VOLUME 28]

JANUARY, 1928

[NUMBER 1

NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

Monthly Summary

INDUSTRIAL employment in Canada at the beginning of December showed the reduction usual at this season, but the losses were this year smaller than in any of the last eight years except 1922, and the situation continued better than on December 1 in any previous year of the record. The Dominion Bureau of Statistics tabulated statements from 6,276 firms, each with at least 15 employees, these firms employing 886,430 persons, as compared with 892,143 in the preceding month; the employment index stood 106.8, compared with 107.5 on November 1, and with 101.1, 95.3, 90.8, 95.7, 95.1 and 87.2 on December 1, 1926, 1925, 1924, 1923, 1922 and 1921, respectively. These indexes, which are based upon the number of employees of the reporting firms in January, 1920, as 100, are indicative of conditions in all industries except agriculture, fishing, hunting and highly specialized business. Reports received from the offices of the Employment Service of Canada indicated a continued decline in the volume of business transacted in November, chiefly owing to the seasonal slackening in farming and construction. Logging, however, showed a marked gain. A small increase was recorded in comparison with the same period in 1926, farming, logging and services showing the largest gains. At the beginning of December the percentage of inactivity reported by the members of local trade unions stood at 5.2 in comparison with percentages of 3.9 at the beginning of November and 4.7 at the beginning of December, 1926. The November percentage is based on reports tabulated by the Department of Labour from 1,591 labour organizations with an aggregate membership of 170,918 persons.

The average cost of a weekly family budget of twenty-nine staple foods was \$11.17 at the beginning of December, as compared with \$11.07 for November; \$11.18 for December, 1926; \$11.56 for December, 1925; \$10.58 for December, 1924; \$10.73 for December, 1923; \$10.39 for December, 1922; \$11 for December, 1921; \$14.84 for December, 1920; \$16.92 for June, 1920 (the peak); \$13.65 for December,

1918; and \$7.96 for December, 1914. In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon prices in 1913 as 100, declined slightly to 151.9 for December, as compared with 152.2 for November; 150.3 for December, 1926; 163.5 for December, 1925; 160.9 for December, 1924; 153.5 for December, 1923; 153.1 for December, 1922; 150.6 for December, 1921; 217.2 for December, 1920; 256.7 for May, 1920 (the peak); and 205.6 for December, 1918.

The time loss due to industrial disputes in December, 1927, was less than during November, 1927, but greater than during December, 1926. Eleven disputes were in existence at some time or other during the month, involving 321 workpeople, and resulting in a time loss of 6,102 working days. Corresponding figures for November, 1927, were: sixteen disputes, 1,868 workpeople, and 11,719 working days; and for December, 1926, ten disputes, 198 workpeople and 4,365 working days.

Industrial Disputes Investigation Act, 1907

During December the Department received the report of a Board of Conciliation and Investigation established to deal with the dispute between the Western Fuel Corporation of Canada, Limited, and its underground employees, together with a minority report signed by the Board member nominated by the employees. Two new applications for the establishment of Boards were received during the month, and a Board was appointed to deal with these disputes, which were similar in character. A full account of the proceedings under the Act during the month will be found on page 13.

Wages, hours of labour and prices in Canada 1920-1927

Two supplements are included with this issue of the LABOUR GAZETTE. The first deals with Wages and Hours of Labour in Canada, 1920 to 1927, including the following classes of labour: (1) building, metal, printing, electric railways, civic employment, and longshore-

men; (2) mining, lumbering, electric power, telephone; and (3) factory labour in various industries. The second supplement deals with the movement of wholesale and retail prices and changes in the cost of living in Canada and various other countries in recent years.

Revised Statutes of Canada, 1927

The *Canada Gazette* in its issue of December 27 announced that the new Revised Statutes of Canada were ready for publication and would come into force on January 31, 1928. The new Revised Statutes, which are in four volumes of over 4,000 pages, consolidate the existing legislation in Canada, including the twenty-one annual volumes of statutes enacted since the last revision in 1906. The work of consolidation was carried out in less than four years by a commission of six members, with the Right Hon. Sir Charles Fitzpatrick, former Minister of Justice and former Chief Justice of Canada, as president.

Various provinces have published revised statutes during the past few years, the work of revision having been delayed owing to the great war. The Province of Saskatchewan consolidated its statutes in 1920; Alberta in 1922; Nova Scotia in 1923; British Columbia in 1924 and Quebec in 1925. In Ontario the first three volumes of the new consolidated statutes have been completed and came into force on December 31. The fourth volume, containing the general index is also approaching completion.

The statutes of Manitoba and New Brunswick are now in process of revision, but the date of the publication of the revised statutes of these provinces has not been announced.

Canadian pupils are instructed on League of Nations

The Assembly of the League of Nations having suggested that the governments of states members should take steps for the instruction of young people in the aims of the League, the government of Canada recently brought this matter to the attention of the various provincial governments, and already measures have been taken by the educational authorities in various provinces to provide the desired instruction. The Lieutenant Governor of Manitoba reports that a special article on the League has been prepared for inclusion in book V of the authorized school readers, which will appear in the edition printed for distribution on September 1 next, and that the Advisory Board of the province has passed a regulation requiring all students enrolled in grade X in the

secondary schools to study the special pamphlet prepared by the League of Nations Society of Canada.

The Lieutenant Governor of Saskatchewan also intimates that his Minister of Education has provided for the inclusion of a study of the aims of the League of Nations in the course of study for the schools of the province, and has issued a pamphlet dealing with the matter for the use of teachers and pupils.

The Lieutenant Governor of Ontario reports that his minister of Education has had printed in the registers for the elementary schools of that province the preamble of the covenant of the League, thus showing the sympathy of his department in its aims and purposes. In the secondary schools, in the lower school course in Canadian history and civics, the membership of Canada in the League of Nations is one of the sub-topics of "External Relations of Canada," an optional division of the course which pupils may take. "The League of Nations" is also a subject of study which pupils may elect to take in the Middle School British History Course. The Middle School British History examination paper of June last contained the following question (optional): "What is the League of Nations—What are its chief aims?" It is added that the officials of the Department of Education have no suggestions to make at present for placing additional emphasis upon the aims of the League of Nations in the schools of the provincial system of Ontario.

The Lieutenant Governor of British Columbia reports that provision is made in the schools of that province for teaching students the aims and objects of the League of Nations. In the High School Course in History the League of Nations is assigned as one of the topics for social study, and in the course in Citizenship for Elementary Schools the League of Nations is dealt with briefly.

The Lieutenant Governor of Prince Edward Island reports that it is stated by his Chief Superintendent of Education that instruction regarding the constitution and aims of the League of Nations is included in the course of study for teachers in the Normal School of that province, while in the public schools the subject matter is being taken up with the proper forms, and a simple chapter on the subject is in course of preparation and will be used in the primary schools.

The Lieutenant Governor of Alberta reports that all schools in that province have been provided with information in regard to the organization and work of the League of Nations. The Department of Education requires that students preparing for public school graduation and Normal School entrance ex-

aminations shall have definite information with regard to the history of the League and the projects undertaken by it; and students are encouraged to keep in touch with the latest developments in connection with all peace movements.

Health Insurance proposed in British Columbia

Reference was made in the last issue of the LABOUR GAZETTE (page 1278) to a movement in British Columbia in the direction of a provincial system of health insurance. During December the advisory board to the Farmers' Institutes of the province submitted to a convention of that organization proposals for the inauguration of a province-wide state health insurance scheme on a contributory basis for the benefit not only of farmers, but of all workers who are not protected by the Workmen's Compensation Act. The Board suggested also the provision of medical service for people in rural districts, particularly for maternity cases and for children. The adoption of health insurance as a general state measure was advocated by Mr. E. S. H. Winn, chairraan of the Workmen's Compensation Board of this province, in the course of an address to the New Westminster Board of Trade in December. Mr. Winn stated that health insurance had already passed the test of experience in countries where it had been tried. Moreover, the proposal for a provincial system, he said, had been approved by doctors, trade unions, hospital boards and various societies and organizations in British Columbia. Discussing the principles of health insurance Mr. Winn pointed out that the province might properly undertake to promote public health as a national asset, and expressed the opinion that such insurance should not be conducted for profit. Many large concerns in Canada, including the railways, considered it good business, he said, to conduct their own insurance schemes. A provincial scheme would be the means of spreading, over the entire population, the losses due to ill-health. At the present time, he stated, less than one-third of the patients in the general wards of the various hospitals were able to pay for their treatment and maintenance.

Old-Age Pensions Proposed in South Africa

A commission has been sitting in South Africa since the beginning of 1926 to examine and report upon: (a) the payment of pensions by the state to necessitous aged and permanently incapacitated persons who are

unable to maintain themselves and for whom no provision at present exists; (b) a system of national insurance as a means of making provision for the risks of sickness, accident, premature death, invalidity, old age, unemployment and maternity.

The commission has just issued its first report, which is devoted to the first term of reference only. Much space is devoted to the practice of foreign countries in the matter of old-age insurance. It was found that there was very great need of assistance for the aged and invalids. The commission consequently recommended that pending further enquiries into the institution of a contributory scheme, non-contributory pensions should be provided without delay. Non-contributory pensions are thus regarded as a temporary measure. The proposed scheme corresponds generally with that existing in Australia. British subjects only are eligible, and they must have been resident in South Africa for at least fifteen out of the twenty years preceding the date of application for the pension. The age proposed for the award of the pension is 65 for both sexes. Pensions are also to be granted to persons over 21 who are totally and permanently disabled or blind. Asiatic and coloured (i.e. having an admixture of non-European blood) persons would be eligible for pensions on the same footing as Europeans. Natives, on the other hand, would not be covered.

The rate of pension suggested is 10s. a week, as in Great Britain, to be reduced in proportion to the means of the pensioner: every pound of annual income involves a reduction of 10s. in the annual pension; but income for this purpose does not include assistance from children or benefits from friendly societies. The commission do not consider such a pension sufficient to meet all the needs of an individual in all districts of the union, though it compares not unfavourably with the rates at present paid in other countries, except Australia and New Zealand, which indeed are reported to be finding the cost somewhat onerous. They expect, however, that the pensioner will continue to be assisted by charitable organizations. Moreover, the receipt of poor relief is not a disqualification for a pension.

The cost of the pension is to be met by the union government.

The duty of examining claims is entrusted to district magistrates, and the post office is made responsible for paying out the weekly instalments of the pension.

Contributory Pensions in Great Britain

The following information with regard to pensions and allowances paid under the Widows', Orphans' and Old Age Contributory Pensions Act, 1925, was given in answer to a question in the British House of Commons recently. (The provisions of this Act were outlined in the LABOUR GAZETTE, June, 1925, page 580.) On September 30 last, 188,169 widows were receiving pensions; children's allowances were being paid for 246,949 children; and orphans' pension for 11,832 orphans. The amount paid to these beneficiaries since the beginning of the Act up to October 31 last was £12,740,000; and the total amount, including payments to old-age pensioners, was £18,700,000.

Under the provisions of the Widows', Orphans', and Old Age Contributory Pensions Act, 1925, men and women aged 65 and over ceased to be entitled to sickness benefit, disablement benefit, or unemployment benefit as from January 2, 1928. They are no longer required to pay health and pensions contributions (which are consolidated in one payment) or unemployment insurance contributions; but if they are insurably employed their employers are required to pay the employees' contributions for them (pensions and unemployment) as though they were exempt persons.

It was estimated that approximately 342,000 persons aged 65 years and over, formerly insured under the Unemployment Insurance Acts, ceased to be insured against unemployment as from January 2.

British Conference on Industrial Peace

Recent movements in Great Britain towards peace in industry were outlined in the LABOUR GAZETTE, December, 1927, pages 1309-1310. Reference was made to a tacit invitation by the Trades Union Congress to the employers to take part in a joint conference. Subsequently the National Confederation of Employers' Organizations and the Federation of British Industries held a conference at which they reached the conclusion that they were not competent to act for the general body of employers in such matters. Whereupon a group of representative employers, headed by Sir Alfred Mond, M.P., proposed to the General Council of the Trades Union Congress that a conference be held for the purpose of discussing industrial peace. The employers' letter to the secretary of the General Council of the Trades Union Congress was, in part, as follows:

"The movement towards industrial co-operation has recently received a great acces-

sion of strength, and there seems to be general agreement that a useful purpose would be served by a consideration of certain fundamental factors in industrial reorganization and industrial relations with the view to the formulation of definite and concrete proposals applicable to and to be determined in detail by the various industries concerned. We realize that industrial reconstruction can be undertaken only in conjunction with and with the co-operation of those entitled and empowered to speak for organized labour. The necessity of every action being taken to achieve the fullest and speediest measures of industrial reconstruction therefore impells us to seek the immediate co-operation of those who are as vitally interested in the subject as ourselves. We believe that the common interests which bind us are more powerful than the apparently divergent interests which seem to separate."

The letter then stated that the twin objects of the negotiations were "the restoration of industrial prosperity and the corresponding improvement in the standard of living of the population."

On December 21, the General Council of the Trades Union Congress met and indicated their acceptance in the following resolution:

"That this General Council of the T.U.C., having considered the invitation from a group of employers to a joint meeting with a view to discussing, without prejudice, the industrial problems facing this country, agrees to accept such invitation and appoint a sub-committee to consider the most suitable subjects for discussion and to make the necessary arrangements for a full meeting of this General Council with those sending the invitation.

It was considered that this meeting could not take place before the end of January.

Recent wage policy of employers in U.S.A.

Mr. Charles M. Schwab, in his recent presidential address to the American Society of Mechanical Engineers, stated some modern problems of "industrial statesmanship" and explained certain principles that are now recognized by enlightened employers. "What are these reasonable wants of employees," he asked, "which they have a right to see satisfied as far as conditions in industry permit? I believe they include the payment of fair wages for efficient services; steady, uninterrupted employment; safeguarding of their lives and health; good physical working conditions; provision for them to lay up savings and to become partners in the business through stock ownership; and finally, some guarantee of financial independence in

old age. The desire of labour in connection with wages can, I believe, best be fulfilled by rewarding men in accordance with their contributions toward the success of the business. It is fundamental with human beings that they want individual recognition of, and reward for, their talents and achievements. This is the crux of the wage problem. The nearer we can come to fulfilling this want on a sound, justifiable basis that recognizes individual merit, the sooner shall we witness the solving of a long-standing and contentious question. We have travelled far in our thinking on this fundamental question of reward for service. We have come to have a new viewpoint toward the payment of wages. Our better relationships have brought a clearer understanding of the reciprocal value to national well-being of a class of well-paid workers whose buying power is sufficient to take the output of our mass production. We are ambitious to see our workers receive an adequate wage—a wage that is sufficient to afford a worker and his family a decent standard of living with a margin for laying something aside—but we cannot entertain any uneconomic theories as to doles or subsidies. We cannot lose sight of the fundamental law that requires full value in services for wages paid.”

Discussing the problem of stabilizing employment, Mr. Schwab continued: “During the last few years industrial managers have been giving much thought to this question—to the elimination of the evil of unemployment. It has come to be realized that peaks and valleys of industrial activity, during which periods of feverish effort to get out products alternate with periods of idleness and stagnation, not only are undesirable from the standpoint of the workingman but are wasteful and expensive to industry and to society as a whole. Toward the levelling of these peaks and valleys much has been done by the intelligent effort of management; perhaps even more has been accomplished as a result of the sustained purchasing power built upon high wages and of the changed buying methods of the public.”

The purpose of employees' stock ownership

The National Industrial Conference Board, an organization of employers in the United States, recently investigated the extent and results of employees' stock ownership. They found little evidence to show that it is a factor of any importance in advancing “democratization” in industry. The value of joint partnership lies rather in helping wage earners to provide against old age by acquir-

ing an independent source of income during the active years of their earning capacity. Many employers reported that the feeling of security thus gained by the workmen definitely results in better workmanship and higher production. The conclusions of the Board are based on an analysis of the experience of several hundred companies having stock purchase plans. It is stated that wage earners and other employees of corporations in the United States own, or are now making payments for the purchase of, considerably more than a billion dollars' worth of the securities of the companies by which they are employed. These holdings are distributed among some 800,000 employees, the average amount of individual holdings being about \$1,250.

Voluntary and Public Social Services

The question of the relations between voluntary social effort and public social services in the industrial field will be considered at an International Conference of Social Work, to be held in Paris, July 8-13 next. The Conference will be divided into five sections as follows:—

- (1) General organization of social work (Chairman: The Hon. Percy Alden, London);
- (2) Training for social work (Chairman: Dr. Alice Salomon Berlin);
- (3) The methods of social case work (Chairman: Mrs. John M. Glenn, New York);
- (4) Social work and industry (Chairman: Mr. Albert Thomas);
- (5) Social work and public health (Chairman Professor Bagge, Stockholm).

As regards Section 4, it may be pointed out that in recent years a notable development has taken place in the intervention of the State in the regulation of conditions of life and labour, but *pari passu* with the progress of social service has gone the development of voluntary social work, and many interesting questions arise in connection with the co-ordination of the social services of the State and the social work of the voluntary associations.

The relation of factory inspection to social work is another important problem to be discussed. Social work, however, is concerned not only with conditions of life in the factory, but also with conditions of life outside the factory, and these are usually connected with the life of the family. The various meetings of Section 4 will deal with some of the main questions connected with the relations of industry and the family, including the family standard of life, the worker's spare

time, unemployment and the family, family problems of migration, and health work in industry.

Safety on railways in United States and Canada

As the result of requests from various railway brotherhoods, a joint conference was held at Washington, D.C., early in December between the railway commissioners of the United States and Canada for the purpose of considering the uniform application of safety devices on railways for the protection of employees and the public. The meeting was held in the office of the Interstate Commerce Commission. Canada was represented by the Hon. H. A. McKeown, K.C., chief commissioner, and Mr. Calvin Lawrence, of the Board of Railway Commissioners for Canada. Mr. Lawrence is a member of the Brotherhood of Locomotive Engineers, and was formerly the legislative representative of that organization in Canada. Other members of the Canadian party were Messrs. A. George Blair, K.C., counsel of the Board of Railway Commissioners; A. C. Boyce, K.C., counsel of the railroad brotherhoods, a former member of the Board, and T. J. Coughlin, national legislative representative of the Brotherhood of Railroad Trainmen. The United States representatives were Messrs. J. J. Esch, the chairman, and Richard V. Taylor, a member of the Interstate Commerce Commission. The conference voted unanimously to appoint a sub-committee of three to "examine into the merits of the different connectors and to prepare tentative specifications of a device which will automatically couple and connect, and automatically uncouple and disconnect, without the necessity of going between or underneath cars for that purpose, to be presented for consideration at an adjourned meeting of this conference to be held in Ottawa, Canada, or at any other place that may be decided upon, at some convenient date in January, 1928." The sub-committee consists of chairman John J. Esch of the Interstate Commerce Commission; chairman H. A. McKeown of the Canadian Board, and assistant president W. N. Doak of the Brotherhood of Railroad Trainmen.

Another resolution asked the American Railway Association and the Canadian Railway Association to co-operate with the sub-committee.

Tribute to workers in coal mining industry

paid a tribute to

The Hon. G. S. Harrington, minister of Mines of Nova Scotia, in a recent address before the Union of Municipalities in the province, the character and qualifica-

tions of the coal miners. "If people understood the employment of the coal miners there would be less criticism of them," he said. "A coal miner who actually cuts coal from the face, usually does so to-day with a machine. Frequently, it is an electrical cutting machine. The miner therefore must be a mechanic, and if operating an electrical machine he must also know something of electrical appliances. No one can foretell the conditions he will be called upon to meet underground from day to day, and as these conditions come upon him suddenly he must be resourceful and able to meet them or forfeit his life or at least his well-being. There is scarcely a man employed underground who has not been present at an accident, either to himself or some friend. He therefore is always prompt to render and accept assistance in time of emergency. Thus he tends to become generous towards others. Consciously or otherwise, from the time he enters the mine until he leaves it, he feels that thousands of hands are reaching out of the darkness to injure him. He therefore becomes courageous, self-reliant and resourceful. . . It has been my own personal experience, that when met fairly and dealt with in a spirit of understanding, there is no more openhanded class of men in the country, nor is there any class that can less easily be tricked or misled about their own occupation, for that is frequently a matter of life and death with them. I feel that this explanation is due to the miners of our Province, who produce so much wealth in such uncongenial surroundings, and who have so frequently been the object of false attacks and adverse propaganda."

Superior Council of Labour

Elsewhere in this issue reference is made to the recommendations contained in the legislative programme of the Federation of Catholic Workers of Canada as presented to the government and Legislature of the Province of Quebec. Among the recommendations is one for the establishment in the Province of a Superior Labour Council, an organization which has been formed in several European countries to act as an advisory and consultative body on industrial problems. In France a Superior Labour Council was established in January, 1921, consisting of 78 members with the Minister of Labour as president. Of this number, 32 are nominated by the employers, representing specified trade groups, and 32 are nominated by the wage-earning and salaried employees according to trade and occupational groups. Of the remainder, three are senators, elected by the Senate; five are Deputies,

elected by the Chamber of Deputies; one member is appointed by the Paris Chamber of Commerce, two members are appointed by the elected members of the Superior Co-operative Council (one by the consumers' section and one by the production section); and three members are chosen by the Minister of Labour from among the members of the Institute and the professors of the faculty of law of the University of Paris.

Canadian Workmen and U.S.A. Border Regulations Hon. Peter Heenan, Minister of Labour of Canada, conferred in Washington, D.C., during Christmas week with Hon. Jas. J. Davis, United States Secretary of Labour, concerning the border-crossing regulations issued by the United States Bureau of Immigration as they affect railroad employees who cross the international boundary on their runs or go into the United States to exercise their seniority rights. Mr. C. W. Laughlin, National Legislative Representative of the Brotherhood of Locomotive Engineers, and Mr. Arthur J. Lovell, National Legislative Representative of the Brotherhood of Locomotive Firemen and Enginemen, accompanied Mr. Heenan on his visit to Secretary Davis. After the meeting, Mr. Heenan and the Brotherhood officials expressed themselves as well pleased. "Ninety per cent of the difficulties were cleared up by our interview," Mr. Heenan remarked. "I am of opinion that the remaining ten per cent can be adjusted without trouble."

According to officials of the United States Department of Labour, no attention will be paid to train and engine service employees whose runs cross the border line. Only those who seek permanent residence on the United States side of the line will come under the United States immigration regulations. In such instances each case will be treated on its merits and will be adjusted through negotiations between the Brotherhood representatives and the Immigration officials.

Dictionary of occupational terms The Ministry of Labour of Great Britain has just published a Dictionary of Occupational Terms, based on the classification of occupations used in the Census of Population, 1921. The terms listed in the dictionary are those employed for occupations in Great Britain, differing to some extent from the usage on the American continent. The Dictionary had its origin in one of the resolutions adopted by the British Empire Statistical Conference, 1920, recommending the preparation of a complete occupational index. It was considered

that such a glossary, describing occupations in detail, was a necessary step towards the preparation of a proper classification of occupations. The work was compiled primarily to serve administrative purposes, but the Ministry has now placed it on sale as likely to be generally useful. The glossary is based on information received from various government departments, from joint industrial councils and trade boards, from railway companies and the Railway Staff Conference, and from a large number of individual employers and trade unions. The classification of occupations issued in connection with the census is used in the Dictionary, which adds a concise definition to each of the occupations named therein. Many additional terms are given which came to light during the compilation. The total number of terms appearing in the volume is 29,106, but since many of these are synonyms the number of occupations is considerably less, amounting in all to 16,837. No occupations in connection with public administration or the professions have been included. The prefatory note points out that many industries are in a state of transition, and that there are many variations in practice between different factories in the same industry. No definition could therefore be framed that would fit every possible case. However, the Dictionary gives, in non-technical language and in broad outline, a description of the work generally performed by the person to whom an occupational term is applied.

The British Ministry invites corrections and additions that employers, trade unions and others may suggest, as it is recognized that "in a pioneer attempt of this kind many of the definitions are inevitably unsatisfactory, and the co-operation of the public in improving the Dictionary will therefore be much appreciated." The work may be purchased from H.M. Stationery Office, London, price 21 shillings.

The quadrennial meeting of the International Council of Nurses will be held at Montreal in August, 1929. Miss Jean Wilson, R.N., executive secretary of the Canadian Association of Nurses, speaking recently at Calgary, mentioned some of the association's policies which had proved helpful to members of the profession. These included the 8-hour day system; opposition to the practice of employing student nurses for special nursing in hospitals; extension courses for nurses; residences for nurses separate from hospitals. "The registered nurse," she said, "guarantees to the public a better nursing service."

GENERAL REVIEW OF THE INDUSTRIAL SITUATION

WHILE the end of December is ordinarily the least active time of the year in so far as the public employment offices are concerned, the employment situation as reported by the superintendents of the Employment Service of Canada at December 31 showed a not unfavourable employment situation obtaining throughout Canada. The details for the several provinces are as follows:—

In Nova Scotia there was very little demand for farm workers. The logging industry, having been interfered with by the holidays and by the mild weather, had not yet taken on its usual winter activity. Manufacturing was normal, with some improvement in the iron and steel group in prospect. The coal mining industry reported rather good production for the season. While building and construction throughout the province were rather quiet, a considerable amount of work was being proceeded with at Halifax and this was providing a satisfactory volume of employment for construction workers. Railroad transportation was good. Trade had been good during the holiday season, but now showed some falling off. The demand for women domestic workers was fair, with plenty of applicants.

The agricultural industry in the province of New Brunswick was very quiet. In this province fishing was fair, but unseasonable weather had interfered with the catches. Mild weather, as in Nova Scotia, had held up work in the logging industry. Manufacturing was normal, while construction was reported to be rather quiet. Transportation was very brisk, and trade was good. There were fair demands for women domestic workers.

A few farm placements were being made in the province of Quebec. A slight increase in the demand for logging workers was noticeable and some placements had been made during the month. Manufacturing remained rather good; while metals, leather, and boots and shoes were somewhat slack, rubber, printing, cotton, wool, and silk were reported as good. Construction was busy for the season; Quebec, Montreal and Sherbrooke reported tradesmen as fairly well employed. Montreal and Quebec reported improvements in trade. There was the usual seasonal shortage of female domestic workers.

Not many farm orders were being registered at the Ontario employment offices, and such as were being notified were being easily filled. Due to stock-taking, manufacturing in this province was temporarily quiet, but no actual contrac-

tions appeared to be taking place. While building was seasonally quiet with few orders for workers, the volume of work under way was not unsatisfactory for the season. Some logging orders were being received and filled, but the demands were not exceptionally heavy. There was some shortage of cooks-general reported from different centres. The general situation throughout Ontario was rather favourable for the season, as unemployment did not appear to be more than ordinarily serious. The fact that very little work had been opened up by municipalities to relieve unemployment furnished evidence that matters were not considered as grave.

The Manitoba employment offices reported very few farm orders, with no difficulty in filling those received. Construction was fair in the City of Winnipeg; elsewhere this industry was quiet. Some districts reported that a number of men had left for the Flin Flon district, hoping to secure work there. Logging placements from Winnipeg were heavier, and many applicants for this work were unplaced. Trade was fairly good. The placement of women domestic workers was rather quiet. With very little work of a general character offering, the employment situation was somewhat quiet, although the position did not appear to be much, if any, less favourable than a year before.

While there were not a great many demands for farm workers in Saskatchewan, the number of applicants seeking this work was correspondingly small. Construction was fairly quiet. A fair number of orders and not many applicants were reported from Prince Albert in connection with the logging and wood cutting industries. Demands for women workers for household work were not brisk, but applicants were none too plentiful. While the general situation from an employment point of view was rather quiet, there did not seem to be much unemployment for the season, and compared with the same period of the year before the situation showed improvement.

Farm demands in the province of Alberta were fair, with the surplus of farm workers making application to the offices less than usual for the time of year. Only small demands for logging workers were being received, but plenty of applicants for this work were registering. Considering the season, a fair volume of construction work was proceeding, including some extra gang work. The coal mines were busy, and while there were plenty of applicants, there were some calls for addi-

tional men. There were quite a number of women applying for domestic work, the demands for whose services were not very numerous. Conditions in Alberta were quite favourable for the season, although the vacancies for workers developing were none too numerous.

Some few orders for men in the lumbering industry were reported by the British Columbia employment offices, but there was a surplus of applicants. The coal mines of Van-

couver Island were busy, but there were no demands for coal miners. While, likewise, there were no orders for metal miners, the metal mines maintained normal activity. Building and construction throughout the province were rather quiet. While the situation in the coast province was fairly quiet, with several centres reporting few available employment opportunities and a fair number of unemployed, the situation was not abnormal for the season.

MONTHLY STATISTICS REFLECTING INDUSTRIAL CONDITIONS IN CANADA

(Official Statistics except where noted)

EMPLOYERS'
REPORTS

The seasonal losses in employment recorded at the beginning of December were on a smaller scale than on the same date in any other of the last eight years except 1922, and the situation continued better than on December 1 in any previous year of the record. Statements were tabulated by the Dominion Bureau of Statistics from 6,276 firms, employing 886,430 persons, compared with 892,143 in the preceding month; the index stood at 106.8, compared with 107.5 on November 1 and with 101.1, 95.3, 90.8, 95.7, 95.1 and 87.2 on December 1, 1926, 1925, 1924, 1923, 1922 and 1921 respectively.

All except the Prairie Provinces registered curtailment, the largest recessions taking place in British Columbia and Ontario. In the Maritime Provinces, further but smaller seasonal reductions in employment were noted, chiefly in construction but also in lumber mills, while logging, mining, trade, transportation and iron and steel showed improvement. In Quebec, manufacturing and construction showed declines, while logging was decidedly busier, and important gains were shown in transportation and trade. In Ontario, employment again declined, though less extensively than on November 1; trade and logging registered decided seasonal increases, and considerable improvement was shown in the pulp and paper, textile and iron and steel groups. Construction and lumber mills, however, reported large losses, and smaller decreases were shown in mining, transportation and communications. In the Prairie Provinces there was a small advance in employment, in contrast with the movement usually indicated at the beginning of December. Manufacturing, logging, mining, transportation and trade were more active, while construction registered the only pronounced reductions. In British Columbia, fish-canneries and lumber mills were slacker, as was construction; on the other hand, trade and some other groups were brisker.

Montreal, Quebec, Ottawa, and Vancouver reported lessened activity, while employment advanced in Toronto, Hamilton, Windsor and the Other Border Cities and Winnipeg. In Montreal, manufacturing and construction reported a falling-off, while work increased about the harbour and in retail establishments. In Quebec, employment showed its first decrease since January; this took place chiefly in construction and transportation. In Toronto, manufacturers and trade showed improvement, while construction, communications and transportation were slacker. In Ottawa, further curtailment was shown, chiefly in construction, transportation and manufacturing. In Hamil-

ton, manufactures and trade were busier, while construction was seasonably quiet. In Windsor and the other Border Cities, partial recovery from the losses recently indicated was recorded, mainly in manufacturing. In Winnipeg, most of the improvement was reported in trade, while transportation was also busier, and construction work released many men. In Vancouver, manufacturing and construction showed curtailment, but trade afforded more employment.

Another but smaller reduction in employment occurred in manufacturing establishments, mainly in lumber and food factories, but to some extent also in textile, building material, and electric current plants. On the other hand, the metal industries, particularly iron and steel works, afforded more employment. Mining, transportation, logging and trade also registered marked improvement, the gains in the last two being the largest on record. Communications and construction and maintenance, however, reported reductions, those in the latter being extensive.

An article elsewhere in this issue gives in some detail the employment situation as at the beginning of December, 1927.

TRADE
UNION
REPORTS

The percentage of unemployment reported at the close of November by 1,591 local trade unions, with a combined membership of 170,918 persons, stood at 5.2, in contrast with percentages of 3.9 in the previous month and with 4.7 in November, 1926. The reductions in comparison with October were distributed throughout the various provinces, but more especially in Quebec and British Columbia, caused in these two provinces by inactivity for workers in the manufacturing and in the building and construction trades. The change over November, 1926, was due to lessened employment afforded workers in the Nova Scotia, Quebec, Manitoba and Saskatchewan unions.

A more detailed report of the unemployment conditions among local trade unions at the close of November will be found elsewhere in this issue.

EMPLOYMENT
OFFICE
REPORTS

During the month of November 1927 the references to employment made by the offices of the Employment Service of Canada numbered 30,694, while the placements effected totalled 29,218. Of the latter, the placements in regular employment were 16,316 of men and 3,577 of women, a total of 19,893, while the placements in casual work were 9,325. Applications for work reported at the offices numbered 44,303, of which 33,288 were of men and 11,015 of

women workers. Employers notified the Service during the month of 22,784 vacancies for men and 8,378 for women, a total of 31,162. It will be seen that a decline is recorded in the transactions when the above figures are compared with those of the preceding month, while an increase is shown when a comparison is made with the records of November, 1926, the reports for October 1927 showing 48,678 vacancies offered, 56,600 applications made and 45,365 placements effected, while in November 1926 there were recorded 29,551 vacancies, 42,917 applications for work and 28,338 placements in regular and casual employment. A report in detail of the work of the offices for the month of November, 1927, may be found elsewhere in this issue.

PRODUCTION IN CERTAIN INDUSTRIES

Some figures indicating the recent movements of trade and industry are given in the table on page 9. The Dominion Bureau of Statistics reported that the year 1927 closed with the volume of Canadian business at a satisfactory level though somewhat below the high point reached in the second quarter. The confident tone which prevailed in regard to the business situation was justified by the strength of fundamental factors. An index of the physical volume of business in the *Monthly Review* by the Dominion Bureau of Statistics, indicated that business was being maintained currently at a level of about 48 per cent greater than the average of the base period from 1919 to 1924, the average during the first eleven months being about 7.5 per cent greater than in 1926. The volume of construction, estimated from the value of contracts awarded with adjustment for the cost of labour and materials, was nearly 10 per cent greater in 1927. The index of mining, based on the exports of the output and the receipt of gold and silver at the Royal Mint, showed an increase of 7 per cent. In view of the expansion of the pulp and paper industry, the output of forestry showed an increase of 6 per cent. The average of manufacturing activity, being adversely affected by declines in the automobile and steel industries, was only 4 per cent greater than in 1926. Employment in retail and wholesale trade averaged 7.5 per cent greater, indicating that commodity distribution was in a healthy state.

The crop harvested in 1927 was \$35,800,000 or 3.3 per cent more valuable than in the preceding year. The total value of the principal field crops in 1927 as estimated on December 14, was \$1,141,300,000, as compared

with \$1,105,500,000 in 1926 and \$1,153,400,000 in 1925. Aside from the specially profitable crop of 1925, the value of this year's crops exceeded that of any year since the period of inflated farm prices in 1920. The value of the crops in Alberta showed a substantial increase over either 1925 or 1926, the wheat crop being valued at \$183,875,000 compared with \$119,686,000 in 1926, an increase of 53.6 per cent. Declines were shown in the value of field crops in Saskatchewan and especially in Manitoba. The average producers' price of wheat was \$1.02 per bushel, compared with \$1.09 per bushel in 1926, the reduction being due to the larger crop and the poorer quality of much of the grain.

In 1927 the output of manufacturing establishments was greater than in any year in the post-war period. The average index during the first eleven months of 1927 was nearly 151 compared with 145 in 1926, representing an increase of nearly 4 per cent. The gain in 1927 was due to the high levels attained from March to June, when the most of the industries represented in the index were operating at a high percentage of capacity. From July onward a recession was in evidence, and in October and November the index showed decline as compared with the same months last year. The preliminary index for November showed an advance over October, the increase in the output of steel being one of the strong factors.

The output of coal from Canadian mines during October increased 9 per cent over the production for the preceding month, but was 10 per cent lower than the average for October in the past five years. The figures were 1,469,172 tons in October as against 1,339,465 tons in September and an average of 1,617,737 tons during the five preceding years. All the coal producing provinces, except British Columbia, showed an increase in production over the preceding month, but all were lower than the average for the month in the five preceding years.

Men employed in the coal mines of Canada during October numbered 29,004 of whom 22,393 worked underground and 6,611 on surface, as compared with a total of 28,093 in September, of whom 21,689 worked underground and 6,404 on the surface. Production per man was 50.6 tons in October as against 47.7 tons in September. During October the production per man-day was 2.3 tons, being the same as in September. The tonnage lost was largely due to "lack of orders."

According to a report prepared by the Dominion Bureau of Statistics, the value of the building permits issued by the municipal authorities in sixty-three cities in Canada during the month of November, 1927, amounted to \$12,849,089, as compared with \$18,838,558 in October, 1927, and with \$9,975,451 in November, 1926. The cumulative value for the January-November period of 1927, exceeds by nearly \$29,000,000 that for the corresponding months in 1926.

The *McLean Building Review* estimates the total value of the construction contracts awarded in Canada in December, 1927, at \$36,682,000. Of this amount, \$23,216,700 was for business buildings; \$6,650,800 for residential construction; \$5,859,800 for public works and utilities, and \$1,314,700 for industrial undertakings. The apportionment of contracts awarded by provinces, during December, 1927, was: Ontario, \$26,852,100; Quebec, \$4,119,000; British Columbia, \$1,897,700; Prairie Provinces, \$3,641,200, and the Maritime Provinces, \$172,000.

During 1927, the total value of construction contracts awarded amounted to \$418,951,600, or \$46,003,700 more than in 1926. Ontario with \$196,159,000 had the highest total of all the provinces for the year, the totals for the other provinces being: \$133,182,600 in Quebec; \$31,337,600 in British Columbia; \$29,939,900 in Manitoba; \$11,337,600 in Saskatchewan; \$7,507,300 in Alberta, and \$9,487,600 in the Maritime Provinces.

A summary of Canadian trade prepared by the Department of National Revenue shows that in November, 1927, the merchandise entered for consumption amounted to \$94,311,883 as compared with \$93,935,872 in October, 1927, and \$87,656,757 in November, 1926. The chief imports in November, 1927, were: Iron and its products, \$16,746,963; fibres, textiles and textile products, \$14,665,046, and non-metallic minerals and products, \$14,519,384.

The domestic merchandise exported amounted to \$153,118,718, in November, 1927, as compared with \$103,884,933, in October, 1927, and \$152,355,795 in November, 1926. The chief exports in November were in the group of agricultural and vegetable products, mainly foods, \$84,928,417; wood, wood products and paper, \$24,623,263, and animals and animal products, \$19,894,356.

In the eight months ending November, 1927, exports of domestic merchandise totalled \$819,826,210, and imports, \$739,725,772.

Strikes and Lockouts

The time loss due to industrial disputes in December, 1927, was less than during November, 1927, but greater than during December, 1926. There were in existence during the month eleven disputes, involving 321 workpeople, and resulting in a time loss of 6,102 working days, as compared with sixteen disputes in November, involving 1,868 workpeople, and resulting in a time loss of 11,718 working days. In December, 1926, there had been recorded ten disputes, involving 198 workpeople and resulting in a time loss of 4,365 working days. Five of the strikes and lockouts commencing prior to December terminated during the month as did the three strikes and lockouts commencing during the month. At the end of December, therefore, there were on record three strikes and lockouts affecting 153 workpeople, not including those strikes and lockouts in which employment conditions were reported to be no longer affected but which had not been formally called off.

Prices

The cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average retail prices in some sixty cities was \$11.17 at the beginning of December, as compared with \$11.07 for November; \$11.18 for December, 1926; \$11.56 for December, 1925; \$10.58 for December, 1924; \$10.73 for December, 1923; \$10.39 for December, 1922; \$11.00 for December, 1921; \$14.84 for December, 1920; \$16.92 for June, 1920 (the peak); \$13.65 for December, 1918; and \$7.96 for December, 1914. The increase was due mainly to seasonal advances in the prices of eggs, milk and butter, with less important advances in the prices of beef, veal, mutton, lard, rice, beans, yellow sugar and tea. Slight declines occurred in the prices of pork, bacon, rolled oats, evaporated apples and prunes. Including the cost of fuel and rent with that of foods the total budget averaged \$21.37 at the beginning of December, as compared with \$21.27 for November; \$21.41 for December, 1926; \$21.87 for December, 1925; \$20.90 for December, 1924; \$21.21 for December, 1923; \$20.97 for December, 1922; \$21.49 for December, 1921; \$25.67 for December, 1920; \$26.92 for July, 1920 (the peak); \$21.64 for December, 1918; and \$14.26 for December, 1914. Fuel and rent were practically unchanged.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics was again slightly lower at 151.9 for December, as compared with 152.2 for November; 150.3 for December, 1926; 163.5 for December, 1925; 160.9 for December, 1924; 153.5 for De-

ember, 1923; 153.1 for December, 1922; 150.6 for December, 1921; 217.2 for December, 1920; 256.7 for May, 1920 (the peak); and 205.6 for December, 1918. In the grouping according to chief component materials two of the eight main groups declined, four advanced and two were unchanged. The vegetables and their Products group and the Fibres, Textiles and Textile Products group both declined, the former due to lower prices for wheat, flax, sugar, potatoes, lemons, oranges and coffee, which more than offset advances in the prices of barley, corn, oats, rye, flour, apples, dried fruits and rubber; and the latter due to de-

clines in the prices of cotton, cotton yarns, flax fibre and silk. The groups which advanced were: the Animals and their Products group, due to higher prices for cattle, beef, hides, skins and leather, which more than offset slight declines in the prices of hogs, sheep, pork and eggs; the Iron and its Products group, mainly because of advances in the prices of steel billets; the Non-Ferrous Metals group, due to higher prices for silver, copper, lead and tin; and the Wood and Wood Products group. The Non-Metallic Minerals and their Products group and the Chemicals and Allied Products group were unchanged.

PROCEEDINGS UNDER THE INDUSTRIAL DISPUTES INVESTIGATION ACT, 1907, DURING THE MONTH OF DECEMBER, 1927

DURING the month of December the Department received the report of a Board of Conciliation and Investigation established to deal with a dispute between the Western Fuel Corporation of Canada, Limited, and its underground employees.

Applications Received

Two applications for the establishment of Boards of Conciliation and Investigation were received during December from certain employees of the Canadian Pacific Railway Company at St. John, N.B., being (1) grain elevator employees, members of Local 1121, International Longshoremen's Association, and (2) freight handlers, coopers, car sealers and heater men, members of Local 838, International Longshoremen's Association. One hundred and forty employees were stated to be directly affected by the first dispute and 375 in the case of the second application. The differences as set forth in the two applications showed the respective disputes to be of practically an identical nature, and it appeared desirable in the circumstances that the two disputes should be referred to one board. The various parties concerned indicated that they were agreeable to this course and a board was accordingly established by the Minister, composed as follows:—The Hon. Henry Miles, Montreal, P.Q., chairman, appointed by the Minister in the absence of a joint recommendation from the other members of the board, Mr. Frederick E. Sayre, St. John, N.B., nominated by the employing company, and Mr. J. E. Tighe, St. John, N.B., nominated by the employees concerned in the two disputes.

Other Proceedings under the Act

Reference was made in the November issue of the *LABOUR GAZETTE* to an application

made by certain employees of the Toronto, Hamilton and Buffalo Railway Company, being freight shed foremen, freight checkers, truckers, clerks, messengers, etc. During the month of December a board was established in this case, Mr. Bernard Rose, K.C., Montreal, P.Q., being appointed a member thereof by the Minister on behalf of the company in the absence of a recommendation from the latter, and Mr. John L. Counsell, K.C., Hamilton, Ont., board member on the recommendation of the employees. The chairmanship had not been filled at the close of the month.

The board established to deal with a dispute between the Canadian Collieries (Dunsmuir), Limited, and certain of its employees at Extension, Wellington and South Wellington mines, Vancouver Island, was completed shortly after the close of the month by the appointment of Mr. H. A. Maclean, K.C., Victoria, B.C., as chairman, the appointment being made by the Minister of Labour in the absence of a joint recommendation from the other members of the board, Messrs. Wm. Fleet Robertson, Victoria, B.C., and Joseph Hitchen, Nanaimo, B.C., nominees of the employing company and employees respectively.

In the December issue of the *LABOUR GAZETTE* (p. 1291), there appeared the text of the report of the Board of Conciliation and Investigation which dealt with a dispute between the British Columbia Electric Railway Company, Limited, and certain of its employees, being members of Divisions 101, 109 and 134, Amalgamated Association of Street and Electric Railway Employees of America; also of a minority report presented by the board member representing the employees. The board recommended the continuance of the old agreement for a period of three years, with certain modifica-

tions, including an advance of one cent an hour to motormen and conductors for the third year. The employees agreed by a referendum vote to accept the board's findings on the condition that a clause should be included in the agreement providing for cancellation of the agreement upon thirty days' notice. The company rejected the proposal for the in-

clusion in the proposed agreement of a thirty-day cancellation clause and offered a general wage increase of one cent an hour and other concessions if the men would accept a three-year agreement. Word reached the Department towards the close of the month that the company's offer had been accepted by the employees.

Report of Board in Dispute Between the Western Fuel Corporation of Canada, Limited, and Its Underground Employees

A report was received from the board established to deal with a dispute between the Western Fuel Corporation of Canada, Limited, and its underground employees. The dispute concerned the employees' request for the restoration of a daily bonus of 60 cents which had been deducted in June, 1925; also the readjustment of wage rates and working conditions. The report, which was signed by His Honour Judge C. H. Barker, chairman, and Mr. D. S. Wallbridge, the company's nominee, contained certain recommendations as to settlement of the dispute. Mr. Joseph Hitchen, the employees' nominee, submitted a minority report.

Report of Board

In the matter of the Industrial Disputes Investigation Act, 1907, and of a dispute between the Western Fuel Corporation of Canada, Limited (employer), and its underground employees (employees).

The undersigned Board of Conciliation and Investigation in this matter reports as follows:

The Board held its first sitting on November the 16th, 1927, at 10 a.m., the members of the Board having duly taken the oaths of office required by the Act.

The employer was represented by John Hunt, Manager, and by Mr. Lett, Barrister, of the City of Vancouver. The employees were represented by G. Joseph Sutton and Joseph Dixon, President and Secretary of the Employees' Committee, and by Mr. Irvine, of Seattle, U.S.A.

Both parties stated they did not object to the representatives.

The question of what matters were to be taken up by the Board was raised, the employer stating that only the wages were involved, the employees that certain conditions of their employment were in question. After some evidence had been put in as to what had taken place during the negotiations leading up to the appointment of the Board and the filing of a statement by the employees as to what they considered proper points to

investigate, the Board ruled that the matters referred to in the statement filed on behalf of the employees be allowed to be investigated.

The most important matter was the demand of the men for a general increase of wages to the extent of sixty cents a day. It appears that an agreement was arrived at in October, 1924, for three years, fixing a schedule of rates of wages for the employees underground, to which was added what is called in the Agreement a "bonus" of ninety cents a day, it being a condition that any increase or decrease in the bonus should be governed by competitive conditions. In 1925 this bonus was decreased by 60 cents a day, leaving a bonus of only 30 cents over the base rates. The employees now demand an increase in this bonus to the original 90 cents, and also object to having the increase referred to as a bonus which can be altered at any time during the life of the Agreement.

The Board heard a great deal of evidence on this point whereby it appeared that competition at Vancouver, the leading point of disposing of the coal produced, was very keen, not only in the coal disposed of for power purposes, but also for domestic use, owing to the influx of coal from the Upper Country mines, and from Alberta, where it is more easily mined than in the above employer's mines, and also less subject to loss from breakage, as it can be brought directly to Vancouver by rail, also a certain amount of coal has been recently brought from Wales by freight vessels. It also appears that the use of fuel oil and Deisel oil has cut largely into the use of Nanaimo coal for power purposes, and that which is known as hog fuel for domestic purposes. Steamships also coming into Vancouver were, to a certain extent, obtaining their coal at the Seattle bunkers, instead of at the Vancouver bunkers. The statistics filed do not show that their original output is increasing, but, if anything, is decreasing, and has been doing so for a number of years. Evidence was also given to the effect that no dividends had been declared since the incorporation of the employer's company.

In considering this evidence the Board does not find itself in a position to advise any fixed rate of wages higher than the present rate, that is, the base rate plus the 30 cents bonus. The Board would recommend that the bonus should be made a certainty or fixed rate during the life of the Agreement, and not be left an uncertain quantity, as it is under the present Agreement. The Board does not consider that the employees should receive any less wages than they are now receiving; any increase over this amount might be by way of bonus as before. We would recommend that the life of any agreement arrived at be for two years.

The question of the manner of working Section No. 5, north, and Section No. 7 long wall, was gone into at some length. The work is now being done by day work, and not by contract, and some of the employees think it should be done by contract work. The evidence given on this point on behalf of the employer is to the effect that owing to the difficulties in these places, and the necessity especially in No. 5 north of using machine cutters and of moving the miners from place to place there, it would not be possible to work them to advantage by contract labour. They also showed that where the miners did not make fair miners' wages by day work their pay was made up, and they were not held strictly to the Agreement scale.

The Board feels itself unable to recommend any changes in this respect.

Though not in the Agreement, workers in wet places are given increase in pay on the recommendation of the overmen. There was an opinion on the part of the employees that their allowances in pay should be fixed, but, owing to the fact that the mine is under the sea, the wet places vary from day to day, or from one part of a day to another, making it impossible to specify what places are wet, and what dry, for any length of time, the Board cannot see its way clear to make a recommendation.

The question of the price to be paid to the miners for cutting rock was raised. The agreement provides for a price for removing white rock only. The employees urge that there should be no distinction made between white rock or black rock. The difficulty seems to be that the black rock is difficult in some cases to be distinguished from the coal, and in some cases is merely a very small vein running through the coal seams or black dirt in the coal. The Board realize the difficulty and would recommend that some way be found to meet this objection. As to the questions of extra pay for building up the side

walls with the cog wood, for which a sliding scale of pay is allowed, the Board is not prepared to make any recommendation.

A complaint was made that contract miners were compelled to take up some of their time in unloading cog wood from the cars without being paid; thus lessening their time in getting out coal. In some cases the amount of time would be very small; in no case very long, but the Board think that some consideration should be given by the company to this complaint.

The question of pay to the miners for pushing cars to the face of the coal for loading purposes was also brought up. Extra pay is allowed for them on a sliding scale, to be fixed by the overmen.

Considerable dissatisfaction was expressed on the part of the employees that in the allowance of extras, such as pushing cars, working in wet places, etc., the overmen should be allowed to decide the matter, as in some cases injustice had arisen. The committee for the employees have the right to receive complaints and carry them to the management, and in many cases the troubles are so arranged. In some cases, however, it would seem that the party aggrieved, for some reason, does not complain to the committee. It seems a difficult matter for the Board to make any recommendations. The overmen are necessary in the carrying out of the work, and their personality of fairness cannot be dealt with in advance. The Board must, it seems, leave this matter to the endeavour of the company to deal fairly with its employees and to carry out their Agreement in a fair and equitable manner.

Respectfully submitted this 16th day of December, A.D. 1927.

(Sgd.) D. S. WALLBRIDGE,

(Sgd.) C. H. BARKER.

To:—the Hon. PETER HEENAN,
Minister of Labour.

Minority Report

1204 VICTORIA ROAD, NANAIMO, B.C.

In submitting my report of Board of Conciliation and Investigation instituted to investigate the dispute between the Western Fuel Corporation of Canada and its underground employees I regret not being able to agree with the majority of the Board in their report to you.

The chief matter in dispute was the demand on the part of the employees for the restoration of sixty cents (60 cents) per day, which was taken from the employees in June, 1925. This 60 cents was part of 90 cents which was included in the 1924 agreement, as/or bonus,

which bonus originated as a cost of living bonus, based upon the findings of the Cost of Living Commission instituted during the war period by the Department of Labour.

Evidence was submitted to show that the present bonus would be 67.9 cents per day if based on these findings. The standard of living as expressed in these figures is regarded as being far below a reasonable standard by all parties.

The bonus is now based upon competitive conditions and is expressed in the agreement as follows: "It being mutually understood by the company and its employees that any increase or decrease in the bonus herein mentioned shall be governed by competitive conditions."

The employers in June, 1925, exercised their power and reduced the bonus from 90 cents to 30 cents. This was submitted to after a strike lasting 7 or 8 days. This reduction has had a very serious effect upon the economic and living standards of the miners. Evidence was submitted to show a reduction of \$1.74 in the base rates since November, 1920. Other evidence was submitted by the employees which show many reductions in the rates paid for timbers, cogs and brushing.

Evidence submitted by the employers to show the average wage of contract men being improved, was also qualified by the statement of their representative "that the miners work harder."

The day rate employee having no chance to improve his present wage, his wage remaining fixed, whether working harder or not.

Evidence submitted by the employees shows changes in customs and working conditions, which have proved detrimental to the employees, the employer changing from contract rates of pay to flat rates in certain sections of the mine known as No. 5 North and No. 7 Wall. In the case of No. 5 north, the chief reason given for the change was "That the company might reimburse themselves for the expense in prospecting for this coal." Other reasons were also given, but this seemed to be the chief reason. Some of the miners in this section were paid above the base rate, but this was shown to be governed by the opinion of the overman as to the amount of coal that they produce and not by being placed upon an actual tonnage basis as in the agreement. This is one of the causes for much dissatisfaction.

The employers submitted evidence indicating difficulty to meet competition in the market in the form of fuel oil, hog fuel and also a small amount of coal from Washington, U.S.A., Alberta and the interior of British Columbia. In spite of this, their own figures show that

for the years 1924, 1925 and 1926 there is no reduction in their sales, and the figures submitted up to date for 1927 show a possible improvement over previous years. A statement purported to have been made by the Hon. William Sloan, Minister of Mines for British Columbia, was submitted, which is as follows: "With continued growth of population and industries in the province, expansion of the coal industry he believes should take place, notwithstanding competition from other coals and from fuel oils."

Selling prices at the mines are shown to be reduced since 1925, but it is also shown that the cost of production is also reduced correspondingly or even in a greater degree. The reduction in selling prices is shown to be 56.5 cents per ton. The reduction in cost of production 61.8 cents per ton. These figures are based on returns up to September this year. An advance of 12.1 cents per ton in the selling price is shown over the selling price of 1926 in the average taken up to September, 1927, which advance will be improved by the end of the year, the last three months of each year having a considerable advance in selling prices and also a reduction in cost of production. This shows the employer in a considerably improved position.

The company did not produce their balance sheets, but merely stated that no dividends had been paid to ordinary shareholders since 1924, when the company was reorganized. It is stated that there are 3,000,000 shares of \$1.00 each of common stock outstanding. There is an issue of 2,700,000 first mortgage bonds bearing 8 per cent, which interest was admitted to be met regularly out of the profits of the business. The failure of the majority of the Board to obtain a balance sheet and more definite knowledge of the financial position of the corporation places them, along with myself, in a position in which it is impossible to make any accurate estimate of the ability of the corporation to meet the demand of the employees for a restoration of the 60 cents a day taken from the bonus in 1925. Their admission of the possibility of an increase is expressed in their report wherein it says: "Any increase over this amount might be by way of bonus as before".

After thoroughly considering the evidence that was submitted, I consider the following as a basis of agreement, not because of its sufficiency to meet the requirements of the employees and their families, but because of the possibility of it being met out of the shown improvement of the company:—

- (1) The deletion of the clause referring to competitive conditions.

- (2) The restoration of at least 38 cents, this to be added to the present 30 cents, making 68 cents, and to be placed on all base rates in the agreement; this will give the equivalent to the cost of living commission findings.
- (3) This to apply from the 1st of October, 1927, and the term of the agreement to be for two years.
- (4) That full recognition be given to establish customs and practices that have existed as working conditions, changes of

conditions only to take place after consultation with the employees or their representatives. Contract work being paid where work is done under conditions as specified in the agreement.

Dated at Nanaimo, B.C., this 19th day of December, A.D. 1927.

Respectfully submitted,
(Sgd.) JOSEPH HITCHEN.

To the Hon. PETER HEENAN,
Minister of Labour.

CANADIAN RAILWAY BOARD OF ADJUSTMENT No. 1

THREE new decisions of the Canadian Railway Board of Adjustment No. 1 have been received by the Department. This board was established by a voluntary agreement concluded in 1918 between the various railway companies and certain of the railway labour organizations, its original purpose being to secure uninterrupted service on the railways during the continuance of the war. The Board consists of six representatives of the railway companies and six representatives of labour, one for each of the following railway brotherhoods: the Brotherhood of Locomotive Engineers, the Brotherhood of Locomotive Firemen and Enginemen, the Order of Railway Conductors, the Brotherhood of Railroad Trainmen, the Order of Railroad Telegraphers, and the United Brotherhood of Maintenance of Way Employees and Railway Shop Labourers. Earlier decisions were outlined in the *LABOUR GAZETTE*, October, 1927, and in previous issues. The third report of the proceedings of the Board, covering the decisions rendered from October 1, 1923, to September 30, 1927, was issued as a supplement to the issue of November, 1927. The new decisions were as follows:—

Case No. 305—Canadian National Railways, western region, and Brotherhood of Railroad Trainmen.

A question arose as to the payment of trainmen for "preparatory" time under the rule requiring these employees to be on duty 30 minutes before the time set for the departure of trains. The rule lays down that payment for this half-time period is to be at "through freight rates." The employees contended that this was an arbitrary payment, and that it should be additional to the monthly mileage guaranteed to trainmen. The company, on the other hand, claimed the right to use the

30 minutes to make up the monthly guarantee. When the case first came before the Board some doubt existed as to past practice, and the secretary was instructed to obtain further information on the question in dispute. Subsequently it became apparent that the company's contention was in keeping with precedent, and the contention of the employees was not sustained by the Board.

Case No. 311—Canadian Pacific Railway, western lines, and Brotherhood of Maintenance of Way Employees.

A train became derailed as the result of the spreading of the rails. The section foreman in whose section the accident occurred was subsequently reduced to the rank of permanent sectionman for permitting defective track conditions to exist and for failing to take immediate steps to protect trains. The employees contended that the general condition of the track at the point was such that it could not have been kept in a perfectly safe state. The claim of the employees was not sustained, but under the special circumstances, and considering the good record of the employee concerned, the Board suggested that his status should not be reduced permanently.

Case No. 312—Kettle Valley Railway Company and Brotherhood of Locomotive Engineers and Brotherhood of Locomotive Firemen and Enginemen.

Owing to a derailment on the main track it became necessary to detour certain trains in the subdivision, involving a change in terminals for the engine crews. The employees contended that when a change was made there should have been a readjustment of crews to compensate for loss of mileage on

the assignment, and that at least a seven days' notice should have been given in accordance with the articles of the agreement dealing with the assigning of men and the naming of terminals. Article 20, clause "h", reads as follows:—

"Senior engineers and firemen to have choice of passenger, mixed, pusher and way freight runs on any subdivision, and will be assigned thereto seven days after change of time table, and will stay with run chosen during the period time table is in effect."

Article 26 reads as follows:—

"Terminals for all runs will be named when the runs are established."

The company stated that it was not their intention to deviate from the general practice prescribed in the articles quoted, but in the present circumstances it was impossible to bulletin changes in assignments for seven days before they became effective.

In view of the unusual conditions in this case the claim of the employees was not sustained, but the Board stated that this decision should not be taken to imply that employees can be tied up between terminals except in accordance with the terms of the schedule.

STRIKES AND LOCKOUTS IN CANADA DURING DECEMBER, 1927

THE number of strikes and lockouts in existence in Canada during December was eleven as compared with sixteen the preceding month. The time loss for the month was greater than during December, 1926, being 6,102 working days as compared with 4,365 working days during the same month last year.

Date	Number of disputes	Number of employees involved	Time loss in working days
Dec. 1927	11	321	6,102
Nov. 1927	16	1,868	11,718
Dec. 1926	10	198	4,365

The record of the Department includes lockouts as well as strikes, but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees at its commencement and lasting at least one working day. Disputes of less than one day's duration, and disputes involving less than six employees, are included in the published record only when ten days' or more time loss is caused, but a separate record of such disputes is maintained in the Department, and the figures are given in the annual review.

The figures printed are inclusive of all disputes which come to the knowledge of the Department, and the methods taken to secure information practically preclude probability of omissions of a serious nature. Information as to a dispute involving a small number of employees, or for a short period of time, is frequently not received until some time after its commencement.

Eight disputes, involving 197 workpeople, were carried over from November. Five of the strikes and lockouts commencing prior to December terminated during the month, and the three strikes and lockouts commencing during December also terminated during the month. At the end of December, therefore, there were on record three strikes and lock-

outs, as follows: bakers, Montreal, P.Q.; men's clothing factory workers, Montreal, P.Q.; and stonecutters, Montreal, P.Q.

The record does not include minor disputes such as are described in a previous paragraph, nor does it include disputes as to which information has been received indicating that employment conditions are no longer affected, although the unions or organizations concerned have not yet declared them terminated. Information is available as to six such disputes, namely, fur workers at Winnipeg, Man., September 25, 1926; plumbers at Windsor, Ont., April 5, 1927; electrotypers at Toronto, Ont., December 20, 1926; sheet metal workers at Montreal, P.Q., September 1, 1927; ladies' clothing factory workers, Toronto, Ont., June 30, 1926; and plasterers at Vancouver, B.C., October 3, 1927, the last two being put on the list in December.

Of the disputes which commenced during the month, one was for an increase in wages and changes in conditions, one against a change in working conditions, and one was against the employment of a non-union worker. Of the eight strikes and lockouts which terminated during the month three were in favour of the employers, four in favour of the employees, and one was partially successful.

The following paragraphs give particulars in regard to certain disputes, in addition to information given in the tabular statement.

LADIES' CLOTHING FACTORY WORKERS, TORONTO, ONT.—In this dispute, commencing in June, 1926, all the employees involved are reported to have secured work elsewhere, and the dispute is, therefore, recorded as terminated and placed on the list of those in which employment conditions are no longer affected but the organization concerned has not called off the strike. The International

Ladies' Garment Workers' Union has taken action against the employers concerned and their association, claiming damages for an alleged breach of agreement entered into in February, 1925 (LABOUR GAZETTE, June 1925, p. 619), alleging the employees had been locked out contrary to the terms of the agreement. The case came up for hearing on December 16, judgment being reserved.

CAP FACTORY WORKERS, HAMILTON, ONT.—As reported in the December issue of the

LABOUR GAZETTE this dispute was due to a demand for a union shop and a reduction in hours from 49 to 44 per week. The demands of the employees being granted and an agreement being signed, work was resumed on December 7, 1927.

BLACKSMITHS, ETC., SASKATOON, SASK.—This dispute, commencing in May, the workers demanding an increase in wages and recognition of union, appears to have lapsed at the beginning of December.

STRIKES AND LOCKOUTS DURING DECEMBER, 1927

Industry, occupation and locality	Number of employees involved	Time loss in working days	Remarks
(a) Strikes and Lockouts occurring prior to December, 1927.			
MANUFACTURING—			
<i>Vegetable Foods—</i>			
Bakers, Montreal, P.Q.....	73	1,898	Commenced May 1, 1927, for increase in wages. Unterminated.
<i>Clothing (including knitted goods)—</i>			
Ladies' clothing factory workers, Toronto, Ont.....			Alleged lockout, commenced June 30, 1926; enforcement of non-union conditions. Employees secured work elsewhere by beginning of December.
Men's clothing factory workers, Montreal, P.Q.....	40	1,040	Alleged lockout, commenced November 8, 1927: union conditions as to overtime. Unterminated.
Cap factory workers, Hamilton, Ont.....	9	45	Commenced November 23, 1927, for union shop and reduction in hours. Terminated December 7, 1927, in favour of employees.
<i>Iron, Steel and Products—</i>			
Blacksmiths, etc., Saskatoon, Sask.....			Commenced May 17, 1927, for increase in wages and recognition of union. Lapsed at the beginning of December.
<i>Non-Metallic Mineral Products—</i>			
Stonecutters, Montreal, P.Q....	40	1,040	Commenced June 10, 1927, for increase in wages. Unterminated.
CONSTRUCTION—			
<i>Buildings and Structures—</i>			
Plasterers, Vancouver, B.C.....			Commenced October 3, 1927, to enforce employment of union helpers. In favour of employees.
Elevator erectors, Toronto, Ont.....	35	35	Commenced November 29, 1927, to maintain union wages and working conditions: terminated December 2, 1927, in favour of employees.
(b) Strikes and Lockouts commencing during December, 1927.			
LOGGING—			
Pulpwood cutters, Timmins District, Ont.....	70	420	Commenced December 1, 1927, for increase in wages and changes in conditions; terminated December 7, 1927; partially successful.
MANUFACTURING—			
<i>Clothing (including knitted goods)—</i>			
Ladies' clothing factory workers (cloak makers), Toronto, Ont.....	38	608	Commenced December 3, 1927, against change in working conditions; terminated December 22, 1927, in favour of employees.
Ladies' clothing factory workers (embroidery workers), Toronto, Ont.....	16	16	Commenced December 21, 1927, against employment of non-union workers; terminated December 23, 1927, in favour of employer.

PLASTERERS, VANCOUVER, B.C.—In this dispute, commencing in October to enforce the union rule as to the employment of union helpers for plasterers, one of the employers concerned agreed to the demands of the workers shortly afterwards, and the other employer replaced the strikers. By the end of November, however, this contractor also agreed to the terms of the union.

ELEVATOR ERECTORS, TORONTO, ONT.—As reported in the December issue of the *LABOUR GAZETTE* the strike of elevator erectors in Toronto who ceased work on November 29 in order to secure the carrying out of an agreement terminating a previous dispute, was settled on December 2, the demands of the employees being granted.

PULPWOOD CUTTERS, TIMMINS DISTRICT, ONT.—Pulpwood cutters employed in the district near Timmins were reported to have demanded an increase in wages and certain changes in conditions at the camps, and, the demands being refused, work was held up from December 1 to December 7. Complete

reports as to the dispute have not been received but it appears that some of the demands were granted.

LADIES' CLOTHING FACTORY WORKERS (CLOAK MAKERS), TORONTO, ONT.—Employees in a ladies' clothing factory in Toronto became involved in a dispute on December 3 when the employer organized a new Department. Objecting to this, the employees asked the management to negotiate on the matter but were refused and it is claimed that some employees were locked out. The union called a strike on December 6. Later negotiations between the parties resulted in an arrangement satisfactory to both parties and work was resumed on December 22.

LADIES' CLOTHING FACTORY WORKERS (EMBROIDERY WORKERS), TORONTO, ONT.—Ladies' clothing factory employees, embroidery workers, ceased work on December 21, owing to a dispute as to the application of the union rule as to union membership. Work was resumed on December 23, the union conceding the contention of the employer.

STRIKES AND LOCKOUTS IN GREAT BRITAIN AND OTHER COUNTRIES

THE latest available information as to strikes and lockouts in various countries is given in the *LABOUR GAZETTE* from month to month, bringing down to date that given in the issue for February, 1927, as an addendum to the review of strikes and lockouts in Canada during 1926. The latter review included a table summarizing the principal statistics as to strikes and lockouts since 1918 in the several countries for which such figures were available. Many countries publish these statistics only once each year, the figures being issued in some cases after an interval of as much as two years, so that for such countries the latest figures are not for relatively recent dates.

Great Britain and Northern Ireland

The number of trade disputes reported as beginning in November was 16, and 15 disputes were still in progress from the previous month. The total number of workpeople involved was 10,600, and the time loss was 51,000 working days.

Of the 16 disputes beginning in November, 8 arose on wages questions, 3 on questions respecting the employment of particular classes or persons, 3 on trade union questions and 2 on other questions.

Settlements were reached in 15 disputes, one in favour of workpeople, 5 in favour of employers and 9 ended in compromise. In another case, work was resumed pending negotiations.

On November 15, 170 tailors at Leeds ceased work over a dispute respecting the employment of boy improvers and others. A week later 3,500 pressers, machinists, cutters, etc., went out in sympathy with the tailors. On November 23, an agreement was reached providing that boys learning tailoring be provided with facilities for doing so.

United States

Preliminary figures for October show 39 disputes beginning in the month and 57 in effect at the end of the month. The number of workers involved in disputes in effect at the end of the month was 83,387 and the time loss for all disputes 2,760,095 working days.

Bituminous Coal Miners' Dispute.—Following the request made to the President of the United States by union representatives and officers of the American Federation of Labour, referred to in the *LABOUR GAZETTE* for December, the Secretary of Labour called a conference of operators and union leaders during the

week of December 12, but the principal operators refused to be represented and no progress was reported to have been made toward a settlement. The miners having been on strike since April 1, and a great number having been evicted from the company houses, are reported to be dependent to a great extent upon relief provided by union members, etc.

Lignite Coal Miners' Dispute, Colorado.—Disorders continued to be reported at the mines in Colorado, and the National Guard was called out to protect the strikebreakers at work in several mines, a number of arrests being made. It has been reported that certain mines in this district have increased wages by amounts reaching as high as \$1 per day.

Netherlands

During October, 10 disputes began, involving 734 workers.

Poland

In the first quarter of 1927, 121 strikes began, involving 1,392 establishments and 114,536 strikers. The total time loss was 1,186,312 working days.

Australia

During the second quarter of 1927, 85 disputes were reported, involving 110 establishments. The number of workpeople involved directly and indirectly was 31,698 and the time loss 295,657 working days. The estimated loss in wages during this quarter was £303,081.

New Zealand

For the first nine months of 1927, 29 disputes were reported involving 31 establishments and 3,093 workers. The number of working days lost was 9,013 and the approximate loss in wages £8,529.

International Congress on Industrial Relations

The International Association for the study and improvement of Human Relations and Conditions of Industry, a new organization having its headquarters at The Hague, Holland, will hold its first triennial congress at Girton College, Cambridge, England, from June 28 to July 3. The subject of the congress will be: The Fundamental Relationship between All sections of the Industrial Community. It will be open to members and to persons introduced by members.

The aim of the Association is indicated by its title. Membership is open to all who are engaged in any undertaking involving the employment of persons, or who are occupied in work of scientific research or social significance bearing on industry, and who are in sympathy with the aims of the Association.

A meeting ground is thus offered within industry itself for the fulfilment of these aims by co-operation among directors, managers, engineers, forepeople, general employees, personnel (welfare) workers, psychologists, factory doctors, factory inspectors, members of employers' and workers' organizations, industrial research workers, educationalists, industrial social workers.

At the present time the Association draws its members from 26 countries, thus giving a wide scope to its studies and findings.

Since its inception at Flushing, Holland, in 1925, the Association has organized two meetings, the first in 1926 at the Rigi-Scheidegg, Switzerland, the second in 1927 at

Baveno, Italy, which took the form of a summer school.

The program of the congress containing all particulars will be published early in the New Year. Persons desiring to receive a copy should communicate with the secretariat headquarters now situated at Hague, Holland (Javastraat 66).

The coroner's jury which investigated the circumstances surrounding the death of Charles Wassgren, a logger who was killed on December 13 in the course of his employment at a camp at Great Central Lake, near Alberni, Vancouver Island, expressed the opinion that "the logging companies are not taking stringent enough precautions to protect the lives of their employees."

A group of model tenements, built by the Fred L. Lavanburg Foundation, for persons with weekly salaries of not more than \$25, were opened in New York on the lower east side on December 28. Owing to a lack of applicants earning \$25 a week it was necessary to raise the salary limit to include persons earning from \$30 to \$50 a week. The buildings contain 115 apartments, six-storey houses having been divided into apartments of three, four and five rooms, with electric lights, steam heat, tiled bathrooms, brass plumbing, gas ranges, iceboxes and wash tubs.

WORKMEN'S COMPENSATION FOR DOMINION GOVERNMENT EMPLOYEES IN 1926-7

THE annual report of the Department of Railways and Canals for the fiscal year ending March 31, 1927, contains a statement showing the number of claims and payments made to employees of the Dominion Government in respect to workmen's compensation.

Since the adoption of the Employees' Compensation Act, chapter 15, Statutes of Canada, 1918, Dominion advances on account of compensation, pensions, etc., and administration have amounted to \$1,655,268.31. As the Department of Railways and Canals was obliged to maintain a staff for the purpose, owing to the Canadian Government Railways being chiefly concerned, that department took over the administration of the Act for the other departments of Government which were concerned in lesser degree.

During the fiscal year ended March 31, 1927, 2,618 claims were dealt with and \$316,721.47 disbursed on compensation or pension account, and \$24,246.76 on administration. Of this total, 1,746 were claims involving both compensation and medical aid, 679 were medical aid only, and 256 pensions. Of the total of 2,681, 2,038 had to do with Canadian Government Railways, involving \$226,212.18, and 117 the canals, involving \$23,862.21. Next in importance numerically was the Department of Public Works with 116 cases, involving an expenditure of \$16,155.93; Marine and Fisheries, 54 cases, and \$13,169.36; Interior, 105 cases, and \$12,538.75; National Defence, 43 cases, and \$7,135.62; Hudson Bay Railway, 136 cases, and \$6,198.68; Soldiers' Civil Re-establishment, 15 cases, and \$3,815.82, etc., etc.

The following table shows the payments made under the Act from 1918 to March 31, 1927, by provinces:—

Board	Dominion expenditure including amounts advanced	Disbursements	
		Compensation, pensions, etc.	Proportion administrative expenses
	\$	\$	\$
Nova Scotia.....	220,515	185,553	30,466
New Brunswick.....	514,339	451,521	52,679
Ontario.....	479,650	456,207	17,007
Manitoba.....	332,986	278,099	41,699
Alberta.....	51,111	41,155	5,804
British Columbia.....	88,809	82,075	4,453
Province of Quebec and miscellaneous.....	285,748	285,809	60
Province of Ontario (Medical Aid).....	163	163
Province of Saskatchewan.....	1,115	1,115
Interest deposited to credit of casual revenue.....	11,971
Totals to March 31, 1927..	1,986,409	1,781,699	152,049

The Employees' Compensation Act of 1918 provides as follows:—

1. (1) An employee in the service of His Majesty who is injured and the dependants of any such employee who is killed, shall be entitled to the same compensation as the employee, or as the dependant of a deceased employee, of a person other than His Majesty would, under similar circumstances, be entitled to receive under the law of the province in which the accident occurred, and the liability for and the amount of such compensation shall be determined in the same manner and by the same boards, officers or authority as that established by the law of the province for determining compensation in similar cases, or by such other board, officers or authority or by such court as the Governor in Council shall from time to time direct.

(2) Any compensation awarded to any employee or the dependants of any deceased employee of His Majesty by any board, officer or authority, or by any court, under the authority of this Act, shall be paid to such employee or dependant or to such person as the board, officer, or authority or the court may direct, and the said board, officer, authority and court shall have the same jurisdiction to award costs as in cases between private parties is conferred by the law of the province where the accident occurred.

The Act was amended in 1925 so as to provide that compensation should include medical and hospital expenses, the new section being retroactive in its operation to May 24, 1918.

Workers' Savings in the United States

A statement recently made public by the Bureau of Labour Statistics of the United States Department of Labour summarizes the results of a study of various methods used by employers to encourage thrift among their employees.

The report is based upon a recent survey of 430 concerns. Of these, 196 companies reported an effort to induce their employees to put something in the bank each pay day. A total of 29 concerns reported building and loan associations or some form of financial assistance in building or buying homes. There were reported 72 loan funds maintained either by the company or as a part of the savings plan. Special schemes for the sale of stock to employees were reported by 123 companies, while about 50 reported profit-sharing bonus systems. Co-operative stores were reported by only 21 concerns, but many companies promote co-operative buying of certain commodities or allow employees a discount on their own products. Vacation and Christmas savings funds were also reported.

WORKMEN'S COMPENSATION INQUIRY IN ALBERTA

Memorandum Submitted by Alberta Federation of Labour

THE appointment by the government of Alberta of a special committee to investigate the subject of workmen's compensation in the province was noted in the *LABOUR GAZETTE*, July, 1927, page 700. This committee was appointed in accordance with a resolution adopted by the legislature of the province at its last session. It consists of five representative employers, five representatives of employees, and five members of the legislative assembly. The committee held sessions during the recess, much evidence being heard from the parties interested in compensation.

A report will be presented by the committee at the forthcoming session of the legislature, and it is probable that legislation may be introduced in accordance with the recommendations contained therein. The following memorandum was submitted to the special committee by representatives of the Alberta Federation of Labour:—

Memorandum of the Alberta Federation of Labour

Mr. Chairman and Gentlemen,—The Alberta Federation of Labour is the central organization of the trade unions of Alberta. It acts also as the provincial executive of the Trades and Labour Congress of Canada. It is a legislative body maintained chiefly for the purpose of initiating legislation of interest to working people, and seeking to make legislation that has been adopted more satisfactory to these for whose benefit it has been enacted. The Federation represents here to-day, miners, building tradesmen, railway men, civic employees, printers, etc., covering practically all of the organized working people of the Province of Alberta. We respectfully submit, therefore, that we are vitally interested in the question being considered by this committee, since those we represent are those chiefly affected by workmen's compensation legislation and the administration of same.

In making our representations to your committee we believe that it is self-evident that the purpose of workmen's compensation legislation is the provision of compensation to workmen who receive injuries during the course of their employment, and to the dependents of workmen who are fatally injured. The motive behind the legislation is the relief of workmen and their dependents, when by reason of injuries their earning power is cut off or curtailed.

It is true that the Workmen's Compensation Acts of this and most other Provinces of the

Dominion serve the purpose of relieving the employer of direct responsibility for the compensation of workmen who are injured in his employ. That, we submit, is a very satisfactory phase of this form of legislation from the standpoint of the employer, but that is not its fundamental purpose. The primary object of the legislation is compensation and relief for the injured workman, and it appears to us that this should be kept continually in mind when the Workmen's Compensation Act and its administration is being considered.

If the promise stated in the foregoing paragraph is accepted, it would appear that the chief concern of this committee should be, (1) that the provisions of the legislation should insure adequate compensation for injured workmen and their dependants and, (2) that the legislation should be administered in an equitable and sympathetic manner. Our representations to you, therefore, will be based on those two principles.

1. *That the provisions of the legislation should insure adequate compensation for the workmen and their dependents.*

In order to provide this we are of the opinion that certain changes in the present Workmen's Compensation Act are necessary. We, therefore, submit the following suggested amendments to the Act:

- (a) Amend Section 20, Sub-section 4, to increase the maximum earnings of a workman, upon which assessment shall be paid, to \$2,500.
- (b) Amend Section 52, Sub-section 1, to increase the amount of compensation paid to an injured workman to 75 per cent of earnings based on the actual daily rate of pay at the time of the accident. Also amend other sections of the Act dealing with compensation to injured workmen in conformity with this proposed amendment.
- (c) Amend Section 57, Sub-section 1, to provide that the minimum amount of compensation to an injured workman shall not be less than \$18 per week, except where earnings are less than \$15 per week, when the amount of such earnings shall be paid.

In submitting our proposals for increased compensation we have taken into consideration the fact that the Medical Aid fund, under the Alberta Act, is provided solely by an assessment on the workmen. This levy provided the sum of \$186,969.56 in 1926, which

otherwise would have been added to the assessment on employers. We believe, therefore, that if compensation paid to injured workmen is increased to 75 per cent of earnings, the proportionate amount, for which employers will be assessed, will not be as great in Alberta as in some other provinces of the Dominion where compensation paid to workmen is 66 $\frac{2}{3}$ per cent of earnings. We believe that this method will be more beneficial to injured workmen, and at the same time will not make the assessment on employers any heavier than in some other provinces. We believe, that should any less than 75 per cent of earnings be paid to injured workmen in Alberta, the total cost of medical aid should be levied on industries within the scope of the Act.

- (d) Amend Section 49 to provide that where any beneficiary named therein receives \$35 per month, the amount be increased to \$50 per month.

In submitting this amendment we maintain that the dependents of fatally injured workmen should receive an amount equal to, at least, the amount paid to soldier's widows. We also believe that an amount paid to a widow should be sufficient to provide for the establishment of a home and to meet the necessary running expenses of same.

- (e) Amend Section 49, Sub-section 1, Clause C, to provide payment of \$12 per month to all dependent children. This amount will only be sufficient to meet the actual cost of maintaining the child.
- (f) Amend by deleting Section 35 from the Act.

In a great number of countries reciprocal legislation has been passed, and for Alberta to continue its policy of limitation is not in accordance with to-day's general practice:

- (g) Amend Section 49, Sub-section 1 (a) to increase the amount of expenses for burial of the workman to \$150.
- (h) Make provision in the Act that all persons required to receive medical attention, at the request of the Board, outside of their own locality, shall be paid transportation and reasonable subsistence allowance.

The Act should also be amended to provide:—

- (1) That compensation cover all accidental injuries and industrial ailments arising out of or in the course of employment.
- (2) That efforts be made to provide for the re-establishment of permanently injured workmen.

- (3) That when injured workmen have been awarded total disability compensation, the same shall be continued until he is able to resume his former occupation or has been offered other suitable and equally remunerative employment, and that if such injured workman has suffered a permanent, partial disability, but upon the report of the attending physician is able to do light work, the total disability payments should be continued until suitable employment has been provided.

- (4) There has recently been created a Board of Review at the Alberta University and we believe that the Act should be amended to provide for the continuance of this Board by legislation.

- (5) Where by reason of some form of total disability an injured workman required extra attendance, provision should be made for same in addition to compensation.

- (6) We believe that the scope of the Act should be widened to include a number of workmen in various occupations who are not now covered by the Act. In this connection we would refer the committee to Section 16, Sub-section 4, which apparently is intended to provide for the payment of compensation to workmen engaged in casual employment. Regulation 8 of the Compensation Board restricts unduly the operation of said Section.

2. *The legislation should be administered in an equitable and sympathetic manner.*

The manner in which workmen's compensation legislation is administered is as important as are the provisions of the legislation itself. If the fundamental purpose of the legislation is not kept uppermost in mind by those in charge of administration, that purpose will in many cases be defeated and the legislation cease to function in the manner in which it is intended that it should.

The compensation paid to an injured workman should not in any sense be considered as a donation. It is a right which is recognized and provided by the law through the Workmen's Compensation Act.

Since the chief purpose of the legislation is to provide compensation and relief for injured workmen and their dependants, the Act should be administered in a manner sympathetic to those who find themselves in need of the relief it provides. Because of the purpose of the Act, an injured workman or his dependants should at all times receive the benefit of any reasonable doubt which may

exist relative to the interpretation of the provisions of the Act, or in connection with the opinions of medical men regarding the state or extent of an injury. Our meaning in this connection may be made clear by reference to a recent example of what we would term the antithesis of the attitude which should be adopted in the administration of the Act. A man named Frith was injured in a mine at Drumheller in November, 1926. The medical referee of the Compensation Board ruled that the injured workman had a hernia of congenital origin, and he therefore recommended that compensation should not be paid, despite the fact that the workman had had no apparent disability before he met with the accident. The workman and his agents pressed for a review of the case, and it was finally referred in June, 1927, to the Medical Board set up at the University of Alberta. It happened that the original Board, which had been appointed for the review of such cases, was not available at this time and, at the request of the Compensation Board, a substitute Board consisting of three eminent medical men was appointed. This Board examined the workman, taking X-rays, etc., and also examined the files relating to the case. After doing so it made a unanimous recommendation that the workman should receive compensation from the date of the accident. The workman and those acting for him naturally concluded that the incident was closed insofar as any dispute about paying compensation was concerned. But, not so. The Compensation Board, acting on the recommendation of its medical officer, still refused to recognize the claim of the workman but insisted that the case should be referred to another board of reference. It so happened that the decision again went against the Compensation Board, and it was compelled, however reluctantly, to agree to pay compensation to the workman. Thus the case dragged on for a whole year before the workman received what was his right under the Act. But even more serious than the delay is the fact that if there had not been aggressive representation made on his behalf, it is very doubtful if he would have received just treatment at all. We believe that such a procedure is not in conformity with the basic purpose of the Act. And while it is true that the number of cases in which there is dispute constitutes a comparatively small percentage of the total number of cases, the incident here referred to is not an isolated one and it reveals an attitude which should not be tolerated.

In the administration of the Act, the function of the medical referee is an ex-

ceedingly important one from every point of view. He should be a man whose ability and experience is unquestioned, and who is recognized as an outstanding member of his profession. This is necessary in order that there may be the utmost confidence in his decisions. We appreciate that in order to secure such a man the salary must be sufficiently large to attract leaders in the medical profession.

We feel that it is impossible to too strongly impress upon this committee the urgent necessity of making provision for sympathetic and equitable administration of the Act. There appears to have grown up, in connection with the administration of the Alberta Act, an assumption that the chief function of the administration is to conserve at all costs the funds of the board, even at the expense of injured workmen in whose interest the legislation was enacted. We are convinced that there must be a change in this regard if those coming under the Act are to have confidence in its administration.

Because of the dissatisfaction which has been caused by the fact that injured workmen have not, in many cases, received the consideration to which they were entitled, there has evolved in some quarters a desire for some form of appeal from the decisions of the Compensation Board. The attitude of the Trades and Labour Congress of Canada on this matter, as expressed in a resolution passed at its 1927 convention, is as follows:—

“That representatives of Labour throughout Canada be urged to oppose the creation of appeal boards set up for the purpose of making final decisions on claims for compensation, thus closing the door for the review of such claims.”

The Alberta Federation of Labour concurs in that view. We are opposed to anything approaching the system which prevailed before the present Act came into force. We believe that, given equitable and sympathetic administration of the Act, no appeal from decisions of the Board will be necessary or desirable. We want to again draw attention to the fact that any sincere agitation for a place of appeal is the result of a pronounced feeling that there has been a lack of that sympathetic administration which might reasonably be expected in connection with legislation that is designed to bring compensation and relief to injured workmen and their dependants.

Respectfully submitted,

ALBERTA FEDERATION OF LABOUR,

Secretary.

Nova Scotia Fishermen and Workmen's Compensation

In the *LABOUR GAZETTE*, August, 1927, pages 829-830, reference was made to the fact that the Government of Nova Scotia had appointed Mr. Carl D. Dennis, of Amherst, under the Public Inquiries Act, to inquire into the position of the fishing and lumbering industries in relation to workmen's compensation in the province. At a meeting held in Lunenburg the commission heard the evidence of a number of witnesses, including several fishing captains. A petition was presented by Mr. J. J. Kinley, containing the following recommendations:—

(1) "That in view of the large amount of money annually voted for the assistance of relief societies in other industries, which in addition thereto receive the benefits of the Workmen's Compensation, it be recommended to the Government of Nova Scotia that it annually appropriate similar sums for the relief of the burden thrown upon the fishing industry by

the heavy assessments of the Workmen's Compensation Board.

(2) That if the Workmen's Compensation Board does not concur in the contention of your petitioners, it be recommended to the Government of Nova Scotia that it apply to the Supreme Court of the Province for an interpretation of Section 59(d) of the Workmen's Compensation Act, with a view to ascertain whether that section provides for the creation of one disaster fund which can be drawn upon to avoid increased assessments upon any industry or group of industries suffering from a disaster or disasters or whether that section provides for individual disaster funds for individual industries or groups of industries, and that each industry or group of industries in case of disaster is limited to the amount that it individually has contributed to such disaster fund.

(3) That it be recommended to the Government that the rates of assessment upon the vessels engaged in the fishing industry shall not at any time be greater than the rates in force during the year 1926."

INDUSTRIAL RESEARCH IN CANADA

AN account of the industrial research work carried on in the Dominion at the present time was given in the *LABOUR GAZETTE*, June, 1926, and March, 1927, where the constitution and work of the National Research Council of Canada were described. This council was established in 1916 for the purpose of stimulating research at a comparatively small cost to the public treasury, and of building up as effective an organization as possible, on a basis of voluntary service. Existing organizations with their equipment and trained scientific investigators, have been enlisted in this work. During the year 1925-26, for example, forty-two specific investigations were in progress in various Canadian laboratories, each of which was directed, without remuneration, by a Canadian scientist possessing special qualifications for the work entrusted to him. In the provincial field a Scientific and Industrial Research Council was appointed in Alberta in 1921, the work of investigation being carried on by special investigators acting in collaboration with members of the provincial university staff. Labour organizations have repeatedly given their approval to proposals for developing research work, and since 1925 the Trades and Labour Congress of Canada has had a representative on the Research Council.

New Federal Proposals

The Dominion Government is now considering the question of extending the work of the National Research Council by establishing national research laboratories. Refer-

ence to the new proposals was made at the meeting of representatives of Dominion and provincial governments held at Ottawa last November, outlined in the *LABOUR GAZETTE*, November, 1927, page 1169. On that occasion the Hon. James Malcolm, minister of Trade and Commerce, informed the conference that this question was receiving the most earnest consideration of the federal government. He announced that a plan commensurate with the importance of research for the purpose of developing Canadian industries would shortly be evolved, and stated that at the last session of Parliament a vote of \$170,000 had been passed for the National Research Council. Many representations had been made, he continued, that the vote might reasonably be increased, and the government had announced that next session it would bring down a more extensive plan of expansion. The Council, which is made up of men working gratuitously, last year spent \$170,000, and of this \$80,000 went to the universities for research; \$40,000 for scholarships; and \$30,000 for the Council's own research. The Council made a recommendation for the establishment of a national institution comparable to the Bureau of Standards at Washington, and Mr. Malcolm stated that the government was sympathetic to this proposal. Before any large scheme were embarked upon, however, there must, he said, be a clear understanding to prevent overlapping.

Premier Ferguson, of Ontario, declared that his province had done some valuable research work during the war, and that he had con-

templated going more deeply into it if the central authority did not undertake the work. After Mr. Malcolm had returned and made his announcement last summer, Mr. Ferguson had decided rather than to cross wires to wait and see what policies might be adopted.

Concluding the discussion, Mr. Malcolm declared that a question of such major importance could not be decided in a brief space of time, and that the sympathetic support of the provinces would be necessary.

Proposed Ontario Scheme

The Hon. G. H. Ferguson, premier and minister of Education for Ontario, in the course of a speech delivered in December to a gathering of manufacturers at Toronto, further outlined a plan for the development of scientific industrial research in the province. Mr. Ferguson referred to the high development of technical and university education in Ontario, but he claimed that education was not carried to a sufficiently high standard or to a sufficiently high point. "We have the machinery; we have the equipment, we have the staff of trained men," he continued; "what we need is the opportunity for them after they have had their training—an opportunity to carry on their research work." Having outlined the achievements of organized research work in Great Britain, the United States, Germany and Japan, Mr. Ferguson proceeded to outline a plan for Ontario. "I believe the place to establish research laboratories and organizations is in the atmosphere that lends itself to such work. I would not say that these things must be under the control of a university or a government, but I say they should be associated with universities and educational institutions, where the men are available and the students are there to carry on this work, rather than establishing an institution at Ottawa, which will, to some extent, at any rate, detract from its immediate usefulness.

"I have in mind an ambitious scheme of my own, and perhaps we may establish our own institution. I have in view the idea that industry should take part in this thing and contribute to it. I think we should have the opportunity, and if necessary, I would consider favourably the passing of legislation to create a board upon which industry as well as the university would have representation. The board would be the administrative council, and among its duties would be the assigning of whatever moneys were available to the different branches which would include investigation in minerals, in textiles or in everything else—the branches would all report to that council board. I believe that with the co-operation of industry, with the assist-

ance and under the direction of the trained men at the university, and with a whole hearted enthusiastic backing of the government—which you will have—we can make a great success of industrial research in the province of Ontario.

"May I tell you the plan I have in mind," Mr. Ferguson continued, and I discussed it with one of the great captains of industry, and he was good enough to say he thought it was sound—a research endowment of \$2,000,000 which would give us annually \$100,000. If that could be raised over a period of five years in instalments we would have the first year, \$20,000 and so on until we got our hundred thousand dollars. The government is prepared to give the use of a building free to start this organization for a period of five years; because we must start in a small way and expand and grow. If you collected twenty per cent of your two millions in the first year—you put up a million and the government will put up a million—put up enough to give us twenty thousand the first year and carry it on until the end of your five years; you would have available \$100,000 a year which would do a tremendous lot toward the investigation and solution of the problems of nature and of industry.

"That, simply and shortly, is the idea I had in mind. The Government of Ontario is prepared to co-operate with you and with the Dominion Government for the development of industry and the business expansion of this great country of ours."

Views of Manufacturers

Leading members of the Canadian Manufacturers' Association state that they will strongly support any plan for the development of industrial research. Mr. S. R. Parsons, former president of the Association, referred to Mr. Ferguson's proposals as follows:

"There can be no doubt as to support forthcoming from industrialists. The plan is not new to them, and they will join in it most heartily. It is the only thing that can really help us at this stage, and if we do not take it up we will lag behind other nations.

"In fact, the need is so great that a committee of engineers was formed to take this matter up, and the Technical Service Council was formed to raise funds. It secured \$20,000 six months ago. That is only an indication that the manufacturers have the right spirit and will get behind this new plan.

"The Technical Service Council was formed by the Canadian Manufacturers' Association to prepare plans whereby graduates of Canadian Universities could be retained in Canada

and absorbed into our industrial life instead of drifting off to foreign countries. Those who were enlisted to raise funds were: Dr. Cody, Sir John Aird, Sir Edward Kemp, C. A. Magrath and myself, and we have practically attained our objective of \$30,000. This, of course, merely shows the attitude of the manufacturers, who will give the research fund all possible co-operation. It will mark a new

era in industrial development in Ontario. We believed that from what other countries were doing we were lagging behind.

"We felt the situation all the more keenly when we took into account the advantage we held in having such unlimited natural resources. It is showing the way to the Dominion Government and will be of tremendous value to the province."

The United States National Bureau of Economic Research

The *International Labour Review*, a monthly publication of the International Labour Office, gives in its December issue a brief description of the constitution and work of the United States National Bureau of Economic Research, as representing a notable and apparently successful experiment in the impartial investigation of controversial questions affecting governments, employers, and employees. The National Bureau was formed on the initiative of a small group of economists and statisticians who were engaged during the war, in various branches of government service dealing with the mobilization of the total resources of the country, and frequently found themselves handicapped by the lack of any exact knowledge of certain fundamental objective facts. During the reconstruction period following upon the war these men came to the conclusion "that peace demands a knowledge of facts even more varied in scope and harder to get than the knowledge demanded by war." It was realized that in time of peace the knowledge of vital economic facts would require to be "broadcasted to the whole public instead of being passed on in confidential memoranda to a few high officers." The Bureau was set up and incorporated as a non-profit-making corporation in the State of New York on January 29, 1920. Its charter states that "The particular objects for which the corporation is formed are to encourage, in the broadest and most liberal manner, investigation, research and discovery, and the application of knowledge in the well-being of mankind; and in particular to conduct, or assist in the making of, exact and impartial investigations in the field of economic, social and industrial science, and to this end to co-operate with Governments, universities, learned societies and individuals."

To secure impartiality and accuracy in its findings, the Bureau has recourse to three chief measures: (1) its research staff is made up of men enjoying a high reputation for scientific research: (2) the type of investigation carried on is essentially the finding and *measuring* of

facts bearing upon economic, social and industrial problems; and (3) the by-laws of the corporation provide for a Board of Directors made up of men representing the most divergent points of view on such problems, to whom all reports of the Bureau must be submitted before publication.

The annual budget of the National Bureau of Economic Research is at present rather more than \$100,000. It obtains the necessary funds in part from annual grants made by certain of the large foundations (Carnegie, Laura Spelman, Rockefeller, etc), in part from extraordinary grants made by the Government or by some organization for special research to be carried out, in part from the sale of its reports, and largely from the sustaining members, now numbering some 500, who, approving of the aims of the organization, subscribe from \$25 to \$1,000 annually. These sustaining members are of the most varied description, including some Governments and Government offices, a number of trade unions, certain employers' associations, Federal Reserve banks, and many business firms, universities and individuals. The reports of the Bureau so far published have centered round two inter-related questions—*income in the United States and the business cycle.*

The Egyptian Government has set up a Commission to study the question of labour in Egypt and to prepare legislation to safeguard the interests of workers and conduce to the reduction of disputes and the maintenance of good relations between workers and employers. The Commission is presided over by the Under-Secretary of State for Justice, and its members comprise two senators and two deputies as well as representatives of the Departments most interested in the question. The first meeting was recently held, and sub-committees were formed to study and report on various branches of the main question.

MOTHERS' ALLOWANCES IN MANITOBA AND BRITISH COLUMBIA

Manitoba

THE second annual report of the Child Welfare Division of the Department of Public Welfare of Manitoba, recently received by the Department of Labour, outlines the work carried on during the twelve months' period ending April 30, 1926. It will be recalled that the Mothers' Allowance Commission was abolished in 1924 and its functions transferred to the Child Welfare Bureau (LABOUR GAZETTE, May 1924, page 373; August, 1924, page 626, etc.). The Child Welfare Division is assisted in its work by many individuals and institutions interested in promoting family welfare in the Province. The report states that the experiment of granting public aid in their own homes to children deprived of their fathers' support was begun in 1911 although the principle of such aid had been applied in a limited way by private agencies for many years prior to this date. It is considered that "the experimental stage has practically passed, and besides the humanitarian reason for its existence there is the economic justification for our legislation." In this respect, the report quotes the opinion of the Pennsylvania State Board of Education as follows: "It is actually cheaper in dollars and cents to maintain children in their own homes than to support them in institutions, and 'home-made' children, cared for by their own mothers, have the best chance of becoming healthy normal citizens." However the report considers that such emphasis is misplaced; that the important consideration is what it costs the child; and that "deprivation of his own home is a very serious thing for any child."

In Canada, five provinces have similar legislation but lack uniform administration. Similarly 42 of the States have adopted this principle with varying adequacy in regard to the amount of allowance granted.

The report observes that certain fundamental principles must be observed if such laws are to be effective child-welfare measures, the essential requirements being as follows:

1. Application broad enough to permit aid whenever by such means a suitable home may be obtained.
2. Age limitation to conform with education and child labour laws.
3. Amount of allowance to be based on the needs of each individual family with due regard to other available resources.

4. Investigation in each case to determine the home conditions and the allowances needed for the proper care of children.

5. Continued supervision in order that the welfare of the children may be protected and the allowance adjusted to meet changing conditions.

6. The protection of the public purse against fraudulent or unwarranted claims and burdens that should be borne by other communities or by individuals morally or legally responsible and able to furnish support.

7. Appropriation sufficient to carry out the purpose of the legislation with respect both to funds required for allowances and to expenses of administration.

At the beginning of the year, 682 families were receiving allowances. This number increased to 713 at the end of the fiscal year, April 30, 1926, being a net increase of 4.5 per cent. For varying periods during the year, 825 families were dealt with. The number of new applications in 1925-1926 showed a marked reduction as compared with the year 1923-1924, thirty-seven fewer families applying for assistance. The number of applications granted also shows a reduction—40 families or a difference of 21.8 per cent. Of the total of 124 families to whom the allowance was discontinued during the year, it is noteworthy that 74, or 59.6 per cent, became self-supporting, and that 33 mothers, or 26.6 per cent were re-married.

British Columbia

The annual report of the Board administering the Mothers' Pension Act of British Columbia for the year ending September 30, 1926, recently received by the Department of Labour, indicates that 374 new applications were received during the year. Applications for reconsideration of previous decisions numbering 666 were also dealt with. For the year ending September 30, 1926, the total expenditure under the Act amounted to \$553,872, of which \$537,760 was paid as assistance and \$16,112 as administration expenses, the percentage cost of administration amounting to 2.91 per cent. During the year 1,161 families, including 3,134 children received assistance. Total payments under the Act since it became effective in July, 1920, have amounted to \$2,952,182.65.

MINIMUM WAGES FOR FEMALE EMPLOYEES IN QUEBEC

Publication of Orders Governing Printing, Book-Binding, Lithographing and Envelope-Making Establishments (1) in Montreal and District (2) in Rest of Province

THE *Quebec Official Gazette*, published in its issue of December 3, 1927, the text of Orders No. 3 and No. 4 under the Women's Minimum Wage Act, governing female employees in printing, bookbinding, lithographing and envelopemaking establishments in the Province. Orders No. 1 and 2, governing employment in the laundry industry, were published in the *LABOUR GAZETTE*, December, 1926, page 1195, and March, 1927, page 271, and the text of Order No. 3 was given in the issue for November, 1927, page 1174.

The Act provides, at section 7, that orders of the Women's Minimum Wage commission become effective 60 days after their publication in the *Quebec Official Gazette*, the commission having authority, however, to extend such delay if circumstances so require. Orders No. 3 and 4 will therefore, in the normal course, come into force at the beginning of February.

It will be recalled that Order No. 3 governs female employees in printing, bookbinding, lithographing and envelopemaking establishments in the city and Island of Montreal and a radius of ten miles around and beyond the Island. The minimum weekly rate for experienced workers within this district is fixed at \$12.50, and for apprentices \$7, \$8, \$9.50 and \$11 respectively for each of four periods of apprenticeship of six months' duration, the learning period lasting for two years. The text of Order No. 4 is as follows:—

Order No. 4

Governing female employees in printing, bookbinding, lithographing and envelope-making establishments of the Province of Quebec, with the exception of the city and Island of Montreal and a radius of ten miles around and beyond the Island.

1. *Minimum*: No wage shall be less per week for the regular recognized working period of the establishment than is set forth in the following table:

<i>Experienced Workers</i>	\$9.00
<i>Apprentices</i> :	
1st six months.....	6.00
2nd six months.....	6.50
3rd six months.....	7.00
4th six months.....	8.00

2. *Maximum of Inexperienced Workers*: The number of inexperienced workers having less than twenty-four months of apprenticeship shall not exceed one half of the total female working force.

3. *Overtime*: Any female employee doing work in excess of the regular recognized working period of the establishment shall be paid for same at not less than the regular rates, but in all cases according to the prevailing custom of the trade.

4. *Lost Time*: Any female employee losing time during the regular recognized working period of the establishment will be paid proportionately for the actual number of hours worked.

5. *Deductions for absence*: No deduction below the minimum wage line for absence shall exceed the value of the time lost, reckoned proportionately to the regular recognized working period of the establishment.

6. *Waiting*: An employee required to wait on the premises shall be paid for the time spent.

7. *Permits*: The Board may issue permits for lower wages on behalf of aged or handicapped workers. It may also grant permits of variation or suspension of any of these regulations in case of exceptional conditions. Employers and employees are invited to consult the Board regarding any problems which this Order may concern.

8. *Penalties*: Any violation of this Order is punishable by fine. (See Section 12 of the Act).

9. *Posting*: Each establishment shall keep a copy of this Order posted in a conspicuous place.

10. This Order is subject to annual revision by the Board.

11. This Order shall come into force and be effective on March 1, 1928.

GUS. FRANCO, *Chairman*.
EUGENE RICHARD.
J. C. GRIFFIN.
OMER BRUNET.

For the employees, Mrs. L. Cloutier, Miss E. Guay, Miss B. Delisle.

For the Employers, S. G. Chabot, S. R. Paradis, W. Ruel.

For the Public, E. Chapleau, Priest; Mrs. A. C. Drouin, Mrs. E. L. Laferté.

Quebec, November 16, 1927.

Section 12 of the Women's Minimum Wage Act, mentioned in section 8 of the foregoing order, provides that an employer who employs a female worker at a wage lower than the minimum rate fixed by the Board is subject to a penalty not exceeding \$50, recoverable on summary conviction.

TRADES AND LABOUR CONGRESS OF CANADA

Legislative Demands Submitted to Dominion Government

THE legislative programme of the Trades and Labour Congress of Canada was submitted to the Dominion Government at the Parliament Buildings, Ottawa, on January 9. The proposals were presented by the executive officers of the Congress, who were supported by officials of numerous labour organizations throughout Canada. The Dominion Government was represented at the meeting by the following ministers:

The Right Hon. W. L. Mackenzie King, Prime Minister; Hon. Peter Heenan, Minister of Labour; Hon. W. D. Euler, Minister of National Revenue; Hon. J. L. Ralston, Minister of National Defence; Hon. C. Stewart, Minister of the Interior; Hon. E. Lapointe, Minister of Justice; Hon. C. A. Dunning, Minister of Railways; Hon. J. H. King, Minister of Soldiers' Civil Re-establishment; Hon. R. Forke, Minister of Immigration and Colonization; Hon. P. J. Veniot, Postmaster General; and Hon. J. C. Elliott, Minister of Public Works.

The delegation was composed of the following representatives of labour organizations:

Tom Moore, President, and James Simpson, J. T. Foster, R. J. Tallon, Vice Presidents, and P. M. Draper, Secretary-Treasurer, Trades and Labour Congress of Canada.

A. Martel, Executive Board Member, J. F. Marsh and Pat. Green, General Organizers, United Brotherhood of Carpenters and Joiners of America.

T. Broad, Executive Board Member, and F. Lee, Brotherhood of Railway Carmen of America.

W. Jewkes, Secretary, C.P.R. System Federation, Western Lines, Brotherhood of Maintenance of Way Employees.

Chas. Dickie, Secretary, Division No. 4, Railway Employees Department, American Federation of Labour.

J. W. Bruce, General Organizer, United Association of Plumbers and Steamfitters.

A. Bell, Vice President, and A. J. Crawford, General Representative, Sheet Metal Workers International Alliance.

E. Ingles, Vice President, John Noble, James Brodrick, General Representatives, International Brotherhood of Electrical Workers.

E. Hamelin, General President, National Association of Marine Engineers.

Hon. G. D. Robertson, Vice President, Order of Railroad Telegraphers.

E. W. A. O'Dell, General Representative, Boot and Shoe Workers Union.

J. G. A. Decelles, Executive Board Member, The Commercial Telegraphers Union.

A. Gariepy, Vice President, Cigarmakers International Union of America.

W. Coyle, Vice President, International Brotherhood of Boilermakers, Iron Ship Builders and Helpers.

James Somerville, Vice President, International Association of Machinists.

A. D. Dear, Vice President, and R. Maxwell, International Association of Fire Fighters.

F. W. Folker, International Moulders Union.

W. F. Bush, Executive Board Member, United Garment Workers of America.

M. Bergstein and H. Segal, General Representatives, Cloth Hat, Cap and Millinery Workers International Union.

J. J. Reeves, Federated Association of Letter Carriers.

A. Bastien, General Representative, American Federation of Labour.

W. G. Powlesland, Vice President, Brotherhood of Blacksmiths, Drop Forgers and Helpers.

F. Molineux, General Organizer, Brotherhood of Painters, Decorators and Paperhangers of America.

W. P. Covert, Vice President, International Alliance Theatrical Stage Employees.

J. A. P. Haydon, Legislative Vice President, Ontario and Quebec Conference, Typographical Unions.

F. W. Jackson, Secretary, Ontario Provincial Conference, International Union Bricklayers, Masons and Plasterers.

Address by President Moore

Mr. Tom Moore, President of the Trades and Labour Congress of Canada, in introducing the delegation, said that their task had been made easier through favourable action taken by Parliament on several matters which had, for a great number of years, been incorporated in the legislative programs submitted, and also by the departmental action of several Ministers in compliance with the requests of labour organizations.

"I particularly wish," he said, "to convey the appreciation of the organized workers whom we represent, and I believe, I could truthfully say, of the people of Canada for the great step in social progress which has

been taken through the passage of the Federal Old Age Pensions Act, introduced by your Government and passed by Parliament at the last session. Though this measure is not ideal or as generous as labour would have liked it, it will, nevertheless, bring some measure of relief into the lives of thousands of workers who are unable in their declining years to support themselves. Difficulties have yet to be overcome before this measure is available to all citizens of this Dominion and we wish to express appreciation of the efforts put forth by the Minister of Labour, the Hon. Peter Heenan, to have the various Provincial Governments agree to co-operate and thus make the Act nation-wide in its application. We believe this is the first essential step to be taken before amendments to the Act are sought, but, nevertheless, any changes which the Government might see fit to introduce, which would make easier the acceptance of the measure by some of the provinces, would be welcomed. We also wish to commend your Government for introducing and securing the enactment of amendments to the Trade Mark and Designs Act, which now enables our organizations to register and properly protect their union labels, shop cards, etc.

"Other legislation which we note with satisfaction is that creating the Canadian National Steamships, giving effect to our recommendations for the carrying on of the West Indies Steamship Service by a Government-owned line in co-operation with the Canadian National Railways; the Act amending the Workmen's Compensation Act respecting Government employees (1918), which authorizes the Governor in Council to name a Board or authority to deal with such cases in Prince Edward Island; amendments to the Income Tax Act raising the age of exemption of dependent children from 18 to 21 years of age; the Acts passed encouraging further use of Canadian mined coal by subsidy to coking plants and the encouragement to have the same publicly owned by making the subsidy larger in such cases, and the Acts providing for the extension of public ownership by the establishment of Harbour Commissions for the ports of Halifax and St. John.

"We deplore that the Bills introduced by the Government to amend the Immigration Act and the Criminal Code, in harmony with Labour's requests, were rejected by the Senate, but trust that they will be again re-introduced during the forthcoming session.

"We wish to extend our thanks to the Ministers of Immigration and of Health for the compliance with our request for medical examination of immigrants to take place as near

their homes as possible, which has been done by sending over a staff of Canadian doctors to Great Britain and other countries. We wish to also thank the Ministers of Marine and of Public Works for having equalized the wages of marine engineers, etc., and trust that the other departments concerned will soon adopt the same policy on vessels operated by them.

"The action of the Minister of Labour in appointing an additional officer for the Maritimes and a chief officer at Ottawa to secure the better supervision of Fair Wage Clauses in Government contracts is appreciated, as is also the inclusion of these clauses in concessions let for cutting and use of pulp wood from the Crown Lands of Canada.

"Notwithstanding the elimination of all these important matters from our Legislative Program, a great number still have to be reiterated and some new ones introduced, chief of which is the request which will be made for the re-enactment of the Technical Education Act (1919).

Referring to the members of the delegation, Mr. Moore stated that they were all Canadians engaged in looking after the interests of their respective organizations in the Dominion of Canada. The matters to be submitted were, he believed, not only in the interest of the organized workers but of benefit to the country as a whole.

"The large majority of those composing the Trades and Labour Congress of Canada," the president continued, "hold membership in international unions, though several thousands of them are organized in national, provincial and local organizations where it is considered their interest can be better served in that way. Because of this, others unfriendly to the Trades and Labour Congress of Canada have sought to leave the impression that we are less responsible or desirable Canadian citizens, therefore, an innovation has been made this year and a memorandum prepared setting forth the facts as to the status of the body we represent."

Prime Minister's Reply

In thanking the delegation from the Trades and Labour Congress for giving the Government the benefit of its views, the Prime Minister said that the interview this year had been of such a cordial and constructive character that he felt impelled to do more than close the proceedings with the usual assurance that the Government would give careful consideration to their representations.

He wished in the first place to congratulate the Congress on the representative character

of its delegation, whose members had come from every section of the Dominion and from almost every field of labour. It was to him an encouragement and an inspiration to meet the representatives of the Trades and Labour Congress at these annual interviews. In one sense, indeed, the interview this morning had been a conference between representatives of two parliaments—the one a parliament of the workers of the nation, organized in their separate trades and occupations, and the other a parliament of the Canadian people as a whole, organized in their constituencies. The two parliaments were by no means distinct or separate. They were united to a large extent in the personnel of their electorate and equally in their ideals for the national welfare. Such conferences were always helpful, and he wished, on behalf of his colleagues and himself, to say that they were looked forward to each year with cordial anticipation.

Mr. King then complimented Mr. Moore and the other members of the delegation on the admirable manner in which they had prepared and presented their memoranda, remarking that he could not recall any delegation which had excelled it in the presentation of its case.

There was one feature of the discussion to which he wished to call particular attention. His reference was to the comparative industrial peace which had existed in Canada during the past year. It was a splendid thing to be able to make such a statement at a time when many countries were disturbed by the turmoil of industrial conflict, and he felt that the credit for the peace in Canadian industry was due in very large measure to the spirit of good-will and co-operation which was fostered by the Trades and Labour Congress.

In conclusion, the Prime Minister thanked Mr. Moore, as President of the Trades and Labour Congress, for the kind and generous way in which he had commended the action of the Government in giving effect to certain of the recommendations of the Congress during the late session. He wished to assure the members of the delegation that he and his colleagues were sincerely desirous of meeting their wishes in every way possible and that their further recommendations would receive the most careful consideration of the Government.

The Hon. Peter Heenan also spoke, expressing his appreciation of references made by some of the speakers to the work of his department and to his own services as Minister of Labour.

Secretary-Treasurer Draper then presented the following memorandum:—

Status and Membership of the Trades and Labour Congress of Canada

During the forty-three years which have passed since the Trades and Labour Congress of Canada was first founded it has annually, almost without exception, presented to the Federal Government a program embodying the views and desires of the organized workers of Canada respecting legislation affecting their interests.

The Trades and Labour Congress of Canada being composed of, and controlled by, Canadian workers only, has always been recognized by the Government of the day as the authoritative medium through which the organized workers have expressed their opinions and it has been upon its representations that such measures have been enacted as the fair wage regulations, the creation of the Federal Department of Labour, the Technical Education Act, the substitution of State instead of Private Employment Offices, measures governing compensation for Federal employees, Old Age Pensions, etc.

The co-operation of the Trades and Labour Congress of Canada was sought by the Government and freely given during the period of the war, its representatives acting upon such important Boards as the Advisory Committee to the Director of Coal Operations; the Canada Registration Board, the Conservation Commission, Repatriation Committee, etc. Its nominees have also been accepted by the Government in respect to:—The Royal Commission on Industrial Training and Technical Education, Labour Adviser to the Peace Delegation (1919), Labour member on the Soldiers' Civil Re-establishment Commission, the Labour Appeal Board, the Industrial Relations Commission (1919), and subsequent National Industrial Conferences and Inter-Provincial Conferences arising therefrom, Commission on Prison Reform (1921), Advisory Council of the Health Department, the Economic Development Commission, the Employment Service Council, Canadian National Directorate, Conference on Winter Employment, Dominion Council on Women's Immigration, Dominion Fire Prevention Association, National Research Council, and to the annual conferences of the International Labour Organization (League of Nations.)

Answering a question in Parliament on May 20, 1924, as to whether Labour was given an opportunity of nominating its representatives to the International Labour Conferences, the then Minister of Labour (Hon. James Murdock) replied:—

"Section 389 of the Peace Treaty provides that the representative of the employees shall be chosen from the organization chiefly representative of the workpeople, and it is claimed that the Trades and Labour Congress of Canada answers this description in respect to the workpeople of Canada; therefore, under previous governments, and under this government, the Congress has been deemed *without question* to be entitled to name the representative."

From time to time other bodies have endeavoured to supersede the Trades and Labour Congress of Canada as the representative body of organized workers in this Dominion, but such claims have never been justified, and are not now, as the following information extracted from the official publica-

tion of the Federal Labour Department, 'Labour Organization in Canada' for the year ending December 31, 1926, clearly shows:—

The Congress is composed of the Canadian membership of 57 International unions having 1,297 Canadian branches; 2 National unions having 54 branches; 2 Provincial Federations of Labour; 41 Trades and Labour Councils located in the chief industrial centres of the Dominion, and 43 Provincial, District and local Federal Unions chartered directly by the Trades and Labour Congress of Canada.

It is held by some that membership in an international union makes workers of this Dominion less responsible or desirable citizens, but it would not appear that any Federal Government had accepted this, when it is considered that of three members of the Government who have occupied the office of Federal Minister of Labour, including the present incumbent, the Hon. Peter Heenan, all hold membership in international unions.

The Trades and Labour Congress has not only its Dominion Executive, but Provincial Executives, Federations of Labour and Trades and Labour Councils operating in the respective provinces and industrial centres throughout the Dominion, all of which receive the same measure of recognition from provincial and civic authorities as the Dominion Government has always accorded the Trades and Labour Congress of Canada itself.

The membership of the Trades and Labour Congress of Canada is distributed in every province of the Dominion and likewise includes men and women engaged in practically all of the varied industrial occupations carried on in Canada. Without enumerating all of these the following major groups are quoted, compiled from the Table of Membership published in 'Labour Organization in Canada' (December, 1926.)

- (a) *Railroad Workers:* Including telegraphers and dispatchers, locomotive engineers, signalmen, maintenance of way employees, car repair and Federated shop crafts, clerks, freight handlers, station employees, firemen and oilers, etc.
- (b) *Building Trades:* Including bricklayers, bridge and structural iron workers, carpenters, electrical workers, steam and operating engineers, granite cutters, stonecutters, labourers, lathers, sheet metal workers, painters, plumbers, plasterers, etc.
- (c) *Metal Trades:* Including blacksmiths, boilermakers, iron, steel and tin workers, machinists, moulders, pattern makers, metal polishers, etc.
- (d) *Service Trades:* Including barbers, retail clerks, brewery workers, beverage dispensers, hotel and restaurant employees, bakery workers, teamsters, chauffeurs, deliverymen, commercial telegraphers, butcher workmen, news vendors, street railway employees, etc.
- (e) *Marine Workers:* Including marine engineers, longshoremen, seamen, fishermen, etc.
- (f) *Clothing Trades:* Including hat and cap makers, garment workers, ladies garment workers, boot and shoe workers, fur workers, custom tailors, etc.

(g) *Printing Trades:* Including typographical, bookbinders, photo engravers, printers and die stamper, printing pressmen, lithographers, stereotypers, etc.

(h) *Mine Workers.*

(i) *Miscellaneous:* Others besides the above are civil service employees, civic employees of all grades, fire fighters, policemen, theatrical stage employees, musicians, hospital staffs, cigarmakers, broom and whisk makers, janitors and office cleaners, jewelry workers, lumber camp workers, etc.

The membership of the Trades and Labour Congress is just as widely varied in the religious beliefs of its members, the Congress and its affiliated units making no distinction or exercising any authority whatever in that respect.

In conclusion, we desire to direct attention to the fact that membership of the Trades and Labour Congress of Canada is based on actual financial returns submitted by its affiliated units and in that it differs materially from several other groups included in the total compilation of trade union membership in Canada published in "Labour Organization in Canada."

For the purpose of the statements contained herein, the issue of "Labour Organization in Canada," dated December, 1926, has been used as these are the latest official figures available. We can state, however, that those for the current year will only emphasize the predominance of the Trades and Labour Congress of Canada as the number of members reported to the Convention of the Congress in August last, based on per capita tax received during the year, showed an increase of 11,325 members over those of the year ending August 31, 1926.

We contend organized labour should be given membership on delegations, commissions or boards dealing with matters affecting the interests of industrial wage earners, as for instance the Economic Conference (Geneva 1927), the Tariff Board, etc., and the Trades and Labour Congress of Canada, being of a truly representative nature, as set forth in this statement, that it is the proper body to consult on seeking nominations for such appointments.

Memorandum on Technical Education

Organized labour has always recognized the advantages of education and for that reason has, from the inception of the Trades and Labour Congress of Canada, given constant attention to all phases of this important subject. In 1907, the Executive of the Congress, jointly with a large delegation of manufacturers and others, waited upon the Government to make representations as to the advisability of having a commission appointed to inquire into the whole aspect of technical education. This request was not complied with until June 1910 when the commission asked for was appointed, Mr. James Simpson, Vice-President of the Congress, being included thereon as the representative of the workers. After carrying out investigations in European and other countries this Commission submitted a very comprehensive report to the Government in 1913. The war years intervening, however, no action was taken by the Government until the session of Parliament of 1919, when the present Technical Education Act was passed.

This Act provides for the appropriation of \$10,000,000 by the Federal Government to be expended during the ten-year period ending

March 31, 1929. Grants are to be made from this sum to the respective provinces on the basis of population, but not to exceed an amount equivalent to that which the Provincial Government has itself expended on technical education during the year. A proportion of this money, not to exceed 25 per cent of the annual grant can be used for acquiring lands, buildings or on furnishings or equipment.

The assistance rendered by this Act has enabled the provinces to develop a very widespread and efficient system of technical education. In the report of the Technical Education Branch of the Department of Labour for the year ending March 31, 1926, it is shown that during that year 72 municipalities were conducting day classes and 166 were conducting evening classes. There were employed 1,361 day teachers, 2,090 evening teachers, and 27 correspondence teachers, a total in all of 2,478. Out of a total of 88,691 pupils, 29,010 attended during the days; 57,706 attended evening classes, the remaining pupils taking correspondence courses. A large number of these are apprentices continuing their education under the rules of apprenticeship councils formed jointly by employers and trade unions, such as those of the printing industry, railroad shops, and certain sections of the building industry.

Technical education is fully recognized as an essential part of apprenticeship training, enabling Canadian workers to become fully qualified to fill any position in Canadian industry and throughout the entire period of the operation of this Act, employers, labour organizations, educational authorities and all who realize the necessity for technical education as a foundation for industrial efficiency have co-operated fully in carrying out the purposes of technical education as set forth in the Commission's report.

These activities are beneficial to the country as a whole and it is our opinion that every possible assistance and encouragement should be given to maintain them at the present high level and provide for their future expansion. It is doubtful, however, if this would be possible if the financial burden was left entirely to the respective Provincial Governments and as the present Act only provides for Dominion assistance until March 31, 1929, it is now urged that it should be renewed at the forthcoming session of Parliament, in order to ensure that this important work may be continued.

Memorandum re Dominion Fair Wage Policies

Ever since the adoption by the House of Commons in March, 1900, of the Fair Wage Resolutions difficulties have been met in securing application of the same so as to give proper protection to workers employed on work instituted by or in behalf of the Government.

The regulations put into effect by Order-in-Council to carry out the instructions of the fair wage resolutions have been amended from time to time presumably with the intention of strengthening the administrative machinery and securing more effective compliance with the sections of the resolutions which state "that all Government contracts shall contain such provisions as will prevent abuses" and "that every effort should be made to secure the payment of such wages as are generally accepted as current in each trade, etc."

The appointment of fair wage officers operating under the Minister of Labour has also

assisted materially in enforcing fair wage clauses in Government contracts and with their assistance thousands of dollars have been collected for workers who had failed to receive remuneration for their services in accordance with the fair wage clauses of the contracts. Unfortunately, it is equally true that additional thousands of dollars have gone into the coffers of contractors which, had the terms of the fair wage clauses been fully enforced, would have rightfully gone into the pay envelopes of the employees.

The absence of any penalties to be imposed on contractors who wilfully violate the fair wage clauses, coupled with the lack of supervision and the possibility of financial gain encourages contractors to violate these clauses in their contracts. The policy of leaving to the workers or their representatives the responsibility of reporting violations of these clauses gives the unfair employer an advantage and makes the worker subject to discrimination. To more effectually cover up their violations some contractors refuse the right of workers' representatives to visit jobs so as to become acquainted with conditions at first hand.

The fact that fair wage regulations are based on a resolution of the House of Commons and not on an Act of Parliament, makes it that only such portions of these regulations are enforceable at law as are incorporated in each individual contract. In this respect cases have occurred where Departments have let contracts without consulting with the Labour Department and in some instances even without inclusion of any fair wage clauses whatever. Laxity in this respect, coupled with the division of authority between the Labour Department and other Departments of the Government in respect to enforcement of fair wage regulations tends to nullify the general declarations contained in paragraphs 1 and 2 of the amended fair wage regulations of April 9, 1924 (P.C. 605) and Sections 1 and 3 (A) of the regulations therein set out.

Section 5 of these regulations provides:—

"In all cases where clerks of works or other inspecting officers are appointed by the Government to ensure the due observance of the contract, they shall be specially instructed by the Department concerned to do all in their power to see that the labour conditions are fully complied with and to report any apparent violations to the Department with which the contract was made."

On practically all jobs covered by the fair wage policy of the Government this regulation is totally ignored as is also Section 4 (C) which calls for the filing with the Minister by the contractor of an attested statement signifying that the fair wage clauses respecting wages, hours, etc., have been fully observed.

Again the latter paragraph of Clause 3, Section (A) of P.C. 605 enables contractors to avoid payment of recognized current wages by the setting up of "dummy" organizations. Instances have occurred, notably on the Welland Ship Canal, where contractors have attempted to make "contracting out" of the provisions of the Fair Wage Clauses a condition of employment, using this part of the fair wage regulations as their right to do so. The Section here referred to reads:—

"The powers of the Minister of Labour hereunder shall not be exercised as to any employee or employees where it is established to his satisfaction that an agreement

in writing exists and is in effect between the contractor and the class of employees to which such employee or employees belong or the authorized representative of such class of employees fixing rates of wages, overtime conditions, and hours of labour."

Difficulties have arisen in many instances because of lack of sufficient authority being vested with fair wage officers in respect to examination of books, pay rolls, etc., and the taking of immediate action in the cases of violation; such delay might be obviated if these officers were empowered by the Minister of Labour to act without having to first report violations to Ottawa and await further instructions.

The majority of the workers in Canada have already established the eight-hour working day. The imposition of longer hours on Government work has been a source of continuous trouble and as the Dominion Government is committed to the Washington Eight-Hour Day Convention of the International Labour Organization it would demonstrate the good faith of the Government on the question of the eight-hour day, and improve considerably the fair wage regulations, if a clause providing for a work day not exceeding eight hours was inserted in all fair wage contracts instead of the present provision calling for the observance of such hours as are customary in the District.

The above whilst not by any means a complete list, sets forth some of the major factors leading to non-observance of the fair wage resolutions.

The fact that contractors on nearly all jobs undertaken by, or on behalf of the Government are still able to start them under unfair conditions, and in many cases, notwithstanding the efforts of the Minister of Labour, continue under such conditions, demonstrates clearly the need for further amendments to the regulations.

In order to assist the Government in correcting these abuses, we strongly urge the following changes and further that the Fair Wage Regulations, so amended, be incorporated in an Act of Parliament so as to give the full power of the law in enforcing same.

1. The substitution of the words "not to exceed eight hours per day" instead of "such hours as are customary in the district."

2. That Clause 5, Section (A) relating to the duties of inspecting officers, including supervision over labour conditions, be strictly enforced.

3. That penalties be imposed on contractors violating the fair wage clauses and making false declarations as to compliance with the same. Moneys collected for such violations to become the property of the Government when the workmen entitled to the same can not be located within a reasonable time.

4. That Clause 3, Section (A) limiting the powers of the Minister of Labour be repealed.

5. That extended authority to examine books, payrolls, etc., and take action in cases of violations be given by the Minister of Labour to the fair wage officers.

6. That a new clause be inserted providing for the right of representatives of workers' organizations to have free access to all jobs covered by fair wage policies of the Government.

7. That fair wage regulations should apply not only to works undertaken by the Government itself or by commissions using Government funds but also to trading companies of which the Government own part or all of the stock.

Memorandum on Migration

"The reasons against a wide-open policy allowing the entry of all races and classes are convincing. Mere numbers of themselves would contribute nothing to Canada's prosperity. Idle men without means are never an economic asset, and may, on the contrary, become a very heavy drag upon the producing part of the population. It is essential that immigrants coming to this country, come not only to Canada but to employment. It is equally essential that in finding employment for themselves they do not displace others."

The above quotation taken from the statement of the Minister of Immigration, the Hon. Robert Forke, and published in the "Toronto Globe" on the 3rd instant, clearly states the same principles as govern the policies of the Trades and Labour Congress of Canada respecting immigration. It is because of the situation brought about by the bringing into Canada of immigrants contrary to the policy set forth by the Minister in the above statement that we find it necessary to again urge upon the Government to amend the Immigration Act and Regulations so as to prevent the continuance of conditions which bring hardship not only to residents of Canada but to the immigrants themselves.

It is not our purpose to enter into detail of the many cases which have been brought to our attention during the past year, but merely to refer in general terms to what we believe are three of the major causes of these unsatisfactory conditions.

First, the desire on the part of some employers to have available, at all times, a class of cheap and subservient labour. To ensure this, nationals who do not understand the language or the customs of this country and whose standards of living are much inferior to those in Canada, are sought as immigrants, and often given preferences in employment offering.

Secondly, the decentralizing of responsibility in immigration matters by the encouraging and subsidizing, either directly or indirectly, of different societies and religious denominations, and the placing in their hands of the power of recruiting immigrants which should be properly the function of the Government. This results in competition amongst these bodies to recruit immigrants for this country, based on the desire to maintain the preponderance of their own following instead of on the actual needs of the country.

Thirdly, the lack of co-ordination of effort in regulating the supply of immigrants which Canada can properly absorb.

Last year we presented in detail a number of suggestions which, if adopted, would, we believe, lead to the formation of an immigration policy which the majority of Canadian people could support, the following being a condensed summary of the same:—

That Oriental immigration should be excluded or reduced to a minimum. Abolition of all bonuses and grants to private agencies, and that the British Government be requested to exercise fuller supervision of these operating in the British Isles. Placing in prohibited classes of workers recruited outside Canada to replace those engaged in industrial disputes, contract labour, unless certified as being

required by the Employment Service of the Government, and children under working age unless accompanied by parents or coming to join them or other responsible relatives. Deportation of those entering Canada under assisted passage schemes or exempt class regulations who violate their agreements by seeking or accepting different employment within twelve months of entry. Reintroduction of the legislation passed by the House of Commons last year, and on five previous occasions, repealing the amendments to the Act made during the 1919 session of Parliament, discriminating against British-born citizens.

That a vigorous "back to the land" movement be inaugurated and land settlement and colonization schemes be made equally available to residents of Canada as to those of other countries. The repatriation of Canadian citizens resident in the U.S.A. should also be actively encouraged. That efforts be made to secure from United States Authorities equal rights of entry to the U.S.A. for all bona fide Canadian citizens, irrespective of their places of birth. That emigration as well as immigration statistics be published in accordance with the 1923 recommendations of the I.L.O. The creation of a Dominion Advisory Council on Immigration on which Labour shall have representation.

In addition to the above, and under instructions of our Edmonton 1927 Convention, we desire to submit the further following recommendation:—

That a clause be inserted in the Immigration Act that any Government, Company, Corporation, Society, Association, person or party or agents for the same, soliciting to bring immigrants into Canada, shall be responsible financially for the said immigrant for not less than one year.

Briefly summarized, our recommendations aim to secure the peopling of Canada, through immigration, by a free, enlightened, moral, energetic and law abiding class of citizens who would come to this country free from all false inducements and whose coming would result in permanent good and be a desirable acquisition to Canada.

We support the policy of giving first preference to those whose language, customs and standards of living make easier their assimilation in our national life.

We, therefore, again strongly urge the Government to take such steps as will give effect to the above recommendations.

Memorandum re Senate Reform

Last year we requested the Government to take action which would make the Senate responsive to public opinion and establish the supremacy of the elected Chamber,—the House of Commons—in all legislative matters. Though the matter was not dealt with by Parliament, we note that it was submitted by the Government for consideration to the Dominion-Provincial Conference of November last. As these meetings were held behind closed doors, the decisions arrived at can only be judged from the Press reports or that published in the LABOUR GAZETTE, November, 1927, and in the latter it is stated, that after discussing at considerable length several proposals pertaining to abolition or reform of the Senate, the conference expressed the belief that "there was a strong body

of opinion in favour of any reforms which might strengthen the general machinery of Parliament."

Past presentations respecting the Senate made by the Trades and Labour Congress of Canada have emphasized that the veto power exercised by the Senate over legislation enacted in the House of Commons is contrary to a real democratic form of Government. This view was strongly corroborated by the Hon. E. N. Rhodes, Premier of Nova Scotia, in his statement of October last, respecting the decisions of the Privy Council granting the right to the Nova Scotia Government to abolish the Second Chamber in that Province and wherein he said:—

"In my own judgment, in the last analysis, the abolition of the Council, which will be effected in the near future, will be reflected not only in a more responsive public opinion but the whole responsibility for legislation, resting as it will upon the representatives of the people, will make for more serious and thoughtful consideration on the part of members of the House of Assembly. They will not be able to shield themselves behind a body which has in times past too frequently lent itself to the purpose of party manoeuvres."

During the past session of Parliament the Senate again rejected Bills which had passed the House of Commons amending the Criminal Code so as to restore the provisions existing prior to 1919 in respect to freedom of speech, Press, etc., and Bills amending the Immigration Act repealing the amendments of the 1919 session of Parliament and placing British-born citizens again on an equality with naturalized foreign-born citizens. These actions serve to emphasize the necessity for reform of the Senate so that the expressed will of the people shall predominate.

We, therefore, strongly urge that as a first step in this direction legislation be proceeded with during the forthcoming session of Parliament curtailing the powers of the Senate to the extent "that the veto of the Senate shall not be operative in respect to legislation which has passed three different sessions of the House of Commons."

Other Recommendations

Eight Hour Day.—The Washington (1919) Convention of the International Labour Organization to be fully applied so far as lies within the power of the Dominion Government to do so, and especially to all Government employees or those engaged on works undertaken by or on behalf of the Government.

One Day's Rest in Seven.—New legislation is desired embodying the principles of the conventions of the International Labour Conference on this matter, or failing this, the present Lord's Day Act so amended as to enable the above convention to be ratified.

British North America Act.—That such changes should be sought in the Act as will foster national unity by (a) giving power to the Federal Government to deal with all matters covered in recommendations and conventions of the International Labour Conference (League of Nations). (b) Abolish appeals to the Privy Council and establish the Supreme Court of Canada as the highest court of appeal; (c) give the Federal Government the undisputed

powers to effectively administer throughout Canada the Industrial Disputes Act of 1907 and its subsequent amendments and (d) bring about such changes in the constitution of Parliament as may be necessary to make decisions of the elected representatives of the people paramount.

Criminal Code Amendments.—(a) Reintroduction of the legislation passed by the House of Commons last session repealing the amendments inserted during the 1919 session of Parliament, with respect to freedom of association, etc., (b) An amendment to the Code to reinsert the clauses defining and legalizing picketing previously contained in Section 12, Chapter 173 of the Consolidated Statutes (1886).

Unemployment and Unemployment Insurance.—Requests for action to deal with unemployment are divided into two distinct phases: First, measures which would tend to reduce the volume of unemployment, definite recommendations in respect to which are incorporated in the report of the Federal-Provincial Conference on Winter Employment, held in 1924. Secondly, unemployment insurance on which detailed recommendations were incorporated in our 1924 and 1925 legislative program and are again reiterated.

National Fuel Policy.—Further action to bring about greater use in Canada of Canadian mined coal, which would result in more regular employment for the workers engaged in this industry.

Militia Act Amendments, Military Training, etc.—The resolutions presented in previous years are again reiterated and action urged to give effect to the requests incorporated therein which were (a) prohibition of maintenance by industrial corporations of armed forces designed for use during industrial disputes; (b) to give the Federal Government discretionary powers as to the provision of troops on requisition of municipal or provincial governments; (c) discontinuance of grants or other government aid for the continuance or encouragement of military cadet training in public schools.

International Labour Office.—It is satisfactory to note that Canada has accepted a seat on the Council of the League of Nations. Having assumed this further international responsibility, we contend that it is incumbent on the Canadian Government to demonstrate its good faith and confidence in the League of Nations and its allied bodies by every possible means. We, therefore, urge that all efforts should be made to ratify the conventions arising from the conferences of the International Labour Organization and to comply with the same in every respect, so far as lies within the power of the Dominion Government. And, further that the various Provincial Governments should be encouraged to maintain an interest in these matters and in the conferences of the I.L.O. so as to bring about the fullest compliance with conventions arising therefrom as are held to come within the jurisdiction of the respective Provincial Authorities.

Marine Matters.—We again reiterate our request for (a) changes in the Shipping Act outlined in our legislative program of last year dealing with licensing and conditions of employment of marine engineers and others; asking for a qualified engineer to be appointed to sit as a commissioner with the Wreck Commission on all cases; that a Health Inspector be

appointed at each important port in Canada with powers of inspection on Canadian ships; Changes in the method of computing horsepower on steamships and for the revision of the Section dealing with coastwise trading so as to exclude from Canadian port to port trade other than ships built in Canada, owned by Canadians, manned by Canadian seamen and registered in Canada, with a view of permitting ships of other countries to enter this trade only under proper duties; that a duty be placed on ships used exclusively in Canadian trade, built or repaired outside of Canada so as to assist in providing employment in the ship building trades.

It is further requested that the policy of equalizing wages paid to marine engineers in different sections of Canada, now in effect by the Marine and Fisheries and the Public Works Departments be adopted by other Departments of the Government operating vessels.

Research Council.—Cognizance has been taken of the valuable work being undertaken by the Research Council of Canada and the hope is expressed that its future activities will also include research into matters which more directly affect the health and safety of industrial workers. The Council has directed attention to the advisability of providing a National Research Institute as necessary to enable its work to be more effectively and vigorously prosecuted and this proposal is fully endorsed.

Bankruptcy Act.—Amendments to this Act are sought which would give claims for wages and salaries of employees first rank and priority over all other creditors where said estates or concerns are wound up or liquidated by virtue of the Bankruptcy and Winding-Up Acts.

Prison Reform.—That steps be taken to give effect to the report of the Government Commission (1921) on this matter.

Tariff Board.—As industrial wage earners are vitally affected by any adverse conditions which might be brought about by tariff changes and as the Government has seen fit to place on the Tariff Board representatives of organized employers and farmers, we again strongly press for the appointment of a representative of labour on this Board.

Taxation.—We submit that there should be no further tax reductions if the same would reduce the National revenues beyond a point where provision can be made to fulfil the State's obligation to protect those who, either from old age, unemployment or sickness find themselves unable to provide the necessities of life. We urge the retention of the Income Tax, the amendments of last session increasing exemptions, etc., having brought relief to those unable to pay the same. On the other hand, the Sales Tax is not only an obstruction to trade but places an unfair financial burden upon the masses of the people. We, therefore, recommend that if any reduction in taxation is found possible at this time that such reduction should be applied to the Sales Tax so that it might be progressively eliminated.

Electoral Reform and Election Act Amendments.—The following requests which were dealt with fully in a special brief presented with our last year's program are again reiterated,—(a) That the Election Act be amended so as to allow of promotions from amongst

members of Parliament to Cabinet positions without having to return to their constituencies, for re-election, where such occur within two years subsequent to a general election; (b) Changes in the method of appointment and control of returning officers and their subordinates charged with the conduct of Federal elections so as to eliminate the interjection of political partyism into what should be an impartial state function; (c) For the introduction of proportional representation in group constituencies and the use of the transferable vote in single member constituencies; (d) For a compulsory half day holiday with pay on Federal election days instead of the two hours now stipulated in the Act; (e) For protection against the imposition of restrictions by public authorities which prevent their employees from exercising their full political rights under free conditions; (f) The abolition of forfeiture of election deposits and the substitution therefor of a stated number of signatures before nominations are accepted; (g) Repeal of Clauses 10 and 11 of the Franchise Act (1920) which prohibit voluntary contributions towards election campaigns from trade unions or other groups unless they are specially incorporated as political associations and prohibit non-residents from participating in election campaigns.

Industrial Disputes Investigation Act.—It having been made clear that the amendments to the Industrial Disputes Investigation Act of 1925 do not provide for the granting of a Board without the formality of taking a strike vote, we would, therefore, repeat our previous request that Clause B of Subsection 2 of Section 15 of the Industrial Disputes Investigation Act be amended by substituting "A declaration of failure to reach agreement by direct negotiations" for the present oath which reads:—"To the belief of the declarant a strike or lockout will be declared." The reasons for the suggested change are that the taking of a strike vote many times acts as a deterrent to conciliation.

Government Plant Conditions.—That established standard working conditions should be observed in Government plants manufacturing uniforms or doing other similar commercial work, which proposal will be best assured by the adoption of such conditions as will enable the union label to be fixed on these products.

Hiring of labour during trade disputes.—Action is requested which would ensure the observance by existing private employment agencies of the same regulations as apply to those operated under the Employment Service of Canada and that employers advertising in the Press, or otherwise, for Labour during trade disputes shall be required to make known the existence of such disputes.

Alien Labour Act.—This Act is at present ineffective and difficult of enforcement, attributable in a large measure to the fact that there is no Minister of the Government charged with administering the same. We therefore request that the Dominion Government assign the administration of the Alien Labour Act to a Minister of the Government so that organized bodies may effectively bring to his attention violations of the said Act.

Postal Service Employees.—Considerable cause for dissatisfaction still exists amongst the employees of this Department. Salary revisions have not been commensurate with the cost of

living or with increases granted to employees of other Departments since 1918. The arbitrary powers exercised by the Civil Service Commission respecting classification and fixing of salaries is held to be largely responsible for these conditions and the request is again reiterated for the repeal of Section 45b of the Civil Service Act (1919) so as to place the Postmaster General in a position to deal directly with his employees on such matters.

It is further respectfully urged that machinery be established, either through the Industrial Disputes Investigation Act or by the setting up of Departmental Councils whereby classification, fixing of salaries, adjustments of grievances, etc., arising therefrom, may be dealt with promptly and with justice to the men concerned.

We also reiterate that there should be some modification in the Section of the Criminal Code which fixes the minimum penalty for theft by a postal employee at three years, so that the trial judge may have wider discretionary powers when dealing with offences of a minor nature.

As Christmas and New Year's Day are recognized legal holidays enjoyed by the great majority of the people of Canada, it is requested that all delivery of mail by letter carriers be suspended on Christmas Day and New Year's Day.

Federal Office Cleaners Conditions.—That Federal Office Cleaners be paid on an annual salary basis as permanent employees, including privileges of sick leave and holidays with pay and superannuation.

Pensions.—That employees in the Marine and Fisheries and Public Works Departments of the Federal Government, who were eligible for superannuation or pension under the Calder Act, be made eligible for the same privileges under the Civil Service Act.

Co-operative Legislation.—In order to encourage co-operative trading in Canada, Federal legislation should be simplified in respect to the Dominion incorporation of such societies.

The Consolidated Mining and Smelting Company, Trail, B.C., recently allowed a ten cents per day per man increase in the metal bonus, effective January 1. This bonus is based on the price of refined lead and zinc, and is adjusted monthly. This company distributed to their employees the same Christmas gifts as in the last three years, namely, a turkey to all married men, to widows of former employees, and to those who were known to be in poor circumstances; a card in each envelope for \$3 to all single employees, which was exchangeable for anything in their retail department store of that value. Over 8 tons of turkey were distributed in Trail, and 3½ tons in Rossland; in addition to this they gave a \$50 cash bonus to all married employees in their employ one year or more, \$25 for a half year, and \$25 to single employees having the same length of service.

LEGISLATION SOUGHT BY ORGANIZED CATHOLIC WORKERS

A DELEGATION composed of Messrs. Pierre Beaulé, president; O. Fillion, first vice-president; A. Brulé, second vice-president; Ferdinand Laroche, secretary; J. Co-meau, treasurer; and the Rev. Maxime Fortin, chaplain, forming the general executive of the Federation of Catholic Workers of Canada, together with Mr. Thomas Poulin, secretary, and a number of members of the Central Trades Council of the District of Quebec, waited on the Hon. Premier Taschereau of Quebec and members of his cabinet on December 14, 1927, and placed before them the following requests for labour legislation:—

- (1) The codification of all labour laws within the province;
- (2) That the Government set up two scholarships for working youths to enable them to take a sociology course in Belgium;
- (3) That a bill to provide workmen's compensation in accordance with the unanimous opinion of organized labour in the province and including the establishment of a board, be introduced by the government at the next session;
- (4) That an allowance of \$25 be made for every child born after the fifth birth in a family;
- (5) That the government grant family allowances to provincial civil servants;
- (6) That the provincial government cooperate with the federal government with a view to obtaining a Family Allowance Act applicable to the whole of Canada;
- (7) The enactment of a law forbidding all children under sixteen years of age to be present at any cinema show;
- (8) That the exhibition of illustrated posters advertising films be forbidden and that all theatres be closed on Sunday;
- (9) That the Federal Government amend the Fair Wage regulations so that wage schedules shall be fixed on the basis of the family budget published each month in the *LABOUR GAZETTE*.
- (10) That the provincial government apply the Fair Wages regulations to provincial works, and that the Employment Offices should adopt the same wage scale in finding employment for workers.
- (11) That public work be provided during dull seasons;
- (12) That the provincial government establish a Superior Labour Council in the Province of Quebec;
- (13) That the provincial government make the necessary grants for the maintenance of

night courses on sewing and cooking for women at Hull, and for the establishment of an apprenticeship school at Chicoutimi;

(14) That the double shift system be established for firemen;

(15) That fees for court witnesses be increased to five dollars per day;

(16) That the provincial government amend the law so as to forbid the inclusion in any lease of a clause by means of which the lessee recognizes as distrainable household articles which are not distrainable by law;

(17) That a sufficient number of inspectors be appointed for the proper enforcement of labour laws;

(18) That the provincial government buy for distribution to school children only books written by Canadian authors and printed in Canada;

(19) The control and supervision by the provincial government of the installation and working of paint spraying machines;

(20) That the provincial government cooperate in putting into effect in the province the Dominion Old Age Pension Act;

(21) A more rapid application of the Women's Minimum Wage Act and the appointing of inspectors to assure the proper enforcement of the orders of the Minimum Wage board.

(22) That inspectors be appointed to prosecute persons who break the Sunday Observance Act;

(23) Heavy fines on those who disregard the instructions of sanitary inspectors in factories;

(24) That the provincial government amend the Firemen and Policemen's Arbitration Act so as to provide for its compulsory application;

(25) Amendments to articles 3837 and 3337 A* of the Revised Statutes of the Province

* Revised Statutes of the Province of Quebec, 1925 (Chap. 182, Sec. 15) provides that no boy of less than eighteen, and no girl or woman shall be employed in factories, works, workshops, workyards, and mills of any kind for more than 10 hours in one day or 60 hours in one week. The day is not to start before 6 in the morning and there must be an hour for meals at noon.

Revised Statutes of the Province of Quebec, 1925 (Chap. 182, sec. 16) provides that no boy of less than eighteen and no girl or woman shall be employed in cotton and woollen factories for more than 10 hours in one day or more than 55 hours in one week. An hour must be given at noon for meals, and the day must not begin before seven o'clock in the morning nor end after half-past six o'clock at night.

(Quebec Industrial Establishments Act) relating to rates of wages, and hours of labour of the textile workers, and addition of a paragraph to article 3838 with regard to the dismissal of employees for refusing to work overtime;

(26) That the provincial government grant no more charters for closed cities, and amend as soon as possible the charters already existing.

Civil Service Association of Alberta

Over fifty delegates attended the eighth annual convention of the Civil Service Association of Alberta which was held in Edmonton on November 25-26, 1927, president Mr. G. W. Waistell in the chair.

In October, 1927, a referendum vote was taken on the question of affiliation with the Trades and Labour Congress of Canada. The necessary two-thirds vote of the membership having been secured the convention voted to

complete affiliation with that body and also with the Alberta Federation of Labour.

The convention decided against a full time secretary and against a sliding scale of fees but endorsed group life insurance as a protection to the civil servant. It was recommended that orders-in-council affecting the status of civil servants be discussed in joint council before becoming operative.

The *per capita* levy for the year was placed at \$2.50. After the various reports had been received, an audited financial statement was presented, showing a balance on hand for the year of \$222 and \$846 in reserve account.

Instructions were given to the incoming executive to continue their efforts to obtain a general increase for the underpaid service (those receiving \$1,800 and less).

The executive officers for the year 1928 are: President, J. W. Dodds, Edmonton; First vice-president, H. Looker, Fort Saskatchewan; Second vice-president, A. Scofield, Edmonton; General secretary-treasurer, W. T. Aiken, Edmonton.

NOTES ON VOCATIONAL EDUCATION AND APPRENTICESHIP

Inaugurating Apprentice Training

AN article dealing with the question of apprenticeship, by Mr. C. J. Freund, Apprentice Supervisor of the Falk Corporation, Milwaukee, Wisconsin, appears in the September issue of *Industrial Management*. It reads in part as follows:—

School work is an essential part of a thorough apprentice training. The apprentice requires a two-fold training. In the shop he learns how to work, learns the practical side of the business in which he is engaged. Here he becomes familiar with machinery and equipment, materials and processes; he becomes used to the atmosphere and surroundings of the plant. But this is only half of it. The apprentice must learn also the theoretical side of his trade. He must learn mathematics, blue print reading, elementary science related to his trade and fundamental principles of business. If he is above the average and of a type or class of apprentice likely to be promoted in time above the rank of mechanic he will quickly master these simpler studies and should be given an opportunity for more advanced instruction. More difficult mathematics, simple mechanics, economics and business organization, industrial history and shop administration may profitably be taught. Moreover, the better type of apprentice should learn the more compli-

cated phases of his trade. Thus, the ambitious foundry apprentice needs to have an understanding of metallurgy and of the melting and annealing and heat treatment of metals. In the machine shop, such an apprentice must become familiar with planning and scheduling and methods of tooling for production work.

Various plans for school instruction for apprentices are in effect. A number of large corporations have established their own apprentice schools. In some cases special arrangements have been made with public schools whereby part time instruction is provided for apprentices. Occasionally independent and private schools for apprentices have been organized by a group of manufacturers. The vocational schools are peculiarly well fitted for apprentice training because of the industrial and trade attitude of their teachers and administrators rather than by their equipment. The heavy expense of the corporation apprentice school places it beyond the reach of the ordinary manufacturer.

The Wisconsin apprentice law requires all apprentices to attend a vocational school one-half day per week and in Milwaukee, accordingly, the vocational school was the obvious solution for the problem of school instruction. Arrangements were made with the Milwaukee Vocational School for special courses to suit the individual needs of apprentices, in addition to standard programs of school work for

regular apprentice courses. Apprentice instruction at this institution is on a very high plane. The school is possibly the greatest of its kind in the world. Twenty-five thousand students are enrolled, the faculty numbers several hundred and the plant, methods and results achieved are in proportion.

Absorption of Technically Trained Youths in Industries of the Province of Quebec

According to an announcement appearing in the December issue of *Industrial Canada* the executive committees of the Quebec Division and Montreal Branch of the Canadian Manufacturer's Association have undertaken to lend assistance in the matter of the more complete absorption of graduates of the technical schools and colleges in the province. A special committee has been formed which will enquire into ways and means of coping with the problem.

The following review of the circumstances leading to the formation of the committee was given by Mr. Whittall, chairman of the Quebec Division of the Association, at a recent meeting of the members of the committee.

"In discussing with Hon. L. A. David, Provincial Secretary, the matter of a more effective means of absorption of graduates from the various technical schools throughout the province in industrial plants of Quebec, the Provincial Secretary suggested a plan of action by this Executive calculated to assist in this direction, provided the Executive felt it desirable to sponsor such a movement.

"Mr. David prefaced his remarks by stating that the Provincial Government at the present time is spending a half million dollars annually in the technical training and education of young men, in order to be able to give to industry and commercial life in general young men who were competent and fit mentally, and by training, to take their places in industry.

"The Provincial Secretary expressed the view that this Executive might assist in the further absorption of graduates of the schools as a first step by the passing of a resolution, a copy of which would be furnished to all members of the Association, and to the press, asking manufacturers generally to give preference to young men graduates of provincial technical schools when filling positions where special technical training was required, always of course, providing that the mental equipment of graduates of provincial schools and their training and wage demands were on a parity with technically trained men of other provinces and other countries.

He said that, so far as the government was concerned, it was always willing, and indeed anxious, to listen to any suggestions which the manufacturers might have to make regarding the improvement of the work in the technical colleges, either by the extension of the present courses, the development of new courses, or the adoption of any lines of special training which in the opinion of the manufacturers would be beneficial to the industrial life of the province.

"Mr. David said that the government was indeed willing to go even further than this, and if the Association deemed it wise to appoint a committee to investigate technical training in the province with a view of developing constructive criticism along these lines, that the government would be quite happy to recognize such a committee appointed by the Association, and charged with these duties.

It was also suggested that on a date convenient to the members of the Association, visits should be made to the technical schools so that the manufacturers might make themselves familiar at first hand with the work which was being done.

"Mr. David pointed out that a great many of the graduates from the technical schools were forced to leave Canada to secure employment, the great majority of them leaving this country to go to the United States for employment. He stressed the point that although in later years they might possibly return to Canada, yet, due to their years of sojourn in a foreign country, they had absorbed foreign ideas, and were no longer native Canadians in the true sense of the term so far as their mental process was concerned, and possibly their national ideas had been more or less impaired by their absence from Canada during the formative years of their lives.

"The Association is now making investigations for the purpose of determining the extent to which graduates of technical schools and industrial training establishments are being absorbed by manufacturing industries."

A deputation representing prominent builders and contractors in Toronto held a consultation in December with the Hon. G. Howard Ferguson, premier of Ontario, for the purpose of devising means of stabilizing the employment of young men in this industry during the slack seasons of the year. The premier undertook to make inquiries as to the measures that are taken elsewhere to meet the problem of seasonal unemployment, and further conferences will be held later.

UNION-MANAGEMENT CO-OPERATION ON THE PITTSBURGH RAILWAYS

IMPROVED industrial relations between the Pittsburgh Railways Company and its employees as a result of joint-management forms the subject of an article in the December issue of the *American Federationist* by Mr. P. J. McGrath, fourth international vice-president of the Amalgamated Association of Street and Electric Railway Employees of America. Mr. McGrath, who is also a member of Division 85 executive, writes from intimate knowledge of the subject, for this division of the union was directly concerned in the establishment of the new policy of co-operation with the management of the railways. Mr. McGrath states that the co-operative method followed in Pittsburgh "developed from actual experience and hard knocks." It was inaugurated about a year and a half ago when it was recognized that lack of understanding between those concerned could not produce satisfactory results, and that conflicting claims could not be reconciled without the open discussion. Consequently it was proposed that the company officials of each department, numbering from thirty-five to fifty, and the officers of the organization, including its executive and local board, numbering from seventy-five to one hundred, should meet in joint session once a month. So successful have these methods been that both sides agreed to an indefinite continuation of the meetings, which have been regularly held since that time.

The first business taken up at the meetings is the company's financial earnings, and comparisons are detailed, indicating the extent of business on the same date in the previous year. Comparisons are also made on the trend of business during that particular month with the same month of the previous year. The meeting is then thrown open for any questions or comments on these reports.

The next item on the agenda is the disposition of complaints made by the men at the previous meeting. In this respect, Mr. McGrath observed that on an average 90 to 95 per cent of the complaints are satisfactorily adjusted, and for those which are not so adjusted a reason is given. At the same time any further complaints are recorded. These are taken down verbatim and a copy is sent in type-written form to each car house where the men in general may read the nature of the complaint, the name of its sponsor and its disposition. The complaint is then dealt with by the department to which it belongs, and the results are reported by that department. In addition, there is a special investigation com-

mittee to handle the more serious complaints, and a member of the union organization is a member of that committee.

At these meetings the entire range of railway operations is covered and the financial difficulties of the company, where such exist, are freely disclosed and discussed. Methods of increasing business form a popular topic, no suggestion being ignored.

The following are typical of the subjects proposed by the trainmen and considered by the company: Additional service at peaks on certain routes; change in certain car loading points; advisability of an early morning car on a certain route; loss of time in dropping trailers; children's five cent school tickets; schedules, sanding equipment and cleaning cars; thermostats, lights, switches, signals, etc.

Mr. McGrath observes that "transportation is a competitive business. The trainmen are the sales agents, and they aim to make the car ride as attractive as possible. By so doing, the public benefits the company profits, and the employees by contributing to the success of the company earn that recognition of their efforts that must eventually bring them their reward as the profits of the employing company will permit."

The employee representatives of the plant council of the steel mills of the Dominion Iron and Steel Company at Sydney, Nova Scotia, were elected in December to serve for the coming year. Each of the following departments was represented by one, two or three employees: Coke ovens; Blast furnaces and docks; Open hearth; Rolling mills; Machine shop; Foundry, carpenter shop and pattern shop; Outside mechanical department; Mills boilers; Electrical; Railway; General yard; Miscellaneous departments; Rod and bar mill. The plant council, modelled after the British Whitley plan, was introduced here at the close of the unsuccessful coal-steel strike of 1923, and according to many workers has been quite a success. While it does not take the place of a regulation union, it is said to provide a sure channel through which grievances that can be remedied, are brought to the notice of the management for action, instead of being left to foment in the dark until they reach dangerous proportions. It is claimed the council has secured better working conditions in the mills than ever obtained there previously.

MEETING OF SAFETY SUBCOMMITTEE OF INTERNATIONAL LABOUR ORGANIZATION

Report of Mr. R. B. Morley, Delegate From Canada

MR. R. B. Morley, general manager of the Industrial Accident Prevention Associations of Ontario, who was recently appointed by the Dominion Government to represent Canada on the Safety Sub-committee established by the International Labour Organization (LABOUR GAZETTE, October, 1927, page 1028) returned from Geneva in December. He gives his impressions of the International Labour Organization and of the work of the Safety Sub-committee, as follows:—

Report of Delegate

International Labour Organization.—The International Labour Office was set up under the authority given in Part XIII of the Treaty of Peace and is one of the bulwarks of the League of Nations. The present International Labour Office has a staff of about 350 people and is directed by Mr. Albert Thomas, a brilliant Frenchman. The Deputy Director is Mr. H. R. Butler, C.B., an Englishman of remarkable ability. The organization exists for the purpose of securing, by international action, adjustment of conditions of labour throughout the world. The success of their work is reasonably apparent when one reads the list of Draft Conventions and Recommendations that have been considered and approved.

The International Labour Office is something more than a mere gathering of representatives of 55 countries who pass resolutions and do nothing else. A Draft Convention must be submitted to the legislative authorities of each of the countries represented within one year, although there is, of course, no undertaking on the part of the delegates at the International Labour Conference that a Convention will be approved by their own country either in whole or in part. A Recommendation is expected to be taken, by the various countries, as a guide in passing national legislation or in issuing administrative orders.

The International Labour Organization consists of a number of divisions, all, of course, taking instructions from the Director. One branch of the organization is the Research Division and this, like others, is broken up into various groups. One of the groups of the Research Division is the Safety Service and it is this particular group with which the Industrial Accident Prevention Associations must have the bulk of its contact.

The work of the Safety Service is under the direction of Dr. F. Ritzmann, a former Factory Inspector with the German Government and a man with a very keen interest in all of the problems of his Department. He has, at the present time, a rather limited staff and if the Safety Service is going to assume its proper place in the work of the International Labour Office, the staff should be materially increased and strengthened. There should be some organization acting as a clearing house for safety information for the whole world and while certain bodies already claim to carry on this work, the claims can hardly be substantiated in the first place and, in the second place, it is only reasonable to assume that Geneva, having become "The Cross-Roads of the World," this clearing house for safety should be established at Geneva.

Appointment of Safety Sub-committee.—The Governing Body of the International Labour Office has set up a number of Committees, including a Safety Sub-Committee which deals solely with problems of accident prevention. The members of this Committee were approved by the various Governments. This is, of course, a desirable feature as it means that the members of the Committee have a certain national standing. It has been the regular practice to carry on most of the business of this Committee by correspondence, although in some few cases, meetings of the European members were held. Some little time ago, representations were made to the Governing Body of the International Labour Office that at least one overseas delegate be called in for the next meeting, and this accounts for there being a special grant made to take care of the bulk of that overseas delegate's expenses.

Meeting of Safety Committee.—I arrived in Geneva on the night of the 31st of October and on the next morning got into touch with Dr. W. A. Riddell, Canadian Advisory Officer there, and had a long talk with him. I had, before seeing him, my first opportunity of going over the material to be considered at the meetings of the Committee, and found that he had already entered a protest against the failure of the International Labour Office to get out this material in sufficient time for the overseas delegates to be able to canvass the whole situation in ample time prior to the meetings of the Committee. I should add to

this that part of the delay was later explained to me by Dr. Ritzmann, Chief of the Safety Service, and was due to the fact that one of his staff had been killed some time before by a fall in the Alps and a second member had been seriously ill for a considerable time. On the other hand, it is a fact that if the overseas members of any Committees established by the International Labour Office are to do efficient work, they must have the material in ample time to consider the whole problem and arrive at a reasonable conclusion. Dr. Riddell is doing excellent work at Geneva and has a remarkable grasp of a very wide number of subjects, including, I am glad to say, our own problem of accident prevention.

After seeing Dr. Riddell, I went to the International Labour Office and had a discussion with Dr. Ritzmann, and later met Mr. Thomas, who is an extraordinarily dynamic personality. Dr. Ritzmann gave me some additional material on which I worked the next day and, on the morning of the 3rd of November, the Committee met. In addition to the delegate from Canada, there was one from Great Britain, one from Finland, one from Switzerland, two from Germany, two from France, two from Belgium, one from Holland, and one from Italy. Sir Gerald Bellhouse, Chief Inspector of Factories for Great Britain, was elected President of the Committee, an office which he had formerly held. All statements made in English were translated into French, all French was translated into English, and all remarks in German were translated into both English and French. This, of course, slows up the proceedings to a certain extent, but with efficient translators who can take the heart of the statement and give all that is necessary in abbreviated form, there is not as much delay as might appear on the face of things. Dr. Ritzmann had prepared a lengthy statement of the accident prevention situation as it appeared to him and the Committee during its three days sitting, namely, 3rd, 4th and 5th of November, went carefully through this whole memorandum. Certain structural changes were made and because of their value and general interest, I give (page 47) the recommendations by Sir Gerald Bellhouse. The memorandum as it appears is a copy of that submitted by him and it will be noticed that he has dealt with the whole problem in a broad general manner, but with sufficient detail to make a real contribution to the accident prevention problem of industry as it exists to-day.

The meeting considered a monograph on chains, submitted by the Belgian delegates, and turned this back with numerous suggestions. The monograph on hydro extractors

was accepted and approval given. This was prepared by the Italian delegate. Railway automatic couplings were on the agenda, but there was a quite evident disposition to leave this subject alone. I had some valuable data from the Canadian Pacific Railway, the Canadian National Railways, the Board of Railway Commissioners for Canada and others, which I left with the Chief of the Safety Service of the International Labour Office. It is fairly evident that asking members of the Safety Sub-Committee (who are presumably all men with important work of their own to do) to prepare monographs on any technical detail is wrong in principle, as there must almost always be a delay in getting out such material. This work should be done by a properly organized safety service at the International Labour Office, and subsequently be submitted to the Safety Sub-Committee before being published for general use.

It was of the utmost interest to me to meet men with whom I had been corresponding for years and to have an opportunity of discussing certain details with them. This, however, sinks into insignificance when we contemplate the importance of a discussion next year at the International Labour Conference by the representatives of fifty-five countries and remember what will come from this. In short, certain countries have in the past made an effort to control the accident situation, but there has been no world-wide effort put forth. This, therefore, would seem to be the dawn of a new day for industrial safety work.

Paris—While I was in Paris, I called on Mr. Julien Caen of the French Association for the Prevention of Industrial Accidents, and went over certain matters at his office. Later, I had another long talk with him at my hotel and he repeated the statement, that has so often been made to me before, that in the Workmen's Compensation Act of Ontario we have a condition superior to most others for dealing with accident prevention. The combination of legislative authority with voluntary effort naturally makes a peculiar appeal to everyone who knows anything of accident prevention work. I was also fortunate in meeting Mr. Duncan who is in charge of the Massey-Harris interests there.

London—While in London, I spent considerable time with Col. J. A. A. Pickard, D.S.O., National "Safety First" Association. This is an organization that is established along voluntary lines and is a federation of the London "Safety First" Association, and the British Industrial "Safety First" Association. We now receive the literature of this organization regularly. One rather remarkable thing about the safety effort being put forth in the

Old Country is the manner in which well-known people have lent their support. Colonel Pickard is to be commended for this and many other features of the British work. For instance, I attended a meeting at Kingsway Hall, called for the purpose of presenting cash prizes to school children who had competed in an essay contest. There were about 160,000 essays written and there were 148 prizes given. The Duke of York was chairman of that meeting and made an address dealing with the general situation and the Duchess of York personally presented the prizes to each one of the winners.

I attended a Safety Officers Conference called by the London "Safety First" Association and attended by delegates from various parts of England and one from Wales. The program committee put me down for an address on "Industrial Accident Prevention in Canada" and it was a delight to talk to so many keenly interested men.

Another visit was to the National Employers' Mutual General Insurance Association Limited. This is one of several companies carrying workmen's compensation insurance. I met Mr. E. J. Wallace, who is in charge of their Accident Prevention Branch. He told me their whole story and has forwarded a great deal of safety literature.

Following the discussions which I had with Sir Gerald Bellhouse at Geneva, I also saw a good deal of him in London. One morning he took me over the new Safety Museum which has just been completed by the Home Office. This is a fine building built for the purpose and housing a large number of exhibits, many of which have been loaned by the manufacturers of the machine or by the makers of the guard. This museum is so far in advance of say the American Museum of Safety in New York city that it is hardly possible to compare the two. It is expected that King George will formally open the museum in the near future.

I spent a most interesting afternoon with Mr. E. Farmer of the Industrial Fatigue Research Board, which is an organization established by the Home Office for research purposes. Mr. Farmer and his assistant, Mr. Chambers, are special officers of the Board and about twelve months ago completed an exhaustive survey of accident conditions, particularly in relation to what we know here as "repeaters." They have proven that certain individuals are more liable to have accidents than others, have proven that in the main, the "accident prone" worker is not as efficient as the worker who is normally reasonably free from accidents. Remarkable as it may seem, they developed in a four-year period of work certain tests and, dealing with

several hundred workers, were able to show that those who passed the tests would have 48 per cent fewer accidents than those who were unable to pass. The value of this work lies in the fact that those who are accident prone should be put on the less hazardous jobs.

New York—While in New York, I called on the American Society of Safety Engineers, an organization consisting of men who are designated "Safety Engineers," the membership consisting of representatives from various countries, chiefly, however, from Canada and the United States. The organization is doing a good deal of work in co-operation with the National Safety Council in Chicago, but in the main, its activities are largely localized in the vicinity of New York city.

I also called on Mr. A. H. Young of the Industrial Relations Counsellors, which is an organization set up by the Rockefeller interests for the purpose of investigating relations between employer and employee and of establishing certain standards in the plants controlled by or through Mr. Rockefeller. Mr. Young was with the International Harvester Company of Chicago, in charge of their industrial relations work for several years; prior to that he was a Director of the American Museum of Safety, and back of that again was with certain of the large industrial establishments in the United States. He is an extremely interesting man with now an international experience on his particular problem. He has been keenly interested in accident prevention for a great many years, and quite frankly, I hope that some day we may have him as a speaker at our Annual Safety Convention.

Another most interesting talk in New York was with Mr. C. L. Close and Mr. H. A. Schultz, his assistant. Mr. Close is Director of the Bureau of Safety, Sanitation and Welfare of the United States Steel Corporation. You will recollect that this corporation controls an average of a quarter of a million workers and from Mr. Close's office in the last sixteen or eighteen years has been directed an expenditure of twenty millions of dollars on accident prevention work alone. One of their large steel plants employing about 2,500 men had operated for 233 days to the 30th of November, 1927, without a single lost-time accident. The total experience of the United States Steel Corporation for the first eleven months of 1927 showed a decrease of 24 per cent in accidents from the same period in 1926. These results have been achieved over a period of years by a large expenditure of money where this was necessary and by impressing on the executive heads of the various

plants that a fixed policy of the organization was a reduction in accidents. Mr. Close rather proudly points out that the late Judge Gary said Mr. Close never asked for one dollar for expenditures on accident prevention work which was not sanctioned immediately. Certainly, if the United States Steel Corporation could afford to spend twenty millions in less than twenty years on this work, there is a big field for an expansion of the accident prevention movement in this country. One rather interesting item that I brought away from New York with me was a 1927 Safety Calendar. This consists of drawings made by the pupils attending the schools in towns where the Carnegie Steel Company, a subsidiary of the United States Steel Corporation, have plants. This calendar has been a real success.

I also called on the offices of the Rockefeller Foundation and met Dr. C. W. Wells there. This organization is doing a remarkable international job and I was brought into contact with them through Mr. Louis Pfisterer, who came to us last September with a letter of introduction from them. Mr. Pfisterer is Vice-Director of the National Institute for Workmen's Insurance at Budapest, Hungary.

General.—In the first place, my thanks are due to the Governing Body of the International Labour Office for extending the invitation to be present at the Committee meetings and for undertaking to pay the bulk of the expenses, and in the second place, my thanks are due to the Directors of the Industrial Accident Prevention Associations and the Chairman of the Ontario Workmen's Compensation Board for his approval and to those numerous good citizens overseas who made the whole trip a pleasure. I have no hesitation in assuring you that in my opinion the Industrial Accident Prevention Associations will be repaid several times over for what it has put into this. To me, it is an extraordinary encouragement to think that the countries comprising the membership of the International Labour Office are going to discuss accident prevention. It is, I believe, the biggest step forward that the industrial accident prevention movement has ever known.

Suggestions made at the meeting by Sir Gerald Bellhouse, C.B.E., Chief Inspector of Factories for Great Britain.

A—Statement of the problem and its gravity (1) General—quote world statistics of industrial accidents (fatal). (2) Special (a) industries with high accident rates; (b) chief causes of accidents. Prevention or avoidance of accidents has two sides—(a) the material (machinery, plant, structures, etc.); (b) the human; and must be approached

from both sides—(a) protection of machines, prohibition of sale of unfenced machinery, maintenance of plant and structures, etc.; (b) care on the part of the worker, selection, training and supervision of the worker by the management.

B—The object of the Conference is to consider what can be done to improve present conditions. We do not want to go back to the rudiments of the matter such as the need of statistics, powers of inspectors and so forth.

C—Recognize two outstanding facts in present situation. (1) That no finality has been reached in rendering machinery, plant, etc., safe; improvements are constantly being effected and can be effected. 2. That, though it is in the plain interests of both workers and management to avoid or prevent accidents, the degree of interest taken is small and co-operation limited. The need for this is emphasized by the fact that inspectors cannot be present often enough always to ensure compliance with regulations.

D—What can be done? (1) Research—mechanical, standardization, psychological; (2) Co-operation—national and international.

1. Research. (a) State—Industrial (Fatigue) Research Boards; (b) Individual industries. Each industry should have its own research body, on which management and workers should be represented and with which Government inspectors can co-operate and consult.

2. Co-operation. (a) National. (1) Safety Committees in each works. (2) Research Committee in each industry. (3) National Safety Council. (4) Co-operation with Insurance Companies or Compensation Boards. (a) Statistics. (b) Reduction of premiums. (5) Co-operation with Educational Agencies—primary, technical, etc. (6) Adequate First Aid in all industries. (b) International. (1) Co-operation between the State Research Boards to plan work, compare results, etc. (2) Interchange of information between Governments as to improvements and new methods, direct or through I.L.O. If through I.L.O., a much stronger "safety section" needed. (3) Consultation between the Safety Councils of individual industries.

The Halifax Trades and Labour Council decided at a meeting during November to request the legislature of Nova Scotia to introduce legislation at the forthcoming session giving effect in the province to the Old Age Pensions Act enacted by the Parliament of Canada in 1927. The legislature will also be asked to appoint a women's minimum wage board in accordance with the Minimum Wage Act, 1920 (as amended in 1924); to amend the Workmen's Compensation Act on the lines proposed by the council before the last session (these proposals were outlined in the LABOUR GAZETTE, March, 1927, page 287); and to establish government control of liquor sales in the province.

NOTES ON INDUSTRIAL SAFETY AND HEALTH

Regulations Governing Blasting in British Columbia Metalliferous Mines

The Department of Mines of British Columbia has issued under the Metalliferous Mines Regulation Act a series of regulations governing blasting operations. Some of these regulations are as follows:—

No magazine for explosives may be maintained on any mining property except with the written permission of the Inspector of Mines. Specifications are laid down as to the size and construction of magazines.

Cases containing explosives are not to be opened in the magazine, and only implements of wood, brass or copper may be used in opening cases.

No explosives in excess of a supply for twenty-four hours may be allowed underground in a working-mine, and no store for twenty-four hours' supply may be established without the approval in writing of the Inspector of Mines.

No naked light is to be taken into any magazine or place where explosives are kept, and no smoking is allowed in a magazine or place where explosives are kept, or while handling explosives.

The superintendent in charge of a mine or some other responsible person delegated by him is to make a thorough daily inspection of the condition of explosives, etc.

Any employee who commits a careless act with an explosive, or where explosives are stored, or who, having discovered it, omits or neglects to report immediately such act to an officer in charge of the mine, will be guilty of an offence against the Act.

No building for thawing explosives may be maintained in connection with any mine except with the written permission of the Inspector of Mines. The site and style of structure and equipment is to be subject to the approval of the Inspector. The quantity of explosives brought in at one time for thawing must not exceed a supply for 24 hours.

Powder is not to be thawed near an open fire or a steam-boiler or by direct contact with steam or hot water, and no electrical device for generating heat will be allowed in the same compartment with explosives.

No drilling is to be done in any hole that has been charged or blasted.

When a blaster fires a round of holes he will, where possible, count the number of shots exploding. If there is any report missing, he is to report same to the mine foreman or shiftboss. If a missed hole has not been fired at the end of

a shift that fact, together with the location of the hole is to be reported by the mine foreman or shift-boss to the mine foreman or shiftboss in charge of the next relay of workmen before work is commenced by them. In the case of a miss-fire shot, or suspected miss-fire shot, no person will be allowed to return to the place where blasting is being done until the expiry of thirty minutes from the time of lighting the fuse. Except in fuse blasting, no fuse shorter than three feet is to be used in any blasting operation.

A charge which has missed fire shall not be withdrawn but is to be blasted, and no drilling may be done within a distance of three feet of a missed-fire shot or a cut-off hole containing explosive until it has been blasted. Every missed-fire shot is to be marked by the insertion of a wooden marker into the outer end of the hole. The shiftboss will be responsible for directing the angle of the hole and depth to which it is to be drilled.

No person other than the holder of a blasting certificate may remove or attempt to remove the wooden marker with which a missed-fire hole or socket of a hole has been marked.

In so far as possible, no blaster is to be alone when spitting fuse, and in no case is he to spit fuse without having a second light. Not more than 12 holes may be spit in any round of shots by one person.

The firing of rounds in shafts or winzes is to be done by electric current where the shafts or winzes are deeper than 100 feet, except where shafts or winzes are sunk at an angle flatter than 45 degrees.

Warning must be given by blaster before blasting, and he must satisfy himself that all persons have left working-place except those required to assist him in blasting.

Every blaster must see to it that all entrances to the place or places where blasting is to be done or where safety of persons may be endangered are guarded.

Where blasting takes place by electricity, a blaster will not be permitted to enter or allow others to enter the place where charges have been fired until he has disconnected the cables from blasting-battery, or has pulled out and locked the switches of the blasting-circuit.

Before conveying explosives in a shaft by machinery, the operator is to give notice to the hoistman, deckman and cage-tender.

Cages containing explosives must be gently lowered or raised, and no person may take out of the shaft conveyance any explosives except under the immediate supervision of the

person authorized by the superintendent, mine foreman, or shiftboss.

Should no storage place for explosives be provided, person authorized to travel with same on any shaft conveyance will personally deliver explosives to another authorized person.

All drill-holes are to be of sufficient size to admit of the free insertion of the explosive, without ramming, pounding, or undue pressure, and no explosive may be removed from its original paper container.

No explosive is to be used to blast or break up ore or other material where by reason of its heated condition there is any danger or risk of premature explosion of the charge.

No explosive may be used at any mine unless package containing same bears name and place of business of manufacturer and the strength and date of its manufacture, and every case of defective fuse, etc., is to be reported to the inspector of mines, with the name of the manufacturer.

The person in charge of underground magazines must be competent, and acquainted with the nature of explosives. It will be his duty to distribute and keep a record of all explosives which he delivers to the various working places, and will only deliver such amounts as are required for 24 hours' operation for each working place.

In no case are detonators to be transported in the same conveyance or carried in the same receptacle with any other explosives, safety-fuse excepted.

No person unless he is the holder of a provisional or permanent blasting certificate will be permitted to conduct any blasting operations in or about a mine. A prospector however, having charge of not less than 12 workmen and being the possessor of a special permit may carry on blasting operations for the purpose of quarrying, etc., issued by the inspector of mines, may conduct blasting operations without being the holder of such certificate.

Upon engagement a miner or other person shall produce his blasting certificate which will be delivered to him by superintendent on termination of engagement. Provisional blasting certificates are to be similarly held by superintendent. No person will be permitted to prepare any blast unless he is the holder of a blasting certificate. Persons acting under direct supervision of blaster may assist in preparation and firing of charges who are not holders of blasting certificates.

No person other than one holding a blasting certificate or permit, or a person authorized by the superintendent in writing, may in any mine whatever open or interfere in any manner with a box containing explosives.

Definite instructions must be given by mine foreman, shiftboss, or blaster at the beginning of a shift or after blasting, to any person who may be required to enter the working-place, of any danger which might exist.

Permanent blasting certificates are to be obtained from an inspector of mines. Provisional blasting certificates valid for ninety days, or until the first visit of the inspector of mines, may be granted by the mine superintendent, or a qualified person authorized by the mine superintendent. No more than one provisional certificate may be granted to one person. Such certificates may be obtained in blank form from the office of the chief inspector of mines, Victoria, B.C.

Permanent blasting certificates may be granted by the inspector of mines to persons who can satisfy him as to their fitness to receive same. The inspector may by an endorsement place any limitation or qualification he may think fit upon the scope of the certificate.

A mine superintendent or a qualified person or persons authorized by the mine superintendent shall not sign a provisional blasting certificate until he has, or they have, by such means as are available or by inquiry and examination, found that the applicant has a competent knowledge of blasting operations and the rules and regulations referring thereto, and that he is trustworthy and sober.

The applicant for a permanent blasting certificate must produce satisfactory proof that he is properly qualified to conduct blasting operations.

If at any time the holder of a blasting certificate issued in accordance with these regulations is, in the opinion of the inspector of mines, guilty of inattention or negligence in execution of his duties, or suffers from any physical infirmity likely to be detrimental to efficient discharge of his duties, the inspector may immediately suspend or cancel such certificate.

If at any time the holder of a blasting certificate, whether provisional or permanent, issued in accordance with these regulations, is, in the opinion of the superintendent, guilty of a breach of any of the regulations, such superintendent may immediately suspend such person from duties of a blaster, and must forthwith report any such suspension to an inspector of mines for such action as he thinks fit.

Safety Work in Lumber Camps

The annual report of Dr. W. S. Barnhart, medical superintendent of the Lumbermen's Safety Association, which appeared in the December issue of the *Canada Lumberman*,

indicates the growing interest in safety work in lumbering operations and the good results achieved. Dr. Barnhart states that from 1920 onward there was apparently an increase in the number of accidents in the lumber industry and that paralleling this increase there was naturally an increase in the compensation rates. Analyzing the accident record of recent years, Dr. Barnhart says:—

“If we were to take any one company’s payroll for a given year and along with it consider the average weekly wage paid to all employees, we could estimate the average number of men employed continually for a whole year. By such a method the Workmen’s Compensation Board estimated the average number of men employed by the lumber industry in Ontario per year for a period of six years, and along with it considered the number of accidents for which compensation was paid. The following were their findings based on their own records which are complete only to the end of 1925:—

Year	No. of accidents per thousand full-year workers.
1920	236.
1921	269.7
1922	312.7
1923	304.
1924	360.6
1925	304.8

“It will be noted that in 1924, just before the present campaign was started, accident frequency was 56 per cent higher than in 1920. It may be that there were really more accidents, or it may be that more claims were made each year for trifling accidents that in former years would hardly be called accidents. At any rate the cost to the industry increased during the years mentioned, and it is our purpose to reduce the cost to a minimum without in any way attempting to curtail the benefits to which injured workmen are entitled under the Act. In connection with hospitalization, it has been found by the Workmen’s Compensation Board that this has been excessive in a number of cases and we understand that the Board is taking steps to reduce unnecessary hospitalization and the associated expenses.”

Dr. Barnhart points out that the plans for the present campaign were laid along the lines that have proved successful in other industries, and in the lumber industry in districts outside of Ontario. He considers that it was of “fundamental importance to secure the interest of the executive of every company in this movement, which is not only humanitarian, but can save thousands of dollars annually for the companies.” He considers that the

operators in Ontario whose executive and superintendents have shown a keen interest and have made systematic efforts in accident prevention in their mills and woods have been well rewarded financially. Meetings have been held in the various districts in order to arouse and maintain the interest of the executives, superintendents and doctors, and to secure their advice in regard to practical plans for the campaign.

Outlining the work of the association’s inspectors, Dr. Barnhart states that since October, 1925, the Association’s inspectors or field men have made over four hundred visits to logging camps and over a thousand visits to sawmills.

“Many of our members,” he says, “operate portable sawmills for three or four weeks per year, employ two or three men, and in some cases are fifteen or twenty miles from a railroad. It has been impossible to visit all the small camps and sawmills regularly as the cost would be prohibitive, but the Association has made every effort to keep in touch with all operators who are members and to supply them with literature even though personal visits are not made to their plants. We have sent out about 110,000 pieces of safety literature apart from circular letters and personal letters to various operators. It is our intention to mail out bulletins and circular letters regularly in order to keep before all interested persons the ideas and methods that are found to be most valuable in accident prevention work. These bulletins and circulars are designed to put emphasis on hazards which are peculiar to the months in which the literature is mailed, and an appeal is made to senior employees and men to make special efforts to avoid these hazards. During the past summer our inspectors made their regular inspections of sawmills, searching for hazards and ordering mechanical safeguards where advisable, but, in addition, they arranged for mass meetings at each of the plants in the interest of accident prevention. Many of these meetings were attended by members of the executive and the company’s doctor in addition to senior employees and men. Usually about one hour was spent at each meeting, our inspectors outlining to the meeting the practical methods which have already helped many plants to reduce the number of accidents and accident costs.

Dr. Barnhart adds that at these meetings, which were featured by the teaching of first aid, the men elected their permanent chairman and secretary, and a group to act as Plant Safety Committees for various parts of the mill.

LEAGUE OF NATIONS INTERNATIONAL LABOUR ORGANIZATION

Ratification of Conventions

On October 31 the total number of ratifications of Conventions registered with the Secretary-General of the League of Nations was 244. At the same date, the number of Conventions of which ratification had been authorized by the competent authority in the country concerned, but had not yet been registered with the Secretary-General of the League, was 28.

Eight new ratifications were registered in October.

Belgium ratified the five following Conventions:

- (1) Convention concerning workmen's compensation for accidents.
- (2) Convention concerning workmen's compensation for occupational diseases.
- (3) Convention concerning equality of treatment for national and foreign workers as regards workmen's compensation for accidents.
- (4) Convention concerning seamen's articles of agreement.
- (5) Convention concerning the repatriation of seamen.

Norway ratified two Conventions:

- (1) Convention fixing the minimum age for admission of children to employment at sea.
- (2) Convention fixing the minimum age for the admission of young persons to employment as trimmers or stokers.

Germany ratified one Convention:

Convention concerning the employment of women before and after childbirth.

Advisory Committee on Intellectual Workers

As a result of a decision of the Governing Body of the International Labour Office at its session of last April, the nucleus of an Advisory Committee on Intellectual Workers was formed. The Committee, which at present consists of five members—one each from the Government, Employers' and Workers' Groups respectively of the Governing Body, and two members appointed by the International Commission on Intellectual Co-operation of the League of Nations—met on December 19 at Brussels and made proposals for the constitution and initial programme of the Advisory Committee, which proposals will be submitted to the Governing Body of the Office at its next session, opening in Geneva on January 30.

For the first meeting of the Committee, the following agenda was suggested:—

- (1) The termination of the services of journalists in the event of a change in the general policy of their newspaper;
- (2) The "radius" or "competition" clause as applied to engineers and technicians leaving the service of a firm;
- (3) The problem of employment facilities for theatrical artists;
- (4) The problem of employee-inventors.

There has been a steadily increasing development in organizations among intellectual workers. New associations have been formed in several countries, e.g., Austria, Germany and Poland, and international groups are also gradually extending their activities. Special attention is being given by several international organizations of intellectual workers to the work of the International Labour Office and they express a desire to be associated with it in one way or another. The international Medical Association, for instance, has appointed two permanent delegates to be responsible for relations with the Office. The International Labour Organization is responding to this desire by the formation of the Advisory Committee on Intellectual Workers and by inquiries and research, and in doing so, is carrying out the resolution approved in 1921 by the International Labour Conference, which laid down that "it is its duty to assist those who desire their means of existence from imaginative or intellectual work to obtain better conditions of life."

The British Columbia Teachers' Federation is taking action to secure an amendment to the Provincial Superannuation Act making it compulsory for municipalities, upon request of the teachers, to provide for their superannuation under the Act. A similar amendment in regard to the compulsory superannuation of other municipal employees was made to the Act in 1927 (*LABOUR GAZETTE*, April, 1927, page 382), but teachers were not then included among the employees benefiting.

The Ontario Workmen's Compensation Board recently organized a system of group insurance for its employees on a voluntary basis, the Board paying one-half the amount of the premiums required and the employees the other half.

EMPLOYMENT SITUATION AT THE BEGINNING OF DECEMBER, 1927, AS REPORTED BY THE EMPLOYERS MAKING RETURNS TO THE DOMINION BUREAU OF STATISTICS

THE seasonal losses in employment recorded at the beginning of December were on a smaller scale than on the same date in any other of the last eight years except 1922, and the situation continued better than on December 1 in any previous year of the record. Statements were tabulated by the Dominion Bureau of Statistics from 6,276 firms employing 886,430 persons, compared with 892,143 in the preceding month; the employment index stood at 106.8, compared with 107.5 on November 1, and with 101.1, 95.3, 90.8, 95.7, 95.1 and 87.2 on December 1, 1926, 1925, 1924, 1923, 1922 and 1921, respectively.

The most noteworthy losses were again indicated in construction, and in lumber mills, while unusually pronounced improvement was reported in logging and trade. Mining, transportation and iron and steel plants were also busier.

Employment by Economic Areas

All except the Prairie Provinces registered curtailment, the largest recessions taking place in British Columbia and Ontario.

Maritime Provinces.—Further, but smaller seasonal reduction in employment were noted in the Maritime Provinces, chiefly in construction, but also in lumber mills, while logging, mining, trade, transportation and iron and steel afforded greater employment. The payrolls of the 535 co-operating employers totalled 65,629 as against 66,389 on November 1. Larger losses were reported on the corresponding date last year, when the index was lower.

Quebec.—There was a slight falling-off in activity in Quebec, according to statements from 1,397 employers of 259,528 persons, or 325 less than in the preceding month. Manufacturing and construction showed declines, those in the latter being considerable; on the other hand, logging was decidedly busier and important improvement was also shown in trade and transportation. Much more pronounced decreases were recorded on December 1, 1926, and employment then was in smaller volume.

Ontario.—Employment in Ontario again declined, although less extensively than on November 1; 2,251 workers were released from the staffs of the 2,874 firms whose statistics were received, and who had 366,415 on the

payroll. Trade and logging registered decided seasonal gains, and considerable improvement was also shown in the pulp and paper, textile and iron and steel groups. Construction and lumber mills, however, reported large losses, and smaller decreases were shown in mining, transportation and communications. The index was several points higher than in the corresponding month last year, when similar curtailment was reported.

Prairie Provinces.—Contrary to the movement usually indicated at the beginning of December, there was a small advance in employment in the Prairie Provinces on the date under review, when 101 persons were added to the forces of the 800 reporting employers, who had 118,746 on their staffs. Manufacturing, logging, mining, transportation and trade were more active, while construction registered the only pronounced reductions. Conditions were more favourable than at the beginning of December in earlier years of the record.

British Columbia.—Continued losses, involving practically the same number of workers as that noted on December 1, 1926, were shown in British Columbia, where 670 firms had 76,112 employees, as compared with 78,590 in their last report. Fish-canneries and lumber mills were slacker, as was construction; on the other hand, trade and some other groups registered heightened activity. The situation continued to be better than on the corresponding date in any of the last eight years.

Table I gives index numbers by economic areas.

Employment by Cities

Montreal, Quebec, Ottawa and Vancouver reported lessened activity, while employment advanced in Toronto, Hamilton, Windsor and the other Border Cities and Winnipeg.

Montreal.—There was a reduction in the employment afforded by the 747 co-operating firms, whose staffs declined by 732 persons to 123,453 at the beginning of December. Manufacturing and construction reported a falling-off, while work increased about the harbour and in retail establishments. More extensive losses were noted on the corresponding date last year; the situation was better than in the early winter of any other year of the record, which for this city goes back to 1922.

Quebec.—For the first time since January, employment in Quebec City showed a decrease, 339 workers being laid off by the 101 employers whose returns were received, and who had 11,167 employees on December 1. The greatest contractions were in construction and transportation. Rather smaller declines were indicated on the same date in 1926, but the index then was considerably lower.

Toronto.—Important additions to personnel were made in Toronto by 809 firms who employed 107,982 persons, as compared with 106,854 at the beginning of November. Manufactures and trade showed improvement, that in the latter being especially noteworthy, while construction, communications and transportation were slacker. Moderate gains were registered on December 1 last year, when the volume of employment was much smaller.

The index was several points higher than on the corresponding date a year ago, when considerable contractions were noted.

Windsor and the Other Border Cities.—Partial recovery from the losses recently indicated was recorded in the Border Cities, mainly in manufacturing. Statements were tabulated from 109 employers with 9,543 workers, or 276 more than in the preceding month. Rather small gains were indicated on December 1, 1926, but conditions then were better.

Winnipeg.—The trend of employment in Winnipeg was favourable, repeating the upward movement noted on the same date last year; the increase then, however, was smaller, and the index number several points lower. Data were received from 288 firms employing

EMPLOYMENT IN CANADA AS REPORTED BY EMPLOYERS

NOTE.—The curve is based on the number of employees at work on the first day of the month, as indicated by the firms reporting, in comparison with the number of employees they reported in January, 1920, as 100.

Ottawa.—Further curtailment was shown in Ottawa, chiefly in construction, transportation and manufacturing; 142 employers recorded a combined payroll of 10,956 workers, as against 11,432 in their last report. Employment was more active than at the beginning of December, 1926, although similar losses were then indicated.

Hamilton.—Continued, but slight increases were reported in Hamilton, where an aggregate staff of 30,863 persons was employed by the 304 firms furnishing data, a gain of 64 as compared with their labour forces on November 1. Manufactures and trade were busier, while construction was seasonally quiet.

30,307 persons, as against 29,428 in the preceding month. Most of the improvement was reported in trade, while transportation was also busier, and construction work released many men.

Vancouver.—There was a further, but smaller falling-off in activity in Vancouver, according to 238 employers of 24,945 workers, or 240 less than on November 1. Manufacturing and construction showed curtailment, but trade afforded more employment. Practically no change in the situation had been recorded at the beginning of December, 1926, when the index was somewhat higher.

Index numbers by cities are given in Table II.

TABLE I.—INDEX NUMBERS OF ALL EMPLOYMENT BY ECONOMIC AREAS, AND OF DOMINION EMPLOYMENT IN MANUFACTURING

	Canada	Maritime Provinces	Quebec	Ontario	Prairie Provinces	British Columbia	All manufacturing

Dec. 1.....	106.8	88.3	115.5	102.5	111.6	113.8	96.4
Relative Weight of Employment by Districts and in Manufacturing as at Dec. 1, 1927.....	100.0	7.4	29.3	41.3	13.4	8.6	53.9

NOTE.—Number employed by the reporting firms in Jan., 1920=100 in every case. The "Relative Weight" shows the proportion of employees in the indicated area to the total number of employees reported in Canada on the date under review.

Manufacturing

Another, but smaller reduction in employment occurred in manufacturing establishments, 3,875 of which employed 477,765 operatives, compared with 480,894 on November 1. This decline involved fewer workers than had been let out at the beginning of December in most years of the eight years' record, in all of which the index was lower than on the date under review. Lumber and food factories were seasonally slacker, and smaller losses were noted in textile, building material and electric current plants, while the metal industries, particularly iron and steel works, afforded considerably more employment.

Animal Products—Edible.—Meat-preserving establishments reported improvement, particularly in the Prairie Provinces, but there was a further seasonal decline in fish-canneries,

mainly in British Columbia. The result was a reduction of 561 in the staffs of the 191 firms making returns, who had 17,233 employees. Although this decrease was very much larger than that recorded on the corresponding date in 1926, the index then was some eight points lower.

Leather and Products.—Continuing the favourable movement indicated during the last six months, employment in this industry showed a gain at the beginning of December chiefly in tanneries and leather goods factories. Statements were tabulated from 196 manufacturers employing 18,023 persons, as compared with 17,845 on November 1. The largest increases were in the Maritime Provinces and Ontario. Somewhat more pronounced expansion was noted on December 1, 1926, when the situation was practically the same as on the date under review.

TABLE II.—INDEX NUMBERS OF EMPLOYMENT BY PRINCIPAL CITIES

	Montreal	Quebec	Toronto	Ottawa	Hamilton	Windsor	Winnipeg	Vancouver
1923

Oct. 1, 1927	107.2	120.5	99.7	110.6	98.3	83.3	106.2	119.0
Nov. 1, 1927	108.0	122.5	99.1	106.2	101.0	81.7	105.7	115.2
Dec. 1, 1927	107.3	118.6	100.0	101.7	101.9	84.5	108.9	114.0
Relative weight of employment by Cities as at Dec. 1, 1927...	13.9	1.3	12.3	1.2	3.5	1.1	3.4	2.8

Lumber and Products.—Seasonal curtailment of operations on a smaller scale than in the preceding month and also than on the corresponding month last year, was noted in saw-mills. Furniture and match factories, however, reported additions to payrolls. All provinces shared in the downward movement. Data were received from 703 firms in this industry, whose staffs declined from 48,581 workers on November 1, to 44,282 at the beginning of December. The index was very slightly lower than on December 1 a year ago.

Plant Products, Edible.—Varying conditions in the different divisions of the vegetable food group produced a reduction of 609 persons in the 314 plants from which returns were received, and which reported a combined working force of 29,274 operatives. Fruit and vegetable canneries released help, owing to the completion of the season's work, and biscuit factories were also slacker, while the sugar and syrup and cereal divisions reported improvement. In the Maritime and Prairie Provinces activity increased, but elsewhere curtailment was indicated. The volume of employment on December 1, 1926, was rather greater, the losses then noted having been considerably less extensive.

Pulp and Paper.—Statements were received from 477 manufacturers in the pulp and paper industry, whose payrolls were increased by 64 persons to 60,324 at the beginning of De-

ember. Employment continued to be much brisker than on the same date in any other year of the record. Most of the improvement took place in printing and publishing establishments, while pulp and paper works released some employees. Improvement was shown in all provinces except Quebec and British Columbia.

Textile Products.—There was a reduction in employment in this division, owing to decreases in garment factories, while thread, yarn and cloth, knitting and other textile mills reported heightened activity. Returns were compiled from 518 manufacturers employing 76,545 workers, or 229 less than in the preceding month. Practically all the declines occurred in Quebec, the tendency in Ontario being favourable. Practically no change on the whole was shown at the beginning of December, 1926, when the index was several points lower.

Clay, Glass and Stone Products.—A seasonal falling-off occurred in building material factories, according to statistics from 119 firms, whose staffs declined from 10,546 in their last report to 10,280 persons on the date under review. The largest reductions were in brick factories and stone works, and took place in Ontario and the Prairie Provinces. The level of employment was higher than on December 1, 1926, the shrinkage then registered having involved a greater number of workers.

TABLE III.—INDEX NUMBERS OF EMPLOYMENT IN CANADA BY INDUSTRIES (JAN. 1920=100)

Industries	¹ Relative Weight	Dec. 1, 1927	Nov. 1, 1927	Dec. 1, 1926	Dec. 1, 1925	Dec. 1, 1924	Dec. 1, 1923

¹The "Relative Weight" column shows the proportion that the number of employees in the indicated industry is of the total number of employees reported in all industries by firms making returns on the date under review.

Electric Current.—There were further moderate reductions in electric current plants, 88 of which reported 13,067 employees, or 184 less than in the preceding month. The recessions were distributed over the different provinces. Practically the same number of workers were released at the beginning of December a year ago, but then the index number was considerably lower.

Electrical Appliances.—Continued additions to payrolls were noted in electrical apparatus plants, mainly in Ontario; 40 manufacturers employed 11,361 persons, as compared with 11,248 in their last report. Employment on December 1 was at the highest level so far reached in this record.

Iron and Steel Products.—Considerable improvement was indicated in iron and steel factories, chiefly in the crude, rolled and forged, railway car, and shipbuilding divisions, while automobile and some other plants released employees. The result was an increase of 2,053 in the staffs of the 651 co-operating manufacturers, who employed 126,094 workers. Employment advanced in all provinces except British Columbia. The situation was practically the same as on the corresponding date last year.

Non-Ferrous Metal Products.—There was a further increase in employment in this division at the beginning of December, according to data received from 104 employers of 16,805 persons, as compared with 16,202 in the preceding month. A favourable movement was noted in all provinces, but particularly in British Columbia. The index was much higher than on December 1, 1926, when minor gains were made.

Logging

Continued advances were shown in logging, there being an improvement in all provinces, with the largest gains in Quebec. Statements were tabulated from 255 logging camps having 42,900 employees, or 10,781 more than in their last report. This expansion, which was the greatest indicated in this record of eight years, brought the index number to the highest point so far reached.

Mining

Coal.—Employment in coal mines increased considerably at the beginning of December, 1,302 persons being added to the rolls of the 89 reporting operators, who had 28,141 employees. The Maritime and Prairie Provinces reported most of the improvement. The seasonal gains on the corresponding date in 1926 were rather larger, and the index number then stood at 92.1, as compared with 90.4 on December 1, 1927.

Non-Metallic Minerals, Other than Coal.—Continued declines in employment were noted in this industry, in which 69 firms furnished data, showing that they had reduced their staffs by 620 persons to 6,843 on the date under review. All provinces shared in this seasonal slackness. Conditions were better than in the corresponding month of a year ago, when the trend was also downward.

Communications

Further losses in personnel were noted on telephones and telegraphs; 322 persons were released from the payrolls of the 187 co-

operating companies and branches, which had 25,371 employees on the date under review; the index was higher than in the early winter of any other year of the record.

Transportation

Steam Railways.—The trend of employment in railway operation continued to be upward, 101 employers reporting 80,591 workers as compared with 80,409 in the preceding month. Most of the advance was made in Quebec and the Prairie Provinces. The index number was higher than on December 1 in any other year of the record except 1923; in most of the years since 1920 employment showed a contraction at the beginning of December.

Shipping and Stevedoring.—According to information received from 62 companies employing 16,174 persons, there was an increase in shipping, chiefly in the Maritime Provinces and Quebec, 490 employees having been taken on by these firms since November 1. Considerable losses were noted on December 1, 1926, when the level of employment was lower.

Construction and Maintenance

Building.—Employment in building construction showed a seasonal falling-off from the preceding month, although it was still at a higher level than in the early winter of previous years of the record, which was instituted in 1920. Statements were compiled from 502 contractors employing 35,917 persons, as compared with 39,481 on November 1. The most extensive curtailment was in Quebec and Ontario, although there were general recessions throughout the country.

Highway.—Further important decreases were noted in the staffs of the 165 highway contractors furnishing statistics, who employed 16,377 workers on December 1, as compared with 26,375 in the preceding month. The number released was greater than on December 1, 1926, when employment was in smaller volume. Important declines were registered in all provinces.

Railway.—Activity on railway construction and maintenance showed another seasonal decline, which, however, involved fewer workers than on the corresponding date last year. The

index number then was slightly lower than on December 1, 1927. Statistics were received from 38 contractors and divisional superintendents, whose staffs diminished from 40,235 men on November 1, to 34,033 on the date under review. The most pronounced contractions were in Ontario and the Prairie Provinces, although there were general losses throughout the country.

Services

Further, seasonal reductions were reported by the 172 co-operating firms in this division, who had 15,761 employees, or 182 less than in the preceding month. Hotels and restaurants continued to decrease their labour forces, while little general change was shown in other divisions of the service group. Employment was more active than on December 1 of any previous year of the record.

Trade

Further and larger seasonal increases were noted in trade, the additions being the most extensive ever registered in this record, which was commenced in 1920. The index, standing at 122.2 was at its maximum for the last eight years. Reports were received from 590 trading establishments with 72,371 employees, or 5,639 more than on November 1. Practically the entire gain was in retail stores, which added to their forces in all provinces.

Tables I, II and III give index numbers of employment by economic areas, leading cities and industries, respectively. The columns headed "relative weight" show the proportion that the number of employees reported in the indicated area or industry is of the total number of employees reported in Canada by the firms making returns for December 1, 1927.

ANNUAL REVIEW OF EMPLOYMENT IN CANADA, 1927

Summary of Reports Made by Employers to Dominion Bureau of Statistics

EMPLOYMENT as reported by employers throughout Canada was in greater volume in 1927 than in any other year since 1920, there being almost uninterrupted expansion on a large scale from early in January until the first of September. This upward movement carried the curve of employment to a level many points higher than in any of the last seven years, and considerably higher than on the basic date in 1920, when the post-war boom was at its maximum. During these seven months of advancing employment, nearly 125,000 persons were added to the staffs of the reporting firms, a number which was practically the same as in 1926, and greater than in the same period of any other year of the record except 1922, when the opening up of industry following the depression of 1921 caused the employment of approximately the same number of extra employees. In 1927 the most pronounced gains were recorded at the beginning of May, June and July, as is generally the case. There were less extensive increases in the next two months, followed by unusually small declines at the beginning of October, November and December.

The chart on page 53 illustrates the course of employment in Canada since the beginning of 1925; the favourable trend indicated during the greater part of 1927 is shown, as is the fact that on December 1, the curve of employ-

ment was still at a higher level than in any month of the years, 1921-1926.

The Dominion Bureau of Statistics tabulated payroll data from some 6,060 firms who employed a monthly average of 854,762 workers during 1927, their staffs varying between 781,559 on January 1 and 905,756 at the beginning of September. The index, with January 1920 as 100, reached its peak for the year in that month, standing at 109.7 which was the maximum so far reached since this series was commenced in 1920. In 1926 the peak was 105.2 on October 1. The index averaged 103.4 during the year under review, as compared with 98.4 in 1926, 92.5 in 1925, 92.3 in 1924, 94.6 in 1923, 87.9 in 1922 and 87.8 in 1921.

The most outstanding feature of the situation during the year was the marked expansion in construction, in which the number of workers covered by these statistics considerably more than doubled between February and September. Manufacturing showed consistent gains for many months, affording considerably more employment than in earlier years of the record. Transportation, mining, logging, services, communications and trade were all much more active than in preceding years; in the last named, and in construction, employment attained its highest point in the record.

NOTE.—The number employed by the reporting firms in January, 1920, is taken as 100 in every case. The relative weight in this table shows the proportion of employees reported in the indicated area to the total number of employees reported in Canada by the firms making returns on December 1, 1927.

Relative weight of Employment by Economic Areas, as at December 1, 1927.....	7.4	29.3	41.3	13.4	8.6	100.0

Employment by Economic Areas

Firms in all provinces augmented employment during 1927 as compared with 1926. As in the preceding year, the index of employment was higher in British Columbia and Quebec than elsewhere, but the most pronounced improvement was in Ontario and Quebec.

Maritime Provinces.—In the early part of 1927 employment in the Maritime Provinces showed a decrease, succeeded by five months of expansion. From the beginning of September until the end of the year, however, curtailment was noted, but this was generally less than in the same months of 1926. The index number averaged 92.4, as compared with

Note.—The number employed by the reporting firms in Jan. 1920, is taken as 100 in every case. The "relative weight" in this table shows the proportion of employees reported in the indicated city to the total number of employees reported in Canada by the firms making returns on Dec. 1, 1927.

TABLE II.—INDEX NUMBERS OF EMPLOYMENT BY PRINCIPAL CITIES

	Montreal	Quebec	Toronto	Ottawa	Hamilton	Windsor	Winnipeg	Vancouver
1923								
Jan. 1.....	79.8		84.7	94.4	81.5		92.6	87.7

Relative weight of Employment by cities as at Dec. 1, 1927.....	13.9	1.3	12.3	1.2	3.5	1.1	3.4	2.8

88.6 in 1926, 86.4 in 1925, 86.1 in 1924 and 94.2 in 1923. Manufacturing, as a whole, afforded approximately the same volume of employment as in the preceding year. The lumber industry was comparatively dull throughout 1927; textiles, pulp and paper, however, showed a much more favourable

situation and iron and steel plants on the whole, were somewhat busier. Logging and mining were more active, the index numbers being higher than in the three preceding years. During the greater part of 1927, transportation afforded rather more employment than in 1926. Construction was generally

TABLE III.—Index Numbers of Employment by industries. (Jan. 1920=100). The relative weight shows the proportion of employees reported in the indicated industries to the total number of employees reported in Canada by the firms making returns on December 1, 1927.

slacker during the early part of the year, but important improvement was recorded from May onward, bringing employment to a higher level than in other years of the record, while services, communications and trade registered slightly greater activity. The aggregate pay-rolls of the reporting firms in the Maritime Provinces averaged 68,593 persons, as compared with 65,339 in the preceding year.

Quebec.—Employment in Quebec showed greater fluctuation than in 1926, but the situation each month was more favourable than in the corresponding month in any other year of the record, instituted in 1920. From the low point of 98.2 on January 1, the index rose to 115.9 at its peak on September 1, while at the beginning of December it was at 115.5. The labour forces of the 1,328 co-operating

TABLE IV.—INDEX NUMBERS OF EMPLOYMENT IN CANADA BY INDUSTRIES 1927, (JAN. 1920=100)

Industries	Jan. 1 1927	Feb. 1 1927	Mar. 1 1927	April 1 1927	May 1 1927	June 1 1927	¹ Relative Weight

¹The "Relative Weight" column shows the proportion that the number of employees in the indicated industry is of the total number of employees reported in all industries by the firms making returns on June 1, 1927.

employers varied between 217,669 and 257,823 workers on those dates, respectively, averaging 244,005 for the twelve months. The mean index was 109.1 as compared with 104.3 in the preceding year. Manufacturing as a whole was much brisker in every month of 1927 than in the same month of 1926 and 1925. The

index was also rather higher than the general index in manufacturing for Canada. Employment in lumber products was more active than in 1926 from the first of the year until September; the seasonal declines in the two following months were larger than usual, but on December 1 activity was greater than on

TABLE IV.—INDEX NUMBERS OF EMPLOYMENT IN CANADA BY INDUSTRIES 1927 (JAN. 1920=100)

Industries	July 1 1927	Aug. 1 1927	Sept. 1 1927	Oct. 1 1927	Nov. 1 1927	Dec. 1 1927	Relative Weight

¹The "Relative Weight" column shows the proportion that the number of employees in the indicated industry is of the total number of employees reported in all industries by firms making returns on December 1, 1927.

the same date in 1926, as was the average for the year. Pulp and paper, textiles, and other manufactures recorded a materially larger volume of employment than in the preceding year, while the mean index in iron and steel was only slightly higher. With the commencement of development work in the new mining

areas of Quebec, employment in mining gained, but not so extensively as may be expected when operations are more fully established. Communications, logging, services and trade were all considerably more active than in 1926; construction and transportation, during the first six months of 1927, reported

greater activity than in 1926, but in the latter half of the year, the indexes were lower. In the former, this was mainly owing to the completion of various important industrial undertakings in which production was then enabled to commence. Employment however, averaged higher throughout the year in both these groups. The advances in construction continued to be closely associated with the development of the power and pulp and paper industries. Employment in logging camps was in greater volume than in almost any other year of the record, forecasting an active season in 1928 in sawmills and pulp and paper plants.

Ontario.—Continuous improvement was noted in Ontario from the first of the year until October 1, a longer period of expansion than in any other year of the record, which brought the index on the latter date to 104.3, the highest point reached since 1920. An average staff of 356,222 employees was recorded by the firms furnishing data in Ontario, as compared with the mean of 331,762 in 1926; the index averaged 99.1 in 1927, or 5.6 points higher than in the preceding year. Manufactures consistently reported a better situation, the index being higher in every month than on the same date in 1926 or 1925. Employment in pulp and food, electrical apparatus, iron and steel, rubber, building material, leather, non-ferrous metal and paper, and other manufactures showed decided improvement over the preceding year, while there was a small gain in textiles and the number engaged in lumber products was almost the same. Operations in logging camps showed an advance, particularly towards the close of the year. Mining, communications, transportation, construction and maintenance, services, and trade employed considerably larger payrolls, the improvement in construction being especially noteworthy.

Prairie Provinces.—Pronounced expansion was indicated in the Prairie Provinces during the summer months; the payrolls of the employers furnishing data averaged 112,877 persons during the year and the index, 103.3, while in 1926 an average payroll of 105,891 workers and a mean index of 100.2 were recorded. The level of employment in manufacturing, logging, mining, communications, transportation, construction and maintenance, services and trade was higher in 1927 than in 1926, when the situation generally was better than in 1925 and 1924. The improvement in construction, services, trade and transporta-

tion was particularly marked. Within the manufacturing group, pulp and paper, lumber, iron and steel and other divisions shared in the upward movement.

British Columbia.—The firms reporting in British Columbia employed an average working force of 75,898 employees, while in the preceding year the mean was 75,274. The index averaged 114.0, the greatest since the record was begun in 1920; as compared with 112.9 in 1926. At the end of the year, employment was 15 points higher than at the beginning. Within the manufacturing division, pulp and paper, food, non-ferrous metals and some other groups showed heightened activity, while lumber and iron and steel plants were slacker. Communications, transportation, services and trade were much busier during the greater part of 1927 than in 1926. On the other hand, logging and mining afforded less employment and construction was also rather quieter.

Index numbers by economic areas since 1923 are shown in Table I. The curves in the chart on page 53 are based upon the number of workers employed by the reporting firms at the beginning of the month, as compared with the number on their payrolls in January, 1920, as 100.

Employment by Cities

Marked improvement as compared with 1926 was recorded in Montreal, Quebec, Toronto, Ottawa, Hamilton, Winnipeg and Vancouver, while, owing to curtailment of production during most of 1927 in a large automobile plant in the Border Cities, activity there was at a lower level than in the preceding year.

Montreal.—The staffs of the Montreal firms making returns averaged 115,874 persons, as compared with an average of 111,514 on the payrolls of the employers reporting in 1926; the mean index, at 101.6, was over three points higher than that for the preceding year. Steady increases were indicated from early in January until August 1, when there was a small decline, but the upward movement was soon resumed and employment advanced during the next three months. Manufacturing as a whole, reported gains, especially in printing and publishing, textile, tobacco, distilled and malt liquor and iron and steel plants. Communications, transportation, construction and trade generally showed a much better situation.

Quebec.—The tendency during most of the year was favourable, the index which stood at 97.2 on February 1, rising to its maximum of 122.5 on November 1. At the beginning of December it was higher than in any month of the three preceding years for which statistics are available. The staffs of the employers furnishing data averaged 10,202 and the index, 110.0 in 1927, compared with means of 8,487 and 98.0 in the 1926. Manufacturing, construction and transportation were active; within the first named, improvement was noted in shoe and other factories.

Toronto.—Employment at the beginning of 1927 showed the usual pronounced curtailment, although the losses were less extensive than on the same period of preceding years. From February on, however, the trend was almost uninterruptedly upward, the index, which rose from 89.9 on Feb. 1 to 100.0 on December 1, averaging 95.7, as against 90.2 in 1926 and 86.7 in 1925. The number of employees of the co-operating firms during 1927 averaged 102,916, while in the year before the mean was 96,716. Within the manufacturing group, food, iron and steel, printing and publishing and other plants recorded marked gains, and in textiles there were minor increases. Communications, construction and trade were decidedly more active, but local transportation was slacker, which may be partly a result of the growth in the use of automobiles.

Ottawa.—Manufacturing on the whole recorded a better situation than in the preceding year, lumber, pulp and paper and other plants affording heightened employment, while gains were also shown in construction and trade. A mean payroll of 10,773 workers was reported by the employers furnishing data, and the index averaged 101.1, as compared with 9,916 employees and an average index of 93.9 in 1926.

Hamilton.—Improvement was noted in Hamilton during the greater part of 1927, the index, at 101.9 on December 1 being its maximum for the record, which was begun in 1922. Manufacturing, generally, was considerably more active; the electrical apparatus and iron and steel industries maintained a higher level of employment than in the preceding year, but textile mills were rather slacker. Construction and trade were more active, especially pronounced advances being indicated in the latter. The co-operating firms reported an average working force of 29,751 persons, while in the preceding year the average was 28,645. The mean index was 97.9, over three points higher than in 1926.

Windsor and Other Border Cities.—The index number of employment in the Border Cities averaged 86.1 and the recorded payrolls averaged 9,654 workers in 1927, compared with 99.9 and 10,930, respectively, in the preceding year. Employment in the automobile industry was comparatively low, owing to curtailment of production for many months in a large plant. Other branches of manufactures however, registered expansion and construction was also busier.

Winnipeg.—The situation in Winnipeg was more favourable during every month of 1927 than in the corresponding month of 1926. The mean index of employment for the year was 101.7, compared with 96.9 in the preceding year. Manufacturing, generally, was much brisker, as were transportation and trade, but construction was dull. An average staff of 28,372 was recorded by the firms whose data were received, an increase of more than 1,600 over the 1926 mean.

Vancouver.—Conditions in Vancouver, were rather better, the index averaging 116.3 as compared with 115.4 in the preceding year, while the paylists covered averaged 25,298 persons as against 25,035 in 1926. No general change was shown in manufactures during the year as compared with 1926, improvement in food, pulp and paper, textile, electric current, and mineral product factories being offset by losses in the metal and lumber industries. Services and trade were decidedly more active, communications and transportation reported only minor changes, while construction was slacker.

Index numbers by cities are given in Table II,

Employment by Industries

The year 1927 was characterized by steady advances in manufacturing, in which activity was greater than in any other year since 1920; on December 1 the index was, in fact, higher than on the corresponding date in all other years of the record, including 1920. Statistics were received from some 3,875 manufacturers employing on the average, of 472,286 operatives, as compared with 452,392 in 1926, while the mean index, standing at 95.6 compared satisfactorily with an average of 92.1 in the preceding year. Practically all divisions of manufacturing shared in the generally favourable movement. Especially noteworthy were the gains in iron and steel, pulp and paper, rubber, food and textile groups, which together employ a large proportion of the workers engaged in manufacturing processes. Although the usual heavy losses incidental to

the holiday and inventory season will have reduced employment to a considerable extent on January 1, 1928, it may be expected that the upward trend will soon be resumed.

Animal Products, Edible.—Employment in this division during 1926 was better than in any previous year of the record, and further improvement was noted in 1927. Fish and meat preserving plants and dairies registered marked activity. The payrolls of the reporting employers averaged 16,733 persons, varying between 14,081 on March 1 and 19,205 at the beginning of August. The mean index was 103.7, compared with 97.1 in 1926.

Leather and Products.—Boot and shoe and other leather-using factories afforded more employment than in the preceding year, the tendency being favourable during eight of the twelve months. An average working force of 17,528 employees was recorded by the co-operating establishments and the mean index was 80.8, as compared with 77.8 in 1926.

Lumber Products.—The seasonal movements always felt in lumber works caused the usual fluctuations during 1927, in which employment was in greater volume during the first six months than in 1926, but was lower during the remainder of the year. Steady gains between February 1 and August 1 were succeeded by consistent losses during the latter part of the year. The payrolls of the firms furnishing data ranged between 38,327 persons at the beginning of January and 58,198 on August 1, averaging 48,910 in the 12 months, as compared with the 1926 mean payroll of 49,384. The average index, standing at 99.4, was about one point lower than in the preceding year, it was, however, greater than in 1925 and 1924, though slightly less than in 1923. Rough and dressed lumber mills recorded a smaller volume of employment than in 1926, but moderate improvement in that comparison was noted in furniture and other lumber factories.

Musical Instruments.—Activity in musical instrument factories was rather greater than in the preceding year, the index averaging 72.3 against 71.3 in 1926 and 62.0 in 1925. The staffs of the co-operating employers averaged 3,188 workers during the year under review. The production of radio apparatus is not included in this industrial group, which has undoubtedly been affected by the marked activity recently prevailing in that line.

Plant Products, Edible.—Employment in vegetable food factories was better in 1927 than in the preceding year. The sugar, biscuit and confectionery industries reported greater activity, but canneries, probably as a result of

the cold summer, did not afford so much employment as in 1926, nor were flour and cereal mills as busy. An average working force of 27,656 persons was registered by the reporting establishments, in which the number of operatives ranged between 25,082 on January 1 and 33,132 at the beginning of October. The mean general index of 100.2 in 1927 compares favourably with the 1926 average of 98.5.

Pulp and Paper.—Continued development of the pulp and paper industry caused considerable increases in employment which was at a higher level in 1927 than in any other of the eight years for which records are available. The reported staffs averaged 58,581 employees and the index 114.1 in 1927, as compared with 54,958 and 107.9, respectively, in 1926. Most of the improvement took place in pulp and paper mills, but printing and publishing and other industries coming under this heading were also busier.

Rubber Products.—There was almost continuous expansion in rubber factories during the year under review, in contrast with the fluctuations that characterized the situation in 1926 when employment was in smaller volume. The mean index in 1927 was 98.6, compared with 87.7 in the preceding year. At the beginning of December, the situation was more favourable than in any other month in the record. Footwear, tire and other rubber factories were active in Quebec and Ontario. The payrolls of the plants supplying information averaged 14,075, ranging between 12,746 workers on January 1 and 15,177 at the close of the year.

Textile Products.—Employment in the textile industries showed almost the same trends as in 1926, improvement in the first four months being followed by losses at the beginning of June, July and August, succeeded in turn by recovery in the next three months. Conditions were consistently more favourable in the year under review than in any other since 1920, the index number averaging 96.7, compared with 92.6 in 1926. An average staff of 74,740 employees was reported by the co-operating manufacturers, while in the preceding year the mean payroll was 71,251. The hosiery and knit goods, thread, yarn and cloth groups were decidedly busier during the year, while employment in garment factories remained, on the whole, in about the same volume, there being only an insignificant increase in the mean index.

Tobacco, Distilled and Malt Liquors.—Statements were compiled from over 100 firms, whose working forces averaged 12,447

persons, varying between 10,801 on January 1 and 13,262 at the beginning of December. The main index of 104.6 in 1927 was nearly seven points higher than in 1926. Tobacco factories and breweries were active during the year under review.

Chemical and Allied Products.—A higher level of employment than in 1926 and 1925 was recorded in this group during 1927, when the index averaged 86.6 as compared with 83.7 in the preceding year. An average payroll of 6,656 workers was registered by the employers whose statistics were tabulated, as against the 1926 mean of 6,429.

Clay, Glass and Stone Products.—Improvement was reported during seven months in 1927, when employment was in greater volume than in any other year of the record. The index number averaged 100.5, while in 1926 it was 96.8. The marked activity registered in building during 1927 is reflected in the personnel of building material factories, 115 of which reported a mean working force of 9,974 persons. At the maximum, the number employed was 10,984.

Electric Current.—The number employed in electric current works was greater than in any other of the last eight years; the index averaged 134.5 as compared with 126.0 during 1926 and 130.5 in 1925, the previous high level of the record. The staffs of the co-operating producers averaged 12,605 during 1927.

Electrical Apparatus.—Employment in this division, which includes the manufacture of radios and equipment, was in greater volume during 1927 than in any other year of the record, which was commenced in 1920. The reported payroll included on the average 10,631 workers, and the mean index was 133.3, as compared with 9,644 and 122.2, respectively in 1926.

Iron and Steel Products.—Improvement in the general situation was noted during 1927, the average index, 82.0, being about two points above the 1926 mean, and over 10 points higher than in 1925. The year under review was more favourable than any other since 1920, employment generally being in rather greater volume than in 1923, the previous high level of these seven years. Gains were shown in the crude, rolled and forged, machinery, agricultural implement, heating appliance, structural iron and steel, foundry and machine shop and some other divisions, but land vehicles works showed less activity. This was partly due to the fact that the production of automobiles in one large plant was curtailed during the greater

part of the year, owing to an important change in model. The working forces of some 645 firms who reported during 1927 averaged 126,920 persons, while in 1926 the average was 123,748 and in 1925 it was 110,245.

Non-Ferrous Metal Products.—Employment in this division increased in most months of the year under review, when activity was greater than in any other since 1920. The index averaged 107.1 and the reported employees, 16,151, compared with 96.3 and 14,361, respectively, in the year preceding.

Non-Metallic Mineral Products.—Employment in non-metallic mineral product plants was brisker, the mean index standing at 107.5, as compared with 104.5 in 1926. Statements were received from over 75 firms with an average staff of 9,863 persons. The gas, petroleum and other divisions of this classification maintained a good volume of employment.

Other Manufacturing Industries.—Fur factories showed a rather less favourable situation than in 1926, while the production of wood distillates and extracts and of miscellaneous manufactured products increased.

Logging

Logging camps reported more activity than in the preceding year and also than in 1925, the index on December 1 being higher than in any other month of this eight years' record. The working force of the firms supplying data averaged 25,538 men and the index number 60.5 in 1927; in 1926 and 1925 the mean indexes were 55.2 and 58.4 and the average payroll 21,947 and 23,154, respectively. The practice, constantly gaining in popularity, of the larger operators doing their cutting through small contractors and local settlers in the northern reaches makes it increasingly difficult to collect current statistics on employment. As usual, the greatest variation in logging was in Ontario and Quebec, while in British Columbia a more constant volume of employment was afforded.

Mining

There were losses in employment in mining during the first quarter of 1927, followed by nine months of continuous expansion which resulted in a better situation than in any other year of the record. The index averaged 102.3 compared with 95.3 in 1926. In *coal mining* the conditions were better during the greater part of the year than in 1926, although employment was not so active on December 1, 1927, as on the same date in the preceding

year. The mean index, however, was 86.0 as compared with 81.2 in 1926, while the labour force of the co-operating operators averaged 26,804 workers. Both Eastern and Prairie coal fields shared in the gains. In *metallic ores*, the level of employment was decidedly higher, the index, at 165.3, averaging over 18 points more than in 1926. The staffs of the reporting firms averaged 12,246 during the year under review. When the operations planned in the newly prospected areas are established, employment in metallic ore mines may be expected to show important advances. *Non-metallic minerals* (other than coal) registered greatly increased employment, an upward movement being recorded during most of the year. The index averaged 108.3, as against 102.1 in the preceding year; a mean payroll of 6,690 persons was employed by the co-operating firms. Quarries, asbestos mines and other divisions coming under this heading reported considerable activity.

Communications

Telegraphs and telephones showed further substantial advances during 1927; the index averaged 120.8, or almost five points higher than in 1926, the previous high level of this record. The personnel of the companies furnishing data averaged 25,145 employees, of whom about 80 per cent were engaged on telephones. The improvement was general throughout the Dominion.

Transportation

Heavy seasonal losses were shown in the first two months of 1927, after which the tendency was generally favourable until the close of the year, until employment was at the maximum so far reached in this record. The index averaged 111.0 as compared with 108.0 in 1926. The transportation companies whose returns were tabulated employed, on the average, 112,486 workers, or between 13 and 14 per cent of the total number covered by these statistics throughout the Dominion. *Street railways and cartage*, reporting an average payroll of 20,208 persons, were generally more active, the index averaging 117.0 compared with 113.4 in 1926. In the *steam railway division*, improvement over the three preceding years was indicated, but the number employed has not attained the maximum reached in 1923. The index averaged 101.5 in 1927, or nearly three points higher than in 1926; at its peak on December 1 it stood at 104.5, which was rather lower than the 1926 high point, reached on October 1. A mean working force of 78,277 employees was recorded in steam railway oper-

ation. Employment in *shipping and stevedoring* was better than in 1926; the average was 202.2, while the reported staffs averaged 14,001, varying between 10,450 persons on March 1 and 16,295 at the beginning of July. In the preceding year the mean index was 197.9.

Construction and Maintenance

Greater expansion than in any previous year of the record was indicated by the construction industries in 1927. During the period of pronounced activity, from February 1 to September 1, over 73,000 persons were added to the forces of the co-operating contractors, whose payrolls averaged 93,833 during the 12 months, varying between 56,969 on Feb. 1 and 130,257 at the beginning of September. The general index for this group averaged 177.6, compared with 161.6 and 138.4 in 1926 and 1925, respectively, the previous high levels of this record. *Building construction* gained steadily from March 1 to September 1, but was comparatively brisk in every month. A mean index of 173.7 in 1927, compared favourably with that of 157.4 in the preceding year. The average number of persons employed by the reporting contractors was 35,602. As already mentioned in the case of logging, there is a growing tendency on the part of the larger contractors to sub-let their contracts by trades to sub-contractors, who usually employ a comparatively small number of workers. When they have less than 15 employees, they are not required to furnish data on employment, so that the number employed in building is probably considerably in excess of that covered in these statistics. *Road construction* reported many additions to staffs during the summer, when the number employed was higher than in any other of the last eight years. The payrolls registered averaged 17,706, and ranged between 3,294 on March 1 and 34,230 at the beginning of August. In many districts this work is supplementary to occupations ordinarily followed by nearby residents, particularly agriculturists, during slack periods on their farms. Employment in *railway construction* (in which the working forces covered averaged 40,525 men, attained a greater volume than in any other year of the record. The index averaged 129.1, while in 1926 the mean was 126.2 and in 1923, the previous high level, it was 123.7.

Services

Statements were received monthly from some 175 firms in this division, whose employees averaged 15,680. Steady gains were noted from January until September, suc-

ceeded by seasonal declines until the end of the year. Employment in hotels and restaurants was very active during 1927, partly as a result of the tourist trade, while improvement was also shown in other divisions. The index number averaged 127.2, as against 119.1 in 1926; this was considerably better than in any other year of the record.

Trade

Employment in trade was decidedly more favourable than in previous years of the record, the index number being higher in each month of 1927 than in the corresponding months of any other of the last eight years. Both *retail* and *wholesale trading establishments* shared in the gains, which were fairly well distributed over the country. There was uninterrupted expansion from March until the end of the year. The payrolls of the co-

operating firms averaged 63,971 persons, and the index 108.3, compared with 58,932 and 100.0, respectively, in 1926.

Tables Showing Employment by Industries

Table III gives index numbers of employment by main industrial divisions since 1923, while the trend of employment during 1927 in some 60 industries are shown in Table IV. The columns headed "relative weight" show the proportion that the number of employees in the indicated industry is of the total number of employees reported in Canada by the firms making returns on June 1 and December 1, 1927. The chart shows the course of employment in some of the important industries since 1925; the curves are based upon the number of workers employed by the reporting firms at the beginning of the month, as compared with the number on their payrolls in January, 1920, as 100.

UNEMPLOYMENT IN TRADE UNIONS AT THE CLOSE OF NOVEMBER, 1927

THE term unemployment as used in the following article has reference to involuntary idleness, due to economic causes. Persons occupied in work other than their own trades, or who are idle because of illness, are not considered as unemployed. Unions involved in an industrial dispute are excluded from these tabulations. As the number of unions making returns varies from month to month, with consequent variation in the membership upon which the percentage of unemployment is based, it should be understood that such figures have reference only to the organizations reporting.

Reports which were tabulated from 1,591 labour organizations at the end of November, including a membership of 170,918 persons, showed an increase in idleness of 1.3 per cent over the previous month, the unemployment percentage mounting from 3.9 at the end of October to 5.2 per cent at the close of November. This depression was more particularly localized in the provinces of Quebec and British Columbia, although the other provinces all shared somewhat in the retrogressive movement. In both Quebec and British Columbia inactivity in the manufacturing industries and the building trades accounted for a substantial share of the unemployment reported. In comparison with the returns for November, 1926, when 4.7 per cent of the members were without work, the situation in

New Brunswick, Ontario, Alberta and British Columbia improved, but the reductions in the remaining provinces were sufficient to more than counteract these gains.

Each month a separate tabulation is made, showing the conditions as existing in various cities of the country, the centres taken for comparison being the largest city in each province, with the exception of Prince Edward Island. Of these the unemployment percentage in Vancouver of 10.7 during November was the most noteworthy, followed by 7.8 per cent of inactivity in Montreal. These percentages of idleness were slightly above those recorded in the same cities in both the previous month and in November, 1926. Winnipeg, with 4.9 per cent of unemployed members, reported practically the same situation as had obtained in October, and Halifax with 4.4 per cent of the members out of work showed slightly adverse conditions. Toronto unions indicated 3.7 per cent of idleness, followed by unemployed percentages of 3.2 in Edmonton, 2.2 in St. John, and .9 in Regina.

The accompanying chart illustrates the trend of unemployment by months from 1921 to date. The course followed in November, 1927, was a continuance of the upward movement of the previous month, indicating an increase in the volume of unemployment. The course in November paralleled that of the same month in 1926, although the level in

November, 1927, was slightly above that of the same month in the previous year.

In the manufacturing industries unemployment increased during November in comparison with October, as indicated by the returns tabulated from 417 locals with an aggregate membership of 47,772 persons. Of these, 3,429 were without work on November 30, or a percentage of 7.2, in contrast with percentages of 5.0 in October and 6.3 in November, 1926. Garment, leather, iron and steel, hat and cap, and woodworkers, metal polishers and general labourers all contributed in the reduction reported over October. On the other hand, slight gains in employment occurred among papermakers and printing tradesmen, and tex-

the improvement manifest in the coal mines of British Columbia, supplemented by minor gains in Alberta. In Nova Scotia there were slight reductions in employment. Quarry workers in Nova Scotia showed considerable slackness during November, as compared with no inactivity in both the previous month and November, 1926. Asbestos miners in Quebec were fully employed during November.

Building and construction tradesmen were slacker at the end of November than at the close of the previous month, there being 13.3 per cent of idleness on November 30 as compared with 10.0 per cent in October. Reports were received during November from 190 unions of these tradesmen with 19,142 mem-

PERCENTAGE OF UNEMPLOYMENT AS REPORTED BY TRADE UNIONS

tile, brewery and glass workers, which, however, were not of sufficient magnitude to sway the group percentage favourably. In comparison with the returns for November, 1926, the situation for iron and steel workers, printing tradesmen, leather and textile workers, and bakers improved, while of the offsetting reductions the most pronounced were recorded among garment, glass and woodworkers, papermakers, hat and cap makers, metal polishers and general labourers.

Coal miners, with 36 unions reporting a membership of 15,248 persons, had 2.1 per cent of their members idle on November 30, as against 2.8 per cent in October and 11.2 per cent in November, 1926. The gain in employment over October was due to the better conditions prevailing in the Alberta mining areas. In Nova Scotia there was a nominal adverse change, but in British Columbia all members were reported at work as in October. The advance in employment over November last year was almost wholly due to

members, 2,555 of whom were without work. The reductions in employment were largely due to inactivity among carpenters and joiners, bricklayers, masons and plasterers, and painters, decorators and paperhangers, followed by lesser contractions among steam shovel and dredgemen, bridge and structural iron workers, granite and stonecutters, plumbers and steamfitters and hod carriers and building labourers. Tile layers, lathers and roofers and electrical workers, on the other hand, were afforded a greater volume of work. In comparison with the returns for November, 1926, when 12.7 per cent of the members were idle, bricklayers, masons and plasterers, carpenters and joiners, plumbers and steamfitters and hod carriers and building labourers all reported less favourable conditions during the period under review, while among the remaining tradesmen the volume of employment increased.

From unions in the transportation group 646 reports were received, comprising a mem-

TABLE 1—PERCENTAGES OF UNEMPLOYMENT IN TRADE UNIONS BY GROUPS OF INDUSTRIES

Month	Month

bership of 58,628 persons, 1,962 of whom, or a percentage of 3.3, were without work on November 30, as compared with 3.0 per cent in October. Navigation workers, steam and street and electric railway employees all shared slightly in the increase in unemployment, but among teamsters and chauffeurs no inactivity was recorded, as compared with a small percentage of idleness in October. In comparison with the November, 1926, returns when the percentage of unemployed stood at 1.5, navigation workers were decidedly less active, and steam and street and electric railway employees reported small increases in the number of idle members. Teamsters and chauffeurs were fully employed in both months.

A separate report is compiled each month showing the situation as affecting longshore workers. For November reports were tabulated from 15 unions of these workers, with 6,321 members, 16.3 per cent of whom were

unemployed, as compared with a percentage of 15.6 in October. The volume of work afforded during November was slightly less than in November, 1926, when 15.3 per cent of the members were without work.

From governmental workers 134 returns were tabulated, showing a membership of 12,744 persons, .7 per cent of whom were idle on November 30, as against no unemployment in October and a percentage of 1.6 in November, 1926. Among federal employees no inactivity was reported in any of the months used here for comparison, while civic employees indicated 1.3 per cent of idleness in November, against a fully employed situation in October and a 3.2 percentage of unemployment in November, 1926.

In the miscellaneous group of trades 104 unions reported, showing a membership of 4,519 persons, 6.7 per cent of whom were idle on November 30 as compared with 5.7 per cent in October and 6.4 per cent in November 1926. Hotel and restaurant employees, barbers, and stationary engineers and firemen all registered a slightly less favourable situation in both comparisons, while conditions for theatre and stage employees showed some improvement over the same months.

A much lower level of employment was indicated at the end of November over the preceding month by the 2 unions of fishermen reporting a membership of 755 persons, 19.9 per cent of whom were idle on November 30, as compared with a percentage of 3.5 in October. Declines were also indicated in comparison with the returns of November 1926, when 12.9 per cent of the members were idle. Lumber workers and loggers were reported fully employed in all months used here for comparison.

Table II on this page is a summary of the returns provincially for November of each year from 1919 to 1924 inclusive, and for each month from January, 1925, to date, and Table I on page 71 gives the percentages of idleness indicated in the various groups of industries for the same months.

The new regulations under the Lead Paint (Protection Against Poisoning) Act of Great Britain (LABOUR GAZETTE, November, 1927, page 1211) have been relaxed with respect to the prohibition of the employment of boys under apprenticeship indentures and of girls and women for the execution of wall or ceiling paintings or any similar work of decorative design.

TABLE II.—PERCENTAGES OF UNEMPLOYMENT IN TRADE UNIONS BY PROVINCES

EMPLOYMENT OFFICE REPORTS FOR NOVEMBER, 1927

A DECREASE of 33 per cent in the volume of business transacted during the month of November, 1927, as compared with that of the previous month was reported by the offices of the Employment Service of Canada. This was chiefly due to the usual slackening at this time of year in out-of-door activities, farming and construction in particular. Logging, however, showed a decided gain. An increase of over 3 per cent was recorded when the records were compared with those of November, 1926, farming, logging and services showing the largest gains.

67.4 during the first and second half of November, 1927, in contrast with ratios of 69.5 and 68.2 during the same periods in 1926. The ratios of placements to each 100 applications during the periods under review were 69.0 and 62.6, as compared with 67.5 and 64.4 during the corresponding month of 1926.

The average number of applications for employment received daily by the offices of the Service throughout Canada was 1,926 during the first half of November, as compared with 2,220 during the preceding period, and with

POSITIONS OFFERED AND PLACEMENTS EFFECTED FOR EACH ONE HUNDRED APPLICATIONS FOR EMPLOYMENT

The accompanying chart shows the trend of employment since January, 1925, as represented by the ratio of vacancies offered and of placements effected for each 100 applications for work registered at the offices of the Service throughout Canada, computations being made semi-monthly. It will be noted that the curve of vacancies and of placements in relation to applications declined sharply throughout the month, and at the close of the period under review the level attained was slightly lower than that shown at the close of November, 1926. The ratio of vacancies to each 100 applications was 73.0 and

1,845 daily in the corresponding period of 1926. Applications for work during the latter half of the month registered 1,631 daily, in contrast with 1,600 daily during the latter half of November a year ago.

The average number of vacancies reported by employers to the Service daily was 1,407 during the first half, and 1,099 during the latter half of the month under review, as compared with a daily average of 1,281 and 1,091 vacancies during the month of November, 1926. Vacancies offered to the Service during the latter half of October, 1927, averaged 1,890 daily.

The average number of placements made daily by the offices of the Service during the first half of November, 1927, was 1,330, of which 938 were in regular employment and 392 in work of one week's duration or less, as compared with a total average placement during the preceding period of 1,769 daily, and with 1,246 daily during the first half of November, 1926. During the latter half of the month under review placements averaged 1,021 daily (665 regular and 356 casual) as compared with an average of 1,031 daily during the corresponding period a year ago.

During the month of November, 1927, the offices of the Service referred 30,694 persons to vacancies, and effected a total of 29,218 placements; of these the placements in regular employment were 19,893, of which 16,316 were of men and 3,577 of women, while the placements in casual work totalled 9,325. The number of vacancies reported by the employers totalled 22,784 for men and 8,378 for women, a total of 31,162, while applications for work totalled 44,303, of which 33,288 were from men and 11,015 from women.

The following table gives the placements effected to date in the offices of the Employment Service of Canada:—

Year	Placements		
	Regular	Casual	Totals
1919 (10 months).....	268,001	37,904	305,905
1920.....	366,547	79,265	445,812
1921.....	280,518	75,238	355,756
1922.....	297,827	95,695	393,522
1923.....	347,165	115,387	462,552
1924.....	247,425	118,707	366,132
1925.....	306,804	106,021	412,825
1926.....	300,226	109,929	410,155
1927 (11 months).....	289,299	102,096	391,395

NOVA SCOTIA

There was a gain of nearly 3 per cent in the number of positions offered through offices in Nova Scotia when a comparison was made with the preceding month, but a decline of 8 per cent was recorded when compared with the reports of November, 1926. Placements also showed a gain of 5 per cent over October, but a decrease of 6 per cent from the corresponding month a year ago. Manufacturing registered the largest decline under the latter comparison, while services reported the largest gain, minor changes being recorded in all other groups, except transportation, which remained unchanged. Industrial divisions in which most of the placements were effected during the month were: logging, 100; construction and maintenance, 40; trade, 47; and

services, 366, of which 286 were of household workers. Regular employment was found for 146 men and 90 women.

NEW BRUNSWICK

During the month of November, 1927, positions offered through New Brunswick offices showed a gain of nearly 8 per cent over the preceding month, but a decline of over 3 per cent in comparison with November, 1926. Placements showed a decrease under both comparisons, that of 6 per cent being shown from October and of 15 per cent from November a year ago. All groups except manufacturing, farming and trade reported declines, the largest being in logging, while the gains reported in the three previously mentioned groups were nominal only. Placements by industrial divisions included: manufacturing, 58; logging, 52; construction and maintenance, 56; and services, 513, of which 327 were of household workers. Placements for men in regular work numbered 135 and for women 75.

QUEBEC

There was a decrease of 16 per cent in opportunities for employment offered by Quebec offices during November, when compared with the preceding month, but an increase of 5 per cent when compared with the corresponding month a year ago. Placements showed a decline of 24 per cent from October, but remained unchanged in comparison with November, 1926. Gains under the latter review were shown for nearly all industrial divisions, but these were counterbalanced by losses in logging, communication and construction and maintenance. Industrial groups in which employment was found for over one hundred workers included: manufacturing, 136; logging, 885; transportation, 148; construction and maintenance, 693; trade, 102; and services, 506, of which 340 were household workers. During the month 2,010 men and 450 men were placed in regular employment.

ONTARIO

Orders listed at employment offices in the Province of Ontario during November called for nearly 20 per cent fewer workers than in October, and almost 4 per cent less than were recorded during November a year ago. Placements likewise showed decreases of 18 per cent and nearly 5 per cent respectively under the above comparisons. Declines from November, 1926, were shown in all groups except mining, services and trade, the largest being manufacturing, farming, and construction and maintenance and the highest gain recorded, in

services. Industrial groups in which most of the placements were effected were: manufacturing, 1,081; logging, 2,936; farming, 544; transportation, 633; construction and maintenance, 1,753; trade, 414; and services, 3,375, of which 2,086 were of household workers. Regular employment was obtained for 5,532 men and 1,271 women.

MANITOBA

Opportunities for employment, as indicated by orders listed at employment offices in Manitoba during November, were 31 per cent lower than during the preceding month and 14 per cent less than in November, 1926. There were also declines of 34 and 17 per cent respectively in the placements for the month under review when comparisons were made the same as above. The only group to show a gain in placements, when contrasted with last year, was logging, and in that the increase was small. All other groups reported decreased placements, that in farming being the largest, due to the seasonal reaction from the heavy demand for harvesters during the preceding months. Trade also showed a considerable decline. Placements by industrial divisions included: manufacturing, 127; logging, 1,205; farming, 723; construction and maintenance, 147; trade, 189; and services, 1,597, of which 1,238 were of household workers. Placements in regular work numbered 2,039 for men and 583 for women.

SASKATCHEWAN

The number of positions offered to employment offices in Saskatchewan during November was nearly 62 per cent less than in the preceding month, but 29 per cent more than in the corresponding month a year ago. Placements declined 56 per cent when compared with October, but were 17 per cent in excess of those recorded in November, 1926. Owing to unfavourable weather conditions having prevailed throughout sections of the Prairie Provinces, threshing operations which had been somewhat delayed thereby, were still being carried on in some parts of Saskatchewan, and this accounted for a noticeable gain in farm placements over those of November a year ago. Logging, construction and maintenance, services and trade also recorded increased placements, the most noteworthy improvement among these being shown in the latter two groups. Manufacturing remained unchanged. Industrial divisions in which the largest number of placements were effected were: logging, 870; farming, 1,188; manufacturing, 82; construction and maintenance, 257; trade, 145; and services, 887, of which 564

were of household workers. During the month under review, 2,306 men and 449 women obtained regular employment.

ALBERTA

Employment opportunities as indicated by orders received at employment offices in Alberta during November were 56 per cent less than in October but were nearly 64 per cent in excess of November, 1926. Placements also showed the same decline in comparison with the preceding month, but recorded a somewhat higher percentage of gain, namely, 65 per cent, when compared with the November placements of the previous year. The increase under the latter comparison occurred chiefly in logging and farming, where the gain was particularly noteworthy. As in Saskatchewan, delayed harvesting operations were still being carried on, though, at times, under adverse weather conditions, owing to heavy snowfalls and extreme cold. All other groups, however, reported increased activity, though in a lesser degree. Placements recorded during the month occurred in the following industrial groups: manufacturing, 235; logging, 697; farming, 1,671; mining, 288; construction and maintenance, 431; transportation, 93; trade, 156; and services, 807, of which 548 were of household workers, regular employment being found for 3,084 men and 377 women.

BRITISH COLUMBIA

British Columbia orders during November called for 25 per cent less workers than in the preceding month, but were 7 per cent in excess of the corresponding month a year ago. Placements were nearly 27 per cent less than in October, but 6 per cent higher than in November, 1926. In the latter comparison, logging showed the highest gain, while shipping and stevedoring, in the transportation group, registered the largest decline. Nominal losses also occurred in mining, communication and services, but these were more than offset by improvement shown in manufacturing, farming, construction and maintenance and trade. Placements by industrial divisions included: manufacturing, 364; logging, 536; farming, 120; transportation, 125; construction and maintenance, 364; trade, 140; and services, 816, of which 494 were of household workers. During the month 1,064 men and 282 women secured positions in regular employment.

Movement of Labour

During November, 1927, the offices of the Employment Service of Canada made 19,893 placements in regular employment of which

13,334 were persons for whom the employment found was outside the immediate locality of the offices at which they were registered. Of the latter 3,043 were granted the Employment Service reduced transportation rate, 1,808 going to points within the same province as the despatching office and 1,235 to other provinces. The reduced transportation rate which is 2.7 cents per mile with a minimum fare of \$4 is granted by the railway companies to bona fide applicants at the Employment Service who may desire to travel to distant employment for which no workers are available locally.

The transfers at the reduced rate from Quebec offices were 145 in number, 141 of which were for points in other provinces. Provincially the 4 transfers were of bushmen seeking employment in the Quebec zone, who received certificates from the Quebec city office. Hull issued 139 of the interprovincial certificates to 83 bushmen going to North Bay regions, 39 bushmen to Sudbury and vicinity, and 17 bushmen to Cobalt and the surrounding districts. The remaining 2 certificates were granted by Montreal to tinsmiths travelling to Sault Ste. Marie.

Of the persons who benefited by transportation vouchers from Ontario offices 597 were for districts within the province and 18 for other provinces. The provincial movement was largely of bushmen, 536 of whom went to logging camps in the northern part of the province and recruited mainly by the Northern Ontario offices. From North Bay one carpenter, one engineer, 2 cookees, one painter and one plasterer went to Cobalt, 8 mill hands, 2 machinists, 2 mechanics and 6 carpenters to Timmins, and 3 bricklayers and 8 carpenters to points within the North Bay zone. The Fort William office transferred 14 construction workers and the Port Arthur office 3 construction labourers to employment within their respective zones. Kingston received one butler and one female cook from London, and Windsor one die sinker from St. Catharines. From Toronto 2 tinsmiths travelled to Sudbury and one handyman to Timmins, while from Sudbury one steel sharpener was sent to Sault Ste. Marie and 2 carpenters to Timmins. The Hull zone received the majority of the interprovincial transfers, including 11 carpenters, 2 mining labourers, one mucker and one cook from North Bay and one miner from Sudbury. In addition 2 farm labourers were shipped from Toronto to work in Saskatchewan.

The volume of business transacted by Manitoba offices included the transfers of 1,109 workers, 247 to provincial stations, and 862 to outside points. Provincially 117 were bush-

men, 77 going to the Dauphin zone and 40 within the Winnipeg zone. The majority of these received their certificates from the Winnipeg office. From Winnipeg in addition 3 carpenters, 2 cooks, one chambermaid and one waitress went to Brandon, one town general to Dauphin and 114 farm labourers and 8 farm domestics to the various farming centres within the province. The bulk of the transfers to other provinces was also from Winnipeg and included 758 bushmen, 3 farm labourers, 5 rock drillers, 2 waitresses and one dishwasher going to Port Arthur, 33 bushmen, one book-keeper, one camp foreman and one female hotel worker to Prince Albert, 7 bushmen to Melfort, one cook, one waitress and one kitchen worker to Estevan, one waitress to Regina, 29 farm labourers and farm domestics to Saskatchewan points and 8 farm labourers to Alberta agricultural areas. The Brandon office despatched 2 farm labourers to Swift Current and the Dauphin office 7 bushmen to Prince Albert.

Saskatchewan offices issued 685 reduced rate certificates, 493 of which were provincial and 192 interprovincial. Of the former 397 were issued to bushmen, practically all of whom went to employment in the Prince Albert zone on certificates from Saskatoon, Prince Albert, Moose Jaw and Regina. The Saskatoon, Regina and Moose Jaw offices also transferred 85 farm labourers and 4 farm household workers to various provincial points. Regina in addition sent 2 cooks and one waiter to Estevan, one hotel cook to Moose Jaw and one baker to Swift Current; Moose Jaw shipped one waitress and Saskatoon one labourer within their respective zones. The Dauphin zone received 168 of the workers transferred outside the province, all of whom were bushmen, the majority journeying from Regina and Moose Jaw. Moose Jaw also sent one bushman to the Edmonton zone and Estevan 2 bushmen to Calgary. The Regina office transported 16 farm labourers to Alberta points and one farm worker to Manitoba, while from the Saskatoon office 3 miners travelled to work near Edmonton and one farm labourer to Alberta.

The offices in Alberta granted 286 certificates for reduced transportation, 264 of which were for persons travelling to employment within the province and 22 to other provinces. The Edmonton office transferred 182 persons to districts within its own zone, including 133 bushmen, 8 cooks, 5 mill hands, 5 fishermen, 5 miners, 4 cookees, 3 carpenters, 3 teamsters, 2 waitresses, 2 labourers, 2 engineers, one porter, one dairyman, one butcher, one blacksmith, and one farm labourer, and in addition despatched 4 miners to the Drumheller zone,

one waitress and one chambermaid to Calgary, 2 miners to Lethbridge and 30 farm hands to various outlying districts. The Calgary certificates were issued to 12 sawyers and 5 teamsters going to Lethbridge, one fur buyer to Edmonton, 4 female hotel workers to employment in the Calgary zone and 22 farm labourers to provincial areas. Of those destined for points in other provinces 19 were bushmen for logging camps around Prince George, and one was a farm hand for employment in Saskatchewan, all of whom received certificates from the Edmonton office. In addition one cook went to Saskatoon and one farm hand to the Revelstoke zone from Calgary.

The movement from the British Columbia offices was entirely provincial, comprising the transfer of 203 persons, 161 of whom were bushmen for employment principally around Prince George, Prince Rupert and Kamloops. Of the remainder the Vancouver offices issued

certificates to 8 railroad construction workers, 4 flunkies, 2 cooks, one dishwasher, one engineer, one edgerman and one restaurant worker for employment in the Penticton zone, to 5 miners and 3 cooks for Kamloops, one electrician for Nelson, one book-keeper for Revelstoke, and 2 carpenters, one electrician, 2 cooks, 2 farm labourers, one flunkie and one dishwasher for points within the Vancouver zone. From the Nelson office one blacksmith was sent to Penticton and one farm labourer to a point within its own zone, while Prince George despatched 3 bridge men to work in the surrounding district.

Of the 3,043 persons who benefited by the Employment Service reduced transportation rate, 2,184 travelled by the Canadian National Railways, 731 by the Canadian Pacific Railway, 118 by the Temiskaming and Northern Ontario Railway, 9 by the Pacific Great Eastern Railway and one by the Michigan Central Railway.

BUILDING PERMITS ISSUED IN CANADA DURING NOVEMBER, 1927

THE value of the building permits issued by 63 cities during November was \$12,849,089. This was a seasonal decline of \$5,989,469 or 31.8 per cent as compared with the October total of \$18,838,558, but an increase of \$2,373,638 or 28.8 per cent over the aggregate of \$9,975,451 for November, 1926. The total for November of this year was rather greater than in the same month of any other year for which statistics for the 63 centres are available. The cumulative value for eleven months of 1927 exceeds by nearly \$29,000,000 that for the corresponding months in 1926, the previous high level of this eight years' record.

Some 50 cities furnished detailed statistics, showing that they had issued nearly 1,200 permits for dwellings, estimated to cost over \$6,000,000, and about 2,300 permits for other buildings, estimated at almost \$6,700,000. During October, authority was granted for the erection of about 1,600 dwellings and 3,200 other buildings, estimated to cost approximately \$8,800,000 and \$9,800,000, respectively.

All provinces showed reductions in the value of the permits issued as compared with October, those of \$3,653,420, or 36.0 per cent and \$1,122,154 or 21.3 per cent in Ontario and Quebec, respectively, being most pronounced.

As compared with November, 1926, all provinces except Alberta reported increases, of which that of \$1,130,825 or 27.3 per cent in Quebec was most noteworthy.

The four largest centres, Montreal, Toronto, Winnipeg and Vancouver, recorded seasonal declines as compared with the preceding month, but increases over November a year ago. Of the other cities, Sherbrooke, Galt, Hamilton, Kingston, Port Arthur, Sarnia, Windsor, Riverside, St. Boniface, Saskatoon, Medicine Hat, and South Vancouver reported higher totals of building permits issued than in either October, 1927, or November, 1926.

Cumulative Record for First Eleven Months, 1927.—The following table shows the value of the building authorized by 63 cities during November and in the first eleven months of each year since 1920. The January-November index number of wholesale prices of building materials in those years are also given (1913=100).

Year	Value of permits issued		Average indexes of wholesale prices of building materials in first eleven months
	In November	In first eleven months	
1927.....	\$ 12,849,089	\$ 173,707,177	147.7
1926.....	9,975,451	144,877,789	149.3
1925.....	7,988,765	117,665,590	153.5
1924.....	10,212,908	120,119,829	159.8
1923.....	8,228,206	126,547,365	166.9
1922.....	11,182,030	138,698,005	162.0
1921.....	12,192,414	111,257,084	185.0
1920.....	5,627,949	112,175,268	215.3

The aggregate for the first eleven months of this year was 19.8 per cent greater than in 1926, the previous high level of the record, while the average index numbers of wholesale prices of building materials continued to be lower than in any year since 1920.

The accompanying table gives the value of the building permits issued by 63 cities in October and November, 1927, and November, 1926. The 35 cities for which records are available since 1910 are marked with asterisks.

ESTIMATED COST OF BUILDING WORK AS INDICATED BY BUILDING PERMITS ISSUED BY 63 CITIES

FAIR WAGES CONDITIONS IN DOMINION GOVERNMENT CONTRACTS

THE Department has recently received information regarding certain contracts executed by the Government of Canada which included among their provisions the fair wages conditions sanctioned by Order in Council for the protection of the labour to be employed. The contracts (Group "A") awarded in connection with the works of construction contained the following fair wages clause:—

1. All mechanics, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed for the character or class of work in which they are respectively engaged, and if there be no current rates in such district, then fair and reasonable

rates, and shall work such hours as are customary in the trade in the district where the work is carried on, or if there be no custom of the trade as respects hours in the district, then fair and reasonable hours, unless for the protection of life and property, or for other cause shown to the satisfaction of the Minister of Labour, longer hours of service are required. The Minister of Labour may at any time and from time to time determine for the purposes of this contract, what are the current or fair and reasonable rates of wages and the current or fair and reasonable hours, and may from time to time rescind, revoke, amend, or vary any such decision, provided that his determination and any amendment or variation shall not be operative prior to the period of three months immediately preceding the date thereof.

Five of the contracts above mentioned contained schedules of rates and hours based on

the current standards of the district in these respects. The schedules are given below.

Four contracts were awarded for interior fittings (Group "B") containing the general fair wages clause and other conditions for the protection of the labour employed, as sanctioned by the Fair Wages Order in Council which reads as follows:—

All workmen, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed, and if there be no current rate in such district, then a fair and reasonable rate, and shall work such hours as those fixed by the custom of the trade as respects hours in the district where the work is carried on, or if there be no custom of the trade as respects hours in the district then fair and reasonable hours, except for the protection of life and property, or on due cause shown to the satisfaction of the Minister of Labour. In the event of a dispute arising as to what is the current or a fair and reasonable rate of wages or what are the current hours fixed by the custom of the trade or fair and reasonable hours it shall be determined by the Minister of Labour, whose decision shall be final; payment may also be withheld of any moneys which would otherwise be payable to the contractor until the Minister of Labour's decision has been complied with.

By the term "current wages" and the term "hours of labour fixed by the custom of the trade" in the foregoing are meant respectively the standard rates of wages and hours of labour either recognized by signed agreements between employers and workmen in the district from which the labour required is necessarily drawn or actually prevailing, although not necessarily recognized by signed agreements.

A statement was also received as to supplies ordered by the Post Office Department subject to the regulations for the suppressing of the sweating system and the securing of fair wages, etc.

The general labour conditions sanctioned by the Fair Wages Order in Council are as follows:—

Where there are special circumstances which in the judgment of the Minister of Labour make it expedient that he should do so, he may, in the manner and subject to the provisions hereinabove set forth, decide what are the current or fair and reasonable rates of wages for overtime, and what is the proper classification of any work for the purposes of wages and hours. Immediately upon receipt of notice of any decision of the Minister of Labour hereunder the Contractor shall adjust the wages and hours and classification of work so as to give effect to such decision. In case the Contractor shall fail so to do, or to pay to any employee or employees for any services performed or for any hours of labour, wages according to the rates fixed therefor by the Minister of Labour, the Minister of Labour may authorize and direct the Minister to pay any such wages at the rates so fixed and to deduct the amount thereof from any moneys

owing by the Government to the Contractor and any such payment shall for all purposes as between the Contractor and the Government be deemed and taken to be payment to the Contractor, and the Contractor shall be bound in every particular by any such authority, direction and payment as aforesaid. The powers of the Minister of Labour hereunder shall not be exercised as to any employee or employees where it is established to his satisfaction that an agreement in writing exists and is in effect between the Contractor and the class of employees to which such employee or employees belong or the authorized representatives of such class of employees fixing rates of wages, overtime conditions and hours of labour.

2. The Contractor shall post and keep posted in a conspicuous place on the premises where the contract is being executed, occupied or frequented by the workmen, the Fair Wages Clause or Schedule inserted in his contract for the protection of the workmen employed, also any decision of the Minister of Labour under the preceding paragraph.

3. The Contractor shall keep proper books and records showing the names, trades, and addresses of all workmen in his employ and the wages paid to and time worked by such workmen, and the books or documents containing such record shall be open for inspection by the Fair Wage Officers of the Government at any time it may be expedient to the Minister of Labour to have the same inspected.

4. The Contractor shall not be entitled to payment of any money which would otherwise be payable under the terms of the contract in respect of work and labour performed in the execution of the contract unless and until he shall have filed with the Minister in support of his claim for payment a statement attested by statutory declaration, showing (1) the rates of wages and hours of labour of the various classes of workmen employed in the execution of the contract; (2) whether any wages in respect of the said work and labour remain in arrears; (3) that all the labour conditions of the contract have been duly complied with; nor, in the event of notice from the Minister of Labour of claims for wages until the same are adjusted. The Contractor shall also from time to time furnish the Minister such further detailed information and evidence as the Minister may deem necessary in order to satisfy him that the conditions herein contained to secure the payment of fair wages have been complied with, and that the workmen so employed as aforesaid upon the portion of the work in respect of which payment is demanded have been paid in full.

5. In the event of default being made in payment of any money owing in respect of wages of any workmen employed on the said work and if a claim therefor is filed in the office of the Minister and proof thereof satisfactory to the Minister is furnished, the said Minister may pay such claim out of the moneys at any time payable by His Majesty under said contract and the amounts so paid shall be deemed payments to the Contractor.

6. These conditions shall extend and apply to moneys payable for the use or hire of horses or teams, and the persons entitled to payments for the use or hire of horses or teams shall have the like rights in respect of moneys so owing them as if such moneys were payable to them in respect of wages.

7. With a view to the avoidance of any abuses which might arise from the sub-letting of contracts it shall be understood that sub-letting, other than such as may be customary in the trades concerned is prohibited unless the approval of the Minister is obtained: sub-contractors shall be bound in all cases to conform to the conditions of the main contract, and the main Contractor shall be held responsible for strict adherence to all contract conditions on the part of sub-contractor; the contract shall not, nor shall any portion thereof be transferred without the written permission of the Minister; no portion of the work to be performed shall be done at the homes of the workmen.

8. All workmen employed upon the work comprehended in and to be executed pursuant to the said contract shall be residents of Canada, unless the Minister is of opinion that Canadian Labour is not available or that other special circumstances exist which render it contrary to the public interest to enforce this provision.

DEPARTMENT OF PUBLIC WORKS

Contracts in Group "A" (Construction, etc.)

Repairs to the wharf at Port Simpson, B.C. Name of contractor, John Currie, Prince Rupert, B.C. Date of contract, November 21, 1927. Amount of contract, unit prices, approximate expenditure, \$7,871.49.

Extension of Rifle Range, Sussex, N.B. Name of contractor, Herbert J. Cripps, Sussex, N.B. Date of contract, September 21, 1927. Amount of contract, \$7,980.

New roof and repairs, Administration Building, Lindsay Arsenal, Lindsay, Ont. Name of contractor, E. A. McPhee, Lindsay, Ont. Date of contract, September 26, 1927. Amount of contract, \$3,197.

Construction of caretaker's cottage, Brandon, Man. Name of contractors, G. W. Epton Company, Brandon, Man. Date of contract, September 28, 1927. Amount of contract, \$3,856.

Alterations and additions to "B" Block, Ordnance Depot, Kingston, Ont. Names of contractors, McKelvie and Birch, Limited, Kingston, Ont. Date of contract, October 22, 1927. Amount of contract, \$6,475.

Erection of incinerator, Fort Osborne Barracks, Winnipeg, Man. Names of contractors, Fraser and Yager, Winnipeg, Man. Date of contract, October 26, 1927. Amount of contract, \$3,950.

Heating Plant, "B" Block, Ordnance Depot, Kingston, Ontario. Name of contractor, David Hall, Kingston, Ont. Date of contract, December 3, 1927. Amount of contract, \$5,977.

Contracts in Group "B" (Interior Fittings)

Plastering—new floors and repairs to old floors—and installation of plumbing fixtures, The Barracks, St. Johns, P.Q. Name of contractor, Pierre Trahan, St. Johns, P.Q. Date of contract, November 24, 1927. Amount of contract, \$11,092.

Installation of hot water heating system, Glacis Barracks, Halifax, N.S. Name of contractors, Powers Brothers, Limited, Lunenburg, N.S. Date of contract, November 24, 1927. Amount of contract, \$6,790.

POST OFFICE DEPARTMENT

The following is a statement of payments made in December, 1927, for supplies ordered by the Post Office Department under contracts which are subject to the Fair Wages policy:—

Nature of Orders	Amount of Orders
Making metal dating stamps and type, also other hand stamps and brass crown seals.....	\$ 986 83
Making and repairing rubber stamps, daters, etc.	215 15
Making up and supplying letter carriers uniforms, etc.....	11,109 11
Stamping pads, ink, etc.....	379 32
Bag fittings.....	7,552 29
Scales.....	655 55
Rural mail boxes.....	5,851 22

PRICES, RETAIL AND WHOLESALE, IN CANADA, DECEMBER, 1927

Cost of Living, Prices of Staple Articles and Index Numbers

THE movement in prices during the month was slight, the weekly family budget in terms of retail prices being somewhat higher, while the Dominion Bureau of Statistics index number of wholesale prices was slightly lower.

In retail prices the cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average prices in some sixty cities was \$11.17 at the beginning of December, as compared with \$11.07 for November; \$11.18 for December, 1926; \$11.56 for December, 1925; \$10.58 for December, 1924; \$10.73 for December, 1923; \$10.39 for December, 1922; \$11.00 for December, 1921; \$14.84 for December, 1920; \$16.92 for June, 1920 (the peak); \$13.65 for December, 1918; and \$7.96 for December, 1914. The advance was due mainly to seasonal increases in the prices of eggs, milk and butter, while less important advances occurred in the prices of beef, veal, mutton, lard, rice, beans, yellow sugar and tea. The prices of pork, bacon, rolled oats, evaporated apples and prunes declined slightly. Including the cost of fuel and rent with that of foods the total budget averaged \$21.37 at the beginning of December, as compared with \$21.27 for November; \$21.41 for December, 1926, \$21.87 for December, 1925; \$20.90 for December, 1924; \$21.21 for December, 1923; \$20.97 for December, 1922; \$21.49 for December, 1921; \$25.67 for December, 1920; \$26.92 for July, 1920 (the peak); \$21.64 for December, 1918; and \$14.26 for December, 1914. Fuel was practically unchanged. No changes were reported in rent.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics based upon the average prices of 236 commodities in 1913 as 100, and weighted according to the commercial importance of the commodities declined slightly to 151.9 for December, as compared with 152.2 for November; 150.3 for December, 1926; 163.5 for December, 1925; 160.9 for December, 1924; 153.5 for December, 1923; 153.1 for December, 1922; 150.6 for December, 1921; 217.2 for December, 1920; 256.7 for May, 1920 (the peak); and 205.6 for December, 1918. Twenty-nine prices quotations declined, forty-nine advanced and one hundred and fifty-eight were unchanged.

In the grouping according to chief component materials two of the eight main groups declined, four advanced and two were unchanged. The Vegetables and their Products group and the Fibres, Textiles and Textile Products group both declined, the former due to lower prices for wheat, flax, sugar, potatoes,

lemons, oranges and coffee, which more than offset advances in the prices of barley, corn, oats, rye, flour, apples, dried fruits and rubber, and the latter due mainly to declines in the prices of cotton, cotton yarn, flax fibre and silk. The groups which advanced were: the Animals and their Products group, substantial advances in the prices of cattle, beef, hides and skins more than offsetting declines in the prices of hogs, sheep, pork and eggs; the Iron and its Products group, mainly due to advances in the prices of steel billets; the Non-Ferrous Metals group, because of higher prices for silver, copper, lead and tin; and the Wood and Wood Products group. The Non-Metallic Minerals and their Products group and the Chemicals and Allied Products group were unchanged.

In the grouping according to purpose consumers' goods advanced, slightly higher prices for beef, mutton, mess pork, flour, apples and matches more than offsetting declines in vegetables, coffee, tea, lemons, oranges and eggs. Producers' goods were practically unchanged. Building and construction materials declined, as did also materials for the textile and clothing industries, for the milling and other industries, as well as miscellaneous producers' materials. Materials for the fur industry for the leather industry, for the metal working industries and for the meat packing industry advanced.

In the grouping according to origin raw or partly manufactured goods were lower, declines in the prices of wheat, flax, lemons, oranges, vegetables, coffee, tea, hogs, cotton and silk more than offsetting higher prices for corn, oats, barley, rye, rubber, cattle, beef, hides, skins, wool and non-ferrous metals. Fully or chiefly manufactured goods advanced, due mainly to higher prices for flour, leather and non-ferrous metal products. Domestic farm products declined, while articles of marine origin, articles of forest origin and articles of mineral origin were somewhat higher.

EXPLANATORY NOTE AS TO WHOLESALE PRICES

The index number calculated by the Dominion Bureau of Statistics is based upon the prices of 236 commodities, price levels in 1913 being taken as the base, that is equal to 100, the figures being weighted according to the commercial and industrial importance of each article included. The index number has been calculated by years back to 1890, being unweighted, however, for the period of 1890 to 1913 and has been calculated by months from 1919 to date for all groupings and from 1913

to date for the principal grouping. Summary tables of the Bureau's index number may be found in the supplement to the *LABOUR GAZETTE* for January, 1925, January, 1926, and in greater detail in the Report on "Prices and Price Indexes 1913-24," issued by the Bureau. A description of the methods used in the construction of the index number appears in the *LABOUR GAZETTE* for June, 1923.

The accompanying table gives the index numbers of the Dominion Bureau of Statistics by the principal groups in the three methods of classification and with those of the classification according to purpose or use in detail for the current month and for certain preceding dates.

EXPLANATORY NOTES AS TO RETAIL PRICES

The table of retail prices and rentals shows the prices at the beginning of December of seventy-one staple foodstuffs, groceries, coal, wood and coal oil and the rent for six-roomed houses in some sixty cities throughout Canada. All prices are for delivered goods. The exact quality, for which the quotation is given is set forth in the case of each commodity, and every effort has been made to ensure that the quotations in each case refer to the same class of commodity in order that the statistics may be available for purposes of comparison from month to month, from city to city, etc. The prices of foods and groceries in each city, except milk and bread, are the averages of quotations reported to the Department and to the Dominion Bureau of Statistics by a number of representative butchers and grocers in each. The prices of fuel and the rates for rent are reported by the correspondents of the *LABOUR GAZETTE*.

Statistics similar to these were published each month from 1910 to 1920, the figures during this period being secured at the middle of each month by the correspondents of the *LABOUR GAZETTE* resident in each locality from dealers doing a considerable business with workingmen's households. From 1910 to 1915 the table contained a list of only the twenty-nine foods included in the family budget, with laundry starch, coal, wood, coal oil and rent. In 1915 when monthly publication of the budget in the *LABOUR GAZETTE* was begun, it was decided to extend the list of foods to 40, and in 1920 the list of foods and groceries was still further extended to include over 100 items.

Beginning with October, 1922, a number of commodities were dropped from the list, and in the case of a number of articles the average prices of the grades most sold have been given, owing to the impossibility of securing prices for uniform grades for the various cities from month to month.

Oleomargarine was dropped in March, 1924, the provision for its manufacture and sale since 1917, notwithstanding the Dairy Act, expired at the end of February, 1924.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts extensively occupied by workingmen. The first class is of houses in good condition, favourably located in such districts with good modern conveniences. The second class is of houses in fair condition less desirably located, but still fairly central, without modern conveniences.

The weekly budget of a family of five, calculated in terms of the average prices in the cities for which reports are received, includes twenty-nine staple foods, laundry starch, coal, wood, coal oil, and rent, these being the items for which statistics have been obtained each month and published in the *LABOUR GAZETTE* since January, 1910. The quantities of each commodity included are modifications of those employed in similar calculations by various authorities. For some articles comparatively large quantities are included owing to the absence of other important items of the same class. For instance, the only fruits are evaporated apples and prunes, and the only fresh vegetable is potatoes. But as market conditions affecting these usually affect the prices of other fruits and vegetables somewhat similarly, the relative proportions of expenditure on the various classes of foods tends to be maintained. At times when the price of an article heavily weighted for this purpose rises, or falls (abnormally) the increase (or decrease) in food prices so indicated is exaggerated, and this should be taken into account in using the budget as an indicator of changes in the cost of living. In fuel and lighting the quantities are estimated on a similar principle, anthracite coal being used chiefly east of Manitoba, and soft coal and wood in the western provinces, while no allowance is made for the quantities required in the various localities owing to climatic conditions, nor for the differences in the heating value of the various fuels. It was estimated, when the budget was first published in 1912 in the report on wholesale prices in Canada for 1911, that these calculations represented from sixty to eighty per cent of the expenditure of an ordinary family, according to the total income. For the average family of five the expenditure on these items of food, fuel, light and rent would be perhaps two-thirds or about sixty-five per cent of the total income.

While the budget serves to show the increase or decrease from time to time in the cost of the items included, it does not purport to show the minimum cost of food and fuel supplies for an average family in the Dominion or in any one province. The quantities of meats, dairy products, cereals, etc., included were adopted as affording a liberal supply for the healthy family of a man at hard physical work. On the other hand an average family with an income sufficient to do so would buy less meat, etc., but more fruit, fresh and canned vegetables, etc., so that comparative expenditure would be little changed.

Index Number of Changes in the Cost of Living

In March, 1921, the Department published in the *LABOUR GAZETTE* a table of percentages of changes in the cost of living since 1913 as a tentative cost of living index number, using the figures of the above mentioned budget for the calculation for food, fuel and rent, with preliminary figures for clothing and sundries added and this table has been brought down

(Continued on page 92)

†The budget is intended to show the changes in the cost of the items included, not to show the minimum cost for an average family. See Text. †December only. §Kind most sold. *For electric light see text.

††An allowance for the cost of clothing and sundries would increase the figures by about 50 per cent: see text.

*The figures for "all items" were calculated by giving the following weights to each group: Food 35%; Fuel 8%; Rent 18%; Clothing 18%; Sundries 20%.

†Figures for Sundries since 1920 have been revised and this has affected for certain dates "all items".

Cost of Electric Current and Gas for Householders

With rates in 1913 as 100, index numbers of electric light rates were 1900, 141.4; 1905, 135.6; 1910, 118.1; 1911, 113.4; 1912, 109.1; 1913, 100.0; 1914, 96.5; 1915, 90.8; 1916, 87.6; 1917, 87.2; 1918, 85.8; 1919, 85.8; 1920, 84.2; 1921, 84.9; 1922, 82.7; 1923, 79.5; 1924, 79.2; 1925, 85.6; 1926, 75.6.

The above figures were arrived at by converting to the base of 1913 as 100, an index number of electric current costs from 1900 to 1913 constructed for the Board of Inquiry into the cost of living in Canada, 1914-15 (Report, Vol. 2, page 318) and bringing the figures down to 1926. The figures are unweighted. The Dominion Bureau of Statistics has recently issued an index number of electric current rates for household consumption as follows: 1923, 73.8; 1924, 72.2; 1925, 69.9; 1926, 68.7. This index number is weighted according to consumption in each city. When the above index number, 1900-1926, is weighted according to population in such city covered for the years 1923, 1924, 1925 and 1926, the figures are substantially the same as those recently issued by the Bureau.

The following are index numbers of rates for manufactured and natural gas for the years 1913 to 1926 issued by the Dominion Bureau of Statistics (revised, Prices and Price Indexes, 1913-1926): Manufactured gas, 1913, 100; 1914, 98.3; 1915, 98.1; 1916, 96.3; 1917, 100.7; 1918, 107.4; 1919, 111.1; 1920, 125.4; 1921, 143.6; 1922, 140.6; 1923, 135.7; 1924, 134.6; 1925, 131.6; 1926, 131.1. Natural gas, 1913, 100; 1914, 109.6; 1915, 112.8; 1916, 112.8; 1917, 113.6; 1918, 114.2; 1919, 116.2; 1920, 123.8; 1921, 143.0; 1922, 163.1; 1923, 162.9; 1924, 162.6; 1925, 178.7; 1926, 172.2. For the years 1900 to 1913 two index numbers of gas costs calculated for the Cost of Living Inquiry in 1914-1915, have been averaged and converted to the base of 1913 as 100, as follows: 1900, 125.8; 1901, 125.8; 1902, 125.8; 1903, 125.2; 1904, 123.9; 1905, 120.1; 1906, 107.5; 1907, 108.8; 1908, 106.9; 1909, 105.7; 1910, 103.8; 1911, 99.4; 1912, 100.6; 1913, 100.0.

Retail Prices

Beef prices which had declined since June showed a slight upward tendency in December, sirloin steak averaging 30.6 cents per pound in December, as compared with 30.4 cents in November; round steak 25.1 cents per pound in December and 25 cents in November; rib roast 23.3 cents per pound in December and 23.2 cents in November; and shoulder roast 17.4 cents per pound in De-

for 1927. As stated in the above mentioned supplement the figures in the food group in the family budget are still used to show the changes in food prices but in the other groups the percentage changes in the prices of each article have been weighted according to workingmen's average family consumption, and in the fuel and light groups, gas and electricity have been included.

cent per pound in November. The price of veal advanced in most localities and was up in the average from 20.6 cents per pound in November to 21 cents in December. Mutton was also considerably higher at 28.6 cents per pound. Both fresh and salt pork declined, the former from an average of 27.5 cents per pound in November to 26.3 cents in December and the latter from 26.5 cents per pound in November to 26 cents in December. Bacon was down from 33.4 cents per pound to 37.6 cents. In fresh fish, halibut and whitefish declined. Salt herrings were also slightly lower. Lard averaged slightly higher at 22.2 cents per pound.

The seasonal advance in the prices of eggs continued, fresh averaging 64.1 cents per dozen in December, as compared with 57.7 cents in November and 52.6 cents in October, and cooking averaging 52 cents per dozen in December, 49.7 cents in November, and 47 cents in October. Higher prices were reported from practically all localities. Milk was up from an average price of 12.1 cents per quart in November to 12.3 cents in December. Increases were reported from Sorel, St. Hyacinthe, St. Catharines, St. Thomas, Cobalt, Prince Albert, Edmonton and Calgary. The prices of butter were slightly higher, dairy being up from 42.4 cents per pound to 42.9 cents and creamery from 46.5 cents per pound to 46.7 cents. Cheese was slightly higher at an average price of 32 cents per pound. Bread was unchanged at an average price of 7.7 cents per pound. Flour and soda biscuits were steady. Rolled oats were down from an average of 6.4 cents per pound in November to 6.2 cents in December. Rice advanced slightly, averaging 10.8 cents per pound. Canned vegetables showed little change. Beans were slightly higher, averaging 8 cents per pound. Potatoes showed little change in the average. Evaporated apples declined from 19.4 cents per pound to 19.2 cents and prunes from 14.3 cents per pound to 13.9 cents. Raisins were down from an average of 18.3 cents per pound to 17.9 cents. Granulated sugar was unchanged at an average price of 8.2 cents per pound, while yellow rose slightly from an average of 7.7 cents per pound to 7.8 cents. Tea advanced in price from an average of 71.3 cents per pound to 72 cents. Anthracite coal was practically unchanged at \$16.37 per ton. Slight increases were reported from Moncton, St. Hyacinthe and Galt. Coke was down from an average of \$13.08 per ton in November to \$12.98 in December. Wood showed little change. No changes were reported in rent.

Wholesale Prices

The following is a summary of a statement on wholesale prices changes during the month issued by the Dominion Bureau of Statistics.

The movement in grain prices during December was mixed. Wheat moved to slightly lower levels, No. 1 Manitoba northern cash wheat, Fort William and Port Arthur basis, being \$1.40 per bushel, as compared with \$1.45 in November. Western barley at Winnipeg advanced from 81½ cents per bushel to 83½ cents; western oats from 59½ cents per bushel to 61½ cents; Ontario barley at Toronto from 77 cents per bushel to 79½ cents; Ontario oats from 54¼ cents per bushel to 57½ cents and American corn from \$1.00 per bushel to \$1.02¼. Flax declined from \$1.83 per bushel to \$1.80. Shorts advanced from \$33.50 per ton to \$34.85. Evaporated apples were up from 14 cents per pound to 15 cents. Oranges and lemons were substantially lower, the former at Montreal declining from \$9.25-\$9.50 per case to \$5.00-\$5.50 and the latter at Toronto from \$7.50-\$8.00 per case to \$5.50. Ceylon and India tea fell from 53 cents per pound to 51½ cents. Quebec grades of potatoes at Montreal declined from \$1.04 per bag to 95 cents-\$1.00, and Ontario grades at Toronto from \$1.59 per bag to \$1.37. Turnips declined from 75 cents per bag to 65 cents, carrots from \$1.00 to 67½ cents and parsnips from \$1.00 to 86½ cents. Ceylon rubber continued to advance, being up from 37¼ cents per pound to 40¾ cents. Turpentine rose from 92 cents per gallon to 97 cents, while linseed oil declined from 88 cents per gallon to 86 cents. Rosin was up from \$12.75 per barrel to \$13.50. Western cattle at Winnipeg advanced from \$8.54 per hundred pounds to \$9.46 and choice steers at Toronto from \$8.81 to \$9.80. Hogs at Toronto fell from \$8.99 per hundred pounds to \$8.62 and sheep from \$6.12½ per hundred pounds to \$5.70. Beef hides rose from 19-20 cents per pound to 20-21 cents and calf skins from 22-23 cents per pound to 23-24 cents. Sole leather rose from 43 cents per pound to 45 cents. Meats followed the trend in live stock, prices of beef, forequarter, advancing from \$10.75 per hundred pounds to \$11 and hindquarter from \$15.75 per hundred pounds to \$16.30. Dressed hogs fell from \$14.25 per hundred pounds to \$13.90. Fresh eggs declined from 70 cents per dozen to 65 cents. Raw cotton at New York declined from 20¼ cents per pound to 19½ cents. Flax fibre was somewhat lower at 23 cents per pound. Raw silk was down from \$4.75 per pound to \$4.65. Wool was slightly higher. In non-ferrous metals copper advanced from \$15.30 per cwt. to \$15.85; copper sheets from 21¼ cents

per pound to 21½ cents; copper wire from 18½ cents per pound to 18½ cents; lead from \$6.15 per cwt. to \$6.45; spelter from \$7.22½ per cwt. to \$7.25; tin from 61½ cents per pound to 63½

cents; and silver from 57½ cents per ounce to 58½ cents. Matches advanced from \$8.50 per case to \$9.50. Steel billets were up from \$28.50-\$43 per ton to \$33.50-\$43.

PRICES IN GREAT BRITAIN AND OTHER COUNTRIES

THE following notes give the latest information available as to the movements of prices in Great Britain and other countries. The index numbers of retail prices are from official sources unless otherwise stated. The authorities for the wholesale prices index numbers are named in all cases.

Great Britain

WHOLESALE PRICES.—The Board of Trade index number for November, on the base prices in 1913=100, was 141.1, as compared with 141.4 for October. Foods declined 0.3 per cent with a decrease in cereals and slight advances in meat and fish and other foods. Industrial materials as a whole showed practically no change, the declines in iron and steel and cotton being counteracted by advances in other metals and minerals, other textiles and other articles.

The *Economist* index number, on the base 1901-05=100, was 179.9 for November, a decrease of 0.9 per cent for the month. Cereals and meat declined 2.0 per cent owing chiefly to a decline in barley. Other foods showed little change. Textiles declined 3.5 per cent owing to sharp declines in cotton and flax. Minerals and miscellaneous commodities advanced slightly.

The *Statist* index number (in continuation of Sauerbeck's figures) was 121.5 for the end of November, being a rise of 0.7 per cent for the month. Foods advanced 2.3 per cent owing to a sharp advance in animal foods, which was partly counteracted by a decline of 1.7 per cent in vegetable foods. Industrial materials declined 0.2 per cent, with declines in textiles and sundries and an advance in minerals.

The *Times* index number, on the base 1913=100, was 143.8 at the end of November, which is 0.2 per cent higher than the previous month. Foods rose 1.1 per cent, with a rise in meat and a decline in cereals. Industrial materials declined 0.4 per cent featured by a decrease of 5 per cent in cotton.

COST OF LIVING.—The index number of the Ministry of Labour, on the base July 1914=100, was 169 at December 1, which is the same figure as that for November 1. The index number for the food group was unchanged although there were increases in the

prices of eggs and butter and decreases in bacon. Rent, clothing, fuel and light and sundries were unchanged.

Belgium

WHOLESALE PRICES.—The index number of the Ministry of Industry, Labour and Social Affairs, on the base April 1914=100, was 839 for October as compared with 837 for September. Foods rose 0.6 per cent.

COST OF LIVING.—The official index number of the cost of living of a middle class family of moderate income on the base 1921=100, was 208.59 for November as compared with 207.42 for October. The food, clothing and sundries groups showed slight advances.

Denmark

WHOLESALE PRICES.—The index number of the Department of Statistics for November was 154, showing no change from the previous month. Fodder, textiles and clothing and hides, leather and products showed advances while vegetable foods, fertilizers, metals and chemicals declined.

Germany

WHOLESALE PRICES.—The index number of the Federal Statistical Office, on the base 1913=100, was 140.1 for November, an increase of 0.2 per cent over the previous month. Agricultural products and colonial products advanced 0.3 per cent, materials and semi-manufactured goods were unchanged and manufactured goods advanced 1.1 per cent.

COST OF LIVING.—The official index number for November was 150.6, an advance of 0.3 per cent over October, which was due to advances in food and in clothing.

Switzerland

COST OF LIVING.—The official index number was 162 for November, on the base June 1914=100, showing an advance of one point over October. This advance was due to seasonal rises in the prices of milk, eggs and other foods. Fuel, clothing and rent were unchanged.

United States

WHOLESALE PRICES.—The *Annalist* index number of wholesale commodity prices, on the base 1913=100, was 146.6 for December, a decline of 1.1 per cent from the November level. There were declines in all groups with the exceptions of fuels and metals which showed advances.

Dun's index number showing the cost *per capita* of a year's supply of commodities was \$193,342 at December 1, an advance of 0.8 per cent over the previous month, with in-

creases in breadstuffs and meat and declines in dairy and garden products and miscellaneous commodities.

COST OF LIVING.—The index number of the Massachusetts Special Commission on the Necessaries of Life, on the base 1913=100, was 160.3 for November, an increase of about 1½ per cent over the previous month. Foods advanced 1.1 per cent owing to increases in beef, eggs, milk and other foods; clothing advanced 0.4 per cent owing to increases in the price of shoes.

The Seven-Hour Day in Russia

Industrial and Labour Information, the weekly publication of the International Labour Office, states that a meeting of the Central Executive Committee of the Union of Soviet Socialist Republics was held at Leningrad on October 25, at which the President of the Council of People's Commissaries read a "Manifesto to the Workers" containing the following declaration:—

"In so far as industrial workers are concerned, steps will be taken during the next few years to reduce the working day from eight to seven hours without a reduction in wages. The Presidium of the Central Executive Committee and the Council of People's Commissaries have instructions to prepare within one year for the gradual introduction of this reform in certain branches of industry, together with the renewal of equipment, rationalization of undertakings and increased productivity of labour."

The general opinion, based on interviews with members of the Central Executive Committee, is that the introduction of a seven-hour day will improve the material condition of the workers by increasing their spare time and enabling them to develop social and cultural activities. It will also reduce unemployment. From the political point of view, it is anticipated that this step will strengthen the confidence and sympathy both of the Russian masses and of the foreign workers with regard to the Soviet Government. It is hoped that the introduction of the seven-hour day will not reduce the productivity of labour, but rather increase it, provided that reorganization of production and technical improvements take place at the same time.

The opposition party is not in favour of the step. Mr. Zinoviev is of the opinion that the question of hours of work is not of the greatest importance to the workers at the present time; the problems of wages and housing are more urgent.

The Government is of the opinion that rationalization and the increased use of machinery, the building of new factories and works proposed or already begun, the renewal of equipment and the reorganization of industry as a whole, make the seven-hour day not only possible but necessary in the near future.

The *Quebec Official Gazette* of December 3, 1927, contained notice of the incorporation of the "Canadian Women's Hostel of Montreal (incorporated)", its purpose being to provide a hostel, irrespective of race and creed, for unaccompanied immigrant women, and to make provision for their protection, distribution and welfare by means of a Female Labour Bureau.

The legislative committee of the Montreal City Council has recommended that legislative authority be given to the city to amend its building by-laws by limiting the number of persons who may inhabit a dwelling so as to allow sufficient cubic space for hygienic living.

The provincial treasurer of Ontario made a preliminary survey of the finances of the province in the *Ontario Gazette*, December 10, 1927. Among the services rendered to the community he mentions the following expenditures: education, \$9,555,000; highways and enforcement of Motor Vehicles Act, \$13,959,000; public health service, \$683,000; regulation and inspection of factories, boilers, etc., operation of Employment Bureaus, Minimum Wage Board and unemployment relief, \$384,000; mothers' allowances, \$2,072,000 (this item shows an increase of \$137,000 over the previous year); institutions and grants in aid of the afflicted, under-privileged and unfortunate, \$6,932,000; agriculture, colonization and immigration, \$2,480,000; soldiers' aid, \$80,000.

RECENT LEGAL DECISIONS AFFECTING LABOUR

Employer Liable for Hospital Maintenance of Workman

The Hospitals and Charitable Institutions Act of Ontario, as amended in 1926 (Statutes of Ontario, 1926, chapter 73), provides as follows:—

“Section 23 (12). Every employer of labour having more than ten persons in his employ and having a contract for the medical and surgical care of his employees shall be liable for the maintenance of such employee in any public hospital, but not at a higher rate than the actual cost per day for maintenance at such hospital.”

A workman employed in the camp of a lumber company sustained injuries in the course of his employment resulting in hernia. He was told by the camp foreman to report to a doctor who had attended the camp on previous occasions. This doctor told him that an operation was necessary. The workman however delayed submitting to an operation, but as the pain continued he returned to the camp for his “time”. This he obtained from the foreman, the entries “gone to hospital” and “capabilities good” being made against his name in the company’s records. Subsequently he was operated on in hospital by another doctor, his recovery being slow. The hospital board sued the company for \$388 for hospital care and attendance in the case. The company contended that the patient was not an employee of theirs when he entered hospital, and that it had not been shown that they (the company) had a contract for the medical and surgical care of their employees. The trial judge dismissed the action on the ground that the injury was not wholly occasioned by the nature of the work, but resulted partly from a previous incomplete operation, and that it had not been shown that the defendants had more than ten persons in their employment or had a medical contract with their employees. On appeal by the plaintiffs the Ontario Supreme Court unanimously reversed this decision. The Chief Justice pointed out that the doctor had attended the camp on various occasions, and that when the workman was injured the foreman sent him to see this doctor. “Physicians do not act for a company like the defendants without having a contract for their remuneration. The contract was oral. It is inconceivable that a reputable organization like the defendant company should make against an employee a fixed monthly charge for medical fees unless it was bound to pay over such fees to a physician under a contract with him, oral or written. In such work

as the defendant company carried on, accidents requiring surgical treatment are not infrequent; and, as the contract with Dr. James must cover medical care, it is a fair, in fact an inevitable, inference that the defendant company did not fail to include in it the surgical care mentioned in section 23.

Agreement by Bankrupt Workman as to Disposal of Wages

A brakeman was employed by the Canadian National Railway in New Brunswick at a monthly salary of \$140, payable semi-monthly. Last June he made a voluntary assignment under the Bankruptcy Act, and a trustee of his estate was appointed in September. In October the trustee claimed that the wages earned by the assignor after that date, or some part of them, were “after-acquired” property within the meaning of the act, and as such were payable to him (the trustee), and he notified the railway that he required the railway to pay to him the wages due to the assignor (the workman). The railway accordingly withheld delivery to the workman of his wages, pending arrangements to be made between the assignor and the trustee. As the result of a subsequent discussion between the assignor, the trustee and the representative of the railway it was agreed that wage cheques payable to the workman should be delivered to the trustee, and that the workman and the trustee should each furnish a receipt to the railway. In regard to the division of the wages, the workman also agreed with the trustee that he would accept \$40 of the amount of the semi-monthly cheque. Later, however, the assignor brought action in the New Brunswick Supreme Court against the trustee for the balance of the cheque. The question raised for determination by the court was whether the whole or any part of the wages earned by the assignor after the assignment was “after-acquired” property within the meaning of section 25 (2) of the Bankruptcy Act, and as such receivable by the trustee and divisible among the creditors. The court decided that in such a case as the present, where the trustee, the debtor and the debtor’s employer have entered into an agreement as to the disposition of the debtor’s wages after bankruptcy, the court would not be justified in interfering.

Diseased Conditions Due to Accident Compensable in Quebec

A workman employed by an engineering construction company in the Province of Quebec received injuries to his shoulder while he was engaged in removing stone from an excavation, and a condition of osteo-myelitis, or necrosis of the bone, supervened. He sought compensation from his employer under the Workmen's Compensation Act. The question at issue in the case was whether the condition from which the injured man suffered was a "disease" or an "accident", the Act only taking account of injuries received in the course of employment. Mr. Justice Demers, in the Hull Superior Court, found that the claimant's condition was entirely due to the accident, causing disability to the extent of 30 per cent of his earning capacity, and allowed him \$3,080 in compensation.

—(*Quebec-Prozuck versus Fraser Brace Construction Company*).

Caisson Illness Compensable in Quebec

A workman employed in bridge construction in the Province of Quebec was working in compressed air on March 9, 1927. On finishing his shift he was released into open air without having remained for the necessary period under an intermediate pressure before coming to the surface. As the result of the sudden change from high to normal atmospheric pressure he was overcome, and suffered from vertigo and deafness. These symptoms persisted notwithstanding hospital treatment, and the workman took action against his employer under the Workmen's Compensation Act. Mr. Justice Bond, who heard the case

in the Superior Court at Montreal, awarded the claimant \$2,609 in damages, stating that neither the Workmen's Compensation Act nor the Civil Code defines an "accident," and that in this case he would interpret the word in its ordinary meaning. He found therefore that the injured man had established the fact of an "accident" arising out of and in the course of his work, this accident being attributable to the events on March 9.

—(*Quebec-St. Germain versus Dufresne Construction Company*).

Damages for Lead Poisoning in Quebec

A workman was employed by a steel company in Quebec for ten years, working with lead during the last eight years of this period. In April, 1926, he was found to have contracted lead poisoning. He sued his employers for \$5,000 alleging that his illness was due to their negligence. The Superior Court at Montreal awarded the claimant \$626.75 in damages, finding that his health was not very seriously impaired. The trial judge criticized the action of the company in reducing the time allowed for washing to five minutes at dinner time and ten minutes at night. He held that this time was entirely insufficient, as it was proved that lead poisoning could be occasioned in two ways, by inhalation through the respiratory organs and by absorption through the skin. Those parts of the body which were exposed should therefore have been washed carefully. There seemed to have been no supervision of the workers in this respect.

THE LABOUR GAZETTE

PREPARED AND EDITED IN
THE DEPARTMENT OF LABOUR, OTTAWA, CANADA

VOLUME 28]

FEBRUARY, 1928

[NUMBER 2

NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

Monthly Summary

A SEASONAL contraction in the volume of industrial employment in Canada was shown at the beginning of January, 1928, the resulting losses involving a rather larger number of workers than is usual at this season, but the employment situation continued to be better than on the corresponding date in any other year of the record which was instituted in 1920. Employment in recent months has been maintained at an exceptionally high level, so that many employers took advantage of the opportunity of closing their entire plants during the holidays season for necessary repairs and inventories, as well as to provide a vacation for their staffs. The Dominion Bureau of Statistics tabulated statements from 6,177 firms, each with at least 15 employees, in all industries except agriculture, fishing, hunting and highly specialized business. The payrolls of these concerns declined from 886,836 persons on December 1 to 826,736 at the beginning of January, a decrease of 60,100 persons or 6.8 per cent. Reflecting this contraction, the employment index number (based upon the number employed by the reporting firms in January, 1920, as 100) stood at 99.5 on January 1, 1928, compared with 106.8 in the preceding month, and with 94.8, 89.6, 83.9, 88.7, 86.3, 77.9 and 88.7 on the same date in 1927, 1926, 1925, 1924, 1923, 1922 and 1921, respectively. Reports received from the offices of the Employment Service of Canada indicated a continued decline in the volume of business transacted in December as compared with the previous month, chiefly owing to a reduction in the number of placements in logging and farming. A decline was shown also in comparison with the record for December, 1926. At the beginning of January, 1928, the unemployment percentage registered by the members of local trade unions was 6.6 as compared with percentages of 5.2 at the beginning of December and with 5.9 at the beginning of January, 1927. The percentage for December is based on the reports tabulated by the Department of Labour from 1,696 labour organizations with a combined membership of 180,204 persons.

The average cost of a weekly family budget of twenty-nine staple foods was \$11.19 at the beginning of January, as compared with \$11.17 for December, 1927; \$11.37 for January, 1927; \$11.63 for January, 1926; \$10.77 for January, 1925; \$10.78 for January, 1924; \$10.52 for January, 1923; \$11.03 for January, 1922; \$14.48 for January, 1921; \$16.92 for June, 1920 (the peak); \$12.42 for January, 1918; and \$7.73 for January, 1914. In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon prices in 1913 as 100, was slightly lower at 151.2 for January, as compared with 151.8 for December, 1927; 150.6 for January, 1927; 163.8 for January, 1926; 165.5 for January, 1925; 156.9 for January, 1924; 151.4 for January, 1923; 151.7 for January, 1922; 200.6 for January, 1921; 256.7 for May, 1920 (the peak); 233.4 for January, 1920; 206.1 for January, 1919; and 191.7 for January, 1918.

The time loss due to industrial disputes in January, 1928, was greater than during December, 1927, and also greater than during January, 1927. Nine disputes were in existence at some time or other during the month, involving 500 workpeople, and resulting in a time loss of 8,154 working days. Corresponding figures for December, 1927, were: eleven disputes, 321 workpeople, and 6,102 working days, and for January, 1927, 8 disputes, 261 workpeople and 4,020 working days.

Industrial Disputes Investigation Act, 1907

During January the Department received a report from the Board of Conciliation and Investigation in connection with the dispute between the Canadian Pacific Railway Company and certain of its employees, members of the Brotherhood of Railway and Steamship Clerks, Freighthandlers, Express and Station Employees. The Board already established in connection with a dispute between the Toronto, Hamilton and Buffalo Railway Company and certain of its employees, members of the Canadian Brotherhood of Railroad Employees, was completed. Two new applications for the establishment of

Boards were received during the month. A full account of the recent proceedings under the Act will be found on page 112.

**Progress of
Old Age
Pensions
legislation in
Canada**

Legislation giving effect within the respective provinces to the provisions of the federal Old Age Pensions Act, 1927, was foreshadowed in the Speeches from the Throne at the opening of the current sessions of the legislative assemblies of the provinces of Manitoba and Saskatchewan. In Manitoba the Speech forecast "a measure of co-operation with the Dominion Government for the establishment of a system of Old Age Pensions in Manitoba, in the event of the Dominion Government deciding not to proceed to finance and administer the scheme as a purely federal one."

The Speech from the Throne at the opening of the legislative Assembly of Ontario on February 9 contained the following paragraph:—

"One of the social problems which is engaging the earnest attention of my ministers is the better care of our dependent aged population. Information on this subject is being gathered from various sources and it is intended, in addition, to institute a special survey of the province in this respect."

The Old Age Pensions Act is now in full operation in the Province of British Columbia, an enabling act having been passed at the legislative session last year (LABOUR GAZETTE, April, 1927, page 382; December, 1927, page 1272).

**Brazilian
Government
Subsidizes
Vocational
Training**

A recent government decree in the United States of Brazil directs that all primary schools subsidized or maintained by the Brazilian Government shall include manual training and the rudiments of trades or agriculture as obligatory courses of instruction, and that all secondary schools shall have free obligatory classes in vocational training. The Federal Government will enter into arrangements with the State Governments to establish vocational schools for which the Federal Government will contribute half the expense. In addition the Government will establish as many other vocational schools and apprenticeship courses as are needed. The decree carries an appropriation for the execution of its provisions.

**Proposed
enforcement
of industrial
agreements**

The American Bar Association recently appointed a special committee to study the question whether the Association could suggest to Congress any legislation which might further the prevention or adjustment of industrial disputes. The committee considers that the time has arrived for the Association to make a distinctive contribution in this department of law, and has drafted a bill embodying principles upon which they believe that industrial managements, organized labour and the public may be brought together, at least within the field of federal jurisdiction. The bill proposes to achieve this purpose by encouraging the making and maintenance inviolate, by responsible organizations of employers and responsible organizations of working men, of contracts for the adjustment of their relations, through negotiation and arbitration, such contracts when freely and voluntarily made to be in all respects lawful and binding, and the provisions for the settlement of differences by arbitration to be irrevocable and enforceable in the manner provided.

It is declared further to be part of the proposed policy to encourage the peaceable and orderly ascertainment of the true fact in all industrial situations coming within federal cognizance and thus to promote the use of rational and lawful methods in the settlement of controversies arising out of such industrial situations.

**Australian
Industrial
Research
Council**

Mr. G. A. Julius, chairman of the Commonwealth of Australia Scientific and Industrial Research Council gave an address in Ottawa, on February 1, in which he outlined the constructive program now being carried out by the Council. By the Science and Industry Research Act, 1926 of the Commonwealth of Australia, the previously existing Commonwealth Institute of Science and Industry was reorganized under the title of the Council for Scientific and Industrial Research. This Act provides for a Council consisting of: (a) Three members nominated by the Commonwealth Government; (b) The Chairman of each State Committee constituted under the Act; (c) Such other members as the Council, with the consent of the Minister, co-opts by reason of their scientific knowledge.

The three Commonwealth nominees form an Executive Committee which exercises between meetings of the Council, all the

powers and functions of the Council, of which the principal are as follow: (a) The initiation and carrying out of scientific researches in connection with primary or secondary industries in the Commonwealth; (b) the training of research workers and the establishing of industrial research studentships and fellowships; (c) the making of grants in aid of pure scientific research; (d) the establishment of industrial research associations in any industries; (e) the testing and standardization of scientific apparatus and instruments; (f) the establishment of a Bureau of information; (g) the function of acting as a means of liaison between the Commonwealth and other countries in matters of scientific research.

The State Committees are constituted in accordance with the regulations prescribed, and their main function is to advise the Council as to investigations to be undertaken. A sum of £250,000 has been appropriated under the terms of the Act for the purpose of scientific and industrial investigations.

Under the Science and Industry Endowment Act, 1926, the Government established a fund of £100,000, the income from which is used to provide assistance (a) to persons engaged in scientific research, and (b) in the training of students in scientific research. Provision is made for gifts or bequests to be made to the fund, which is controlled by a trust consisting of the three Commonwealth nominees on the Council. In accordance with the Act arrangements have been made to send a number of qualified graduates abroad for training in special fields of work.

The Council held its first meeting in June, 1926, and decided to concentrate its initial activities on five main branches of work, namely, (i) Animal pests and diseases, (ii) Plant pests and diseases; (iii) Fuel research—especially liquid fuels; (iv) Forest products; and (v) Preservation of foodstuffs—especially cold storage problems.

In carrying out its work it is the policy of the Council to co-operate closely not only with existing scientific institutions and State Government Departments in Australia, but also with similar organizations in other parts of the Empire.

United States Bureau of Standards

An account of the work of the United States Bureau of Standards during the past fiscal year is given in the 15th annual report of the Secretary of Commerce. (The last issue of the LABOUR GAZETTE, page 26, contained a note of the development of indus-

trial research in Canada.) It is stated that most of the work of the Bureau of Standards is made effective through voluntary co-operation of the State and municipal governments, scientific and professional societies, trade associations, manufacturers, and individuals who accept the findings of the bureau and incorporate them into a State law, a municipal ordinance, a dimensional standard, or a standard of quality, performance, or practice. All such co-operation is encouraged to promote a better understanding between producer and consumer and between industries, to the end that industries may be, so far as practicable, self-regulatory. Many national organizations assist the bureau directly in research, standardization, and simplification, and in turn the bureau co-operates with numerous national organizations engaged in similar effort, frequently designating members of the staff to serve on committees. The extent of these relationships is shown by the fact that at the present time the bureau is co-operating with over 200 scientific, technical, and industrial organizations. In many cases the work with any one group covers a single project, while in other cases 25 projects or more are being handled by practically every division of the bureau. One of the most effective ways in which the bureau co-operates with American industries is through its research associate plan. At the close of the fiscal year there were 63 of these associates stationed at the bureau, representing 38 industries and associations.

The regular staff of the Bureau at the close of the fiscal year numbered 850 employees.

An account of the organization and work of the Canadian Engineering Standards Association will be found on another page of this issue.

Technical education for juvenile unemployed

Some of the provisions of the new Unemployment Insurance Act which will take effect in Great Britain next April, are outlined on another page of this issue. The new act makes provision for the technical education of boys and girls, of ages between 16 and 18 years, who are insured against unemployment, and who are normally employed, or likely to be employed, in an insured occupation. The Minister of Labour, with the consent of the Treasury, may authorize the payment out of the unemployment fund of grants towards the cost of approved courses of instruction for these classes.

The Ministry of Labour is also taking steps to secure a redistribution of juvenile labour throughout the country in accordance with local requirements. This course of action

was suggested in 1926 by a committee on education and industry, which recommended an investigation into the question of "transferring juvenile labour from one area to another to secure the more effective correlation of supply and demand." The Ministry is now seeking information on this subject from the local education authorities. A shortage in the supply of juvenile labour is noted, amounting to about 20 per cent, being attributed mainly to the low birthrate during the years of the great war. In some areas, therefore, the demand is at least equal to the supply, but on the other hand there are areas where juvenile unemployment is so widespread that the diminution in the supply of boys and girls has no effect, and a large surplus of young people still remains. The local education authorities are asked to report on the possibilities of their respective districts in regard to employment, and to state whether there is need for any preliminary training of juveniles whose parents agree to their transference to other areas under approved conditions.

Whitley Councils after ten years

Mr. L. H. Green, secretary of the Industrial Council for the flour milling industry in Great Britain, contributed to a special supplement on industrial relations recently published by the *Manchester Guardian*, an account of the present standing and prospects of "Whitley Councils," with particular reference to his own organization. The industrial council movement, he states, received a severe check from the general strike in 1926, but it has now recovered the lost ground, and is even extending its field of operations. "Perhaps the strongest argument in favour of the Whitley method of organization is that in the 54 industries which possess these joint councils, employing 3,000,000 workpeople, hardly any strike or lockout (apart from the general strike) has taken place on a national or even on a large scale during the whole of the post-war period—a period of exceptional difficulty in industrial relations." One circumstance enabled the industrial council for the flour milling industry to weather the storm of the general strike, namely, the inclusion of non-contentious matter within the council's scope. Without provision for the handling of general questions affecting the welfare of the industry, the industrial council tended to become little more than a piece of machinery for conciliation. Since the general strike, however, arrangements were made for extending the scope of the industrial council to include gen-

eral and technical questions affecting the industry. The education committee, for example, has extended its work to include "a scheme providing for the recruitment of labour into the industry on a scientific basis instead of on the haphazard methods now employed." Mr. Green states that the Trade Union Congress in 1926 accepted the principle of a proposed measure to give the sanction of law to agreements made by industrial councils.

Mr. Green's conclusions as to the need for broadening the scope of the councils beyond controversial questions receive support from the report of the committee on works councils in the metal trades (United States), published by the National Metal Trades Association, Chicago, which says: "True shop representation fails of its purpose when it is intended by the management to divert employees from the real industrial problems of the business, or when allowed to deteriorate into a welfare or similar committees, as it thus invariably defeats its own purpose, namely, the securing the real co-operation of the employee in solving vital industrial problems."

Fishermen and workmen's compensation in Nova Scotia

The recommendations of Mr. Carl D. Dennis, the special commissioner appointed by the Nova Scotia government to investigate the conditions of the fishing and lumbering industries in relation to workmen's compensation in the province, will be found on another page of this issue. Mr. Dennis recommends that the fishing industry should be released entirely from the operation of the Act. The exceptional organization and the incalculable accident experience of this industry place it in a class by itself. This is particularly true in Nova Scotia, where fishing crews work on a co-operative basis the "sharesmen" contributing no assessment, but receiving the benefits of compensation. The report notes the fact that the practice in other countries is to exclude fishermen from compensation (the British Columbia Act, however, includes fishing in the list of industries covered). During the year 1927 the fishing industry suffered a disaster in the loss of four schooners with their entire crews, throwing a heavy burden on the accident fund. The shipowners and masters of the Lunenburg fleet, in a petition presented to the commissioner declared that "during the whole history of the fishing fleet, covering a period of over 40 years, no such disasters have been previously experienced, and are not likely to be experienced again." The resulting situation,

they claimed, "calls for the sympathy of the whole country and the financial assistance of the government for the purpose of relieving the already heavy burden of assessment by the Workmen's Compensation Board upon the owners of the fishing vessels." They pointed out that the legislature, by the amending act of 1927 (LABOUR GAZETTE, June, 1927, page 628), limiting the assessment rate for 1927 to the amount of the rate for 1926, had recognized that the limit of assessment had already been reached. The petitioners suggested that the Disaster Fund which may be created under section 59 of the act, "to be used to meet the loss arising from any disaster or other circumstance which in the opinion of the Board would unfairly burden the employers in any class," should be considered as being a "fund available for any industry which has suffered disaster . . . without the industry suffering such disaster being liable to repay the same." The section should, they proposed, be referred to the Supreme Court of the province for interpretation, the question being whether the section provides for the creation of one disaster fund available for any industries suffering a disaster, or whether it provides for the creation of individual disaster funds for separate industries or industrial groups.

The Hon. E. N. Rhodes, premier of Nova Scotia, in a letter dated January 27, informed the fishermen's representatives that the provincial government intended to take measures for the relief of the industry. He stated however that "it is the view of the local government that the fisheries being under the jurisdiction and control of the federal government, it should properly assume its responsibility in directing and safe-guarding the fishing industry."

The provincial government proposes to assist the fishermen by (1) continuing for one year the present assessment rate of 5 per cent; (2) paying the difference between the latter rate and that ultimately obtained through Lloyds; (3) removing the industry from the operation of the Workmen's Compensation Act; (4) providing for compulsory insurance of fishing vessels, with maximum liability; (5) relieving the industry from its obligation arising out of the present deficit with the Compensation Board.

Workmen's compensation in Quebec

following paragraph in reference to workmen's compensation:

The speech from the Throne at the opening of the Legislature of the Province of Quebec on January 10 contained the following

"Our workmen desire a law providing more generous compensation in case of accidents befalling them at their work than that now in force. After long and careful study, my Ministers believe that they have formulated a scheme which will contain all that is best in our own and foreign legislation. This scheme will satisfy both employers and workmen. To indemnify the workman on a generous scale without injuriously affecting industry has been the aim in drafting a Bill for the new law, which will be submitted to you."

It will be recalled that the Workmen's Compensation Act, 1926, was amended in 1927, the date of its taking effect being postponed until April 1, 1928 (LABOUR GAZETTE, May, 1927, Chap. 506). In the meantime the government undertook a special inquiry into compensation systems in other provinces, the understanding being that the whole subject would be reconsidered at the session of 1928 (LABOUR GAZETTE, October, 1927, page 1028).

On the question of Sunday observance the Speech declared that "in our pulp and paper factories, there has been a considerable improvement. Some abuses still continue, and the government is anxious to do everything it can to put a stop to these. It cannot, however, undertake their prevention throughout the whole province. For the due observance of the Lord's Day, it looks to the proper spirit of employers and their workmen as well as to the co-operation of certain associations, and it must rely on the help of municipal authorities which unfortunately has too often been wanting."

Estimate of financial losses due to an industrial accident

The December issue of the *Labour Bulletin* of the Illinois Department of Labour makes an estimate of the amount of the total actual losses sustained both by a wage earner and by his employer in consequence of an industrial accident. According to this estimate the amount received by the wage earner or expended by the employer in workmen's compensation represent only a small proportion of the losses involved. The calculation is based on the figures given in the Workmen's Compensation report for 1925, which show that temporary total disabilities lasted, on an average, for 4.47 weeks, the average compensation per case being \$52.85. Average earnings in the same period, at the rate of \$30.77 per week, amounted to \$136.64. The average loss in earnings was therefore \$83.79 in each case. Compensation offsets 38.7 per

cent of the average loss of earnings and leaves 61.3 per cent of the total uncovered. It is pointed out that this estimate takes no account of the worker's personal suffering or of the anxiety of his family, nor is allowance made for incidental expenses or additional help in the home often not included in the payment for medical attention.

The employer's actual loss from an industrial accident is found to amount to at least four times the amount he paid for compensation and medical aid. The factors considered in this calculation include the value of the time lost by other employees who stop work when the accident occurs; the time lost by foremen supervisors and other executives either in assisting the injured man or investigating the causes of the accident; the training of a new man to replace the injured man; injury to machine or tools; cost of welfare organizations, etc. The average amount of compensation paid per employee being \$52.85, it follows that the incidental cost to the employer is four times that amount, or \$211.40, and the average total cost of each accident to the employer, including both compensation and incidental losses, is at least \$264.25. Add to this the employee's loss of \$83.79, and the total loss per accident becomes \$348.04.

The *Labour Bulletin* concludes that the total financial losses incurred by employers and workmen in connection with the 50,000 or 55,000 compensable accidents which occur in Illinois in the course of a year can be estimated very conservatively at 25 million dollars.

Proposed compensation changes in Saskatchewan

Among the legislative requests of the Saskatchewan Executive of the Trades and Labour Congress of Canada, given on another page of this issue, is one for the enactment of a new Workmen's Compensation Act for the province on lines similar to the acts of Ontario and the other provinces having provincial accident funds. In view of this request, some employers' groups in Saskatchewan expressed approval of the proposal to substitute a "state fund" system for the existing method of administration by means of court procedure. An employers' association was formed at Saskatoon in January to co-operate with other employers in the province in promoting the passing of the new act. The new association was addressed by Mr. G. E. Carpenter, secretary of the Manitoba branch of the Canadian Manufacturers' Association and a member of the Compensation Board of the

same province. Mr. Carpenter supported the movement to obtain a new act because under the present act it was very difficult for working men to obtain relief from the expense and loss which follow an accident. This was especially so, he said, in the case of men working for small concerns, who are financially unable to pay amounts awarded by the courts. Under the proposed new act all injured workmen would receive compensation benefit regardless of whether they were employed by a large or a small concern, and regardless of the financial position of the concern. "In this province", Mr. Carpenter said, "protection is only carried to the extent of \$2,500 per individual for accident cases and this means that when a concern has a larger claim to meet it is sometimes quite unable to pay it—a situation which leads to dissatisfaction and often legal proceedings."

On January 22 the provincial government announced the appointment of a commission of five to examine the question of workmen's compensation by ascertaining the views of labour and capital in Saskatchewan regarding the best method of looking after those who are injured in industrial accidents and their dependants. The composition of the commission is as follows: Messrs. P. M. Anderson, K.C., Regina, Chairman; S. McTavish, Moose Jaw; Harry Perry, Regina; F. M. Still, Regina; A. W. Heise, Saskatoon. The commission will sit at various points in the province in the near future.

Rehabilitation work of compensation boards

The "rehabilitation" work of the Ontario Workmen's Compensation Board was described in the course of a recent address by Mr. Costigane, secretary of the Ontario Pulp and Paper Makers' Safety Association, as being "wonderful advance on anything offered in the past to benefit legitimately injured men." It may be recalled that during 1927 Nova Scotia followed the example of Ontario and Manitoba in making provision for the rehabilitation of injured workmen as a branch of workmen's compensation (LABOUR GAZETTE, July, 1927, page 702). The province of Ontario (Statutes of 1924, chapter 41) allows the Workmen's Compensation Board to expend a sum not exceeding \$100,000 in any one year for this purpose. Mr. Costigane explained the Board's method in making use of this allowance. "Suppose, for example," he said, "one of the men in your mill met with a serious accident, and in a few months' time was convalescent, but still suffering from a disability that prohibited him from again taking up the duties of his old position; then,

in the event of the company placing him on other work, the pay of which did not equal the pay he was receiving prior to his accident, the Board through the company would supplement his pay up to the point of his previous earnings, and that for a period long enough to establish his health to a point where his earning capacity would return to normal. The main idea is to get injured men back to work before they have become pessimistic."

Precautions are taken by the Board against any possible malingering on the part of the men who are helped in this way, Mr. Costigane pointing out that the "Board or the Government would be the last to bolster up a man who declined to do his duty, be he manager or water boy."

Causes and prevention of accidents in lumber camps

The Lumbermen's Safety Association (Ottawa), in a recent statement on the accident record for the past year, calls attention once more to the "human element" as a more important factor in the accident totals than purely mechanical risks. They state that "it has been found in the past that the personal work of seniors in the camp counts more than anything else in accident prevention work." The older employees are acquainted with the risks and are qualified to instruct new men how to avoid accidents. The Association suggests that foremen, clerks and other seniors in every camp should be organized for first aid and for giving informal instruction in regard to the special risks of the occupation. "In this way all will be in a better position to make systematic effort in the prevention of mishaps and fatalities during the balance of the season."

For the purpose of indicating the chief causes of accidents in lumber camps the Association gives a list of the causes of casualties in a large number of lumber camps during the first three months of 1927 as follows: (1) Jammed by falling or rolling logs, 153; (2) slipping and falling, 57; (3) using axes, 58; (4) falling trees, 39; (5) springing branches, 31; (6) slivers, chips, etc., 33; (7) freezing, 22; (8) muscular strain, 22; (9) falling branches, 18; (10) horse-kicks, bites, etc., 25; (11) handling supplies, 16; (12) falling or thrown off sleighs, 14; (13) tools other than saws or axes, 13; (14) falling on a saw or axe, 13; (15) using hand saws, 5; (16) struck by fellow workmen with axe, 7; (17) miscellaneous, 69.

The Association points out that nearly one-quarter of all accidents occurred in the handling of logs. Slipping caused a high percent-

age, and it is suggested that the total might be reduced by the general use of "non-slips" of some kind on boots. The foregoing list has been circulated by the Association to assist camp managers in planning their accident prevention work. Information is also given on the "nature of injuries" in the woods, and the Association expresses the hope that camp clerks and others will secure regular instruction in first aid so that all men injured in the camp will be properly treated until they reach the doctor. In this connection attention is called to the fact that the Workmen's Compensation Board will not pay the hospital accounts for men who are not really hospital cases, and that in such cases the men themselves are expected to pay for board and lodging out of the money they receive for compensation.

Labour's proposals to United States Congress

A delegation representing organized labour submitted to the United States Congress early in the present session a list of requests for measures in the interest of labour, the main proposals being: (1) An amendment to the Federal code prescribing the power of equity courts in the issuance of labour injunctions; (2) a searching investigation by a joint Congressional committee of the bituminous coal industry and strike conditions prevailing in Ohio, Pennsylvania and West Virginia; (3) enactment of a state fund workmen's compensation law for the District of Columbia. All these subjects were dealt with by the American Federation of Labour at recent conventions.

An Anti-Injunction bill was introduced during the month by Senator Shipstead of Minnesota. It would provide as follows:—

"Equity courts shall have jurisdiction to protect property when there is no remedy at law, and for the purpose of determining such jurisdiction nothing shall be held to be property unless it is tangible and transferable, and all laws and parts of laws inconsistent herewith are hereby repealed."

It is pointed out that when the Clayton Act was written into the Federal statutes in 1914, declaring that "the labour of a human being is not a commodity or article of commerce," it was believed that the injunction evil had been solved, but its effectiveness was soon destroyed by adverse court decisions.

The existing legislation for the District of Columbia in reference to workmen's compensation relates only to the civilian employees of the United States Government. Efforts have been made for several years to have a law en-

acted for the benefit of general labour in the District, and Representative Roy G. Fitzgerald of Ohio is now reintroducing a bill which has hitherto failed to pass the House, to provide for an exclusive state fund on the model of the Ohio Workmen's Compensation Act.

The Hon. J. D. MacLean, premier of British Columbia, announced in the provincial legislature in January that the government was considering legislation to provide for health insurance, and with it a scheme for settlers' maternity or medical assistance.

The government of British Columbia has advanced a loan of \$12,000 to the broom factory operated at Vancouver by the Canadian National Institute for the Blind.

The Minimum Wage Board of Saskatchewan gave a ruling in January that no deductions are to be made from the minimum wages fixed by various orders for girls and women in the province. The question had been raised whether employers could make deductions to cover the cost of uniforms supplied by the employing firm.

Plant No. 3, Hull, Quebec, and Plant No. 5, Belleville, Ontario, of the Canada Cement Company, Limited, have each won the Portland Cement Association trophy for completing the calendar year 1927 without a single lost time accident. This is the fourth successive year that at least one Canada Cement plant has had a perfect record.

General damages to the amount of \$17,000 were awarded on February 2 by a Regina jury, in court of King's bench, to a former section-man who sued the Canadian National Railways for \$35,000, claiming that he had been crippled for life through injuries received in the course of his employment. After hearing the verdict counsel for the Railways, obtained a stay in proceedings. In the meanwhile payment of special damages of \$1,538 was made.

The "two-platoon" system for firefighters came into effect in Moose Jaw, Saskatchewan, on January 2, and in Halifax, Nova Scotia, on February 1.

Mr. James Simpson, vice-president of the Trades and Labour Congress of Canada will attend the meeting of the Governing Body of the International Labour Organization which is to be held at Geneva in February. Mr. Simpson is acting as substitute for Mr. Tom Moore, the Canadian labour representative on the Governing Body.

The Dominion Law Reports, 1928, 1, pages 1-12, contains a comprehensive annotation on Mechanics Liens by Mr. R. L. Reid, K.C., who is regarded as an outstanding authority on this subject. The article is written with respect chiefly to the Mechanic's Lien Acts in force in the provinces west of the Great Lakes, and especially to the British Columbia Act, but it is likely to prove a valuable aid in construing the statutes in the eastern provinces also.

Progress of Labour Banks

The November, 1927, issue of the LABOUR GAZETTE, pages 1205-6, contained a review of the history of labour banking. According to a compilation just published by the Industrial Relations Section of Princeton University the total resources of labour banks on December 31, 1927, were \$119,815,386. This total shows an increase of nearly two and one-half million dollars compared to the resources of October 10, 1927, but a decrease of approximately seven million compared to the year-end figures of 1926. During the year the control of four labour banks shifted to other interests. Deposits in labour banks increased almost three million dollars during the last quarter, but at the end of 1927 were approximately five and one-half million below the December 1926 total.

The outstanding event of the year in the labour banking movement was the change in

the policy of the Brotherhood of Locomotive Engineers concerning their banking enterprises. According to the review of the Princeton Industrial Relations Section, this change was reflected both in the transfer of two banks from Brotherhood control and in a reduction in the resources of several of the Brotherhood banks.

No banks were added to the labour group during 1927, but several larger banks, especially in New York City and vicinity, and a number of smaller banks elsewhere showed marked increases in resources compared to 1926. The growth of these banks, coupled with the recessions and, in some cases, later increases in the resources of several other banks, indicates that 1927 was a year of stabilization in the labour banking movement.

GENERAL REVIEW OF THE INDUSTRIAL SITUATION

THE employment situation at the end of January was reported by the Superintendents of the Employment Service of Canada to be as follows:—

Logging in the Province of Nova Scotia was not very brisk, as the weather had been unfavourable, at the outset being too mild and later being featured by only light snows. Good catches were reported by the fishing industry in this province, and fish curing firms were busy. While coal mining was not so busy as last year, yet the amount of coal being hoisted was fairly satisfactory for the winter season. With the manufacturing industry in general reported as rather satisfactory, it appeared that the iron and steel group were experiencing fair activity. Building and construction were seasonally quiet. Transportation was fairly good, as was also the case with trade. There was a fair demand for women domestic workers, while applicants for such work were none too numerous.

From the Province of New Brunswick fishing was reported as being only fair, although the lack of snow had interfered here with hauling operations in the logging industry. Generally speaking, woods operations were favourable. Manufacturing was normally busy. The construction industry was fair for the season, with fair prospects for later months. While transportation was rather satisfactory, the winter port activities at St. John had not been normal so far this year. Trade was satisfactory. A good number of placements of women domestic workers were being made.

The peak of the logging season in the Province of Quebec had been passed, but an encouraging number of placements were still being made. Manufacturing was satisfactorily busy: clothing, printing, rubber and textiles were reported as experiencing satisfactory activity, while boots and shoes, cigars, and metals were not so active. Construction was seasonally quiet in this province. Transportation was normally satisfactory, while trade was seasonally quiet. Although the demand for women domestic workers was less, practically all applicants were being placed. Snow shovelling was affording a considerable volume of casual work at different centres.

The farming industry in the Province of Ontario showed very little activity, but inquiries for spring help were beginning to come in. Most centres reported manufacturing as normal, and some workers were being recalled to their former employment at sev-

eral centres: increased activity was almost noticeable at Brantford, Chatham, Hamilton and Oshawa, but at the latter centre it had not yet been possible to absorb the workers customarily employed in this industry. The severe weather had checked building activity to a very large extent. However, the prospects for the spring were promising and even for the season building tradesmen were fairly well employed. Mining in Northern Ontario was normal, with some demands for workers for Manitoba. Pulp wood cutting had almost finished for the season in the northern parts of the province, and hauling operations were on the increase, with a fair demand for workers, which were being met rather easily. There appeared to be a larger available supply of applicants for house work registering at the different offices. Ice cutting and snow shovelling were giving a considerable volume of casual employment throughout the larger centres.

A nominal number of farm placements were being made in Manitoba. Considerable construction activity was reported from the Flin Flon area, and this was having an effect on other districts. Building prospects for the spring were hopeful. A fair number of logging placements were being made. Some placements in the metal mining industry were also recorded. Trade was rather good. A fair number of placements were reported from the household workers sections of the offices.

Farm placements in Saskatchewan were not heavy and applicants were sufficiently numerous to fill them. Construction for the season was not bad. There was a shortage of logging workers at Prince Albert, where numerous placements were being made. There was not much demand throughout this province for general labour, yet the situation seemed to be rather favourable. The demand for women domestic workers was not very heavy and sufficient applicants were available.

With the orders for farm workers in Alberta not very numerous, enough applicants were calling at the employment offices. In this province building and construction activity for the winter season was fairly good, and some railroad construction was being carried on: the prospects for the spring in this industry were very good. The peak of the season for the coal mining industry had been passed and vacancies for additional workers had consequently declined. The logging industry required some additional workers, who were supplied. The number of demands for

women domestic workers was fair, and such orders were satisfactorily filled. Generally, conditions in Alberta were quite favourable for the time of year.

The logging industry in the Province of British Columbia continued rather quiet, with only minor demands for workers. Mining, both metal and coal, continued to be satisfactorily busy, although there were not any outstanding requirements for workers. Although there was no great demand for workers for the building and construction industries, fair activity was shown for the season. Manufacturing continued on a normal basis. Conditions generally in the coast province showed up fairly well for the season, with the number of unemployed not being reported as exceptional, and with fair prospects for the opening up of the usual spring work in the course of a few weeks.

EMPLOYERS' REPORTS.

The seasonal curtailment in employment registered at the beginning of January, 1928, involved a rather larger number of workers than on January 1 of most years of the record, which began in 1920, although the percentage loss was only slightly higher than in 1926 or 1925, and was smaller than in earlier years of the record. Employment in recent months has been maintained at an exceptionally high level, so that many employers took advantage of the opportunity of closing their entire plants during the holiday season for necessary repairs and inventories, as well as to provide a vacation for their staffs. The situation, however, continued to be better than on the corresponding date in any other year since the record was instituted. The Dominion Bureau of Statistics tabulated returns from 6,177 firms, whose pay-rolls declined from 886,836 persons on December 1 to 826,736 at the beginning of January. Reflecting this contraction, the index on January 1, 1928, stood at 99.5, as compared with 106.8 in the preceding month, and with 94.8, 89.6, 83.9, 88.7, 86.3, 77.9 and 88.7 on the same date in 1927, 1926, 1925, 1924, 1923, 1922 and 1921, respectively.

All provinces recorded declines, those in Quebec and Ontario being most extensive. In the Maritime Provinces, the recession took place chiefly in manufacturing and construction; mining and trade were also rather slacker, but logging and transportation showed heightened activity. In Quebec, manufacturing, construction and transportation reported especially pronounced losses, while the tendency was also unfavourable in logging, mining and communications. In Ontario, also, manufacturing, construction and transportation

showed the greatest losses, but there were decreases in trade, services and communications, while logging and metallic ore mines showed improvement. In the Prairie Provinces, construction, transportation and food and iron and steel plants reported the most noteworthy decreases; on the other hand, mining, trade and logging registered increased activity. In British Columbia, lumber and food factories, logging and construction recorded important curtailment, but additions to staffs were indicated in trade and a few other industries.

There were contractions in the eight cities for which separate tabulations are made, those in Montreal, Toronto and Hamilton being most marked. In Montreal, important declines were shown in construction, transportation and manufacturing. In Quebec, manufactures afforded more employment, but seasonal curtailment in shipping and construction caused, on the whole, a loss in employment. In Toronto, there were contractions in manufacturing and also in construction, trade transportation and communications. In Ottawa, manufactures registered seasonal curtailment, while little general change occurred in other industries. In Hamilton, manufacturing, especially of textiles and iron and steel, showed reduced activity and construction was also quiet. In the Border Cities, manufacturing, building and trade were dull, but the losses were smaller than is usual at the commencement of January. In Winnipeg, manufactures and construction registered the greatest declines, while considerable improvement was indicated in trade. In Vancouver, employment in lumber mills and other manufactures, and in construction, showed a falling-off, while trade was brisk.

An analysis of the returns by industries shows important contractions in manufacturing, construction, transportation, logging and communications, while coal mining and retail trade recorded seasonal gains.

An article elsewhere in this issue gives in some detail the employment situation as at the beginning of January, 1928.

TRADE UNION REPORTS.

Due partly to seasonal inactivity and also to conditions consequent upon the holiday period, the volume of unemployment among trade union members at the close of December, 1927, was greater than that which was indicated at the end of the preceding month. December reports were received from 1,696 labour organizations with an aggregate membership of 180,204 persons, and of these 11,822 were without work on December 31, a percentage of

6.6 as compared with unemployment percentages of 5.2 in November and 5.9 in December last year. New Brunswick and Alberta unions alone showed an increase in the volume of work afforded over November, and these were but nominal, while of the declines in the remaining provinces that of 2.5 per cent in British Columbia, due to lessened activity in building operations and in the manufacturing industries, was the most note-

worthy. In comparison with the returns for December, 1926, the situation for Nova Scotia, Quebec, Manitoba, Saskatchewan and British Columbia unions was less favourable, while in the remaining provinces the volume of employment increased.

An article elsewhere in this issue gives in more detail the unemployment conditions existing among the members of local trade unions at the close of December, 1927.

**EMPLOYMENT
OFFICE
REPORTS.**

During the month of December, 1927, the offices of the Employment Service of Canada made 24,451 references to positions and effected a total of 23,374 placements. Of these, placements in regular employment numbered 13,424, of which 10,726 were of men and 2,698 of women, while placements in casual employment numbered 9,950. The offices of the Service also received notification of 24,384 vacancies during the period under review, of which 16,326 were for men and 8,058 for women. Applications for employment were registered from 25,161 men and 8,988 women, a total of 34,149. Compared with the preceding month and also with December a year ago a decline is shown in the volume of business transacted, the records for November, 1927, showing 31,162 vacancies offered, 44,303 applications made and 29,218 placements effected, while in December, 1926, there were recorded 26,287 vacancies, 36,245 applications for work and 24,667 placements in regular and casual employment. In another section of this issue will be found a detailed statement of the work of the offices for the month of December, 1927, and also for the quarterly period September to December.

**PRODUCTION
IN INDUSTRIES
IN CANADA.**

Some figures indicating the recent movements of trade and industry are given in the table on page 109. The Dominion Bureau of Statistics reported that the physical volume of business in Canada attained a new high total in December. The index published in the *Monthly Review of Business Statistics*, in December was 158, compared with 148 in November. Sharp advances in seven factors counterbalanced declines in the remaining five used in the construction of the general index. Mineral production was considerably greater in December than in the preceding month, and the building industry was more active after adjustment for seasonal tendencies. Manufacturing industries, on the whole, showed slight improvement, increases in raw cotton imports and in iron and steel production as well as increased importation of crude rubber and petroleum offsetting declines in other lines. Employment in wholesale and retail trade after adjustment showed expansion in commodity distribution. The average price of 31 industrial stocks listed on the Montreal and Toronto exchanges showed an advance of 4.5 per cent over the level of the preceding month. The trading on the Montreal Stock Exchange was the greatest in the history of the exchange.

Widespread interest in the mining industry was created in 1927 through spectacular dis-

coveries of ore and persistent efforts in preparation for increased production. The production in 1927 of gold, copper, lead and zinc was greater than in any previous year, while among the non-metallics, cement, gypsum and lime were produced in record volume. The nickel mining industry showed satisfactory progress, the production being 66,436,000 pounds compared with 65,714,000 pounds in 1926, and the gross value \$15,105,000 compared with \$14,374,000. The value of the copper, lead and zinc output was less than in 1926 owing to lower prices. The output and value of silver showed a decline, the low prices adversely affecting the industry. The net result from mineral production was an estimated value of \$241,773,000 compared with \$240,437,000, the previous high record established in 1926.

The output of coal from Canadian mines during November increased 19 per cent over the production for the preceding month, and was 3 per cent higher than the average for November in the past five years. The figures were 1,746,976 tons in November as against 1,469,172 tons in October and an average of 1,688,547 tons during the five preceding years. All the coal producing provinces showed an increase in production over the preceding month, but New Brunswick was lower than the average for the month in the five preceding years. Men employed in the coal mines of Canada during November numbered 30,618 of whom 23,799 worked underground and 6,819 on surface, as compared with a total of 29,004 in October, of whom 22,393 worked underground and 6,611 on the surface. Production per man was 57.0 tons in November as against 50.6 tons in October. During November the production per man-day was 2.5 tons, as compared with 2.3 in October. The tonnage lost was largely due to "lack of orders."

**BUILDING
PERMITS AND
CONTRACTS
AWARDED.**

According to a report prepared by the Dominion Bureau of Statistics the value of the building permits issued by the municipal authorities in sixty-three cities in Canada during the month of December, 1927, amounted to \$11,744,094, as compared with \$12,849,089 in November, 1927, and with \$11,508,818, in December, 1926. The cumulative value for the twelve months, 1927, was \$185,451,271, as compared with \$156,386,607 for the twelve months period of 1926.

The *McLean Building Review* estimates the total value of the construction contracts awarded in Canada in January, 1928, at \$20,480,000, setting a new record for this month. Of this amount \$8,123,100 was for business building; \$6,572,900 for residential construction; \$3,108,500 for industrial work, and \$2,-

675,500 for public works and utilities. The apportionment of contracts awarded by provinces, during January, 1928, was as follows:—Ontario, \$10,988,700; Quebec, \$6,514,500; Prairie Provinces, \$1,993,500; British Columbia, \$904,600, and the Maritime Provinces, \$78,700.

The "contemplated new construction" in Canada during January, 1928, according to the same *Review*, totalled \$66,364,400, \$8,652,300 of this amount being for residential building; \$35,943,000 for business building; \$2,011,500 for industrial building, and \$19,757,600 for engineering (including bridges, dams and wharves, sewers, watermains, roads, streets and general engineering).

EXTERNAL TRADE.

A summary of Canadian trade prepared by the Department of National Revenue shows that in December, 1927, the merchandise entered for consumption amounted to \$83,262,695 as compared with \$94,311,883 in November, 1927, and \$81,774,995 in December, 1926. The chief imports in December, 1927, were: fibres, textiles and textile products, \$15,302,858; iron and its products, \$14,479,862, and agricultural and vegetable products, other than foods, \$11,160,771.

The domestic merchandise exported amounted to \$130,277,157 in December, 1927, as compared with \$153,118,718 in November, 1927, and \$138,421,375 in December, 1926. The chief exports in December were in the group of agricultural products, mainly foods, \$69,509,416; wood, wood products and paper, \$21,780,770, and animals and animal products, \$15,260,542.

In the nine months ending December, 1927, exports of domestic merchandise totalled \$950,103,367, and imports, \$822,988,467.

Strikes and Lockouts

The time loss due to industrial disputes in January, 1928, was greater than during December, 1927, and also greater than during January, 1927. There were in existence during the month nine disputes, involving 500 workpeople, and resulting in a time loss of 8,154 working days, as compared with 11 disputes in December, involving 321 workpeople and resulting in a time loss of 6,102 working days. In January, 1927, there were recorded 8 disputes, involving 261 workpeople, and resulting in a time loss of 4,020 working days. None of the strikes and lockouts commencing prior to January terminated during the month, but four of the disputes commencing during January terminated during the month. At the end of January, therefore, there were on record five strikes and lockouts affecting 122 workpeople, not including those strikes and lockouts in which employment conditions were reported to be no longer affected but which had not been formally called off.

Prices

The cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average retail prices in some sixty cities was \$11.19 at the beginning of January, as compared with \$11.17 for December, 1927; \$11.37 for January, 1927; \$11.63 for January, 1926; \$10.77 for January, 1925; \$10.78 for January, 1924; \$10.52 for January, 1923; \$11.03 for January, 1922; \$14.48 for January, 1921; \$16.92 for June, 1920 (the peak); \$12.42 for January, 1918; and \$7.73 for January, 1914. The most important advance was in the price of beef, which was considerably higher than last month, while less important increases occurred in the prices of veal, mutton, fresh eggs, creamery butter, rolled oats and evaporated apples. Prices of fresh and salt pork, bacon, lard, rice, sugar and tea were somewhat lower. Including the cost of fuel and rent with that of foods the total budget averaged \$21.41 at the beginning of January, as compared with \$21.37 for December, 1927; \$21.59 for January, 1927; \$21.96 for January, 1926; \$21.09 for January, 1925; \$21.23 for January, 1924; \$21.13 for January, 1923; \$21.52 for January, 1922; \$25.30 for January, 1921; \$26.92 for July, 1920 (the peak); \$19.61 for January, 1918; and \$14.41 for January, 1914. Fuel and rent were practically unchanged.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics was slightly lower at 151.2 for January, as compared with 151.8 for December, 1927; 150.6 for January, 1927; 163.8 for January, 1926; 165.5 for January, 1925; 156.9 for January, 1924; 151.4 for January, 1923; 151.7 for January, 1922; 200.6 for January, 1921; 256.7 for May 1920 (the peak); 233.4 for January, 1920; 206.1 for January, 1919; and 191.7 for January, 1918. In the grouping according to chief component materials two of the eight main groups were lower, one advanced and five were unchanged. The Animals and their Products group and the Non-Ferrous Metals group declined, the former due to lower prices for eggs, pork products and butter, which more than offset advances in the prices of livestock, leather and beef, and the latter due to lower prices for aluminum, silver, lead, tin, spelter, and solder. The Vegetables and their Products group advanced, higher prices for most grain, shorts, potatoes, apples, coffee, rosin and turpentine more than offsetting declines in the prices of flour, rubber, tea, lemons and oranges. The groups which were unchanged were: the Fibres, Textiles and Textile Products group, the Wood, Wood Products and Paper group; the Iron and its Products group; the Non-Metallic Minerals and their Products group; and the Chemicals and Allied Products group.

PROCEEDINGS UNDER THE INDUSTRIAL DISPUTES INVESTIGATION ACT FOR THE MONTH OF JANUARY, 1928

DURING the month of January the Department received the report of a Board of Conciliation and Investigation established to deal with a dispute between the Canadian Pacific Railway Company and certain of its employees, being clerks employed in the mechanical department, car and locomotive foremen's offices, members of the Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees.

Applications Received

Two applications for the establishment of Boards of Conciliation and Investigation under the terms of the Industrial Disputes Investigation Act, 1907, were received during the month as follows:—

- (1) From certain employees of the Avon Coal Company, Ltd., being coal miners, members of the One Big Union.
- (2) From certain employees of the Winni-

peg Electric Company, being motormen, conductors and busmen, members of the Street Railway Employees' Unit, One Big Union.

Other Proceedings Under the Act

The board established to deal with a dispute between the Toronto, Hamilton and Buffalo Railway Company and certain of its employees, being freight shed foremen, freight checkers, truckers, clerks, messengers, etc., members of the Canadian Brotherhood of Railroad Employees, was completed during the month by the appointment of Mr. H. J. McNulty, Barrister, of Ottawa, Ont., as chairman, on the joint recommendation of the other members of the board, Mr. Bernard Rose, K.C., Montreal, P.Q., appointed by the Minister in the absence of a recommendation from the employing company, and Mr. John L. Counsell, K.C., Hamilton, Ont., nominee of the employees.

Report of Board in Dispute Between the Canadian Pacific Railway Company and Certain of its Clerks

A report was received from the board established to deal with a dispute between the Canadian Pacific Railway Company and certain of its employees, being clerks employed in the mechanical departments, car and locomotive foremen's offices, members of the Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees. The dispute concerned certain proposals submitted by the employees looking to an agreement as to rates of pay and working conditions, and including a request for increased wages. The number of employees directly affected by the dispute was given as 275. The board was composed as follows:—Professor Edouard Montpetit, Montreal, chairman, appointed on the joint recommendation of the other two members of the board; Sir William Stavert, Montreal, appointed by the Minister in the absence of a recommendation from the employing company; and Mr. J. T. Foster, Montreal, nominee of the employees. The report of the board was unanimous and contained recommendations as to the settlement of the dispute.

Report of Board

In the matter of the Industrial Disputes Investigation Act, 1907, and a dispute between the Canadian Pacific Railway Company and certain of its employees in the Mechanical Department at Angus, members of the Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees.

MONTREAL, January 14, 1928.

SIR,—The Board of Conciliation and Investigation appointed in the dispute between the Canadian Pacific Railway Company and certain of its employees in the Mechanical Department at Angus, Car and Locomotive Foremen's offices, members of the Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees, have the honour to make the following report:

The case was opened at Montreal on November 10, 1927, and continued on November 11, 15, 19, 22 and subsequent dates, there being a hiatus between November 22, 1927, and January 13, 1928, due to the illness of one of the members.

The applicants were represented by Mr. F. H. Hall, Chairman of the Brotherhood of Railway and Steamship Clerks, Freight Handlers,

Express and Station Employees, and the company, by Mr. Geo. Hodge, Assistant General Manager.

Your Board heard and considered the arguments of the employees, as presented by Mr. Hall, the reply for the employers, as presented by Mr. Hodge, and Mr. Hall in rebuttal.

The dispute in the reference consisted, as subsequently agreed by the representatives of the employees, in the question as to whether certain employees in the Mechanical Department at the Angus Shops, members of the Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees, who are referred to in the telegrams of Mr. H. H. Ward, Deputy Minister and Registrar, to the Members of the Board who represented the employees and employers respectively, of 24th and 25th October and 1st November last, should be included with the other employees on whose behalf a proposal was submitted to the Chief of Motive Power and Rolling Stock of the Canadian Pacific Railway Company on 21st February last, looking to an agreement as to rates of pay and working conditions.

Mr. Hall opened the case for the employees, and endeavoured to show why the "certain employees" should be included, quoting a number of cases in which men of similar calling and responsibilities were included, but admitting that there were exceptions.

Mr. Hodge replied for the employers, stating that all the men to whom they objected as being allowed to be identified with the agreement sought for were what is known as general office employees, who are in such close touch with the executive heads as to place

them in what might be termed confidential positions, whose duties and responsibilities were of a confidential nature, and who were regarded as being in line for promotion to greater confidences and responsibilities, which it may be said they as a body are continually enjoying. Mr. Hodge was asked how the existence of an agreement would jeopardize the confidences reposed in them, and the answer was that an agreement in which they were joined with other employees would tend to create a community of interest which did not now exist.

As the employers have not refused to discuss the proposal with the employees, on the contrary have informed your Board that they have always held themselves ready to do so, subject to the exclusion of the employees at the Works Manager's Office at Angus Shops, your Board is of the opinion that the employees should agree to exclude these employees and to proceed with negotiations as originally planned.

With regard to the employees in the Works Manager's Office at Angus Shops, the Board is of the opinion that they should approach the employers with a view of arriving at an agreement specifically applying to themselves.

Your Board, therefore, makes its recommendation in accordance with the opinions above expressed.

(Sgd.) EDOUARD MONTPETIT,
Chairman.

(Sgd.) JOHN T. FOSTER,
(Sgd.) W. E. STAVERT,

Members of the Board.

To the Honourable the Minister of Labour,
Ottawa, Ont.

CANADIAN RAILWAY BOARD OF ADJUSTMENT No. 1

THREE new decisions of the Canadian Railway Board of Adjustment No. 1 have been received by the Department. This board was established by a voluntary agreement concluded in 1918 between the various railway companies and certain of the railway labour organizations, its original purpose being to secure uninterrupted service on the railways during the continuance of the war. The board consists of six representatives of the railway companies and six representatives of labour, one for each of the following railway brotherhoods: the Brotherhood of Locomotive Engineers, the Brotherhood of Locomotive Firemen and Enginemen, the Order of Railway Conductors, the Brotherhood of Railroad Trainmen, the Order of Railroad Telegraphers, and the United Brotherhood of Maintenance

of Way Employees and Railway Shop Labourers. Earlier decisions were outlined in the LABOUR GAZETTE, January, 1928, and in previous issues. The third report of the proceedings of the Board covering the decisions rendered from October 1, 1923, to September 30, 1927, was issued as a supplement to the issue of November, 1927. The new decisions were as follows:—

Case No. 313—Canadian Pacific Railway, western lines, and Order of Railroad Telegraphers

A dispatcher was dismissed from the service for failure to comply with special instructions in connection with the signalling of trains, resulting in a collision between two trains. The employees asked for his reinstatement on the

ground that an emergency existed at the time, owing to storm conditions causing unforeseen delays to traffic. They claimed further that the accident would not have occurred if the dispatcher's actions had not been hampered by the chief dispatcher. The Board recommended, under all the circumstances, and in view of this dispatcher's length of service and good record that the company should favourably consider his reinstatement, without pay for time lost, such time to be regarded as discipline for his share of responsibility for the accident.

Case No. 314—Canadian National Railways, Atlantic region, and Order of Railroad Telegraphers

The regular assigned hours of an operator were from 12 midnight to 9 a.m., and the assigned hours of the agent were from 8 a.m. to 5 p.m. After performing his regular duties on a certain date the operator was instructed to remain on duty as agent until a relief agent could be sent to relieve him. He continued to perform the duties of both positions for three days, and was paid the operator's rate for his regular assignment as operator, and inflated time at operator's rate while relieving the agent. The railways contended that this payment was in accordance with the terms of the telegraphers' schedule. The employees claimed that the operator should have been paid for his work as agent at the rate of time and one half, based on the salary of an agent, in addition to his regular rate as an operator. The board sustained the claim of the employees.

Case No. 315—Canadian National Railways, Western region, and Brotherhood of Locomotive Engineers, and Brotherhood of Locomotive Firemen and Enginemen.

This case concerned the dismissal of an engineer for responsibility in blocking the main line near Winnipeg and delaying traffic, for disregarding instructions and for the moving of his engine on the main line without authority. The company stated that the engineer on arriving at the entrance of Fort Rouge Yard was stopped on the main line, the yard being congested; that he told the head brakeman to inform the yardmaster by telephone that he would cut his engine off and go to the shop if he could not get his train into the yard in 15 or 20 minutes; and that the yardmaster, on receiving this message, went out to arrange for the yarding of the train, but found on reaching the junction that the engine had been detached from the train

and was on its way to the shop. As a matter of leniency the engineer was reinstated after nearly three weeks. On the other side the employees contended that the engineer's conduct was in accordance with article 10, clause (b) of the Engineers' Schedule (re Rest), as follows:—

"Trains may be laid up between terminals for engineers to obtain rest after they have been fifteen hours on duty, upon advice to Train Dispatcher. Engineers to be judge of their own condition."

The employees stated that on the arrival of the train at the junction the night yardmaster was asked if it could be yarded. No information being forthcoming the yardmaster was told that the engine crew were tying up for rest, as they had been over 15 hours on duty, and the engineer had had nothing to eat for 10 hours. The weather that day was between 15 and 20 degrees below zero. The employees further alleged that the yardmaster had said by telephone that the train was in a good place to be tied up. The engine arrived at the shop, it was stated, after the crew had been on duty for 15 hours and 55 minutes. The employees claimed that the engineer, being unable to leave the engine with no one in charge, could do nothing but cut the engine off and take it to the shop, and that he was improperly dismissed and was entitled to compensation for time lost.

The Board was of the opinion that the right of the employees to book rest was not involved in the case. The employees had that right, but it could be exercised only under proper conditions. Such conditions, they held, were not observed in the case, and apparently the engineer and the yardmaster were jointly responsible for the conditions which developed. Under all the circumstances the Board sustained the claim of the employees to the extent of a recommendation that the engineer should be paid for half the time lost.

The legislature of Nova Scotia, in session of 1927, passed the Fire Departments Two Platoon Act (LABOUR GAZETTE, June, 1927, page 626), to apply to cities having a population of at least 30,000, subject to approval by a majority of the municipal authority. In Halifax, the city charter gives the Board of Fire Wardens control of the fire department, and the Board accordingly has instructed the fire chief to adopt the Two Platoon system from February 1, provision being made in the estimates of the Board for the payment of salaries to additional men for the force.

STRIKES AND LOCKOUTS IN CANADA DURING JANUARY, 1928

THE number of strikes and lockouts in existence in Canada during January was nine, as compared with eleven the preceding month. The time loss for the month was greater than during January, 1927, being 8,154 working days as compared with 4,020 working days during the same month last year.

Date	Number of disputes	Number of employees involved	Time loss in working days
Jan. 1928.....	9	500	8,154
Dec. 1927.....	11	321	6,102
Jan. 1927.....	8	261	4,020

The record of the Department includes lockouts as well as strikes, but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees at its commencement and lasting at least one working day. Disputes of less than one day's duration, and disputes involving less than six employees, are included in the published record only when ten days' or more time loss is caused, but a separate record of such disputes is maintained in the Department, and the figures are given in the annual review.

The figures printed are inclusive of all disputes which come to the knowledge of the Department, and the methods taken to secure information practically preclude probability of omissions of a serious nature. Information as to a dispute involving a small number of employees, or for a short period of time, is frequently not received until some time after its commencement.

Four disputes, involving 193 workpeople, were carried over from December, 1927, none of which terminated during January. Five disputes commenced during January and four of these terminated during the month. At the end of January, therefore, there were on record five strikes and lockouts, as follows: bakers, Montreal, P.Q.; two disputes involving men's clothing factory workers, Montreal, P.Q.; stonecutters, Montreal, P.Q.; and ladies' clothing factory workers, Toronto, Ont.

The record does not include minor disputes such as are described in a previous paragraph, nor does it include disputes as to which information has been received indicating that employment conditions are no longer affected, although the unions or organizations concerned have not yet declared them terminated. Information is available as to four such disputes, namely, plumbers at Windsor, Ont., April 5, 1927; electrotypers at Toronto, Ont., December 20, 1926; sheet metal workers at Montreal, P.Q., September 1, 1927; and ladies' clothing factory workers, Toronto, Ont., June 30, 1926. Information has been recently received

that the dispute involving plasterers in Vancouver since October 3, 1927, added to the above list in December, was settled in November, the employees securing their demands. The dispute involving fur workers at Winnipeg, Man., since September 25, 1926, carried in this list for some months, is reported to have lapsed.

Of the disputes which commenced during the month three were for increases in wages, one against a change to the piece work system and alleged reduction in wages, and one was a sympathetic dispute. Of the four strikes and lockouts which terminated during the month one was in favour of the workers, one a compromise, and the result of two was indefinite.

The following paragraphs give particulars in regard to certain disputes, in addition to information given in the tabular statement.

BAKERS, MONTREAL, P.Q.—During January no developments were reported in this dispute, commencing May 1, 1927, for increase in wages. Early in February, however, it was reported that the parties concerned had agreed to arbitration, a judge of the Superior Court to appoint the Chairman of the arbitration board if the members of it did not agree on one.

MEN'S CLOTHING FACTORY WORKERS, MONTREAL, P.Q.—November 8, 1927.—In connection with picketing, in this dispute it was reported that two female strikers were arrested and were to be tried later.

MEN'S CLOTHING FACTORY WORKERS, MONTREAL, P.Q.—December 23, 1927—This dispute was in an establishment where a cessation of work occurred in June, 1927, the employees alleging a lockout. It had been reported that on this occasion the employees were not paid the wages due when work ceased, the head of the establishment alleging that they were working for a sub-contractor. In a test case in the courts the decision was given against the employer. The earlier dispute having lapsed in September, it was renewed in December, the employees ceasing work on the 23rd.

BOOT AND SHOE FACTORY WORKERS, TORONTO, ONT.—In this dispute, commencing January 4, 1928, the employer was reported to have proposed a change from time-wages to piece-rates for certain employees, which the union refused, and on such refusal to amend the wage rates agreed upon (LABOUR GAZETTE, May, 1927) the employer dismissed certain employees. The union then called out all the

piece workers, after which the employer is said to have locked out all the time workers. The employees alleged the reductions proposed would have ranged from 10 per cent to 50 per cent of their earnings. After ten days, negotiations resulted in a settlement, the employer agreeing to take back all former employees and continue under the old agreement. The two employees originally dismissed were reported to have left the city and to have refused to come back.

LADIES' CLOTHING FACTORY WORKERS, TORONTO, ONT.—Pressers, said to be ten in number, in an establishment in Toronto, asked for an increase in wages, and, this being refused, they ceased work on January 17. The employer, on the other hand, stated that only five had ceased work and that he had replaced

them. At the end of the month the dispute was still unterminated.

PRINTING COMPOSITORS, LONDON, ONT.—Printing compositors employed in newspaper establishments in London ceased work on January 13 owing to their demand for an increase in wages or arbitration as to such increase being refused. The wage increase demanded was \$2 per week, the scale in force being \$38 per week for day work and \$41 for night work, the hours of labour being 44 per week for day work and 42 for night work. It was understood that the employees proposed that the wage increase should be arbitrated and that the employers refused this. At the request of the union the Minister of Labour sent the Chief Conciliation Officer of the Department to London and negotiations

STRIKES AND LOCKOUTS DURING JANUARY, 1928

Industry, occupation and locality	Number of employees involved	Time loss in working days	Remarks
(a) Strikes and Lockouts occurring prior to January, 1928			
MANUFACTURING—			
<i>Vegetable Foods—</i>			
Bakers, Montreal, P.Q.....	73	1,826	Commenced May 1, 1927, for increase in wages. Untermminated.
<i>Clothing (Including knitted goods)—</i>			
Men's clothing factory workers, Montreal, P.Q.....	30	750	Alleged lockout, commenced Nov. 8, 1927; union conditions as to overtime. Untermminated.
Men's clothing factory workers, Montreal, P.Q.....	50	875	Commenced Dec. 23, 1927; Renewal of previous dispute re union wages and working conditions. Untermminated.
<i>Non-Metallic Mineral Products—</i>			
Stonecutters, Montreal, P.Q....	40	1,000	Commenced June 10, 1927, for increase in wages. Untermminated.
(b) Strikes and Lockouts occurring during January, 1928			
MANUFACTURING—			
<i>Boots & Shoes, (other than rubber & felt)—</i>			
Boot & shoe factory workers, Toronto, Ont.....	75	850	Alleged lockout, commenced Jan. 4, 1928; change to piece work system and alleged reduction in wages; terminated Jan. 17, 1928, in favour of workers.
<i>Clothing (Including knitted goods)—</i>			
Ladies' clothing factory workers, Toronto, Ont.....	10	130	Commenced Jan. 17, 1928, for increase in wages. Untermminated.
<i>Printing & Publishing—</i>			
Printing compositors, London, Ont.....	75	225	Commenced Jan. 13, 1928; refusal of employer to grant an increase in wages or arbitration; terminated Jan. 16, 1928; Compromise.
CONSTRUCTION—			
<i>Buildings & Structures—</i>			
Tile setters, Toronto, Ont....	43	602	Alleged lockout, commenced Jan. 3, 1928; increase in wages; terminated Jan. 19, 1928. Indefinite.
Terrazzo and marble workers and helpers, Toronto, Ont....	104	1,896	Commenced Jan. 5, 1928, in sympathy with tile setters locked out on Jan. 3, 1928. Terminated January 27, 1928. Indefinite.

were resumed. The Conciliation Officer proposed that the dispute be referred to a Board of Conciliation under the Industrial Disputes Investigation Act, 1907. In the settlement reached, a three year agreement was signed, providing that work would continue for one year and one-half at the rates in force before the dispute, and that at the end of such time if the two parties could not agree on the wage scale, it would be referred to a Board of Conciliation and Investigation under the Industrial Disputes Investigation Act, 1907.

TILE SETTERS, TORONTO, ONT.—Work ceased on January 3 in fifteen establishments, the employees alleging that they were locked out on that day as the result of their demand for an increase in wages from \$1.10 to \$1.25 per

hour, the employer alleging that the men were on strike. Two days later marble workers, terrazzo workers and their helpers went on strike in sympathy with the tile setters. A settlement was reached between the tile setters and their employers on January 19 providing for an agreement for two years, the exact terms of settlement not being available.

MARBLE WORKERS, TERRAZZO WORKERS AND HELPERS, TORONTO, ONT.—These employees ceased work on January 5 in sympathy with a dispute involving tile setters two days earlier. The marble workers returned to work on the termination of the tile setters' dispute, but the terrazzo workers did not return to work until January 26 after negotiations with the employers. The helpers returned on January 27.

RECENT STRIKES AND LOCKOUTS IN GREAT BRITAIN AND OTHER COUNTRIES

THE latest available information as to strikes and lockouts in various countries is given in the *LABOUR GAZETTE* from month to month. A table is given on page 134 summarizing the principal statistics as to strikes and lockouts from 1919 as far as possible to date.

INDUSTRIAL DISPUTES IN GREAT BRITAIN AND NORTHERN IRELAND DURING 1927

Groups of Industries	Number of Disputes beginning in year	Number of workpeople involved in all disputes in progress	Aggregate duration in working days of all disputes in progress
Mining and quarrying.	114	73,200	700,000
Brick, Pottery, Glass, etc.....	9	300	11,000
Engineering	8	2,500	12,000
Shipbuilding	21	7,200	30,000
Other metal	37	5,800	38,000
Textiles	27	4,500	36,000
Clothing	10	9,100	199,000
Woodworking and Furnishing.....	18	800	10,000
Building, Public works, contracting, etc.....	34	7,800	127,000
Transport.....	16	2,100	6,000
Other.....	9	400	6,000
Total.....	303	113,700	1,175,000

Great Britain and Northern Ireland

A preliminary report on strikes and lockouts during 1927 was published in the *British Ministry of Labour Gazette* for January. The figures given are subject to revision. The number of trades disputes beginning in the year was 303, which is the smallest number recorded in the forty years for which statistics were collected. In addition 13 disputes were still in progress from the previous year. The number of workpeople involved (directly and indirectly) in all disputes in progress during the year was about 113,700 and the time loss approximately 1,175,000 working days.

There was no dispute of outstanding magnitude during the year, the largest being that in the slipper industry at Rossendale which was mentioned in the *LABOUR GAZETTE* for September and October, and which dispute resulted in a time loss of 175,000 working days.

The table given below shows the disputes classified by industries. Of the total number of 113,700 workpeople, approximately 18,300 were indirectly involved.

The number of disputes reported as beginning in December, 1927, was 12, while 15 were still in progress from the previous month, making a total of 27 disputes in progress during the month, in which 7,600 workpeople were involved and the time loss was 38,000 working days.

Of the 12 disputes beginning in December, 7 arose out of wages questions, one on a question respecting hours and 4 on other questions.

Settlements were reached in 15 disputes, 2 in favour of workpeople, 5 in favour of employers and 8 ended in compromise.

There were no disputes involving large numbers of workpeople during December.

United States

Bituminous Coal Miners' Dispute.—No development towards a settlement of this dispute in Pennsylvania, West Virginia and Ohio where it is still in progress, was reported. The Secretary of Labour when in Pittsburg was reported to have discussed the situation with some of the parties. Minor disorders were reported. Evictions from company houses continued and families of the strikers, dependent upon a small amount of strike pay from the union and supplies provided by various labour organizations and by private citizens, were reported to be in great distress.

Lignite Coal Miners' Dispute, Colorado.—Serious disturbances continued during January. On January 12 at Walsenburg, there was a clash between the police and strikers on parade and some of the latter were reported to have been killed. An investigation into the causes of the strike has been undertaken by the State Industrial Commission.

Spain

A general strike occurred in Barcelona and other industrial towns in that vicinity on January 31 in protest against an income tax which was imposed on all workers. Work was resumed on February 6, but the result of the dispute was not reported.

STRIKES AND LOCKOUTS IN CANADA AND OTHER COUNTRIES, 1927

THE time loss in working days in Canada during 1927 was less than in any year since the record was begun in 1901, except 1902 and 1915, while the number of employees involved was less than in any year since 1915 and less than in most of the years since 1901. The year was marked by the absence of disputes of great magnitude, either in number of employees involved or in time lost, there being none involving over 5,000 employees or causing more than 50,000 days time loss. There were, however, a relatively large number of disputes in the building trades for the first time since 1921, and, as in recent years, there were several in clothing factories. In coal mining, while there were numerous disputes, none were of long duration or involved great time loss.

Since its establishment toward the end of 1900 the Department of Labour has maintained a record of strikes and lockouts in Canada, publishing in the LABOUR GAZETTE each month a complete list of those in progress, so far as available, with particulars as to the nature and result of each dispute. Early in each year a review of the previous year has been given, including statistical tables analyzing the data, and since 1912 including a complete list of the disputes on record during the year. As the monthly statements in the LABOUR GAZETTE are necessarily of a preliminary nature the annual review constitutes the revised record for the year. A special report on "Strikes and Lockouts in Canada, 1901 to 1912," issued in 1913, contained a complete list of strikes and lockouts for that period with analytical tables and the annual reviews in the LABOUR GAZETTE have brought the lists of disputes and analytical tables down to date each year.

The record of the Department includes lockouts as well as strikes, but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical tables therefore, strikes and lockouts are recorded together, the term dispute being used with reference to either.

A strike or lockout included as such in the records of the Department, is a cessation of work involving six or more employees and lasting one working day or more. Disputes of less than one day's duration and disputes involving less than six employees have not been included in the published record unless a time loss of 10 days or more is caused. A separate record of such disputes involving less than 10 days time loss is maintained in the Department. During 1927 there was one such dispute, involving 4 employees for one half day, making a time loss of two man working days.

The figures in this report are inclusive of all strikes which come to the knowledge of the Department, and the methods taken to secure information practically preclude probability of omissions of a serious nature. So far as concerns figures given with respect to duration of strikes, numbers of employees concerned, etc., it is impossible always to secure exact information, but the estimate made in such cases is the result of painstaking methods in the collection of data, and, with increasing experience in dealing with the subject it is believed that the statistics indicate the conditions with reasonable precision. The estimate of time loss is reached by multiplying the number of working days during which each strike lasted by the number of employees involved in the dispute from time to time so far as known.

The accompanying chart of the time loss in working days by groups of industries for each year back to 1901, shows that in mining considerable time loss occurred in 1903, 1909, 1910, 1911 and 1913, and again in 1917, 1919,

1922, 1923, 1924, and 1925, with very little time loss for 1926 and 1927. In metal trades no great time loss appeared except in 1919, when the strikes in the metal trades in various cities and the general strike in Winnipeg in sym-

RESULTS OF STRIKES AND LOCKOUTS ACCORDING TO NUMBERS OF EMPLOYEES INVOLVED IN 1901-1927

NUMBER OF EMPLOYEES

bers of strikes in street railway operation, as well as among freight handlers in local transportation, cartage, etc. The item "other industries" for 1926 included a comparatively large time loss in boot and shoe manufacturing.

From the chart showing results of the settlements arrived at it appears that the majority of employees were successful or substantially successful in 1905, 1906, 1915, 1917 and 1918, periods of steadily rising prices and expand-

TABLE I.—RECORD OF STRIKES AND LOCKOUTS BY YEARS

Year	Number of disputes		Disputes in existence in the year		
	In existence in the year	Beginning in the year	Employers involved	Workers involved	Time loss in working days

The record does not include minor disputes as described in a previous paragraph, nor does it include disputes as to which information has been received indicating that employment conditions are no longer affected, although the unions or organizations concerned have not yet declared them terminated. In addition to the list in Table 10, information is available as to the following disputes of this nature, carried over from 1926: metal polishers, Sackville, N.B., March 15, 1921, lapsed in June, 1927; moulders at Galt, Ont., August 2, 1922, lapsed in August, 1927; cigarmakers at Montreal, P.Q. March 24, 1925, lapsed in September, 1927; and men's clothing factory workers, St. Hyacinthe, P.Q., March 19, 1926, terminated June 20, 1927. Also during 1927, the following disputes included in Table X were added to this list: women's clothing factory workers, Toronto, June 30, 1926; fur workers, Winnipeg, Man., September 25, 1926, lapsed in December, 1927; electrotypers, Toronto, Ont., December 20, 1926; plumbers, Windsor, Ont., April 5, 1927; and sheet metal workers, Montreal, P.Q., September 1, 1927.

The following notes deal with the chief features in strikes and lockouts during the year 1927.

LOGGING.—The two disputes involving pulpwood cutters in the northern part of Ontario involved relatively small numbers of workers at various camps, who ceased work to secure higher wages or better working conditions, in most cases returning to work or being replaced by others. Reports indicated that the disputes were unorganized except that small groups in various camps acted collectively.

COAL MINING.—Out of twenty-five disputes, involving 16,580 workers and causing a time loss of 54,048 working days, only two involved relatively large numbers of workers, one of these being a one day strike on August 22 in protest against the execution of Sacco and Vanzetti in Massachusetts and the other, on May 14, being in sympathy with a strike of road makers on the previous day. There were also several strikes regarding the employment of non-union workers or of members of another union and the others were practically all "pit head" strikes arising out of disputes as to working conditions, changes in methods of payment, etc. In nearly all these cases the strikes were not authorized by the union and the strikers returned to work, the cases in dispute being taken up after that for settlement, as provided in the agreements under which the miners were working.

(Continued on page 132)

Restaurant workers.....	Saskatoon, Sask.....					4	69	810	

(d) A number of employers subsequently cancelled this agreement.
 (e) Also Toronto workers installing elevators in certain other cities.
 (f) Overtime at time and one-half after ten hours.

(g) 225 indirectly affected for one shift.
 (h) 750 workers indirectly affected.
 (c) Employment conditions no longer affected but dispute not declared terminated by one of the parties involved. See page 122.

(Continued from page 122)

MANUFACTURING.—As in each year recently there were numerous disputes in clothing factories, especially men's clothing, in most cases to secure or to maintain union wages and working conditions, either in the factories themselves or in the contract shops to which work was sent out. During 1927 none of these disputes was of any great magnitude.

CONSTRUCTION.—Since 1921 there have been relatively few disputes in building construction, but during 1927 there were a number of these, most of them being of short duration and causing little time loss. In most cases the causes were demands for increased wages or shorter hours, and many of them were at least partially in favour of the workers. The most important dispute in the building trades was a strike of carpenters in Toronto in October for a closed shop agreement for the United Brotherhood of Carpenters and Joiners, to be in effect from January 1, 1928, the contractors concerned having an agreement with the Amalgamated Carpenters of Canada expiring at the end of 1927. Two sympathetic strikes of other building trades occurred during the dispute, but were confined to jobs where strike breaking carpenters were employed, and therefore did not cause a relatively large amount of time loss. Through the mediation of the Minister of Labour a settlement was reached providing for an agreement between the contractors and the United Brotherhood to be in effect from January 1, 1928, all carpenters employed by such contractors to work under the terms of such agreement but without provision for a closed shop. An increase in wages from 85 cents to \$1 per hour from January 1, 1928, had previously been agreed to by the contractors.

TRANSPORTATION AND PUBLIC UTILITIES.—Three disputes occurred, involving 226 employees and causing a time loss of 471 working days, including longshoremen at Toronto for four days, teamsters at Saskatoon for one-half day and taxi cab drivers at Vancouver for three days.

TRADE.—Teamsters for retail coal merchants struck for the employment of shovellers to assist in unloading cars at Charlottetown and were successful after four days.

SERVICE.—Four disputes occurred including two disputes in theatres (one being that of stage hands in sympathy with musicians) one of laundry workers and one of restaurant employees, the four disputes involving 92 workers and causing time loss of 1,128 working days.

Analysis of Statistics

Table I, shows strikes and lockouts in 1927 as compared with each year back to 1901, the figures for 1927, like those for 1926, showing re-

latively much less disturbance than for any other year since 1916. The great difference in the time loss in these two years as compared with the period 1922 to 1925 is due to the absence of prolonged or extensive coal mining strikes which accounted for most of the time loss in those years in which time loss was great except 1919, the year of the general strike at Winnipeg.

Table II, giving an analysis by numbers of employees involved, shows that most of the disputes during 1927 involved relatively small numbers of employees, there being only two involving over 2,500 employees and these being of short duration caused little time loss.

Table III, giving an analysis by time loss, shows that only one dispute caused 25,000 days time loss, that of carpenters at Toronto, and only two caused 10,000 days or more time loss, one being of coal miners at Inverness, N.S., and the other of bakers in Montreal. These three, however, caused over twenty-five per cent of the time loss for the year, though not involving very large numbers of employees. The seventeen disputes causing between 2,500 days and 10,000 days time loss, however, involved altogether nearly 15,000 employees and caused nearly sixty per cent of the time loss for the year.

Table IV, with an analysis according to duration, shows that twenty-eight out of the seventy-nine disputes in existence lasted under five days, but that these involved over 15,000 employees and caused over 25,000 days time loss or fifteen per cent of all for the year. The nineteen disputes lasting over thirty days but terminating during the year caused over 50,000 days time loss, or thirty-four per cent of that for the year, while the three which were unterminated at the end of the year, though involving only 213 workers, caused over 20,000 days in time loss.

Table V, an analysis by provinces, shows that Nova Scotia, Quebec and Ontario had each about 50,000 days time loss. The largest number of disputes, twenty-eight, occurred in Ontario but the largest number of employees involved were in Nova Scotia. In the other provinces a relatively small number of employees were involved.

Table VI, giving an analysis by industries, shows that most of the disputes occurred in mining, clothing manufacturing and construction, and that these industries included the largest numbers of employees involved and also suffered most of the time loss. In the other industries, numbers of disputes, numbers of employees involved and time loss were not great.

Table VII, an analysis by causes and results, shows that out of the seventy-nine disputes in

existence during the year, twenty-one, involving 3,041 workers, resulted in favour of the workers, thirty-three, involving 7,763 workers, in favour of the employers; fifteen, involving 2,781 workers, were partially successful or ended in compromises; and ten were un-terminated or indefinite, these involving 9,098 workers. Disputes regarding increases or decreases in wages numbered twenty-seven and involved 3,477 workers. Disputes regarding questions of unionism, including union wages and working conditions, numbered thirty-nine and involved 6,952 workers of whom approximately 1,288 were successful, 1,522 were unsuccessful and 1,193 were partially successful.

Table VIII, an analysis by industries and methods of settlement, shows that thirty-five out of the seventy-nine disputes in existence were settled by negotiations between the parties, these involving 8,673 workers out of 22,683 in all disputes. Among the seven disputes, settled by conciliation or mediation involving 1,710 workers, the Minister of Labour or representatives of the Department mediated in six and in the seventh, restaurant workers in Saskatoon, the Local Council of Women brought about the settlement. One dispute was terminated by reference to a Board, under the Industrial Disputes Investigation Act. In seventeen disputes, involving 10,551 workers, the employees returned on employers' terms, and in fifteen disputes, involving 1,216 workers,

the termination was the result of replacement of workers. In the column headed "otherwise, including indefinite or un-terminated," all four were un-terminated at the end of the year.

Table IX shows numbers of disputes, numbers of employees and time loss by months since 1921. It appears that the greatest number of employees were involved and the greatest time loss occurred in the spring and summer months, but that in 1927 October showed the greatest disturbance owing to the strike of carpenters in Toronto at that time, this constituting the most important dispute in the year.

Table X gives the list of disputes with particulars as to location, causes, method of settlement, etc. This list does not include minor disputes, that is those causing less than ten days time loss as mentioned in an earlier paragraph, nor does it include disputes carried over from the previous year by which employment conditions are no longer affected but which have not been declared terminated by the organization of workers involved. These disputes are listed in an earlier paragraph.

In this table, "date of commencement" means the day on which time loss began, not necessarily the date on which the strike or lockout was declared, while "date of termination" means the date on which work was resumed, though in many cases the settlement would be made a day or so earlier.

Strikes and Lockouts in Other Countries 1919-1927

The accompanying table gives the principal figures as to strikes and lockouts in other countries as compared with Canada since 1919, showing the number of disputes (strikes and lockouts), the number of employees involved in stoppages of work and the time loss in man working days in those countries for which such figures are available.

In some of these countries, figures as to strikes and lockouts are published separately, but in the table here given they have been included together. The practice varies greatly in the various countries also in regard to other points. In some cases the number of strikes and lockouts shown for a year is the number beginning during the year, in other cases it is the number ending during the year, and in still other cases it is the number in existence during the year, including those carried over from the previous year, with those beginning during the year.

The figures as to the number of employees involved published by some countries show not only the number of employees directly involved, but also the number of those indirectly involved, that is thrown out of work by disputes to which they were not parties, but exact information as to these points is not always given. In the table given herewith the column showing numbers of employees involved includes figures for the numbers directly involved, or the total number directly and indirectly involved according to the method adopted by the country in question.

For some countries, figures as to time loss, that is the number of man working days lost, are not given, or are given only by years and not by months. Footnotes to the table indicate the nature of the statistics with reference to the above points. Many countries publish these statistics only once each year or less frequently, the figures being issued in some cases after an interval of some length.

Workmen's Compensation in Ontario in January

In January, the Ontario Workmen's Compensation Board awarded \$569,775.50 in benefits, this being made up of \$478,330.10 in payments for compensation and \$91,445.40 for medical aid. These figures are higher than for January, 1927, when a total of \$538,374.81 was awarded, which included \$76,441.29 for medical aid. The accidents reported last month numbered 5,056, of which 58 were fatal. The figures for December, 1927, were 5,655 accidents, including 47 fatalities and the reports in January, 1927, 5,293, including 29 fatal cases. The total number of fatalities reported in the past six months is 266 which is considerably above the average for any six month period since 1926.

Commenting on these figures Mr. R. B. Morley, General Manager of the Industrial Accident Prevention Associations, tells of several accidents that have recently been investigated by the field force of the Associations. One of these involved the loss of the left hand of a seventeen year old operator, when his sleeve was caught in a revolving cylinder in a textile mill. Mr. Morley states that in certain types of industry, close attention must be paid to the type of clothes worn. Many

accidents would be prevented if operators wore tight fitting clothes and rolled the sleeves. Another serious accident was in a laundry when the operator failed to replace the guard on the extractor before starting the machine, this resulting in a right arm being broken in four places. A third preventable accident occurred at a plant when the ladder, on which the janitor was working, broke. This accident had serious results and is another instance of the necessity for reasonable inspection of all equipment being used. A fatality involving a machinist's helper was caused by a large motor truck crushing the helper between casting and the rear of the truck. Too many serious accidents have happened within the last several months and, according to the investigations made by the Industrial Accident Prevention Associations, many of these would have been prevented by the exercise of a little more care and caution.

By an amendment to Regulation 48, under the Moving Pictures Act of British Columbia, the license fee payable for a projectionist's license in the province has been reduced from \$10 to \$2.

OLD AGE PENSIONS REGULATIONS

REGULATIONS pursuant to the Old Age Pensions Act (Revised Statutes of Canada, 1927, chapter 156) were made on the recommendation of the Minister of Labour, by order of the Governor General on June 25, 1927, and amended by another order on September 26, 1927. A further amendment was made by an order on January 16, 1928, after consultation with the pension authority of British Columbia, in which province the Old Age Pensions Act is now in effect. (The provincial regulations under the Act were given in the LABOUR GAZETTE, September, 1927, page 926). The new amendment eliminates a subsection which sanctioned the use of a certificate of service in any of His Majesty's forces as evidence in determining the age of an applicant. The full text of the existing regulations is as follows:—

THE OLD AGE PENSIONS REGULATIONS

Short Title

1. These regulations may be cited as The Old Age Pensions Regulations.

Interpretation

2. (a) In these Regulations, unless the context otherwise requires, "The Act" means The Old Age Pensions Act, 1927.

(b) The definition of expressions contained in The Old Age Pensions Act, 1927, shall apply to the said expressions whenever used in these Regulations.

(c) "to lodge" means to be present in person in circumstances consistent with an intention to reside.

Provision as to Notices

3. (a) Any notice or other document required or authorized to be sent or delivered for the purpose of these Regulations shall be in writing.

(b) Any notice or other document required or authorized to be sent or delivered to any person by the pension authority for the purpose of these Regulations shall be deemed to be duly sent or delivered at the time at which the notice or document is posted to that person at his ordinary address.

When Application May be Made

4. An application for a pension may be made at any time after the proposed pensioner has reached the age of sixty-nine years and nine months.

Method of Making Application

5. (a) Every person who desires to make application for pension under the Act shall complete the form of application prescribed by the pension authority; this application shall contain, inter alia, the full name of the applicant, his address, occupation, sex, conjugal state, age, date of birth, place of birth, nation-

ality, date of naturalization, place of residence during the past twenty years, income (including income of spouse), other means of subsistence, description of any property transferred within the past five years with name of transferee.

(b) Every pension authority shall supply a form *gratis* to any person who desires to make an application and if so requested shall give all necessary information and assistance in completing the said form.

Investigation of Claims

6. As soon as may be after receiving any application the pension authority shall take all necessary steps to ascertain whether the applicant is entitled to a pension and if he is so entitled, what rate of pension should be paid.

Age

7. (1) For the purpose of determining the age of any person regard may be had to any of the following documents:

- (a) Certificate of birth;
- (b) Certificate of baptism;
- (c) Entries in a family Bible or other genealogical record or memorandum of the family of the pensioner;
- (d) The returns of any census taken more than 30 years before the date of application for such pension, provided:

(i) That any request for census information by a pension authority be made with the consent in writing of the person regarding whom the information is required.

(ii) That the specific locality (city, town, village, township or rural municipality) in which the applicant resided at the date of the census aforesaid be stated;

(iii) That any information supplied by the Bureau shall be confidential and shall not be used for any other purpose than that of the administration of The Old Age Pensions Act; and

(iv) That a request for census information be made only in the event of failure to obtain information under the immediately preceding subsections;

and when better evidence cannot be obtained

(e) A statutory declaration setting forth that none of the certificates above referred to in this Regulation are obtainable, and a further statutory declaration as to the age of the pensioner by any person who has knowledge of the fact.

(2) The pension authority, however, shall not be bound to accept evidence mentioned in this clause and may accept other evidence not herein mentioned.

Nationality

8. (1) For the purpose of determining the nationality of any person regard may be had to any of the following documents:—

- (a) Certificate of birth;
- (b) Certificate of baptism;
- (c) Certificate of service in any of His Majesty's forces;
- (d) Certificate of Naturalization; and

(c) When better evidence cannot be obtained a statutory declaration or evidence under oath by any person who has knowledge of the fact.

(2) The pension authority, however, shall not be bound to accept evidence mentioned in this clause and may accept other evidence not herein mentioned.

9. Every pension authority shall be entitled to obtain without charge from the Department of the Secretary of State or any other Department any information available in such Department as to the nationality of any pensioner.

Residence

10. An applicant shall, in the absence of evidence to rebut such presumption, be presumed to have been resident in Canada for the twenty years immediately preceding the date of the proposed commencement of the pension if he (a) has actually lodged within Canada on at least 4,384 days within the said twenty years, and (b) has not within the said twenty years been absent from Canada for more than 731 consecutive days, but in no case shall a pensioner be deemed a resident of Canada for twenty years unless he lodged within Canada some time at least twenty years prior to making application.

11. An applicant shall, in the absence of evidence to rebut such presumption, be presumed to have resided in the province in which the application for pension is made for the five years immediately preceding the date of the proposed commencement of pension if he is then residing in the province, and if he has lodged therein on at least 1,095 days in the said five years, but in no case shall a pensioner be presumed to be a resident of such province for five years unless he lodged within said province some time at least five years prior to making application.

12. For the purpose of determining the province in which an applicant has resided, and subject to Regulations 10 and 11, if an applicant had left Canada and subsequently returned to Canada he shall, in the absence of evidence to rebut such presumption, be presumed to have continued to reside in the province which he left until the date of his return.

13. If an applicant was employed and paid by the Dominion of Canada or any province for services performed without Canada, or if his travelling expenses out of Canada were paid by Canada or by any province or municipality, he shall when he was so employed or while his travelling expenses were paid, be presumed to have continued to lodge in that province of Canada in which he was resident immediately before entering such employment or proceeding on the journey in respect of which his travelling expenses were paid.

14. An applicant who has been employed on a ship registered at or sailing regularly from any Canadian port shall be presumed to have lodged in Canada during the whole time he was employed on such ship, and in such province where he last resided previous to such employment.

15. An applicant who was employed by any railway company having its head office in Canada, on trains running out of Canada, or the wife of such pensioner, shall be presumed to have lodged in the province in which was

situate the Canadian terminus to and from which such trains were operated during the whole time he was employed on such trains.

Income

16. In determining the income of a pensioner receivable in the form of periodic payments in the nature of an annuity to which he is entitled, his income shall (a) if he has a right to assign or charge the same, be taken as equal to 5 per cent of the present value of his right thereto, or (b) if he has no right to assign or charge the same, the full amount thereof.

17. The income of a pensioner derivable from real property shall be taken as equal to 5 per cent of the assessed value in excess of the encumbrances thereof, and the income of a pensioner derivable from personal property shall be taken as equal to 5 per cent of the cash value thereof.

18. Where a pensioner lives with his or her wife or husband, his or her income shall be taken to be equal to one-half of the sum of the incomes, calculated as in the Act and these Regulations provided, receivable by each of them separately.

Transfer of Property

19. A transfer of property made more than five years before the date of an application for pension shall be deemed not to have been made for the purpose of qualifying for a pension.

When Pension Shall Commence

20. Every pension granted shall commence on the day after the application is received by the pension authority, or on the day when the pensioner first becomes entitled, whichever is the later.

Manner Pension Payable

21. Pensions shall be payable monthly in such manner as may be provided by provincial regulation.

Suspension of Pension

22. The payment of a pension shall be suspended during the lawful imprisonment of the pensioner for an offence.

Increase or Reduction of Pension

23. Every pensioner shall forthwith report to the pension authority any increase in his real or personal property of a total value of \$100 or more, occurring by devolution, bequest or gift or any other change in his financial condition.

24. Any pensioner who desires to make a claim for an increase of pension to which he may be entitled under the Act shall complete the form of claim provided, and deliver the form when completed to the proper pension authority, who shall investigate the claim as provided herein.

Management of Pensioner's Property

25. Any pension authority may, if so authorized by the law of the province, and with the consent of the pensioner, assume the management of any property belonging to the pensioner.

26. Every pension authority shall be entitled to recover from a pensioner any sum improperly

paid by way of pension whether as the result of the non-disclosure of facts innocent or false representations or any other cause.

Accounting

27. Any sums due by Canada to any province in settlement of Canada's half share of the net amount expended by any province in the payment of pensions shall be ascertained as of the last day of March, June, September and December, and shall be paid as soon thereafter as possible.

28. In calculating the amount due by Canada to any province no account shall be taken of any sums which, under the provisions of the Act, such province is liable to reimburse another province or to be reimbursed by another province in respect of a pension granted therein or in such other province, nor shall any account be taken of the cost of administering or paying pensions.

29. In calculating the amount in which any province is liable to be reimbursed by another province under the provisions of Section 10 of the Act, regard shall be had only to the net amount of the pension paid by the province to

be reimbursed after deducting therefrom the amount payable by Canada on account of such pension.

30. Balances due by one province to another province under the provisions of the Act shall be settled quarterly as of the same dates as the sums due by Canada are payable from time to time.

31. The Minister charged with the administration of the Act may at any time require the province to furnish information, detailed or otherwise, in connection with statements of account rendered by the province.

Interprovincial Board

32. An Interprovincial Board is authorized to be established with powers to interpret and recommend alterations in the Regulations, such Board to be appointed by the Governor in Council.

The Deputy of His Excellency the Governor General in Council, on the recommendation of the Right Honourable W. L. Mackenzie King, the Prime Minister, is pleased to order that the administration of the Old Age Pensions Act, 1927, and regulations made thereunder, be, and it is hereby vested in the Minister of Labour.

POLITICAL FUNDS OF BRITISH TRADE UNIONS

THE Trade Disputes and Trade Unions Act passed in Great Britain in 1927, (*LABOUR GAZETTE*, September, 1927, page 944), among its other provisions, amended the law as it previously existed with regard to the political funds of trade unions. Since the passing of the Act, the British trade unions have taken steps to comply with the new requirements. The following communication received by the International Labour Office from a reliable source may be of interest as showing the procedure adopted in a typical case for this purpose.

The above named Act has placed upon the unions which desire to carry on "political" work for their members the obligations to bring the rules of the union into conformity with the requirements of the Act and thereby legalise both the collection of any moneys from the members for the carrying on of political work, and also the use of the funds so collected for the political side of the union's work.

It should be stated for the purpose of a clear understanding of the important alteration insisted upon by the Act, that under the old Act of Parliament the unions, once they had secured the proper authority for their political rules and therefore for carrying on political activities, in most instances had in their rules a statement as to what portion of the contributions was allocated to this part of the union's work. If a member objected to any portion of his contribution being spent upon political work, he had to obtain a form from the branch secretary, called a form of exemption notice, on which he stated that he so objected. This form the member then handed back to the branch officer and thus

secured exemption from payment of any sum to the political fund of the union.

Under the new Act the process is reversed, that is the union must secure from the member a signed document stating that he is willing and agrees to contribute to the political fund of the union.

This document is then kept in the custody of the union and is the authority of the union for putting into its political fund any portion of the member's contribution.

To enable a union to carry out political work in the future, it is required that the rules of the union must be in accordance with the requirements of the Act and must secure the authority and sanction of the Registrar of Friendly Societies. Thus it has become necessary for all those unions which desire to continue their political work to secure the authority of the membership for the necessary alterations to the rules of the union, whether registered unions or not. A draft of the new rules is then sent to the Chief Registrar of Friendly Societies for registration and his signature showing that the requirements of the law have been fulfilled. If they are not found to be in conformity with the law, the Registrar sends them back pointing out where alterations are necessary before he can sign them and thus give them the force of law. The alterations named by the Registrar being dealt with by the union, they are again submitted, and if found to be in order by the Registrar, he signs them and certifies them as being in agreement with the law, and therefore they become operative as and from January, 1928.

ANNUAL REPORT OF THE DEPARTMENT OF LABOUR OF CANADA

THE annual report of the Department of Labour of Canada for the fiscal year ended March 31, 1927, was issued during the current month. The principal activities of the Department are described under fifteen heads as follows:— (1) Industrial Disputes Investigation Act; (2) Conciliation Work; (3) Fair Wages; (4) Statistics; (5) LABOUR GAZETTE; (6) Labour Organizations in Canada; (7) Organization in industry, commerce and the professions in Canada; (8) Labour legislation in Canada; (9) the Departmental library; (10) Combines Investigation Act; (11) Government Annuities Act; (12) Old Age Pensions Act; (13) Employment Offices Co-ordination Act; (14) Technical Education Act; (15) International Labour Organization.

The report mentions two important services that were carried out by the Department during the parliamentary session of 1927, the first being in connection with the Old Age Pensions Act, which involved a large amount of additional work in the Department, and the second in preparing the amendment to the Trade Mark and Design Act, whereby trade union labels may be registered for the purpose of preventing their unauthorized use and preventing fraudulent imitations (Both these measures have been fully described in the LABOUR GAZETTE (April, 1927, pages 374 and 380 etc.).

Industrial Disputes Investigation Act

The position of this Act in view of its amendment in 1925 and the subsequent legislation in the several provinces was stated in the LABOUR GAZETTE, January, 1927, page 33. There was no change during the year under review in the jurisdiction of the department in relation to the settlement of industrial disputes.

Nineteen applications under the Industrial Disputes Investigation Act were dealt with, resulting in the establishment of eleven Boards of Conciliation and Investigation. Nine boards reported during the fiscal year; in each case the strike which had been feared was averted and work continued steadily. In four cases the dispute concerned was amicably adjusted by a Board of Conciliation and Investigation and the agreement formed a part of the board's unanimous report. The report of a fifth board was also unanimous, and no strike occurred in this case. The four other boards presented majority and minority reports, and in two instances the recommendations contained in the majority report were accepted by the parties concerned as an adjustment of the differences. The two remaining disputes proved

more difficult, the majority findings of the board being rejected by the employees in one case and by the company in the other. The disputes in question involved, respectively, 15,000 conductors, trainmen and yardmen in the employ of the Canadian Pacific Railway and Canadian National Railways, and 6,300 clerks, freight handlers, station agents, etc., employed on eastern and western lines of the Canadian Pacific Railway. The employees in each case, by a large majority, voted in favour of a strike unless a settlement satisfactory to their representatives was otherwise secured. The Hon. Mr. Heenan, Minister of Labour, assisted in one instance by the Minister of Railways and Canals, intervened personally in the two controversies and on each occasion secured a resumption of negotiations during which a compromise was effected, thus avoiding interruption in the transportation service of the two major Canadian railways.

The report contains a full account of the circumstances leading to the framing of the Act. The Industrial Disputes Investigation Act, 1907, the intent of which is more fully set forth in its complete title, "An Act to aid in the Prevention and Settlement of Strikes and Lockouts in Mines and Industries connected with Public Utilities," became law on March 22, 1907. The incident leading immediately to the conception of the statute was a prolonged strike in the coal mines at Lethbridge, Alberta, which had threatened to cause a fuel famine in the Prairie Provinces during the previous winter. Negotiations resulting in a settlement of the strike were conducted by Mr. W. L. Mackenzie King, then Deputy Minister of Labour and now Prime Minister of Canada, who, in his report on the subject, dealt at length with the danger and loss to the country ensuing from such stoppages and recommended that consideration be given by Parliament to industrial disputes legislation which would have as its dominant motive the prevention of strikes seriously menacing the public safety. The outcome of this suggestion was the enactment of the Industrial Disputes Investigation Act, 1907, which is popularly known as "the Lemieux Act", being named after the Hon. Rodolphe Lemieux, who, in his capacity as Minister of Labour, presented the Bill to Parliament. The essence of the legislation is the provision that in disputes arising in mines and public utility industries no strike or lockout may be lawfully declared until after the subject of the dispute in question has been investigated by a Board of Conciliation and Investigation and every reasonable effort has been made to bring the parties concerned to

an agreement. The Act does not forbid strikes or lockouts failing an ultimate agreement, but forbids them only pending inquiry before a board. The award of a board is not binding unless the parties agree to make it so. At least thirty days' notice is required to be given by employers and employees regarding an intended or desired change affecting wages or working conditions, and the Act prescribes further that, in the case of a dispute arising, any such contemplated change may not take place until the dispute has been finally dealt with by a board.

Penalties are named in the statute for employers causing a lockout or change in wages or hours, and for employees engaging in a strike, prior to board proceedings; also for persons who incite, encourage or aid those taking part in such strikes or lockouts.

The report outlines the controversies which have arisen on the question of the constitutionality of the Act, with particular reference to the litigation which resulted in the amendment of 1925; and describes fully the machinery used in its administration.

The total number of applications under the terms of the Industrial Disputes Investigation Act received during the twenty years which have elapsed since the enactment of the statute in March, 1907, is 661; Boards of Conciliation and Investigation were established in 461 disputes, leaving 200 cases in which the dispute was settled by other agencies than those of a Conciliation Board, or it was found that the dispute did not come within the provisions of the statute. Of the 461 disputes so referred and as to each of which it had been declared on oath that a strike or lockout was believed to be impending, a cessation of work was averted or ended in all save 37 cases.

Conciliation Work

Apart from the operation of the Industrial Disputes Investigation Act, the services of the officers of the Department of Labour were utilized during the year in the adjustment of a number of labour disputes through conciliation. In certain cases in which application had been made for the establishment of Boards of Conciliation and Investigation under the Industrial Disputes Investigation Act, it was found that the Act did not apply, but the department lent the assistance of its officers in promoting an amicable settlement. In many of the disputes where a settlement was secured by conciliation, no strike took place and it was deemed desirable to give the matter as little publicity as possible. Some of the best work of the department achieved in this way often is known, therefore, to the disputants alone.

The Minister of Labour took an active part personally in proceedings in certain cases. In several instances the disputes in question had previously been referred to boards established under the Industrial Disputes Investigation Act. In other instances the good offices of the Department of Labour in the settlement of labour disputes were exerted through the Fair Wages Officers, who are stationed at different industrial centres.

Fair Wages on Government Contracts

The fair wages policy of the Government of Canada is based on a resolution of the House of Commons which was adopted at the session of 1900 in the terms following:—

"That it is resolved that all Government contracts should contain such conditions as will prevent abuses which may arise from the subletting of such contracts, and that every effort should be made to secure the payment of such wages as are generally accepted as current in each trade for competent workmen in the district where the work is carried out, and that this House cordially concurs in such policy and deems it the duty of the Government to take immediate steps to give effect thereto.

"It is hereby declared that the work to which the foregoing policy shall apply includes not only work undertaken by the Government itself, but also all works aided by grant of Dominion public funds."

The policy outlined in this resolution was accepted at once by the Government and has been adhered to during the years which have since passed. Since the inception of the Fair Wages Policy in 1900, fair wages officers have been employed by the Department of Labour to prepare fair wages schedules as required and to assist in the adjustment of complaints and disputes arising from time to time as to the proper rates observable under the terms of Government contracts.

During the year 1926-27 the Department of Labour prepared fair wages conditions in connection with the execution of sixty-nine contracts. These were divided among the different departments of the Government as follows: Railways and Canals, 6; Marine and Fisheries, 2; National Defence, 1; Indian Affairs, 4; and Public Works, 56.

Statistics

Statistical and other information relating to labour conditions has been collected and published by the Department of Labour since its establishment in 1900 as required by statute (Conciliation and Labour Act, chapter 96, Re-

vised Statutes, 1906, section 12). In accordance with the "Statistics Act, 1918," and under arrangements with the Dominion Statistician, statistics are collected and published in close association with statistics of general social and economic conditions as organized in the Dominion Bureau of Statistics.

An important feature of this arrangement is the use by the department of the classification of industries and occupations drawn up in the bureau and followed by various departments of the Federal Government Service in the compilation and publication of records and statistics.

This section of the report contains information as to strikes and lockouts, wages and hours; prices and cost of living, and as to fatal industrial accidents.

Labour Gazette

The monthly publication of the LABOUR GAZETTE was one of the original functions of the Department of Labour as prescribed by section 10 of the Conciliation Act of 1900 (section 12 of the Conciliation and Labour Act, Revised Statutes of Canada, 1906, chapter 96), under which the department was established.

The LABOUR GAZETTE was published monthly in English and French during the fiscal year ended March 31, 1927, which was the twenty-sixth year of its existence, the average number distributed each month being 9,143 of the English, and 1,504 of the French editions. The average monthly paid circulation was 6,436, or 5,567 of the English edition and 869 of the French.

Labour Organization

The department has continued the publication of the annual reports on labour organization in Canada, that for 1926 being the sixteenth. These reports, which are prepared in the Labour Intelligence Branch, give much information as to the nature of the labour unions with which the Canadian organized workers are identified, and contain complete statistics of organized labour in the Dominion, as well as setting forth some of the more important activities of trade unionists.

Organization in Industry, Commerce and the Professions in Canada

In addition to the report discussed in the last section, the work of the Labour Intelligence Branch includes the preparation of the Report on Organization in Industry, Commerce and the Professions in Canada. This report was originated in 1921 with a view to meeting the demand for information showing

the extent to which organization prevails in the Dominion among persons engaged in industrial, commercial and professional pursuits. The marked approval given the first report prompted the issuance of a second volume on the same subject, and since 1923 the report has appeared annually, that for 1926 being counted as the fifth.

Labour Legislation in Canada

The annual report on Labour Legislation in Canada for 1926 is the twelfth report on this subject to be issued by the department and the sixth supplement to the volume showing labour legislation in Canada as existing on December 31, 1920. The first report of the series was issued in 1915 and contained the text of the labour laws which had been enacted by the Parliament of Canada and by the provincial legislatures up to December 31, 1915. This volume was followed by annual supplements in the years 1916-19. The report for 1920 was again a consolidation covering legislation to the end of that year, and supplements thereto have been issued annually. The introduction to each report contains a summary of the principal laws which have been passed during the year. Since 1922 the reports have been published in French as well as in English. The English edition of each supplement contains a cumulative index covering the contents of the basic volume and supplements.

Library

The library of the Department of Labour was organized in 1900 when the department was created, and has steadily increased its collection of documents since that time. Through the exchange of publications with departments of other Governments carrying on work along similar lines, the department is kept in touch with labour matters in almost all countries of the world. In addition to the official publications thus received, there is a valuable collection of publications of labour organizations and periodicals and newspapers published in the interests of organized labour. Subject to the requirements of the departmental officers, the material in the library is at the disposal of the general public. Volumes are loaned to students and others in different parts of the country, and bibliographies are prepared and special information compiled when required.

Combines Investigation Act

The most important investigation conducted under the Combines Investigation Act during the fiscal year concerned the operations of the Proprietary Articles Trade Association, an or-

ganzation of wholesale and retail druggists and manufacturers, established to fix the resale prices of proprietary medicines and toilet articles. The results of the operations of the association in certain respects and the means adopted to enforce the maintenance of prices were reported by the registrar to be against the public interest and therefore in contravention of the Combines Investigation Act. A more extensive investigation was thereupon urged by the association, and was authorized by the minister. The subsequent history of this case has been followed in previous issues of the LABOUR GAZETTE (November, 1927, page 1165, etc.).

An inquiry into an illegal combine in the distribution of fruits and vegetables produced in Ontario was completed during the year by the commissioner. Mr. Lewis Duncan, who reported that in his opinion there had been no contravention of the Combines Investigation Act, but that the inquiry had disclosed certain marketing conditions and practices prejudicial to the interests of growers and consumers. The report was brought to the attention of the proper authorities, and as a result legislation was enacted by the Ontario Legislature providing for the regulation of the sale of fruit and vegetables on consignment by requiring that records should be kept and shippers notified regarding sales of their products. Other inquiries during the fiscal year related to the basic industries as well as to manufacturing and the distributive trades. The points involved in these cases included the principle of resale price maintenance, price-fixing by manufacturers and by distributors, exclusive dealing arrangements, withholding of supplies for various reasons, and other methods alleged to be in undue restraint of trade.

Dominion Government Annuities

As an incentive to thrift there has been on the federal statute books since 1908 a Government Annuities Act, under which individuals may, with absolute security and at an exceptionally low cost, make provision for their old age by the purchase of annuities. During recent years there has been an increasing evidence of the desire of Canadian citizens of moderate incomes to take advantage of the facilities offered by the annuities system. On March 31, 1927, there were 7,713 annuity contracts in force, purchase money received to that date totalling \$13,588,105.88, over 60 per cent of this money having been received during the past five years. Five hundred and three annuities were purchased during the fiscal year 1926-27, the total value of the contracts being \$195,360.28, an average of about \$388 for each annuitant.

Old Age Pensions Act

The report contains a full account of the movement which culminated in the enactment of this measure in 1927. The legislation provides for a Dominion-Provincial system, under which the administration and payment of pensions is entrusted to the provinces, the Dominion Government to reimburse each province coming into the scheme one-half of the net sum disbursed by the province in pensions. The system is not effective in a province until the province has passed legislation authorizing payment of pensions and agreeing to bear one-half of the cost. The continuance of the federal grant is designated as dependent upon an agreement between the Dominion and each of the provinces desiring to come into the scheme, the agreement to be terminable only upon the repeal of the provincial legislation authorizing payment of pensions or upon ten years' notice by the Dominion.

It is not anticipated that the cost of administering old age pensions will bear heavily on the provinces, as administrative machinery for dealing with workmen's compensation, mothers' allowances, etc., is already available in practically every province and could be utilized in the administration of old age pensions.

In view of the desirability of having the scheme uniform in all the provinces, the Act specifies the classes of persons who shall be entitled to pension. A pension shall be granted to every person who is a British subject (or, being a widow, who is not a British subject, was such before her marriage) of seventy years of age and upwards who has been resident in Canada for at least twenty years immediately preceding the date of commencement of a pension and who has lived in the province in which the application is made for at least five years immediately preceding the granting of a pension. A person will be disqualified from receiving a pension who is an Indian as defined by the Indian Act, or who has made any voluntary transfer of property in order to qualify for a pension. The maximum pension payable is fixed at \$240 yearly, and from this will be deducted the amount of any private income received by the pensioner in excess of \$125 a year, the total of any pensioner's income, including pension, being, therefore, \$365 a year or \$1 a day.

Employment Offices Co-ordination Act

The report contains the ninth annual report of the Employment Service of Canada, and describes the functions and organization of this service, special mention being made of the work carried on on behalf of handicapped ex-service men. The employment offices whose

co-ordination and uniformity of methods are sought are the employment offices of the various provincial governments. The desired co-operation of the provinces, one with the other and all with the Department of Labour, is obtained by the device of federal subventions for employment service work provided for in the Act. In view of the close co-ordination of effort which is attained, the employment offices of the several provinces and the federal clearing houses, though each unit retains its individual identity are commonly considered as a single organization known as "The Employment Service of Canada."

Emanating from the administration of the Act is the supplementary function recited in (c) Section 2—that of collecting, compiling and publishing information which sheds light on the currently prevailing trend of the volume of employment. To fulfil this mission two classes of statistics are regularly prepared: (1) administrative statistics—those showing the volume of work performed by the offices of the Employment Service of Canada; and (2) trade union statistics—those compiled on the basis of monthly returns forwarded voluntarily by over 1,500 local trade unions, showing the percentages of their memberships unemployed. These statistics are all published monthly in the LABOUR GAZETTE.

Technical Education Act

Disbursements during the fiscal year to the provinces under the provisions of the Technical Education Act amounted to \$1,047,535.80, distributed as follows: British Columbia, \$56,627.03; Alberta, \$85,789.16; Saskatchewan, \$18,021.83; Manitoba, \$20,056.34; Ontario, \$347,636.30; Quebec, \$403,944.35; New Brunswick, \$76,208.59; Nova Scotia, \$31,494.87; Prince Edward Island, \$7,757.33. These grants are made with a view to assisting the provinces in promoting and developing technical or voca-

tional education for industrial workers. Summaries of the work accomplished in the respective provinces are given in the chapter discussing the operations of the Act. During the year the Technical Education Branch convened the Second National Conference on Technical Education, at which representatives from every province met and discussed problems of mutual interest.

Under the Technical Education Act as at present enacted the federal grants expire on March 31, 1929. A resolution was adopted by the conference urging the continuance of the grants for a further period of ten years. The conference also recommended the inclusion of agricultural instruction under the provisions of the Technical Education Act in such provinces as are not earning their full annual appropriations.

International Labour Organization (League of Nations)

Under this heading the report gives a full account of the Organization which was formed under the authority of Part XIII of the Treaty of Versailles. The Department of Labour is entrusted with the duties arising out of the relations of Canada with the International Labour Organization. These entailed much correspondence, not only with the International Labour Office, but also with other departments of the Dominion Government, with the provinces and with employers' and workers' organizations. Replies were also prepared in the Department of Labour to various questionnaires which were circulated on behalf of the International Labour Office. The performance of these duties has necessarily entailed a close study on the part of officers of the department of the various technical questions which have figured on the various conference agenda and meetings of the Governing Body and of questionnaires received from the International Labour Office.

Clothing Workers' Housing Scheme in New York

The Amalgamated Housing Corporation, a private limited dividend company organized in New York by the Amalgamated Clothing Workers of America, which expects to afford housing relief for 303 families by the middle of February, received official approval from the State Board of Housing in January. When the operation is completed, there will be six apartment houses, containing in all 1,185 rooms, which will rent at the rate of \$11 a room. The total cost of the operation will be \$1,825,000, of which \$1,200,000 has been lent by the Metropolitan Life Insurance Company,

in accordance with its announced policy of providing mortgage for low-cost housing approved by the State Board. The balance represents investments of co-operators, many of whom will be tenants later. The buildings are all five-storey brick "walk-ups" of two, three, four and five-room apartments, providing maximum light and ventilation. Every room will receive direct sunlight. A central heating plant has been installed, and each apartment is furnished with electricity, hot and cold water, tub and shower, ice boxes and gas ranges.

ANNUAL REPORT OF THE LABOUR DEPARTMENT OF QUEBEC

THE annual report of the Department of Public Works and Labour of the Province of Quebec for the year ending June 30, 1927, has been issued recently. The functions of this Department include the supervision of all proceedings under the Quebec Trades Disputes Act; inspection of industrial establishments from the standpoint of the health and safety of the workers; the carrying out of the policy of the Provincial Government in requiring the payment of fair wages on government contracts; superintending licensed registry offices for domestic servants; administering the Boiler Inspection Act, and the act respecting the prevention of fires and supervision of the inspection of foundries. Another important duty of the Department is in connection with the issue of educational certificates to children under sixteen years of age, such certificates being required under amendments of 1919 to the Industrial Establishments Act before these children may be employed for wages. The work of the Women's Minimum Wage Commission also is under the supervision of the Department.

Factories.—In regard to the inspection of industrial establishments, public buildings, boilers, etc., performed by the Department's inspectors, there was a considerable increase in the number of inspections over 1925-1926. During the year ending June 30, 1927, 3,115 industrial establishments, 1,005 public buildings and 2,358 boilers were inspected, the provincial inspections of boilers totalling 1,578. In addition, 138 mills, 75 creameries and 122 churches were inspected. It was pointed out that the inspection of church heating systems formerly cost five dollars, but that the Department now does this work free, as well as the inspection of the electric wiring and fixtures in churches. In view of the numerous visits of its boiler inspectors and the inspections of its inspector-electricians, the Department was in constant touch, through interviews or correspondence, with all patrons, owners or directors of public buildings throughout the year.

Electrical Inspection.—The annual report of the Electricians' Branch showed a considerable increase in the number of inspections in the recruiting of electricians, and in the number of examinations, renewals and inscription of plans. This report noted that the conference of the representatives of the different provinces and insurance companies, held at Winnipeg, made possible the adoption of a uniform electric code throughout the Dominion.

Commenting on the inspection of public buildings, Mr. Louis Guyon, Deputy Minister of Labour, made the following observation on the catastrophe of the Laurier theatre fire in Montreal in January, 1927:—

"The awful catastrophe of January last to the Laurier Palace caused widespread sorrow throughout the province, and the Government Inspection Branch and that of the City of Montreal joined hands to search for the cause of the disaster.

"The fire was barely out when our inspector-electricians examined the electric wires and operators' apartment which were found intact.

"Much was said at the time about the insufficiency of the municipal regulations. This is an error; the city by-laws regarding fire prevention, while not perfect, would be amply sufficient if a staff of six or eight inspectors, under the direction of a competent chief, had the exclusive duty of supervising theatres and public halls in the city. As a result of the unfortunate fire, the department's inspectors had to immediately set to work and visit all theatres and halls in the small towns of the province."

Employment of Children.—Dealing with the registration of children, the report emphasizes that the official certificate upon the child's education and his baptism certificate are the indispensable requirements to enter a factory. It is stated that "no factory owner or company now thinks of evading this obligation," and that "the story of children ten to twelve years old in factories is dead." Encouraging reports were received regarding the attendance at night schools of young factory employees whose education was deficient at the time of the examination. In Montreal, 2,191 children were registered during the year. The total number of children registered in Montreal division since the enforcement of the law is 26,715. The Quebec inspectors issued 545 certificates during the year for admission to factories while the Eastern Townships inspectors issued 349, making a total of 3,085 registrations.

Sunday Observance.—It was reported that over fifteen investigations were made in various centers in the Province regarding Sunday work. Many of the complaints were found to be exaggerated, and in other cases the work was urgent and indispensable to factory operation. Commenting on this matter, the Deputy Minister expressed himself as follows: "No matter what we do, it will always be difficult to stop, for twelve or fifteen hours,

plants requiring continuous firing which are being constantly installed in the new districts in the north of the Province. Indispensable repairs, inherent requirements of the kind of factory, climatic conditions and a thousand other reasons militate against the strict observance of Sunday and create a burdensome situation for the department's officers, who are obliged to make night inspections in answer to complaints sent in to the Government."

Fair Wages.—Other complaints received had to do with fair wages for work under government contracts. These were as follows:

1. Painters employed in painting the Bordeaux Gaol complained that they were not receiving current wages. After inquiry this was settled to the satisfaction of both parties.
2. Carpenters of a tramways company complained as to wages, and this matter was also settled to the satisfaction of both parties.
3. The complaint of the joiners employed by the Lavigueur company was declared to be unfounded and dismissed.

Employment Bureaus.—The report of the general superintendent of employment bureaus indicated an active and successful year, 26,056 persons having been placed by the bureaus. This total exceeded by 3,000 the placements of the previous year. The summary of the total operations of the five bureaus for the year was as follows: Registrations, 48,664; vacancies notified by employers, 30,609; situations offered by bureaus, 29,679; persons placed, 26,056. The industries supplied included: agriculture, cutting of pulpwood and lumber, building, railways, hotels, restaurants, etc. It was pointed out that a factor of great importance was the development of water powers, which attracted foreign capital and gave employment to thousands of workmen. Under a new regulation, the municipal authorities have assumed the task of licensing and supervising servant registry offices, re-establishing, for such purpose, the annual tax. Owing to the many complaints sent to the Department it was considered advisable that a closer supervision should be exercised by the city's licence department with the co-operation of the police in each ward.

Trade Disputes Act.—The report of the Registrar of Councils of Conciliation and Arbitration under the Quebec Trade Disputes Act stated that the spirit of conciliation which has prevailed for some years in the relations between employers and workmen, "was still more effective than formerly," only one re-

quest to intervene in a dispute having been received. This dispute centered about a demand for increased wages and better sanitary conditions on behalf of the employees of the Montreal Light, Heat and Power Consolidated in the gas plant at town of Lasalle. One hundred and sixty-eight workmen—all members of the Gas Workers' Federal Labour Union, No. 16571, of Montreal—were involved. After three weeks of negotiation, conducted by the Registrar, the company and its employees agreed to sign a contract for a period of one year. The Registrar also used his good offices in two other strikes—one of clothing employees at St. Hyacinthe and the other of cement workers in Montreal. In both cases the difficulties were settled by the parties themselves. A complaint was received from the female telephone operators in Quebec that the company obliged them to work on Sunday without a day of rest during the week. This case was investigated, the manager admitting that the complaint was founded, but that there had been an involuntary mistake. Instructions were immediately given that no operator should hereafter work for more than six consecutive days.

The industrial accidents during the year totalled to 1,616. Of this number, 1,516 were classed as slight; 73 as serious, while 27 were fatal.

The article on page 148 deals with the section of the report which related to Women's Minimum Wages.

The enactment by the United States Congress of a law providing accident compensation for harbour workers in the United States was noted in the LABOUR GAZETTE, April, 1927, page 397. The act took effect on July 1, 1927. From that date to January more than 5,800 accidents to longshoremen and other employees on harbour craft and docks were reported to the federal commissioner, and a settlement was effected in more than 4,000 cases. Most of the injured workers are stevedores and their injuries extend from injured fingers to mortal wounds. The law covers all men engaged in dock and marine work except the masters and crews of vessels. Accidents occurring in the loading or unloading of vessels, by falls into the holds of ships, contacts with machinery and in other ways. More than 2,000 companies are affected by the law, including trucking and shipping companies and concerns engaged in work at the piers.

FIRST REPORT OF WOMEN'S MINIMUM WAGE COMMISSION OF QUEBEC

THE first annual report of the Women's Minimum Wage Commission of the Province of Quebec forms part of the General Report of the Minister of Public Works and Labour. The report details the activities of this body during the year ending June 30, 1927. The Commission is composed of Messrs. Gus Francq, chairman; E. Richard, C. J. Griffin, O. Brunet and A. Crowe, secretary.

Cost of Living.—After its own organization, the Commission prepared an estimate of a workwoman's living expenses. A questionnaire was drawn up for this purpose, and sent to the workwomen's organizations, leagues, female professional associations as well as to individual workwomen in various industries. A number of replies were received, indicating a minimum weekly living cost of \$10.85 and a maximum of \$19.81. Although there was this marked difference existing in the estimates submitted, it was considered to be more apparent than real, for the estimated cost of board, cost of clothing and maintenance were found to be nearly the same, the divergencies in views being principally in fictitious costs and incidentals. This factor enabled the Commission to realize that the workwoman's cost of living is generally higher in large industrial centres than in small ones. It also helped to establish a standard estimate after a public conference with the representatives of the organizations, which had replied to the questionnaire, assisted by experts in the subject, at which the various estimates were minutely scrutinized and discussed.

The standard estimate applies to a workwoman living in the City of Montreal, this standard being accepted as a reasonable basis for the minimum wage rates. It amounts to \$12.20 per week, or \$634.40 a year, and is distributed as follows: Room and board \$7 a week, or \$364 a year; clothing \$138 a year; sundries \$132.40 a year.

Division of the Province into Zones.—When the estimate had been established, it was thought that the Province should be divided into groups of inhabitants, so that the minima of wages fixed, and the conditions and cost of living as well as the needs of the industry might accord. Three large divisions were established. The first comprising Montreal and its immediate suburbs, being the Island of Montreal with a 10-mile boundary around it; the second including the cities of Quebec and Levis and any other town of 25,000 in-

habitants or over, outside of the first group; the third composed of the rest of the Province. It was however decided that for certain industries or particular cases, the third group could be subdivided or combined with the second.

Division of Industries by Groups.—As wages and working conditions vary not only by locality, but also from one industry to another—by reason of a longer apprenticeship, harder or more exhausting work, etc.—the Commission thought it wise to subdivide the industries into various groups as follows:

1. Laundries, dyeing and dry cleaning establishments
2. Food: comprising confectionery, chocolate, biscuit and canning factories (except those in which the work is only for a season) in all their branches.
3. Bookmaking industry: including printing in all its branches.
4. Paper making: including manufactures of cardboard boxes, paper bags, stationery and other establishments making paper or paper products.
5. Textile factories in all their branches and operations.
6. Needle trade: including tailoring, clothing, linen, millinery, fur, tents, flags, etc., workshops, in all their branches.
7. Shoe factories and other leather trades as well as rubber factories, in all their branches.
8. Tobacco, cigar and cigarette factories, in all their branches.
9. Manufactures of pharmaceutical and chemical products, drugs, toilet articles, cereals, in all their branches.
10. Any other workshop, plant, factory or industrial establishment not included nor covered by the foregoing groups.

These groups are subject to modification, according to circumstances. They may be combined or subdivided according to industrial needs.*

*Order No. 1 (laundries, etc., in Montreal), was given in the LABOUR GAZETTE, December, 1926, page 1195; order No. 2 (laundries, etc., in rest of Province), March, 1927, page 271; order No. 3 (printing, bookbinding, etc., in Montreal), November, 1927, page 1174; order No. 4 (printing, etc., in rest of Province), January, 1928, page 39.

The Commission expressed its opinion regarding the question of a uniform wage for the Province as follows:—

"We have been repeatedly asked why the Commission did not establish a uniform wage for the whole province, or several uniform wages for the various geographical districts of the Province, the cost of living not varying sufficiently from one place to another, or from one industry to another, to prevent such a decision.

"Experience has shown that if this method be the easiest and simplest to apply, it was neither the most just nor the most equitable. Moreover, it has not been a success in the provinces or countries where tried because it did not obtain the sympathy nor the co-operation of the parties interested, which have to be obtained by an amicable and free discussion of the conditions of an industry by means of conferences between employers and workwomen. Further, there would be no need for the Commission if it had only to fix minima for uniform wages; a clause in the Industrial Establishments' Act would effect this. In addition to establishing minimum wages, the Commission has to consider unskilled workwomen, apprentices, aged and infirm or handicapped workwomen, as well as the number and proportion of these in each establishment, the resources and particular needs of each industry. We must also remember that one industry is in a position to pay better wages than another, being more prosperous or employing more skilled workwomen, all of which creates varying conditions from one trade to another and necessitates special consideration in each instance.

Orders Issued.—Upon this basis, the Commission investigated the situation in the first group, consisting of laundries, dye works and dry cleaning establishments in the City of Montreal.

As a result, the first conference was held in the Montreal Court House, on November 10, and the decision of the representatives of patrons, workwomen and the public was approved by the Commission. On November 11 the first order under the Act was issued; but in order to give employers in this industry every latitude to adapt contracts and working conditions, the date of its coming into force was fixed for the 1st of March, 1927.

A second conference was held at Quebec, on December 21, 1926. It embraced the same

group of industries, but extended to the whole Province, except the Island of Montreal (covered by Order No. 1). The decisions adopted were ratified by the Commission and constitute Order No. 2, which came into force on the 16th April, 1927.

Inquiry was later made for the printing industry in all its branches; another likewise into the food industry, comprising confectionery, chocolate, biscuit and canning and food product factories of all kinds.

Conclusion.—In closing the Commission expresses its great appreciation and gratitude to employers, workwomen and others who helped them in their task. "We are pleased to say that employers' associations were eager to place all desired information at our disposal and their experience in particular matters inherent to every industry. It was not always easy to get into touch with the workwomen, as they are not generally organized; the choosing of their representatives was fairly difficult and sometimes a delicate matter, but once chosen their co-operation was very useful. In all our inquiries and the carrying into execution of the orders, it was most agreeable to us to have had the sincere and effective co-operation of the Deputy Minister of Labour, Mr. Louis Guyon, and that of the factory inspectors, who all contributed greatly to make our task easier."

In all cities in the United States with a population of 25,000 to 100,000, less than one-fourth (23 per cent) of the women at work are married. But in Binghamton, N.Y., nearly one-half (48.2 per cent) of the working women are married. In a study made recently, the Bureau of Women in Industry of the New York Department of Labour found the facts regarding the employment of married women in Binghamton Industries almost startling—so large a part did they play in the industrial life of the community. In manufacturing industries 51 per cent of the women employed are married, with the manufacturing of cigars heading the list with 62 per cent of its women employees married; metal and machinery comes next with 58 per cent; wood products and shoes next with 52 and 51 per cent respectively.

NOVA SCOTIA FISHING AND LUMBERING INDUSTRIES AND WORKMEN'S COMPENSATION

Report and Recommendations of Provincial Royal Commission

THE Royal Commission appointed in July, 1927, by the Government of Nova Scotia, to investigate the ratings of the Lunenburg fishing fleet and the lumber industry, as applied by the Workmen's Compensation Board of the Province, issued its report in January. The appointment of Mr. Carl D. Dennis, of Amherst, as Commissioner, was noted in the *LABOUR GAZETTE* (August, 1927, page 829). He was instructed to inquire whether the rates and assessments levied by the Board adversely affected the fishing and lumbering industries; to investigate the Board's method in determining and levying rates upon the owners of fishing vessels in the County of Lunenburg, and to ascertain whether the present rates could be increased without detriment to the industry. If the present rate was found insufficient to provide compensation for the losses sustained, the commission was to suggest what other system of insurance might be practicable; he was also to inquire into the rate levied by the Board in the lumbering industry, and to suggest remedies if it should be found to be inequitable.

Representatives of the fishing and lumbering industries had intimated that any further increase in their assessments would threaten their continued existence, while the Workmen's Compensation Board, on the other hand, pointed out that the existing rates were not sufficient to meet the actual risks during the period that the Act had been in force. It was to reconcile these opposing claims that the Commission was appointed.

The Commissioner prefaces his report by the following statement as to the benefits of Workmen's Compensation:

"In seeking a remedy, the Commission has maintained as a fixed principle that The Workmen's Compensation Act is a direct benefit, the worth of which has been proved, and borne out in nearly every province of the Dominion, in Great Britain and in the United States, and this Commission would be loathe to take away any benefit which has been conferred upon the employees, unless such benefit could only be at the unreasonable expense of the employer, or where such benefits would ultimately result in the strangling of the very industry which gives employment to the employees.

"This Commission has based its investigation on the seven years' experience from 1920 to 1926, supplemented by the facts and estimated figures furnished by the Workmen's

Compensation Board necessary to take care of the accident costs to the close of the fiscal year 1927.

"Every channel of inquiry has been utilized and the fullest opportunity has been given to all interested to put before this Commission any evidence which they might have to offer to throw light on the present conditions, and also to submit any computations or statements of facts tending towards some solution with a view to the re-adjustment of the rates, the main question always being: how can the beneficial operation of The Workmen's Compensation Act be carried on in the manner the least burdensome to those who have to bear the expense?"

The Fishing Industry

The case for the fishing industry was set forth in a petition of ship owners and masters of the Lunenburg fishing fleet, which is given in the report in full. The petition calls attention to the exceptional severity of the losses sustained by the fleet in 1927. No such disasters, it is stated, had been experienced in the past 40 years, or would probably happen again, and it was suggested the loss of life in 1927 called for special assistance from the Government for relieving the already heavy burden of assessments.

The Commissioner calls attention to the important amendment in 1920, when "sharesmen" on a fishing vessel were brought within the scope of the Workmen's Compensation Act, on their application to be included in its provisions. The Lunenburg fleet generally accepted this protection. This industry is conducted on a co-operative basis, under a system of shares. On board a fishing schooner there are a few paid employees—the cook, the header, the throater, and sometimes an extra man, the rest of the men fishing on shares. When the fish are sold and the money is received for the cargo, the schooner settles with her crew on the following basis: From the total gross is deducted: Wages of header; wages of throater; commission 2½ per cent for captain; all bills for bait; towing and curing of fish. The remainder is divided equally between the owners and crew. After the cook's wages are deducted from the crew's share, the remainder is divided among the captain and crew, share and share alike. From the owner's portion is deducted another 2½ per cent commission for the captain, and all bills of expense connected with the running of the vessel.

Summary of evidence.—The Commissioner gives the following summary of the evidence taken at the various hearings:

"1. In the year 1926 the owners, not allowing for depreciation, made an average of 6.3 per cent gross profit. This result was obtained after making an audit of the operation accounts of 90 per cent of the fleet. This margin of 6.3 was not sufficient to take care of depreciation charges. 1926 was considered to be a bad year. In the case of 1925, which on the other hand was considered to be a good year, the profits were somewhat greater, but striking an average between 1925 and 1926, we find that the gross profit amounted to 13 per cent but on deducting municipal taxes and depreciation, this was reduced to 3.54. No income tax has been deducted.

"2. The owners submit that they are not able to bear a rate greater than that which presently obtains, namely 5 per cent, and there is no evidence before the Commission to show that the sharesmen would be satisfied to assume any portion of a rate, although the average earnings of sharesmen covering the fishing seasons for 1925 and 1926 proved to be \$97.40 per month without board, and \$115.40 with board.

"3. In order to take care of the past eight years' experience including the deficit, the Board would be obliged to assess at rate of 20 per cent approximately against the industry. Even if the fishing industry was relieved of its present deficit, it would still be necessary to strike a rate of 11.29 on the present mode of assessment based on an arbitrarily fixed earning of \$65 per month per sharesman. If this arbitrary figure of \$65 per month was increased to \$100 per month a rate of \$13.60 would be required to take care of the experience and the present deficit. Eliminating the deficit the rate would be \$8.58.

"If a remedy were sought within the scope of the present Act (amending the Act, however, to permit sharesmen to contribute towards the assessment) it would seem that a solution could be found by raising the arbitrary monthly earning of the sharesmen from \$65 to \$100 and fixing an assessment of 8.58, such assessment to be borne equally by the owner and the sharesmen. Thus the industry could not only be made to take care of its experience for the future, but disability compensation would be increased from \$35.75 per month to \$55 per month and at a cost of only \$4.21 per man per month for five months.

"From enquiries and private investigation made by this Commission it has been placed beyond question that any such low rate or even a rate approximating the above could be

obtained from any insurance company. It has, however, been indicated to this Commission that the sharesmen would not be willing to contribute in the above manner set forth and it must be admitted that such contribution is not in keeping with the spirit of the Workmen's Compensation Act as it presently obtains.

"On the other hand, this procedure cannot be lightly turned aside, owing to the fact that the fishermen are more than employees in as far that they are sharing in the profits of the vessel, and necessarily should have some interest in the preservation of the industry."

Findings.—The findings of the Commissioner are as follows:—

"It being shown that the statement of the experience of the last eight years discloses a very serious situation in the fishing industry, it being established:

(a) That the industry cannot take care of the enormous deficit which has accrued.

(b) That it cannot assume a rate much greater than the present assessment.

(c) That even if the arbitrary monthly wage was raised from \$65 to \$100 a month and the new rate based on this figure was divided equally between the sharesmen and the owners, even such divided rate could not be paid by the owners and still leave a margin of profit, and there is no evidence before this Commission which would tend to show that the sharesmen would be willing to assume this proportion; and in any event this proposed method of deriving a part of the assessment either directly or indirectly from the sharesmen is opposed to the present structure of the Workmen's Compensation Act which would require a radical amendment, to make it possible; and it is difficult to say, if such amendment were made, why it would not be used as a dangerous precedent for bringing about the same system in all other branches of the industry, which is repugnant to the present spirit of the Act.

(d) It is further shown that if the fishing industry was released from the operation of the Act, and undertook to privately insure its own hazards, that it can obtain from Underwriters a rate 7.15 per cent, if the covering is placed on 90 per cent of the fleet, and covering a liability not greater than \$60,000 for any one vessel. This rate is determined on a cost of \$550 per vessel, whether the vessel makes one trip or four.

"From the above conclusions, it is obvious that there is no apparent solution within the scope of the Workmen's Compensation Act. Consequently we are forced back upon some solution outside of the Act.

"A survey of similar legislation in all countries brings out this striking fact—that the fishing industry is by reason of its peculiar system of operation excluded from the operation of the various Workmen's Compensation Acts. It is doubtless the fact that all maritime countries have considered the inclusion of the fishing industry, but nowhere except in Nova Scotia has this been done. The experience of the last eight years shows conclusively that it has not been workable in Nova Scotia, and that since it is unsound economically to so burden the owner that he will no longer find his business a profitable one, and consequently cease, and in ceasing throw the fishermen out of employment, the obvious way out is to release the fishing industry absolutely from the Act.

"It has been indicated to this Commission that the various owners and sharesmen would be satisfied to carry their own risk in the form of a mutual benefit association. It is undoubtedly a fact that the rank and file of the fishing industry with their long experience of the hazards of their calling have been obliged to give very weighty consideration to their problems of taking care of accident and death losses, and if the majority of the members of the industry have reached a conclusion that it is in their best interest to be allowed to withdraw from the operation of the Act and carry their risks in the manner above mentioned, this Commission would strongly recommend that they be permitted to do so.

"Being mindful of the many perils that the fisherman in his arduous task of wrestling a mere existence from the sea experiences, and fully realizing the terrible toll of human life, fathers, brothers and sons, which is yearly exacted as part payment for this mere existence, the Commission feels that every consideration should be shown to the members of the industry in their effort to find a solution of their problems, and has at all times felt the greatest sympathy for them, but stern economic factors force the foregoing solution upon us all. There seems to be no other way out.

"Taking into consideration that the Fishing Industry is a class so diversified from land industries, both in its operations and its hazards, this Commission feels that it is justified in taking up a solution beyond the scope of the Act.

"Therefore, the only solutions that seem feasible are that—

(a) The industry be relieved of deficit to the end of fiscal year 1927, and that owners in industry be permitted to withdraw from operation of Part 1 of the Act, and insure their own risk, such insurance to cover the shares-

men and others, and give the same benefits and protection as the Workmen's Compensation Act.

(b) Release the industry from the Act absolutely.

The Lumber Industry

The lumber operators of the Province gave several reasons for the low condition of the industry in recent years, several of their number having been forced out of business. These reasons included foreign competition, made possible by cheap labour, and no-stumpage charges. A contributing cause was stated to be the rate of assessment levied by the Workmen's Compensation Board, amounting in 1926 to \$4 on every \$100 of payroll. As a deficit of over \$50,000 existed it was apprehended that this rate would be further raised.

Findings.—The Commissioner having considered the evidence submitted by the Board and by representatives of the industry, found as follows:—

"1. That there is no immediate necessity for increasing the present rates and assessments levied upon the lumbering industry.

"This Commission further finds that the present rate compares very favourably with these rates which obtain in other provinces.

"2. That a more equitable system of assessment can be levied upon this industry (in which for the purpose of convenience this Commission includes pulp operations) by re-grouping of payrolls in conformity with the respective phases of the operation, giving to each less hazardous phase the benefit of appropriate rating. This refers to the larger operations wherein the respective phases of labour comprise substantial proportions of the combined payroll.

"3. That there should be no change made in the minimum number of employees on one payroll (namely 5) entitled to come under the operation of the Act.

"4. That payrolls having an assessment of less than \$20 are an unfair drain on the Accident Fund, and the minimum assessment should be fixed at \$20.

"5. That the experience of this class discloses all likelihood of disasters resulting in heavy withdrawals from the Disaster Fund, and whereas this class has to its credit in this fund, an amount in excess of \$40,000; that these monies be credited back to the class.

"6. It has been shown that there are cases where employers either fail to report their operations or falsify such reports, and in other manners are guilty of non-compliance with those sections of the Act requiring the furnishing of various statements. In these cases full

penalties should be exacted, and an amendment made to the Act making the offenders liable to a penalty not exceeding \$500.

"7. The present system of allowing an injured employee to file his claim within 12 months has proven unsatisfactory. This period should be considerably reduced, and the injured employee should be obliged to inform his employer of the accident as soon as may be after the occurrence, in order that the accident may properly be investigated.

"8. Closer co-operation between the Industry and the Board will result if effect is given to the proposed substitution for the present section 83 of the Act, enabling an authorized committee representing the employers to obtain and be given full information in respect

to the administration and operation of the Workmen's Compensation Act.

"9. That some of the larger operations have payrolls comprising different phases of labour with different degrees of hazard. Such payrolls should be re-grouped so that groups bearing a substantial proportion of that payroll should be assessed its appropriate rate.

"10. In view of the fact that at least one large operator has shown a remarkably low loss record, and where operators have gone to considerable expense in furnishing medical aid equipment and carrying on of Safety First campaigns, such operators should receive special consideration from the Board in the matter of determining their assessments."

RATES OF ASSESSMENT FOR WORKMEN'S COMPENSATION BOARD OF NEW BRUNSWICK FOR 1928

THE Workmen's Compensation Board of New Brunswick, as provided for under the Act, has recently prepared its estimate of assessments necessary to provide sufficient funds in each of the industrial classes to meet all claims for compensation payable during the ensuing year. The rates of assessment for 1928, per \$100 of payroll, show a few changes from the rates for 1927 (LABOUR GAZETTE, February, 1927, page 163). These changes indicate to some extent the nature of the accident record in each group on which assessment is based. In several of the larger industrial groups the assessments remained unchanged from last year, and among these were the following: coal mining continuing at \$5; steel and iron (manufacture of bolts, nuts, nails, etc.) continuing at \$2; steel shipbuilding and repairing continuing at \$2.50; erection of steel buildings continuing at \$7; bricklaying, mason work and general construction continuing at \$3; construction of dry docks, piers, wharves or other harbour improvements continuing at \$2.

The new schedule of rates is featured particularly by increases in the lumbering industry, these being as follows: Logging, cutting of timber, etc., increased from \$4.25 to \$5; sawmills, shingle mills, lath mills, etc. increased from \$4.50 to \$5; planing and moulding mills, sash and door factories, etc., increased from \$2.25 to \$2.50; pulp and paper mills increased from \$1.70 to \$2; furniture manufacturing, upholstering, cabinet work, boat building, etc., from \$1 to \$2.

In other industrial classifications the principal changes in the rates for 1928 as compared with 1927 are as follows:—

Mining, other than coal, increased from \$3 to \$4.

Stone dressing increased from 70 cents to \$1.

Drilling oil or gas wells increased from \$3 to \$4.

Car building, iron and steel foundries, etc., increased from \$1.50 to \$2.

Cutting and storing of ice, coal and wood merchants, etc., increased from \$2 to \$3.

Compression of hay, unconnected with farming operations, increased from \$1 to \$3.

Manufacture of cotton rugs, textiles, hosiery, blankets, underwear, yarn, etc., increased from 50 cents to 70 cents.

Manufacture of tar paper, distilling coal tar, etc., increased from 80 cents to \$1.20.

Manufacture of beverages of all kinds increased from \$2 to \$2.50.

Manufacture of tobacco, cigars, spices, increased from 30 cents to 40 cents.

Handling of grain decreased from \$1 to 80 cents.

Wholesale and retail stores decreased from 60 cents to 50 cents.

Junk business (shop only) increased from \$1.75 to \$2.

Golf links, janitors, caretakers, decreased from \$1 to 80 cents.

Bridge construction (wood) increased from \$5 to \$6.

Construction power lines, electric railways, gas works, etc., increased from \$1 to \$1.50.

Telegraph and telephone companies (operation and maintenance) decreased from \$3 to \$2.50.

Operation and maintenance of railways increased from \$1.50 to \$2.

Fish traps increased from \$2.20 to \$3.

Tunnelling of rock or blasting increased from \$5.50 to \$6.

Dam construction (concrete or wood) increased from \$3 to \$4.

Workmen's Compensation Legislation in the United States in 1927

The *Monthly Labour Review*, published by the United States Department of Labour, summarizes as follows the numerous amendments made during the past year to the various State workmen's compensation laws:

In the 43 states and 3 territories having workmen's compensation laws, 2 legislatures did not meet in 1927, and 11 did not change the law. A liberal tendency was noticeable in the legislation of the 34 jurisdictions which did pass amendments or supplemental acts. At the beginning of the year 5 states did not have workmen's compensation laws and 4 great classes of workers subject to federal jurisdiction had not been covered (employees in the District of Columbia, those engaged in interstate commerce, seamen, and longshoremen). The longshoremen's and harbour workers' compensation act (LABOUR GAZETTE, April, 1927, page 397, etc.) was the outstanding piece of legislation of the year and brought to a large number of persons the benefits of compensation law. Two jurisdictions re-enacted their laws with many improvements.

Liberalization of benefits received attention in 21 states. This was done by increasing all benefits for certain special classes, by

raising the minimum or maximum weekly payments, by more liberal allowances in the case of medical assistance or burial, and by other less direct methods.

Increase in coverage comes next in importance. In California and in Nebraska action was taken to place more farmers under the act. Maryland, Illinois, Michigan, Oregon, and Wisconsin dealt with the subject of illegally employed minors. Several States extended the act to cover more public employees. Particular activity and continued hesitancy were noticeable in covering volunteer firemen, employed convicts, and national guardsmen.

Interesting changes were made showing a tendency to cut down benefits payable to alien non-resident dependants, remarried widows, and children who marry or reach a certain age. Several important words and phrases have been redefined, particularly "hernia." Idaho created a second-injury indemnity fund. The waiting period was dealt with in Maine, Pennsylvania, and Texas. Connecticut and Massachusetts gave attention to the waiving of rights under the act. The Alaska lien section and the transfer of administration from the courts in Kansas should receive special notice.

NEW UNEMPLOYMENT INSURANCE ACT IN GREAT BRITAIN

REFERENCE was made in the LABOUR GAZETTE, November, 1927, to the introduction in the British Parliament of an Unemployment Insurance Bill, based to some extent on the recommendations contained in the "Blanesburgh Report" (LABOUR GAZETTE, March, 1927, page 284).

The Unemployment Insurance Act, 1927, received the Royal Assent on December 22. It will come into force, with certain exceptions, on April 19, 1928. The Act makes all unemployment benefit payable as of right, where the requisite conditions are satisfied. The distinction between "standard" and "extended" benefit, and with it the discretionary power of the Minister of Labour to place restrictions on the grant of benefit, will come to an end.

New rates of contribution are fixed for young men and young women between the ages of 18 and 21, as from July 2, 1928. The rates of contribution are 6d. a week for young men and 5d. for young women, from the employed person; 7d. and 6d., respectively, from the employer; and 5½d. and 3¾d., respectively, from the Exchequer. In the case of exempt persons, the Exchequer rates are 2¼d. and 2d., respectively.

It is required that at least as frequently as once every five years there shall be an investigation into the financial condition of the Unemployment Fund.

A revised scale of benefits is provided. The weekly rate of benefit for men with no adult dependants is reduced from 18s. to 17s.; while the rate of benefit in respect of an

adult dependant is increased from 5s. to 7s. Thus a man with an adult dependant will receive 24s., that is, an increase of 1s. on the present rate; while a man without an adult dependant will receive 17s., that is, a decrease of 1s. on the present rate. Two shillings will be paid as at present in respect of each dependent child.

The revised scale of benefits for boys and girls, and for young men and young women, between the ages of 16 and 21, is as follows:

		Boys	Girls
Ages 16-18 years		6s.	5s.
		Young Men	Young Women
“ 18-19 “		10s.	8s.
“ 19-20 “		12s.	10s.
“ 20-21 “		14s.	12s.

It is, however, provided that the adult rate of benefit (17s. and 15s., respectively) will be paid to young men and young women between the ages of 18 and 21 up to July 5, 1928; and thereafter to young men and young women of those ages who are in receipt of additional benefit in respect of dependants.

After a transitional period, it will be a condition for the receipt of benefit that at least 30 contributions have been paid in the two years preceding the date of claim. Fulfilment of this condition will be verified at quarterly intervals.

The 30 contributions condition is, however, modified in favour of the insured person in two cases:—(i) where the inability to satisfy the condition is due to incapacity owing to sickness, the period of two years during which the 30 contributions are to be paid is extended by the period of incapacity up to a maximum of four years; (ii) in the case of ex-service men who have during the last two years been in receipt of a disability pension and whose inability to satisfy the condition is due to their disability, the number of contributions required to satisfy the condition is reduced to 10.

Modifications are introduced in the trade dispute disqualification. At present persons who are not themselves participating in or financing, or directly interested in, a trade dispute which causes a stoppage of work at the premises where they were employed, may nevertheless be disqualified from benefit if other members of the grade or class to which they belong are participating in or financing, or are directly interested in, the trade dispute. Such disqualification may be imposed although the other members in question may not have been employed at the same premises or even in the same district as the persons disqualified. The effect of the first

part of the section is to secure that in such circumstances the disqualification will not apply to persons who are not themselves participating in, or financing, or directly interested in, the trade dispute, unless there are other members of their grade or class at the same premises as themselves who are so participating or financing or directly interested. The present relief from disqualification in certain cases where the employer has contravened an agreement is withdrawn.

The Act gives the Minister of Labour, with the consent of the Treasury, power to authorize payments out of the Unemployment Fund towards the cost of approved courses of instruction for boys and girls aged 16 to 18 who are insured persons under the scheme or are normally employed, or likely to be employed, in an insured occupation. Grants are not to exceed 50 per cent of any amount which may be paid in respect of the attendances of boys and girls at such courses out of the moneys provided by Parliament.

Number of Insured Persons at Ages 60 and 65

The Minister of Labour, in answer to questions in the House of Commons on December 21, gave a table showing, for all insured industries and for certain specified industries, the estimated numbers of persons of various ages insured under the Unemployment Insurance Acts in Great Britain at July, 1927. The figures include unemployed insured persons as well as those in employment.

The estimated number of insured persons aged 60 and over in all insured industries at that date were 669,000 males and 53,000 females; those aged 65 and over numbered 319,000 males and 23,000 females. These figures exclude persons insured under the special schemes for the banking and insurance industries, as to which particulars for age groups are not available.

The estimated numbers of insured males in the coal mining, shipbuilding, and iron and steel industries were as shown below:—

	Aged 60 and over	Aged 65 and over
Coal mining	78,400	34,200
Shipbuilding	18,200	7,100
Pig iron (blast furnaces)	3,600	1,500
Steel-melting and iron-puddling furnaces iron and steel rolling mills and forges	15,700	6,400

Figures for females are not available, but the numbers of females employed in these industries are very small.

CANADIAN ENGINEERING STANDARDS ASSOCIATION

Publication of Canadian Electrical Code

THE Canadian Engineering Standards Association recently published Part I of a Canadian Electrical Code, stating the essential requirements and minimum standards for electrical installation in, on, or over buildings using potentials of 0-5000 volts. This is perhaps the most important project that has engaged the attention of the Association since its incorporation in 1919. Its preparation was suggested in 1920, and a conference of provincial and other representatives called by the Department of Trade and Commerce to meet at Ottawa in 1923, resulting in the forming in the following year of a Code Committee which included representatives of the provincial governments. The code was considered at successive meetings of this committee, and was finally approved at a meeting held at Winnipeg last June.

The code is based on the National Electrical Code, the National Electrical Safety Code, Rules and Regulations of the Hydro-Electric Power Commission of Ontario and other provincial or municipal regulations. Its prime object is to promote the adoption of uniform electrical regulations throughout Canada, a condition much to be desired. A somewhat unique feature is the provision for both fire and personal safety hazard and the inclusion of rules for resuscitation from electric shock. For the proper operation of the code in the meantime it will be necessary for the different provinces to pass enabling legislation in order to give the necessary authority to their respective inspection departments. It is hoped eventually to secure Dominion legislation. It is expected that a laboratory for testing and approving electrical apparatus will be established in connection with the research laboratories which the Dominion Government is now proposing.

The code has been adopted by the city of Saskatoon and the Department of Telephones in Saskatchewan, approved by the Department of Telephones in Manitoba and formally approved by the Hydro-Electric Power Commission of Ontario, its adoption by the Commission being approved by the Lieutenant-Governor in Council. It is now being considered for adoption by the provincial governments of British Columbia, Nova Scotia and Quebec, and parts of the code are being incorporated in the rules of the Electrical Commission of Montreal. Requests for copies have also been received from two of the largest technical correspondence schools in the United States.

The Canadian Engineering Standards Association was organized during the latter part of the war, at the suggestion of the British

Board of Trade and the British Engineering Standards Association. This latter organization was the first central body to be established for the work of engineering standardization, having been founded in 1901. The main object of the Association is to promote the establishment of industrial standards by providing an organization to receive requests for standardization, investigate their desirability and arrange for the formation of committees comprising representatives of both manufacturers and users to determine standards that will be acceptable to all interests concerned. The Association itself is not concerned, nor does it take any active part, in the preparation of the specifications, but it reviews the findings of committees to satisfy itself that the standards have been properly prepared, and finally it arranges for their publication and issue.

The Association operated until 1925 with funds provided by grants from the Department of Trade and Commerce of the Dominion Government, and by subscriptions received from various industrial firms and technical organizations. In 1925, however, on account of the imperative necessity for economy, the grant from the Department of Trade and Commerce was withdrawn, but the National Research Council of Canada, realizing the importance of the work being carried on by the Association, made arrangements to guarantee the budget, with the understanding that special efforts be made to obtain financial support from Canadian industry. The Main Committee of the Association has, therefore, for financial purposes, been constituted an Associate Committee on Engineering Standards of the Research Council. The Association, however, continues to carry on its operations independently on the lines followed since incorporation. An annual report is made to the Research Council.

The Association is organized on lines similar to those adopted by the British Engineering Standards Association. The members of the Association serve on its various committees gratuitously, giving it the benefit of their technical or business experience in the preparation of the various standards.

The Association has published also standard specifications for steel railway bridges; for wire rope for mining, dredging and steam shovels; for Portland cement; for commercial bar steels; for reinforcing materials for concrete; for Tungsten lamps; for steel structures for buildings, and for many other branches of engineering work. The central office of the Canadian Engineering Standards Association is at 178 Queen street, Ottawa.

ACCIDENT PREVENTION IN NOVA SCOTIA COAL MINES

THE Nova Scotia Accident Prevention Association has prepared a "coal miners' circular" addressed to every underground employee in the coal mines of Nova Scotia, in the hope that it will serve to create a greater interest among the miners in the matter of Safety First. It is practically a reprint of two miners' circulars published by the United States Bureau of Mines—to which due acknowledgement is made—changed and adapted for local application.

Part I entitled "Accidents From Falls of Roof and Coal" was written by Dr. George S. Rice, chief mining engineer of the United States Bureau of Mines, whose work in Nova Scotia and Alberta in promoting safer conditions of operation in coal mines was referred to in the LABOUR GAZETTE for February, 1925, page 161, and in the issue for February, 1927, page 281. Part II is taken from a compilation entitled "Accidents From Mine Cars and Locomotives," written by the late Mr. L. M. Jones, a mining engineer who lost his life while doing recovery work after a mine explosion.

The accompanying tables show the causes of accidents to workmen, and also the record of individual companies engaged in coal mining operations in Nova Scotia during 1926:

CAUSES OF ACCIDENTS IN COAL MINES IN NOVA SCOTIA IN 1926

Falls—Roof.....	395
Rib.....	43
Face.....	171
Total falls.....	609
Bumps.....	21
Infection (bruises, etc.).....	60
Flying pieces coal, wood, steel, etc.....	102
Strains, lifting or pushing tubs.....	91
Strains, handling other material.....	71
Haulage gear, ropes, pulleys, grabs.....	128
Spragging and coupling tubs.....	53
Mining machines and accessories.....	52
Caught, squeezed, run over by tubs.....	501
Struck by pick.....	38
Struck by axe or hammer.....	65
Struck by falling timber.....	99
Kicked by horse, etc.....	41
Gear about tubs or shafts.....	30
Falling tripping, slipping.....	249
Dropping articles being lifted or carried.....	186
Miscellaneous.....	80
Total.....	2,476

This table shows that the two chief causes of accidents in the Nova Scotia coal mines during 1926 came under the categories of "Falls" and "Caught, Squeezed, or Run Over By Tubs," the former accounting for a total of 609 accidents, and the latter for 501. The Association points out that in the first eight months of the year 1927 there were 20 fatal accidents in the Nova Scotia coal mines, thirteen of these being caused by "falls," while seven were in connection with coal transportation underground.

Discussing the causes of such accidents as those from "falls" "transportation" the Association in its introduction states that "little is to be gained by declaring that the miners or the companies are mostly to blame. As a matter of fact, neither the companies nor the miners, acting alone, can entirely prevent such accidents. Each has a part to do. Each is responsible for doing that part well, and if the miners will co-operate with the companies and the companies co-operate with the miners in an earnest effort to prevent these accidents, many lives will be saved."

Accidents from Falls of Roof and Coal

Dr. Rice states that accidents from falls of roof are less frequent in roadways, headings or passageways than at the working face because the roof is constantly inspected by examiners and other officials. He points out that while the burden of preventing falls in entries and passageways rests largely upon the officials, yet whenever a miner or anyone passing along the roadway discovers a loose or dangerous place it should be his duty to mark the place and report it to the nearest official.

Experience in the coal mines in the United States shows that slightly over 90 per cent of the deaths from falls of roof, "slate" and coal happened at the face and in pillar workings. Sixty-seven per cent, or two-thirds of the whole, happened at the face of rooms or chambers, and 23 per cent, or about one-fourth, happened in pillar workings.

Regarding the causes of such accidents, Dr. Rice makes the following observations:—

"It is the belief of many engineers and experienced miners that most falls of roof, coal and slate are not necessary. The principal

NUMBER OF ACCIDENTS AND TIME LOSS OF COAL MINES IN NOVA SCOTIA IN 1926

	Number of accidents	Man-days worked year, 1926	Accidents per 10,000 man-days worked
A. Dominion Coal Co.....	1,102	1,563,469	7-05
B. Nova Scotia Steel and Coal Co.....	279	309,625	9-01
C. Acadia Coal Co.....	291	288,915	10-07
D. Cumberland Railway and Coal Co.....	415	281,271	14-79

causes of accidents from falls are the following:

"(1) Failure to use sufficient props or timbers or improper setting of them.

"(2) Going back to pick, shovel, or prepare other shots at the face without testing the roof after shot firing.

"(3) Undermining the inner edge of a block that seems to be safe, because too heavy to vibrate when struck, but actually is loose.

"(4) The sudden loosening of a concealed 'pot,' 'kettle-bottom,' 'bell' or a fossil stump.

"The first two causes, which result in the largest number of accidents, are generally avoidable; the second two may generally be avoided by setting the props or timbers close enough together, but some accidents from these two causes may be considered unavoidable."

The writer emphasizes the necessity of caution as the primary factor in the prevention of accidents of this type "Be careful at all times" is his injunction to the miner.

"The Law requires the operator to furnish the necessary props or timber at or near the working place. Sometimes through delays in haulage, or more rarely through the carelessness of some person the timber is not received at the-time you need it. If the timber does not arrive, you should not take a great risk in going without it and work under an unsafe roof. Important as it is to you, the delay of one or two hours, or even a whole shift, is as nothing compared with being killed, or becoming a cripple for life, by having a piece of roof fall on you. Remember your family and those dependent on you, and wait for props."

The circular cautions against certain practices, such as entering a working place on shift without first examining the roof and testing all doubtful spots with a pick or a bar and timbering the same; and finishing a cut or loading a box before putting up a prop.

Dealing with falls of "slate," Dr. Rice says:

"One of the things that causes a large number of accidents is the 'draw slate' in the upper part of the coal bed or just above the coal. In some districts this is called merely 'slate' but it is a 'slate' (really a clay shale) that in many places is hard when first exposed to the air, but rapidly softens and falls. Props will not keep it up; that is, it will 'cut' around the head of the prop or cap piece. Therefore, the best thing to do is to take it down immediately and stow it in gob. When similar 'draw slate' is found in the mines in other districts no time should be lost in pulling it down.

"In coal mines in France, which generally have a weak shale roof, the rules require that the props shall be placed not over 1 meter (3½ feet) apart each way and that there must be hitches cut in the coal face and booms or bars put in, supported by the props behind, before the miner is permitted to undercut the face. The good result of this law is shown by the records of accidents in the French mines. In spite of the poor roof, the number of accidents from roof falls in proportion to the number of underground employees is lower than in any other country."

The work of drawing or pulling pillars is considered as requiring such skill that only an experienced miner should be set at this task, and then only after a line of "breaker props" have been placed in position.

As to the effect of explosives, Dr. Rice states that great damage is done to a roof by the use of too much explosive for a shot, and by not placing shots properly. After firing a shot, it is particularly necessary that the roof should be thoroughly tested, and that the miner should not return under any condition while the smoke is thick.

Responsibility for preventing accidents from falls of coal is placed "almost wholly in the hands of the miner," it being considered that most of these accidents occur through failure to block or sprag the coal while undercutting it, or in a thick seam, while slabbing it off.

Under the heading "Suggestions For Overmen and Examiners," the following instructions are directed to officials:—

"In keeping rooms and working places safe you share responsibility with the miner, except that it is your duty to see that timber supplies and tools are promptly furnished at the request of the miner, or as your own inspection has shown to be necessary. Systematic records should be kept of the supplies furnished each miner, and it should be a matter of suspicion that requires inspection if the miner is not using at least the average supply of timber furnished other miners. Dealing with a large body of men, you will always find a certain number of miners careless of their own safety. These men should be closely watched, and any miner who persists in not using the necessary amount of timber should be given other less dangerous work to do, or should be placed as the partner or 'buddy' of a more experienced and careful man.

"It is sometimes thought because the roof is strong that little or no timber is required. Such mines or places are often the most dangerous, because when a loose block of roof is undermined there is no protection. Where the roof is good there is a tendency for offi-

cial and miners to become careless. You should bear in mind that you must always be prepared for the unusual condition. The loss of one life or the crippling of one man will pay for a vast amount of timbering, not only from a humanitarian standpoint, but in dollars and cents."

Accidents From Mine Boxes and Locomotives

This part of the circular details specific precautions to be taken (1) in going to a work-

ing place; (2) travelling a haulage road; (3) travelling a rope haulage road; (4) travelling an electric haulage road; (5) shifting boxes or tubs (6) shifting boxes in "dip" rooms; (7) placing props near the track; (8) spragging boxes and applying brakes; (9) handling horses, etc. In addition special instructions are given to motormen, brakemen and trip riders, to the hooker-on, to the topman, to roadmakers, examiners and overmen.

NOTES ON INDUSTRIAL SAFETY AND HEALTH

Industrial Medical Study in Universities in Quebec

An organization composed of representatives of McGill University, the University of Montreal, and Laval University, Quebec, was formed in accordance with a resolution passed at a provisional meeting held in the Medical School at McGill University on January 17. Provisional officers were elected, with Dr. A. R. Pennoyer as president, and a temporary executive committee of doctors was appointed. It was stated at the meeting that a course in industrial medicine is being offered by McGill to members of the profession, beginning about March 1. The course will consist of lectures and demonstrations on various phases of industrial medicine, from the scientific standpoint and from the standpoint of sociological relations, periodical health examinations, laws governing health in industry and the rehabilitation of employees. Field work in the industry and work at the industrial clinic of the Montreal General Hospital will be carried on.

Ontario Safety League

The year 1927 completed the fourteenth year of the League's campaign in safety work. During the year, over one million pieces of literature, etc., were distributed to school children, motorists, street car men, manufacturers and others, dealing with prevention of accidents and fires and asking their assistance and co-operation in the reduction of fatalities and lesser accidents from these hazards. The bulletins were distributed in over six hundred cities, towns and villages in Ontario, and posted conspicuously in railway stations, street cars, garages and public places. Posters and signs dealing with the traffic hazard were erected in cities, towns and rural districts.

The safety essay competition and the drawing contest were carried on as in former years, throughout the schools of Ontario, with largely increased entries in both contests. Safety calendars were distributed and posted prominently all over Ontario. These calendars emphasized the necessity for safety in industry, care in the prevention of fire, and dealt with the hazards of street and highway traffic, railroad crossings, aquatic and electrocution. They also showed illustrations on first aid and resuscitation. The literature distributed included industrial bulletins, traffic bulletins, cards to motorists, special bulletins, school bulletins, illustrated school book covers, letters to parents, special cards and reports, safety buttons, safety calendars, and sundry circulars.

Safety lectures and safety moving pictures were given in 335 schools; \$600 was distributed in cash prizes in the drawing competition; safety films were shown in moving picture theatres, and safety talks were broadcast by radio, as opportunity offered, during the year.

Life-saving Plan for Mine Explosions

Mr. T. A. Southern, a former inspector of mines, of Cardiff, in a paper read to the Institution of Mining Engineers in London in January, pointed out that in nearly all the most fatal colliery explosions a large proportion of the victims were entirely uninjured either by burning or by violence, but were killed by the after-damp. He suggested that a life-saving door should be erected in the main intake of each district of working faces. It should normally be kept always open, and should only be shut in the event of smoke or after-damp coming in. In the recent Cwm colliery disaster, he claimed that the provision of such a door would have saved the lives of

twenty of the victims. "These men would have shut the life-saving door to protect them from the influx of after-damp. It would have effectually protected them, enabled them to escape unscathed via the main return, and the death roll of this explosion would have been reduced by twenty."

Specifications for Camps in Alberta

The Provincial Board of Health for Alberta recently published regulations dealing with specifications for camps. Regulation 141 is amended by the requirement that 400 cubic feet of air space (instead of 300 cubic feet as formerly) are to be allowed for every occupant of every house, tent or other building occupied or used by the employees of any camp or mine, and these premises are to be properly constructed, lighted and heated. The specifications provide as follows:

Material and construction.—The building may be constructed of logs or of lumber—if the former, the logs to be flushed up with mortar or clean soil.

Roofs and floors.—All roofs and floors shall be constructed of tight lumber (poles of any kind will not be permitted).

Window lighting.—There shall be window lighting of an amount equal to one-tenth of the total floor area in each building. Provided, however, if the windows are placed in the roof, one-twentieth of the total floor area will be sufficient.

Ventilation and heating.—There shall be windows as hereinbefore provided. At least one-half of the windows shall be so installed as to allow of their being opened to the external air.

In every building heated by direct heat from a heater, there shall be properly installed and operated, a system of ventilation consisting of a shield entirely surrounding the heater at a distance of not less than six inches from the radiating surface of the heater, this shield having its lower edge so constructed or so placed as to admit of the re-circulation of cold air from the floor, and extending in height to a distance of six inches above the top of the heater and having in connection with the shield a fresh air intake admitting air from the outside of the building to the inside of the shield near the floor level. The fresh air inlet shall have a sectional area of not less than 36 square inches for every 10,000 cubic feet of capacity heated by the heater. A vitiated air conduit or chimney shall be provided for the purpose of removing the vitiated air. The vitiated air conduit or chimney shall have a

sectional area of one-third greater than that of the fresh air inlet and shall have its inlet near the floor level.

If, however, it is the intention to operate a camp for a period of one logging season only, any or all of these regulations may be declared by the Provincial Board to be temporarily suspended in any particular case upon the recommendation of an executive officer of the Provincial Board, and on application for such suspension being made in writing by the manager of the camp. Application shall contain information as to why the suspension is requested and the period of time it is intended to operate the camp before it is finally abandoned.

Sleeping accommodation.—The bunks or bedsteads shall be single (or individual) and of the single deck (or single tier) class. Bunks or bedsteads may be constructed of metal or wood, or a combination of both metal and wood, but shall be arranged in position so as to be at right angles to the sidewalls. A passage-way between bunks or bedsteads of at least 15 inches shall be provided for. Provided, however, that in the case of camps in existence at the time of the passing of these regulations, this regulation shall not apply for one year from the date of the passing of these regulations, excepting that portion of this regulation which deals with single deck or single tier class of bunks.

Cook's quarters.—Sleeping accommodation in direct connection with the dining room is not permitted. The cook's quarters may be so constructed as to be part of the building wherein the kitchen and dining room are located, but all such quarters shall be tightly partitioned off from the kitchen and dining room.

Food stores.—A room or separate building shall be provided for the storage of perishable or unwrapped foods, which room or building shall be properly lighted and ventilated.

White-washing interiors.—All camp buildings shall be thoroughly cleaned and disinfected immediately before being occupied, and as often thereafter as may be necessary to maintain the interior of buildings clean and sanitary at all times during occupation.

Ablution and bathrooms.—There shall be provided a wash-room of sufficient size and capacity together with all the necessary furnishings for the ordinary use of employees.

There shall be provided a sufficient number of tubs for bathing purposes to allow of each occupier of the camp availing himself of them at least once in each week.

Laundry and drying room.—Unless provision is otherwise made by the operators for the laundering of clothes, a laundry and drying room shall be provided for the use of all persons employed in connection with the camp. All washing of linen or clothing shall be done in this building or the open air. Drying of clothing shall not be permitted in bunk houses or dining rooms or kitchens.

Drainage.—All waste water from sinks, tubs, wash-houses, etc., shall be conveyed by drain or received into water-tight containers and thereafter removed to a distance that no nuisance will be occasioned thereby.

Refuse disposal.—All refuse shall be removed daily and disposed of by burning or burying, or it may be hauled away for use as hog feed.

Night urinal buckets shall not be kept in the living quarters between the hours of 6 a.m. and 9 p.m. Night urinal buckets may be provided in the lobbies adjoining bunk-houses during the hours of 9 p.m. and 6 a.m.

Toilets and closets.—Sufficient toilet or closet accommodation shall be provided and maintained in clean condition at all times. When out-door privies are used, they shall be located at least one hundred feet from bunk-houses, dining rooms, kitchens, and all other inhabited buildings.

The Work of an Industrial Nurse

A recent issue of *Labour and Industry*, the monthly publication of the Department of Labour and Industry of Pennsylvania contained the papers read at a conference on industrial nursing, held last summer at Harrisburg. The department has compiled a directory of establishments in the Commonwealth which are known to employ industrial nurses.

One of the nurses described her duties as follows: "The industrial nurse usually has an entrance to industry through the first aid department, but her value to industry is shown by applying her services to every phase of health work among the employees. Her daily routine consists of first aid work, assisting with physical examinations, taking care of employees sent to the rest room, calling on employees for re-examination, visiting absentees, making outside visits when requested to do so by the foreman or the employee himself, giving health instructions in the home, health talks in the plant, and arranging for hospital or clinical care. The industrial nurse can do valuable work in promoting pleasant industrial relations, in reducing time lost through accident and illnesses, in minimizing results of accidents by first aid and follow-up care, in shortening illness by co-operation with the physician, in

searching out causes for accidents and illnesses, and by co-operation with employers and outside agencies, so making possible healthy, thrifty home life, and increasing the efficiency of the worker."

Another nurse declared "that the outstanding lack in our plants at the present time is one which the industrial nurse by training and by temperament is best able to supply—that of common sense housekeeping, of making the plant a more pleasant place in which to work, cleaner, lighter, more comfortable."

President Maurer, of the Pennsylvania Federation of Labour, stated that "the work of the industrial nurse cannot receive too high praise from the workers, to whom she is fundamentally reponsible, even if not technically so. Usually the first to aid a sick or injured worker, her power for good is a tremendous one, and I believe I can safely say, one that is seldom misused. The service she can render as she visits the sick or disabled workers in their homes is equally great. Her visits are much more intimate than those of the doctor, and she can accordingly render a much fuller service than he. She can do more to help the family find adjustment to the calamity that has befallen them, thus reducing the severity and the length of their misfortune. . . . Workers in America, as a rule, resent paternalism, even when it accompanies fair wages. Health and safety work within the plant need not fall into this category, however. The industrial nurse should see that it does not. She would do well, I think, to insist upon workers' committees on safety and sanitation, democratically chosen, to assist in policy-making for her department, and to hear grievances that may arise in connection with it."

Physique of Women in Industry

The Industrial Fatigue Research Board of the British Medical Research Council recently published the results of research undertaken to determine the maximum load to be carried by women. It was found that the highest degree of efficiency in the carrying of loads by women would seem to be obtained when the weight of the load is equal to 35 per cent of the weight of the body, although the method of carrying loads is of great importance. In practice a weight of 40 per cent of that of the body may be carried continuously and of 50 per cent intermittently. For a woman of average weight the maximum load would appear to be 40 pounds for continuous carrying and 50 pounds for intermittent, although it is possible to increase

this weight when the burden is compact and easily handled and does not interfere with walking or affect the normal position of the body.

The report states that by calculating the proportion between the strength exerted in certain muscular tests and the total weight of the body, a co-efficient of aptitude is obtained; when this co-efficient falls below a certain limit, the subject is not fitted for strenuous work. Experiments have shown that in undertakings where the weight of the load is left to the convenience of the workers, women rarely exceed their strength, while adolescents and men have a tendency to over-work, especially in rapid carrying.

Regulation of Lead Paints in Australia

The Department of Health of the Commonwealth of Australia recently issued the report of the third Commonwealth and Inter-State Conference on Industrial Hygiene held in May, 1927, on the recommendation of the Royal Commission on Health.

A committee appointed by the Australian Commonwealth Engineering Standards Association advanced some interesting proposals in relation to precautions to be taken in the manufacture and use of lead paints; it suggested that lead substances should not be used except when previously prepared in the form of paste or paint; that lead paint should not be used in spray form for interior painting; that surfaces painted with lead paint should not be rubbed down or scraped by a dry process; that application of lead paint by the bare hand should be forbidden; that suitable overalls and head coverings should be worn during working hours and kept clean where lead paints are handled; and that where dust in dangerous amounts is present, respirators should be provided. Wet rubbing down and wet removal of paint was recommended, but it was realized that its execution was not always practical. Provision of washing facilities and of good drinking water and thorough investigation into all cases of lead poisoning were demanded; similar recommendations with slight modification were made for exterior painting. A special set of rules was drawn up in regard to the painting of articles for sale. For ship painting, burning off and chipping were regarded as inevitable under certain conditions. For spray painting the recommendations made were to the effect that lead should not be used for interiors and that non-lead paints should be given preference under all circumstances; indications were given as regards the form, ventilation, size, and maintenance of booths. The use of

benzol as a solvent was deprecated and shellac dissolved in wood alcohol or wood alcohol in some other form prescribed. Labelling of containers with a note of attendant risks and the issue of special common-sense instructions to workers were demanded.

Painters Desire Supervision of Spraying Machines

The National Union of Painters, Decorators and Paperhangers of Canada, Jubilee Local Union No. 1, Toronto, in a recent resolution, expressed the opinion that the competent authority should carry out rigid inspections of all buildings where paint-spraying machines are used, and where various paints that are highly injurious to the health of those who use, work in or near the same, are applied by spray or brush. It was pointed out that many of the preparations now in use contain dangerous liquids, the fumes from which are inhaled by the workers. The letter proposed that an official analysis should be made of the formulas used in the manufacture of all quick drying paints; that information should be published as to their ill-effects on human beings who breathe for hours in vitiated atmosphere; and that regulations should be made requiring that spraying machine operators should be supplied with masks.

It will be recalled that the International Labour Conference (League of Nations) at its third session in 1921, at which the Government of Canada was represented, adopted a draft convention the purpose of which was to prohibit, with certain exceptions, the use of white lead and sulphite of lead and of all products containing these pigments in the internal painting of buildings. The draft convention provides, among other features, for measures to be taken in order to prevent danger arising from the application of paint in the form of spray. The Law Officers of the Crown in Canada have advised that such legislation as may be necessary to give effect to the proposals of this draft convention is within the competence of the several provincial legislatures.

Safety Museum at London

The last issue of the LABOUR GAZETTE contained a reference on page 46 to the new Safety Museum recently established in Westminster by the British Home Office, as a permanent exhibition for promoting the safety, health and welfare of industrial workers. It is hoped that the museum will serve as a means both of contributing to the well-being of the workers and the efficiency of industry

and also of bringing to notice improvements from time to time devised in this or in other countries, and thus act as a stimulus to further invention and improvement. The principle has been followed of not exhibiting a device until it has been tested and found serviceable in actual use in industry.

In the *Safety* sections of the museum the exhibits are mostly actual machines and appliances, as they would be installed in a factory; and power is provided so that the machines can be seen in motion. There are a few models; but it has been found that models do not make the same appeal as actual machines. A great variety of machinery guards are shown. The exhibits of actual machinery are supplemented by an extensive collection of photographs; in some cases, for example, in the shipbuilding industry, or in the case of the loading and unloading of ships at docks and wharves, photographs are, from the nature of the case, the only means of illustrating dangerous practices, and the proper way of avoiding them.

In the *Health* sections of the museum, the exhibits include photographs showing the methods for the prevention of lead poisoning, silicosis, dermatitis, etc., in various industries;

Two sections are devoted to illustrating the principles of efficient ventilation and lighting. The ventilation section includes complete installations (connected with the grinding and woodworking machinery exhibits) for the removal of dust; demonstration installations of well-designed and badly-designed air ducts, and other ventilation arrangements; and

photographs of actual installations from various industries. Arrangements for the protection of the worker against dust and fumes are also installed in the pottery, textile, and aerographing exhibits.

The *Welfare* section of the museum includes rooms fitted up as an ambulance room, rest room, canteen and welfare supervisor's room; canteen equipment, types of work-seats designed to prevent fatigue and facilitate efficient work; types of first-aid boxes for factory use; many kinds of protective clothing; and photographs of welfare arrangements obtained from various works.

The museum shows not only what is best, but, by contrast by way of warning, dangerous plant and appliances which have been found in actual use; e.g., in the electrical section, apparatus which have been the cause of fatal accidents; in the lifting gear section, ropes, chains, etc., dangerously worn; in the boiler section, parts from boilers which have exploded, showing the conditions which caused the accident.

It is believed that the museum will be of interest to employers and workers, and to their respective organizations; to designers of factories, designers and makers of machinery and power plant, makers of guards for machinery and other protective appliances, and designers and makers of ventilation plant; to medical practitioners, welfare and other social workers; to factory inspectors; and to the staffs and students of technical schools and of the engineering departments of universities.

Old Age Pension Inquiry and Fair Wages in Nova Scotia

The Speech from the Throne at the opening of the Legislative Assembly of Nova Scotia on February 14, announced that a "fair wage clause" is to be included in all contracts affecting the provincial government undertakings. The Speech contained the following paragraph in regard to old age pensions: "At the Dominion-Provincial conference my ministers—in co-operation with ministers representing other provinces, being in full sympathy in principle—urged upon the federal government the necessity of making complete financial provision for old age pensions. The Duncan Royal Commission found that our present revenue is insufficient to meet the demands of the essential services of government, moreover, the aged are distributed most unequally throughout Canada, the number of aged in

the Maritimes being greatly in excess of those in provinces where development is more recent. My government is taking the necessary steps to obtain full information relative to old age pensions as appertaining to this province.

A bill has been introduced in the Legislative Assembly of New York State to amend the State Workmen's Compensation law so as to provide compensation for all kinds of occupational diseases instead of the limited number mentioned in the existing schedule, and to make the law applicable to workers who are exposed to injury through the use of any harmful material.

NOTES ON LABOUR UNION ACTIVITIES

Alberta Federation of Labour

With approximately one hundred delegates in attendance, the twelfth annual convention of the Alberta Federation of Labour was held in the city of Calgary commencing January 12, 1928. The officers in submitting their report reviewed the various activities participated in by the Federation since the previous convention and also outlined social legislation enacted and amendments secured to existing statutes during the last session of the provincial legislature. The memorandum recently submitted by the executive of the Federation to the special committee appointed by the provincial government to investigate the Workmen's Compensation Act and its administration was presented to the delegates in detail. (The text of this memorandum was given in the last issue of the *LABOUR GAZETTE*, page 23.)

According to the financial statement covering the period from November 15, 1926, to December 31, 1927, as presented by the secretary-treasurer, the receipts, together with bank balance brought forward, amounted to \$2,003.61, while expenditures totalled \$1,764.90, leaving a balance to the credit of the Federation of \$238.71.

A report was made by a special committee appointed at the last convention to study the principles of consumers' co-operation and what it has to offer trade unionists and members of the labour movement. This committee submitted the following suggestions:

1. Each local union set up a small committee with a view to bringing to the attention of its membership the value of consumers' co-operation. Some very useful pamphlets can be secured to assist in this work, one notable example being "Why Trade Unionists Should be Co-operators," by Fred Bramley.

2. The Co-operative Union of Canada takes in honorary members for a fee of two dollars, which includes subscription to the *Canadian Co-operator*, a magazine in the interests of the movement. By taking advantage of this opportunity the ground can be prepared for the future organizing of successful consumers' societies.

3. Then for those who wish to delve deeper into the subject there are correspondence schools organized by the Co-operative Alliance of America, under the direction of the leaders of the movement in the U.S.A. From the prospectus to hand it would seem that a thorough training in all branches of consumers' co-operation can be secured at very little cost by this method.

The convention approved of a resolution urging the provincial legislature to pass an enabling act making the Federal Industrial

Disputes Investigation Act operative in Alberta.*

Other resolutions adopted were as follows:

- (1) Calling for the upward revision of the schedule of rates of pay now in force under the orders of the Minimum Wage Board.

- (2) Instructing the incoming executive officers to impress upon the provincial government the necessity that provisions should be made whereby foremen discharging temporary employees pay wages due at the time of their being laid off.

- (3) Asking the provincial government to submit to the Alberta Federation of Labour any changes or amendments to The Mechanics' Lien Act before their adoption.

- (4) Recommending that municipal areas and improvement boards through the public works office of the provincial government issue building permits so that workmen employed by them may be eligible for the benefits of the Compensation Act, and that such undertakings be assessed by the compensation board as provided by legislation.

- (5) Favouring the organization of agricultural workers as a part of the labour movement and asking the Trades and Labour Congress of Canada to take steps to bring about an organization of the agricultural workers of Canada;

- (6) Petitioning the provincial government to so amend the Minimum Wage Act that all places of business deriving any profit or revenue whatever from an apprentice be termed a place of business and not a school.

- (7) Instructing the executive to petition the provincial government to make provision for deserted wives and families and prisoners' wives and families by bringing them under the Mothers' Allowance Act.

- (8) Seeking legislation making it compulsory for expectant mothers to cease their employment in factories, shops, etc., for two months before and three months after childbirth, and where such person is depending on her own wages, a sufficient sum be given her by the government to take care of all additional necessary expenses.

- (9) Requesting the Federation to promote legislation extending the provisions made for industrial diseases in the Workmen's Compen-

*The provisions of the Labour Disputes Act, enacted by the legislature of Alberta in 1926 were outlined in the *LABOUR GAZETTE*, May, 1926, page 447.

sation Act and raising the rates of compensation payable under the Act from 62½ per cent to 75 per cent of average earnings.

(10) Pressing for legislation which will make possible the appointment of an inspector, from among qualified tradesmen recommended by the Building Trades Council, of all building equipment within the province, and that all safety inspection laws be co-ordinated under the Bureau of Labour;

(11) Advocating the free distribution of a copy of the Alberta Coal Mines Regulation Act to all men when signing on for work at the mines and that all workers coming within the scope of the Compensation Act in any industry receive a copy of the Act.

(12) Favouring the eight-hour day and forty-four hour week for all workers.

(13) Condemning all company or dual unions and advocating intelligent propaganda and action to show workers within these unions the necessity for again lining up with the international unions as exemplified by the Alberta Federation of Labour, Trades and Labour Congress of Canada, and the American Federation of Labour.

(14) Demanding that the chief inspector of mines rigidly enforce the eight-hour day.

(15) Demanding the abolition of the Gar-nishee Act.

(16) Demanding that sixty feet apart be the limit between crosscuts in mines and that an immediate investigation and examination be made of all non-gaseous mines so that this evil may be totally eradicated and the Mines Act fully complied with.

(17) Urging the Federal Government to take action for transporting Alberta coal to the eastern market.

(18) Seeking an amendment to the Mines Act enabling each mining district in Alberta to elect, by popular vote of the miners, an inspector who shall be subject to the recall of the miners if found unsatisfactory.

(19) Recommending that the miners' representative on the board of examiners be a miner who has worked at the coal face not less than ten years.

(20) Asking an amendment to the Franchise Act so that only three months' residence in the province will be required for a British subject or a naturalized subject before being entitled to vote.

(21) Urging the provincial government to bring in legislation on health insurance on similar lines to the Workmen's Compensation Act.

(22) Requesting the provincial government to institute an immediate and exhaustive inquiry into the possibility of ensuring medical attention in sickness to all workers.

(23) Instructing the incoming executive officers to press for amendments to the Health Act and sanitary laws so as to prohibit the sale of food where drugs and chemicals are sold, and that this Act be more rigidly enforced.

(24) Pressing for legislation to prohibit the employment of white girls by orientals.

(25) Seeking regulations under the Health Act to compel hotels, restaurants and other eating establishments to use only proper utensils for the cooking and maintaining of food.

The two following resolutions were referred to the Committee on Workmen's Compensation: (1) Recommending that the Workmen's Compensation Act be amended to provide that all wage earners be included within its scope; (2) Seeking an amendment to the Workmen's Compensation Act whereby the amount of compensation shall be increased to one hundred per cent of average earnings; also that the allowance for widows be increased to seventy dollars per month, and for the first child twenty dollars, and fifteen dollars for each additional child.

To the Committee on officers reports were referred the following resolutions: (1) Recommending that the proposed Contributory Negligence Act should be so worded that it will clearly state that no part of any liability incurred by workmen being injured can be had against any fellow employee or employees; (2) Urging the Federation to do all in its power for the enactment of the Old Age Pensions Legislation in Alberta, implementing the Federal Act of March 31, 1927, and that a higher rate of pensions than that specified in the Federal Act be provided in the province; (3) Calling upon the Alberta Government to co-operate with the Dominion Government so that Old Age Pensions may be put into effect in Alberta without delay.

A resolution calling upon the Federation to urge the Federal Government to amend the Criminal Code covering vagrancy so that workers shall not be liable for conviction simply for turning down jobs with low wages, was referred to the incoming executive.

The chief officers elected were: President, F. J. White, M.L.A., Calgary; Secretary-Treasurer, Elmer E. Roper, Edmonton. The Vice-presidents are elected from the different Trades and Labour Councils in the province, together with one chosen from District 18, United Mine Workers of America. E. E. Roper

was elected as delegate to the Trades and Labour Congress which meets in Toronto this year, while J. E. Worsley, Calgary, was elected

fraternal delegate to the annual convention of the United Farmers of Alberta. Lethbridge was chosen as the convention city for 1929.

Legislative Proposals of Organized Labour in Province of Quebec

A delegation composed of Alphetus Mathieu, Omer Fleury, Jas. Broderick and Lionel Thibault, members of the Quebec provincial executive of the Trades and Labour Congress of Canada, accompanied by J. T. Foster, president of the Montreal Trades and Labour Council, P. M. Draper, secretary of the Trades and Labour Congress of Canada, and a number of trade union representatives, waited on Premier Taschereau, members of the cabinet and officers of the government and presented the following suggestions for legislative measures affecting the social and economic conditions of the workers of the province, these being grouped under the following heads. (Details of these requests were given in the report of the proceedings of the Trades and Labour Congress of Canada, in the *LABOUR GAZETTE*, September, 1927.)

- (1) Workmen's compensation.
- (2) Safety Measures in Industry.
 - (a) Scaffolding Inspection.
 - (b) Elevator Regulation.
 - (c) Motion Picture Operators' Examination.
 - (d) Engineers' Licenses.
- (3) Health and Hygiene;
 - (a) Paint Sprayers.
 - (b) Sweat Shops.
- (4) Social Measures;
 - (a) Mothers' Allowance.
 - (b) Old Age Pensions.
 - (c) Minimum Wage.
- (5) Education;
 - Seeking further improvements in the educational system of the province. *LABOUR GAZETTE*, September, 1927, page 975.)
- (6) Employment regulations;
 - (a) Fair wage regulations.
 - (b) One day rest in seven.
 - (c) Abolition of private fee charging employment bureaux.
- (7) Legislation embodying the decision of the International Labour Organization of the League of Nations;
 - (a) Establishment of the eight-hour day.
 - (b) Protection of women and children in industry and commerce.
 - (c) Co-operation with other Provinces to obtain ratification by Canada of all these conventions and recommendations.
 - (d) That the Province should be officially represented at the annual conferences of the International Labour Organization at Geneva.

In addition to the above requests the following resolutions were presented: (1) By the Joint Council, Boot and Shoe Workers of Montreal, protesting against the manufacture of boots and shoes by the Reform School of Montreal;

(2) By the Federated Trades and Labour Council of Quebec and Levis demanding that the sanitary regulations in taverns be better observed; (3) By the Moulders' Union, requesting that an inspector be appointed for foundries.

Legislative Program of Organized Labour of Saskatchewan

The Saskatchewan Executive of the Trades and Labour Congress of Canada, composed of Alex. M. Eddy (chairman), Saskatoon; C. J. Greene, Moose Jaw; H. D. Davis, Prince Albert; and Ralph Heseltine, and H. Perry, Regina, accompanied by a number of trade union representatives, waited upon Premier Gardiner and members of his Cabinet on December 20, 1927, for the purpose of discussing a number of legislative matters desired by the workers of the province, as follows: (1) Seeking legislation for an eight-hour day; (2) Requesting the enactment of provincial legislation implementing the federal Old Age Pensions Act; (3) Recom-

mending the extension of the scope of the Minimum Wage Act so as to take in boys, and that the fine for infractions of this law be increased; (4) Urging legislation to require the wrapping of bread; (5) Advocating better control and regulation of trade schools; (6) Seeking one day's rest in seven for hotel and cafe employees; (7) Advocating compulsory liability insurance for auto owners; (8) Urging amendments to the Election Act to compel the printing of the name of the publisher or printer on all election literature; (9) Recommending a new Workmen's Compensation Act similar to those in force in other provinces.

Legislative Program of Organized Labour in Manitoba

The Manitoba provincial executive of the Trades and Labour Congress of Canada and the executive of the Winnipeg Trades and Labour Council composed a delegation which waited on Premier Bracken and members of the provincial Cabinet and presented the following memorandum on proposed labour legislation:

A Child's Welfare Act which would provide for (a) Mothers with one child; (b) Mothers whose husbands are confined to Public Institutions, or physically unable to support the family; (c) Mothers who have been deserted for a period of five years; (d) That a substantial increase in the appropriations for the carrying out of this Act to allow for more liberal treatment for those coming under this Act; (e) To prohibit the employment of women for a period of two months before and two months after childbirth, maintenance to be paid out of fund provided by the Government; (f) That a clause similar to that of the Ontario Act be placed in the legislation so that mothers moving from other provinces to Manitoba or from Manitoba to other provinces may share the benefits of the legislation but such provinces must have passed legislation enabling reciprocal action.

An eight hour day and forty-four hour week for all industries.

An act to establish the one day's rest in seven.

An amendment to the Minimum Wage Act so as to make it apply to boys under 18 years of age.

A liberal appropriation for the enforcement of the Building Trades Protection Act.

Amendments to the Amusement Act so that licenses for moving picture machine operators shall be granted to men only.

An act to provide for Compulsory Public Liability Insurance for automobile owners.

Larger exemptions under the Income Tax Act for both householders and non-householders and with an additional exemption of \$400 for each child.

The placing of additional taxation on all motor vehicles using the highways, and that drivers of such motor vehicles be required to pass a qualifying examination.

Greater precautionary measures for crossings at railway grades and the ultimate elimination of such crossings.

Liberal appropriation to the Bureau of Labour for general safety-first inspection work.

That only licensed engineers be permitted to operate engines which are separated from the boiler.

Amendments to the Mines Act to provide adequate safety measures against silicosis poisoning, or miners' phthisis and accident prevention.

The creation of a Labour Department with a minister and deputy to administer same.

The appointment of a commission to bring in recommendations with a view to establishing regulations dealing with accident prevention.

Congratulating the government on its intention of introducing an Old Age Pensions Act during the present session of the legislature.

Organized Labour of Nova Scotia Presents Legislative Program to Government

A delegation composed of P. J. Healey, M. D. Coolen, and W. A. MacDonald, members of the Nova Scotia provincial executive of the Trades and Labour Congress of Canada, accompanied by a number of trade union representatives, waited on Premier Rhodes and members of his Cabinet on February 3, and laid before them labour's legislative program. The government was urged to introduce at the 1928 session of the Legislature an enabling Act to bring into effect in Nova Scotia the Federal

Old Age Pensions Act of 1927. Other requests were as follows: (1) That effect should be given to the Minimum Wage for Women Act of 1920; (2) A system of government control of liquor; (3) Amendments to the Workmen's Compensation Act; (4) The appointment of a boiler inspector; (5) That a fair wage clause be inserted in all provincial government contracts; (6) That a Provincial Department of Labour be established; (7) An eight-hour day clause in all provincial government contracts.

Legislative Proposals of Railway Brotherhoods in Canada

THE Canadian Legislative Board of the Railway Brotherhoods, composed of Messrs. L. L. Peltier of the Order of Railway Conductors; T. J. Coughlin, of the Brotherhood of Railroad Trainmen; Byron Baker, of the Brotherhood of Locomotive Engineers and William L. Best, of the Brotherhood of Locomotive Firemen and Enginemen, held a conference at Ottawa on January 23, with the Prime Minister, the Right Hon. W. L. Mackenzie King, and members of his cabinet, and submitted a memorandum of proposed legislation as follows:

1. Amendment of the Immigration Act by the repeal of Section 41, as enacted by Chapter 26 of the Statutes of 1919 (1st session). Section 41 provides for the deportation of persons advocating revolutionary methods, etc.

2. Repeal of sections 97a and 97b of the Criminal Code, as enacted by Chapter 46 of the Statutes of 1919 (1st session), relating to unlawful associations and to the printing and distribution of seditious literature. The memorandum expressed appreciation of the government's action in introducing in Parliament at the last session measures on the lines now proposed (LABOUR GAZETTE, May 1927, page 506), and deplored the senate's action in rejecting these bills.

3. Amendment of the British North America Act so as to restrict the powers of the senate to reject any measure passed by the House of Commons more than twice. It was claimed that the action of the senate at the last session, in rejecting bills on the lines proposed in paragraphs 1 and 2, furnished sufficient reasons for granting this request.

4. Amendments to the Dominion Elections Act so as to extend the hours for advanced polls for railway employees, sailors and commercial travellers.

5. Protection at highway crossings of railways at rail level. To this end the memorandum stated:—

(1) that there is only one sure remedy for the level crossing hazard, namely, separate the grade crossing by placing the highway over or under the railway. This may involve considerable expenditure and it is not expected that the work of grade separation on over 30,000 level crossings in Canada can be accomplished in one or two years. Definite action should be taken, however, if the conservation of human life is to have first consideration.

(2) That pending complete separation or elimination of highway crossings with the railway, protection should be provided, (a) by watchman (b) by gates, (c) by bell signals, preferably of the wig-wag type, or (d) by some form of signals or other means which will require drivers of all vehicles to stop, or at least

slow down before passing over level crossings, unless absolutely sure of no danger thereat.

(3) That every Highway Department adopt and make effective a policy of restricting the improvement of any highway nearer than 700 feet on either side of the railway, where such is a level crossing. This would result in slowing down traffic before crossing the railway and in stimulating public thought, especially of drivers of motors and other vehicles to the dangers and unsafe practice of maintaining level crossings, the desirability for their elimination, and the importance of slowing down before crossing the railway.

(4) That any further financial aid from the Federal government for the construction and improvement of highways shall be subject to the provincial government receiving it, giving an undertaking to eliminate any level crossing, where practicable, on highways where such Federal aid is used, by making use of the Railway Grade Crossing Fund provided for in section 262 of the Railway Act. (Revised Statutes of Canada, 1927, chapter 170).

(5) That with a view to a broader application of the provisions of the Railway Act in the matter of grade separation or level crossing protection, section 262 be amended as follows:

(a) In subsection (1) strike out the limitations now existing with respect to highway crossings of the railway at rail level constructed since April 1, 1909. (This subsection provides that sums set apart for safety construction work at crossings at the date mentioned are to be placed in the Railway Grade Crossing Fund).

(b) Amend subsection (5) to provide for a grant of \$500,000 (instead of \$200,000) each year for ten consecutive years from the first day of April, 1928, to be expended for the purposes mentioned in the Act.

6. Amendment of Section 311 of the Railway Act by extending from five to ten minutes the time beyond which a train must not obstruct a highway crossing. The chief reasons for this request and the desirability of some change are, the long trains handled by the modern locomotive, with the impracticability of all operations being made without obstructing highways longer than five minutes, and the convictions taken against and fines imposed upon railway employees by reason of being unable to comply with the provisions of the Railway Act, as at present.

7. Amendment to the Railway Act to provide for the establishment and maintenance of a Division of Locomotive Inspection of the Board of Railway Commissioners for Canada, to be under the direction and supervision of a competent Chief Inspector, preferably appointed from the ranks of locomotive engineers, and the appointment of a sufficient number of division inspectors to adequately supervise and inspect the condition of locomotives and tenders, boilers and appurtenances on all lines of railway under the jurisdiction of the Parliament of Canada.

8. Amendment of the Railway Act by requiring that all reports on accidents shall be made accessible to the accredited representatives of the employees concerned.

9. Amendment of the Railway Act to ensure a more strict observance of orders and regulations of the Board respecting safety equipment, the operation and maintenance of railways, and to give broader powers to inspectors to enforce said orders and regulations.

10. That an appropriation be made to the Board of Railway Commissioners for Canada,

sufficient to defray expenses for consolidating and printing orders, rulings and regulations of the Board relating to operating matters on the railways, at least every five years.

11. Amendment of the Technical Education Act to ensure the continuance of the annual appropriation therein provided for promoting and assisting technical education in Canada, for another ten years.

12. Repeal of the Sales Tax and continuance of the Income War Tax Act.

District 18, United Mine Workers of America

THE convention of District 18, United Mine Workers of America, was held in Calgary, January 11-12, 1928, with delegates present from the various coal mining centres of Alberta and Northeastern British Columbia, representing, it was stated, about 2,000 members of the union. After briefly addressing the delegates assembled, president Robert Livett, appointed the various committees. The provisional officers submitted a joint report on conditions existing in the mining territory known as district 18, in which it was pointed out that "as the time is fast approaching when our present working agreements will expire, your committees will be formed for the purpose of placing your demands before the operators for their consideration and action." The report further stated that "the men who broke

away from the United Mine Workers of America have not maintained the working conditions or wages secured for them by the United Mine Workers of America, and have retrograded in their experiment with a so-called Canadian union. It is obvious that such actions acted as a detriment to the interests of the miners as a whole."

The wage scale committee which was appointed at the opening session, brought in their report, which, after a thorough discussion in which it was taken up clause by clause, was adopted as a whole. A resolution asking the International office to grant that the International assessment now in effect be turned over to the district to help in negotiations and future organization, was adopted.

Proposed Amendment of Ontario Workmen's Compensation Act

A deputation representing labour organizations in Ontario held a conference at Toronto on February 1 with the Attorney General of the province, suggesting various amendments to the Workmen's Compensation Act. The principal changes proposed were in line with the recommendation contained in the report of a special committee of the Trades and Labour Congress of Canada, which was unanimously adopted at the annual convention of the Congress held at Edmonton in August, 1927 (LABOUR GAZETTE, September, 1927, page 973). Similar requests have been placed before the legislature of Alberta (LABOUR GAZETTE, January, 1928, page 23). The deputation included W. L. Best, of Ottawa, chairman; John W. Bruce, Toronto; Thomas Coughlin, Ottawa; Humphrey Mitchel, Hamilton, chairman of the Ontario executive, Trades and Labour Congress; John Munro, Toronto; Tom Maguire, Toronto, and William Crawford, of the Brotherhood of Locomotive Engineers, Sar-

nia. Vice-President Halford and other members of the Workmen's Compensation Board attended the conference.

International Federation of Trade Unions

The official report of proceedings at the fourth ordinary congress of the International Federation of Trade Unions, which was held at Paris in August, 1927, was recently published at Amsterdam by the I.F.T.U. It contains not only the proceedings of the International Trade Union Congress, the conference of the International Trade Secretaries, and the International Conference of Trade Union Women, but also the full text of the addresses submitted to the Congresses on the various items of its agenda, and of the resolutions passed. Of these, mention may be made of the following:

At the International Trade Union Congress: The fight against war and militarism, the International campaign for the eight hours

day, the commercial, clerical and technical employees and the professional workers in the trade union movement, the organizational structure of the International Federation of Trade Unions, international assistance in strikes and lockouts.

At the International Conference of Trade Union Women. The protection of women

workers, the economic significance of women's work for wages, and homework.

This publication is valuable and interesting not merely to labour organizations, but also to politicians and economists of all shades of opinion. Canadian orders should be sent to the Publication Department of the Trades and Labour Congress of Canada, 172 McLaren street, Ottawa, Ontario, price \$1.25.

NOTES ON VOCATIONAL EDUCATION AND APPRENTICESHIP

Foreman Training Courses in the United States

A GREAT increase in the number of foreman training courses in practically all lines of industry throughout the country is shown in a survey report just issued by the Department of manufacture of the Chamber of Commerce of the United States. The number of foremanship courses, the bulletin states, has grown from 105 in 1925 to 933 in 1927. These figures, the Chamber's Department of Manufacture points out, indicate that foreman training is looked upon as an agency for greater efficiency in manufacturing.

Most of the increases in foremanship courses last year were in the larger industrial states. The outstanding increases for the year were recorded in Connecticut, Michigan and West Virginia. The first state increased from 3 to 46; the second from 5 to 73; and the last from 4 to 43.

Virtually every line of industry is represented in the foreman training movement. The machinery group, not including transportation equipment, has the largest number of courses. On the basis of the number of workers employed, however, the rubber products and chemicals and allied products groups are far in the lead.

The phenomenal growth of foreman training courses, the bulletin says, offers encouragement to those who appreciate the great value of human efficiency in American industry and are giving these efforts sympathy and support. No attempt has been made to evaluate types of courses or to suggest standards. Those who have them in charge have used initiative to get results, with due regard to the conditions to be met.

The great increase in courses within the short period from 1925 to 1927 bears eloquent testimony to the fact that to-day industry regards the trained foreman as a most important factor in management. The greater use of intricate and expensive machinery re-

quires not only better trained attendants but better selected and equipped foremen to lead the personnel for more effective production. Foreman training courses are being carried on by individual manufacturers, state universities, industrial vocational agencies, chambers of commerce and manufacturers' associations. Such work can be profitably conducted in any community having industrial plants.

Courses of Instruction for Fishermen at Halifax, Nova Scotia

The first course of instruction for *bona fide* fishermen ever conducted in Canada is now well under way at the Fisheries Experimental Station at the King's Wharf, Halifax, where twenty fishermen students from different parts of the Maritime Provinces are daily attending the lectures of the course and practising fish curing methods. The course, which is of six weeks' duration, opened January 18. All the lectures, except those on boat engines, are given at the station, those on boat engines being given at another building for the purpose of demonstrations. The students are all between the ages of seventeen and thirty-five years, and the staff of the station, including Dr. Huntsman, the Director, Dr. H. R. Chipman, Dr. A. H. Lein, E. Hess, E. W. Mitchell and Robert Gray are all participating in the instruction and demonstrations for the benefit of the young fishermen seeking knowledge. Lectures are also being given by Professor Longley, of the Agricultural College, who speaks on co-operation and marketing, by Professor Gowanlock, a member of the Biological Board, by Captain O'Hara, of the Nova Scotia Technical College, who lectures on navigation, by Professor Walker, of King's College, who lectures on Economics; and by Mr. Anderson, of Yarmouth County, who demonstrates and instructs on the subject of dry and boneless fish.

The students have complete demonstrations in fish curing from the moment the fresh

fish come from the water to the time when the cured product is ready for the market. Fish are brought to the station freshly caught and are put through the curing processes by the student fishermen under expert direction, so that before the completion of the course the young fishermen will have practical illustrations of the success of the methods of curing which they had been taught. Instructions are given on fish salting, drying, pickling, and boneless preparation, etc. Lectures are given in elementary science, applicable to the fisheries, life history of fish, navigation as necessary for prosecution of the fisheries, co-operation, marketing, geography, history, etc., and the course is apparently giving as much satisfaction to the staff engaged in imparting it as to the students who are devoting the most striking attention to the lectures, instructions and demonstrations.

Fruit Culture Short Course in British Columbia

A two-weeks' course on fruit and vegetable growing, ornamental gardening, insect and disease control has recently been started at the University of British Columbia, under the auspices of the faculty of agriculture. There will be four one-hour lectures each day, commencing at 9 a.m.

The subjects of the program are extremely varied and include such topics as the opportunities for fruit and vegetable growing in British Columbia, hot beds and cold frames, the culture of berries of all kinds, propagation, training and pruning of small fruits, selecting and handling of nursery stock, selection of fruit varieties, fertilizers, field practice in pruning, farm storage and spring flowering bulbs, making and applying spray mixtures, etc.

Agricultural-Vocational School at Ridgetown, Ontario

In 1921 the Ontario government purchased a farm of 186 acres, part of which was within the corporation of Ridgetown. Plans for a community hall in connection with the farm ripened into one for an agricultural school containing such a hall. The department of agriculture agreed to pay the cost of such a building as an experiment in agricultural education, and the department of education agreed to pay grants for equipment and teaching under the Technical Schools Act.

The building was ready for occupancy in September, 1926. It contains an assembly hall with capacity for from 350 to 400 persons, two standard classrooms equipped with six large tables and each seating 24 students,

a chemistry laboratory and a household science room.

The new school and the high school—only 100 feet away—are operated under one principal and one staff. Students of 14 years or over are allowed to enroll without passing the high school entrance, but this is not encouraged and most of the students have full entrance standing. Ages range from 12 to 16 on entering, and enrolment is not confined to rural pupils only. This year, out of a total of 65 enrolled, 25 are from town, 12 of whom are girls taking the household science course.

As to curriculum, it is intended to cover in four years a course equivalent to junior matriculation in English, history, mathematics and science. The boys will receive instruction in agricultural subjects, such as horticulture, field crops, animal husbandry, bee-keeping, botany, entomology, poultry, farm mechanics, economics, farm management and farm book-keeping and bacteriology. The girls receive instruction in household science, cooking and sewing. They also have work in bacteriology, dairying and horticulture. All the students are given training in English, history, junior mathematics, chemistry and physics.

In addition to the regular course, a winter course has been instituted in which last year 22 young men enrolled. The course continued for three months with an average attendance of 17. This course will be held again this year.

Wide Registration in Central Technical School, Toronto

The Advisory Vocational Committee of the Board of Education, Toronto, recently received a report on the number of non-residents at the Central Technical School, which showed that pupils in this school came not only from all over Ontario, but that one was from Jamaica, another from Moose Jaw, a third from Portage la Prairie, and the home of another was Dorchester, Nova Scotia.

Technical Education in South Australia

South Australia has a well-developed system of technical training of apprentices. The Printers' Trade School is now housed in a commodious modern building in Adelaide. There are ten high-grade technical schools in the metropolitan area and the country, and seven junior institutions in the industrial centres. These give pre-vocational instruction, and there are also specialized trade schools, in addition to technical classes at the School of Mines and the School of Arts and Crafts. The range of teaching covers practically every

trade. During 1926, the number of students enrolled was 3,564, and there were also 500 younger apprentices and probationers. The education department has fourteen woodworking centres where special courses of training are given, and 209 small country schools where the pupils are taught handicrafts.

The largest technical school is close to the city and is a direct link between the primary school and the university. For those unable to go to the university, it is the link between the primary school and apprenticeship, and any boy who has passed the qualifying certificate examination is eligible to enter. The course extends over four years and includes instruction in English, French, civics, industries, economics, arithmetic, mensuration, algebra, trigonometry, physics, chemistry, free drawing, geometrical, mechanical and building drawing, modelling wood work, sheet-metal work, blacksmithing and fitting and turning.

One of the chief factors which led to the establishment of the technical schools was the shortage of skilled craftsmen in almost every

branch of industry and the difficulty of properly training apprentices under modern workshop conditions. To further the project, the government intends to introduce fresh legislation during the present session of parliament. In the large central technical schools, only boys who are already apprenticed to trades are taken. They usually begin there between the ages of fifteen and a half and sixteen years. They are required to attend the school for one evening a week in their leisure time, and the employer is required to allow the apprentice one half day a week, with pay, during working hours for school instruction.

The education department provides the cost of teachers, equipment and schooling. All the instructors in the various schools are skilled tradesmen. They meet the boys on their own ground, and their teaching is imbued with a strong note of common interest. Employers generally are loud in their praise of the scheme, knowing that in the end they will materially benefit from the work of the skilled tradesmen.

EMPLOYEES' BENEFIT SCHEMES IN CANADA

Pension Fund of British Empire Steel Corporation

IN the LABOUR GAZETTE for March, 1926, pages 237-9 provisions of the Pension Fund established by the British Empire Steel Corporation were given in detail. The fourth annual report of the operations of this Pension Fund for the period ending December 31, 1927, indicate that during that year pensions were granted to 77 new cases, making a total of 350 cases since the adoption of the scheme on October 1, 1923. A total of \$251,163.78 has been paid out to pensioners of the various companies since the inauguration of the Fund, the average monthly pension granted since the commencement being \$29.05. Pension disbursements during 1927 totalled \$96,775.17, with an average monthly pension for the year of \$31.60.

Since the adoption of the Fund, pension was discontinued in one case because the pensioner had returned to active service; 44 had been removed by death (4 during 1924, 12 during 1925, 13 during 1926 and 15 during 1927),

leaving 305 names on pension payroll at December 31, 1927.

There were 22 employees (28.5 per cent) retired after fifty or more years of service, and 8 of these with from 55 to 60 years of service.

Of the eight employees with over 55 years of service two had been in service for 60 years, two for 57 years and two for 56 years. The remaining two had served for 55 years and 59 years, respectively.

In two cases the maximum pension of \$75 per month was granted; in two cases pensions of \$70.75 and \$63.75 per month were granted; in five cases the pension exceeded \$50 per month; in nine cases the pensions granted were from \$40 to \$50 per month; in twenty cases the pensions granted were from \$30 to \$40 per month, and in thirty-nine cases the pensions granted were less than \$30 per month.

The Pension Committee were compelled to refuse some applications for pensions that were plainly outside of the requirements of the pension rules.

For the 77 cases granted during 1927, the averages were as follows:—

	Cases	Age	Service	Pension
Dominion Coal Company, Limited.....	41	69.5	43.7	\$ 34 40
Nova Scotia Steel and Coal Co., Ltd., (Sydney Mines).....	6	68.8	38.9	25 85
Acadia Coal Company, Limited.....	1	63.0	37.0	75 00
Cumberland Railway and Coal Co., Ltd. (Springhill).....	14	67.3	37.8	29.00
Dominion Iron and Steel Co., Ltd.....	11	70.5	26.0	26 45
Nova Scotia Steel and Coal Co., Ltd. (New Glasgow).....	3	70.5	31.5	25 50
Halifax Shipyards Limited.....	1	65.0	40.0	20 00
	77	69.0	39.2	\$ 31 60

Service Record of Pensioners is shown in the following table:—

	Service

International Nickel Company's Employees' Benefit Scheme

In order to provide a uniform method of granting pensions to employees of the International Nickel Company, Limited, who, after long periods of faithful and conscientious service, are no longer able to perform their duties by reason of old age or physical incapacity, the board of directors have voted to establish a retirement system. This company employs over 2,000 workers in Canada, besides those employed by the subsidiary companies referred to below.

A pension system already existed, but this did not include all the employees, and was not considered to be on a sound actuarial basis. Under the new plan no contributions are required from any employee, and the entire cost of the plan is met from company funds. The company does not guarantee to continue the grant benefits in accordance with the provisions of the retirement system, or obligate itself to set aside any special funds to take care of future pensions, but it has created the new pensions system with the intention of continuing it indefinitely, and has had an actuarial valuation made to determine what the probable cost to the company will be of the future benefits provided by the retirement system.

All regular employees of the International Nickel Company are eligible for membership, and all employees of certain subsidiary or affiliated companies provided the board of administration and the board of directors of the company by which the employees are directly employed approve.

The system provides for: (1) a service retirement benefit; (2) disability retirement

benefit to any member with over ten years of service who becomes totally and permanently disabled from any cause; (3) Death benefit payable on the death of a pensioner.

Service Benefit.—The minimum age for retirement on a service pension is 65 for men and 60 for women, with the further provision that a member who asks to retire must have completed 20 years of service. All employees will be retired at age 70 unless they request to be retained in the service and the request is approved by the company.

Upon service retirement a member receives a pension equal to 1½ per cent of his average annual pay for his last five years of service multiplied by the number of his years of creditable service (meaning service before and after the establishment of the system which may be credited under the rules) plus a flat pension equal to \$6, multiplied by the number of his years of creditable service. For example, to calculate the pension of a member who has had 30 years of service and whose average pay for the five years preceding retirement is \$2,000, take 1½ per cent of \$2,000, which is \$30. Add to the \$30 the flat pension of \$6 for each year of service, making a total of \$36, and then multiply by the years of service, or 30 years, which gives a total pension of \$1,080 per year.

Disability Benefit.—If a member, having completed ten years of creditable service and before becoming eligible for retirement on a service pension, becomes permanently and totally disabled, he may be retired upon a disability pension. Upon disability retirement a member receives a pension based on his

compensation equal to 1½ per cent of his average annual pay for the last five years of service multiplied by the number of his years of creditable service, plus a flat pension equal to \$6 multiplied by the number of his years of creditable service. Employees who are disabled before completing 15 years of service receive as a minimum the pension which would be payable after fifteen years of service. The minimum does not apply to employees who did not enter the service of the company until after reaching age 50.

Death Benefit.—Upon the death of a member in active service, after one year of service, a death benefit of \$500 will be paid to his beneficiary, or if the designated beneficiary is not living, to such persons as the board of administration shall determine. If the member leaves dependents an additional death benefit is provided. The amount of this benefit is equal to a lump sum payment of 10 per cent of the average annual pay of the member for the last five years of service preceding death, multiplied by the number of his years of creditable service not in excess of five years.

Pensioner's Death Benefit.—Upon the death of a pensioner a death benefit of \$500 is payable. In addition, any pensioner may at the time of his retirement elect to receive instead of his full pension, which would stop at his death, a somewhat smaller pension and to have part of this smaller pension continue after his death to his widow or other nominated beneficiary.

Pensions now being paid to former employees will be continued under this retirement system at the same rate as is now being paid. At the death of a pensioner retired prior to January 1, 1928, a \$500 death benefit will be paid which is the benefit allowable to beneficiaries of deceased pensioners under the new retirement system.

Pensions for Civic Employees in British Columbia

In the *LABOUR GAZETTE* for November, 1927, pages 1175 and 1176, reference was made to the subject of employees' superannuation in Canada, and to the provision of the British Columbia Superannuation Act, which were outlined also in the issue of the *LABOUR GAZETTE* for February 1924, page 127. Recently three new municipalities—Nelson, North Cowichan and Chilliwack—have decided to adopt the provincial superannuation scheme for municipal employees. Altogether twelve municipalities have adopted the provincial scheme for the benefit of their employees. It is estimated that at the beginning of 1928 over 1,300 municipal employees were under the operation of the Superannuation Act. When all civic employees accept the arrangement, approximately 3,000 municipal workers will benefit under the act.

The British Columbia Teachers' Federation is now aiming to secure similar privileges for its members. The organizations of school teachers in Alberta and Saskatchewan have recently asked for pension legislation from the Legislatures of their respective provinces.

Canadian Construction Association

The tenth annual convention of the Association of Canadian Building and Construction Industries (henceforth to be known as the Canadian Construction Association) was held at Winnipeg from January 31 to February 3, 1928. A considerable number of important subjects were discussed, among these being the question of winter construction. Prefacing this discussion, there was a paper by Mr. A. J. Bonnett entitled, "Taking the Sting Out Of Winter Construction." Following it considerable discussion ensued as to winter building practice in all parts of Canada. A British Columbia delegate pointed out that conditions on the Coast and on the prairies are entirely different, and that wetness is the difficult feature that has to be contended with in the Pacific province. Another delegate cited an instance of chimney construction in severe weather and contended that brick work could be as satisfactorily carried out in winter as in summer. He also argued that more winter work is needed and that supply houses ought to give a discount in order to encourage it.

Considerable discussion developed as to the extra cost of cold weather building, opinions varying from 3 to 10 per cent. One delegate declared that while winter construction might cost more, 75 per cent of the unemployment could be eliminated. Another delegate pointed out that a greater volume of building in the cold weather months would help the brick manufacturer by enabling him to dispense with piling of his brick. It was also suggested that contractors handling winter concrete work would be well advised to purchase enough canvas sheets to cover the whole slab and thus prevent snow and water getting in the forms and on the reinforcing.

Technical training formed a topic of discussion at one of the sessions. This subject will be dealt with in detail in a future issue of the *LABOUR GAZETTE*.

It was decided to change the name of the organization to the Canadian Construction Association and authority was given to take the necessary procedure to have the charter altered.

Mr. S. E. Dinsmore, of Windsor, Ontario, was elected president for 1928.

LEAGUE OF NATIONS INTERNATIONAL LABOUR ORGANIZATION

THE first day of the New Year was marked by the bringing into operation of two measures of considerable interest to members of the International Labour Organization—one affecting hours of work in Germany, and the other affecting slavery in Sierra Leone.

In Germany, by the coming into force of an Order issued last July, the eight-hour day has been extended to further classes of workers employed in the iron and steel industry. The Government agreed last month to limited postponements in the case of certain works which cannot be adapted to the three shift system without costly reconstruction; but the Government declined to yield to appeals for a general prolongation of the respite.

In Sierra Leone, by an ordinance passed by the Legislature last September, the legal status of slavery was abolished throughout the Protectorate, and upwards of 200,000 domestic slaves were at liberty, as from January 1, to leave their former masters if they so desired. It will be remembered that this matter received some attention at the Eight Assembly of the League of Nations, and that the representative of the British Government explained to the Assembly that urgent measures were being taken to eliminate from the law the recognition of domestic servitude revealed by an unexpected legal decision.

Ratification of Conventions

Up to the end of 1927 the total number of ratifications registered, including conditional ratifications, was 248. The States which ratified the largest number of Conventions during the year were the Serb-Croat-Slovene Kingdom (twelve) and Belgium (five).

Belgium, the Netherlands and Great Britain are the first to register ratification of Conventions adopted in 1926 and considerable progress has been made towards ratification of these Conventions by other States.

In Germany the ratification of the Conventions concerning sickness insurance adopted by the Tenth Session of the Conference in 1927 has already been authorized by Parliament.

In the Grand Duchy of Luxemburg, a Bill has been submitted to the competent national authorities proposing the ratification of all the twenty-five Conventions adopted by the International Labour Conference.

The Washington Hours Convention has been conditionally ratified by France, and two Conventions adopted in 1925, concerning workmen's compensation for accidents and work-

men's compensation for occupational diseases, have come into force in virtue of the registration of the requisite number of ratifications.

The Scientific Work of the International Labour Office

Industrial and Labour Information, the weekly publication of the International Labour Office, gives a brief survey of the scientific work of the Office in its issue of January 2. It is pointed out that the work of the Office in promoting social legislation, of which the continued progress of ratifications is a tangible sign, is supplemented by scientific enquiry and research work which it is more difficult for those outside the Office to keep track of even approximately.

Legislation.—In this field, the Office compiles yearly in the *Legislative Series* a record of the legislation in force in each country, and in its *International Survey of Legal Decisions on Labour Law*, records decisions which are likely to establish precedents. It also compiles collective agreements between workers' and employers' organizations determining conditions of Labour.

Freedom of Association.—The first volume of an extensive study on "Freedom of Association" containing a comparative analysis of the legal status of trade unions in different countries, has already appeared. Four other volumes are to follow in the near future containing detailed monographs on the legal position of associations in each country. The Office has also prepared several monographs on the settlement of industrial disputes by conciliation and arbitration in various countries and published in its "International Labour Review" an introductory essay on the subject in general.

Conditions of Labour.—Much information has been compiled as to wages and hours of work in the mines of the principal coal-producing countries, and the "enquiry into conditions of work in mines" is nearly finished. The Office carries on periodical enquiries in an increasing number of capitals into the "Level of real wages," i.e., the relative value of wages resulting from comparison of nominal wages with prices. The compilation of information on "methods of fixing minimum wages" is being continued in preparation for the 1928 Session of the Conference. Other studies deal with legislation relating to the employment of women before and after childbirth, and the employment of children in

cinematograph studios, and with the questions of hours of work of salaried employees, paid holidays, and other related matters. The problems of vocational guidance and the training or vocational re-education of cripples and backward and abnormal individuals, are also being investigated.

Economic Problems.—Studies were prepared for the International Economic Conference on the standard of living of workers in various countries, on the efficiency of workers in the coal mining industry and in the building trade, on the comparison between the retail prices in private trade and those of distributive co-operative societies, and on the part played by co-operative organizations in the international trade in wheat, dairy produce and some other agricultural products, on the principal forms of co-operative relations between producers and consumers of agricultural products, and on the relation of labour cost to total costs of production in agriculture.

Social Insurance.—In addition to the reports already published on sickness insurance two substantial volumes will be published very shortly dealing respectively with compulsory and voluntary sickness insurance. Studies have been made also on the relation between the development of unemployment and the general movement of prices, statistics of migration, the history of migration movements from their beginning, regulation of migration, legislation relating to the migration of the yellow race, the covering of vocational and social risks of persons employed in aviation, the rights of salaried inventors, statistics of industrial accidents, accident prevention, etc., etc.

Maritime Questions.—In preparation for the Maritime Session of the Conference in 1929, research has been undertaken in the regulation of hours of work on board ship and the improvement of living conditions of seamen in ports. The Office is also carrying on a general investigation into the conditions of work in the fishing industry. A survey of legislation relating to maritime labour has been published and a study has been begun of systems of protection of seamen in case of disease or accident. At the request of the League of Nations an investigation into the conditions of work in inland navigation has been undertaken.

Projected Studies.—The International Labour Office is already called upon to assume further tasks. There will a study on labour contracts and a new report on the fluctuation of wages during recent years. There will also be a study on family allowances and an extensive report on the utilization of workers' spare

time. The question of standardization of industrial hygiene is to be attacked also, together with a great number of other questions.

Publications of the Office

In preparation for the Tenth (1927) Session of the International Labour Conference, at which Draft Conventions and a Recommendation relating to sickness insurance were adopted, the International Labour Office compiled a Report on the subject, which has been published under the title "Compulsory Sickness Insurance." Its original purpose was to provide delegates with accurate information as to the present state of legislation in different countries, so as to enable them to appreciate the effort required in each country in order to bring legislation into harmony with the Draft Conventions, to decide whether such an effort could be made and to adapt the text of the Draft Conventions and Recommendations to the possibilities of the great majority of countries.

The Report consists of six parts, dealing with the fundamental aspects of compulsory sickness insurance: scope; benefits, resources and financial administration; institutions and managing bodies; disputes, jurisdiction, infringements and penalties; and the position of foreign workers. The same method has been followed throughout. The problem is first analysed; then the various possible solutions are described and national legislation classified according to the solutions adopted; finally, an analysis of national legislation and its results is given.

The use of this method has made it possible to give both a general survey showing the place of the various systems in the movement of ideas and the development of institutions, and at the same time to describe the legislation of each country in sufficient detail to preserve its peculiarities. The work contains neither a complete body of social theory nor a complete reproduction of the legislation of each country, but a systematic summary of the ideas which have led to positive solutions and an analysis of the essential features of the system of each country.

In order to show the results of various systems, an effort has been made to compile statistics for a fairly long period; wherever possible, data have been given from a normal pre-war year, preferably 1913, to 1925 inclusive. The national statistics, which are compiled on the basis of legislation in force, differ widely in method from each other. While no attempt has been made to render them strictly comparable, they have been presented system-

atically by classification and comparison on points of the greatest international interest.

Each part of the volume is supplemented by a comparative international table of texts and statistics, showing the most important provisions of national legislation and giving

at a glance the essential features of its development. At the end of the volume is a list of 350 laws and regulations and 220 reports of various kinds, written in some 15 languages, which were used in the compilation of the report.

OCCUPATIONS OF INDIANS IN CANADA

THE annual report of the Department of Indian Affairs for the year ended March 31, 1927, states that the Indian population of Canada is fairly stable at about 100,000. Among the less civilized groups, the high birth rate balances the high death rate, but in the civilized tribes, who have met and withstood the first shock of contact with civilization, there is an appreciable gain, not only in numbers, but in physical standards.

There were 77 residential schools and 250 day schools in operation during the past year—a total of 327 Indian schools. In addition, the department assisted in the maintenance of 16 combined white and Indian schools. The total enrolment for 1926-27 was 14,710 and the average attendance 10,541.

The chief occupations of the Indians in the various provinces are described as follows:—

The Indians in the western and central parts of Ontario engage largely in farming. During the summer months Indians find a profitable source of income as guides and canoe-men. Many are employed at various industries and trades, while railway and navigation companies employ a large number. As a rule they are excellent bushmen and many find employment in the various lumber camps. There is still an excellent market for snowshoes, canoes, and moccasins, and these are usually manufactured by the other members of the community. The women also have many sources of income; some are employed as domestics; others support themselves by making baskets and fancy work. In certain districts berry-picking is an important item and furnishes considerable income.

In the agricultural districts of Quebec the Indians are developing a keener interest in farming operations and are making a decided success. In the Gaspé peninsula Indians find employment in the lumber camps and mills, but on the north shore of the gulf, fishing, hunting and trapping are still the principal sources of income. In the northern part of the province lumbering is the chief pursuit. One of the principal industries of the Indians of Quebec is making baskets, and many of the Indians spend the summer months at the resorts in order to dispose of the baskets,

lacrosse sticks, racquets, moccasins, etc., to the tourists. Some of them, particularly in the Saguenay district, act as guides and canoe-men. In the more remote districts, where hunting and trapping are still the principal occupations, the Indians necessarily live in tents during the greater part of the year. Along the north shore of the gulf of St. Lawrence, the Indians have been taking a marked interest in the fishing industry. Salmon and cod are the principal marketable fish, and are a source of considerable income to the Indians. The land is not suitable for extensive cultivation, but many of the Indians have very creditable gardens.

In the northeast division of New Brunswick the Indians are mostly engaged in fishing, hunting and trapping. Some farming is carried on, and the Indians have rather tended to increase their interest in this regard. The lumbering industry employs quite a large number and the Indians all through the eastern provinces have become very proficient in the lumber camps, on the river drives and in the mills. In the Northern division there is less farming carried on, and the Indians during the summer find employment generally as day labourers. In the Southern division they support themselves chiefly by the manufacture and sale of Indian wares.

In Nova Scotia the Indians follow various occupations, but as a rule, do not confine themselves to any particular one. Many of them cultivate the land with indifferent success, but as there are exceptions in almost every case, so it is with our Indians; a few of them are succeeding very well as farmers. The majority of those living near industrial centres usually work as day labourers. Hunting, trapping and acting as guides for sportsmen are favourite occupations, more especially with Indians of middle age. Basket-making and the manufacture of fancy moccasins, etc., are confined mostly to women. A profitable employment among Indians in a few sections of Nova Scotia is the manufacture of hockey sticks, and they appear to be experts at the business.

But few of the Indians of Prince Edward Island are farmers. The principal industries

are basket-making and fishing. The oyster fisheries, which had been a complete failure for some years, are again profitable and have added somewhat to the income of the Indians.

In Manitoba, in the northern agencies the occupations are mostly hunting and trapping, but fishing has been becoming a more and more important factor during the past four or five years, and considerable income has been derived therefrom. While fur has been scarce the price has been high and the market for fish has increased. All of the northern Indians are expert guides and canoe-men, and many find employment in this way or with the transport or fur companies. In the southern and more settled districts many of the younger people seek employment as day labourers, and owing to the high wages have been fairly prosperous. The Indian women make needle work, baskets, etc., for which there is a ready market.

The principal occupation of the Indians of Saskatchewan is mixed farming and stock-raising. The close supervision which the department has had over these Indians has tended to greatly improve their method of farming and consequently their crops and income derived from them have greatly increased. Most of the Indians are well provided with good quality of machinery. As a rule they have good stock and suitable houses. In the outlying districts, however, hunting and trapping are still the main sources of income and will so remain until civilization encroaches upon the hunting grounds.

The principal occupations of the Indians of Alberta are farming and stock-raising. Almost all the reserves in the settled districts of the province have large herds of horses and cattle. In the northern parts of the province hunting and trapping are still almost the sole sources of income; there is practically no farming carried on and the construction of steamers on the Peace and Athabasca rivers, and of the railways to Peace River Crossing and Fort McMurray, have greatly lessened the wages of the Indians with the trading companies and transports. However, the price of fur has been even higher than in past years.

The occupations of the Indians of British Columbia vary with their habitat. The Indians situated along the coast earn their livelihood principally by fishing. In many instances they own their own motor-launches, nets and gear, while others are supplied by the various canneries. Many of the women are also employed in the canneries or in the hop fields, and make a very steady income. The Indians of the Queen Charlotte islands own and operate their own small plant for rendering the oolachan or candle fish. In the inland parts of the province some farming operations are carried on and particularly

in the irrigated districts grain, fruits of all kinds, and vegetables have been raised with success. These Indians have been making marked progress in this regard and are now well equipped with modern machinery. The Kootenay, Kamloops, Okanagan and New Westminster Indians own large herds of horses and cattle. While the Indians in the northern and remote parts of the province still depend upon hunting and trapping for their livelihood, the agents report a marked improvement in their manner of living.

The Indians in the northern sections of the Northwest Territories depend entirely upon hunting and fishing. A few have been induced to raise small plots of potatoes. They own no horses or cattle, transportation being almost entirely by canoe along the great waterways, or by dogs in winter. They catch and preserve large quantities of whitefish for their own use and for consumption by their dog-trains in winter.

Hunting, trapping and fishing are the chief occupations of the Yukon Indians, and they have been fairly successful during the past year. The women also derive some revenue from the sale of moccasins and curios of various kinds, while the men are expert at making toboggans and snowshoes. Practically no farming is carried on owing to climatic conditions, but some of the Indians cultivate patches of potatoes and other vegetables.

Regulation of Immigration in South America

Dr. Amadeo E. Grandi, director-general of the Argentine immigration department, has recently visited Brazil in connection with a proposal for the adoption of standardized and parallel measures for the supervision of immigration into Brazil, Argentina and Uruguay. In published statements he claimed that there was no risk of competition between Argentina and Brazil as regards immigration, as the number of European workers, whether unemployed or not who are at present prepared to emigrate to these two countries, is far greater than the number which can be absorbed. Moreover, in Brazil and even in Argentina, there are a certain number of unemployed workers, estimated at over 300,000 for the latter country, which is to be attributed not to the shortage of work, but to the fact that the workers in question are not suited to the local conditions of employment. He considered it necessary for the immigration countries of South America to establish a systematic selection of the migrants who wish to enter these countries in order to eliminate various elements which cannot be assimilated or are undesirable for economic, political, or social reasons.

Number and Wages of Masters and Pilots in 1926-27

The annual report of the Department of Marine and Fisheries for the fiscal year 1926-27 states that the Masters' and Seamen's branch issued during the year 18 masters', 34 mates' and 31 second mates' seagoing certificates of competency; 66 masters' and 98 mates' coasting certificates of competency; 28 masters' and 63 mates' inland waters certificates of competency; 27 masters' and 22 mates' minor inland waters certificates of competency; 2 masters' service coasting certificates and 36 masters' temporary certificates.

Thirty-one thousand eight hundred and sixty-nine seamen were shipped and 27,413 seamen were discharged at seaports. The Director of Pilotage reported as follows:—

District of Montreal.—On the opening of navigation there were 51 pilots and 10 apprentice pilots in this district. Four pilots were ill the greater part of the season, leaving 47 pilots who worked throughout the year; 10 new apprentice pilots were appointed. This leaves 51 pilots and 20 apprentice pilots on March 31, 1927.

The gross earnings of all pilots were \$257,325.37, as compared with \$249,201.21 for 1925 and \$229,006.51 for 1924. The average earnings of the 47 pilots who worked all season were \$5,170.71, as compared with \$5,357.68 for 1925.

In this district 5 per cent of the gross earnings of the pilots is deducted for the Pension Fund (Montreal Decayed Pilots' Pension Fund), which fund is administered, without charge, for the Montreal pilots by the Department of Finance. On March 31, 1923, the fund amounted to \$30,305.77; on March 31, 1927, it amounted to \$97,923.56.

District of Quebec.—There were 49 pilots and 19 apprentice pilots in this district on the opening of navigation. Two pilots and one apprentice resigned during the season; three new apprentices were appointed. This leaves 47 pilots and 21 apprentice pilots on March 31, 1927.

Of the 49 pilots who were on the roll at various times during the season of navigation 47 worked the whole season. The total earnings of all pilots were \$247,393.30 as compared with \$237,337.71 in 1925, and \$229,051.39 in 1924. The average earnings of the 47 pilots who were employed all season were \$5,171.12, as compared with \$4,578.88 in 1925.

In this district 7 per cent of the gross earnings of the pilots is deducted for the Pension Fund. This fund is administered by the Quebec Pilots' Corporation, and amounted on December 31, 1926, to \$101,599.01; on December 31, 1923, the fund amounted to \$93,359.33. In addition to the pension received from the corporation certain retired

pilots, 37 in number, received an annual allowance from the government of \$300.

District of Halifax.—There were 20 first-class pilots and 4 apprentice pilots in this district on the opening of navigation. The gross revenue for 1926-7 was \$96,281.85. The total expenses, including repayment on loan for building of new pilot boat, the upkeep of the two pilot tenders, and the amount paid into the Superannuation Fund, amounted to \$28,451.55, leaving a balance to be divided amongst the pilots of \$67,830. The average net earnings of each pilot who worked the whole season was \$3,420.

In this district 5 per cent of the gross revenue is deducted for the Superannuation Fund. This fund is administered, without charge, for the Halifax pilots by the Department of Finance, and on March 31, 1927, amounted to \$68,645.83; on March 31, 1923, this fund amounted to \$52,863.84.

District of St. John.—At the beginning of the season there were 14 pilots and 2 apprentices in this district. One pilot was retired towards the close of the year at the age of 69 years.

The gross revenue for 1926-27 was \$64,231 and the total expenses including the upkeep of the pilot tender and auxiliary motor launch, the repayment on loan made for purchase of pilot boat, and the amount paid into the Superannuation Fund were \$18,638.24, leaving a balance to be divided amongst the pilots of \$45,592.76. The average net earnings of each pilot who worked all season was \$3,418.92.

In this district 12 per cent of the gross revenue is deducted for the Superannuation Fund. This fund is administered, without charge, for the St. John Pilots by the Department of Finance; on March 31, 1927, the fund amounted to \$39,496.25; as compared with \$25,953.91 on March 31, 1923.

District of Sydney.—There were 21 pilots in this district at the beginning of the season. The gross revenue of the district was \$72,972.25, and the total expenses including the amount paid into the Superannuation Fund, the upkeep of the pilot boat, and the repayment on loan for the building of the pilot boat were \$18,920.42, leaving a balance of \$54,051.83 to be divided amongst the pilots. The average net earnings of each pilot who worked all season were \$2,628.86.

In this district 15 per cent of the gross revenue of the district is deducted for the Superannuation Fund, which is administered for the Sydney Pilots, without charge, by the Department of Finance. On March 31, 1927, the fund amounted to \$28,309.57, while on March 31, 1923, it amounted to \$12,646.39.

EMPLOYMENT SITUATION ON JANUARY 1, 1928, AS REPORTED BY EMPLOYERS MAKING RETURNS TO THE DOMINION BUREAU OF STATISTICS

THE seasonal curtailment in employment registered at the beginning of January, 1928, involved a rather larger number of workers than on January 1 of most years of the record, although the percentage loss was only slightly higher than in 1926 or 1925, and was smaller than in earlier years of the record. Employment in recent months has been maintained at an exceptionally high level, so that many employers took advantage of the oppor-

Manufacturing, construction, transportation and logging reported pronounced seasonal contractions, while coal mines registered improvement.

Employment by Economic Areas

All provinces recorded declines, those in Quebec and Ontario, where manufactures are an especially important factor, being most extensive.

EMPLOYMENT IN CANADA AS REPORTED BY EMPLOYERS

NOTE.—The curve is based on the number of employees at work on the first day of the month, as indicated by the firms reporting, in comparison with the number of employees they reported in January, 1920, as 100.

tunity of closing their entire plants during the holiday season for necessary repairs and inventories, as well as to provide a vacation for their staffs. The situation, however, continued to be better than on the corresponding date in any other year since the record was instituted in 1920. The Dominion Bureau of Statistics tabulated returns from 6,177 firms, whose payrolls declined from 886,836 persons on December 1 to 826,736 at the beginning of January, a decrease of 60,100 persons, or 6.8 per cent. Reflecting this contraction, the index on January 1, 1928, stood at 99.5 as compared with 106.8 in the preceding month, and with 94.8, 89.6, 83.9, 88.7, 86.3, 77.9 and 88.7 on the same date in 1927, 1926, 1925, 1924, 1923, 1922 and 1921, respectively.

Maritime Provinces.—There was a further and larger recession in employment in the Maritime Provinces, chiefly in manufacturing and construction, while mining and trade were also rather slacker. On the other hand, logging and transportation showed heightened activity. Statements were received from 512 firms employing 64,093 persons, compared with 65,445 at the beginning of December. Considerable improvement in the situation had been noted on January, 1927, when the index was higher.

Quebec.—The reductions in Quebec were on a greater scale than in previous years of the record, but the situation continued much more favourable than on January 1 in any other year since this series was instituted in 1920.

Manufacturing (notably of: iron and steel, food, lumber, pulp and paper and building materials), construction and transportation reported especially pronounced losses, but the tendency was also unfavourable in logging, mining and communications. In many cases, operations were expected to be resumed early in the New Year. The labour forces of the 1,374 co-operating employers aggregated 233,838 workers, as against 258,510 on December 1, 1927.

Ontario.—Manufacturing, construction and transportation showed the greatest curtailment in Ontario, but there were also decreases in trade, services and communications. Within the manufacturing division, textile, food, iron and steel and lumber reported the most extensive shrinkage. Logging, however, reported a small advance, and metallic ore mines were busier. A combined payroll of 344,637 persons was employed by the 2,870 firms whose returns were received and who had 368,433 on their staffs in the preceding month. Those contractions were rather larger than on the same date in 1926 or 1925, but were considerably less than in earlier years of the record, in all of which the index was lower.

Prairie Provinces.—Declines involving a smaller number of workers than at the beginning of January, 1927, were noted in the Prairie Provinces, where employment continued more active than on the corresponding date of any other year of the record. Statistics were tabulated from 796 employers of 115,657 workers, or 3,178 less than on December 1. Construction, transportation and manufacturing reported the most noteworthy losses; within the last named, those in food and iron and steel plants were especially marked. On the other hand, mining, trade and logging registered improvement.

British Columbia.—The recessions in British Columbia were also less extensive than on January 1 last year, while the index was higher than on the same date in any of the last seven years. The 625 firms furnishing data reported 68,511 employees, as against 75,613 in the preceding month. Lumber and food factories, logging and construction recorded important curtailment, but additions to staffs were indicated in trade and a few other industries.

Index numbers of employment by economic areas are given in Table I.

Employment by Cities

There were contractions in the eight cities for which separate tabulations are made, those in Montreal, Toronto and Hamilton being most marked.

Montreal.—The decrease in Montreal involved a larger number of workers than that registered on January 1, 1927; conditions then, however, were not so favourable as on the date under review. Statements were received from 741 firms with 111,431 employees, as compared with 122,847 in the preceding month. Important declines were shown in construction and transportation and also in manufacturing, especially in iron and steel, food, building material and tobacco, distilled and malt liquor factories.

Quebec.—Manufactures were more active, but seasonal curtailment in construction and shipping caused, on the whole, a loss in employment in Quebec City, where 99 employers reduced their staffs from 11,137 persons on December 1 to 10,202 at the beginning of January. Although this decrease exceeded that indicated on the same date last year, the index continued to be considerably higher.

Toronto.—Employment in Toronto showed a larger seasonal drop than on January 1, 1927, when the general situation was not so favourable. There were contractions in manufacturing, the most noteworthy being in textiles, food and iron and steel. Construction, trade, transportation and communications were also seasonally slacker. Returns were tabulated from 819 firms with 103,869 employees, compared with 109,195 in their last report.

Ottawa.—Manufactures registered seasonal curtailment, while little general change occurred in other industries. The working forces of the 135 reporting establishments aggregated 10,542 persons, or 277 fewer than at the beginning of December. This reduction involved a smaller number of employees than that recorded on the corresponding date last year, when employment was in less volume.

Hamilton.—Data were received from 200 firms in Hamilton employing 28,068 workers, as against 30,598 on Dec. 1. Manufactures, especially of textile and iron and steel products, showed reduced activity, and construction was also quiet. The declines noted on January 1, 1927, were not so marked and the index then was slightly higher.

Windsor and the Other Border Cities.—There was a smaller contraction in the Border cities than is usual at the commencement of January, resulting in a better general situation than on January 1, 1927 or 1926, the two years for which statistics are available. Manufactures, construction and trade were quiet, according to returns from 120 establishments with 9,409 persons in their employ, or 203 less than on December 1.

Winnipeg.—Manufacturing and construction registered the greatest declines in Winnipeg, while trade showed considerable improvement; the 285 co-operating firms reported 29,673 employees, compared with 30,173 in the preceding month. This reduction involved only a third of the number released on January 1, 1927, when employment was in much smaller volume.

Vancouver.—Employment in lumber mills and other manufactures, and in construction showed a falling off, while trade was brisk. Returns were compiled from 229 employers of 23,567 persons, or 1,135 less than on December 1. Decidedly more pronounced losses had been indicated on the corresponding date

last year, and the index then was slightly lower.

Index numbers by cities are given in Table II.

Manufacturing

The losses in employment registered in manufactures were somewhat smaller than on January 1, 1927, and the situation continued more favourable than at the beginning of any other year since 1920. The most extensive reductions were in the food, lumber, iron and steel, textile, pulp and paper, building material and non-ferrous metal industries, but plants in all divisions recorded curtailment. As in previous years, these declines

Note.—Number employed by the reporting firms in January, 1920=100 in every case. The "Relative Weight" shows the proportion of employees in the indicated area to the total number of all employees reported in Canada on the date under review.

TABLE I.—INDEX NUMBERS OF ALL EMPLOYMENT BY ECONOMIC AREAS, AND OF DOMINION EMPLOYMENT IN MANUFACTURING

	Canada	Maritime Provinces	Quebec	Ontario	Prairie Provinces	British Columbia	All manufacturing

were chiefly due to shutdowns for holidays, inventories and repairs, and considerable recovery may be looked for in the next report. Statistics were compiled from 3,808 manufacturers, employing 448,096 operatives, compared with 477,065 on December 1.

Animal Products—Édible.—Continued and large reductions were reported in this division, in which all branches showed curtailment, those in meat and fish preparing and preserving plants being most extensive. Statements were received from 173 manufacturers with 15,993 employees, as compared with 17,216 at the beginning of December. This loss was rather smaller than that recorded on January 1, 1927, when the index number was some 10 points lower. All provinces reported reduced employment, but the heaviest contractions were in Ontario.

Leather Products.—Following six months of uninterrupted expansion, there was a decline in employment in leather-using factories at the beginning of January, particularly in boot and shoe works. The shrinkage involved about the same number on the corresponding date last year, and the indexes were similar. A combined working force of 17,175 persons was registered by the 189 firms making returns, as compared with 17,712 in the preceding month. The tendency was downward,

in all except the Maritime Provinces, the greatest losses occurring in Quebec and Ontario.

Lumber Products.—Seasonal curtailment on a somewhat smaller scale than on January 1, 1927, was noted in lumber mills, 674 of which reduced their payrolls from 43,900 on December 1 to 38,413 workers at the beginning of January. Employment was in slightly greater volume than on the corresponding date last year. Sawmills registered the most pronounced contractions, but there were also decreases in furniture, container and other wood-using industries. There were especially marked losses in British Columbia and Ontario, although employment declined generally except in the Prairie Provinces.

Musical Instruments.—Thirty-nine manufacturers of musical instruments released 199 persons from their staffs, bringing them to 3,230 at the beginning of January. The bulk of the decrease was in Ontario. Although a rather larger recession had been noted on January 1 a year ago, the index number then was slightly higher.

Plant Products—Edible.—There were contractions in employment in all branches of the vegetable food group, the greatest being in sugar and syrup, canning, biscuit and confectionery factories. The working forces of

the 309 co-operating employers totalled 23,792 persons as compared with 29,157 in their last report. The reductions in Ontario were especially pronounced, but the movement was generally unfavourable. The declines noted at the beginning of January last year were smaller, and the index number was higher than on the date under review. The fruit

and vegetable crop last summer was affected by the unfavourable weather, so that employment in canneries last season was not as active as in 1926.

Pulp and Paper Products.—The shrinkage at the beginning of January, 1928, was less extensive than in 1927, and employment continued better than on the corresponding date

TABLE III.—INDEX NUMBERS OF EMPLOYMENT IN CANADA BY INDUSTRIES (JAN. 1920=100)

Industries	¹ Relative Weight	Jan. 1, 1928	Dec. 1, 1927	Jan. 1, 1927	Jan. 1, 1926	Jan. 1, 1925	Jan. 1, 1924

¹The "Relative Weight" column shows the proportion that the number of employees in the indicated industry is of the total number of employees reported in all industries by firms making returns on the date under review.

in any other year since the record was instituted in 1920. Statistics were received from 475 firms, whose staffs aggregated 58,555 workers, or 1,662 less than in their last report. The most noteworthy losses were in Quebec and Ontario, although the trend was downward in all provinces. Pulp and paper mills reported a large proportion of the reductions, but there were also declines in plants producing paper goods.

Rubber Products.—Rubber factories showed a decrease exceeding that of January 1, 1927; 35 rubber factories had 14,522 employees on the date under review, as against 15,159 at the beginning of December. Ontario and Quebec reported considerable losses, despite which, the index number at 101.6, was higher than in any month in the years 1920-1926.

Textile Products.—The 514 firms furnishing data released a greater number of operatives than at the beginning of January, 1927, but the index number then was slightly lower than on the date under review. Their payrolls included 71,742 persons on January 1, against 76,422 in the last report. Ontario recorded the bulk of the shrinkage, which was especially marked in the hosiery and knitting, thread, yarn and cloth and garment divisions.

Tobacco, Distilled and Malt Liquors.—The falling off in employment at the beginning of January involved a smaller number of employees than on January 1 last year, when employment was in considerably smaller volume. Statements were tabulated from 108 manufacturers in this group, employing 12,859 workers, or 271 less than on December 1. Practically all the loss took place in Quebec, while the tendency was favourable in Ontario and the Western Provinces.

Chemical Products.—Employment in chemical and allied product factories, chiefly in Ontario, showed a contraction on January 1, when 190 persons were released from the labour forces of the 112 reporting plants, who had 6,628 employees. Much larger declines had been noted on the corresponding date a year ago, and the index number then was several points lower.

Clay, Glass and Stone Products.—Further contractions in employment were made in building material works, 123 of which reported an aggregate staff of 8,883, as compared with 10,446 in the preceding month. All provinces shared in this curtailment, which, however, was most marked in Quebec and Ontario. Brick, glass and stone plants recorded important declines, which exceeded those of January 1, 1927, when the index number was a few points higher.

Electric Current.—There were continued decreases in the number employed in electric current plants, according to statistics from 85 producers, employing 12,579 workers, or 451 less than on December 1. Quebec reported a large share of this contraction, which involved practically the same number as that indicated on January 1, 1927. The index then, however, was nearly 13 points below.

Electrical Apparatus.—Reductions in personnel on much the same scale as on the corresponding date last year were registered by the 45 co-operating electrical apparatus factories, whose labour forces declined from 11,425 persons on December 1 to 11,051 on January 1. Firms in Quebec showed most of the decrease.

Iron and Steel Products.—Land vehicles, ship-building, crude, rolled and forged, heating appliance and boiler, engine and tank works reported decided curtailment; the payrolls of the 650 firms furnishing data in the iron and steel group totalled 121,955, as against 126,745 employees in the preceding month. This contraction, which was on a much smaller scale than on the corresponding date last year, when the index was lower, was most pronounced in Quebec and Ontario, although the movement was downward in all provinces except British Columbia.

Non-Ferrous Metal Products.—The loss recorded in non-ferrous metal products, chiefly in the smelting and refining and lead, tin, zinc and copper divisions, involved a rather larger number than that indicated on the corresponding date in 1927; the index then was seven points lower than on January 1, 1928. Returns were compiled from 106 employers, with 15,765 workers, as compared with 16,827 at the commencement of December. The tendency in all provinces was unfavourable, but the most noteworthy reductions were in Ontario and British Columbia.

Mineral Products.—Further and somewhat greater declines were noted in this group, the shrinkage being practically the same as at the beginning of last year. A combined working force of 9,625 persons was employed by the 78 establishments whose returns were received and who had 9,888 employees on December 1. The situation was more favourable than on January 1, 1927.

Logging

Logging camps, partly owing to the unfavourable weather, showed a more pronounced falling-off than on the same date last year, but employment continued in considerably greater volume than at the beginning of Janu-

ary in most years of the record. A combined working force of 38,344 men was reported by the 254 co-operating firms, who had 42,741 in the preceding month. All provinces, except Ontario and the Maritimes, shared in the downward movement.

Mining

Coal.—There was a further increase in coal mines, 90 of which enlarged their payrolls from 28,157 persons on December 1 to 28,762 at the beginning of January. The expansion took place in the Prairie Provinces, while declines were registered in the Eastern coal fields. Contractions involving about the same number as were added to staffs on the date under review were indicated on January 1, 1927, when the index number was lower.

Non-Metallic Minerals (Other than Coal).—The trend of employment in this division continued to be downward, but the losses were smaller than on January 1 a year ago, and the index then was some 10 points lower. Statements were received from 65 firms employing 6,094 workers, as compared with 6,756 in the preceding month. Quebec and Ontario recorded the greatest shrinkage.

Communications

Further curtailment in personnel was reported on telephones and telegraphs, but the situation continued to compare favourably with that on the same date in other years of the record. The payrolls of the 187 companies and branches furnishing data declined from 25,370 on December 1 to 24,929 employees at the beginning of January.

Transportation

Street Railways and Cartage.—Employment in local transportation showed a further seasonal decline, in which practically the same number was involved as on January 1, 1927, when the index number was nearly eight points lower. A combined working force of 20,508 persons was reported by the 120 co-operating firms, who had 20,938 in the preceding month. All provinces except British Columbia shared in the reduction.

Steam Railways.—Employment on steam railways showed a decrease which exceeded that indicated on the corresponding date a year ago; the index number then, however, was lower, as it was in most other years of the record. Improvement in the Maritime Provinces was offset by contractions elsewhere. The payrolls of the 100 companies and divisional superintendents furnishing returns aggre-

gated 79,855 employees as against 81,679 in their last report.

Shipping and Stevedoring.—There was a large reduction in employment in water transportation, chiefly in Quebec and Ontario, while an increase was noted in the Maritime Provinces. On the whole, a larger number of workers were let out than on January 1, 1927, when the index was higher. Returns were compiled from 59 employers of 10,035 men, compared with 16,139 in the preceding month.

Construction and Maintenance

Building.—Continued curtailment of operations was shown generally in building construction; 487 contractors reduced their staffs from 35,812 at the beginning of December to 27,988 on January 1. The most pronounced declines were in Quebec. Less extensive decreases were indicated on January 1 last year when the index was rather higher.

Highway.—Statements were received from 151 firms employing 8,983 workers, as compared with 16,364 in the preceding month. The largest losses were in the Maritime Provinces and Ontario, but the movement was downward in all provinces. Somewhat smaller contractions were indicated at the beginning of January, 1927, but employment then was in less volume.

Railway.—A further, but decidedly less pronounced recession was reported in this division, in which 38 employers reported 31,454 persons on payroll as compared with 34,047 in the preceding month. The situation was much better than on the corresponding date a year ago, when the declines were considerably larger. All provinces recorded a seasonal falling off in employment, but that in Ontario was greatest.

Services

Another reduction was registered in the service group; 177 firms employed 15,834 persons, or 154 less than in the preceding month. The number released was the same as on January 1, 1927, when the index, as on the corresponding date in earlier years of the record, was lower.

Trade

Retail trade afforded considerably more employment than on December 1, although it was not so brisk as in Christmas week, but there were contractions in wholesale establishments, following an unusually active season. The 535 co-operating employers had 72,604 workers, practically the same as in

their last report. Employment continued at a much higher level than in the corresponding month in any previous year of the record.

Tables I, II and III give index numbers of employment by economic areas, by leading cities and by industries, respectively. The

columns headed "Relative Weight" show the proportion that the number of employees reported in the indicated area or industry is of the total number of employees reported in Canada by the firms making returns for January 1, 1928.

UNEMPLOYMENT IN TRADE UNIONS AT THE CLOSE OF DECEMBER, 1927

UNEMPLOYMENT as used in the following report has reference to involuntary idleness, due to economic causes. Persons who are engaged in work other than their own trades, or who are idle because of illness are not considered as unemployed. Unions which are involved in an industrial dispute are excluded from these tabulations. As the num-

ber of unions making returns varies from month to month with consequent variation in membership, upon which the percentage of unemployment is based it should be understood that such figures have reference only to the organizations reporting.

PERCENTAGE OF UNEMPLOYMENT AS REPORTED BY TRADES UNIONS

ber of unions making returns varies from month to month with consequent variation in membership, upon which the percentage of unemployment is based it should be understood that such figures have reference only to the organizations reporting.

The present article on unemployment among the members of local trade unions deals with the situation as existing at the close of December, 1927, and is based on the reports tabulated from 1,696 labour organizations, with a combined membership of 180,204 persons. For all occupations reporting 6.6 per cent of the members were unemployed at the end of December in contrast with percentages of 5.2 on November 30 and with 5.9 at the close of December, 1926. The increase in idleness reported at the end of December over the pre-

dency was in a slightly favourable direction, none of the changes, however, being particularly outstanding. When making a comparison with the returns for December, 1926, Saskatchewan and British Columbia unions registered declines in employment of 3.5 per cent and 3.0 per cent respectively, followed by lesser contractions in the Provinces of Quebec, Nova Scotia and Manitoba. Of the gains, Alberta showed the most substantial, namely that of 3.5 per cent due to a great extent to the increase in work afforded coal miners in that province.

A separate tabulation is compiled monthly showing the conditions as affecting workers in the largest city of each province except Prince Edward Island. The most noticeable recessions occurred among Vancouver workmen,

10.7 per cent of whom were idle in November as compared with 14.3 per cent in December, a change of 3.6 per cent, followed by percentage increases in idleness of 2.9 in St. John, 2.7 in both Edmonton and Halifax, 2.4 in Toronto, 2.1 in Winnipeg, 1.7 in Regina, and 1.1 in Montreal. Toronto was the only city to record a slight increase in employment over December, 1926, while in all other cities an adverse situation prevailed.

The chart which accompanies this article indicates the unemployment trend by months from 1921 to date. During 1927 the course followed by the curve changed in direction several times, the March, May, June and September trend showing a higher level of employment from the month preceding, and the remaining months contractions in the amount of work afforded. The level of the curve at the end of the year was slightly above that traced at the close of 1926, indicating somewhat less favourable conditions, but the projection was lower than that attained for several years previous to 1926.

From unions in the manufacturing industries 464 reports were tabulated showing an aggregate membership of 51,051 persons, 9.3 per cent of whom were idle on December 31 as against a percentage of 7.2 in November. Variations were apparent within the group, the iron and steel, wood and leather trades registering reduction which involved the greatest number of workers, and the printing, garment and glass trades contractions on a smaller scale. Increases in the volume of employment offered were recorded by brewery workers, cigarmakers, hat and cap makers, and metal polishers. The decline over the December, 1926, returns when 7.3 per cent of idleness was reported in the manufacturing divisions, took place for the most part among wood, leather, garment, glass and hat and cap makers, metal polishers and papermakers. The situation for cigarmakers, textile and jewellery workers improved, while among iron and steel workers there was no appreciable change.

Conditions for coal miners were slightly better at the end of December, 1927, than in the previous month, as shown by reports received from 39 unions with 16,791 members. Of these 228, or a percentage of 1.4 were unemployed, as against 2.1 per cent in the preceding month and 1.0 per cent in December, 1926. The gains in employment over November were attributable to the greater volume of work afforded Alberta miners, which was partly offset by contractions for Nova Scotia miners. In British Columbia there was a fractional percentage of unemployment indicated as compared with a fully employed situation in November. In

comparing with the December, 1926, returns for coal miners the same conditions prevailed in both the Provinces of Nova Scotia and Alberta, as in the previous comparisons Alberta unions reporting improvement, and Nova Scotia a lower level of employment. In British Columbia there was a very slight change for the better. Inactivity for Nova Scotia quarry workers was considerably in advance of that reported during November but in the same volume as indicated during December, 1926.

The seasonal curtailment in building activities which has been in evidence for several months with increasing impetus caused the percentage of idleness among building and construction tradesmen to rise to a percentage of 19.1 in December from an unemployment percentage of 13.3 during November. Reports were received at the end of December from 19,241 of these workers, representing 184 different unions. All tradesmen shared

TABLE I.—PERCENTAGES OF UNEMPLOYMENT IN TRADE UNIONS BY PROVINCES

Month	N.S. and Pr. Edw. Island	New Brunswick	Quebec	Ontario	Manitoba	Saskatchewan	Alberta	British Columbia	Canada

in the extensive contractions, bricklayers, masons and plasterers, painters, decorators and paperhangers, steam shovel and dredgemen, bridge and structural iron workers, granite and stone cutters, tile layers, lathers and roofers, and hod carriers and building labourers being especially slack, and followed by more moderate declines among carpenters and joiners, electrical workers and plumbers and steamfitters. The change in the situation for the building group as a whole over December, 1926, was but nominal, though the tendency was favourable. In this comparison conditions appeared to be better during December, 1927, for carpenters and joiners, steam shovel and dredgemen, granite and stonecutters, and tile layers, lathers and roofers, while the remaining tradesmen suffered curtailment of work.

The unemployment percentage of 3.6 in the transportation industry at the close of December was slightly above that reported in November when 3.3 per cent of inactivity was registered. Returns for December included reports from 700 unions of transportation workers, combining a membership of 62,277 persons, of whom 2,231 were idle on December 31. The change recorded in the steam railway division, whose returns constitute about 83 per cent of the entire group membership reporting, and as a result is the greatest deciding factor for the group as a whole, was scarcely perceptible, the change being very small. Operations were somewhat restricted for navigation workers, while among street and electric railway employees the same volume of inactivity prevailed as in November, namely .2 per cent. Among teamsters and chauffeurs there was a small percentage of members without work as compared with no idleness during November. In making a comparison with the December, 1926, returns when the unemployment percentage stood at 3.0, steam and street and electric railway employees, and teamsters and chauffeurs all shared in the downward movement of employment, which the gains among navigation workers were not sufficient to offset.

A separate tabulation is made each month for longshore workers, reports having been received at the end of December from 13 organizations with an aggregate membership of 6,923 persons, 15.0 per cent of whom were idle, in comparison with 16.3 per cent in November and with 12.7 per cent in December, 1926.

The public service group of employees, with 134 unions having a combined membership of 12,773 persons, reported 1.0 per cent of their members idle on December 31 as against .7 per cent in November. Federal employees in both months under comparison were fully engaged while work for civic employees subsided slightly. In comparison with the returns for December, 1926, when 1.2 per cent of the members were unemployed, the situation for Federal workers remained stationary, no members being idle, while civic employees reported a nominal increase in the volume of work available.

From unions in the miscellaneous group of trades 111 reports were received at the end of December, with a membership of 4,934 persons, indicating a 6.7 per centage of unemployed members, the same as was reported at the end of November. Hotel and restaurant workers and barbers were afforded a slightly greater volume of employment, but the declines in work for theatre and stage employees, stationary engineers and firemen, office workers and bill posters and billers were sufficient to counterbalance these gains. Unemployment was more prevalent in the group as a whole than at the end of December, 1926, the percentage of inactivity at that time standing at 5.7. In this comparison the level of employment for hotel and restaurant employees, barbers, stationary engineers and firemen, and miscellaneous workers was slightly lower, while among theatre and stage employees there was minor improvement in conditions.

Fishermen were slacker at the end of December, 1927, than in the previous month with 26.7 per cent of the members out of work as compared with 19.9 per cent in November and with an unemployment percentage of 12.9 in December, 1926. Lumber workers and loggers were fully engaged both in November and in December, but at the close of December, 1926, the percentage of idleness stood at 14.0.

Table I on page 188 is a summary of the returns provincially for December of each year from 1919 to 1924 inclusive, and for each month from January, 1925, to date, and Table II on page 189 shows the percentage of unemployment registered in the various industrial groups for the same months.

EMPLOYMENT OFFICE REPORTS FOR DECEMBER, 1927

THE records of the Employment Service of Canada for the month of December, 1927, when compared with those of November showed a decline of 23 per cent in the volume of business transacted, due chiefly to fewer placements in logging and farming. A decline of 5 per cent was also recorded when the records were compared with those of December, 1926, all industrial divisions except manufacturing and services showing declines under the latter comparison.

in contrast to the ratios of 66.5 and 80.2 during the same periods of 1926. The ratios of placements to each 100 applications during the periods under review were 64.4 and 73.7, as compared with 65.6 and 71.2 during the corresponding month of 1926.

The average number of applications for employment received daily by the offices of the Service throughout Canada was 1,488 during the first half of December, as compared with 1,631 during the preceding month and with

POSITIONS OFFERED AND PLACEMENTS EFFECTED FOR EACH ONE HUNDRED APPLICATIONS FOR EMPLOYMENT

The accompanying chart shows the trend of employment since January, 1925, as represented by the ratio of vacancies offered and of placements effected for each 100 applications for work registered at the offices of the Service throughout Canada, computations being made semi-monthly. It will be seen that the curve of vacancies and also of placements in relation to applications showed a decidedly upward trend throughout the month, the latter at the close of the month being over 2 points higher than that attained at the end of December, 1926. The ratio of vacancies, however, was over three points lower than that shown a year ago. The ratio of vacancies to each 100 applications was 67.2 and 76.9 during the first and second half of December, 1927,

1,562 daily in the corresponding period of 1926. Applications for work during the latter half of the month numbered 1,140 daily in contrast with 1,227 during the latter half of December a year ago.

The average number of vacancies reported by employers to the Service daily was 999 during the first half and 877 during the latter half of the month under review as compared with a daily average of 1,039 and 984 vacancies during the month of December, 1926. Vacancies offered to the Service during the latter half of November, 1927, averaged 1,099 daily.

The average number of placements made daily by the offices of the Service during the first half of December, 1927, was 958 of which 577 were in regular employment and 381 in

work of one week's duration or less as compared with a total average placement during the preceding period of 1,021 daily and with 1,024 daily during the first half of December, 1926. During the latter half of the month under review placements averaged 841 daily (457 regular and 384 casual) as compared with an average of 874 daily during the corresponding period a year ago.

During the month of December, 1927, the offices of the Service referred 24,451 persons to vacancies and effected a total of 23,374 placements. Of these the placements in regular employment were 13,424, of which 10,726 were for men and 2,698 for women, while the placements in casual work totalled 9,950. The number of vacancies reported by employers totalled 16,326 for men and 8,058 for women, a total of 24,384, while applications for work totalled 34,149, of which 25,161 were from men and 8,988 from women.

The following table gives the placements effected to date in the offices of the Employment Service of Canada:—

Year	Regular	Casual	Totals
1919 (10 months).....	268,001	37,904	305,905
1920.....	366,547	79,265	445,812
1921.....	280,518	75,238	355,756
1922.....	297,827	95,695	393,522
1923.....	347,165	115,387	462,552
1924.....	247,425	118,707	366,132
1925.....	306,804	106,021	412,825
1926.....	300,226	109,929	410,155
1927.....	302,723	112,046	414,769

NOVA SCOTIA

During the month of December, 1927, positions offered through employment offices in Nova Scotia were 12 per cent less than in the preceding month and nearly 18 per cent less than during the corresponding month of 1926. Placements declined nearly 10 per cent in comparison with November and 15 per cent when compared with December, 1926. The latter reduction was caused by fewer placements in the manufacturing industries and construction and maintenance as there were minor changes only in all other industrial groups. Industrial groups in which most of the placements were effected during the month were: manufacturing, 36; logging, 72; transportation, 35; construction and maintenance, 35; trade, 43; and services, 351, of which 269 were of household workers. During December 107 men and 56 women were placed in regular employment.

NEW BRUNSWICK

There was a decline of over 20 per cent in the number of positions offered through employment offices in New Brunswick during

December when compared with the preceding month, and of 25 per cent in comparison with the corresponding month of 1926. Placements were over 5 per cent less than in November and 16 per cent below December, 1926. Mining, transportation and construction and maintenance showed the largest reductions in placements from December, 1926. There were, however, declines also under services and logging. Minor gains were recorded in the manufacturing industries and trade. Placements by industrial groups included: manufacturing, 23; logging, 90; trade, 41, and services, 487, of which 354 were of household workers. Regular employment was procured for 155 men and 89 women.

QUEBEC

The demand for workers as indicated by orders listed at employment offices in the Province of Quebec during the month of December declined nearly 50 per cent when compared with the preceding month and nearly 12 per cent in comparison with the corresponding month of 1926. Placements were nearly 41 per cent less than in November and over 8 per cent in excess of December, 1926. Logging and transportation were the only groups in which less placements were made during the month under review than in December, 1926. The largest gains were in construction and maintenance and services. Industrial groups in which most of the placements were effected during the month were: manufacturing, 124; logging, 466; construction and maintenance, 480; and services, 380, of which 260 were of household workers. Placements in regular employment numbered 1,097 of men and 361 of women.

ONTARIO

During December employment offices in Ontario received orders for nearly 15 per cent less workers than in the preceding month and also in the corresponding month of 1926. There was a decline of nearly 10 per cent in placements when compared with November and over 13 per cent in comparison with December, 1926. Manufacturing was the only group to show any appreciable gain in placements over December, 1926, while large reductions were shown in transportation and construction and maintenance. Placements by industrial groups included: manufacturing, 1,072; logging, 2,066; farming, 354; transportation, 372; construction and maintenance, 2,157; trade, 327; and services, 3,298, of which 1,841 were of household workers. During the month 4,259 men and 878 women were placed in regular employment.

MANITOBA

Orders listed at Manitoba offices during December called for over 2 per cent more workers than in the preceding month and over 14 per cent more than in the corresponding month of 1926. Placements were nearly 2 per cent higher than in November and 13 per cent above December, 1926. The largest gains in placements over December, 1926, were in logging and services, while farming showed the largest decline. Industrial groups in which most of the placements were effected during the month were: manufacturing, 88; logging, 1,131; farming, 475; construction and maintenance, 172; trade, 199; and services, 1,978, of which 1,643 were of household workers. There were 1,776 men and 451 women placed in regular employment during the month.

SASKATCHEWAN

Opportunities for employment as indicated by orders listed at employment offices in Saskatchewan during December were nearly 32 per cent less than in the preceding month, but nearly 10 per cent better than in the corresponding month of 1926. Placements were over 38 per cent less than in November, but nearly 2 per cent higher than in December, 1926. When comparing placements during the month under review with December, 1926, logging, services and transportation were the only groups to show gains and of the balance the largest reduction was in farming. Placements by industrial division included: manufacturing, 56; logging, 423; farming, 532; transportation, 116; construction and maintenance, 132; trade, 127; and services, 783, of which 534 were of household workers. During the month 1,104 men and 359 women were placed in regular employment.

ALBERTA

There was a decline of nearly 43 per cent in the number of positions offered through employment offices in Alberta during December when compared with the preceding month, but a gain of 9 per cent in comparison with the corresponding month of 1926. Placements were over 44 per cent less than in November, but over 7 per cent higher than in December, 1926. Manufacturing, transportation and trade were the only groups in which less placements were made during the month under review than in December, 1926. Farming showed the most substantial gain. Industrial groups in which most of the placements were effected during the month were: manufacturing, 130; logging, 605; farming, 484; mining, 245; construction and maintenance, 236; trade, 64; and services, 636, of which 476 were of house-

hold workers. Placements in regular employment numbered 1,628 of men and 282 of women.

BRITISH COLUMBIA

Employment opportunities as indicated by orders listed at employment offices in British Columbia during December were over 16 per cent less favourable than in the preceding month and nearly 12 per cent fewer than in the corresponding month of 1926. There was a decline of over 17 per cent in placements when compared with November and 14 per cent in comparison with December, 1926. All industrial groups except farming participated in the reductions in placements from December, 1926, those in construction and maintenance and transportation being the most pronounced. Placements by industrial groups included: manufacturing, 207; logging, 295; farming, 65; mining, 43; transportation, 156; construction and maintenance, 177; trade, 190; and services, 931, of which 454 were of household workers. During the month regular employment was procured for 600 men and 222 women.

Movement of Labour

During December, 1927, the offices of the Employment Service of Canada effected 13,424 placements in regular employment, of which 8,561 were persons for whom the employment found was outside the immediate locality of the office at which they were registered. Of the latter, 2,371 were granted the Employment Service reduced transportation rate, 1,634 going to points within the same province as the despatching office and 737 to other provinces. The reduced transportation rate which is 2.7 cents per mile, with a minimum fare of \$4, is granted by the railway companies to bona fide applicants at the Employment Service who may desire to travel to distant employment, for which no workers are available locally.

The Quebec offices issued 138 certificates of reduced transportation, to 31 persons for employment provincially and 107 for points outside the province. The provincial certificates were all for bushmen going to the Quebec and Montreal zones from their respective zone office. The transfers to outside points were also of bushmen, Hull sending 58 to North Bay and district, 25 to Cabalt and 24 to the Sudbury zone.

The certificates granted by Ontario offices totalled 637, of which 626 were provincial and 11 interprovincial. Provincially North Bay transferred 3 carpenters, 1 millwright, and 1 painter to Timmins, 2 cooks, 2 dairy workers and 1 electrical worker to Cobalt, and 13 con-

struction labourers within its own zone. From Sudbury 1 diamond drill setter went to Cobalt, from Windsor 1 male hotel cook to Sarnia, from Pembroke 2 millwrights to North Bay, and from Toronto 2 farm labourers and 1 chef to North Bay. The balance of the movement was entirely of bushmen, 596 of whom travelled on certificates mainly for points in the vicinity of Fort William, Port Arthur and Sudbury. Of those going to other provinces, the Hull zone received 2 miners from Sudbury and 4 electrical workers, 2 carpenters and 1 miner from North Bay, and the Winnipeg zone 1 blacksmith and 1 machine runner from Cobalt.

From the Manitoba offices 898 persons secured certificates of reduced transportation, 289 for provincial centres and 609 for stations outside the province. The former included transfers of 102 bushmen, 16 railroad construction labourers, 17 axemen, 25 labourers, 1 female hotel worker, 8 carpenters and 1 mission school matron for the Dauphin zone, 82 farm labourers, 17 bushmen, 11 farm domestics and 2 teamsters for the Winnipeg zone, and 1 hospital cook and 1 chambermaid for Brandon. All of these travelled from Winnipeg. In addition, Dauphin despatched 1 bushman and Brandon 4 bushmen to camps within the Dauphin zone. The interprovincial movement was for the most part from Winnipeg, 561 bushmen, 4 farm hands, 2 construction labourers, 1 general, 1 cook, 2 fishermen and 2 rock drillers going to Port Arthur and vicinity, 13 bushmen and 1 housekeeper to Yorkton, 1 female hotel worker to Swift Current, 1 tile setter and 1 plasterer to Calgary, and 15 farm hands and 2 farm domestics to various points in Saskatchewan. The two remaining certificates were granted by the Dauphin office to bushmen who travelled to employment in the Prince Albert zone.

Persons taking advantage of the reduced rate from Saskatchewan offices numbered 344. Of these 340 went to points within the province and 4 to other provinces. Included in the provincial transfers from Regina were 27 labourers going to Saskatoon, 1 hotel porter to Estevan, 2 female hotel workers to Moose Jaw, and 8 farm labourers and 4 farm domestics to Saskatchewan agricultural areas. From the Saskatoon office 1 female hotel worker was sent to Prince Albert and 9 farm labourers and 1 farm domestic to rural districts of the province; from Weyburn 1 chambermaid went to Swift Current, from Moose Jaw, 1 hotel cook to Estevan and 9 farm labourers

and 1 farm domestic to various Saskatchewan points, while from Prince Albert 1 edgerman travelled to Yorkton, and 1 timekeeper within the Prince Albert zone. The balance of the provincial movement was of 273 bushmen, namely for employment in the Prince Albert zone. Of the certificates issued to points outside the province, Saskatoon granted 2 to bushmen for the Dauphin zone and Regina 1 to a coal miner and 1 to a female companion for the Lethbridge and Vancouver zones respectively.

The business transacted by Alberta offices involved an issue of 278 reduced transportation vouchers, 275 of which were for provincial stations. Edmonton granted the majority of these to 166 bushmen, 8 sawyers, 1 carpenter, 1 road cutter 4 labourers, 1 millhand, 2 millwrights, 1 edgerman, 4 fishermen, 2 setters, 2 miners, 2 mining engineers, 1 flunkey, 1 cookee, 1 blacksmith, 1 bookkeeper and 2 cooks going to points within its own zone, 1 plasterer, 2 bricklayers, 1 tile setter and 1 housemaid to Calgary and 22 farm labourers to agricultural parts of the province. The remainder were issued by the Calgary office to 1 hotel worker for Edmonton, 1 miner for Lethbridge, 7 bushmen and 3 female hotel workers for points within the Calgary zone, and 32 farm labourers and 4 farm domestics for various rural parts. The interprovincial transfers included 2 farm labourers travelling from Edmonton to Saskatchewan centres and 1 railroad construction foreman from Calgary to Prince Albert.

From British Columbia offices 76 persons travelled on the reduced transportation rate, 73 within the province and 3 to outside points. Provincially Nelson transferred 1 ore mill operator to Cranbrook, Prince George 1 edgerman to Prince Rupert, Vancouver 5 muckers and 1 miner to Kamloops, 1 farm hand and 1 flunkey to Penticton and 2 carpenters and 1 engineer within its own zone, while Prince Rupert despatched 5 miners to points within its zone. The remaining 55 were bushmen, principally for work in the vicinity of Prince George. The movement outside the province was of 3 farm hands 2 of whom travelled from Vancouver and one from Victoria to Saskatchewan farms.

Of the 2,371 persons who benefited by the Employment Service reduced rate, 1,841 were transported by the Canadian National Railways, 486 by the Canadian Pacific Railway, 43 by the Temiskaming and Northern Ontario Railway, and 1 by the Pacific Great Eastern Railway.

REPORT OF THE EMPLOYMENT SERVICE OF CANADA FOR THE PERIOD OCTOBER TO DECEMBER, 1927

EMPLOYMENT conditions as indicated by the work of the offices of the Employment Service of Canada during the quarter October to December, 1927, were somewhat

more favourable than during the corresponding period of 1926, as there was shown an increase of 4 per cent in the number of positions offered and of nearly 5 per cent in the placements

effected in regular and casual employment. An analysis of the different industries showed that gains were registered both in vacancies and placements in logging, farming, mining, services, trade and finance, while manufacturing, transportation communication and construction showed declines in both instances. Quebec,

Saskatchewan and Alberta were the only provinces to register gains under both comparisons, but the increases more than offset the declines reported by the remaining provinces. The accompanying table gives the vacancies and placements of the Employment Service of Canada by industrial groups in the various

provinces during the period October to December, 1927.

From the chart on page 191 which accompanies the article on the work of the Employment Service for the month of December it will be noted that the trend of the curves representing the ratios of vacancies and of placements to applications, showed a sharp decline during the months of October and November and the first half of December, but registered a marked upward trend during the latter half of that month, the level of the ratios of vacancies to applications at the close of 1927, standing 3 points lower than that shown in December, 1926, while that of placements was over 2 points higher. During the period October to December, 1927, there was a ratio of 77.2 vacancies and 72.5 placements for each 100 applications for employment, as compared with 76.9 vacancies and 71.9 placements during the corresponding period of 1926. The average number of applicants registered daily during the quarter under review was 1,754, of positions offered 1,354, and of placements effected 1,273, in contrast with a daily average of 1,689 applications, 1,299 vacancies and 1,214 placements in regular and casual employment during the last quarter of 1926.

During the three months October to December 1927 the offices reported that they had made 102,224 references to positions and had effected a total of 97,957 placements, of which 66,778 were in regular employment and 31,179 in casual work. Of the placements in regular employment 56,674 were of men and 10,104 of women, while casual work was found for 18,290 men and 12,889 women. Comparison with the same period in 1926 showed that 93,458 placements were then made, of which 64,240 were in regular employment and 29,218 in casual work. Applications for employment during the period under review were received from 102,297 men and 32,755 women, a total of 135,052, in contrast with a registration of 130,000 persons during the same period of 1926. Employers notified the Service during October to December, 1927, of 104,224 vacancies of which 77,421 were for men and 26,803 for women as compared with 99,558 opportunities for work during the corresponding period of 1926.

In another section of this issue will be found a report in detail of the transactions of the Employment Service for the month of December, 1927.

RECENT INDUSTRIAL AGREEMENTS AND SCHEDULES OF WAGES

A SUMMARY is given below of the more important industrial agreements and schedules of wages and working conditions that have recently been received by the Department. Such agreements are summarized each month in the LABOUR GAZETTE. In the majority of cases the agreements are signed by both the employers and the employees. Verbal agreements, which are also included in the records, are schedules of rates of wages and hours of labour and other conditions of employment agreed upon between the parties concerned, and in effect though not signed. In addition to these, important schedules of wages are summarized, including civic schedules. In the case of each agreement or schedule, the rate of wages for the principal classes of labour are given, with other information of general interest.

Manufacturing: Printing and Publishing

EDMONTON, ALBERTA—ALBERTA FREE PRESS, LIMITED AND THE INTERNATIONAL STEREOTYPERS' AND ELECTROTYPERS' UNION LOCAL No. 129.

Agreement to be in effect from May 27, 1926, to May 27, 1929.

Union members only to be employed if they are available and the employer to accept union conditions provided in the union constitution.

Disputes to be referred to an arbitration committee consisting of two representatives from each party and a fifth to be agreed upon. If no settlement is reached through this means, the matter will be dealt with as provided by the current international arbitration agreement between the American Newspaper Publishers' Association and the International Stereotypers and Electrotypers Union. There shall be no suspension of work pending a decision.

Hours: 45 per week for day work and 42 for night work.

Overtime: time and one-half up to 3 hours and double time thereafter and on Sundays. On Dominion Day, Labour Day, and Christmas Day a full holiday shall be allowed and paid for. Any work done on these days shall be paid for at time and one-half extra. On other specified holidays, time and one-half.

Wages: From May 27, 1926, to May 26, 1927, day work 96 cents, night work \$1.02 $\frac{2}{3}$ per hour, from May 27, 1927 to May 26, 1928, day work 98 cents, night work \$1.04 $\frac{2}{3}$ per hour, from May 27, 1928, to May 26, 1929, day work \$1.00, night work \$1.06 $\frac{2}{3}$ per hour. Should any lower scale of wages be accepted from any other publishers of a daily newspaper in Edmonton, the same lower scale to apply to the parties of the agreement.

Manufacturing: Textile Products

VANCOUVER, B.C.—CERTAIN EMPLOYERS AND THE JOURNEYMEN TAILORS UNION OF AMERICA, LOCAL No. 178.

Agreement to be in effect from April 1, 1927, from year to year until 30 days' notice of change is given by either party.

Wages: Tailors (including operators, pressers and tailors) 91 cents per hour, finishers, 63 cents and helpers 55 cents. Female apprentices to receive \$7 per week for first six months, with an increase of \$3 per week every six months, until helper's minimum is reached. If boy apprentices be employed it will be by special arrangement with the union.

All employees to be union members or join the union within 10 days after their employment.

Hours: 44 per week with not more than 4 hours' overtime in any week; work on Dominion holidays, time and one-half.

No employee to be discharged through scarcity of work in slack season, after three weeks' employment.

Incapacitated members may accept piece-work or a lower weekly wage if agreed to by union officers.

In consideration of the agreement being complied with, union label to be supplied by the union, free of charge.

Manufacturing: Iron, Steel and Products

TORONTO, ONT.—CERTAIN SHEET METAL CONTRACTORS AND THE SHEET METAL WORKERS' INTERNATIONAL ASSOCIATION, LOCAL No. 30.

Agreement in effect from May 1, 1927, until April 30, 1929.

This agreement is identical with that previously in force and summarized in the LABOUR GAZETTE for June, 1926, with the following exceptions:

Work on Saturday afternoons to be paid for at the rate of time and one-half rather than double time.

Wages: from May 1, 1927, to April 30, 1928, minimum rate for journeymen sheet metal workers, 90 cents, and for junior mechanics 65 cents per hour. From May 1, 1928, to April 30, 1929, \$1 per hour for journeymen and 75 cents for junior mechanics.

Construction: Buildings and Structures

MONTREAL, QUEBEC—MASTER PLUMBERS ASSOCIATION OF MONTREAL AND VICINITY AND THE UNITED ASSOCIATION OF PLUMBERS AND STEAMFITTERS, LOCAL No. 144.

Agreement to be in effect from September 1, 1927, to April 30, 1929, and from year to year until notice is given by either party 60 days prior to the expiry date in any year.

Hours: 8 per day, 4 on Saturdays.

Wages: 75 cents per hour from Sept. 1, 1927, to April 30, 1928, and 85 cents from May 1, 1928, to April 30, 1929.

Overtime: time and one-half until midnight; after midnight until starting time and all work on Sundays and certain holidays, double time.

For out of town work, fare and board to be paid and time travelling to and from such work at the rate of single time. In localities where no union exists the hours may be extended to 10 hours per day at single time rate.

Union members only to be employed if such are available and union members to work only for a recognized master plumber or heating contractor, and will not instal any apparatus not supplied by a recognized plumber or heating contractor.

No plumber shall be employed who does not carry a journeyman plumber's city license and no member of the union shall be permitted to operate or carry a master's license.

The union agrees not to make any rules or regulations which will curtail the output of work or interfere with the operations or directions of employers.

No members of the union shall work for general contractors during term of this agreement.

Any dispute between the parties which cannot be adjusted by representatives of both organizations shall be referred to a joint arbitration board composed of three masters and three journeymen. This board shall have full power to settle such grievance and appoint an arbitrator, if necessary, the arbitrator to be a Dominion government official and his decision to be final.

MONTREAL, QUEBEC—J. B. BAILLARGEON COMPANY LIMITED AND THE INTERNATIONAL ASSOCIATION OF BRIDGE, STRUCTURAL, ORNAMENTAL AND REINFORCED IRONWORKERS, MACHINERY MOVERS, DERRICKMEN AND RIGGERS, LOCAL No. 417.

Agreement to be in effect from December 20, 1927, to June 30, 1928.

Hours: 8 per day; overtime, time and one-half till midnight, double time thereafter, except when work is night work only, the night gang to start work before midnight and work 7½ hours and be paid for 8 hours. After 7½ hours, overtime at time and one-half; double time for work on Sundays and certain holidays.

Wages: journeymen \$1.00 per hour, apprentices 75 cents and foreman \$1.15 per hour.

Union members only to be employed, and work to be that covered by and enumerated in the union constitution.

One apprentice allowed for every four journeymen.

For out of town work travelling time up to 8 hours out of 24 to be paid for and railroad fare to be paid.

No employee to be discriminated against for union activities.

Union members do not bind themselves to work on jobs where there are labour troubles.

Transportation and Public Utilities: Water Transportation

HALIFAX, N.S.—CERTAIN STEAMSHIP COMPANIES AND THE INTERNATIONAL LONGSHOREMEN'S ASSOCIATION, LOCAL No. 269.

Agreement to be in effect from November 30, 1927, to November 30, 1928.

Wages: 70 cents per hour for day work and 80 for night work, with 10 cents per hour extra

for handling full cargoes of cement or for handling bulk grain or full cargoes of slag or fertilizer, or when a ship has more than one hundred tons in any one hold. For work on ships with cargo on fire or with hatches affected by fire, smoke, steam or gas, the rate shall be \$1.40 per hour for day work and \$1.60 per hour for night work. Work on Sundays, after 6 p.m. on Saturdays, Christmas Day, Good Friday and Labour Day, double rates except in case of ships with cargo on fire, when rate will be \$2.10 for day and \$2.40 for night work. If required to work meal hours, double time until relieved. It shall be optional with any man not to work longer than 20 consecutive hours.

From 7 a.m. to midnight, waiting time to be paid full rate for first hour of each period and one-half rate for succeeding hours until midnight; after midnight full rate to be paid.

When men are ordered to work in gangs they shall receive at least two hours' pay whether they start work or not unless weather conditions are unfavourable.

In case of minor disputes the business manager of the union is empowered to confer with the employees and their decision will be binding on union members.

ST. JOHN, N.B.—VARIOUS STEAMSHIP COMPANIES TRADING TO THE PORT OF ST. JOHN AND THE INTERNATIONAL LONGSHOREMEN'S ASSOCIATION—GENERAL LONGSHORE WORKERS. LOCAL No. 273.

Agreement to be in effect from December 1, 1927, to November 30, 1928, and thereafter from year to year until either party serves 30 days' notice of change before November 30 of any year.

Wages: 70 cents per hour day or night for handling general cargo and 80 cents for bulk cargoes.

If required to work during meal hours, double time until relieved.

Nine hours shall constitute a day's or night's work.

Two hours' pay to be allowed when men are ordered out for day work, unless weather conditions unfavourable. Double time for work on Sundays and certain holidays, and for Saturday afternoons from June 1 to September 30.

Any disputes between the two parties shall be referred to a committee consisting of three members, one selected by the companies, one by the longshoremen and a third jointly selected by the first two. A majority decision of this committee shall be binding and there shall be no suspension of work pending such decision.

ST. JOHN, N.B.—VARIOUS STEAMSHIP COMPANIES TRADING TO THE PORT OF ST. JOHN AND THE INTERNATIONAL LONGSHOREMEN'S ASSOCIATION—COAL HANDLERS AND TRIMMERS. LOCAL No. 810.

Agreement to be in effect from December 1, 1927, to November 30, 1928, and thereafter from year to year until either party gives notice of change 30 days prior to expiry of agreement in any year.

Only union members to be employed if available, and if not, non-union men may not work longer than to finish one ship; all foremen must be members of the union and they are to hire all men.

Wages: 80 cents per hour day work and \$1 per hour night work.

Waiting time shall be paid for at full rate for first hour and half rate for succeeding hours.

Double time for work on Sundays and certain holidays and for Saturday afternoons from June 1, to September 30, and if required to work during meal hours double time until relieved.

Two hours' pay to be allowed when men are ordered out for day work and three hours pay when ordered out for night work. Same provision made for settling disputes as in the agreement summarized above for General Longshore Workers.

ST. JOHN, N.B.—VARIOUS STEAMSHIPS' COMPANIES TRADING TO THE PORT OF ST. JOHN AND THE INTERNATIONAL LONGSHOREMEN'S ASSOCIATION—STEAMSHIP HORSE, AND CATTLE FITTERS', SEALERS', LINERS', AND CLEANERS' UNION, LOCAL No. 1039.

Agreement to be in effect from December 1, 1927, to November 30, 1928, and from year to year until either party gives notice of change 30 days prior to expiry of agreement in any year.

Union to supply the necessary men for the work.

Wages: 65 cents per hour for day work and 97½ cents for night work.

For Sundays and certain holidays, double time for day work and double time and one-half for night work and double time if required to work during meal hours until relieved.

Two hours' pay to be allowed when men are ordered out for day or night work.

Same provision made for settling disputes as in the agreement summarized above for General Longshore Workers.

Transportation and Public Utilities: Local Transportation

WINNIPEG, MAN.—THE CRESCENT CREAMERY COMPANY AND THE CITY DAIRY LIMITED AND THE INTERNATIONAL BROTHERHOOD OF TEAMSTERS, CHAUFFEURS, STABLEMEN AND HELPERS OF AMERICA—MILK WAGON DRIVERS AND DAIRY EMPLOYEES LOCAL LOCAL No. 119.

Agreement to be in effect until October 31, 1928, and from year to year until 30 days notice is given by either party prior to November of any year.

Union members only to be employed or those who will join the union within fifteen days of employment.

Employees through their representative to have the right to discuss any grievances with company officials.

No boys or unauthorized person shall be permitted to ride on wagons or serve customers.

No wagons to be loaded before 5.30 a.m. in winter months or before 4 a.m. in summer months.

Choice of routes to be based on seniority and efficiency.

One day off in seven to be granted with pay.

Stablemen to work 6 days per week and 8 hours per day with seven days' holidays with full pay annually.

Wages: Retail drivers, minimum of \$29 per week with commissions on increased sales; spare route men and reliefmen, \$35 per week and auto truck drivers, teamsters and wholesale drivers, \$31, stablemen, \$25, special delivery drivers, \$25.

AGREEMENTS BETWEEN CARPENTERS AND EMPLOYERS IN TORONTO

THE following agreements have been signed in Toronto between organizations of carpenters and certain organizations of contractors employing carpenters, as to wages and working conditions from January 1, 1928. The issues of the LABOUR GAZETTE for November and December, 1927 contained information as to the recent strike of carpenters and the sympathetic strikes of workers in other building trades, owing to the refusal of the employers to agree to the closed union shop for the United Brotherhood. The increase in wages from 90 cents per hour to \$1 per hour had been previously agreed upon.

WORKING AGREEMENT between The General Contractors' Association of the City of Toronto, parties of the First Part and Local Union No. 27 of Toronto and District, United Brotherhood of Carpenters and Joiners of America, Parties of the Second Part.

This Agreement shall take effect on the first day of January, 1928, between the two bodies aforementioned, and remain in effect until December 31, 1928.

(2) Under the terms of this Agreement, eight hours shall constitute a full working day for the first five days of the week, and four hours on Saturday, the hours of work to be from 8 a.m. to 5 p.m., and on Saturday from 8 a.m. to 12 noon. One hour shall be allowed from 12 noon to 1 p.m. for lunch, unless it is mutually arranged that only one-half hour shall be taken for lunch, then, in such cases, the quitting time shall be 4.30 p.m.

(3) All work done on Sundays, New Year's Day, Victoria Day, Dominion Day, Labour Day and Christmas, shall be paid for at the rate of double time. Work done during the first three hours after the regular quitting time on all week days, including Saturday, shall be paid for at the rate of time-and-one-half; after the first three hours the rate shall be double time. Two or more shifts may be employed, and in such cases the 2nd and 3rd shifts shall be of seven hours each, the men to receive eight hours wages for seven hours work. No man shall be allowed to work on more than one shift in any 24 consecutive hours.

(4) The minimum rate of wage for carpenters in Toronto and District (as defined later) during the term of this Agreement shall be One Dollar (\$1) per hour.

(5) Carpenters shall be paid every week. In case of discharge the men shall immediately be

paid their wages in full. In case of quitting, those doing so shall be paid on the regular pay day. When a man is to be discharged or when a man decides to quit, one hour's notice shall be given in either case.

(6) A room shall be provided by the employer with sufficient space for carpenters to eat their noonday meal. This room shall be properly heated during cold weather. A tool house shall also be provided by the employer for the safeguarding and storage of tools.

(7) The business agent of the Union shall have access to the job during working hours, but must first make application to the superintendent. The agent shall not interfere with the progress of the work.

(8) For the purpose of this Agreement, Toronto and District jurisdiction shall be held to include the City of Toronto and northward to the southerly limit of Richmond Hill; eastward to the easterly limit of Whitby, westward to the 7th Trafalgar Line.

(9) In the event of disputes or grievances arising which cannot be settled satisfactorily by the contracting firm in question and the business agent, or in the event of any violation of the clauses of this Agreement by either party, the matter in dispute shall be referred to a Conciliation Board, said Board to be composed of three (3) members of each party, and the Board shall convene within forty-eight (48) hours and report its decision. Furthermore no strike or lock-out shall take place until an international officer of the Union and the chairman of the General Contractors' Association has investigated the matter and rendered a decision.

(10) Negotiations toward any new agreement shall commence not later than November 1, 1928.

(11) This Agreement shall be effective only when signed by the chairman and secretary of the Party of the First Part, and by the proper representatives of the Local Union No. 27, and also by an official international officer of the United Brotherhood of Carpenters and Joiners of America.

Dated at Toronto, this 19th day of November, 1927.

Signed on behalf of the General Contractors' Association of the City of Toronto.

ISAAC ILSLEY, *Chairman.*
P. W. PRICE, *Secretary.*

Signed on behalf of Local Union No. 27.

PERCY NUGENT, *President.*
FRANK WARD, *Secretary.*

Signed as a witness on behalf of the United Brotherhood of Carpenters and Joiners of America.

J. F. MARSH,
General Representative.

AGREEMENT between *The Toronto Builders Exchange of the City of Toronto represented by the Carpenters and General Contractors of the First Part and The Toronto District Managing Committee of the Amalgamated Carpenters of Canada of the Second Part.*

This Agreement shall take effect on the first day of January, 1928, between the two bodies aforementioned, and shall remain in effect until the 31st day of December, 1929.

Clause 1.—Any change in this agreement requested by either party must be made three months prior to December 31, 1929, and notification of same will be given in writing.

Clause 2.—The party of the Second Part, as a whole will not order any strike against members of the First Part, either individually or collectively, nor shall any members of the party of the Second Part, leave their work before the matter in dispute is brought before the Joint Arbitration Board hereinafter described, for settlement, such Board to be called within forty-eight hours. A Joint Arbitration Board of three members from each party shall be appointed forthwith to carry out terms set in this clause.

Clause 3.—Under this agreement, eight hours shall constitute a full working day, for the first five days of the week, and four hours on Saturday, the hours to be from 8 a.m. to 5 p.m. and Saturday from 8 a.m. to 12 noon. Where it is agreeable to both parties of this agreement to take half an hour for lunch then the quitting time shall be 4.30 p.m.

Clause 4.—All work done after 12 noon on Saturdays, also Sundays, New Year's Day, Victoria Day, shall be paid at the rate of double time. Work may be done in the case of an emergency for the first two hours after the regular quitting time for the first five days of the week and shall be paid at the rate of time and one half, all other overtime to be paid for at double rate.

Clause 5.—When work is carried on in two or more shifts, the second and third shifts shall be paid eight hours time for seven hours work. The men shall not work on any more than one shaft in twenty-four hours, unless paid for such time as rates covered in clause 4 of this agreement. First shift to work regular hours, if

other hours, they shall be paid the same rate as second and third shifts. Saturdays 4 hours working pay, for 3½ hours work.

Clause 6.—The rate of wages for carpenters in this district as agreed between the parties hereto, as and from January 1, 1928, to and inclusive of December 31, 1929, shall be one dollar per hour.

Clause 7.—When men are moved from one job to another during working hours, car fare shall be paid by the employer, and time in transit.

Clause 8.—The jurisdiction to which these rules apply shall be a radius of eight miles from Bloor and Yonge Streets, Toronto. The contractors agree to pay the rate of wages and observe the working conditions as set forth in this agreement within the said eight miles radius; also pay transportation charges both ways outside of this radius.

Clause 9.—It is also agreed that a room shall be provided with sufficient space, heat, and equipment exclusively for carpenters to eat their meals, and be used for the storage of their tools, a lock and key to be provided.

Clause 10.—The party of the Second Part agrees to give the parties of the First Part a preference in the supply of carpenters and joiners available; and further, the Party of the First Part agrees to apply to the office of the Amalgamated Carpenters when in need of men.

Clause 11.—The rates of pay for apprentices shall be as follows:—

For the First year, twenty-five cents (25) per hour.

For the Second year, thirty-five cents (35) per hour.

For the Third year forty-five cents (45) per hour.

For the Fifth year, sixty cents (60) per hour

On behalf of the Carpenters and General Contractors, of the Toronto Builders Exchange, Party of the First Part.

(Signed) S. L. LANE,

Pres. E. R. French & Son.

On behalf of the Toronto District Managing Committee, Amalgamated Carpenters of Canada.

(Signed) GEORGE THOMSON,

WILLIAM W. YOUNG.

Dated at Toronto on this 24th day of December, 1927.

Witness: GEORGE GANDER, *Secretary.*

BUILDING PERMITS ISSUED IN CANADA IN DECEMBER AND DURING 1927

THE value of the building permits issued by 63 cities in December, 1927, was the highest for that month since this record was begun in 1920, the authorizations being valued at \$11,744,094. This was a seasonal decrease of 8.6 per cent as compared with the November total of \$12,849,089, but an increase of 2.0 per cent as compared with the aggregate of \$11,508,818 in December, 1926, the previous high level for the month.

Detailed statements were received from some fifty cities, showing that they had issued over 550 permits for dwellings valued at more

than \$3,400,000 and about 1,200 permits for other buildings at an estimated cost of approximately \$7,000,000. During November the construction was authorized of some 1,200 dwellings and 2,300 other buildings, estimated to cost nearly \$6,000,000 and \$6,700,000, respectively.

As compared with the preceding month, British Columbia registered an increase of \$675,721 or 48.7 per cent in the value of the building permits issued. Of the declines in the remaining provinces, those of \$724,207 or

17.5 per cent in Quebec and \$493,670 or 7.6 per cent in Ontario were the largest.

As compared with December, 1926, Ontario, Manitoba, Saskatchewan and British Columbia recorded increases in the value of building authorized, Ontario showing the most marked gain of \$2,697,364 or 82.0 per cent. The other provinces reported reductions in the value of building authorized, that of \$3,648,200 or 51.6 per cent in Quebec being the greatest.

Montreal registered a decrease in the building permits issued as compared with November, and also as compared with the exceptionally high total of December, 1926. In Toronto and Vancouver there were increases in both comparisons, while Winnipeg, showed a loss in the former and a gain in the latter. Sherbrooke, Three Rivers, Westmount, Belleville, Chatham, Sarnia, Brandon, Moose Jaw and Victoria recorded increases in both comparisons.

Cumulative Record for 1927.—The following table gives the value of the building authorized by 63 cities during December and in the twelve months of each year since 1920. the 1927 figures are unrevised, while for the preceding years the statistics are revised. The average index numbers of wholesale prices for building materials for those years are also given (1913=100).

Year	Value of Permits Issued		Average Indexes of Wholesale Prices of Building Materials
	In December	In Twelve Months	
1927.....	\$11,744,094	\$185,451,271	147.7
1926.....	11,508,818	156,386,607	149.2
1925.....	7,363,777	125,039,367	153.7
1924.....	6,463,319	126,583,148	159.1
1923.....	6,974,256	133,521,621	166.8
1922.....	9,517,402	148,215,407	162.2
1921.....	5,537,330	116,734,414	183.2
1920.....	4,844,354	117,019,622	214.9

The December total for the 63 cities was the highest in the record, as shown above, while the unrevised statistics for 1927 also show that last year's aggregate was greater than in any other of the seven preceding years, exceeding the previous high level of 1926 by 18.6 per cent. The twelve months' total for the 35 cities was exceeded only once (in 1913) since the record was begun in 1910.

The accompanying table gives the value of the building permits issued by 63 cities in November and December, 1927, and December,

1926. The 35 cities for which records are available since 1910 are marked with asterisks.

ESTIMATED COST OF BUILDING WORK AS INDICATED BY BUILDING PERMITS ISSUED BY 63 CITIES.

FAIR WAGES CONDITIONS IN DOMINION GOVERNMENT CONTRACTS

THE Department has recently received information regarding certain contracts executed by the Government of Canada which included among their provisions the fair wages conditions sanctioned by Order in Council for the protection of the labour to be employed. The contracts (Group "A") awarded in connection with the works of construction contained the following fair wages clause:—

All mechanics, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed for the character or class of work in which they are respectively engaged, and if there be no current rates in such district, then fair and reasonable rates, and shall work such hours as are customary in the trade in the district where the work is carried on, or if there be no custom of the trade as respects hours in the district, then fair and reasonable hours, unless for the protection of life and property, or for other cause shown to the satisfaction of the Minister of Labour, longer hours of service are required. The Minister of Labour may at any time and from time to time determine for the purposes of this contract, what are the current or fair reasonable rates of wages, and the current or fair and reasonable hours, and may from time to time rescind, revoke, amend or vary any such decision, provided that his determination and any amendment or variation shall not be operative prior to the period of three months immediately preceding the date thereof.

Two of the contracts above mentioned contained schedules of rates and hours based on the current standards of the district in these respects. The schedules are given below.

Three contracts were awarded for interior fittings (Group "B") containing the general fair wages clause and other conditions for the protection of the labour employed, as sanctioned by the Fair Wages Order in Council which reads as follows:—

All workmen, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed, and if there be no current rate in such district, then a fair and reasonable rate, and shall work such hours as those fixed by the custom of the trade as respects hours in the district where the work is carried on, or if there be no custom of the trade as respects hours in the district then fair and reasonable hours, except for the protection of life and property, or on due cause shown to the satisfaction of the Minister of Labour. In the event of a dispute arising as to what is the current or a fair and reasonable rate of wages or what are the current hours fixed by the custom of the trade or fair and reasonable hours it shall be determined by the

Minister of Labour, whose decision shall be final; payment may also be withheld of any moneys which would otherwise be payable to the contractor until the Minister of Labour's decision has been complied with.

By the term "current wages" and the term "hours of labour fixed by the custom of the trade" in the foregoing are meant respectively the standard rates of wages and hours of labour either recognized by signed agreements between employers and workmen in the district from which the labour required is necessarily drawn or actually prevailing, although not necessarily recognized by signed agreements.

A statement was also received as to supplies ordered by the Post Office Department subject to the regulations for the suppressing of the sweating system and the securing of fair wages, etc.

The general labour conditions sanctioned by the Fair Wages Order in Council are as follows:—

1. Where there are special circumstances which in the judgment of the Minister of Labour make it expedient that he should do so, he may decide what are the current or fair and reasonable rates of wages for overtime, and what is the proper classification of any work for the purposes of wages and hours. Immediately upon receipt of notice of any decision of the Minister of Labour hereunder the contractor shall adjust the wages and hours and classification of work so as to give effect to such decision. In case the contractor shall fail so to do, or fail at any time to pay to any employee or employees for any services performed or for any hours of labour wages according to the rates set forth in the schedule or fixed therefor by the Minister of Labour hereunder regarding overtime and classification, the Minister of Labour may authorize and direct the Minister to pay any such wages at the rates so fixed and to deduct the amount thereof from any moneys owing by the Government to the contractor and any such payment shall for all purposes as between the contractor and the Government be deemed and taken to be payment to the contractor, and the contractor shall be bound in every particular by any such authority, direction and payment as aforesaid. The powers of the Minister of Labour hereunder shall not be exercised as to any employee or employees where it is established to his satisfaction that an agreement in writing exists and is in effect between the contractor and the class of employees to which such employee or employees belong or the authorized representatives of such class of employees fixing rates of wages, overtime conditions and hours of labour.

2. The Contractor shall post and keep posted in a conspicuous place on the premises where the contract is being executed, occupied or frequented by the workmen, the Fair Wages Clause or Schedule, inserted in his contract for the protection of the workmen employed, also any decision of the Minister of Labour under the preceding paragraph.

3. The Contractor shall keep proper books and records showing the names, trades and addresses of all workmen in his employ and the wages paid to and time worked by such work-

men, and the books or documents containing such record shall be open for inspection by the Fair Wage Officers of the Government at any time it may be expedient to the Minister of Labour to have the same inspected.

4. The Contractor shall not be entitled to payment of any money which would otherwise be payable under the terms of the contract in respect of work and labour performed in the execution of the contract unless and until he shall have filed with the Minister in support of his claim for payment a statement attested by statutory declaration, showing (1) the rates of wages and hours of Labour of the various classes of workmen employed in the execution of the contract; (2) whether any wages in respect of the said work and labour remain in arrears; (3) that all the labour conditions of the contract have been duly complied with; nor, in the event of notice from the Minister of Labour of claims for wages, until the same are adjusted. The Contractor shall also from time to time furnish the Minister such further detailed information and evidence as the Minister may deem necessary in order to satisfy him that the conditions herein contained to secure the payment of fair wages have been complied with, and that the workmen so employed as aforesaid upon the portion of the work in respect of which payment is demanded have been paid in full.

5. In the event of default being made in payment of any money owing in respect of wages of any workmen employed on the said work and if a claim therefor is filed in the office of the Minister and proof thereof satisfactory to the Minister is furnished, the said Minister may pay such claim out of the moneys at any time payable by His Majesty under said contract and the amounts so paid shall be deemed payments to the Contractor.

6. These conditions shall extend and apply to moneys payable for the use or hire of horses or teams, and the persons entitled to payments for the use or hire of horses or teams shall have the like rights in respect of moneys so owing them as if such moneys were payable to them in respect of wages.

7. With a view to the avoidance of any abuses which might arise from the sub-letting of contracts it shall be understood that sub-letting, other than such as may be customary in the trades concerned is prohibited unless the approval of the Minister is obtained; sub-contractors shall be bound in all cases to conform to the conditions of the main contract, and the main Contractor shall be held responsible for strict adherence to all contract conditions on the part of sub-contractor; the contract shall not, nor shall any portion thereof be transferred without the written permission of the Minister; no portion of the work to be performed shall be done at the homes of the workmen.

8. All workmen employed upon the work comprehended in and to be executed pursuant to the said contract shall be residents of Canada, unless the Minister is of opinion that Canadian Labour is not available or that other special circumstances exist which render it contrary to the public interest to enforce this provision.

DEPARTMENT OF PUBLIC WORKS

Contracts in Group "A" (Construction, etc.)

Construction of a gasoline power work boat for the Dry Dock at Esquimalt, B.C. Name of

contractor, Bertram Foster, Victoria, B.C. Date of contract, December 27, 1927. Amount of contract, \$4,460.

Construction of Hangar No. 1, at St. Hubert, P.Q. (Montreal Air Harbour). Name of contractors, Canadian Vickers, Limited, Montreal, P.Q. Date of contract, December 30, 1927. Amount of contract, \$8,400.

Construction of a pier and quay at Sorel, in Sorel Harbour, Richelieu County, P.Q. Name of contractors, Dufresne Construction Company, Limited, Montreal, P.Q. Date of contract, December 15, 1927. Amount of con-

tract, unit prices, approximate expenditure, \$349,802.82.

Harbour improvements at Port Burwell, Elgin County, Ont., consisting of the construction of a Rubble Mound Checkwater from the middle of the existing breakwater, a Rubble Mound Extension to the said breakwater, and repairs to the existing Rubble Mound Wall. Name of contractors, Port Arthur Construction Company, Limited, Toronto, Ont. Date of contract, December 28, 1927. Amount of contract, unit prices, approximate expenditure, \$435,584.25.

Contracts in Group "B" (Interior Fittings)

Supply and installation of fittings in the Minto Street Armoury, Winnipeg, Man. Name of contractor, Robert Nicholas Wyatt, Winnipeg, Man. Date of contract, December 13, 1927. Amount of contract, unit prices, approximate expenditure, \$14,963.78.

Supply and installation of interior fittings (in oak) in the Public Building at Durham, Ont. Name of contractors, The Interior Hardwood Company, Limited, Kitchener, Ont. Date of contract, December 23, 1927. Amount of contract, \$1,275.

Alterations and additions to interior fittings in the Post Office Building, Vancouver, B.C. Name of contractors, C. F. Perry Contracting Company, Limited, Vancouver, B.C. Date of contract, December 28, 1927. Amount of contract, \$4,130.

POST OFFICE DEPARTMENT

The following is a statement of payments made in January, 1928, for supplies ordered by the Post Office Department under contracts which are subject to the Fair Wages policy:—

Nature of Orders	Amount of Orders
Making metal dating stamps and type, also other hand stamps and brass crown seals.....	\$ 762 55
Making and repairing rubber stamps, daters, etc	151 53
Making up and supplying letter carriers uniforms, etc.....	10,645 59
Stamping pads, ink, etc.....	187 90
Bag fittings.....	3,622 30
Scales.....	125 00
Rural mail boxes.....	26,931 00
Letter boxes.....	1,775 95

Minimum Wage Legislation in the United States

The International Labour Office publishes in the January number of the *International Labour Review* an article entitled "Minimum Wage Legislation in the United States" by Rudolf Broda, A.M., J.D., Associate Professor of Social Science, Antioch College, Ohio. After outlining the history of the movement in the United States the writer examines the characteristics of existing legislation; the field of its application, the principal of wage-fixing, and machinery for the purpose. He then studies in detail the Massachusetts law—the first to come into effect in the United States. Finally, an analysis is made of the practical effects of the legal regulation of minimum wages from the point of view of the workers, the employers, and industry respectively. From this it would appear that regulation has given satisfactory results, without involving the parties concerned in any disagreeable consequences.

Professor Broda's study shows that the influence of minimum wage legislation in the United States on the lot of individuals or groups has not been very great. Minimum wages are not applied to home work, which in other countries most needs that protection and even in the United States offers much lower wages than those paid in factories. As he points out, the majority of the women

employed in workshops and stores, and protected by American minimum wage legislation, live at home, and there was no great poverty to be relieved, so far as they are concerned, the United States generally being too prosperous for that condition. Among female workers living alone, however, there was real poverty; this class constitutes only a minority of American working women, but to them the minimum wage has been a great benefit. Against these limited but good results, he finds, on the other hand, no evil results whatever. The cases of elimination of slow workers have been few, and frequently this elimination, in the case of very young and inexperienced girls, has even perhaps been a benefit inducing them to perfect their training first before working for wages. No employment has resulted to any considerable extent; superior workers have not been injured; and the assumption that the minimum tends to become the maximum has proved to be purely imaginary.

The writer concludes by stating: "Other nations can learn from American experience that it is perfectly feasible for an otherwise prosperous country to raise the living standards of its self-supporting working women to standards of decency without any harm to other superior interests, through the instrumentality of minimum wage legislation."

PRICES, RETAIL AND WHOLESALE, IN CANADA, JANUARY, 1928

Cost of Living, Prices of Staple Articles and Index Numbers

THE movement in prices during the month was slight, the weekly family budget in terms of retail prices being again slightly higher, while the Dominion Bureau of Statistics index of wholesale prices continued towards somewhat lower levels.

In retail prices the cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average prices in some sixty cities was \$11.19 at the beginning of January, as compared with \$11.17 for December, 1927; \$11.37 for January, 1927; \$11.63 for January, 1926; \$10.77 for January, 1925; \$10.78 for January, 1924; \$10.52 for January, 1923; \$11.03 for January, 1922; \$14.48 for January, 1921; \$16.92 for June, 1920 (the peak); \$12.42 for January, 1918; and \$7.73 for January, 1914. The advance was due mainly to higher prices for beef, although there were slight increases in the prices of veal, mutton, fresh eggs, creamery butter, rolled oats and evaporated apples. Slight declines occurred in the prices of fresh and salt pork, bacon, lard, rice, sugar and tea. Including the cost of fuel and rent with that of foods the total budget averaged \$21.41 at the beginning of January, as compared with \$21.37 for December, 1927; \$21.59 for January, 1927; \$21.96 for January, 1926; \$21.09 for January, 1925; \$21.23 for January, 1924; \$21.13 for January, 1923; \$21.52 for January, 1922; \$25.30 for January, 1921; \$26.92 for July, 1920 (the peak); \$19.61 for January, 1918; and \$14.41 for January, 1914. Fuel was practically unchanged. Rent was slightly higher in the average, an increase having been reported from Oshawa.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon the average prices of 236 commodities in 1913 as 100, and weighted according to the commercial importance of the commodities, declined slightly, being 151.2 for January, as compared with 151.8 for December, 1927; 150.6 for January, 1927; 163.8 for January, 1926; 165.5 for January, 1925; 156.9 for January, 1924; 151.4 for January, 1923; 151.7 for January, 1922; 200.6 for January, 1921; 256.7 for May, 1920 (the peak); 233.4 for January, 1920; 206.1 for January, 1919; and 191.7 for January, 1918. Thirty-one prices quotations were lower, forty-two were higher, while one hundred and sixty-three were unchanged.

In the grouping according to chief component materials, two of the eight main groups declined, one advanced, while five were unchanged. The Vegetables and their Products group advanced, declines in the prices of flour,

rubber, tea, lemons and oranges being more than offset by advances in the prices of most grains, shorts, potatoes, apples, coffee, rosin and turpentine. The Animals and their Products group and the Non-Ferrous Metals group declined, the former due to lower prices for eggs, pork products and butter, which more than offset higher prices for livestock, leather and beef, and the latter due to somewhat lower prices for aluminium, silver, lead, tin, spelter and solder. In the Fibres, Textile and Textile Products group slightly higher prices for silk and wool offset lower prices for cotton and flax fibre, the index remaining at the same level as last month. The other groups which were unchanged were: the Wood, Wood Products and Paper group; the Iron and its Products group; the Non-Metallic Minerals group; and the Chemicals and Allied Products group.

In the grouping according to purpose, consumers' goods were lower, higher prices for coffee, potatoes, apples, beef and mutton being more than offset by lower prices for flour, lemons, oranges, pork products, butter and eggs. Producers' goods advanced somewhat, due to higher prices for materials for the textile and clothing industry, for the leather industry; for the meat packing industries; and for milling industries. Materials for the metal working industries were lower.

In the grouping according to origin, raw or partly manufactured goods declined, due to lower prices for eggs, lemons, oranges, rubber, cotton and non-ferrous metals, which more than offset increases for grains, potatoes, coffee, apples, livestock, hides, beef, silk and wool. Fully or chiefly manufactured goods showed only minor changes, the level of the group being slightly higher than in the previous month. Domestic farm products, articles of marine origin and of mineral origin were slightly lower, while articles of forest origin were unchanged.

The Canadian Bank of Commerce index of the wholesale prices of about eighty commodities, based upon prices in 1923 and weighted according to the physical volume of production of each commodity included, showed little change, being 96.65 for January, as compared with 96.51 for December, 1927; 96.73 for November, 1927; 96.63 for January, 1927; and 99.67 for January, 1926.

EXPLANATORY NOTE AS TO WHOLESALE PRICES

The index number calculated by the Dominion Bureau of Statistics is based upon the prices of 236 commodities, price levels in 1913

being taken as the base, that is equal to 100, the figures being weighted according to the commercial and industrial importance of each article included. The index number has been calculated by years back to 1890, being unweighted, however, for the period of 1890 to 1913 and has been calculated by months from 1919 to date for all groupings and from 1913 to date for the principal grouping. Summary tables of the Bureau's index number may be found in the supplement to the LABOUR GAZETTE for January, 1925, January, 1926, and in greater detail in the Report on "Prices and Price Indexes 1913-24," issued by the Bureau. A description of the methods used in the construction of the index number appears in the LABOUR GAZETTE for June, 1923.

EXPLANATORY NOTES AS TO RETAIL PRICES

The accompanying table gives the index numbers of the Dominion Bureau of Statistics by the principal groups in the three methods of classification and with those of the classification according to purpose or use in detail for the current month and for certain preceding dates.

The table of retail prices and rentals shows the prices at the beginning of December of seventy-one staple foodstuffs, groceries, coal, wood and coal oil and the rent of six-roomed houses in some sixty cities throughout Canada. All prices are for delivered goods. The exact quality, for which the quotation is given is set forth in the case of each commodity, and every effort has been made to ensure that the quotations in each case refer to the same class of commodity in order that the statistics may be available for purposes of comparison from month to month, from city to city, etc. The prices of foods and groceries in each city, except milk and bread, are the averages of quotations reported to the Department and to the Dominion Bureau of Statistics by a number of representative butchers and grocers in each. The prices of fuel and the rates for rent are reported by the correspondents of the LABOUR GAZETTE.

Statistics similar to these were published each month from 1910 to 1920, the figures during this period being secured at the middle of each month by the correspondents of the LABOUR GAZETTE resident in each locality from dealers doing a considerable business with workmen's households. From 1910 to 1915 the table contained a list of only the twenty-nine foods included in the family budget, with laundry starch, coal, wood, coal oil and rent. In 1915 when monthly publication of the budget in the LABOUR GAZETTE was begun, it was decided to extend the list of foods to 40, and in 1920 the list of foods and groceries was still further extended to include over 100 items.

Beginning with October, 1922, a number of commodities were dropped from the list, and in the case of a number of articles the average prices of the grades most sold have been given, owing to the impossibility of securing prices for uniform grades for the various cities from month to month.

Oleomargarine was dropped in March, 1924, the provision for its manufacture and sale since 1917, notwithstanding the Dairy Act, expired at the end of February, 1924.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts extensively occupied by workmen. The first class is of houses in good condition, favour-

ably located in such districts with good modern conveniences. The second class is of houses in fair condition less desirably located, but still fairly central, without modern conveniences.

The weekly budget of a family of five, calculated in terms of the average prices in the cities for which reports are received, includes twenty-nine staple foods, laundry starch, coal, wood, coal oil, and rent, these being the items for which statistics have been obtained each month and published in the LABOUR GAZETTE since January, 1910. The quantities of each commodity included are modifications of those employed in similar calculations by various authorities. For some articles comparatively large quantities are included owing to the absence of other important items of the same class. For instance, the only fruits are evaporated apples and prunes, and the only fresh vegetable is potatoes. But as market conditions affecting these usually affect the prices of other fruits and vegetables somewhat similarly, the relative proportions of expenditure on the various classes of foods tends to be maintained. At times when the price of an article heavily weighted for this purpose rises, or falls (abnormally) the increase (or decrease) in food prices so indicated is exaggerated, and this should be taken into account in using the budget as an indicator of changes in the cost of living. In fuel and lighting the quantities are estimated on a similar principle, anthracite coal being used chiefly east of Manitoba, and soft coal and wood in the western provinces, while no allowance is made for the quantities required in the various localities owing to climatic conditions, nor for the differences in the heating value of the various fuels. It was estimated, when the budget was first published in 1912 in the report on wholesale prices in Canada for 1911, that these calculations represented from sixty to eighty per cent of the expenditure of an ordinary family, according to the total income. For the average family of five the expenditure on these items of food, fuel, light and rent would be perhaps two-thirds or about sixty-five per cent of the total income.

While the budget serves to show the increase or decreases from time to time in the cost of the items included, it does not purport to show the minimum cost of food and fuel supplies for an average family in the Dominion or in any one province. The quantities of meats, dairy products, cereals, etc., included were adapted as affording a liberal supply for the healthy family of a man at hard physical work. On the other hand an average family with an income sufficient to do so would buy less meat, etc., but more fruit, fresh and canned vegetables, etc., so that comparative expenditure would be little changed.

Index Number of Changes in the Cost of Living

In March, 1921, the Department published in the LABOUR GAZETTE a table of percentages of changes in the cost of living since 1913 as a tentative cost of living index number, using the figures of the above mentioned budget for the calculation for food, fuel and rent, with preliminary figures for clothing and sundries added and this table has been brought down to date at intervals since. The calculation of

(Continued on page 216)

COST PER WEEK OF A FAMILY BUDGET OF STAPLE FOODS, FUEL AND LIGHTING, AND RENT IN TERMS OF THE AVERAGE PRICES IN SIXTY CITIES IN CANADA†

Table with 19 columns (Commodities, Quant., 1900, 1905, 1910, 1913, Jan. 1914, Jan. 1916, Jan. 1918, Jan. 1919, Jan. 1920, Jan. 1921, Jan. 1922, Jan. 1923, Jan. 1924, Jan. 1925, Jan. 1926, Jan. 1927, Dec 1927, Jan. 1928) listing items like Beef, Butter, Eggs, etc.

AVERAGE COST OF STAPLE FOODS BY PROVINCES

Table with 19 columns (Province, \$, \$, \$, \$, \$, \$, \$, \$, \$, \$, \$, \$, \$, \$, \$, \$, \$, \$) listing provinces like Nova Scotia, Prince Edward Island, etc.

†The budget is intended to show the changes in the cost of the items included, not to show the minimum cost for an average family. See Text. †December only. ‡Kind most sold. *For electric light see text.

††An allowance for the cost of clothing and sundries would increase the figures by about 50 per cent: see text.

RETAIL PRICES OF STAPLE FOODS, GROCERIES, FUEL AND LIGHTING AND

a. Houses with conveniences not extensively occupied by workmen but some at \$35.00. p. Mining Company houses \$20, others \$40-\$60. r. Company houses \$10-\$20, others \$30-\$35. s. Delivered from mines.

(Continued from page 208)
 a comprehensive cost of living index number covering all items of workmen's family expenditure in progress since 1918 had been sufficiently advanced to enable the publication of preliminary figures by groups in a supplement to the LABOUR GAZETTE, January 1926, on Prices in Canada and in Other Countries,

page. 9. This table gave figures for June and December each year from 1914 to 1926, inclusive. Figures have since been given for March and September each year since 1917 and the accompanying table gives figures for December each year, from 1914 to 1917, quarterly from 1918 to 1926, and monthly for 1927. As stated in the above mentioned

INDEX NUMBERS OF WHOLESALE PRICES (WEIGHTED) CALCULATED BY THE DOMINION BUREAU OF STATISTICS (Average Prices 1913=100)

supplement the figures in the food group in the family budget are still used to show the changes in food prices but in the other groups the percentage changes in the prices of each article have been weighted according to workmen's average family consumption, and in the fuel and light groups, gas and electricity have been included.

Cost of Electric Current and Gas for Householders

With rates in 1913 as 100, index numbers of electric light rates were 1900, 141.4; 1905, 135.6; 1910, 118.1; 1911, 113.4; 1912, 109.1; 1913, 100.0; 1914, 96.5; 1915, 90.8; 1916, 87.6; 1917, 87.2; 1918, 85.8; 1919, 85.8; 1920, 84.2; 1921, 84.9; 1922, 82.7; 1923, 79.5; 1924, 79.2; 1925, 85.6; 1926, 75.6.

The above figures were arrived at by converting to the base of 1913 as 100, an index number of electric current costs from 1900 to 1913 constructed for the Board of Inquiry into the cost of living in Canada, 1914-15 (Report, Vol. 2, page 318) and bringing the figures down to 1926. The figures are unweighted. The Dominion Bureau of Statistics has recently issued an index number of electric current rates for household consumption as follows: 1923, 73.8; 1924, 72.2; 1925, 69.9; 1926, 68.7. This index number is weighted according to consumption in each city. When the above index number, 1900-1926, is weighted according to population in each city covered for the years 1923, 1924, 1925 and 1926, the figures are substantially the same as those recently issued by the Bureau.

The following are index numbers of rates for manufactured and natural gas for the years 1913 to 1926 issued by the Dominion Bureau of Statistics (revised, Prices and Price Indexes, 1913-1926): Manufactured gas, 1913, 100; 1914, 98.3; 1915, 98.1; 1916, 96.3; 1917, 100.7; 1918, 107.4; 1919, 111.1; 1920, 125.4; 1921, 143.6; 1922, 140.6; 1923, 135.7; 1924, 134.6; 1925, 131.6; 1926, 131.1. Natural gas, 1913, 100; 1914, 109.6; 1915, 112.8; 1916, 112.8; 1917, 113.6; 1918, 114.2; 1919, 116.2; 1920, 123.8; 1921, 143.0; 1922, 163.1; 1923, 162.9; 1924, 162.6; 1925, 178.7; 1926, 172.2. For the years 1900 to 1913 two index numbers of gas costs calculated for the Cost of Living Inquiry in 1914-1915, have been averaged and converted to the base of 1913 as 100, as follows: 1900, 125.8; 1901, 125.8; 1902, 125.8; 1903, 125.2; 1904, 123.9; 1905, 120.1; 1906, 107.5; 1907, 108.8; 1908, 106.9; 1909, 105.7; 1910, 103.8; 1911, 99.4; 1912, 100.6; 1913, 100.0.

*The figures for "all items" were calculated by giving the following weights to each group: Food 35%; Fuel 8%; Rent 18%; Clothing 18%; Sundries 20%.
†Figures for Sundries since 1920 have been revised and this has affected for certain dates "all items".

Retail Prices

The advance in beef prices continued, sirloin steak averaging 31.4 cents per pound in January, as compared with 30.6 cents in December; round steak 26.1 cents per pound in January and 25.1 cents in December; rib roast 24

cents per pound in January and 23.3 cents in December; and shoulder roast 18.2 cents per pound in January and 17.4 cents in December. Higher prices were reported from nearly all localities. Veal and mutton were also higher, the former averaging 21.7 cents per pound in January, as compared with 21 cents in December, and the latter averaging 29 cents per pound in January, as compared with 28.6 cents in December. Fresh pork was down from an average of 26.3 cents per pound in December to 25.9 cents in January. Bacon also averaged slightly lower at 41.8 cents per pound in January, as compared with 42 cents in December. Boiled ham was down from 59.2 cents per pound in December to 58.7 cents in January. In fresh fish cod steak and halibut were slightly higher. Salt cod was unchanged in the average. Finan haddie advanced somewhat. Lard was slightly lower at an average price of 22.1 cents per pound.

Fresh eggs averaged 64.3 cents per dozen, as compared with 64.1 cents in December, 1927 and 57.7 cents in November. Cooking eggs were unchanged at an average price of 52 cents per dozen. Milk was unchanged in the average. An increase, however, was reported from Medicine Hat. Dairy butter was unchanged in the average, higher prices in the western provinces being offset by declines in Ontario and the eastern provinces. Creamery butter was slightly higher, averaging 47 cents per pound, as compared with 46.7 cents in December. Slight increases were reported from most localities, except in Ontario and Quebec where the levels remained about the same as in December. Cheese was slightly higher at an average price of 32.1 cents per pound.

Bread was unchanged at 7.7 cents per pound. Soda biscuits were up from an average of 18.3 cents per pound in December to 18.5 cents in January. Flour was steady. Rolled oats advanced somewhat, averaging 6.3 cents per pound. Rice was down from an average of 10.8 cents per pound in December to 10.6 cents in January. Canned vegetables showed little change. Onions were up from an average of 4.7 cents per pound in December to 4.9 cents in January. Potatoes were practically unchanged at an average price of \$1.65 per ninety pounds. Increases occurred in most localities in the western provinces, but these were offset by declines in Ontario, Quebec and the Maritime provinces. Evaporated apples were slightly higher, averaging 19.4 cents per pound. Raspberry jam averaged somewhat lower at 77.9 cents per four pound tin. Sugar was slightly lower, granulated averaging 8.1 cents per pound, as compared with 8.2 cents in December; and yellow averaging 7.7 cents per pound in January, as compared with 7.8 cents

in December. Tea was down from an average of 72 cents per pound in December to 71.2 cents in January. Anthracite coal averaged \$16.43 per ton in January, as compared with \$16.37 in December. Higher prices were reported from Moncton, Sorel, St. Thomas, Sarnia, and Timmins. Bituminous coal was little changed at an average price of \$10.20 per ton. Coke averaged \$13.03 per ton. Hardwood was slightly lower, averaging \$11.99 per cord, as compared with \$12.07 in December. An increase in rent was reported from Oshawa.

Wholesale Prices

The following is a summary of a statement on wholesale price changes during the month issued by the Dominion Bureau of Statistics. Grain prices moved to slightly higher levels during January. The average price of No. 1 Manitoba Northern cash wheat, Fort William and Port Arthur basis was \$1.42 $\frac{3}{4}$, as compared with \$1.40 $\frac{1}{4}$ in December. The low price for the month was \$1.40 per bushel reached on the 10th and the high \$1.46 $\frac{1}{2}$ on the 20th. The higher price was said to be due largely to a larger export demand. Coarse grains were generally higher, western oats being up from 61 $\frac{1}{4}$ cents per bushel to 62 $\frac{1}{4}$ cents; Ontario oats from 57 $\frac{3}{4}$ cents per bushel to 58 $\frac{3}{4}$ cents; Ontario barley from 79 $\frac{3}{4}$ cents per bushel to 83 $\frac{3}{4}$ cents; rye from \$1.00 per bushel to \$1.03; peas from \$1.50 per bushel to \$1.55; and flax from \$1.80 per bushel to \$1.83. Flour was slightly lower, the price at Toronto being \$7.91 per barrel, as compared with \$8.04 $\frac{1}{2}$ in December. Shorts at Toronto were up from \$34.85 per ton to \$36.25. Lemons at Toronto were down from \$5.50 per box to \$4.50 and oranges from \$5.00-\$5.50 per box to \$4.50-\$5.50. Evaporated apples advanced from 15 cents per box to 16-17 cents. Santos coffee rose from 24 cents per pound to 27 cents. Ceylon and India tea declined. Quebec grades of potatoes at Montreal rose from 95 cents per bag to 97 $\frac{1}{2}$ cents; Manitoba potatoes at Winnipeg from 75 cents per bushel to 79 $\frac{1}{2}$ cents; and New Brunswick grades at St. John from \$2.75 per barrel to \$2.85. The price of Ontario potatoes at Toronto, however, was slightly lower at \$1.29 $\frac{1}{2}$ per bag. Ceylon rubber declined from 40 $\frac{3}{4}$ cents per pound to 40 cents. Turpentine rose from 97 cents per gallon to \$1.05 and rosin from \$13.50 per barrel to \$14.15. The upward trend in the prices of cattle continued, western cattle at Winnipeg advancing from \$9.46 per hundred pounds to \$9.85 and choice steers at Toronto from \$9.80 per hundred pounds to \$11.07. Hogs at Toronto advanced from \$8.62 per hundred

pounds to \$8.79. Sheep rose from \$5.70 per hundred pounds to \$6.63. The price of beef advanced, forequarters being up from \$11.00 per hundred pounds to \$12.63, and hind quarters from \$16.30 per hundred pounds to \$20.63. Mutton advanced \$1.00 per hundred pounds to \$12.00, while dressed hogs were lower at \$13.50 per hundred pounds, as compared with \$13.90 in December. Mess pork was down from \$34.50 per barrel to \$33.50. Beef hides rose from 20-21 cents per pound to 22-23 cents and calf skins from 23-24 cents per pound to 26-27 cents. Sole leather was up from 45 cents per pound to 49 cents. Finest creamery butter at Montreal was down from 40 cents per pound to 39 cents. Fresh eggs at Montreal were substantially lower at 50-53 cents

per dozen, as compared with 65-70 cents in December. Storage eggs at Toronto declined, being 37 cents per dozen, as compared with 43 cents in December. Raw cotton at New York declined from 19.6 cents per pound to 19.2 cents. The high price for the month was 20.1 cents, reached on the 2nd, and the low 17.95 cents on the 28th. The price of wool continued to advance, being up from 27-28 cents per pound to 28-29 cents. Flax fibre was slightly lower at 22½ cents per pound. In non-ferrous metals tin declined from 63¼ cents per pound to 59½ cents; lead from \$6.45 per cwt. to \$6.40; spelter from \$7.25 per cwt. to \$7.17½; solder from 35¼ cents per pound to 34¼; and silver from 58¼ cents per ounce to 57¼.

PRICES IN GREAT BRITAIN AND OTHER COUNTRIES

THE following notes give the latest information available as to the movements of prices in Great Britain and other countries. The index numbers of retail prices are from official sources unless otherwise stated. The authorities for the wholesale prices index numbers are named in all cases.

Great Britain

WHOLESALE PRICES.—The Board of Trade index number, on the base 1913=100, was 140.4 for December, a decline of 0.5 per cent from the previous month. There was a decline of 0.7 per cent in foodstuffs with declines in cereals and 'other foods' and an advance in meat and fish. Non-foods declined 0.5 per cent with decline in iron and steel, other metals and minerals and cotton and advances in other textiles and the miscellaneous group. The average index number for the year 1927, on the same base, was 141.4 as compared with 148.1 for 1926. Foods were 152.0 in 1927, as compared with 154.8 for 1926, with a decline of 1.1 per cent in meat and fish and advances in cereals and other foods, non-foods were 135.7 in 1927 as compared with 144.3 for 1926 with declines in all groups.

The *Statist* index number (in continuation of Sauerbeck's figures) was 121.4 for the end of December, a decline of 0.1 per cent from the November level. During the month, the foodstuffs index advanced from 110.3 to 111.8 with advances in all groups, while industrial materials declined from 129.8 to 128.5 with declines in minerals, textiles and an advance in sundries.

The *Economist* index number, on the base 1901-05=100, was 173.3 for December, a decline of 0.3 per cent from the November level.

Cereals and meat rose 3.0 per cent owing to a sharp rise in pork and lesser increases in other meats and certain cereals. In other foods, a fall in butter and tea, partly counteracted by an advance in sugar, brought the group down 2.2 per cent. Textiles continued to decline due to a decrease in the price of cotton. The mineral group showed a decrease owing to reduction in the prices of pig-iron and of coal while the miscellaneous group advanced owing to a sharp rise in leather.

COST OF LIVING.—The index number of the Ministry of Labour, on the base July, 1914=100, was 168 at December 31, a decline of 0.6 per cent for the month. Foods declined slightly due to decreases in the prices of eggs, butter and bacon, although potatoes advanced. Other groups were unchanged.

Austria

WHOLESALE PRICES.—The index number of the Federal Statistical Office, on the base of prices in gold, first half of 1914=100, was 129 for January as compared with 127 for both November and December. The index price of foods was unchanged from the previous month and industrial materials advanced 3.4 per cent.

COST OF LIVING.—The official index number on the base of prices in gold, July, 1914=100, was 107 for January, showing no change from the previous month.

Belgium

WHOLESALE PRICES.—The index number of the Ministry of Industry, Labour and Social Affairs, on the base April 1914=100, was 838 for November, as compared with 839 for October. Foods rose 2.1 per cent and hides and

leather 3.8 per cent, while with few exceptions, all other groups decreased slightly.

COST OF LIVING.—The official index number of the cost of living of a middle class family of moderate income, on the base 1921=100, was 209.43 for December, as compared with 208.59 for October. All groups showed advances, with the exception of heat and light which declined.

Denmark

WHOLESALE PRICES.—The index number of the Department of Statistics for December, on the base 1913=100, was 154, showing no change from November and October. Vegetable foods, fodder and hides and leather advanced; animal foods, lime, cement, bricks and glass, textiles and clothing and chemicals declined, while fertilizers, fuel and oil, metals and metal products and wood and paper showed no change. The general average for the year 1927 was 153 as compared with 163 for 1926.

Germany

WHOLESALE PRICES.—The index number of the Federal Statistical Office on the base 1913=100, was 139.6 for December, a decline of 0.4 per cent over November. Agricultural products declined 1.2 per cent, provisions 1.4 per cent, raw materials and semi-manufactured goods 0.1 per cent, while manufactured goods advanced 0.7 per cent.

COST OF LIVING.—The official index number, on the base 1913-14=100, was 151.3 for December, an advance of 0.5 per cent over November. Food, heat and light and clothing rose, while rent and sundries were unchanged.

Italy

WHOLESALE PRICES.—The index number of the Milan Chamber of Commerce, on the base 1913=100, was 482.78 for December, a decline of 0.4 per cent from the November level. Both foods and industrial materials declined slightly. The average total index number for the year 1927 was 526.67 as compared with 654.41 for the year 1926.

United States

WHOLESALE PRICES.—The Annalist index number of wholesale commodity prices, on the base 1913=100, was 147.5 for January, an advance of 0.6 per cent over the December level. There were advances in farm products, textile products, fuels, metals and miscellaneous commodities, which were partly counteracted by declines in food products and building materials, while chemicals were unchanged.

Bradstreet's index number, showing the cost of a list of 106 commodities was \$13.5263 at February 1, a decline of 0.3 per cent over the previous month. There were advances in hides and leather, building materials, and miscellaneous commodities, while breadstuffs, livestock, provisions, fruits, textiles, metals, coal and coke, naval stores, and chemicals and drugs declined.

COST OF LIVING.—The index number of the National Industrial Conference Board, on the base July 1914=100, was 163.6 for December, a decline of 0.4 per cent from November. Food and shelter each declined 0.6 per cent, while clothing, fuel and light and sundries were unchanged.

International Yearbook of Agricultural Legislation

The International Institute of Agriculture at Rome has recently published the *International Yearbook of Agricultural Legislation* dealing with the laws relating to agriculture passed during 1926 throughout the world. The volume, which consists of 800 pages, contains a complete series of laws, decrees and regulations on agriculture, published in 133 different countries during 1926, the full text or the title only being given according to the importance of the subject. The laws thus treated in the present annual refer to the following subjects: Trade in agricultural products; agricultural machinery, fertilizers and live stock; laws dealing with finance and customs regulations; plant and animal production and the related industries; agricultural organization and instruction; plant diseases; co-operation, insurance, agricultural credit; land tenure; relations between capital and labour in agriculture.

Owing to the importance of the questions treated and the comprehensive character of the documentary material contained, this Yearbook is recommended to legislators, legal authorities, sociologists, economists, and agricultural associations—in a word to all who are interested either in agriculture itself or in the trade in the products of the land and their industrial exploitation.

Industrial Diseases in Great Britain

A list of the industrial diseases from which workmen receive compensation, published by the British Home Office in their report on Workmen's Compensation during 1926 includes the following complaints: Mercury poisoning, phosphorus poisoning (no cases in 1926); poisoning by benzene, poisoning by African boxwood (no cases in 1926) compressed air illness, "beat hand," miner's "beat knee," and twister's cramp.

FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE FOURTH QUARTER OF 1927

THE number of fatal industrial accidents and such fatalities from industrial diseases as are included with fatal accidents by workmen's compensation boards, etc., recorded in the Department as occurring during the fourth quarter of 1927 was 354, there being 110 in October, 123 in November and 121 in December. In the fourth quarter of 1926, 386 fatal accidents were recorded. In this report it is the custom to record industrial accidents under the dates of the occurrence of the accidents and fatal industrial diseases under the dates on which they prove fatal.

Reports were received from the Workmen's Compensation Boards, the Board of Railway Commissioners, and certain other official sources; from certain large employers of labour; and from the correspondents of the LABOUR GAZETTE. Reports of accidents were also recorded from local newspapers.

By groups of industries the fatalities occurred as follows: agriculture, 30; logging, 46; fishing and trapping, 12; mining, non-ferrous smelting and quarrying, 51; manufacturing, 28; construction, 54; transportation and public utilities, 106; service, 23; trade, 4. Of the mining accidents, 12 were in "metalliferous mining," 28 in "coal mining," 8 in "non-metallic mineral mining" and 3 in "structural materials." Of the accidents in manufacturing, 6 were in the group "vegetable foods," 5 in "pulp, paper and paper products," 9 in "iron, steel and products," 4 in "non-metallic mineral products," one in "non-ferrous metallic products," one in "printing and publishing" and 2 in "miscellaneous products." In construction, there were 25 fatalities in "buildings and structures," 5 in "bridge and highway," one in "railway," and 23 in "miscellaneous construction." In transportation and public utilities, there were 48 fatalities in "steam railways," 2 in "street and electric railways," 39 in "water transportation," 6 in "local transportation," 5 in "storage," 4 in "electricity and gas" and 2 in "telegraphs and telephones." There were 23 fatalities in "service," of which 15 were in "public administration," one in "recreational," 2 in "custom and repair" and 5 in "personal and domestic service." In trade, there was one fatality in "wholesale" and 3 in "retail."

The most serious disaster during this period was caused by a severe storm on the Great Lakes lasting several days during the second week in December. A number of freight boats which were making their last trip up the lakes before the close of navigation were caught in the storm and several were wrecked. The S.S. *Kamloops* of the Canada Steamship Lines, with a crew of twenty, was last heard from on December 6, off White Fish, Lake Superior. This boat was on its way to Port Arthur with a package freight cargo, and no trade was found of it. The S.S. *Lambton* was grounded on a reef off Parisienne Isle, Lake Superior, on December 8, and two of the crew were drowned when they attempted to swim ashore to secure help. The crews of the other vessels which were wrecked by this storm were all saved.

Several other accidents involved a number of fatalities. In logging, four employees of a logging company near Deep Bay, B.C., were going home from work on a speeder on the logging railroad, when a car which had defective brakes became detached from the train, and sliding down grade, collided with the speeder, killing the four men. In mining, two coal miners at Corbin, B.C., on October 1 were killed as the result of a gas explosion in the mine. In miscellaneous construction, five labourers were drowned at Paugan Falls, Que., on December 8, when the boom on which they were standing was prematurely released. Another accident in this group occurred on December 10, when three men engaged in construction work on the Welland Canal lost their lives due to the collapse of the cofferdam on which they were working. In steam railways, two men were killed on November 4, near Kingsey, Que., when a train was derailed owing to the washout of a bridge, following heavy rains. On November 5, near Woodstock, N.B., three men were killed when a freight train went through a trestle.

Supplementary list of accidents.—The supplementary list of accidents occurring during the first three quarters of 1927 includes 19 fatalities, of which 4 were in logging, 4 in mining, 2 in manufacturing, 5 in construction and 4 in transportation and public utilities. Three accidents occurred in May, 3 in July, 2 in August and 11 in September.

FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE FOURTH
QUARTER OF 1927

Trade or Industry	Locality	Date	Age	Cause of Fatality
AGRICULTURE AND STOCKRAISING—				
Farmer's son.....	Barney's River, N.S.....	Oct. 1	21	Heavy mechanical fork fell on him.
Farmer.....	Dalemead, Alberta.....	" 5	71	Thrown from wagon when team bolted, and run over; died Oct. 6.
Farm labourer.....	Buford, Alberta.....	" 5	Thrown from wagon when horses ran away.
Farmer.....	Parry Sound, Ont.....	" 11	Kicked by horse while ploughing; died Oct. 12.
Farmer.....	Libau, Man.....	" 12	64	Struck by pieces of wood when saw broke; died Oct. 26.
Farm labourer.....	near Strathcona, Alberta.....	" 12	51	Crushed by water tank which fell from wagon.
Farmer.....	near Merid, Sask.....	" 15	63	Fell from wagon and run over; died Oct. 16.
Rancher.....	Beaver Meadows, B.C.....	" 17	61	Injured spine when horses ran away; died Nov. 22
Farmer.....	near Milly, Sask.....	" 20	Trapped in burning shack.
Farmer.....	near Brandon, Man.....	" 24	Fatally injured while adjusting the magneto on his threshing machine.
Farmer.....	Milo, Alberta.....	" 26	Fell between threshing machine and engine; died Nov. 23.
Boy on farm.....	near Marquis, Sask.....	" 27	11	Grain wagon which he was driving was ove turned by an automobile.
Farmer.....	Kincardine Twp., Ont.....	" 28	65	Fell from load of wood.
Farmer.....	near Cypress River, Man.....	Nov. 1	33	Fell from seat of tractor and caught under it.
Farmer.....	Pasqua district, Sask.....	" 2	80	Found dead in gravel pit; had apparently been run over by his wagon.
Farmer.....	Becancour, Que.....	" 4	36	Drowned while attempting to pull away small bridge which was being destroyed by swollen stream.
Farmer.....	L'Avenir, Que.....	" 4	20	Drowned when he fell from wagon during flood
Farmer.....	near Indian Head, Sask.....	" 12	64	Asphyxiated by fumes from a pumping engine in pumphouse.
Farm hand.....	Summerside, P.E.I.....	" —	57	Kicked by cow; died Nov. 17.
Farmer.....	near Moosomin, Sask.....	" 17	Caught in drive belt of engine.
Farmer.....	near Sherbrooke, Que.....	" 21	24	Crushed by falling tree.
Farmer.....	near Moncton, N.B.....	" 23	Clothing caught in the shafting of gasoline engine, running a thresher.
Farmer.....	St. Justine, Que.....	" 26	Struck by falling tree.
Farmer.....	Laprairie, Que.....	" 28	53	Was thrown from wagon when horses bolted; died Dec. 2.
Farmer.....	Port Stewart, Ont.....	" 29	Became entangled in engine operating circular saw
Farmer.....	near Champion, Alberta.....	Dec. 5	Frozen to death during blizzard.
Sheep rancher.....	near Skiff, Alberta.....	" 5	65	Frozen to death during blizzard.
Farm hand.....	Reid Hill, Alberta.....	" 5	Frozen to death during blizzard.
Farmer.....	near Morris, Man.....	" 19	Trampled by horse.
LOGGING—				
Logger.....	Campbell River, B.C.....	Oct. 1	Fractured neck; died Dec. 2.
Timber cruiser.....	near Whitecourt, Alberta.....	" 1	While pulling up canoe, revolver accidentally discharged and he was shot.
Logger.....	Howe Sound, B.C.....	" 1	Skull fractured when cable broke; died Oct. 24.
Logger.....	Timberland, B.C.....	" 1	46	Struck by limb of tree.
Logger.....	Yahk, B.C.....	" 3	31	Log rolled on him.
Logger.....	Chilliwack, B.C.....	" 3	33	Struck by falling tree.
Loader.....	Fanny Bay, B.C.....	" 10	41	Crushed by rolling log.
Chokerman.....	Reid Bay, B.C.....	" 11	30	Struck by rolling log.
Logger.....	St. Honoré, Que.....	" 12	Struck by falling tree.
Fireman.....	Bainbridge, B.C.....	" 17	45	Killed by falling spar tree.
Labourer.....	Albarni, B.C.....	" 18	47	While unloading car of poles, poles rolled on him.
Logger.....	McNab Creek, B.C.....	" 19	40	Struck by logging line.
Chokerman.....	near Duncan, B.C.....	" 21	23	Struck by tree.
Clerk.....	Mile 45 C.N.R. Ruel Sub-div., Ont.....	" 24	Drowned.
Engineer.....	Pitt Lake, B.C.....	" 27	24	Scalded when the pipe of donkey engine burst.
Logger.....	Buckley Bay, B.C.....	" 28	32	Slipped from boom of logs and was drowned.
Logger.....	Fort Coulonge, Que.....	Oct. 29	55	Leg crushed by log; died Dec. 16.
Labourer.....	Britannia Beach, B.C.....	" 31	24	Piece of tree fell on him.
Chopper.....	Five Islands, N.S.....	Nov. —	Struck on head by a stub from falling tree.
Logger.....	Fossmill, Ont.....	" 2	23	Struck by limb of falling tree.
Labourer.....	Appello, Ont.....	" 3	35	Struck on side by tree.
Labourer.....	near Quebec, Que.....	" 4	32	While taking provisions to camp, was frozen.
Labourer.....	Flanders, Ont.....	" 4	45	Struck by tree.
Labourer.....	Dean Lake, Ont.....	" 4	32	Struck by tree.
Labourer.....	Turriff, Ont.....	" 12	75	Struck by falling limb of tree.
Logger.....	Penny, B.C.....	" 18	Struck by falling tree.
Logger.....	Whatshan Lake, B.C.....	" 21	48	Struck by falling tree.
Grader.....	" 21	48	Rear car of logging train became detached, and owing to defective brakes, slid down grade colliding with speeder on which four men were riding home from work.
Grade foreman.....	Deep Bay, B.C.....	" 21	28	Struck by falling tree.
Steam shovel engineer.....	" 21	44	Struck by log.
Railroad grader.....	" 21	44	Struck by log.
Logging contractor.....	near Lac Edouard, Que.....	" —	32	Drowned while crossing on ice.
Logger.....	Restigouche Co., N.B.....	" 24	61	Struck by falling tree.
Labourer.....	Dean Lake, Ont.....	" 24	32	Crushed by log.
Logger.....	Moose River, N.S.....	" 30	Leg crushed in log carrier; died Dec. 5.
Logger.....	near McBride, B.C.....	Dec. 4	38	Struck by falling tree.

FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE FOURTH QUARTER OF 1927—Continued

Trade or Industry	Locality	Date	Age	Cause of Fatality
LOGGING—Concluded				
Logger.....	St. Come District, Que.....	" 5	Struck by falling tree.
Labourer.....	Anstice, Ont.....	" 7	55	Dynamite explosion.
Labourer.....	Olive Siding, Ont.....	" 9	35	Struck by tree.
Labourer.....	Strathly Twp., Ont.....	" 12	Struck by tree.
Labourer.....	Wako, Ont.....	" 13	25	Struck by tree.
Hooktender.....	Great Central, B.C.....	" 13	40	Changing rigging on a log when tree fell on him.
Logger.....	near Stillwater, B.C.....	" 18	45	Struck by falling tree.
Logger.....	Godbout, Que.....	" 19	20	Feet frozen while working in the bush; died of gangrene.
Sub-contractor.....	Phoenix, Alberta.....	" 21	36	Fell under sleigh.
Lumberman.....	near Sussex, N.B.....	" 29	24	Struck by limb of tree.
FISHING AND TRAPPING—				
Fisherman.....	Port Alberni, B.C.....	Oct. 16	21	Drowned when vessel was sunk in collision
Fisherman.....	Rapid Point, Man.....	" 19	Drowned when skiff capsized.
Trapper.....	near Chapleau, Ont.....	" 29	29	Drowned.
Trapper.....		" 29	26	
Trapper.....	near Sioux Lookout, Ont.....	Nov. 9	While out trapping was accidentally shot; died Nov. 10.
Fisherman.....	St. Peter's Bay, N.S.....	" 22	26	Capsize of dory.
Fisherman.....	Off coast of Nova Scotia.....	" 29	Lost in storm at sea.
Fisherman.....		" 29	
Fisherman.....	Tobermory, Ont.....	Dec. 7	Drowned when boat capsized.
Trapper.....	Near Kenora, Ont.....	about
Trapper.....	North Abitibi District, Que.....	Dec. 17	Accidentally walked into trap.
Fisherman.....	Off Guysboro, N.S.....	" 21	Found dead in his cabin.
		" 23	35	Slipped on icy deck and fell into sea.
MINING NON-FERROUS SMELTING AND QUARRYING—				
Metalliferous Mining:—				
Prospector.....	Adams River, B.C.....	Oct. 24	62	Explosion of caps.
Miner.....	Noranda, Rouyn, Que.....	" 26	32	Struck by double gage.
Miner.....	Timmins, Ont.....	Nov. 1	27	Smothered in ore and dust.
Miner.....	Near Cobalt, Ont.....	" 3	48	While riding between levels with gage door open, his legs jammed in shaft.
Repairman in mine.....	South Porcupine, Ont.....	" 6	44	Sustained fatal injuries in unknown manner while repairing pump at the bottom of shaft.
Labourer.....	Sullivan, B.C.....	" 12	39	Pile of planks fell on him; died Nov. 18.
Steelworker.....	Sullivan, B.C.....	" 26	28	While rivetting, beam on scaffold broke and he fell 40 feet; died Nov. 29.
Miner.....	Kirkland Lake, Ont.....	" 30	23	Fall of rock.
Miner.....	Cassidy, B.C.....	Dec. 13	38	Crushed between two cars; died Dec. 14.
Miner.....	Kimberly, B.C.....	" —	Piece of coal fell on his foot, died of septic poisoning on Dec. 20.
Miner.....	near Stewart, B.C.....	" 19	Buried in snowslide on way to mine.
Miner.....	Kirkland Lake, Ont.....	" 23	Crushed between freight cars on way home from work.
Coal Mining—				
Miner.....	Glace Bay, N.S.....	Oct. 1	45	Run over by shunting steel cars.
Miner.....	Corbin, B.C.....	" 1	Gas explosion in mine, one man instantly killed, other died Oct. 3.
Fire boss.....		" 1	49	
Miner.....	Inverness, B.C.....	" 3	Struck by runaway coal trip.
Miner.....	Drumheller, Alberta.....	" 5	38	Buried by fall of rock.
Miner.....	Cumberland, B.C.....	" 5	50	Fall of coal; died Oct. 7.
Miner.....	Cumberland, B.C.....	" 12	Struck by falling piece of coal.
Miner.....	Drumheller, Alberta.....	" 12	47	Struck by falling piece of coal; died Oct. 15.
Miner.....	Inverness, N.S.....	" 17	Struck by piece of coal which fell from roof.
Miner.....	New Glasgow, N.S.....	" 18	In boarding riding rake, his head was struck by steel rope.
Miner.....	Wayne, Alberta.....	" 21	27	Fall of rock.
Miner.....	Stellarton, N.S.....	Nov. 4	36	Fall of coal.
Miner.....	Inverness, N.S.....	" 4	60	Fall of coal.
Miner.....	Mountain Park, Alberta.....	" 9	40	Caught by cave-in at mines.
Stable boss.....	Drumheller, Alberta.....	" 18	66	Cut hand on harness; infection.
Miner.....	Aerial, Alberta.....	" 23	45	Crushed by fall of rock.
Miner.....	Little Bras d'Or, N.S.....	" 30	21	Fall of rock.
Miner.....	Drumheller, Alberta.....	" 30	32	Fell down shaft of mine.
Miner.....	Coalhurst, Alberta.....	Dec. 1	22	Fall of rock.
Miner.....	Wayne, Alberta.....	" 10	43	Fall of coal.
Miner.....	Bellevue, Alberta.....	" 14	37	Fell between cars and was run over.
Miner.....	Edmonton, Alberta.....	" 15	38	While timbering, roof fell and buried him.
Miner.....	Drumheller, Alberta.....	" 16	35	Fall of rock.
Miner.....	Lethbridge, Alberta.....	" 17	54	Crushed between coal cars; died Dec. 21.
Miner.....	Edmonton, Alberta.....	" 22	over 21	Caught in fall of rock.
Miner.....	Taber, Alberta.....	" 23	28	Fall of rock.
Miner.....	Bellevue, Alberta.....	" 27	23	Killed at work at bottom of slope.
Miner.....	Edmonton, Alberta.....	" 29	47	Crushed by coal cutting machine.

FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE FOURTH
QUARTER OF 1927—*Continued*

Trade or Industry	Locality	Date	Age	Cause of Fatality
MINING NON-FERROUS				
SMELTING AND QUARRYING—Concluded				
<i>Non-metallic mineral mining and quarrying, n.e.s.:</i>				
Miner.....	Thetford Mines, Que.....	Oct. 6	22	Struck by rock which fell from box.
Miner.....	Galetta, Ont.....	" 7	25	Fracture of skull.
Labourer.....	St. Genevieve de Bastican, Que.....	" 14	32	While loading gravel in sand pit, was caught under landslide; died Oct. 17.
Miner.....	Asbestos, Que.....	about Oct. 28	28	While at foot of shaft, a heavy bolt fell on him; died Nov. 4.
Mill hand.....	Thetford Mines, Que.....	Nov. 3	19	While trying to put a conveyor belt on a pulley, his arm was caught in the motor.
Miner.....	Asbestos, Que.....	" 5	Head crushed between two cars.
Miner.....	Galetta, Ont.....	" 29	48	Fell down chute.
Miner.....	Asbestos, Que.....	Dec. 13	28	Struck by rock following explosion of dynamite.
<i>Structural Materials:</i>				
Crusherman with quarry contractor.....	Smiths Falls, Ont.....	Oct. 1	40	Blow in abdomen.
Labourer.....	Highland Creek, Ont.....	Nov. 7	17	While loading gravel car was crushed between crane and gravel car; died Nov. 8.
Teamster.....	Midland, Ont.....	" 16	59	While loading sand from pit was smothered when section of bank fell on him.
MANUFACTURING—				
<i>Vegetable foods, drink and tobacco:</i>				
Cigar factory employee.....	Levis, Que.....	Oct. 1	16	Cut hand, infection; died Oct. 10.
Baker.....	Marmora, Ont.....	" 6	48	Caught in bread mixer, fracturing skull.
Labourer.....	Montreal, Que.....	Nov. 24	17	Slipped from elevator in flour mill and fell to ground; died Dec. 22.
Labourer.....	London, Ont.....	Dec. 8	36	Infection.
Painter.....	London, Ont.....	" 10	43	Fell two stories down shaft; died Dec. 13.
Employee of flour mill.....	Montreal, Que.....	" 22	17	Slipped from elevator and fell several feet.
<i>Non-metallic mineral products:</i>				
Millwright with brick company.....	Milton, Ont.....	Nov. 22	Caught in shafting.
Brickmaker.....	Toronto, Ont.....	" 22	Fell into clutch drive pulley.
Employee of cement works.....	Tuxedo, Man.....	Dec. 1	35	Buried under pile of rock.
Powder man with brick company.....	Redcliff, Alberta.....	" 28	56	While investigating charge of dynamite which had not gone off on time, it exploded.
<i>Pulp, paper and paper products:</i>				
Trucker.....	Port Arthur, Ont.....	Oct. 18	45	Struck in abdomen.
Electrician.....	Limoilou, Que.....	Nov. 14	32	While connecting electric wires was electrocuted.
Brakeman.....	Kapuskasing, Ont.....	" 17	Crushed between car and door.
Labourer.....	Donnacona, Que.....	Dec. 2	36	Fell into pulp crushing machine at pressure plant.
Labourer.....	Limoilou, Que.....	" 13	25	Struck by piece of machinery.
<i>Printing and publishing:</i>				
Labourer.....	Toronto, Ont.....	Dec. 3	Fell in shop of publishing company.
<i>Iron, steel and products:</i>				
Labourer.....	Sydney, N.S.....	Oct. 30	30	While loading steel rods in vessel, fell into hold of same.
Ladle man in steel mill.....	Sydney, N.S.....	Nov. 13	54	While coupling, slipped and fell between cars and was run over.
Labourer.....	Hamilton, Ont.....	" 18	40	Came in contact with high voltage power wire and electrocuted.
Foreman in boiler shop.....	Levis, Que.....	" 24	42	Heavy piece of machinery fell on him.
Labourer in automobile factory.....	Oshawa, Ont.....	" 29	81	Fell from a box.
Structural iron worker.....	Hamilton, Ont.....	Dec. 1	24	Struck on head by tongs which were thrown up by forging hammer.
Labourer.....	Winnipeg, Man.....	" 5	18	Caught in moving elevator belt.
Fireman.....	Toronto, Ont.....	" 26	Fell from ladder, pneumonia.
Foundry worker.....	Hamilton, Ont.....	" 29	Crushed between truck and cover casting; died Dec. 30.

<i>Water transportation:</i>				
Labourer.....	Kent Co., N.B.....	Sept. 9	25	Fell from scow into pond and drowned.

IMMIGRATION INTO CANADA IN 1926 AND 1927

THE report of the Department of Immigration and Colonization covering the activities of the fiscal year ending March 31, 1927, has been received recently. The extensive scope of the Department's work is indicated by the reports of the various branches, including those concerned with Chinese immigration, colonization, European emigration for Canada, publicity, immigration of women, immigration of juveniles, together with the reports of the commissioners of the eastern, western and Pacific divisions of Canada.

The total number of immigrants into Canada during the fiscal year 1926-27 was 143,991 as compared with 96,064 for the previous year, and with 111,362 for the year ending March 31, 1925. Of the total of 143,991 for 1926-27, 80,512 were males, 34,828 were females, and 28,651 were children. The num-

ber of immigrants arriving by ocean ports was 122,966 in 1926-7, and 77,286 in 1925-6. From the United States, 21,025 immigrated into Canada during 1926-27 as compared with 18,778 during the previous year.

Analyzing the total immigration on a basis of racial origin the leading racial groups as indicated by the official figures were as follows: English, 30,935; Scotch, 16,728; German, 15,221; Irish, 11,553; Scandanavian, 10,277—(Danish, 2,255; Icelandic, 62; Norwegian, 4,639; Swedish, 3,321); Ruthenian, 10,061; Polish, 6,704.

In connection with the Three Thousand British Families Scheme, it is stated:—

"This scheme was undertaken primarily to demonstrate the possibilities of successful settlement on the land of British families with little or no capital of their own. During the summer of 1926, the Right Hon. the Earl of

Clarendon, chairman, and Mr. T. C. Macnaghten, C.M.G., C.B.E., vice-chairman of the Overseas Settlement Committee, visited Canada to study land settlement and particularly to ascertain the progress made by the families who came to Canada under the Three Thousand Families scheme in 1925 and in the early months of 1926. The delegation spent two and one half months in Canada, travelled from the Atlantic to the Pacific, and personally visited 178 families in process of settlement. The conclusions reached are summarized in the following quotation from the official report, which was issued in November, 1926:—

“We have no hesitation in saying that the scheme has thus far proved a conspicuous success and promises to become the most useful effort in colonization undertaken by any government in modern times.”

“Canada would benefit by immigration to a much greater degree,” the report continues, “if capital more commonly accompanied settlers. It is expected that the balance of the three thousand families will be moved during next fiscal year. Already much thought has been given to plans for continued settlement along similar lines.”

The report further observes that publicity was almost entirely confined to the British Isles and the United States, and that it was not possible to undertake any widespread effort in the northern States of Europe owing largely to the desire of the government of such States to retain their own people. However, the statistics indicated that Canada continues to attract a valuable movement of such people from northern European countries. It was considered that a very large per-

centage of the present movement of immigrants to Canada is of such racial origin or of such pioneer type as to offer comparatively little difficulty in absorption and assimilation.

Attention was drawn to the special movement from the British Isles of lads between 14 and 17 years of age. These lads come not from institutions or other shelters in the mother country but from their own homes. They are carefully selected overseas, are given passage assistance, and are brought out under the auspices of special organizations created for that purpose. The lads come to distributing farm centres in Canada, and from these are placed in good farm homes. The usual terms for the first year are \$10 per month and keep. Wages, apart from a regular amount of pocket money, are collected by the organization and deposited in a bank to the joint signature of the lad and the organization. In this way the lad's interests are protected, and his wages are kept for him until he reaches the age of eighteen or nineteen years, when they are all turned over to him with accrued interest.

In the work of this movement, federal-provincial co-operation proved a beneficial feature. It was hoped to enlarge and extend this branch of the work until "British lads, moved under this arrangement, will be counted not in hundreds but in thousands."

Touching on the next logical step in the scheme the report points out that a practical scheme must be devised to assist British boys in acquiring land when they have demonstrated their fitness to take over farms on their own account. Various proposals are now under consideration, and it is hoped that during the next fiscal year something of a practical nature will have been developed and thus provide the second step in the permanent settlement upon the land of the splendid type of British lads now being attracted to Canada.

A movement not included in the immigration figures is that of returned Canadians. Since April, 1924, a record has been kept of the number of Canadian citizens returning to Canada after an absence in the United States, who left Canada with the intention of making their permanent home in the United States and subsequently returned to Canada declaring their intention of again taking up permanent residence here. Persons who left Canada on visits or for other temporary purpose are not included in this category. Returning Canadian citizens are divided into three classes: (a) those born in Canada, (b) those British born who acquired Canadian domicile, and (c) those who secured naturalization in Canada. For the year 1924-25, there was a total of 43,775 returned Canadians; for 1925-26, 47,221; for 1926-27, 56,957.

Immigration to Canada during the Nine Months ended December 31, 1927

The accompanying tables from the Department of Immigration and Colonization show the nature and extent of immigration into Canada during the first nine months of the fiscal year 1927-1928, with some comparative figures for the corresponding period 1926-1927. Of a total of 128,928 immigrants 45,949, or 36 per cent were British, 19,947, or 15 per cent from the United States and 63,032, or 49 per cent from other countries. This compares with a total of 114,035 for the same period of the fiscal year 1926-1927 of whom 42,793, or 38 per cent were British, 17,154, or 15 per cent from the United States, and 54,088, or 47 per cent from other countries. During the period 33,722 Canadians returned from the United States. If these are included with the general immigration figures the combined total is 162,650, as compared with a corresponding total of 162,636 for the same period last year.

STATEMENT of Immigration to Canada, for the Nine Months ended December 31, 1927, compared with that of the corresponding Months of 1926.—

RECENT LEGAL DECISIONS AFFECTING LABOUR

Unincorporated Union has no Standing in Ontario Courts

On the 11th day of February, 1928, a lengthy judgment was delivered by the Honourable Mr. Justice Raney in the Trial Division of the Supreme Court of Ontario in the case of *Polakoff, et al v. Winters Garment Company, et al.* This action was brought by the International Ladies' Garment Workers' Union, an unincorporated labour union, and three other local labour unions who were joined as co-plaintiffs, against the Toronto Cloak Manufacturers' Protective Association, an incorporated body, the members of which are Toronto manufacturers of ladies garments, and one of the manufacturers added as a co-defendant. The action was to enforce an agreement in writing in the nature of a collective bargain, made in February, 1925, by way of settlement of disputes between the local manufacturers and the local unions.

Mr. Justice Raney dismissed the action on the grounds that the plaintiffs, the International Ladies Garment Workers' Union, is an illegal organization, and because of its illegality, incapable of maintaining this action or, for that matter, any other civil action in an Ontario court. The learned judge, in his reasons for judgment, set out in detail the history of legislation in England, Canada and Ontario as applied to trade unions in that province, and was of the opinion that because of lack of provincial legislation, the law applicable to trade unions in Ontario is the law applicable to trade unions as it existed in England and was introduced into the province of Ontario on the 15th day of October, 1792 (Revised Statutes of Ontario, 1927, c. 130), and as it was declared in *Hornby v. Close* (1867) 2 L.R., Q.B., 153, and *Farrer v. Close* (1869) L.R., 4 Q.B., 602, wherein it was held that the labour unions were illegal organizations, their rules in relation to strikes being in restraint of trade and therefore against public policy. This rule of law is further set out in a judgment of the House of Lords in *Russell v. the Amalgamated Society of Carpenters* (1912) A.C. 421, which case Mr. Justice Raney felt bound to follow. *Starr v. Chase*,* 1924, S.C.R. 495, in which the Supreme Court of Canada, on an appeal from Manitoba, upheld the right of the Brotherhood of Locomotive Engineers to bring an action in the Manitoba courts is distinguished on the grounds that the courts

in that case found that public policy as known to the law of Manitoba, is not the public policy as set out in the *Russell* case and therefore not the public policy as known to the law of Ontario. There is also a reference in the judgment to the public policy of Canada with respect to trade unions as declared by the enactment of the Trade Unions Act (R.S.C. 1927, c. 202, and as approved by the Parliament of Canada in its ratification of the covenant of the League of Nations which includes the various labour clauses enumerated in the judgment. This also is not the public policy of Ontario.

In the course of this judgment Mr. Justice Raney referred to the Trade Unions Act of Canada (R.S.C. 1927, c. 202), and expressed the opinion that as far as that Act gives protection against criminal prosecution the unions are better protected by the Criminal Code of Canada, but as far as it purports to deal with property and civil rights by removing the common law disability of registered trade unions to make contracts, the Act would appear to be clearly *ultra vires*.

An editorial of the *Toronto Globe* states that this judgment opens up a big question, and further, that as a result, the validity of many collective bargains between employers and employees may be subject to attack, and a principle generally accepted in most countries in industrial relations may be discredited in the province of Ontario.

Scope of Male Minimum Wage Order in British Columbia

Leave to appeal to the Judicial Committee of the Privy Council against a recent decision of the British Columbia Court of Appeal under the Male Minimum Wage Act of the Province is being sought by the defendant, Allen Thrasher, a logging operator in the Prince George District. The earlier stages of this case were outlined in the *LABOUR GAZETTE*, September, 1927, page 1026. Thrasher was sued by Cecil Compton, a cook in a lumber camp, for payment at the rate of 40 cents an hour, this being the minimum rate fixed for the lumber industry by the Board of Adjustment administering the Act. The County Court Judge at Fort George held that the occupation of a cook was not incidental to the lumbering industry and was not covered by the Board's order. On appeal by the plaintiff the Court of Appeal decided that cooks were included and refused to the defendant permission to appeal to a higher court. Thrasher then took steps to obtain from the Privy Council leave to appeal

**LABOUR GAZETTE*, June, 1924, page 532.

to them. The Board of Adjustment will oppose the application, which will be considered early in the present year.

Another case involving the interpretation of the Board's order governing the lumbering industry was heard at Vancouver, in December, when Mr. Justice Cayley, held that the order did not apply to cooks' "flunkies" (dish washers, etc.), though it might be held to apply to the cooks themselves. It is stated that the Board will take any action that may be necessary to secure the application of the Act to all workers connected with the lumbering industry.

Reasonable Care Must be Exercised by Workman

This was an Appeal by the defendant from the judgment of Mr. Justice Orde, J.A. (32 Ontario Weekly Notes 241). The appeal was heard by the First Divisional Court of the Appellate Division of the Supreme Court of Ontario, Chief Justice Mulock, and Judges Magee, Hodgins, Ferguson and Grant. Judgment was delivered on January 16, 1928.

Chief Justice Mulock, in a written judgment, said that there was upon the defendant's premises a ladder, 25 feet high, which it was the daily duty of the plaintiff to ascend and descend, and at the base of which was a concrete floor. For the plaintiff's safety, these conditions required the latter to be maintained in a reasonably safe state. The defendant, a farmer, must have realized it to be his duty to see that it was safe. A week before the accident he ascended it "and saw nothing wrong with it;" he made it his "practice to look around that work at least once a week." Any reasonable person would have realized that, as the plaintiff seized the rungs when ascending or descending this upright ladder, there would be a pressure away from the ladder which would have a tendency to pull out the nails in the rungs, and that it was imprudent not to adopt from time to time reasonable means to counteract such pressure in order to prevent injury to the plaintiff. It would have been evident to any reasonably careful person that failure to adopt such means to prevent the nails drawing out would be likely to endanger the plaintiff's safety.

The happening of the accident showed that the ladder was not in a safe condition. This any reasonably careful man on proper examination would have discovered. Even if the ladder when built was reasonably safe, there was a time-limit to its safety, and the defendant was not entitled to neglect proper inspection and necessary repair until the happening of an accident. It had been for two years in use;

the effect must have been to loosen gradually the hold of the nails in the wood. During the whole of that period, so far as appeared, the defendant did not make any sufficient inspection of its condition; and it was a fair inference that, even if the ladder was originally safe, it had in the course of time become unsafe.

It was competent for the trial Judge, sitting as a jury, to take all these circumstances into consideration in determining whether or not the defendant had failed in his duty to the plaintiff; and he found that at the time of the accident the ladder was unsafe and the defendant was negligent in leaving it in that condition. The Chief Justice agreed with that finding and was of opinion that the appeal should be dismissed with costs.

The Appeal was dismissed, Mr. Justice Ferguson, dissenting. Ontario-Hurley v. Boyce. 33 Ontario Weekly Notes 287.

No Appeal from Decision of Compensation Board on Question of Fact

This case concerned the question of the application of section 35 (1) of the Workmen's Compensation Act of New Brunswick, which provides as follows:—

"An appeal shall lie to the Supreme Court, Appeal Division, from any final decision of the Board upon any question as to its jurisdiction or upon any question of law, but said appeal shall be taken only by permission of a judge of the Supreme Court, etc."

The town of Bathurst, in order to carry out repairs to its waterworks system, arranged with an engineering company that the company should rent to the town a diving apparatus which it owned, and should permit one of its employees, D. Crosby, to leave his employment for a time and to work for the town as a diver. While engaged in this work Crosby was accidentally killed. His widow made a claim for compensation under the Workmen's Compensation Act, but the Board disallowed the claim on the ground that the deceased as an employee did not come within the scope of Part I of the Act.

A judge of the Supreme Court granted permission to appeal against this decision. He said: "It seems to me that whether he (the deceased) was a workman or an independent contractor, or one who had entered into a contract of service or a contract for service involves a question of law and is not merely a question of fact, for in the view I take of the case, without attempting to decide the matter definitely, I am of the opinion that if he was a workman under the definition contained in the Act there is substantial ground for an appeal."

The Supreme Court affirmed the decision of the Workmen's Compensation Board, holding that there was no appeal from the Board's decision on the question whether an injury has arisen out of an employment covered by the Act. The judgment cited section 33 of the Act, which provides that "the decisions and findings of the Board upon all questions of law and fact shall be final and conclusive," and proceeds to enumerate the questions which are to be regarded as "questions of fact," the first question on this list being as to whether or not an injury has arisen in the course of an employment within the scope of the Act.

(*New Brunswick—Town of Bathurst versus Workmen's Compensation Board**).

No Payment Due for Work Requiring to be Re-done

The owner of a house in Saskatchewan contracted with a workman for the stuccoing of the house and for repairing the chimney. The workman not having received payment for this work, sought to recover the sum of \$104.80. The defendant stated that the plaintiff agreed to stucco the house in a workmanlike manner, and to do a "first class job" in every respect, and alleged that the work was actually done in such a negligent and careless manner as to be useless. He alleged further that through the plaintiff's negligence he had lost the material supplied by him for the work to the value of \$213.52, and he counter-claimed for this amount, for loss of time in hauling the material to his farm, and for general damages. The trial court accepted the evidence showing that the work was done in an unworkmanlike manner, and that it would require to be done over again. It therefore found that the defendant

*Dominion Law Reports, 1928, 1, page 114.

was entitled to recover \$213.42 in specific damages, and about \$25 in general damages. The plaintiff having appealed, the Saskatchewan Court of Appeal affirmed the decision of the lower court, except in regard to general damages, which were held to be not recoverable in an action for breach of contract unless it can be shown that there has been an element of loss which cannot be estimated. The Appeal Court held, however, that where work under a contract has been so badly done that it requires to be done again, the contractor is not entitled to be paid anything therefor, and the contractee is entitled to recover the amount spent by him on materials wasted by the contractor.

(*Saskatchewan-Evans versus Draper**)

Wage Agreement Proved Valid by Acceptance of its Terms

Appeal was taken by the defendant from the decision of the Manitoba Court of King's Bench, reported in the LABOUR GAZETTE, July, 1927, page 823. The Manitoba Court of Appeal affirmed the decision of the lower court, with a slight variation as to the amount of the defendant's net profits which had been allowed to the plaintiff. The judgment affirmed that a company which has accepted the services of an employee, not an officer or shareholder of the company, for a long time, and paid him wages and a bonus regularly, will not be allowed to contest the contract of employment on the ground that it was entered into by the president, who was also the manager, without proper authority.

NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

Monthly Summary

AN increase was noted in industrial employment in Canada at the beginning of February, although the situation was still affected to some extent by inventory shut-downs, and more so, by continued seasonal slackness in the out-of-door industries. Employment, however, was in considerably greater volume than on the same date in any other year of the record. This statement is based upon returns received by the Dominion Bureau of Statistics from 6,223 firms, each with a minimum of fifteen employees. The staffs of these firms on February 1 aggregated 839,604 persons, as compared with 827,711 on January 1. This increase, which was more extensive than on the corresponding date in 1927 or 1926, caused the index (with January, 1920, as the base equal to 100) to stand at 100.8, while in the preceding month it was 99.5, and on February 1, 1927, 1926, 1925, 1924, 1923, 1922 and 1921, it was 95.4, 90.7, 86.1, 90.6, 89.5, 78.9 and 90.1, respectively. The returns are representative of employment in all industries except agriculture, fishing, hunting and highly specialized business. Reports received from the offices of the Employment Service of Canada indicated a small decline in the volume of business transacted in January, as indicated by average daily placements, chiefly owing to a reduction in logging, which more than offset increases in construction and maintenance of railways and highways. At the beginning of February, 1928, the percentage of unemployed members registered by local trade unions stood at 6.8 contrasted with percentages of 6.6 at the beginning of January and with 6.4 at the beginning of February, 1927. The percentage for February is based on the reports tabulated by the Department of Labour from 1,668 labour organizations with an aggregate membership of 176,421 persons.

The average cost of a weekly family budget of twenty-nine staple foods was \$11.03 at the beginning of February, as compared with \$11.19 for January; \$11.23 for February, 1927;

\$11.50 for February, 1926; \$10.93 for February, 1925; \$10.75 for February, 1924; \$10.53 for February, 1923; \$10.61 for February, 1922; \$14.08 for February, 1921; \$16.92 for June, 1920 (the peak); \$12.54 for February, 1918; and \$7.75 for February, 1914. In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon prices in 1913 as 100, was slightly lower at 150.8 for February, as compared with 151.2 for January; 150.1 for February, 1927; 162.0 for February, 1926; 164.7 for February, 1925; 156.8 for February, 1924; 153.6 for February, 1923; 153.5 for February, 1922; 191.1 for February, 1921; 256.7 for May, 1920 (the peak); 238.8 for February, 1920; and 200.5 for February, 1919.

The time loss due to industrial disputes in February, 1928, was less than during January, 1928, and also less than in February, 1927. Seven disputes were in existence as some time or other during the month, involving 232 workpeople, and resulting in a time loss of 5,103 working days. Corresponding figures for January, 1928, were: 9 disputes, 500 workpeople and 8,154 working days; and for February, 1927, ten disputes, 410 workpeople and 6,403 working days.

Industrial Disputes Investigation Act, 1907.

During February the Department received reports from three Boards of Conciliation and Investigation in connection with disputes involving (1) the Toronto, Hamilton and Buffalo Railway Company; (2) Canadian Collieries (Dunsmuir) Limited; and (3) the Canadian Pacific Railway Company, and certain of the employees respectively. One new application for the establishment of a board was received. In connection with one of the applications reported last month a new agreement was reached between the parties concerned in the dispute through the mediation of the Department of Labour. A full account of recent proceedings under the act will be found at page 251.

Combines Investigation Act, 1923.

The action of the Proprietary Articles Trade Association in withdrawing its stop-list and ceasing operations immediately after the publication of the Commissioner's report in October last was referred to by the Minister of Labour in the House of Commons on February 20, 1928, in answering a question asked by Mr. J. S. Woodsworth. The extract from Hansard is as follows:—

Mr. WOODSWORTH (Winnipeg North Centre): What action has been taken or does the Government propose to take to protect the public against the operations of the Proprietary Articles Trade Association?

Mr. HEENAN: An investigation under the Combines Investigation Act was made into the operations of the Proprietary Articles Trade Association as an alleged combine of manufacturers and wholesale and retail druggists established to fix minimum resale prices on certain proprietary medicines and toilet articles. The Commissioner, Mr. L. V. O'Connor, reported, on October 24, 1927, that the association was operating against the public interest. Immediately after the publication of this report the association withdrew its stop-list and ceased operations.

Methods of conciliation in labour disputes in the United States were described recently by Mr. J. A. Moffitt, of the United States Conciliation Service. During the fiscal year 1926-7 the mediation of the Service was acceptable to employers and workers in 551 industrial disputes. In 447 of these cases commissioners of conciliation were successful in securing an amicable settlement almost immediately, by means of conferences. Some of the disputes were settled by co-operation with state or local agencies and civic committees. The commissioners failed in 61 cases only to suggest or arrange settlements to the satisfaction of the parties concerned. The number of disputes in the industrial field is comparatively small when it is considered that there are approximately 24,800,000 actual earners of wages in the United States, including skilled and semi-skilled workers, labourers and servants. Including people engaged in clerical and office work the total is about 31,500,000, and with all persons gainfully employed it rises to a grand total of about 42,000,000 persons. A lessening in the violence and harshness formerly accompanying disputes is noted by Mr. Moffitt. "Here and there in a few industries 'he says,' they still cling to some of the ways of the past, but I believe that the time is at hand when we shall soon see a great majority of our industrial differences settled by joint negotiation and conference while work progresses, and man

and manager maintain a friendly attitude during the negotiation of a contract or settlement of a dispute."

Describing the recent changes in the mutual relations of employers and workpeople, Mr. Moffitt points out that in former days it was a common thing for workers to oppose any innovations in the factory in which they worked, and the management was often unwilling to give consideration to any plans put forward by the employees, each believing that only selfish interest guided the actions of the other. It was the fashion for the employer to oppose every request for an adjustment in wage rates or the betterment of working conditions, and it was the general attitude of the workers to look with disfavour on any changes suggested by the management. "We have gone a long distance since this condition prevailed, 'Mr. Moffitt states'; today we have a different idea as to the rights of workers and management, but for the most part it has been an awakening to the fundamental fact that satisfactory productivity depends not only on managerial efficiency and intelligent labour, but more than all else on harmony, good will, and co-operation. Good management now believes in well paid workers, employed under the very best of working and sanitary conditions."

Number of Old Age Pensioners in British Columbia

The attorney-general of British Columbia stated in the provincial legislature on February 2, that up to that date 3,208 applications had been received for old age pensions in the province (an account of the payment of the first pension was given in the December issue, page 1272). Of these applications 2,254 were granted by the Workmen's Compensation Board (which has charge of this work), 1,435 of the applicants receiving the maximum pension of \$240 a year, the remainder receiving partial pensions. The claims of 106 applicants were rejected, the reason for rejection being, in 17 cases, a yearly income in excess of \$365; in 21 cases, that the applicant had not yet reached the required age of 70 years; in 6 cases, that children residing in the home were able to support the applicant as required by the Parents' Maintenance Act; in 47 cases, that the applicant was not resident in Canada for the 20 years preceding the application; and in 15 cases, that the applicant was not resident in the province for the past five years. The estimated yearly cost to the province under the Act and its regulations is given as \$300,000. If the age limit were reduced from 70 to 65 years it is estimated that the cost of the system to the province would be advanced to \$650,000.

Workmen's Compensation in Quebec.

In accordance with the intimation contained in the Speech from the Throne at the opening of the present session (LABOUR GAZETTE,

February, page 103) a new bill dealing with workmen's compensation was introduced in the legislature of the Province of Quebec on February 22. The proposed measure, when it becomes law, will repeal the Act passed in 1926, which would otherwise have taken effect on April 1, 1928. The new Act resembles the act of 1926 in some of its features, but contains many provisions that are two-thirds new. The per cent compensation is retained, but with a provision in cases of permanent total incapacity held at a maximum of \$10,000 of capital. An important change in the table of scale for permanent partial incapacity is attached to the bill. Employers will be permitted to insure the life companies, or mutual companies, or provide their own insurance by satisfying the Provincial Treasurer of their ability to meet the conditions. The act is to apply to accidents happening in specified industries. Those not specified will not come under the act unless the employers to whom the act does not apply enter into a written agreement with their employees and agree to the conditions of the act and to the regulations to be specified.

Supplementing the main Act, a bill to provide for the creation of a Workmen's Compensation Commission was introduced on the following day by the Hon. A. Galipault, Minister of Public Works and Labour. The Commission will be composed of three members, with headquarters in the city of Quebec. They will be named by the Lieutenant-Governor-in-Council. The president will receive \$10,000 a year, and the other commissioners will be paid \$8,000 a year. It is provided that the commission shall be the only authority "having jurisdiction to interpret, administer, apply and carry out the Workmen's Compensation Act," and the present act. It is provided that without restriction the commission is to have jurisdiction to the exclusion of every other tribunal, and without appeal, in all matters connected with the awarding of the allowances and compensation provided by the Workmen's Compensation Act. There is to be provision made for prevention, as for example, it is enacted that "the commission may, moreover, on complaint to it or on its own initiative exercise a power of supervision, control and direction over the establishments subjected to the Workmen's Compensation Act, with a view to preventing workmen's accidents, and, for such purpose, it shall itself have the right to visit and inspect such establishments or cause them to be visited and inspected by a person named

by it, and it may order the owners and employers to take such precautionary measures, as it deems proper." It is provided that "it shall also be the duty of the commissioners to promote rehabilitation of injured workmen and to take such measures as it may deem proper to aid in the re-establishment of such workmen in industry in the province."

The commission is to have the powers of the Superior Court in the matter of summoning witnesses, but is not obliged to follow the ordinary rules of evidence in civil matters, and "may by all legal means which it seems best, inquire into the matters the investigation whereof is attributed to it."

Full details of the new legislation will be given in a future issue of the LABOUR GAZETTE.

Alberta Workmen's Compensation Act amended.

Important changes in the Alberta Workmen's Compensation Act (Accident Fund) are proposed in a government bill introduced in the provincial legislature

during March. Among other proposed amendments the rate of compensation, based on the workmen's rate of wages, is raised from 62½ to 66½ per cent, and the waiting period is reduced from ten to three days. A full account of the amending act will be given in a future issue of the LABOUR GAZETTE.

In accordance with a resolution adopted by the Legislative Assembly of Alberta, the provincial government last year appointed a special committee, composed of five representative employers, five representatives of employees and five members of the Legislative Assembly (LABOUR GAZETTE, July, 1927, page 700). The recommendations of the committee are summarized as follows:—

The request of labour that so-called industrial ailments should be compensated in the same way as accidents is disallowed.

The question of a contribution by the Government towards the cost of administration is left over.

The proposal of a right of appeal made by the railway companies is rejected.

The proposal to increase the wage base from \$2,000 to \$2,500 is rejected.

It is recommended to the Compensation Board that wilful or culpable failure to use safeguards provided by the employer, should be considered wilful misconduct.

The section of the Act making frost bites compensable is disapproved.

The proposal that a previously existing disease should be considered as a factor in determining the amount of compensation is rejected.

It is recommended that compensation should be computed on average earnings, not by the day, week or month, but for the 12 months prior to the accident.

It is recommended that silicosis should be added to the list of industrial diseases.

A three-day absolute waiting period (*i.e.*, no compensation for the first three days in any event) is recommended.

Funeral expenses to be increased from \$100 to \$125.

Payments to widows to be increased from \$35 to \$40 a month.

The scale of compensation to remain at 62½ per cent.

Weekly minimum to remain at \$10.

It is recommended that the Compensation Board should compensate and report upon the question of rehabilitation of injured workmen.

The contribution by the workmen to the cost of medical aid to be left unchanged.

A memorandum which was submitted to the Committee by the Alberta Federation of Labour was given in the issue of the GAZETTE for January, page 23.

Problem of industrial accidents in Manitoba.

The Manitoba Workmen's Compensation Board have asked the provincial government to undertake a direct investigation into the problem of accident prevention. The industrial accident rate in the province is found to have remained during 1927 at the same high level as in the preceding year, when it appeared that the limit of the funds at the board's disposal was reached, and an advance in the rates of assessment was unavoidable (LABOUR GAZETTE, June, 1927, pages 393 and 634). The board's report for 1927, which was tabled in the provincial legislature on February 22, states that unless the whole problem of accident prevention is attacked systematically, increases in the rates of assessment on industries in the province are inevitable.

The creation of a provincial Department of Labour to take the place of the existing Bureau of Labour is announced as one of the government measures to be submitted to the Legislative Assembly at its present session (The functions of the Bureau of Labour were outlined in the LABOUR GAZETTE, April, 1925, page 355). It may be noted that the legislative program submitted to the government on the eve of the session by the provincial executive of the Trades and Labour Congress of Canada included a proposal for the creation

of a Labour Department, with a minister and deputy minister (LABOUR GAZETTE, February, 1928, page 167).

Mothers' Allowance Legislation in Canada

A valuable study by Mr. J. L. Cohen of "Mothers' Allowance Legislation in Canada", containing a review of the existing provincial acts, and a proposed standard act eliminating certain defects in some of these acts, has been published at Toronto by the MacMillan Company. Mr. Tom Moore, president of the Trades and Labour Congress of Canada, in a preface to the work deprecates the want of unity in Canada in regard to legislation which should be of a national character, this inconsistency being the result of the division of legislative authority between the federal and provincial governments. However, he believes that mothers' allowances have had beneficial results that cannot be measured by the amount of the money expended. For example, "it has been possible to enforce more strictly the education acts, especially so far as compulsory attendance at schools is concerned, and to eliminate to a considerable degree the curse of child labour in industry. In these ways the children themselves are benefited considerably, fuller education equipping them more fully for the battle of life. Labour has also benefited, though in a more indirect way. The removal of the necessity of these mothers and children to seek industrial employment has enlarged the opportunity of work for others and made somewhat easier the maintenance of higher standards of working conditions, etc."

Mr. Cohen examines in detail the provisions of the five provinces having this type of legislation, namely Alberta, British Columbia, Manitoba, Ontario and Saskatchewan. Referring in passing to the gaps in the mothers' allowances in Canada, he finds difficulty in explaining the failure of the eastern provinces to co-operate in the movement, especially in view of the fact that 44 out of the 48 states of the American Union, as well as Alaska and Hawaii, have enacted legislation of this type.

The main features of the respective provincial acts are grouped together in successive chapters, and a comparison of the various provisions is facilitated further by a tabular summary of existing Canadian laws.

The writer lays stress on the vital importance of having an adequate administrative board, preference being given to the system followed in three provinces of appointing a representative body. He suggests that some agency should be formed to further active co-

operation and periodic consultation between the administrators of Mothers' Allowance Acts in the various provinces. This might be done, he thinks, under the auspices of the Canadian Council on Child Welfare, but the semi-governmental character of the work would seem to require a separate means of consultation, by way of conferences and discussions in addition to the activities of the Canadian Child Welfare Council.

Mr. Cohen's recommendations in regard to mothers' allowance legislation include a relaxing of some of the disabilities which in some provinces hinder the application of the Act to all families in need of assistance, and an extension of all the Acts to include foster mothers; uniformity in regard to residence qualifications; elimination of the requirement of British citizenship on the part of the parents; payment of an allowance to a family with only one dependent child; amendment of all provincial acts enabling the Board, in its discretion, to increase the amount of allowance above the statutory limit in special circumstances.

Finally, Mr. Cohen considers that complete public records of statistics and policy of operation should be regularly maintained and published.

Recent wage movement in various countries.

In the February issue of the *International Labour Review*, published monthly by the International Labour Office, Geneva, J. H. Richardson, M.A., Ph.D., of the

Research Division of the International Labour Office, contributes an article entitled "Some Aspects of Recent Wage Movements and Tendencies in Various Countries." Dr. Richardson states that his review of general wage movements and tendencies has indicated that, even allowing for the reduction in hours of labour since 1914, labour productivity per head in certain countries is definitely higher than before the war, especially in the United States. In European countries the unstable monetary and political conditions and the tariff restrictions of recent years have artificially diverted industrial and commercial developments from their natural channels. The deflationist countries have suffered severe depression, and their relatively high wages for full-time work have been largely counterbalanced by an exceptionally large volume of unemployment. In countries where inflation has been practised industrial and commercial activity has been stimulated and there has been little unemployment; money wages, however, have not kept pace with the rise in the cost of living.

The writer points out that a continuance in Europe of the stability of 1927 will permit of a steady restoration of equilibrium in wage and price relations, which are not likely to return to the pre-war ratios, and that the increases in productivity witnessed during recent years in the United States indicate the probability of real wages above the pre-war level also in other countries. He considers that there is every reason to believe that to some extent at least Europe will benefit from industrial changes on the lines of those in the United States, and that the economic *rapprochement* and reduction of tariff barriers foreshadowed by the World Economic Conference of 1927 will facilitate the permanent improvement of real wage standards.

Progress of public health insurance and medical aid.

Proposals to establish public systems of health insurance and medical aid are now being considered in Alberta, British Columbia and Saskatchewan. The January issue of the *LABOUR GAZETTE* (page 3) had a reference to the progress of this movement in British Columbia. The Premier, the Hon. Dr. MacLean, stated in the legislature on January 26 that the government had received requests for legislation from municipalities, trade unions and other bodies, and that the proposal was being seriously considered. The Alberta Legislature, on February 29, adopted a resolution proposed by Mr. Fred White, leader of the labour group, as follows:—

Resolved, that the Government should cause an inquiry to be made for the purpose of enquiring into legislation now in force in any country and suggested legislation and proposals having for their object the provision of any medical or surgical service to the people as a public service; the nature and extent of such service and the efficiency thereof; the cost thereby entailed on the public funds and the financial arrangements for the payment thereof; the feasibility of adopting with or without notification any such legislation or proposals in the Province of Alberta having regard to prevalent conditions and circumstances, and the probable cost; such report shall be completed in order that it can be submitted to this legislature at the next session.

In Saskatchewan, the People's Forum at Regina heard an address from Mr. Louis Rosenberg advocating the establishment of a state scheme of free medical examination for everybody annually, free hospital and convalescent treatment, with free medicine, a free nursing service and travelling clinics on trains throughout the province.

In the *New Republic* (New York) of February 29, Dr. Alice S. Cutler, formerly an industrial physician, points out that workmen's

compensation laws require to be supplemented by a general system of public medical aid. She found by experience that the compensation laws tend to displace elderly and infirm employees, who are left without the means to obtain medical treatment. "Sickness," she says, "is becoming a financial disaster to thousands of people of moderate means, from which it may take them years to recover on account of the ever-increasing burden of keeping well." Dr. Cutler refers to the long lives of inmates of mental hospitals as being the outcome of constant medical supervision, and asks: "If the state gives these unfortunates such splendid free medical attention, why not give the same medical care to normal people, who cannot afford the actual cost of scientific examinations?"

Progress of the eight-hour day movement.

Industrial and Labour Information, the weekly publication of the International Labour Office (League of Nations), Geneva, in its issue of February 13th refers to a series of official reports which are being published by the Minister of Labour of France on the effects of the eight-hour day on production and labour in French industries. These reports show that in the china, biscuit, and tanning industries in France, the application of the eight-hour day has been followed by a development of production, due to increased efforts by the workers, better discipline, better utilization of labour and improved internal organization in the factory.

Reference was made in the November issue of the LABOUR GAZETTE to the satisfactory results obtained by the introduction of the eight-hour day in various other industries in France.

Mention is also made in the same issue of *Industrial Labour Information* of the fact that the eight-hour day has been reintroduced in the blast furnaces and works, iron foundries and certain other branches of the metal industry in Polish Upper Silesia and that trade unions in Greece have called on the Government to apply the Eight-Hour Act to the liberal professions and lithography, also that an enquiry made by the German trade unions reveals a continuing tendency towards reduction of hours in many industries in Germany.

Proposed development of rehabilitation legislation

The American Association for Labour Legislation recently proposed certain lines of policy which should be followed in order to establish on a permanent basis the already widely accepted principle of the vocational rehabilitation of workers injured in industry. The

last issue of the LABOUR GAZETTE, page 104, contained a note on the progress of this movement in Canada. The association actively promoted the "Fess-Kenyon" law of 1920, providing for federal and state co-operation in this matter, and for the inclusion of industrial cripples along with the military cripples who were already provided for (LABOUR GAZETTE, August, 1920, page 1905). That act authorized a federal appropriation of one million dollars annually to encourage the individual states to undertake the work of rehabilitation. The federal act has since been accepted by forty-one states, only seven states being now without rehabilitation legislation. The association now points out that "seven years of progress under federal co-operation in vocational rehabilitation of industrial cripples has brought us to the point where action must be taken and policies fixed so as to carry on the work into the future on a uniformly high level of effectiveness." The lines of future policy, in the opinion of the association, should include the adoption by all states of special funds under workmen's compensation laws to protect employers of rehabilitated persons against any added compensation costs in "second injury" cases; general acceptance of the essential policy of "administering vocational rehabilitation in close connection with workmen's compensation; emphasis should be laid upon *rehabilitation*, avoiding any tendency to confine this service within the scope of education alone; a searching, sympathetic, constructive survey of the results thus far under vocational rehabilitation legislation.

Report of Committee on Rationalization of British Industry

Progress has been made in the movement in Great Britain to give effect to various recommendations made by the World Economic Conference which was held at Geneva last May under the auspices of the League of Nations (LABOUR GAZETTE, July, 1927, page 769). The conference recommended that industry should be "rationalized," that is, reorganized so as to secure the least possible waste of effort or material. Subsequently a British Committee was appointed, representing about 60 industrial and technical associations. This committee presented its first report at a general meeting of the association held recently in London, under the chairmanship of Sir William Mackenzie. It was decided to continue the conferences at half-yearly intervals and to develop a greater degree of co-operative action of an unofficial character before any attempt is made to establish a national body which will definitely

co-ordinate the activities of the associations bearing on the subject of rationalization. The committee will act meanwhile as a link between the organizations. One of the first undertakings will be the publication of a directory of industrial management.

The objects to be achieved by the conference are the following: (a) Increased publicity as to the activities of the various organizations and as to the directions in which the discoveries and methods of modern science may be applied to the problems of industrial management with practical results; (b) closer contact between men in industry occupying positions of responsibility and the various organizations bearing on rationalization; (c) direction of the attention of existing organizations to the question of rationalization and to the development of such of their activities as contribute to the study and application of rationalization principles; (d) the fostering of the idea of co-operation between existing organizations in the co-ordination of their efforts regarding rationalization.

Co-operation in printing industry in Great Britain

A note in the last issue of the LABOUR GAZETTE (page 102) referred to the results of ten years' experience of "Whitley" joint industrial councils, and to the sug-

gestion that these councils, in order to succeed, should deal not only with employment conditions, but with the general problems of the industry. The extent of the field covered by a successful council is shown by the recommendation made a month ago by the Joint Industrial Council of the printing and allied trades, that there should be "mutual agreement and hearty co-operation" in trying to carry out the following program:—

1. Employers should be urged to improve the efficiency of their works by scrapping old and installing new machinery and adopting improved methods of organization and production of every kind.

2. Modern time-saving machinery, the costing system, paper standardization, and other methods of simplification reduce the cost of production, are beneficial to all concerned, and should be generally adopted. Employees should co-operate with the employers in the use of these methods.

3. In view of the temporary loss of employment which in some instances has been known to follow the introduction of time-saving machines, employers are recommended, when machinery of a new type is introduced, to endeavour to retain all their employees by transfer to other duties. This suggestion is

not intended to interfere with any of the recognized lines of demarcation.

4. All Works Advisory Committee should be formed in all offices where the number of the employees makes the formation of such a committee practicable.

5. Employees should be encouraged to make suggestions for improving the methods of working and the amenities of the factory. The Works Advisory Committee should be the natural and proper channel through which suggestions by workers should be made. Employees making suggestions which are adopted by the employers should be suitably rewarded.

6. When possible, additional day labour, double shifts, or night shifts should be engaged instead of working avoidable persistent overtime.

7. Work in the printing trade is largely seasonal, and large consumers, all public authorities, and the stationery office should be persuaded to place their orders earlier, and, as far as practicable, in slack season.

8. Wherever possible, the education authorities, the employers, and the trade unions should jointly arrange classes for unemployed workers, so that they may improve their efficiency and be instructed in the latest developments in their trade.

The European coal crisis, 1926-27.

The February number of "*International Labour Review*," the monthly publication of the International Labour Office, contains an

article entitled "The European Coal Crisis, 1926-1927," by Dr. Mack Eastman, formerly professor of history in the University of British Columbia, and now attached to the Research Division of the International Labour Office, Geneva. This article is a sequel to an earlier one which appeared in the May 1926 issue of the same publication under the title "International Aspects of the Coal Question" and which was referred to in the LABOUR GAZETTE of November, 1926, at pages 1048-9. Dr. Eastman shows that between May, 1926, and December, 1927, the wheel turned full circle from overproduction to threatened shortage and back to overproduction. The effect of the seven-months industrial struggle in Britain on the coal situation in Germany, Belgium, France, Poland, Czecho-Slovakia and other European countries is discussed and it is shown that Britain, Germany, Belgium and finally France were all suffering from national coal crises whose causes and effects were international.

In his previous article Dr. Eastman outlined the various international agreements, remedies, programs and "solutions" which had been more

or less hopefully advocated up to that time. Unfortunately for the coal industries and mine workers of Europe little progress has been accomplished in this direction. The British attitude towards an international coal treaty in the near future has been for the most part lukewarm or hostile. Although the miners' leaders have been generally favourable to the principle of some eventual international arrangement, provided it involve the levelling upwards of general working conditions to the highest point already anywhere attained, nevertheless they seem to feel that nothing worth while can be accomplished until after the nationalization of British mines. But whatever may be the opinion of labour leaders, the attitude of the coal owners of the United Kingdom towards every suggestion of international co-operation in coal was consistently and uncompromisingly negative, especially after the great stoppage, and the organs of coal owners' opinion stood firm for free competition, and for unrestricted output and export.

After glancing at the international "solutions" still under discussion in 1927, Dr. Eastman states that it is clear that even the most internationally-minded observers, whether in Britain or on the Continent, have come to the conclusion that the next step forward would consist in the frank adoption in Britain of the policy of "rationalization" in the most comprehensive sense of that word—a policy already applied with wonderful thoroughness in the major basins of Germany and only to a lesser degree in those of Poland and France. "At the close of 1927 the drift in Britain was towards the abandonment of unintelligent pits; towards the reduction of the number of miners by pensioning off the old, or refusing entrance to the very young, and by transferring the remaining surplus no one knew where; toward more intensive and wholesale research into oil extraction, pulverisation, gasification, low-temperature carbonization, and general scientific utilization of coal and its by-products, with the help of privately endowed or Government-aided institutes; committees, or bureaux; toward greater control of prices or of output or of exports; toward further mechanisation, standardization, and modernization; toward some measure of unification or centralization, whether national or regional; in short, toward that general rationalization which Germany had already realized, and which each coal-producing nation must realize according to its own particular genius, needs, and circumstances. Not until then will the possibility and desirability of international agreements as to hours, prices, markets, output, or exports enter the realm of practical politics."

**Bill to
establish
Civil Service
Councils**

A bill was introduced in the House of Commons on January 30 by Mr. J. S. Woodsworth, M.P. (Winnipeg North), to permit of the establishment by the Government of national and departmental councils composed of an equal number of Dominion government officials chosen by the government and of representatives of the employees comprising the Dominion public service. Provision is made in the bill also for the creation of a board of appeal composed of three members, for civil servants, against suspension or dismissal or against claims of unjust treatment.

Mr. Woodsworth's bill was referred to the Industrial and International Relations Committee of the House of Commons for examination and report. Meetings of this committee were held on February 29, March 5, 8 and 13, at which an opportunity was given to representatives of various organizations of civil servants to state their views in reference to the desirability of establishing Civil Service Councils, and also of eliciting their views in relation to the particular plan which is set out in Mr. Woodsworth's bill. The hearings on this subject had not been completed when the present issue of the LABOUR GAZETTE went to press.

**Increase in
productivity
of labour**

In his last annual report, Dr. Ethelbert Stewart, United States Commissioner of Labour Statistics, refers to the remarkable conditions revealed by the inquiries already made by the Bureau into the subject of productivity of labour or "one-man-hour output." He states that it was only within the past twelve months that the Bureau has extended its inquiries into wages and cost of living for the purpose of ascertaining what value the employer gets for the money he pays in wages. The report points out that "the increased output per man-hour in a given industry may have been due to more skilful and efficient labour, to new inventions, improved machinery, superior management, or any one of a number of factors; but the bureau makes no attempt to determine the relative importance of these factors."

Thus far the bureau has been able to construct productivity indexes for 11 industries. These have shown increases in output per man-hour from 1914 to 1925, as follows: Iron and steel, 59 per cent; boots and shoes, 6 per cent; leather tanning, 26 per cent; slaughtering and meat packing, 27 per cent; petroleum refining, 83 per cent; paper and pulp manu-

facturing, 34 per cent; cement manufacturing, 61 per cent; automobiles, 172 per cent; rubber tires, 211 per cent; flour milling, 36 per cent; and sugar refining, 28 per cent. For the most part the period covered is that from 1914 to 1925, though occasionally it has been possible to make indexes further back, to 1909 or earlier. In no industry has there failed to be an advance in productivity between 1914 and 1925, while in some the output per man-hour has been doubled and even tripled in the last 10 years. Dr. Stewart points out that the bare measurement of productivity must be supplemented by analysis of the reasons for changes which are discovered "in order that the statistical results may not be misused by those economic groups desiring to claim the larger share of the credit for greater efficiency. The bureau is therefore ascertaining and measuring the causes of increased output per man-hour by means of these special field studies."

Lawyers' services for poor clients.

Mr. John Queen, a labour member of the Legislative Assembly of Manitoba, recently suggested that a "people's counsel" should be appointed by the provincial authority to advise any person who may be unable to pay a lawyer's fees as to his rights under the law in regard to such matters as the garnisheeing of wages, etc. This suggestion is in line with the opinion of the Hon. Chief Justice W. H. Taft, of the United States Supreme Court, which was quoted in the *LABOUR GAZETTE*, June, 1926, page 532. "I think," said the Chief Justice, "that we shall have to come, and ought to come, to the creation in every criminal court of the office of public defender, and that he should be paid out of the treasury of the county or the state. I think, too, that there should be a department in every large city, and probably in the state, which shall be sufficiently equipped to offer legal advice and legal service in suits and defences in all civil cases, but especially in small claims courts, in courts of domestic relations, and in other forums of the plain people."

A similar proposal was made in the Saskatchewan Legislature in February, when Mr. J. T. M. Anderson, representative for Saskatoon, inquired concerning the government's policy in regard to poor persons involved in criminal action. The Attorney General replied as follows:—

"It has long been the practice of the judges, if they find the prisoner, owing to poverty, to be undefended in any case of exceptional difficulty, to ask some counsel to undertake his defence. Under such circumstances if the

judge fixes a counsel fee within the tariff in criminal cases and requests the Department to pay the same it is the practice to do so. In cases in which a request is made to the Attorney-General's Department by the defence previous to the trial of a criminal case that the department procure the attendance of witnesses for the defence on the ground that the accused is without funds to procure their attendance, it is required that an affidavit be submitted to the department by the defence. After such an affidavit has been submitted to the department, if it appears that the accused is without funds and any of the witnesses are necessary and material witnesses, the agent of the Attorney-General is then authorized to subpoena such witness or witnesses at the same rate to which Crown witnesses are entitled to be paid for attending at a criminal trial."

Accidents reported to the Manitoba Workmen's Compensation Board in February numbered 904, 8 of which were fatalities.

On February 22 the Legislative Assembly of Alberta by a vote of 34 to 15 defeated a motion introduced by the labour group asking the Provincial Government to bring in legislation during the present session giving effect within the province to the provisions of the Old Age Pensions Act, passed by the Parliament of the Dominion in 1927.

The Speech from the Throne at the opening session of the Legislature of New Brunswick contained the following statement in reference to the possible future participation of this province in the federal Old Age Pensions Act of 1927. "I hope that we may yet receive some assurance of increased assistance from the Federal Government to the scheme of old age pensions which may enable my government to deal more effectively with the matter than the present resources of the province will admit."

The Canadian Railway Board of Adjustment No. 1 recently adopted a new rule providing that any case submitted to the Board should have its origin in circumstances occurring within two years previous to the date of such submission. Before its final adoption the proposal to limit the time within which controversies may be referred to the Board was submitted to, and approved by, the Railway Association of Canada and the chief executive officers of the railway brotherhoods, parties to the agreement constituting the Board.

GENERAL REVIEW OF THE INDUSTRIAL SITUATION

THE employment situation at the end of February was reported by superintendents of the Employment Service of Canada to be as follows:—

There was some demand for workers for the logging industry, which was fairly active. Manufacturing, including the iron and steel group, was fairly active also. For the season, coal mining production was rather favourable. A fair amount of building was being proceeded with at Halifax, although at other points the construction industry was quiet. Transportation was active, while trade was stated to be good. A fair number of women applicants were being placed in domestic work.

The fishing industry in the Province of New Brunswick was fairly active. Logging in this province was fairly quiet, with the winter activity decreasing. While construction was fair at St. John, elsewhere this industry was quiet. Manufacturing industries were operating normally. Trade was good, and while railroad transportation was likewise good winter port activities at St. John were not very brisk.

From the Province of Quebec it was reported that, with the winter logging activities rapidly easing off, the workers in demand for this industry at the different employment offices were for road work in preparation for the logging drives. Conditions in the manufacturing industry were very favourable, particularly at Montreal, while Hull and Three Rivers reported some placements due to industries increasing operations. The demand for building workers was rather slack throughout the province, although Hull and Sherbrooke reported some activity in this direction. Trade was seasonally quiet. Some placements of women domestic workers were being made, with sufficient applicants available to fill vacancies received. Throughout the Province of Quebec conditions seemed better, and snow removal was affording a considerable amount of casual employment.

In the Province of Ontario the demand for farm hands was increasing with the approach of spring. Manufacturing throughout this province seemed to be generally on the increase in so far as activity is concerned. While there was very little demand for help in the building and construction industry, interior work on a number of buildings was keeping a considerable number of tradesmen occupied. The offices in the northern part of the province still reported a continuance of orders for workers for the different branches of the logging and allied industries. Metal mines in the same

district continued to operate normally, and some placements at Cobalt and Timmins were reported. The only outstanding feature of the employment situation as far as women domestic workers was concerned was the usual demand for experienced cooks general.

Orders for farm workers for spring operations had begun to come in to the Manitoba employment offices. Construction and building were fairly active for the season, and a considerable amount of this type of work was in prospect for the spring and summer months. Orders for logging workers had decreased in number. The demand for casual labour was quite small. Trade showed some betterment, particularly in Winnipeg. A small increase in the number of women domestic workers placed was reported.

The demand for farm workers in the Province of Saskatchewan was fairly small, but it was normal for the season. Construction work was rather quiet in this province. From Prince Albert it was reported that men for the logging industry were scarce, although there was a considerable reduction in new orders received toward the end of the month. The demand for women domestic workers was fairly well maintained. While the employment offices reported that the demand for workers of all classes was not very brisk, the employment situation appeared to be rather normal for the season, without any undue volume of unemployment.

The demand for women workers in the Province of Alberta was down to some degree, but it would not seem to be less than usual for the season. Building and construction for the time of year were fairly active. The demand for logging workers continued to be rather good. The coal mining industry was still fairly quiet, but better prospects were in view at some points. Trade continued fair. The women's divisions of the employment offices reported very little activity.

Orders for logging workers in the Province of British Columbia were not very numerous, and those received were easily filled. The mines continued operating on a normal basis, but demands for workers were light. Owing to the fact that the construction industry was experiencing the usual winter dullness, orders for workers of this type were not numerous. Manufacturing continued to be normally busy. Although conditions generally throughout the Coast Province continued to be seasonally quiet, the general situation was not unfavourable for the time of year, and with the coming of spring as improvement was anticipated.

EMPLOYERS' REPORTS

Though still affected to some extent by inventory shut-downs, and more so, by continued seasonal slackness in the out-of-door industries, employment at the beginning of February showed an increase exceeding that of the corresponding date in 1927 or 1926. The Dominion Bureau of Statistics tabulated returns from 6,223 firms, whose staffs aggregated 839,604 persons, as

compared with 827,711 on January 1. Reflecting this advance, the index stood at 100.8 at the beginning of February, while in the preceding month it was 99.5, and on February 1, 1927, 1926, 1925, 1924, 1923, 1922 and 1921, it was 95.4, 90.7, 86.1, 90.6, 89.5, 78.9 and 90.1, respectively.

Reductions were recorded in the Maritime and Prairie Provinces, while elsewhere the tendency was upward. In the Maritime Prov-

*Figures for end of previous months. †Bradstreet. †Maclean Building Review. \$For group figures see articles elsewhere in this issue. **Figures for four weeks ending February 25, 1928, and corresponding previous periods. ***The index of the physical volume of business includes, forestry, mining, manufacturing, employment in wholesale and retail trade, imports, exports, car loadings, shares traded and bank debts. Industrial commodity production includes forestry, mining, manufacturing and construction. Manufacturing includes consumers' goods and producers' goods. ††Preliminary. (1)Excluding lines east of Quebec. (2)Including lines east of Quebec.

inces, construction and communications reported a falling-off, while logging and lumbering were brisker. In Quebec, manufacturing (especially of iron and steel, pulp and paper, textiles and building materials) showed much improvement, as did also construction and transportation. On the other hand, logging and trade recorded pronounced seasonal curtailment. The situation was decidedly more favourable than on February 1 in earlier years of the record. In Ontario, important gains were made in manufacturing, notably in the iron and steel, textile, lumber and pulp and paper divisions. Logging, mining and services also reported heightened activity, while there were seasonal reductions in trade, construction, steam railway operation and communications. In the Prairie Provinces, manufacturing and logging were more active, but considerable shrinkage was recorded in trade, railway construction and transportation. The situation, however, continued better than on the same date in any other year of the record. In British Columbia, there was decided recovery in manufacturing, particularly in lumber mills, and in logging, while transportation was also busier, but construction and trade reported seasonal losses.

The trend of employment was upward in Montreal, Quebec, Toronto, Hamilton, Ottawa, Windsor and the other Border Cities, and Vancouver, while Winnipeg showed a general reduction. In Montreal, manufactures registered substantial recovery, especially in the iron and steel, tobacco and building material groups; construction was also considerably busier, but there were marked seasonal losses in trade. In Quebec, manufactures and construction reported improvement, while trade was seasonally slacker. In Toronto, heavy, seasonal decreases took place in trade, but there were greater gains in manufacturing, especially in textiles and iron and steel. In Ottawa, street railway operation was busier, largely owing to snow removal, while trade was seasonally quiet. In Hamilton, the situation showed decided improvement, particularly in the manufacture of textile and iron and steel products, but trade registered curtailment of a seasonal character. In Windsor and the other Border Cities, recovery was indicated, chiefly in automobile plants. In Winnipeg, the number employed showed a contraction, mainly in trade, but manufactures were somewhat busier. In Vancouver, the lumber, food, metal, shipping and construction industries reported expansion, while trade was seasonally slacker.

An analysis of the return by industries shows a marked revival in manufacturing, notably in the iron and steel, textile, lumber,

pulp and paper, vegetable food and tobacco divisions, while the only pronounced losses were those of a seasonal character, in animal food factories. Logging and mining also showed improvement, but activity declined in communications, transportation, construction and maintenance and trade, the losses in the last named being very extensive, as is usual following the activity of the Christmas and holiday season.

An article elsewhere in this issue gives in some detail the employment situation as at the beginning of February, 1928.

TRADE UNION REPORTS.

A nominal change only was registered in unemployment among trade union members at the close of January as compared with the previous month. The 1,668 unions from which reports were received with a combined membership of 176,421 persons indicating a 6.8 per cent of idleness as against 6.6 per cent in December. The New Brunswick situation remained the same in both months, while the reductions evident during January in Ontario, Nova Scotia, Manitoba and Alberta unions outweighed slightly the gains in the remaining provinces. In comparison with the returns for January, 1927, when the unemployment percentage stood at 6.4, New Brunswick and Saskatchewan unions reported a nominal advance in employment while the Manitoba situation was unchanged and the reductions in the remaining provinces swayed the percentage for Canada as a whole in a slightly adverse direction.

A more detailed report of the situation among local trade unions at the close of January will be found on another page of this issue.

EMPLOYMENT OFFICE REPORTS.

Reports of the Employment Service of Canada for the month of January, 1928, showed 22,572 references to positions and a total of 20,959 placements. Of these the placements in regular employment were 13,013, of which 9,671 were of men and 3,342 of women, while placements in casual work was 7,946. Vacancies offered by employers to the Service numbered 22,864, of these 15,099 were for men and 7,765 for women, while applications for employment were registered from 25,890 men and 10,844 women, a total of 36,734. A slight decrease was shown in the volume of business transacted when the above figures were compared with those of the preceding month, and also with the records of January last year, the reports for December, 1927, showing 24,384 vacancies offered, 34,149 applications made

and 23,374 placements effected, while in January, 1927, there were recorded 22,922 vacancies, 35,675 applications for work, and 21,311 placements in regular and casual employment. A report in detail of the work of the offices for the month of January, 1928, will be found elsewhere in this issue.

Some figures indicating the recent movements of trade and industry are given in the table on page 247.

According to the *Monthly Review of Business Statistics* published by the Dominion Bureau of Statistics, the volume of business in the first month of 1928 compared favourably with the same month last year, and, after seasonal adjustment, was at a higher level than at any other time in the history of the country. The index of the physical volume of business, maintained by the Dominion Bureau of Statistics, stood at 159.6 in January compared with 157.9, the previous high point, reached in December last. Merchandise imports, after seasonal adjustment, were much greater than in December, and heavy movement of grain to the Pacific Coast ports resulted in an increase in carloadings after adjustment for seasonal tendencies. Manufacturing industries, on the whole, were considerably more active in January, the sub-index being 148.8 compared with 140.6 in the preceding month. The automobile industry showed improvement over December, although one of the chief plants had not resumed operation, materially affecting the result. Both branches of the forestry division were more active, the exports of lumber and production of newsprint being in excess of December totals. Though the production of steel showed recession, the primary iron and steel industry operated at a high rate of capacity. The sugar industry was more productive in January but still much below normal.

The output of coal from Canadian mines during December increased 6 per cent over the production for the preceding month, and was 16 per cent higher than the average for December in the past five years. The figures were 1,866,715 tons in December as against 1,752,844 tons in November and an average of 1,606,179 tons during the five preceding years. Of the coal producing provinces, Alberta and British Columbia showed increases in production over the preceding month, (but New Brunswick's output was lower than the average for the month in the five preceding years). Men employed in the coal mines of Canada during December numbered 31,656, of whom 24,567 worked underground and 7,089 on surface, as compared with a total of 30,618

in November, of whom 23,799 worked underground and 6,819 on the surface. Production per man was 58.9 tons in December as against 57.0 in November. During December the production per man-day was 2.6 tons, as compared with 2.5 in November. The tonnage lost was largely due to lack of orders.

According to a report prepared by the Dominion Bureau of Statistics the value of the building permits issued by the municipal authorities in sixty-three cities in Canada during the month of January, 1928, amounted to \$7,708,904, as compared with \$11,755,566 in December, 1927, and with \$5,676,537 in January, 1927.

The *McLean Building Review* estimates the total value of the construction contracts awarded in Canada in February, 1928, at \$25,875,200, this total exceeding all previous records for that month. Of this amount \$11,884,000 was for engineering contracts of which \$10,607,700 was in Quebec; \$7,574,300 for business building; \$4,855,700 for residential building, and \$1,561,200 for industrial projects. The apportionment by provinces, during February, 1928, was as follows: Quebec, \$14,512,100; Ontario, \$5,845,200; British Columbia, \$3,879,900; Prairie Provinces, \$1,372,300 and the Maritime Provinces, \$265,700.

The "contemplated new construction" in Canada during February, 1928, according to the same *Review*, totalled \$56,135,600, \$10,677,000 of this amount being for residential building, \$21,674,500 for business building; \$9,221,000 for industrial building, and \$14,562,600 for engineering (including bridges, dams and wharves, sewers, watermains, roads, streets and general engineering).

A summary of Canadian trade prepared by the Department of National Revenue shows that in January, 1928, the merchandise entered for consumption amounted to \$79,506,417 as compared with \$83,262,695 in December, 1927, and \$78,805,632 in January, 1927. The chief imports in January, 1928, were: Fibres, textiles and textile products, \$17,693,176; iron and its products, \$15,605,041, and non-metallic minerals and products, \$9,921,018.

The domestic merchandise exported amounted to \$82,564,479 in January, 1928, as compared with \$130,277,157 in December, 1927, and \$84,094,692 in January, 1927. The chief exports in January were in the group of agricultural and vegetable products, mainly foods \$27,769,843; wood, wood products and

paper, \$19,405,713, and animals and animal products, \$13,441,975.

In the ten months ending January, 1928, exports of domestic merchandise totalled \$1,032,667,846, and imports, \$902,494,884.

Strikes and Lockouts

The time loss due to industrial disputes in February, 1928, was less than during January, 1928, and also less than in February, 1927. There were in existence during the month seven disputes, involving 232 workpeople, and resulting in a time loss of 5,103 working days, as compared with nine disputes in January, involving 500 workpeople and resulting in a time loss of 8,154 working days. In February, 1927, there were recorded ten disputes, involving 410 workpeople and resulting in a time loss of 6,403 working days. None of the strikes and lockouts commencing prior to February terminated during the month, but one of the disputes commencing during February terminated during the month. At the end of February, therefore, there were on record six strikes and lockouts affecting 168 workpeople, not including those strikes and lockouts in which employment conditions were reported to be no longer affected but which had not been formally called off.

Prices

The cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average retail prices in some sixty cities was \$11.03 at the beginning of February, as compared with \$11.19 for January; \$11.23 for February, 1927; \$11.50 for February, 1926; \$10.93 for February, 1925; \$10.75 for February, 1924; \$10.53 for February, 1923; \$10.61 for February, 1922; \$14.08 for February, 1921; \$16.92 for June, 1920 (the peak); \$12.54 for February, 1918; and \$7.75 for February, 1914. The decrease was due mainly to a seasonal fall in the price of eggs, while the prices of pork, bacon, lard, butter, beans, prunes, yellow sugar and potatoes were also slightly lower. Beef prices were substantially higher, with less important increases in the prices of veal and mutton. Including the cost of fuel and rent with that of foods, the total budget averaged \$21.25 at the beginning of February, as compared with \$21.41 for January; \$21.46 for February, 1927; \$21.87 for February, 1926; \$21.19 for February, 1925; \$21.18 for February, 1924; \$21.17 for February, 1923; \$21.07 for February, 1922; \$24.85 for February, 1921; \$26.92 for July, 1920 (the peak); \$19.80 for February, 1918; and \$14.54 for February, 1914. Fuel was slightly higher. No changes were reported in rent.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics was slightly lower at 150.8 for February, as compared with 151.2 for January; 150.1 for February, 1927; 162.0 for February, 1926; 164.7 for February, 1925; 156.8 for February, 1924; 153.6 for February, 1923; 153.5 for February, 1922; 191.1 for February, 1921; 256.7 for May, 1920 (the peak); 238.8 for February, 1920; and 200.5 for February, 1919. In the grouping according to chief component materials four of the eight main groups were lower, two advanced, while two were unchanged. The groups which declined were: the Animals and their Products group, due mainly to lower prices for meats, furs, hides and skins, and eggs; the Textile and Textile Products group, due to declines in the prices of cotton, cotton yarns, cotton hosiery and rope, which more than offset higher prices for silk, wool and flax fibre; the Non-Ferrous Metals group, due to lower prices for silver, lead, tin, spelter and solder; and the Chemicals and Allied Products group. The Vegetables and Vegetable Products group and the Iron and its Products group both advanced; the former due to higher prices for grains, potatoes, apples, oranges and lemons, which more than offset lower prices for flour, sugar, tea, rubber and hay; and the latter due to slight increases in the prices of steel billets and of steel sheets. The Wood and Wood Products group and the Non-Metallic Minerals and their Products group were practically unchanged.

An international conference on emigration and immigration is to be opened in Havana, Cuba, on March 31. The agenda comprises 39 items proposed respectively by the Governments of Belgium, Cuba, Danzig, San Domingo, Finland, France, Italy, Japan, Poland and Switzerland, and divided into five groups, each of which will be examined by a separate committee: transport and protection of emigrants, health and sanitary services; assistance of emigrants, co-operation and welfare measures; measures to be adopted for adapting emigration to the demand for labour in the countries of immigration, and for co-operation between the emigration and immigration services of different countries; general principles on which migration treaties should be based, and miscellaneous questions; examination of the resolutions of the Rome Conference, and the consequent action to be taken.

PROCEEDINGS UNDER THE INDUSTRIAL DISPUTES INVESTIGATION ACT, 1907, FOR THE MONTH OF FEBRUARY, 1928

DURING the month of February the Department received the reports of three Boards of Conciliation and Investigation established to deal with disputes between (1) The Toronto, Hamilton and Buffalo Railway Company and certain of its employees being freight shed foremen, freight checkers, truckers, clerks, messengers, etc., (2) the Canadian Collieries (Dunsmuir), Limited, and certain of its employees at Extension, Wellington and South Wellington mines, Vancouver Island; and (3) the Canadian Pacific Railway Company and certain of its employees at St. John, N.B., being grain elevator employees, members of Local 1121, and freight handlers, coopers, etc., members of Local 838, International Longshoremen's Association.

Application Received

An application for the establishment of a Board of Conciliation and Investigation was received during February from shop employees of the Quebec Power Company being members of the International Association of Machinists, International Brotherhood of Blacksmiths and Drop Forgers and Helpers of America, International Brotherhood of Boilermakers and Iron Ship Builders and Helpers of America, and Brotherhood of Railway Carmen of America.

Report of Board in Dispute between the Toronto, Hamilton and Buffalo Railway Company and Certain of its Employees

The findings of the Board of Conciliation and Investigation established to deal with a dispute between the Toronto, Hamilton and Buffalo Railway Company and certain of its employees being freight shed foremen, freight checkers, truckers, clerks, messengers, etc., were received on February 15. The board was composed as follows:—Mr. H. J. McNulty, Ottawa, Ont., chairman, appointed on the joint recommendation of the other two members of the board; Mr. Bernard Rose, K.C., Montreal, P.Q., appointed by the Minister in the absence of a recommendation from the employing company, and Mr. John L. Counsell, K.C., Hamilton, Ont., nominee of the employees. The dispute concerned wages and working conditions; also the alleged dismissal of an employee on account of certain union affiliation. The report of the board was unanimous and indicated that all matters in dispute had been satisfactorily adjusted.

Other Proceedings under the Act

An application was reported in the February issue of the *LABOUR GAZETTE* as having been received during the preceding month from certain employees of the Avon Coal Company, Limited, being coal miners, members of the One Big Union. The dispute related to the employees' request for re-establishment of the former wage rate and also concerned certain working conditions. During the latter part of January Mr. M. S. Campbell, Chief Conciliation Officer of the Department of Labour, proceeded to Minto, N.B., to investigate existing conditions at the mines of the Avon Coal Company. At Minto Mr. Campbell interviewed the employees concerned; he also visited St. John and discussed the matter with the manager of the Company. During February the Hon. Mr. Heenan, Minister of Labour, conferred in Ottawa with the Manager, who agreed that the Company would restore the former wage rate and would rectify certain conditions as to which complaint had been made. The Manager later notified the Department that the agreement had been put into effect as from February 23.

Report of Board

In the matter of the Industrial Disputes Investigation Act, 1907, and of a dispute between the Toronto, Hamilton and Buffalo Railway Company, employers, and certain of its employees being freight handlers and freight clerks.

To the Honourable Peter Heenan,
Minister of Labour,
Ottawa, Ontario.

Sir,—The Board of Conciliation established by you herein has the honour to report as follows:—

On Tuesday, the 17th day of January, 1928, the Board met pursuant to appointment at the city of Hamilton. All the members were present. The Board continued to meet from day to day thereafter to hear evidence respecting working conditions and pertaining to the case of the dismissal of freight trucker,

George Fricker. The Board ascertained, after having heard the evidence relating to the case of trucker George Fricker, that this employee, following his dismissal, had not appealed his case to the executives of the company. The Board thereupon suggested that trucker George Fricker immediately appeal his case through the usual channels. Pending the carrying out of this suggestion, the Board heard evidence relating to working conditions and arranged for a meeting of a committee of the men with the executives of the company to discuss the points at issue.

The Board is pleased to report that, as a result of trucker George Fricker having taken the course suggested by the Board, which right he had failed to exercise following his dismissal, the executives of the company considered his case in the usual way and reinstated him in his former employment.

Having disposed of the Fricker matter to the satisfaction of the parties, the Board next considered the question of working conditions and again suggested the advisability of the interested parties settling the matter to their mutual satisfaction, instead of leaving it to the Board. The Board is pleased to state that this suggestion was likewise carried out and, as a result of several meetings between a committee of the company's employees and the executives, that a satisfactory basis was reached and that the affected employees and the company will henceforth be able to adjust any difficulty that might arise as a result of the mutual understanding effected.

Since the parties are aware of the nature of the understanding reached, it was not deemed necessary to incorporate such working conditions and the arrangements referred to in this report. The Board is likewise pleased to state that throughout its sessions there seemed to be an excellent disposition

on the part of the company towards its employees and a willingness to meet them at any time to discuss such grievances as might arise. No complaints came before the Board from the men as to any inconsiderate treatment being shown them, and, to judge by the number of years during which the majority of employees affected have been with the company, it would appear that the relations between the parties were all that could be desired.

The Board wishes to state that, although the application makes reference to freight clerks, as a result of the investigation it conducted and the interrogation of certain persons that came before it, it was evident that the freight clerks were not interested in the proceedings. The evidence which the Board obtained, led it to conclude that the matters primarily in dispute related solely to the freight handlers and truckers and that the clerks were in no way interested in the Board, and had, furthermore, signed a statement to this effect.

The Board wishes to take this opportunity of thanking the company and its officials for the courtesies extended to it and the facilities offered to carry on its investigations.

It likewise wishes to place on record its appreciation of the employees' attitude and their readiness to co-operate with the Board and accept all suggestions made with a view to getting the matter amicably adjusted.

All of which we, the members of your Board, have the honour to submit.

Dated at Montreal, this 9th day of February, 1928.

(Sgd.) H. J. McNULTY,
Chairman.

(Sgd.) BERNARD ROSE,
Representing Employer.

(Sgd.) J. L. COUNSELL,
Representing Employees.

Report of Board in Dispute between the Canadian Collieries (Dunsmuir), Limited, and Certain of its Coal Miners

A report was received from the Board established to deal with a dispute between the Canadian Collieries (Dunsmuir) Limited, and certain of its employees at Extension, Wellington and South Wellington mines, Vancouver Island. The dispute related to the employees' request for a restoration of a daily bonus of 60 cents which had been deducted in 1925, and the readjustment of wage rates and working conditions. Approximately 700 employees were stated to be directly affected. The report was signed by Mr. H. A. Maclean, chairman, and Mr. Wm. Fléet Robertson, the company's nominee. Mr. Joseph

Hitchen, the employees' nominee, submitted a minority report.

Report of Board

Victoria, B.C., February 16, 1928.

The Honourable,
The Minister of Labour,
Ottawa, Ont.

SIR,—The company, known as "Canadian Collieries (Dunsmuir) Limited," was incorporated in the year 1910 for the purpose of taking over and exploiting the Dunsmuir coal properties on Vancouver Island.

The company started operating mines at Wellington, South Wellington and Extension, all of which are within a short distance of the City of Nanaimo, and at Cumberland, which is some 70 miles north of the City of Nanaimo on Vancouver Island.

It was stated before the Board that approximately \$17,000,000 of capital have been invested in this undertaking by this company, and that during all the time that it has been operating since 1910 nothing whatever has been paid to shareholders by way of dividend or bonus.

It would appear that the relations between the company and its employees up to the present time have been of the most cordial and satisfactory nature. From time to time the company entered into agreements with its men, fixing a wage scale for the life of the agreement. The last of these agreements, with regard to the Wellington-Extension District, being the district embraced in this reference, was entered into on the 1st of November, 1924, and remained in force until the end of October, 1926, when by agreement it was extended until the 31st day of October, 1927. The present trouble has arisen in connection with the attempted making of a new agreement.

The agreement of the 1st of November, 1924, contains amongst other provisions, the following clause:

"During the term of this Agreement the company will pay its employees who are engaged in the classes of work named in Schedules A, B, C, and D, attached hereto and made a part hereof, a day bonus of ninety-one cents (\$0.91), it being mutually understood by the company and its employees that any increase or decrease in the bonus herein mentioned shall be governed by competitive conditions."

In the year 1925 occurred a drop of over 80 cents a ton in the price the company was receiving for its commercial coal. This loss compelled the company to take 60 cents off the above-mentioned bonus of 91 cents a day. Since 1925 the price of coal has been steadily downwards, until on the 22nd of October, 1927, the company was receiving \$5.68 a ton for coal for which, in the beginning of 1925, it had been receiving \$6.85—a loss of \$1.17 a ton.

This serious drop in the price of coal, together with the severe competition the company is experiencing from American fuel oil and from coal raised in the Alberta coal fields, has, it is contended, prevented the company from restoring the 60 cents deducted from the above-mentioned bonus in the year 1925.

The consequence of the above-mentioned adverse factors has been that, in the year ending 13th of June, 1925, the company lost \$7,030.79 on its year's operations in the Wellington-Extension District. This was improved somewhat in 1926 after taking off 60 cents of the bonus, as in that year the company made an operating profit of \$19,314.46, but in 1927 the company's operating loss was \$20,536.04 and for the portion of the year July 1, 1927, to January 14, 1928, the company's operating loss has been \$89,040.79.

It must be borne in mind that during all these years the company has paid nothing whatever for dividends and has made default in payment of interest on its debenture indebtedness.

The operating losses above mentioned are arrived at simply by deducting from the actual cost of producing the coal the amount actually received by the company for its product.

When the bonus was cut in 1925, the General Manager of the company assured his employees that every time the price of coal advanced 25 cents per ton, the company would restore 15 cents of the bonus. That offer the General Manager repeated at the hearing before the board.

Although 60 cents a day was taken off the bonus, yet the employees, it is said, made quite as much money, as the company employed them for a greater number of days during each year. In other words, the employees did more work but in this way were enabled to earn quite as much money as they did before the reduction of the bonus.

At the present time the average of the daily pay of all the employees of the company in the Wellington-Extension District amounts to \$4.41, and the average sum earned by the actual miners, that is the men who work at the face of the coal, amounts to \$5.30 a day.

At the hearing before the Board several matters other than the amount of wages received by the employees, were enquired into, but some of them were adjudged at once by the company and others will be remedied by agreement. Practically, therefore, there is nothing outstanding except the fact that the men want the 60 cents a day bonus restored, and the company takes the position that it is absolutely unable at the present time, considering the present price of coal, to comply with this request.

At the present time the Company has a large amount of capital embarked in this undertaking and continues working the mines in the hope that the price of coal will increase or that new seams of coal will be discovered

which can be operated much more cheaply than those being worked in the present mines. It must be remembered that the three mines dealt with on this reference are old mines and every year the expense of working them becomes greater.

The first meeting of the Board was held on the 28th day of January, at the City of Victoria, for organization purposes. It was then decided to hold the first public meeting at the City of Nanaimo as the mines in question are all situated within a very short distance of that place. The first public meeting was therefore held at the City of Nanaimo on Wednesday the 8th instant. At that meeting the Company was represented by Colonel Villiers, the General Manager of the Company; Mr. Thomas Graham, the Superintendent of the Company, and Mr. Fagan, the Company's Accountant. The men were represented by Messrs. R. S. Wood, J. Mason and Dominic O'Connel, all employees of the Company, and the Board wishes to put on record its appreciation of the able manner in which the case of the men was handled by these representatives.

The sittings of the Board were continued on Thursday, the 9th instant, when the public sittings were closed. At the close of the sittings the Board intimated to the representatives of the men that it considered the statement of the Company as to its financial position was correct and would have to be accepted by the Board as showing the true state of the Company's affairs, unless evidence to the contrary were produced.

The Company expressed a willingness to have its statement which had been prepared by its accountant and verified as to its correctness by his oath, and also verified as to its correctness by a firm of reputable auditors carrying on business in the City of Vancouver, and who are the Company's regular auditors submitted to any chartered accountant for examination.

The representatives of the men stated that they probably would be unable to employ a chartered accountant as they had not the necessary means. The Company thereupon offered to pay the expense of such an examination by a chartered accountant if the men had any doubt whatever as to the correctness of the statement. The representatives of the men apparently considered, after careful examination made of this statement by them and by the members of the Board, that the statement was a fair and honest one. They therefore did not ask for any re-examination of it by a chartered accountant.

The Board intimated to the representatives of the men that it was the duty of the Board, if possible, to bring about a settlement between the employers and the employees, and that, as the representatives of the men were now fully aware of the position of the Company, they ought to lay this information before the men in the hope that knowledge of the true financial position of the Company might possibly induce them to make some settlement.

The Board therefore stated that it would not send its report to the Honourable the Minister of Labour until the representatives of the men had an opportunity of consulting those whom they represented.

That consultation, we assume, has taken place, but apparently without modifying in any way the demands of the men.

This Board therefore feels constrained to report that the correctness of the reply of the Company to the miners' application for the appointment of a Board of Conciliation and Investigation under the Industrial Disputes Investigation Act, has been fully established.

All of which is respectfully submitted.

We have the honour to be,

Sir,

Your obedient servants,

(Sgd.) H. A. MACLEAN,

(Sgd.) WM. FLEET ROBERTSON,

Minority Report

NANAIMO, B.C., February 22, 1928.

To the Honourable PETER HEENAN,
Minister of Labour,
Ottawa, Canada.

DEAR SIR,—In submitting my report, I very much regret my inability to concur with the other members of the Board. Whilst realizing the desirability of a unanimous report, I regret their total failure to mention the deplorable condition of the employees of this company.

Evidence submitted by the representatives of the operators indicate a financial position which is more or less a result of past folly.

Here we are faced with the fact of a basic industry unable to pay any more than two-thirds of what is necessary, as a reasonable standard of living. Some of the employees of this company are paid less than wages paid to the orientals in sawmills and logging camps.

The average wage is given as \$4.39½ per day, the yearly average as \$1,249.27, while cost of living figures are given as \$2,075.80. These

figures are from the *LABOUR GAZETTE* and verified locally.

During the last few years an increase in wages has been obtained by almost all classes of labour in the province, while in the case of miners decrease after decrease has been suffered. The cut of 60 cents per day in 1925 has resulted in real hardship to the employees.

The inducement held out to the employees was that they would work more regularly; this has been the case, but with only the result of a reduced daily wage and very little improvement in the aggregate yearly wage.

There would seem to be very little incentive in the chance to work more for no real improvement in remuneration.

The operators confess to be in no better position now than before the cut in the wages and the reduction in selling prices. Therefore, the expedient that was tried stands as a monument of colossal blunder. One way alone do they seem to have proved their efficiency, and that is in the ability to cut slices off the pay-roll.

Certain classes of employees are shown to be paid \$2.17 less per day than the same class of labour working alongside them for other companies. The matter demands the close attention of both Dominion and Provincial Governments.

There are certain definite lines along which relief could be given to the present situation.

Report of Board in Dispute between the Canadian Pacific Railway Company and its Marine Freight Handlers and Grain Elevator Employees at St. John, N.B.

A report was received on February 8 from the Board established to deal with a dispute between the Canadian Pacific Railway Company and certain of its employees at St. John, N.B., being marine freight handlers and grain elevator employees, members of Locals 838 and 1121, International Longshoremen's Association. Five hundred and fifteen employees were stated to be directly affected by the dispute, which related to the employees' request for increased wages and changed working conditions. The Board was composed as follows:—The Hon. Henry Miles, Montreal, P.Q., chairman, appointed by the Minister in the absence of a joint recommendation from the other members of the Board, Mr. Frederick E. Sayre, St. John, N.B., the company's nominee, and Mr. J. E. Tighe, St. John, N.B., the employees' nominee. As a result of the board's efforts direct negotiations were resumed and an agreement was reached.

Better protection of coal could be given by the Dominion Government.

Relief in the matter of taxation could be considered by the Provincial Government.

Last but not least is the method of handling the coal; it is not proved that the best methods are adopted in the production and handling of the commodity.

Better methods of distribution might be adopted. Prices at the mine and to the consumer in the cities of Vancouver, Victoria and Seattle show a very wide margin which might be reduced to the mutual benefit of operators and employees.

Better and more up to date utilizing of coal is becoming more urgent. I trust that some real move will be forced by the present situation.

I consider that the miners are justified in their demand for an improvement in their wages and working conditions.

And, I recommend, that in the meantime their wages be increased by the sum of 37 cents per day, not that this is sufficient but that it may bring their wages in line with what would be the wage if they had continued to be governed by the Cost of Living Board, as formerly.

I trust along this line some satisfactory solution will be found.

Respectfully submitted, this 22nd day of February, 1928.

Your obedient servant,
(Sgd.) JOSEPH HITCHEN.

Report of Board

Report of the Board of Conciliation and Investigation appointed re dispute between certain employees and their employer, the Canadian Pacific Railway Company at St. John, N.B.

To the Hon. Peter Heenan,
Minister of Labour,
Ottawa, Ont.

We, the undersigned members of the Board appointed in this matter, beg to report that we met at St. John, N.B., on January 12, 13 and 14. All the members were present at each and every meeting. The Canadian Pacific Company were represented before the Board by Mr. George Hodge and Mr. W. Woodman.

Mr. Hodge placed before the Board a considerable amount of evidence and extensive documents.

We called before us the following representatives of the employees, Mr. John J. Doyle, Mr. John McDade, Mr. Arthur Blake, Mr. William Price and Mr. Edward McGinnis. We went into all matters relevant to the dispute and visited the wharves and elevator. When we found ourselves in a position to reach a decision, having secured all information possible from both parties, it seemed to the board that a further effort might be made towards bringing the company and their employees together.

On Saturday, January 14, an earnest effort in this direction was made. The results attained due to this were the bringing of the men into a general meeting on Sunday, January 15, and then on Monday, January 16, a meeting between the representatives of both parties, and finally a mutually satisfactory situation was reached.

Respectfully submitted,

(Sgd.) HENRY MILES, M.L.C., *Chairman*,

(Sgd.) F. E. SAYRE, *member*.

(Sgd.) JAS. E. TIGHE, *member*.

STRIKES AND LOCKOUTS IN CANADA DURING FEBRUARY, 1928

THE number of strikes and lockout in existence in Canada during February was seven as compared with nine in the preceding month. The time-loss for the month was less than during February, 1927, being 5,103 working days, as compared with 6,403 working days during the same month last year.

Date	Number of disputes	Number of employees involved	Time loss in working days
Feb. 1928.....	7	232	5,103
Jan. 1928.....	9	500	8,154
Feb. 1927.....	10	410	6,403

record six strikes and lockouts, as follows: bakers, Montreal, P.Q.; two disputes involving men's clothing factory workers at Montreal, P.Q.; stonecutters, Montreal, P.Q.; coal miners, River Hebert, N.S.; and asbestos and insulation workers at Toronto, Ont.

The record does not include minor disputes such as are described in a previous paragraph, nor does it include disputes as to which information has been received indicating that employment conditions are no longer affected, although the unions or organizations concerned have not yet declared them terminated. Information is available as to five such disputes, namely, plumbers at Windsor, Ont., April 5, 1927; electrotypers at Toronto, Ont., December 20, 1926; sheet metal workers at Montreal, P.Q., September 1, 1927; ladies' clothing factory workers, Toronto, Ont., June 20, 1926; and blacksmiths, etc., at Saskatoon, Sask., May 17, 1927, the last mentioned though reported as lapsed during January, being again added to this list as the union concerned claims the strike is still in existence.

The record of the Department includes lockouts as well as strikes, but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees at its commencement and lasting at least one working day. Disputes of less than one day's duration, and disputes involving less than six employees, are included in the published record only when ten days' or more time loss is caused, but a separate record of such disputes is maintained in the Department, and the figures are given in the annual review.

The figures printed are inclusive of all disputes which come to the knowledge of the Department, and the methods taken to secure information practically preclude probability of omissions of a serious nature. Information as to a dispute involving a small number of employees, or for a short period of time, is frequently not received until some time after its commencement.

Four disputes, involving 148 workpeople, were carried over from January, the dispute involving ladies' clothing factory workers in Toronto having terminated during January (this information did not reach the Department in time for inclusion in the February LABOUR GAZETTE). None of these disputes terminated during the month, but one of the three disputes which commenced during February terminated during the month. At the end of February, therefore, there were on

Of the disputes which commenced during the month one was for an increase in wages, one for recognition of union, and one against the dismissal of employees. The one strike which terminated during the month was in favour of the workers.

A dispute involving 110 coal miners at Aerial, Alberta, has been reported as beginning on February 10 in connection with the membership of certain employees who joined the Mine Workers' Union of Canada instead of the United Mine Workers of America to which the employees of the mine generally belonged. It appears that the mine was not being operated at the time for lack of orders so that there was no actual stoppage of work. Incomplete reports indicate that it was agreed all miners would belong to the United Mine Workers of America and that work would be resumed under the same conditions as before.

A strike of coal miners at Springhill, N.S., has been reported to the Department, but no details are as yet available.

Nurses in training in a hospital in Guelph, Ont., were reported as partially ceasing work on February 22 owing to a dispute with the superintendent as to certain conditions, but work was resumed the next day. Disputes of this kind, not being industrial, are not included in the records of the Department.

The following paragraphs give particulars in regard to certain disputes, in addition to the information given in the tabular statement.

BAKERS, MONTREAL, P.Q.—In the LABOUR GAZETTE for February it was stated that the parties involved had arranged to settle the dispute by arbitration. At the end of February, however, the strikers had not yet resumed work. During February one of the strikers was charged with intimidation in

connection with picketing in June 1927, but was acquitted in the Court of King's Bench.

MEN'S CLOTHING FACTORY WORKERS, MONTREAL, P.Q.—In the LABOUR GAZETTE for February it was stated that two female strikers had been arrested and charged with an offence in connection with picketing. On February 6 in the Court of King's Bench they were found guilty of intimidation. The union to which they belonged, the Amalgamated Clothing Workers of America, arranged to have an appeal entered and the women were released on bail.

LADIES' CLOTHING FACTORY WORKERS, TORONTO, ONT.—In this dispute, commencing January 17, a number of pressers ceased work because their demand for an increase in wages had not been granted. The employer replaced these workers and they secured work elsewhere. Those who ceased work did not belong to the union, the International Ladies'

STRIKES AND LOCKOUTS IN CANADA DURING FEBRUARY, 1928

Industry, occupation and locality	Number of employees involved	Time loss in working days	Remarks
(a) Strikes and Lockouts occurring prior to February, 1928.			
MANUFACTURING—			
<i>Vegetable Foods—</i>			
Bakers, Montreal, P.Q.	73	1,825	Commenced May 1, 1927, for increase in wages. Underminated.
<i>Clothing (including knitted goods)—</i>			
Men's clothing factory workers, Montreal, P.Q.	20	375	Alleged lockout, commenced Nov. 8, 1927; union conditions as to overtime. Underminated.
Men's clothing factory workers, Montreal, P.Q.	15	300	Commenced Dec. 23, 1927; renewal of previous dispute <i>re</i> union wages and working conditions. Underminated.
Ladies' clothing factory workers, Toronto, Ont.			Commenced Jan. 17, 1928, for increase in wages. Strikers secured work elsewhere.
<i>Non-Metallic Mineral Products—</i>			
Stonecutters, Montreal, P.Q.	40	1,000	Commenced June 10, 1927, for increase in wages. Underminated.
(b) Strikes and Lockouts occurring during February, 1928.			
MINING, NON-FERROUS SMELTING AND QUARRYING—			
Coal miners, River Hebert, N.S.	30	750	Commenced Feb. 1, 1928, against dismissal of employees. Underminated.
MANUFACTURING—			
<i>Clothing (including knitted goods)—</i>			
Cap factory workers, Toronto, Ont.	14	63	Commenced Feb. 15, 1928, for recognition of union. Terminated February 21, 1928, in favour of workers.
CONSTRUCTION—			
<i>Buildings and Structures—</i>			
Asbestos and insulation workers, Toronto, Ont.	40	790	Commenced February 6, 1928, for increase in wages. Underminated.

Garment Workers' Union, and the union officials state that it is not considered to be a strike, and that a report that the union would call a sympathetic strike was not correct.

COAL MINERS, RIVER HERBERT, N.S.—Employees ceased work on February 1 because their demand for the reinstatement of two workers for an alleged offence in connection with loading coal had been refused. During the month negotiations for a settlement and for an agreement covering working conditions were reported to have been carried on, but at the end of the month it was reported that the operators of the mine were going to discontinue operations, had taken the equipment out of the mine, and were allowing it to be flooded.

CAP FACTORY WORKERS, TORONTO, ONT.—Employees in a cap factory ceased work on February 15 to secure recognition of their

union. On February 21 work was resumed, an agreement having been signed between the employer and the employees providing for a union shop and union working conditions.

ASBESTOS AND INSULATION WORKERS, TORONTO, ONT.—Asbestos and insulation workers ceased work on February 6, negotiations for an agreement with their employers having broken down. The union proposed an increase in wages from 85 cents per hour to \$1 per hour. A proposal to compromise at 95 cents per hour was not carried out, and work ceased on February 6. As the result of further negotiations several employers agreed with the union to increase the rate to 95 cents on July 1, but other firms refused, some workers, therefore, resuming work toward the end of the month, leaving five workers still on strike at the end of the month, their former employer refusing to agree to these terms.

STRIKES AND LOCKOUTS IN GREAT BRITAIN AND OTHER COUNTRIES

THE latest available information as to strikes and lockouts in various countries is given in the *LABOUR GAZETTE* from month to month, bringing down to date that given in the issue for February, 1928, in the review of Strikes and Lockouts in Canada and Other Countries, 1927. The latter review included a table summarizing the principal statistics as to strikes and lockouts since 1918 in the several countries for which such figures were available. Many countries publish these statistics only once each year, the figures being issued in some cases after an interval of as much as two years, so that for such countries the latest figures are not for relatively recent dates.

Great Britain and Northern Ireland

The number of trade disputes reported to the Ministry of Labour as beginning in January was 31, while 10 disputes which began previous to January were still in progress during that month. In all, about 10,000 workpeople were either directly or indirectly involved, and the time loss was approximately 50,000 working days, of which 40,000 days were due to disputes in the mining and quarrying industry.

Of the 31 disputes beginning in January, 5 arose out of demands for increased wages, 5 out of proposed reductions in wages, 10 on other wages questions, 3 on questions respecting the employment of particular classes or persons and 8 on other questions.

Settlements were reached in 23 disputes, of which 6 were settled in favour of workpeople, 10 in favour of employers, and 7 ended in compromise, while in the case of 4 other disputes, work was resumed pending negotiations.

There were no disputes involving large numbers of workpeople during January.

Irish Free State

Statistics for the year 1927 show that 53 disputes began during the year, as compared with 57 in 1926. The number of workpeople involved in all disputes in progress was 2,312 and the time loss 64,020 working days.

Of the 53 disputes beginning in the year, 34 arose out of wages questions, one over hours of labour, 9 over the engagement or dismissal of workers and 3 over other questions concerning conditions of employment, while 5 concerned trades union questions or refusal to conclude a collective agreement, and one was a sympathetic dispute.

Settlements were reached in 55 disputes and were classified as follows: 7 in which workers' claims were wholly admitted, 9 in which workers' claims were admitted in part, and 9 in which workers' claims were rejected. In 8 cases the employers' claims were wholly successful, in 8 cases partially successful and in 7 rejected, while 7 disputes had an indeterminate result.

The principal disputes for the year include textile workers in Blarney in April and May, causing 19,000 working days' time loss; woolen mill workers in Navan from May to September with 8,500 working days lost, and storemen and boatmen at Carrick-on-Suir with 6,600 days' time loss.

Table I gives a classification of the disputes for the year by industries.

TABLE I.—INDUSTRIAL DISPUTES IN THE IRISH FREE STATE DURING 1927 BY INDUSTRIES

Industries	Number of Disputes	Work-people Involved	Working Days Lost
Food, drink and tobacco....	1	60	2,292
Mining and quarrying.....	5	238	2,234
Building and allied trades...	12	330	6,237

General and miscellaneous trades.....	5	97	1,179
	53	2,312	64,020

Belgium

During the year 1927, 186 disputes were terminated. The number of workers were 45,071, of which 39,873 were directly and 5,198 indirectly involved. The number of establishments concerned was 1,273. The number of disputes include 181 strikes and 5 lockouts.

TABLE II.—INDUSTRIAL DISPUTES IN BELGIUM DURING 1927, BY INDUSTRIES

Industries	Disputes Terminating	Establishments	Workpeople affected	
			Directly	Indirectly
Mining.....	16	16	7,226	2,412
Quarrying.....	8	31	4,081	61
Metals.....	31	44	3,400	165

Transportation.....	7	23	1,580	360
Cinemas.....	4	14	145	—
Total.....	186	1,273	39,873	5,198

Of the 186 disputes, 119 arose over wages questions and 23 against discharge of workers, and the others over various other questions. The results of the disputes were: 55 in favour of workpeople, 86 in favour of employers, and 43 ended in compromise. The other 2 disputes were one-day strikes of protestation only.

Table II gives a classification of the disputes by industries.

United States

The number of disputes beginning in December was 18, while 49 were in effect at the end of the month. The number of workers involved in disputes beginning in the month was 3,488, and 81,511 were involved in disputes which were in effect at the end of the month. The number of man-days lost during the month was 2,138,079.

Bituminous Coal Miners' Dispute.—On February 16, the Senate passed a resolution providing for an investigation of conditions in the bituminous fields of Pennsylvania, Ohio and West Virginia (where the dispute has been in progress since April 1, 1927) by the Senate Committee on Interstate Commerce. This investigation began on February 23 and a sub-committee spent five days visiting mining towns to gain information as to conditions at first hand and to report them to the committee as a whole. Disorders resulting in loss of life and injuries continued in Ohio and Pennsylvania.

Lignite Coal Miners' Dispute, Colorado.—This dispute which began last October was reported to have virtually lapsed by the end of December or early in January, most of the mines having full forces of workers and production being back to normal. Wage increases effective January first brought the basic rate for miners to \$6.52 per day in the southern field and to \$6.77 in the northern field.

Cleaners and Dyers, New York City.—A dispute occurred in New York city involving some 27,000 cleaners and dyers during February, all work in connection with cleaning and dyeing being suspended. This dispute did not involve demands for changes in wages or working conditions, but was a protest against cut rates charged by certain of these shops. After a two weeks' stoppage, work was resumed on March 5.

New Zealand

Table III is taken from the *Monthly Abstract of Statistics* for New Zealand and summarizes industrial disputes for the year 1927.

TABLE III.—INDUSTRIAL DISTURBANCES FOR THE TWELVE MONTHS ENDED DECEMBER 31, 1927

Industry	Number of disturbances	Number of firms involved	Number of workers affected	Total duration (days)	Average duration (days)	Working days lost	Approximate loss in wages

MALE MINIMUM WAGES IN BRITISH COLUMBIA

New Order Governing the Catering Industry

THE Board of Adjustment which administers the Male Minimum Wage Act of British Columbia has issued the following order governing the catering industry in the province. This Board was constituted under the Hours of Work Act, 1923, and is charged with the administration of both these Acts. The text of the Male Minimum Wage Act was given in the *LABOUR GAZETTE*, January, 1926, page 17. The previous orders of the Board under this act relate to all branches of the lumbering industry (*LABOUR GAZETTE*, October, 1926, page 948, etc.).

MALE MINIMUM WAGE ACT

Order establishing a Minimum Wage in the Catering Industry.

Pursuant to the provisions of the "Male Minimum Wage Act," the Board of Adjustment, constituted under the "Hours of Work Act, 1923," having made due inquiry, hereby orders:—

1. That where used in this Order the expression "catering industry" includes all operations in or incidental to the preparation, or to the serving, or to both preparation and serving of meals or refreshments where the meals or refreshments are served or intended to be served in any hotel, restaurant, boarding-house, eating-house, dance-hall, banquet-hall, social or other club, cafeteria, tea-room, lunch-room, lunch-counter, or in any other place where food is served and a charge is made for the same either directly or indirectly, whether such charge is made against the persons who partake of the meals or refreshments or against some other person; but does not include restaurants, boarding-houses, or other places within the meaning of the expression "lumbering industry," as defined in any other Order made under the "Male Minimum Wage Act."

2. That where used in this Order the expression "straight shift" refers to conditions of employment under which the shift or daily work period of employees is continuous, without any intermission or period of time off duty other than time allowed for partaking of meals; and the expression "split shift" refers to conditions of employment under which the shift or daily work period of employees is not continuous, but is divided into two or more parts by one or more intermissions or periods of time off duty other than time allowed for partaking of meals.

3. In the case of employees in the catering industry the conditions of whose employment provided for the furnishing of meals at the cost of the employer to such employees during each day of employment, the minimum wage for such employees shall be:—

- (a) In the case of a straight shift, the sum of thirty-two and one-half (32½c.) cents per hour; and
- (b) In the case of a split shift, the sum of thirty-five (35c.) cents per hour.

4. That, subject to the other provisions of this Order, the minimum wage for all employees in the catering industry shall be:—

- (a) In the case of a straight shift, the sum of forty (40c.) cents per hour; and
- (b) In the case of a split shift, the sum of forty-two and one-half (42½c.) cents per hour.

5. That the number of handicapped, part-time, and apprentice employees in respect to whom a permit may be obtained pursuant to the said "Male Minimum Wage Act" authorizing the payment of a wage less than the minimum wage otherwise payable under this Order shall, in the case of each employer, be limited to ten per centum of the adult male employees.

Systems of pensions for aged employees were discussed at the annual meeting of the National Retail Dry Goods Association held at New York City in February. President R. C. Hudson expressed the opinion that pensions tend to pauperize old employees, and as an alternative he recommended that all employees should be trained in work which they could perform efficiently after they have outlived their usefulness in more difficult tasks. Another speaker suggested, as an alternative to pensions, encouragement in thrift by means of increases in wages, and better protection of the health of workmen. He claimed that the main causes of dependency were to be found in sickness, disease and accident rather than in old age; and moreover that employers had no economic responsibility for old workers, provided they had paid them enough wages to permit them to save for their declining years.

LABOUR LEGISLATION IN BRITISH COLUMBIA

Reports of Committees of Legislature on Various Acts

REPORTS were received by the legislature of British Columbia on February 29 from various committees appointed to consider the question of Public Health Insurance in the province, and to examine certain questions in regard to the administration of the Workmen's Compensation and Mothers' Pensions Act. These reports were as follows:—

Medical Service to Settlers and Health Insurance

"It is recommended that a careful and sympathetic consideration be given to the needs of settlers in outlying districts through the lack and high cost of medical service and the advisability of state assistance in this matter, to be given through the establishment of some form of health insurance and maternity benefits, which, in our opinion, should be contributory."

Workmen's Compensation

"On January 25, 1927, a select committee of this House was appointed to examine the provisions of the "Workmen's Compensation Act" and the "Mothers' Pensions Act" and the regulations made thereunder, and to inquire into the administration thereof, and generally to investigate the effects and results of the said Acts and to report its findings to the House.

"The appointment of the committee was well advertised throughout the province; a number of public sittings were held. The attendance altogether with the correspondence received by the different members proved that the press of the province had given excellent publicity to the existence and purpose of the committee.

"Representatives of various organizations, trades-unions, and a number of individuals attended the sittings of the committee. The three members of the Workmen's Compensation Board attended each sitting of the committee, prepared to answer any questions. In every instance any files asked for were promptly placed in the hands of the committee.

"The creation of some form of appeal was suggested by several of the complaining witnesses, but while the trades-unions may be safely assumed to represent the intelligent opinion of labour, it is a significant fact that no trades-union or workmen's organization has asked for the creation of a court of appeal; and the same is true of the employers' and

medical organizations. The various railway-men's organizations definitely opposed any appeal.

"Your committee does not feel justified in recommending any change in this respect at the present time.

"Your committee feels that, in justice to the workers, it is advisable that certain diseases, directly traceable to labour in various industries, and which are not now classified as industrial diseases be so classified.

"Your committee, while recognizing the efficiency of the administration of the Workmen's Compensation Act, after considering many individual cases, is of the opinion that if more elasticity were shown in the administration of that Act it would tend to diminish materially the possibility of irritation and dissatisfaction arising."

Mothers' Pensions

"As a result of our own observations and from the evidence adduced, we are of the opinion that the Mothers' Pensions Act is being efficiently administered; therefore your committee after a year's deliberation do recommend that, if possible, a reciprocal arrangement be entered into between the provinces, whereby recipients of the mothers' pension who may for one reason or another have to leave one province and go to another be not debarred from receiving the pension.

"Your committee is of the opinion that if a widow be left with a house worth over \$1,500, instead of being forced to dispose of it before she can qualify for the mothers' pension, as at present, she should be allowed to retain the house, but that in her case 5 per cent of the value of the house over and above \$1,500 should be annually deducted from the maximum pension allowed.

"Your committee is also of the opinion that a similar principal should be adopted in regard to widows who have more than \$500 in money. The surplus over and above \$500 should be deposited with the government and the full amount of the pension be paid. Upon the determination of the pension the original sum deposited with the government would be returned to the widow or her beneficiaries.

"We recommend that the matters dealt with in this report be carefully considered by the legislature, as the adoption of some of these recommendations would entail an amendment to the Act."

LABOUR AND INDUSTRY IN SASKATCHEWAN

THE seventh annual report of the Bureau of Labour and Industries of the province of Saskatchewan, recently received, indicates the scope of this department's activities during the year ending April 30, 1927. Under the provisions of the Bureau of Labour and Industries Act of 1920, the functions of the Bureau of Labour include the administration of the Factories Act, the Building Trades Protection Act, the Electrical Workers' Protection Act, the Employment Agencies Act, the Mines Act and the Minimum Wage Act. The Bureau is also charged with the duty of preparing statistics of employment, wages and hours of labour, strikes and lockouts, labour organization, industrial relations, conditions of industrial employment and the natural resources of the province.

Industrial Accidents.—The report of the Inspection Bureau details the results of the investigation of claims for compensation owing to injuries sustained by accident to government employees where the nature of the work performed brought such employees within the provisions of the Workmen's Compensation Act (No compensation board exists in Saskatchewan, and disputed claims for compensation are dealt with in the courts). The recommendations of the Bureau were invariably accepted, and were apparently satisfactory to the parties concerned, no application having been received for a review of the settlements offered. Most of the accidents investigated for the purpose of compensation occurred upon work performed under the direction of the Highways Department. In this respect, the report considers that the small number of accidents which occurred, when the large volume of the work performed throughout the province is taken into consideration, reflects considerable credit on the efficiency of the supervision. It is pointed out that "a large proportion of the accidents which happen are caused through lack of safety education." The accidents and time loss due to accidents in various industries reported under the provisions of the Workmen's Compensation Act and the Mines Act are listed in the accompanying table.

The report states that 71 recommendations were made for greater safety in the operation of elevators, while 39 safety recommendations were made in connection with factories, these being in all cases promptly complied with. During the year frequent inspections were made of the coal mines situated in the mining areas of the province. Two mines were ordered closed owing to the dangerous conditions of the workings.

Strikes and Lockouts.—For the past two years the province had no strikes or lockouts.

ACCIDENTS AND TIME LOSS IN VARIOUS INDUSTRIES IN SASKATCHEWAN, 1926-7.

Trade or industry	Fatal	Permanent	Temporary	Time lost in days
Building trades.....	3	1	44	878

Civic employees and public.....	—	1	51	608
Miscellaneous.....	1	1	61	1,075
	14	26	1,004	20,393

Manufacturing Industries.—The primary production of the province is on a scale of considerable magnitude, and a commencement has been made to build up manufactures of a secondary nature. The capital investment in manufactures in the province shows an increase in 1925 of \$1,338,349 over the figures of 1924. Net production value of manufactures increased from \$14,134,784 in 1924 to \$15,739,692 in 1925, an increase of \$1,604,908. The accompanying table indicates the extent of the manufacturing industries in the province:—

PRINCIPAL STATISTICS OF MANUFACTURING INDUSTRIES FOR 1923, 1924 AND 1925

Principal Statistics	1923	1924	1925
Establishments reporting.....	647	645	650
Capital invested.....	\$ 29,891,831	\$ 30,269,547	\$ 31,607,896
Employees.....	4,137	4,152	4,405
Salaries and wages.....	\$ 5,384,953	\$ 5,554,416	\$ 5,755,629
Cost of fuel.....	\$ 57,486	\$ 61,896	\$ 72,847
Power equipment, h.p.....	1,701,009	1,640,381	1,483,860
Cost of materials.....	\$ 19,333,620	\$ 22,179,147	\$ 24,353,581
Gross value of products.....	34,337,801	36,313,931	40,093,273
Net value of products.....	15,004,181	14,134,784	15,739,692

Coal Mining.—The number of coal mines in operation during the calendar year 1926 was 56, and the total production was 451,077 tons valued at \$819,805 as compared with 471,965, valued at \$870,875, produced in 1925. The total number of employees underground averaged 360 for the year, while the number of employees above ground averaged 110. Nine mines were ventilated by centrifugal fans and 43 by natural means.

Other Industries.—During the year the Employment Service placed 43,267 men in employment on farms. The average wage for farm work throughout the year was (winter work) 1926-27, \$10 to \$25 per month; spring 1927, \$35 to \$60 per month; harvest, \$4 to \$6

per day; autumn, after threshing until freeze-up, \$40 to \$50 per month. The fur industry yielded to trappers for the season of 1926-27, the total of \$1,609,782 as compared with \$1,927,914 in 1925-26. A total of 42 fur farms were operating in the province in 1925 as against 25 in 1924. The value of fur bearing animals on the farms is estimated at \$175,655.

The product of the commercial fisheries of the Province in 1926 had a total market value of \$444,288. Compared with the preceding year the value of the product decreased by \$50,594. Whitefish is of the first importance, representing 73 per cent of the total value of the fish production of the Province.

Employment Service.—The work of the Employment Service is dealt with in regular articles appearing in The LABOUR GAZETTE. Nine permanent offices are maintained in Saskatchewan, and the staff of the provincial service included one general superintendent, 9 local superintendents, 10 clerks and 7 stenographers. The average cost per placement was 84 cents.

Minimum Wage Board

A section of the report outlines the activities of the Minimum Wage Board in respect to wage rates in establishments coming under its jurisdiction, and statistics are given of employment in these establishments. During the year the Board made a ruling with respect to three Orders—those covering “Shops and

Shop and Stores.—Number of firms, 208; number of employees 1,072 (inexperienced), 251; experienced, 721); employees on piece work and part time, 66; employees on wages of \$15 and over, 672.

Laundries and Factories.—Number of firms, 62; number of employees, 314 (inexperienced, 110; experienced, 204); employees on piece work and part time, 8; employees on wages of \$15 and over, 84.

Mail Order House.—Number of firms, 4; number of employees, 333 (inexperienced, 61; experienced, 272); employees on wages of \$15 and over 228.

All Establishments except Hotel, Restaurants and Refreshment Rooms.—Number of firms, 274; number of employees, 1,719 (inexperienced, 522; experienced, 1,197); employees on piece work and part time, 73; employees on wages of \$15 and over, 984.

Hotels, Restaurants and Refreshment Rooms.—Number of firms, 154; number of employees, 662 (inexperienced, 13; experienced, 649); part time employees, 29. Of the total number employed in this particular class 69 received no other compensation (although 14 of this number received wages of \$15 and over); 402 employees received board; 109 received board and room and 12 had room only. In all 23 employees received \$15 and over.

Stores,” “Laundries and Factories” and “Mail Order Houses”—that “all time worked beyond 50 hours in any one week be regarded as overtime and paid for; statutory holidays be regarded as time worked and to be paid for as time worked.” The Board also ruled that the minimum rate of wages for female employees in shops and stores shall not be less than \$10 per week for the first six months for inexperienced help; \$12 for the second six months; \$13.50 for the third six months and not less than \$15 thereafter. Some figures in connection with the administration of the several Orders in 1926-27 are given below:

WORKMEN'S COMPENSATION IN ALBERTA IN 1927

THE Workmen's Compensation Board of Alberta has issued a summary of its 10th annual report, covering the work of the year 1927, as presented to the Legislative Assembly at its present session. The complete report will be published later in the year. The principal statistics for 1927 are as follows:—

Number of accidents disposed of on which no compensation was due ..	2,132
Number of claims on which further payments have to be made	313
Number of accidents awaiting further reports and on which no payments have been made	1,721

Number of employers within the scope of the Act as at December 31, 1927	4,795
Number of accidents reported during the year 1927	10,149
Number of accidents and claims not finally disposed of as at December 31, 1926	1,930
Number of claims disposed of by award of pension or payment of compensation	5,547
Number of claims disposed of by payment only of account for medical aid	1,954
Number of accidents disposed of for which no application for compensation was received	412

The financial and other tables shown in the tenth Report, when compared with those of previous years, show that the transactions of the Board were heavier in 1927 than in any previous year. A total of 10,149 claims were reported, in consequence of which payments covering compensation and medical services as well as receipts from assessment and medical aid all totalled record figures; from which it is evident that operations under the Act were on a more extensive scale last year than in any previous year since the Act came into force.

Of the 10,149 accidents reported during the year, 59 proved fatal, 129 resulted in some permanent disability and 9,961 were of a tempor-

any nature. Thirty of the fatalities were in coal mining, and ten were in the lumbering, sawmills and woodworking group.

Compensation covering temporary disabilities and totalling \$371,787 was paid, \$415,422 was transferred to the pension fund to cover awards in the case of permanent disabilities and fatal accidents and \$106,770 was set up as a liability to cover pending claims.

A net increase of \$175,839 is shown in the disaster reserve, which brings the amount standing to the credit of this account as at December 31, 1927, to \$261,193. These are moneys set aside by the Board for the purpose of meeting any contingency caused by disaster.

Assessments levied, together with those outstanding at December 31, 1926, totalled \$1,053,456. Of this amount \$995,585.92 was collected, \$42,839 was cancelled (owing to over-estimate of payrolls or cessation of operations) leaving a balance of \$15,030 unpaid at December 31, 1927.

Receipts on account of medical aid totalled

\$202,940 while payments for medical services amounted to \$161,537.

During the year there was transferred from the accident fund to the pension fund \$415,422, which, together with interest earned by the fund, less the amount paid to pensioners, leaves a balance at the credit of this fund at December 31, 1927, of \$1,838,439, out of which 201 widows and 397 children of deceased workmen, as well as 244 workmen who met with permanent disabilities, are receiving monthly payments.

The investments of the Board at December 31, 1927, totalled \$2,409,010 (cost) and yield an average interest rate of 5.26 per cent.

Administration expense (excluding that made on account of Mine Rescue) was \$75,476 or 5.85 per cent on cash receipts, a reduction of 1.04 per cent as compared with the year 1926. Reports with reference to Mine Rescue, First Aid and Accident Prevention and Electrical Protection, covering a résumé of the various activities during the year pertaining to each, are contained in the main report, which will be reviewed in a future issue.

Workmen's Compensation in Great Britain

Statistics of compensation were recently presented to the Parliament of Great Britain, including a statement of proceedings during 1926 under the Workmen's Compensation Acts and the Employers' Liability Act, 1880. The total number of cases in which compensation was paid in 1926 was 370,908, and the total amount of the compensation paid was £6,006,921. Of the total amount of compensation paid, 51.6 per cent was paid by Mutual Indemnity Associations; 24.0 per cent by Insurance Companies, and 24.4 per cent by uninsured employers. The great reduction in 1926 as compared with 1925 in the number of cases and in the total amount of the compensation paid is attributed to the coal stoppage, the number of cases in the mining industry alone falling from 214,405 in 1925 to 131,231 in 1926. In 1926 the average payment in case of death was £288, as compared with £285 in 1925 and £161 in 1914; in cases of disablement the average payment (including cases settled by payment of a lump sum) was £14 9s., as against £12 4s. in 1925 and £6 7s. in 1914. The proportion of compensation paid in the seven industries in fatal cases was 11.2 per cent of the total amount paid for compensation. The percentages for the main industrial groups work out as follows: shipping, 36.1; factories, 9.4; docks, 13.6; mines, 8.5; quarries, 17.8; constructional work, 15.6; and railways, 22.9. In the coal mining industry the

charge arising under the act, calculated simply on the basis of the compensation paid, works out in 1926 at about 5d. per ton of coal raised, as compared with 3s. 1d. in 1925.

The report gives particulars concerning the various industrial diseases included under the Workmen's Compensation Acts. Compensation was paid in the seven groups, in 27 fatal cases, to the amount of £5,943, and in 14,751 disablement cases to the amount of £599,393. The 27 fatal cases included 9 of lead poisoning, 1 of anthrax, 1 of poisoning by nitrous fumes, 1 of dermatitis, 10 of epitheliomatous cancer, 4 of nystagmus, and 1 of beat knee. As in previous years, the bulk of the cases occurred in the mining industry, but as a result of the coal mining stoppage, the number of cases in the mining industry fell from 15,782 in 1925 to 13,192 in 1926. The majority of the cases were due to miner's nystagmus, beat hand and beat knee. Those diseases, together with beat elbow and inflammation of the synovial lining of the wrist joint and tendon sheaths, numbered 13,270 or 89.8 per cent of the total number of cases. Of the remainder, 837, or 5.7 per cent, were cases of dermatitis produced by dust or liquids, 346 or 2.3 per cent were cases of lead poisoning, and 227 or 1.5 per cent were cases of skin or other ulceration or cancer. The remaining 98 cases, or .7 per cent, included 43 cases of various forms of industrial poisoning and 30 cases of anthrax

ALL-CANADIAN CONGRESS SEEKS RECOGNITION

ON March 15, the executive board of the All-Canadian Congress of Labour, consisting of Messrs. A. R. Mosher, W. T. Burford, F. Wheatley, R. I. Bradley, O. Deleau, S. Sykes, and M. M. McLean, presented a memorandum to the Dominion Government. The statement which was read by the president, Mr. A. R. Mosher, was as follows:—

To the Prime Minister and Members of the Dominion Government:

The present delegation, consisting of officers and members of the Executive of the All-Canadian Congress of Labour, desires to place before you certain information with respect to the status of the Congress as the representative of a large group of organized workers in Canada.

Canadian Labour Unions.—The labour unions of Canada may be classified into two groups; first, national unions independent of foreign control; and second, so-called "international" unions, which are controlled by their United States membership, have their headquarters in the United States, and are, for the most part, affiliated with the American Federation of Labour. The American Federation of Labour affiliates maintain, as their Canadian legislative representative, the Trades and Labour Congress of Canada. The national group is subdivided into the national Catholic unions, which operate wholly in the Province of Quebec, and the Canadian unions which with one or two exceptions have affiliated with the All-Canadian Congress of Labour, the larger of the two national federations.

History of the Independent Movement.—The American Federation of Labour asserts that it is the recognized head of the trade-union movement in North America. It functions as a chartering body of autonomous craft organizations to which it claims the right to give jurisdiction in the United States and Canada. In the United States it also acts as the legislative representative of its affiliates. Since 1886 the latter function has been performed by the organization now known as the Trades and Labour Congress of Canada, for the Canadian membership of American Federation of Labour unions. The Congress is therefore essentially a lobby for the promotion of legislation on behalf of the members of branch unions of United States labour organizations operating in Canada. It is not allowed to accept affiliation or make representations on behalf of any organized body of Canadian workers except those affiliated with or not dual to A. F. of L. organizations in Canada. Following the adoption of a resolution at the 1902 convention of the Trades and Labour Congress of Canada, by which the Congress excluded from affiliation all national unions which were dual to international organizations, various national and independent unions thus excluded from the Congress established the Canadian Federation of Labour. Subsequently, other Canadian unions were organized, and these, with the Canadian Federation of Labour, established in March, 1927, The All-Canadian Congress of Labour. This organization has grown steadily since its formation, and it now represents all the independent labour groups in Canada, with the exception of the national Catholic unions and one or two others.

Basis of Organization.—The All-Canadian Congress of Labour is organized on the same basis as the British Trades Union Congress, and other national trades union federations, having jurisdiction over both economic and legislative matters. It not only endeavours to promote legislation in matters of interest to labour, but also to further the organization of Canadian workers in autonomous national unions.

In contrast with the Trades and Labour Congress of Canada (by which, in accordance with its constitutional provisions, affiliation is refused to Canadian organizations which are dual to United States unions) the All-Canadian Congress of Labour accepts the affiliation of any independent organized body of Canadian workers. The policy of the Trades and Labour Congress leaves control of the Canadian movement with the American unions; the policy of the All-Canadian Congress of Labour keeps control within our own boundaries, and provides for the representation of every independent body of organized workers in Canada.

Among the organizations which are affiliated with the All-Canadian Congress of Labour are groups of workers in the following industries: railroads, mines, lumbering, building trades, communication, shipping, as well as other classes of trades and occupations. The Congress maintains an office in Ottawa, with a full-time executive officer, and publishes a monthly journal, *The Canadian Unionist*.

During the last few years, there has been a steady development of national sentiment in Canada. The support which the Government has received in its successful endeavours to obtain for Canada a more independent status within the Empire indicates the feeling of the Canadian people in this matter. The formation of the All-Canadian Congress of Labour is a further indication of this desire for independence, and the members of the national unions which compose it feel that the Government, in giving almost exclusive recognition to the Trades and Labour Congress of Canada, which depends for its financial support upon unions controlled by membership in the United States, is encouraging the perpetuation of a principle which it has repudiated in the matter of Canada's political relationship with other parts of the Empire.

It may be said that Canada is the only country in the world where the Labour movement is not in undisputed control of its own policy and administration. Since it is rightly felt that Canada is entitled to be politically independent, so far at least as her domestic affairs are concerned, of any other part of the Empire, the subjection of the Canadian labour movement to the will of United States labour officials with the recognition of the Government, is subversive of the self-respect of Canadian workers, and we feel that the Government should therefore recognize the right of the All-Canadian Congress of Labour to consultation in respect of social and labour legislation, and to representation in all matters in which the workers of Canada are concerned.

The Trades and Labour Congress of Canada.—This delegation does not wish to belittle the work done in the past by United States unions and their legislative lobby, the Trades and Labour Congress of Canada. It is felt, however, that some facts should be presented to you with respect to their representations. In in-

roducing the Congress delegation to the Government in January last, President Tom Moore stated that "the large majority of those composing it hold membership in international unions, though several thousands of them are organized in national, provincial and local organizations, where it is considered their interest can be better served in that way." Since, however, the Congress reported to the Department of Labour a membership of 103,037 for the year 1926 it is evident that the "several thousands" referred to by Mr. Moore are insignificant in comparison with the membership of the United States unions affiliated with the Congress.

The term "international" is wholly a misnomer in its application to United States unions. It properly applies to federations of independent national groups which unite for common purposes, such as the nations of the world unite in the League of Nations, which is a purely international body. But the membership of United States unions consists only of American and Canadian workers, the former of whom have absolute control of labour policy. The Canadian members pay their dues to the American headquarters of their unions, and the latter maintain the Trades and Labour Congress of Canada by paying into its treasury a per-capita fee for each Canadian member.

Trades and Labour Congress Conventions.—The Trades and Labour Congress of Canada claims that its representations to the Government are based upon the decisions made at its annual conventions, and thus are expressions of Canadian opinion. It may be pointed out, however, that the delegates to these conventions comprise a large number who are on the pay of, and under instructions from the headquarters of their respective organizations in the United States, 41 of such delegates being credentialled to the last convention, while delegates were also sent from district councils and provincial federations, thus duplicating the representation of the United States union branches. Out of 1297 local branches of the A. F. of L. unions in Canada for which a per-capita fee is paid to the Trades and Labour Congress of Canada by their respective headquarters, credentials were received for only one hundred and eighty-five delegates, that is, less than 15 per cent. of the Canadian workers whom the Trades and Labour Congress of Canada claims to represent, had delegates at its last convention.

Mr. Moore also stated to the Government that an effort was being made to leave the impression that the members of the United States unions were "less responsible or desirable Canadian citizens" and the Congress, therefore, felt it necessary to depart from its usual procedure and submit a statement in its defence. The All-Canadian Congress of Labour has never used these terms in referring to the Trades and Labour Congress of Canada, and the only reason why they are imputed to us by Mr. Moore would appear to be a feeling on his part that they are not unjustified. Whether or not a Canadian citizen who supports and is subject to the dictation of a foreign labour union is "less responsible or desirable" on that account is a matter for the citizen himself to decide. There is now no excuse, however, for any Canadian citizen to give his allegiance to a foreign union on the ground that no Canadian union is available, or that his interests cannot be protected by such a union. The Canadian labour movement has now reached a stage of development in which provision is made for the organization of every class of Canadian worker, so

that the existence of branches of American unions, and their legislative lobby, the Trades and Labour Congress of Canada, is no longer required in this country.

The Object of the Delegation.—It is not our purpose to make any suggestions to the Government at the present time with respect to legislation, as we believe that any representation from the Congress should be taken up, in the first instance, with the Minister of the Department concerned.

We do however, request that the recognition now given to the Trades and Labour Congress of Canada, and, in some measure, to the National Catholic unions, and the American Railway Brotherhoods be extended to the All-Canadian Congress of Labour. We feel that, in view of the facts set forth herein, the almost exclusive recognition of the Trades and Labour Congress as the "mouthpiece" of organized labour in Canada is no longer justified, and that the Government should take into consideration the recent developments in the Canadian labour movement as a result of which the All-Canadian Congress of Labour has been formed, as the representative of a large group of autonomous Canadian unions. In all matters of special concern to Canadian workers, therefore, the Congress wishes to co-operate with the Government, and requests for its representations such consideration as is justified by its status, its membership, and its character as the only independent federation of national and autonomous unions in Canada.

Children's Accident Compensation in Illinois

On July 1, 1927, the new provisions of the Illinois Workmen's Compensation Act came into effect, under which illegally employed children who are injured in industrial accidents are now entitled to the benefits of the act and will also receive compensation amounting to one and a half times as much as they would have received if they had been legally employed.

In view of the new enactment the State Department of Labour has published a list of employments prohibited by the Illinois law to children under the age of 16. Under its authority to forbid the employment of children under 16 in occupations which it finds to be dangerous or injurious to health, the State Department of Labour has prohibited the employment of such children in the following classes of work: work on or near power-driven machinery and on scaffolding in buildings under construction, with certain specified exceptions; work in garages, filling stations, and automobile repair shops; cranking automobiles or motor lorries; handling petrol; work in tunnels and in places where there are noxious gases, and work with dyes.

NOTES ON LABOUR UNION ACTIVITIES

Legislative Program of Organized Labour In British Columbia

THE legislative proposals of organized labour of British Columbia were placed before Premier MacLean and members of the provincial cabinet on February 3 by a delegation from the British Columbia executive of the Trades and Labour Congress of Canada, composed of P. R. Bengough, Wm. Page, S. D. McDonald and R. W. Nunn.

The proposals were as follows:—

Amendments to the Workmen's Compensation Act which would provide—

(a) That excluded persons as set out in section 4, paragraph (b) engaged in undertakings costing in excess of \$50 be brought under the provisions of the act.

(b) All the compensation to be based on rate of wages being paid to workman at time of injury.

(c) That the rate of compensation be increased from 62½ per cent to 66⅔ per cent, same as in force in Ontario and Manitoba.

(d) That there be a more liberal interpretation in hernia cases.

(e) That when injured workman has been awarded total disability compensation same shall be continued until he is able to resume his former occupation or has been offered other suitable and equally remunerative employment; and that if such injured workman has suffered a permanent partial disability, but upon the report of the attending physician is able to take light work, the total disability payments should be continued until suitable employment is provided.

(f) That medical inspection and professional treatment be provided, when workers are employed in occupations where they are subjected to the dangers of poisonous gases.

Legislation which would provide for health insurance;

Amendments to the Mothers' Allowance Act so as to conform more closely with the Ontario Act;

That the scope of the Hours of Work Act be extended to include all employed within the province.

Legislation establishing a minimum wage and limitation of hours of work for boys employed within the province;

That maternity cases be given free treatment in hospitals receiving provincial government grants;

That all automobile owners be compelled to carry insurance against physical and property injury to others;

Amendments to the Municipal Act and city charters to provide:—

(1) That every person who is a British subject of 21 years of age (and to all from whom a poll tax is collected) shall have the right to vote in all civic and municipal elections.

(2) That in any city of municipal election all persons be prohibited from voting in any more than one polling division.

(3) That property qualifications be abolished for all elective offices in cities and municipalities. Five years' residence and endorsement by 150 electors be an alternative qualification.

That the provincial government urge the Dominion government to enact legislation providing for the creation of a State Unemployment Insurance Fund;

Enactment of legislation to provide for the establishment of Conciliation Boards to consider disputes of municipal and civic employees;

An act to regulate the installing of plumbing and a commission to work in conjunction with the provincial health officer in drafting such act.

The services of trade union officials to assist in properly enforcing the labour and social legislation on the provincial statutes were offered gratis to the government.

New Miners' Hall at Springhill, N.S.

Local No. 4514 of the United Mine Workers of America, of Springhill, N.S., celebrated the official opening of its new hall on February 15, the ceremony being performed by P. G. Muise, vice-president of District 26, U.M.W.A., in the presence of three hundred officials, union members and guests. The event was featured by a banquet followed by a dance.

The new building, which supersedes one that was erected more than thirty years ago, was dedicated as the first Labour Temple in the province of Nova Scotia. It was erected at a cost of \$20,000, the construction fund being contributed to by local members at the rate of about \$1,000 per month, and it is expected that the building will be free of debt about December of this year. It is constructed of brick and cellular tile on a concrete foundation 35 by 100 feet, permitting a spacious and serviceable basement. The ground floor is partly composed of offices and committee rooms, while the main hall has seating accommodation for six hundred persons. With floors of polished hardwood and white walls with ornamental wood wainscoting, the interior is attractively finished. It is steam heated, with modern plumbing and sanitary fixtures throughout. The building is electrically lighted by a profusion of ceiling and wall clusters. An ample stage provides utility for public entertainments as well as for meetings. As far as possible all material, including furniture, was obtained from Nova Scotia manufacturers.

Messages of congratulation were received from John L. Lewis, president of the United Mine Workers of America; Thomas Kennedy,

secretary-treasurer: J. W. McLeod, president of District 26; W. G. Delaney, secretary-treasurer, District 26; Arthur Petrie, District Board member; Hon. Peter Heenan, Minister of Labour; Hon. J. L. Ralston, Minister of Militia; Hon. Percy Black, Hon. G. S. Harrington, R. K. Smith, M.P., and P. M. Draper, secretary, Trades and Labour Congress of Canada.

In his address, International Board Member Hayes stated that the original ball was the first Labour Hall in Canada with the exception of one at Fernie, B.C.

Federal Office Cleaners Interview the Government

Officers of Office Cleaners' Federal Labour Union, No. 67 (Trades and Labour Congress), composed of office cleaners employed by the federal government, supported by prominent labour union officials, interviewed the Minis-

ter of Labour and the Minister of Public Works on February 21, for the purpose of bringing before the government claims for wage increases, with allowance for sick leave and holidays. It was stated that the woman working in Government offices have not had an increase since 1919, at which time their pay was increased from \$1 to \$1.25 per day. At the same time the salary was changed from an annual to a prevailing rate basis, and sickness provision was not included in the new scale.

The delegation was composed of Mr. Tom Moore, president of the Trades and Labour Congress of Canada; Rod Plant, representing the Allied Trades and Labour Association of Ottawa; and Mrs. N. Donaldson, president; Mrs. Stanyer, secretary, and Mrs. G. Kidney, officers of Federal Union No. 67.

The ministers promised that the requests of the delegates would receive careful attention.

Civil Service Federation of Canada Meets the Cabinet

On February 21, 1928, there took place at Ottawa an interview of the Executive of the Civil Service Federation of Canada with the Prime Minister and several members of the Cabinet. The Federation made representations in connection with two specific items upon which they requested the action of the Government, the first being the establishment of a board in connection with the Superannuation Fund, and the second, the setting up of a National Civil Service Council.

In dealing with the first request, it was pointed out by the Executive that the Superannuation Fund was contributed jointly by both the Government and Civil Servants, yet the latter had no voice in its administration. Civil servants had to date paid some \$20,000,000 into the fund, and it was their opinion that the Government might properly institute a board to advise in connection with the administration of the Fund—a board upon which civil servants themselves should be directly represented.

Proceeding to the matter of a National Civil Service Council, the Executive informed the Cabinet that it was their desire to cooperate, as employees, as closely as might be possible with the Government as employer. A permanent Council, giving equal representation to both parties, was considered as the most practicable means to that end. The matter was one which had received the consideration of civil service organizations for several years, and had previously formed the basis of representations to the Government. The Federation therefore requested that the Government appoint a committee of fourteen members—seven to represent the Govern-

ment and seven to represent civil servants—with the object in view of drafting the constitution for a National Civil Service Council, and, further, that immediately after the said committee reported, the National Civil Service Council should be established.

The Right Hon. Mackenzie King, in replying for the Government, stated that the representations would receive the most earnest consideration. With respect to the superannuation board, the Prime Minister said that the Minister of Finance looked upon the idea with favour. Regarding the question of a National Civil Service Council, Mr. King drew attention to the fact that a Bill on this matter had this session been referred by the House of Commons to the Committee on Industrial and International Relations. He would, therefore, suggest that the Federation might appear before that Committee when this Bill was under consideration, to give the members the benefit of its views on the subject. Such action would be most helpful to the Government should legislation eventuate from the committee's investigation.

The delegation, which was introduced by Messrs. E. R. E. Chevrier, M.P., and Gordon Edwards, M.P., was made up of the following executive members of the Civil Service Federation of Canada: the President, Mr. T. R. L. MacInnes, Miss M. Lyon, and Messrs. J. H. Ryan, V. C. Phelan, T. H. Burns, V. L. Lawson, W. J. Callaghan, and F. Jacques. For the Government there were present besides the Prime Minister, the Honourables E. Lapointe, J. A. Robb, P. Heenan, F. Rinfret, C. Stewart, J. C. Elliott, J. Malcolm, P. J. A. Cardin, and L. Cannon.

NEW APPRENTICESHIP ACT IN ONTARIO

Proposed Apprentice Training System for Building Trades

A BILL to provide for apprentice training in certain trades was introduced in the Ontario Legislative Assembly on February 10. The proposed legislation is the first of its kind to be introduced in Canada. It is the result of much thought and continued effort on the part of interested employers and representatives of organized labour, and particular credit is due to the Construction and Apprenticeship Council of Ontario, which is sponsoring the act. This council, which is composed of representatives of the Association of Canadian Building and Construction Industries (now the Canadian Construction Association), the Ontario Association of Architects, the Engineering Institute of Canada, the Building Trades Council of Ontario, and the Technical Branch of the Provincial Department of Education, has worked consistently, since its inception a little more than a year ago, in an effort to promote apprenticeship in the building trades. The proposed act has been endorsed by employers, organized labour, and educators, and is the result of a training program already in operation for carpentry apprentices in Toronto, and for carpenters and bricklayers in Hamilton. When the act comes into force it will have a far-reaching effect upon industrial education throughout the Dominion and should do much to promote and improve the training of young Canadians in skilled industrial occupations.

The bill as submitted to the Legislature is in the form of enabling legislation and provides for the control and regulation of apprentice training in "designated trades." The five trades named in schedule A are bricklaying, masonry, carpentry, painting and decorating, and plastering. Any other trade in any industry may be added to the schedule if twenty-five or more employers in the trade petition the Minister of Labour, but the petition must be approved by the Lieutenant-Governor in Council, following an investigation by the provincial Inspector of Apprenticeship, before the act becomes effective in that trade.

The act provides for the appointment of an Inspector of Apprenticeship who shall keep a register of all contracts or indentures, supervise and inspect the application and operation of the act in each designated trade, assist the apprenticeship committees and others in carrying out its provisions, and promote interest in the adoption of the act in different industries.

In all designated trades, no minors may be employed for a longer period than three

months except under contract of apprenticeship. Indentured apprentices must be registered within three months of the date when the act becomes effective in any trade, and other learners, not under contract, must sign a contract in accordance with the act for the balance of their training periods. No contract shall be for a period of less than two years. All contracts shall be signed by the apprentice, his father (or guardian), and the employer. Contracts may be terminated or cancelled by the inspector, by mutual agreement of all parties, or for "good and sufficient reason." The transfer of apprentices from one employer to another is provided for.

The organization of the work and the programs of training are to be determined by regulations of the Lieutenant-Governor in Council. These regulations govern: the formation of apprenticeship committees in defined areas, the duties, powers and procedure of these committees, the length of the periods of apprenticeship, the qualifications for entry, the courses of training, the nature and number of classes to be attended, the number of apprentices in each designated trade, the wages of apprentices, the assessment of employers, the records to be kept, etc.

Provision is made for close co-operation with existing vocational schools, but the control of apprentice training is placed in the hands of the Minister of Labour. The members of apprenticeship committees receive no salaries but are to be reimbursed for traveling and living expenses while attending meetings and the Government will pay the cost of operating the committees. A penalty of not less than ten dollars and not more than one hundred dollars is provided for violation of the provisions of the act.

The following extracts from a statement by the Construction Apprenticeship Council indicate the purpose and value of the act as it affects the building industry:—

"By means of apprenticeship committees in defined areas the industry will be assured of proper control of apprenticeship training. These committees will be composed of representatives of employers and employees who will guard against employing more apprentices than the trade should carry to take care of existing needs. This matter of the control of the number of apprentices who may be employed at any time is important. With representatives of employers' organizations, together with employees' representatives, properly constituting these committees, we may

be assured that there will be no flooding of the trade with apprentices to the detriment of journeymen.

"The act contains reference to regulations which may come later with respect to assessment of the industry for the training of apprentices. If this assessment proves feasible it will provide an equitable plan for training apprentices. At present a small number of employers bear the cost.

"By means of an assessment the industry would have funds with which to pay apprentices wages during the first and second year of apprenticeship training, and these apprentices could be assigned to employers as they had work. Continuous employment would be provided and all the possibilities of the industry utilized for training skilled workers.

"With such funds at the disposal of the industry it would be possible to take all first and second-year apprentices out of the trade during the slack season and place them in the technical schools for training in the advanced processes and operations of their trade. It

would be to the advantage of journeymen to have apprentices taken out of the trade in the slack season so that what work there is would be left for journeymen, and it will be of great value to apprentices to give them the advantage of intensive trade training in our technical school in the winter season.

"This act should commend itself to every employer in the construction industry as a reasonable and necessary step in setting up a workable system of apprenticeship training and one which will offer our own Canadian boys an excellent opportunity to become skilled workers."

Mr. James W. Marsh, general organizer of the International Brotherhood of Carpenters and Joiners, expressed strong approval on the part of organized labour of the provisions contained in the proposed measure. "This," he said, "is the most important measure since the Workmen's Compensation Act and the Mothers' Allowance Act. No one with the interest of the province at heart will oppose it."

NOTES ON VOCATIONAL EDUCATION AND APPRENTICESHIP

Summary of Progress of Vocational Education—United States

In a biennial survey of education in the United States 1924-26, just published, the gains resulting from vocational education are summarized as follows:—

1. Increase in the number of shop courses in both elementary and high schools.

2. A marked tendency to offer compulsory industrial arts courses in grades seven and eight.

3. A growing tendency to discriminate more definitely between manual arts courses and vocational courses, with a growing recognition of the former as a part of the general education program and of the latter as a special form of education.

4. Marked increase in the number of schools offering some form of part-time and apprenticeship work, the number of such courses, and the number of students enrolled.

5. A great increase in the number of schools offering an occupational information course and setting up some kind of guidance machinery.

6. Increase in the time of the school program allotted to manual arts work.

7. Increase in the enrolment of all types of industrial and manual arts courses.

8. Increase in the use of visual aids for instructional purposes.

9. The development of shop work on the itinerant teacher basis together with the extension of shop courses to pupils in rural and village communities.

10. The rapid increase of general shop courses as a form of shop organization for industrial purposes, especially for the required courses in the junior high-school grades.

11. Occasional efforts toward the reorganization of teacher training work in teacher training institutions to meet special needs of manual arts instructors, especially for such new types of work as are represented by the general shop teachers.

12. Continued change in the emphasis of instruction in manual arts courses from that of skill in the use of tools and machinery to that of industrial intelligence and developmental experiences and general elementary, fundamental, manipulative abilities for general education values, including guidance.

13. A growing recognition on the part of those charged with the responsibility for organizing vocational industrial and manual arts courses of the advisability of treating the vocational industrial courses as special forms of education, strictly for employment purposes, and enrolling in such courses those students who should have training preparatory for entering upon employment in some specific trade.

Part-Time Shop and School Plan in United States

The plan of part-time school and shop employment was first put into practice in 1906 at Cincinnati. To-day there are many industrial centers where the part-time system is employed. Mr. Frank M. Leavitt, Associate Superintendent of Education, Pittsburgh, reports that "in Pittsburgh, every indentured apprentice goes to school one day a week on the employer's time. The electrical-workers' union asked for a class in the evening schools. From 600 to 900 apprentices in several trades attend evening school under compulsion of the unions. Foundry men have asked for apprentices. They try to get boys for half time and cannot. We must get them, and the employers take them on."

Charles F. Bauder, director of industrial arts, Philadelphia, says: "We have demonstrated to employers in plastering, printing, metal trades, paperhanging, and painting that it pays to return boys to school for one-half day a week for training under pay. Most of them come on Saturday morning. All are over 16 years of age. One half of the time in school is devoted to academic work related to the trades. In metal trades, all is academic. We now have 85 boys in metal trades and 75 in plastering. Boys of the last year's week-about co-operative trade-tailoring course obtained jobs largely on full time. A new two-year course is being organized. A new vocational school now being planned will offer fine opportunities for part-time courses especially with textile apprentices. A committee of the tex-

tile-manufacturers' association has recommended a week-about plan in place of the present eight-hour week in school."

An employer in Pennsylvania says: "With the new system of co-operating with the schools, in three years we have trained 4 machinists, 2 sheet-metal apprentices, and 2 patternmakers. In the next twelve years, we will have trained 40 machinists and 25 sheet-metal workers, instead of 14 and 6, as formerly. Trade training should lead to professional training. Many workmen have job or position training only—neither good vocational equipment nor training for enjoyment of life. The difficulty is that the trades are becoming so complicated that they are over the heads of the workers."

Day Classes for Workers at New York

Representatives of the building-trades unions of New York City recently held a conference with President George J. Ryan of the board of education to urge the establishment of day classes for apprentices in the continuation schools, as an extension of the classes now conducted in the evening schools. Similar classes are being conducted for apprentices in the printing-trades day continuation school.

The apprenticeship classes in the evening schools have begun their fifth year and are training 6,000 indentured apprentices in eight trades. The classes are conducted with the co-operation of the employers and trades union, and the work is supervised by committees of the trades.

CANADIAN NATIONAL SAFETY LEAGUE

Annual Reports of Dominion and Provincial Organizations for 1927

THE ninth annual report of the Canadian National Safety League, recently received, outlines the activities of the League and its various branches during the year 1927. Acknowledgement is made of the support given to the safety movement by the Dominion Government which contributed \$10,000 to the funds of the League. The central body conducts general safety work throughout the Dominion, and co-ordinates the activities of the various provincial leagues which now include the following affiliated organizations: The Ontario Safety League (now in its fifteenth year); Province of Quebec Safety League; Maritimes Safety League (covering the provinces of New Brunswick, Nova Scotia and Prince Edward Island); Manitoba Safety League; and British Columbia Safety League.

A safety service by mail was given Alberta and Saskatchewan throughout the year from head office.

The work of the main body comprised the distribution of 2,000 circular safety letters and reports; 10,000 campers' bulletins; 10,500 hunters' bulletins; 93,000 industrial, traffic and special bulletins; 24,600 school bulletins; 23,750 safety calendars; 10,000 safety buttons. The distribution of these was made possible by the co-operation of the provincial affiliates, which received valuable assistance from fire rangers, provincial and district foresters, tourist agents, general passenger agents of the Canadian Pacific and Canadian National Railways, fire and police chiefs, Boards of Trade and Chambers of Commerce throughout Canada.

Ontario Safety League.—The Ontario Safety League in its fourteenth annual report especially thanks the various governmental departments, municipalities and organizations which have given it financial support. During 1927 the League concentrated its efforts on safety work among school children on a scale never before attempted. The scope of the general campaign activities was considerably enlarged during the year, especially in connection with traffic, drowning and other hazardous conditions. Prior to the commencement of the intensive traffic and aquatic seasons, the boards of education and separate school boards in 74 cities, towns and villages were communicated with, and authority was given to the League to give safety talks and demonstrations of resuscitation. Where possible, the chiefs of police in the different localities supplied a local speaker, generally a traffic officer, who talked to the children on traffic and water hazards. After the lectures, the children were shown motion pictures, depicting hazards and imparting safety instruction. In all 330 safety talks were given to over 100,000 children. Motion pictures were shown in theatres in the towns visited, where they were viewed by approximately 75,000 people. In addition, publicity was secured in about fifty newspapers throughout the province. The report states that in spite of an increase of 124 fatalities during 1927 from the automobile hazard and a total increase of 97 fatalities from 36 different hazards, there were throughout the province 13 fewer children (under sixteen years of age) killed than in 1926. In carrying the message of safety to young people talks were also given upon request to Home and School Clubs, Community Clubs, Daily Bible Vacation Schools, summer camps, church organizations, juvenile lodges and clubs.

During the year 1927 there were in the Province 1,548 fatalities as a result of industrial accidents from all causes as compared with 1,451 for 1926. During 1927, deaths from the automobile hazards head the list with 422 fatalities and 3,976 non-fatal accidents, as compared with 298 fatal and 4,144 non-fatal accidents from this cause in 1926. Drownings are in the second place with 318 fatalities as compared with 297 deaths from this hazard the previous year. Dealing with the automobile hazard, the report stated that during the fall of a year a short campaign was conducted "to stay what might be called an epidemic of motor accidents" then prevalent over the North American continent. The motoring public were reached by press advertisements, bill board posters and windshield stickers. Air navigation has become the 36th hazard in Ontario, and while it was stated that this method

of travel had become much safer than in the earlier periods, yet a safety-in-air suggestion competition was recommended.

Besides directing particular attention to safety work among children, the League continued its important campaign for the reduction of industrial hazards, and its industrial bulletin service has proved to be of great value to employer and employee.

Province of Quebec Safety League.—The third annual report of the Quebec Safety League deals, in part, with the Laurier Palace theatre disaster, and in this connection states that a committee has fully investigated not only the safety of all the theatres but has extended inspection into all public buildings as well. Throughout the province, the League got in touch with school authorities during the year and a safety program was organized in many schools, safety talks being given each week by the teachers on the eve of week-end holidays. Definite educational work in this direction has been carried on regularly, and the efforts of the League have been generously supported by the radio station of *La Presse*, which broadcasted safety bed-time stories to children twice a week. The Traffic section studied the various problems pertaining to safety of the streets, while the vigilance committee, appointed to check up on the observance of traffic bylaws, was very active in investigating cases of infringement. An industrial section was added during the year, and through it "the gospel of carefulness" was regularly preached in the form of illustrated posters, talks and motion pictures to some 75,000 employees distributed in 360 firms that are members of the industrial section.

Maritimes Safety League.—This League, which covers the Provinces of New Brunswick, Nova Scotia and Prince Edward Island, devotes special attention to safety work among the school children.

Manitoba Safety League.—In Manitoba the prospects are reported as encouraging for permanent safety work supported by the Provincial Government. Besides the activities carried on for the prevention of fires and industrial accidents, members of the Provincial Government have under consideration the appointment of a permanent safety committee which will probably be financed largely by the Government and the Manitoba Motor League.

British Columbia Safety League.—This branch was established during the year, the organization meeting being held in Vancouver on July 22, 1927. The office was thoroughly equipped with the essentials, and a system of campaign procedure instituted on the same basis as that successfully employed by the Ontario Safety League.

NOTES ON INDUSTRIAL SAFETY AND HEALTH

Safety Work in Cement Industry

ACCORDING to the January-February number of the *Accident Prevention Magazine*, published by the Portland Cement Association, the records of the annual safety trophy contest among the company's plants indicate that the results for the year 1927 "were not only greater than for past years, but so much greater that they dwarf previous achievement." Ten plants claimed the association trophy by completing the year's operation without a lost-time mishap. This is twice the number which have accomplished this feat during all the years since the accident records of the industry have been kept. Among the ten winners in 1927 were two Canadian plants of the organization—those at Belleville, Ontario, and Hull, Quebec. Commenting on the success of the Canadian plants, the editor makes the following observation:—

"Dominion safety leaders and those of the provinces of Ontario and Quebec found greatest interest in the achievement of the Canada Cement Company mills at Belleville, Ontario, and Hull, Quebec, and the company and its employees find gratification in the fact that they are the first organization in our membership to win the trophy during three successive years—Port Colborne, 1925; Fort Whyte, 1926, and the above-mentioned two plants in 1927. Four trophies in three years is a record that may prove hard to beat."

The Duluth plant now has the outstanding continuous safety record of the cement industry. On January 6, it completed 696 accident-free days.

Health Record of Industrial Population

The *Statistical Bulletin*, published by the Metropolitan Life Insurance Company, states that in no previous year were health conditions among the industrial populations of the United States and Canada as satisfactory as during 1927.

"The death rate among the wage-workers of the two countries, and their dependants the *Bulletin* states, "may be accurately gauged by that of the more than eighteen million of them who are industrial policyholders of the Metropolitan Life Insurance Company. This rate dropped, in 1927, to the amazingly low figure of 8.4 per 1,000, which is a new minimum for all time.

"The actual number of deaths among Metropolitan industrial policyholders, at ages one and over, in 1927, was 147,520. The corresponding deathrate of 8.4 per 1,000 may be

compared with 8.9 for 1926 and with the former minimum of 8.5 in both 1925 and 1924. These fractional reductions in the deathrate, when translated into actual savings of lives, assume more importance than appears on the face of the figures. If, for example, the 1926 deathrate had prevailed in 1927 there would have occurred in the latter year 8,808 more deaths than did occur. This is what results from a reduction of only one-half of one point in the deathrate. And even the reduction of one-tenth of one point from the former minimal figure of 1925 corresponds to 1,782 fewer deaths last year than would have occurred had the lowest previous mortality rate prevailed. In 1911 the deathrate of the American and Canadian wage-earners was 12.5 per 1,000. The reduction sixteen years later to 8.4 amounts to a 33 per cent drop. And no less than 72,570 fewer American and Canadian wage-earners and their dependants died last year than would have died if the deathrate of 1911 had prevailed."

Proposed Central Mine-Rescue Station

The *Canadian Mining Journal*, referring to the explosion at the Hollinger mine on February 10, when 39 miners lost their lives in consequence of an explosion, suggests that "the government of Ontario might well consider joint action with its growing mining industry for the establishment of a central depot, or mine-rescue station, with requisite transportation arrangements following what is now customary practice in coal-mining districts. Something of this kind would be more suited to the needs of the Ontario mines than provision of apparatus at individual mines where core of the equipment and training of the wearers might be neglected because, as is evident from the isolated incident at the Hollinger mine, the need for special equipment of this kind is rare.

"It is well to know," the *Journal* adds, "that the Workmen's Compensation Board of Ontario, under the policy of accumulating a disaster reserve, will be able to meet the heavy demand that will now fall upon the funds without inflicting any unduly heavy burden upon the financial reserves of the Hollinger company itself.

The writer states that the action of the United States Department of Mines in promptly sending one of its rescue cars to the scene of the accident will be gratefully remembered in Canada.

The provincial government has appointed Mr. Justice Godson a special commissioner to inquire into the causes of the disaster.

Safety Engineer Desired by United States Commission

The United States Employees' Compensation Commission, in their last annual report, call attention to certain practices which cause unnecessary industrial risks: "There are certain conditions in government employment," it is stated, "that suggest the possibility of large savings by systematic work in accident prevention. Such savings can probably only be realized by the appointment of a competent experienced safety engineer to study the causes and conditions under which accidents occur and to secure the co-operation of government officials in all departments in avoiding unsafe practices and in correcting unsafe conditions. Examples of injuries which suggest a field for accident prevention are the large numbers of hernias due to accidents, mostly caused by overstrain in connection with heavy lifting. These cases are so numerous as to make it quite clear that many men were assigned to heavy work who are entirely unfitted physically to do such work. The very large number of drownings in the work of the Engineer Department of the War Department suggest that some means could probably be found for making the conditions of the work somewhat safer and thus avoiding the extremely costly accidents."

Progress of Safety on American Railways

Mr. Howard Goodwin, of the Phoenix Mutual Life Insurance Company, of Hartford, Connecticut, in commenting on a revised schedule of charges recently issued for railway employees insured by the company, states that "the more than 1,750,000 persons employed by the railroads, aside from the recognized hazards of their occupations, are regarded by the insurance company as highly desirable types of risk, being picked men, generally skilled workers, who operate under careful medical and executive supervision and under a rigid 'safety' regime."

He states that the American railway companies have accomplished nothing more outstanding in the last decade than their establishment of the new methods and standards in the conservation of human life values. The economic value, even, of these savings is almost beyond calculation. Among the persons killed on American railroads in 1926, the last recorded year, 1,672 were employees and 169 were passengers; 111,903 employees and 5,093

passengers were injured. Comparing these figures with 1916, there is a reduction of about 30 per cent in the total number killed and of about one-third in the total number injured. The average journey per passenger has grown from 33.58 miles to 40.79 miles, or about 21.4 per cent, though the number of passengers decreased more than 174,000,000. The number of railroad employees increased 4.6 per cent in the ten-year period."

Investigation of Hernia in Ontario

It is stated that the Ontario Department of Health is giving serious consideration to the problem of hernia as an occupational disease. The Hon. Premier Ferguson, speaking in the provincial legislature on February 21 expressed approval of a speech on this subject by Dr. G. A. McQuibban, the member for Northeast Wellington, who pointed out the difficulty of determining the exact cause of ruptures, and of selecting the cases where they are due to employment. In many cases the patient is predisposed to the ailment, owing to conditions which have developed gradually, but such workmen are unconscious of their condition, knowing nothing of it until they are suddenly disabled, without hope of assistance towards recovery. Dr. McQuibban pointed out that in silicosis the campaign of prevention had been very successful, and he suggested that the same could be done with hernia. By means of medical examinations those cases which are predisposed and actually in progress could be determined. The workman could be placed at safer work and treatment given him, and in this way the number of cases actually coming to the observation of the board would be lessened. He promised that the Workmen's Compensation Board would find the medical profession willing and eager to co-operate with them in this matter. Caisson disease and silicosis had been included in the compensation list, he said. "I hope," he added, "that all measures have not been exhausted by the government to give this condition to which I refer the place it rightfully deserves."

No Accident Year of Electro-Metallurgical Company

The Electro-Metallurgical Company of Canada, Limited, of Welland, Ontario, gave a banquet to its employees on February 16 to celebrate the completion of a full year without a lost-time accident. A bronze tablet has been erected to commemorate the achievement. Mr. W. H. Winans, head of the Industrial Relations Department, said that the year's record meant that safety had been successfully practised for an aggregate of 823,000 labour hours,

equivalent to one man working for 329 years without an accident. In Canada and the United States, some person died every six minutes as the result of an accident. Needless sacrifices of 91,000 lives were made every year and it was too great a price. That something could be done to reduce this enormous toll was evidenced by the fact that the Welland plants had operated for a full year without a lost-time accident. He believed that with determination, enthusiasm and courage, the Welland works could extend their safety record to two full years.

Occupational Mortality Rates in England and Wales by Social Classes

The Registrar General for England and Wales has issued a report on occupational mortality, based on the results of the census of 1921, taken in connection with the birth and mortality statistics of 1921-1923. The figures are for male occupations only, except that illegitimate births are connected with the occupations of the mothers. The number of males aged 2 to 65 years in England and Wales at the last census was 10,082,062, of whom 9,704,860 were occupied and retired (civilians only). If the mortality of all these males be expressed as 1,000, the corresponding mortality of the five social classes is as follows:—

Class I, numbering 225,618, comprises directors and secretaries of companies, stockbrokers, heads of departments in banks and insurance companies, clergymen and ministers of religion, professional men, authors, editors, and journalists, etc.—Rate of mortality, 812.

Class II, numbering 1,974,884, comprises farmers, employers and managers in most businesses, railway officials, officers in the mercantile marine, buyers and commercial travellers, and most brokers and agents, civil service and local authority officials and clerks, commercial and other clerks, teachers, artists, etc., etc.:—Rate of mortality, 942.

Class III, numbering 4,218,715, comprises foremen, and the more skilled grades of manual workers generally, together with shop assistants, roundsmen and van salesmen, postmen and post office sorters, telegraph and telephone operators, actors, musicians, and stage hands, domestic servants, gamekeepers, waiters, motor car, motor omnibus, and motor lorry drivers, tram drivers, etc., etc.:—Rate of mortality, 951.

Class IV, numbering 1,984,906, comprises agricultural labourers and fishermen, most mine and quarry workers other than coal hewers, machine tool workers, engineers' and foundry labourers, drivers of horse-drawn vehicles, omnibus and tramway conductors, packers, railway porters, platelayers, gas stokers, boiler firemen and stokers, firemen and trimmers in mercantile marine, etc., etc.:—Rate of mortality, 1,007.

Class V, numbering 1,300,737, comprises unskilled workers:—Rate of mortality, 1,258.

The social contrasts for some individual diseases are even more striking. For respiratory tuberculosis the mortality rate for Class 5 is nearly three times as high as that for Class 1, and for bronchitis the rate for Class 5 is nearly seven times as high as in Class 1.

Master Painters Recommend Paint Spraying Machines

The American Paint and Varnish Manufacturers' Association published recently a pamphlet prepared by Mr. G. B. Heckel, entitled "The Spray Painting Machine as Economical Factor in the Preservation and Decoration of Structures and Products." It is intended as a reply to objections that have been advanced from the side of labour against the use of the sprayer as being detrimental to the health of the worker and as tending to lessen employment.

Paint sprayers in a crude form have existed since 1869, but the modern air-atomizing machine is comparatively a recent development. The spray gun is its most important unit, delivering a readily controllable, concentrated spray at uniform rates of speed as the operator desires. Its advantages are enumerated as "speed, cleanliness, economy of time and labour, ease of operation, excellence and variety of work performed, and adaptability."

The pamphlet mentions particular classes of work which is impracticable by any other means. The atomized paint, varnish, enamel, lacquer, etc., from the spray gun penetrates every crevice of the surface and finds no difficulty in thoroughly coating a surface which a brush, for mechanical reasons, would leave inadequately protected, and for which the time required would make the cost prohibitive. Labour men themselves recognize, it is claimed, that certain kinds of work are best done by a machine, as is shown by agreements made by many local journeymen painters' unions, permitting the use of sprayers only on rough work "where it is not practical to use brushes, such as concrete, undressed lumber, brick, etc." Mr. Heckel, however, justifies the use of the spray gun for carriages, furniture, and fine work as well as for structural painting. While it will not replace the

brush, he believes it will develop more and wider uses for paint and painters, and this is Mr. Heckel's answer to the allegation that painters will have less employment in consequence of the general adoption of the machine.

As to the economy of spray painting, the writer asks "shall we, when avoidable, continue to spend from 65 per cent to 75 per cent of the total cost of the job on labour and only 25 per cent on materials, or shall we, by increasing production, reduce the labour cost to 50 per cent or less of the total. This can be done, in very many cases, by the use of

the machine, without reducing the wages of the individual workman; and, because of the increased demand which always follows reduction in cost, without displacing a single workman."

Mr. Heckel's pamphlet does not deal with the alleged ill effects on workmen, but he points out that for proper operation and proper service the use of the spray machine requires skill and knowledge just as does the proper use of the brush. The machine should be adopted as a supplementary service and the more intelligent journeymen should be thoroughly instructed in its use and care.

REPORT OF THE LIBERAL INDUSTRIAL INQUIRY COMMITTEE IN GREAT BRITAIN

THE Industrial Inquiry Committee, a body appointed nearly two years ago on the initiative of the organizers of the Liberal Summer Schools, published a voluminous report early in February, under the title "Britain's Industrial Future." The report was prepared by specialists in the various departments of economics considered including employers, trade-unionists and financial experts, and outlines an economic policy having the unanimous approval of the committee composed of the following members: W. T. Layton, editor of the *Economist*, chairman; E. D. Simon, M.P., vice-chairman; Right Hon. D. Lloyd George; Right Hon. Sir Herbert Samuel; Right Hon. Sir John Simon; E. H. Gilpin; H. D. Henderson, editor of the *Nation and Athenæum*; Philip Kerr; J. M. Keynes; the late C. F. G. Masterman; Professor Ramsay Muir; H. L. Nathan, and B. S. Rowntree.

The committee applies the principles of "rationalization" to industry as a whole, and attempts to infuse into the existing haphazard industrial growth some measure of control and co-ordination. The discussion of the abstract merit of socialism or individualism is briefly dismissed, the committee being concerned with finding the most effective adaptation of the existing machinery.

Economic General Staff.—The second section of the book deals with the "organization of business." The committee propose the establishment of a Board of National Investment, whose duty would be to direct the flow of national savings which at present accrue in the hands of the various government departments. They also recommend that an Economic General Staff should be created for the continuous study of economic problems and of their relation to government policy. Apart

from these two new features, however, the recommendations of the committee are confined to a suggested remodelling of existing boards, under both public and private management, and to proposals for adapting and enlarging company law to suit the widely varying nature of joint stock enterprise.

Industrial relations.—The discontent of the workers is stated to result from the feeling that they are treated as tools rather than as partners in production, and that the distribution of wealth is carried out on principles to which they are not parties, leading to a cleavage between a small owning class and a large working class. The committee propose that industry should be given a measure of self-government under proper control. The machinery for collective bargaining should be developed into a system of "joint ascertainment" of what is just, practicable and advantageous to the industry and to the community.

The committee recommend an extension of the trade board system to trades now without boards, and industries with joint industrial councils should add a neutral member, representing the state or the consumers. The committee recommends that the Ministry of Labour should be reconstructed under the title of Ministry of Industry, taking over the powers of the Home Office under the Factory Acts and Compensation Acts, the Mines Department of the Board of Trade, and such other functions as may be necessary to bring within the purview of a single Ministry all the relations between the state and the organized bodies of employers and workpeople. The Ministry, thus reconstructed, should undertake the duty of advising and stimulating the various industries towards co-operative action in the pursuit of efficiency.

Council of Industry.—A Council of Industry also should be established in close association with the Ministry of Industry, to be composed of nine employers' and nine workers' representatives, with six members appointed by the ministry. A proper minimum wage should be fixed by each industry for itself, but in addition the worker should receive a sum representing his individual special effort or skill, and an ideal wage should include an element varying in accordance with the profit made by the employing firm. An extension of suitable forms of profit-sharing is also desired. In general, the object or policy of the state should be to bring about the establishment in every industry of a representative regulating body, including both employers and workmen, for the consideration of common interests, and endowed with the power of obtaining, under proper safeguards, legal sanction for their agreements. In certain essential industries compulsory procedure would be applied. In these industries the worker would not have the right to strike without warning and inquiry, but a worker in such an industry should be compensated for thus waiving his individual rights. His terms of service should be such that he would not wish to strike.

Works Councils.—On this subject the committee states that it is even more important to create the machinery of organized co-operation in the individual factory or workshop than in national negotiating bodies. But this must be done without impairing the necessary authority and prerogatives of management, which would be fatal to efficiency, and without conflicting with the agreement or decisions of national or district negotiating bodies. Anything which can be accurately described as "workers' control" is therefore out of the question. The representation of workers upon boards of directors is of little value, unless either the workers have an established right to a share of residual profits, or the functions of direction have been divided, in which case workers might advantageously be represented upon a supervisory council. The committee regards it as important that there should be permanent, regular, and established methods of consultation in every factory and workshop of substantial size. It is therefore recommended that it should be a legal obligation upon every concern employing fifty or more workpeople, or, alternatively, upon every concern falling under the Factory or Workshops Acts, to establish a works council.

Profit Sharing.—A wider diffusion of ownership might be obtained, first, by the setting aside of reserves within industry, and second,

by means of private saving. It is by the creation of reserves that the major part of industrial capital is provided. This is all now assumed to be the property of the existing shareholders. The report suggests that after existing capital has received an adequate return, the balance ought to be shared with the employees, and that it is best shared in the form of capital allotments, which create new ownerships. It is recommended that the Council of Industry should do everything in its power to stimulate distributions of this kind, which are already adopted by various concerns.

Unemployment.—The committee draws a sharp line between normal unemployment, due to trade fluctuations, seasons, etc.; and abnormal unemployment due to the war or other special causes. Normal unemployment, it is stated, can be tempered by a wise regulation of monetary policy and by forethought in the distribution of orders. It can be alleviated by a system of social insurance. Abnormal unemployment ought not to be dealt with by a straining of the insurance system, or by poor relief. It is recommended that the state should assume direct responsibility for the relief of the able-bodied unemployed. This would result in restoring the unemployment insurance scheme to a sound actuarial basis. Abnormal unemployment should be met by a readjustment of the balance of the economic life of the country and by a vigorous national development. This subject occupies several chapters of the report, dealing with roads, housing, electricity, waterways, agriculture and other divisions of national work, these proposed undertakings being brought into relation with the financial and other arrangements proposed elsewhere in the report, and the whole system being so designed that no sudden or excessive strain may be placed upon the public exchequer.

The last section of the report deals with national finance, reforms being proposed in currency and banking, in the system of national accounts, in the expenditure of national revenue, and in the present system of local rating, the latter being considered to be far more injurious to industry at the present time than the system of national taxation.

The *Manchester Guardian*, commenting on this publication, expresses the opinion that "the authors of this report have undertaken a gigantic task, and performed a national service, not in any spirit of partizanship, but with a single eye to what seemed to them reasonable, fair, attainable, and in the national interest."

BRITISH CONFERENCE ON INDUSTRIAL PEACE

RECENT movements toward industrial peace in Great Britain were outlined in the *LABOUR GAZETTE*, December, 1927, pages 1309-10, and the issue for January, 1928, page 4, noted the decision of the Trades Union Congress and a representative body of employers, headed by Sir Alfred Mond, to hold a conference for the purposing discussing the industrial problem. The invitation for a joint meeting was extended by the employers, and accepted by the General Council of the T.U.C., a committee being appointed to enumerate the topics which might serve as a basis for discussion.

According to a report of the preliminary conferences appearing in the February, 1928, issue of the *Ministry of Labour Gazette*, the subsequent proceedings were as follows:

The first meeting of the General Council with the employers who had sent the invitation took place on January 12. At this meeting Sir Alfred Mond explained why a representative group of employers had issued the invitation, as none of the existing bodies were able to take the initiative. They were there, he said, neither as representatives of associations nor as representatives of their respective businesses, but in their individual capacity. It was not the purpose of the meeting to go into the more detailed problems of the various industries, which must be dealt with by the industries themselves; but to consider general lines of policy which they could recommend, the particular application of which must be determined by the various industries in the way most suitable to each.

He went on to suggest that this involved problems of the following character:—

The better organization of existing industries by means of amalgamation; rationalization; introduction of new processes and of new methods, both technical and administrative. This would involve the consideration of means of dealing with workers eliminated by improved methods, e.g., by methods of transference or by encouraging mobility of labour, and by a system of compensation and pension.

The improvement of the security and status of the worker.

Social problems, such as questions of housing, health and unemployment insurance, and educational methods.

The effect of national taxation and of rates upon industry.

Causes of industrial disputes, and means of avoiding them.

Participation in the proceeds of industry, on the basis of the worker being not merely entitled to a fixed percentage of wage, but interested in the general prosperity of his industry.

The creation of a permanent standing committee, to meet for consultation from time to time on topics affecting industry.

Mr. Ben Turner, chairman of the Trades Union Congress, replied on behalf of the General Council. He thanked the employers for their invitation, noted the reasons given for the inability of any single organization of employers to enter into discussions on the entire range of questions they had met to discuss, and expressed the hope that the employers there present might be able to indicate what steps they proposed to secure the greatest possible amount of support for and the widest possible adoption of the agreed principles. Each side entered into the conversations without prejudice, and without surrendering principles which they held to be fundamental. In their discussions and decisions they should not in any way trespass upon the sphere and functions of the existing organizations of employers and trade unions.

A general discussion followed, in which nine trade union leaders and three employers spoke; and various questions as to the scope and procedure of the proposed conversations were considered.

Sir Alfred Mond replied on the discussion, and announced that the employers had appointed a sub-committee to carry on the discussions, consisting of himself (as chairman), Lord Londonberry, Sir David Milne-Watson, Sir Hugo Hirst, Lord Ashfield, Lord Weir, the Hon. Vernon Willey, with Mr. J. Conway Davies as secretary.

Mr. Ben Turner stated that the General Council had not yet decided on the appointment of a committee, but that the matter would be considered at a special meeting of the General Council.

The General Council met on January 24, and decided to continue discussions with the representative group of employers. The Council authorized the committee, which was appointed in the first place to make arrangements for the conference with the employers, to go into the questions for discussion and to meet the committee already appointed by the employers. The committee so appointed by the General Council consists of Mr. Ben Turner,

Mr. W. Thorne, M.P., Mr. J. H. Thomas, M.P., Mr. A. Pugh, Mr. E. Bevin, Mr. T. Richards, and Mr. W. M. Citrine, with Mr. W. Milne Bailey as secretary.

The Council also authorized the committee

to draft an interim report for submission to the executives of the affiliated unions, and reports will be prepared for circulation to the unions from time to time during the period of the discussions.

CONCILIATION AND ARBITRATION IN NEW ZEALAND

THE calling of a representative conference by the Right Hon. J. G. Coates, Prime Minister of New Zealand, for the purpose of investigating and revising the industrial legislation of the Dominion, together with recent proposals to amend the Industrial Conciliation and Arbitration Act, 1925, have served to emphasize the special features of the New Zealand system of conciliation and arbitration as applied to industrial disputes.

The conference, which has been convened to meet on March 27, was announced as being in response to a general feeling that the labour legislation, particularly the arbitration system, required revision. The scope of the inquiry will include the welfare of the country as a whole, the interests of capital and labour, the effect of industrial legislation on the primary industries on which the prosperity of the country depends, the encouraging of primary industries, the basis of wage rates, the constitution of the Arbitration Court, and immigration. There will be twenty-five representatives each for employers and employees, in addition to the departmental political representatives.

It had been alleged that one of the chief consequences in the past of the work of the Arbitration Court was an increase of wages in secondary industries at the expense of primary producers, with the result of an influx of workers to the towns, and considerable unemployment in the larger centres was attributed to this condition.

The original Industrial Conciliation and Arbitration Act was placed on the New Zealand statute book in 1894. Its object was to encourage the formation of industrial unions and associations, and to facilitate the settlement of industrial disputes by conciliation and arbitration. It provided for the registration as "industrial unions" of societies of workers or employers in the various industrial districts, and, as "industrial associations" of any council or other body representing any number of such unions; for the making of industrial agreements pursuant to the act and the filing of such in the Supreme Court; for the formation of industrial districts, the election of Boards of Conciliation, and the setting up of a Court of Arbitration.

Administrative Machinery.—The original act and its amendments were consolidated in 1900; a compelling act was passed in 1905; and further consolidation was effected in 1908 and 1925. There have been several important amendments to the act, which will be detailed later. The act is under the jurisdiction of the Minister of Labour, and inspectors of factories are charged with the duty of seeing that the provisions of awards and agreements are carried out. For purposes of its administration the Dominion of New Zealand is divided into industrial districts. The system is based on the organization of "industrial unions," each of which include three employers or fifteen employees, and the nomenclature of the union indicates its locality and whether composed of workers or employers. Each such union is required to register with the court and provide the Secretary of Labour with an annual statement as to membership.

When a dispute arises the first part of the legislative machinery to operate is a Council of Conciliation. These are called into being by one of four "Industrial Commissioners," who are appointed for a term of three years, and who exercise jurisdiction within an assigned industrial district. An industrial union, if registered under the act, may cite an association of employers or an employer for a hearing of an industrial dispute before a Council of Conciliation. Similarly, a registered industrial union may be cited by an association of employers or an employer. The workers may compel any of their employers to come under this act; but the employers cannot so compel the workers unless the latter have registered as an industrial union, such registration being voluntary. The duties of an Industrial Commissioner are to establish and preside over a Council of Conciliation in an attempt to settle the dispute. If a settlement is arrived at, the agreement is signed by both parties and registered as an industrial agreement. If, however, only the assessors (the other members of the conciliation council) reach an agreement, it is filed as a "recommendation." If within one month no objection has been received from either party, such recommendation becomes binding in the same manner as an agreement. If no settle-

ment is arrived at, or if the recommendation of the assessors is not accepted, then the dispute goes immediately to a Court of Arbitration.

The Court of Arbitration.—This body functions for the whole of New Zealand in the settlement of industrial disputes pursuant to the act. It consists of three members appointed by the Governor General, the presiding officer being a judge of the Supreme Court. The other two members are appointed on the nomination of the disputants, one on the recommendation of the employers and one by the employees. There is no appeal from its decisions except on certain points of law, and it is noteworthy that in practically all such cases where appeals have been made, the action of the court has been sustained. According to an outline of the act given in the New Zealand Year Book, the court, after hearing argument upon the matters not agreed upon, makes its award, which is binding on all parties. In all cases where an industrial agreement, or an accepted recommendation, or award is filed, it becomes binding on all the parties, and a strike or lockout becomes unlawful. For any breach of the award, an employee is liable to a fine not exceeding £10, while an employer who does not observe the wage terms of an award is also liable to penalty and to the payment of wages in arrears. At one time, the unions had the right of initiating proceedings for breach of an award, receiving the fines thus imposed. However, in 1903, this duty was given over to factory inspectors, and the fines went to the public treasury.

Amendments to the Act.—While the act has been amended from time to time, yet the general principle of the system has not been materially altered since its establishment. In 1898, an amendment was passed empowering the Arbitration Court in its award to prescribe the minimum rate of wages, with special provisions for a lower rate being paid in the case of workers unable to earn the prescribed minimum. The amendment of 1903 prohibited employers and employees from taking proceedings to defeat any of the provisions of an award during its currency. It forbade an employer to dismiss any employee merely because he happened to be entitled to the benefit of an award, or merely because he was a member of a union. In 1905 an amendment provided for the punishment by fine of any employee or employer, bound by an award or industrial agreement affecting an industry, who participates in a strike or lockout in that industry. A worker taking part in a strike was subject to a fine not exceeding £10,

while an employer taking part in a lockout was liable to a penalty not exceeding £500. In 1908, an additional penalty was provided for in the case of certain public utility industries such as gas manufacture, the supply of milk or meat, tramway service, etc. A further amendment in 1911 empowered the Arbitration Court to make an industrial agreement into an award provided such an agreement does not conflict with an existing award or is not contrary to the public interest.

Proposed Amendment of 1927.—While there has been no major amendment since 1911, the position of the farming industry under the act has been a matter of increasing controversy. Finally, on October 20, 1927, a bill amending the act was introduced by the government in which it was proposed to exempt the farming and dairy industries from the operation of the act. Farming includes "all agricultural, pastoral, and dairying operations and all work of any description incidental to such operations, when effected on a farm, but does not include market gardening or orcharding, or cultivation of or operations concerning flax or timber." Accordingly this would have the effect of depriving shearers and other pastoral workers of the benefits of future awards. A delegation of trade union delegates, which was received by the Prime Minister and the Minister of Labour, expressed itself as entirely opposed to the bill, which they requested should be withdrawn. In view of the complicated situation which developed, the Prime Minister announced that the Government had decided, in effect, to hold over the amending bill until Parliament had again dealt with the subject. However, several substitutions were made in the original proposals, the net result being that no award relating to farming or to the manufacture of butter, cheese, etc., can be made before September 1, 1928 and also that existing awards are to be maintained. The Prime Minister also announced the convening of a conference of the directly interested parties during the recess.

The lighthouse keepers of Canada have asked the Dominion Government that they should be included among the civil servants who benefit under the Superannuation Act. The practice hitherto has been to pay lighthouse keepers in lump sums from which they can secure their own assistants. This arrangement in the past has not enabled the lighthouse men to be accurately classified as to salary.

AN EMPLOYER'S EXPERIMENT WITH UNION AGREEMENTS

WHY I Unionized My Plant" is the subject of an article in the February issue of *Factory and Industrial Management* (New York), by Mr. George W. Meade, president of the Consolidated Water Power and Paper Company, Wisconsin Rapids, Wisconsin. The writer recounts the labour troubles which formerly occurred in this industry owing to the company's opposition to unionized labour. These difficulties suggested a full inquiry which might lead to a permanent solution. In the spring of 1919 the company had planned to increase wages, but there were some problems connected with the increase which the office could not solve to the best advantage, and for a proper solution of which certain information that only the men themselves could give was needed. Consequently, on this matter, the executive reasoned as follows: "Now that we must have a union here in our plant, is there anything we can do to make it a good union rather than a troublesome one? And have unions good points that we can develop to advantage? If so, what are these points? Deliberately and independently we began to investigate. We looked into union ideas and principles as we would have looked into a chemical problem in paper-making, or a problem of developing our supplies of pulp-wood."

One of the first steps of this new policy was to call in some of the union leaders in the plant at various times for questioning. The result of these consultations is detailed by Mr. Meade as follows:—

"The result was that a new view-point was presented to us of which we have never before been conscious. We found that the union men, although they too were beset by fears and prejudices, had also an unexpected store of well-reasoned plans and aspirations. Above all they exhibited a striking candor and honesty . . . We decided, when this stage of inquiry was passed, to keep on applying the scientific method to our union-labour relations. Inquiry first, then trial and error. We would see what would happen if we attempted negotiations with the union. And if something reasonably promising resulted, we might give it a year's trial. . . . As a result, in May of 1919, we signed a one year's contract, or 'joint labour agreement' with representatives of three unions: The International Brotherhood of Paper Makers; the International Brotherhood of Pulp, Sulphite and Paper Mill Workers; and the International Brotherhood of Electrical Workers. The further result is that each of the eight springs since 1919 has

seen a new contract based on the experience of the previous year and signed by both parties after fresh negotiations have cleared the atmosphere of any new aspirations or dissatisfaction on the one side or the other."

Dealing with the fears and doubts of the average anti-union employer, the writer in the light of his own experience states: "Certainly, if our experiment had proved any of these forebodings true we would not have kept on through nine successive contracts. However, our experience has been quite the opposite of what the employer would expect who holds himself in a mood of opposition. Instead of our unions going on and on to bolder and bolder demands, they have progressed year by year to more and more effective co-operation."

One of the rules in operation at this plant is that no man can be discharged without having his case subject to review, at his complaint, by the grievance committee. "There is no question," observes the president, "that in the days before our union agreement capable men were sometimes discharged by an irate foreman or a superintendent for rather slight cause. Under the new arrangement we not only save good men for the company, but also have lost one or two superintendents who were, it now appears, a good riddance."

"But here again the rule has stimulated an improvement in our own procedures. To-day we make no discharge without study and thought. To our minds the discharge of a man is a serious reflection upon the employer himself. Time and careful thought in the selection of men; training foremen to take pride in the progress of their men; study and transfer of men who are not measuring up to what is expected of them; continuous effort to avoid injustice; with all these it should almost never be necessary to fire a man. What this thorough respect of a man's right in the possession of his job means to us, is a thing no man can measure. Surely, any man who is free from the fear that something may happen to take his job from him can accomplish more in his daily work than can the man who is haunted by such fear."

Mr. Meade pays tribute to the union leaders:

"Recently the foresightedness of the union leaders has been evidenced in their attention to business conditions in the paper industry. The paper industry of America is at present over-built. There is an excess capacity of at least 15 per cent. This condition has called forth all the ability that we and other paper manufacturers have to look ahead and safe-

guard our future. But I sometimes think the union leaders, who are close students of economics, saw what was coming before we did. At any rate they recently asked us and our employees to take our share of lessened business. That is, instead of each mill fighting to keep one hundred per cent busy by cutting prices or sacrificing standards of quality, they would like to see each one running, let us say, 85 per cent of its capacity, with normal prices and improved quality. Similarly they would like to have each man in the mill take his share of the slack instead of seeing part of the men continuously employed and part of them out of work. In line with this policy our men suggested that we shut down on Thanksgiving Day, which is not one of the holidays agreed upon in our contract. In the long run this may not be the best possible method of how to make men secure in their jobs at a time when the jobs of some are threatened

by current business conditions. On the other hand it is at least a method which is better than no method at all. And it has the advantage both of being co-operative and of inspiring further co-operation."

In other phases of relationship with the unions, the writer reports the results to have been satisfactory. In particular, the men were found to be "receptive to our undertakings toward economy even when these mean that fewer men will be employed; and very willing to modify their pet rules, such as not having non-union men come into the plant for construction work, when they see that a rule blocks the path of efficiency."

In conclusion, the president declares that for nine years the experiment with unions has been successful. "It may not be always so," he stated, "but so long as it is successful we shall, I imagine, prefer dealing with unions to any alternative method."

CO-OPERATIVE PLAN OF JAMES PENDER AND COMPANY, LIMITED, SAINT JOHN, N.B.

PUBLIC attention was called in February to the achievement of the co-operative committee of James Pender and Company, nail manufacturers at Saint John, New Brunswick, in saving the company's export trade to the West Indies by means of an arrangement made in 1925, whereby the management and the workmen made certain mutual concessions temporarily for the common interest. The employees agreed to contribute their time, and the company its overhead expenses in connection with contracts for the West Indian market. Seventy-five per cent of the returns were to go to the men and 25 per cent to the company. The result of the arrangement was that the market for the product of the factory was saved, and the wages of the men for this work averaged for the whole period 87.7 per cent.

Pender Co-operative Plan

The "Pender Co-operative Plan" is an arrangement between the employers and employees of James Pender and Company Limited. It was inaugurated during the latter part of the year 1922. For many months previous to that time the readjustment after the abnormal business of the war period had led to lack of employment, high costs, and a growing lack of interest between employers and employees. The continuance of such conditions could only be detrimental to both labour and capital.

The employees of James Pender and Company Limited, with the full support of the

management, after several conferences, decided that some steps should be taken to remove as far as possible the existing conditions by improving both the quality and quantity of their output, which would naturally decrease costs, and thus conserve their own interests as well as those of the company.

Some of the results obtained to date by the adoption of the plan are: Production has been increased and costs lowered, as a result of which employment has been provided for a large number of workers; the management and men have been drawn closer together, and are working in complete harmony; wages have been adjusted on the strength of the plan; working conditions have been greatly improved by the adoption of safety appliances, and improvements to the plant.

The co-operative plan has no jurisdiction over the employees except in the operation of the plant, but all employees are asked to conduct themselves in such a way as to cast no reflection on the firm or fellow employees.

Constitution and By-laws

The objects of the Pender Co-operative Plan are stated in the constitution to be as follows:

(a) To promote and maintain just and harmonious relationship between the company and its employees in all departments.

(b) To expedite the settlement of any matters requiring adjustment between the company and its employees.

(c) To further the efficiency and to improve the working conditions of the plant through co-operative development of constructive policies by the employees and the management.

The by-laws provide for the election of departmental representatives, elected each year by the employees. These representatives form the general Works' Committee, discussing freely all factory problems, conditions and regulations, and recommending to the Co-operative Committee any policies which it believes will bring about better and closer relations between the management and the employees or improve the efficiency or general welfare of the employees of the company.

On the other side, the Executive Committee consists of the Superintendent and not more than six additional members appointed by him to hold office at his pleasure. This Committee discusses policies and working conditions tending to improve the efficiency of the company and the welfare of the employees.

The General Works Committee meeting with the Executive Committee is known as the "Co-operative Committee." The duties of the Co-operative Committee are to receive and discuss freely and openly all questions brought forward by the General Works Committee and Executive Committee, with power to recommend definite action to the management.

Among other rules the following may be quoted: If any employee or employees have

a grievance, the matter should first be taken up with the foreman. Failing satisfactory decision, the matter should then be reported to the Departmental representative.

When a grievance is reported by an employee or employees to the representative, the latter takes in writing the facts of the case and has the paper signed. This paper is to be handed to the General Works Committee and, if necessary, referred to the Co-operative Committee for action.

No employee shall be discriminated against in the operation of the Pender Co-operative Plan because of race, sex, political or religious affiliation, or membership in any labour or other organization.

No Departmental Representative shall be interfered with by the management in the legitimate performance of the duties of his or her office, nor shall be discriminated against by the management or any employee on account of any action taken by him or her in good faith in his or her representative capacity. If any Departmental Representative feels that any such discrimination is being made against him or her, it shall be handled in the same way as other grievances. It is provided that the Pender Co-operative Plan shall not interfere with existing or future agreements between trade organizations and the company, or abridge the right of any trade organization to deal separately with the company.

Legislation Desired by Ontario Municipalities

The Ontario section of the Union of Canadian Municipalities held a conference at London, Ontario, in February for the purpose of framing proposals to be submitted to the federal and provincial governments in regard to matters of importance to the municipalities. Among the suggestions made to the federal government, it was proposed that concentration farms should be established away from the cities; that immigration should be further encouraged; that the Dominion government should contribute part of the cost of unemployment relief; and that low railway rates should be fixed for transporting Alberta coal to other places in the Dominion.

The Ontario legislature will be asked to increase the provincial grant to hospitals; to pay to the municipalities a portion of the proceeds of the gasoline tax; to relieve the municipalities of the cost of highway maintenance; to enact legislation making the federal Old Age Pensions Act effective within the prov-

ince; to contribute a portion of the cost of unemployment relief; and to build three or four institutions for the care of senile patients.

Since February 4, 1922, the United States Public Health Service has been furnishing medical advice by radio to vessels at sea. The amount of this work has increased and the Public Health Service has often rendered great assistance to vessels at sea in need of medical aid. Advice by radio is furnished from the United States Marine Hospitals of the Public Health Service, the Atlantic Coast being served from New York City, the Gulf of Mexico from Key West, New Orleans and Galveston, and the Pacific Coast from San Francisco. On the Great Lakes, the Marine Hospitals at Chicago, Cleveland and the Relief Station at Sault Ste. Marie give medical assistance by radio. The Relief Station of the Public Health Service at Honolulu, serves ships in that vicinity, and those near Manila radio the Relief Station there for advice.

LEAGUE OF NATIONS INTERNATIONAL LABOUR ORGANIZATION

Meeting of the Governing Body

The Thirty-eighth Session of the Governing Body of the International Labour Office was held in Geneva from February 1-4. Dr. W. A. Riddell attended as one of the Government representatives on behalf of the Minister of Labour of Canada. Mr. James Simpson, vice-president of the Trades and Labour Congress of Canada, was also present as one of the workers' representatives, in place of Mr. Tom Moore, President of the Trades and Labour Congress of Canada, who is one of the eight workers' members of this body. Reference is made elsewhere in the present issue of the *LABOUR GAZETTE* to the consideration which was given to the Washington Convention limiting hours of work in industrial undertakings to eight in the day and forty-eight in the week.

Mr. Albert Thomas, Director of the International Labour Office, in his report on the work of the office emphasized the progress that was being made in the ratification of conventions and stated that the number of ratifications officially registered was now 255. He also drew attention to the delicate situation which might be created by an extension of the practice of conditional ratifications. On behalf of the workers' group it was pointed out that if the policy of conditional ratifications became general, governments would wait for each other to take action and ratifications would be impeded.

The Director referred to the election of the Governing Body which is to take place at the next session of the International Labour Conference. An amendment to Article 393 of the Treaty of Versailles has been adopted by the Conference with the object of increasing the membership of the Governing Body so as to permit of a larger representation of countries outside Europe. Forty-two ratifications of this amendment are requisite in order that the same may take effect. Up to the present, the amendment has been ratified by 34 countries only. If this situation is not changed by the time the Conference meets in 1928, the Governing Body will be re-elected according to the provision laid down in the present Article 393.

It was decided that the Joint Maritime Commission would meet in the second half of the month of March and that the Correspondence Committee on Industrial Hygiene would meet on April 16.

It was decided that the 39th Session of the Governing Body should be held in Geneva in the week of April 23-29.

Agenda of the 1929 Conference.—In consequence of decisions previously taken by the Governing Body, the International Labour Conference will hold two sessions in 1929, a general session and a special session for maritime questions. The Governing Body had first to consider whether these two sessions would be held at different times of the year, or whether they would be held successively. The Governing Body decided that the maritime session would open immediately after the general session.

The agenda of the maritime session had been fixed previously. It includes regulation of hours of work on board ship, the protection of seamen in case of sickness (including treatment of seamen injured on board ship), and the promotion of seamen's welfare in ports.

The agenda of the general session remained to be fixed definitely. It will be remembered that at Berlin in October last the Governing Body decided to place on this agenda the question of forced labour. The Governing Body exchanged views on the other questions which might be added to the agenda; unemployment insurance, hours of work of salaried employees, and the connected question of the hours of closing of shops and that of the termination of employees' contracts of employment. The Governing Body finally selected the question of hours of work of salaried employees.

The Work of the International Labour Organization in 1927

The work of the International Labour Organization in 1927 is outlined in the monthly summary published by the International Labour Office for January, 1928. The most characteristic features of the year were: the adoption of two important Conventions on sickness insurance, the noticeable improvement in the number of Conventions ratified, the consideration in a spirit of mutual examination of the reports furnished by States Members on the application of Conventions ratified by them, the collaboration with the International Economic Conference, the establishment of closer relations with distant countries, a detailed study of conditions of native labour, a methodical effort to solve intellectual workers' and salaried employees' problems, and the constant development of its scientific work.

At the beginning of 1927, 215 ratifications of International Labour Conventions had been registered with the League of Nations.

At the end of the year this number had risen to 248, an increase of 33. Recent parliamentary decisions which render new ratifications possible suggest that even more definite progress will soon be realized. The Conventions which show the greatest number of ratifications are:—

Convention concerning unemployment—ratified by 21 States;

Convention concerning the night work of young persons employed in industry—ratified by 18 States;

Convention fixing the minimum age of young persons employed at sea—ratified by 18 States;

Convention concerning the rights of association and combination of agricultural workers—ratified by 16 States;

Convention concerning the night work of women—ratified by 16 States;

Convention fixing the minimum age for the admission of young persons to employment as trimmers or stokers ratified by 16 States.

During the year 1927 the relations of the organization with workers' and employers' organizations have continued to develop.

The employers have shown continued readiness to co-operate in the work of the organization. In the Conference and Governing Body their collaboration has not failed. The International Organization of Industrial Employers made a point of inviting the Chairman of the Governing Body and the Director to attend the opening sitting of their Congress. The various national central employers' organizations, although not in some cases abstaining from criticism, have not dissociated themselves from the objects of the organization.

The workers' organizations have continued to give the fullest support to the organization. The International Federation of Trade Unions at its Congress in Paris reiterated its continued confidence in the work of the organization, and its affiliated national organizations and international secretariats continue to display the same attitude. The other tendencies represented in the International Labour Conference have also continued to show confidence in the International Labour Organization and to claim the ratification of the international labour conventions.

Specially noteworthy is the increasing tendency of the great organizations of salaried employees to turn to the office for the examination of questions of interest to them. The intellectual workers repose high hopes on the Advisory Committee on Intellectual Workers, which is being established in connection with

the work of the International Labour Organization. The question may be asked why intellectual workers were not associated from the start with the work of the International Labour Office. The reason is that when the peace treaties were drawn up the intellectual workers were not generally organized. Since that time, however, a change has taken place in the direction of organization, both nationally and internationally.

Ratification by France of Draft Convention

On January 18, 1928, the secretary-general of the League of Nations forwarded to the International Labour Office the copy of a communication by which the Minister for Foreign Affairs of the French Republic informed him, in accordance with Article 405 of the Treaty of Versailles, of the ratification by France of the Convention fixing the minimum age for the admission of young persons to employment as trimmers or stokers adopted by the Third (1921) Session of the International Labour Conference.

In view of recent parliamentary developments, it is anticipated that further ratifications may be registered by France. It is announced that the agricultural committee of the Chamber of Deputies has unanimously adopted two reports recommending ratification of the Conventions concerning workmen's compensation in agriculture and the rights of association and combination of agricultural workers. The committee asked that these reports be submitted to the Chamber without delay and adopted without discussion. The maritime committee of the Chamber has adopted the final text of a report on the Convention concerning the repatriation of seamen.

Publications of the International Labour Office

In accordance with a decision of the Seventh Assembly of the League of Nations, the International Labour Office has undertaken the preparation of an annual list of publications dealing with the International Labour Organization.

The first list, which has just been published, comprises publications that appeared during the years 1919 to 1926.

It includes. (1) Works relating to the International Labour Organization catalogued in the library of the International Labour Office; (2) Articles appearing in periodicals received by the International Labour Office and read by its Documents Service; (3) Books or articles on the Organization noted by the national correspondents of the Office.

The Bibliography does not include articles appearing in daily newspapers, or publications of the Office.

Prevention of Industrial Accidents

A report on the prevention of industrial accidents has been issued by the International Labour Office in pursuance of its policy of calling attention to this subject at this year's session of the International Labour Conference. The volume is one of 318 pages and contains chapters dealing with (1) legal provisions for the prevention of industrial accidents and the official supervision of their enforcement; (2) organized safety work of associations and institutions for the promotion of safety; (3) the scientific side of accident prevention, including accident statistics; and (4) particular aspects of accident prevention; also a draft questionnaire which will be considered by the International Labour Conference for submission to the principal States, looking to the adoption of a Convention or Recommendation on the subject of industrial accidents, at the ensuing session of the International Labour Conference in 1929.

The questionnaire propounds the query whether a Recommendation should be passed embodying the general principle that it is the duty not only of the employers and workers but also of governments and the general public to use their best endeavours and every means in their power to prevent industrial accidents. The question is also asked whether a Recommendation should be adopted in favour of practical measures to put the principle indicated in the preceding question into operation. Attention is directed also to the need for authoritative statistics of industrial accidents and for scientific research into accident prevention. Further questions in the questionnaire relate to the desirability of convening in the near future a conference of experts to study the technical aspects of the problem of automatic couplings on railways, and to the desirability of indicating the weights of heavy packages transported by ship and the fixing of maximum weights of packages and loads for various categories of workers.

In a preface to the report attention is directed to the heavy loss of life incident to industrial accidents occurring at present in various countries. In 1923 the number of fatal accidents to workers was 2,082 in France, and 3,302 in England. The corresponding figure for Germany in 1925 was 5,285. In the United States the total number of fatal industrial accidents is estimated at 20,000 to 25,000 a year. The number of injuries sustained at work is far more than one hundred times as high. It is estimated that contributions to compulsory accident insurance

roughly average 1 to 2 per cent of wages. In the United States a method has been used to estimate the annual loss in working days, a fatal accident being considered equivalent to a loss of 6,000 days. The result is an annual average of 40 million working weeks lost. In other words, 800,000 persons must work steadily throughout the year merely to take the place of those who have permanently or temporarily lost all or part of their working capacity in consequence of an accident.

Social Legislation of Latin America

In response to a request expressed by Governments and scientific workers of the countries concerned, the International Labour Office has undertaken the publication of a collection of labour laws of Latin-American countries.

The first volume, which covers Argentina, Bolivia, Brazil and Chile, has just appeared. The remaining Latin-American countries will be dealt with in a second volume. The work is to appear in Spanish only. The study has been prepared by Mr. Moises Poblete-Troncoso, former Under-Secretary in the Chilean Ministry of Hygiene, Social Assistance and Welfare, and Labour, and Professor in the University of Santiago de Chile, who, in addition to the work of collecting, selecting and classifying the laws, has written a general introduction, containing a survey of their fundamental features.

It has been decided to publish this survey in the *International Labour Review*.

Industrial Disputes in New Zealand and Australia

The number of industrial disputes reported in New Zealand in 1926 was 59, involving 6,264 workers employed in 67 undertakings. The corresponding figures for 1925 were 83 disputes, 10,027 workers, and 94 undertakings.

The total duration of the disputes was 314 days (598 in 1925) and the amount of wages lost was approximately £32,355 (£49,149 in 1925). The most important group of disputes (25) took place in the coal mining industry, involving 4,159 workers and a loss of wages amounting to £17,647. The most prolonged dispute lasted 14 days and took place in the meat refrigerating industry.

The number of industrial disputes reported in Australia in 1926 was 360, involving directly or indirectly 113,034 workers. The corresponding figures for 1925 were 499 and 176,746. These are the lowest figures since 1921, except for 1923 when the figures were 274 and 76,321 respectively. The number of working days lost in 1926 was, however, the largest since 1920, being 1,415,813, as compared with 1,107,544 in 1925.

EIGHT HOUR DAY CONVENTION OF THE INTERNATIONAL LABOUR CONFERENCE

AT the meeting of the Governing Body of the International Labour Office which was held in Geneva on February 1-4, the British Government, through Hon. Mr. Betterton, Parliamentary Secretary, proposed that the Convention limiting hours of work in industrial undertakings to eight in the day and forty-eight in the week, which had been adopted at Washington in 1919, should be referred to the International Labour Conference in 1929 for revision. In offering this proposal he recalled the difficulties experienced in Great Britain with regard to the ratification of conventions. The Governing Body is required, at least once in ten years, to present to the Conference a report on the working of the Convention and to consider the desirability of its revision or modification. Mr. Betterton suggested that the International Labour office should be instructed to prepare a draft report on the working of the Convention for consideration by the Governing Body at its next session, in order that the same might be communicated to all the States Members of the International Labour Organization for an expression of their views. The British Government, he said considered it preferable that a revision of the Convention should be undertaken as soon as possible in order that a workable Convention might be produced which would be generally accepted. Their intention, he observed, in Great Britain was to work towards the framing of a Convention which, while adhering to the principles of the Washington proposal, would be free from the difficulties encountered in that draft. If such a text was obtained, Great Britain would be prepared to stand in line with other industrial states by ratifying it and putting it into operation.

On behalf of the Workers' Group, Mr. Jouhaux (France) opposed the British Government's proposal. He pointed out that it amounted to a refusal to ratify the Washington Convention. He recalled the fact that, as a proof of its conciliatory attitude, the Workers' Group had on several occasions associated itself with efforts made to interpret the Convention in order to facilitate its ratification. This applied particularly to the Conferences held at Berne and London. As representative of the French workers, Mr. Jouhaux expressed the profound disappointment occasioned by the proposal of the British Government. He drew attention to the fact that the French workers had agreed that the ratification by France of the Hours Convention should be made conditional on ratification by the British

Government and by the German Government, because they believed they were entitled to count on those ratifications being received, in view of the statements which had previously been made by the representatives of those Governments. He also emphasized the fact that the Convention had already been ratified by a certain number of countries which were confronted with economic difficulties at least as great as those confronting the large industrial countries, in particular Great Britain.

Mr. Lambert-Ribot, French employers representative, stated that the principle of the eight-hour day could not be questioned. The only points to be considered were the adjustments required as regards the methods of application of the Convention. These adjustments should take account of an experience of nearly ten years of the working of the Convention and their adoption would be calculated to facilitate ratifications.

Mr. Mahaim, Belgian Government representative, said that the proposals of the British Government would place his country, which was one of those which had ratified the Washington Convention unconditionally, in a difficult position. He emphasized the fact that Belgium had experienced and had overcome the difficulties advanced by the British Government in support of its refusal to ratify the Convention, and that no international social legislation was possible if the provisions of Conventions were constantly discussed afresh.

After a long discussion, in which Mr. Poulton, British workers' representative, Mr. Müller, German workers' representative, Mr. Oudegeest, Dutch workers' representative, Mr. Forbes Watson, British employers' representative, Mr. Oersted, Danish employers' representative, and the representatives of the German and French Governments took part, Mr. Betterton stated that he had appreciated the arguments submitted against his proposals and he did not press for an immediate decision by the Governing Body concerning the inclusion in the agenda of the 1929 Conference of the question of the revision of the Hours Convention. While maintaining his opinion as to the advantages of revising the Convention in the very near future, he agreed that the matter should be postponed till the next session of the Governing Body.

After statements had been made by Mr. Sokal, Polish Government representative, and by Mr. Simpson, Canadian workers' representative, the Director drew the following conclusions from the discussion. He said that

the eight-hour day seemed to him to be almost universally recognized, and it did not appear that the principle could be seriously threatened. In his opinion the British Government's proposal was nevertheless premature, inasmuch as the general rules for the procedure to be followed as regards revision of Conventions had not yet been determined. He also expressed the opinion that in order that a request for revision could be considered, it would be necessary that the request should specify the points with regard to which revision should apply.

Finally, the Governing Body adopted two resolutions submitted by Mr. Picquenard, French Government delegate.

The first of these resolutions, which was adopted by 15 votes to 6, with one declared abstention, is as follows:

The Governing Body instructs the Standing Orders Committee to submit to it, at its next session, a report on the procedure to be adopted

with regard to proposals for the possible revision of Conventions, taking into account the terms both of the Conventions themselves and the constitution of the International Labour Organization.

The Standing Orders Committee will meet on 30 and 31 March to consider this question.

The second resolution submitted by Mr. Picquenard was adopted by 13 votes to 7, with 4 abstentions. It is as follows:

The Governing Body decides to place on the agenda of its next session, after the consideration of the general procedure for revision, the question whether the revision of the Hours Convention, proposed by the British Government, should be placed on the agenda of the 1929 Conference.

The Chairman pointed out that this second resolution was simply intended to specify the order in which the questions would be considered, and left members of the Governing Body quite free to vote either for or against revision of the Hours Convention.

MINERAL PRODUCTION IN QUEBEC IN 1927

A preliminary statement of the mineral production in the Province of Quebec during the year 1927 has been recently issued by the provincial Department of Colonization, Mines and Fisheries (Bureau of Mines). The purpose of the preliminary statement is to present to the interested public the figures of production at as early a date as possible after the close of the year. The figures are given subject to revision as returns are not quite complete. The final statistics will be given as in past years in the annual Report On Mining Operations in the Province of Quebec. The ton used throughout is that of 2,000 pounds except when specially mentioned. The values of non-metallic products, raw or prepared are given as estimated at the point of shipment or at the pit mouth. As regards metallic products, the value of the metal contents of the ore is given, this being calculated at average yearly market prices of the refined metals.

The total value of the products extracted from the mines and quarries during the twelve months ending December 31, 1927, amounted to \$29,211,001 according to reports of production received to date direct from mine and quarry operators. These figures will probably be slightly increased when all reports are in. It is a record annual figure for all times past. As compared with the preceding year, 1926, it is an increase of \$3,460,538 or a proportional increase of 13.4 per cent. Compared with the previous record of \$28,392,939, which was for the year 1920, it represents a substantial increase, which, the Bureau adds, "is almost certain to grow year by year for a long time to come." It is pointed out that the high total

value of the mineral production of 1920 was due to the abnormally high prices then prevailing, rather than to the quantities of the various products marketed.

The total value of the mineral production for 1927 is analysed as follows: Non-metallic products, apart from building materials, \$11,326,856, or 38.8 per cent of the total; building materials—stone, brick, lime, cement, sand—\$15,474,338 or 52.9 per cent; metallic products, \$2,409,307, or 8.3 per cent.

The Bureau points out that asbestos has always been by far the largest individual item in the table of Quebec's mineral production, at least since 1898 when annual mineral statistics were first collected regularly. For 1927, asbestos production represents 36 per cent of the total. The tonnage of asbestos sold and shipped from the mines of Quebec in 1927 amounted to 274,798 tons valued at \$10,621,571, a slight increase of 1.6 per cent in tonnage, but a substantial increase of 5.2 per cent in value as compared with the year 1926. This increase is due to the better prices for all grades which ruled throughout the year. The average price of all asbestos shipped was \$38.65 a ton for the year as against \$36.13 for 1926.

The value of the building materials production in the Province during 1927 shows an increase of nearly 20 per cent over that of 1926. It amounts to \$15,474,338 as compared with \$13,004,929 for the previous year. This is the largest production of building materials ever recorded in the Province. Cement, brick, stone, lime and sand indicated increases both in quantities and in values of production.

PRELIMINARY REPORT ON CENSUS OF TRADING ESTABLISHMENTS IN CANADA

THE Dominion Bureau of Statistics, in an effort to obtain a measurement of the mechanism of distribution in Canada, recently issued a preliminary report on the census of trading establishments, summarizing the results of its research in this direction. This statistical study in the field of trading establishments parallels the annual census in industrial activity a review of which was published in the LABOUR GAZETTE for December, 1927, pages 1322 to 1327.

The report points out that while statistics have long been available relating to population and, more recently, regarding the production of commodities, yet the mechanism by which commodities have been distributed to the ultimate consumer has in the past been subject to but slight quantitative measurement. Information regarding this mechanism is of great economic and social importance, and the postal census of Trading Establishments relating to the year 1923 represents a first step to meet an urgent need. It is further stated that the statistics, while incomplete, are indicative of certain phases of merchandising and form a basis for more thorough-going investigations.

In all, 66,814 schedules were received for wholesale and retail distributing firms as a result of the census. This number does not, of course, include all trading establishments in the Dominion, it being found impossible to take cognizance of a large number of very small units. Of this total, 60,181 were retail stores, 3,782 were wholesale and 2,851 were wholesale and retail. By ownership these were divided into 9,493 joint stock company stores, 49,833 single ownership and 7,488 partner ownership stores.

Capital Investment.—Capital investment was ascertained by adding together the following items—(a) cash in hand and in the bank, (b) merchandise on hand, (c) accounts due, (d) furniture and fixtures, (e) delivery equipment, (f) real estate. The total amount of capital investment in the 66,814 stores was shown by inventories to be \$1,580,123,723. This was distributed among the three classes of stores as follows: Retail, \$914,990,830; wholesale, \$476,559,544; retail and wholesale, \$188,573,349. Thus, 57.9 per cent of the capital investment was in retail stores, 30.2 per cent in wholesale and 11.9 per cent in retail and wholesale. The average capital investment in retail stores was \$15,204, in the wholesale stores \$126,007, and in wholesale and retail stores \$66,143.

Purchases and Sales.—In the year covered by the census the total purchases of merchandise were: Retail, \$1,225,016,362; wholesale, \$812,139,031; wholesale and retail, \$283,922,904, the combined total being \$2,321,078,297. During the same period the sales were: Retail, \$1,642,103,468; wholesale, \$1,021,920,931; wholesale and retail, \$366,638,786. The combined total of sales was \$3,030,663,185.

The trade done per dollar of investment capital was obtained by dividing the total of investment capital into the sales totals. For the Dominion as a whole the figures are: Retail, \$1.80; wholesale, \$2.13; wholesale-retail, \$1.94.

Employees, Salaries and Wages.—Total male employees, as shown by the schedules, were 168,392 and the total female 73,468. Total salaries and wages amounted to \$261,040,558. The average amount received by each employee in retail stores was \$965; in wholesale stores \$1,321 and in wholesale-retail \$1,216. Employees averaged in number 2.5 in retail stores, 15.2 in wholesale and 9.8 in wholesale-retail.

The Hon. Peter Heenan, Minister of Labour, has been appointed a member of the Advisory Council of the American Association for Labour Legislation. Mr. Tom Moore, president of the Trades and Labour Congress of Canada, is also a member of the Advisory Council.

The *London Gazette* of January 13, 1928, contained an announcement that His Majesty the King has awarded the Imperial Service Medal to 52 officers of the Department of Railways and Canals of Canada, and to six officers of the Department of Marine and Fisheries of Canada. The names of these officers are given in the *Canada Gazette*, February 18, 1928.

A Canadian conference on social work will be held at Montreal on April 24-27, the participating organizations being the Social Service Council of Canada, the Canadian National Committee on Mental Hygiene, the Canadian Association of Child Protection Officers, and the Canadian Association of Social Workers. The Canadian Council on Child Welfare will not hold a conference in 1928.

EMPLOYMENT SITUATION ON FEBRUARY 1, 1928, AS REPORTED BY THE EMPLOYERS MAKING RETURNS TO THE DOMINION BUREAU OF STATISTICS

THERE was an increase in employment at the beginning of February, although the situation was still affected to some extent by inventory shutdowns and more so, by continued seasonal slackness in the out-of-door industries. Employment, however, was in considerably greater volume than on the same date in any other year of the record. The Dominion Bureau of Statistics tabulated re-

Maritime Provinces.—Construction and communications reporting a falling-off in employment in the Maritime Provinces, where logging and lumbering were brisker. The general losses were smaller than on February 1, 1927, but the situation then was rather more favourable. Statistics were received from 506 firms employing 63,707 workers, compared with 63,893 at the beginning of January.

EMPLOYMENT IN CANADA AS REPORTED BY EMPLOYERS

NOTE.—The curve is based on the number of employees at work on the first day of the month, as indicated by the firms reporting, in comparison with the number of employees they reported in January, 1920, as 100.

turns from 6,223 firms, whose staffs aggregated 839,604 persons, as compared with 827,711 on January 1. This increase which was more extensive than on the corresponding date in 1927 or 1926, caused the index to stand at 100.8, while in the preceding month it was 99.5, and on February 1, 1927, 1926, 1925, 1924, 1923, 1922 and 1921, it was 95.4, 90.7, 86.1, 90.6, 89.5, 78.9 and 90.1, respectively.

Substantial recovery was shown in manufacturing, and logging also reported improvement. On the other hand, there were important seasonal declines in construction trade and steam railway operation.

Employment by Economic Areas

Reductions were recorded in the Maritime and Prairie Provinces, while elsewhere the tendency was upward.

Quebec.—The recovery in Quebec caused the reinstatement of a greater number of workers than on February 1, 1927, when employment was in considerably smaller volume. Manufacturing (especially of iron and steel, pulp and paper, textiles and building materials) showed much improvement, as did also construction and transportation. On the other hand, logging and trade recorded pronounced seasonal curtailment. The working forces of the 1,366 co-operating employers aggregated 238,659 persons, as against 233,872 in the last report.

Ontario.—Important gains were made in manufacturing, notably in the iron and steel, textile, lumber and pulp and paper divisions. Logging, mining and services also reported heightened activity, while there were seasonal reductions in trade, construction, steam rail-

way operation and communications. According to data received from 2,897 firms, their staffs rose from 345,266 at the beginning of January to 355,264 on the date under review. This advance exceeded that indicated on February 1 in the three preceding years, while the index was higher than in any other winter since 1920.

Prairie Provinces.—The contraction in the Prairie Provinces involved a rather greater number of workers than that noted at the beginning of February of 1927, but was smaller than in 1926, while the situation continued better than on the same date in any other year of the record. Statements were tabulated from 823 employers, whose staffs declined by 4,632 persons to 111,567 on February 1. Manufacturing and logging were more active, but considerable shrinkage was recorded in trade, railway construction and transportation.

British Columbia.—The additions to payroll registered at the beginning of February were somewhat smaller than those noted in the same month of 1927, when employment was not so active. The working forces of the 631 reporting firms aggregated 70,407, an increase of 1,931 over their January 1 staffs. There was considerable recovery in manufacturing, particularly in lumber mills, and in logging, while transportation was also busier. On the other hand, construction and trade reported seasonal losses.

Index numbers of employment by economic areas are given in Table I.

Employment by Cities

The trend of employment was upward in Montreal, Quebec, Toronto, Hamilton, Ottawa, Windsor and the other Border Cities and Vancouver, while Winnipeg showed a general reduction.

Montreal.—Manufactures registered substantial recovery in Montreal, especially in the iron and steel, tobacco and building material groups; construction was also considerably busier, but there were heavy seasonal losses in trade. Employment, however, showed an increase on the whole, according to the data received from 733 firms employing 113,241 workers, as compared with 111,295 in the preceding month. This gain exceeded that of February 1, in 1927 or in 1926, while the index on the date under review was higher than in any other winter since the record for Montreal was instituted in 1922.

Quebec.—Returns tabulated from 100 employers in Quebec showed that they had enlarged their staffs by 149 persons to 10,425 at the beginning of February, Manufactures and

construction reported improvement, while trade was seasonally slacker. The index was higher than on the corresponding date last year, when employment had declined.

Toronto.—Heavy seasonal losses took place in trade, but there were greater gains in manufacturing, especially in textiles and iron and steel. The result was an increase of 471 in the number employed by the 831 co-operating firms, who had 104,658 employees. A falling-off in personnel had been indicated on February 1 a year ago; the index then stood at 89.9, compared with 95.4 on the date under review.

Ottawa.—Street railway operation was busier, largely owing to snow removal, while trade was seasonally quiet; 139 employers had 10,725 workers, or 119 more than on January 1. Employment was in greater volume than at the beginning of February, 1927.

Hamilton.—The situation in Hamilton showed decided improvement, particularly in the manufacture of textile and iron and steel products. Trade, on the other hand, registered seasonal curtailment. Statistics were tabulated from 202 firms employing 29,914 persons, compared with 28,168 in the preceding month. The index was several points higher than on February 1 a year ago, when practically no change was noted.

Windsor and the Other Border Cities.—Recovery, chiefly in automobile plants, was indicated in the Border Cities, where 646 workers were taken on by the 127 co-operating employers, whose staffs aggregated 10,208. Employment was not so active as on the same date of 1927.

Winnipeg.—The number employed in Winnipeg showed a contraction, mainly in trade, while manufactures were somewhat busier. Returns were compiled from 297 firms with 28,088 employees, as compared with 29,978 in the preceding month. Conditions were better than at the beginning of February last year, when curtailment was also noted.

Vancouver.—The lumber, food, metal, shipping, and construction industries reported expansion, while trade was seasonally slacker. A combined working force of 24,264 persons was recorded by the 239 employers furnishing data, who had 23,763 in their last report. Employment was slightly more active on February 1 a year ago, the improvement then registered having been rather greater.

Index numbers of employment by cities are given in Table II.

Manufacturing Industries

The revival in manufacturing on February 1 was more marked than on the corresponding date of 1927, when the index was about four points lower. Statements were tabulated from 3,842 manufacturers employing 468,249 operatives, compared with 448,566 in the preceding month. The most noteworthy recovery was in the iron and steel, textile, lumber, pulp and paper, vegetable food and tobacco divisions, while the only pronounced losses were those of a seasonal character in animal food factories.

Animal Products—Edible.—There was a further though much smaller decline in em-

ployment in this group at the beginning of February the reduction was rather larger than on the corresponding date last year, when the index was however some four points lower. Statements were tabulated from 167 firms employing 15,287 workers, as compared with 15,985 in the preceding month. Fish preserving and meat-packing plants showed the largest losses, which took place to a considerable extent in the Maritime and Prairie Provinces and British Columbia.

Leather and Products.—Employment in boot and shoe factories showed an increase, which exceeded that noted on February 1, 1926. The situation then was not quite so favourable as on the date under review. A combined

NOTE.—Number employed by the reporting firms in January, 1920=100 in every case. The "Relative Weight" shows the proportion of employees in the indicated area to the total number of all employees reported in Canada on the date under review.

working force of 17,993 persons was reported by the 192 co-operating manufacturers, who had 17,311 employees at the beginning of January. Most of the gain took place in Quebec and Ontario.

Lumber and Products.—The commencement of seasonal activity caused a considerable advance in employment, while there was also improvement in furniture, vehicle and other lumber-using factories; 3,819 workers were taken on by the 672 firms making returns, who had 42,132 on their staffs. This increase was a good deal larger than that registered at the beginning of February in earlier years of the record, in all of which the index was lower than on the date under review. All provinces shared in the upward movement, the gains in Ontario and British Columbia being the most extensive.

Musical Instruments.—There was a further but somewhat smaller curtailment in employment in musical instrument works, 40 of which reduced their payrolls from 3,212 persons on January 1 to 3,084 on February 1. Practically all the decrease was in Quebec. Somewhat greater contractions were noted on February 1, 1927, but the index number then was slightly higher.

Plant Products—Edible.—Partial recovery from the heavy seasonal losses of the preceding

month were registered in this division at the beginning of February, when the 312 reporting establishments enlarged their payrolls by 1,125 employees to 25,038. Gains were shown in all divisions of the group, those in sugar and syrup factories being most marked. Considerably smaller advances were noted on the corresponding date last year, but the index number then was practically the same.

Pulp and Paper.—The additions to staffs recorded in pulp and paper plants were larger than on February 1 of previous years of the record, in all of which employment was at a lower level. Data were received from 467 employers of 60,387 workers, as against 53,351 at the beginning of January. The greatest increases were in pulp and paper mills, but other branches of this group were also busier. There were general gains except in the Maritime Provinces and British Columbia, the improvement in Quebec and Ontario being most extensive.

Rubber Products.—Considerable expansion in employment was shown in rubber factories, 37 of which added 246 employees to their payrolls, bringing them to 14,809 at the beginning of February. This increase, which was smaller than that noted on the corresponding date last year, was chiefly confined to Quebec and On-

tario. The index was higher than in the winter of any other year of the record.

Textile Products.—The increase in employment in the co-operating factories was more pronounced than on February 1, 1927 or 1926,

and employment continued in greater volume than on the corresponding date in previous years since 1920. Silk, woollen, knitting, headwear, garment and personal furnishing and other textile establishments registered import-

TABLE III.—INDEX NUMBERS OF EMPLOYMENT IN CANADA BY INDUSTRIES (JAN. 1920=100)

¹ The "Relative Weight" column shows the proportion that the number of employees in the indicated industry is of the total number of employees reported in all industries by firms making returns on the date under review.

ant increases in personnel. The working force of the 516 co-operating firms aggregated 75,895 persons, as compared with 71,963 in their last report. Ontario showed especially noteworthy improvement.

Tobacco, Distilled and Malt Liquors.—The advance in employment in this group was considerably greater than had been the decline recorded at the beginning of January, while the index number was higher than in any other month of the record, standing at 116.2, as against 103.2 on February 1, 1927. Returns were tabulated from 123 manufacturers with 14,038 employees, or 1,023 more than in the preceding month. The bulk of the gain was in Quebec and Ontario.

Chemicals and Allied Products.—Statements were compiled from 117 firms in this group, whose staffs rose from 6,720 on January 1 to 7,044 at the beginning of February. Practically all this improvement took place in Ontario. Employment was in greater volume than in the winter of earlier years of the record.

Clay, Glass and Stone Products.—Contrasting with the contractions indicated at the beginning of February, 1927, there was a considerable increase in employment on the date under review; according to 123 manufacturers, their labour forces included 9,511 workers, or 711 more than in the preceding month. All provinces shared in the upward movement, which was most pronounced in Quebec.

Electrical Appliances.—Employment in electrical appliance works showed a further, though smaller decline, while the situation continued to be rather better than on the corresponding date a year ago. Data were received from 46 establishments, employing 10,935 operatives, as against 11,051 on January 1. Practically all this shrinkage was registered in Ontario.

Iron and Steel Products.—There were large increases in employment in iron and steel factories, exceeding the losses noted at the beginning of January. The expansion was particularly noteworthy in vehicle, agricultural implement, shipbuilding, plant machinery, structural and other iron and steel works and in rolling mills. The improvement in Ontario and Quebec was most pronounced. Statistics were tabulated from 665 firms whose staffs stood at 128,226, as compared with 122,395 on January 1. The index was higher than in most winters of the record.

Non-ferrous Metal Products.—Lead, tin, zinc and copper works and smelters and refineries reported heightened activity. The general gain was greater, and the index was higher, than on February 1 in most years since the record was instituted. The working forces of the 103

co-operating manufacturers included 16,186 employees, or 798 more than at the beginning of January. Practically all the increases was in Ontario and British Columbia.

Mineral Products.—Seventy-six establishments in the mineral products group reported 9,687 workers, as compared with 9,546 in the preceding month. Gas, ice and other divisions in this group reported the bulk of the advance.

Logging

Seasonal expansion was recorded in logging camps at the beginning of February; the increase was smaller than on the corresponding date in 1927, but the index number then was over 11 points lower. Statements were received from 249 operators employing 39,747 workers, as against 38,076 on February 1. The trend of employment was downward in Quebec, but upward in the remaining provinces.

Mining

Coal mining, metallic ore and non-metallic mineral mines afforded moderately increased employment, there being an increase of 219 persons in the forces of the operators furnishing returns, who also numbered 219. Their staffs aggregated 48,454 employees, of whom 28,807 were engaged in the mining of coal, 13,322 in metallic ores and 6,323 in non-metallic minerals, other than coal. Activity had shown a falling-off on February 1, 1927, when the index, as in the winter of other years of the record, was several points lower than on the date under review.

Communications

The working force of the 186 companies and branches reporting stood at 24,439 persons, compared with 24,893 in the preceding month, most of the reduction taking place on telephones. The number employed was greater than on the same date in any of the last eight years, in all of which the tendency was unfavourable.

Transportation

Street Railways and Cartage.—There was an upward trend in employment in this division on February 1, repeating the movement noted on the corresponding date of 1927. The index was higher than in the winter of other years of the record. The 118 co-operating employers had 20,740 persons on their payrolls, or 298 more than in the preceding month. Quebec and Ontario registered most of the increase, which was largely due to snow removal from street railway lines.

Steam Railways.—Seasonal contractions involving a much smaller number of workers than on February 1 a year ago, were shown in steam railway operation; employment continued at a rather higher level than on the same date in any other year since the record was instituted in 1920. Returns were compiled from 102 companies and branches in this group, whose staffs aggregated 78,720 persons, as compared with 79,889 on January 1. There were decreases in the Maritime and Prairie Provinces and Ontario, while elsewhere improvement was noted.

Shipping and Stevedoring.—Employment in water transportation showed a small increase, in contrast with the decline noted on February 1 in most years of the record; 45 employers added 148 workers to their payrolls, bringing them to 10,135 on the date under review. There were small losses in the Maritime Provinces and Quebec, while in Ontario and British Columbia there were slightly larger gains.

Construction and Maintenance

Building.—For the first time in the history of this series, employment in building construction showed an increase on February 1, considerable reductions being usual on that date. The index was higher than in the winter of any other year of the record. Statistics were received from 496 contractors, with 28,570 persons in their employ, as against 27,953 on January 1. Practically all the improvement was in Quebec and the Western Provinces.

Highway.—The number of persons employed by 126 firms on highway construction and maintenance was 7,391, or 1,558 less than in the preceding month. The seasonal losses in Ontario and British Columbia were especially

pronounced, while in Quebec there was a small advance. Employment was brisker than in the winter of other years of the record.

Railway.—Continued, but smaller contractions were noted in railway construction and maintenance; the decline was also less extensive than on the same date of 1927, while the number employed was greater than in other years for which statistics are available. Statements were tabulated from 40 employers in this group, with 29,825 persons on their payrolls, as compared with 31,459 in the last report. Quebec showed improvement, but reductions in personnel were registered in the other provinces.

Trade

Following the unusually marked increases in employment reported at the Christmas and holiday season, there was a considerable falling-off in the number employed in trade on February 1. Although the losses exceeded those noted on the corresponding date in previous years, employment continued at a higher level than in the winter in the other years of the record. The 620 trading establishments furnishing data reduced their payrolls from 73,434 employees on January 1, to 67,428 at the beginning of February. There were decreases in all provinces, mainly in retail stores, although wholesalers were also slacker.

Tables I, II and III give index numbers of employment by economic areas, leading cities and industries, respectively. The columns headed "Relative Weight" shows the proportion that the number of employees reported in the indicated area or industry is of the total number of employees reported in Canada by the firms making returns on February 1, 1928.

UNEMPLOYMENT IN TRADE UNIONS AT THE CLOSE OF JANUARY, 1928

THE term unemployment as found in the following report has reference to involuntary idleness due to economic causes. Persons who are engaged in employment other than their own trades, or who are idle owing to illness, are not considered as unemployed. Unions which are involved in industrial disputes are not included in these tabulations. As the number of unions making returns varies from month to month, with consequent variation in the membership upon which the percentage of unemployment is based, it should be understood that such figures refer only to the organizations reporting.

The situation among local trade unions at the close of January, 1928, varied little from that of the previous month, the change in the employment percentage being only .2 points in advance of that recorded on December 31, 1927. For the January tabulations returns from 1,668 local organizations were received, covering a membership of 176,421 persons, 12,082 of whom, or a percentage of 6.8, were without work at the end of the month, in comparison with percentages of 6.6 in December and 6.4 in January, 1927. Though the change in percentage for Canada, as a whole, appeared nominal during January in contrast with the

previous month there were fluctuations of considerable magnitude in various provinces. Of these, the most substantial were reported among unions in Ontario and Quebec, the declines in the former province more than offsetting the improvement registered in the latter. Unemployment in the building group in Ontario, due to seasonal depression in that industry, accounted in large measure for the adverse movement in that province, supplemented by further contractions of considerable volume in the manufacturing industry, mainly the fur and iron and steel divisions. The determining factor in the better situation as obtaining in Quebec was the gain in employment registered in the iron and steel group, especially among railway carmen, who, although indicating much short time, reported little actual unemployment at the close of January, con-

most outstanding reductions in the other provinces, namely, those of 2.5 per cent in Nova Scotia and 2.2 per cent in British Columbia, were caused, in the former, by unemployment in the coal mines, and in the latter, by greater inactivity among carpenters and joiners engaged chiefly in the shipyards of that province.

Each month a separate compilation is made showing the unemployment trend in the largest city of each province with the exception of Prince Edward Island. The Halifax percentage of unemployment during January was the most substantial reported in any of the cities used in this comparison, and a considerable increase over the December percentage of idle members. Vancouver was the next in line with 12.6 per cent of inactivity, a slight improvement however, over December. Edmonton unions indicated a 10.2 percentage of idleness

PERCENTAGE OF UNEMPLOYMENT AS REPORTED BY TRADES UNIONS

trasted with the conditions in December when, owing to shutdowns, a large number of their members were thrown out of work. Of the remaining provinces Nova Scotia, Manitoba and Alberta unions all reported recessions in the amount of work afforded, which were not particularly outstanding, while New Brunswick showed no change in the percentage of unemployed members. Of the increases in Saskatchewan and British Columbia those reported by British Columbia unions were the most pronounced, and due for the most part, to preparations consequent upon the opening up of the fishing season which takes place early in February. In comparison with the returns of January, 1927, New Brunswick and Saskatchewan unions alone indicated increases in activity, which, however, were quite small; the Manitoba situation remained unchanged, and the

in January, in contrast with 5.9 per cent in the previous month. St. John and Montreal were the only centres in which a better situation prevailed during January. In comparison with the returns of January, 1927, the Halifax and Edmonton reductions were the most noticeable, followed by contractions on a smaller scale in Vancouver, Toronto and Winnipeg unions, while in St. John, Montreal and Regina there was an increase in employment afforded.

The chart accompanying this article illustrates the trend of unemployment by months from January 1922 to date. The course in January this year changed little from that of December, though the slight projection shown was in an unfavourable direction, indicating a small increase in the amount of inactivity recorded over December. The same conditions prevailed when comparison is made with Jan-

uary last year, the unemployment curve at the end of January, 1928, resting slightly above that point reached in the same month of 1927.

In the manufacturing industries as a whole the percentage of idleness was slightly less during January than in December, as was shown by the returns tabulated from 446 local unions with a membership of 50,553 persons. Of these 4,170 were without work, a percentage of 8.2 as compared with 9.3 per cent in December. The change in the unemployment figure reported in the iron and steel groups, while not being the most substantial reported in the industry as viewed from a percentage basis, still involved the greatest number of workers, and was sufficient to sway considerably in a more favourable trend the percentage for the industry as a whole. Pulp and paper makers, hat, cap and glass workers also contributed a share to the greater activity reported. On the contrary, unemployment for printing tradesmen, cigar makers, garment and fur workers was somewhat restricted. In making a comparison with the returns of January, 1927, when 7.8 per cent of idleness was shown, the most noticeable improvement took place in the iron and steel group, supported by small gains in employment for printing tradesmen, textile and brewery workers, bakers, hat, cap, glove and gas workers. However, the contractions in the wood products division of the industry, and among paper makers, garment, leather and fur workers and metal polishers more than counterbalanced these gains.

The 41 unions of coal miners reporting a membership of 16,215 persons at the close of January indicated a 2.9 percentage of idleness as against percentages of 1.4 and .4 in December, 1927, and January 1927, respectively. From Nova Scotia coal fields a reduction in employment of nearly 3 per cent was evidenced during January as compared with the previous month. In Alberta no change was indicated, the percentage of inactivity in both months being but nominal, while from British Columbia no members were reported idle, as compared with a small percentage of unemployment in December. Considerable short time was registered by both Nova Scotia and Alberta coal mines, due partly to a falling off in orders received. In comparison with the January, 1927, situation the changes in Alberta and British Columbia coal mines were quite small, while in the Nova Scotia areas there was an increase in unemployment of over 4 per cent during the period under review. Quarry workers in Nova Scotia reported all their members at work in January, contrasted

with considerable slackness during December. Asbestos miners in Quebec were also quite actively employed.

The building trades, with 191 unions reporting a membership of 19,209 persons at the close of January, showed a further advance in the unemployment which has been apparent since the beginning of the fall and winter slack season, the January percentage standing at 23.2 as compared with 19.1 per cent in December. The change over January last year, when 22.6 per cent of the tradesmen were idle was, however, small. The most noticeable curtailment in operations in comparison with December was indicated among carpenters and joiners and bricklayers, masons and plasterers, though painters, decorators and paperhangers, plumbers and steamfitters, granite and stone cutters, steam shovel and dredgemen and tile layers, lathers and roofers all suffered a reduction in the employment available. Bridge and structural iron workers, electrical workers and hod carriers and building labourers, on the other hand, were afforded a slightly greater volume of work. The improvement in the situation over January, 1927, for bridge and structural iron workers, bricklayers, masons and plasterers, carpenters

and joiners and granite and stone cutters, was slightly more than offset by the declines in employment for the remaining tradesmen.

The change in the transportation industry during January, 1928, was merely nominal both as compared with December conditions and with the January, 1927, situation. During January this year returns were received and tabulated from an aggregate of 662 unions, involving a membership of 59,599 persons, 2,279 of whom, or a percentage of 3.8, were idle, in contrast with 3.6 per cent in December, and with 3.5 per cent in January, 1927. Slightly greater activity was indicated by navigation workers during January than in the previous month, which increase, however, the declines for steam railway employees (whose returns constitute over 82 per cent of the entire group membership reporting), street and electric railway employees and teamsters and chauffeurs were sufficient to slightly more than counteract. The level of employment in the navigation division was, much lower in January than in the same month last year, and street and electric railway employees and teamsters and chauffeurs also reported a less favourable situation. Among steam railway employees, on the other hand, there was a .8 per cent increase in the work afforded.

From longshoremen, whose returns are tabulated separately each month, 13 reports were received in January comprising 7,272 members, and of these 1,403, or a percentage of 19.3, were idle, as compared with a 15.0 unemployment percentage in December. An increase in slackness of 8 per cent was registered over January, 1927, the percentage out of work at that time being 11.3.

Unions engaged in governmental service including federal and civic employees, showed little change in employment conditions during January over both the previous month and January last year. Reports were tabulated from 141 unions of these workers with 12,505

members, 1.2 per cent of whom were idle on January 31, as compared with 1.0 per cent of inactivity in December, and with 1.3 per cent in January, 1927. Federal employees reported nominal unemployment in January compared with no inactivity in both the months used here for comparison, while among civic employees there was a slight reduction in the amount of work afforded in contrast with December and a small increase over January, 1927.

The 112 unions in the miscellaneous group of trades from which reports were received, with an aggregate membership of 5,087 persons, registered 9.8 per cent of unemployment at the close of January compared with 6.7 per cent in December. Hotel and restaurant employees, theatre and stage employees, barbers and stationary engineers and firemen all contributed slightly to the increase in idleness over December, the most pronounced reduction taking place among unions of barbers. In comparison with the January, 1927, returns, when the percentage of inactivity stood at 6.6, all of the tradesmen registered a slightly adverse situation.

From the 2 unions of fishermen reporting at the end of January with 755 members, 2.6 per cent were without work on January 31, as against 26.7 per cent at the close of December and 3.9 per cent in January, 1927. Adequate work was provided during both December and January for the lumber workers and loggers for whom returns were tabulated, while in January, 1927, 1.6 per cent of their members were unemployed.

Table I on page 298 summarises the returns by provinces for January of each year from 1919 to 1925 inclusive and for each month from January, 1926, to date and table II on page 299 gives the unemployment percentages recorded in the various groups of industries for the same months.

EMPLOYMENT OFFICE REPORTS FOR JANUARY, 1928

THE volume of business transacted by the offices of the Employment Service of Canada during the month of January, 1928, as indicated by the average daily placements effected showed a decline, both when compared with that of the preceding month and with the corresponding period a year ago, the loss in the former comparison being nearly 7 per cent and in the latter about 2 per cent. Construction and maintenance showed the greatest gain, due to increased placements in the railway and highway divisions, but these gains were more than offset by a marked

decline in logging. Changes in other industrial groups were nominal only.

The accompanying chart shows the trend of employment since January, 1926, as represented by the ratio of vacancies offered and placements effected for each 100 applications for work registered at the offices of the Employment Service throughout Canada, computations being made semi-monthly. It will be seen that the curves of vacancies and placements in relation to applications declined sharply during the first half of the month, but showed a marked upward trend during

the latter half of the period under review, both reaching at the end of January, levels only slightly lower than those attained at the close of January a year ago. The ratio of vacancies to each 100 applications was 58.2 and 66.0 during the first and second half of January, 1928, in contrast with the ratios of 61.3 and 67.6 during the same periods of 1927. The ratios of placements to each 100 applications during the periods under review were 52.7 and 61.1 as compared with 56.6 and 63.4 during the corresponding month of 1927.

during the month of January, 1927. Vacancies offered to the Service during the latter half of December, 1927, averaged 877 daily.

The average number of placements made daily by the offices of the Service during the first half of January, 1928, was 846, of which 537 were in regular employment and 309 in work of one week's duration or less, as compared with a total average placement during the preceding period of 841 daily, and with 896 daily during the first half of January, 1927. During the latter half of the month under review placements averaged 833 daily

POSITIONS OFFERED AND PLACEMENTS EFFECTED FOR EACH ONE HUNDRED APPLICATIONS FOR EMPLOYMENT

Applications ————— Vacancies - - - - - Placements o-o-o-o-o-o

The average number of applications for employment received daily by the offices of the Service throughout Canada was 1,606 during the first half of January, as compared with 1,140 during the preceding period and with 1,585 daily in the corresponding period of 1927. Applications for work during the latter half of the month numbered 1,363 daily, in contrast with 1,282 daily during the latter half of January a year ago.

The average number of vacancies reported by employers to the Service daily was 934 during the first half and 900 during the latter half of the month under review, as compared with a daily average of 972 and 867 vacancies

(508 regular and 325 casual), as compared with an average of 813 daily during the corresponding period a year ago.

During the month of January, 1928, the offices of the Service referred 22,572 persons to vacancies and effected a total of 20,959 placements. Of these the placements in regular employment were 13,013, of which 9,671 were for men and 3,342 for women, while the placements in casual work totalled 7,946. The number of vacancies reported by employers totalled 15,099 for men and 7,765 for women, a total of 22,864, while applications for work totalled 36,734, of which 25,890 were from men and 10,844 from women. The following

table gives the placements effected to date by the offices of the Employment Service of Canada:—

	Placements		
	Regular	Casual	Totals
1919 (10 months).....	268,001	37,904	305,905

1928 (1 month).....	13,013	7,946	20,959

NOVA SCOTIA

There was a decline of about 11 per cent in the number of positions offered through employment offices in Nova Scotia during January when compared with the preceding month and also in comparison with the corresponding month last year. Placements were over 19 per cent less than in December and nearly 16 per cent below January, 1927. Farming, transportation and trade were the only industrial groups in which more placements were made during the month under review than in January last year, and these gains were more than offset by declines in the other divisions. Placements by industrial groups included: manufacturing, 40; logging, 43; transportation, 29; construction and maintenance, 24; trade, 57; and services, 266, of which 200 were of household workers. During the month 89 men and 62 women were placed in regular employment.

NEW BRUNSWICK

The demand for workers as indicated by orders listed at employment offices in New Brunswick during January was over 17 per cent less than in the preceding month and 10 per cent below the corresponding month last year. There was a decline of 20 per cent in placements when compared with December, and of nearly 8 per cent in comparison with January, 1927. Trade was the only group in which more placements were made during the month under review than in January, 1927. Industrial groups in which most of the placements were effected during the month were: logging, 65; transportation, 31; construction and maintenance, 26; trade, 24; and services, 387, of which 291 were of household workers. Regular employment was procured for 113 men and 58 women during the month.

QUEBEC

During January employment offices in the Province of Quebec received orders for nearly 18 per cent more workers than in the preceding

month, but nearly 25 per cent less than in the corresponding month last year. Placements were nearly 23 per cent less than in December, and nearly 29 per cent below January, 1927. Construction and maintenance and services showed gains in placements over January last year, but these gains were more than offset by large reductions in bush placements. The changes in other groups were small. Industrial groups in which most of the placements were effected during the month were: manufacturing, 103; logging, 287; construction and maintenance, 322; and services, 413, of which 332 were of household workers. There were 700 men and 431 women placed in regular employment.

ONTARIO

Orders listed at Ontario offices during January called for 5 per cent less workers than in the preceding month, and nearly 2 per cent less than in the corresponding month last year. There was a decline of over 4 per cent in placements when compared with December, and of over 2 per cent in comparison with January, 1927. The manufacturing industries and logging showed the largest declines in placements from January last year, and were responsible for the adverse change under this comparison. Construction showed considerable improvement. The changes in other groups were small. Placements by industrial divisions included: manufacturing, 965; logging, 1,944; farming, 353; mining, 111; communication, 50; transportation, 118; construction and maintenance, 2,684; trade, 315; and services, 2,782, of which 1,896 were of household workers. During the month 4,005 men and 1,139 women were placed in regular employment.

MANITOBA

Opportunities for employment as indicated by orders listed at employment offices in Manitoba during January were 11 per cent less than in the preceding month, but over 8 per cent better than during the corresponding month last year. Placements declined over 22 per cent from December, and were 1 per cent lower than in January, 1927. Construction and maintenance showed the largest increase of placements over January last year, and farming and logging the largest reductions. Industrial groups in which most of the placements were effected during the month were: manufacturing, 91; logging, 838; farming 354; transportation, 43; construction and maintenance, 216; trade, 136; and services, 1,488, of which 1,226 were of household workers. There were 1,451 men and 529 women placed in regular employment during the month.

SASKATCHEWAN

There was a decline of 13 per cent in the number of positions offered through offices in Saskatchewan during January when compared with the preceding month, but a gain of 7 per cent in comparison with the corresponding month last year. Placements were over 9 per cent fewer than in December, but 11 per cent in excess of January, 1927. Farming and construction and maintenance placements were less than in January last year, but all other groups showed increases. Placements by industries included: manufacturing, 49; logging, 322; farming, 427; transportation, 115; construction and maintenance, 107; trade, 95; and services, 847, of which 570 were of household workers. During the month 931 men and 489 women were listed in regular employment.

ALBERTA

Employment opportunities as indicated by orders received at employment offices in Alberta during January were over 3 per cent less than in the preceding month but over 12 per cent better than in the corresponding month last year. Placements showed a slightly smaller percentage of change under each comparison. Farming, mining, construction and maintenance services and trade showed increased placements over January, 1927, and these gains more than offset the declines in all other groups. Industrial divisions in which most of the placements were effected during the month included: manufacturing, 137; logging, 711; farming, 429; mining, 143; construction and maintenance, 229; trade, 63; and services, 635, of which 514 were of household workers. Placements in regular employment numbered 1,608 of men and 339 of women.

BRITISH COLUMBIA

During January positions offered through employment offices in British Columbia declined over 9 per cent from the preceding month, but were nearly 5 per cent in excess of the corresponding month last year. There was a reduction of 10 per cent in placements when compared with December, but a gain of over 3 per cent in comparison with January, 1927. Increased placements in the manufacturing industries, construction and maintenance and services were mainly responsible for the gains in placements over January last year, as the changes in all other groups were small. Placements by industrial divisions included: manufacturing, 250; logging, 339; farming, 83; transportation, 90; construction and maintenance, 220; trade, 105; and services, 759, of which 449 were of household workers. Regular employment was found for 774 men and 295 women during the month.

Movement of Labour

During the month of January, 1928, the offices of the Employment Service of Canada made 13,013 placements in regular employment, of which 7,849 were persons for whom the employment found was outside the immediate locality of the offices at which they were registered. Of the latter 1,921 were granted the Employment Service reduced transportation rate, 1,419 going to points within the same province as the despatching office, and 502 to other provinces. The reduced transportation rate which is 2.7 cents per mile with a minimum fare of \$4, is granted by the railway companies to *bona fide* applicants at the Employment Service who may desire to travel to distant employment for which no workers are available locally.

From Quebec offices 45 persons took advantage of the special reduced fare, 44 going to points outside the Province and one within the province. The latter, a camp cook, was conveyed from Montreal to employment within its own zone. All the interprovincial transfers were from Hull, 40 bushmen going to camps around North Bay and 4 bushmen to the Cobalt district.

The Ontario offices granted 604 certificates of reduced transportation, 483 provincial and 121 interprovincial. The bulk of the provincial movement was to northern Ontario logging camps which benefited by the transfer of 472 bush workers, the majority of whom went from Fort William, Port Arthur and North Bay. North Bay also despatched one engineer and one machinist to Timmins, 2 miners, one plasterer and one electrical worker to Cobalt and one waiter to Toronto. From Port Arthur one miner went to a point within its own zone and from Sault Ste. Marie one miner travelled to Timmins. The Toronto office issued a certificate to one watchman for Port Arthur and one farm worker for the North Bay zone. For mining operations and railway construction work in the Winnipeg zone 90 persons were transferred by Ontario offices, 30 mine labourers going from Cobalt, including one mining surface man, 18 shaft men, 4 deck men, 3 engineers, 2 miners, one blacksmith and one foreman, 16 shaft miners from Sudbury and 44 railroad construction labourers from Port Arthur. The Hull zone received 2 carpenters from Cobalt, 27 bushmen from North Bay and one diamond driller from Pembroke and the Montreal zone one waiter from North Bay.

The Manitoba offices transferred 602 persons at the reduced rate, 302 provincially and 300 to employment in other provinces. The Winnipeg office effected the majority of the trans-

fers within the Province, 86 construction labourers, 66 bushmen, 8 stationmen, 7 hotel workers, 3 rock labourers, one baker, 3 cooks, 3 carpenters, 2 domestics and one timekeeper going to Dauphin zone centres, 28 bushmen and one female hotel worker to points in the Winnipeg zone and 80 farm labourers and 8 farm domestics to various Manitoba districts. The remaining provincial certificates were granted by the Dauphin office to 3 railroad construction labourers, one rock man and one bushman bound for employment in the Dauphin zone. The 300 persons travelling to points outside the Province were all despatched by the Winnipeg office, the Port Arthur zone receiving 233 bushmen, 8 riveters, 6 construction labourers, 2 blacksmiths, 2 farm hands, one fisherman and 10 hotel and household workers, the Regina zone 3 female hotel workers and one cook, Estevan one tank man and one chambermaid, Prince Albert 3 cooks and one bush foreman, Saskatoon one cook, North Battleford one millwright and Edmonton one domestic. The balance of the movement was of twenty farm hands and 4 farm domestics who were sent to Saskatchewan rural points and one farm hand to a situation in Alberta.

Persons using reduced rate certificates issued by Saskatchewan offices were 279 in number, and of these 256 were going to provincial employment and 23 to points outside the Province. Of the transfers within the Province 212 were bushmen mainly for camps in the vicinity of Prince Albert who received their certificates from the Saskatoon, Regina, Prince Albert and Moose Jaw offices. From these centres in addition 37 farm hands and farm domestics sought work in the various agricultural parts of the Province. The Regina office also sent one baker to Swift Current. The remainder of the movement provincially was of hotel and household workers for the Prince Albert, Moose Jaw and Regina zones. Of those travelling to other provinces 17 were for the Dauphin zone including 8 station men going from Saskatoon, 2 rock drillers from Yorkton, 5 bushmen from Regina and 2 railroad construction blasters from North Battleford. Regina, in addition, issued certificates to one domestic destined for New Westminster and one housekeeper for Montreal, while from Moose Jaw 2 bushmen were despatched to the Fort William zone and 2 farm labourers to employment in the Province of Alberta.

Of the 316 certificates issued by Alberta offices 314 were for various stations within the province and 2 for other provinces. From Edmonton 206 bushmen, 5 miners, 6 carpenters, 10 cooks, 7 sawyers, 3 mine labourers, one waitress, one blacksmith, one bookkeeper, 2

porters, one housekeeper, 2 engineers and one female hotel worker were all transported at the reduced rate to stations within the territory covered by that office, one tile setter, one carpenter and one painter to the Calgary zone and 25 farm labourers to various sections throughout the province. The Calgary office despatched 13 bushmen, one waitress and 2 chambermaids to employment within its own zone and 19 farm hands and 5 farm domestics to provincial rural districts. Those who travelled without the Province were for British Columbia points, one farm hand securing a certificate from the Calgary office for transportation to Revelstoke and one housemaid from Edmonton for Vancouver.

The business conducted by British Columbia office included transfers of 75 persons, 63 of whom were sent at the reduced rate to points within the Province and 12 to other provinces. Provincially, the Vancouver offices shipped 8 carpenters, 2 bridge builders, 2 cooks, one blacksmith, one cement finisher, one edgerman, one fireman and one flunkey to the Penticton zone, 10 bushmen, to Cranbrook and 3 miners, one flunkey, one waitress, one engineer and one cook to employment in the Vancouver zone. From Nelson 6 bushmen and one farm labourer, from Penticton one sawyer and from Prince George 15 bushmen, 2 cooks and one bridgeman all went to stations within their respective zones. In addition, Prince Rupert sent 2 bushmen to camps around Prince George and one carpenter within its own zone. The interprovincial movement was entirely to farm areas, Alberta receiving 7 agricultural labourers, Saskatchewan 3 farm hands and one farm domestic and Manitoba one farm labourer, the majority coming from Vancouver.

Of the 1,921 persons who made use of the Employment Service reduced transportation rate, 450 were carried by the Canadian National Railways, 336 by the Canadian Pacific Railway, 131 by the Temiskaming and Northern Ontario Railway, 3 by the Pacific Great Eastern Railway and one by the Kettle Valley Railway.

The Eastern Ontario Townships Good Roads Association, at a convention held at Ottawa in February, adopted a resolution favouring the inclusion of farmers among the classes covered by the provincial Workmen's Compensation Act and pointing out that the protection given by the Act to other industries was denied to the farmers, who mostly employed unskilled labour, and were held individually responsible for injuries.

UNEMPLOYMENT IN THE UNITED STATES

IN recent weeks the question of unemployment in the United States has been receiving considerable public attention in that country, this fact being due to what apparently is a growth of some consequence in the numbers out of work during the latter months of 1927 and the early months of the current year. While it is not known exactly how many are unemployed, estimates of the number have ranged well into the millions, and from the indexes available and the statements made by reliable authorities, it would seem that the employment situation is now less favourable than at any time since 1920. In New York State the Governor ordered a special investigation as a preliminary to dealing with the situation.

The index number of employment in manufacturing industries, compiled by the United States Bureau of Labour Statistics, shows a cumulative falling off in each of the last three months of 1927. The figure for December, 85.1 (the base of 100 being the average of 1923), shows less employment in manufacturing industries than in any other month of the last three years. The average of these index numbers for the months of 1927 is 88.5 points, compared with 100.0, 90.3, 91.2 and 91.9 for 1923, 1924, 1925, and 1926, respectively. A figure compiled by the American Federation of Labour, showing the percentage of its membership unemployed in twenty-three of the leading American cities, shows, on the average, 13.8 per cent unemployed in October to De-

ember, 1927, and 17.8 per cent in January, 1928. In this case comparison with earlier dates cannot be made, as the record only commenced during last year.

The condition at present existing is ascribed only in part to an actual decline in economic activity. The increasing productivity of labour, due to new machinery in industry, is stated to be an important fundamental cause, and recently the Secretary of Labour called attention to this factor. A table which appears in the March issue of the *Bulletin* of the National City Bank of New York quotes Department of Labour figures which state that the increase in the productivity of labour, due to the introduction of labour-saving machinery, ranges from 26 per cent to 211 per cent in the case of the ten more important divisions of the manufacturing industry, over a period of eleven years. Industries other than manufacturing, notably railroad transportation and agriculture, are reported to show a like tendency. While large numbers of the displaced and diverted workers have been absorbed in newer industries, such as automobile servicing, the radio trade, etc., and the growth of the hotel and restaurant business, not all of them have become so established. One fact that adds strength to the belief that a considerable share of the present unemployment is largely due to the further mechanization of industry is that it is largely centred in the north-eastern industrial States.

AGREEMENT BETWEEN CONTRACTORS AND THE BUILDING TRADES COUNCIL, TORONTO

IN the LABOUR GAZETTE for February, page 201, there appears the text of agreements between certain organizations of carpenters and certain organizations of employers in Toronto as to wages, working conditions, etc., from January 1, 1928. One of the above agreements was signed between the General Contractors Association of Toronto and the United Brotherhood of Carpenters and Joiners of America and this organization of employers has also signed an agreement with the Toronto Building Trades Council, with which the Toronto locals of the United Brotherhood are affiliated, the text being as follows:

BUILDING TRADES COUNCIL, TORONTO

WORKING AGREEMENT between the General Contractors' Association of the City of Toronto, Parties of the First Part and Toronto Building Trades Council, Parties of the Second Part.

It is hereby agreed that in the event of a dispute arising or any disagreement existing between any of the trades represented by the

Parties of the Second Part and the Parties of the First Part, which dispute may tend to cause a sympathetic strike or general lockout, (as distinct from an individual trade strike) that before any definite action is taken the matter in dispute shall be submitted to a Board of Conciliation composed of three representatives of the Building Trades Council and three members of the General Contractors Association. This Board shall meet upon notification by either party, within twenty-four hours (24) of such notification and shall render its decision within a further forty-eight hours (48) of such reading, unless this latter period is extended by mutual consent.

This Agreement shall remain in effect from the date of signing until notice in writing to the contrary has been given by either party. Dated at Toronto, this 23rd day of November, 1927.

Signed on behalf of the General Contractors Association of Toronto.

ISAAC ILSLEY, P. W. PRICE,
Chairman, Secretary.

Signed on behalf of The Toronto Building Trades Council.

J. L. GILLANDERS, WM. VARLEY,
President Secretary.

CHANGES IN WAGES AND HOURS OF LABOUR IN THE UNITED STATES

THE United States Bureau of Labour Statistics compiles each year data as to rates of wages, hours of labour, etc., under the union scales for certain trades in the principal cities in the United States. The information secured is published in detail annually in special reports issued the following year; but summaries of the figures are given in the *Monthly Labour Review* published by the Bureau. The issues for September and November contain information as to the figures for May 15, 1927, with comparisons with previous years.

The Bureau publishes the hourly rate of pay for each trade in each city on May 15, as specified in the agreements between the unions and employers. The number of employees working under these agreements is also given, the hours per week and the weekly wages for a full week's work. It is stated that it has not been found practicable to secure from the unions or the employees themselves data as to actual or average weekly earnings.

The Bureau analyses the data as to trade union scales, calculating index numbers of rates of wages per hour, full time hours per week and wages per week full time. The accompanying table gives these index numbers for all trades and cities for previous years, the data going back to 1907. This information is given from time to time in the *LABOUR GAZETTE*, the last article on the subject being in the issue for December, 1926.

INDEX NUMBERS OF UNION WAGE RATES AND HOURS OF LABOUR IN THE UNITED STATES AS OF MAY EACH YEAR, 1907 TO 1927.

(1913=100.0)

Year	Index numbers of—		
	Rate of wages per hour	Full-time hours per week	Rate of wages per week full time
1907.....	89.7	102.6	91.5
1908.....	91.0	102.1	92.5
1909.....	91.9	101.9	93.3
1910.....	94.4	101.1	95.2
1911.....	96.0	100.7	96.5
1912.....	97.6	100.3	97.7
1913.....	100.0	100.0	100.0
1914.....	101.9	99.6	101.6
1915.....	102.8	99.4	102.3
1916.....	107.2	98.8	106.2
1917.....	114.1	98.4	112.4
1918.....	132.7	97.1	129.6
1919.....	154.5	94.7	147.8
1920.....	199.0	93.8	188.5
1921.....	205.3	93.9	193.3
1922.....	193.1	94.4	183.0
1923.....	210.6	94.3	198.6
1924.....	228.1	93.9	214.3
1925.....	237.9	93.0	222.3
1926.....	250.3	92.8	233.4
1927.....	259.5	92.4	240.8

The data cover Bakers, Building Trades (41 trades), Chauffeurs and Teamsters and Drivers, Granite Cutters and Stonecutters, Laundry Workers, Linemen, Longshoremen, Printing Trades (book and job offices 10 trades; news offices, 8 trades), and Street Railway Employees. The number of employees included in the compilation was 835,924 in 66 cities. It will be observed that figures for railway employees, coal miners, iron and steel workers, etc., are not included.

The average rate per hour for all trades included in the calculation was found to be \$1.19 in 1927 as compared with \$1.148 in 1926, the 1927 average being 3.7 per cent above that for 1926, 127.3 per cent higher than 1917, 159.5 per cent higher than in 1913, 174.8 per cent higher than in 1910 and 189.2 per cent higher than in 1907.

All hourly rates have been converted to equivalent weekly rates and all weekly rates have been reduced to equivalent hourly rates. Taken collectively, weekly rates in 1927 were 3.2 per cent higher than in 1926, 114.3 per cent higher than in 1917 and 163.1 per cent higher than in 1907. Because of reductions in hours of labour, weekly rates have not increased to the same extent as hourly rates. In 1927 the regular hours of labour were 0.5 per cent lower than in 1926, 7.7 per cent lower than in 1913, and 10 per cent lower than in 1907.

A table is included showing index numbers of changes in the wages of the building trades since 1913.

INDEX NUMBERS OF UNION RATES OF WAGES PER HOUR IN THE BUILDING TRADES

(1913=100)

Year	Index numbers
1913.....	100
1914.....	102
1915.....	103
1916.....	106
1917.....	113
1918.....	126
1919.....	145
1920.....	197
1921.....	200
1922.....	187
1923.....	207
1924.....	224
1925.....	233
1926.....	248
1927.....	257

The United States Bureau of Labour Statistics in 1921 published in the *Monthly Labour Review* for February an index number of earnings per hour of wage earners generally for the period 1840 to 1920, using such data as was available for the various lines of employment

except agriculture. In the same *Review* for February, 1928, this index number has been brought down to 1926. The figures up to 1920 were given in the *LABOUR GAZETTE* for March, 1921, page 420, and the table continued down to 1926 is given herewith.

The *Monthly Labour Review* contained the following:—

The early part of 1920 was a period of great industrial activity and in this period employment and hourly earnings reached their highest point. A sharp downward trend of employment occurred in the latter part of the year. There was a great reduction in employment in the depressed year, 1921, accompanied, as might be expected, by a reduction in wage rates. The slump continued in 1922. As business conditions improved in 1923 there was a gain in wage rates which has been augmented each succeeding year.

It must not be assumed that changes have been alike in all lines of employment. Heavy factors in the upward trend since 1922 are the trades engaged in baking, building, stonework, auto driving, freight handling and printing. All of these trades were particularly active during recent years and they have had very substantial wage increases. The building trades and all of these trades collectively had a wage rate 26 per cent higher in 1926 than in 1920. Anthracite-coal workers had an increase of 10 per cent in the latter part of 1923. On the other hand, earnings per hour in many lines were considerably lower in 1926 than in 1920. To illustrate, there was a decrease of 32 per cent in hourly earnings in cotton manufacturing, of 22 per cent in woollen manufacturing, of 15 per cent in the iron and steel industry, and of 6 per cent in railroad wages, all as between 1920 and 1926.

There is also published a table of index numbers of wages on farms collected by the United States Department of Agriculture on the basis of rates in 1910-14 equal 100. The Bureau of Labour Statistics converted these index numbers to the basis of rates in 1913 equal 100, the same basis as the other index numbers of wages computed by the Bureau. That part of the table of index numbers of farm wages 1866 to 1926 on the basis 1913 equals 100 is included herewith.

INDEX NUMBERS OF FARM-WAGE RATES, 1866 to 1926

(Years 1866 to 1878 in gold)

(1913=100)

Year	Index Number	Year	Index Number
1866.....	53	1909.....	92

BUILDING PERMITS ISSUED IN CANADA IN JANUARY, 1928

THERE was a seasonal decline in the value of the building permits issued by 63 cities during January as compared with the preceding month, but the aggregate was higher than in January, 1927, and also than in the same month in any other year since this record was instituted in 1920. The co-operating municipalities reported permits for building estimated to cost \$7,708,904, as compared with \$11,755,566 in December, 1927, and \$5,676,537 in January, 1927. There was, therefore, a reduction of 34.4 per cent in the former, but an increase of 35.8 per cent in the latter more significant comparison.

Some 50 cities furnished detailed statements showing that they had granted over 600 permits for dwelling valued at more than \$3,000,000 and over 1,200 permits for other buildings estimated to cost approximately \$3,900,000. In December, authority was granted for the erection of some 550 dwellings and 1,200 other buildings, estimated to cost approximately \$3,400,000 and \$7,000,000, respectively.

New Brunswick, Manitoba and Alberta reported increases in the value of the building authorized as compared with December, the last named showing the greatest gain. Of the declines recorded in the remaining provinces, those of \$1,472,032 and \$1,775,522 in Quebec and Ontario respectively, were most pronounced.

As compared with January, 1927, there were increases in all provinces except New Brunswick and Alberta. The most marked advances were in Ontario and Quebec, where they stood at \$1,803,980 and \$1,024,020, respectively.

In Montreal and Toronto, there were decreases in the value of the building permits granted as compared with the preceding month, but increases over the corresponding month last year. Winnipeg showed an advance in both comparisons, while in Vancouver the January total was less than in either December or January, 1927. The following cities reported increases in both comparisons—New Glasgow, Sydney, Moncton, Quebec, Shawinigan Falls, Brantford, Hamilton, Kingston, London, Niagara Falls, Owen Sound, Port Arthur, St. Thomas, Sault Ste. Marie, York Townships, Riverside, Sandwich, St. Boniface, Regina, Lethbridge, Medicine Hat, Kamloops, New Westminster, Point Grey and North Vancouver.

¹ Not received.

The value of the permits issued by 63 cities in January of the years 1920-28 is shown below:—

Year	Value
1928	\$7,708,904
1927	5,676,537
1926	4,719,534
1925	5,447,270
1924	4,460,579
1923	4,139,498
1922	3,326,537
1921	2,595,564
1920	4,017,024

The 1928 figure for January was the greatest in the record of nine years, being larger by 35.8 per cent than in 1927, the previous high level, while wholesale prices of building materials continued to be lower than in previous years since 1920.

The accompanying table gives the value of the building permits issued by 63 cities in January, 1928, and December and January, 1927. The 35 cities for which statistics are available since 1910 are indicated by asterisks.

FAIR WAGES CONDITIONS IN DOMINION GOVERNMENT CONTRACTS

THE Department has recently received information regarding certain contracts executed by the Government of Canada which included among their provisions the fair wages conditions sanctioned by Order in Council for the protection of the labour to be employed. The contracts (Group "A") awarded in connection with the works of construction contained the following fair wages clause:—

1. All mechanics, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed for character or class of work in which they are respectively engaged, and if there be no current rates in such district, then fair and reasonable rates, and shall work such hours as are customary in the trade, in the district where the work is carried on, or if there be no custom of the trade as respects hours in the district, then fair and reasonable hours, unless for the protection of life and property, or for other cause shown to the satisfaction of the Minister of Labour, longer hours of service are required. The Minister of Labour may at any time and from time to time determine for the purposes of this contract, what are the current or fair and reasonable rates of wages and the current or fair and reasonable hours, and may from time to time rescind, revoke, amend, or vary any such decision, provided that his determination and any amendment or variation shall not be operative prior to the period of three months immediately preceding the date thereof.

Two of the contracts above mentioned contained schedules of rates and hours based on the current standards of the district in these respects. The schedules are given below.

Six contracts were awarded for interior fittings (Group "B") containing the general fair wages clause and other conditions for the protection of the labour employed, as sanctioned by the Fair Wages Order in Council which reads as follows:—

All workmen, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid

such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed, and if there be no current rate in such district, then a fair and reasonable rate, and shall work such hours as those fixed by the custom of the trade as respects hours in the district where the work is carried on, or if there be no custom of the trade as respects hours in the district then fair and reasonable hours, except for the protection of life and property, or on due cause shown to the satisfaction of the Minister of Labour. In the event of a dispute arising as to what is the current or a fair and reasonable rate of wages or what are the current hours fixed by the custom of the trade or fair and reasonable hours it shall be determined by the Minister of Labour, whose decision shall be final; payment may also be withheld of any moneys which would otherwise be payable to the contractor until the Minister of Labour's decision has been complied with.

By the term "current wages" and the term "hours of labour fixed by the custom of the trade" in the foregoing are meant respectively the standard rates of wages and hours of labour either recognized by signed agreements between employers and workmen in the district from which the labour required is necessarily drawn or actually prevailing, although not necessarily recognized by signed agreements.

A statement was also received as to supplies ordered by the Post Office Department subject to the regulations for the suppressing of the sweating system and the securing of fair wages, etc.

The general labour conditions sanctioned by the Fair Wages Order in Council are as follows:—

1. Where there are special circumstances which in the judgment of the Minister of Labour make it expedient that he should do so, he may decide what are the current or fair and reasonable rates of wages for overtime, and what is the proper classification of any work for the purposes of wages and hours. Immediately upon receipt of notice of any decision of the Minister of Labour hereunder the contractor shall adjust the wages and hours and classification of work so as to give effect to such decision. In case the Contractor shall fail so to do, or to pay to any employee or employees for any services performed or for any hours of labour, wages according to the rates fixed therefor by the Minister of Labour hereunder

regarding overtime and classification, the Minister of Labour may authorize and direct the Minister to pay any such wages at the rates so fixed and deduct the amount thereof from any moneys owing by the Government to the Contractor and any such payment shall for all purposes as between the Contractor and the Government be deemed and taken to be payment to the Contractor, and the Contractor shall be bound in every particular by any such authority, direction and payment as aforesaid. The powers of the Minister of Labour hereunder shall not be exercised as to any employee or employees where it is established to his satisfaction that an agreement in writing exists and is in effect between the Contractor and the class of employees to which such employee or employees belong or the authorized representatives of such class of employees fixing rates of wages, overtime conditions and hours of labour.

2. The Contractor shall post and keep posted in a conspicuous place on the premises where the contract is being executed, occupied or frequented by the workmen, the Fair Wages Clause or Schedule inserted in his contract for the protection of the workmen employed, also any decision of the Minister of Labour under the preceding paragraph.

3. The Contractor shall keep proper books and records showing the names, trades, and addresses of all workmen in his employ and the wages paid to and time worked by such workmen, and the books or documents containing such record shall be open for inspection by the Fair Wage Officers of the Government at any time it may be expedient to the Minister of Labour to have the same inspected.

4. The Contractor shall not be entitled to payment of any money which would otherwise be payable under the terms of the contract in respect of work and labour performed in the execution of the contract unless and until he shall have filed with the Minister in support of his claim for payment a statement attested by statutory declaration, showing (1) the rates of wages and hours of labour of the various classes of workmen employed in the execution of the contract; (2) whether any wages in respect of the said work and labour remain in arrears; (3) that all the labour conditions of the contract have been duly complied with; or, in the event of notice from the Minister of Labour of claims for wages, until the same are adjusted. The Contractor shall also from time to time furnish the Minister such further detailed information and evidence as the Minister may deem necessary in order to satisfy him that the conditions herein contained to secure the payment of fair wages have been complied with, and that the workmen so employed as aforesaid upon the portion of the work in respect of which payment is demanded have been paid in full.

5. In the event of default being made in payment of any money owing in respect of wages of any workmen employed on the said work and if a claim therefor is filed in the office of the Minister and proof thereof satisfactory to the Minister is furnished, the said Minister may pay such claim out of the moneys at any time payable by His Majesty under said contract and the amounts so paid shall be deemed payments to the Contractor.

6. These conditions shall extend and apply to moneys payable for the use or hire of horses or teams, and the persons entitled to payments

for the use or hire of horses or teams shall have the like rights in respect of moneys so owing them as if such moneys were payable to them in respect of wages.

7. With a view to the avoidance of any abuses which might arise from the sub-letting of contracts it shall be understood that sub-letting other than such as may be customary in the trades concerned is prohibited unless the approval of the Minister is obtained; sub-contractors shall be bound in all cases to conform to the conditions of the main contract, and the main Contractor shall be held responsible for strict adherence to all contract conditions on the part of sub-contractor; the contract shall not, nor shall any portion thereof be transferred without the written permission of the Minister; no portion of the work to be performed shall be done at the homes of the workmen.

8. All workmen employed upon the work comprehended in and to be executed pursuant to the said contract shall be residents of Canada, unless the Minister is of opinion that Canadian labour is not available or that other special circumstances exist which render it contrary to the public interest to enforce this provision.

DEPARTMENT OF PUBLIC WORKS

Contracts in Group "A" (Construction, etc.)

Renewal of a wharf at Bella Bella, Skeena District, B.C. Name of contractor, John Currie, Prince Rupert, B.C. Date of contract, February 3, 1928. Amount of contract, unit prices, approximate expenditure, \$3,955.87.

Construct and instal interior fittings (in oak) in the Public Building at Rockland, Ont. Name of contractors, The J. T. Schell Company, Alexandria, Ont. Date of contract, February 9, 1928. Amount of contract, \$1,021.

Supply and instal interior fittings (in solid B.C. fir) in the Public Building at Kensington, P.E.I. Name of contractor, Major Schurman, Summerside, P.E.I. Date of contract, February 4, 1928. Amount of contract, \$1,050.

Alterations and additions to plumbing and heating in the Governor General's Quarters at the Quebec Citadel, Quebec, P.Q. Name of contractor, Napoléon Ferland, Quebec, P.Q. Date of contract, January 30, 1928. Amount of contract, \$7,428.

Supply and instal interior fittings (in oak) in the Public Building at St. Jacques de l'Achigan, P.Q. Name of contractors, The Interior Hardwood Company, Limited, Kitchener, Ont. Date of contract, January 29, 1928. Amount of contract, \$1,185.

Interior fittings (birch) in the Public Building at Hamilton, Ont. Name of contractors, The Interior Hardwood Company, Limited, Kitchener, Ont. Date of contract, January 25, 1928. Amount of contract, \$3,960.

DEPARTMENT OF RAILWAYS AND CANALS

Contract in Group "A" (Construction, etc.)

Clearing, grubbing, crosswaying, grading, culvert excavation, etc., of proposed Hudson Bay Railway line from Mile 356.5 to Fort Churchill, in the Province of Manitoba. Name of contractors, Stewart and Cameron Limited, Winnipeg, Man. Date of contract, November 1, 1927.

DEPARTMENT OF NATIONAL DEFENCE

No construction contracts having a valuation of \$3,000 and over were placed by this department during the month of February.

POST OFFICE DEPARTMENT

The following is a statement of payments made in February, 1928, for supplies ordered by the Post Office Department under contracts which are subject to the Fair Wages policy:—

Nature of Orders	Amount of Orders
Making metal dating stamps and type, also other hand stamps and brass crown seals	\$ 668 31
Making and repairing rubber stamps, daters, etc.	359 73
Making up and supplying letter carriers uniforms, etc.	8,992 25
Stamping pads, ink, etc.	291 15
Bag fittings	3,047 10
Scales	776 60
Rural mail boxes	25,416 00
Letter boxes	396 00

Mines Regulations for Manitoba are in course of preparation by Dr. R. C. Wallace, commissioner of mines for the province. The department is securing full information concerning the recent disaster in the Hollinger mine at Timmins, Ontario, and it is stated that the new regulations will include protective measures for workmen under similar conditions.

In reply to a question in the British House of Commons as to how many women were employed in the coal mines in Bengal, Bihar and Orissa, and the Central Provinces, and in the salt mines of the Punjab, and whether any proposals for the gradual withdrawal of these women were being considered, the Under-Secretary of State for India said that on an average there were 23,392 adult females employed daily in those provinces in coal mines below ground, and 18,616 above ground. In the salt mines of the Punjab the average was 223 daily. Proposals were under consideration for the gradual withdrawal of the women employed below ground.

PRICES, RETAIL AND WHOLESALE, IN CANADA, FEBRUARY, 1928

Cost of Living, Prices of Staple Articles and Index Numbers

THE movement in prices during the month was toward slightly lower levels, both the weekly family budget in terms of retail prices and the Dominion Bureau of Statistics index of wholesale prices being down somewhat from the levels of the previous month.

In retail prices the cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average prices in some sixty cities was \$11.03 at the beginning of February, as compared with \$11.19 for January; \$11.23 for February, 1927; \$11.50 for February, 1926; \$10.93 for February, 1925; \$10.75 for February, 1924; \$10.53 for February, 1923; \$10.61 for February, 1922; \$14.08 for February, 1921; \$16.92 for June, 1920 (the peak); \$12.54 for February, 1918; and \$7.75 for February, 1914. The decline was due mainly to the substantially lower prices for eggs, while less important declines occurred in the prices of pork, bacon, lard, butter, beans, prunes, yellow sugar and potatoes. The most important advance occurred in the price of beef, while smaller advances occurred in the prices of veal, and mutton. Including the cost of fuel and rent with that of foods the total budget averaged \$21.25 at the beginning of February, as compared with \$21.41 for January; \$21.46 for February, 1927; \$21.87 for February, 1926; \$21.19 for February, 1925; \$21.18 for February, 1924; \$21.17 for February, 1923; \$21.07 for February, 1922; \$24.85 for February, 1921; \$26.92 for July, 1920 (the peak); \$19.80 for February, 1918; and \$14.54 for February, 1914. Fuel showed a slight increase. No changes were reported in rent.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon the average prices of 236 commodities in 1913 as 100, and weighted according to the commercial importance of the commodities, was slightly lower at 150.8 for February, as compared with 151.2 for January; 150.1 for February, 1927; 162.0 for February, 1926; 164.7 for February, 1925; 156.8 for February, 1924; 153.6 for February, 1923; 153.5 for February, 1922; 191.1 for February, 1921; 256.7 for May, 1920 (the peak); 238.8 for February, 1920; and 200.5 for February, 1919. Thirty-eight prices quotations were lower, thirty-six were higher, and one hundred and sixty-two were unchanged.

In the grouping according to chief component materials four of the eight main groups declined, two advanced, while two were unchanged. The groups which declined were:

the Animals and their Products group, due mainly to lower prices for meats, furs, hides, and eggs; the Textile and Textile Products group, due to declines in the prices of cotton, cotton yarns, cotton hosiery and rope, which more than offset higher levels for silk, wool and flax fibre, the Non-Ferrous Metals group, due to lower prices for silver, lead, tin, spelter and solder; and the Chemicals and Allied Products group. The Vegetables and Vegetable Products group and the Iron and its Products group advanced. In the former higher prices for grains, potatoes, apples, oranges and lemons more than offset declines in the prices of flour, sugar, tea, rubber and hay, while in the latter group the advance was due to slight increases in the prices of steel billets and of steel sheets. The Wood and Wood Products group and the Non-Metallic Minerals and their Products group were practically unchanged.

In the grouping according to purpose both consumers' goods and producers' goods declined. In consumers' goods lower prices for flour, eggs, tea, sugar, meats and cotton hosiery more than offset advances in the prices of oranges, apples, lemons, potatoes and spices. In producers' goods materials for the textile and clothing industry, for the fur industry, for the chemical using industries, for the meat packing industries, as well as miscellaneous producers' materials, declined. Materials for the leather industry and for the milling and other industries were slightly higher.

In the grouping according to origin raw or partly manufactured goods were lower. Declines in the prices of rubber, sugar, tea, eggs, beef, hay, cotton and non-ferrous metals more than offset higher prices for grains, oranges, lemons, apples, potatoes, hogs, sheep, spices, silk, wool and steel billets. Fully or chiefly manufactured goods also declined, due mainly to declines in the prices of flour, sugar, manila rope and cotton yarn. Domestic farm products and articles of forest origin were lower. Articles of marine origin were somewhat higher, while articles of mineral origin were unchanged.

The Canadian Bank of Commerce index of wholesale prices of about eighty commodities, based upon prices in 1923 and weighted according to the physical volume of production of each commodity included, was slightly lower at 96.27 for February, as compared with 96.65 for January and 96.51 for December, 1927.

EXPLANATORY NOTE AS TO WHOLESALE PRICES

The index number calculated by the Dominion Bureau of Statistics is based upon the prices of 236 commodities, price levels in 1913 being taken as the base, that is equal to 100, the figures being weighted according to the commercial and industrial importance of each article included. The index number has been calculated by years back to 1890, being unweighted, however, for the period of 1890 to 1913 and has been calculated by months from 1919 to date for all groupings and from 1913 to date for the principal grouping. Summary tables of the Bureau's index number may be found in the supplement to the *LABOUR GAZETTE* for January, 1925, January, 1926, and in greater detail in the Report on "Prices and Price Indexes 1913-24," issued by the Bureau. A description of the methods used in the construction of the index number appears in the *LABOUR GAZETTE* for June, 1923.

The accompanying table gives the index numbers of the Dominion Bureau of Statistics by the principal groups *viz.* the three methods of classification and with those of the classification according to purpose or use in detail for the current month and for certain preceding dates.

EXPLANATORY NOTES AS TO RETAIL PRICES

The table of retail prices and rentals shows the prices at the beginning of February of seventy-one staple foodstuffs, groceries, coal, wood and coal oil and the rent of six-roomed houses in some sixty cities throughout Canada. All prices are for delivered goods. The exact quality, for which the quotation is given is set forth in the case of each commodity, and every effort has been made to ensure that the quotations in each case refer to the same class of commodity in order that the statistics may be available for purposes of comparison from month to month, from city to city, etc. The prices of foods and groceries in each city, except milk and bread, are the averages of quotations reported to the Department and to the Dominion Bureau of Statistics by a number of representative butchers and grocers in each. The prices of fuel and the rates for rent are reported by the correspondents of the *LABOUR GAZETTE*.

Statistics similar to these were published each month from 1910 to 1920, the figures during this period being secured at the middle of each month by the correspondents of the *LABOUR GAZETTE* resident in each locality from dealers doing a considerable business with workingmen's households. From 1910 to 1915 the table contained a list of only the twenty-nine foods included in the family budget, with laundry starch, coal, wood, coal oil and rent. In 1915 when monthly publication of the budget in the *LABOUR GAZETTE* was begun, it was decided to extend the list of foods to 40, and in 1920 the list of foods and groceries was still further extended to include over 100 items.

Beginning with October, 1922, a number of commodities were dropped from the list, and in the case of a number of articles the average prices of the grades most sold have been given, owing to the impossibility of securing prices for uniform grades for the various cities from month to month.

Oleomargarine was dropped in March, 1924, the provision for its manufacture and sale since

1917, notwithstanding the Dairy Act, expired at the end of February, 1924.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts extensively occupied by workingmen. The first class is of houses in good condition, favourably located in such districts with good modern conveniences. The second class is of houses in fair condition less desirably located, but still fairly central, without modern conveniences.

The weekly budget of a family of five, calculated in terms of the average prices in the cities for which reports are received, includes twenty-nine staple foods, laundry starch, coal, wood, coal oil, and rent, these being the items for which statistics have been obtained each month and published in the *LABOUR GAZETTE* since January, 1910. The quantities of each commodity included are modifications of those employed in similar calculations by various authorities. For some articles comparatively large quantities are included owing to the absence of other important items of the same class. For instance, the only fruits are evaporated apples and prunes, and the only fresh vegetable is potatoes. But as market conditions affecting these usually affect the prices of other fruits and vegetables somewhat similarly, the relative proportions of expenditure on the various classes of foods tends to be maintained. At times when the price of an article heavily weighted for this purpose rises, or falls (abnormally) the increase (or decrease) in food prices so indicated is exaggerated, and this should be taken into account in using the budget as an indicator of changes in the cost of living. In fuel and lighting the quantities are estimated on a similar principle, anthracite coal being used chiefly east of Manitoba, and soft coal and wood in the western provinces, while no allowance is made for the quantities required in the various localities owing to climatic conditions, nor for the differences in the heating value of the various fuels. It was estimated, when the budget was first published in 1912 in the report on wholesale prices in Canada for 1911, that these calculations represented from sixty to eighty per cent of the expenditure of an ordinary family, according to the total income. For the average family of five the expenditure on these items of food, fuel, light and rent would be perhaps two-thirds or about sixty-five per cent of the total income.

While the budget serves to show the increase or decreases from time to time in the cost of the items included, it does not purport to show the minimum cost of food and fuel supplies for an average family in the Dominion or in any one province. The quantities of meats, dairy products, cereals, etc., included were adopted as affording a liberal supply for the healthy family of a man at hard physical work. On the other hand an average family with an income sufficient to do so would buy less meat, etc., but more fruit, fresh and canned vegetables, etc., so that comparative expenditure would be little changed.

Index Number of Changes in the Cost of Living

In March, 1921, the Department published in the *LABOUR GAZETTE* a table of percentages of changes in the cost of living since 1913 as a tentative cost of living index number, using the figures of the above mentioned budget for

(Continued from page 314)

the calculation for food, fuel and rent, with preliminary figures for clothing and sundries added and this table has been brought down to date at intervals since. The calculation of a comprehensive cost of living index number covering all items of working men's family expenditure in progress since 1918 had been

sufficiently advanced to enable the publication of preliminary figures by groups in a supplement to the LABOUR GAZETTE, January, 1926, on Prices in Canada and in Other Countries, page 9. This table gave figures for June and December each year from 1914 to 1926, inclusive. Figures have since been given for March and September each year since 1917

INDEX NUMBERS OF WHOLESALE PRICES (WEIGHTED) CALCULATED BY THE DOMINION BUREAU OF STATISTICS (Average Prices 1913=100)

and the accompanying table gives figures for December each year from 1914 to 1917, quarterly from 1918 to 1926, and monthly since January, 1927. As stated in the above-mentioned supplement the figures in the food group in the family budget are still used to show the changes in food prices but in the other groups the percentage changes in the prices of each article have been weighted according to workmen's average family consumption, and in the fuel and light groups, gas and electricity have been included.

Cost of Electric Current and Gas for Householders

With rates in 1913 as 100, index numbers of electric light rates were 1900, 141.4; 1905, 135.6; 1910, 118.1; 1911, 113.4; 1912, 109.1; 1913, 100.0; 1914, 96.5; 1915, 90.8; 1916, 87.6; 1917, 87.2; 1918, 85.8; 1919, 85.8; 1920, 84.2; 1921, 84.9; 1922, 82.7; 1923, 79.5; 1924, 79.2; 1925, 85.6; 1926, 75.6.

The above figures were arrived at by converting to the base of 1913 as 100, an index number of electric current costs from 1900 to 1913 constructed for the Board of Inquiry into the cost of living in Canada, 1914-15 (Report, Vol. 2, page 318) and bringing the figures down to 1926. The figures are unweighted. The Dominion Bureau of Statistics has recently issued an index number of electric current rates for household consumption as follows: 1923, 73.8; 1924, 72.2; 1925, 69.9; 1926, 68.7. This index number is weighted according to consumption in each city. When the above index number, 1900-1926, is weighted according to population in each city covered for the years 1923, 1924, 1925 and 1926, the figures are substantially the same as those recently issued by the Bureau.

The following are index numbers of rates for manufactured and natural gas for the years 1913 to 1926 issued by the Dominion Bureau of Statistics (revised, Prices and Price Indexes, 1913-1926): Manufactured gas, 1913, 100; 1914, 98.3; 1915, 98.1; 1916, 96.3; 1917, 100.7; 1918, 107.4; 1919, 111.1; 1920, 125.4; 1921, 143.6; 1922, 140.6; 1923, 135.7; 1924, 134.6; 1925, 131.6; 1926, 131.1. Natural gas, 1913, 100; 1914, 109.6; 1915, 112.8; 1916, 112.8; 1917, 113.6; 1918, 114.2; 1919, 116.2; 1920, 123.8; 1921, 143.0; 1922, 163.1; 1923, 162.9; 1924, 162.6; 1925, 178.7; 1926, 172.2. For the years 1900 to 1913 two index numbers of gas costs calculated for the Cost of Living Inquiry in 1914-1915, have been averaged and converted to the base of 1913 as 100, as follows: 1900, 125.8; 1901, 125.8; 1902, 125.8;

1903, 125.2; 1904, 123.9; 1905, 120.1; 1906, 107.5; 1907, 108.8; 1908, 106.9; 1909, 105.7; 1910, 103.8; 1911, 99.4; 1912, 100.6; 1913, 100.0.

*The figures for "all items" were calculated by giving the following weights to each group: Food 35%; Fuel 8%; Rent 18%; Clothing 18%; Sundries 20%.

†Figures for Sundries since 1920 have been revised and this has affected for certain dates "all items".

Retail Prices

Beef prices again averaged substantially higher, sirloin steak being up from an average of 31.4 cents per pound in January to 33.5 cents in February; round steak from 26.1 cents per pound in January to 27.9 cents in February; rib roast from 24 cents per pound in January to 25.9 cents in February; and shoulder roast from 18.2 cents per pound in January to 19.6 cents in February. Higher prices were reported from nearly all localities. The increase, however, was more pronounced in Ontario, Alberta and British Columbia than in the other provinces. Veal advanced from an average of 21.7 cents per pound in January to 22.4 cents in February and mutton from 29 cents per pound in January to 29.8 cents in February. Both fresh and salt pork were lower, the former being down from an average of 25.9 cents per pound in January to 25.3 cents in February, and the latter from 25.6 cents per pound in January to 25.3 cents in February. Bacon fell from an average of 37.2 cents per pound in January to 36.8 cents in February. Ham was slightly lower at an average price of 58.2 cents per pound. In fresh fish cod steak was slightly higher, while halibut and white fish declined somewhat. Lard was slightly lower at an average price of 21.9 cents per pound.

Eggs were substantially lower in practically all localities, fresh averaging 51.8 cents per dozen in February, as compared with 64.3 cents in January, and cooking averaging 44.2 cents per dozen in February, as compared with 52 cents in January. Milk was unchanged in the average. Butter was slightly lower, dairy averaging 42.3 cents per pound in February, as compared with 42.9 cents in January, and creamery averaging 46.4 cents per pound in February, as compared with 47 cents in January. Cheese showed little change at an average price of 32.2 cents per pound. No changes were reported in bread, the price remaining at an average of 7.7 cents per pound. Flour was unchanged at an average price of 5.2 cents per pound, increases in some localities being offset by declines in others. Canned vegetables showed little change, tomatoes averaging 16.3 cents per can, peas 16.5 cents and corn 16.4 cents. Beans were slightly lower at 7.8 cents per pound. Onions rose from 4.9 cents per pound in January to 5.1 cents in February. Potatoes showed little change, averaging \$1.63 per ninety pounds. Prunes were down from an average of 13.9 cents per pound in January to 13.4 cents in February. Raisins were slightly lower, averaging 17.6 cents per pound. Marmalade was down from 66.3 cents per four pound tin in January to 65.4 cents in Febru-

ary. Granulated sugar was unchanged at an average price of 8.1 cents per pound, while yellow sugar declined from 7.7 cents per pound to 7.5 cents. Anthracite coal averaged \$16.45 per ton in February, as compared with \$16.43 in January. Bituminous coal and coke showed little change, the former averaging \$10.20 per ton and the latter \$13.04 per ton. Wood was slightly higher, hard averaging \$12.06 per cord in February, as compared with \$11.99 in January, and soft \$8.99 per cord in February, as compared with \$8.93 in January. No changes were reported in rent.

Wholesale Prices

The following is a summary of a statement on wholesale prices changes during the month issued by the Dominion Bureau of Statistics.

Grain prices moved to slightly higher levels during February, due to advances in the prices of coarse grains, wheat being practically stationary. No. 1 Manitoba northern cash wheat, Fort William and Port Arthur basis averaged \$1.42 $\frac{1}{2}$ per bushel in February, as compared with \$1.42 $\frac{1}{4}$ in January. The low price for the month was \$1.39 $\frac{1}{2}$ per bushel reached on the 7th and the high \$1.45 reached on the 22nd. Coarse grains were generally higher, western barley being up from 83 $\frac{1}{2}$ cents per bushel to 86 $\frac{1}{4}$ cents; Ontario barley from 83 $\frac{1}{2}$ cents per bushel to 84 $\frac{1}{4}$ cents; western oats from 62 $\frac{1}{2}$ cents per bushel to 64 cents; Ontario oats from 58 $\frac{1}{2}$ cents per bushel to 60 $\frac{1}{2}$ cents; rye from \$1.03 per bushel to \$1.05; American corn from \$1.02 per bushel to \$1.05 $\frac{1}{2}$; and flax seed from \$1.83 per bushel to \$1.83 $\frac{1}{2}$. Flour was slightly lower, the price at Toronto declining from \$7.91 per barrel to \$7.87. Shorts at Toronto advanced from \$36.25 per ton to \$36.50. Oranges and lemons were higher, the former advancing from \$4.50-\$5.50 per case to \$5.50-\$6.50, and the latter from \$4.50 per case to \$5-\$5.25. Granulated sugar at Montreal fell from \$6.03 $\frac{1}{4}$ per hundred to \$5.93 $\frac{1}{4}$ and yellow from \$5.65 $\frac{1}{4}$ per hundred to \$5.55 $\frac{1}{4}$. Ceylon and India tea at Toronto fell from 51 cents per pound to 49 cents and medium Japan from 46 cents per pound to 45 $\frac{1}{2}$ cents. Potato prices were generally higher, Quebec grades at Montreal being up from 97 $\frac{1}{2}$ cents per bag to \$1.12 $\frac{1}{2}$; Ontario grades at Toronto from \$1.29 $\frac{1}{2}$ per bag to \$1.32 $\frac{1}{2}$; Manitoba grades at Winnipeg from 79 $\frac{1}{2}$ cents per bushel to 81 cents; and New Brunswick potatoes at St. John from \$2.85 per barrel to \$2.95. Raw rubber was again lower, due it was said to unsettled feeling regarding the future of restriction. The price declined from 40 cents per pound to 32 $\frac{1}{2}$ cents. Hay at Toronto fell from \$14.50 per ton to \$14. Rosin declined from \$14.15 per barrel to \$13.10. In

cattle choice steers at Toronto were down from \$10.68 per hundred pounds to \$10.25, while at Winnipeg the price advanced from \$9.84½ per hundred pounds to \$10.19. Hogs advanced from \$8.79 per hundred pounds to \$9.20 and sheep from \$6.62½ per hundred pounds to \$6.75. Dressed beef, hindquarters, fell from \$20.63 per hundred pounds to \$19.75. Beef hides were down from 22-23 cents per pound to 20-21 cents and calf skins from 26-27 cents per pound to 25-26 cents. In butter creamery solids at Toronto rose from 41 cents per pound to 42 cents. The decline in the price of eggs continued, fresh at Montreal being down from 50-53 cents per dozen to 48-50 cents and storage at

Toronto from 37¼ cents per dozen to 33 cents. Raw cotton at New York fell from 19.2 cents per pound to 18.4 cents, the low price for the month being 17.5 cents, reached near the beginning, and the high 19.1 cents towards the end. Cotton yarn fell from 37 cents per pound to 34½ cents. Wool was again higher, the price being up from 28-29 cents per pound to 31-32 cents. Flax fibre rose from 22-23 cents per pound to 23-24 cents. In non-ferrous metals lead fell from \$6.40 per cwt. to \$6.10; spelter from \$7.18 per cwt. to \$7.15; solder from 34½ cents per pound to 32 cents; and silver from 57¼ cents per ounce to 57½ cents. Copper was slightly higher at \$15.90 per cwt.

PRICES IN GREAT BRITAIN AND OTHER COUNTRIES

THE following notes give the latest information available as to the movements of prices in Great Britain and other countries. The index numbers of retail prices are from official sources unless otherwise stated. The authorities for wholesale prices index numbers are named in all cases.

Great Britain

WHOLESALE PRICES.—The Board of Trade index number, on the base 1913=100, was 140.9 for January, a decline of 0.4 per cent from December. Foods advanced 1.5 per cent with advances in all groups, while industrial materials declined 0.4 per cent with declines in iron and steel, other metals and minerals and cotton and advances in other textiles and the miscellaneous group.

The *Economist* index number, on the base 1901-05=100, was 176.7 for the end of January, a decline of 1.5 per cent from the previous month. Cereals and meat declined 0.8 per cent owing to a decline in pork, and other foods declined 4.3 per cent owing to declines in tea, sugar and butter. There was a slight advance in textiles caused by an upward movement in flax, partly counteracted by a decline in cotton. Minerals declined 1.9 per cent, showing no change in iron and steel, decreases in household coal, lead and tin and an increase in copper.

The *Statist* index number (in continuation of Sauerbeck's figures) was 120.9 for the end of January, a decline of 0.4 per cent from December. The foodstuffs index number was unchanged at 111.8, advances in vegetable foods and animal foods being offset by a decline in sugar, coffee and tea. Minerals fell 4.5 per cent owing to falls in prices of coal, tin and lead. In textiles, an advance in cotton

was offset by lower prices for flax. The advance of 1.4 per cent in sundries was attributable to leather and timber.

COST OF LIVING.—The Ministry of Labour index number, on the base July, 1914=100, was 166 at February 1, a decline of 1.2 per cent from the previous month. Foods declined 1.8 per cent owing chiefly to reductions in the prices of eggs, butter and bacon. Other groups were unchanged.

Belgium

WHOLESALE PRICES.—The index number of the Ministry of Industry, Labour and Social Affairs, on the base April, 1914=100, was 841 for December as compared with 838 for November. Seven groups showed increases, six showed reductions and four were unchanged, the changes in all cases being slight.

COST OF LIVING.—The official index number of the cost of living for a middle class family of moderate income, on the base 1921=100, was 211.25 for January, an increase of 0.9 per cent over the December level. Rent and lodging, clothing and sundries advanced slightly, while food and heat and light declined.

France

WHOLESALE PRICES.—The index number of *Statistique Générale*, on the base 1914=100, was 620 for January, showing an advance of 0.5 per cent over December. Native products were unchanged, while imported products rose 1.4 per cent. Foods advanced 0.5 per cent, with advances in vegetable foods, sugar, coffee and cocoa, and a decline in animal foods. Industrial materials also advanced 0.5 per cent, showing a slight fall in minerals and metals, a rise in textiles and no change in the sundries group.

COST OF LIVING.—The index number of *Statistique Générale* of the cost of living at Paris, on the base 1914=100, was 498 for the fourth quarter of 1927, as compared with 507 in the previous quarter. The decline was due to reductions in the price of food of 4 per cent, partly offset by advances in heat and light and clothing. Rent and sundries were unchanged.

Germany

WHOLESALE PRICES.—The index number of the Federal Statistical Office, on the base 1913=100, was 133.7 for January, a decline of 0.7 per cent from the December level. There was a decline in agricultural products and in manufactured goods, while provisions and industrial raw materials and semi-manufactured goods advanced slightly.

COST OF LIVING.—The official index number for January was 150.8, as against 151.3 for December, a decline of 0.3 per cent, which was due to declines in food and heat and light. The other groups were practically unchanged.

New Zealand

WHOLESALE PRICES.—The index number of the Census and Statistics Office, on the base average annual aggregate expenditure, four chief centres, 1909-13=1,000, was 1,565 for December, an increase of 1.0 per cent over the previous month. In consumers' goods, both foods and non-foods advanced, and in producers' materials, materials for building and construction declined while materials for farming and for other industries advanced.

COST OF LIVING.—The official cost of living index number, on the base July 1914=1,000, was 1,612 for November as compared with 1,610 for August. Foods advanced 0.2 per cent with advances in groceries and meat and a fall in dairy produce. Fuel and light advanced while clothing, drapery, footwear and miscellaneous commodities declined.

United States

WHOLESALE PRICES.—The index number of the Bureau of Labour Statistics, on the base 1926=100, was 96.3 for January as compared with 96.8 for December. Farm products, hides and leather products and building materials advanced, while foods, textiles, fuel and lighting, metals and metal products, chemicals and drugs and housefurnishing goods declined.

The *Analyst* index number, on the base 1913=100, was 145.9 for February, a decline of 1.1 per cent from the January level, owing chiefly to a decrease in the price of farm products of

2.6 per cent and in food products of 1.4 per cent and fuels also of 1.4 per cent. There was a slight decline in textiles, while metals, building materials and miscellaneous commodities showed small advances and chemicals were unchanged.

Dun's index number showing the cost *per capita* of a year's supply of commodities was \$191.884 at February 1, a decline of 0.5 per cent from the previous month. There was falls in the prices of meat, dairy and garden produce, metals and miscellaneous commodities and rises in breadstuffs, "other food" and clothing.

COST OF LIVING.—The Bureau of Labour Statistics index number of the cost of living on the base 1913=100 was 172.0 for December, as compared with 173.4 for June and 175.6 for December, 1926. All groups showed declines from the same month of the previous year except the miscellaneous group which advanced 1.2 per cent.

The index number of the Massachusetts Special Commission on the Necessaries of Life, on the base 1913=100, was 160.6 for January, an increase of 0.1 per cent over the previous month. Food advanced 0.3 per cent and clothing declined 0.1 per cent, while other groups were unchanged.

When giving evidence at an investigation into the administration of the Department of Labour and Workmen's Compensation Bureau of the State of New York, Mr. James A. Hamilton, State Commissioner of Labour, advocated the establishment of an exclusive state insurance fund, and the elimination of independent insurance companies from the field of workmen's compensation. He claimed that with an exclusive state fund the employers would not only be saved nearly 28 per cent of the premiums they now pay, but would be relieved of all possible responsibility for injury or death of employees. Under the present system if an insurance company fails, the employer is left with the responsibility.

During the month of February a total of 4,870 accidents were reported to the Ontario Workmen's Compensation Board in the industries in Schedule 1 of the Act, 71 of which were fatal cases; in Schedule 2 industries, 387 were reported, including 7 fatal cases; and 313 Crown, 4 of which were fatal, were reported during the month, making in all 5,570, of which 82 were fatal.

FATAL INDUSTRIAL ACCIDENTS IN CANADA IN 1927

THE accompanying tables provide an analysis of the fatal accidents to workpeople in Canada in the course of their employment during the calendar year 1927, according to causes, provinces and months, as well as by industries. Quarterly statements giving a list of the accidents occurring during the period covered and certain particulars as to each, appeared in the *LABOUR GAZETTE* for May, August and November, 1927 and February, 1928. The tables include such fatalities from industrial diseases as are listed with fatal accidents by workmen's compensation boards, etc.

The record is compiled from reports from the following governmental authorities: the Board of Railway Commissioners, the Explosives Division of the Department of Mines, Ottawa, the Workmen's Compensation Boards of Nova Scotia, New Brunswick, Ontario, Manitoba, Alberta and British Columbia, the Ontario Factory Inspector, the Ontario Railway and Municipal Board, the Saskatchewan Bureau of Labour and Industries and the British Columbia Department of Mines. Reports were also received from the Spanish River Pulp and Paper Company, the Algoma Steel Corporation, Limited, and the Algoma Central and Hudson Bay Railway, as well as from correspondents of the *LABOUR GAZETTE*, resident in the principal industrial centres throughout Canada. Industrial accidents reported in the press are also included in the record after inquiry has been made to avoid duplication. Most of the accidents in agriculture are recorded from press reports, and, while it is not known to what extent the accidents in this industry are covered, it is believed that in this respect the record is fairly complete. On the whole, however, most of the information obtained from this source is used merely to supplement information received from official sources.

Fatalities by Industries

The total number of fatalities recorded for the year was 1,378, the fatalities being attributed to the various industries in the following proportions: transportation and public utilities, 314 or 22.8 per cent of the total; construction, 183 or 13.3 per cent; mining, non-ferrous smelting and quarrying, 165 or 12 per cent; agriculture, 162 or 11.7 per cent; logging, 155 or 11.2 per cent, manufacturing 151 or 11 per cent; fishing and trapping, 125 or 9.1 per cent; service, 96 or 6.9 per cent; trade, 26 or 1.9 per cent; finance, 1.

The tables also include summary figures for 1926, being a final revision of the figures pub-

lished in the *LABOUR GAZETTE* for March, 1927, by the inclusion of accidents occurring in 1926, reported too late for incorporation into the annual statement. These accidents were shown in detail in supplementary lists in the *LABOUR GAZETTE* for May, August and November, 1927. The figures for 1927, being to some extent still incomplete, are accordingly not strictly comparable with the completed figures for 1926. In some industries where differences in the numbers of accidents are accentuated, these can be attributed to particular circumstances. For example, in the fishing and trapping group, the increase in the number of fatalities to 125 includes 90 fishermen, the crews of four large Nova Scotian fishing schooners and several smaller schooners, which were lost in a storm in August. This number includes fishermen from Newfoundland who were employed on these schooners, and excludes a number of Nova Scotian fishermen on a United States schooner which was also lost at that time. In logging, there was an increase from 129 to 155 fatal accidents and in construction from 166 to 183, which may be attributed in part to an increase in employment in these industries for the year.

Fatalities by Causes

The classification of fatal accidents according to causes shows that the largest number, 499, came under the category "by moving trains, vehicles, etc." This includes all accidents due to cars or engines, including mine and quarry cars, and to automobiles and other power vehicles and horse-drawn vehicles, as well as accidents caused by moving implements, both those impelled by power and those drawn by horses, by moving water craft and by air craft. The largest number of accidents thus caused, 173, were in connection with water craft, 112 of these victims being engaged in fishing and 45 in water transportation; 121 accidents were due to persons being struck or run over by or crushed by or between cars and engines (65 in the industry steam railways), 55 due to derailments (41 in steam railways), 24 to falling from or in cars or engines (22 in steam railways), while mine and quarry cars caused 23. Automobiles and other power vehicles and implements caused 64 fatalities, while animal drawn vehicles and implements caused 35, (accidents primarily caused by animals being classified elsewhere), and air craft caused 4 fatalities.

Next in order as a cause of fatalities was "falls of persons," which caused 203, including

(Continued from page 327)

63 falls into pits, shafts, harbours, rivers, etc. (some of which resulted in drowning), 58 falls from elevations, 28 due to collapse of support, 18 falls into holds of vessels, 16 falls from loads, etc., 8 falls from ladders, 7 falls on the level and 5 falls into tanks, vats, kilns, etc.

Fatalities numbering 154 were caused by falling objects, of which 67 were due to falling trees and limbs, 50 to objects falling in mines and quarries, 17 to objects falling from elevations, loads, piles, etc., 12 to breaking or loosening of straps, cables, etc., 4 to collapse of structure and 4 to other falling objects.

"Dangerous substances" caused 116 fatalities, of which 35 were due to explosive substances, 28 to electric current, 21 to gas fumes, etc., 19 to hot and inflammable substances and flames, 11 to steam escapes, boiler explosions, compressed air and 2 to conflagrations.

There were 51 fatalities caused by striking against or being struck by objects, of which

5 were due to striking against objects and 46 to being struck by objects. There were 49 due to working machines, 24 to prime movers and 21 to hoisting apparatus. There were 42 accidents caused by handling of heavy or sharp objects and 6 by the use of tools. Animals caused 37 fatalities including 24 by horses. The category "other causes" includes 176 fatalities, of which 15 were deaths following infection, 10 due to industrial diseases, 45 to drowning, of which no particulars were available, 12 to shooting and violence, 45 to cave-ins, landslides, ice jams, etc., 23 to lightning, frost, storms, etc., and 26 accidents of which no particulars were available.

Fatalities by Provinces

The classification of fatal industrial accidents according to provinces shows that the largest number, 460, occurred in Ontario. There were 253 in Quebec, 230 in British Columbia,

186 in Nova Scotia, 98 in Alberta, 56 in Manitoba, 53 in Saskatchewan, 39 in New Brunswick and 3 in Prince Edward Island. In Ontario, the largest proportion of fatalities occurred in the group, transportation and public utilities, where there were 124, with 85 in construction, 72 in manufacturing, 57 in agriculture, 38 in logging, 37 in mining, non-ferrous smelting and quarrying and 25 in service. In Quebec, the largest number, 59, was also in transportation and public utilities, with 56 in construction, 34 in service, 33 in manufacturing. In Nova Scotia and Alberta, there were respectively 35 and 30 mining fatalities. In Alberta no other industry suffered as many fatalities, but in Nova Scotia, the number of mining accidents was exceeded by the number in fishing and trapping, which was 98. In British Columbia, there were 83 fatalities in logging with 50 in transportation and public utilities, 39 in mining, etc. In Saskatchewan, the greater proportion of accidents, 32, occurred in agriculture.

Accident Frequency in Certain Industries

The table of fatalities by months, shows the highest point to have been in August, when there were 200, the average per month being 114.8. The low point for the year, 77, was reached in February. This table gives estimates of the number of employees in certain industries, the latest figures available being given in each case. The frequency of fatalities for the industries for which estimates were available was highest for logging, being 3.9 per thousand for the year, and second for mining, non-ferrous smelting and quarrying, being 2.1 per thousand. Fishing and trapping accidents showed a frequency of 2 per thousand, construction, one per thousand, and manufacturing 0.3 per thousand. The total number of employees in the group, transportation and public utilities, is not available, but for water transportation the ratio was 3.8 per thousand, for steam railways 0.9, for street and electric railways 0.5, for local transportation 0.5, and for electricity and gas 1.3 per thousand.

RECENT LEGAL DECISIONS AFFECTING LABOUR

Lumber Camp Cooks included in Minimum Wage Order

The Judicial Committee of the Privy Council, in a decision handed down in February, confirmed the decision of the British Columbia Court of Appeal in the case of Compton versus Allan and Thresher (*LABOUR GAZETTE*, September, 1927, page 1026). Compton, a cook in one of the lumber camps of the defendant company, claimed for an amount that would bring his pay to the rate of 40 cents an hour, as fixed for the lumbering industry by the Male Minimum Wage Act. This claim was refused by a county court judge, who held that a camp cook was not an employee in the lumbering industry. This decision was refused by the Court of Appeal, the Board of Adjustment which administers the Act having instructed counsel to argue the case on behalf of the plaintiff. Leave to appeal to the Privy Council was sought by the defendants, but the application was refused by the Judicial Committee.

—(*British Columbia—Compton versus Allan and Thresher.*)

Injunction Against American Federation of Labour Denied

By a decision rendered on February 16, Justice Wasservogel of the United States Supreme Court denied the application of the Interborough Rapid Transit Company of New York for a restraining order to prohibit the officials and members of the American Federation of Labour from attempting to organize, or interfere with, the members of the "company union," known as the Brotherhood of Interborough Rapid Transit Company Employees. The application was a sequel to an "outlaw" strike in 1926, when Edward P. Lavin organized the Consolidated Railway Workers' Union of Greater New York. Lavin was defeated in that dispute, and the company applied to the Supreme Court for, and obtained, an injunction restraining him, his associates, and James H. Coleman, the general organizer of the Amalgamated Association of Street and Electric Railway Employees, from all interference with the company union. The granting of this injunction was affirmed by the Appellate Division of the Supreme Court, but on January 10, 1928, the Court of Appeals at Albany, New York, reversed the decision by a unanimous vote.

In the meantime the company brought action to have Lavin, Coleman and others adjudged in contempt on the ground that they

had violated the terms of the injunction while it was in force prior to the decision of the Court of Appeals. They also asked for an injunction restraining from all activity to the detriment of the company union William Green, president of the American Federation of Labour; William D. Mahon, president of the Amalgamated Association of Street and Electric Railway Employees; Lavin and others. Finally the company asked for \$130,000 in damages alleged to have been sustained by them in consequence of the activities of union organizers.

Justice Wasservogel, in his decision, criticized the terms of the contract entered into on June 30, 1927, and retroactive to April 30, between the company and its employees, and held that "the intervention of a court of equity at this time is not warranted." He held that this contract gave the Interborough "unlimited and practically unhampered power to discharge employees," and continued: "Even as regards the causes of discharge listed as arbitrable, as, whenever the service of the employees 'shall be rendered unnecessary by reason of any change in economic conditions or the seasonal requirements of the company' or 'by reason of the adoption of any new device or the extension of the use of any existing device,' arbitration here would merely establish that the causes exist and that therefore the company may discharge. The contract purports to bind the employees for two years while the employer is not in substance subject to a reciprocal obligation. Where an employee abandons all rights to leave the service of his employer, whereas the employer reserves practically entire freedom to discharge him, there is no compensating consideration. Whatever the status of the contract at law, the provisions above referred to are, to say the least, inequitable."

Compensation for Eye Injury from Electric Welding Machine

A workman employed by a construction company in the province of Quebec sustained injuries in the course of his employment for which he claimed the sum of \$2,173 as compensation. In May, 1927, the claimant received instructions to have a steel ladder welded by electricity. The ultra-violet rays of the electric welding machine, he claimed, caused atrophy of the optical nerve of the right eye, which ultimately became blind. He sued the company under the Workmen's Compensation Act. Two specialists called on behalf of the workman stated that the injury

was caused by exposure to the ultra-violet rays, while two other specialists, called on behalf of the company, stated that it was impossible that the atrophy of the optical nerve was due to the rays of the welding machine, as the rays would have left a wound or some other traces of retinitis, and they stated that there was none in this case. As the medical evidence was conflicting the judge appointed an eye specialist in Montreal to report on the case. This expert in his report supported the claimant's contention. The court awarded the plaintiff the full amount of his claim, and the costs of the action.

—(*Quebec—Beadry versus Fraser-Brace Engineering Company, Limited.*)

Injunction against Officials of Southern Pacific Railway

A federal court injunction was granted last year to the Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees, restraining the executive of the Southern Pacific Railway in Texas and Louisiana from ignoring the provision of the Railway Labour Act providing for the submission of labour disputes to a mediation board, and for attempting to destroy the Brotherhood by setting up a "company union." Three executive officers of the company were called before Federal Judge Hutcheson, at Houston, Texas, in February, and were required to explain their action in violating the injunction. They were informed that jail sentences would follow further neglect on their part to comply with the following orders of the court:—

First, there must be a complete disestablishment of the Association of Clerical Employees (a company union), and withdrawal of said association as a sole, or as any, representative of the clerical employees. Next, the Southern Pacific must cease to permit officers and representatives of the company union to organize, promote, manage or attend to the business of such association, or any organization hereafter formed, on company time, at company expense, and under the aegis of the authority of the defendants.

It was ordered further, that the officials and other members of the Brotherhood who had lost their positions should be reinstated without prejudice and without loss of seniority, and with payment for time lost through dismissal.

Wages in Lieu of Notice need not Include Board

A domestic servant in England sued her employer for 12 shillings and 6 pence, being her wages for one week, in lieu of notice of dismissal, and for 21 shillings in respect of board for one week. The amount of 12s. 6d. had been paid into court, and the question at issue was to the plaintiff's right to a payment in respect of board. On behalf of the defendant the case of *Gordon versus Potter*, decided in 1859, was cited, in which it was held that a domestic servant on dismissal was not entitled to board wages in addition to wages in lieu of notice.

The county court judge found in favour of the defendant with costs.

Canadian Border Workers not "Immigrants" to United States

The United States Circuit Court of Appeals handed down a decision at New York, March 5, to the effect that Mary Cook and Antonio Danelon, residents of Niagara Falls, Ont., who were taken into custody when they attempted to cross the Peace bridge on Dec. 1, last, for the purpose of working for the day in Niagara Falls, N.Y., were not immigrants and therefore not lawfully subject to detention.

The court held that the Jay Treaty entered into by Canada and the United States in 1794 granted workers of either nationality the right to transact business in the neighbouring country and for that purpose to enter the country temporarily without the usual immigration restrictions.

The decision has been awaited with interest by immigration officials and by thousands of workers living in Canada who have jobs on this side of the boundary line. The decision which was unanimous, makes it clear that even the fact that Miss Cook is a British subject not born in Canada, and that Danelon is a native of Italy, they cannot be lawfully excluded as both are British subjects living in Canada.

The court's opinion, written by Presiding Judge Manton, sets forth that the Jay Treaty provides the right of free temporary passage across the Canadian border for business purposes for both Canadians and Americans.

Because the relators were not immigrants within the act and were within the exception of section 203 of the immigration law, wrote Judge Manton, "they were both permitted by law to enter the United States temporarily for their respective businesses, one to work and the other seeking employment. At no time

did they intend to remain permanently or seek to migrate here.

"The treaty effective at the time of their crossing and re-crossing gave them, as British subjects, privileges accorded under the explanatory note of article 3, the treaty of 1794, which included that of crossing and re-crossing for the purpose of business and commerce, and such they were engaged in. The writ should have been sustained and their discharge granted."

Injured Workman Refusing Operation does not Forfeit Compensation

A judgment confirming the opinion given last year in a similar case in the Superior Court at Montreal (LABOUR GAZETTE, March, 1927, page 343) was rendered in the same court on February 27, it being held that an injured workman does not lose his right to an indemnity under the Workmen's Compensation Act because of his refusal to undergo an operation which might remove the cause of action. In this, as in the earlier case, the plaintiff sustained hernia in the course of his employment. On behalf of the railway company, for whom the claimant had worked as trackman, it was stated that he had declined

to follow their suggestion that he should submit to an operation. The court stated that in England the question whether refusal to undergo an operation disqualifies the patient for compensation resolves itself into the further question of the reasonableness of such a refusal. Opinions in France on this subject vary, some authorities making a distinction between operations in general, and those involving only a slight risk and susceptible of being performed under a local anesthetic.

The Montreal court held that according to the law as it existed in the province of Quebec, there is no provision compelling the victim of an accident, who sues for bodily injuries, to submit to a medical examination. That being so, an injured employee cannot be required to submit to an operation even if the risk is practically negligible. The claimant in the case before the court could have had the proposed operation under a local anesthetic. On the other hand there was no authority to require him to incur even this slight risk under pain of the loss of his indemnity under the Workmen's Compensation Act.

The plaintiff had asked for \$2,500, but was awarded \$751.

[NUMBER 4

NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

Monthly Summary

INDUSTRIAL employment in Canada at the beginning of March showed a moderate increase, according to returns received by the Dominion Bureau of Statistics from 6,222 employers of labour, each with a minimum of fifteen employees, and representing all industries except agriculture, fishing, hunting and highly specialized business. The working forces of these firms aggregated 846,095 persons, as compared with 842,066 in the preceding month. This increase caused the index number (with January, 1920, as the base, equal to 100) to rise from 100.8 on February 1, to 101.4 at the beginning of March, as compared with 96.3, 91.5, 87.0, 90.7, 89.9, 81.9 and 88.0 on March 1, 1927, 1926, 1925, 1924, 1923, 1922 and 1921, respectively. Reports received from the offices of the Employment Service of Canada indicated a decline during February in the average daily placements in employment as compared with the previous month, but a slight increase in comparison with February last year. The decline was caused mainly by a reduction in logging activity. At the beginning of March, 1928, the unemployment percentage reported by local trade unions was 7.0 in comparison with 6.8 per cent of inactivity at the beginning of February and with 6.5 per cent at the beginning of March, 1927. The March percentage was based on the returns tabulated by the Department of Labour from 1,677 labour organizations comprising a membership of 178,892 persons.

The average cost of a weekly family budget of twenty-nine staple foods was \$10.92 at the beginning of March, as compared with \$11.03 for February; \$11.05 for March, 1927; \$11.46 for March, 1926; \$10.74 for March, 1925; \$10.58 for March, 1924; \$10.79 for March, 1923; \$10.54 for March, 1922; \$13.23 for March, 1921; \$15.98 for March, 1920; \$12.66 for March, 1918; and \$7.68 for March, 1914. In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon prices in 1913 as 100, advanced to 152.8 for March, as compared with 150.8 for February; 148.7 for March, 1927; 160.0 for March, 1926; 161.6 for March, 1925; 154.4

for March, 1924; 159.9 for March, 1923; 153.6 for March, 1922; 186.0 for March, 1921; 241.3 for March, 1920; and 194.3 for March, 1918.

The time loss due to industrial disputes in March, 1928, was greater than during February, 1928, but less than in March, 1927. Eleven disputes were in existence at some time or other during the month, involving 773 workpeople and resulting in a time loss of 6,105 working days. Corresponding figures for February, 1928, were: 7 disputes, 232 workpeople, and 5,103 working days; and for March, 1927, 10 disputes, 520 workpeople and 7,312 working days.

Industrial Disputes Investigation Act, 1907

During the month of March the Department received the report of the Board of Conciliation and Investigation in connection with a dispute between the Manitoba Telephone System and its electrical workers. In the case of the dispute between the Winnipeg Electric Company and members of the Street Railway employees' unit of the One Big Union a settlement was reached through the personal intervention of the Minister of Labour and of the conciliation officers of the Department of Labour. The text of the report and a full account of the recent proceedings under the Act, are given on page 352.

Progress of Old Age Pension Legislation in Canada

The Old Age Pensions Act (Revised Statutes of Canada, 1927, chapter 156) was made operative in the Yukon Territory under an agreement concluded during March in pursuance of a resolution adopted last year by the Council of the Yukon Territory. The legislatures of Manitoba and Saskatchewan, at the sessions recently concluded, enacted legislation making the federal act operative within these provinces after the necessary arrangements with the Federal Government have been completed, and it is hoped that the payment of pensions under these acts will shortly commence. As already noted in the LABOUR GAZETTE the Old Age Pensions Act was made

effective in September, 1927, in British Columbia, which was the first province in Canada to give effect to the pension system.

The text of the Old Age Pensions Act, 1927, was given in the *LABOUR GAZETTE*, April, 1927, page 375. It establishes a system of pensions for persons of seventy years of age and upwards, whose income from other sources is less than \$365 per year, the maximum rate of pension being \$20 a month, which is lessened by the amount of private income. One-half of the amount of the pension payable is borne by the federal government, and the other half by the governments of such provinces as enact legislation giving effect to the pension system, the cost of administration being borne by the respective governments. The Old Age Pensions Act is effective only in those provinces in which the provincial legislatures have enacted special legislation expressly for this purpose.

Industrial Disputes Investigation Act in Alberta

The Legislative Assembly of the Province of Alberta at its recent session passed an "Act respecting the Industrial Disputes Investigation Act of Canada and Labour Disputes within the jurisdiction of the Province." The new Act became effective as from April 2. The purpose of the measure, as stated in a note attached to the bill, is "to give the Dominion Government the power to deal with (a) certain labour disputes, for example in the mining industry, mentioned in the Industrial Disputes Investigation Act, as to which there may be some doubt as to the extent of the legislative jurisdiction of the Dominion; and (b) other labour disputes mentioned in any subsequent amendment to the Act, upon being proclaimed by the Lieutenant Governor in Council, as to which there may be similar doubts."

The preamble of the Act sets forth that "the provisions of the Industrial Disputes Investigation Act, being chapter 112 of the Revised Statutes of Canada, 1927, do not apply to industrial disputes which are within the exclusive legislative jurisdiction of any Province of Canada, except only any dispute which is within the exclusive legislative jurisdiction of any Province and which by the legislation of the Province is made subject to the provisions thereof"; and that "it is deemed expedient that the provisions of the said Act shall be made to apply to industrial disputes of the nature defined in the said Act which are within the exclusive legislative jurisdiction of the Province."

The Alberta legislature, in 1926, passed an Act for the Settlement of Labour Disputes, in order to meet the situation arising out of the recent decision of the Judicial Committee of the Privy Council declaring invalid those sections of the Industrial Disputes Investigation Act which deal with matters coming properly within provincial jurisdiction. The Dominion Parliament in 1925 enacted legislation making the application of these sections conditional upon the enactment of enabling acts by the provinces concerned. The Province of Alberta preferred to retain full authority with respect to the settlement of industrial disputes within its exclusive jurisdiction and adopted a Labour Disputes Act of its own on April 8, 1926, which resembles generally the federal statute. The provincial law relates, however, to all industries and omits any provisions prohibiting strikes and lockouts pending the report of the board.

An account of the proceedings under the Alberta Labour Disputes Act during its first year was given in the *LABOUR GAZETTE*, June, 1927, page 615.

Male minimum wages in British Columbia

The text of a new order issued under the Male Minimum Wage Act of British Columbia to govern employment in the catering industry, was given in the last issue of the *LABOUR GAZETTE* (page 260). The new order took effect on April 1, and at that date some adjustments were already being made in hotel and restaurant staffs. The male minimum rates are now 40 cents an hour for a straight shift and 42½ cents for a split shift for employees not receiving meals, and 32½ cents per hour for a straight shift and 35 cents for a split shift for employees receiving meals. According to newspaper reports, two large hotels at once gave notice of dismissal to all their male dishwashers, stating that they would in future employ women and girls, for whom the rate fixed by the Minimum Wage Act (applying to female employees) is \$14 for a week of 48 hours without free meals. It is stated that many male dishwashers in hotels were merely suffering from war disabilities. The Board of Adjustment which administers the Male Minimum Wage Act has no power to interfere with employers who may replace their male helpers with women, but it has control over any agreements between employers and physically handicapped men for wages below the minimum scale.

National Health Insurance in Great Britain

A bill to amend the National Health Insurance Act, 1924, and other enactments relating to health insurance was introduced

recently in the British House of Commons (The provisions of the new Unemployment Insurance Act were outlined in the February issue of this GAZETTE, page 154). The bill is based mainly on the majority report of the Royal Commission on National Health Insurance. That report, presented early in 1926, expressed the opinion that national health insurance had established its position as a permanent feature of the social system in Great Britain. A similar opinion in reference to unemployment insurance was expressed by the "Blanesburgh Commission" on that subject in 1927 (LABOUR GAZETTE, March, 1927, pages 249, 284). The Health Insurance Commission strongly recommended the continuance of health insurance on its existing compulsory and contributory basis, but recommended several administrative changes.

National Health Insurance in Great Britain had its origin in the National Insurance Act of 1911, the scheme coming into operation in July, 1912. As already mentioned, National Health Insurance in Great Britain is on a compulsory and contributory basis. The persons who are required to be insured are, subject to certain exceptions, all those between the ages of 16 and 70 who are employed under a contract of service in manual labour, or in non-manual employment at a rate of remuneration not exceeding £250 a year. The total number of persons insured exceeded 15,000,000 in 1926.

The cost of the scheme is shared between the insured persons, their employers and the National Exchequer. The revenue is derived, in the first instance, from weekly contributions paid partly by the workers and partly by their employers by means of health insurance stamps affixed to contribution cards, the rates of contribution in 1925 being 10d. a week in the case of men, of which 5d. was payable by the employer and 5d. by the worker; and 9d. in the case of women, of which 5d. was payable by the employer and 4d. by the worker. As from January 4, 1926, these rates were reduced to 9d. a week in the case of men (employer 4½d., worker 4½d.) and 8½d. a week in the case of women (employer 4½d. and worker 4d.) consequent upon the modifications in the benefits of the scheme which follow from the provision of pensions at 65 under the recent Widows', Orphans', and Old Age Contributory Pensions Act (LABOUR GAZETTE, June, 1925, page 581).

The total income received from contributions in 1924 amounted to £27,377,000, and about £5,000,000 was derived from interest on accumulated funds. The expenditure on benefits in the same year was £26,118,000 and on cost of administration £3,804,000. The total expenditure from the Exchequer was £7,045,000.

The benefits provided under the scheme are as follows:—

(1) Medical benefit, i.e., medical treatment and attendance, including the provision of proper and sufficient medicines and of the prescribed medical and surgical appliances.

(2) Sickness benefit, i.e., periodical payments during incapacity for work through illness. The ordinary rates of sickness benefit are 15s. a week for men, and 12s. a week for women, commencing on the fourth day of incapacity and continuing for a maximum period of 26 weeks.

(3) Disablement benefit, i.e., a continuance of periodical payments during illness at the reduced rate of 7s. 6d. a week for both men and women after the title to sickness benefit has been exhausted.

(4) Maternity benefit, i.e., payment of the sum of £2 on the confinement of an insured woman or the wife of an insured man. (A total sum of £4 is payable in the case of a married woman who is or has recently been herself an employed contributor; these cases represent 25 per cent of the whole number of payments to married women.)

(5) Additional benefits, which may be provided by an Approved Society having a disposal surplus on valuation, and may take the form either of an increase of the normal cash benefits, or payment towards the cost of various forms of treatment, such as dental, ophthalmic, hospital or convalescent home treatment.

Rates of compensation for silicosis in Ontario

The rates for compensation to be paid to workmen in mines in Ontario who contract silicosis in the course of their employment have been announced. This disease was made compensable by legislation in 1926 (LABOUR GAZETTE, May, 1926, page 450). Under the amendments enacted in that year silicosis was divided into three stages, the ante-primary, the primary and the secondary.

A lump sum of \$500 will be paid for miners in the ante-primary stage, "where it is found by the Board that the earliest detectable specific physical signs of silicosis are or have been present, whether or not capacity for work is or has been impaired by such silicosis."

One thousand dollars will be paid to workmen in the primary stage, "when it is found by the Board that definite and specific physical signs of silico-is are or have been present, and that capacity for work is or has been impaired by that disease, though not seriously and permanently."

The secondary stage entitles workmen to the maximum compensation of 66 $\frac{2}{3}$ per cent of their wages, "when it is found by the Board that definite and specific physical signs of silicosis are or have been present, and that capacity for work is or has been seriously and permanently impaired by that disease, or when it is found by the Board that tuberculosis with silicosis is or has been present."

A note on the causes and symptoms of this disease was given in the *LABOUR GAZETTE*, June, 1926, page 574.

Self-insurance for workmen's compensation in Pennsylvania

The Bureau of Workmen's Compensation of the State of Pennsylvania received reports of 2,064 fatal accidents in 1927, as compared with 2,116 in 1926. The industrial group responsible for the largest number of fatalities was coal mining, with 502 in the anthracite and 389 in the bituminous field. The manufacturing group had 400 fatal accidents, followed by transportation and public utilities with 273, and construction with 235 fatalities. During the year the Bureau found that the average time required by self-insurers and insurance companies for reporting accidents was eighteen days, and the average time required for submitting agreements for the payment of compensation to the Bureau was forty-eight days. In view of the fact that it is proposed to reduce the waiting period for the beginning of compensation payments in Pennsylvania from 10 to 7 days, the Bureau points out that it is of the utmost importance that these intervals in reporting accidents and submitting agreements shall be greatly reduced if compensation payments are to be made promptly.

A feature of compensation in Pennsylvania is the wide extent of the practice of "self insurance." About 60 per cent of the compensation paid in the state comes from this group. A special section of the Bureau is charged with the responsibility of passing upon the application of employers for the privilege of operating as self-insurers. The importance of this work is shown by the fact that it involves the extending of credit to these employers to the extent of about three million dollars annually. The "Insurance Coverage" section of the Bureau is also responsible for enforcing the compulsory insurance provision of the Act.

Problems of compensation for industrial diseases

An article in the *American Journal of Public Health* for March, 1928, discusses various problems arising out of occupational disease, considered under its medical and legal aspects. Certain specified diseases arising out of and in the course of employment are compensated under most of the provincial Workmen's Compensation Acts in Canada. These diseases are also subject to compensation in the United States by the federal government and by twelve states. The writers of the article referred to are Dr. H. H. Kessler, medical director of the New Jersey Rehabilitation Commission, and B. S. Coleman, industrial secretary of the Tuberculosis League in the same State. They point out that this class of compensation is practically in the hands of the doctor concerned, the Board or the referee looking to him in each case for guidance. The doctor makes the diagnosis and also practically determines the responsibility of the last employer. As a rule the last employer pays for the entire condition unless he can show conclusively that the symptoms were present at the time of hiring. The main problem met with is in connection with cases of chronic poisoning with no visible symptoms at the time of hiring, but developing symptoms in their new place of employment. The writer recommends a fuller system of health record in regard to all applicants for employment; the true facts should be elicited and recorded by means of a thorough physical examination, by full information as to past record, both general and occupational, and by knowledge of the hygienic conditions at the plant. The following conclusions are reached:—

"An experience with the management and adjudication of cases of occupational diseases leads us to the belief that only occupational poisons should be compensated; that all other forms of illness which can directly or indirectly be traced to industrial conditions should be compensated through a system of workmen's sickness insurance; that increased reporting of occupational disease could be accomplished from a three-point attack: (1) compulsory reporting of the doctor to the board of health; (2) compulsory reporting to the department of labour by the employer; and (3) the establishment of an occupational disease clinic, under state auspices, for the dissemination of information and the demonstration of methods of examination and detection of occupational disease.

"The payment of compensation for occupational disease must be made in accordance with medical facts. Compensation for permanent

disability should be based on accepted standards, not necessarily arbitrary, such as could be adopted or proposed by such an organization as the American Public Health Association. The use of the strength diminution and reduction in life expectancy is suggested as a rational basis for such an appraisal. Finally, the autopsy is an important factor in determining the cause of death."

**Advisory Council
for Juvenile
Employment in
England**

The British Minister of Labour has appointed a National Advisory Council for Juvenile Employment in England and Wales, in accordance with the recommendation of the committee on Education and Industry, 1926 (the "Malcolm Committee"), and a similar council will shortly be set up for Scotland. The Earl of Shaftesbury will act as chairman of this Council, which includes representatives of the local education authorities; the London Juvenile Advisory Council (LABOUR GAZETTE, April, 1925, page 372); the juvenile advisory committees; the teaching professions; the National Confederation of Employers' Organizations; the General Council of the Trade Union Congress; and the Ministry of Labour. The Council is instructed to examine and discuss matters arising out of the report of the Committee on Education and Industry, and to advise the Minister of Labour thereon.

The report of the "Malcolm Committee" outlined the existing public arrangements for advising boys and girls as to choice of employment, and for placing them in such employment. Such arrangements date back to the labour exchanges (now called employment exchanges) established in 1909. The Labour Exchange Act was followed in 1910 by the Education (Choice of Employment) Act, which enabled local education authorities to make arrangements to assist boys and girls in choosing their employment. Finally, in 1923, under the Unemployment Insurance Act of that year, it was provided that a Local Education Authority should not exercise such advisory powers unless it also undertook duties in connection with the administration of unemployment benefit to persons under the age of 18 years. Under these arrangements the work of advising and placing young persons was divided between two organizations:—the Ministry of Labour, assisted by local juvenile advisory committees, and the Local Education Authorities,

working through juvenile employment committees. The Malcolm Committee recommended that the Ministry of Labour should assume full responsibility for the two services, leaving however the Local Education Authorities to conduct their advisory work on individual lines. Among its other recommendations the committee suggested close co-operation between neighbouring areas; that the minority should organize national statistics bearing on the employment and unemployment of juveniles; that well qualified advisory officers should be appointed; that the use of psychological tests should be encouraged; that information as to industrial conditions should be made available to young people and their parents.

**Industrial
Injuries and
"Common
Employment"**

A case of some interest in Canada from its bearing on the case of *Toronto Power Company Limited versus Paskwan*, to which the Privy Council in 1915 held that the doctrine of "common employment" did not apply, is reported among the Recent Legal Decisions in this issue. The Privy Council, in the earlier case, ruled that the duty of an employer to provide proper appliances, as distinguished from the subsequent care of them, cannot be delegated. In the recent case, however, Mr. Justice Finlay, in the King's Bench Division, held that the matter was one of fact in each particular case, and though there might be cases, such as that of machinery in a power house, as in the Toronto Power Company case, where delegation could not be allowed, yet these were cases, such as that before the court, which stood on a different footing.

By the Common Law of England an employer is not in general liable for an injury caused to an employee by the negligence of a fellow-servant. This rule is known as the "doctrine of common employment," and the theory underlying it is that an employee when entering upon the service of his employer is deemed to have undertaken the risk that his fellow-servants may be negligent, and so cannot complain if he suffers personal injury from this cause. This doctrine was to a large extent superseded in England by the Employers' Liability Act, 1880, and the Workmen's Compensation Act, 1925, but it still applies to cases where for some reason or other the employee does not claim the benefit of those Acts.

Saskatchewan Workmen's Compensation Commission

The government of the Province of Saskatchewan has appointed a Commission, under the Public Inquiries Act, to inquire into the subject of Workmen's Compensation in the province. The Commission is composed of the following members: Messrs. Percy M. Anderson, K.C., Regina; Lachlan D. McTavish, Moose Jaw; Harry Perry, Regina; Francis Mallock Still, Regina; and Asa W. Heise, Saskatoon. They are to inquire into and report upon labour conditions in the province with a view to ascertaining the most equitable system or systems for fixing and determining what indemnity or compensation should be allowed to workmen for injuries received by them arising out of or in the course of their employment, and in particular, without restricting the generality of the foregoing terms, upon the following matters:

1. As to whether the Workmen's Compensation Act now in force in Saskatchewan provides adequate and certain compensation to all classes of injured employees coming within the scope of its provisions.

2. As to whether the Workmen's Compensation Act now in force in Saskatchewan is fair and equitable to employers coming within its provisions.

3. As to whether any amendments might be made to the said Act which would remedy or remove any injustice or other cause of complaint on the part of employers or employees.

4. As to whether a system embodying the principle of compulsory employers' liability insurance might be adopted in lieu of, or in addition to, the present Act.

5. As to whether the system of collective liability commonly known as State Insurance should be adopted in lieu of the present Act.

6. As to what is the approximate aggregate payrolls of employers likely to be included in a system of collective liability insurance.

7. As to what should be regarded as an equitable scale of compensation to injured employees and their dependants.

"The Law of Organized Labour and Industrial Conflicts"

The Lawyers' Co-operative Publishing Company, Rochester, New York, has published a useful work of reference by Edwin Stacey Oakes, on "The Law of Organized Labour and Industrial Conflicts." The writer's aim is to provide a complete compendium of law on labour unions, employers' associations, union

labels, contracts between unions and employers, strikes, lockouts, boycotts, blacklisting by employers or workmen, interference with another's employment, injunctions in labour cases, conciliation and arbitration. All important decisions on these subjects are cited, those of courts not only in the United States, but also in Great Britain and Canada. The work includes also incidental topics such as criminal syndicalism, the effect of strikes and liability for non-performance of a duty or contract obligation, personal injuries incidental to a strike, and strike insurance.

"Towards Industrial Peace" in Great Britain

The department has received a volume entitled "Towards Industrial Peace" (London: P. S. King and Son, Limited), being the official report of the proceedings of the conference held last year at the London School of Economics under the auspices of the League of Nations Union of Great Britain, on systems of fixing minimum wages and methods of conciliation and arbitration. It will be recalled that "minimum wage-fixing machinery" was discussed at the 10th session of the International Labour Conference, and will, under the double discussion procedure, be discussed again at the 11th session to be held at Geneva in May. The conference at London was attended by representatives of all schools of economic thought, including trade union leaders, employers, professors, administrators and members of Parliament. The report comments on the large amount of agreement found to exist between persons of such different outlook.

The discussion on minimum wage-fixing machinery centered on the British system of trade boards. It was agreed that these boards have now proved their utility and may be considered a permanent feature in industry. The fear that trade boards and joint industrial councils would operate against labour organization was felt to be without real foundation, the conference agreeing that trade unions were in fact necessary to give full effectiveness to these bodies. This point was emphasized in the debate on the question whether the awards of the joint industrial councils should be enforced compulsorily, it being shown that industrial awards, containing complicated terms, could not be enforced without complete organization of both sides of industry.

The discussion on industrial arbitration and conciliation brought out unanimous approval of the following remedies for the existing in-

the discussion on industrial arbitration and conciliation brought out unanimous approval of the following remedies for the existing in-

dustrial unrest: Complete disclosure by employers of profit and loss and business conditions; a recognized standard of what constitutes ability to pay wages; frequent meetings between workmen and employers to discuss economic and industrial problems; and the creation of an economic council representing organizations of employers and employed.

The steam boilers' branch of the Department of Public Works of the province of Saskatchewan in its report for the year ending April 30, 1927, states that 2,762 inspections were made during the year, these being as follows: boilers, 2,516; air pressure tanks, 228; refrigerating plants, 18. During the year 3,327 traction and portable engine licenses were issued.

During the month of March a total of 5,016 accidents were reported to the Ontario Workmen's Compensation Board in the industries in Schedule 1 of the Act, 20 of which were fatal cases; in Schedule 2 industries 372 were reported, including 3 fatal cases; and 323 Crown, 3 of which were fatal, were reported during the month, making in all 5,711, of which 26 were fatal.

The Right Hon. S. M. Bruce, prime minister of the Commonwealth of Australia, has ap-

proved a proposal that the Industrial Peace Conference which is to be held shortly, should be made a permanent body under the title of Commonwealth Economic Conference. He suggested that the coming conference should state whether or not it considered a permanent organization to be desirable.

The National Bureau of Casualty and Surety Underwriters has published an annual index to current literature dealing with casualty insurance, suretyship and related subjects which had been received in the library of the Bureau during the year 1927. The aim of the index is to cover the various lines of casualty insurance and suretyship and the allied problems confronting the underwriter, such as insurance regulation and legislation, accident prevention, industrial hygiene and safety methods and devices.

The Board of Education of Toronto recently decided, in response to a request from the Association of Mechanics and Mechanics' Helpers, that workmen who have been with the Board more than five years and who have been employed on an average of 39 weeks in each of those years, should be given two weeks' vacation in summer. Last year the Board granted one week to these men, with pay, the cost being \$3,553.

Report of Australian Mission to the United States

The Australian industrial mission, which visited the United States in 1927, recently issued majority and minority reports representing the views of employers and workers respectively.

Majority Report.—The majority report emphasises the relations existing in the United States between employers and workers, and states that the effort of employers to understand the wants and requirements of their workers and the readiness of the workers to grasp the idea that the interests of both are identical are very pronounced. It is stated that the management of undertakings aims at collecting a good working force, giving it the opportunity of earning good wages, keeping it working steadily and continuously, gaining in confidence, and keeping faith with it. The attitude of organized labour towards scientific management was found to be one of broad-minded enquiry and experiment. The report also deals with the prevention of

waste, including unemployment, by the study of markets, etc.

Minority Report.—The minority report attributes the industrial prosperity of the United States to superior equipment and efficient management. It denies that American methods of mass production could be introduced in Australia, and states that the piece work system used in the United States could not be generally applied in Australia until the population or volume of production justified the installation of equipment and efficient management such as prevail in the United States at present.

Collective bargaining, it is stated, has no place in the United States, since a large part of the unskilled labour is unorganized. The company unions existing in many factories are said to have been established for the purpose of preventing the development of trade unionism. Finally, the minority report points out that wages in the United States are not determined by reference to the cost of living.

GENERAL REVIEW OF THE INDUSTRIAL SITUATION

Employment

THE employment situation at the end of March was reported by the superintendents of the Employment Service of Canada to be as follows:—

Spring farming activities in the Province of Nova Scotia were about to commence. The fishing industry was reporting fairly good catches. Although woods work in the logging industry was rather slack, river driving was about to begin. Sawmills were fairly busy throughout the province. Building and construction in Halifax were unusually busy with some large projects already well under way, and with some new contracts in sight. The manufacturing industry was fairly busy; iron and steel showed good activity. The coal mining industry reported reasonably good production. Transportation, both freight and passenger, was very fair, while trade showed an improvement. The Women's Divisions of the employment offices were reported as placing substantial numbers of women domestic workers.

In the Province of New Brunswick spring farm activities were also about to begin. The fishing industry was reported to be in a fairly good condition. The logging industry in this province was quiet, and river driving had not yet been started. The manufacturing industry was normally busy with the pulp, paper and lumber branches being singled out for special mention. While building and construction were reasonably busy with fairly good prospects in the City of Saint John, elsewhere these industries were rather quiet. Trade was good, as was also the case with transportation; in this latter group winter port activities at Saint John were stated to be brisk, preparatory to the closing of the winter season. There was a good demand for women domestic workers at the different offices.

Orders for farm workers were considerably more numerous at the Quebec employment offices. Log cutting being practically over, vacancies for workers in this group were restricted to those for river drivers. Manufacturing throughout the Province of Quebec appeared to be very satisfactory, with special mention being made of printing, rubber, textiles, and tobacco plants in Montreal; in Quebec City the leather trades were stated to be operating at full capacity; from Hull reports indicated that some increases in manufacturing staffs were being made; while from Three Rivers it was reported that the paper industry showed considerable improve-

ment. In the building and construction group prospects were encouraging as it was anticipated that substantial programs for building would be carried out by municipalities as well as by private undertakings. Rail transportation was brisk. Trade did not show any improvement. Orders for women domestics were increasing, although they were being filled satisfactorily.

A considerable number of the offices in the Province of Ontario reported increases in the numbers of orders for farm help being received. Manufacturing industries appeared to be increasing their activities, and a substantial number were taking on more workers. Building showed some more activity, and prospects were said to be fair. As the logging cut for the year was fairly well over, men were coming out of the bush. Metal mines continued to operate normally. The demands for women domestic workers were increasing in this province, and orders for summer resort workers were beginning to come in.

With the return of spring weather a very substantial increase in the number of farm vacancies being notified to the employment offices of Manitoba was reported. However, it would appear that the number of workers seeking farm work was substantially enough to enable the offices to keep pace with orders when received. Railroad construction was beginning to require workers, and in some cases men laid off last fall were taken back. Building construction, particularly in the City of Winnipeg, was fairly active for the season. While the mining industry was rather quiet as yet, a busy summer in this branch was anticipated. A considerable number of logging placements were still being made from the Winnipeg employment office. It was reported that a combination paper mill and box factory to cost one million dollars would be erected in Winnipeg this year. Jobs for casual labourers as usual were fairly scarce. Trade showed a steady improvement. The demand for women workers was not quite so brisk as in previous weeks.

While farm orders notified to the employment offices in Saskatchewan were considerably increased in number, the applications being registered were more than sufficient to fill them. Construction in this province was fairly quiet, but the prospect of an opening up in this industry in the not distant future was reassuring. The demands for women workers were not heavy, and little difficulty was experienced in satisfying them. Generally speaking, conditions, while rather quiet,

were fairly satisfactory for the time of year. Rather backward weather in the Province of Alberta had retarded the influx of orders for farm workers usually registered at this time, but their receipt before many days

was anticipated. It would seem that when they were received, the number of competent applicants would be practically sufficient to take care of them. Although building and construction were not gaining momentum

*Figures for end of previous months. †Bradstreet. ‡Maclean Building Review. §For group figures see articles elsewhere in this issue. **Figures for four weeks ending March 31, 1928, and corresponding previous periods. ***The index of the physical volume of business includes, forestry, mining, construction, manufacturing, trade, imports, exports, car loadings, shares traded and bank debits. Industrial commodity production includes forestry, mining, manufacturing and construction. Manufacturing includes production of flour, sugar, newsprint, pig iron, steel and automobiles; imports of cotton, rubber, wool and petroleum; slaughtering of cattle, sheep and hogs; storage holdings of butter and cheese. ††Preliminary (1)Excluding lines east of Quebec. (2)Including lines east of Quebec. (3) Life Insurance Sales Research Bureau, Hartford, Conn.

at a very rapid pace, some pronounced prospects were in the offing, and it was expected that a substantial improvement in these lines would develop shortly. Activity in the logging industry was gradually being curtailed. While the coal mining industry was rather slack, the new rate for Alberta coal to the East was causing orders for the product to be received, and it was reported to be only a matter of time till increased activity would be the result. The demand for women domestics continued fairly good, but there was no apparent shortage of applicants.

While the logging industry in the Province of British Columbia showed fair activity, there was no substantial demand for workers of this class. The situation in the metal mining industry was similar: while the mines apparently were working normally, the employment offices were not being asked to refer many additional workers. Building and construction appeared to be rather active for the time of year, and prospects for some additional work opening up at a later date were pronounced. The demand for women domestic workers showed a slight improvement. Generally, conditions throughout the Coast province were not unfavourable, and although some unemployment was in evidence, it was anticipated that with the return of fine weather this condition would be gradually improved.

EMPLOYERS' REPORTS.

There was a moderate gain in employment at the beginning of March, according to the monthly statements furnished to the Dominion Bureau of Statistics by 6,222 of the larger employers of labour throughout Canada. The working forces of these firms aggregated 846,095 persons, as compared with 842,066 in the preceding month. This increase caused the index number, (with January, 1920, as 100) to rise from 100.8 on February 1 to 101.4 at the beginning of March, as compared with 96.3, 91.5, 87.0, 90.7, 89.9, 81.9 and 88.0 on March 1, 1927, 1926, 1925, 1924, 1923, 1922 and 1921, respectively.

The trend was upward in the Maritime Provinces, Ontario and British Columbia, but in Quebec and the Prairie Provinces contractions were indicated. In the Maritime Provinces, improvement was registered in manufactures, particularly in iron and steel works, and transportation was also busier, while logging, mining and construction reported seasonal losses. In Quebec, the decrease was due to seasonal curtailment, mainly in construction and logging, but also in transportation and trade. Manufacturing, on the other hand, was decidedly brisker. In Ontario, manufacturing recorded considerable recovery, and

mining and trade were also more active, while construction and logging were seasonally slack. In the Prairie Provinces, manufacturing showed slight increases, and construction marked improvement, but mining and transportation reported reduced activity. In British Columbia, manufacturing, particularly of lumber and metal products, recorded important advances in employment, as did logging and construction, while only small changes were noted in other industries.

Employment advanced in Montreal, Toronto, Windsor and the Other Border Cities and Vancouver, while the trend was unfavourable in Quebec City, Ottawa, Hamilton and Winnipeg. In Montreal, there were continued gains, chiefly in manufactures; on the other hand, transportation, trade and construction showed seasonal curtailment. In Quebec, manufacturing afforded more employment, while construction was slacker. In Toronto, iron and steel reported a considerable increase and there was a smaller advance in trade and some other industries, while printing and publishing were quiet. In Ottawa, manufactures were more active, but transportation and construction were seasonally dull. In Hamilton, manufacturing and construction afforded less employment. In the Border Cities, pronounced improvement was indicated, mainly in automobile factories. In Winnipeg, the declines were largely in trade and construction, while manufactures were somewhat busier. In Vancouver, manufacturing and construction recorded substantial increases.

A review of the returns by industries shows a marked improvement in manufactures, notably in iron and steel and lumber factories; logging, mining, transportation and construction, on the other hand, showed seasonal curtailment, while only small changes were registered in communications, services and trade.

An article elsewhere in this issue gives in some detail the employment situation as at the beginning of March, 1928.

TRADE UNION REPORTS.

The situation indicated at the close of February by the 1,677 local trade unions from which reports were tabulated combining a membership of 178,892 persons showed little variation from that of the preceding month, the percentage of inactivity on February 29 standing at 7.0 as contrasted with 6.8 per cent of unemployment in January. That the percentage for February was slightly above that which was recorded in January was due to greater unemployment existing in the coal fields of Nova Scotia, and in the Quebec metal trades, with contributory declines in employment, though of lesser magnitude, in New Brunswick, Manitoba and Sas-

katchewan unions. The Ontario situation showed improvement, especially in the manufacturing industries, and in British Columbia there were slight gains. The Alberta unemployment percentage remained the same in both months. Slight contractions in the volume of employment available were reported over February last year when 6.5 per cent of the members were idle. In this comparison Nova Scotia, Quebec, Saskatchewan, Alberta and British Columbia unions all shared to some extent in the unemployment increase, while unions in the remaining provinces registered additional employment.

An article in more detail showing the local trade union situation at the close of February appears on another page of this issue.

EMPLOYMENT OFFICE REPORTS.

During the month of February, 1928, the offices of the Employment Service of Canada made 21,181 references to vacancies and effected a total of 19,690 placements, of which 12,167 were in regular employment and 7,523 in casual work. Of the placements in regular employment, 8,945 were of men and 3,222 were of women. Applications for work were received from 30,733 workers, of whom 20,941 were men and 9,792 were women, while employers notified the Service of opportunities for 13,197 men and 7,895 women, a total of 21,092 vacancies. A decline was shown in the volume of business transacted when a comparison was made with the figures of the preceding month, but a slight increase was indicated when the figures were compared, with those of February of last year, the reports for January, 1928, showing 22,864 vacancies offered, 36,734 applications made, and 20,959 placements effected, while in February, 1927, there were recorded 20,188 positions available, 29,678 applications for work, and 18,633 placements in regular and casual employment. A report in detail of the work of the offices for the month of February, 1928, will be found elsewhere in this issue.

Production and Trade

**INDUSTRIAL
PRODUCTION
IN CANADA** Some figures indicating the recent movements of trade and industry are given in the table on page 347.

The physical volume of business in Canada showed further expansion during February, according to an index in the *Monthly Review of Business Statistics* published by the Dominion Bureau of Statistics. Much of the material for this section is derived from this monthly publication, to which readers are referred for fuller information on current business statistics. As the in-

dex stood at 162.4 in February, compared with 159.0, the previous high total attained in January, business operations were carried on at the highest level on record. A greater production of newsprint and increased exportation of lumber indicated greater activity in the pulp and paper and related industries. Most manufacturing lines showed expansion in February, due allowance being made for the shortness of the month and seasonal tendencies. The sugar industry showed improvement over the low level of the preceding month. The slaughtering industry was operated at a greater percentage of capacity. The output of steel was much greater in February, while the production of iron declined. Automobile production was greater in February, the difficulties in regard to the introduction of new models having been partially solved. Imports of crude rubber were heavy in view of favourable prices and an expanding market for tires. The imports of raw cotton and wool indicated some curtailment in textile mills, though employment was well maintained.

The physical volume of external trade was much greater than in January after the usual adjustments. The movement of railway freight was greater, due in part to the heavy movement of grain to the Pacific ports. Notwithstanding some slackening in trading on the stock exchanges, bank debits, after seasonal adjustment, again showed an increase in February.

Production of coal from Canadian mines in January, 1928, amounted to 1,683,476 short tons as against 1,866,715 tons in December, 1927. Although the tonnage was thus slightly less than in the preceding month, the output was greater than in the month of January, 1927 or 1926. The output of bituminous coal from New Brunswick and Alberta mines was greater in January than in December, the tonnages from the mines of Nova Scotia, Saskatchewan, British Columbia, and from the lignite mines of Alberta, being however, slightly below the totals for December.

BUILDING PERMITS AND CONTRACTS AWARDED

According to a report prepared by the Dominion Bureau of Statistics the value of the building permits issued by the municipal authorities in sixty-three cities in Canada during the month of February, 1928, amounted to \$10,323,405, as compared with \$7,712,604 in January, 1928, and \$7,638,176 in February, 1927. The February, 1928, total was the highest for that month in the record for the 63 cities, which goes back to 1920.

The *MacLean Building Review* estimates the total value of the construction contracts awarded in Canada in March, 1928, at \$22,946,100. Of this amount \$8,581,900 was for residential work; \$8,254,600 for business buildings; \$4,247,100, for public works and utilities; and \$1,862,500 for industrial projects. The apportionment by provinces during March, 1928, was as follows:—Ontario, \$9,735,700; Quebec, \$7,187,900; British Columbia, \$3,855,200; Prairie Provinces, \$1,883,500 and the Maritime Provinces, \$283,800.

It is stated that the heavy total for contracts awarded during the first quarter year, \$69,301,300, is something unheard of since records have been compiled. The classification for the three months totals being: Business building, \$23,952,000; residential, \$20,010,500; public works and utilities, \$18,806,600, and industrial, \$6,532,200. The awards for the first quarter were: Quebec, \$28,214,500; Ontario, \$26,569,600; British Columbia, \$8,639,700; Prairie Provinces, \$5,249,300 and the Maritimes, \$628,200.

The "contemplated new construction" in Canada during March, 1928, according to the same *Review*, totalled \$57,459,500, \$12,480,300 of this amount being for residential building; \$24,456,500 for business building; \$4,034,300 for industrial building, and \$16,488,400 for engineering (including bridges, dams and wharves, sewers, watermains, roads, streets and general engineering).

A particularly heavy program is indicated in the contemplated new construction by the accumulative total for three months in Ontario and Quebec.

EXTERNAL
TRADE

A summary of Canadian trade prepared by the Department of National Revenue shows that in February, 1928, the merchandise entered for consumption amounted to \$85,932,397 as compared with \$79,506,417 in January, 1928, and \$74,706,654 in February, 1927. The chief imports in February, 1928, were: Iron and its products, \$20,161,414, and fibres, textiles and textile products, \$16,710,887.

The domestic merchandise exported amounted to \$88,565,196, as compared with \$82,564,479 in January, 1928, and \$78,533,607 in February, 1927. The chief exports in February, 1928, were in the group of agricultural and vegetable products, mainly foods, \$32,169,829, and wood, wood products and paper, \$22,661,941.

In the eleven months ending February, 1928, exports of domestic merchandise totalled \$1,121,233,042, and imports, \$988,429,281.

Strikes and Lockouts

The time loss due to industrial disputes in March, 1928, was greater than during February, 1928, but less than during March, 1927. There were in existence during the month eleven disputes, involving 773 workpeople and resulting in a time loss of 6,105 working days, as compared with seven disputes involving 232 workpeople and resulting in a time loss of 5,103 working days in February. In March, 1927, there were on record ten disputes involving 543 workpeople and resulting in a time loss of 7,248 working days. None of the strikes and lockouts commencing prior to March terminated during the month, but four of the disputes commencing during March terminated during the month. At the end of March, therefore, there were on record seven strikes and lockouts affecting 196 workpeople, not including those strikes and lockouts in which employment conditions were reported to be no longer affected but which had not been formally called off.

Prices

The cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average retail prices in some sixty cities was \$10.92 at the beginning of March, as compared with \$11.03 for February; \$11.05 for March, 1927; \$11.46 for March, 1926; \$10.74 for March, 1925; \$10.58 for March, 1924; \$10.79 for March, 1923; \$10.54 for March, 1922; \$13.23 for March, 1921; \$15.98 for March, 1920; \$12.66 for March, 1918; and \$7.68 for March, 1914. The decline was due mainly to a seasonal fall in the price of eggs, while less important declines occurred in the prices of bacon, lard, butter, granulated sugar, sirloin steak and veal. The prices of potatoes, beans, evaporated apples and mutton were slightly higher. Including the cost of fuel and rent with that of foods the total budget averaged \$21.15 at the beginning of March, as compared with \$21.25 for February; \$21.29 for March, 1927; \$21.77 for March, 1926; \$21 for March, 1925; \$21 for March, 1924; \$21.42 for March, 1923; \$20.96 for March, 1922; \$23.87 for March, 1921; \$25.01 for March, 1920; \$20 for March, 1918; and \$14.35 for March, 1914. Fuel was unchanged in the average, while rent was slightly higher, due to an increase reported from Woodstock.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics advanced to 152.8 for March, as compared with 150.8 for February; 148.7 for March, 1927; 160.0 for March, 1926; 161.6 for March, 1925; 154.4 for March, 1924; 159.9 for March,

1923; 153.6 for March, 1922; 186.0 for March, 1921; 241.3 for March, 1920; and 194.3 for March, 1918. In the grouping according to chief component materials four of the eight main groups advanced and four declined. The Vegetables and their Products group and the Animals and their Products group were substantially higher, the former due mainly to higher prices for grains and vegetables, and the latter due mainly to the higher price of

butter. In this group eggs were lower. The Fibres, Textiles and Textile Products group and the Wood, Wood Products and Paper group were slightly higher. The groups which declined were: the Iron and its Products group; the Non-Ferrous Metals and their Products group; the Non-Metallic Minerals and their Products group; and the Chemicals and Allied Products group.

Bell Telephone Company's Employees' Benefit Plans

The annual report of the Bell Telephone Company of Canada for the year ending December 31, 1927, refers to the company's employees' stock plan (LABOUR GAZETTE, page 368), the employees' benefit plan and the employees' life insurance plan.

Under the Employees' Stock Plan, which was inaugurated in 1922, of the 13,095 employees of the Bell Telephone Company of Canada eligible to subscribe, 10,137 are now subscribing. Since the inception of this plan 26,828 shares have been issued to employees.

Under the Employees' Benefit Plan during the year 1927, benefits and pensions were paid in 2,977 cases, amounting to \$296,941, divided as follows:

	No. of Cases	Amount
Pensions	91	\$ 44,092
Accident Benefits (including expenses)	554	26,745
Sickness Benefits	2,309	198,046
Death Benefits	23	28,058

An additional feature of the company's policy to encourage thrift, of which the Stock Purchase Plan is a part, is the employees' life insurance plan. During the year arrangements were made with two Canadian insurance companies for the acceptance of monthly premiums on policies issued to Bell Telephone employees, the collection of premiums being undertaken by the Company through pay roll deduction.

First Aid instruction continues to be an important part of the training of Bell Telephone employees. Of the Company's total male plant staff, numbering upwards of 4,400, over 76 per cent are now qualified First Aiders. The report adds that "it is gratifying to learn from time to time of invaluable aid rendered by telephone employees to victims of accident and mischance."

The Living Wage in Great Britain

A joint enquiry into the question of the living wage is being conducted in Great Britain by the General Council of the Trades Union Congress and the Independent Labour Party. It is hoped, but is by no means certain, that the work may be completed within twelve months. The scope of the enquiry has been outlined as follows: general conception of the living wage; present productivity in relation to the wage standard aimed at; present distribution of the product of industry; defects of the present system of production, distribution, and finance, and the problem of foreign markets and international competition; immediate improvements in the level of wage rates: (1) changes in organization technique, etc., (2) the high wage policy and maintenance of consuming power, (3) family allowances, (4) social insurance and the extension of socially provided income, etc.; the present tendencies of capitalism and transitional forms of industrial organization; Socialism—(1) general considerations, (2) specific industries.

On the third reading of a bill to incorporate the Niagara Falls Memorial Bridge Company in the House of Commons on March 27, an amendment moved by Mr. A. A. Heaps of North Winnipeg was agreed to, providing that "the employment of labour in the construction, maintenance and supervision of the said bridge shall be subject to the terms and conditions of the fair wage clauses set forth in the Order in Council No. 1206, of June 7, 1922, and any amendments thereto, and so far as it may be practical to do so, Canadian materials and labour must be used in the construction of the said bridge, and a certified statement shall be sent weekly to the Department of Labour giving the names and addresses of firms supplying materials and the quantity thereof."

PROCEEDINGS UNDER THE INDUSTRIAL DISPUTES INVESTIGATION ACT, 1907, DURING THE MONTH OF MARCH, 1928

DURING the month of March the Department received the report of a Board of Conciliation and Investigation established to deal with a dispute between the Manitoba Telephone System and certain of its employees being members of the International Brotherhood of Electrical Workers.

Other Proceedings under the Act

Reference was made in the February issue of the LABOUR GAZETTE to an application received from motormen, conductors and busmen in the employ of the Winnipeg Electric Company and being members of the Street

Railway Employees' Unit, One Big Union. Eight hundred men were stated to be directly affected by the dispute, which arose out of the dismissal of an employee by the company. An acute situation existed and the Minister of Labour visited Winnipeg personally and held several conferences with the interested parties. At that time the Minister submitted certain proposals for the settlement of the dispute to which both sides agreed to give consideration. The Minister later instructed the departmental Conciliation Officers, Messrs. M. S. Campbell and E. McG. Quirk, to proceed to Winnipeg for the purpose of working out the details of the settlement which was successfully achieved.

Report of Board in dispute between the Manitoba Telephone System and Certain of its Employees

An application was reported in the July, 1927, issue of the LABOUR GAZETTE as having been received from certain employees of the Winnipeg Electric Company, Limited, and Manitoba Telephone System, being linemen, etc., members of Locals 435 and 1037, International Brotherhood of Electrical Workers. The dispute concerned the employees' demand for a wage increase of 11 cents an hour; the employees also protested against a reduction of 2 cents an hour which had been put into effect in the case of certain combination troublemen in the employ of the Manitoba Telephone System. The Minister of Labour visited Winnipeg in connection with this dispute, and, as stated in the August LABOUR GAZETTE, a settlement was effected as a result of his personal intervention. In the case of the dispute between the Winnipeg Electric Company and its employees an agreement was signed providing for 3½ cents per hour increase, i.e., 2 cents per hour the first year dating from May 1, 1927, and 1½ cents per hour additional increase the second year, the agreement to run for a period of three years. The same terms were accepted by the Manitoba Telephone System and their employees. It was agreed, however, to refer the point concerning combination troublemen employed by the Manitoba Telephone System to a Board whose findings would be binding. A Board of Conciliation and Investigation was accordingly established by the Minister and Board members were appointed as follows:—Mr. Robert Jacob, K.C., Winnipeg, chairman, appointed on the joint recommendation of the other two members of the Board, Messrs. W. G. Chace, and J. G.

Hutchison, both of Winnipeg, appointed on the recommendation of the employer and employees, respectively. The report of the Board, which was unanimous, was received in the Department of Labour on March 29.

Report of Board

Re Dispute Between Certain Employees and Commissioner for Manitoba Government Telephones

Effective May 1, 1927, a schedule of wages and salaries to Winnipeg employees of the Manitoba Government Telephone System was fixed by Commissioner. Nine employees of the system, classed with five others as Combination Troublemen, objected to a reduction in their rate from 94 cents per hour to 92 cents per hour as fixed in that schedule. They demanded an increase to 96 cents per hour for the year ending May 1st, 1928. The dispute was submitted to arbitration by a Board comprising Mr. R. Jacob, Mr. J. G. Hutchison and Mr. W. G. Chace, all of Winnipeg, and, on December 7th, 1927, both parties to the dispute agreed to submit to the decision of this Board of Arbitration.

Four public hearings were had in the Manitoba Government Buildings, on December 7th, 14th and 21st, 1927 and January 4th, 1928. Oral evidence was presented on behalf of the nine men, and on behalf of the Commission, and briefs were presented by Counsel for the men and by the Commissioner. Certain excerpts from regularly kept Commission records were presented, along with a copy of the schedule of salaries and wages above referred

to in comparison with the salaries and wages in effect immediately prior to May 1st, 1927, for the various classifications of employees in Winnipeg Telephone service. Records regularly kept by the Commission regarding the troubles experienced in Winnipeg were displayed and explained by the Superintendent in charge of Telephone Plant. A full stenographic record of the hearings was made and was considered by The Board of Arbitration.

The evidence included records and official statements regarding the value to the Telephone System of the work done by five men also classed in the 1927 schedule as "Combination Troublemens," as compared with the work of the nine who protested against the new 1927-28 schedule. In that schedule the wages of the five have been increased from 89 cents per hour to 92 cents per hour, the same wage as fixed by the Commissioner for the nine. The records of the nine, and of three of the five men, covered the months of April and August, 1927, which months were acknowledged by both parties to the dispute to be properly typical months as to troubles upon the Winnipeg system.

From the evidence submitted it was plain that each of the *nine* men had reached the classification of "Combination Troublemens" after a major experience in outside work, although some had had installation and instrument experience. It was also plain that each of the *five* men had reached that classification after a major experience on switchboard and instrument work in station and private branch exchanges. Several men of both groups had been employed by the System for many years.

It was also shown that, since the substitution of the automatic exchange system for the earlier manual system, and since the street work had been mostly rebuilt, substituting pairs of insulated wires inside lead sheathed cables for open wires on insulators mounted on poles, the major number of Winnipeg troubles which require the attention of these men appear about subscribers' services and "drops" leading thereto, and within the exchange buildings. Relatively very little work appears for which the use of linemen's spurs are needed, although all troublemen climb stepped poles and it is on such that most of the simpler outdoor troubles appear, and such as do not require the services of an equipped gang of men.

Of the April and August troubles attended to by the twelve men listed on the return furnished, 4,469 cases of "inside" and 1,040 cases of "outside" troubles appear; of the attention to "outside" troubles there was shown no greater efficiency on the part of the *nine* men recruited from "outside" staff than on the part

of the three (of *five*) men recruited from "inside" staff.

Study of the schedules of pay of all classes of Winnipeg Telephone employees shows that "linemen," i.e., those who work *outdoors* on the construction and maintenance of lines, are less highly paid than are "installers," "switchmen" or "inspectors," all of whom are regularly engaged upon *inside* telephone construction and maintenance. This is true of the 1926-27 as of the 1927-28 schedule. Superior qualification as pole climbers, or greater experience on open wire and outdoor work is therefore no gauge of a man's greater value to The System, but rather does it show that the inside experience is more valuable.

After full and careful consideration of all the evidence and after weighing the arguments of both parties to the dispute, this Board has decided that the relative position of Combination Troublemans as placed in the Telephone Commission's wage schedule is correct. But, in view of the long and loyal service rendered to The Commission by the nine men, the Board regret exceedingly that, in order that the pay schedule should be properly balanced, it seemed necessary to reduce the rate of pay of the nine men from 94 cents to 92 cents per hour; it is the judgment of this Board that the rate applicable to all Combination Troublemens should be increased to 93 cents per hour, as this would not appear to affect the relative balance of the schedule; this change shall be effective from May 1st, 1927.

(Signed) ROBERT JACOB,
Chairman,

W. G. CHACE,
J. G. HUTCHISON.

WINNIPEG, MAN., March 21, 1928.

The Speech from the Throne at the opening of the 45th General Assembly of the Province of Prince Edward Island on March 24 expressed satisfaction with the arrangement made last year under which the Dominion Government agreed to include many branches of agricultural activities under the head of technical education, with the result that the province would receive a larger share in the federal grant for this purpose. The Speech further said: "My Government has made arrangements with the Department of Fisheries at Ottawa, whereby our fishermen will be able to take a course of instruction, practically free of charge, in the preparation of dried, pickled and boneless fish, in the construction and operation of motor engines for boats, in navigation, and in the co-operative marketing of fish."

CANADIAN RAILWAY BOARD OF ADJUSTMENT No. 1

SIX new decisions of the Canadian Railway Board of Adjustment No. 1 have been received by the Department. This board was established by a voluntary agreement concluded in 1918 between the various railway companies and certain of the railway labour organizations, its original purpose being to secure uninterrupted service on the railways during the continuance of the war. The Board consists of six representatives of labour, one for each of the following railway brotherhoods: the Brotherhood of Locomotive Engineers, the Brotherhood of Locomotive Firemen and Enginemen, the Order of Railway Conductors, the Brotherhood of Railroad Trainmen, the Order of Telegraphers, and the United Brotherhood of Maintenance of Way Employees and Railway Shop Labourers. Earlier decisions were outlined in the *LABOUR GAZETTE*, February, 1928, and in previous issues. The third report of the proceedings of the Board covering the decisions rendered from October 1, 1923, to September 30, 1927, was issued as a supplement to the issue of November, 1927. The new decisions were as follows:—

Case No. 316.—Esquimalt and Nanaimo Railway Company and Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees

The employees claimed that certain increases in rates which the company was willing to concede as from July 1, 1927, should be made retroactive to March 16, 1927. They stated that their organization had requested wage increases on June 10 for employees on the main line, an agreement having been reached which was retroactive to March 16 for monthly-rated, and to June 1 for hourly-rated staff. It was further claimed that agreements on the mainland had always been held to apply to the Esquimalt and Nanaimo Railway. The company denied that there had been any promise or agreement that the rates or rules would be made retroactive. The claim of the employees was not sustained by the Board.

Case No. 317.—Canadian National Railways, Western Region, and Brotherhood of Locomotive Engineers, and Brotherhood of Locomotive Firemen and Enginemen

A controversy arose as to the compensation of switch crews used to handle water cars

between Edmonton South Yard and a point over 8 miles distant. The employees contended that these men should have been paid at road rates, and were not under yard rates or conditions. They relied on Article 1 of their agreement governing yard service which fixes the working limits for switch engines at 8 miles from yard office, but includes in these limits legitimate switching in the working limits the "greater district" of certain towns. The company denied that there had been violation of Article 1. They stated that the water supply at a public institution situated 8 miles and 317 feet from the city had given out, and it was necessary to furnish water temporarily. Under the circumstances the Board did not sustain the claim of the employees.

Case No. 318.—Canadian National Railways, Western Region, and the Brotherhood of Locomotive Engineers, and the Brotherhood of Locomotive Firemen and Enginemen

An engineer and fireman having completed work-train service were required to perform freight service. They claimed that they were entitled to compensation for a new working day for the latter service. The company contended the case was governed by Clause "G," Article 3 and Clause "I" and Article 2 of the schedules, providing that where there is a combination of runs the engineer or firemen are to be paid "the highest rate per day or trip from initial point to destination per class of work performed," and that employees "taken off trains between terminals for work-train service, and afterwards continuing their original trip, will be paid at work-train rates for the time engine was taken off until trip continued, such time to be deducted when computing overtime." The Board decided that the proper basis of payment was at through freight rates and conditions governing such service.

Case No. 319.—Canadian National Railways, Central Region, and Brotherhood of Locomotive Engineers, and Brotherhood of Locomotive Firemen and Enginemen.

A controversy arose as to the calling of the engine crew of a mixed train in advance of their regular leaving time to perform switching service, such time being used to make up

a minimum day and paid for on an hourly basis. The employees cited Article 29, 30 and 7, Clause (d) of the schedule, providing that men assigned to regular runs or yard service are not to be considered on duty from the time they are relieved at the roundhouse until required for their regular run or shifts; that they are to be called two hours before train departure; and that initial terminal delay is to be paid on the minute basis. They stated that this crew was often required to switch for as long as four hours before departing on their trip, and contended that if this time could be used for making up a short day, the time and one-half rate should be paid after eight hours on duty. On the other hand, the management contended that under Article 7, Clause (d) initial terminal delay payments would be used to make up a minimum day, claiming that this provision includes switching or any other cause delaying departure. Clause (f) of the same article, it was pointed out, permits of roadmen being used for yard-switching at terminals where no switch engines are on duty. In regard to the claim for time and one-half rates for overtime, the management stated that in consideration of the company agreeing to segregate all terminal time from road time, it was agreed that all terminal time would be paid for at *pro rata* rates. The claim of the employees was not sustained by the Board.

Case No. 320.—Canadian National Railways (Central Region) and Order of Railroad Telegraphers.

This case involved the question of the seniority rights of a certain dispatcher, a difficulty having resulted from various existing methods of determining seniority. The seniority standing of the employee being the result of an agreement between the then accredited representatives of both parties, the Board found itself without jurisdiction to amend it. The Board however recommended, in view of the fact that the telegraphers' schedules had been consolidated, that the company and the labour organization should confer and eliminate from the seniority list of dispatchers any fictitious dates that might be in effect.

Case No. 321.—Canadian National Railways (Western Region), and Order of Railroad Telegraphers.

A dispatcher at Calgary was discharged following his refusal to permit a snow plow extra to run on an open line without due protection. The employees contended that there was no justification for his dismissal and asked for his reinstatement with pay for all time lost. The company contended that the offence was the culmination of generally unsatisfactory service. Under all the circumstances as presented the Board sustained the claim of the employees to the extent of reinstatement, but without pay for time lost.

CANADIAN NATIONAL RAILWAYS EMPLOYEES' BOARD OF ADJUSTMENT No. 2

REPORTS have been received of nine cases recently settled by the Canadian National Railways Employees' Board of Adjustment No. 2.

This Board was established towards the end of 1925 for the purpose of adjusting disputes arising between the management of the railways and the clerks and certain other office and station employees. The classes of employees coming under the Board are those given in the schedule of rules governing these classes which is contained in the existing agreement between the railways and the Canadian Brotherhood of Railway Employees. Board of Adjustment No. 2 is composed of the following members:—

Representing the railways.—Messrs. H. Morton, Moncton, George Turvey, Toronto, J. M. Grieve, Toronto, Ontario.

Representing the employees.—Messrs. A. R. Mosher, Ottawa, Ontario, M. M. Maclean,

Ottawa; N. L. Preston, Winnipeg, Manitoba; and C. H. Minchin, Calgary, Alberta.

An outline of earlier cases dealt with by the Board was given in the December, 1927, issue of this GAZETTE, and in previous issues.

Case No. 26.—Operating Department—western region.

The employees in the freight sheds at Saskatoon formerly worked regular hours (exclusive of overtime) from 8 a.m. to 5.30 p.m. for five days per week, and from 7.30 a.m. to 1 p.m. on Saturdays. About October 1, 1927, the Railways changed the starting hours of some of these employees to 9.30, working hours to continue until 7 p.m. (excluding overtime). The employees, contended that this change was made for the purpose of absorbing overtime, contrary to Article 7 of their agreement, which prohibits such practice, and that it was carried out without due notice; and they asked for

the restoration of the former hours. The Board did not sustain the employees' contention that the management had not the right to set the starting time of employees, but at the same time they suggested that the management should give further careful consideration to the situation, and confer with representatives of the employees in regard to the subject of this grievance.

Case No. 28.—Sleeping, Dining and Parlour Car Department.

A sleeping car run was re-established on certain trains between Halifax, N.S., and Saint John, N.B. The employees contended that in accordance with Article 4, Rule "B" of the schedule of rules for employees in sleeping, dining and parlour car service, the employees' general committee should have been consulted, and that sleeping car conductors should have been placed on the run, as had been the practice formerly. The employees referred to the decision of the Board in Case No. 6, dealing with this question (LABOUR GAZETTE, March, 1926, page 230), when the Board sustained the contention of the employees. The Management, on the other side, stated that a conductors' committee had been informed of the proposed run of sleeping cars without conductors, and that there had been no violation of Article 4, as alleged by the employees. The management claimed moreover that sleeping car porters in charge had been used formerly in this service, and that the use of sleeping car conductors was in the nature of a supplementary or super-service to that given by the porters.

The Board was unable to reach a decision in this case, and it was therefore referred to a special arbitrator under the terms of the agreement constituting the Board.

Mr. E. McG. Quirk, of Montreal, who was chosen as arbitrator, maintained the contention of the employees that changes of the kind in question should be made only in accordance with Article 4, Rule "B," mentioned above.

Case No. 29.—Operating Department—Atlantic region.

A clerk in the freight office at Campbellton was given leave of absence on account of sickness, and another clerk was appointed as substitute, receiving the same rate of pay as the absent employee. A third clerk in turn took over the duties of the substitute, but was paid at a lower rate than had been paid to the man whose work he performed. The third clerk claimed that he should be paid the difference in rate for the time he

filled the temporary position, in accordance with Article 11, Rule "B" of the schedule for clerks and other classes of employees. The Board found that the evidence failed to show that he had performed the duties of the more highly rated position, and therefore denied the employee's claim.

Case No. 30.—Operating Department—Atlantic region.

The parties in this case appeared before the Board, and after conferring consented to withdraw it, the Board approving this action. The case concerned the seniority rights of an old employee who had been transferred to another position.

Case No. 32.—Operating Department—Atlantic region.

A female stenographer employed in a freight office started at a rate of \$70, the second year apprentice rate, and was advanced to \$87.50 after one year. The employees contended that the employee was an experienced stenographer when she entered the service of the Railways, that she should have started with the maximum rate for apprentice clerks, namely \$87.50, and that she should now receive an increase to \$106, the rate for her position under the new schedule. The management claimed that due consideration had been given to the employee's former experience, and that she had therefore been started at the second year rate for apprentice clerks. The Board sustained the claim of the employees that the rate for this position be increased to the schedule rate for her position.

Case No. 33.—Operating Department—Atlantic region.

Four freight truckers were laid off for four or five hours owing to lack of work. Under Article 3 Rule "K" of their agreement, providing that when a reduction in forces takes place the senior employees with sufficient ability to perform the work shall be retained, they claimed that they should have been retained, and that four junior baggage porters who were retained on service should have been laid off. The management contended that there was no violation of the schedule, and that as the men were laid off for only half a day it was not practical or in the interest of the work to allow them to displace baggage porters. The Board denied the claim of the employees in view of the reduction in staff being so temporary that it would not justify the disorganization of the baggage room that would have resulted from following strict seniority.

Case No. 35.—Operating Department— western region.

A female employee who had occupied the position of bridge and building master's clerk for over eight years was changed to another position at a lower rate of wages. The employees claimed that her demotion was due to her sex and was contrary to Article 1, Rule "B" of the schedule, no question having been raised as to her capabilities. The management contended that the services of this employee having been found unsatisfactory she was given a trial in other offices, but failed to reach the standard of work required. Oral evidence was heard, the Board finally deciding that the employee be given another trial as bridge and building master's clerk, as it had not been conclusively shown that she had been incompetent.

Case No. 36.—Accounting Department— Headquarters.

This case involved the same question as Case No. 15 (LABOUR GAZETTE, July, 1926, page 646) and Case No. 23 (LABOUR GAZETTE, December, 1927, page 1294).

The position of rate clerk in the office of the Auditor of Passenger Accounts was filled by a junior applicant, when, in the employees'

opinion, a senior qualified applicant should have been appointed. They cited Article 3 of the General Schedule which lays down the principle that promotion should be governed by seniority in the service rather than service in any grade. Moreover in this case the senior applicant had been temporarily assigned to the position and had performed the duties satisfactorily for seven months. The company contended that there had been a special agreement clearly defining the basis of "grade to grade" promotion. The Board decided as in the earlier cases that the senior qualified applicant of the office as a whole should be awarded the position in question.

Case No. 37.—Accounting Department— Headquarters.

This case was similar to Case No. 36. A position in the Auditor of Passenger Accounts' Office was awarded to a male applicant of lower seniority than a female employee who also applied for the appointment. The management, as in the preceding case, contended that the appointment was made on the basis of "grade to grade" promotion, under a special agreement, but here also the Board decided that the senior qualified applicant of the Auditor of Passenger Accounts' Office should be awarded the position.

STRIKES AND LOCKOUTS IN CANADA DURING MARCH, 1928

THE number of strikes and lockouts in existence in Canada during March was eleven as compared with seven the preceding month. The time loss for the month was less than during March, 1927, being 6,105 working days as compared with 7,248 working days during the same month last year.

Date	Number of disputes	Number of employees involved	Time loss in working days
March 1928.....	11	773	6,105
Feb. 1928.....	7	232	5,103
March 1927.....	10	543	7,248

The record of the Department includes lockouts as well as strikes, but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees at its commencement and lasting at least one working day. Disputes of less than one day's duration, and disputes involving less than six employees, are included in the published record only when ten days' or more time loss is caused, but a separate record of such disputes is maintained in the Department, and the figures are given in the annual review.

The figures printed are inclusive of all disputes which come to the knowledge of the Department, and the methods taken to secure information practically preclude probability of omissions of a serious nature. Information as to a dispute involving a small number of employees, or for a short period of time, is frequently not received until some time after its commencement.

Six disputes, involving 146 workpeople, were carried over from February, including one dispute as to which information was not received until March, and excluding one dispute which had terminated by the end of February, which information was not received in time for inclusion in the LABOUR GAZETTE for March. None of these disputes terminated during the month, but of the five disputes commencing during March, four had terminated by the end of the month. At the end of March, therefore, there were on record seven strikes and lockouts, as follows: bakers, Montreal, P.Q.; two disputes involving men's clothing factory workers at Montreal, P.Q.; cap factory workers, Toronto, Ont.; upholsterers, Toronto, Ont.; stonecutters, Montreal, P.Q.; and asbestos and insulation workers at Toronto, Ont.

The record does not include minor disputes such as are described in a previous paragraph,

nor does it include disputes as to which information has been received indicating that employment conditions are no longer affected, although the unions concerned have not yet declared them terminated. Information is available as to five such disputes, namely, ladies' clothing factory workers, Toronto, Ont., June 20, 1926; electrotypers at Toronto, Ont., December 20, 1926; plumbers at Windsor,

Ont., April 5, 1927; blacksmiths, etc., at Saskatoon, Sask., May 17, 1927; and sheet metal workers at Montreal, P.Q., September 1, 1927.

Of the disputes which commenced during the month three were against a reduction in wages, one for an increase in wages and one against the discharge of employees. Of the strikes and lockouts which terminated during March

STRIKES AND LOCKOUTS IN CANADA DURING MARCH, 1928

Industry, occupation and locality	Number of employees involved	Time loss in working days	Remarks
(a) Strikes and Lockouts occurring prior to March, 1928.			
MANUFACTURING—			
<i>Vegetable Foods—</i>			
Bakers, Montreal, P.Q.....	73	975	Commenced May 1, 1927, for increase in wages. Underminated.
<i>Clothing (including knitted goods)—</i>			
Men's clothing factory workers, Montreal, P.Q.....	10	270	Alleged lockout, commenced Nov. 8, 1927; union conditions as to overtime. Underminated.
Men's clothing factory workers, Montreal, P.Q.....	10	270	Commenced Dec. 23, 1927; renewal of previous dispute re union wages and working conditions. Underminated.
Cap factory workers, Toronto, Ont.....	8	216	Commenced Jan. 17, 1928, against reduction in wages. Underminated.
<i>Non-Metallic Mineral Products—</i>			
Stonecutters, Montreal, P.Q....	40	1,080	Commenced June 10, 1927, for increase in wages. Underminated.
CONSTRUCTION—			
<i>Buildings and Structures—</i>			
Asbestos and insulation workers, Toronto, Ont.....	5	135	Commenced Feb. 6, 1928, for increase in wages. Underminated.
(b) Strikes and Lockouts occurring during March, 1928.			
MANUFACTURING—			
<i>Boots and Shoes (other than rubber and felt)—</i>			
Boot factory workers, Montreal, P.Q.....	42	84	Commenced Mar. 26, 1928, against reduction in wages. Terminated Mar. 28, 1928, in favour of employer.
<i>Clothing (including knitted goods)—</i>			
Men's clothing factory workers, Toronto, Ont.....	25	15	Commenced Mar. 5, 1928, against discharge of employees. Terminated Mar. 22, 1928. Indefinite.
<i>Other Wood Products—</i>			
Upholsterers, Toronto, Ont....	50	300	Commenced Mar. 26, 1928, against reduction in wages. Underminated.
<i>Other Metal Products—</i>			
Automobile factory workers, Oshawa, Ont.....	450	2,700	Commenced Mar. 24, 1928, against reduction in piece rates. Terminated Mar. 31, 1928. Indefinite.
CONSTRUCTION—			
<i>Buildings and Structures—</i>			
Building labourers, Corbyville, Ont.....	60	60	Commenced Mar. 16, 1928, for increase in wages. Terminated Mar. 17, 1928, in favour of employer.

two were in favour of the employer and in the other two the results are recorded as indefinite.

Further information received in the Department regarding the dispute involving coal miners at River Hebert, N.S., reported in the *MARCH LABOUR GAZETTE* as unterminated at the end of February, reveals that the mine had been abandoned by the end of February and the dispute consequently is recorded terminated by the beginning of March.

It has been reported in the press that steel erectors employed on the construction of a building at Leaside, Ont., ceased work on January 29, demanding an increase in wages. It appears that this occurred when work ceased for the noon hour and that work was resumed as usual at one o'clock on the understanding that there would be further negotiations as to wages. Accordingly there was no time loss.

The following paragraphs give particulars in regard to certain disputes, in addition to the information given in the tabular statement.

CAP FACTORY WORKERS, TORONTO, ONT.—On January 17 a number of employees in a cap factory ceased work when negotiations for a renewal of the agreement between the union and the employer broke down because the union refused to agree to a reduction in rates of wages for certain employees. The employer replaced the strikers, but at the end of March the union had not called off the dispute and was paying strike benefits to the members involved.

BOOT FACTORY WORKERS, MONTREAL, P.Q.—Employees in a boot factory ceased work on March 26 against a reduction in piece rates. On March 28 the employees agreed to return to work at the reduced wages, some to be employed immediately and others when required by the employer.

MEN'S CLOTHING FACTORY WORKERS, TORONTO, ONT.—A certain number of employees in a men's clothing factory in Toronto ceased work on March 5 when five employees were discharged by the employer in accordance with the agreement with the union as these employees had been suspended from membership, and the agreement provided that only members of the union could work in the establishment. The strikers were replaced by members of the union in good standing. On March 22 the union members affected by this action were reported to have reached a settlement of their dispute with the union and declared the dispute terminated.

UPHOLSTERERS, TORONTO, ONT.—Employees in two furniture factories went on strike on March 26, 1928, against a proposed reduction in wages, demanding also recognition of their union and a closed shop in both factories. Several conferences were held between the employers and representatives of the workers but at the end of March the dispute was still unterminated. Two pickets were reported to have been arrested on a charge of intimidation.

AUTOMOBILE FACTORY WORKERS, OSHAWA, ONT.—Employees in the trimming department of an automobile manufacturing establishment ceased work on March 24, a new scale of piece-rates having been adopted in connection with changes in methods of production which the employees alleged were 30 to 40 per cent lower than those previously in force, and which the employer claimed under the new system would yield as large daily earnings as before. Certain other employees ceased work in sympathy with the trimmers, bringing the number up to 450, and as the factory operations were held up by this action the remaining employees in the establishment were indirectly involved in the dispute, about 1,500 in number. At the request of the employees the Minister of Labour sent the Chief Conciliation Officer of the department to bring the parties together, and on March 30 the Minister himself reached Oshawa. The parties concerned agreed to refer the dispute to a Board of Conciliation and Investigation under the Industrial Disputes Investigation Act, 1907, the management agreeing to pay the rates in force before the reduction pending the report of the board and agreeing to the return of all employees to their former positions.

BUILDING LABOURERS, CORBYVILLE, ONT.—On March 16 employees on a building ceased work demanding 40 cents per hour instead of 30 cents. On the following day a number of them returned to work at 30 cents per hour. In connection with picketing two of the pickets were arrested for assault and sentenced, one to fifteen days and the other to ten days in the county jail.

The British House of Commons, on March 23, by a vote of 154 to 127, rejected a motion supported by the Labour and Liberal parties, to repeal the Coal Mines Act of 1926 (*LABOUR GAZETTE*, August, 1926, page 747), which increased the working day in the mines from seven to eight hours per day.

STRIKES AND LOCKOUTS IN GREAT BRITAIN AND OTHER COUNTRIES

THE latest available information as to strikes and lockouts in various countries is given in the *LABOUR GAZETTE* from month to month, bringing down to date that given in the issue for February, 1928, in the review of *Strikes and Lockouts in Canada and Other Countries, 1927*. The latter review included a table summarizing the principal statistics as to strikes and lockouts since 1918 in the several countries for which such figures were available. Many countries publish these statistics only once each year, the figures being issued in some cases after an interval of as much as two years, so that for such countries the latest figures are not for relatively recent dates.

Great Britain and Northern Ireland

The number of trade disputes involving a stoppage of work, reported as beginning in February was 33, and 13 disputes which began previously were still in progress during the month. In all, about 13,200 workpeople were involved in all disputes in progress, and the time loss was 107,000 working days.

Of the 33 disputes beginning in February, 13 arose out of proposed reductions in wages, 9 on other wages questions, 6 on questions respecting the employment of particular classes or persons, 3 in sympathy with workpeople involved in other disputes and 2 on other questions.

Settlements were effected in 26 disputes, of which 2 were in favour of the workpeople, 16 in favour of employers, 8 ended in compromise, and in 2 other cases, work was resumed pending negotiations.

The principal dispute during February was one which involved about 5,600 colliery workpeople at South Shields. On February 13, about 2,000 workpeople became involved owing to the refusal of the coal producers and putters to give individual undertakings to refrain from restriction of output, and from the same day and until February 18, about 3,600 other workpeople became involved in sympathy. The dispute was settled on February 23, when employers accepted the undertaking given by trade union representatives on behalf of their members.

Finland

During January, 6 disputes were in progress, involving 9 employers and 552 workers.

Netherlands

The number of disputes beginning in January was 19, involving 624 workpeople, as compared with 18 in December involving 632 workpeople.

Switzerland

The number of strikes and lockouts which terminated during the year 1927 was 26, involving 328 establishments and 2,058 workers. The approximate time loss was 34,160 working days.

United States

The number of disputes beginning in January was 29, and the number in effect at the end of that month was 59. The number of workers involved in disputes beginning in the month was 17,148, and 82,809 were involved in disputes in effect at the end of the month. The number of man-days lost during the month was 2,123,881.

Bituminous Coal Miners' Dispute.—The investigation of conditions in the bituminous coal fields of Pennsylvania, Ohio and West Virginia by the Senate Committee on Interstate Commerce continued during March. A sub-committee investigated conditions on the field and reported the distressing living conditions of the union miners and violations of law and order in these districts. Leading operators and investors were called upon for information with a view to reorganizing the whole industry, but no definite plans had been made at the end of the month. It was reported that many of the mines in Illinois and the Southwest field which were operating under a temporary agreement continuing the Jacksonville scale until April 1, closed on that date when operators refused to renew the agreement and the miners refused to accept a lower scale. It was estimated that about 100,000 miners were thereby thrown out of employment at the beginning of April in these states.

Australia

During the third quarter of 1927, 150 disputes were reported, involving 157 establishments and 62,169 workpeople. The number of working days lost was 401,656, and the estimated loss in wages £356,512.

UNEMPLOYMENT, SICKNESS AND INVALIDITY INSURANCE

A RESOLUTION, introduced by Mr. A. A. Heaps (Winnipeg North) in the terms following, was adopted by the House of Commons on March 21:—

That in the opinion of this House, the Committee on Industrial and International Relations be authorized to investigate and report on insurance against unemployment, sickness and invalidity.

The Honourable Peter Heenan, Minister of Labour, on behalf of the Government, intimated that the Government was favourable to the adoption of this resolution in order that the Committee on International and Industrial Relations might be empowered to investigate the subject of insurance against unemployment, sickness and invalidity in all its bearings.

The Committee held its first session on March 29 under the chairmanship of Mr. C. R. McIntosh. Mr. Gerald H. Brown, Assistant Deputy Minister of Labour was called as the first witness and furnished the Committee with statements indicating the attention which was being given to these subjects in Canada and other countries. The members of the Committee were also furnished with copies of memoranda of information on unemployment, sickness and invalidity insurance which had been prepared in the Department of Labour.

The Assistant Deputy Minister of Labour referred to the assistance which had been given through the Dominion Government to the establishment of the Employment Service of Canada in 1918 and since, comprising at present sixty-four public employment offices situated in industrial centres from coast to coast. Mention was made also of the financial assistance which had been granted by the Federal authorities towards the relief of unemployment in the emergent conditions following the war. The witness also furnished the Committee with copies of a Recommendation which had been adopted by the International Labour Conference (League of Nations) in Washington in 1919 on the subject of unemployment, in which the following reference occurred to unemployment insurance:—

The General Conference recommends that each member of the International Labour

Organization establish an effective system of unemployment insurance, either through a Government system or through a system of Government subventions to associations whose rules provide for the payment of benefits to their unemployed members.

Passing to the subject of insurance against sickness and invalidity, the witness referred to two Draft Conventions and a Recommendation on these subjects which had been passed at the last session of the International Labour Conference and also to two reports which had been issued by the International Labour Office within the past few weeks entitled respectively "Compulsory Sickness Insurance—A Comparative Analysis of National Laws and Statistics" and "Voluntary Sickness Insurance—A Collection of National Studies, Laws and Statistics." The Assistant Deputy Minister of Labour dealt briefly with various systems of insurance against sickness and invalidity which have been established in other countries and outlined also the methods of voluntary sickness insurance and benefits which have been developed in Canada.

Summaries are included in the present article of the memoranda of information which have been compiled in the Department of Labour concerning unemployment, sickness and invalidity insurance and which were distributed to members of the Committee on Industrial and International Relations.

Mr. R. A. Rigg, Director of the Employment Service Branch of the Department of Labour, appeared also as a witness before the Committee and was examined in relation to the operation of the Employment Service of Canada. He stated that the number of placements made through the Employment Service average 420,000 yearly. As respects available statistics of employment and unemployment, the witness stated that reports are received monthly by the Dominion Bureau of Statistics from upwards of 6,000 employees in Canada on the state of employment in their respective establishments and that employment returns are also obtained monthly from over 1,500 local trade unions showing the number and proportion of their membership who are unemployed.

Unemployment Insurance

In a memorandum of information on the subject of unemployment insurance which has been compiled in the Department of Labour and distributed to the Committee of the House of Commons on Industrial and International Relations, it is pointed out that insurance against unemployment was first

provided by trade unions for their members, and out-of-work benefits are now paid by larger unions in nearly all industrial countries. The British trade unions have developed this feature of their organizations to such an extent that this form of insurance is probably more common in Great Britain than

in any other country. The labour organizations paying out-of-work benefits are, however, made up of skilled craftsmen, and represent only a small percentage of the workers in any country. In the newer industrial countries such as the United States and Canada, only a few of the larger unions provide benefits during unemployment. In Canada the total amount paid in out-of-work benefits in 1927 was \$13,703.

Another form of insurance against unemployment is that provided by large employers in all parts of the world for their own employees. Firms in Great Britain, France, Germany, Switzerland, Austria and the United States have established unemployment funds of their own. One of the best known examples of this type of insurance is that provided by Messrs. Rowntree & Company, York, England.

The schemes of unemployment insurance, other than voluntary plans, adopted by trade unions or by employers, which are at present in force in various countries fall into two main classes:—

(1) The plan of insurance generally known as the "Ghent System" because it was first successfully organized in that city. The underlying principle of this system is that of giving government assistance to trade union unemployment funds. The contribution is sometimes made by a local, sometimes by the central authority, and sometimes by both local and central authorities, while employers make no direct contribution to the funds.

(2) Compulsory unemployment insurance of workers. A system of this type usually involves contributions from employers, workers and the state.

The Ghent System.—The system of subsidizing trade union unemployment funds is in operation in the following countries: Belgium, Czecho-Slovakia, Denmark, Finland, France, Germany, Italy, Netherlands, Norway, Spain, Switzerland.

Compulsory Unemployment Insurance

Compulsory unemployment insurance schemes are in operation in Austria, Bulgaria, Germany, Great Britain, Italy, Luxemburg, Poland, Queensland, Russia and Switzerland.

Compulsory unemployment insurance schemes have been proposed in Belgium, Chili and the Argentine, and in several of the American States:

The British Act of 1920 marked a further development in the field of unemployment insurance by providing means whereby insurance by industry might be substituted for insurance by the state. The Act enables industries to contract out of the general scheme

and set up schemes of their own. These schemes must cover all persons employed in the industry either throughout the country or over some definite area, must provide benefits which are, on the whole, not less favourable than those provided under the general scheme, and must be administered by a joint body of employers and workers in industry specially set up for this purpose. The state contribution to a special scheme is limited to an amount not exceeding three-tenths of the contribution which the state would have made if the members had remained under the general scheme. Two industries have taken advantage of this provision, namely, the insurance industry and the banking industry. By an amendment of 1924 no further special schemes will be permitted until one year from the date when the Unemployment Fund again becomes solvent.

The memorandum of the Department of Labour contains a summary by countries of the various schemes of unemployment insurance which are in effect in the following countries: Australia (New South Wales and Queensland), Austria, Belgium, Brazil, Bulgaria, Chili, Czecho-Slovakia, Denmark, Finland, France, Germany, Great Britain, Hungary, Italy, Japan, Latvia, Luxemburg, Netherlands, Norway, Poland, Russia, Spain, Sweden, Switzerland, United States.

The memorandum deals in a subsequent section with the systems of compulsory unemployment insurance which are in effect in Austria, Bulgaria, Germany, Great Britain, Italy, Luxemburg, Poland, Queensland (Australia), Russia and the following states of the United States of America: Massachusetts, New York, Pennsylvania and Wisconsin.

Germany.—The German system of unemployment insurance which is in effect at present is based on a law which was enacted in July, 1927, and which came into force on October 1, 1927. This measure abrogates all previous provisions concerning the relief of unemployment and co-ordinates the new system of insurance closely with the work of the public employment exchanges. All workers subject to compulsory sickness insurance are insured against unemployment. Among the workers excluded from benefits are workers in agriculture and forestry who possess or work sufficient land to supply the essential requirements of their families, or are employed in coastal fishing, or as sharesmen, apprentices, manual workers with annual incomes exceeding 3,600 marks, and employees earning more than 6,000 marks per annum. The latter class may insure voluntarily. An employer who has set up a system of unemployment insurance which is more favourable to his workers than that provided by the Act

may demand exemption for them. The cost of unemployment insurance is met by equal contribution from employers and insured persons, except in the case of those who insure voluntarily, who bear the cost themselves. Employers' and workers' contributions together may not exceed three per cent of the basic wage. Insured persons are grouped for purposes of benefits in eleven wage classes according to weekly wages, varying from ten to sixty Reichsmarks. The benefit consists of a main allowance which accrues to the insured himself and a supplementary allowance payable in respect to dependants, if any. The former is paid as a fixed percentage of the basic wage, varying from seventy-five per cent in the last class to thirty-five per cent in the higher classes. The family allowance is five per cent of the basic wage for each dependant. Benefits are normally payable for twenty-six weeks in twelve months, but in exceptional cases the time may be extended to thirty-nine weeks. During prolonged periods when the labour market is particularly unfavourable, emergency benefit may be granted by the Federal minister of Labour to persons who have exhausted their claim to ordinary benefit or have been unable to fulfil the prescribed conditions. The payment of such emergency benefit may be restricted to certain districts or trades. In order to be entitled to an allowance, the unemployed person must be capable and desirous of working and have been insured for twenty-six weeks during the year preceding his application.

Great Britain.—The National Insurance Act of 1911 of Great Britain introduced compulsory unemployment insurance for workers in the shipbuilding, engineering, and construction industries. The scheme was extended during the War to workers in a number of war industries, and in 1920 a new Act was passed applying compulsory unemployment insurance to practically all classes of workers, with the exception of agricultural workers and domestic servants. The Act of 1920 has been amended in 1921, 1922, 1923, 1924, 1925, 1926 and 1927.

In 1925 a committee under the chairmanship of Lord Blanesburgh was appointed "to consider in the light of experience gained in the work of the unemployment scheme what changes in the scheme, if any, ought to be made." The committee included in its membership representatives of the worker and employer interests and of the specialized thought which had grown out of the administration of the system during the preceding year. The report of the committee was unani-

mous. It found that in all quarters there was a general agreement that the risk of unemployment should be insured. "Nobody has suggested to us", it stated, "that the principle of unemployment insurance should be abandoned. It has been recognized by all who have appeared before us, and we ourselves share the view, that an unemployment insurance scheme must now be regarded as a permanent feature of our code of social legislation." The committee dealt in its report with the allegations that the existing system of unemployment insurance was subject to widespread abuse. The conclusion reached was that although cases of abuse are relatively few, the tendencies to abuse are latent in all compulsory schemes of unemployment insurance and that "no system can claim to be completely satisfactory which does not by its corrective provisions succeed in neutralizing these tendencies." The committee laid down the principal conditions with which a contributory scheme must comply as follows:

(1) The worker's contribution must be moderate in amount. It should never normally exceed 5d. a week, and, supplemented by the contribution of his employer and the State, should secure him an insurance sufficient in the great majority of cases to save him, during inevitable unemployment, from recourse to public assistance.

(2) The scheme must not, by the extent of benefit promised, tempt the insured contributor to improvidence when in receipt of good pay.

(3) It should provide benefits definitely less in amount than the general labourer's rate of wage, so that there may be no temptation to prefer benefit to work.

(4) It must not interfere unduly with the mobility of labour in this country.

(5) It must not deter from emigration those who would be benefited by a life overseas.

(6) Subject to these conditions, the scheme should be made as attractive in its benefits to the insured contributor as, on a strictly actuarial basis, it is possible to make it.

An Act embodying many of the recommendations of the Blanesburgh Committee report was adopted by the British Parliament in December, 1927. Under its provisions certain revisions were made in the scale of benefits. A number of changes were made in other features of the law based on the experience gained in its administration.

Sickness Insurance in Canada

There is no legislation in existence in Canada establishing compulsory sickness insurance, except in respect of certain specified industrial diseases for which compensation is granted under the Workmen's Compensation laws of all the provinces in the same manner as accident disabilities. Voluntary sickness insurance and benefits, however, have been developed to a very considerable extent. A number of different agencies are utilized to this end, including the sickness and invalidity benefits which have been granted within recent years under ordinary life insurance policies; sickness insurance policies issued by insurance companies, commonly in conjunction with accident insurance; fraternal benefit insurance; sickness benefit schemes which have been introduced in many industrial and commercial establishments for the assistance of those employed therein; and sickness benefit features of trade unionism established in connection with many of the larger labour organizations.

Disability Benefits under Life Insurance Policies

Of the aggregate amount of life insurance policies in force with Canadian insurance companies at the beginning of 1927, totalling \$4,299,067,931, thirty-three per cent or a total amount of \$1,424,408,872, of this insurance carries disability benefits, three-quarters of which amount is in force within the boundaries of Canada. In addition thereto, life insurance policies written by foreign companies in Canada to an amount of \$549,705,385 provide like protective benefits for the policy holders. The aggregate amount of life insurance in effect in Canada containing disability benefits is, therefore, approximately one and a half billion dollars. In cases of accident or illness resulting in disability, the payment of premiums under these policies ceases and monthly benefits are granted of approximately \$10.00 per month per \$1,000 of insurance, with continuing payments at this rate in the event of permanent total disability. Moreover, under the liberal interpretation which is now established of total disability, cases of invalidity extending beyond ninety days are generally assumed to involve permanent disablement. The sickness and accident features of life insurance policies are not subject to cancellation as long as the policy is kept in force, and extend to all classes of disability occurring up to the age of 60 years, and in some cases beyond.

Sickness and Accident Insurance by Commercial Companies

Forty-nine insurance companies in Canada issue policies providing for the payment of benefits in cases of sickness. Forty-six insurance companies are engaged in the business of accident insurance. The following statement deals with the operations of these companies:—

	Premiums	Losses Incurred
Personal Accident.. . . .	\$2,967,013	\$1,308,887
Employers' Liability and Workmen's Compensation.. . . .		2,320,714
Combined Accident and Sickness.. . . .	1,579,965	884,784
Sickness.. . . .	1,660,407	902,247

Sickness Insurance by Fraternal Benefit Societies

Apart from the benefits provided by insurance companies in cases of disability under sickness and accident policies, are the benefits granted by fraternal societies to their members. Some of these societies operate under federal authority and others under the authority of certain of the provinces. No complete compilation has been made of the operations of the provincial societies, but a memorandum was prepared by the Federal Department of Insurance for the International Labour Office in regard to sickness insurance carried on by fraternal benefit societies operating under Dominion jurisdiction. In this memorandum it was pointed out that many of the fraternal benefit societies grant only life insurance benefits, and that in general where insurance against sickness and disability is included, these are secondary to the life insurance features. They are secondary in the sense that to be an insured member at all one must take the life insurance or mortuary benefits but may or may not take the other benefits; secondary also in financial importance. The memorandum showed that at December 31, 1925, there were six Canadian societies and six foreign societies in Canada granting sickness benefits, the former having a membership of 82,697, and the latter 5,231. One foreign society grants accident benefits only, along the same general lines as commercial accident companies. The members are drawn from the ranks of commercial travellers. As at December 31, 1925, the number of members

of this society in Canada was 3,926 and the amount of insurance in force \$19,630,000.

Some societies limit, or practically limit, membership to men; others admit women and men with equal freedom; while others limit membership to women only. Some societies limit membership to persons who are also members of an occupational organization, as commercial travellers, or expressmen; others to persons who are members of a fraternal order; still others limit membership to persons of one race (which may also imply religion) or of one religion. One society limits membership to deaf-mutes.

The average rate of contribution per member in 1925 was given as \$5.97 with a total contribution of \$561,913 for sickness insurance.

With regard to sickness benefits granted, the most usual benefit is \$5 per week; some societies also grant a double benefit of \$10 per week. The first week is generally excluded, but in one society if the sickness lasts for one week, benefit is paid for the full week. Another society gives a reduced benefit of \$3 for the first two weeks; \$5 thereafter. Payment of benefit is limited to 12, 15 or 20 weeks in any year; three societies fix a maximum for the whole of life, as for example, \$400 for a \$5 benefit.

The total amount of sickness benefits paid in Canada in 1926 was \$494,252.

The total assets of all societies as at December 31, 1926, as given by the Federal Department of Insurance, were: Canadian societies, \$65,575,215; foreign societies (assets in Canada) \$1,956,915.

Mutual Benefit Funds in Industry

An outline of systems existing in industries and businesses in Canada was given in the *LABOUR GAZETTE*, October, 1926. The Department of Labour in 1926 sent out a questionnaire to about 150 Canadian firms which were known to have some form of sickness insurance in effect for the benefit of their employees, and the replies gave full particulars of the various systems. The insurance generally covers all classes of permanent employees, but in some cases the executive staffs, office employees and foremen are excluded or placed in a separate class. The required period of service with the company varies from three months to two years. The risks covered include all sickness or accidents lasting over one week, not compensable under the Workmen's Compensation Act, and not occasioned by strong drink or immoral conduct or participation in sports. Exception is usually made in cases of illness arising from chronic

ailments from which employees may have been suffering before entering company's employ. Many firms have adopted schemes of group insurance, by arrangement with insurance companies, which include sickness benefits. In such cases the sick benefits are paid by the insurance companies.

In a number of cases the entire cost of sickness insurance is borne by the employing firm, and in many cases jointly by the employer and the employees, but more generally it appears to be supported by the employees alone. In the latter case, the rate of employees' contributions is usually on a sliding scale based on wages and ranging from 20 cents a month up to \$1. The total amount contributed annually by employees varies from a few hundred dollars in the case of the smaller firms up to over \$25,000. Sometimes a certain percentage of the monthly due collections is added by the firm, or the firm may make a contribution of a lump sum annually to restore the fund to its original amount or to take care of any deficit. In a great many cases the employing firm merely furnishes the machinery for operating the club. The returns indicate that the total amounts contributed by the employing firms range from a few hundred dollars in the case of the small companies, to \$12,000 in the case of a large lumber company, \$17,000 in the case of a large electrical concern, \$45,000 in that of a large insurance company, and \$160,000 in that of the principal telephone company.

Sickness benefits under plans adopted by representative Canadian firms are apparently graded generally according to salaries and also according to scale of contributions. Payments are not usually made for more than twenty-six weeks, but in individual cases are continued up to one year. There are also individual cases in which benefits are restricted to shorter periods. The benefits take the form of money payments, medical treatment, drugs, etc. In a great many cases, however, drugs are not supplied.

The employees in many cases are free to choose their own medical assistance. The company pays the doctor's fees, often having a yearly contract with a doctor, and paying so much a month per employee, in return for which the employees are guaranteed free medical attendance for themselves and often for their families, except in cases of major operations and confinements. The affairs of the benefit fund are usually managed by a board of trustees, elected annually, composed of officials of the company and representatives of the employees, who are responsible for financial stability.

The existing schemes of sickness insurance have resulted in a general improvement in health conditions among the employees, who by this means are relieved of anxiety in cases of sickness in their family, and receive prompt medical attention for themselves and their dependents. Most of the schemes, moreover, provide for a special health service in the form of pamphlets, lectures, and free physical examinations.

Sickness Benefits provided by Trades Unions

One phase of trade unionism which is extending from year to year is that connected with the payment of benefits in cases of sickness and death. The funds to meet these payments are raised by a per capita tax on the membership, a portion of the proceeds of this tax being placed to the credit of the beneficiary funds.

Of the eighty-nine international organizations operating in Canada, twenty-two provide benefits in cases of sickness and accidents through their international headquarters. Many of the remaining organizations having Canadian affiliations have benefit features, the administration of which is under the control of the local branches. This is mainly accounted for by the fact that many local unions existed independently prior to their affiliations with the international "central" and some of these "locals" provided for death, sick and other benefits for which a fund has been created. In this manner the benefit features have often become identical with the local branches and their jurisdiction has been recognized.

In the statements given below, reference is made separately to the benefits paid to labour organizations from their international headquarters and from the local unions. Unfortunately the statement as to the payments made from international headquarters is not complete as no separate account is kept of disbursement or sick benefits in Canada and the United States in the case of some unions.

Reports received in the Department of Labour from 13 of the international unions

operating in Canada, with headquarters in the United States, indicated that these bodies have disbursed to their members in Canada for various sickness benefits a total of \$34,063 during the last fiscal year, as follows:—

SICKNESS BENEFITS PAID BY INTERNATIONAL UNIONS IN CANADA

Bakery & Confectionery Workers' International Union of America	\$ 1,538 12
Barbers' International Union of America, Journeymen.. . . .	6,584 00
Boot and Shoe Workers' Union..	5,020 90*

Tailors' Union of America, Journeymen.. . . .	835 00
Total	\$34,062 99

* This amount included funeral benefits.

Apart from the international unions, the Canadian Brotherhood of Railway Employees also made a group insurance contract in 1925, which provides disability benefits for its membership.

Reports received in the Department of Labour from 658 local branch unions in Canada showed that these bodies disbursed a total of \$283,212 to their members in 1925 for various benefits provided for by their local constitution, including an amount of \$114,311 in sick and accident benefits. The following is a statement showing the amounts paid by local branches of international organizations, non-international organizations and independent bodies, respectively, in Canada for sick and accident benefits last year:—

Sickness Insurance in Other Countries

In 1925, at its 7th session, the International Labour Conference adopted a resolution requesting the International Labour Office to continue the work of collecting information with regard to social insurance. Carrying out these instructions the Office recently published two large volumes devoted to a systematic examination, on an international basis, of the essential aspects of compulsory sickness insurance, including scope, benefits, financial resources; institutions and supervisory authorities; disputes, judicial authorities, offences and penalties; and the situation of foreign workers. The first volume (No. 6 of Series M (Social Insurance) of Studies and Reports, published by the office at Geneva), gives a comparative analysis of rational laws and Statistics of Compulsory Social Insurance. The second volume (Studies and Reports, Series M, Social Insurance No. 7) contains a collection of studies of voluntary sickness insurance systems in existence in various countries. The national monographs relate to Argentine, Australia, Belgium, Canada, Denmark, Finland, France, Great Britain, Northern Ireland, Irish Free State, India, Italy, Netherlands, New Zealand, Palestine, South Africa, Spain, Sweden, Switzerland and Uruguay. The sources of information are especially complete for Australia, Belgium, Denmark, Finland, France, Great Britain, Spain, Sweden and Switzerland.

A general introduction traces the history of voluntary sickness insurance beginning with the mutual aid provided by the guilds to their members in the middle ages. As a rule these benefits were granted in the shape of a loan to be paid back by the journeyman when restored to health. The guilds practically ceased their activities at the end of the 18th century. The industrial revolution which followed the wide adoption of machinery opened the period of large scale industry. It was marked by anarchy in production, unemployment, sweating, low wages and long hours of work. For a long time the public authorities intervened no further than to distribute bread tickets to the families of workers who were sick or unemployed. Nevertheless, towards the middle of the nineteenth century, as industrialization became more intense, the conviction grew that the community itself would suffer in its health, its productive capacity, and its future by reason of the distress of its producers. Employers, realizing that distress breeds a dangerous temper, guided also by a feeling of social duty, and desiring to secure the services of

a labour force which should be stable, healthy and loyal, began to organize schemes of welfare and relief. The third quarter of the nineteenth century witnessed the appearance of numerous employers' welfare institutions: hospitals, homes, and funds for pensions and relief. At the same time the workers began to develop institutions for their own protection. From Great Britain, the home of friendly societies, the movement spread over the continent. But the basis of organization of these societies was not large enough to enable them to undertake insurance against the more serious risks of prolonged illness or disablement.

In the meantime the state was changing its attitude, and during the last thirty years of the 19th century took an increasingly active part in the solution of the problems of labour protection. The doctrine of state interference acquired wide acceptance, superseding the earlier doctrine of *laissez faire*. The state no longer considered its task to be limited to authorizing the establishment of schemes of welfare or mutual aid and to regulating the relations between the managers of such schemes and the beneficiaries, according to ordinary laws. It began to concern itself also in the organization of insurance, and after 1880 the countries can be divided into two groups according to the nature of their efforts in the domain of social thrift.

The first group established compulsory sickness insurance. It includes numerous countries: Germany (1883), Austria, Hungary, Luxembourg, Norway, Serbia, Great Britain, Russia, Roumania, Bulgaria, Czechoslovakia and Portugal, Poland, Japan, Greece, Chile and Lithuania. Other countries, carrying on the tradition of *laissez faire*, preferred to encourage the formation of institutions by private initiative, and adopted legislation which granted the mutual-aid movement a special status more favourable than that of commercial companies or other kinds of association, and provided financial assistance from public funds.

Legislation of this kind has been adopted in Italy, Sweden, Denmark, Belgium, Finland, France, Spain and Switzerland. Thus, aided both materially and morally, the mutual-aid movement developed rapidly; thousands of societies were formed, having in some countries hundreds of thousands, and in others millions of members. The movement has spread beyond the frontiers of the old world to South America, Australia, New Zealand and Canada, whither emigrants have carried the traditions of their countries of origin.

LABOUR LEGISLATION IN SASKATCHEWAN IN 1928

A NUMBER of laws of interest to labour were passed during the session of the Saskatchewan Legislature which opened on January 24 and closed on March 7, 1928. The new legislation included acts providing for old age pensions, superannuation of telephone and telegraph employees, the establishment of a Department of Railways, Labour and Industries, and amendments to the City Act, the School Grants Act, and the Public Utilities Companies Act.

The Old Age Pensions Act is very similar to that passed by the British Columbia Legislature during the session of 1926-27 (LABOUR GAZETTE, April, 1927, page 382), and authorizes the Lieutenant-Governor in Council to enter into an agreement with the Governor General in Council as to a general scheme of old-age pensions in the province, pursuant to the provisions of any Act passed by the Dominion Government relating to old-age pensions. The Saskatchewan Act, however, provides that treaty Indians shall not come within the scope of the Act even if they change their status to that of non-treaty Indians. The Act comes into force on Proclamation of the Lieutenant-Governor in Council.

The Department of Railways, Labour and Industries Act sets up a Department of Railways, Labour and Industries. It repeals the Bureau of Labour and Industries Act and transfers the powers and duties of that Bureau to the new Department.

An amendment to the School Attendance Act repeals that section which authorized school boards to grant certificates of exemption from school attendance to children over thirteen years of age who had passed Grade V and whose services were required in husbandry or in urgent and necessary household duties.

Amendments to the School Act provide, among other things, that three or more adjacent rural school districts whose schools are closed during the winter months may cooperate in maintaining a community school or schools. An amendment to the School Grants Act which comes into force July 1, 1928, makes provision for special grants of two dollars per teaching day to boards maintaining such community schools. A grant for a night school will not be payable to a district while such district is co-operating in the maintenance of a community school.

An amendment to the Public Utilities Companies Act, which comes into force on May 1, 1928, contains a section empowering the Lieutenant-Governor in Council to make reasonable and necessary regulations with regard to

the generation, transmission, transformation, distribution and use of electrical energy in any place or class of places without the limits of any city or town. The Electrical Workers Protection Act is repealed.

An amendment to the City Act, which also comes into force on May 1, 1928, contains a section which provides that a city council may pass by-laws regulating and licensing electrical workers, inquiring into their qualifications, establishing a board for the examination of journeymen, electricians, foremen, overseers or managers and also for regulating the installation of electrical apparatus and providing for inspection and permits.

The amendment to the City Act repeals that section which provided that no by-law requiring early closing of shops might be passed except on petition of at least three-fourths of the occupiers of the shops concerned. A new section was inserted providing that a council may pass such a by-law of its own motion and without petition. If a petition is received, however, the council, if satisfied that it is signed by at least three-fourths of the shopkeepers concerned, must pass a closing by-law within four weeks.

The Telephone Department Superannuation Act provides for the compulsory retirement of telephone and telegraph employees at the age of sixty-five years in the case of men, and sixty years in the case of women. Exception may be made by the Minister of Telephones and Telegraphs in the case of any employee whose retention in the service is deemed to be in the public interest. The term, however, may not be extended beyond the age of seventy years. Employees who have served for 35 years or more, if not physically fit to continue their duties, may retire at the age of 60 years, if men, and 55 years, if women. Employees will contribute four per cent of their salaries to the Superannuation Fund, but no contribution is to be made in respect of any period exceeding 35 years. Employees are entitled to superannuation after ten years' continuous service. The allowance is fixed at one-fiftieth of the average salary during the last three years of service multiplied by the total number of years of service, but may not be more than \$2,000 or less than \$360 per annum, nor exceed the final annual salary of the employee. On the death of an employee one-half of the allowance to which he was entitled is paid to his widow during her widowhood, with an additional ten per cent of the allowance for each child under the age of 18 years, the maximum total allowance

for the children being 25 per cent. If the superannuate's wife has predeceased him, or if she, having survived him, dies or remarries, his children under 18 years of age will receive her one-half allowance. Employees retiring voluntarily or ceasing to be employed will receive the amount deducted from their salaries with accrued interest. The Department of Telephones and Telegraphs will contribute to the fund an amount equal to the employees' contributions. Allowances made under the Act are tax exempt and unassignable. Active service during the great war is not deemed to be a discontinuance of service to the Department. The Act comes into force on May 1, 1928.

An amendment to the Civil Service Superannuation Act provides that in the case of persons who have left the service and been re-employed, the previous service shall be taken into account in computing the allowance, if such service covered a continuous

period of three years or more. If a gratuity or honorarium was granted, however, it must be repaid before the previous service will be taken into account. The provisions of the Act are extended to cover the dependants of civil servants who died between the passing of the Act and the date on which it was put in force. Other minor changes were also made.

The Public Vehicles Act, which comes into force on May 1, makes provision for the licensing of drivers of public vehicles. It also limits the working day of such employees to nine hours of actual driving in any twenty-four hours, excluding all stops for any purpose whatsoever. Drivers may not smoke or drink intoxicating liquor while on duty.

The Village Act was consolidated and amended but the sections of labour interest were not changed.

The law relating to Co-operative Associations was also amended and consolidated.

Old Age Pensions in British Columbia

A motion to adopt the following resolution submitted to the Legislative Assembly of British Columbia on February 8, by a private member, was ruled out of order by the speaker on the ground that it would involve the expenditure of public money and could only be submitted by a minister of the Crown:—

Whereas the Parliament of Canada, by an Act assented to on March 31, 1927, enacted certain provisions dealing with the subject of old-age pensions:

And whereas it was by the said Act provided that the Canadian Government pension authority would make payment of a pension to such persons who, *inter alia*: (1) Had attained the age of 70 years; and (2) were not in receipt of an income of as much as \$365 per year:

And whereas the payment of the said pension to any person is by the said Act conditioned upon: (a) The right of the said pension authority to make the interest of any pensioner in his or her dwelling-house subject to be realized upon for the repayment to the said pension authority of the amount of all payments made to such pensioner, together with interest on such payments at the rate of 5 per cent per annum compounded annually; and (b) the right of the said pension authority to recover out of the estate of any deceased pensioner, as a debt due by the said pensioner to the pension authority, the sum of the payments made to such pensioner, together with interest on such payments at the rate of 5 per cent per annum compounded annually;

And whereas the said provisions of the said Act have in effect: (1) The virtual pauperiza-

tion of all successful applicants for an old-age pension; (2) the denial of a pension to any persons who, not having reached the age of 70 years, are nevertheless by reason of premature old-age entitled to a pension equally with persons who have reached the age of 70 years; and (3) the granting of aid in many cases only out of the assets which the pensioner may be able to furnish, thus pauperizing such pensioner's dependants;

And whereas the aforesaid conditions are inimical to the interests of many persons who should be entitled to apply for old-age pensions as well as to the interests of their dependants;

Be it therefore Resolved, That this Legislative Assembly, endeavouring to represent the just cause of the aged persons of this Province and of their dependants, humbly petition the Canadian Government to alter the said Act so as to provide: (a) That the dwelling-house of any pensioner shall not be subjected to the repayment of any amounts paid to such pensioner by said pension authority; (b) reduction of the pension age from 70 to 65 years; (c) that an applicant for a pension shall be entitled to same regardless of such applicant's income up to an amount of at least \$365 per annum; and (d) exemption of the estate of a pensioner from repayments to the pension authority of amounts paid by way of pension in all such cases where such pensioner leaves him surviving any dependant.

And be it further Resolved, That an humble Address be presented to His Honour the Lieutenant-Governor, praying that he will cause to be conveyed to the Secretary of State for Canada the foregoing Preamble and Resolution.

PROPOSAL TO ESTABLISH A NATIONAL CIVIL SERVICE COUNCIL APPROVED BY THE HOUSE OF COMMONS

AS reported in last month's *LABOUR GAZETTE* the House of Commons on February 10, 1928, referred to the Select Standing Committee on Industrial and International Relations Bill No. 4, an Act to amend the Civil Service Act (Councils), which had been introduced by Mr. J. S. Woodsworth, M.P., of Winnipeg North Centre. In order that it might deal satisfactorily with the specific measure referred to it, the Committee decided to summon several witnesses for the purpose of hearing evidence on the general subject of joint councils for the civil service. With this object in mind the Committee held seven meetings between February 9 and March 27, at the first six of which witnesses were examined.

The first witness was Mr. Gerald H. Brown, Assistant Deputy Minister of Labour, who dealt with joint councils in both public and private employment, particularly in Great Britain and specifically in the British Civil Service. Dr. O. D. Skelton, Under-Secretary of State for External Affairs, was examined by the Committee on the subject of the operations of the Whitley Councils in the British Civil Service, which Dr. Skelton had enquired into while in England recently.

The major Civil Service organizations were represented before the Committee by their respective officers. The Civil Service Federation of Canada was represented by Mr. T. R. L. MacInnes, President, Mr. V. C. Phelan, Treasurer, and Mr. J. H. Ryan, Secretary. For the Civil Service Association of Ottawa there appeared Mr. W. J. Callaghan, President, Miss Jane McInnes, First Vice-President, and Mr. V. L. Lawson, Secretary. Mr. D. Roy Cameron, President, spoke for the Professional Institute of Canada. Mr. Fred Knowles, President of the Amalgamated Civil Servants of Canada, represented his organization. Mr. T. H. Burns, Secretary of the Dominion Customs and Excise Officers Association, laid the views of his organization before the Committee. The representatives of the various Civil Service organizations explained the requests which had already been made for the establishment of Civil Service Councils by their respective organizations. The proposals differed to some

extent, but in the main the view that at the outset a National Civil Service Council alone should be established predominated.

The Hon. W. J. Roche, Chairman of the Civil Service Commission, informed the Committee of the Commission's views on the general question of joint councils, as affecting the Civil Service.

After completing the hearing of evidence the Committee formulated and presented to the House of Commons its report, which is as follows:—

Your committee has had before it Bill No. 4, An Act to amend the Civil Service Act (Councils), referred to the Committee on February 10, 1928. Having considered the Bill and examined a number of witnesses on the subject-matter involved, your Committee beg leave to report as follows:—

1. That whereas the majority of the witnesses heard were of the opinion that further consideration should be given to the details of the constitution of National Civil Service Councils.

And whereas the Government is prepared to establish such Councils.

And whereas the objects of the Bill may be attained by Order in Council.

2. That this Committee endorses the principle of the establishment by the Government of a National Civil Service Council, composed of representatives of the Government and the organized Civil Service in equal numbers, to consider and advise the Government upon matters of mutual concern to the Government and civil servants in their respective capacities as employer and employees, also as to the establishing of any other consultative and advisory machinery that may be required.

3. That, as the form of constitution for such a Council, covering its scope and functions, can best be determined by joint agreement between the parties concerned, this committee recommends the setting up by the Government of a drafting committee representing both the Government and the Civil Service organizations, for the said purpose, provided that any such constitution so drafted shall be subject to the approval of the Governor in Council; and

4. That after the said constitution has been drafted and approved in the manner set forth the National Civil Service Council should be established forthwith by the Government.

5. In view of the above recommendations your Committee recommend that Bill No. 4 be not further proceeded with.

This report was unanimously concurred in by the House on March 29, 1928.

REPORT OF BUREAU OF LABOUR OF MANITOBA FOR 1926-7

THE twelfth annual report of the Bureau of Labour, Department of Public Works of Manitoba for the year ending April 30, 1927, has been recently received. The report details the activities of the Bureau throughout this period in the administration of the following Acts: The Bureau of Labour Act; The Manitoba Factories Act; The Bake Shops Act; The Shops Regulation Act; The Minimum Wage Act; The Elevator and Hoist Act; The Steam Boiler Act; The Building Trades Protection Act; The Public Buildings Act; The Fair Wage Act; The Electricians' License Act; The Public Amusements Act (the licensing of cinema projectors); The Fires Prevention Act.

The expansion of the Bureau's duties from its commencement in 1915 may be gauged by a chart which shows the inspections carried out under the various Acts. During the twelve-year period these inspections increased from a total of 1,154 to 18,408. Orders issued under the same Acts increased from 1,220 in 1915 to 8,405 for year ending April 30, 1927. Most of the orders for improvement were connected with safety and health, while a few dealt with child labour. During the fiscal year the matter of child labour received close attention. Thirteen cases were found among the following industries—abattoirs, furniture, bedding, paints, printing, glass and wood-working. Orders were issued to have conditions remedied and compliance obtained in every case. Three applications were made for permission to work during the school holidays, two of which were granted and one refused.

Minimum Wages for Female Employees.—During the year the Minimum Wage Board held thirty-one meetings. On July 24, 1926, Regulation No. 6, covering brick yards, and seasonal and casual employment in industries in the Province of Manitoba, not already covered by other regulations, became effective. With the view of effecting a consolidation of the regulations and in order to simplify administration, the Board devoted considerable time to revision, and on July 31, 1926, Regulation No. 7, covering artificial flowers, bedding, ladies wear, hats, caps, embroidery, jewellery, regalia and garments which include all clothing trades except custom dressmaking, millinery, custom tailoring and furriers, became law. Regulation No. 8 covering auto tops, caskets, gloves, knitting, leather goods, tents and awnings in all portions of the Province became effective on April 2, 1927.

The consolidation of all these regulations proved very beneficial for administration purposes.

There were 22 prosecutions under the regulations covering restaurants for non-payment of wages, excessive hours, one day off in seven, etc. In ten cases, conviction and costs were obtained, and fines imposed. Stay of proceedings was entered in the remaining twelve cases, all claims for wages having been satisfactorily settled. Twenty-four claims for wages were adjusted and collections were effected by the Bureau without resorting to prosecution. In addition to the prosecutions under the Minimum Wage Act, there were three under The Steam Boiler Act and three under The Electricians' License Act. Overtime permits were granted during the year to the number of 135 while fifteen permits were issued for legal holidays.

Industrial Accidents.—There were thirteen fatal accidents during the year, of which number seven were in factories and six in building operations. The report details the nature of each fatality, indicating the cause of each as ascertained after investigation. Three fatalities were investigated which did not come under legislation administered by the Bureau. Special investigations were made by the Bureau into 422 industrial, 88 building, and 16 elevator accidents. In all, there were 6,219 accidents reported to the Bureau during the year, of which number 5,542 were industrial, 16 in connection with elevators and 661 in building trades.

Accident Prevention and First Aid.—The report emphasized that responsibility for accidents should be realized, "and the old idea of regarding them as due to some unforeseen power and therefore impossible to prevent, discarded. . . . Experience has taught us, and there is a considerable amount of testimony to this effect, that accidents are caused and do not 'just happen.' In a number of industries, especially in the operation of elevators in the Province of Manitoba, it has been proved that accidents can be prevented. There are two parties who principally have the power, if properly directed, to prevent industrial accidents, i.e., the employer and the employee. Both have responsibilities and neither can avoid them. It is the duty of the employer to study the hazards of his industry, provide safe equipment and maintain same in a safe condition, but no matter how far the employer may go in this respect,

the worker also has a responsibility and must do his part whole-heartedly, in order to achieve the desired results. Experience has shown that many industrial accidents are due to the human element and might be prevented by exercising thought and care."

Much work was accomplished by the Bureau in preventing accidents by means of improvements in working conditions, and wherever possible every effort was made to impress upon the worker the necessity of realizing that many accidents might be prevented if due care was taken. The report points out that there is still much work which might be done to advantage, such as the establishment of a bulletin service for the purpose of keeping before the employer and the worker the necessity of adopting safer working methods and the avoidance of unnecessary risks. It was hoped that in the near future adequate means would be found for the further development of the work of accident prevention.

Dealing with the subject of "First Aid," the report states that industrial classes in this subject are becoming popular, and that last season's work was very encouraging. Nine classes were held, which were all that could be handled with the accommodation and facilities at the disposal of the Bureau. Great interest was taken in the work by those participating in the classes and also by the employers, while the whole-hearted co-operation of the Workmen's Compensation Board was very much appreciated. During the season, the amount of work accomplished surpassed that in any previous year. There were 287 students instructed of which number 210 were successful candidates.

Commenting on the value of First Aid, the report says: "We are convinced that 'First Aid' is next in importance to the prevention of accidents; in fact, in some ways it is even of greater importance, because with all our efforts, we can never hope to entirely eliminate accidents, but with efficient first aid promptly at hand the fatal tendencies of accidents can very frequently be arrested. The efforts of the Bureau during the past six years to bring home to both employer and employee the necessity of having 'First Aiders' distributed among industrial and other workers have not been in vain."

The industries and occupations covered during the season in first aid work were: Iron works, abattoirs, flour mills, biscuit manufacture, candy manufacture, fish company, bags, iron foundry, engineering, woodworking, breweries, cartage, harness manufacture, soap

works, printing, departmental stores, telephone employees, caretakers, dairies.

Strikes and Labour Difficulties.—During the fiscal year, the services of the Bureau Secretary were offered and accepted in connection with a strike between mill owners and their respective employees, which strike had then been in progress about ten days and involved approximately 100 workers. After several meetings and lengthy discussions with representatives of both sides, a settlement, satisfactory to all concerned, was reached.

Unemployment Relief.—A special report on the subject of destitution and unemployment relief for the fiscal year is given as an appendix to the main report. This report details the arrangement by which the Provincial Government shared the burden of relief with municipalities, the basis of such assistance being as follows:

(1) Assisting in relief of persons, in excess of the normal number, having two or more dependants, by refunding the municipality one-quarter of the financial relief necessary.

(2) Paying to the municipality one-half of the increased administration expense due to relief measures.

(3) Paying one-half of the cost of furnishing men with transportation to return to their homes or to places where work could be found for them.

Mrs. Edith Rogers, M.L.A., and Mr. A. MacNamara, Chief Inspector, of the Bureau, represented the Provincial Government in dealing with the municipalities. The report states that the Federal Government was appealed to by the municipalities to assist in the matter, but declined to continue the contribution formerly granted.

The cost of unemployment relief to the province during the winter of 1926-1927 was lower than in any winter since 1920, being \$9,640.41. The report gives a table showing the cost of unemployment relief to the province during the winters from 1920. This table is as follows:

1920-1921..	\$ 78,952 28
1921-1922..	151,718 85
1922-1923..	63,542 80
1923-1924..	55,104 39
1924-1925..	58,609 32
1925-1926..	16,567 57
1926-1927..	9,640 41

WORKMEN'S COMPENSATION IN ONTARIO

Changes in Rates of Assessment for Various Industries in 1928

THE provisional rates of assessment for 1928 for each industry coming under the Workmen's Compensation Act have been published by the Board in pamphlet form. The adjusted rates for 1927 are also shown, the provisional rate struck for that year having been adjusted in accordance with the accident record of each group during the year. The variation of the rates from year to year thus serves to indicate to some extent the progress or recession of the several industries in the matter of safe operation. However, the adjustment is based also on the actual payroll of each industry, this being known definitely only at the end of the year. But as a general rule the rates are fixed in accordance with the accident experience. The classes are subdivided into groups, and the experience of each group is recorded; at the same time, each class is regarded as an insurance group, and all lines of industry in the class share to some extent the good or ill fortune of the class as a whole. This is especially the case where the total amount of the payrolls in sub-group of industry is small. The Board points out that "to charge that line of industry with its own cost might place a very excessive burden upon its employers for one year, while perhaps relieving them almost wholly from assessment another year. This would destroy the underlying principle of collective liability or mutual insurance which is the basis of the system."

Merit Rating Refunds

The Board proceeds to describe "merit rating," a system whereby a distinction is made between employers having a good or bad accident experience. "Where the accident cost falls short of the amount of assessment by a stated percentage a merit rating refund, within specified limits, is made accordingly. Merit rating for the period including the years 1924, 1925, and 1926 is being made, and will go out with this year's assessments, and it is the purpose of the Board to give merit refunds annually, based on the accident experience of each firm for the three preceding years. Full particulars of merit rating can be obtained on application to the Board." The rates of assessment are a percentage of \$100 of payroll.

Assessment Changes in 1928

In Class 1, the rate for logging, woods operations, river driving, loading, etc., is raised from \$3.50 to \$4.50. Substantial increases are

made in pulpwood woods operations, in saw-mills and in cooorage manufacturing.

In Class 2 (pulp and paper mills), the rates remain as in 1927 with the exception of an increase of 50 cents in connection with river operations.

In Class 3 (furniture, canoes, etc.), the rates remain at their former low level.

Class 4 shows a considerable advance in assessment rates in practically all sub-groups except planing mills and sash and door factories and hardwood flooring. These increases are in the manufacture of boxes, fibre board, turned wooden articles, refrigerators, etc., window and door screens, various domestic utensils of wood, and shop carpentry or cabinet work.

In Class 5 (the mining group) the general rate remains at \$4, but increases are shown in gold mining, and in abrasives. On the other hand reductions are made in nickel mining and treatment of ores.

In Class 6, increases occur in quarries, cement manufacture, glassware (with heat), lime burning and milling, slate manufacture, manufacture of peat fibre, and coal briquetting. Reductions are made in the rates for glassware (manufacture without heat, and installation); stone cutting and marble works, and in concrete blocks manufactured by hand.

Class 7 shows reduced assessments in rolling mills and heavy forgings.

Class 8 shows reductions in malleable iron foundries, stoves, furnaces, boilers, radiators (manufacture and installation). On the other hand there are increases in connection with steel and brass foundries and lead works.

In Class 9 (structural steel, etc.) there are increases in the rates for boiler making, manufacture of metal sidings, ceilings, roofs, etc., steel drums, etc. Reductions are shown for the manufacture of heavy machinery, freight elevators, iron stairs and ornamental iron work, and riveted pipes, tanks, etc.

Class 10 shows increases for manufacture of bolts, nuts, etc., cold drawn shafting, wind-mills, lightning rods, while there are reductions for manufacture of small machines (sewing machines, typewriters, etc.) The rates of the light machinery, blacksmith shops, tool manufacture, sheet metal, wire, etc., remain as formerly.

Class 11 (vehicles, farm implements, etc.) show increased rates for manufacture of waggons, motor truck bodies, toy waggons, etc. Aerial testing, flying or demonstrating is an industry in this class, the rate being \$10. The

rates for boiler manufacturing and car shops also are unchanged.

Class 12 shows numerous reductions, these including petroleum products, the business of gas or ice, manufacture of corrosive acids, drugs and medicines, writing ink, blacking, etc. Increased assessments are made for manufacture of paints and oils, tar paper, soap, and salt.

Class 13 (manufacture of cereals, operation of elevators, threshing or ensilage cutting) remains as before.

In Class 14, reductions are made in connection with packing houses or abattoirs, glue and fertilizers.

Class 15 (food and drink products) shows few changes, but the rates for dairy products are lower than formerly. The manufacture of cans, an industry in this group, also has a reduced assessment.

Class 16 (leather and rubber) shows little change, but an increase is made in the rate for rubber tires, belting and hose.

Class 17 (the textile group) shows a reduction throughout, evenly spread among the various sub-groups.

Class 18 (mainly manufacture of clothing but including power laundries and dyeing and cleaning establishments), on the other hand, shows small general increases.

Class 19. The printing and publishing group shows further reductions in an already low rate of assessment. Manufacture of cardboard boxes, stationery, bags, etc., also have reductions.

Class 20. Increases are made in the rates for teaming and cartage, and for coal, wood, lumber and builders' supply yards. Warehousing or storage remains as before.

Class 21. The rate for bridge construction is advanced, but road making, excavations, sewer construction, etc., remains unchanged. Caisson work (as a business) retains the high rate of \$6.50, and blasting remains at \$5. Foremen and policemen* are assessed at \$2.

Class 22 shows reductions in construction of electric power or transmission lines, but no changes occur in connection with telephone or telegraph lines.

Class 23 (including erection of structural steel, canal construction, fishing, stevedoring, loading cars, and navigation*) shows no changes from the rates for 1927.

Class 24 has increases in the rates of assessment for brick work and stone masonry, plastering, carpentry, electric wiring of buildings, plumbing and painting and general construction. On the other hand there are reductions in connection with sheet metal work and with theatres and moving picture houses.

*By application.

LABOUR COMMISSION APPOINTED IN SASKATCHEWAN

APPPOINTMENT of a commission to ascertain the views of labour and the employers of labour in Saskatchewan regarding the best methods of looking after workmen injured in accidents in the course of their work and taking care of the dependants of workmen killed in industrial accidents was announced recently by Premier J. G. Gardiner. Mr. P. M. Anderson, K.C., is named as chairman, who is to be assisted in the investigation by Messrs. L. D. McTavish, Moose Jaw, an officer of the running trades; Harry Perry, Regina, a representative of the Saskatchewan executive of the Trades and Labour Congress; F. M. Still, Regina, of the P. Burns Co., chairman of the Employers of Labour committee which is enquiring into the necessity for a change in the law; and A. W. Heise, a contractor and employer of labour of the city of Saskatoon.

In making the announcement Premier Gardiner said that there had been a difference of opinion expressed as between the running trades and other branches of labour as to the value of the present Workmen's Compensation Act. Most of the employers of

labour favour a change in the law, although they do not appear unanimous. There was some doubt as to what limitation should be placed on the classes of labour which should be covered by a system of state insurance, should one be adopted. In view of the recent representations of labour to the Government (LABOUR GAZETTE February, 1928, page 166), and after consultation with others interested, it was decided to appoint a commission, which will sit at different places in the province and hear the views of labour and employers of labour in the near future, and compile information upon which a decision can be reached as to the best method by which the welfare of dependants of, as well as those suffering from accidents, can be provided for.

A departmental examination into the facts was made some years ago, but the results were not entirely satisfactory, largely because the body making the finding was not representative of those concerned. To overcome this objection it has been decided to appoint a commission of those outside the government service.

MOTHERS' ALLOWANCES IN SASKATCHEWAN IN 1927

DURING the year 1927 there were 260 new applications made for mothers' allowances in Saskatchewan, according to F. J. Reynolds, Commissioner for the Bureau of Child Protection, Regina. Of this number 238 were not allowed. There are also 1,119 allowances that were on the payroll in the preceding years, 1918-1926, both inclusive, which makes a total of 1,441.

During the year there was a total of 183 cancellations, 152 for the years 1918-1926 and 36 for 1927. With these cancellations there were at the end of December, 1927, a total of 1,253 shown on the payroll.

The amount paid during the calendar year totalled \$343,975, which represented an average of \$22.88 per family per month, and the total number of children under 16 years of age represented in the families receiving allowances was 4,386, while the number of fam-

ilies receiving allowance is greater the average per family per month is \$1.35 less, the difference being accounted for by the improved conditions which surrounded the average family. On December 31, 217 women whose husbands are incapacitated from earning for the family and are either in an institution or at home, were receiving allowances. There were 12 cases where orphans were being taken care of by widows or unmarried women, and 17 cases where the husband or father was in jail or penitentiary.

In all there were 48 fewer applications for allowances received in 1927 than in 1926 and eight more applications allowed. The number of cancellations in 1927 was 80 less than in 1926, and the number receiving allowances now is 134 more than at the same period last year. A total of \$18,545.00 more was paid out in 1927 than 1926.

CONTROL OF INDUSTRIAL COMBINATIONS FROM THE SOCIAL STANDPOINT

CERTAIN aspects of the present-day tendency toward further centralization of control in industry are examined in the January number of the *International Labour Review*¹, in a survey² of the policies of national governments relating to mergers, cartels and other amalgamations and associations of business enterprises. The writer reviews principles invoked by the courts of Britain, Germany, France, the United States and other countries in the regulation of industrial and business combinations, studying these varying policies of control with special reference to the worker as a producer and also as a consumer. The purpose of the article is stated to be that of indicating the inadequacy of former mechanical criteria used by these courts, "in the face of a market which is passing out of the control of automatic forces, and becoming dependent on the efforts of large industrial combinations to impose on it their will and discipline."

In the rise of large business combinations to positions of economic ascendancy there is seen a possible source of serious injury to the entire community and particularly to the workers. The resulting clash between industrial combinations and labour combinations is, on the

one hand, a struggle of wage earners seeking to widen the concept of their personal rights; on the other, an effort on the part of combinations of employers to extend the idea of property so far as to include labour as an essential part of their industrial assets. The limitations imposed on the right of labour to organize, with the various changes in these limitations which have taken place from time to time, are compared with public policy toward these vast and growing organizations of capital. The growth of industrial combinations is, however, regarded as a necessary mitigation of the wastes of unbridled competition. To protect the interests of the public in this new era in industry there has come, in turn, an increasing tendency to supervise combinations of enterprises when, by their abuses, they injure the conditions of life of the people.

The British principle of judicial non-intervention in cases of commercial competition is cited as one conspicuous exception to this regulative tendency.¹ In the Dominions, however, this attitude is much less marked. French judicial practice for a number of years has shown a tendency to distinguish between legal and illegal capital combinations by the criterion of "a lawful margin of profit." The amendment

¹ *Mogul Case*, 1892, A.C. 49 et seq.; *Commonwealth of Australia v. Adelaide Steamship Company*, 1913 A.C. 78; *Ware and de Freville v. The Motor Trades Association*, 1921 3 K. B. 40 et seq.; *Sorrell v. Smith*, 1925 A.C. 725; *Crown Milling Company v. The King*, 1927, A.C. 394.

of December 3, 1926, to section 419 of the French Penal Code condemned "influencing or trying to influence the market, whether alone or in an association or combination, with a view to obtaining a profit which would not be the outcome of the natural play of the forces of supply and demand"; in addition to previously prohibited commercial practices. Such regulation in France has been much less comprehensive than that in Germany, where government policy has been rather to encourage industrial combination and at the same time to subject it to control in the public interest. Thus the Cartel Tribunal set up in Germany by the Order of November 2, 1923, examines alleged injurious acts of combinations of capital by the standard of their social consequences, rather than by the French criterion of intention. Under the provisions of this Order members of a cartel or similar association may denounce their contract with the cartel in cases where their business activities are pronounced by the Tribunal to be "unfairly restricted, particularly as regards production, sale or fixing of prices." No boycott or related punishment may be imposed by an association if "the measure in question would involve a danger to industry in general or the common weal, or unfairly restrict the economic freedom of the person affected thereby." Decisions carrying out the provisions of the above two sections were rendered on February 25, 1924, and February 17, 1927, respectively. The Swedish Act of June 18, 1925, and the Norwegian Act of March 12, 1926, similarly provide for supervision of industrial combinations, with the purpose of preventing abuse of economic power.

The United States, by the Sherman Act of 1890, first aimed to prohibit alike all forms of contracts considered to be in restraint of trade. Though at first this Act was interpreted by the courts in the sense of prohibiting all trusts and mergers, distinctions came to be made between "reasonable" and "unreasonable" associations. The writer considers as possible standards of distinction between legal and illegal combinations, first, the degree of control obtained by the combination, second, the methods adopted for controlling prices, and third, the idea of a reasonable price. By a number of concrete illustrations from decisions of the United States Supreme Court, it is pointed out that no one of these standards has been maintained as a uniform policy for determining the lawfulness or unlawfulness of industrial combinations in the United States. Changes in the social effects of business policies may result from changes in other economic conditions, just as the activities of industrial combinations may at one time be in the "interests of the general public" and lawful,

and, at a later date, become unlawful because of changes in their activities producing new undesirable social effects. This necessity for a more elastic control than that of the judiciary is said to explain the establishment, under the Clayton Act of September 26, 1914, of the Federal Trade Commission, an administrative authority with duties of inquiring into all cases considered to constitute interference with the freedom of trade, and of preventing unfair methods of competition in commerce, "if it should appear to the Commission that a proceeding by it in respect thereof would be to the interests of the public."

In general, the modern tendency is said to be not so much toward the regulation of business combinations on the grounds of motive or of methods as toward a policy of supervision to prevent such combinations from engaging in certain practices which may result in injury to the workers, whether regarded as producers or as consumers. Presuming the adoption by wage earners of the necessary precautions for the protection of their own interests as producers, it is chiefly in the latter capacity that they may be more seriously threatened by monopolistic tendencies which receive inadequate public supervision.

Immigration to the United States in 1926-7

The annual report of the Commissioner General of Immigration, United States Department of Labour, for the year ending June, 1927, states that nearly one-half of the immigrants during the past year came from countries in the Western Hemisphere, with Canada and Mexico far in the lead. These two countries, with 81,506 and 67,721, respectively, contributed nearly 45 per cent of the total number of immigrants for the year. Europe sent 168,368 immigrant aliens during the same period, Germany, with 48,513, leading the list, followed by the Irish Free State with 28,054, and Great Britain with 23,669. Italy sent 17,297 immigrants in the past year, and the Scandinavian countries 16,860. All the other countries of Europe combined sent 33,975. Compared with figures for the previous year, Canadian immigration decreased 10.5 per cent; Mexican immigration increased 56.3 per cent; and European immigration increased 8.2 per cent. The report shows that the principal contributions of the immigrant class on a racial basis were as follows: Mexican, 66,766; German, 56,587; Irish, 44,726; English, 40,165; Scotch, 25,544; French, 19,313; Scandinavian, 19,235; Italian, 18,529; Hebrew, 11,483.

NOTES ON INDUSTRIAL SAFETY AND HEALTH

Verdict of Coroner's Jury on Hollinger Mine Disaster

The coroner's jury which investigated the circumstances surrounding the disaster at the Hollinger mine, near Timmins, Ontario, on February 10, when thirty-nine employees were killed (LABOUR GAZETTE, March, page 273), returned the following verdict on March 23:—

"We, the jury assembled, find that Lindsay, Kampula, Gardez (over whose bodies the inquest was held) and others, came to their deaths between the morning of Friday, February 10, 1928, and Monday, February 13, 1928, at the Hollinger mine from carbon monoxide poisoning due to the fire in stope 55-A.

"That fire was due to gross negligence on the part of the Hollinger management and the operating executives in allowing conditions to exist whereby their subordinates dumped large quantities of inflammable material in old stopes.

"We recommend that the old stopes where the rubbish has been dumped be cleaned out or made safe under the supervision of the government inspectors and that more mining inspectors be appointed."

The report of Mr. Justice Godson, who was appointed by the Provincial Government to inquire into the causes of the disaster, is expected shortly.

Cause of Explosion at McGillivray Mine

The report of the Hon. Chief Justice Harvey, appointed by the government of Alberta to conduct an inquiry into conditions at the McGillivray coal mine, Coleman, was published recently. The inquiry was held in consequence of a disaster resulting from an explosion in this mine on November 23, 1926, when ten employees were killed (LABOUR GAZETTE, February, 1927, page 236; June, page 598). The Chief Justice finds that the explosion was caused through the heat formed by a charge of blasting powder igniting combustible material in the form of gas or coal dust. No blame is attached to any of the mine workers or officials, the report paying a tribute to "the heroic conduct of all concerned, from the lowest to the highest degree, both miners and officials, and including the government inspector," and suggesting that public recognition should be made of the valour of these men. The report points out that White, the fire boss, was a careful, competent, intelligent man, and was captain of a rescue team which held the championship for effi-

ciency in first aid service for all Canada in all industries. His Instructions were to fire not more than one shot at a time, and his duty was, after a shot was fired, to test for gas with his safety lamp and to inspect the result of the shot. In regard to the explosive used on this occasion the report states as follows:—

"On one or two occasions before the explosion, flame had been noticed issuing in a blasting operation with gelpermite No. 1, (the explosive used in the No. 4 level where the accident occurred) but the attention of the management had not been drawn to it. When it was seen, the blasting was in rock work and in a rock tunnel where there is no gas it would not cause any damage and one of the miners who saw it said it did not impress him particularly."

Later in the report it is stated that after the disaster Mr. Kellock, manager of the mine was notified of the flame seen when gelpermite was being used.

". . . Not long after, flames were noticed by others and reported on; then careful tests were made, some in the presence of the representatives of the explosive company. On the occasions of the tests there were one or more shots exhibiting a flame or flash while there were several free from any flame."

Referring to expert evidence on gelpermite No. 1 given by Dr. Macintyre, chief explosives chemist in the Dominion Government department of mines the reports states:—

". . . Intense heat is generated when the explosive is fired and if that heat comes in contact with anything capable of ignition, it will ignite it . . . Dr. Macintyre says all explosives have flames. There was no comparison of gelpermite No. 1 with any other explosive but in a general way there seemed to be surprise expressed at the flame emitted from this explosive."

". . . It seems clear that it is a most efficient explosive in regard to the work it will do and when there is no danger of gas as in pure rock work it will seem to be an excellent explosive."

". . . While Dr. Macintyre's opinion was that the explosion was caused by the heat engendered in the explosion of the last shot being communicated to some combustible matter before it had sufficiently cooled and was still hot enough to ignite it, it does not follow that any other explosive would have had any different action. He was of the opinion that it was something that probably could not have been foreseen, for all the evidence indicates that White would have taken every precaution . . . The breaking of the rock may have released a confined amount (of gas) sufficient

to ignite and communicate with the dust which would be raised by the explosion."

"The exact details must be of course more or less speculative but I quite agree with the view of Dr. Macintyre and indeed had come to the conclusion before he expressed his opinion, that the cause of the explosion was the ignition of gas and dust from the heat generated in the last shot fired in the rock face of No. 4 level. That seems entirely probable and consistent with evidence and there is no other probable not to say possible cause that suggests itself."

Extent and Cost of Infection Ontario Industries

The extent and cost of infection both in dollars and in death and permanent disability, as an over-looked factor in accident prevention, formed the subject of an article by Mr. R. M. Hutton, of the Division of Industrial Hygiene, Ontario Department of Health, which appeared in the March issue of *Industrial Canada*, the official journal of the Canadian Manufacturers' Association. The writer declares that "it is a staggering fact that out of roughly six million dollars paid annually in Ontario in compensation of accidents, one million dollars, or one-sixth, is on account of infection—on account of something, that in actual fact need seldom occur." Mr. Hutton adds that in addition to the one million dollars cash that infection steals from industry, it also causes approximately 14 deaths and 37 cases of permanent disability, including 15 amputations a year.

According to the figures of the Ontario Workmen's Compensation Board for the four-year period 1922 to 1926, 9 per cent of the cases compensated were blood poisoning (infection) cases. Such a condition was described as "a very sanguine picture of the situation in Ontario," there being many individual plants where the proportion of infections to total accidents is much higher, and relatively few where, as the result of supervision, it is lower. An investigation made by the Division of Industrial Hygiene in thirty logging camps, where cuts are numerous and first aid somewhat difficult to enforce rigidly, indicated that 60 per cent of the wounds were infected before the doctor was reached, and that in two camps the doctor practically never saw an uninfected wound. On the other hand, records of plants where some form of medical care is in force show the proportion of infections to total accidents varying from 4.7 to .40 per cent. To illustrate what can be accomplished, Mr. Hutton refers to the highly organized medical department of a large grinding wheel company in the United States, where the problem of in-

fection has been intensively studied. This firm reported only 8 cases of infection out of 2,300 accidents severe enough to be reported, that is .34 per cent, or a very much lower rate if all accidents were included. Regarding these eight infected cases there was the significant comment that every one of the men concerned had either waited twenty-four hours before going to their medical department or had interfered with his dressing. The writer considers that such neglect on the part of the worker "is notoriously common," an instance being given in the records of one Ontario firm, which reported 24 very minor injuries which became infected and cost 341½ lost working days and \$1,165, despite the fact that 10 of them were at first so slight as to be refused compensation. It was also stated that 21 of the 24 cases did not report to first aid until after they had become infected.

The writer concludes by detailing some of the special features of prevention work in infection particularly in regard to its administrative and medical aspects.

Results of Safety Campaign in Nova Scotia Coal Mines

In the *LABOUR GAZETTE* for December, 1927, page 1318, the safety and first aid program of the British Empire Steel Corporation was described. The results of this campaign were indicated recently upon the occasion of the presentation of trophies to the Safety First Committees of the two collieries (Caledonia No. 4 and Victory No. 24) for having the best safety records. In all the mines of the Corporation during 1927 the number of accidents were decreased by 210 as compared with 1926.

The total number of accidents in all the coal mining operations of the corporation for the year 1927 was 1,987 as compared with 2,197 in the previous year. In the year 1927 there were 27 fatal accidents at the collieries and auxiliary departments of the corporation due to the following causes: falls from roof, 15; caught between boxes and run over by trips, 7; kicked by horse, 1; run over by railway cars, 3; falls off ladder, 1. By companies, the fatal accidents occurred as follows: Dominion Coal Company, 17; Nova Scotia Steel and Coal Company, 4; Acadia Coal Company, 5; Cumberland Railway and Coal Company, 1.

Safety Activities at the Sydney Steel Plant

The last bulletin published by the Nova Scotia Accident Prevention Association contained an account which indicated the results achieved during a four-year period of the accident prevention campaign conducted at the plant of the Dominion Iron & Steel Company,

Limited, Sydney. In the year 1924 there were 351 compensable accidents reported by the Sydney Steel Plant as compared with 144 compensable accidents in the year 1927. In other words, the company reduced its accident total from an average of 30 accidents per month in 1924 to 12 per month in 1927. The following figures show what has been accomplished in the prevention of industrial accidents during the past four years:

Year	Number of Accidents	Accidents per 10,000 Man-Days worked
1924.....	351	4.8
1925.....	222	3.1
1926.....	244	3.0
1927.....	144	2.0

The bulletin enumerates the factors which contributed to this improvement as follows:

(1) Recognition by the management that progress in accident prevention work would result only when the personnel of the plant realized that the management was squarely behind the safety campaign. Meetings of the plant superintendents and foremen were accordingly held at which it was announced that "Safety First" had been adopted as the operating rule by the company, and was to be carried out by all employees, regardless of position, in the same manner as any other order of the company.

(2) Formation of safety committees. These committees composed of superintendents, foremen and workmen are functioning in every department of the plant. Meetings are held at regular intervals, and frank discussions carried on relative to the elimination of accident hazards. Conditions that are known to cause accidents are investigated and corrected, and in this connection there was the utmost co-operation between the plant officials and the workmen. The company readily acknowledged that the splendid improvement in the accident situation during the past four years would not have been possible without the co-operation of the men.

(3) An active educational campaign. The fact that not more than 20 per cent of the accidents on the plant were due to mechanical hazards made it necessary that ways and means be devised of lessening the larger number resulting from non-mechanical causes. To this end the company developed an intensive campaign of education. Safety regulations were drafted to meet the conditions peculiar to the various departments, and all concerned endeavoured to have these rules carried out. A bulletin board service was maintained in all departments, new employees were instructed

regarding the hazards of their employment and advised of safe working practices, and department superintendents made frequent appeals to men under their charge.

Medical Certificates for Restaurant Employees in Saskatchewan

Under the powers conferred by the Public Health Act of Saskatchewan, an Order in Council has been issued which compels every employee in a hotel, restaurant, cafe, lunch counter, ice cream parlour, or a refreshment room where food or drink is sold to the public, and every other person engaged therein in the handling of food for human consumption, to furnish to the owner or manager a certificate from a legally qualified medical practitioner that such an employee is not suffering from any communicable disease in a communicable state. This Order in Council becomes effective on July 1, 1928. The employee is required to renew the certificate every six months as long as engaged in such employment.

Risks of Electrical Linemen

Greater precautions against accidents to electrical workers were urged by a coroner's jury at an inquest recently held in Winnipeg to enquire into the death of a lineman, who was electrocuted while working on a new pole. The evidence showed that the lineman was killed when he slipped while working on a cross arm at the top of the pole. In the attempt to save himself from falling, he missed the cross arm and clutched two high tension wires. He wore no rubber gloves at the time of the accident although it was stated that he had taken them with him when he first ascended the pole. Although regulations required that rubber gloves be worn while working among high voltage wires, the evidence of several linemen indicated that it was a common practice to discard gloves under certain weather conditions.

The coroner and the inspector of the provincial Bureau of Labour considered that accidents of such a nature had become too frequent, and that stricter preventive measures should be introduced.

The jury in returning a verdict of accidental death declared that there was not enough care and supervision over men engaged in such a hazardous calling. They recommended that all power company authorities and employees should have representatives meet together and draft special safety regulations affecting electrical workers. It was also urged that all employees working for electrical companies be required to take a first aid course for certificates, especially in artificial respiration.

CANADIAN PACIFIC RAILWAY COMPANY'S EMPLOYEES' PENSION PLAN

ACCORDING to the statement of the Canadian Pacific Railway Pension Department, published in the annual report of the company for the year 1927, pension allowances for the year amounted to \$766,214. The number of former employees on the pension roll at December 31, 1927, was 1,503, of whom 37 were under sixty years of age; 651 between sixty and seventy years of age; and 815 over seventy years of age. The balance in cash and investments in the fund was \$1,488,182.

This pension scheme, which was inaugurated by the Canadian Pacific Railway Company on January 1, 1903, is administered by a committee comprised of the president, the vice-presidents and chief solicitor of the company. It calls for no contributions from the employees themselves. The benefits of the pension plan apply to those in the service of any railway, express company or steamship line operated or controlled by the company.

The plan provides that all officers and employees who have attained the age of sixty-five years shall be retired, and such of those who have been ten years or longer in the company's service shall be pensioned. It is stipulated, however, that the Pension Committee shall have power to vary the foregoing rule and retain in the service any employee who has reached the age of sixty-five years if in their opinion it is in the interests of the company to do so; provided that no employee who has reached the age of sixty-five years without having served ten years continuously in the company's service, and who shall be retained in the service after he attains the age of sixty-five years, shall be eligible for pension allowance. No employee, who shall have entered the service of the company after attaining the age of forty years shall be eligible for pension except under special circumstances to be approved by the Pension Committee. Officers and employees between sixty and sixty-five years of age may, at the discretion of the committee, be retired with a pension either upon the application of such employee or upon the recommendation of the Head of the Department. The Pension Committee also have the power, subject to the approval of the Board of Directors, to retire with a pension, in special circumstances, employees who have not reached the age of sixty years, and, also subject to like approval, to add additional years to the actual term of service when there is sufficient cause for doing so.

Leave of absence, suspension, dismissal followed by reinstatement within one year, or a

temporary lay-off on account of a reduction of forces is not necessarily treated by the Pension Committee as constituting a breach in the continuity of the service, and the time when so laid off or absent, unless the employee has during such absence entered other employment, may be allowed to count as part of such service.

Basis of Pension Allowance.—The pension allowance authorized is granted upon the following basis:

For each year of service an allowance of one per cent of the average monthly pay received for the ten years preceding retirement, or preceding the date upon which the employee attained the age of sixty-five years, should he be retained in the service after such date; for example an employee who has been in the service for forty years and received on an average for the last ten years sixty dollars per month, the pension allowance would be forty per cent of sixty dollars, or \$24 per month. No pension allowance authorized, however, shall be less than \$20 per month.

In calculating the period of service upon which the pension allowance is based, the broken period following the completion of a year, when it is less than six months, shall not be counted; when it exceeds six months, it shall count as an additional year.

When pension allowances are authorized, they shall be paid monthly during the life of the beneficiary, provided that the company may cancel any pension whenever it is established in the opinion of the Pension Committee that the pensioner displays a decided lack of appreciation of the company's liberality in granting the pension, or is guilty of other serious misconduct.

The secretary of the pension department shall keep himself informed of the whereabouts of all employees who have retired from the service, and shall require satisfactory evidence from each of such employees, at least once a year, that he still comes within the rules of the pension department.

No assignment of pensions is permitted or recognized.

The acceptance of a pension allowance does not debar a retired employee from engaging in other business, but such retired employee cannot so engage in other business, or re-enter the service of the company, except with the consent of the Pension Committee, without forfeiting his pension allowance.

The company states that "the establishment and continuance of this system of pensions

is entirely a voluntary act on the part of the company, and as the employees do not in any way contribute towards it, neither the action of the Board of Directors in establishing such a system, nor any other action hereafter taken by them or by the Committee in the inauguration or operation of the Pension Department, shall be construed as giving to any officer or employee of the company a legal right to be retained in its service, or any legal right or claim to pension allowance. While it is the policy of the company to en-

courage its employees to remain with it and by faithful service to earn a pension, the company expressly reserves its right and privilege to discharge at any time any officer, agent or employee when the interests of the company, in its judgment, may so require, without liability for any claim for pension or other allowance than the salary or wages due and unpaid."

An account of the company's plan for employees' stock ownership was given in the LABOUR GAZETTE for October, 1927, page 1061.

Miners' Welfare Fund and National Scholarship Scheme of Great Britain

The sixth annual report of the Miners' Welfare Fund, which was established under the British Mining Industry Act of 1920* and to which reference was made in the Labour Gazette, April, 1922, page 376, has been recently received. Coupled with this report, which was issued under the Mines Department by the Committee appointed by the Board of Trade to allocate the Fund, is the first report of the selection committee, appointed to administer the Miners' Welfare National Scholarship Scheme. The period covered by the former report covers the year ending December 31, 1927, while the first report of the National Scholarship Scheme covers the period from November 13, 1926, to October 31, 1927.

Owing to the prolonged stoppage in the coal mining industry in 1926, the sum paid into the Welfare Fund during 1927 from the levy on output was only £523,304 as compared with £1,003,658 in the previous year. The total sum allocated during the year was £1,090,734, and the total amount paid out was £997,373 as compared with £1,283,202 and £1,208,315, respectively in 1926. The first year's levy on royalties, under the Mining Industry Act, 1926, amounted to £196,000. The credits from this levy are wholly devoted to the provision of pithead baths, and this was supplemented during the year by contributions from the output levy account. The total receipts from contributions on "output levy" account—i.e. from the proceeds of the penny a ton levy on output—from the initiation of the fund in 1920, to December 31, 1927, were £5,947,623; to which is added inter-

est to the amount of £517,717, making a total of £6,465,340 credited to the output levy account. Four-fifths of this (£5,062,066) is designated for the respective districts in which the money is raised; the remaining fifth forms the General Fund, used for purposes of education and research of value to the industry generally. During 1927, a sum of £127,011 was appropriated by the Miners' Welfare Committee for pithead baths; to which object also the whole of the royalties welfare levy (5 per cent on royalties) under the Mining Industry Act, 1926, is appropriated.

The allocations of the district funds from the inception of the scheme to December 31, 1927, were as follows: Indoor recreation (institutes, halls, clubs, libraries, swimming baths), £1,584,021; Outdoor recreation (sports grounds, playing fields, swimming pools, colliery bands), £1,131,783; Pit Welfare (cycle sheds, drying rooms and shelters, pithead baths), £127,691; Health (hospitals, £123,236; convalescent schemes, £1,487,944; district nursing services, £27,766; ambulance services, £57,354); Education (lectures, scholarships, establishment and equipment of centres for junior technical instruction) £48,000; Expenses of administration. £41,782.

The General Fund is devoted, as previously stated, mainly to education and research. The first competition for scholarships under the university scholarship scheme (established in 1926) was held early in 1927. No fewer than 2,259 applications were received—1,209 from candidates who were themselves workers in or about coal mines, and the remainder from the children of such workers. Over 300 of the working miner candidates, and over 500 children of miners, had satisfactory educational qualifications, entitling their applications to serious consideration; 59 applicants were selected to attend for a personal interview, and eleven scholarships were eventually awarded.

* The Mining Industry Act of 1920 provided for the creation of a fund to be used for the promotion of the social well-being, recreation and conditions of living of workers in and about coal mines, and also for mining education and research, its financial support being derived by the levy of a penny a ton on the output of each mine.

NOTES ON LABOUR UNION ACTIVITIES

Legislation Sought by New Brunswick Federation of Labour

THE fifteenth annual convention of the New Brunswick Federation of Labour was held in Fredericton, March 7-9, 1928, with a large number of delegates present from various points throughout the province. After the address of welcome by His Worship C. W. Clark, mayor of Fredericton, President J. E. Tighe of the Federation assumed charge of proceedings and appointed the several committees.

The secretary presented the report of the executive board which dealt with the various matters taken care of by them during the year, and made several recommendations. The report made special reference to the following matters:

(1) The appointment of a Fair Wage Officer for the Maritime Provinces, for which position the Civil Service Commission of Canada has advertised for applications;

(2) The Report of the Commission on the Workmen's Compensation Act,* containing recommendations under the following heads:—

(a) Accident prevention; (b) First aid; (c) Administration; (d) Estimating payrolls; (e) Time limit for application for compensation; (f) Co-operation between Board and Lumbermen's Safety Association; (g) Adjusting payrolls; (h) Authority of Board in enforcing payment of assessments.

(3) Vocational Education—The Dominion Government has been asked to renew the Technical Educational Act of 1919, which expires in 1929, and the Executive has submitted a resolution for the convention to act on along the same lines.

(4) Immigration—A protest had been made against the bringing of men into this province to work in the Minto Coal Fields and recommended that this question receive special consideration by the convention.

(5) Factories Act—Complaints had been received concerning the working conditions under which girls had to work in some canning factories, and these complaints had been referred to the Minister of Health and Labour.

The Executive Board recommended that the convention give its serious consideration to the following subjects: (1) Mothers' Allowance; (2) Minimum wage; (3) Old Age Pen-

sions; (4) Amendments to the Factories Act; (5) Recommendations of the International Labour Conferences.

President Tighe said that the province was on the eve of an important industrial development and that it was the duty of the convention to urge the government to see, that in all cases, where special concessions were given to an industrial enterprise, the fullest protection and safeguards should be provided for the workers in these industries, so as "to maintain true Canadian standards of wages, working hours and conditions." As a temporary relief for workers in the lumbering industry, the president recommended that the Government be urged to provide a nine-hour day in those places where ten hours are still being worked. He also urged the convention to support the request of the Executive officers for a continuance of the Federal grants to vocational education. President Tighe said that "if proper attention is given to the working conditions, hours of employment, wages, accident prevention and old age pensions, by the government, through legislation when necessary, these would prove a wonderful means towards solving the much vexed question of Maritime Rights."

The report of the secretary-treasurer showed a balance on hand at the beginning of 1927 of \$221; receipts, \$410, expenditures \$374, leaving a balance of \$256 on December 31, 1927.

The Hon. Premier J. B. M. Baxter, the Hon. L. P. D. Tilley, the Hon. Mr. Dysart, leader of the opposition and the Hon. B. M. Hill addressed the delegates. The president appointed the following committee to meet the Government and present the legislative demands of the Federation: J. E. Mack, T. F. Donahue, Harry Ryan, Geo. Crawford, J. S. MacKinnon, F. S. A. MacMullin, Robt. Carlin, Joseph Monteith, John Wallace, R. D. Babcock, Simon Burns, C. Corey, E. P. Steeves, E. J. Lloyd, B. W. Swetnam, with the president and secretary-treasurer.

Among the resolutions adopted were: (1) Favouring the adoption by the province of the Federal Old Age Pensions System; (2) Urging the Dominion Government to renew the Technical Education Act during the present session of Parliament, and requesting the Provincial Government to impress upon the Federal government the necessity for the continuance of this Act; (3) Advocating the appointment of additional public health nurses; (4) Requesting the provincial government to adopt by legislation a 9-hour day for the lumber industry only; (5) Urging the provincial government to instruct its Immi-

* The report of the provincial Royal Commission which investigated the effect of the Workmen's Compensation Act upon the lumbering industry in the province was given in the LABOUR GAZETTE, May, 1927, page 508.

gration Department to cease bringing, or to allow to be brought to this province, people other than those needed, who can be taken care of in the agricultural industry and that organizations and agencies bringing people to the province be held financially responsible for them for one year; (6) Requesting the government to provide for a system of fortnightly pay in the Public Works Department; (7) Asking the government to arrange, through the Board of Education, for a system of practical first-aid instruction in the public schools; (8) Recommending an amendment to the Workmen's Compensation Act whereby the Board shall be removed from political interference; (9) Favouring an increase in salary for those on the Workmen's Compensation Board to at least the salary paid members of the Nova Scotia Board.

The election of officers resulted as follows: President, J. E. Tighe; First vice-president, E. R. Steeves; Second vice-president, George C. Crawford; Third vice-president, Simon Burns; Secretary-treasurer, George R. Melvin; Legislative representative, John S. MacKinnon.

The time and place of the next convention was left in the hands of the executive.

President Tighe requested all the delegates to assist the Saint John Trades and Labour Council to bring the 1929 convention of the Trades and Labour Congress of Canada to that city.

The legislative requests of the Federation were presented to the Provincial Government on March 9, 1928, by the above mentioned committee, and included the recommendations of the convention as outlined.

Ontario Provincial Conference of the Bricklayers, Masons and Plasterers' International Union

The 22nd annual convention of the Ontario Provincial Conference of the Bricklayers, Masons, Plasterers, Marble Masons, Tile Setters, and Terrazzo Workers, was held in the Trades and Labour Hall, Kitchener, Ontario, on February 13, 1928, with William Jenoves of Toronto, president of the conference, presiding. At the opening session short addresses were delivered by E. W. A. O'Dell, representative of the Boot and Shoe Workers' Union; Otto Boll, president, Twin City Trades and Labour Council and Alderman Ruddell.

The president drew attention to the improved industrial conditions, which had resulted in greater continuity of employment and increased membership. He referred to the injunction taken out by employers in Toronto to restrain locals affiliated with the Building Trades Council from calling a strike in order to eliminate the dual organization of

carpenters, and stated "that the judgment handed down in this matter by Mr. Justice Logie (LABOUR GAZETTE, Nov. 1927, page 1267) was pleasing and far reaching, as it means that any body of organized workers can strike against a dual union, just as if they were a body of non-union men." A matter which the president considered of vital importance, not only to the conference but to the whole organization, was the Bill then before the Provincial House dealing with the formation of apprenticeship councils (LABOUR GAZETTE, March, 1928, page 269). He urged that the act be given close scrutiny and careful consideration before it received the endorsement of the conference.

Referring to amendments to the Ontario Workmen's Compensation Act which had been prepared by a special committee of the labour movement (LABOUR GAZETTE, Sept. 1927, page 973), and presented to the provincial Government (LABOUR GAZETTE, February, 1928, page 169), the president stated "that they cannot fail to bring results other than will be to the advantage of the movement in general." The president also informed the delegates that the provincial government had been requested again to pass a uniform building law, to which Premier Ferguson had promised his careful attention.

According to the report of the secretary-treasurer the membership at the close of 1927 stood at 2,023, which was an increase of 160 over the previous year. Receipts totalled \$2,680.66 while expenditures amounted to \$1,502.26, leaving a balance of \$1,178.40.

Among the resolutions adopted were the following:—

That all locals within the province petition the Ontario Government to immediately introduce a bill providing for old age pensions;

Instructing the incoming executive council to make every effort within their power to prevent the passing of the Apprentice Act.

Officers elected were: President, William Jenoves, Toronto, Ont.; First vice-president, J. S. Barker, Hamilton, Ont.; Second vice-president, F. W. Jackson, Ottawa, Ont.; Third vice-president, C. E. Needham, Windsor, Ont.; Secretary-treasurer, A. W. Johnson, Kitchener, Ont.

Niagara Falls was selected as the convention city for 1929.

Ontario Provincial Association of the United Association of Plumbers and Steamfitters

The first annual convention of the Ontario Provincial Association of The United Association of Plumbers and Steamfitters was held in Toronto on March 4, with delegates present

from eight local unions. This being the first annual meeting of the association, the first business to be taken up was the election of officers, which resulted as follows: President, Frank Greenlaw, St. Catharines; Vice-president, George Milligan, Toronto; Secretary-treasurer, W. Goring, Welland.

A feature of the convention was the presentation of reports by delegates from Toronto, Hamilton, Ottawa, St. Catharines, Kitchener, Windsor, London and Welland, as to existing trade conditions and prospects for the coming

summer. These reports indicated that considerable activity in the trade was expected during the present season.

The convention placed itself on record as endorsing the apprenticeship system.

The jurisdiction of local unions affiliated with the Council was defined. Delegates were requested to report to their local unions the question of guild shifting of men from town to town and report back at next meeting.

Kitchener was selected as the next convention city.

NOTES ON VOCATIONAL EDUCATION AND APPRENTICESHIP

Carpenter Apprentices' Class—Toronto

During the months of December, January and February a class of carpenter apprentices, under the supervision of the Carpenter Apprentice Committee of Toronto and District, attended the Central Technical School in Toronto five days a week for ten weeks for instruction in drafting, mathematics and trade practice. This work was carried out in accordance with the scheme whereby early in the year 1927 a Carpenter Apprentice Committee for Toronto and District was organized and a plan of apprenticeship for the carpentering trades adopted, based upon the apprenticeship plan recommended for use in the construction industry by the Construction Apprenticeship Council of Ontario. This plan of carpenter apprenticeship was approved by the carpenters' section of the Toronto Builders' Exchange and the Toronto General Contractors' Association.

The course of instruction covered shop work in trade practice of carpentry and joinery, drafting and mathematics. The timetable was so arranged as to give the boys a large proportion of their time in actual trade practice in those branches of the trade in which they would receive very little opportunity to gain experience on outside jobs during this period of their apprenticeship.

Lectures by trade teachers covered all common forms of construction in joinery and carpentry and notes and sketches were made. The lectures on mouldings covered their purpose and formation, fixing and fitting, with detailed instruction in oblique and curved work. The instruction in carpentry covered the fundamental principles and problems in the use of the steel square and roof framing and their practical application in the construction of a model house.

Classroom work was divided between mathematics and drafting. The mathematics

included the fundamental operations, multiplication, division of decimals, fractions, percentage and square root and concluded with their application and use in solving trade problems.

Apprenticeship Situation in Vancouver

Twenty-five boys are now apprenticed to the carpentering trade in the city of Vancouver under the direction of the Vancouver Apprenticeship Council, and efforts are being made to have the painting, plastering, sheet metal and mill working trades adopt the apprenticeship plan. The boys attend the technical school two nights weekly from September to March. If the contractor for whom they are working is out of jobs, the boys are transferred to another contractor in the General Contractors' Association. In this way they are assured of steady work.

The minimum wage is 15 per cent of a journeyman's scale for the first six months, increasing half-yearly until in the last six months of the four years of apprenticeship the pay is 50 per cent of a journeyman's wages. On completion of apprenticeship a minimum bonus of \$100 is paid from the funds of the Apprenticeship Council.

Education and Industry

What various cities are doing to combine education and industry was described at the annual convention of the National Education Association held at Boston in February.

The methods adopted in Boston were outlined as follows: "The Boston Trade School, operating on a seven-hour day, and with courses of from one to four years in length, is offering instruction under the best academic and shop teachers obtainable in a wide variety of the mechanical and building trades. Its graduates are readily absorbed in industry

and 75 per cent of them are found in the trades prepared for.

"Co-operative industrial courses in agriculture, machine shop practice, sheet metalry, automobile mechanics, woodworking, and electricity are established in seven mixed, cosmopolitan high schools. With especially planned curricula; alternate weeks spent in school and industry after the second year; teacher supervision in industry; and easy entrance into permanent employment; these courses make a strong appeal to employer, pupil, educator and taxpayer."

The plans carried out in Cleveland were described by Mr. Howard L. Briggs, Director of Vocational Education, Cleveland, in the following words: "A joint advisory committee upon apprenticeship must be established by the trade itself. These committees under the guidance of our own division carefully analyze the educational requirements of their trade, establish definite apprenticeship agreements with our apprentices, assure the qualifications of those entering the trade, supply the school without cost to the pupil all the necessary materials required for instructional purposes,

and send their apprentices to school throughout their entire four years of apprenticeship, for a minimum of four hours per day during working time with pay. Such a committee, due to the fact that it has a definite investment in the school, insists that the school be operated as economically and as efficiently as any competent business concern.

"Our teachers must be qualified journeymen. Through our vocational teacher-training division we must make them efficient teachers, and through the services of our committee and co-ordinators we must assure the boy fair treatment, an opportunity for promotion, increases in salary, and at the same time eliminate from the trade all of those who are not competent to become master craftsmen.

"At the present time we are training all the bricklayer, carpenter, plumber, electrician, painter, paperhanger, sheet metal, and stone-cutter apprentices in the city of Cleveland. We are training a large percentage of the machine shop apprentices, and all of the automobile mechanic apprentices."

British Unemployment Statistics

Sir William H. Beveridge, director of the London School of Economics and Political Science, in a recent letter addressed to the *New Republic*, describes the basis of the official estimates of unemployment in Great Britain as follows:—

"The British Ministry issues two main series of unemployment figures. One is the weekly total of Persons on the Registers of Employment Exchanges. This figure, which for March 5 was 1,094,500, includes everybody who on that day was 'registered for work.' It includes all persons, insured or uninsured against unemployment, who were signing the registers. It includes persons not receiving benefit as well as those receiving benefit. It includes children under sixteen, domestic servants, agricultural workers and uninsured persons of all kinds so far as these were on the books as applicants for work. The other series is the monthly figures, given in the British *Ministry of Labour Gazette*, of 'Books Lodged.' This series is confined to persons inside the insurance scheme. The term 'Books Lodged' derives from the fact that when an insured person comes out of work he must deposit his personal unemployment-insurance book (containing stamps representing the contributions made on his behalf into the fund) at an employment exchange, and the book

must lie at the exchange until the man gets work again. Once a month these 'lodged books' are counted up. The count gives a substantially accurate measure of the number of insured persons unemployed, and, as the total number of insured persons is known, reliable unemployment percentages can be, and are worked out. These percentages relate, it is true, strictly to insured persons; but insured persons number over 11½ millions out of a total wage- and small-salary-earning population of perhaps 17 millions, and the rate of unemployment is almost certainly less among those who are not insured than among the insured."

The Ontario Workmen's Compensation Board awarded \$764,263.57 during March, this amount including \$108,025.06 for medical aid. This total, which was due in part to the Hollinger mine disaster in February, was the highest recorded. The accidents reported numbered in March 5,711, an increase over February, when 5,570 were reported. Fatalities in March, however, were considerably below the average, there having been 26 death cases reported. The total number of accidents reported in the first quarter of 1928 was 16,337, an increase of only 216 over last year, which would be more than offset by increased employment.

LEAGUE OF NATIONS INTERNATIONAL LABOUR ORGANIZATION

Ratification of Draft Conventions

ON January 31, 1928, the total number of ratifications of Draft Conventions registered with the Secretary General of the League of Nations was 255. At the same date the number of Draft Conventions of which ratification had been authorized by the competent authority in the country concerned, but had not yet been registered with the Secretary General, was 33. Seven new ratifications were registered during January.

Hungary has ratified the Convention concerning the use of white lead in painting. The instrument of ratification of this Convention indicates that the Convention will not be put into force by Hungary until France, Germany and Great Britain have ratified it. This Convention was adopted by the International Labour Conference at its Third Session, Geneva, 1921. It had previously been ratified by 13 States, including France.

France has ratified the Convention for establishing facilities for finding employment for seamen, adopted by the Conference at its Third Session at Genoa, 1920, and the Convention fixing the minimum age for the admission of young persons to employment as trimmers or stokers, which was adopted by the International Labour Conference at its Third Session, Geneva, 1921. The first of these Conventions had previously been ratified by 13 States, and the second by 16.

Austria and India have ratified the Draft Convention concerning the simplification of the inspection of emigrants on board ship. This Convention was adopted by the International Labour Conference at its Eighth Session, Geneva, 1926. It had previously been ratified by the Netherlands unconditionally, and by Great Britain conditionally.

Germany has ratified the Draft Convention concerning sickness insurance for workers in industry and commerce and domestic servants, and also the Draft Convention concerning sickness insurance for agricultural workers. These two Draft Conventions were adopted by the International Labour Conference at its last Session on June 15, 1927.

Each member of the Organization which ratifies the former of these Draft Conventions undertakes to set up a system of compulsory sickness insurance for manual and non-manual workers, including apprentices, employed by industrial undertakings and commercial undertakings, out-workers, and domestic servants.

Each member which ratifies the second Convention undertakes to set up a system of com-

pulsory sickness insurance for agricultural workers, manual and non-manual, including apprentices.

Each State which ratifies the two Draft Conventions therefore undertakes, in fact, to cover against the risk of sickness by compulsory insurance all wage-earning workers of all categories, with the exception of seamen and fishermen. The situation of these workers will be examined at a later Session of the Conference to deal specially with questions of work at sea.

The Hungarian Parliament has authorized the ratification of the Draft Convention concerning sickness insurance for workers in industry and commerce and domestic servants.

The Governments of Latvia and Luxemburg have already recommended to their respective Parliaments the ratification of these two Draft Conventions.

International Labour Office as a Clearing House of Information

The increasing importance of the office as a clearing house of information is indicated by the number of requests for information dealt with by the various departments of the office. In 1922 the total number of requests for information received during the year did not exceed 180, whereas in 1927, these requests reached the number of 920, compared with 800 in 1926, without counting those received and answered directly by the national correspondents of the office. Requests are received from Governments, employers' and workers' organizations, miscellaneous organizations and individuals concerning such questions as conditions of work, hours, wages, co-partnership and profit-sharing, arbitration and conciliation; health and safety; social insurance, disabled men; labour legislation; employment and unemployment; apprenticeship and vocational guidance; employers' and workers' organizations; co-operation; family budgets, cost of living, housing; agriculture; migration; maritime labour; intellectual workers; native workers; etc.

The mass of labour involved in such collections of information must be pictured in order to realize the work done in this field by the International Labour Office. Many Government departments, when preparing draft legislation, apply to the office to obtain detailed information on the measures existing in the legislation of other States, and the collection of such information requires long and minute inquiries on the part of the depart-

ments of the office and its national correspondents, and the despatch of much original information.

Recent Publications of the International Labour Office

In addition to its periodical publications, which include, among others, the *International Labour Review*, the *Industrial and Labour Information*, the *Official Bulletin*, the *Monthly Record of Migration* and the *Industrial Safety Survey*, the International Labour Office has recently published a number of important Studies and Reports. Special mention may be made of the following:

Compulsory Sickness Insurance.—In preparation for the Tenth (1927) Session of the International Labour Conference, at which Draft Conventions and a Recommendation relating to sickness insurance were adopted, the International Labour Office compiled a Report on the subject, which has now been published under the above title. Its original purpose was to provide delegates with accurate information as to the present state of legislation in different countries, so as to enable them to appreciate the effort required in each country in order to bring legislation into harmony with the Draft Conventions, to decide whether such an effort could be made and to adapt the texts of the Draft Conventions and Recommendation to the possibilities of the great majority of countries.

The Report consists of six parts, dealing with the fundamental aspects of compulsory sickness insurance: scope; benefits; resources and financial administration; institutions and managing bodies; disputes, jurisdiction, infringements and penalties; and the position of foreign workers. The same method has been followed throughout. The problem is first analyzed; then the various possible solutions are described and national legislation classified according to the solutions adopted; finally, an analysis of national legislation and its results is given. The use of this method has made it possible to give both a general survey showing the place of the various systems in the movement of ideas and the development of institutions, and at the same time to describe the legislation of each country in sufficient detail to preserve its peculiarities. The work contains neither a complete body of social theory nor a complete reproduction of the legislation of each country, but a systematic summary of the ideas which have led to positive solutions and an analysis of the essential features of the system of each country.

In order to show the results of various systems, an effort has been made to compile

statistics for a fairly long period; wherever possible, data have been given from a normal pre-war year, preferably 1913, to 1925 inclusive. The national statistics, which are compiled on the basis of legislation in force, differ widely in method from each other. While no attempt has been made to render them strictly comparable, they have been presented systematically by classification and comparison on points of the greatest international interest. Each part of the volume is supplemented by a comparative international table of texts and statistics, showing the most important provisions of national legislation and giving at a glance the essential features of its development. At the end of the volume is a list of 350 laws and regulations and 220 reports of various kinds written in some 15 languages which were used in the compilation of the Report.

International Survey of Legal Decisions on Labour Law.—The second volume of the *International Survey of Legal Decisions on Labour Law* recently appeared. In this volume a number of valuable suggestions made by distinguished jurists have been incorporated. It contains decisions given in 1926, and comprises a larger number of decisions than the previous volume. It also contains the opinions expressed by the Permanent Court of International Justice relating to the international regulation of conditions of labour. A detailed index is added to facilitate consultation of the work. In the next volume of the *Survey* it is hoped to extend its scope, which is at present confined to France, Germany, Great Britain and Italy, to the United States.

Minimum Wage-fixing Machinery.—A report has been issued by the International Labour Office on the subject of minimum wage-fixing machinery, for presentation to the Eleventh Session of the International Labour Conference. This report contains the answers received from twenty-two different countries to a questionnaire which had been circulated on the subject of minimum wage-fixing machinery.

The office observed from the replies of the Governments that the great majority were in favour of a solution of the question by means of a Draft Convention containing general principals supplemented by a Recommendation on certain methods of application. It is therefore submitting for the consideration of the Conference a Draft Convention concerning the creation or maintenance of minimum wage-fixing machinery in certain trades, and a Recommendation concerning the application of such machinery in these trades.

The policy of the Draft Convention is thus to promote the protection of the workers in as many countries as possible by providing a

broad basis for mutual obligations in the present between countries which already possess a minimum wage fixing system and for the extension of the principle to other countries in the future, besides laying a foundation for following up this first venture into the field of wages and pooling experience which may lead to still further practical results in the course of time.

The Recommendation is intended to supplement the Draft Convention by putting on record for the guidance of the Governments certain methods of applying some of the principles contained in the Draft Convention, which methods are almost universally adopted and have been proved by experience to be best

calculated to facilitate the purposes of minimum wage-fixing machinery.

It should be noted that the subject with which the Conference is called upon to deal relates simply to the institution of machinery, or the creation of the means, whereby minimum wages can be fixed in the individual country for certain special classes of unfavourably situated workers. There is thus no question of actually fixing a minimum wage, and still less, of course, of turning the Conference into a wage-fixing body and fixing an international minimum wage. The subject before the Conference therefore touches hardly more than the fringe of the complicated question of wages, though it is big with possibilities of furthering the protection of the workers.

Proposed Minimum Wage for Adolescents Working on Permits

The Ontario Educational Association, at a meeting held at Toronto on April 10, passed a resolution asking the Provincial Minimum Wage Board to fix a minimum wage rate for adolescents working on employment permits. It was alleged that many employers make a practice of docking adolescent employees of their pay for the time during which they attend school as required by the Adolescent School Attendance Act (Revised Statutes of Ontario, 1927, chapter 333). This Act, which became law in 1919, requires, at sections 5 and 6, that every adolescent between 14 and 16 years of age shall attend school (this term including vocational schools) for full time,

unless he (or she) has been granted a home permit or an employment certificate by the school attendance officer. Children of this age who hold a permit or certificate are required to attend part-time courses for an aggregate of at least 400 hours each year. Adolescents between the ages of 16 and 18 years (unless they are excused for special reasons such as ill-health, good record as regards education, etc.), must attend part-time classes for at least 320 hours each year. Municipalities having a population of 5,000 or over must, and smaller municipalities may, establish part-time courses, which courses may include technical and commercial subjects.

MINERAL PRODUCTION IN CANADA IN 1927

A PRELIMINARY report on the mineral production of Canada during the calendar year 1927, prepared by the Dominion Bureau of Statistics, indicates that a new high-record for the Dominion was established, the value of the output being \$244,520,098. This figure represents a gain of over four million dollars, or 1.7 per cent over the previous year's record total of \$240,437,123. New production records were established in gold, copper, lead and zinc among the metals, and in coal, cement, lime and gypsum in the non-metal and structural materials field. Values for natural gas and petroleum production also exceeded any recorded in previous years. Increased outputs in comparison with the totals for 1926 were noted in the figures for arsenic, cobalt, copper, gold, lead, nickel, platinum metals, zinc, coal, natural gas, petroleum, gypsum, pyrites, clay products, cement, limestone, sand and gravel.

Nineteen mineral products reached a production value of one million dollars each or over in Canada during 1927, and contributed over 99 per cent of the total recorded value of the mineral production of the Dominion in that year. In order of total values these were: coal, gold, copper, lead, nickel, cement, silver, clay products, asbestos, zinc, stone, natural gas, sand and gravel, lime, gypsum, cobalt, petroleum, salt, and metals of the platinum group.

Metals as a group, at \$113,135,582, showed a loss in aggregate value in comparison with the total of \$115,237,581 for 1926, due to the lower prices for copper, lead, zinc and silver that prevailed during the year. Increases in the outputs, noted above, were not sufficient to offset the loss in values due to lower prices.

Fuels indicated a general advance. Production values totalled \$71,071,478 for coal, gas and petroleum in 1927 as against \$68,-

743,933 in 1926. The output of coal was appreciably higher than in the next preceding year and established a new high production record.

Other non-metallic minerals, including a score of different commodities, valued at \$17,426,547 in 1927, also reached a higher aggregate than in 1926.

At \$42,836,492 the clay products, brick, tile, etc., and other structural materials produced during the year attained a total value in excess of the figures for any previous year. In this field the gain in the output of cement was the most outstanding feature. Although the price of cement declined slightly during the year, production increased to a new output record of over 10,000,000 barrels, and the value of the output amounted to \$14,391,897 as compared with a total of \$13,013,283 in 1926.

The accompanying table shows the values of production for metals, fuels and non-metals, clay products and other structural materials for the years 1907, 1912, 1917, and 1922 to 1927 inclusive.

VALUES OF MINERAL PRODUCTION OF CANADA
BY CLASSES, 1907, 1912, 1917, AND 1922-1927

Year	Non-Metallic			Total
	Metallic	Fuels and other non-metallics	Structural materials and clay products	
\$	\$	\$	\$	
1907.....	42,426,607	31,275,546	12,863,049	*86,565,202
1912.....	61,172,753	45,080,674	28,794,869	135,048,296
1917.....	106,455,147	63,354,363	19,837,311	189,646,821
1922.....	61,785,707	82,976,794	39,534,741	184,297,242
1923.....	84,391,218	91,936,732	37,751,381	214,079,331
1924.....	102,406,528	71,796,009	35,380,869	209,583,406
1925.....	117,082,298	71,851,801	37,649,234	226,583,333
1926.....	115,237,581	85,240,144	39,959,398	240,437,123
1927.....	113,135,582	88,498,024	42,886,492	244,520,098

*Total includes \$300,000 allowed for products not reported.

Metals.—The report outlines the recent development of metal mining throughout Canada, as follows. In Quebec, it is stated, the blowing in of the Noranda smelter at Rouyn, marked the passing of another milestone in the extensive program of metal mine development that has been carried on in that province during the past three years. The proposal to build mills at some of the other properties in that area, and the continued investigation of new areas, supplemented and strengthened by the energetic development of new mines, have all served to keep public interest at fever heat. Great expectations are held in respect to many of the projects in this comparatively new field in Canada's mining industry.

Gold mining in Ontario was carried forward actively throughout the year and a new output record was established at 1,629,246 fine ounces worth \$33,679,503. The output from the Porcupine area amounted to 1,156,365 fine ounces valued at \$23,904,185 as against 1,145,564 fine ounces valued at \$23,680,909 in 1926, in addition to which there was about \$120,000 worth of silver produced by these mines.

In Manitoba, the Whitney option on the Flin Flon copper-zinc property was a chief subject of discussion during the greater part of the year. It is pointed out that agreement among the representatives of the mining companies concerned, the railways, the provincial and federal governments, led to the taking-up of the option on December 1, as a result of which it is probable that 1928 will see a railway built into this area and arrangements well under way for the opening of new mines, and the establishment of milling and smelting facilities with all that such a program of development connotes.

In British Columbia, metal-mining is a very important industry in the boundary and coast districts. Extensive hydro-electric developments, such as at Bonnington Falls and Elko, furnish adequate supplies of electric energy for the operation of the various mines, and mills of the boundary district, including the great Kimberley concentrator, and the world's largest non-ferrous metallurgical works at Trail.

Coal Production.—Canada's coal output in 1927 amounted to 17,411,505 short tons, valued at \$61,809,672. Imports totalled 19,253,088 tons, and exports 1,113,330 tons, so that the quantity made available for consumption was 35,551,263 tons. In 1927, Nova Scotia produced more than seven million tons of bituminous coal and continued to hold the lead as Canada's premier coal producing province. Canada's coal consumption increased during 1927 by nearly two million tons, and as the gain was wholly in fuel for industrial purposes, the greater tonnage reflected, in some measure, the advance in factory, mine and mill outputs that took place during the year. More coal was mined in Canada last year than in 1926, or in any other year, except 1923 and 1920. At the same time more coal was imported into Canada than in any other year since 1923. Exports were normal at 1.1 million tons.

It is stated that steady employment throughout the year in the coal mines of eastern Canada, and less than the usual amount of summer seasonal decline in employment in the mines of western Canada, greatly increased the general prosperity of the 30,000 employees engaged in the operation of Canada's coal mines.

Prices of Canadian coal at the mine were a little lower on the average in 1927 than in 1926; for the whole of Canada, the average sales value was \$3.55 per short ton in 1927 as against \$3.63 a ton in 1926 about three cents a ton. Lignite coal sold for an average price of \$2.80 a ton at the mine; Saskatchewan lignite sold for \$1.84 while Alberta lignite mine operators obtained an average of \$2.93 a ton for their product. Bituminous coal, at the mine, brought \$3.80 on the average; Nova Scotia's average rate was \$3.85; New Brunswick, \$4.34; Alberta, \$3.47; and British Columbia, \$3.98 for the year. Sub-bituminous coal from Alberta mines sold for an average price of \$2.99 a ton at mine.

A feature of the year's coal import business was the importation of nearly a million tons of coal from Great Britain. Never before had so great a tonnage been brought to Canada from that source. While there does not seem to be anything particularly significant about the figures for bituminous coal imports from various sources, a study of the anthracite importations reveals the fact that the average quantity imported in each of the last six years amounts to about four million tons, and that, further, the records for the past two years show a very definite shifting of business in this field. In 1926 imports of anthracite from the United States totalled 3,883,242 tons, and from Great Britain, 272,170 tons which with 87,520 tons from other countries, made a total of 4,242,932 tons. In 1927 the distribution showed 3,265,411 tons from the United States, 788,235 tons from Great Britain and 9,973 tons from other countries, making a total of 4,063,619 tons. Importations from Great Britain in 1927 evidently displayed about half a million tons of anthracite formerly purchased in the United States.

Asbestos Production.—Dealing with production returns in the non-metallic group, the report shows that asbestos, of which by far the greater part of the world's supply comes from the eastern townships of Quebec, is the most important non-metallic mineral produced in that province. In 1927 the output of asbestos at 275,461 tons did not show much change from the total of 279,403 tons produced in 1926. Higher prices raised the aggregate value of sales to \$10,624,106.

Production by Provinces.—Ontario's production valued at \$89,109,865 made up 36.44 per cent of the Dominion total; British Columbia came second with an output valued at \$60,188,134 representing 24.61 per cent of the aggregate for the Dominion; Nova Scotia with an output valued at \$29,554,822 held third place

and contributed 12.08 per cent of the total, closely followed by Alberta with a production of \$29,375,040 constituting 12.02 per cent of the total; Quebec was next with a production valued at \$28,313,330 or 11.58 per cent; Manitoba, New Brunswick Yukon, and Saskatchewan followed in the order named.

Employment.—The report points out that losses in employment in mining during the first quarter of 1927 were followed by nine months of continuous expansion, which resulted in a better situation than in any other year of the record. The employment index number, based on the numbers employed in January, 1920, as 100, was 102.3 in 1927, as compared with 95.3 in 1926. In coal mining, conditions were better during the greater part of the year than in 1926, although employment was not so active on December 1, 1927, as on the same date in the preceding year. The mean index, however, was 86.0 as compared with 81.2 in 1926, while the labour force of the co-operating operators averaged 26,804 workers. Both eastern and prairie coal fields shared in the gains. In metallic mining, the level of employment was decidedly better, the index at 165.3, averaging over 18 points more than in 1926. The staffs of the reporting firms averaged 12,246 during the year under review. Non-metallic minerals (other than coal) registered greatly increased employment, an upward movement being recorded during most of the year. The index in this group averaged 108.3, as against 102.1 in the preceding year; while the mean number of persons employed by the co-operating firms was 6,690. Quarries, asbestos mines and other divisions coming under this heading reported considerable activity.

Capital Employed.—Investment in Canadian mines amounts to approximately \$688,750,000, of which \$320,249,000 is invested in metal mining and metallurgical works treating Canadian ores; \$223,149,000 represents the investment in coal, gas and oil properties; \$50,960,000 is invested in other non-metallic mineral properties; and \$94,392,000 in plants producing clay products and other structural materials.

Investments in coal mining account for 22 per cent of the total capital employed in the mining industry. Gold quartz mines represent another 15 per cent of the capital; metallurgical works, 12 per cent; natural gas, 8 per cent; cement, 6 per cent; silver-cobalt, 6 per cent; nickel-copper, 6 per cent; clay products, 4 per cent; and stone, 2 per cent; the other mining industries account for the balance of the capital employed. The Ontario mines account for 41 per cent of the total investment in the industry. For the other provinces the

relative investments in mining, expressed in percentages, are as follows: Quebec, 16 per cent; British Columbia, 16 per cent; Alberta, 15 per cent; Nova Scotia, 8 per cent; Manitoba, 2 per cent; the remaining 2 per cent is represented by the provinces of New Brunswick and Saskatchewan, and Yukon Territory.

Canada's Mineral Future.—In conclusion, the report makes the following observation on the future of the mining industry in the Dominion:—

"Looking backward over the year just closed, the student must be impressed with the magnificent progress made by the mining industry of the Dominion. Never before has the outlook for the future appeared brighter. In the light of the advances made during the past two years, and considering particularly

the extent to which preparatory work was done in so many fields during 1927, he would be a pessimist, indeed, who could not see a brilliant future immediately ahead in Canada's mining industry. And when a primary or basic industry such as mining, prospers, good fortune is just around the corner for all those other industries that provide the maintenance materials for the mines and mills and that supply the multitudinous wants of the workers, not only in the mines, but throughout the communities that flourish when the mining districts are prosperous. Success in the mining industry means fare more to the people of Canada than the bare value of the mineral output indicates. Prosperity in the mining industry is soon reflected in the everyday life of the nation."

INDUSTRIAL CENSUS OF UNITED STATES

A REPORT on the Census of Manufactures, 1925, issued by the Bureau of the Census of the United States Department of Commerce summarizes, by industries and industry groups, the statistics compiled from the data collected at the third biennial census of manufactures, which covered the operations of manufacturing establishments during the calendar year 1925. According to this report, which has been received recently, the value of products (at factory prices) of manufacturing establishments in the United States in 1925 aggregated \$62,713,714,000. This aggregate represents an increase of 4 per cent as compared with \$60,258,471,000 in 1923, and an increase of 44.4 per cent as compared with \$43,427,224,000 in 1921.

In connection with the statistics for cost of materials and the value of products, the report draws attention to the large amount of duplication due to the use of the products of certain establishments as materials by others. As a result of this indeterminate amount of duplication, the aggregate value of the products of all manufacturing establishments is much in excess of the aggregate value of the manufactured products in the form in which they reach the ultimate consumer. Accordingly, the report states that a very much better measure of the actual value created by manufacturing processes is the "value added by manufacture" i.e. the difference between the cost of materials (including fuel, mill supplies, containers sold with products, etc.) and the factory value of the finished products. This amounted to \$26,778,066,000 in 1925, an increase of 3.9 per cent as compared with \$25,777,616,000 in 1923; and of 46.5 per cent over \$18,272,417,000 in 1921. It is shown that average prices of manufactured commodities taken as a whole

increased greatly between 1914 and 1919, declined considerably between 1919 and 1921, increased materially between 1921 and 1923, and increased slightly between 1923 and 1925. According to the report, "for this reason neither the value of products nor the value added by manufacture affords a correct index of the actual increase or decrease in manufacturing activities from census to census."

Number of Wage Earners.—It is considered that "a far better standard by which to measure growth or decline in the manufacturing industry is found in the average number of wage earners." In this connection the report emphasizes that in some industries mechanical processes have displaced hand labour to such an extent as to make possible a marked increase in production with no increase in the number of wage earners, while there has been, since 1914, a considerable decrease in the average length of the working day.

Bearing in mind these two factors, the statistics indicate that the total number of persons engaged in the manufacturing industry in the census year of 1925 was 9,857,697. This total is made up as follows: proprietors and firm members, 133,054; salaried officers and employees, 1,340,382; wage earners (average number) 8,384,261. The wage earners' group showed a decrease of 4.4 per cent when compared with total of 8,768,491 for this class in 1923. Salaries and wages paid out in 1925 amounted to \$13,877,297,603, of which total wages represented \$10,729,968,927. This amount for wages represented a decrease of 2.4 per cent as compared with the similar total for 1923, which was \$10,999,281,784. The number of establishments reporting products of over \$5,000 in value for the year 1925 was 187,390, as compared with 195,580 in 1923, the percentage of decrease being 4.2.

EMPLOYMENT SITUATION AT THE BEGINNING OF MARCH, 1928, AS REPORTED BY THE EMPLOYERS MAKING RETURNS TO THE DOMINION BUREAU OF STATISTICS

THERE was a moderate gain in employment at the beginning of March, according to the monthly statements furnished to the Dominion Bureau of Statistics by 6,222 of the larger employers of labour throughout Canada. These employers are those having at least fifteen workers in their establishments. The working forces of these firms aggregated 846,095 persons, as compared with 842,066 in the preceding month. This increase of slightly over 4,000 workers caused the index number to rise from 100.8 on February 1, 1928, to 101.4 at the beginning of March, as compared with 96.3, 91.5, 87.0, 90.7, 39.9, 81.9 and 88.0 on March 1, 1927, 1926, 1925, 1924, 1923, 1922 and 1921, respectively.

The largest increases took place in manufacturing, while logging, construction, mining and transportation were seasonally slacker.

Employment by Economic Areas

The trend was upward in the Maritime Provinces, Ontario and British Columbia, but in Quebec and the Prairie Provinces contractions were indicated.

Maritime Provinces.—There was a slight increase in the Maritime Provinces, where 500 employers enlarged their staffs from 64,581 persons on February 1, to 64,650 at the beginning of March. Improvement was registered in manufactures, particularly in iron and steel works, and transportation was also busier. Logging, mining and construction, however, recorded seasonal losses. Employment on March 1, 1927, had shown a reduction, but the index then was practically the same as on the date under review.

Quebec.—In spite of the fact that activity declined on March 1, employment in Quebec was at a higher level than in the early spring of any other year of the record. The decrease was due to seasonal curtailment, mainly in construction and logging, but also in transportation and trade. Manufacturing, on the other hand, was decidedly brisker, the iron and steel, pulp and paper, leather, textile, tobacco, distilled and malt liquor divisions showing especially pronounced gains. Statements were tabulated from 1,357 firms, whose payrolls aggregated 237,393 employees, as against 239,201 at the beginning of February. The index stood at 105.8, as against 100.9 on March 1, a year ago.

Ontario.—Further expansion was registered in Ontario, where the 2,887 co-operating establishments added 4,836 persons to their labour forces, bringing them to 360,581 on March 1. The situation continued to compare favourably with that noted on the corresponding dates of the years 1921-1927. Manufacturing, notably of iron and steel products, recorded considerable recovery, and mining and trade were also more active than on February 1; construction and logging, however, were seasonally slacker.

Prairie Provinces.—The contractions shown in the Prairie Provinces involved a rather smaller number of workers than those recorded on the same date in the five preceding years, while the index was higher than on March 1 in any other year of the record. Data were tabulated from 810 firms, with 109,633 employees, compared with 111,027 in their last report. Manufacturing registered slight increases and construction marked improvement, while mining and transportation reported the greatest declines.

British Columbia.—Manufacturing, particularly of lumber and metal products, recorded important advances in employment, as did logging and construction, while only small changes were noted in other industries. The working forces of the 667 reporting employers aggregated 73,838 persons, as against 71,512 in the preceding month. Additions to staff on a smaller scale had been indicated on March 1 last year, when the index was several points lower. The level of employment was higher on March 1, 1928, than in the late winter in any other year of the record.

Employment by Cities

Employment advanced in Montreal, Toronto, Windsor and the Other Border Cities and Vancouver, while the trend was unfavourable in Quebec City, Ottawa, Hamilton and Winnipeg.

Montreal.—Continued gains were indicated in Montreal, chiefly in manufactures, within which iron and steel plants recorded especially important recovery; on the other hand, transportation, trade and construction showed seasonal curtailment. Statements were tabulated from 730 firms employing 114,205 workers, as compared with 113,400 in the preceding month.

The tendency on March 1, 1927, was also upward, but the index then was several points lower.

Quebec.—Manufacturing afforded more employment while construction was slacker. Although improvement had been noted on the corresponding date last year, the situation then was not so favourable. The working forces of the 101 co-operating employers totalled 9,993 persons, compared with 10,436 on February 1, 1928.

Toronto.—Iron and steel reported a considerable increase, and there was a smaller advance in trade and some other industries, while

pared with 29,950 in their last report. Additions to staffs had been recorded on the corresponding date last year, but the situation then was not so favourable.

Windsor and The Other Border Cities.—Further pronounced improvement was indicated in the Border Cities, mainly in automobile factories. Data were received from 126 firms with 11,893 employees, or 1,753 more than on February 1. Employment was at a very slightly higher level than at the beginning of March, 1927.

Winnipeg.—There was another, but smaller reduction in Winnipeg, where 289 employers re-

EMPLOYMENT IN CANADA AS REPORTED BY EMPLOYERS

NOTE.—The curve is based on the number of employees at work on the first day of the month, as indicated by the firms reporting, in comparison with the number of employees they reported in January, 1920, as 100.

printing and publishing were quiet. According to returns received from 826 firms, they enlarged their staffs from 104,602 workers in the preceding month to 105,602 at the beginning of March. Less extensive gains were indicated on the same date last year, when the index was several points lower.

Ottawa.—Employment in Ottawa showed a small decline; manufactures were more active but transportation and construction were seasonally dull. The 137 co-operating employers reduced their payrolls by 90 persons, bringing them to 10,613 on the date under review. Activity was greater than on March 1, 1927, although improvement had then been noted.

Hamilton.—Manufacturing and construction afforded less employment in Hamilton, where 204 firms employed 29,652 workers, as com-

ported 27,937 workers, as against 28,045 in the preceding month. The decline was largely in trade and construction, while manufactures were somewhat busier. Employment was rather more active than on March 1 last year, when similar losses were registered.

Vancouver.—Manufacturing (especially of lumber products), and construction recorded substantial increases in Vancouver. Returns were compiled from 253 employers, whose staffs were increased by 767 persons to 25,412 at the beginning of March. Gains on a similar scale had been shown on the corresponding date a year ago, and the index then was practically the same as on the date under review.

Index numbers of employment by cities are given in Table II.

NOTE.—Number employed by the reporting firms in Jan. 1920=100 in every case. The "Relative Weight" shows the proportion of employees in the indicated area to the total number of all employees reported in Canada on the date under review.

TABLE I.—INDEX NUMBERS OF ALL EMPLOYMENT BY ECONOMIC AREAS, AND OF DOMINION EMPLOYMENT IN MANUFACTURING

	Canada	Maritime Provinces	Quebec	Ontario	Prairie Provinces	British Columbia	All manufacturing
Mar. 1, 1921.....	88.0	90.7	88.7	86.2	91.0	87.3	84.6

The "Relative Weight" column shows the proportion that the number of employees in the indicated industry is of the total number of employees reported in all industries by firms making returns on the date under review.

Manufacturing Industries

The trend of employment in this group continued upward, according to statistics furnished by 3,851 manufacturers employing 480,480 operatives, as compared with 469,366 at the beginning of February. The most pronounced re-

covery took place in iron and steel factories; lumber mills showed further seasonal gains which exceeded the average increase recorded on March 1, and there was also important advances in textile, vegetable food, tobacco, distilled and malt liquor, non-ferrous metal, leather and mineral product works. Animal

food establishments, however, registered reduced employment. The general improvement in manufactures was rather greater than on March 1, 1927, when the index number, as in the early spring of the other years since 1920, was several points lower than on the date under review.

Animal Products, Edible.—Employment in this industry showed a further decline which involved more workers than that recorded on the corresponding date last year. The index number, despite this larger reduction, stood at 91.8, as compared with 88.0 on March 1, 1927. The working forces of the 162 reporting establishments aggregated 14,782 persons, as compared with 15,247 in the preceding month. The decrease, in which all provinces shared, was most pronounced in meat-packing plants.

Leather and Products.—There was continued improvement in employment in this industry at the beginning of March, according to statistics from 192 manufacturers, whose staffs, at 18,470, were greater by 392 workers than on February 1. The largest gains were in boot and shoe factories in Quebec. A minor increase had been noted on the corresponding date a year ago, and the index number then was between two and three points lower.

Lumber and Products.—Further additions to payrolls on a somewhat smaller scale than on March 1, 1927, were made in the lumber group, sawmill, container, vehicle and other wood-using establishments reporting heightened activity. Statements were tabulated from 682 employers, whose staffs rose from 42,253 workers on February 1 to 43,682 at the beginning of March. The tendency was favourable in all provinces, but the largest increases were registered in British Columbia. The index number was higher than on March 1 in any other year since 1920.

Plant Products, Edible.—Considerable gains were recorded in the edible plant product group, particularly in biscuit and confectionery factories. The firms making returns to the Dominion Bureau of Statistics, 309 in number, had 25,438 workers in their employ, or 456 more than at the beginning of February. This advance, which took place chiefly in Ontario, and the Maritime and Prairie Provinces was rather smaller than that indicated at the beginning of March last year, when the index number was very slightly higher.

Pulp and Paper Products.—In contrast with the reduction in employment in this group at the beginning of March, 1927, there was an increase on the date under review, chiefly in

pulp and paper mills, while printing and publishing shops were slacker. A combined working force of 60,639 persons was reported by the 469 co-operating manufacturers, who had 60,525 employees on February 1. The situation was more favourable than in the early spring of any other year for which statistics are available. The largest advance took place in Quebec.

Rubber Products.—Further expansion in employment was recorded in rubber factories, 37 of which employed 14,921 workers, as against 14,809 in their last report. The index number was higher than on March 1 in any other year of the record. Small gains were made in Quebec, Ontario and British Columbia.

Textile Products.—Garment and knitting factories registered an increase which involved a rather smaller number of employees than that reported on March 1, 1927. The level of employment then, however, as on the same date in earlier years of the record, was lower. The payrolls of the 518 co-operating establishments aggregated 77,146 persons, as compared with 76,414 on February 1. Considerable improvement was registered in Quebec and Ontario, while elsewhere only small changes occurred.

Tobacco, Distilled and Malt Liquors.—Gains on a larger scale than on March 1 in any other year of the record were indicated in this group on the date under review, when the index number, at 119.5, reached its highest point in the series. Data were received from 124 firms employing 14,432 workers, or 429 more than in their last report. The bulk of the increase was in Quebec.

Clay, Glass and Stone Products.—Activity declined slightly in building material plants, in which the situation was better than on the corresponding date in earlier years of the record. Statements were compiled from 122 manufacturers with 9,459 employees, as against 9,545 in the preceding month.

Electric Current.—Employment in plants producing electric power advanced moderately according to the 89 co-operating firms who employed 12,733 workers, compared with 12,537 on February 1. There were small increases in all provinces. The index number was higher than on March 1 of any other year of the series.

Electrical Apparatus.—The trend of employment was upward in plants turning out electrical appliances, 48 of which enlarged their payroll by 172 persons to 11,129 on the date under review. All provinces registered small

gains. Practically no change had been indicated at the beginning of March, 1927, when the index number was a few points lower.

Iron and Steel Products.—Continued advances on a larger scale than on the corresponding date last year were reported in iron and steel factories, in which employment was in greater volume than in the early spring of many years of the record. Automobile and railway car shops registered the greatest increases, but there was also an upward movement in rolling mills, agricultural implements, foundries and machine shops, heating appliances and sheet metal works. Returns were tabulated from 660 establishments having 134,980 persons in their employ, or 6,928 more than in the preceding month. The most noteworthy expansion was in Ontario, but general improvement was noted throughout the Dominion.

Non-Ferrous Metal Products.—Lead, tin, zinc and copper works showed heightened activity, while only small changes were reported in other divisions of this industry; 107 firms had 17,084 workers on their payrolls, as against 16,680 at the beginning of February. There were additions to staffs in Ontario and British Columbia. The level of employment was considerably greater than on March 1 in any other year of the record.

Mineral Products, n.e.s.—Statistics tabulated from 77 employers indicated that they had enlarged their forces from 9,703 workers in the preceding month to 10,060 at the beginning of March. Most of the increase took place in Quebec and Ontario. The situation on the corresponding date a year ago had shown no general change, and the index number then was 10 points lower.

Logging

Marked contractions were noted in logging camps, in many of which the season's operations were almost completed; 257 firms had 37,339 men in their employ, or 2,520 less than in their last report. The decline was rather smaller than that recorded at the beginning of March a year ago, when the index was some 12 points lower.

Mining

Coal.—Employment in both eastern and western coal fields, but particularly in Alberta, showed a falling-off, involving the release of slightly fewer workers than that noted on March 1, 1927; the index number then was over four points lower. Eighty-nine operators reduced their labour forces from 28,737 persons on February 1, to 27,809 at the beginning of March.

Metallic Ores.—In contrast with the contractions indicated on the corresponding date last year, there were moderate increases in employment in this group, mainly in Ontario. Data were received from 66 mines employing 13,536 workers, as against 13,412 at the beginning of February. The index was slightly higher than in any other month of the record.

Communications

Practically no change was indicated on telegraphs and telephones, which afforded more employment than in the early spring of other years of the record. Returns were received from 187 companies and branches with 24,535 employees, compared with 24,501 in the preceding month. More pronounced improvement had been registered on March 1, 1927, but the index then was rather lower.

Transportation

Street Railways and Cartage.—Statistics tabulated from 120 employers in this division showed that they had reduced their payrolls by 412 persons to 20,402 at the beginning of March; this took place mainly in Ontario, where snow shovelling gangs completed their work. Smaller losses were noted on the corresponding date a year ago, when employment was not so active.

Steam Railways.—Continued and larger reductions were registered in steam railway operation, from which 1,756 workers were released by the 103 co-operating companies and divisional superintendents on whose payrolls were 76,988 persons. A small increase had been indicated on March 1 last year, when the index number was very slightly lower. Large losses were noted in the Prairie Provinces, but there was an advance in Ontario.

Shipping and Stevedoring.—A further and more extensive gain occurred in shipping and stevedoring, mainly in the Maritime Provinces, while in Quebec declines were recorded. The situation was slightly more favourable than on March 1, 1927, when curtailment was indicated. On the date under review, 49 employers reported a staff of 10,735, or 537 more than in the preceding month.

Construction and Maintenance

Building.—Contrasting with the expansion indicated on the same date last year, there was a falling-off in employment in building construction at the beginning of March. The 479 contractors furnishing data had 26,503 employees, as against 28,422 on February 1. Quebec and Ontario recorded important reductions, while elsewhere improvement was shown. The

index number, although lower than on March 1, 1927, was higher than in the early spring of any other year since the series was instituted.

Highway.—Shrinkage in employment involving rather more workers than on the corresponding date last year was indicated in this group on March 1, when 113 employers reported 7,053 workers, as compared with 7,484 on February 1. Most of this contraction took place in the Central and Prairie Provinces. Employment was in greater volume than on the same date in earlier years of the record.

Railways.—Employment on steam railway construction and maintenance showed an increase, which was much smaller than that registered on the corresponding date in 1927; the index number then was slightly higher. Data were received from 36 companies and divisional superintendents employing 29,895 persons, or 66 more than at the beginning of February. Losses in the Eastern and Central Provinces were offset by advances in the Western Provinces.

Services

Very little general change was noted in the service group, 182 establishments reporting a staff of 16,009, compared with 15,958 on February 1. Activity continued at a higher level than in the corresponding month of earlier years of the record.

Trade

Retail trade showed a slight advance, but wholesalers released some help. The result was an increase of 45 in the personnel of the 622 firms furnishing data, who had 68,448 workers. Employment was in decidedly greater volume than on March 1 of any other year for which statistics are available.

Tables I, II, and III give index numbers of employment by economic areas, leading cities and industries, respectively. The columns headed "relative weight" show the proportion that the number of employees reported in the indicated area or industry is of the total number of employees reported in Canada by the firms making returns on March 1, 1928.

UNEMPLOYMENT IN TRADE UNIONS AT THE CLOSE OF FEBRUARY, 1928

UNEMPLOYMENT as used in the following article has reference to involuntary idleness due to economic causes. Persons who are occupied in employment other than their own trades, or who are idle through illness, are not considered as unemployed. Unions involved in industrial disputes are excluded from these tabulations. As the number of reporting unions varies from month to month with consequent variation in the membership upon which the percentage of unemployment is based, it should be understood that such figures have reference only to the organizations reporting.

Practically no change in the unemployment level was indicated by the local trade unions from which reports were tabulated at the close of February as compared with the returns of the previous month, the percentage of idleness standing at 7.0 on February 29, contrasted with 6.8 per cent at the end of January. The percentage for February was based on the reports received from 1,677 local trade unions with an aggregate membership of 178,892 persons. Though the unemployment percentage in February remained nearly stationary when compared with the previous month, what nominal decline in employment it indicated may be attributed largely to inactivity among Nova Scotia and Quebec unions, due

in the former, almost exclusively to contractions in the employment for coal miners, and in the latter, to heavy declines among iron and steel workers. New Brunswick, Manitoba and Saskatchewan unions in addition showed slight curtailment of operations. The Alberta situation remained unchanged but the gains in employment registered in Ontario, principally in the manufacturing industries, supplemented by small increases in British Columbia, were almost adequate to offset the reductions in the other provinces. In comparison with the returns for February last year, when 6.5 per cent of the members were without work, the most noteworthy changes occurred, as in the previous comparison, among unions in Nova Scotia and Quebec where less favourable situations prevailed followed by minor declines among Saskatchewan, Alberta and British Columbia unions. Employment conditions were somewhat better in Ontario than in February a year ago while in New Brunswick and Manitoba unions there was but a fractional increase in the amount of work afforded.

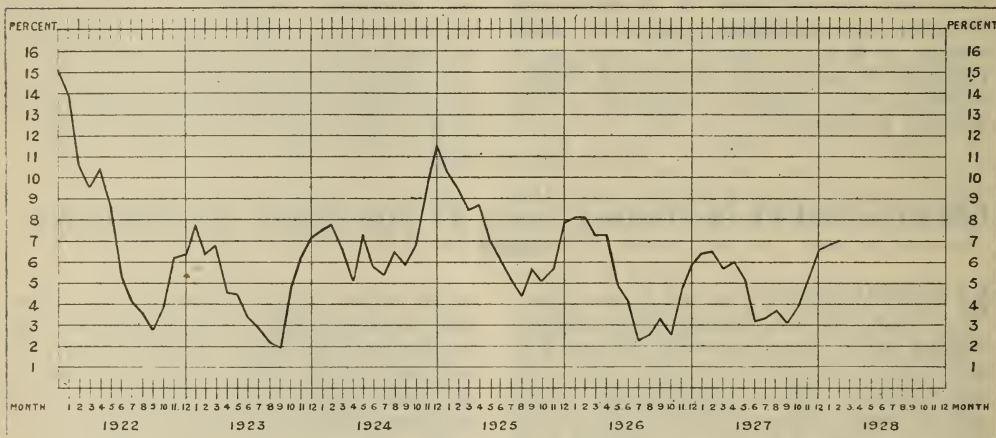

Each month a separate tabulation is made showing the unemployment situation in the largest city in each province with the exception of Prince Edward Island. Halifax, Toronto, Edmonton and Vancouver unions all

reported increases in employment during February of around 3 per cent when compared with January conditions, the Halifax unemployment percentage of 13.2 in February being the largest reached in any of the cities. In Winnipeg the same percentage of idle members was indicated during both months under comparison, while Regina, Montreal and St. John unions registered percentage reductions in employment of 3.0, 2.6 and .5 respectively. When making a comparison with the returns for February last year Montreal, Toronto, and St. John unions reported heightened activity and of the contractions in the remaining cities the most substantial was that of 3.3 per cent in Edmonton.

other hand, more than offset these reductions. In comparison with the February returns of last year when 6.8 per cent of the members were idle, the situation for printing tradesmen, leather and brewery workers, bakers and confectioners, textile and carpet workers, metal polishers, iron and steel workers and general labourers was more favourable during the period under review, while of the contractions the most noticeable were those reported by wood, garment and glass workers and paper makers.

Coal miners with 40 unions indicating a membership of 16,543 persons reflected slightly less favourable conditions during February than in the preceding month, 4.9 per cent of

PERCENTAGE OF UNEMPLOYMENT AS REPORTED BY TRADES UNIONS

The accompanying chart indicates the curve of unemployment by months from January, 1922, to date. The trend during February this year was slightly above that of the previous month showing a small decrease in the amount of work available. The level of the curve was also slightly in advance of that reached in February last year.

From unions in the manufacturing industries 447 reports were received comprising a membership of 5,066 persons, 7.3 per cent of whom were without work on February 29, as compared with 8.2 per cent at the close of the preceding month. The most outstanding change occurred among iron and steel workers particularly railway car men who reported a large number of their members idle. Glass workers in addition showed a large falling off in employment. The improvement registered among paper makers, printing tradesmen, metal polishers, general labourers, hat and cap makers, wood, leather and fur workers, on the

idleness being registered at the end of February as against 2.9 per cent in January. The bulk of the increase in unemployment over January was reported by Nova Scotia coal miners followed by reductions of lesser magnitude from the Alberta miners. British Columbia coal miners as in January were fully engaged. When compared with the February, 1927, situation employment for Nova Scotia coal miners during the period under review was reduced by about 6 per cent; in British Columbia no unemployment was indicated compared with a small percentage of idleness in February last year, while in Alberta the tendency was slightly favourable. Quarry workers in Nova Scotia during February reported pronounced curtailment of operations as compared with the January situation but the level of employment was the same as in February a year ago.

Building tradesmen indicated no recovery during February from the employment situa-

tion in January, the percentage in both months being the same, namely, 23.2 per cent. Slight improvement was shown, however, over conditions in February last year when 24.3 per cent of the tradesmen were without employment. For February this year returns were tabulated from 195 unions of these tradesmen involving a membership of 19,221 persons, 4,462 of whom were idle at the close of the month. Greater activity prevailed during February than in the previous month for tile layers, lathers and roofers, steam shovel and dredgemen, bridge and structural iron workers, hod carriers and building labourers, granite and stone cutters, carpenters and joiners, and painters, decorators and paper hangers which, however, was fully offset by the declines in employment for plumbers and steam fitters, brick layers, masons and plasterers and electrical workers. In comparing with the February, 1927, returns, the trend of employment was upward during the month under review among granite and stone cutters, brick layers, masons and plasterers, hod carriers and building labourers, painters, decorators and paper hangers, steam shovel and dredgemen and bridge and structural iron workers, while in the remaining trades there were moderate contractions in the volume of work afforded.

In the transportation industries a small increase in unemployment was reported during February over the previous month as was indicated by the 678 reporting unions whose membership aggregated 61,335 persons. Of these 2,489 or a percentage of 4.1 were out of work at the close of the month as compared with 3.8 per cent in January. In the steam railway division, the membership of which was about 83 per cent of the total membership reporting in the transportation industries, there was a very slight adverse change which was in part offset by gains in employment for navigation workers, street and electric railway employees and teamsters and chauffeurs. When comparing the situation in the transportation industries with that of February last year, the nominal change registered tended adversely, the unemployment percentage at that time standing at 4.0. In this comparison there was a slight improvement among steam railway employees but the greater unemployment shown among navigation workers was just sufficient to effect an unfavourable balance for the transportation industries as a whole.

A separate tabulation each month is made for longshore workers, from whom nine reports were received during February including a membership of 5,560 persons, 743 of whom were idle, a percentage of 13.4 compared with 19.3 per cent in January and with 8.6 per cent in February last year.

From unions in the public employment group 139 returns were tabulated indicating a membership of 12,855 persons and showed a .9 per cent of unemployment at the end of February as compared with 1.2 per cent in January and with 1.5 per cent in February, 1927. Federal employees reported no idleness during February in contrast with nominal percentages of inactivity in both the months used here for comparison, while civic employees were afforded more work than in either the previous month or February last year.

Reports were tabulated from 113 unions in the miscellaneous groups of trades with 5,082 members, 406 of whom or 8.0 per cent were idle at the close of February in comparison with 9.8 per cent in the previous month. Greater activity than in January was indicated by barbers, theatre and stage employees and stationary engineers and firemen, while hotel and restaurant employees were slacker. In comparing with the February, 1927, situation when 6.5 per cent of the members were idle, theatre and stage and hotel and restaurant employees were afforded a greater volume of work, while among barbers and stationary engineers and firemen there were moderate increases in unemployment.

TABLE I.—PERCENTAGES OF UNEMPLOYMENT IN TRADE UNIONS BY PROVINCES

Month	N.S. and Pr. Edw. Island	New Brunswick	Quebec	Ontario	Manitoba	Saskatchewan	Alberta	British Columbia	Canada
Feb. 1919.....	5.7	2.7	4.9	5.5	2.8	4.5	4.2	7.8	5.2
Feb., 1920.....	5.1	2.4	2.3	2.9	3.6	5.2	5.1	10.2	4.0

From unions in the fishing industry 3 returns were received comprising a membership of 1,014 persons and showed 27.5 per cent of inactivity compared with 2.6 per cent in January and with 4.1 per cent in February last year. Lumber workers and loggers in the three months used here for comparison reported all their members fully engaged.

Table I on page 401 is a summary of the provincial returns for February of each year from 1919 to 1925 inclusive and for each month from January, 1926, to date, and Table II on page 402 is a record of the unemployment percentages in the various industrial groups for the same months.

EMPLOYMENT OFFICE REPORTS FOR FEBRUARY, 1928

THE volume of business transacted by the offices of the Employment Service of Canada during the month of February, 1928, as indicated by the average daily placements effected, showed a decline of 6 per cent from the previous month, while an increase of 1 per cent was reported over February, 1927. Logging was chiefly accountable for the reduction in placements in the comparison with last month, while the gains reported over last year in manufacturing, construction and services were largely offset by losses in logging.

The accompanying chart shows the trend of employment since January, 1926, as represented by the ratio of vacancies offered and placements effected for each 100 applications for work registered at the offices of the Employment Service throughout Canada, computations being made semi-monthly. It will be seen that both the curve of vacancies and of placements in relation to applications showed a slightly upward trend during the month, though at the close of the period under review the curves were respectively about three and two points lower than the levels attained at the close of February a year ago. The ratio of vacancies to each 100 applications was 68.2 and 69.1 during the first and second half of February, 1928, in contrast with the ratios of 69.7 and 66.4 during the same periods in 1927. The ratios of placements to each 100 applications during the periods under review were 63.4 and 64.9 as compared with 62.5 and 63.1 during the corresponding month of 1927.

The average number of applications for employment received daily by the offices of the Service throughout Canada was 1,262 during the first half of February, as compared with 1,363 during the preceding period, and with 1,241 daily during the first half of February, 1927. Applications for work during the latter half of the month numbered 1,195 daily, in contrast with 1,234 daily during the latter half of February a year ago.

The average number of vacancies reported by employers to the Service daily was 862 during the first half and 825 during the latter half of the month under review, as compared

with a daily average of 864 and 819 vacancies during the month of February, 1927. Vacancies offered to the Service during the latter half of January, 1928, averaged 900 daily.

The average number of placements made daily by the offices of the Service during the first half of February, 1928, was 800, of which 488 were in regular employment and 312 in work of one week's duration or less, as compared with a total average placement during the preceding period of 833 daily, and with 775 daily during the first half of February a year ago. During the latter half of the month under review placements averaged 775 daily (486 regular and 289 casual), as compared with an average of 778 daily, during the corresponding period of 1927.

During the month of February, 1928, the offices of the Service referred 21,181 persons to vacancies and effected a total of 19,690 placements. Of these the placements in regular employment were 12,167, of which 8,945 were for men and 3,222 for women, while the placements in casual work totalled 7,523. The numbers of vacancies reported by employers totalled 13,197 for men and 7,895 for women, a total of 21,092, while applications for work totalled 30,733, of which 20,941 were from men and 9,792 from women.

The following table gives the placements effected to date by the offices of the Employment Service of Canada:—

	Placements		
	Regular	Casual	Totals
1919 (10 months).....	268,001	37,904	305,905
1920.....	366,547	79,265	445,812
1921.....	280,518	75,238	355,756
1922.....	297,827	95,695	393,522

1926.....	300,226	109,929	410,155
1927.....	302,723	112,046	414,769
1928 (2 months).....	25,180	15,469	40,649

NOVA SCOTIA

The demand for workers as indicated by orders received at employment offices in Nova Scotia during February was over 2 per cent

greater than in the preceding month, but nearly 12 per cent less than in the corresponding month last year. Placements were over 7 per cent higher than in January, but nearly 15 per cent lower than in February, 1927. Reduced placements in the services and trade groups were responsible for the declines from February last year, as all other divisions except transportation and mining showed gains. The manufacturing industries showed the largest increase. Industrial groups in which most of the placements were effected during the month were: manufacturing, 76; logging,

reductions in placements, when compared with February last year, but these declines were more than offset by gains in the two former. Placements in transportation numbered 58 and in services 372, of which 276 were of household workers. During the month 30 men and 53 women were placed in regular employment.

QUEBEC

Orders listed at offices in the Province of Quebec during February called for nearly 25 per cent fewer workers than in the preceding

POSITIONS OFFERED AND PLACEMENTS EFFECTED FOR EACH ONE HUNDRED APPLICATIONS FOR EMPLOYMENT

Applications —————

Vacancies - - - - -

Placements o—o—o—o—o

47; construction and maintenance, 26; trade, 52; and services, 275, of which 216 were of household workers. There were 125 men and 61 women placed in regular employment.

NEW BRUNSWICK

During February orders received at employment offices in New Brunswick called for over 10 per cent fewer workers than in the preceding month, but showed a gain of over 7 per cent when compared with the corresponding month last year. There was a decline of over 12 per cent in placements from January, but a gain of more than 6 per cent in comparison with February, 1927. All groups except transportation, services and trade, showed small

month, and nearly 27 per cent less than during the corresponding month last year. Placements were over 3 per cent higher than in January, but over 10 per cent lower than in February, 1927. A large reduction in logging placements was responsible for the declines in placements from February last year, as all other groups except transportation and finance showed gains under this comparison. Industrial groups in which most of the placements were effected during the month were: manufacturing, 145; logging, 143; construction and maintenance, 426; and services, 427, of which 355 were of household workers. There were 718 men and 464 women placed in regular employment during the month.

ONTARIO

Opportunities for employment as indicated by orders received at employment offices in Ontario during February were nearly 8 per cent less than in the preceding month, but over 4 per cent better than in the corresponding month last year. Placements declined nearly 7 per cent when compared with January, but were nearly 6 per cent in excess of February, 1927. Logging, farming and transportation placements were less than in February last year, but all other groups except finance where a nominal change was recorded, showed gains under this comparison. Placements by industrial groups included: manufacturing, 1,277; logging, 1,554; farming, 363; mining, 100; transportation, 163; construction and maintenance, 2,083; trade, 409; and services, 2,703, of which 1,818 were of household workers. During the month 3,879 men and 1,179 women were placed in regular employment.

MANITOBA

There was a decline of 15 per cent in the number of positions offered through offices in Manitoba during February, when compared with the preceding month, but a gain of nearly 3 per cent when compared with the corresponding month last year. Placements were over 16 per cent less than in January, and nearly 3 per cent lower than in February, 1927. Logging and farming were the only groups in which less placements were made during the month under review than in February last year, but these reductions more than offset the gains in all other divisions. Industrial groups in which most of the placements were effected during the month were: manufacturing, 89; logging, 382; farming, 376; construction and maintenance, 240; trade, 140; and services, 1,402, of which 1,135 were of household workers. Placements in regular employment numbered 1,012 of men and 485 of women.

SASKATCHEWAN

Employment opportunities, as indicated by orders received at employment offices in Saskatchewan during February, were over 7 per cent less than in the preceding month, but nearly 2 per cent better than in the corresponding month last year. There was a decline of nearly 11 per cent in placements when compared with January, but a gain of 2 per cent in comparison with February, 1927. Logging, transportation and services were the only groups to show more placements during the month under review than in February last year, but these gains more than offset the declines in other groups. Placements by industrial divisions included; manufacturing, 42;

logging, 154; farming, 492; transportation, 100; construction and maintenance, 167; trade, 50; and services, 756, of which 506 were of household workers. Regular employment was secured for 819 men and 424 women.

ALBERTA

During the month of February positions offered through employment offices in Alberta were 2 per cent less than in the preceding month, but over 26 per cent more than in the corresponding month last year. Placements were 3 per cent lower than in January, but over 24 per cent higher than in February, 1927. Services, construction and maintenance, and farming showed the largest gains in placements over February last year, although all groups except manufacturing, logging and trade showed improvement. Industrial groups in which most of the placements were effected during the month included: manufacturing, 146; logging, 611; farming, 493; mining, 39; transportation, 42; construction and maintenance, 329; and services, 612, of which 465 were of household workers. During the month 1,498 men and 309 women were placed in regular employment.

BRITISH COLUMBIA

There was a gain of nearly 6 per cent in the number of positions offered through offices in British Columbia during February when compared with the preceding month, and of 20 per cent in comparison with the corresponding month last year. Placements were over 8 per cent higher than in January, and over 22 per cent in excess of February, 1927. All groups except mining and transportation participated in the gains in placements over February last year, those in services and construction and maintenance being the most noteworthy. Placements by industrial groups included: manufacturing, 218; logging, 339; farming, 119; mining, 37; transportation, 84; construction and maintenance, 366; trade, 129; and services, 724, of which 433 were of household workers. Regular employment was found for 864 men and 247 women during the month.

Movement of Labour

During February, 1928, the offices of the Employment Service of Canada made 12,167 placements in regular employment, of which 6,855 were persons for whom the employment found was outside the immediate locality of the offices at which they were registered. Of the latter, 1,601 were granted the Employment Service reduced transportation rate, 1,208 going to points within the same province as the despatching office, and 393 to other prov-

inces. The reduced transportation rate, which is 2.7 cents per mile with a minimum fare of \$4, is granted by the railway companies to bona fide applicants at the Employment Service who may desire to travel to distant employment for which no workers are available locally.

The transfers at the reduced rate from offices in Quebec numbered 21, and all were of bushmen. Of these 9 were transported on certificates issued by the Quebec City office to camps within its own zone, and 12 from Hull to employment in the vicinity of North Bay.

Persons profiting by reduced transportation certificates from Ontario offices numbered 495, of whom 423 were for employment within the province and 72 for other provinces. Provincially, 377 bushmen sought employment in the Northern Ontario lumber camps, receiving their certificates, for the most part, from the Sudbury, Fort William and Port Arthur offices. Fort William, in addition, transferred 7 construction labourers and Sudbury 6 carpenters and 1 cook to districts within their respective zones. Toronto received 20 bridge builders from Pembroke, and Windsor 1 machine operator from St. Catharines. From North Bay 1 cook was despatched to Cobalt and 1 instrument man to a point within the North Bay zone; from Toronto 1 surveyor travelled to Sault Ste. Marie and 1 timber driver to Port Arthur, and from Timmins 5 machine runners and 2 miners were conveyed to points within its own zone. The Hull or Winnipeg zone was the destination of all workers who availed themselves of certificates for points outside the province, the Cobalt office sending 13 mining labourers and 4 bushmen to Hull and 3 miners to Winnipeg, the Port Arthur office 44 railroad construction labourers to Winnipeg, and the North Bay office 8 bushmen to Hull.

Certificates granted by Manitoba offices were 488 in number, 269 provincial and 219 inter-provincial. To points within the province 263 certificates were issued by the Winnipeg offices, 49 bushmen, 38 station men, 22 rockmen, 12 teamsters, 14 construction workers, 3 engineers, 3 carpenters, 5 cooks, 2 drag line operators, 2 tool sharpeners, 1 cookee, 1 machinist's helper, and 1 chambermaid going to employment within the Dauphin zone, 6 female hotel workers, 1 axeman, 1 general and 1 sanitarium maid to points in the Brandon zone, 10 bushmen to logging areas within the Winnipeg zone, and 80 farm hands and 11 farm domestics to various farming districts in the province. The remainder of the provincial certificates were granted by the Dauphin office to 3 survey axemen, 1 survey cook, 1 bushman and 1 wait-

ress for stations in its own zone. All the transfers outside the province were effected by Winnipeg offices, the Port Arthur zone receiving 143 bushmen, 2 saw filers, 2 sawmill labourers, 1 lumber checker, 2 cooks, 1 kitchen worker, 1 female hotel worker and 1 town general, Prince Albert receiving 3 carpenters and 2 camp cooks, and Edmonton 3 brick makers and 1 machinist. In addition, 1 motor mechanic travelled to North Battleford, 1 orderly to Swift Current, 2 hotel generals to Regina, 2 farm hands to Vancouver, 1 farm hand to Kit-chener, 40 farm labourers and 7 farm domestics to Saskatchewan agricultural regions and 3 farm hands to Alberta points.

Business transacted by Saskatchewan offices involved an issue of 113 transportation certificates, 112 of which were for provincial stations. Of these 73 were given to bushmen destined for the Prince Albert, Yorkton and North Battleford zones and 30 to farm hands, most of whom journeyed to employment in the vicinity of Saskatoon and Moose Jaw. The Prince Albert office sent 1 hospital janitor and 1 ward maid to situations within its own zone. The remaining 7 provincial certificates were granted to hotel and household workers travelling to different sections of the province. The 1 interprovincial transfer was of a bushman who was despatched at the reduced rate from Prince Albert to the Dauphin zone.

From Alberta offices 380 persons benefited by the special reduced rate, 311 going to provincial points and 69 to other provinces. The greater part of the movement within the province was of bushmen, 223 of whom sought employment chiefly in the Edmonton zone, the majority securing their certificates of transportation from the Edmonton City office. In addition Edmonton transferred 25 farm hands and 1 farm domestic and Calgary 20 farm hands and 1 farm domestic to the rural localities within the province. The balance of the movement provincially included from Edmonton, 4 engineers, 3 mill hands, 2 machinists, 2 miners, 1 tile setter, 1 sawyer, 1 fireman, 1 cookee, 1 carpenter, 1 timekeeper, 1 foreman and 15 hotel and household workers, all travelling to employment within its own zone, and 1 carpenter to Lethbridge, and from Calgary, 1 hotel cook going to Edmonton, and 4 housekeepers, 1 maid and 1 cook to positions within the Calgary zone. Of those sent outside the province 54 were station men for the Winnipeg zone, 44 of whom were shipped from Edmonton and 10 from Calgary. From Edmonton also 15 farm hands were transported to work in the Province of Saskatchewan.

From the offices in British Columbia 104 persons were conveyed at the special rate,

84 to points within the province and 20 to other provinces. Of the former, the Vancouver offices granted certificates to 1 carpenter, 1 saw filer and 1 lead burner going to the Nelson zone, to 1 dishwasher, 2 mining labourers, 1 ball mill helper, 2 engineers and 1 farm labourer travelling to Pentiction, 1 sawyer to Prince George, 8 labourers, 4 miners, 2 jack hammer men and 1 orderly to Kamloops, and 4 muckers, 2 miners, 2 brush hands, 1 timber man, 1 flunkey and 1 cook to various parts of the Vancouver zone. The New Westminster office despatched 1 iron moulder to Cranbrook while from Prince Rupert 3 miners and 1 steel sharpener, from Prince George 6 labourers, and from Pentiction 1 farm hand went to points within their respective zones. The remaining transfers with-

in the province were of bushmen, numbering 35, mostly for the Prince George, Kamloops and Pentiction zones. Of those transported to other provinces 19 were farm labourers, 13 for Alberta farming localities, and 6 for Saskatchewan points, all receiving certificates of reduced transportation from the Vancouver and New Westminster offices. Vancouver in addition, transferred 1 roll turner to Hamilton.

Of the 1,601 persons who took advantage of the Employment Service reduced transportation rate, 1,176 travelled by the Canadian National Railways, 390 by the Canadian Pacific Railway, 27 by the Temiskaming and Northern Ontario Railway, 7 by the Pacific Great Eastern Railway, and 1 by the Kettle Valley Railway.

RECENT INDUSTRIAL AGREEMENTS AND SCHEDULES OF WAGES

A SUMMARY is given below of the more important industrial agreements and schedules of wages and working conditions that have recently been received by the Department. Such agreements are summarized each month in the LABOUR GAZETTE. In the majority of cases the agreements are signed by both the employers and the employees. Verbal agreements, which are also included in the records, are schedules of rates of wages and hours of labour and other conditions of employment agreed upon between the parties concerned, and in effect though not signed. In addition to these, important schedules of wages are summarized, including civic schedules. In the case of each agreement or schedule, the rates of wages for principal classes of labour are given, with other information of general interest.

Construction: Buildings and Structures

VANCOUVER, B.C.—GENERAL CONTRACTORS ASSOCIATION AND THE UNITED BROTHERHOOD OF CARPENTERS.

Verbal agreement to be in effect from April 2, 1928, to April 2, 1929, subject to adjustment or continuation by either party giving three months' notice prior to April 2, 1929.

Wages: \$8 per day. Hours: 8 per day.

No change in working conditions.

Other matters pertaining to method of payment and employment to be adjusted by correspondence and conference.

In the case of a dispute, there shall be no stoppage of work until an investigation is made by representatives of both parties. If unable to agree, a board of conciliation consisting of three members from each party shall be chosen to settle the dispute.

Transportation and Public Utilities: Local Transportation

VANCOUVER, B.C.—THE HAZELWOOD CREAMERY LIMITED AND THE INTERNATIONAL BROTHERHOOD OF TEAMSTERS, CHAUFFEURS, STABLEMEN AND HELPERS, LOCAL 464, MILK DRIVERS AND DAIRY EMPLOYEES.

Agreement in effect from March, 1928, until March 1, 1929, and from year to year unless notice of abrogation or amendment is given 30 days prior to the date of expiry.

Only union members or those willing to become such to be employed, but no applicant for union membership to be refused because any union member is out of employment.

The company to deduct from wages and pay over to the union Secretary all dues, fines or assessments levied by the union's by-laws.

Wages: for first three months, inexperienced driver salesmen, \$100 per month; after three months, the minimum scale shall be \$130 per month from March to August inclusive and \$110 from September to February inclusive.

From March to August inclusive, employees to work 7 days per week, but after August they shall receive one week's vacation and one day off for each 7 days worked during this period.

The union agrees to do all in its power to promote the sale of the company's products.

It is provided that there are to be no strikes or lockouts during the term of agreement, any dispute to be adjusted by representatives of both parties; failing this, a board of arbitration to be formed consisting of one representative of each party and a third disinterested party chosen by them, the decision of any two members of this board to be binding.

In the event of the two parties not being able to agree to any amendments to this agreement, a Board of Arbitration under the Industrial Disputes Investigation Act is to be applied for and its majority decision to be binding.

Transportation and Public Utilities: Electric Railways

BRANDON, MANITOBA.—CORPORATION OF THE CITY OF BRANDON AND THE CIVIC EMPLOYEES' FEDERAL LABOUR UNION No. 69—STREET RAILWAY DEPARTMENT.

The Street Railway Department is included in the agreement with civic employees summarized below under the heading "Service: Public Administration."

Service: Public Administration

BRANDON, MANITOBA.—CORPORATION OF THE CITY OF BRANDON AND THE CIVIC EMPLOYEES' FEDERAL LABOUR UNION No. 69—

Agreement to be in effect from March 1, 1928, to February 28, 1929.

Five and one-half days to constitute a week's work in the Works Department, Health Department, Street Railway, Track Laying and all other Departments where permissible.

After due notice in writing, the city manager shall receive a grievance committee from the Civic Employees' Union to consider any grievance.

No civic employee shall be discriminated against by reason of his being a member of a trade union.

The principle of filling positions which become vacant by promotion according to seniority and subject to qualification to be observed.

All regular civic employees must be British subjects.

The following order of precedence shall be maintained in employment and promotion, all other conditions being equal: (a) resident married men with families, (b) resident married men without families, (c) resident single men.

Street Railway Department.—Wages per hour: armature winders 75 cents, machinists 68.25 cents, electricians' helpers and linemen 50 cents, sweeper operators 47.25 cents, repairmen 46.20, line groundsmen 45, experienced trackmen and lamp renewers 42, pitmen and oilers and greasers 40.95, cleaners and switch tenders 38.85, labourers 35 cents; motormen-conductors: first 6 months 40.95 cents per hour, second 6 months 42 cents, third 6 months 44.10 cents, after 18 months' service 46.20 cents, conductors—special 35 cents. Hours: 9 per day. Overtime, time and one half. After one year's service, 2 weeks' holidays with pay each year.

Waterworks Pumping Station.—Wages: firemen \$101.06 per month, machinists 46 cents per hour, boiler washers 39 cents, labourers 35 and 36.75 cents, gas engine operators 3 cents per hour additional to regular rate. Hours: 10 per day and 6 day week except firemen who work on 8-hour shifts. Overtime, time and one half except in case of Sunday work for steady labourers which shall be paid at the regular rate. After one year's service, one week's holidays and all statutory holidays to be granted with pay. Engineers to be governed by the Engineers' Union.

Health Department.—Wages: foreman and horse keeper, \$102.90 per month with cottage, water and light; teamsters, 36.75 cents per hour, night soil men and one teamster 39 cents, labourers 35 and 36.75 cents. Hours: 10 per

day from March 1 to November 15 and 9 per day from November 16 to February 28, with one-half hour extra for stable duty at regular wage rate. Sunday stable duty men to be allowed 5 hours for same at regular rate. Holiday duty at regular rate. After one year's service, one week's holidays and all statutory holidays to be allowed with pay.

Works, Sewer and Water Distribution Departments.—Wages: assistant foremen 55.1 and 48.3 cents per hour, cement foreman, 55.1 cents, cement finishers 48.3 cents, works teamster 39 cents, labourers 35 and 36.75 cents, special labourers 43.7 cents, weighmaster \$87.50 per month. Hours: 10 per day from March 1 to November 16 and 9 for remainder of year. Overtime including Sundays, time and one half. After one year's service, one week's holiday and all statutory holidays to be allowed with pay.

MEDICINE HAT, ALBERTA.—THE CITY COUNCIL, THE REPRESENTATIVES OF THE CITY OF MEDICINE HAT AND THE CIVIC EMPLOYEES FEDERAL LABOUR UNION No. 46.

Agreement to be in effect from January 1, 1928, to December 31, 1928.

This agreement is the same as that for the year 1927 which was summarized in the LABOUR GAZETTE, June, 1927, page 672, with the following exceptions:

That wages not exceeding two weeks (one month in 1927 agreement) be paid in case of sickness after the employee has been in the service of the city at least twelve months.

Parks Department.—Wages of foreman \$135 per month (\$125 in 1927).

Transportation and Public Utilities: Telegraphs and Telephones

THE CANADIAN NATIONAL TELEGRAPHS AND THE ORDER OF RAILROAD TELEGRAPHERS AND THE COMMERCIAL TELEGRAPHERS' UNION OF AMERICA.

Agreement to be in effect from September 1, 1927, and to remain in effect subject to 30 days' notice in writing by either party.

Rules and wages to apply to linemen and (with the exception of the paragraph on hours and overtime) to telephone maintainers.

Seniority to date from time lineman commenced work as such, provided he has not resigned or been discharged.

Promotion to be based on seniority, merit and ability. After four years' service linemen on eastern lines to have right of promotion over all eastern lines, and those on western lines over all western lines.

All vacancies or new positions to be bulletined.

In case of reduction of staff, the junior lineman in the promotion district shall be dispensed with first and any lineman in good standing so laid off, shall have first preference when a vacancy occurs.

Fifteen days' notice of resignation or of being laid off to be given.

No lineman shall be suspended, discharged or disciplined until his case has been first investigated and if he wishes, he may have the right of appeal to the general officers of the company.

Hours: 8 consecutive hours exclusive of meal hour; hours of duty to commence between 6.30 a.m. and 9 a.m.

Overtime: overtime and all work on Sundays, time and one-half. When required to work within the regular hours of duty on certain holidays, overtime payment will be at pro-rata rates.

For overtime and work on Sundays and holidays a minimum allowance of two hours at time and one-half will be paid whether required for that length of time or not. Traveling time after regular duty hours and up to 11 p.m. time and one-half.

After one year's service, an annual vacation of 12 working days with regular wages will be allowed.

Linemen will be paid all necessary expenses while away from home station or while attend-
