It recognizes, however, "that certain measures of rationalization may tend to displace labour or to modify in undesirable ways the conditions of work, and that safeguards are therefore necessary to ensure that the interests of the workers do not suffer by the adoption of such measures. It is therefore agreed that schemes for providing such safeguards should be considered as part of the general question of the displacement of labour.

"Recognizing the necessity for adaptability and elasticity in industry, it is suggested that the Trade Unions and employers concerned should consider the advisability of making provisions for testing variations from existing practices or rules on agreed experimental bases, with proper safeguards against an extension of such conditions being claimed by or imposed upon the industry beyond the agreed limits."

CANADIAN GOVERNMENT ANNUITIES

Address delivered by Mr. E. G. Blackadar, at the Postmasters' Conventions held on June 28, 1928, at Saskatoon, Saskatchewan, and on July 5, 1928, at Calgary Alberta.

I AM informed that the Saskatchewan Postmasters' Association is one of the most progressive branches of the Canadian Postmasters' Association, and I welcome the opportunity of being present with you, as Mr. Kolb, your President, had informed me that the Government Annuity System, although of special interest to postmasters, is not understood by every postmaster.

The Annuities Act was passed some twenty years ago, but it is only in recent years that the public really began to take advantage of the benefits of this legislation, which has been commented upon most favourably by some of the leading financiers. During the past year the Department of Labour has carried on an intensive campaign to bring the advantages of the Government Annuity System to the attention of the Canadian people. During the campaign thousands of lines of space in various newspapers, periodicals, etc., were used. Talks explaining the system were broadcasted over the chain of Canadian National Railway radio broadcasting stations, which extend from coast to coast. Special agents for the sale of Government Annuities were appointed and offices opened in most of the principal cities throughout Canada; in fact everything possible was done to increase the sale of Government Annuities. During the fiscal year ending March 31 last the number of contracts issued exceeded the number sold during the previous fiscal year by 150 per cent, and the amount of money received for the purchase of Government Annuities showed a corresponding increase which also indicates the interest now being shown by the Canadian people.

Commissions to Postmasters

As I have found that generally speaking the postmasters have been too busily occupied with their other duties to make themselves familiar with the various plans of annuity, I think it would be well to give a brief outline of some of the most popular plans; and as I believe most of those present receive their remuneration from the Post Office Department on a commission basis, it would be to your advantage to devote the short space of time necessary to familiarize yourself with the plans which I shall explain in order that you may materially augment your earnings by the sale of Government Annuities. Commissions to postmasters are paid on the following basis: one per cent for Immediate Annuities (and when you consider that we fre-

quently receive cheques for as large amounts as \$10,000, which would give you a commission of \$100 for the one transaction) and five per cent is allowed on applications received, or payments made, through your post office on account of purchase of Deferred Annuities, you will readily understand it would be to your personal advantage to promote the sale of Government Annuities.

It is also a patriotic gesture to lend assistance towards the sale of Government Annuities. The Department of Labour, which has to deal with the human element such as prevention of industrial disputes, and mediation of these disputes when such have occurred, is also vitally interested in endeavouring to reduce the number of indigents throughout the country, thus relieving the state, province and municipality of this burden.

Meeting Problem of Old Age

If the Government Annuity System, as a means of provision for old age, was fully taken advantage of by the younger people of this country, it would be only a matter of a few years before there would be no old age problem to be solved by the Federal and Provincial Governments. For instance, if a young man aged 20 were to make a regular, systematic saving under the Government Annuity System of only 97 cents per week, at age 65 the government would commence to pay him an annuity of \$600 per year or \$50 per month as long as he lives and for ten years in any event. This amount is equivalent to the income from an investment of \$12,000 at five per cent. If he should die just before his annuity began the amount of \$6,287.25 would be returned to his estate in a lump sum. If this young man were to wait until he attained the age of 65 before purchasing, the same amount of annuity would require the payment of \$6,216 in a lump sum. In other words, if a man will take advantage of the Government Annuity System while still young by purchasing an annuity on the plan outlined, he may provide for future independence at a very low cost. He will derive full benefit for every dollar paid in and may secure a dependable income when his earning days are over, at a much lower cost than if he endeavoured to accumulate the amount of cash required to secure a livable income when he is no longer able to continue in employment.

The plan to which I have just referred is known as the Guaranteed Deferred Annuity Plan, and is only one of the many plans available. This plan is more particularly suited to young men or women. There are other plans of annuity which will meet the requirements of older persons who have either retired or desire to retire, and have a moderate amount of money to invest.

Annuities are divided into two classes, first, Deferred Annuities, and second, Immediate Annuities: the former being of interest to younger persons and the latter to older persons.

Deferred Annuities

There are several different plans upon which Deferred Annuities may be purchased, each having features that will commend it.

Under Plan A, if death occurs before the Annuity commences, all purchase money received with 4 per cent compound interest added is refunded to the estate of the annuitant. If the annuitant lives to reach the age at which the annuity begins, he receives the amount of annuity called for, for the balance of his life, even if he lives to be 100 years of age.

A Guaranteed Deferred Annuity is exactly like Plan A with just another advantage. Like Plan A all the money paid in with 4 per cent compound interest added is refunded to dependants if death occurs before the annuity begins. Under this plan however, if death occurs after the annuity period commences, and before payments for the full number of years guaranteed have been received, the remaining payments are continued to the estate. Of course, if the annuitant lives longer than the number of years guaranteed, the annuity would be continued for life.

Deferred Annuities may be purchased by making small monthly, quarterly, half-yearly or yearly payments, or by the payment of a lump sum. The premium payments may be made at any Postal Money Order Office in Canada, and if your office is on a commission basis you are allowed a commission, as previously mentioned, of five per cent thereon.

There is no forfeiture if the premium payments are not made regularly by the annuitant. They may be made up later, and if not the amount of annuity to be received will be adjusted accordingly. This provision is to encourage the sale of annuities to workmen who do not have steady employment and consequently are unable to save regularly.

Immediate Annuities

The second class, Immediate Annuities, is of particular interest to older people who find it necessary to retire and desire an income commencing at once. Purchase of an Immediate Annuity is made by the payment of one lump sum. The annuity commences three months from the date the purchase money is received, the annuitant is placed on the Government payrolls for life, and receives an income cheque quarterly, even if he lives to be 100 years of age.

Immediate Annuities may also be guaranteed for a definite number of years, 10, 15, or 20, thus protecting the heirs in the event of death occurring in the earlier years of the contract, and before the annuitant has received more money in annuity payments than the purchase price of the annuity. If the annuitant lives longer than the guaranteed period, he receives his annuity payments just the same as long as he lives.

Both Deferred and Immediate Annuities may be purchased jointly by any two people, generally man and wife. This plan is known as the Last Survivor Plan and when the annuity payments commence they are paid as long as both live and to the survivor as long as he or she lives.

All plans of annuity are described in detail in the Government Annuities booklet, but as our experience is that no matter how simple the language used in the booklet, there is always the person who is unable to grasp the details of the annuity plan which may be suitable in his particular circumstances. I would, therefore, urge you to make yourself familiar with the various plans of annuity available, in order that both yourself and the members of your staff may be in a position to recommend the plan of annuity which may be suitable to the person making enquiry.

Advantages of System

Briefly, the advantages of the Canadian Government Annuity System are as follows:

A Canadian Government Annuity is safeguarded by the whole resources of the Dominion. It is free from Dominion Government income tax; it is payable for life; it cannot be seized or levied upon by any law or court; no medical examination is required; every one, male or female, from 5 years to 85 is eligible to purchase an annuity; the amount of annuity which may be bought ranges from \$10 to \$5000 per year.

It is not generally known by either the postmasters or the general public that the Government Annuity System is provided to the Canadian people at less than cost. There is no loading in our rates for either profits or expenses, and the Government bears all the cost of salaries, advertising, printing, stationery, etc. The expense for these items increases with the number of annuities sold. During the fiscal year ending March 31 last, approximately \$40,000 was expended in this manner. The Government allows interest on the amounts received for the purchase of Deferred Annuities at the rate of 4 per cent. Consequently all persons who purchase Deferred Annuities are allowed 4 per cent or more on their savings. The reason I have said "or more" is the fact that mortality benefits enter into the purchase of some plans of annuity, for instance a Deferred Annuity on Plan B. Taking the mortality benefits into consideration, if a Deferred Annuity is purchased on Plan B, the annuitant receives five or slightly more per cent on the payments he makes for the purchase of his annuity. Let me say here that pass-books are provided in which receipt of the payments should be acknowledged, using your office date-stamp for this purpose.

Our Government Annuity booklet describes the various plans of annuity in detail, and if you have not already done so, you should make a careful study of the plans and tables of rates in order that you may be in a position to answer enquiries received at your office. You should also see that your staff is familiar with the system in order that they may also be in a position to answer enquiries received at the Post Office wickets.

We have posters which should be on display in every Post Office. Your co-operation in advertising the system by keeping the posters placed in a conspicuous position, is solicited. You should also ascertain if you have a sufficient quantity of Government Annuity booklets on hand in your office. Any Government Annuity supplies required may be obtained by simply writing direct to me.

A number of postmasters throughout Canada have familiarized themselves with the Government Annuity System and have consequently been able to substantially increase their income from this source. In fact in one particular case a postmaster who had been actively promoting the sale of Government Annuities for about ten years, has now retired and is devoting his full time to the sale of Government Annuities on a commission basis, and I am pleased to say, he is doing exceedingly well. During the month of May he earned over \$500 in commissions.

I have mentioned previously that the Government is anxious to increase the sale of annuities throughout Canada. Let me supplement this by saying that we are most anxious to increase the sale of Deferred Annuities to younger persons, the purchase of which is made by making annual, semi-annual, quarterly, monthly, or even weekly payments. Perhaps you already have a number of persons making such annuity payments through your office. If so, you are familiar with the method of handling such payments. To those Postmasters who are, however, not receiving such payments, these few words as to the proper handling of amounts received should be of interest: the moneys received for the purchase of annuities are to be dealt with in the same manner as other Post Office funds, and included in the remittances to bank on Post Office Account. The annuity return G.A. 100, giving full name and address of the person making the payment, the amount paid, and the date on which each payment was made, should be mailed to the Superintendent of Annuities in the envelope addressed to him. All offices will make the return on the same day payments are received. These returns must bear the same date as the cash account in which the collections are charged. You will make the same entries in stub, which you will keep for your own information and protection, as in the form mailed to the Superintendent.

An institute for the training of vocational advisers has been opened in Buenos Aires, Argentine Republic, with a two-year course. The institute admits university graduates, normal-school graduates who have had a certain amount of teaching experience, and other qualified persons.

MINIMUM WAGES FOR FEMALE EMPLOYEES IN SASKATCHEWAN

THE Minimum Wage Board of Saskatchewan has revised and reissued the orders already published governing the employment of female workers in the province, the new orders to be effective on September 1, 1928. The previous regulations of the Board have been published in the *LABOUR GAZETTE* (August, 1927, page 845; September, 1926, page 872; December, 1924, page 1042, etc.). The new orders make some important changes in regard to hours of work, duration of the "inexperienced" periods, and, in the order governing shops and stores, a distinction is made between different sections of the province in regard to the permissible number of working hours.

Shops and Stores.—The earlier order fixed the maximum number of hours of employment at 50 per week, irrespective of locality, with 56 hours by special permit. Clause (c) of section 2, relating to "minor learners," is new. The subsection (g) requiring the furnishing of certificates to inexperienced workers on leaving their employment, is new, as is also section (h) requiring the provision of seats.

Laundries and Factories.—The subsection (f) of section 2 is enlarged from the former subsection (g) by the addition of "wearing apparel manufactories." The rate for learners in this group is reduced from \$8 to \$7.50 per week for the first three months of employment. The subsection (g), in regard to certificates is new.

Mail Order Houses.—This order remains practically unchanged.

Hotels, Restaurants and Refreshment Rooms.—Subsection (a) of section 1 is amended by the omission of the words "10 hours in any one day," from the statement of the minimum number of permitted working hours. A former subsection which prohibited any arrangement of hours by which any work period should end between 12.30 a.m. and 7 a.m. is omitted, and subsection (b) in reference to meal hours, is substituted.

Beauty Parlours and Barber Shops.—In this order the definition of "experienced female" is one of fifteen instead of six months' standing, as formerly. The three months' probationary period remains, but the longer learning period is graded into three stages. Formerly the minimum rate for the paid portion of the learning period was \$10 per week.

General Provision.—All the orders contain the usual sections requiring employers to keep full registers of the names and addresses of the female employees, their working hours and actual earnings, and to permit inspection of these records by a representative of the Board at any time. Employers are required to keep a copy of the respective orders posted in a position where they may be easily read by the employees. Any employer who violates any of the provisions of the regulations is punishable by fine and in default by imprisonment, as provided in the Minimum Wage Act.

The other sections of the new orders read as follows:—

Order No. 1.—Shops and Stores

1. HOURS:

No person, firm or corporation shall employ a female or suffer or permit a female to be employed in any shop or store in the cities of Moose Jaw, Regina and Saskatoon for a greater number of hours than forty-nine (49) in any one week or in the cities of North Battleford, Prince Albert, Swift Current, Weyburn and Yorkton for a greater number of hours than fifty-one (51) in any one week, or if a special permit in writing has been obtained from the secretary of the board, fifty-six (56) hours in any one week or fifty-nine (59) hours in any one week during the period between December 15th and December 31st.

2. WAGES:

(a) No person, firm or corporation shall employ an experienced female or suffer or permit an experienced female to be employed in a shop or store at a rate of wages less than \$15 per week.

(An experienced female is one who has been employed in the industry eighteen months or more.)

(b) *Adult Learners:* Subject to the provisions of sub-clauses (c) and (f) of this clause, the rate of wages for learners may be less than the minimum rate prescribed for experienced workers; provided that adult learners shall be paid not less than \$10 per week for the first six months, not less than \$12 per week for the second six months, not less than \$13.50 per week for the third six months, and thereafter shall be considered to be experienced workers and shall be paid not less than the minimum rate of \$15 per week prescribed for experienced workers.

(c) *Minor Learners:* Girls under 18 years of age may be employed as minor learners and shall be paid not less than \$7 per week for the first six months, and not less than \$8 per week for the next six months, and thereafter shall be considered adult learners and shall be paid on the scale set out above for adult learners. Minor learners who have been working for six months or more shall be considered adult learners upon reaching the age of 18

years. The proportion of minor learners shall not be greater than one to every four female employees.

(d) Wages at not less than the minimum rate applicable shall be paid to employees, whether experienced or inexperienced, for all time worked beyond 49 hours or 51 hours, as the case may be, in any one week.

(e) When a female, whether experienced or inexperienced, is employed for a less number of hours than 49 or 51, as the case may be, in any one week, the minimum wages above set forth may be proportionately reduced, except that no reduction for statutory holidays shall be made from the minimum wage.

(f) *Millinery, Dressmaking, Tailoring, Fur Sewing and Florist*: Excepting the provisions of sub-clauses (b) and (c) of this clause, these regulations shall apply to millinery, dressmaking, tailoring, fur sewing and florist establishments situated in a shop or store.

A probationary period of three months for which no wages are stipulated is allowed, after which period an inexperienced female employee shall be paid wages at a rate not less than \$3 per week for a period of six months, at a rate not less than \$7 per week for the next six months, and at a rate not less than \$12 per week for the next six months and thereafter shall be considered to be an experienced worker and shall be paid not less than the minimum rate of \$15 per week prescribed for experienced workers.

(g) An inexperienced employee when leaving the employment shall be given a certificate showing her length of time and experience in that employment.

(h) *Seats*: Seats shall be provided in the proportion of at least one seat for every four female employees or fraction thereof.

Order No. 2.—Laundries and Factories

1. HOURS:

No female shall be employed in any laundry or factory for more than forty-eight hours in any one week; and the hours of working in any one day shall not be later than half-past six o'clock in the afternoon unless a special permit in writing has been obtained from an inspector under The Factories Act. (See The Factories Act, Section 11 (1).)

2. WAGES:

(a) No person, firm or corporation shall employ an experienced female or suffer or permit an experienced female to be employed in a laundry or factory at a rate of wages less than \$14 per week.

(An experienced female is one who has been employed in the industry for twelve (12) months or more.)

(b) The rate of wages for learners may be less than the minimum rate prescribed for experienced workers; provided that learners shall be paid not less than \$9.50 per week for the first six months, and not less than \$11.50 per week for the second six months and thereafter shall be considered experienced workers and shall be paid not less than the minimum rate prescribed for experienced workers.

(c) Wages at not less than the minimum rate applicable shall be paid to employees, whether experienced or inexperienced, for all time worked beyond forty-eight (48) hours in any one week.

(d) When a female, whether experienced or inexperienced, is employed for a less number of hours than forty-eight (48) in any one week, the minimum wages above set forth may be proportionately reduced, except that no reduction for statutory holidays shall be made from the minimum wage.

(e) *Photographic Studios, other than Film Developing Establishments*: Female apprentices in photographic studios, other than film developing establishments, and workrooms connected therewith shall be paid wages at a rate not less than \$5 per week for a period of three months, and for the twelve months following shall be paid the rates of wages specified in clause (b) for learners.

(f) *Knitting, Hat and Wearing Apparel Manufactories*: Learners in knitting, hat and wearing apparel manufactories shall be paid wages at a rate not less than \$7.50 per week for a period of three months, and for the twelve months following shall be paid the rate of wages specified in clause (b) for learners.

(g) An inexperienced employee when leaving the employment shall be given a certificate showing her length of time and experience in that employment.

Order No. 3.—Mail Order Houses

1. HOURS:

No person, firm or corporation shall employ a female or suffer or permit a female to be employed in any mail order house for a greater number of hours than forty-eight (48) in any one week unless a special permit in writing has been obtained from the secretary of the board.

2. WAGES:

(a) No person, firm or corporation shall employ an experienced female or suffer or permit an experienced female to be employed in any mail order house at a rate of wages less than \$14 per week.

(An experienced female is one who has been employed in the industry for twelve (12) months or more.)

(b) The rate of wages for learners may be less than the minimum rate prescribed for experienced workers; provided that learners shall be paid not less than \$9 per week for the first six months and not less than \$11 per week for the second six months and thereafter shall be considered experienced workers and shall be paid not less than the minimum rate prescribed for experienced workers.

(c) Wages at not less than the minimum rate applicable shall be paid to employees, whether experienced or inexperienced, for all time worked beyond forty-eight (48) hours in any one week.

(d) When a female, whether experienced or inexperienced, is employed for a less number of hours than forty-eight per week, the minimum wages above set forth may be proportion-

ately reduced, except that no reduction for statutory holidays shall be made from the minimum wage.

Order No. 4.—Hotels, Restaurants and Refreshment Rooms

1. HOURS:

(a) No person, firm or corporation shall employ a female or suffer or permit a female to be employed in any hotel, restaurant or refreshment room, or in more than one establishment of that class for a greater number or combined number of hours than fifty (50) in any one week, in the case of establishments open to the public only six days per week, or fifty-six (56) in any one week in the case of establishments open to the public seven days per week, unless a special permit in writing has been obtained from the secretary of the board.

(b) Twenty minutes uninterrupted time shall be allowed for each meal where meals are provided as part of remuneration.

2. WAGES:

(a) No person, firm or corporation shall employ an experienced female or suffer or permit an experienced female to be employed in any hotel, restaurant or refreshment room at a rate of wages less than \$13 per week of six days (\$56.35 per month), or less than \$14 per week of seven days (\$60.65 per month), except as a kitchen help, in which case the rate of wages shall not be less than \$11 per week of six days (\$47.65 per month), or \$12 per week of seven days (\$52 per month).

(An experienced female is one who has been employed in the industry three (3) months or more.)

(b) Except in the case of kitchen employees the rate of wages for learners may be less than the minimum rate prescribed for experienced workers: Provided that the learners shall be paid not less than \$11 per week of six days (\$47.65 per month), or not less than \$12 per week of seven days (\$52 per month), for the first three months of employment and thereafter shall be considered experienced workers and shall be paid not less than the minimum rate prescribed for experienced workers.

(c) Where a female is employed by the hour, the rate of wages shall not be less than 35 cents per hour.

(d) When a female, whether experienced or inexperienced, is employed for a less number of days than six, the minimum wages above set forth for a six-day week may be proportionately reduced.

(e) No female under sixteen years of age shall be employed, nor shall a female under eighteen years of age be employed after eight p.m. in any hotel, restaurant or refreshment room.

3. BOARD AND LODGING:

(a) Where meals are furnished by an employer as part payment of the wages of an employee, not more than \$5.25 a week shall be deducted from her weekly wage for a full week's board of twenty-one meals; a fraction of a week's board shall be computed upon a proportional basis.

(b) Where lodging is furnished by an employer as part payment of the wages of an employee, not more than \$2.50 a week shall be deducted from her weekly wage for a full week's lodging of seven days.

Order No. 5.—Beauty Parlors and Barber Shops

1. HOURS:

(a) Subject to the provisions of clause (c), no person, firm or corporation shall employ a female or suffer or permit a female to be employed in any beauty parlour or barber shop for a greater number of hours than fifty (50) in any one week or ten (10) in any one day. At least one full hour shall be allowed for each meal.

(b) When an employee is transferred from one establishment to another during the regular working day the total number of hours worked by the employee shall not exceed those fixed by these regulations.

(c) Overtime may be worked only by permit to be obtained from the secretary of the board, and shall not exceed three hours in any one day, nor six hours in any one week. Overtime shall be paid for at not less than the regular rate of wages.

2. WAGES:

(a) No person, firm or corporation shall employ an experienced female or suffer or permit an experienced female to be employed in a beauty parlour or barber shop at a rate of wages less than \$15 per week.

(An experienced female is one who has been employed in the industry for fifteen (15) months).

(b) There may be a probationary period of three months for which no wages are payable, after which the employee shall be paid wages at a rate of not less than \$10 per week for the next six months, and \$12 per week for the following six months and thereafter she shall be considered an experienced worker and shall be paid not less than the minimum rate of \$15 per week prescribed for experienced workers.

(c) No reduction for statutory holidays shall be made from the minimum wage.

(d) Where board or lodging or both are provided by the employer there may be deducted from the wage rate a sum not to exceed \$2.50 per week for lodging, nor \$5.25 per week for board.

(e) If uniforms are required to be worn, they shall be supplied and laundered at the expense of the employer.

(Uniform means any special kind of dress, including cuffs, caps and aprons).

(f) An employee when leaving the employment shall be given a certificate showing her length of time and experience in that employment.

MINIMUM WAGES FOR WOMEN IN ALBERTA

Personal Service Occupation

THE Minimum Wage Board of Alberta has amended Order No. 4, governing female employees in personal service occupation (*LABOUR GAZETTE*, August, 1925, page 779), by striking out the former enumeration of the occupations covered by the order, and by substituting the following:—

The operation of hairdressing or manicuring establishments or schools, or beauty parlours or schools of beauty culture, or barber shops or schools where any charge is made for services to the public, or the operation of theatres, motion picture houses, shooting galleries, joy parlours, dance halls, cabarets, garages, gasoline service stations, or any establishment where business of a similar nature is carried on, or the operation of freight and passenger elevators.

No change is made in the minimum rate of wages, which is as follows:—

Wages.—

1. Except as hereinafter provided, no employer shall employ a female worker in the class of employment above mentioned without paying to her wages at a rate not less than \$14 per week (provided this clause shall not apply to ushers in theatres, motion picture houses, music halls, and cloak-room attendants in cabarets and dance halls).

2. The rate of wages for apprentices in hairdressing and manicuring establishments or schools, beauty parlours or schools of beauty culture, and barber shops or schools may be less than the rate above prescribed, but shall be in accordance with the following schedule: One month probationary period for which no wage rate is stipulated, not less than—\$6.00 per week for the 2nd and 3rd months; \$8.00 per week for the 4th, 5th and 6th months; \$10.00 per week for the 7th, 8th and 9th months; \$12.00 per week for the 10th, 11th and 12th months—after which period she shall be paid not less than the minimum rate of \$14.00 per week.

Order No. 1, governing female employees in the manufacturing industry (*LABOUR GAZETTE*, August, 1925, page 777) is amended in the paragraph which enumerates the occupations covered by the order, including "any other manufacturing industry not enumerated in these schedules," these words being changed to read "any other manufacturing industry not otherwise provided for."

Fruit and Vegetable Industry

The Minimum Wage Board also issued Order No. 7 dated July 7, 1928, and effective from that date, governing female employees in the fruit and vegetable industry. The text of the order is as follows:

ORDER No. 7—GOVERNING FEMALE EMPLOYEES IN THE FRUIT AND VEGETABLE INDUSTRY

The following are hereby determined to be a class of employment within the meaning of The Minimum Wage Act, 1925:

The operation of Fruit and Vegetable canning establishments, including the canning, preserving, drying, packing, or otherwise adapting for sale or use any kind of fruit or vegetables.

Wages.—

1. Except as hereinafter provided, no employer shall employ a female worker in the class of employment above mentioned without paying to her wages at a rate not less than \$12.50 per week.

2. The rate of wages for apprentices may be less than the rate above prescribed, and shall be in accordance with the following schedule, not less than—\$9 per week for the first month; \$10 per week for the second month—after which period she shall be paid not less than the minimum rate of \$12.50 per week.

Hours.—

3. No person, firm, or corporation shall employ a female, or suffer or permit a female to be employed in any fruit or vegetable canning establishment for a greater number of hours than nine in any one day, or forty-eight in any one week; provided that where by reason of the season of the year, or otherwise, it seems advisable, the Board may temporarily increase such hours.

Deductions.—

Where the usual hours of employment in any establishment in a week are forty, or more, in the event of the employment of any employee for less than the usual hours in any week, deduction may be made from the minimum wage, but the employer shall pay such employee an amount for such week bearing the same relation to the minimum wage as the actual number of hours of employment in the said week bears to the usual hours.

Where the usual hours of employment in any establishment in a week are less than forty, deductions may be made from the minimum wage, but the employer shall pay to the employee for such work an amount which bears the same relation to the minimum wage as the number of hours actual employment is such week bears to forty.

"Usual hours" as referred to in this Order shall mean the usual, regular, or customary number of hours worked in a week by the majority of the female employees in the class of employment concerned in the establishment.

This Order shall come into force on the date of publication.

During July, 1923 industrial accidents were reported to the Manitoba Workmen's Compensation Board, this number including six fatalities.

THE MINING INDUSTRY IN NOVA SCOTIA IN 1927

THE annual report on the mines of Nova Scotia for the fiscal year ending September 30, 1927, has been recently published by the provincial Department of Public Works and Mines. Detailed information is given in the report on the mining operations carried on in the province during the year, with records of boring done by the government drills, results of mining examinations, reports of the deputy inspectors, and other information relating to mines and mining.

In a prefatory note, the Minister of Public Works and Mines, draws attention to the increased safety in the mining of coal which has resulted from the legislation of 1927 (LABOUR GAZETTE, June, 1927, page 627), the improvement being reflected in the slightly higher output per "man-day" worked, while compulsory working provisions for mineral areas have led to greatly increased activity in examination of metal deposits. "While all conditions in the coal mining industry throughout the year cannot," he says, "be said to have been completely satisfactory, yet the total output of 6,640,000 tons shows an increase of almost a million tons above that of 1926."

The increase in the output of gypsum amounted to 245,000 tons over that of 1926, 850,000 tons of this mineral having been raised in 1927. The Deputy Minister sums up the principal mining statistics of the year, as follows:—

The number of men employed at the coal mines show the total to be 13,253, as compared with 11,914 during the previous year.

The total number of "man-days" worked was 3,204,753, as compared with 2,764,135 in the fiscal year of 1926, which is an increase of 440,618 days.

The coal output for the year was 6,643,205 tons of 2,240 pounds as compared with the previous year's output of 5,652,314 tons, an increase of 990,891 tons.

The quantity of coal distributed for consumption in Nova Scotia during the fiscal year was 1,859,144 tons, as compared with

1,849,419 tons in 1926, an increase of 9,725 tons.

The coal sales for the year were 5,948,099 tons as compared with the previous year's sales of 5,090,599 tons, an increase of 857,500 tons.

Shipments to the United States were 3,551 tons during the fiscal year as compared with 18,271 tons for the previous year.

The shipments to the St. Lawrence markets in the fiscal year were 2,459,702 tons as compared with 1,981,724 tons for the previous year, an increase of 477,978 tons.

The quantity of coke manufactured in the province during the year was 394,365 tons as compared with 453,228 tons the previous year, a decrease of 58,863 tons.

The quantity of tar manufactured from coal during the fiscal year was 6,255,699 imperial gallons as against 6,634,031 gallons manufactured during the previous year.

The benzol gas, from coal, manufactured for motor fuel, etc., during the year was 1,102,543 imperial gallons as against 1,313,560 in the previous year, showing a decrease of 211,017 gallons.

2,307 ounces of gold was produced during the year, showing an increase of 956 ounces as compared with the previous year.

928,259 silicate bricks were manufactured during 1927, this being a decrease of 87,345 as compared with 1926.

The mining and shipment of crude and calcined gypsum reached 851,953 tons for the fiscal year 1927, this being an increase of 244,837 tons over the previous year.

Fatal Accidents

The number of fatal accidents at the coal mines during the year was 29 as compared with 28 the previous year.

The chief cause of the underground fatalities was "falls of roof or face," which accounted for 58.6 per cent of the total number. "Mine cars and locomotives" followed, with 27.6 per cent. The following table makes a com-

parison of the rates of fatal accidents in coal mines for recent years per ton of coal produced, and per 1,000 men employed, in Nova Scotia and the United States:—

FATAL ACCIDENT RATES IN MINES IN NOVA SCOTIA AND U.S.A.

Year	Nova Scotia			United States	
	Number of fatal accidents from all causes	Per 1,000,000 tons of 2,000 lbs.	Per 1,000 men employed	Per 1,000,000 tons of 2,000 lbs.	Per 1,000 men employed
1908...	43	6.09	3.32	6.05	5.54

THE MINING INDUSTRY IN QUEBEC IN 1927

Annual Report of the Bureau of Mines

THE Bureau of Mines of the Department of Colonization, Mines and Fisheries of the Province of Quebec recently made its annual report on mining operations in the province during the calendar year 1927. Attention is called to the large share taken by the province in the mining development in Canada during this period, when great advances were made, especially in the western part of the province known generally as the Rouyn district.

The total value of the marketed products of the mines and quarries in 1927 constituted a record figure, amounting to \$29,124,110, an increase of 11.6 per cent over the corresponding figure for 1926. The previous high record was \$28,392,939 in 1920, but it is pointed out that the high value in 1920 was largely due to the abnormally high prices prevailing at that time. Non-metallic minerals (excluding building materials) accounted for 38.9 per cent of the total production in 1927; asbestos forming by far the largest item in this group. Building materials (stone, brick, lime, cement, sand) accounted for 52.8 per cent, and the metallic group for 8.3 per cent of the total. It is stated that the opening of the Noranda smelter marks the beginning of a new era in the Quebec mineral industry. This smelter is built in two units each of 500 rated capacity, the first unit having started to work in De-

cember, 1927. This is the first production of metallic copper in the province for 35 years.

The accompanying table shows the quantities and value of the minerals produced, by classes, together with the number of employees and wages paid. It should be noted that the term "production" is used as meaning "quantity sold, shipped, or used" and does not necessarily represent "output". Products remaining on hand at the end of the year are not included. The ton used is the "short" ton of 2,000.

The provincial government spent large sums of money in providing means of communication by road or rail with the mining districts and generally throughout the province. The province also assists the industry by a well-equipped laboratory at the Polytechnic School of the University of Montreal, and by the important field and technical work carried on by the Bureau of Mines.

Employment and Wages

A special chapter of the report deals with employment, wages and accidents in the mines. It is pointed out that "the seasonal character of some of the work and the unavoidable part-time employment require the bringing of total figures, as compiled, to a

common denominator so as to have a uniform basis of comparison from year to year. For this purpose the Quebec Bureau of Mines has adopted, for the past fifteen years, the practice of reducing the total number of workmen, mostly on part-time employment, to a basis of a full year of 300 working days. On this basis the total of 15,951 men employed during the year which appears in the table, is reduced to 9,490, the number of men on a 300-day basis.

Sand digging and dredging had a larger number of men on the payroll than any other group at the time of maximum activity. Asbestos is next with a total of 3,170 workmen. These underground and open-cast works are operated steadily throughout the year with but a slight decrease of the number of men employed in the winter months. The search for gold, copper, zinc and lead ores in Western Quebec and Gaspé is responsible for the considerable increase in the figures given for the metallic substances. Nearly twice as many men were engaged in this work in 1927 as the year before.

Wages paid to the miners and quarrymen in 1927 amounted to \$11,418,013. This is an increase of 16 per cent over the \$9,926,900 paid the year before. Of the amount paid in 1927, the miners received \$6,498,259 and the quarrymen \$4,919,754, which figures compare respectively with \$4,923,205 and \$4,903,895 for 1926. The average wage earned by a 300-day workman during 1927 was \$1,203; it was \$1,126 for the preceding year.

Accidents

During the year, mine and quarry operators sent to the Bureau of Mines notices of 416 accidents entailing loss of time to workmen. This was a considerable increase over previous years. But up to 1927 the operators only reported accidents entailing a loss of time of ten days or more. With the Mining Law as amended last year operators have now to report all accidents by which a loss of time is suffered by an employee.

There were 25 violent deaths in 1927 in the mines and quarries; this is an average of 2.63 per 1,000 men-year. This index number

compares with 2·72, 2·38, 1·83, 2·42 and 2·29 for 1922, 1923, 1924, 1925 and 1926, respectively. In the mines proper the proportion of fatal accidents is 4·3 and in the quarries, ·86, as compared with 3·5 and 1·3 for the year 1926.

The report contains tables showing the causes of accidents, these being designed to help operators, superintendents and foremen in the work of accident prevention. Haulage, especially in large workings where railways are in use, is the principal cause of fatalities; the sinking of a number of mine shafts in the development of new properties was not ac-

complished without a few fatal accidents occurring; next comes the handling of explosives, which includes the use of short fuses, ignorance of proper precautions in testing caps, and disregard of warnings when seeking precarious shelters. Other fatal accidents in mines are attributed to scaling operations, falls of rock underground, steam shovel and boom-derrick operations. In quarries, fatalities were caused by electrocution and falls of rock. In annexed plants, fatal accidents occurred in concentrators only, they are mostly charged to power belts.

WAGES, HOURS OF WORK, AND PRODUCTION IN EUROPEAN COAL MINES

Results of Inquiry by International Labour Office

THE International Miners' Federation, at a meeting held at Brussels in April, 1925, appealed to the International Labour Office to undertake an international investigation into conditions in the principal coal producing countries. The office complied with the request, and a report entitled "Wages and Hours of Work in the Coal Mining Industry" has now been published at Geneva (the English edition is published by P. S. King, Limited, London).

The report first reviews the outstanding features of the coal mining industry. "The coal production of the present time," it is stated, "is approximately equal to that of 1913, the last normal year of the pre-war period. It is even the case, in favour of the present period, that the distribution of this production is slightly less unequal; in 1913 the three great coal-producing countries of the world—the United States, Great Britain, and Germany—represented 82 per cent of the world production; to-day they only represent 77 per cent. However, the French production, thanks to the intelligent reconstruction of the mines of the Northern Departments, is continually increasing; the production of the Netherlands, formerly almost non-existent, is also continually developing, and above all, overseas, the mines of Australia, South Africa, India, and indeed China are beginning to take a more important place in the statistics. Hence the monopoly of the former producers is losing its rigidity and its power; the pits are becoming more scattered. It follows that the former holders of a quasi-monopoly suffer restrictions in their exports and, in particular, as they are obliged to reduce their exports of coal to the overseas mining countries, they

are led to seek markets to which they have better access nearer home. Such is more especially the case with Great Britain and Germany, whose endeavours to gain or retain the European buyers are becoming more bitter. In this restricted field of competition the two exporting countries come into collision, but they also come into conflict with the producing countries of the Continent."

The coal industry has been subjected also to the competition of oil and electrical power, and to the practice of greater economy on the part of the coal consuming industries. These adverse conditions suggested the idea of an agreement between the producing countries for the purpose of sharing markets and restricting production.

The report declares that some kind of standardization of working conditions in the coal mines in different countries must be obtained before any such international understanding can become effective. In this suggestion it is in agreement with the British Royal Commission on Coal Mining (LABOUR GAZETTE, April, 1926, page 394). The working conditions on which the various producing countries should agree are chiefly those in regard to hours of work and wages. In regard to the equalization of wages the report makes the following statement:—

"The remuneration of human labour is a very considerable factor in the cost of coal production. Estimates vary according to the source; but it may be said without fear of grave error that wages represent, according to the country, from 45 to 76 per cent of the cost price of coal. The share of wages in the cost price is here far greater than in any

manufacturing industry. It is thus quite evident that in these conditions competition can be benefited in certain countries by very low wages, which means that it is at the expense of the standard of living of the workers that the economic triumph of the nation to which they belong can be achieved. Hence the importance of endeavouring to determine the possibilities of a standardization of wages, considered from the following two points of view.

"In the first place, the point of view of the worker, that is to say, the worker's standard of living. It is here a question of determining an average wage which would enable the miners of all countries to have the same purchasing power and consequently to live everywhere in the same conditions.

"Secondly, the point of view of the employers. It is here a question of seeking to establish a wage per ton which, taking into account differences in the natural conditions in the various mines, in their economic position and their technical conditions, would enable an average wage to be found which would not be disadvantageous to any mining country as far as international competition is concerned."

The Office at first sought to include all the coal producing countries in the scope of the investigation, but owing to the difficulty of obtaining comparative stability the study was finally limited to European countries, excepting Russia. However in an appendix a statement is given of the hours of labour and wages in the coal industry of non-European countries, including figures for Canada which are taken from the Supplements to the LABOUR GAZETTE, January, 1928, and from information published by the Dominion Bureau of Statistics or by the provincial departments concerned.

Results

In the following table the averages obtained for other districts are related to the British average (represented in both cases by 1'00), and there are separate columns to exclude and to include employers' contributions to social insurance:—

Summarizing the main results of the inquiry as to (1) the comparative standard of living of miners (expressed in terms of purchasing power); (2) the comparative wage cost of a ton of coal (expressed in terms of gold); and (3) comparative productivity in the year 1925, the Report says:—

"(1) Great Britain and the Netherlands, where the standard of living appears to be

the highest in Europe and Continental Europe respectively, show also a very high wage cost per ton of coal and a relatively high productivity, which, however, are exceeded or equalled in a few Continental districts.

"(2) Belgium, France, the Saar territory, the Ruhr and Saxony districts of Germany, as well as Czechoslovakia, where the workers' standard of living may be assumed as being roughly equal, show marked differences in respect of the wage cost of production and productivity. The wage cost is very high in the Free State of Saxony and in Belgium (where it attains its maximum level), and is relatively high also in France, but the productivity is considerably less than in Great Britain; in other districts the wage cost is considerably below the maximum level (in Czechoslovakia little more than half of the same), whereas the productivity (the Saar excepted) is equal or nearly equal to the European maximum.

"(3) Finally, in German Upper Silesia and Poland the standard of living is the lowest in Europe, and, as the productivity of these regions (as determined by the average output per manshift or day) is at the same time the highest in Europe, also the wage cost of coal is cheaper than elsewhere; it may be noted that the wage per ton is less than two-fifths, but the real earnings about one-half, of the maximum level attained in Europe."

Accidents in the steel mills at Sydney, Nova Scotia, have declined to one-quarter of their former volume in the ten years since the Safety First movement was begun by the Dominion Iron and Steel Company. This statement was made by Mr. J. N. Morgan, Safety Engineer of the British Empire Steel Corporation, at the quarterly meeting of the executive of the Nova Scotia Accident Prevention Association, held at Sydney on July 25.

BRITISH COMMONWEALTH LABOUR CONFERENCE

THE British Commonwealth Labour Conference met in London in July on the invitation of the Trades' Union Congress and Independent Labour Party. Practically every portion of the British Commonwealth was represented at the meeting, including Great Britain, Canada, Australia, New Zealand, South Africa, Irish Free State, India, Ceylon, British Guiana, West Indies, and Palestine. Canada was represented by Messrs. Tom Moore, president, and R. J. Tallon, vice-president of the Trades and Labour Congress of Canada; A. A. Heaps, M.P., John Queen, (M.L.A.), and E. Magrath, Independent Labour Party of Manitoba.

The Right Hon. J. Ramsay Macdonald opened the proceedings, dealing in his address with the migration problem, the world peace proposals, and questions of foreign policy. He explained that the aim of the conference was to establish common purposes among all branches of the Commonwealth. On the subject of migration, Mr. Macdonald stated that the British Labour Party formerly opposed migration as a policy, but now recognized the importance of fluidity of population. He thought that the labour party should seek to promote the movement of families rather than individuals. The opinions of the British labour representatives were further stated by Messrs. Arthur Henderson, John R. Clynes, Ben Turner and others.

The migration question was discussed later by the conference, the representatives agreeing that fewer restrictions should be imposed upon

the movements of British citizens within the empire, but that there should be a measure of control or regulation to guard against the danger of lowering existing standards of living by an undue amount of immigration. The convention concurred in the opinion expressed by the Canadian representatives that all employment questions should be dealt with through the Government Employment agencies, and not through the transportation companies. The new procedure adopted by the Canadian immigration authorities of conducting medical examinations of intending emigrants prior to their embarkation, was approved by the convention. It was considered that social insurance legislation had an important bearing on migration, and that full reciprocity should be developed between the Dominions in regard to old age pensions, workmen's compensation, and other social measures.

On the subject of world peace, the representatives of the various Dominions agreed that no Dominion should become involved in any war without the express consent of its parliament. Tribute was paid to the work of the League of Nations and the International Labour Organization in the cause of world peace. The conscription of wealth was recommended as the first military measure on the part of the countries engaged in war.

The conference recognized the value of the Canadian Wheat Pool as a possible means of facilitating future state purchases of food-stuffs by Great Britain.

NOTES ON LABOUR UNION ACTIVITIES

Brotherhood of Railroad Trainmen

THE fifth triennial convention of the Brotherhood of Railroad Trainmen was held in Cleveland, Ohio, there being thirty-three grand lodge officers, as well as delegates representing 963 local lodges with a membership of 184,355, in attendance. President W. G. Lee opened the convention with a brief review of the work of the Brotherhood during the past three years. During the period under review the membership had increased by 6,594, while death or total and permanent disability benefits paid out amounted to \$12,768,219, which indicated that 6,744 members had died or were totally and permanently disabled. Some of the speakers who addressed the convention were: A. Johnston, president, Brotherhood Locomotive Engineers; D. B. Robertson, president, Brotherhood of Locomotive Firemen and Enginemen; E. P.

Curtis, president, Order of Railway Conductors; Matthew Woll, vice-president, American Federation of Labour, and Jas. J. Davis, United States Secretary of Labour.

Resolutions were adopted:

Favouring the passing and maintaining of immigration laws which will restrict immigration to the United States and Canada for an indefinite period;

Recommending the support of state laws designed to prohibit the employment of children in industry;

Pressing for the enactment in each state and province of a law permitting railroad men to vote while away from home;

Reaffirming previous action of the organization in that every effort should be made to eliminate the injunction power of the courts;

Favouring the prohibiting of prison or convict made goods by contract from being placed on the market in competition with goods otherwise manufactured;

Advocating the support of laws providing for the care of indigent persons who have lost their earning ability through old age, illness, or infirmities;

Instructing the proper officers of the organization to memorialize the United States Congress to provide machinery for old age insurance, to be administered and operated by the government;

Favouring a change of the law relating to assumed risk on common carriers for damages for personal injuries and death of employees so that this assumed risk will not be a bar to recovery, and further that an injured employee or his dependants may elect to proceed either under Federal law or the law of any state;

Instructing the Grand President and the national legislative representative to immediately request the other transportation organizations to join in an effort to have the Hours of Service Act amended so to guarantee every employee not less than twelve continuous hours off duty out of each twenty-four hour period, ten of which hours the employee would not be responsible to the employer in any manner;

Instructing the national legislative representative to prepare and file a complaint with the Interstate Commerce Commission and use every honourable means to have the Commission issue an order requiring the carriers to comply with the rules adopted by the American Railway Association in regard to the operation of the train brake system;

Recommending that every effort be put forth by national and Dominion legislative representatives to bring about the adoption of the automatic train pipe connector;

Favouring the equipping of all freight cars, both new and old, with a hand-brake that can be applied and released without the use of a club and can be operated with one hand;

Recommending that retaining valves be placed in an accessible universal position near the brake staff;

Favouring as standard equipment, an angle cock designed so as to bleed the air from connecting hose;

Recommending the placing of an additional grab iron on the left side and end of cars where height will permit;

To ask Interstate Commerce Commission to hold a hearing on the adoption of a standard uncoupling lever and attachments;

Urging that railroad companies be compelled to have a suitable platform on cars on rear of all trains;

Favouring a uniform minimum clearance of not less than eight feet measuring from centre line of track to closest obstruction;

Urging the elimination of the practice of placing pusher or helper engines behind the caboose;

Recommending that the Interstate Commerce Commission be directed (a) to report to the Senate the opinion of the Commission in respect to the feasibility of requiring each railroad to establish a pension fund for its employees, and (b) to include in such report, if in the opinion of the commission such project is feasible, a statement of the plan for establishing such fund which the Commission deems most suitable;

Advocating that bus and truck transportation on public highways should be regulated by national and state commissions and it should be required to pay its proper tax on an equality with the railroads;

Requiring railway companies to reimburse members of the organization to the extent of the loss in value to his property, should he be required to sell his home on account of the moving of terminal;

Favouring the exemption of employees from all criminal liability for clocking crossings or highways in the discharge of their duty;

Recommending that suitable laws be introduced requiring vehicles to stop before proceeding over all grade crossings;

Favouring the principle of a six-hour day within a seven hour spread for Grand Lodge office employees.

The officers elected were: President, A. F. Whitney; Assistant to the president, James A. Farquharson; Secretary-Treasurer, W. G. Lee. Among the vice-presidents elected were: W. J. Babe, St. Thomas, Ont., and James Murdock, Ottawa.

Order of Railway Conductors

The thirty-ninth convention of the Order of Railway Conductors was held in Jacksonville, Fla., with approximately 700 delegates present from Canada and the United States. A unique feature of the opening session was

speeches of welcome from representatives of the following five railroads: Atlantic Coast Line; Florida East Coast; Jacksonville Terminal; Seaboard Air Line; and Southern Railway. President L. E. Sheppard outlined

the activities of the Order for the past three years, including the wage movements, the acquisition of the conductors' home at Savannah, and the manner in which the interests of the craft had been affected by increased tonnage and other developments of modern railroading. President Sheppard gave, in chronological order, the story of the work of the general committees on the various railroads for the protection of the members' interests. Secretary-Treasurer E. P. Curtis announced that the assets of the Order now totalled nearly \$5,500,000. The membership is approximately 60,000 comprised in 680 active divisions. A considerable portion of the report of the board of directors was devoted to detailed accounts of negotiations in connection with the new home at Savannah,

Ga., and the Adwear Sales Corporation. The convention voted to continue the subscription to *Labour* for the entire membership. A special train of sixteen pullman cars carried delegates to the pecan farms owned by the Order at Albany, Ga.

The convention adopted a number of changes in the laws of the organization and elected officers as follows: President, E. P. Curtis (succeeding L. E. Sheppard who retired on account of ill-health); Senior Vice-president, S. N. Berry; Secretary-treasurer, J. E. Rodgers. In addition to the above there were eight vice-presidents elected, a board of directors, and trustees. By unanimous vote of the convention L. E. Sheppard was made assistant to the president.

Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees

The regular triennial convention of the Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees was held in Columbus, Ohio, with over 500 delegates in attendance. Addresses were delivered before the convention by the Hon. Jas. J. Davis, secretary of Labour, and Congressman George Huddleston of Alabama. The delegates voted in favour of re-affiliating with the American Federation of Labour, having been two years without connection with the Federation. Per capita to the Grand Division was increased thirty cents a quarter in order to put the death benefit fund of the Brotherhood on a sound financial basis. The maximum benefit payment was placed at \$500 for future members. An assessment of one dollar per member was levied to assist the striking coal miners and their families. A number of changes were made in the constitution and laws of the organization. The convention enacted legislation which provided for the establishment of a permanent research Department, appointments to which, in the future, will be by action of the convention. The office of national legislative counsel was abolished, but provision was made whereby the grand president at his discretion, and when conditions warrant, may assign a member to this work both at Washington and Ottawa.

Resolutions were adopted:

Advocating the fostering of the closest possible co-operation between the Order of Railroad Telegraphers and the Brotherhood of Railway and Steamboat Clerks, Freight Handlers, Express and Station Employees;

Recommending that the establishment of a superannuation scheme for employees of more than ten years service, to which both employees and employers would subscribe, should receive the attention of the grand executive council;

Instructing the grand lodge officers to exert every effort to further a federation of the standard railroad labour organizations;

Advocating the forty-four hour week for every member of the Brotherhood;

Instructing the grand lodge officers to seek release by the Order of Railroad Telegraphers of many clerks in their organization who properly belong to the Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees;

Recommending that the executive council study the advisability of instituting a sick and accident insurance department in connection with the death benefit department;

Advocating state and federal regulation for motor busses and trucks which would eliminate the present competition with railroads;

Recommending the establishing of two scholarships at Brookwood College;

Favouring old age pension legislation.

The officers elected were: President, George M. Harrison, St. Louis, Mo.; Secretary-treasurer, George S. Levi, Cincinnati, Ohio. F. H. Hall, Montreal, was one of the seven vice-presidents elected, while Adam Birtles, Swift Current, Sask., was elected to the Board of Trustees.

Denver, Colo., was selected as the city for the 1931 convention.

Brotherhood of Locomotive Firemen and Enginemen

The thirty-first convention of the Brotherhood of Locomotive Firemen and Enginemen was held in San Francisco, Calif., June 11-July 12, 1928, with 932 delegates present, representing as many local lodges in the United States and Canada, the total membership being approximately 103,000. The Brotherhood is now in its fifty-fifth year, the first lodge having been formed at Port Jervis, N.Y., on December 1st, 1873. The first convention was held at Hornellsville (now Hornell), N.Y., in December, 1874, with delegates in attendance representing twelve local lodges. For the following thirteen years conventions were held annually but at the Minneapolis convention in 1886 it was voted to meet biennially. At the St. Paul convention in 1910 the delegates decided to hold triennial meetings, the first being convened in Washington, D.C., in 1913. During the forty-seven years that the insurance benefit of the Brotherhood has been in operation (created in 1881) there has been paid out to disabled members and beneficiaries of deceased members the sum of \$34,163,520. Insurance and disability claims for the past three years amounted to approximately \$4,000,000. On January 1, 1926, a widow's pension department was inaugurated and on January 1, 1928, a mutual insurance department was instituted. Financially, the Brotherhood is one of the strongest labour organizations, having resources totalling over \$18,000,000. The insurance department, at the close of 1927, had written policies to the value of \$159,253,000.

President D. G. Robertson and Vice-president Timothy Shea made a joint report in which the activities of the Brotherhood since the last convention were outlined, while a report on the more important achievements, such as the repeal in the United States of title III of the Transportation Act of 1920 which abolished the Railroad Labour Board, and which was replaced by the Railway Labour Act. The report devoted considerable space to the hearings held by the Interstate Commerce Commission on the petition of the engine-service brotherhoods and various state public utility commissions in favour of cab curtains on locomotives and of mechanically operated firebox doors, automatic stokers, etc. The Commission sustained the brotherhoods in the matter of cab curtains and took the petition for automatic fire doors under consideration. According to the report, a strong stand was taken in favour of limiting immigration from Mexico, while at the same time safeguarding the right of railroad workers freely to cross the international boundary between Canada and the United States in the

performance of their duties. Mention was made of the abrogation of the Chicago Joint Agreement by the Brotherhood of Locomotive Engineers which was considered "an act which can accomplish no great good for either organization, but may result in considerable harm to both."

Each of the eleven vice-presidents made a separate report covering in detail the work since the last convention. William L. Best, Canadian legislative representative, and Arthur J. Lovell, legislative representative in the United States, gave interesting accounts of their activities.

The convention slightly broadened the scope of the relief department so as to include disabilities arising from tuberculosis of the bone.

A general policy committee was appointed to deal with such matters as relationships with other railroad organizations, employers, legislative matters, and the internal affairs of the Brotherhood. This new committee replaces the Committee on Joint Relations which formerly functioned under the "Chicago joint agreement" between the Brotherhood of Locomotive Firemen and Enginemen and the Brotherhood of Locomotive Engineers.

Resolutions were adopted:—

Favouring a reduction in the hours of service from sixteen to twelve in any 24-hour period;

Recommending that the Brotherhood take an active part in politics on a strictly non-partisan basis;

Authorizing the transferring of \$12,000,000 to a fund for the payment of insurance to members upon reaching the age of 70 years;

Directing officials of the Brotherhood to continue to work for regulations requiring the automatic firedoor, automatic stokers, power reverse gears and thermic systems on engines as safety devices and to oppose the present regulations as to engine smoke at terminals;

Instructing the president and secretary-treasurer to exert every effort to interest other organizations and individuals in perfecting plans for the erection of a monument in memory of the late Senator Robert M. LaFollette, this memorial to be in the nature of a "living institution" which would perpetuate and exemplify the life work of the great progressive;

Approving the movement and authorizing the officers to work for the adoption of a standard set of operating rules on all railroads of the United States and Canada;

Demanding that all locomotives weighing 175,000 pounds or over on drivers, using coal as fuel, be equipped with mechanical stokers;

Favouring a federal law requiring two engineers on every locomotive operated in the United States and Canada, whether steam, electric or gas electric, or oil electric;

Instructing general grievance committees to request railroad companies to furnish free to employees books and literature giving instructions as to the handling of all new devices applied to locomotives;

Urging that employees in engine service be given preference for employment when work trains and pile drivers are used on railroad construction work;

Recommending that all members of the brotherhood in Alaska be transferred to one lodge located at Anchorage;

Demanding that Sunday and holiday work be minimized as far as possible, and instructing grievance committees to make every effort to secure elimination of Sunday work and to secure punitive overtime rates for such work when it is necessary;

Approving the "closed shop" policy in so far as it can be adopted and practically applied;

Indorsing the proposed Child Labour Amendment to the United States constitution;

Authorizing the officers to obtain the application of electric classification and backup lights on locomotives in road service;

Raising the eligible age for pension benefits from 40 to 45, and

Urging the state legislative boards to further legislation regulating motor vehicle traffic so as to promote safety in the highways.

The following officers were re-elected: President, D. B. Robertson, Cleveland; Assistant President, Timothy Shea, Cleveland; Secretary-treasurer, A. H. Hawley, Cleveland; H. H. Lynch, Ottawa, was re-elected vice-president, while Hugh Richmond, Smith's Falls, Ont., was elected to the Board of Directors.

Owing to the cost of transporting the records of the organization to and from the various convention cities, it was decided to hold future conventions at Cleveland, the headquarters of the Brotherhood, unless conditions arise necessitating a change. It was also believed that the attendance of visitors at conventions would be greater in Cleveland as the majority of the members reside in the states along the Atlantic seaboard. The proposal to hold conventions every four years instead of triennially was voted down.

American Federation of Musicians

The 33rd annual convention, presided over by president Jas. N. Weber, was held at Louisville, Kentucky, on May 21-26, 1928, with a large number of delegates present from local unions in Canada and the United States. Addresses of welcome were delivered by Geo. P. Laffell, president of Local No. 11, Louisville, Ky.; Hon. W. B. Harrison, Mayor; and Charles Gorman, president of Kentucky State Federation. In his address, president Weber gave a general summary of past and present problems and conditions surrounding the musical profession and its members, as well as his observations upon the changes that have taken place. The president commented on his activities toward carrying out the wishes of the Baltimore convention in seeking to amend the provisions of the Copyright Law, and spoke of the efforts being put forth to so amend the United States immigration laws as to afford members adequate protection from the invasion of foreign musicians who are endeavouring to enter the country. Executive Officer Weaver presented the report of the delegates to the Los Angeles convention of the American Federation of Labour in 1927. A report on matters concerning the federation coming before congress and the executive departments in Washington, D.C., was made by A. C. Hayden, executive officer.

Matthew Woll, vice-president of the American Federation of Labour and president of the Union Labour Life Insurance Company, reviewed the industrial situation as it existed and lucidly presented the value of the service to the labour movement of the Union Labour Life Insurance Company, and extended the thanks of labour for the wholehearted manner in which the American Federation of Musicians participated in the formation of the Insurance Company.

The convention decided to send six delegates to the convention of the American Federation of Labour, those elected being: Edward Canavan; John W. Parks; Jos. N. Weber; Wm. J. Kerngood; C. A. Weaver; Chas. L. Bagley.

Resolutions were adopted:—

Forbidding travelling dance orchestras to play in the place of their employment for any function whatsoever, given under the auspices or name of any club, lodge, association, or any other organization;

Advising all locals of the A. F. of M. to establish and maintain equitable prices and conditions for radio broadcasting, and in like manner to provide for or curtail the transmitting of music by telephone with or without the use of amplifiers;

Endorsing any legislation which will tend to establish Old Age Pensions in the various states and the abolition of poor houses;

Levying a weekly assessment on paid theatre musicians for the purpose of creating an international theatre defense fund;

Demanding that printed documents issued by the American Federation of Musicians or any local thereof shall not be recognized as official unless such bear the label of the Allied Printing Trades Council or International Typographical Union;

Requesting local unions desiring to take out group life insurance to subscribe same to the Union Labour Life Insurance Company;

Instructing the Federation and its officers to purchase two flags (one Canadian and one American) which will be used and displayed at all parades and meetings of the Federation.

The following officers were re-elected: President, Jos. N. Weber, vice-president, William L. Mayer; Secretary, William J. Kerngood; Treasurer, H. E. Brenton. G. Bert. Henderson, of Toronto, was elected member of the executive committee for Canada. Denver, Col., was selected as the convention city for 1929.

Amalgamated Clothing Workers

The eighth biennial convention of the Amalgamated Clothing Workers was held in Cincinnati, Ohio, with delegates present from all parts of the jurisdiction and presided over by general president Sidney Hillman. In his opening address the president reviewed conditions throughout the country and outlined the efforts put forth by the General Executive Board to establish the 40-hour week. The delegates were informed that unemployment insurance was instituted by the branches of the union in the City of Chicago in 1923 and during the intervening years has worked out very satisfactorily to the membership. Unemployment insurance was also established in the City of Rochester and the president stated that "he hoped that before two months we shall have unemployment insurance in our New York market where there is the greatest need for it". President Hillman drew attention to what had been accomplished by the Amalgamated along the lines of co-operation in the establishing of a banking system, with small loan service and a housing scheme that has already provided modern apartments at a very low rental for 303 workers' families in New York.

The delegates who passed through Chicago on their way home were invited to inspect the latest achievement of the Amalgamated—the "Amalgamated Centre" which is the home of the membership in that city. In closing the president said: "Let us at this convention first legislate soundly, intelligently, sanely, and then not be content with that, but leave the convention with the great spirit of solidarity, and carry on our message so that not merely in our industry alone but throughout the country the cause of labour will be recognized."

During the third session Frank Stagwald, a veteran of the labour movement, addressed the convention. In closing his remarks he

said: "I am glad to have lived 74 years, and I am glad and ready to go now, satisfied that the work which we began in the Knights of Labour is coming to fruition."

Dr. Leo. Wolman, director of the Research Department of the Amalgamated Clothing Workers' Union, addressed the convention on the subject of unemployment insurance.

Resolutions were adopted:

Urging the Amalgamated Clothing Workers organization to use all its resources for the purpose of unionizing the New York clothing market;

Instructing the General Executive board to conduct a vigorous organization campaign in unorganized or partly organized centres;

Commending the general executive board on the successful organizing campaign in Montreal and endorsing the launching of an immediate organizing campaign in Montreal and nearby towns;

Instructing all local and joint board officers to carry on organization work among the shirt makers;

Authorizing the general executive board to formulate a plan for the introduction of life insurance among the members;

Instructing the officers of the organization to introduce unemployment insurance into other clothing markets of the country;

Authorizing the officers to take the necessary steps to bring about the forty-hour week as soon as practicable;

Urging that all possible efforts be made to stimulate the use of the union label;

Favouring the principle of old age pensions, and instructing the general executive board to co-operate in establishing a sound system for workers;

Instructing the general executive board to make plans for the building of further co-

operative houses in New York and other cities where the members demand this service;

Favouring the creation of a Labour Party;

Requesting the recognition of the Government of Soviet Russia by the Government of the United States;

Opposing militarism and international warfare and to all activities which tend to spread the spirit of militarism and warfare.

Among the resolutions referred to the general executive board were the following: Urging the extending of the influence of the Amalgamated to the unorganized shops in the sheepskin and leather goods industry;

Forbidding the members from joining fraternal organizations which have been organized by employers; Urging the elimination of all speed-up systems and advocating a system of maximum standards of production; Recommending the establishment of a scale of wages in the Children's Clothing departments.

General President S. Hillman and General Secretary-Treasurer J. Schlossberg were unanimously nominated for their respective offices.

Toronto was selected as the convention city for 1930.

American Flint Glass Workers' Union

The 52nd convention of the American Flint Glass Workers' Union was held in Cumberland, Maryland, on July 2-11, 1928, with 123 delegates present representing 86 local unions with a membership of approximately 7,000. According to the rules of the organization, the president's duties are connected with the management of the American Bank, while the affairs of the union in particular are entrusted to the vice-president. In speaking of the American Bank, President Clark informed the delegates that the undertaking had proved successful and that the experience gained during the three years in the banking business was worth while, but stated that: "the energies of trade unionists should be devoted to such problems as higher wages, shorter hours, improved working conditions and kindred questions that confront the workers in an economic, industrial and political way, and, by the same reasoning, leave such questions as banking, insurance, death benefits, old age pensions and like problems beyond the pale of the Trade Union movement. If we fail to do this, we are in danger of undermining the entire structure."

Vice-president M. J. Gillooly in his address traced the development of the union from its inception to the present time. He also gave in detail an account of the efforts put forth by the officers in an endeavour to maintain the principles and prestige of the organization and to keep the membership informed as to the introduction of new labour-saving devices in the industry. According to the report of C. J. Shipman, Secretary-treasurer, the total receipts from all sources for the year ended May 31, 1928, amounted to \$151,897.11, expenditures, \$172,697.93, leaving a balance in the treasury as at June 1, 1928, of \$674,587.92.

The convention made a number of changes in the constitution and laws of the organization and adopted the following resolutions:

Declaring in favour of a modification of the Volstead Law;

Recommending that manufacturers endeavour to have a union label placed on all illuminating ware;

Requesting the Tariff Commission to give some relief to the glass industry from the serious foreign importations of glassware;

Seeking legislation against "yellow dog contracts";

Recommending that all legal and orderly efforts be made to persuade non-union workmen to affiliate with the union.

Officers elected were: President, William P. Clarke; Vice-president, Joseph M. Gillooly; Secretary-treasurer, Charles J. Shipman; Assistant-secretary, Harry H. Cook. Toledo, Ohio, was selected as the 1929 convention city.

The Consolidated Coal Company, of Pennsylvania and West Virginia, recently decided to shut down ten of its mines for the purpose of placing the company's operations on a constructive economic basis. The majority of the stock of this company is held by John D. Rockefeller, Junior. Approximately 2,500 men, or one-fifth of the company's forces in the two fields, are thus released from employment. In the course of a statement of its new policy the company declares that "no present useful purpose nor any contribution to future stability is to be gained by further cutting wages below a sound economic level. Whatever may be the temporary relation of labour costs to selling prices, it holds that the primary object to both mine labour and mine management must be the most regular work-time possible under a proper wage base."

LABOUR IN GREAT BRITAIN IN 1927

Annual Report of Ministry of Labour

THE report of the British Ministry of Labour for 1927 recently published indicates that last year may be regarded industrially as making the nearest approach to normal since the War. The period was one of stock-taking and reflection, following the industrial difficulties of 1926. An important feature was the growth of a definite movement, in which all sections of the community displayed interest, towards industrial peace. The number of trade disputes causing stoppages of work of which the Department had cognizance, and the number of working days lost by them were the smallest recorded in any year during the whole period of 40 years for which statistics were available. No industrial case of outstanding importance was dealt with nor was it found necessary for the Minister to exercise his powers to order a Court of Inquiry.

The average rate of unemployment among insured persons (9.6 per cent) was, the report states, lower than in any year since 1920, and the average number of insured persons actually in employment was greater than in any previous year. Two main causes operated. There was a substantial carry-over of work from the previous year when production had been interrupted by the coal stoppage; this produced a high rate of activity in almost every trade during the first half of the year. But more important and, it is to be hoped, of more permanent value, there was a growing steadiness in some of the chief factors affecting industrial production, and there was in various directions an improvement in the conditions of export trade.

New Industrial Era.—It is thought that the problems of employment and unemployment which revealed themselves during the year ought to be considered, not merely as residual difficulties of the War period, but as the problems of a new industrial and commercial era. In regard to unemployment in the coal-fields, it is now generally recognized, says the report, that an appreciable number of those wholly unemployed in the Northern coal-field, in South Wales, and in parts of the Scottish coalfield are unlikely to obtain regular employment in their own industry in their own district; the same is probably true of a smaller proportion in some of the other coalfields in which the percentage of wholly unemployed is high.

The unemployed benefit paid during the year totalled £36,747,420, the average weekly number of persons paid benefit being 786,000.

Juvenile employment.—The report says that the work of the juvenile advisory committees and of the employment exchanges continues to develop. For the Ministry of Labour areas as a whole it is estimated that about one-half of the boys and girls leaving school make use of the official arrangements in seeking their first job. The number of vacancies for juveniles notified to exchanges and juvenile employment bureaux during 1927 was 318,106, as compared with 266,021 in 1926. During the year 140,066 vacancies for boys and 124,596 for girls were filled by the exchanges and bureaux, as compared with 114,872 for boys and 105,353 for girls during 1926.

Emigrant Training.—The Ministry has two farm training centres, at Barham House, Claydon, near Ipswich, and Weeting Hall, near Brandon. The character of the training differs slightly at the two centres, but the objects aimed at in both cases are the same—namely, to eliminate men who, judged by the test of life and work under farm conditions, are not likely to succeed in the Dominions, and to teach those who are found suitable so much of the rudiments of certain farm operations as will enable them to settle down more quickly on the land and will make them of immediate value to the farmer.

Information obtained of the careers up to the present of "trainees" who have gone overseas goes to show that the townsman who has acquired a certain level of proficiency in the subjects taught at the centres has a very definite advantage over the untrained man. The training centres attempt so far as possible to reproduce Canadian and Australian conditions. Both have a good supply of implements, wagons, and harness of the Canadian type, a good deal of which was presented by the Canadian Government. The Australian Development and Migration Commission has also given a number of Australian implements. In the autumn of 1927 it was decided to enlarge the accommodation for overseas men, with special reference to the desirability of training an increased proportion of miners from the distressed mining areas.

PROVISION FOR FAMILY ALLOWANCES IN PUBLIC CONTRACTS IN BELGIUM

REFERENCE was made to the Belgian system of family allowances in a note given in the June issue of the *LABOUR GAZETTE* dealing with a recent work on this subject by the Rev. Father Lebel, S.J.

A new Act was passed in Belgium in April, 1928, providing that all contracts relative to works executed or subsidized by the State, provinces, or communes must include a clause making it obligatory upon contractors to become members of a compensation fund for family allowances, which meets the requirements of the above-mentioned law. Industrial establishments from whom the State, provinces, and communes order supplies are also obliged to be members of a compensation fund, provided supplies are furnished to the amount of at least 50,000 francs. The same obligation is imposed upon subcontractors also.

Public-service enterprises conducted under concessions come under the provisions of this Act, and the King may also extend its provisions to public establishments and to institutions of public utility.

In order to meet the requirements of the law, compensation funds for family allowances should assure, for each child under 14 years of age, payment of a monthly allowance of at least 15 francs for the first child, 20 francs for the second child, 40 francs for the third child, and 80 francs for the fourth and each subsequent child. The King has authority,

however, to allow compensation funds to adopt another scale, provided the resulting cost is not below that involved in the fixed scale given above.

In no case is a compensation fund obliged to distribute in family allowances more than 3 per cent in excess of the total wages and salaries paid by all the establishments affiliated with such fund.

Family allowances must be paid to both wage earners and salaried employees, and will be proportioned to the number of days actually worked by the wage earner or employee in the month. In all cases such allowances accrue from the first day worked. Consideration will be given to interruptions due to sickness, accident, unemployment, and for all other legitimate causes.

A commission on family allowances will be established in connection with the Ministry of Industry, Labour, and Social Welfare, which will decide upon the ratification of compensation funds for family allowances under the law. The commission will be composed of 11 members, including three representatives of the heads of industrial undertakings and three representatives of the workers, these six members being selected from duplicate lists of candidates submitted by the most representative employers' and workers' organizations. The Act will go into effect in October, 1928.

EMPLOYEES' PENSION FUND OF CANADA STEAMSHIP LINES, LIMITED

THE Canada Steamship Lines, Limited, recently established an Employees' Pension Fund, and revised the existing Group Life Insurance Plan which has been in operation for the last five years, subject to the condition that at least 75 per cent of all eligible employees shall subscribe for both funds.

Any employee of the company or its subsidiaries on the permanent payroll is eligible for membership in the Pension Fund. The fund is administered by a Board of Trustees of five members—two appointed by the company, and two elected by ballot by the members of the Fund, the president of the company being president of the Board. The Board's term of service is for one year. Commencing June 30, 1928, no employee entering

the service of the company after the age of 43 years is entitled to become a member of the fund.

Rules for retirement.—No pension is to be granted unless the member has completed 25 years in the company's service and attained the age of 68 years. However, the trustees may grant disability pensions to members having 25 years service who have not attained the age of 68 years, such pensions being continued during the incapacity of such member to earn his livelihood. The trustees also have power to grant pensions in such other cases as they may deem the circumstances warrant.

A member on attaining the age of 68 years may apply to be continued in employment,

and if such application is approved, he will not be required to make further contribution but will have such additional service considered when the amount of his pension is being computed.

Any member having completed 15 years of continuous service, who, before attaining the age of 68, may become totally incapacitated, may apply for pension, the trustees being the judges as to whether such a pension should be granted, and if granted under what conditions and terms. This type of pension is granted only for one year, but it may be re-established from year to year, or for such shorter period as the trustees may deem expedient.

In the case of the voluntary resignation or dismissal of any member the payments made by him to the Pension Fund, less any amounts he may be indebted to the company or the Fund, are to be refunded to him, less the amount of the first ten months contributions. Thereafter such member shall not be entitled to any benefit.

If a member dies while on active service with the company, the trustees will refund to his legal representative or nominee all payments made by him to the Pension Fund, less any amount he may be indebted to the Fund or the company.

Contributions.—Contributions deducted from wages, are paid by members on the following scale: All ages up to 45 years—3 per cent of wages; 46 to 49 years—3½ per cent; 50 to 54 years—4 per cent; 55 to 59—4½ per cent.

Amount of Pension.—The amount of the pension allowed each year to members is calculated as being equal to 1½ per cent of the average salary received during the ten consecutive years immediately preceding retirement multiplied by the number of years of continuous membership in the fund. Any member having attained the age of 43 years and not more than 60 years of age before the date upon which he shall have become a member of the Fund is entitled only to a pension based on 1½ per cent of the average salary received during the ten consecutive years immediately preceding retirement multiplied by twenty-five, plus the number of years of continuous service after attaining the age of 68.

The maximum salary for the purpose of calculating pension payments is \$6,000 per annum, but bonus or overtime are not considered for the purpose of such calculation. All pensions cease on the bankruptcy or insolvency of the pensioner, or on his con-

viction for any crime under the Criminal Code. During the life time of a pensioned member, the pension may, at the discretion of the trustees, be paid to any other person approved by the trustees to receive it for the benefit of the pensioned member, his wife, child, children or dependants.

In the event of a pensioned member taking other employment the permission in writing of the trustees must be obtained, otherwise his pension may be forfeited at the discretion of the trustees.

Leave of Absence.—Leave of absence when granted by the company will not be regarded as an interruption to continuous service, but the term of such absence will not be considered as service for the purpose of computation of pensions unless the member concerned has paid to the Fund the contribution which would have been required had such member continued in the active service of the company.

Any employee who enlisted from the service of the company during the Great War, 1914-1918, and immediately upon his discharge re-entered the service of the company, will have the period that he was absent on war service counted as continuous service.

The *Engineering and Mining Journal*, in its issue for July 28, states that "the copper production statistics for June already reflect the fact that most of the companies have made an effort to increase production to accord with what they think the demand is likely to be. At the steam-shovel mines, this has been easy; but in some of the 'vein' camps a hindrance has arisen that perhaps has not been given sufficient attention; and that is the lack of an adequate labour supply. The season has without doubt been unfavourable to a sudden increase of operations, for in the summer-time many labourers find other more congenial work to do, but the indications are that miners will not be any too plentiful in the fall and winter either. It takes time to make a miner; it is not possible to get efficient work out of an able-bodied man that comes along and thinks he would like to try his hand at an underground job. Copper production can, in all probability, be expanded sufficiently to meet the demand, for no sudden jump in consumption is likely; but it must be remembered that lack of experienced workers is perhaps the most pressing problem that many of the producers have to face, and every effort should be made to train and retain men for underground and other skilled work."

ONTARIO APPRENTICESHIP ACT, 1928

Address delivered by Mr. A. W. Crawford, Inspector of Apprenticeship for Ontario, at the Annual Convention of the Canadian Association of Master Painters and Decorators, Windsor, Ont., on August 8, 1928,

A new type of apprenticeship is being developed in the building trades of Ontario. It is expected that this new development will have a far-reaching effect upon the construction industry, and that other industries in which skilled workers are employed will also be benefitted by the system of apprentice training which is being organized under The Ontario Apprenticeship Act of 1928.

The purpose of this act is to enable industry to provide facilities for the thorough training of all young people entering skilled trades. The provision of such facilities should bring about greater opportunities for young Canadians to develop their powers of craftsmanship; an adequate supply of skilled workers to meet the needs of this growing country; better industrial relations and higher standards of citizenship.

The Act, which was passed at the last session of the Ontario Legislature, is the outgrowth of increasing interest and activity on the part of employers and organized labour during the past ten years.

At a joint conference of the Canadian Building and Construction Industries held in Ottawa during May, 1921, apprenticeship was one of the principal topics of discussion. The conference appointed a committee composed of six employers, six representatives of labour, and an independent chairman, to study the question and to devise a plan of apprenticeship which might be adopted throughout the nine provinces. The committee recommended a plan involving a National Apprenticeship Council, and local councils throughout the larger cities of the Dominion. Regulations governing the organization and operation of these councils were drafted and a form of indenture for all apprentices in the building trades was approved. For various reasons, the scheme was not put into operation, but it has greatly influenced the thoughts and plans of those who have continued to study the problems of apprenticeship in the building trades.

The "Pigott Plan"

At the conference of the Association of Canadian Building and Construction Industries held in Quebec City in January, 1923, Mr. Jos. M. Pigott of Hamilton proposed a scheme of apprenticeship which embodied several new ideas. The principal features of the Pigott Plan were:—

- (1) The boy was to be indentured to an apprenticeship board for the first two years and to an employer for the remaining period of apprenticeship.
- (2) The cost of administration and the wages of apprentices during the first two years were to be paid from an apprenticeship fund obtained by assessing all employers in the construction industry, after the plan adopted by the Workmen's Compensation Board.
- (3) Apprentices were to spend seven months on the job and five months in a school, during the first two years, and provision was to be made for transferring boys from one employer to another.

This plan was endorsed by the Association but it has never been tried out in full. Some of the features enumerated have been adopted in recent schemes being operated at Vancouver and Saskatoon. Provision is made under the Ontario Apprenticeship Act for putting such a scheme into operation, but the plan must first be approved by employers and organized labour representing the trades involved.

Plan of Canadian Construction Association

In September, 1926, The Association of Canadian Building and Construction Industries (now the Canadian Construction Association) enlisted the services of an apprenticeship adviser to study the situation and devise a plan of training for the building trades in Ontario. A tentative proposal, based on the Pigott Plan, was submitted to employers and representatives of organized labour and, after slight alterations and amendments, was put into operation early in 1927. This plan, which is the basis of the work being developed under the Apprenticeship Act, provided for:

1. A provincial council known as the Construction Apprenticeship Council of Ontario. It consisted of ten members selected as follows: four from employers; four from organized labour; one from the Provincial Department of Education; and an advisory secretary.

The functions of this council were to make rules and regulations governing apprenticeship in the construction industry of Ontario and

to administer the apprenticeship funds which were raised by voluntary subscriptions and by assessing employers having apprentices.

2. Local joint trade apprenticeship committees, organized for the different trades in each locality, consisted of: Two employers—one a general contractor and the other a trade contractor; two employees—appointed by the trade union, and an independent chairman—appointed by the council.

The functions of these committees were to select and place apprentices, to register contracts, to supervise training, and to co-operate with technical schools in establishing courses for apprentices.

Standard indenture forms and general regulations were adopted and the scheme was put into operation in Toronto and Hamilton, in connection with the carpentry and bricklaying trades. Approximately 20 boys were indentured in the two cities and special day apprentice classes were operated for about ten weeks during the winter of 1927-28. Apprentices attending these classes were paid at the rate of two dollars per day, from a fund raised by assessing employers ten per cent of the wages paid to each apprentice.

Government Supervision in Ontario

It was early discovered that any scheme of apprenticeship involving uniform regulations, the assessment of employers, and close supervision of training, could best be carried out under government supervision or control, but it was not until employers and organized labour proved their willingness to support such a scheme by a practical demonstration that the Ontario Government consented to introduce legislation providing for the necessary government assistance. The Apprenticeship Act of 1928, which is administered by the Minister of Labour, is in the form of enabling legislation which provides for the continuation and further development of the work which has been started by the Construction Apprenticeship Council of Ontario. Without the continued support and co-operation of employers, organized labour, and educationists, the Act will be of little effect.

Provincial Apprenticeship Committee

In order to insure this co-operation, provision is made for the appointment of a Provincial Apprenticeship Committee, which consists of:—Three employers named by the Canadian Construction Association; three employees named by the Canadian officers of

International Labour Organizations; a representative of the Technical Branch of the Department of Education; and, an independent chairman, appointed by the Lieutenant-Governor in Council.

This committee has been appointed and has taken over the work of the Construction Apprenticeship Council of Ontario. Its members are appointed for three years and arrangement is made for one employer and one employee to be appointed each year.

The function of this committee is to advise the Minister on all matters connected with the conditions governing apprenticeship. Regulations are drafted by the committee, on the advice of local councils, and these become effective throughout the province when approved by the Lieutenant-Governor in Council.

District Apprenticeship Council

The immediate control of apprenticeship throughout the province is left in the hands of District Apprenticeship Councils, which consist of one employer and one employee from each designated trade, with an independent chairman appointed by the Minister of Labour. An executive committee, consisting of three members from each side together with the chairman and a secretary, meets regularly to conduct the business of the council. The employers and the employees representing each trade act as apprenticeship committees for their respective trades with power to add to their numbers, if deemed advisable. Every contract of apprenticeship must be approved by the trade committee concerned before being forwarded to the Department of Labour for registration.

Inspector of Apprenticeship

The Act provides for the appointment of an Inspector of Apprenticeship, whose duties are clearly defined. He is to keep a register of apprenticeship contracts, to arouse and promote interest in the adoption of apprenticeship, to assist in establishing permanent systems of apprentice training in industries, to organize and supervise the work throughout the province.

The salary of the inspector and all expenses in connection with the administration of the Act are paid by the Provincial Government, but the wages of the apprentices must be paid by employers, either individually or collectively.

Ontario Apprenticeship Act, 1928

At present, the Act applies to nine designated trades in the construction industry, but provision is made for including others by order in council, if application is made to the Minister by twenty-five employers or by a representative body of men in the trade to be added. The nine designated trades are:—

1, Bricklayers; 2, Masons; 3, Carpenters; 4, Painters and Decorators; 5, Plasterers; 6, Plumbers; 7, Steamfitters; 8, Sheet Metal Workers; 9, Electricians.

Every boy who is now learning one of these trades or who enters apprenticeship in a designated trade at any future time, must be registered with the Department of Labour at Toronto. Only registered apprentices will be granted government certificates on completion of their training period.

A standard form of contract is appended to the Act and the conditions under which the contract is to become effective are clearly set forth. Provision is made for cancelling a contract and for transferring a boy from one employer to another.

No definite plan of apprenticeship is laid down for any trade, but the Act provides for regulations to be made by order in council governing the conditions of apprenticeship in each trade. These regulations will fix the number of apprentices to be trained, the period of apprenticeship, the nature and amount of schooling to be given to the apprentices, the rates of pay, the method of assessing employers to maintain apprenticeship, etc.

The penalty for contravening any of the provisions of the Act is not less than \$10 or more than \$100, to be recovered on summary conviction before a police magistrate.

Proposed Organization for Painting Industry

This brief review of the origin and provisions of the Apprenticeship Act may give a fairly definite idea of the purpose and scope of the legislation, but it does not show how the Act is to function in connection with the painting and decorating industry. May I briefly outline a proposed organization, which seems to me to fit conditions in this industry and which fully meets the requirements and provisions of the Apprenticeship Act? I do so, not with the idea of inflicting a ready made system on the industry, but in the hope that it may serve as a basis of discussion.

1. A small committee of the members of this association shall be formed immediately to study the act and its operation and shall report at the next annual conference. The

committee shall be empowered to take whatever steps it deems necessary to keep members of the association informed regarding developments under the act. It shall make a special study of the desirability and feasibility of assessing employers to establish an apprenticeship fund which may be used to pay the wages of apprentices during part or all of the training period.

2. A painting and decorating apprenticeship committee consisting of two employers and two employees with an independent chairman shall be appointed in each large city. (The establishment of these committees is provided for by tentative regulations adopted by the Provincial Apprenticeship Committee.) These committees shall meet regularly for the purpose of studying apprenticeship problems, devising ways and means of promoting apprentice training, and suggesting regulations which may be adopted by the government. One employer and one employee representing the local committees in each district shall be selected to act on the district apprenticeship council. Each committee shall co-operate with the apprenticeship committee of the Canadian Association of Master Painters and Decorators and shall keep it fully informed regarding local actions and recommendations affecting the painting and decorating industry. Each committee shall compile a complete list of all boys learning the trade in its locality and shall forward it with full particulars, as required by the Act, to the Inspector of Apprenticeship at Toronto.

By adopting such an organization, this association will be kept fully informed regarding developments under the act and will be assured that no regulations affecting the painting and decorating industry will be made until employers have had ample opportunity to consider the matter and offer criticisms and suggestions which will receive the careful consideration of the government.

The new Workmen's Compensation Commission of the Province of Quebec has opened offices at the City of Quebec where all its sittings will be held. The Ontario Board similarly holds all its meetings at Toronto. In addition to the members of the Commission and the Advisory Body, whose names were given in the last issue (page 680), Mr. Jules Vezina, who formerly practised law at St. Joseph de Beauce, has been appointed statistician and actuary of the Commission, and Dr. J. E. Belanger, president of the College of Surgeons of the Province of Quebec, has been appointed medical officer.

SPECIALIZED TRAINING FOR AN INDUSTRIAL LIFE

Address delivered by L. W. Gill, M.Sc., Principal Hamilton Technical and Art School, at the recent Annual Safety Convention, Industrial Accident Prevention Associations of Ontario.

The training of a boy for industry should begin about fourteen years of age. In some cities in Ontario this training is started a little below that age. In some other provinces a little above that age. This condition prevails over the whole continent. I will speak particularly with respect to the conditions in the City of Hamilton with which I am most familiar. These conditions differ from those in cities of ten to twenty thousand, but are very similar to those in other large cities in Canada and the United States. These conditions may be stated as follows: Of the annual crop of pupils between the age of fourteen and fifteen years, we find that 17 per cent or more are in the High Schools, 5 per cent in commercial classes and 13 per cent in other vocational classes. This condition exists notwithstanding the great advance which has been made within the last ten years in the development of vocational education. Of those I have mentioned, less than 1 per cent go to a university. In a city like Toronto, which is the seat of a university, that percentage is higher, probably in the neighbourhood of 3 per cent. In the City of Hamilton, it does not reach 1½ per cent. These figures show that a very large proportion of pupils do not receive at the present time any kind of vocational or industrial training. That is the first point to be noted.

Let us assume that we can by some means persuade more parents to send their children to a vocational school to be trained along some industrial line. Let us further assume that our schools can accommodate, say, 50 per cent of the boys. These boys will enter the vocational classes at the age at which they are supposed to complete their public school work. This is the usual standard on which they are admitted to vocational classes. In some places they are admitted below this standard. Let us now proceed to plan a course of training.

I have already stated that the number of pupils between fourteen and fifteen in our industrial classes is 13 per cent of the annual crop. When these pupils arrive at the age of 16 to 17 their number has fallen to below 3 per cent. So that we can say for all practical purposes, that we have these boys in the school for two years, from 14 to 16 years of age. This means that the great majority of the boys who take up work in the voca-

tional schools to-day drop out at sixteen years. What can we do for them during those two years? What kind of training can we give them as a preparation for industrial work? Shall we adopt as our objective the training of these boys for production only, leaving out the human side of their being? In other words, shall our aim be to train them as experts in some particular line? If that is to be our objective, it will be necessary to provide training facilities to meet the requirements of all kinds of industrial work. In a manufacturing city the size of Hamilton, we would require courses of training running into hundreds. The cost of such a program, in equipment, number of special teachers, organization, etc., would be prohibitive. This consideration alone makes such a program impossible. Even in our largest vocational schools, the available courses of training are numbered by tens and not by hundreds. Apart from the question of cost, there is not time in the two years which the average pupil spends in the vocational school, to train them to be expert in any one vocation, even if we had the equipment and the staff. Consequently it is impossible, even with the finest and most extensive equipment, to turn out a completely trained journeyman.

Developing the Boy

Many people think vocational schools are organized on that basis and they expect that boys should be experts after two years' attendance. Let me illustrate. A stranger came into my office two weeks ago. He was the head of a department in one of our factories in Hamilton. After introducing himself he applied for a position as a teacher. I informed him that he was not qualified to teach and asked him why he wished to become a teacher. He replied that he had a boy in his department who had been a pupil in the Technical School and that the boy had put the idea into his head. He suggested that I should have teachers who had practical training on the job, from A to Z. I said, "Yes, that is the kind of teacher we always look for. What is the matter with the boy who attended the Technical School?" "Well," said he, "he is not just what he ought to be." I asked, "Has he fallen down on his job?" He replied, "Well, he does not know quite as much as he ought to." I said, "You expected to get a finished jour-

neyman from this school, didn't you?" He said, "That is what I understood the school was for." I said, "Well, you are misinformed. How long was the boy at this school?" He replied, "I think two years." I said, "Did you expect we could give that boy a complete training in two years, when it takes four years actually working on the job as an apprentice to get a complete training, and then they are not any too good, even under the best conditions?" He replied, "Well, I had not thought of it in that light." I asked him, "Is that boy's character all right? Is he honest? Is he attentive on his job? Is he a good worker?" He told me he was all of these. I asked him, "Does he know how to use the tools of his trade and how to tackle the fundamental problems of his job?" "Yes," he said, "he knows how to handle the tools and what they are for. He knows all about the elementary part." "Well," said I, "We have done all we can do for him in this school. We cannot do any more. Our aim is to give that boy a general education and a good character, to develop his judgment, reasoning powers and manual skill and to give him the fundamentals of some kind of industrial work."

Specialization

Even if we could overcome the difficulties which I have mentioned, there are other difficulties which crop up. Every boy would have to select a certain specialized line of work before we could start to train him, and he would have to do that at fourteen years of age. As a matter of fact, they will not all do this, and a lot of them who do select a particular line at fourteen years of age, change their minds at fifteen.

I will mention just one more difficulty. When the boys who are at present attending the vocational school arrive at the age of sixteen, the most of them look for a job. If they cannot quickly find a job in the particular line of work along which they received training at school, they will seize the first opportunity to earn some money. The result is that in many cases the special training is of no value to them.

I think you will agree with me when I state that the difficulties which I have described are such that it is not feasible under present conditions for the vocational school to train a boy fully for any special line of industrial work. In other words, it is not possible for the school to turn out a fully trained journeyman. This leaves the main question unanswered. How is the boy to be trained for specialized industrial work?

There are two feasible schemes by which this may be accomplished. One is by means of a school which is conducted entirely by the industry itself. There are a number of such schools in the United States, conducted by large organizations, such as the big electrical companies, the big telegraph, telephone and railway companies. These organizations carry on the training for a period of four or five years, starting with the boy at sixteen or seventeen years of age. Such a scheme is quite feasible and has been carried on for the last twenty-five years.

Co-operation of Industry and School

The other scheme is one which involves the co-operation of industry and the vocational school. It is along this line we are working in Canada, especially in the province of Ontario. At the present time, the Hamilton Technical Institute co-operates with thirteen large industrial organizations in carrying out a training program for all the boys in these organizations who are required to take such training. Part of this training is effected by the industry and part by the school. The industry and the school co-operate in planning the courses of training and in the setting of examinations. Weekly reports are sent to the industry by the school. The discipline of the boys is entirely in the hands of the industry. Consequently the school has no difficulty whatever with attendance. The industry usually pays the boys for the time in attendance at day school on the same basis as for time at work. Under these conditions the school is virtually a section of the training establishment of the industry. At the present time we have in attendance at the Technical Institute about 260 boys who are being trained under this co-operative scheme. Included in this group are a number of apprentices from the building and printing trades. In the case of these trades co-operative action is effected between the school and an apprentice committee representative of the employers and employees in the trade. In the case of well organized trades all apprentices are under the complete control of these committees.

I have already stated that under this co-operative scheme the school is virtually a special department of industry. Under this condition, the school is kept up to date in respect to the kind of training which industry requires. Without this close contact the school would always be behind, because industrial methods and conditions are changing from week to week. It is essential, therefore, that the teachers should visit the workrooms of the industries and acquaint themselves with re-

spect to the work the boys are doing. By so doing, they are able to correlate the work in the school with the work which the boys have actually in hand.

At the present time this scheme of training can be put into effect only after the boy reaches sixteen years of age, because of the fact that in the province of Ontario a boy must attend full-time day school until he is sixteen. There are some exceptions to this rule, but the number is small. It would be possible of course to begin specialized training below the age of sixteen, but this age is generally regarded as the minimum at which a boy should be apprenticed.

School Program

Let us now leave the question of specialized training and return to that of the full-time school program for boys and girls between fourteen and sixteen. Light is thrown on this question by an investigation which was conducted a number of years ago by the Carnegie Foundation. With the object of finding out what are the essential personal qualities on which success in life mainly depends, a questionnaire was sent out to a large number of leading men in all walks of life. From the answers received it was found that the consensus of opinion favoured the following qualities, stated in order of importance: Character, judgment, efficiency, executive ability, general knowledge or general education, and last, vocational skill or vocational knowledge. Knowing this, should we not aim to develop these qualities in the boys who attend the vocational school during these two years? I have explained that it is impossible to turn out fully fledged journeymen in this time. You have already indicated that you want men with vision, so I think I am quite right in my decision that we should attempt, in those two years—and those are the two most critical years of the boy's life—to develop the boy's character, judgment and initiative. If we can give him the fundamentals of some line of industrial work, he has that much to the good.

Reaching the Boy

Having decided on our aims, the next question is how to reach them. The first essential is to secure the interest of the boy so he will attend school voluntarily. The majority of boys, when they reach the age of thirteen or fourteen begin to get restless under the restraint of the classroom. They have little interest in school work and look upon the school as a kind of prison. On the other hand, we know that the greatest attraction which can

be placed before a boy to induce him to attend school is to allow him to plan and build or create. In other words, if we provide vocational work in which they are interested we can secure the voluntary attendance of over 90 per cent of these boys. If this work is of such a character that it brings into action the boy's reasoning power and creative ability, it will do more for him in the way of preparation for industrial life than any kind of book-work. Any kind of vocational work in which the boy is interested will bring the boy into close contact with the teacher who is interested in his welfare, will develop his initiative, his self-reliance and his judgment. It will develop his power to co-ordinate the action of the hands with that of the mind, which is very essential in industry. Above all, it will develop his honesty, because a boy cannot practice deception if he has to work with material things. Add to these the contact and the association with his teacher in the shop, where there is not that same restraint which is necessary in the ordinary classroom, and you get a condition which will develop character and judgment—these essential qualities, to a far greater degree than is possible in the ordinary classroom. Consequently, I contend that vocational education is just as cultural as the study of classics or literature. When I refer to culture I do not mean the possession of knowledge consequent upon the study of the so-called humanities. Real culture is refinement of character, and vocational education properly organized will give this kind of culture in as great, if not greater degree, than the study of any of the so-called cultural subjects.

General Knowledge Needed

In addition to vocational work, it is of course necessary to provide a place in the vocational school program for the study of those subjects which constitute the basis of a general education. English, arithmetic, history, civics and industrial geography must be included in every course of training. When these are taught in proper correlation with the vocational work, they are no longer uninteresting academic studies, but something which has a tangible relation to the everyday experiences of the pupils. For example, the boy soon finds that he cannot do what he would like to do in his vocational work on account of his lack of knowledge of arithmetic. So he at once takes a real interest in this subject and tries to master it. Under these conditions, he will get a sound general education which will be useful to him in any line of industrial work.

NOTES ON INDUSTRIAL SAFETY AND HEALTH

Extent of Lead Poisoning

The United States Bureau of Labour Statistics recently published Bulletin No. 460 in the Industrial Accidents and Hygiene Series, describing a new test for industrial lead poisoning, which consists in establishing a new index of lead absorption by workers exposed to the hazard. The test is based on the appearance in the blood stream of immature red cells.

The report points out that lead poisoning continues to be the outstanding severe occupational disease in the United States: "Although recent reports indicate a diminishing death rate from this cause, it should not be maintained that the incidence of this disease has reached negligible numbers. For many reasons mortality statistics are of little value in a study of lead-poisoning incidence. One outstanding reason is that rarely does a lead-exposed worker die of lead poisoning which is uncomplicated and typical. The immediate cause of death is usually some chronic lesion to which lead absorbed over a long period may have contributed, but the physician in making out the death certificate is prone to place emphasis on the apparent cause of death, such as the nephritis, the cario-vascular diseases, etc., without associating lead as a primary producing factor. Lead mortality rates are so low as to serve only remotely as an index of lead morbidity. For every single death from lead not fewer than 50 cases of non-fatal lead poisoning are believed to occur."

New Safety Lamp for Mines

A new miner's safety lamp has been patented and placed in the hands of the British Mines Department by Mr. E. Lyon, the technical engineer of the Ceag Company. The invention is designed to overcome the one big disadvantage associated with the use of the electric safety lamp in coal mines. The flame safety lamp affords the readiest and simplest means of detecting firedamp in the air and of estimating the percentage that is present. The electric safety lamp, on the contrary, gives no indication or warning of the presence of firedamp or any other dangerous gas. In this invention the difficulty is surmounted. The advantages of both the old flame lamp and the modern electric lamp of the ordinary type are secured in one lamp by the simple idea of having the two lamps in one. For ordinary work the miner has the maximum illumination, an important consideration which has its bearing on the question of

nystagmus, the miner's great eye trouble, the electric bulb being then in use; while for purposes of gas detection a turn to the top of the lamp puts that light out, and the pressing of a knob causes a small oil flame, under control, to be electrically ignited.

There is a second model of the lamp designed not for use by miners generally but by officials. This has a bull's-eye lens for purposes of underground inspection, with the same process operating for the change to testing for gas. It is claimed for the new lamp, tested at a local colliery, that, being simple in construction, it will not get out of order, and that it will possess the further advantage of being cheap.

Deaths from Tuberculosis in Dusty Trades

Certain trades and occupations in which the workers are exposed to dust show much higher percentages of deaths from tuberculosis than do occupied males as a group. Notable among these occupations are miners (except coal miners), pottery workers, stone cutters and others. These facts are brought out by the analysis now being made of causes of death, by occupations, among white male industrial policyholders of the Metropolitan Life Insurance Company (covering the years 1922 to 1924). The proportion of deaths from tuberculosis for miners (except coal miners) exceeds the average for all occupied males by 83 per cent at the main working ages of life, 15 to 64 years. Pottery workers show an excess of 77 per cent, while stone cutters exceed the average by 44 per cent. Other occupations which in the past have experienced a high mortality from tuberculosis, show in this study percentages somewhat less excessive than those we have mentioned.

Health of Workers in Dusty Trades

The United States Public Health Service has completed a study of the health of workers in a portland cement plant, the first of a series covering the dusty trades, according to an announcement recently made by Surgeon-General H. S. Cumming. The study was undertaken to ascertain whether persons working in an atmosphere containing numerous minute particles of a calcium dust suffered any harmful effects. The investigation was conducted in one of the older, dustier plants, so that the effect of large quantities of the dust could be observed. Records of all absences from work were kept for three years, and the nature of disabling sickness was ascer-

tained. Physical examinations were made, X-ray films taken, and the character and amounts of dust in the atmosphere of the plant were determined.

The results of this investigation indicated that the calcium dusts generated in the process of manufacturing Portland cement do not predispose workers to tuberculosis or pneumonia. The workers exposed to dust experienced, however, an abnormal number of attacks of diseases of the upper respiratory tract, especially colds, acute bronchitis, diseases of the pharynx and tonsils, and also influenza or grippe. Attacks of these diseases serious enough to cause absence for two consecutive working days or longer occurred among the men in the dustier departments at a rate which was about 60 per cent above that of the men in the comparatively non-dusty departments. Limestone dust appeared to be slightly more deleterious in this respect than cement dust.

Outdoor work in all kinds of weather such as was experienced by the quarry workers appeared to predispose to diseases of the upper respiratory tract even more than did exposure to the calcium dusts. In the outdoor departments of the plant, also, the highest attack rates of rheumatism were found. The study also indicated that work in a cement-dusty atmosphere may predispose to certain skin diseases such as boils, to conjunctivitis, and to deafness when cement dust in combination with ear wax forms plugs in the external ear. When the dust in the atmosphere is less than about ten million particles per cubic foot of air it is doubtful that the above-mentioned diseases and conditions would be found at greater than average frequency.

Modernization of plants and installation of ventilating systems are helping to solve the dust problem of the industry.

Safety Campaign in Building Industry in New York

The Building Trades Employers' Association of the City of New York has started a campaign to lessen the suffering caused to its employees and their families by injuries, and to reduce the vast amount of money that is expended annually for the cost of compensation and medical attendance because of injuries in construction work.

For the past six months the Building Trades Employers have been studying accident situation. They learned that insurance companies, the State Insurance Fund, and self-insurers had paid in cash for compensation and medical attendance, because of injuries on building

construction in New York State during the year ending June 30, 1927, an approximate total of \$6,500,000. In the same period these accidents cost contractors four times the cost to the insurer or approximately \$26,000,000, and cost workmen about \$15,000,000 in wages. This appalling waste of money and loss of time caused the major organization to confer with the National Safety Council, Chicago, and with the General Builders' Association, Detroit. It was found that the latter body, through thorough organization work for more than five years, had brought accident costs down 55 per cent. Later the committee secured the co-operation of the American Institute of Architects through the Institute's committee on health and safety.

The general plan that has been adopted is to awaken the general public, the owner, the architect, the contractor, and the mechanic to the serious conditions that prevail in New York City and to obtain their support in reducing the number of accidents that occur almost daily on all structures now being erected or repaired.

Extent of Home Work in New York

The New York State Department of Labour recently published a report on industries which are carried on wholly or in part by means of work performed by the employees at their homes. Employers using this method of production increased from 1,277 in 1924 to 1,467 in 1927, the number of home-workers increasing between the same dates from 10,502 to 11,516. The figures show that there were more women working in their homes in 1926-1927 than there were in 1923-1924, but in order to keep steadily employed it is necessary for the women to learn new processes, as the demand within the various industries fluctuates.

The men's clothing and embroidery industries, in 1927 as in 1924, were the two largest employers of home-workers. Lampshade manufacture, formerly a minor home-work industry, now ranks sixth. Among the industries which show a decrease in number of employers and home-workers, the most significant seems to be the knit goods in which there has been a decrease of 241 per cent in the number of home-workers. There are two changes in the industry which are probably responsible for this great decline: First, the installation of a looping machine which performs an operation on machine-made sweaters formerly done by hand, and second, the greatly increased importation of hand-made sweaters.

LEAGUE OF NATIONS INTERNATIONAL LABOUR ORGANIZATION

Questionnaires Regarding Prevention of Accidents

The Government of Canada has received from the International Labour Office at Geneva the text of two questionnaires adopted at the eleventh session of the International Labour Conference. These documents have been forwarded to the governments of the various provinces, to be answered by the provinces in so far as the subjects relate to matters coming within provincial jurisdiction. The texts of the questionnaires, in their preliminary form, were given in the last issue of the *LABOUR GAZETTE*, pages 755-756. The first questionnaire is on the subject of Item 1 on the agenda of the conference, "namely, the prevention of industrial accidents." The second relates to Item 2 on the agenda—"protection against accidents of workers engaged in loading or unloading ships."

Ratifications of Conventions

The number of ratifications of International Labour Conventions registered increases each month. In June five ratifications were registered and the first few days of July brought eight more. Portugal has ratified the Washington Hours Convention and the Convention concerning the application of the weekly rest in industrial undertakings. The ratification by Cuba of the following Conventions has been registered: concerning the use of white lead in painting; fixing the minimum age for the admission of young persons to employment as trimmers or stokers; concerning the compulsory medical examination of children and young persons employed at sea; concerning seamen's articles of agreement; concerning the repatriation of seamen. Estonia has also just registered the ratification of the Convention concerning the repatriation of seamen.

The Japanese Government delegate to the Governing Body has informed the International Labour Office that the Japanese Privy Council has approved the ratification of the Convention concerning workmen's compensation for occupational diseases, that concerning equality of treatment for national and foreign workers as regards workmen's compensation for accidents, and the Convention concerning the simplification of the inspection of emigrants on board ship.

Publications of the Office

Freedom of Association.—The second of the five volumes of the study on "Freedom of Association" which is being published by

the International Labour Office has just appeared, and contains monographs on the history, legal status and actual position of trade unions in Great Britain, the Irish Free State, France, Belgium, Luxemburg, the Netherlands and Switzerland. A reference appeared in the *LABOUR GAZETTE* of February last to the first volume of this series, which was devoted to a comparative international survey of trade union law.

Occupation and Health.—A further series of brochures of "Occupation and Health," the Encyclopaedia of Hygiene, Pathology and Social Welfare, which is in course of publication by the International Labour Office, has just appeared. It comprises monographs on: Accidents in Industry and the Human Factor; Air: Diminished Pressure (Rarefied Air); Aldehydes; Ashes; Cinders; Atropine; Auramine; Aurantia; Aurine; Azines; Azobenzene; Azo-Triphenylmethane. The last-named monograph completes the subjects coming under the letter "A."

Legal Status of Refugees

The problem of the legal status of refugees was discussed at a conference held in the International Labour Office from June 28 to 30 last at which were present representatives of fifteen Governments, a number of Russian and Armenian legal experts and delegates from the Refugees Section of the Office.

It may be explained that since 1924 the International Labour Office has succeeded in reducing the number of refugees out of employment from about 400,000 to 250,000; but while these refugees have been placed in employment, their position from the point of view of legal status has remained unsettled. Except for the introduction of the so-called Nansen "passport" or identity certificate, and the recommendations for facilitating its use adopted by the Conference of Governments on May 12, 1926, no general measure has yet been adopted to settle this question. In some countries, refugees, having no legal rights are in a very precarious position, and their re-establishment in a new environment is consequently impeded—a state of affairs which is detrimental not only to the refugees themselves but also to the peoples of the countries in which they live.

The Conference was called upon to solve this problem and the recommendations adopted at the meeting will be submitted to the Council of the League of Nations in due course.

ARRANGEMENTS FOR SUPPLYING HARVESTING LABOUR FOR WESTERN PROVINCES

THE annual meeting, representative of the various bodies most directly interested in arranging for the supply of labour necessary for harvesting the Western crop, was held in the Union Station, Winnipeg, on Thursday, July 19. The meeting was attended by representatives of the Governments of Manitoba, Saskatchewan, and Alberta, the Employment Service of Canada, the Federal Departments of Immigration and Colonization and Labour, the Canadian National and Canadian Pacific Railways, the United Farmers of Canada, the United Farmers of Manitoba, and the Winnipeg City Council.

The government representatives of the three Prairie Provinces and those representing the Employment Service of Canada advised that, after carefully surveying crop conditions and labour requirements and supply, the following estimates had been compiled: Manitoba would require a total of 12,000 harvest workers, of which number about 6,000 might be expected to be locally available; Saskatchewan requirements totalled 40,000, with 10,000 locally available; Alberta crop prospects indicated that about 23,000 harvest workers would be required, of which number it was anticipated that about 9,000 would be locally available. Advice received from Employment Service officials in British Columbia intimated that about 6,000 harvest workers would be available in that province for transfer to the province of Alberta and the western part of the province of Saskatchewan.

On the basis of this estimate, after the local field of labour supply had been exhausted, 44,000 additional harvesters would be required from outside sources. The railways indicated that the customary arrangements would be made for recruiting harvest workers in Eastern Canada, and that the usual reduced excursion rates for going and returning would be put into effect.

Upon receipt of this report in Ottawa, the Hon. Peter Heenan, Minister of Labour, telegraphed the premiers of Ontario, Quebec, Nova Scotia, New Brunswick and Prince Edward Island, advising them of the harvest labour requirements for the West, and soliciting their assistance in estimating the number of workers who might be expected to take advantage of the special excursion rates provided by the railways from Eastern Canada to the Western provinces for harvest purposes, in their respective provinces.

The replies received indicated that the prosperous conditions prevailing would not warrant the expectation that the usual supply of harvest workers for Western Canada would be obtainable in the East. As it was evident from the information thus obtained that there would be an apparent serious shortage of harvest workers, the Minister of Labour held telegraphic consultation with the premiers of Manitoba, Saskatchewan and Alberta.

In the meantime the British Government had become aware of the situation, and, faced with a critical unemployment problem, foresaw the possibility of transferring several thousand Britishers to Canada for the purpose of assisting in the harvesting of the Western crop. Negotiations were opened between the British Overseas Settlement Board and the Federal Department of Immigration, as a result of which arrangements have been completed between the British Government and the Canadian National and Canadian Pacific Railways, and approved by the Federal Department of Immigration, for the transfer of not more than 10,000 men at a £12 fare to Winnipeg. In connection with this movement, the British Government and the railways have been required to accept full responsibility that only men accustomed to hard, manual labour should be recruited, and that every precaution must be taken to prevent misrepresentation regarding wages and prospects. The arrangements also include provision for a special return fare for those not placed at farm work for the winter.

The Department of Manufacture of the Chamber of Commerce of the United States has issued a report showing the growth of foremanship courses throughout the country. This movement has made remarkable progress during the past three years, and there is now a definite tendency to place foremanship training on an organized and permanent basis. Manufacturers' associations, trade associations, chambers of commerce and other institutions are coming more and more to the assistance of the individual company. Practically every industry is represented in the movement. The class "machinery, not including transportation equipment" had the largest number of courses, but the classes "Rubber products" and "chemical and allied products" were in the lead in regard to numbers of employees.

EMPLOYMENT AND UNEMPLOYMENT IN CANADA DURING JUNE

THE following information as to the employment situation in Canada is based upon reports from four sources:—

(1) The Dominion Bureau of Statistics receives reports each month from most of the larger employers of labour throughout Canada in all industries except agriculture, fishing, hunting and highly specialized business, the returns representing firms employing fifteen workers or more. The number of firms so reporting in June was 6,599. An employment index number is maintained, based on the number of workers employed by such firms in January, 1920, as 100;

(2) The Department of Labour receives reports from local trade unions throughout Canada, showing the number of their members who were unemployed in the period under re-

view. The number of unions reporting for June was 1,608, having an aggregate membership of 178,578 persons. It should be understood that the report on the number of unemployed workers refers only to organized labour, no figures being available as to the number of unorganized workers who were without employment;

(3) The Department of Labour receives reports from the 64 offices of the Employment Service of Canada showing the number of applications for work, the existing vacancies and the number of workpeople placed in positions;

(4) The Dominion Bureau of Statistics receives each month detailed statistics from 63 cities throughout Canada, showing the value of permits granted during the period for various classes of building construction.

The Employment Situation at the Beginning of July, 1928, as Reported by the Employers Making Returns to the Dominion Bureau of Statistics

There were further pronounced increases in employment at the beginning of July, according to statements tabulated by the Dominion Bureau of Statistics from 6,599 firms employing 976,078 workers, or 32,111 more than on June 1. This advance, which was rather larger than on July 1 in any other year of the record, brought the index number to 116·3, as compared with 112·4 in the preceding month, and with 108·4, 103·7, 96·8, 95·9, 99·5, 91·1 and 87·5 at the beginning of July in 1927, 1926, 1925, 1924, 1923, 1922 and 1921, respectively. The situation continued to be decidedly more favourable than in any other month of the years since 1920.

Considerable improvement was registered in all industries except logging, which showed seasonal curtailment. The largest gains were reported in construction, in which they were greater than on July 1 in any other year of the record, while manufacturing and trade also showed unusually pronounced increases.

Employment by Economic Areas

The trend was favourable in all provinces, the most noteworthy expansion taking place in the Prairie Provinces, Quebec and Ontario.

Maritime Provinces.—Statements were tabulated from 580 firms employing 77,010 workers, as against 71,054 in the preceding month. This increase of nearly 6,000 persons brought employment to a higher level than at any time in the last eight years, the index standing at 103·5, as compared with 100·5 on July

1, 1927. Construction recorded the greatest improvement, but there were also gains in logging, services and some other groups; on the other hand, coal mining and water transportation were slacker.

Quebec.—Construction, manufacturing, trade and services reported the largest additions to staffs in Quebec, while logging was seasonally dull with the end of river-driving, and there were also losses in transportation. The forces of the 1,433 co-operating employers aggregated 268,355 persons, compared with 261,106 on June 1. This advance involved more workers than that registered on the corresponding date last year, when the index was rather lower; employment at the beginning of July, 1928, was, in fact, at the highest level so far recorded.

Ontario.—Continued expansion was noted in Ontario, where the 3,003 firms whose statistics were tabulated reported 402,296 employees, or 7,051 more than on June 1. Considerable gains were shown in manufacturing, construction, transportation, mining, and trade, but logging was seasonally quiet. Smaller increases were indicated on July 1, 1927, when the index was over eight points lower.

Prairie Provinces.—The most noteworthy advances in this area were in construction, manufacturing, transportation, services, trade and mining. Data were compiled from 871 employers with an aggregate staff of 142,075

workers, as against 133,170 in their last report. This increase of 8,905 workers exceeded that registered on the same date last year, while the level of employment was higher than in any other month of the record.

British Columbia.—The improvement in British Columbia was the greatest ever reported on July 1, and the index, at 128.5, was at its maximum since the series was instituted in 1920. A total working force of 86,342 persons was employed by the 712 firms whose data were received and who had 83,391 workers in the preceding month. Manufacturing, particularly fruit, vegetable and fish canning, construction, services and mining, recorded marked gains, while logging afforded less employment.

indicated by the 765 co-operating employers, who had 127,856 on June 1. The gains noted on July 1, 1927, were more extensive, but the index then was considerably lower, as it was on the same date in every other year of the record.

Quebec.—Further improvement brought the index in Quebec to 124.8, the highest point reached since the record for this city was commenced in 1924. Statements were tabulated from 105 firms with 11,916 employees, compared with 11,048 in the preceding month. Manufactures, construction and transportation registered practically all the gain.

Toronto.—Manufacturing (notably in food and printing establishments), transportation and trade reported increased activity. The

EMPLOYMENT IN CANADA AS REPORTED BY EMPLOYERS

NOTE.—The curve is based on the number of employees at work on the first day of the month, as indicated by the firms reporting, in comparison with the number of employees they reported in January, 1920, as 100.

Employment by Cities

The eight cities for which separate tabulations are made reported heightened activity, the gains in Windsor and the Other Border Cities, Toronto and Ottawa being most noteworthy.

Montreal.—Employment in Montreal continued to advance, particularly in the construction, trade and service groups, while manufacturing was seasonally dull. A combined working force of 128,548 persons was

850 establishments furnishing data enlarged their staffs by 1,082 employees to 113,390 at the beginning of July. Smaller gains were noted on the same date last year, when employment was in less volume.

Ottawa.—Statistics were received from 144 employers with 13,089 persons on their paylists, compared with 12,078 in the preceding month. Most of the expansion took place in manufactures, but construction was also brisker. The additions to payroll exceeded

those indicated on July 1, 1927, and the index continued several points higher than it was last summer, or in any other period since the series was instituted.

Hamilton.—There was rather small gains in Hamilton, where employment continued at a higher level than on the same date last year, or, in fact, than in any other month for

which data are available; 234 workers were added to the forces of 210 firms furnishing information, bringing them to 32,147 on the date under review. Construction and trade were brisker, while manufacturing showed practically no change, losses in iron and steel plants being offset by increases in food, electrical apparatus and other groups.

NOTE: Number employed by the reporting firms in Jan. 1920=100 in every case. The "Relative weight" in Tables 1, 2, 3 and 4 shows the proportion of employees in the indicated area or industry to the total number of all employees reported in Canada on the date under review.

Windsor and the Other Border Cities.—Further improvement in employment, mainly in automobile plants, in the Border Cities caused a gain of 1,460 persons in the staffs of the 126 reporting employers, who had 18,502 in their employ on the date under review.

The index was much higher than on July 1, 1927, when large declines were reported; the situation was, in fact, better than in any other month since the record for this city was commenced in 1925.

TABLE IV.—INDEX NUMBERS OF EMPLOYMENT IN CANADA BY INDUSTRIES (JAN. 1920=100)

Industries	Relative Weight	July 1 1928	June 1 1928	July 1 1927	July 1 1926	July 1 1925	July 1 1924

All Industries	100.0	116.3	112.4	108.4	103.7	96.8	95.9

¹The "Relative Weight" column shows the proportion that the number of employees in the indicated industry is of the total number of employees reported in all industries by firms making returns on the date under review.

Winnipeg.—Manufacturing, transportation and trade registered advances that brought employment to its maximum in this record. An aggregate working force of 31,798 employees was reported by the 301 co-operating firms; this was 918 more than on June 1. The improvement registered on the same date a year ago was less extensive.

Vancouver.—The trend of employment in Vancouver continued to be favourable, according to data from 252 establishments employing 27,654 workers, as against 27,457 in the preceding month. The greatest gains were in manufacturing, but communications, trade and some other industries also reported improvement. A larger increase was noted by the firms making returns for July 1, 1927, when the index stood at 122.6 as compared with 125.1 on the date under review.

Manufacturing

Fish, fruit and vegetable canneries, lumber, pulp and paper, rubber, building material, electric current, mineral product, boot and shoe, non-ferrous metal and electrical apparatus factories registered heightened activity, but seasonal curtailment was shown in textile and iron and steel plants. The 4,047 co-operating manufacturers employed 524,802 operatives, as against 518,643 in the preceding month. Much smaller gains were indicated in this division on July 1, 1927, when the index was between six and seven points lower.

Animal Products, Edible.—Additions to staffs were again recorded in this group, 892 persons being taken on by the 249 establishments making returns, which had 19,310 in their employ. Most of the improvement took place in fish-canneries in British Columbia, but gains were also noted in the dairy, meat packing and other divisions of the industry. The index on July 1, 1928, was at the highest point so far reached in this record.

Leather and Products.—Statements were received from 192 manufacturers in this division, employing 17,203 workers, as compared with 17,072 in the preceding month. The bulk of the advance took place in Ontario. The situation was slightly better than on the corresponding date in the last six years.

Lumber and Products.—Rough and dressed lumber mills showed heightened activity, while there were reductions in vehicle and other wood-using factories. The gains were considerably more pronounced than on July 1, 1927, when the index was rather lower. A

combined working force of 58,878 employees was reported by the 747 co-operating firms; this was 3,555 more than at the beginning of June. All provinces, except British Columbia, shared in the upward movement.

Plant Products, Edible.—The resumption of operations in canneries, together with moderate increases in personnel in confectionery factories, caused an advance which was partly offset by losses in sugar refineries and some other divisions. Returns were received from 317 manufacturers of vegetable foods, having 27,725 operatives, as against 27,111 in their last report. There was improvement in all provinces, except Quebec. Rather smaller gains were noted at the beginning of July a year ago, when the index was slightly lower.

Pulp and Paper Products.—There was continued expansion in the pulp and paper group, particularly in pulp and paper mills, but also in printing and publishing establishments. The 472 co-operating employers reported 63,765 workers, compared with 62,382 on June 1. Smaller additions to staffs were indicated on July 1, 1927, and the index of employment was then between six and seven points lower. The trend was generally favourable, the largest gains being in Quebec and Ontario.

Rubber Products.—Further increases, exceeding those of the same date last year, were indicated in rubber factories, chiefly in Ontario. The index continued higher than in any other period of the record. Statistics were tabulated from 38 firms with 16,107 employees on the date under review, as compared with 15,769 in the preceding month.

Textile Products.—Seasonal curtailment of operations, mainly in Quebec and Ontario, was reported by the 519 co-operating textile manufacturers, who employed 74,369 workers, or 1,865 less than at the beginning of June. The largest losses were in cotton, garment, woollen, headwear and knitting mills. Smaller declines were registered on the corresponding date in 1927, but the level of employment then was about the same as on the date under review.

Tobacco, Distilled and Malt Liquors.—Employment in this division showed a slight improvement, according to statistics from 130 establishments, whose staffs rose from 14,311 persons on June 1 to 14,455 at the beginning of July. There were minor increases in Ontario and the Western Provinces. A downward movement had been shown on the same date last year when the index was over 14 points lower.

Clay, Glass and Stone Products.—Continued advances on a smaller scale than in the corresponding month in 1927 were noted in building material plants the 130 co-operating establishments enlarging their forces by 107 persons to 11,646. The bulk of the gain was in Quebec and Ontario. Conditions continued better than in summer in any other year of the record.

Electric current.—Further improvement, exceeding that of July 1, 1927, was registered in electric current plants, mainly in Quebec. A combined working force of 14,584 persons was employed by the 91 producers whose returns were received, and who recorded 14,057 in the preceding month. Employment was in greater volume than in any other period since the series was instituted in 1920.

Electrical Apparatus.—There was an increase of 149 in the staff of the 45 manufacturers furnishing data, who had 12,001 employees on July 1. Ontario reported practically all this gain, which was slightly larger than that noted at the beginning of July, 1927. The number engaged in the production of electrical apparatus, as indicated in these returns, was at its maximum for the record.

Iron and Steel.—The trend of employment in iron and steel factories was downward, as is usually the case in the summer, but the losses were much smaller than in other years of the record. The largest falling-off was in automobile factories, although rolling mills, machinery and agricultural implements works also showed contractions, while improvement was indicated in foundries, machine shops, structural iron and steel, wire and other divisions. Returns were compiled from 669 employers whose forces aggregated 148,631 workers, as against 149,458 in the preceding month. The situation was better than on the corresponding date in any other year since 1920. Additions to staffs were noted in Quebec and the Prairie Provinces, but in the Maritime Provinces and Ontario there were reductions.

Non-Ferrous Metal Products.—Continued advances were registered in non-ferrous metal products, all divisions of which were rather busier. The 110 co-operating manufacturers employed 17,990 operatives, or 174 more than in the preceding month. This increase exceeded that of the same date last year, when the index, as at the beginning of July in other years of the record, was lower.

Mineral Products.—Further and larger gains were shown in this division, mainly in Quebec, Ontario and the Prairie Provinces, re-

sulting in a more favourable situation than in any other period since 1920. Statistics were received from 78 employers whose staffs rose from 11,083 on June 1 to 11,990 on July 1. This improvement was the most extensive ever recorded.

Logging

The conclusion of river-driving operations in many logging camps, chiefly in Quebec and Ontario, caused a seasonal falling-off in employment, while curtailment was also shown in British Columbia; 2,492 persons were released from the staffs of the 225 reporting firms, who employed 17,197 at the beginning of July. The decline involved a smaller number of workers than that noted on the corresponding date a year ago, when the index was lower.

Mining

Coal.—There was a further recession in employment in coal mines, 89 of which employed 25,052 men, as compared with 25,592 in their last report. Practically all the loss was in the Maritime Provinces. Slight additions to staffs had been noted at the beginning of July last year, when the index number was rather higher.

Metallic Ores.—Continued and larger advances were reported in metallic ore mines, mainly in the western provinces. Statements were tabulated from 76 operators employing 14,486 workers, or 447 more than on June 1. The index, at 194.3, was at the highest point yet reached in this record.

Non-Metallic Minerals, other than Coal.—Additions to pay-rolls on a greater scale than on July 1, 1927, were made in non-metallic mineral mines, 72 of which reported 8,806 employees, or 315 more than in their last report. Firms in Ontario and the Prairie Provinces absorbed most of the extra workers. Employment was in greater volume than in any other month of the record.

Communications

Further increases were registered on telephones and telegraphs, 373 persons being added to the forces of the 187 companies and branches making returns. They had 26,270 on their staffs, a larger number than has ever before been indicated in this record.

Transportation

Street Railways and Cartage.—Employment in the local transportation group again advanced, 123 firms reporting 22,621 workers in

their employ, as against 22,213 in the preceding month. Ontario and the Prairie Provinces registered the gain. Smaller advances had been noted on July 1, 1927, when the index was some ten points lower.

Steam Railways.—Statistics tabulated from 106 companies and divisional superintendents in the steam railway operation group, showed that they employed 86,964 workers at the beginning of July, or 4,133 more than in the preceding month. The advance was the largest ever reported on July 1, considerably exceeding that of the same date in 1927, when employment was much below its level at the time of writing. All provinces shared in the upward movement, which, however, was most noteworthy in the Maritime and Prairie Provinces and Ontario.

Shipping and Stevedoring.—As had been the case on July 1 in many years of the record, there was a decline in employment in water transportation on the date under review, when 64 companies reduced their staffs by 3,019 employees, bringing them to 13,579. The situation was not quite so good as on July 1, 1927. Quebec and the Maritime Provinces reported practically all the reduction.

Construction and Maintenance

Building.—Continued important advances in employment were noted in building construction, the gains exceeding those of the same date in any other year of the record, while the index, at 212·6, was at its peak for the beginning of July in the years since 1920. The 543 co-operating contractors employed 44,945 workers, as compared with 40,033 in the preceding month. All provinces except British Columbia reported expansion, but Quebec recorded the largest gains.

Highways.—The number of men engaged on road construction and maintenance was greatly increased on the date under review, when the 171 firms furnishing data had 34,023 employees, or 12,064 more than at the beginning of June. Marked advances were shown generally, those in the Maritime Provinces being largest.

Unemployment in Trade Unions at the Close of June, 1928

Unemployment as used in the following report has reference to involuntary idleness due to economic causes. Persons who are engaged in work other than their own trades, or who are idle through illness, are not considered as unemployed. Unions which are involved in industrial disputes are excluded

Railway.—A combined working force of 62,906 workers was reported by the 52 contractors and divisional superintendents whose statistics were tabulated, and who had 57,350 on June 1. All provinces shared in the increase, which was most noteworthy in the Prairie district. Smaller additions to staffs were noted on July 1 a year ago, but the index then stood at 174·9, compared with 200·7 on the date under review.

Services

Continued and greater expansion was shown in the service group, according to returns from 187 employers with 19,556 persons on their staffs, as compared with 18,070 in the preceding month. The opening of the summer-hotel season caused most of the gain, which exceeded that reported on July 1 of any other year of the record, while employment was at the highest level so far reached. The tendency was favourable in all provinces, but the largest increases were in the Prairie Provinces.

Trade

Further pronounced improvement was noted in trade, in which both retail and wholesale establishments afforded heightened employment. Statements were tabulated from 657 firms having 74,872 persons in their employ, or 2,309 more than at the beginning of June. The additions to staffs in Quebec, Ontario and the Prairie Provinces were most marked. The index, at 118·0, was higher than in the summer of any other year of the record.

Tables

Index numbers of employment by economic areas, leading cities and industries are shown in the accompanying tables, in which the columns headed "relative weight" show the proportion that the number of employees reported in the indicated area or industry is of the total number of employees reported in Canada on the date under review.

from the tabulations. As the number of unions making returns varies from month to month, with consequent variation in the membership upon which the percentage of unemployment is based, it should be understood that such figures have reference only to the organizations reporting.

The improvement in the local trade union situation which has been shown without interruption from month to month since the close of February, due to the steady opening up of activity and new development in various trades and industries, continued into June, the percentage of unemployed members at the close of the month indicating the customary midsummer expansion of industry. Reports were tabulated at the end of June from a total of 1,608 local trade unions, the combined membership of which aggregated 178,578 persons, and of these 5,800 or a percentage of 3.2 were idle on the last day of the month, compared with an unemployment percentage of 3.7 in May. Quebec and British Columbia unions registered a decline in employment of less than 1 per cent when compared with May,

which netted a 4.4 per cent gain, followed by increases on a smaller scale from Toronto, Halifax, St. John, Winnipeg and Edmonton unions. On the other hand unions in Montreal and Vancouver reported slightly reduced activity. A greater volume of work was afforded members in Halifax, St. John, Toronto, Winnipeg and Edmonton during June than in the same month in 1927, and of the reductions in the remaining cities the most noticeable was that recorded from Montreal, due, to quite an extent, to increased slackness in its garment establishments.

The accompanying chart indicates the trend of unemployment from January, 1922, to date. When making a survey of the course traced by the curve during the first half of this year, it will be noticed that the projection during

PERCENTAGE OF UNEMPLOYMENT AS REPORTED BY TRADES UNIONS

while in the remaining provinces the trend was more favourable, Nova Scotia unions reporting the most outstanding gains. The unemployment level at the close of June remained the same as that indicated at the end of June a year ago, when 3.2 per cent of idleness also was reported, though fluctuations occurred in various provinces. As in the previous comparison, minor contractions in employment were reported by Quebec and British Columbia unions during June this year; the Saskatchewan situation remained stationary and the remaining provinces showed generally improved conditions.

Each month a separate tabulation is made of unemployment existing in the largest city in each province with the exception of Prince Edward Island. During June the most extensive advance in employment in comparison with May was shown by unions in Regina,

the first two months of the year was slightly upward, indicating somewhat less activity, but from February onward the trend has been steadily downward showing gradual advancement until at the close of June the curve rested at exactly the same level as at the end of June last year.

From unions in the manufacturing industries reports received for June totalled 444, combining a membership of 50,274 persons, 6.4 per cent of whom were idle at the end of the month, compared with 4.4 per cent in May. That the unemployment percentage in the manufacturing industries was 2 points higher during June than in the preceding month may be largely ascribed to greater inactivity among garment workers in the Province of Quebec, although contributing recessions were reported also by papermakers, wood workers, hat and cap makers, iron, steel and

glass workers. Leather, textile and fur workers, on the other hand, were afforded slightly increased employment. In making a comparison with the June, 1927, returns when 3.8 per cent of unemployment was recorded, garment workers again were the determining factor in the adverse situation reported at the close of June this year. Iron and steel workers and printing tradesmen, however, registered additional employment.

The coal mining industry reported a more favourable situation during June than either the previous month or June last year, as was shown by the reports tabulated from 37 unions with 15,437 members. Of these 401 were out of work on the last day of June, a percentage of 2.6, compared with 7.0 per cent at the close of May and with 3.6 per cent on June 30, 1927. Nova Scotia unions registered marked improvement during June when compared with May, and slight gains in employment over June last year. In Alberta also, conditions were somewhat better during June than in either the previous month or June a year ago, while in British Columbia no members were reported unemployed in any of the months used for comparison.

The building trades in June showed considerable improvement over both the previous month and June last year. Reports were tabulated at the end of June from 205 unions of building tradesmen with 23,558 members, 3.9 per cent of whom were unemployed compared with 8.2 per cent at the end of May and 8.0 per cent in June, 1927. Much of the gain in employment when compared with May took place among carpenters and joiners, and bricklayers, masons and plasterers, though electrical workers, granite and stone cutters, plumbers and steamfitters, tile layers, lathers and roofers, and bridge and structural iron workers were also contributing factors. Painters, decorators and paperhangers, and hodcarriers and building labourers were the only tradesmen to report a falling off in employment when compared with May. The most decided improvement over June last year was, as in the previous comparison, registered by carpenters and joiners, and bricklayers, masons and plasterers, while the increases in employment for granite and stonecutters were also noteworthy. Of the contractions recorded in several of the trades that reported by tile layers, lathers and roofers was the most pronounced.

Transportation workers, with 679 unions reporting 62,834 members at the end of June, indicated 1.4 per cent of unemployment, compared with 1.8 per cent in May and with 2.2

per cent at the end of June last year. Steam railway employees, navigation workers and street electric railway employees all reported a slightly better situation during June than in either the preceding month or June, 1927. Among teamsters and chauffeurs also, improvement was recorded in the former comparison, while in the latter the increase in unemployment was very slight.

A separate tabulation is made each month of unemployment among longshore workers from whom 13 reports were received in June, comprising a membership of 7,274 persons. Of these 15.6 per cent were idle at the end of the month, contrasted with unemployment percentages of 19.4 in May and with 18.5 in June last year.

From retail shop clerks fractional percentages of idleness only were registered in all three months used here for comparison, the June unemployment percentage being slightly less than in May, but a little greater than in June a year ago.

TABLE I.—PERCENTAGES OF UNEMPLOYMENT IN TRADE UNIONS BY PROVINCES

Month	N. S. and Pr. Edw. Island	New Brunswick	Quebec	Ontario	Manitoba	Saskatchewan	Alberta	British Columbia	Canada
June, 1919.....	2.7	2.4	4.0	1.8	1.2	2.5	1.7	3.4	2.6

Reports were tabulated at the close of June from 62 unions of civic employees with 6,583 members, none of whom were idle compared with nominal unemployment percentages in both the previous month and June, 1927.

From unions in the miscellaneous group of trades 113 reports were tabulated at the close of June combining a membership of 5,691 persons, 3.8 per cent of whom were idle compared with 4.6 per cent in May. The greater part of the increase in employment over May was registered by stationary engineers and firemen, and hotel and restaurant employees, while barbers indicated but a nominal change for the better. Theatre and stage employees, on the contrary, were slacker. In comparison with the June, 1927, returns when 5.0 per cent of idleness was recorded, hotel and restaurant workers were the only tradesmen to show a downward employment trend during the

month under review, while theatre and stage employees, stationary engineers and firemen, and barbers were afforded a greater volume of work.

From unions of fishermen no unemployed members were reported at the end of June, compared with small percentages of idleness in both the previous month and June last year. Lumber workers and loggers registered 16.6 per cent of unemployment in June contrasted with 9.5 per cent in May and with no inactivity in June 1927.

Table I summarizes the returns by provinces for June of each year from 1919 to 1925, inclusive, and for each month from January, 1926, to date, and table II records the percentages of unemployment registered in the different groups of industries for the same months.

Employment Office Reports for June, 1928

The volume of business transacted by the offices of the Employment Service of Canada for the month of June, 1928, as shown by the average daily placements effected, was somewhat lower than that of the preceding period, but showed a gain of over 8 per cent when compared with the average daily placements effected during June, 1928. All industrial divisions showed declines from the preceding month except logging and communication, where only minor gains were recorded, the largest decreases being shown in farming and services. In comparison with June last year farming again showed a decline; logging also reported fewer placements, all other groups recording gains.

The accompanying chart shows the trend of employment since January, 1926, as represented by the ratio of vacancies notified and placements effected for each 100 applications for work registered at the offices of the Service throughout Canada, compilations being made semi-monthly. It will be seen that the curves of vacancies and placements, in relation to applications, declined during the first half of the month, but showed a decidedly upward trend during the latter half of the period, the curve of vacancies attaining a level at the close of June over 6 points higher than that recorded during the corresponding period a year ago, while that of placements was nearly 5 points above the level shown at the end of June last year. The ratio of vacancies to each 100 applications was 82.9 during the first half and 86.6 during the second half of June, 1928, in contrast with the ratios of 77.9

and 80.1 during the corresponding periods of 1927. The ratios of placements to each 100 applications during the periods under review were 78.7 and 79.5 as compared with 72.6 and 74.8 respectively, during the corresponding month of 1927.

The average number of applications for employment received daily by the offices of the Service throughout Canada was 1,852 during the first half of June, as compared with 1,908 during the preceding period, and with 1,828 during the corresponding period of June, 1927. Applications for work during the latter half of the month numbered 1,587 daily, in contrast with 1,586 daily, for the latter half of June a year ago.

The average number of vacancies reported by employers to the Service daily was 1,535 during the first half and 1,374 during the latter half of the month under review, as compared with a daily average of 1,424 and 1,266 vacancies during the month of June, 1927. Vacancies offered to the Service during the latter half of May, 1928, averaged 1,672 daily.

The average number of placements made daily by the offices of the Service during the first half of June was 1,458, of which 978 were in regular employment and 480 in work of one week's duration or less, as compared with a total average of placements during the preceding period of 1,552 daily and with 1,326 daily, during the first half of June a year ago. During the latter half of the month under review, placements averaged 1,261 daily (838 regular and 423 casual) as compared with an average of 1,182 daily during the corresponding period of 1927.

During the month of June, 1928, the offices of the Service referred 35,028 persons to vacancies and effected a total of 33,869 placements. Of these, the placements in regular employment were 22,616, of which 18,412 were for men and 4,204 for women, while placements in casual work totalled 11,253. The number of vacancies reported by employers was 25,231 for men and 11,042 for women, a total of 36,273, while applications for work numbered 42,334 of which 31,248 were from men and 11,586 from women.

The following table gives the placements effected to date by the offices of the Employment Service of Canada:—

Year	Regular	Casual	Totals
1919 (10 months) ..	268,001	37,904	305,905
1920	366,547	79,265	445,812
1921	280,518	75,238	355,756
1922	297,827	95,695	393,522
1923	347,165	115,387	462,552
1924	247,425	118,707	366,132
1925	306,804	106,021	412,825
1926	300,226	109,929	410,155
1927	302,723	112,046	414,769
1928 (6 months) ..	112,654	62,275	174,929

NOVA SCOTIA

There was a decrease of over 33 per cent in the number of positions offered through the employment offices in Nova Scotia during June when compared with the preceding month, and of nearly 6 per cent in comparison with the corresponding month last year. Placements declined nearly 32 per cent from May, but were over 5 per cent higher than in June, 1927. Logging and Trade were the only groups in which less placements were made during the month under review than in June last year, the change in the latter being nominal only. The most noteworthy gain was in the manufacture of iron and steel products. Industrial divisions in which most of the placements were effected during the month were: manufacturing, 79; logging, 50; farming, 31; construction and maintenance, 54; trade, 61; and services, 362, of which 285 were household workers. During the month 145 men and 62 women were placed in regular employment.

NEW BRUNSWICK

Employment opportunities as indicated by orders received at employment offices in New Brunswick during June were over 15 per cent less favourable than in the preceding month, but nearly 30 per cent better than in the corresponding month last year. There was a decline of over 17 per cent in placements from May, but a gain of over 26 per cent in comparison with June, 1927. All groups except

logging and farming showed gains in placements over June last year and the declines in logging and farming were nominal only. The railway division of construction and maintenance showed the most noteworthy increase. Placements by industrial divisions were: manufacturing, 32; logging, 79; transportation, 35; construction and maintenance, 263; and services, 480, of which 332 were of household workers. Regular employment was procured for 374 men and 86 women during the month.

QUEBEC

During the month of June positions offered through employment offices in the province of Quebec were nearly 22 per cent less than in the preceding month and nearly 5 per cent less than in the corresponding month last year. Placements also declined 9 per cent from May and nearly 2 per cent when compared with June, 1927. The decline in placements from last year was due to lessened demand for workers in the logging industry as manufacturing was the only other group in which less placements were made. Construction and maintenance showed the most substantial gain. Industrial divisions in which most of the placements were effected during the month were: manufacturing, 145; logging, 153; farming, 125; transportation, 43; construction and maintenance, 878; trade, 78; and services, 689, of which 356 were of household workers. During the month 1,616 men and 482 women were placed in regular employment.

ONTARIO

There was a decrease of nearly 19 per cent in the number of positions offered through employment offices in Ontario during June when compared with the preceding month, but an increase of 9 per cent in comparison with the corresponding month last year. Placements were nearly 17 per cent less than in May, but over 8 per cent in excess of June, 1927. The most noteworthy gains in placements over June last year were in manufacturing, transportation and services, although all groups except logging and construction and maintenance showed improvement. Placements by industrial groups included: manufacturing, 2,149; logging, 1,345; farming, 1,067; mining, 169; communication, 61; transportation, 533; construction and maintenance, 3,389; trade, 551; and services, 4,545, of which 2,405 were of household workers. Regular employment was secured for 7,792 men and 1,415 women during the month.

MANITOBA

The demand for workers as indicated by orders received at employment offices in Manitoba during June was nearly 21 per cent less than in the preceding month but nearly 9 per cent higher than during the corresponding month last year. Placements showed the same percentage of gain over June, 1927, but were over 22 per cent less than in May. Increased placements in services and construction and maintenance were responsible for the gains over June last year, being offset in part by declines in the manufacturing industries, logging and farming. The changes in other groups were small. Industrial groups

and over 4 per cent less than in June, 1927. Transportation, construction and maintenance and services were the only groups in which more placements were made during the month under review than in June last year and these gains were more than offset by declines in all other divisions. Farming showed the most substantial reduction. Placements by industrial divisions included: manufacturing, 135; farming, 1,106; transportation, 93; construction and maintenance, 762; trade, 147; and services, 1,210, of which 713 were of household workers. During the month 1,898 men and 569 women were placed in regular employment.

POSITIONS OFFERED AND PLACEMENTS EFFECTED FOR EACH ONE HUNDRED APPLICATIONS FOR EMPLOYMENT

Applications ————— Vacancies - - - - - Placements o-o-o-o-o

in which most of the placements were effected during the month were: manufacturing, 128; logging, 79; farming, 622; construction and maintenance, 794; trade, 233; and services, 2,233, of which 1,638 were of household workers. Placements in regular employment numbered 1,481 of men and 625 of women.

SASKATCHEWAN

During June orders received in employment offices in Saskatchewan called for over 33 per cent fewer workers than in the preceding month and nearly 6 per cent less than in the corresponding month last year. There were over 32 per cent less placements than in May

ALBERTA

Orders listed at employment offices in Alberta during June called for over 35 per cent less workers than in the preceding month, but about 2 per cent more than in the corresponding month last year. Approximately the same percentages of change were also shown in placements. Increased placements in the manufacturing industries was the only change of note in comparison with June last year, there being small variation in the other divisions. Industrial groups in which most of the placements were effected during the month were: manufacturing, 325; farming, 1,712; mining, 75; transportation, 50; con-

struction and maintenance, 699; trade, 104; and services, 953, of which 599 were of household workers. Placements in regular employment numbered 2,680 of men and 392 of women.

BRITISH COLUMBIA

Opportunities for employment as indicated by orders received at employment offices in British Columbia during June were over 9 per cent better than in the preceding month, and over 32 per cent more favourable than in the corresponding month last year. There was a gain of over 4 per cent in placements when compared with May and of nearly 32 per cent in comparison with June, 1927. All industrial divisions except transportation, services and trade showed increased placements over June last year, the increase in construction and maintenance being the most noteworthy. Industrial divisions in which most of the placements were effected during the month included: manufacturing, 644; logging, 414; farming, 985; mining, 104; transportation, 179; construction and maintenance, 1,269; trade, 135; and services, 909, of which 462 were of household workers. There were 2,426 men and 573 women placed in regular employment during the month.

Movement of Labour

During the month of June, 1928, the offices of the Employment Service of Canada effected 22,616 placements in regular employment 13,033 of which were of persons for whom the employment found was outside the immediate locality of the offices at which they were registered. Of the latter, 1,490 were granted the Employment Service reduced transportation rate, 1,156 travelling to points within the same province as the despatching office and 334 to other provinces. The reduced transportation rate which is 2.7 cents per mile, with a minimum fare of \$4, is granted by the railway companies to bona fide applicants at the Employment Service who may desire to travel to distant employment for which no workers are available locally.

From the Quebec offices 135 persons were transferred at the reduced rate, 29 to provincial centres and 106 to other provinces. The transfers within the Province were from Montreal, 28 saw-mill labourers and one cook going to employment within its own zone. The movement to points outside the Province was from Hull and entirely of bushmen, 40 of whom went to Cobalt and surrounding regions and 57 to North Bay and vicinity.

Of the 268 persons who received certificates of reduced transportation from Ontario offices

263 travelled to employment in various parts of the province and 5 to other provinces. The latter included 3 carpenters who were despatched from Sudbury to Sault Ste. Marie, one floor moulder from Toronto to Montreal and one cook from Cobalt to Hull. Provincially North Bay transferred 8 carpenters, 6 bushmen, 3 pipe fitters, one lineman, one waitress and one millwright to Timmins, 4 bushmen and one cook to Cobalt, 11 bushmen to Sault Ste. Marie, 3 farm hands to Brantford, 3 linemen to Ottawa and one bushman to Sudbury. From Toronto one porter went to employment in Peterboro, one cook to Fort William, 26 power construction labourers and one electrician to Ottawa and one civil engineer to North Bay, while from Sudbury 3 farm hands travelled to positions in the Guelph zone, 3 carpenters to Sault Ste. Marie, 2 miners to Fort William and 49 bushmen, 32 mill hands, 2 cooks and one labourer to points within the locality covered by the Sudbury office. Transfers at the reduced rate from Hamilton included 16 construction labourers going to Peterboro and one welder to Timmins. Sarnia received one porter from Windsor, Port Arthur, 7 shaftsmen, 4 engineers, 2 cooks, 5 surface men and one timber man from Cobalt, Sault Ste. Marie one engineer from Pembroke and Belleville, 2 line men from Ottawa. For employment within their respective zones Port Arthur transferred 13 dam construction labourers, one cookee, one foreman, one blacksmith, one engineer, 25 bushmen, 2 moulders, one farm hand, 5 axe men, 2 chain men, one cook and 3 packers and Fort William one bushman and one cook.

Special transportation rate certificates granted in Manitoba during June were 520 in number, 351 of which were provincial and 169 inter-provincial. All of these were issued by the Winnipeg office. Within the Province, 8 teamsters, 3 cooks, one porter, one cookee, 2 carpenters, one timekeeper, 3 charwomen and one female hotel worker were transported to Brandon zone points, 4 waitresses, 2 chambermaids, one porter and one bushman to Dauphin. 144 railroad construction labourers, 29 rock labourers, 10 teamsters, one saw-mill labourer, 3 cribbers, 2 porters, one cook and one bushman to stations within the Winnipeg zone and 117 farm hands and 15 farm domestics to various provincial centres. Of those going outside the Province the Port Arthur zone received 13 cooks, 2 millwrights, one porter, 2 female hotel workers, 18 bushmen, 5 teamsters, one engineer, one cookee, 2 labourers and 26 carpenters, the Prince Albert zone 25 construction axemen, 2 carpenters, one waitress and one tractor man and

the Moose Jaw and Saskatoon zones each one carpenter. The balance of the movement to other provinces included the transfer of one female hotel worker to Estevan, 2 carpenters to North Battleford, 49 farm hands and 7 farm household workers to Saskatchewan, farming regions and 7 farm hands and one farm domestic to Alberta points.

Opportunities for travelling to employment at the special reduced rate were afforded by Saskatchewan offices to 99 persons, 95 of whom were bound for points within the province and 4 for other provinces. The transfers outside the province were from Regina, from which point 2 labourers were carried at the reduced rate to Dauphin, one domestic to Toronto and one farm hand to Edmonton. A large percentage of the provincial certificates were issued to farm workers, 48 of whom were transported from Saskatoon, 10 from Regina and 8 from Moose Jaw to situations in the agricultural districts of the province. From the Regina office also, two teamsters and one hotel cook secured certificates of reduced transportation to Moose Jaw, one tailor to Yorkton and one housekeeper to Estevan; from Saskatoon, in addition, 2 carpenters travelled within the same zone, while from Moose Jaw one cook was sent to Swift Current and 7 teamsters, 2 cooks and one waitress within its own zone. The remaining 11 provincial certificates were granted by the Prince Albert office to 8 saw-mill labourers and 3 railroad construction labourers to stations within its zone.

Alberta offices granted 317 certificates of reduced transportation during June, 302 to provincial points and 15 to points outside the province. Among the persons who received their certificates from the Edmonton office for centres within the same zone were 17 mill hands, 3 blacksmiths, 16 labourers, 3 flunkeys, 2 dishwashers, 2 axemen, one fireman, 13 carpenters, 7 miners, 4 cookees, 2 mine labourers, 5 bushmen, 57 railroad construction labourers, 5 cooks, 5 teamsters, 2 lumber pilers, one engineer, and one tractor man. From Edmonton, in addition, 2 carpenters travelled to Calgary and 100 farm hands to various points throughout the Province. Calgary transferred 45 farm hands and 2 farm domestics within the province, 5 carpenters to Edmonton and one painter and one waitress to Drumheller. Of those who were transported to other provinces 11 were farm hands despatched from Edmonton to Saskatchewan points. The Calgary office issued certificates to one farm hand going to

Revelstoke and one maid to Regina, while from Lethbridge 2 berry pickers were sent to Cranbrook.

Of the 151 persons benefiting by the reduced transportation rate in British Columbia during June 116 were transferred to various provincial points and 35 to situations in other provinces. The movement within the Province was largely from Vancouver from which centre 6 carpenters, one planerman, 4 road construction labourers, one teamster, 6 flunkeys, 2 farm hands, 2 cooks, one dishwasher, one painter, one orderly and 4 railroad construction labourers were carried at the reduced rate to Kamloops; 4 waitresses, one painter, one bricklayer and one handy man to Nelson; one miner, one engineer and one tractor man to Revelstoke; one fruit picker, one mucker, one cook, one auto mechanic, one engineer, one tractor man, 2 lumber pilers, one general house worker, one waitress, one railroad construction labourer and 2 bushmen to Penticton, one farm hand, one engineer, 3 fruit pickers and 2 saw-mill labourers to Kelowna; 4 engineers and one bushmen to Prince George, one tinsmith to Vernon and one cook, 2 millwrights and one miner to Cranbrook. In addition, Vancouver issued certificates to 15 miners, 5 muckers, 3 millwrights, 2 labourers, 2 flunkeys, one timber framer, one engineer, one bushman, one waitress, one farm hand and one chambermaid for points within its own zone. Prince George transferred 2 axe men to Kamloops and one cook and one cookee within its own zone and New Westminster despatched one tractor man to Prince George, while from Nelson 4 bushmen and from Prince Rupert 2 bushmen, 2 miners and one teamster proceeded to positions within their respective zones. Of the interprovincial transfers 28 were of farm hands, 19 for Alberta points, 8 for Saskatchewan regions and one for Manitoba, the majority of these receiving their certificates of reduced transportation at Vancouver. From Vancouver also 2 bricklayers and one cook travelled to Edmonton, one general houseworker to Medicine Hat and one cook to Brandon, while from New Westminster one shingle mill hand and one general houseworker were carried at the special rate to Edmonton.

Of the 1,490 workers who took advantage of the Employment Service reduced transportation rate 914 travelled by the Canadian National Railways, 516 by the Canadian Pacific Railway, 31 by the Pacific Eastern Railway and 29 by the Temiskaming and Northern Ontario Railway.

Building Permits Issued in Canada in June, 1928

The value of the building permits issued by 63 cities during June was \$22,628,907; this was a seasonal decline of 17.7 per cent from the May total of \$27,497,189, while in the more significant comparison with June, 1927, there was an increase of \$4,265,638 or 23.2 per cent, the value for that month having been \$18,363,239. The aggregate for the first half of 1928 also exceeded that for the first half of any other year on record for these cities; with a total of \$101,606,198, it was 25.7 per cent higher than in the first half of 1927, the previous high level. As has been pointed out in other issues, the wholesale costs of building materials in the last two years have averaged considerably less than in any other of the last eight years.

Some 50 cities furnished detailed statements showing that they had issued over 1,700 permits for dwellings valued at more than \$9,000,000 and some 3,600 permits for other buildings estimated at approximately \$12,000,000. During May, authority was given for the erection of over 2,100 dwellings and some 4,600 other buildings, valued at approximately \$11,400,000 and \$11,800,000 respectively.

Improvement over May, 1928, was reported in New Brunswick and British Columbia, where there were gains of 16.8 and 8.7 per cent respectively. Of the declines elsewhere, that of \$2,593,460 or 19.0 per cent in Ontario was most pronounced, although Manitoba registered a greater proportionate decrease of \$852,670 or 40.8 per cent.

As compared with June, 1927, there were increases in Quebec, Ontario and Alberta. Ontario reported the greatest gain of \$3,510,790 or 49.0 per cent, while of the decreases in the remaining provinces, that of \$182,250 or 11.8 per cent in Saskatchewan was most noteworthy.

Of the larger cities, Montreal and Toronto recorded increases in the value of the permits issued, as compared with both the preceding month and the corresponding month in 1927; Vancouver showed a gain in the former and a reduction in the latter comparison, while in Winnipeg there were declines in both comparisons. Of the other centres, Sydney, Saint John, Shawinigan Falls, Brantford, Guelph, Hamilton, Kingston, London, Ottawa, Owen Sound, St. Thomas, Sarnia, York Townships, Ford, Sandwich, New Westminster and North Vancouver reported improvement over May, 1928, and June, 1927.

Table I gives the value of the building permits issued by 63 cities during May and June, 1928, and June, 1927; the 35 cities for which records are available since 1910 are marked with asterisks.

¹ Compiled by Dominion Bureau of Statistics, Average, 1913=100.
² Compiled by Department of Labour, Average, 1913=100.

Cumulative Record for First Half Year, 1920-28.—The following table gives the value of the building authorized by 63 cities during June and in the first six months of each year since 1920, as well as index numbers for the latter, based upon the total for 1920 as 100. The average index numbers of wholesale prices of building materials in the first six months of the years are also given (1913=100).

The aggregate for the first half year of 1928 was higher by \$20,763,479 or 25.7 per cent than in 1927, the previous high level of this record. Since the average index number of wholesale prices of building materials is this year considerably lower than in any other since 1920, except 1927, the advance in the volume of construction is greater than would be indicated by the percentage gain in the value of the building authorized by the co-operating cities.

Provincial Totals of Building Permits Issued.—Table II is a record by provinces of the building permits issued by 63 cities during the first six months of each year since 1920; it also shows the totals for the same years, the proportion that the six months' aggregates bear to the yearly totals, and the average index numbers of wholesale prices of building materials and of wages in the building trades.

All provinces, except New Brunswick, reported higher aggregates of building permits issued than in the first six months of last

Year	Value of permits issued		Indexes of value of permits issued, first six months (1920=100)	Average indexes of wholesale prices of building materials in first six months (1913=100)
	In June	In first six months		
	\$	\$		
1928.....	22,628,907	101,606,198	164.5	148.9
1927.....	18,363,239	80,842,719	130.9	147.3
1926.....	18,718,050	78,760,419	127.5	150.6
1925.....	14,915,884	65,899,717	106.7	154.1
1924.....	13,967,006	60,674,154	98.2	165.2
1923.....	14,286,252	73,047,496	118.3	166.1
1922.....	17,052,582	71,281,674	115.4	161.1
1921.....	14,240,934	55,771,684	90.3	197.1
1920.....	14,113,794	61,754,710	100.0	215.5

year; in Quebec, Ontario, Saskatchewan and Alberta the totals were, in fact, larger than in any other year since 1920. Alberta registered the greatest proportionate gain of \$3,040,367, or 92.2 per cent over 1927, while the largest absolute increase of \$10,746,809, or 30.3 per cent, was in Ontario. New Brunswick reported a decline of \$466,028 or 44.5 per cent.

During the first six months of this year, the 31 cities furnishing returns in Ontario reported 45.5 per cent of the total value of the building authorized, as compared with 44.2 per cent in the same months of 1927. In Quebec, the proportion declined from 23.3 per cent last year to 22.5 per cent in the elapsed months of 1928, and in British Columbia from 14.5 per cent to 12.4 per cent.

REPORT OF THE EMPLOYMENT SERVICE OF CANADA FOR THE PERIOD APRIL TO JUNE, 1928

EMPLOYMENT conditions as indicated by the work of the offices of the Employment Service of Canada during the quarter April to June, 1928, were more favourable than those reported during the corresponding quarter of 1927, as there was an increase of 16 per cent in the vacancies offered and of 17 per cent in the placements registered in regular and casual employment. All industrial divisions, except logging, showed gains under each comparison, in which group, a reduction both in vacancies and placements occurred. Provincially, Quebec and Nova Scotia recorded fewer positions offered, while in all provinces, except Quebec, placements showed a gain. The accompanying table gives the vacancies and placements of the Employment Service of Canada by industrial groups in the various provinces during the period April to June, 1928.

From the chart on page 893 which accompanies the article on the work of the employment offices for the month of June, it will be seen that the curve, both of vacancies and placements, in relation to applications rose steadily during April and the first part of May, the curve of vacancies then showing a decline until the middle of June, when it once more registered an upward trend, while that of placements continued to rise until the close of May, then declined slightly, showing little fluctuation from then until the end of June. Both curves throughout the quarter under review were on a considerably higher level than that recorded during the corresponding quarter last year. During the period April to June, 1928, there was a ratio of 85.5 vacancies and 78.8 placements for each one

hundred applications for employment, as compared with 80.2 vacancies and 73.3 placements during the corresponding period a year ago. The average number of applicants registered daily during the quarter under review was 1,880, of positions offered 1,606, and of placements effected 1,481, in contrast with the daily average of 1,725 applications, 1,384 vacancies and 1,264 placements in regular and casual employment during the same quarter of 1927.

During the three months April to June, 1928, the offices of the Service reported that they had made 113,542 references to positions and had effected a total of 109,550 placements, of which 71,834 were in regular employment and 37,716 in casual work. In the placements in regular employment 59,280 were of men and 12,554 of women, while casual work was found for 21,263 men and 16,453 women. A comparison with the same period of 1927 shows that 93,464 placements were then made, of which 63,558 were in regular employment and 29,936 in casual work. Applications for employment during the period under review were received from 102,463 men and 36,612 women, a total of 139,075, in contrast with the registration of 127,591 persons during the same period of 1927. Employers notified the Service during the quarter April to June, 1928, of 118,844 vacancies, of which 83,189 were for men and 35,655 for women, as compared with 102,343 opportunities for work, offered during the corresponding period a year ago.

In another section of this issue will be found a report in detail of the transactions of the employment offices for the month of June, 1927.

EMPLOYMENT AND UNEMPLOYMENT IN OTHER COUNTRIES

DETAILED reports and tables showing the employment conditions in Great Britain and Northern Ireland are given in the *British Ministry of Labour Gazette* from month to month, a monthly summary of this information also being published. This summary is reproduced below showing the employment situation during June. The following report on employment conditions in the United States is based on the information contained in the *Monthly Labour Review*, published by the United States Department of Labour, each issue containing statistics showing the trend of employment in selected manufacturing industries throughout the country during the second month prior to the date of publication. The statement contained in the July issue relates to the situation existing in May 1928. The employment situation in the United States is further indicated by unemployment percentages based on statistics compiled each month by the American Federation of Labour, the source of these statistics being returns obtained from the trade union locals in 23 representative cities. Summary figures for the month of May, taken from the July issue of the *American Federationist*, the official publication of the organization, are reproduced below.

Great Britain

There was a further decline, on the whole, in the state of employment during June, the percentage of insured workpeople unemployed rising from 9.9 to 10.8 between 21st May and 25th June.

Of the total increase in the numbers of workpeople unemployed nearly one-half occurred in the coal-mining industry, where, however, the increase consisted mostly of persons who were temporarily stopped from the service of their employers. There were increases also in a number of other important industries, including pottery, pig iron manufacture, shipbuilding, the textile industries other than silk and artificial silk, and the motor vehicle, glass, clothing, boot and shoe, and building industries.

On the other hand, there was a substantial improvement in the tinplate industry, together with some improvement in the printing and paper trades, and in canal, dock, harbour, and certain transport services.

Among workpeople covered by the Unemployment Insurance Acts (aged 16 to 64 inclusive and numbering approximately 11,800,000), and working in practically every industry except agriculture and private domestic service, the percentage unemployed at 25th

June, 1928 (including those temporarily stopped as well as those wholly unemployed), was 10.8, as compared with 9.9 at 21st May, 1928, and 8.8 at 20th June, 1927. For males alone the percentage at 25th June, 1928, was 12.3, as compared with 11.4 at 21st May, 1928; for females the corresponding figures were 6.9 and 5.9. The percentage wholly unemployed at 25th June, 1928, was 7.8, as compared with 7.6 at 21st May, 1928. The total number of persons (insured and uninsured) registered at Employment Exchanges in Great Britain and Northern Ireland at 25th June, 1928, was approximately 1,239,000, of whom 986,000 were men and 198,000 were women, the remainder being boys and girls; at 21st May, 1928, it was 1,143,000, of whom 918,000 were men and 165,000 were women; and at 27th June, 1927, it was 1,032,000, of whom 836,000 were men and 144,000 were women.

United States

Employment and pay-roll totals in manufacturing industries were little changed in May, 1928, as compared with April, 1928, employment being 0.2 per cent lower and pay-roll totals 0.2 per cent higher.

The downward trend of employment, which is usual in May, was considerably less in May, 1928, than it was in the same month of 1924, 1925, 1926, and 1927, and even the small decrease in May, 1928 (0.2 per cent), was practically all due to a strike in the cotton-goods mills of one locality.

The Bureau of Labour Statistics' weighted index of employment for May, 1928, is 85.5, as compared with 85.7 for April, 1928, 86.1 for March, 1928, and 89.7 for May, 1927; the weighted index of pay-roll totals for May, 1928, is 90.1, as compared with 89.9 for April, 1928, 91.2 for March, 1928, and 95.6 for May, 1927. The monthly average for 1923 equals 100.

Employment and pay-roll totals in May, 1928, were 4.7 per cent and 5.8 per cent lower in the two items, respectively, than in May, 1927.

The data for May, 1928, were based on reports made by 11,035 establishments in 54 of the principal manufacturing industries of the United States. These establishments in May had 3,055,200 employees, whose combined earnings in one week were \$82,814,127.

Unemployment percentage.—Unemployment statistics collected by the American Federation of Labour and appearing each month in the *American Federationist*, the official publication of the organization, indicate the

percentage of unemployed union members in twenty-three representative cities of the United States. The method of compilation as described in the *American Federationist*, March, 1928, is as follows:

"The local unions in the 23 cities under review report monthly their membership and the number of unemployed members at the first of the month or the nearest possible date. From these reports the percentage of unemployed members is calculated for identical unions in the current and the previous month. Thus for every month there are two percentage figures—that is for identical unions in December and January—and for identical unions in January and February, and so on. The final figure for January, then,

is calculated by taking the simple arithmetical average of the two January percentages. It may be noted that the reports cover all trades which are organized, factory workers as well as teachers and building trade workers."

By the above method the proportion of unemployed members to the total membership of the local unions reporting, is computed. According to the August issue of the *American Federationist*, the most recent unemployed percentages during the various months in the 23 cities works out as follows: October to December, 1927, 14 per cent; January, 1928, 18 per cent; February, 1928, 18 per cent; March, 1928, 18 per cent; April, 1928, 16 per cent; May, 1928, 13 per cent; June, 1928, 11 per cent.

RECENT INDUSTRIAL AGREEMENTS AND SCHEDULES OF WAGES

A SUMMARY is given below of the more important industrial agreements and schedules of wages and working conditions that have recently been received by the Department. Such agreements are summarized each month in the *LABOUR GAZETTE*. In the majority of cases, the agreements are signed by both employers and employees. Verbal agreements, which are also included in the records, are schedules of rates of wages and hours of labour and other conditions of employment agreed upon between the parties concerned, and in effect though not signed. In addition to these, important schedules of wages are summarized, including civic schedules. In the case of each agreement or schedule, the rates of wages for the principal classes of labour are given, with other information of general interest.

Manufacturing: Vegetable Foods

EDMONTON, ALBERTA.—CERTAIN LOCAL FIRMS AND INTERNATIONAL UNION OF BAKERY AND CONFECTIONERY WORKERS OF AMERICA, LOCAL No. 276.

Agreement in effect from May 1, 1928, to April 30, 1929, and thereafter until cancelled or a new agreement negotiated.

Wages per week: foreman, \$34.50; doughman and ovenman, \$32.50; bakers and confectioners, \$28.50; all night workers to receive \$2 extra per week; jobbers, 75 cents per hour.

Overtime and work on holidays: time and one-half, except day before a holiday where four hours extra will be allowed at regular rate.

Hours: 48 per week.

Only union members to be employed.

Apprentices must be between ages of 16 and 21 to start and to be paid \$12 per week for first year, \$18 for second year and \$24 for third year. In cake-shops, one apprentice or one

helper for every three journeymen employed or one apprentice or one helper to every shop where less than three journeymen are employed. In bread shops, one apprentice or helper allowed for every five journeymen employed.

In case of dispute which cannot be settled between the parties, it shall be referred to an arbitration committee consisting of two representatives of the employees and two of the union (but not parties to the dispute), who shall select a chairman, the decision of such committee to be binding.

Negotiations for renewal or changing of the agreement to be carried out by a committee consisting of one union member and one master from each shop.

Manufacturing: Iron, Steel and Products

PRINCE RUPERT, BRITISH COLUMBIA.—CERTAIN LOCAL FIRMS AND THE AMALGAMATED SHEET METAL WORKERS' INTERNATIONAL ASSOCIATION LOCAL No. 672.

Agreement in effect from October 1, 1927, to May 1, 1929, and thereafter unless notice of change is given 90 days prior to expiration.

Wages: from October 1, 1927, to April 30, 1928, \$1.06½ per hour, from May 1, 1928, to April 30, 1929, \$1.12½ per hour.

Junior members to receive at least three-quarters of journeyman's rate.

Hours: 8 per day and 4 on Saturdays.

Overtime: time and one-half to 9 p.m.; after 9 p.m. and all work on Saturday afternoons, Sundays and holidays double time.

Manufacturing: Printing and Publishing

TORONTO, ONTARIO.—FOUR DAILY NEWSPAPERS AND THE TORONTO WEB PRESSMAN'S UNION No. 1 OF THE INTERNATIONAL PRINTING PRESSMEN AND ASSISTANTS' UNION.

Agreement in effect from June 1, 1928, to May 31, 1931, and from year to year until notice of change is given by either party 60 days prior to May 31 of any year.

Only union members to be employed if available. If no union men available, and others are employed, they may be retained if they join the union.

Foreman must be union member and he is to employ all help.

Quintuple presses require six pressmen, octuple presses five, sextuple presses four and quadruple presses three pressmen.

Wages of journeyman: from June 1, 1928, to May 31, 1929, \$44.50 for day work, \$45 for night work; from June 1, 1929, to May 31, 1930, \$45.50 for day work, \$46 for night work; from June 1, 1930, to May 31, 1931, \$46.50 for day work, and \$47.50 for night work. No payment for holidays or any other day where no work is performed.

Hours: for day work, 8 per day, 48-hour week; for night work, 7 per night, 42-hour week.

Overtime: time and one-half. All work on Sundays or holidays for regular issues during regular hours at regular rates. Except for this, work on Sundays and holidays double time.

Apprentices: one apprentice to every four journeymen allowed. Apprentices to serve five years. Minimum wage for starting \$14 per week. The wage scale for apprentices ranges from \$16 per week for first 6 months of third year to \$30 per week for second 6 months of fifth year.

A joint standing committee consisting of two members from each party to be established and all disputes to be referred to them. If they are unable to agree they are to appoint a fifth member, who together with this committee will form a board of arbitration whose decision shall be binding.

TORONTO, ONTARIO.—TORONTO OPEN SHOP PRINTERS' ASSOCIATION AND THE PRINTING PRESSMEN'S UNION OF TORONTO (A LOCAL CANADIAN UNION).

Agreement in effect from March 26, 1928, to March 26, 1931, and shall be renewed every three years, unless notice of change be given by either party 6 months prior to its expiration.

Wage rates do not form part of the agreement, but are left to the decisions of the Mutual Relations Committee. The rates decided by them to be effective from May 13, 1928, are as follows: journeymen pressmen \$38 per week for one colour sheet fed press and \$40 for a two-colour sheet fed press.

Night shift employees to receive 15 per cent in addition to regular rate. Employees, who, owing to old age or other reason, are unable to earn the minimum wage may be employed at a lesser wage.

Hours: for day work, 8 hours, 48 minutes per day, 4 on Saturdays, 48-hour week; for night work, also 48-hour week with 10 hours per night for 4 nights and 8 hours on fifth night of week, or if mutually agreed, 4 nights of 12 hours each. If three shifts are worked, two of them shall be considered night shifts.

Overtime: time and one-half for first three hours; thereafter and work on Sundays and holidays, double time.

No employee to be discriminated against either for being or not being a union member.

Women may learn to operate presses, and, if as efficient as men, are not to be discriminated against, but are to receive same wages as men.

A Mutual Relations Committee consisting of four members from each party to be estab-

lished and changed each year; all disputes to be referred to this committee, whose decision shall be binding, but if they fail to reach an agreement, a board of arbitration, consisting of one member from each party and a third disinterested party is to be appointed, whose decision shall be binding.

WINNIPEG, MANITOBA.—CERTAIN LOCAL NEWSPAPER OFFICES AND INTERNATIONAL TYPOGRAPHICAL UNION, LOCAL NO. 191.

Agreement to be in effect from November 1, 1927 to October 31, 1930.

This agreement is similar to the one previously in force and summarized in the LABOUR GAZETTE for July, 1926, with the following changes:

The foreman has the right to discharge employees, but exception may be taken to any discharge by the individual or the union and the matter shall then be referred to the Standing Committee or Board of Arbitration provided for, whose decision shall be binding.

Wages: from November 1, 1927, to October 31, 1928, \$46 per week for day work and \$48 for night work; from November 1, 1928, to October 31, 1929, \$46.50 for day work and \$48.50 for night work; from November 1, 1929, to October 31, 1930, \$47 for day work and \$49 for night work.

Wages per week for machine learners: from \$15 per week for first three weeks to \$28 for sixth three weeks; night or middle shifts \$2 per week over the day rate.

Apprentices' wages: from 25 per cent of journeymen's rate for first year to 75 per cent in fifth year.

VICTORIA, BRITISH COLUMBIA.—LOCAL NEWSPAPERS AND INTERNATIONAL TYPOGRAPHICAL UNION, LOCAL NO. 201.

Agreement in effect from January 1, 1928, to December 31, 1930 and for another year unless notice of change is given 60 days prior to expiration.

This agreement is similar to the one previously in force and summarized in the LABOUR GAZETTE for March, 1924, with the following exception:

Wages per week of 48 hours: for day work, \$48; per week of 45 hours for night work, \$48.

VICTORIA, BRITISH COLUMBIA.—LOCAL JOB PRINTING SHOPS AND INTERNATIONAL TYPOGRAPHICAL UNION, LOCAL NO. 201.

Agreement in effect from January 1, 1928, to June 30, 1929, and from year to year provided mutually satisfactory arrangements as to wages and hours may be made after June 30, 1929.

This agreement is similar to the one previously in force and summarized in the LABOUR GAZETTE for March, 1924, with the following exceptions:

Wages: from October 1, 1927, to September 30, 1928, journeymen pressmen, \$43.50 on cylinder and offset presses and \$40.45 on platen presses; from October 1, 1928 to June 30, 1929, journeymen pressmen on cylinder and offset presses, \$45, on platen press, \$42; wages of feeders remain the same as previously, that is \$25.45 per week on cylinder and offset presses and \$23.35 on platen presses: for night work

pressmen to receive 8 cents per hour over day rate and feeders and apprentices 5 cents as before. Any union member brought back on a recall shall be paid for not less than 2 hours' work.

Apprentice scale: after 2 to 2½ years, \$18 per week; after 2½ to 3 years, \$21; after 3 to 3½ years, \$24; after 3½ to 4 years, \$27.35.

Construction: Buildings and Structures

HALIFAX, N.S.—CONSTRUCTIVE MECHANICAL TRADES EXCHANGE AND UNITED BROTHERHOOD OF CARPENTERS AND JOINERS, LOCAL No. 83.

Agreement to be in effect from May 1, 1928, to April 30, 1929, and from year to year until notice of change is given 60 days previous to April 30, of any year.

Hours: 8 per day, 4 on Saturdays.

Overtime: time and one-half to 10 p.m.; after 10 p.m. and all work on Sundays and certain holidays, double time.

Wages: 66 cents per hour.

HALIFAX, N.S.—CONSTRUCTIVE MECHANICAL TRADES EXCHANGE AND UNITED ASSOCIATION OF PLUMBERS AND STEAMFITTERS, LOCAL No. 56.

Agreement in effect from May 1, 1928, to April 30, 1929, and from year to year until notice of change is given before January 1 of any year.

Hours: 8 per day; 4 on Saturdays.

Overtime: time and one-half to 10 p.m.; after 10 p.m. and all work on Sundays and holidays, double time.

Wages: 70 cents per hour.

Men working outside city to have fare and board, and to be paid for travelling time up to 8 hours out of 24.

Apprentices to serve five years, four under supervision of a journeyman and one year as an improver.

One apprentice allowed on any job to each branch of the trade, except where there are more than three journeymen plumbers or three journeymen steamfitters, then one additional apprentice may be allowed to each additional three journeymen.

QUEBEC, P.Q.—CERTAIN CONTRACTORS AND THE NATIONAL AND CATHOLIC UNION OF PAINTERS OF THE CITY OF QUEBEC, INCORPORATED.

Agreement to be in effect from June 11, 1928, to May 1, 1929, and thereafter until a new agreement is concluded.

Only union members to be employed or those willing to become such.

Hours: 9 per day; 54-hour week.

Overtime: time and one-half between 7 p.m. and midnight, after midnight, double time. No work on Sundays, St. Jean-Baptiste Day, Labour Day or religious holidays.

Wages: 47 cents per hour.

No strike or lockout until all means of conciliation have been tried and the dispute has been referred to a board.

The business agent of the union is the only person authorized to settle with the contractor or his representatives on all grievances under this agreement.

Transportation: Electric Railways

BRITISH COLUMBIA.—BRITISH COLUMBIA ELECTRIC RAILWAY COMPANY LIMITED AND AMALGAMATED ASSOCIATION OF STREET AND ELECTRIC RAILWAY EMPLOYEES OF AMERICA.

Agreement signed following the award of the Board under the Industrial Disputes Investigation Act, 1907, reported in the LABOUR GAZETTE for December, 1927.

Agreement in effect from September 30, 1927, to September 30, 1930.

Agreement to govern all employees of the Company referred to therein, except conductors, motormen and trainmen employed on the Lulu Island Branch and the Fraser Line.

Wages per hour: on city and suburban lines: motormen and conductors, first six months, 53 cents; second six months 57½ cents; third six months, 60½ cents; thereafter, 63 cents; motormen and conductors on work train service, 2 cents per hour extra; one-man car operators, 69 cents.

On interurban lines: passenger motormen and conductors from 53 cents for first six months to 65 cents for fourth six months and thereafter; freight motormen and conductors from 56 cents to 67½ cents; passenger brakemen from 53 cents to 62 cents; freight brakemen 63 cents; trolley-men, 61 cents. All work on Sundays, time and one quarter, holidays time and one-half. Extra man to be guaranteed a minimum of \$92 per month.

Shop and barn men: motor car repairers and freight car repairers from 56 to 66 cents; armature winders' helpers, blacksmiths' helpers, carpenters' helpers, machinists' helpers and sawyers from 51½ cents to 61½ cents; barn janitors and car cleaners 46 cents for first six months, 52 cents thereafter; freight car inspectors, 68 cents; freight car repairers' helpers, 56 cents; painters, 72½ cents; freight car painters, 59 cents; brush hands, 56 cents; carpenters, 72½ cents; freight car carpenters, 66 cents; machinists, 75 cents; habitter, 68 cents, trolley retriever 68½ cents; blacksmiths, 75 cents; car wiremen and air-brake fitters, 70 cents; armature winders 75, 70½ and 68 cents; leading hands while so acting 3 cents per hour extra.

Apprentices: first year 32 cents; second year 36½ cents; third year 42½ cents; fourth year 47 cents.

Freight shed department: checkers 57 cents; truckers 54½ cents.

Track maintenance men: interurban: 45½ cents per hour for first three months; 50 cents thereafter. City: 49½ cents for first three months; 54 cents thereafter; track welders 68½ cents, track welders' helpers, 59 cents. Bridge and building master's maintenance gang: carpenters, painters and pipe fitters, 70½ cents.

Monthly employees: baggage men \$117.15 and \$121.65 per month; auto drivers \$121.30; interlocking tower men \$113.30; depot master (Carrall Street) \$121.65; ticket clerks, Terminal Office, \$122.15; train despatchers \$195.50; station agents from \$123.15 to \$145.65; assistant agents, \$82.65 and \$118.65; motor-bus operators \$132; rate and chief clerk, \$144.15; cashier, \$139.65; accountant, \$135.15; switching clerk, abstract clerk and outside inspection clerk, \$121.65; billing clerk, \$112.65; shedman (Chilliwack), \$117.15; on track maintenance, regular gang foreman, \$125.80; extra gang foreman, \$134.80.

Union members only to be employed; new employees to be allowed one month to join the union. Closed shop and seniority clauses do not apply to truck foremen, freight office staff, station agents, storekeeper at Westminster Barn, Carrall Street depot master, ticket clerks at Terminal Office and train despatchers.

If the union protests the dismissal or suspension of any employee after an investigation has been made, the matter will be referred to a board of arbitration, consisting of one representative of each party and a third chosen by them; the decision of such board to be binding.

Promotion to be based on seniority and efficiency.

Monthly men to be given two weeks' holiday each year with pay after one year's service.

City and suburban lines:

Hours for conductors and motormen: 8 per day; overtime to be paid after 8 hours and 20 minutes; every eighth day off.

Overtime: for men on day runs, time and one-half to midnight, double time thereafter; for men on night runs, time and one-half to 2 a.m. and double time thereafter; for men on owl runs, time and one-half after running time up to eleven hours; double time thereafter.

When a run is not completed within ten hours of commencement of first shift, all such overtime shall be paid for at rate of twenty cents per hour in addition to work pay.

Uniforms to be supplied by the company who shall contribute half the cost. Change money up to \$30 to be supplied by the company.

Minimum age of conductors or motormen, 21 years.

Interurban lines:

Overtime: on passenger trains, over 8 hours and 15 minutes, time and one-half up to 16 hours and double time thereafter, provided that if schedule time of regular runs is less than 8 hours and 15 minutes, overtime shall be paid as from the end of the schedule run; on freight and work trains, time and one-half after 8 hours up to 16 hours, double time thereafter.

Hours: the rate of wages shall be based on a day's work of 8 hours. On passenger service all men to be allowed two days off each pay period (first to sixteenth and sixteenth to end of month), except in Exhibition and Christmas week. If a run is not completed within 11 hours, all time over 11 hours shall be computed as allowance time and shall be paid in addition to the working pay.

Students learning to be trainmen to be paid one dollar per day during probation, providing they qualify within 14 days.

Runs to be awarded to qualified trainmen in accordance with their seniority on the district.

Conductors to be provided with \$15 change money.

Shop and barn departments:

Mechanics and mechanics' helpers in Mechanics Department on night work to receive 5 cents per hour additional to regular rate.

Hours: 8 per day, 4 on Saturdays for day work and 8 per night, 6 nights per week for night work.

Overtime: time and one-half for first five hours and for work on Sundays, holidays and Saturday afternoons; after five hours overtime, all extra overtime at double time.

Any apprentice having served one year, who in the opinion of the shop foreman shows no

aptitude for acquiring the trade, will be transferred or dismissed.

Men who have served an apprenticeship or had 4 years' experience at the separate trades of machinists, blacksmiths, carpenters, painters, etc. are to be considered mechanics and paid the minimum rate of pay for mechanics.

Apprentices must begin between ages of 16 and 21 years and serve four years to learn any of the above trades.

In case of machinists, the number of apprentices shall be limited to one for the shop and one for every 4 machinists.

Track maintenance:

Hours: 8 per day, 4 on Saturdays.

Overtime: time and one-half for work on Sundays, holidays and Saturday afternoons and for overtime up to five hours; after five hours overtime, double time.

Freight shed and baggage room:

Hours: 8 per day.

Overtime: time and one-half to 10 p.m. after 10 p.m. and work on Sundays or holidays, double time. Baggage room men to have every second Sunday off.

Station Agents:

Hours: 10 per day for 6 days a week and Sunday hours not to exceed one-half hour for attendance on each regular passenger or express train. Two whole days off per month and two weeks' holidays annually with pay after one year's service.

Overtime: time and one-half.

Agents to be furnished with dwelling house, fuel and light free.

Service: Recreational

OTTAWA, ONTARIO.—CERTAIN LOCAL THEATRES AND INTERNATIONAL ALLIANCE OF THEATRICAL STAGE EMPLOYEES AND MOVING PICTURE MACHINE OPERATORS, LOCAL No. 257.

Agreement to be in effect from September 1, 1927, to August 31, 1929.

Only moving picture machine operators supplied by the union to be employed.

Wages of operators per week (not more than 48 hours): theatres of capacity of 500 or under and operating evenings and Saturday matinee \$30; capacity from 500 to 700, \$31; over 700, \$32.50; capacity 500 to 1,000 and giving matinee and evening performances \$40; capacity over 1,000, \$42. When capacity of 1,000 or over and continuous performances more than two days per week, hours shall be from noon to 11 p.m. with two shifts payable at \$41 per week per shift. If continuous performance is one or two days per week two men must be employed, one to receive \$41 per week and other \$31.

Overtime \$1.50 per hour. Sunday concerts and Sunday screenings \$5 for call of operator and screenings 50 cents per reel; assembling or dissembling machines \$5. Extra performances \$5.

Duties of operators to be confined to projection room.

Two weeks' notice of discharge (except for certain reasons) and of resigning to be given.

Any disputes to be referred to an arbitration committee consisting of one representative of each party and a third selected by them. No strike to occur before arbitration committee has rendered its decision.

FAIR WAGES CONDITIONS IN DOMINION GOVERNMENT CONTRACTS

THE Department has received information regarding contracts recently executed by the Government of Canada, which included among their provisions the fair wages conditions sanctioned by Order in Council for the protection of the labour to be employed. The contracts (Group "A") awarded in connection with the works of construction, etc., contained the following fair wages clause:—

1. All mechanics, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed for the character or class of work in which they are respectively engaged, and if there be no current rates in such district, then fair and reasonable rates, and shall work such hours as are customary in the trade in the district where the work is carried on, or if there be no custom of the trade as respects hours in the district, then fair and reasonable hours, unless for the protection of life and property, or for other cause shown to the satisfaction of the Minister of Labour, longer hours of service are required. The Minister of Labour may at any time and from time to time determine for the purposes of this contract, what are the current or fair and reasonable rates of wages and the current or fair and reasonable hours, and may from time to time rescind, revoke, amend, or vary any such decision, provided that his determination and any amendment or variation shall not be operative prior to the period of three months immediately preceding the date thereof.

Six of the contracts above mentioned contained schedules of rates and hours based on the current standards of the district in these respects. The schedules are given below.

One contract was awarded for interior fittings (Group "B") containing the general fair wages clause and other conditions for the protection of the labour employed, as sanctioned by the Fair Wages Order in Council which reads as follows:—

All workmen, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed, and if there be no current rate in such district, then a fair and reasonable rate, and shall work such hours as those fixed by the custom of the trade as respects hours in the district where the work is carried on, or if there be no custom of the trade as respects hours in the district then fair and reasonable hours, except for the protection of life and property, or on due cause shown to the satisfaction of the Minister of Labour. In the event of a dispute arising as to what is the current or a fair and reasonable rate of wages or what are the current hours fixed by the

custom of the trade or fair and reasonable hours it shall be determined by the Minister of Labour, whose decision shall be final; payment may also be withheld of any moneys which would otherwise be payable to the contractor until the Minister of Labour's decision has been complied with.

By the term "current wages" and the term "hours of labour fixed by the custom of the trade" in the foregoing are meant respectively the standard rates of wages and hours of labour either recognized by signed agreements between employers and workmen in the district from which the labour required is necessarily drawn or actually prevailing, although not necessarily recognized by signed agreements.

A statement was also received as to supplies ordered by the Post Office Department subject to the regulations for the suppressing of the sweating system and the securing of fair wages, etc.

The general labour conditions sanctioned by the Fair Wages Order in Council are as follows:

Where there are special circumstances which in the judgment of the Minister of Labour make it expedient that he should do so, he may decide what are the current or fair and reasonable rates of wages for overtime, and what is the proper classification of any work for the purposes of wages and hours. Immediately upon receipt of notice of any decision of the Minister of Labour hereunder the contractor shall adjust the wages and hours and classification of work so as to give effect to such decision. In case the Contractor shall fail so to do, or to pay to any employee or employees for any services performed or for any hours of labour, wages according to the rates fixed therefor by the Minister of Labour, the Minister of Labour may authorize and direct the Minister to pay any such wages at the rates so fixed and to deduct the amount thereof from any moneys owing by the Government to the Contractor and any such payment shall for all purposes as between the Contractor and the Government be deemed and taken to be payment to the Contractor, and the Contractor shall be bound in every particular by any such authority, direction and payment as aforesaid. The powers of the Minister of Labour hereunder shall not be exercised as to any employee or employees where it is established to his satisfaction that an agreement in writing exists and is in effect between the Contractor and the class of employees to which such employee or employees belong or the authorized representatives of such class of employees fixing rates of wages, overtime conditions and hours of labour.

2. The Contractor shall post and keep posted in a conspicuous place on the premises where the contract is being executed, occupied or frequented by the workmen, the Fair Wages Clause or Schedule inserted in his contract for the protection of the workmen employed, also any decision of the Minister of Labour under the preceding paragraph.

3. The Contractor shall keep proper books and records showing the names, trades, and addresses of all workmen in his employ and the

wages paid to and time worked by such workmen, and the books or documents containing such record shall be open for inspection by the Paid Wage Officers of the Government at any time it may be expedient to the Minister of Labour to have the same inspected.

4. The Contractor shall not be entitled to payment of any money which would otherwise be payable under the terms of the contract in respect of work and labour performed in the execution of the contract unless and until he shall have filed with the Minister in support of his claim for payment a statement attested by statutory declarations, showing (1) the rates of wages and hours of labour of the various classes of workmen employed in the execution of the contract; (2) whether any wages in respect of the said work and labour remain in arrears; (3) that all the labour conditions of the contract have been duly complied with; or, in the event of notice from the Minister of Labour of claims for wages, until the same are adjusted. The Contractor shall also from time to time furnish the Minister such further detailed information and evidence as the Minister may deem necessary in order to satisfy him that the conditions herein contained to secure the payment of fair wages have been complied with, and that the workmen so employed as aforesaid upon the portion of the work in respect of which payment is demanded have been paid in full.

5. In the event of default being made in payment of any money owing in respect of wages of any workmen employed on the said work and if a claim therefor is filed in the office of the Minister and proof thereof satisfactory to the Minister is furnished, the said Minister may pay such claim out of the moneys at any time payable by His Majesty under said contract and the amounts so paid shall be deemed payments to the Contractor.

6. These conditions shall extend and apply to moneys payable for the use or hire of horses or teams, and the persons entitled to payments for the use or hire of horses or teams shall have the like rights in respect of moneys so owing them as if such moneys were payable to them in respect of wages.

7. With a view to the avoidance of any abuses which might arise from the sub-letting of contracts it shall be understood that sub-letting other than such as may be customary in the trades concerned is prohibited unless the approval of the Minister is obtained; sub-contractors shall be bound in all cases to conform to the conditions of the main contract, and the main Contractor shall be held responsible for strict adherence to all contract conditions on the part of sub-contractor; the contract shall not, nor shall any portion thereof be transferred without the written permission of the Minister; no portion of the work to be performed shall be done at the homes of the workmen.

8. All workmen employed upon the work comprehended in and to be executed pursuant to the said contract shall be residents of Canada, unless the Minister is of opinion that

Canadian labour is not available or that other special circumstances exist which render it contrary to the public interest to enforce this provision.

DEPARTMENT OF PUBLIC WORKS

Contracts in Group "A" (Construction, etc.)

Alterations, repairs and renovations to the Old Examining Warehouse at Montreal, P.Q. Name of contractors, Munn and Shea, Limited, Montreal, P.Q. Date of contract, July 9, 1928. Amount of contract, unit prices, approximate expenditure, \$59,900.

Reconstruction of the south pier at Goderich, Ont. Name of contractor, James Alfred Vance, Woodstock, Ont. Date of contract, July 30, 1928. Amount of contract, unit prices, approximate expenditure, \$18,579.18.

Extension to the harbour wall at Owen Sound, Grey County, Ont. Name of contractors, John Edward Woolrich and Royden Howard Brigham, Owen Sound, Ont. Date of contract, July 17, 1928. Amount of contract, unit prices, approximate expenditure, \$14,697.

Deepening entrance channel and area at East Harbour at Port Hope, Ont. Name of contractor, Rob. G. Weddell, Trenton, Ont. Date of contract, July 13, 1928. Amount of contract, Class "A" \$8.50 per cubic yard, place measurement. Class "B" 49 cents per cubic yard, place measurement, approximate expenditure, \$11,760.

Cleaning up the approaches to the New Ontario Wharf and the Algoma Central Railway Wharf at Sault Ste. Marie, Ont. Names of contractors, Alexander B. McLean, Roderick A. McLean, and John McLean, all of Sault Ste. Marie, Ont. "A. B. McLean & Sons." Date of contract, July 14, 1928. Amount of contract (the sum of \$14 per hour for each hour actually engaged in said dredging work), approximate expenditure, \$15,400.

Deepening channel from main ship channel on Lake St. Peter to Yamachiche River, P.Q. Name of contractors, National Dock and Dredging Corporation, Limited, Quebec, P.Q. Date of contract, July 9, 1928. Amount of contract, Class "A" \$4.50 per cubic yard, scow measurement. Class "B" 38 cents per cubic yard, scow measure. Approximate expenditure, \$28,500.

Deepening channel leading to the Government Wharf at St. Pierre Les Becquets, P.Q. Name of contractors, National Dock and Dredging Corporation, Limited, Quebec, P.Q. Date of contract, July 9, 1928. Amount of contract—Class "A" \$6.50 per cubic yard, scow measurement. Class "B" 45 cents per cubic yard, scow measurement, approximate expenditure, \$17,514.

Dredging areas numbers 1 and 2 at Kincardine, Ont. Name of contractor, W. L. Forrester, Goderich, Ont. Date of contract, July 3, 1928. Amount of contract, Class "A" \$5 per cubic yard, scow measurement. Class "B" 50 cents per cubic yard for area No. 1 scow measurement. \$2.50 per cubic yard for area No. 2 scow measurement, approximate expenditure, \$14,625.

Deepening entrance channel to the wharf at Valleyfield, P.Q. Name of contractors, Les Chantiers Manseau, Limitée, Sorel, P.Q. Date of contract, June 30, 1928. Amount of contract, class "A" \$6 per cubic yard, place measurement. Class "B" 63 cents per cubic yard, place measurement, approximate expenditure, \$35,940.

The completion of dredging at the approaches of the Government wharf at Sault Ste. Marie, Ont. Name of contractors, The Soo Dredging Company, Limited, Sault Ste. Marie, Ont. Date of contract, June 29, 1928. Amount of contract, \$14 per hour for each hour actually engaged in said dredging work. Approximate expenditure, \$23,100.

Dredging areas Numbers 1, 2 and 3 at Contrecoeur, P.Q. Name of contractors, Les Chantiers Manseau Limitée, Sorel, P.Q. Date of contract, June 30, 1928. Amount of contract, Class "B" 40 cents per cubic yard for area No. 1, place measurement. 40 cents per cubic yard for area No. 2, scow measurement. 50 cents per cubic yard for area No. 3 place measurement, approximate expenditure, \$19,588.

Deepening channel along face of pier, at Lion's Head, Ont. Name of contractor, William Lawrence Forrester, Goderich, Ont. Date of contract, June 27, 1928. Amount of contract, Class "A", \$5.50 per cubic yard, scow measurement. 63 cents per cubic yard scow measurement, approximate expenditure, \$20,000.

Opening a channel through marsh near mouth of Yamaska River at Baie Lavalliere, P.Q. Name of contractor, Aimé Laperrière, Pierreville, P.Q. Date of contract, June 16, 1928. Amount of contract, Class "B", 30 cents per cubic yard, place measurement. Approximate expenditure, \$12,915.

Cleaning channel from outlet of river to the dam at Yamaska River, P.Q. Name of contractor, Aimé Laperrière, Pierreville, P.Q. Date of contract, June 16, 1928. Amount of contract, Class "B", 30 cents per cubic yard, place measurement. Approximate expenditure, \$4,279.80.

Deepening irregular shaped area between the outer end of the entrance piers of the harbour at Cobourg, Ont. Name of contractors, National Sand and Material Company, Limited, Welland, Ont. Date of contract, July 11, 1928. Amount of contract, Class "B", 55 cents per cubic yard, scow measurement. Approximate expenditure, \$15,400.

Deepening channel between piers at the eastern entrance of the harbour at Toronto, Ont. Name of contractors, National Sand and Material Company, Limited, Welland, Ont. Date of contract, July 20, 1928. Amount of contract, Class "B", 50 cents per cubic yard, scow measurement. Approximate expenditure, \$15,500.

Contract in Group "B" (Interior Fittings)

Interior fittings (in oak) in the Public Building at Drummondville, P.Q. Name of contractors, The Interior Hardwood Company, Limited, Kitchener, Ont. Date of contract, July 27, 1928. Amount of contract, \$1,550.

DEPARTMENT OF NATIONAL DEFENCE

(Contracts in Group "A" Construction, etc.)

Construction of buildings and light railway and general construction work at the magazines, Bedford Basin, N.S. Name of contractors, A. S. MacMillan and C. D. MacNearney, Halifax, N.S. Date of contract, June 22, 1928. Amount of contract, \$89,000.

Letter boxes, etc.....	156 40

PRICES, RETAIL AND WHOLESALE, IN CANADA, JULY, 1928

Cost of Living, Prices of Staple Articles and Index Numbers

THE movement in prices during the month was slight, the weekly family budget in terms of retail prices being somewhat higher, while the Dominion Bureau of Statistics index number of wholesale prices was again slightly lower.

In retail prices the cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average prices in some sixty cities was \$10.80 at the beginning of July, as compared with \$10.73 for June; \$10.92 for July, 1927; \$11.07 for July, 1926; \$10.49 for July, 1925; \$9.91 for July, 1924; \$10.17 for July, 1923; \$10.27 for July, 1922; \$10.96 for July, 1921; \$16.84 for July, 1920; \$13 for July, 1918; and \$7.42 for July, 1914. The more important advances occurred in the prices of beef, bacon and eggs, while less important increases occurred in the prices of veal, fresh and salt pork, lard, beans, evaporated apples and prunes. The prices of potatoes, milk, butter and rolled oats were lower. Including the cost of fuel and rent with that of foods the total budget averaged \$21.01 at the beginning of July, as compared with \$20.97 for June; \$21.11 for July, 1927; \$21.30 for July, 1926; \$20.70 for July, 1925; \$20.30 for July, 1924; \$20.65 for July, 1923; \$20.67 for July, 1922; \$21.53 for July, 1921; \$26.92 for July, 1920 (the peak); \$20.66 for July, 1918; and \$14.17 for July, 1914. Fuel and rent were practically unchanged.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon the average prices of 236 commodi-

ties in 1913 as 100 and weighted according to the commercial importance of the commodities was again slightly lower at 149.6 for July, as compared with 150.2 for June; 152.0 for July, 1927; 155.9 for July, 1926; 158.1 for July, 1925; 153.9 for July, 1924; 153.5 for July, 1923; 154.1 for July, 1922; 163.7 for July, 1921; 256.3 for July, 1920; 256.7 for May, 1920 (the peak); 202.8 for July, 1919; and 199.5 for July, 1918. Thirty-nine prices quotations were lower, thirty-nine were higher and one hundred and fifty-eight were unchanged.

In the grouping according to chief component material three of the eight main groups declined, two advanced and three were unchanged. The Animals and their Products group and the Fibres, Textiles and Textile Products group advanced, the former due to higher prices for cattle, hogs, beef, pork products, butter, cheese and eggs, and the latter due to higher prices for cotton, wool, jute, and hessian, which more than offset lower prices for silk and manilla rope. The Vegetables and their Products group was lower, due mainly to lower prices for grains, flour and other milled products, potatoes, sugar and tea. Lower prices for tin, lead, and silver caused a decline in the Non-Ferrous Metals group, while some minor declines in rolling mill products caused a decline in the Iron and its Products group. The Wood, Wood Products and Paper group, the Non-Metallic Minerals group, and the Chemicals and Allied Products group were unchanged.

In the grouping according to purpose consumers' goods advanced, higher prices for beef, pork products, butter, cheese, eggs, lard, fruit and coffee more than offsetting lower prices for flour, oat products, potatoes and tea. Producers' goods declined, due to declines in materials for the milling and other industries, for the metal-working industries, for the leather industries, as well as miscellaneous producers' materials. Materials for the textile and clothing industries, for the fur industry and for the meat packing industries were somewhat higher.

In the grouping according to origin raw or partly manufactured goods were lower, advances in the prices of cattle, hogs, beef, pork, eggs, citrus fruits, coffee, cotton and jute being more than offset by declines in grains, sugar, potatoes, raw silk and non-ferrous metals. Fully or chiefly manufactured goods also declined, due to lower prices for flour and other milled products, sugar, rope and linseed oil, which more than counterbalanced increases in the prices of butter, cheese, bacon, lard, evaporated apples and turpentine. Domestic farm products, articles of marine origin and articles of mineral origin were lower. Articles of forest origin were unchanged.

EXPLANATORY NOTE AS TO WHOLE-SALE PRICES

The index number calculated by the Dominion Bureau of Statistics is based upon the prices of 236 commodities, price levels in 1913 being taken as the base, that is equal to 100, the figures being weighted according to the commercial and industrial importance of each article included. The index number has been calculated by years back to 1890, being unweighted, however, for the period of 1890 to 1913 and has been calculated by months from 1919 to date for all groupings and from 1913 to date for the principal grouping. Summary tables of the Bureau's index number may be found in the supplement to the LABOUR GAZETTE for January, 1925, January, 1926, and in greater detail in the Report on "Prices and Price Indexes 1913-24," issued by the Bureau. A description of the methods used in the construction of the index number appears in the LABOUR GAZETTE for June, 1923.

The accompanying table gives the index numbers of the Dominion Bureau of Statistics by the principal groups in the three methods of classification and with those of the classification according to purpose or use in detail for the current month and for certain preceding dates.

EXPLANATORY NOTES AS TO RETAIL PRICES

The table of retail prices and rentals shows the prices at the beginning of July of seventy-one staple foodstuffs, groceries, coal, wood and coal oil and the rent of six-roomed houses in some sixty cities throughout Canada. All prices are for delivered goods. The exact quality, for which the quotation is given is set forth in the case of each commodity, and every effort has been made to ensure that the quotations in each

case refer to the same class of commodity in order that the statistics may be available for purposes of comparison from month to month, from city to city, etc. The prices of foods and groceries in each city, except milk and bread, are the averages of quotations reported to the Department and to the Dominion Bureau of Statistics by a number of representative butchers and grocers in each. The prices of fuel and the rates for rent are reported by the correspondents of the LABOUR GAZETTE.

Statistics similar to these were published each month from 1910 to 1920, the figures during this period being secured at the middle of each month by the correspondents of the LABOUR GAZETTE resident in each locality from dealers doing a considerable business with workingmen's households. From 1910 to 1915 the table contained a list of only the twenty-nine foods included in the family budget, with laundry starch, coal, wood, coal oil and rent. In 1915 when monthly publication of the budget in the LABOUR GAZETTE was begun, it was decided to extend the list of foods to 40, and in 1920 the list of foods and groceries was still further extended to include over 100 items.

Beginning with October, 1922, a number of commodities were dropped from the list, and in the case of a number of articles the average prices of the grades most sold have been given, owing to the impossibility of securing prices for uniform grades for the various cities from month to month.

Oleomargarine was dropped in March, 1924, the provision for its manufacture and sale since 1917, notwithstanding the Dairy Act, expired at the end of February, 1924.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts extensively occupied by workingmen. The first class is of houses in good condition, favourably located in such districts with good modern conveniences. The second class is of houses in fair condition less desirably located, but still fairly central, without modern conveniences.

The weekly budget of a family of five, calculated in terms of the average prices in the cities for which reports are received, includes twenty-nine staple foods, laundry starch, coal, wood, coal oil, and rent, these being the items for which statistics have been obtained each month and published in the LABOUR GAZETTE since January, 1910. The quantities of each commodity included are modifications of those employed in similar calculations by various authorities. For some articles comparatively large quantities are included owing to the absence of other important items of the same class. For instance, the only fruits are evaporated apples and prunes, and the only fresh vegetable is potatoes. But as market conditions affecting these usually affect the prices of other fruits and vegetables somewhat similarly, the relative proportions of expenditure on the various classes of foods tends to be maintained. At times when the price of an article heavily weighted for this purpose rises, or falls (abnormally) the increase (or decrease) in food prices so indicated is exaggerated, and this should be taken into account in using the budget as an indicator of changes in the cost of living. In fuel and lighting the quantities are estimated on a similar principle, anthracite coal being used chiefly east of Manitoba, and soft coal and wood in the western provinces,

(Continued on Page 920)

Higher price for petroleum coke. f. Petroleum coke. g. Natural gas used extensively. h. Lignite. i. Poplar, etc. j. In n. Houses with conveniences not extensively occupied by workmen but some at \$35.00. p. Mining Company houses \$20.

(Continued from Page 912)

while no allowance is made for the quantities required in the various localities owing to climatic conditions, nor for the differences in the heating value of the various fuels. It was estimated, when the budget was first published in 1912 in the report on wholesale prices in Canada for 1911, that these calculations represented from sixty to eighty per cent of the ex-

penditure of an ordinary family, according to the total income. For the average family of five the expenditure on these items of food, fuel, light and rent would be perhaps two-thirds or about sixty-five per cent of the total income.

While the budget serves to show the increase or decrease from time to time in the cost of the items included, it does not purport to show the minimum cost of food and fuel supplies for an average family in the Dominion or in any

one province. The quantities of meats, dairy products, cereals, etc., included were adopted as affording a liberal supply for the healthy family of a man at hard physical work. On the other hand an average family with an income sufficient to do so would buy less meat, etc., but more fruit, fresh and canned vegetables, etc., so that comparative expenditure would be little changed.

Index Number of Changes in the Cost of Living

In March, 1921, the Department published in the LABOUR GAZETTE a table of percentages of changes in the cost of living since 1913 as a tentative cost of living index number, using the figures of the above mentioned budget for the calculation for food, fuel and rent, with preliminary figures for clothing and sundries added and this table has been brought down to date at intervals since. The calculation of a comprehensive cost of living index number covering all items of workingmen's family expenditure in progress since 1918 had been sufficiently advanced to enable the publication of preliminary figures by groups in a supplement to the LABOUR GAZETTE, January, 1926, on Prices in Canada and in Other Countries, page 9. This table gave figures for June and December each year from 1914 to 1926, inclusive. Figures have since been given for March and September each year since 1917, and the accompanying table gives figures for December each year from 1914 to 1917, quarterly from 1918 to 1926, and monthly since January, 1927. As stated in the above-mentioned supplement, the figures in the food group in the family budget are still used to show the changes in food prices but in the other groups the percentage changes in the prices of each article have been weighted according to workingmen's average family consumption, and in the fuel and light groups, gas and electricity have been included.

Cost of Electric Current and Gas for Householders

With rates in 1913 as 100, index numbers of electric light rates were 1900, 141.4; 1905, 135.6; 1910, 118.1; 1911, 113.4; 1912, 109.1; 1913, 100.0; 1914, 96.5; 1915, 90.8; 1916, 87.6; 1917, 87.2; 1918, 85.8; 1919, 85.8; 1920, 84.2; 1921, 84.9; 1922, 82.7; 1923, 79.5; 1924, 79.2; 1925, 85.6; 1926, 75.6.

The above figures were arrived at by converting to the base of 1913 as 100, an index number of electric current costs from 1900 to 1913 constructed for the Board of Inquiry into the cost of living in Canada, 1914-15 (Report, Vol. 2, page 318) and bringing the figures down to 1926. The figures

are unweighted. The Dominion Bureau of Statistics has recently issued an index number of electric current rates for household consumption as follows: 1923, 73.8; 1924, 72.2;

CHANGES IN THE COST OF LIVING IN CANADA FROM 1913 TO 1927*

*The figures for "all items" were calculated by giving the following weights to each group: Food 35%; Fuel 8%; Rent 13%; Clothing 13%; Sundries 20%.

1925, 69.9; 1926, 68.7. This index number is weighted according to consumption in each city. When the above index number, 1900-1926, is weighted according to population in each city covered for the years 1923, 1924, 1925 and 1926, the figures are substantially the same as those recently issued by the Bureau.

The following are index numbers of rates for manufactured and natural gas for the years 1913 to 1926 issued by the Dominion Bureau of Statistics (revised, Prices and Price Indexes, 1913-1926): Manufactured gas, 1913, 100; 1914, 98.3; 1915, 98.1; 1916, 96.3; 1917, 100.7; 1918, 107.4; 1919, 111.1; 1920, 125.4; 1921, 143.6; 1922, 140.6; 1923, 135.7; 1924, 134.6; 1925, 131.6; 1926, 131.1. Natural gas, 1913, 100; 1914, 109.6; 1915, 112.8; 1916, 112.8; 1917, 113.6; 1918, 114.2; 1919, 116.2; 1920, 123.8; 1921, 143.0; 1922, 163.1; 1923, 162.9; 1924, 162.6; 1925, 178.7; 1926, 172.2. For the years 1900 to 1913 two index numbers of gas costs calculated for the Cost of Living Inquiry in 1914-1915, have been averaged and converted to the base of 1913 as 100, as follows: 1900, 125.8; 1901, 125.8; 1902, 125.8; 1903, 125.2; 1904, 123.9; 1905, 120.1; 1906, 107.5; 1907, 108.8; 1908, 106.9; 1909, 105.7; 1910, 103.8; 1911, 99.4; 1912, 100.6; 1913, 100.0.

Retail Prices

The advance in the price of beef, in progress since the beginning of the year, continued, sirloin steak averaging 35.7 cents per pound in July, as compared with 34.9 cents in June and 31.4 cents in January; round steak 30.3 cents per pound in July, as compared with 29.1 cents in June and 26.1 cents in January; rib roast 27.9 cents per pound in July, 26.9 cents in June and 24.0 cents in January; and shoulder roast 21.3 cents per pound in July, 20.6 cents in June and 18.2 cents in January. Veal was up from an average of 21.8 cents per pound in June to 22.5 cents in July. Mutton was slightly lower, averaging 30.1 cents per pound. Both fresh and salt pork were higher, the former averaging 28 cents per pound in July, as compared with 26.3 cents in June, and the latter 26.1 cents per pound in July, as compared with 25.9 cents in June. Increases occurred in nearly all localities. Breakfast bacon advanced from an average price of 35.7 cents per pound in June to 37.2 cents in July. Boiled ham again advanced, averaging 57.8 cents per pound, as compared with 56.3 cents in June. Lard was slightly higher, averaging 22 cents per pound.

Eggs showed a general seasonal increase, fresh averaging 38.5 cents per dozen in July, as compared with 36 cents in June, and cooking averaging 34.2 cents per dozen in July, as compared with 32.3 cents in June. Milk averaged 11.7 cents per quart in July, as compared with 11.8 cents in June. Lower prices were reported from St. Hyacinthe, St. John's, Prince Albert, Fernie and Victoria. Butter prices were again lower, dairy averaging 38.6 cents per pound in July and 39.9 cents in June, and creamery 43.3 cents per pound in July and 43.8 cents in June. Cheese was unchanged at an average price of 32.6 cents per pound.

Soda biscuits showed little change at an average price of 18.2 cents per pound. Flour and rolled oats showed little change. Canned vegetables were steady. Onions were down from an average price of 8.9 cents per pound in June to 8.2 cents in July. Potatoes were lower in most localities, averaging \$1.45 per ninety pounds in July, as compared with \$1.55 in June. Evaporated apples advanced from 21.5 cents per pound in June to 21.9 cents in July and prunes from 13.3 cents per pound to 13.5 cents. Canned peaches were slightly higher at 27.3 cents per two pound tin. Granulated sugar was unchanged in the average, increases in some localities being offset by declines in others. Coffee and tea showed little change. Anthracite coal was practically unchanged at an average price of \$16.13 per ton. Lower prices were reported from Halifax, St. John, Quebec, Three Rivers, Kingston and Timmins, and higher prices from Montreal, Orillia, Hamilton and Kitchener. No important changes occurred in the prices of wood. No changes were reported in rent.

Wholesale Prices

The following is a summary of a statement on wholesale prices changes during the month issued by the Dominion Bureau of Statistics.

Grain prices moved to lower levels during July, No. 1 Manitoba northern cash wheat, Fort William and Port Arthur basis, averaging \$1.31 per bushel, as compared with \$1.42½ in June. The high price for the month was \$1.41½ reached on the 4th, and the low \$1.20½ reached on the 23rd. More favourable crop prospects in Canada and the United States were said to be the chief factors causing the lower prices. Coarse grains followed the movement in wheat, western barley being down from 89½ cents per bushel to 83 cents; western oats from 64½ cents per bushel to 59 cents; and flax from \$1.97 per bushel to \$1.86. The price of flour at Toronto declined from

\$8.06 per barrel to \$7.81. Rolled oats were also lower at \$3.75 per ninety pound sack, as compared with \$3.95 in June. Raw sugar at New York fell from \$2.56½ per hundred to \$2.43½ and granulated sugar at Montreal was down from \$5.79½ per hundred to \$5.70. Oranges at Montreal advanced from \$6.50-\$8.50 per box to \$8.25-\$8.50, and lemons at Toronto from \$7 per box to \$7.50-\$8.00. Evaporated apples rose 2 cents per pound to 22 cents. Currants were somewhat higher at 15 cents per pound. Potato prices were generally lower. Quebec grades at Montreal declining from 74 cents per bag to 69½ cents; Ontario grades at Toronto from \$1.07½ per bag to \$1.00; and New Brunswick grades at St. John from \$2.25 per barrel to \$2. Rosin advanced from \$13.10 per barrel to \$13.60. Choice steers at Toronto rose from \$10.75 per hundred pounds to \$11.28 and hogs from \$11.90 per hundred pounds to \$12.62. Choice sheep declined from \$6.80 per hundred pounds to \$5.93½. Dressed beef at Toronto advanced,

the price for forequarters being up from \$13 per hundred pounds to \$14.50 and for hind-quarters from \$19.30 per hundred pounds to \$21.50. Dressed hogs rose from \$13.50 per hundred pounds to \$16.50 and barrelled pork from \$35.50 per barrel to \$36.50. Finest creamery butter at Montreal rose 3 cents per pound to 40 cents and prints at Toronto from 39½ cents per pound to 41 cents. The price of cheese was substantially higher, advancing at Toronto from 22 cents per pound to 25 cents and at Montreal from 25 cents per pound to 27 cents. Fresh eggs at Montreal rose from 38-40 cents per dozen in June to 43-48 cents in July. Raw cotton at New York was slightly higher, averaging 21.7 cents per pound. Raw wool rose from 34-36 cents per pound to 35-37 cents. In non-ferrous metals tin declined from 52½ cents per pound to 49½ cents; lead from \$5.92 per cwt. to \$5.83; spelter from \$7.36 per cwt. to \$7.24; and silver from 59½ cents per ounce to 59 cents.

PRICES IN GREAT BRITAIN AND OTHER COUNTRIES

THE following notes give the latest information available as to movements of prices in Great Britain and other countries. The index numbers of retail prices are from official sources unless otherwise stated. The authorities for the wholesale prices index numbers are named in all cases.

Great Britain

WHOLESALE PRICES.—The Board of Trade index number, on the base 1913=100, was 142.6 for June, a decline of 0.7 per cent from May. The index number for food fell 1.1 per cent with an advance in meat and fish and a decline in cereals and other foods. Industrial materials also showed a decline amounting to 0.4 per cent, owing to declines in textiles and miscellaneous products, while metals and minerals were unchanged.

The *Statist* index number (in continuation of Sauerbeck's figures), on the base 1867-77=100, was 122.6 for June, a decline of 2 per cent from May. Foodstuffs declined 5.3 per cent, showing declines in all groups, the most marked being in animal food amounting to 6.5 per cent. Industrial materials fell one per cent with an increase in textiles and declines in minerals and sundries.

The *Economist* index number, on the base 1901-05=100, declined to 179.6 for June, a decline of 2.1 per cent with declines in all groups, the most marked being in the cereals and meat group.

COST OF LIVING.—The index number of the Ministry of Labour, on the base July, 1914=100, was 165 at June 30, showing no change from June 1. Food increased 0.7 per cent, owing to higher prices for eggs and bacon, but the rise in food was counteracted by a decline in fuel and light from 165-170 to 165, owing to some reductions in the prices of coal and gas. Other groups were unchanged.

Austria

WHOLESALE PRICES.—The index number of the Federal Statistical Office, on the base, prices in gold, first half of 1914=100, was 133 for July, which is the same as for June. The index number for food was unchanged, but industrial materials rose from 144 to 146.

COST OF LIVING.—The official index number, on the base, prices in gold, July, 1914=100, was 108 for July, a decline of one point from June, owing to a decline in food prices, other groups remaining the same as for June.

Belgium

WHOLESALE PRICES.—The index number of the Ministry of Industry, Labour and Social Affairs, on the base, April, 1914=100, was 844 for May, as compared with 847 for April. The principal changes were advances in food products, fuels, tar and products, metals and products, fats and raw rubber, while declines were shown in petrol and products, fertilizers, textile products, resin products and hides and leather products.

COST OF LIVING.—The index number of the Ministry of Labour, on the base 1921=100, was 204.88 for June, as compared with 203.44 for May. All groups advanced, except rent and lodging which showed a very slight decline.

France

WHOLESALE PRICES.—The index number of *Statistique Générale*, on the base July 1914=100, was 639 for June, showing a decline of 1.1 per cent for the month. Both native products and imports declined. A decline in food was due to declines in vegetable products, while animal foods advanced. Industrial materials declined slightly with declines in minerals and metals and miscellaneous products, but a rise in textiles.

COST OF LIVING.—The index number of the cost of living, Paris, on the base 1914=100, was 519 for the second quarter of 1928, an advance of 2.3 per cent over the previous quarter. Food advanced 4.4 per cent, while heat and light declined 7.8 per cent and other groups were unchanged.

Germany

WHOLESALE PRICES.—The index number of the Federal Statistical Office, on the base 1913=100, was 141.3 for June a decline of 0.1 per cent from May. Agricultural products advanced 0.1 per cent, colonial products declined 0.6 per cent, industrial raw materials and semi-manufactured goods 0.2 per cent and manufactured goods advanced 0.4 per cent.

COST OF LIVING.—The official index number on the base 1913-14=100, was 151.4 for June, an advance of 0.5 per cent. Food advanced

0.9 per cent, heat and light 0.1 per cent, rent 0.1 per cent, clothing 0.1 per cent and sundries 0.2 per cent.

United States

WHOLESALE PRICES.—The index number of the Bureau of Labour Statistics, on the base 1926=100, was 97.6 for June, a decline of one per cent from May. None of the groups showed marked changes. There were slight advances in fuel and lighting, metals and metal products and building materials, while all the other groups declined slightly.

The *Annalist* index number, on the base 1913=100, was 150.6 for July, an advance of 0.8 per cent. Farm products, food products, textile products, fuels, building materials and miscellaneous products all advanced, while metals and chemicals declined slightly.

Bradstreet's' index number (showing the cost of a list of 106 commodities) was \$13.1903 at August 1, an increase of 0.3 per cent over July. Increases were noted in provisions, live stock, metals (mainly tin) fruits, hides and leather, coal and coke, building materials, chemicals and drugs and miscellaneous products (mainly rubber), while declines were noted in textiles, breadstuffs, vegetable oils and naval stores.

COST OF LIVING.—The index number of the Massachusetts Special Commission on the Necessaries of Life was 158.7 for June, a decline of 0.6 per cent. Food declined owing to lower prices for fish, eggs, milk, butter, tea and potatoes. Clothing also declined owing to lower prices for shoes, hats, and cotton goods. Other groups were unchanged.

Pension Fund Provides for Employees' Dependents

The International Telephone and Telegraph Corporation has adopted a pension plan which it is expected will ultimately be available to most of the associated companies. It is believed to be unique in making definite provision for taking care of dependents after the death of employees or pensioners.

The plan includes retirement pensions, equal to 1½ per cent of the employee's average annual earnings for his entire term of service, multiplied by the number of years of service; pensions for total disability, from accident or sickness; death benefits and pensions to

dependents, amounting to \$500 upon the death of all employees who have had two years of service and of disability pensioners and retirement pensioners, or \$1,000 in case of death resulting from accident in the company's service, and in addition to these cash payments, pensions to dependents equal to at least 22 per cent of the average annual compensation of the employee; and finally, temporary sickness and accident disability pensions, with a maximum of thirteen weeks' full pay and thirty-nine weeks' half pay.

FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE SECOND QUARTER OF 1928

THE number of fatal industrial accidents and such fatalities from industrial diseases as are included with fatal accidents by workmen's compensation boards, etc., which were recorded in the Department as occurring during the second quarter of 1928 was 374, there being 107 in April, 159 in May and 108 in June. In the second quarter of 1927, 290 fatal accidents were recorded. In this report it is the custom to record industrial accidents under the dates of the occurrence of the accidents, and fatal industrial diseases under the dates on which they prove fatal.

Reports were received from the Workmen's Compensation Boards, the Board of Railway Commissioners and certain other official sources; from certain large employers of labour; and from the correspondents of the *LABOUR GAZETTE*. Reports of accidents were also recorded from local newspapers.

By groups of industries the fatalities occurred as follows: agriculture, 60; logging, 40; fishing and trapping, 25; mining, non-ferrous smelting and quarrying, 47; manufacturing, 45; construction, 47; transportation and public utilities, 78; trade, 13; service, 19. Of the mining accidents 27 were in "metalliferous mining," 15 in "coal mining," 2 in "non-metallic mineral mining and quarrying," and 3 in "structural materials." Of the accidents in manufacturing, 2 were in the group "vegetable foods, drink and tobacco," 2 in "textiles and clothing," 1 in "rubber products," 12 in "saw and planing mill products," 9 in "pulp, paper and paper products," 1 in "printing and publishing," 6 in "iron, steel and products," 1 in "non-ferrous metal products," 4 in "non-metallic mineral products," 2 in "chemical and allied products," and 5 in "miscellaneous products." In construction there were 27 fatalities in "buildings and structures," 6 in "railway," 3 in "bridge and highway," and 11 in "miscellaneous construction." In transportation and public utilities there were 32 fatalities in "steam railways," 5 in "street and electric railways," 19 in "water transportation," 2 in "air transportation," 7 in "local transportation," 1 in "storage," 8 in "electricity and gas," and 4 in "telegraphs and telephones." There were 19 fatalities in service, of which 15 were in public administration, 1 in "recreational," 1 in "laundering, dyeing and cleaning," 1 in "custom and repair," and 1 in "personal and domestic." In trade there were 4 fatalities in "wholesale," and 9 in "retail."

The most serious disaster during this period occurred on May 24 when four members of an Ontario Government land survey party were

drowned near Iroquois Falls when their canoe capsized in the swollen river. Three pulp-cutters were also drowned in the same river a day or two previous when their canoe capsized in the swift current caused by the high waters. Several other accidents involved a number of fatalities. On June 4, three fishermen were drowned off La Have, N.S., when two heavy laden fish dories filled and sank. A train wreck at Drummondville, Quebec, on April 18, caused by a washout, resulted in three fatalities to the train crew. Another train was derailed by fall of rock near Smith's Falls on April 29 and three of the crew were killed. On April 9 three trappers near Fauquier, Ont., were burned to death by an explosion caused by pouring gasoline on a dying fire in their shack. Two trappers were drowned in the high waters of the Magneta-wan river about April 24 and two more were drowned at Byng Inlet, near Parry Sound, about May 9. On June 29 two mechanics in Toronto were crushed by an ash hopper which fell when the chain broke as it was being installed.

It may be mentioned that during this quarter three fatalities occurred in Canadian harbours which are not included in this list, owing to the fact that the men were employed by other countries. On April 1, a seaman from the Cunard liner *Ardania* fell from the ship's deck to the concrete wall of the harbour. On June 20 a British sailor of the Cunard liner *Ausonia* was drowned in Montreal Harbour when he took cramps while swimming after a strenuous life boat practice race, and on the same date a Danish seaman was drowned in Halifax Harbour when he fell from the schooner.

Supplementary lists of accidents.—The supplementary list of fatal accidents occurring in 1927, to be found after the main table of accidents, contains six fatalities of which one was in logging, one in mining, two in construction and two in transportation. Four of these are known to have resulted fatally in 1928. One of these accidents occurred in August, two in September, one in October and two in December. Concluding the lists is a supplementary list of fatal industrial accidents occurring during the first quarter of 1928. This includes eighteen fatalities, of which 1 was in agriculture, 5 in logging, 2 in mining, 2 in construction, 5 in transportation, 1 in trade, and 2 in service. Six accidents were in January, 3 in February and 9 in March.

FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE SECOND QUARTER OF 1928

Trade or Industry	Locality	Date	Age	Cause of Fatality
AGRICULTURE AND STOCKRAISING—				
Farmer	Near Carberry, Man.	Apr. 6		Became entangled in belt of gasoline engine.
Farmer	Colchester North (near Windsor), Ont.	" 8	57	Gored by a bull.
Farmer	Cultus Lake Valley, B.C.	" 9	56	Thrown to roadway when horses bolted and ran over him.
Farmer	West River District, N.S.	" 13	37	While adjusting a slipping belt of wood cutter was thrown against engine.
Farmer	Antigonish, N.S.	" 13	88	Killed when horse he was driving was struck by train.
Farmer's wife	Seaford, N.S.	" 17	54	Fell from sill of barn, fracturing skull.
Farmer	Near Langford Lake, B.C.	" 18	74	Fell from tree.
Housekeeper	Near Turtleford, Sask.	" 18		Burned in fire at house.
Farmer	Near Turtleford, Sask.	" 18		Severely burned when attempting to rescue housekeeper in fire at house. Died April 20.
Farmer	Near Hamilton, Ont.	about Apr. 22	55	Dragged and crushed by wheel of wagon when team bolted.
Farmer	Near Leamington, Ont.	" 29	45	While towing a ditched car his car turned turtle and he was drowned in ditch.
Farmer	Near Hafford, Sask.	about Apr. 30		Harrows turned over on him.
Farmer	Near Hafford, Sask.	" 30		Crushed under wagon wheel.
Farmer	Near Hafford, Sask.	" 30		Decapitated between plow and tractor.
Farmer	Near Speers, Sask.	" 30		When his wagon dropped into rut, was thrown under wheels, fracturing skull.
Farmer	Winnipeg	May 1	61	Struck by train.
Farmer	Trossachs, Sask.	" 4	64	Dragged beneath harrows when horses ran away.
Farmer	Near Kingston, Ont.	" 4		Drowned in river.
Farmer	Emerson District, Man.	" 4	39	Truck he was driving was struck by train, fracturing skull.
Truck farmer	Near Leamington, Ont.	" 5		Killed when his truck was struck by train.
Farm hand	Near Okatoks, Alta.	" 5		Stricken with heart failure while ploughing.
Farmer's son	Near Olds, Alta.	" 5	12	Severely burned while burning stubble.
Farmer	Near Morrin, Alta.	" 7		Burned by explosion while lighting fire with kerosene. Died May 8.
Farmer	Near Fredericton, N.B.	" 9	50	Gored by bull.
Farmer	Near Egremont, Alta.	" 10		Poisoned by eating wild parsnips.
Farmer	Waganville, Ont. (Near Kingston).	" 10	35	Killed by discharge of rifle when shooting a hawk.
Farmer	Near Fallbrook, Ont.	" 10	76	Killed while blasting rock out of holes for fence posts.
Farm hand	Near Lloydminster, Sask.	about May 10		Thrown beneath wheels when his team bolted.
Farmer	Near Admiral, Sask.	" 13	70	Burned by explosion from lighting fire with kerosene.
Farmer	Yellow Grass, Sask.	" 14	28	Burned by explosion from lighting fire with gasoline.
Farmer's wife	Near Wadena, Sask.	" 15		Burned when clothing caught fire while dumping an apron full of chips into stove.
Farmer	Eden, Ont.	" 17	21	Fell from top of barn fracturing skull.
Farmer	Near Hussar, Alta.	" 18	30	Killed by team of horses.
Farmer	Near Alameda, Sask.	" 18	36	Fell into wheels of drill breaking his neck.
Farmer	Near Brandon, Man.	" 18	17	Injured in abdomen when ploughing, team ran away. Died May 21.
Farmer	Gagetown, N.B.	" 18	68	Train struck his wagon when horse became frightened.
Farmer	La Flèche, Sask.	" 19	60	Kicked in abdomen by horse. Died May 22.
Farmer	Near Pennant, Sask.	" 20	35	Thrown to ground when horses ran away.
Farmer	Near Morganston, Ont.	" 22	68	Thrown from farm machine when horses took fright.
Farmer	Near Smoky Lake, Alta.	" 25		Premature explosion while blasting out stumps.
Farmer	Near Galt, Ont.	" 25	65	Injured when his team ran away. Died May 26.
Farmer	Near Tisdale, Sask.	" 25	45	Burned in fire that destroyed farm house.
Housekeeper			45	
Farmer	Near Salvador, Sask.	May 26	48	Crushed under gang plow.
Farm hand	Near Watford, Ont.	" 26	26	Roller passed over him when team bolted.
Farmer	Hermanville, P.E.I.	about May 27	70	Injured while rounding up a hog for butcher.
Farm labourer	Near Digby, N.S.	" 27	35	Struck by car while walking to work.
Farm foreman	Near Lethbridge, Alta.	" 28	53	Kicked by horse, internal injuries.
Farmer's son	Near Clyde, Alta.	June 1	13	Thrown from disse harrow when horses ran away.
Farm hand	Near Lethbridge, Alta.	" 2		Kicked by horse.
Farmer	Salem, Ont.	" 5		Crushed under roller when horses ran away.
Farmer's daughter	Near Winham, Ont.	" 6	17	Burned by explosion from lighting fire with kerosene.
Farmer's daughter			15	
Farmer	Marset, Que.	" 8	30	Fell from his wagon while crossing bridge and drowned.
Farmer	Near Yorkton, Sask.	" 7	30	Slipped off granary roof, falling on pitch fork, which punctured bowels. Died June 11.
Farm hand	Near Rouleau, Sask.	" 13		Fell beneath wheels of water tank wagon.
Farmer	Near Grand Valley, Ont.	" 20	65	Killed when his team bolted, throwing him to roadway.
Farmer	Near Cochrane, Alta.	" 21		Struck by lightning.

FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE SECOND QUARTER OF 1928—Continued

Trade or Industry	Locality	Date	Age	Cause of Fatality
AGRICULTURE AND STOCKRAISING—Con.				
Farmer.....	Glenevis, Alta.....	June 28	53	Thrown under moving car when his horses took fright.
Farmer.....	Thrms, B.C.....	" 29		Crushed under car when it went over bank.
LOGGING—				
Logger.....	Near Kenora, Ont.....	about Apr. 2		Tree fell on him.
Logger.....	Alice Arm, B.C.....	" 3	40	Fell from a boom of logs and drowned.
Wood splitter.....	Bloodcl, B.C.....	" 4	30	Slipped in stepping down from step of locomotive and was run over.
Pulpwood contractor.....	Pottsville, Ont.....	" 7		Crushed by tractor when he fell underneath it. Died April 13.
Logger.....	Crows Nest Pass, B.C.....	" 11	48	Log skidded and rolled on him.
Second loader.....	Bowser, B.C.....	" 11	24	Spar tree broke crushing his body.
Bucker.....	Port-Neville, B.C.....	" 12	49	Sapling blew down and struck him.
Logger.....	Deep Bay, B.C.....	" 11	23	Struck on head by block.
Labourer.....	Cartwright Bay, B.C.....	" 13	27	Slipped into water while moving logs and drowned.
Logger.....	Timberlands, B.C.....	April 17	32	Injured in logging camp. Died April 19.
Logger.....	Nelson, B.C.....	About April 17	64	Struck by falling tree, fracturing his leg, died April 22.
Logger.....	Near Squamish, B.C.....	" 18	46	Log fell on him and broke his neck.
Labourer.....	Maple Island P.O., Ont.....	" 19	33	Drowned.
Logger.....	Restigouche Co., N.B.....	" 27	18	Struck by falling tree, fracturing skull.
Woodsmen.....	GloUCESTER Co., N.B.....	May 1	29	Logs fell on him fracturing skull.
Logger.....	Jervis Inlet, B.C.....	" 2	26	Crushed between two logs.
River driver.....	Near Monteith, Ont.....	" 5	17	Drowned while working on log drive.
Chokerman.....	Valdez Island, B.C.....	" 8	23	Struck by falling snag.
Logger.....	Spurfield, Alta.....	" 9	23	While rolling in logs, the pile gave way, crushing him.
Logger.....	Near Chicoutimi, Que.....	" 18	21	Struck by log while dynamiting jam on river.
Cook.....	Near Chicoutimi, Que.....	" 21	30	Burned when fire destroyed camp.
Logger.....	Kwatna Inlet, B.C.....	" 21	27	Boulder rolled down mountain and struck him.
Logger.....	Quatsino, B.C.....	" 21	27	Tree fell on him, fracturing skull.
Logger.....	Gaspé, Que.....	" 23		Drowned while engaged on log drive.
Logger.....	Pigeon Bay, Ont.....	" 23	25	Drowned while working on log boom.
Logger.....	Near Hoyle, Ont.....	About May 27		Slipped between two logs and drowned.
Logger.....	Opeongo River, Ont.....	" 28	24	Drowned when their boat crashed on sunken rock in rapids.
Logger.....	Opeongo River, Ont.....	" 28	30	Drowned when their boat crashed on sunken rock in rapids.
Head faller.....	Englewood, Ont.....	May 31	29	Struck by side winder, breaking leg and back.
Logger.....	Nelson, B.C.....	June 2		Crushed against stump by a log. Died June 4.
Logger.....	Fort Smith, N.W.T.....	" 5	65	Head crushed between two logs while loading logs.
Logger.....	Koch Siding, B.C.....	" 5		Pinned against stump by log, fracturing skull.
Spiker.....	Youbou, B.C.....	" 5	60	Struck on head by piece of rock from blast.
Foreman.....	Pucakasaw River, Ont.....	" 13	69	Drowned.
Driver.....	Parde Twp., Ont.....	" 18	20	Drowned.
Labourer.....	Fraser River, B.C.....	" 25	59	Fell from boom and drowned.
Log driver.....	Near Rouyn, Que.....	" 27		Drowned while engaged in breaking jam of logs.
Log driver.....	Near Rouyn, Que.....	" 27		Drowned while engaged in breaking jam of logs.
Log driver.....	Buckingham, Que.....	" 28	21	Fell from log boom and drowned.
Logger.....	Near Butedale, B.C.....	" 29	45	Killed in logging accident.
FISHING AND TRAPPING—				
Trapper.....	Fauquier, Ont.....	April 9		On pouring gasoline on a dying fire in shack, they were burned to death following the explosion. Third died April 13.
Trapper.....	Fauquier, Ont.....	April 9		On pouring gasoline on a dying fire in shack, they were burned to death following the explosion. Third died April 13.
Trapper.....	Fauquier, Ont.....	April 9		On pouring gasoline on a dying fire in shack, they were burned to death following the explosion. Third died April 13.
Trapper.....	Near Pakenham, Ont.....	" 11	18	His boat sank and he was drowned.
Fisherman.....	Near Nanaimo, B.C.....	" 13	50	Canoe capsized.
Fisherman.....	Near Digby, N.S.....	" 14	41	While hauling in rakes, became entangled in hoisting.
Fisherman.....	Off Sebelt, B.C.....	" 21		Suffocated by gas fumes.
Trapper.....	On Magnetewan River, Ont.....	About April 24		Drowned.
Trapper.....	On Magnetewan River, Ont.....	April 24		Drowned.
Fisherman.....	Off Malignant Cove, N.S.....	" 26	35	Drowned when his boat capsized.
Fisherman.....	Montreal.....	May 6	50	Drowned when their boat capsized.
Fisherman.....	Montreal.....	May 6	28	Drowned when their boat capsized.
Trapper.....	Byng Inlet, near Parry Sound, Ont.....	About May 9		Drowned.
Trapper.....	Byng Inlet, near Parry Sound, Ont.....	May 9		Drowned.
Fisherman.....	Kabins near Hearst, Ont.....	" 9		Drowned.
Fisherman.....	Near Louiseburg, N.S.....	" 10	30	Drowned.
Fisherman.....	Near Leamington, Ont.....	" 18	22	Lost control of car and it plunged into water, drowned.
Fisherman.....	Near Leamington, Ont.....	" 18	24	Drowned.
Fisherman.....	Long Lake, Near Halifax.....	" 20	25	Drowned.
Fisherman.....	Off Canso, N.S.....	" 29		Fell overboard from schooner and drowned.
Fisherman.....	Off Vancouver Island, B.C.....	About June 1		Swept overboard from boat during storm and drowned.
Fisherman.....	Off Vancouver Island, B.C.....	June 1		Swept overboard from boat during storm and drowned.
Fisherman.....	Off La Have, N.S.....	" 4	23	Drowned when two heavy laden fish dories filled and sank.
Fisherman.....	Off La Have, N.S.....	" 4	21	Drowned when two heavy laden fish dories filled and sank.
Fisherman.....	Off La Have, N.S.....	" 4	19	Drowned when two heavy laden fish dories filled and sank.
Fisherman.....	Off Antigonish, N.S.....	" 18	20	Drowned when his boat capsized in rough sea.

FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE SECOND QUARTER OF 1928—Continued

Trade or Industry	Locality	Date	Age	Cause of Fatality
MINING, NON-FERROUS SMELTING AND QUARRYING—				
<i>Metalliciferous Mining—</i>				
Timberman.....	Kirkland Lake, Ont.....	April 1	39	Scaffold broke and they fell to bottom of winze.
Timberman.....			37	
Miner.....	Rouyn, Que.....	" 14		Struck by handle of a crane, fracturing skull.
Labourer.....	Argonaut Mine, Ont.....	" 17	28	Died April 15.
Prospector.....	Le Pas, Man.....	" 21	34	Rock rolled over him.
Prospector.....			16	Killed in aeroplane crash.
Miner.....	Frood Mine, Ont.....	" 23	20	Crushed between skip and timbers of shaft.
Helper.....	Trail, B.C.....	" 25	26	
Chute blaster.....	Levack, Ont.....	" 26	37	Crushed under rock loosened by unexpected explosion.
Drill helper.....	South Porcupine, Ont.....	" 29	34	Jammed between car and wall of cross cut.
Machine runner.....	South Porcupine, Ont.....	May 3		Silicosis about Aug. 22, 1926, Died May 3, 1928.
Prospector.....	Near Rouyn, Que.....	" 5	35	Died from exposure.
Timberman.....	Galetta, Ont.....	" 8	50	Buried in rock slide in mine.
Timberman.....			40	
Deckman.....	Timmins, Ont.....	" 19	34	Crushed in cage.
Tramway lineman.....	Premier, B.C.....	" 25		Struck by bucket knocking him off tower.
Motorman.....	Kirkland Lake, Ont.....	" 25	29	Crushed between ore chute and ore car.
Prospector.....	Lac du Bonnet, Man.....	" 26	20	Drowned when canoe capsized in squall.
Labourer.....			21	
Miner.....	Kirkland Lake, Ont.....	June 5	28	Fell down shaft when hoisting bucket over-turned.
Miner.....	Prince Rupert, B.C.....	" 5	53	Fell and crushed between ore bucket and trestle.
Machine helper.....	Ostrom Gold Mines, Ont.....	" 16	24	Explosion caused by drilling into a missed hole.
Motorman.....	Timmins, Ont.....	" 18	26	Car ran off track, throwing him and crushing his ribs.
Feederman.....	Allenby, B.C.....	" 21	24	Fell into a machine while fixing light.
Miner.....	Matheson, Ont.....	" 27	37	Stepped into hot water and scalded.
Engineer.....	Narrow Lake, Man.....	About June 29		Drowned when canoe capsized.
Manager.....				
<i>Coal Mining:—</i>				
Miner.....	Christmas Island, N.S.....	April 10	34	Struck on head by fall of stone.
Machine runner.....	Sydney Mines, N.S.....	" 11	53	Killed by a fall of stone.
Track layer.....	Fernie, B.C.....	" 18		Injured by fall while carrying mine ties. Died May 16.
Miner.....	Drumheller, Alta.....	" 24	50	Struck on head by descending bucket.
Miner.....	Glace Bay, N.S.....	" 25	44	Slipped and fell fracturing skull. Died April 27.
Miner.....	Mountain Park, Alta.....	" 26	63	Asphyxiated by gas.
Miner.....	Near Entwistle, Alta.....	May 3	41	Injured in head and arm while riding on locomotive.
Check weighman.....	Drumheller, Alta.....	" 7	60	Struck by train.
Miner.....	Coleman, Alta.....	" 16	45	Cap rock fell on him.
Miner.....	Nanaimo, B.C.....	" 23	47	Rock fell on him.
Driver.....	Lethbridge.....	June 12	56	Kicked by horse, internal injuries.
Miner.....	Sydney Mines, N.S.....	" 19	64	Crushed by fall of stone.
Miner.....	Foot-Hills, Alta.....	" 21	33	Struck by piece of timber, fractured skull.
Miner.....	Glace Bay, N.S.....	" 28	17	Injured while working in mine pit.
Miner.....	Waterford, N.S.....	" 29	17	Mangled in machinery.
<i>Non-metallic mineral mining and quarrying, n.e.s.:—</i>				
Miner.....	Black Lake, Que.....	June 4	24	Crushed by falling rock.
Miner.....	Falkland, B.C.....	" 22	33	Fell 20 feet on to rocks below.
<i>Structural Materials:—</i>				
Teamster.....	Port Arthur, Ont.....	April 6	26	Buried under a fall of gravel.
Labourer.....	St. Marc des Carrières, Que..	June 19	25	Drowned when bridge collapsed beneath his lorry.
Driller.....	Montreal, Que.....	" 28	23	Premature dynamite explosion in quarry.
MANUFACTURING—				
<i>Vegetable foods, drink and tobacco:—</i>				
Chopping mill operator.....	Hawarden, Sask.....	April 18	46	Caught in engine belt and broke his neck.
Oilier.....	Port Colborne, Ont.....	" 23	50	While oiling machinery his arm was caught and severed. Died April 25.
<i>Textiles and Clothing:—</i>				
Tailor.....	Toronto, Ont.....	About May 1	74	Pricked finger with needle, causing blood poisoning. Died May 6.
Dyer.....	Toronto, Ont.....	June 13	36	Liquid ammonia passed over him, injuring eyes and lungs.
<i>Rubber Products:—</i>				
Labourer.....	Toronto, Ont.....	" 9	18	Burned when gasoline caught fire.

FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE SECOND QUARTER OF 1928—Continued

Trade or Industry	Locality	Date	Age	Cause of Fatality
<i>MANUFACTURING—Con.</i>				
<i>Saw and planing mill products:—</i>				
Labourer.....	Chemainus, B.C.....	April 16		Slipped off platform into water under plant, drowned.
Labourer.....	Dorchester, N.B.....	About April 25	40	Injured while helping to dismantle portable mill. Died May 23.
Labourer.....	South Vancouver, B.C.....	May 4		Piece of lumber struck him, piercing his lung.
Labourer.....	Vancouver, B.C.....	" 5	45	Fell 15 feet from platform. Died May 11.
Labourer.....	Aylesford, N.S.....	" 15	24	While adjusting belt clothing became entangled, fractured skull.
Millwright.....	The Pas, Man.....	" 23	63	Struck in stomach by piece of lumber.
Saw operator.....	Calgary, Alta.....	" 30	25	Slipped and fell on circular saw while operating same.
Labourer.....	Squamish, B.C.....	June 2		Fell from launch into water and drowned.
Saw operator.....	Near Tisdale, Sask.....	About June 14	24	Thrown under wheels of wagon when team ran away; fractured skull.
Teamster.....	Calgary, Alta.....	" 14	21	Fell into chute, dropped 18 feet.
Labourer.....	Cache Bay, Ont.....	" 21		Caught in shaft. Died July 1.
Ass't millwright.....	Oromocto, N.B.....	" 23	21	
<i>Pulp, paper and paper products:—</i>				
Carpenter.....	Gatineau, Que.....	April 1	56	Electrocuted by current from power transmission line. Died April 27.
Back tender.....	Three Rivers, Que.....	April 28	28	Caught in machine and thrown to concrete floor. Died April 30.
Labourer.....	Hull, Que.....	May 8	62	Suddenly fell unconscious while at work.
Pulp cutter.....	Near Iroquois Falls, Ont.....	" 22		Drowned when canoe capsized in swollen river.
Pulp cutter.....		"		
Electrician.....	Gatineau, Que.....	June 11	48	Electrocuted while employed in switch room.
Millwright.....	Burt Siding, Ont.....	" 18	54	Slipped into conveying gear, crushing toes, infection.
Worker in carton works.....	Edmonton, Alta.....	" 29	17	Head and body crushed when caught in machinery.
<i>Printing and publishing:</i>				
Messenger.....	Montreal, Que.....	April 16	15	Stepped into elevator shaft, fell, fracturing skull.
<i>Iron, Steel and Products:</i>				
Labourer.....	Toronto, Ont.....	" 2		Killed by poisonous liquid fumes.
Labourer.....	Brookville, Ont.....	" 27	74	Bruised arm, infection.
Labourer.....	Sackville, N.B.....	" 27	60	Clothing caught in shaft when cleaning windows in machine shop.
Bench hand with car factory.....	Oshawa, Ont.....	May 4	48	Received cut in hand, developed blood poisoning. Died May 23.
Labourer with stove and furnace manufacturers.....	Preston, Ont.....	" 7	60	While unloading car of steel fell and fractured skull.
Table operator.....	North Vancouver, B.C.....	" 9	65	Finger caught between cable and rim of stationery sheaf, infection. Died May 28.
<i>Non-ferrous metal products:</i>				
Labourer.....	Arvida, Que.....	June 8	20	Arm severed when caught in machinery.
<i>Non-metallic mineral products:</i>				
Labourer.....	Hull, Que.....	April 30	37	Fell into stone crusher.
Acetylene welder.....	Rosevale, N.B.....	May 29	27	Killed by explosion of acetylene welding machine.
Labourer.....	Lakefield, Ont.....	June 23	21	Suffocated in a drying bin.
Labourer.....	Asbestos, Que.....	May 9		Struck by two pieces of wood while loading a truck.
<i>Chemical and Allied Products—</i>				
Employee (Carborundum plant).	Falls View, Ont.....	Apr. 11		Caught in machinery, fracturing leg.
Employee (Alkali plant).	Amherstburg, Ont.....	June 11	36	Crushed by crane.
<i>Miscellaneous Products</i>				
Labourer.....	Grenville, Que.....	May 8	18	Legs cut off while working in plant.
Installer.....	St. Catharines, Ont.....	" 16	60	Dropped dead while installing machinery.
Labourer.....	Thurso, Que.....	" 23	25	Fell from freight car, fracturing his neck. Died May 24.
Tester.....	Montreal, Que.....	" 23	43	Electrocuted while testing high voltage cable wire.
Electrician.....	Montreal, Que.....	June 14	40	Touched live wire in wireless telegraphy machine and was electrocuted.

FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE SECOND QUARTER OF 1928—Continued

Trade or Industry	Locality	Date	Age	Cause of Fatality
CONSTRUCTION—				
<i>Buildings and Structures</i>				
Labourer.....	Niagara Falls, Ont.....	Apr. 5	35	Struck by scoop of steam shovel.
Contractor.....	Cedar Cottage, B.C.....	about Apr. 6	56	Fell from scaffold. Died April 19.
Labourer.....	Montreal, Que.....	Apr. 14	46	Struck on head by load of cement in elevator shaft.
Carpenter.....	Montreal, Que.....	" 18	76	Fell from third story when ladder gave way.
Installer.....	Toronto, Ont.....	" 19	45	While installing elevator fell to bottom of shaft.
Labourer.....	Toronto, Ont.....	" 26	22	Fell 35 feet from grandstand.
Labourer.....	Hull, Que.....	" 27	46	Fell from scaffolding.
Rigger.....	Kapuskasing, Ont.....	May 12	While riding on a crane, foot got caught in switch and was dragged and mutilated.
Labourer.....	Port William, Ont.....	" 17	26	Fell from 50 feet scaffold. Died May 18.
Labourer.....	West Fort, Ont.....	" 18	26	Fell from roof, fracturing skull and arms.
Labourer.....	Port Arthur, Ont.....	" 18	27	Scow tipped throwing working tower and cement mixer into water and they were drowned.
Barnbuilder.....	Puslinch, Ont.....	May 28	32	Fell 25 feet at barn raising, necessitating amputation of arm and gangrene developed. Died May 31.
Bricklayer.....	St. Ludger, Que.....	" 28	38	Drowned when car skidded off road into river.
Labourer.....	Regina.....	about June 6	Fell from scaffold, fracturing skull.
Pile driver.....	Three Rivers, Que.....	" 6	29	Crushed during pile driving operations.
Carpenter.....	Sudbury, Ont.....	" 7	Bruised knee, infection.
Contractor.....	New Westminster, B.C.....	" 9	73	Fell from house. Died June 11.
Carpenter.....	Montreal, Que.....	" 12	53	Fell from scaffold.
Labourer.....	Montreal, Que.....	" 13	21	Fell down hoist shaft, fracturing skull.
Carpenter.....	Hamilton, Ont.....	" 13	55	Fell from ladder, injuring head.
Labourer.....	Hamilton, Ont.....	" 13	23	Buried by cave in while engaged in excavation work.
Labourer.....	Port Arthur, Ont.....	" 16	Expired while at work.
Ironworker with Steel Contractors.	York Mills, Ont.....	" 25	Fell 90 feet.
Painter.....	St. Catharines, Ont.....	" 25	58	Fell from ladder.
Mechanic.....	Toronto, Ont.....	" 29	29	Crushed by ash hopper which fell when chain broke as it was being installed.
Mechanic.....	Toronto, Ont.....	" 29	28
<i>Railway—</i>				
Tie maker.....	Prince George, B.C.....	Apr. 3	25	Axe slipped and hit him on knee. Died April 11.
Labourer.....	The Pas, Man.....	" 14	38	Struck by rock from blasting operations, fracturing skull.
Tankman.....	Fir Mountain, Sask.....	May 25	40	Crushed beneath water tank which overturned when team ran away.
Labourer.....	Near Ashmont, Alta.....	June 11	25	Injured when hand car on which they were returning from work collided with car ahead which jumped the rails. One died June 12, one died June 13.
Labourer.....	Near Ashmont, Alta.....	June 11	28
Teamster.....	Mile 76, James Bay Extension, T. & N. O.	" 13	Struck by lightning.
<i>Highway and Bridge—</i>				
Labourer.....	Near Woodstock, N.B.....	May 26	Struck by car while working on road. Died May 27.
Painter.....	Montreal, Que.....	June 5	32	Fell from bridge and drowned.
Carpenter.....	Toronto, Ont.....	" 14	33	Fell 80 feet from viaduct.
<i>Miscellaneous—</i>				
Oiler.....	Welland, Ont.....	Apr. 5	24	Slipped into gears of a suction dredge.
Labourer.....	Chute-a-Caron, Que.....	" 19	Buried by an avalanche of sand.
Labourer.....	Welland, Ont.....	May 1	26	Buried by cave-in of bank while engaged on construction of canal siphon.
Structural Steel worker.	Near Point du Bois, Man.....	" 5	22	Fell from bridge and drowned.
Miner with contractors.	Hamilton, Ont.....	" 7	Caught by cave-in while at work on sewer.
Brakeman.....	Near Allenburg, Ont.....	" 7	Struck by train of dump cars while setting switch.
Labourer.....	Gravenhurst, Ont.....	" 24	21	Buried when trench caved in.
Labourer.....	Regina, Sask.....	June 12	43	Crushed beneath telephone poles when they rolled from flat car.
Electrician.....	Paigan Falls, Que.....	" 19	44	Fell from ladder.
Labourer.....	Montreal, Que.....	" 23	48	Buried by cave-in of ditch.
Labourer.....	Toronto, Ont.....	" 26	43	Fell from viaduct.
TRANSPORTATION AND PUBLIC UTILITIES—				
<i>Steam Railways—</i>				
Brakeman.....	Windsor, Ont.....	Apr. 2	59	Fell between cars.
Baggage man.....	Windsor, Ont.....	" 8	51	Killed in train wreck caused by washout.
Express messenger.....	Drummondville, Que.....	" 8	32
Engineer.....	Drummondville, Que.....	" 8	52	Third died April 12.
Brakeman.....	Near Sault Ste-Marie, Ont.....	" 9	38	When setting a brake he fell under the wheels.
Engineer.....	Near Bradford, Ont.....	" 14	26	Killed when train left the rails owing to washout.
Labourer.....	St. Clet, Que.....	" 18	20	Struck by train.

FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE SECOND QUARTER OF 1928—Continued

Trade or Industry	Locality	Date	Age	Cause of Fatality

<i>Steam Railways—Con.</i>				
Watchman.....	Near Campbellton, N.B.....	April 24	39	Collision of two trains, due to blinding snow storm, knocked car over embankment.
Car repairer.....	Montreal, Que.....	" 24	40	While tightening belts beneath a car, a shunting car backed into train, throwing him beneath wheels.
Locomotive engineer.....	Near Dickie Station, N.B.....	" 28	48	Fell from engine while repairing whistle.
Engineer.....	Near Smith's Falls, Ont.....	" 29	35	Killed in wreck when train was derailed by fall of rock.
Fireman.....			26	
Brakeman.....			33	
Car inspector.....	Hamilton, Ont.....	May 2		Run over by cars while coupling air hose.
Section foreman.....	Fabyan, Alta.....	" 9		Struck by train while crossing tracks in car.
Brakeman.....	Near Calgary, Alta.....	" 12	36	Collision of two trains.
Section labourer.....	Windham Centre, Ont.....	" 15	19	Struck by train.
Section labourer.....	Glenevis, Alta.....	" 17		Slipped and fell off motor car.
Conductor.....	Collax, Sask.....	" 18	41	Died while at work.
Labourer.....	Transcona, Man.....	" 18	53	Died while at work.
Watchman.....	Thompson Sd., B.C.....	" 23	24	Velocipede struck by train.
Extra gangman.....	Bala, Ont.....	May 23	48	Struck by train while riding on hand car.
Engineer.....	Hamilton, Ont.....	" 25	43	Slipped and struck foot against pipe, infection.
Sectionman.....	Thompson Sd., B.C.....	" 25	35	Hand car struck by train.
Engineer.....	Sudbury, Cartier Sd., Ont.....	" 26	28	Struck by train.
Car repairman.....	Winnipeg, Man.....	June 14	35	Crushed between shunting train and a box car.
Yardman.....	Port Erie, Ont.....	" 17		Fell from car and was run over.
Labourer.....	Montreal, Que.....	" 19	43	Struck head against heavy metal, fracturing skull.
Car helper.....	Winnipeg, Man.....	" 24	50	While stepping off moving coaches, stumbled and struck his head, causing embolus. Died July 5.
Timber inspector.....	North Vancouver, B.C.....	" 26	55	Driving company auto which crashed into fence.
Labourer.....	A.C. & H.B. Ry., mile 205.	" 26	33	Pinned beneath tie when boom broke while hoisting ties on car.
Express Co. Employee.....	Montreal, Que.....	" 28	32	Crushed between elevator shaft and car.
<i>Street and Electric Railways—</i>				
Lineman.....	Three Rivers, Que.....	April 13		Pole on which he was working loosened and fell on him, fracturing skull.
Motorman.....	Victoria, B.C.....	May 8	70	Crushed between bumpers when two street cars collided.
Labourer.....	Halifax, N.S.....	" 5		Strained stomach while lifting.
Dispatcher.....	Montreal, Que.....	about May 15	66	Cerebral congestion while operating semaphore at switch in signal tower.
Street car conductor.....	Toronto, Ont.....	May 19	48	Fell and decapitated beneath wheels of car.
<i>Water Transportation—</i>				
Seaman.....	Three days out from St. John, N.B.....	about April 10		Crushed to death when steamer struck an iceberg.
Seaman.....	Vancouver, B.C.....	" 26	41	
Patrol longshoreman.....	Port Alberni, B.C.....	" 13	40	Barrel slipped and fell on his chest.
Longshoreman.....				Fell from ship between ship and dock. Died April 14.
Deckhand.....	Near St. John, N.B.....	" 28	48	Slipped and fell overboard and was drowned.
Millwright.....	Owen Sound, Ont.....	May 1	60	Fell 30 feet from scoop for unloading grain boats.
Chief engineer.....	Near Father Point, Que.....	" 7	40	Fell into cross-bunker hold.
Captain.....	English Bay, B.C.....	" 7	45	Logs that were being unloaded rolled and crushed him.
Deck hand.....	Near Cornwall, Ont.....	" 14	18	Fell into canal and drowned.
Labourer.....	Montreal, Que.....	about May 15	62	Run over by shunting train, necessitating amputation of both legs.
Fireman.....	Port Arthur, Ont.....	" 18	38	Scalded when boiler plug blew out.
Ferry engineer.....	Toronto Island, Ont.....	" 16		Dropped dead.
Labourer.....	Burrard Inlet, B.C.....	" 21	38	Fell from log boom and drowned.
Guide.....	Rice Lake, Ont.....	June 12	78	Fell out of motor launch and drowned.
Labourer.....	Port William, Ont.....	" 13	19	Fell into hold of boat, fracturing skull.
Ferryman.....	Near Kamloops, B.C.....	" 18	50	Drowned when ferry boat struck an obstruction and capsized.
Engineer.....	Near Bic, Que.....	" 20		Fell overboard from vessel and drowned.
Deckhand.....	Athabasca River, Alta.....	" 24	18	Drowned.
Sweeper with Towing Co.....	Sault Rapids, Que.....	" 30	25	Drowned.
<i>Air Transportation—</i>				
Pilot.....	Winnipeg, Man.....	" 16		Killed when his aeroplane crashed.
Pilot.....	Todmorden, Ont.....	" 24		Machine fell 3,000 feet.
<i>Local Transportation—</i>				
Teamster.....	Winnipeg, Man.....	April 4	45	Fell off wagon when piling wood.
Teamster.....	Montreal, Que.....	" 30	34	Fell from seat of wagon and dragged by frightened horse. Died May 2.
Truck driver.....	Revelstoke, B.C.....	May 22	34	Drowned when truck he was driving plunged over trestle.
Truck driver.....	Vancouver, B.C.....	" 23	25	Injured when his truck was struck by street car.

FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE SECOND QUARTER OF 1928—*Concluded*

Trade or Industry	Locality	Date	Age	Cause of Fatality
TRANSPORTATION AND PUBLIC UTILITIES—Con.				
<i>Local Transportation—Con.</i>				
Contractor.....	London, Ont.....	June 2	63	Buried by cave-in in sand pit.
Truck driver.....	Near Ruscomb, Ont.....	" 4	Truck hit by train.
Taxi driver.....	Toronto, Ont.....	" 21	18	Injured when his car collided with street car.
<i>Storage—</i>				
Labourer.....	Calgary, Alta.....	April 16	33	While adjusting brakes fell from box car and was run over.
<i>Electricity and Gas—</i>				
Operator.....	Hamilton, Ont.....	April 6	34	Clothing caught fire from flash while locating power trouble. Died April 7.
Patrol man with Electric Co.....	Near Oakville, Ont.....	May 1	36	Killed when truck he was driving was struck by train.
Power plant operator	Port Arthur, Ont.....	" 9	36	While dumping oil from circuit breaker tanks, touched rod of tank and was electrocuted.
Dam attendant.....	Kenogami, Ont.....	" 9	52	Drowned from canoe.
Lineman.....	Woodstock, N.B.....	" 16	Injured in fall from pole. Died May 21.
Lineman.....	Carleton Co., N.B.....	" 21	33	Pole broke and fell with him, fractured jaw embolism.
Lineman.....	Hawkesbury, Ont.....	" 26	28	Electrocuted while connecting water pipe on transformer.
Electrician.....	Montreal, Que.....	" 29	33	Burned by explosion of transformer while throwing on circuit switch. Died June 5.
<i>Telegraphs and Telephones—</i>				
Electrician.....	Fenelon Falls, Ont.....	" 2	Telegraph pole fell on him.
Lineman.....	St. Joseph de Beauce, Que.	" 8	50	Cross beam on telephone pole snapped and fell on his head.
Lineman.....	Terrebonne, Que.....	" 16	21	Received electric shock and thrown from pole.
Labourer.....	Near Grimsby, Ont.....	June 11	20	Car struck by truck.
TRADE—				
<i>Wholesale—</i>				
Oil dealer.....	St. Catharines, Ont.....	May 9	60	Overcome by carbon monoxide gas in garage.
Office manager.....	Fort William, Ont.....	" 10	60	Struck by train.
Labourer.....	Victoria, B.C.....	" 3	45	Struck by pieces of steel when cogwheel shattered by heavy strain.
Labourer.....	"	23
<i>Retail—</i>				
Delivery man.....	Montreal, Que.....	April 12	21	Street car collided with wagon he was driving.
Merchant.....	Near Halifax Harbour, N.S.	" 21	73	Schooner on which he was sailing capsized in squall and he was drowned.
Clerk.....	Penticton, B.C.....	May 2	20	Fell from ladder.
Peddler.....	Toronto, Ont.....	" 11	47	His wagon upset and fractured his spine. Died May 14.
Fur Trader.....	Near Norway House, Man.	" 26	27	Drowned when canoe capsized in squall.
Milkman.....	Sexsmith, Alta.....	about May 27	His wagon upset on him, breaking his neck, died day after.
Butcher.....	Ottawa, Ont.....	June 7	25	Killed when his motorcycle collided with an auto.
Labourer.....	Portage La Prairie, Man....	" 25	61	Pinned beneath threshing machine separator while unloading it from flat car.
Cashier.....	Montreal, Que.....	" 25	26	Burned by explosion of gasoline tank.
SERVICE—				
<i>Public Administration—</i>				
Labourer.....	Montreal, Que.....	April 11	55	Killed when truck on which he was riding overturned.
Janitor.....	Vancouver, B.C.....	" 28	60	Fell down elevator shaft. Died April 30.
Policeman.....	Peterboro, Ont.....	May 3	Shot in liquor raid.
Labourer.....	Haliburton, Ont.....	" 4	64	Cut thumb on glass, infection.
Pipe layer.....	Port Arthur, Ont.....	" 18	52	Injured by cave-in of sewer. Died May 22.
Labourer.....	On Emsdale, Sprucedale Rd., Ont.....	" 22	70	Struck by motor car.
Teamster.....	Middlesex Co., Ont.....	" 22	74	Thrown off wagon by runaway team.
Fireman.....	Westmoreland, N.B.....	" 23	40	Fell on tree broken back.

Second faller.....	Camelcon Harbour, B.C.....	Mar. 12	25	Struck by snag on head and shoulders.
Bucker.....	Hardwicke Island, B.C.....	Mar. 31	47	Log from yarder slid down and knocked him against posts of donkey sled.
MINING, NON-FERROUS SMELTING AND QUARRYING— Metalliferous mining— Miner.....	Timmins, Ont.....	about Jan. 31	Silicosis.
Coal Mining: Miner.....	Carbon, Alta.....	Feb. 24	38	Injured back while at work at mine. Died June 22.
CONSTRUCTION— Buildings and structure: Plumber.....	Regina, Sask.....	Jan. 19	30	Cut finger, blood poisoning.
Miscellaneous— Labourer.....	Valleyfield, Que.....	Mar. 14	21	Struck by flying rock, following dynamite blast while engaged on dredging operation.
TRANSPORTATION AND PUBLIC UTILITIES— Steam railways— Trackman.....	Longwood, Ont.....	Jan. 6	42	Crushed toe, infection.
Conductor.....	Toronto, Ont.....	about Mar. 17	46	Cut leg, infection.
Storage: Labourer.....	Cory, Sask.....	Mar. 2	39	Body mangled when caught in conveyer belt and tripper.
Grain buyer.....	Burgis, Sask.....	Mar. 10	30	Clothing caught in elevator shaft.
Electricity and gas: Electrician.....	Grand Forks, B.C.....	" 26	47	Pole on which he was working broke and he fell to ground. Died Mar. 28.
TRADE— Retail— Labourer.....	Saskatoon, Sask.....	Jan. 16	40	Run over by train, legs crushed.
SERVICE— Public Administration: Powderman for Water Works Dept..	Lynn Valley, B.C.....	" 27	42	Struck by rock from blast. Died Mar. 26.
Personal and domestic: Elevator operator at City Mission.....	Vancouver, B.C.....	Mar. 16	69	Fell down elevator shaft. Died Mar. 31.

IMMIGRATION TO CANADA DURING THE THREE MONTHS ENDED JUNE 30, 1928

THE accompanying tables supplied by the Department of Immigration and Colonization show the nature and extent of immigration to Canada during the three months ended June 30, 1928, with some comparative figures for the corresponding period in 1927. Out of a total of 70,927 immigrants 23,695 or 34 per cent were British, 9,343 or 13 per cent were from the United States, and 37,889 or 53 per cent from other countries. This record compares with a total of 77,434 immigrants during the corresponding period of 1927, of whom 27,483 or 35 per cent were British, 7,663 or 10 per cent were from the United States, and 42,288 or 55 per cent from other countries.

The sixteenth annual convention of the International Association of Public Employment Services, United States and Canada, will be held at Cleveland, Ohio, on September 18 to 21. This association was founded for the purpose of "advancing the ideals, progress and policies of the Public Employment Service through close co-operation and intelligent discussion." Delegates from the Department of Labour of Canada will attend the convention.

The Workmen's Compensation Board of New Brunswick recently amended the regulations which provide that industrial units employing less than a specified number of workmen are excluded from the scope of Part I of the Act. This rule now applies to "any boat or vessel owned, managed or controlled in the Province of New Brunswick engaged in carrying freight, cargo or passengers from one part of the province to another", and which employs not more than five workmen.

RECENT LEGAL DECISIONS AFFECTING LABOUR

Recourse to Workmen's Compensation precludes alternative remedy

The Exchequer Court of Canada recently reversed the decision of the British Columbia Admiralty District Court in the case *SS. "Catala" versus Dagsland*, outlined in the *LABOUR GAZETTE*, December, 1927, page 1369. Action was brought by Martha Dagsland on behalf of herself and two infant children, the widow and children respectively of Erik Dagsland, who lost his life in a collision between the *SS. Catala* and a boat in which the deceased with another were engaged in fishing operations at the mouth of the Skeena River, B.C., and within the territorial waters of Canada. The trial judge found that the death of Dagsland was due to the negligence of the *SS. Catala*, and he awarded damages against that ship in the sum of \$20,000.

The Exchequer Court of Canada held that there was no jurisdiction in the Exchequer Court of Canada, on its admiralty side, to entertain an action for damages for loss of life; any right of action for damages under the circumstances could only be maintained by virtue of the Families Compensation Act,*

*This act is textually the same as the English Statute known as Lord Campbell's Act.

but the right of action under that act was taken away by the operation of the Workmen's Compensation Act of British Columbia.

Section 12 (3) of the Workmen's Compensation Act provides as follows:—

"Where an action in respect of an injury is brought against an employer by a workman or a dependant, the Board shall have jurisdiction, upon the application of any party to the action to adjudicate and determine whether the action is one the right to bring which is taken away by this Part, and such adjudication and determination shall be final and conclusive and if the Board determines that the action is one the right to bring which is taken away by this Part the action shall be forever stayed."

On the application of the owners the Board had declared that the right of the applicants to take action against them was taken away by this section of the Act. The judgment of the Exchequer Court of Canada on these points declared as follows:—

"Upon the hypothesis that this Court has jurisdiction to entertain this action under the Families' Compensation Act, then I think it is reasonably clear that such right of action has been taken away by the adjudication of the Board under the Workmen's Compensation Act.

"While it is not necessary to the decision of this appeal, the point has been raised and

it is therefore proper for me to say, that under the provisions of the Workmen's Compensation Act of British Columbia, and the principles of Common Law, it would appear that the respondent is bound by her election to claim compensation under the Act. The Act itself is remedial legislation, and as such must receive such a beneficent interpretation by the Courts as will enable the intention of the legislation to be effectively attained, and I do not think it was the intention of the legislature that a dependant could elect to apply for and receive compensation under the Act, and at the same time pursue a Common Law remedy. The remedies are alternative, and not cumulative. The dependant I think is burdened with a duty of making an election between the remedy provided in the Workmen's Compensation Act, and his or her Common Law remedy, and the respondent in this case having elected to claim compensation under that Act, and accepted it, cannot now renounce it and resort to an alternative remedy, which once was open to her. There is the consideration inhering in the Common Law rule, *interest reipublicae ut sit finis litium*, i.e., it is the interest of the State that there should be an end of litigation. In the early history of the Common Law it will be found that the minds of judges and lawyers were impressed with the desirability of adhering to the rule that a man should not be vexed twice for the same cause of action. This is the doctrine of the maxim, *nemo debet bis vexari si constat curiae quod sit pro una et eadem causa*, and in *Sperry's case* (1826), 3 Coke's Rep. 123, it is regarded as a fundamental principle of the Common Law. This doctrine may be paraphrased as follows:— 'If there has been a final decision of a competent Court there should be no further pro-

ceedings allowed in another Court, between the same parties for the same cause of action.'

The appeal was therefore allowed, with costs.—*SS. "Catala" versus Dagsland (British Columbia) (1928) 3. D.L.R., 334.*

Municipal Corporation Governed by Trade Unions Act, 1927

The Birkenhead Corporation dismissed one of its employees, an electrician, because he was not a member of the Electrical Trades Union (Great Britain). The electrician having brought action, the County Court awarded him damages for wrongful dismissal. The defence of the Corporation was that the dismissed man was a member of the Union of Enginemen, Firemen, Mechanics and Electrical Workers. The district secretary of the Electrical Trades Union, it was alleged, threatened the corporation engineer with the withdrawal of other workmen unless the electrician joined that union, and the Corporation suspended him temporarily to avoid such withdrawal. In the course of the trial it was pointed out that the Trade Unions Act of 1927 made it unlawful for any public body to make trade union membership a condition of employment, and that it provided that a non-union member should not be placed in a disadvantageous position as compared with other employees in the same class of work who were union members.

The County Court Judge granted a declaration that it was unlawful for the Corporation to require any person as a condition of employment to become a trade union member and required the Corporation to pay the costs of the case.

NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

Monthly Summary

INDUSTRIAL employment in Canada at the beginning of August showed a continued pronounced improvement, resulting in a more favourable situation than in any other period in the years for which comparative data are available. This statement is based on reports from 6,506 of the larger firms throughout the Dominion, the reports being tabulated by the Dominion Bureau of Statistics. The employers making returns are representative of all industries except agriculture, fishing, hunting and highly specialized business. They employed 1,003,085 workers, compared with 973,462 on July 1. The index (with January, 1920, as the base=100) stood at 119.9 on August 1, compared with 116.3 in the preceding month, and with 109.2, 104.2, 96.7, 100.2, 93.1 and 88.9 on August 1, 1927, 1926, 1925, 1924, 1923, 1922, and 1921 respectively.

Reports received by the Department of Labour from the offices of the Employment Service of Canada indicated an appreciable gain in the volume of business transacted in July as compared with the preceding month and also with July, 1927. At the beginning of August the unemployment percentage reported by local trade unions stood at 2.5 contrasted with 3.2 per cent of unemployed members at the beginning of July and with 3.3 per cent at the beginning of August, 1927. The August percentage was based on reports received by the Department of Labour from 1,600 local trade unions embracing a membership of 180,111 persons.

The average cost of a weekly family budget of twenty-nine staple foods was \$11.08 at the beginning of August, as compared with \$10.80 for July; \$10.93 for August, 1927; \$11.10 for August, 1926; \$10.84 for August, 1925; \$10.19 for August, 1924; \$10.53 for August, 1923; \$10.44 for August, 1922; \$11.44 for August, 1921; \$16.42 for August, 1920; \$16.92 for June, 1920 (the peak); \$13.41 for August, 1918; and \$7.68 for August, 1914. In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon prices in 1913 as 100, was again slightly lower at 149.1 for

August, as compared with 149.6 for July; 152.3 for August, 1927; 154.0 for August, 1926; 158.9 for August, 1925; 156.8 for August, 1924; 153.5 for August, 1923; 151.7 for August, 1922; 165.5 for August, 1921; 250.2 for August, 1920; 256.7 for May, 1920 (the peak); and 202.8 for August, 1918.

The time loss due to industrial disputes in August, 1928, was greater than in the previous month, and more than double the time loss in August, 1927. Seventeen disputes were in existence at some time during the month, involving 5,746 work people and resulting in the loss of 37,634 working days. Corresponding figures for July, 1928, were: 18 disputes, 2,449 workpeople, and 23,793 working days; and for August, 1927, 14 disputes, 6,194 workpeople, and 14,321 working days.

Industrial Disputes Investigation Act, 1907

During August the Department received a report from the Board of Conciliation and Investigation in connection with the dispute between the Ottawa Electric Company and its electricians. Five new applications for Boards were received during the month. A full account of the recent proceedings under the Act, appears on page 949 of this issue. The reports of four Boards established under the Alberta Labour Dispute Act, 1926, are also given.

Quebec Workmen's Compensation Act now Effective

The Workmen's Compensation Act passed at the last session of the Legislature of the Province of Quebec became effective on September 1. The provisions of this act were described in the *LABOUR GAZETTE*, May, 1928, page 459, and the names of the members of the Workmen's Compensation Commission and of the Advisory Body representing labour organizations in the province were given in the issue for July, page 680. Industrial accidents occurring on and after September 1, come before the new commission, but those which happened before that date will be dealt with by the courts under the old act.

Fishermen and Workmen's Compensation in Nova Scotia

Recent amendments to the Workmen's Compensation Act of Nova Scotia are outlined on another page of this issue in an account of the legislation enacted at the 1928 session of the provincial legislature. Effect is given to some of the recommendations made by Mr. Carl D. Dennis, the special Commissioner appointed last year by the Nova Scotia Government to investigate the conditions in the fishing and lumbering industries in their relation to workmen's compensation. It will be recalled (LABOUR GAZETTE, February, 1928, page 1021) that the Lunenburg fishing fleet experienced a series of unprecedented disasters during the seasons of 1926 and 1927, throwing an intolerable burden on the Accident Fund, and necessitating a substantial increase in the rates of assessment levied on the owners for the purpose of accident compensation. The new act withdraws the fishing industry from the direct jurisdiction of the Workmen's Compensation Board, reverting to the system of court hearings for compensation claims on the part of fishermen or their dependants. The scale of compensation, however, remains unchanged, the amounts being those which would be awarded by the Board. Owners are required to secure compensation payment by insurance.

Employment of Women in Chinese Establishments

The Factory, Shop and Office Building Act of the Province of Ontario was amended by the Legislature in 1914 by the addition of the following section:—

31a (1). No Chinese person shall employ in any capacity or have under his direction or control any female white person in any factory, restaurant or laundry.

(2) Subsection 1 shall not come into force until a day to be named by proclamation of the Lieutenant-Governor in Council.

In Chapter 275, Revised Statutes of Ontario, 1927, subsection (2) of section 31a is omitted, and section 31a (1) (above) is given as section 30, the result being that this section is now effective in the province. Accordingly, it was announced during August that section 30 would be enforced in Toronto early in September. In the meantime, the Chinese Consul General and representative Chinese residents in Toronto made representations to the Attorney General with a view to the removal of discrimination against Chinese employers. The Attorney-General undertook to submit these representations to the provincial government.

Bill to provide boards for investigations and conciliation in India.

The Government of India is promoting the passage by the legislature of a bill to provide for the establishment of courts of inquiry and boards of conciliation for industrial disputes. The courts of inquiry will investigate and report upon such questions connected with a dispute as may be referred to them by a Provincial government, or (if the case concerns a department of the government of India, or a railway) by the government of India. They will ordinarily be composed of persons having no direct interest in the dispute. Boards of conciliation, on the other hand, will include representatives of the parties to the dispute. The latter Boards will seek to secure a settlement in each case. Both courts and boards of conciliation will normally include representatives of the disputing parties and have an independent chairman. They will aim to secure a settlement of the dispute. Both Courts and Boards will be authorized to enforce the attendance of witnesses and the production of documents and their reports, subject to precautionary provisions still to be published. The bill makes persons employed on monthly wages in public utility services liable to imprisonment and fine for wilful stoppage of work without a month's written notice, and penalizes instigators of such strikes. Action in such cases is to be taken either by a provincial or the central government.

Following the provisions of the British Trades Disputes Act, 1927, persons fostering strikes and lock-outs designed to coerce the Government, or having any object other than, or in addition to, furtherance of a trade dispute within the trade or industry in which the strikers or employers are engaged, will be penalized, and participants therein deprived of the protection afforded by the Trade Unions Act, while persons refusing to participate will be protected.

Observance of Labour Day in Canada.

Labour Day was observed on September 3 as a public holiday throughout Canada. Processions and meetings were held in various industrial centres, the speakers referring to the progress of the labour movement.

The first Monday in September was first officially designated "Labour Day" in Canada in 1894, when Parliament added this day to the list of public holidays enumerated in the Interpretation Act and in the Bills of Exchange Act. Earlier in the same year, the United States Congress had enacted a similar law

applicable to the District of Columbia, but observance of the day was fairly general throughout the both countries since 1884, when the American Federation of Labour gave its support to a movement which had been begun in 1882 by the New York Labour Union.

A Labour Day message from Mr. Tom Moore, president of the Trades and Labour Congress of Canada, was as follows:—

“Those pioneers of the labour movement who secured the enactment of legislation providing for ‘Labour Day’ to be a national holiday left behind them a perpetual reminder of what unity of purpose and organized effort can accomplish. Labour Day is rightfully set apart as a day of recreation and celebration, but it serves also to emphasize the important place which those who toil occupy in the life of the nation. It is a tonic for the down-hearted and discouraged urging them to survey the achievements of the past and take renewed hope and courage in meeting the tasks still ahead. It is in no spirit of boastfulness, but rather in one of pride of achievement that the labour movements refer to the things already accomplished, and whether in blazing the trail or in actively co-operating with other organized bodies seeking to ameliorate and, if possible, eliminate social and economic injustices, the trade union movement has always been well to the fore.

“Much human suffering and misery has been overcome through such beneficial legislation as Workmen’s Compensation Acts, Mother’s Allowance Acts, Minimum Wage Laws, Factory Legislation, abolition of child labour, improvements in working conditions and reduced hours of labour and numerous other similar enactments. The knowledge of the part they have played in the securing of these measures is a source of gratification and pride to the members of the trade union movement, as is also the splendid progress made during the past year in securing old age pensions for the aged needy workers of this Dominion. Legislation bringing the federal-provincial scheme into effect now exists in the whole of Western Canada, except the province of Alberta, while Ontario and Nova Scotia have taken preliminary steps towards the introduction of similar legislation. Labour cannot be satisfied, however, until every worker in the Dominion is assured of this protection, and efforts will be continued towards the accomplishment of this desirable objective.

“Though much has been done through workmen’s compensation laws to mitigate the effects of industrial accidents and also through participation in safety work to reduce the tremendous loss of life and injury to health

resulting from these hazards, there is still a great need for further effort in this direction before conditions can be considered even comparatively satisfactory.

“The rapid development of modern industry, with the ever-increasing productivity of machinery, brings constantly in its train new problems which labour must face. Foremost amongst these is the reduction of the hours to eight per day and the introduction of the five-day week so that labour may not only more fully participate in the benefits accruing from the constantly increasing productivity of machinery, but also be more assured of securing steady employment. Coincident with this is the need for protection against the loss and suffering which unemployment and ill health too often bring and to cope with these twin evils, unemployment and sickness insurance is being consistently urged.

“Mixed with the rejoicing and celebration of Labour Day serious minded workers everywhere will give thought to these pressing problems and to the strengthening of their organizations as an essential step towards the accomplishment of those things which will make Canada a land of happiness and real opportunity.”

Labour policy of Catholic Welfare Conference.

The Social Action Department of the National Catholic Welfare Conference (U.S.A.) in a statement issued in connection with Labour Day, discussed unemployment as one of the outstanding labour problems of the present day, and suggested two directions in which a remedy might be found:—(1) Universal high wages which would increase the purchasing power of the masses and keep industry going with fewer interruptions than have hitherto been the rule. It is pointed out that depressions occur because industries in general are capable of producing more goods than the consuming masses are able to take off the market with their present incomes and purchasing power; (2) Insurance against unemployment, which would greatly reduce the inconveniences caused by irregular wages. The statement declares that sickness and old age are likewise very serious and persistent sources of insecurity, and that in both cases the universally recognized remedy is insurance.

The worker’s status in the industrial system is also discussed, and the suggestion is made that the prevailing tendency toward an “industrial feudalism” might be checked, first, by labour sharing in management; second, by

giving the worker a share of the profits of industry in addition to his regular wages; and third, by labour sharing in ownership.

Department of Labour Report on Co-operative Associations

The Department of Labour has just published a report on Co-operative Associations in Canada. This is the first attempt to supply detailed information on a movement which has made much progress in the Dominion particularly in the co-operative marketing of products and concerning which particulars are frequently sought. The report contains the names of 1,035 associations with a combined membership of 460,133. The various societies are divided into the following groups: (a) Fruit and Vegetable growers; (b) Dairying; (c) Live Stock and allied Associations; (d) Grain and (e) Miscellaneous. The names of the societies are provincially arranged, the date of organization, the number of members and the names and addresses of the chief officers being indicated.

Among the societies enumerated is the Co-operative Union of Canada, a Dominion-wide organization designed to federate co-operative bodies and to propagate co-operative principles. In the fruit and vegetable section will be found some associations with large memberships, the largest being the Associated Growers of British Columbia with 2,800 members. In the dairying group the societies in the three prairie provinces all report strong memberships; that with the most members being the Alberta Co-operative Dairy Producers, with 6,500 members. In the live stock division the United Live Stock Growers stand first with 35,000 members, and also make up the membership of the United Grain Growers. The Saskatchewan Co-operative Poultry Producers has the most numerous following in this class of societies, there being 18,703 members.

The most important of the co-operative marketing societies is the Canadian Co-operative Wheat Producers. This society which has 147,958 members, comprised in the Manitoba, Saskatchewan and Alberta Wheat Pools, is reputed to be the world's largest wheat marketing organization. In the miscellaneous group appears the name of the Canadian Co-operative Wool Growers, a Dominion-wide organization with 12,000 members.

Reference is made in the report to the Co-operative People's Banks, a credit and savings movement which was founded in Quebec in 1901, and has developed to such an extent that there are now 175 co-operative banking associations operating in the province.

In a summary of business, transacted figures are given for 416 associations which reported, showing (1) paid-up capital, (2) assets, (3) sales for past year, (4) general liabilities, (5) profit or surplus, (6) loss, (7) reserve, and (8) unapportioned profits.

Bulletins on "Choosing a Life Work."

The Technical Education Branch of the Department of Labour recently published four bulletins on "Choosing a Life Work." Two of these bulletins deal with the building trades; one being on bricklaying and the other on carpentry. The other two bulletins deal with Office Work.

These studies are intended to inform young Canadians regarding the nature and requirements of occupations open to boys and girls leaving school during the "teen age." The immediate purpose is to create an interest in the study of occupations and to accustom young people to a way of thinking about work so that they will know how to make a decision when selecting a vocation and how to fit themselves into the work they choose. It is also hoped that the studies may be of value to teachers and counsellors in giving information about the occupational world. They may be used as text material for occupational groups or as supplementary reading for interested individuals.

The bulletins on the building trades deal with the place and importance of each trade, emphasizing the nature of the work, the materials and tools used and the operations performed by the workers. The conditions under which the work is done are also described. This includes a discussion of such topics as hours of labour, wages, unemployment, health conditions, industrial accidents, etc. Another section deals with the requirements for entering the trade and a final section describes the opportunities for advancement.

One of the bulletins on Office Work deals with general office conditions. The other gives occupational information covering the positions of secretary, stenographer, dictaphone operator and typist. The description of each position includes an account of the conditions of employment, the duties of the employees, the education and training required, the physical and personal qualities which will ensure success and the most probable methods of securing a promotion.

The booklets are attractively printed and well illustrated. Copies may be obtained on application to the Technical Education Branch, Department of Labour, Ottawa.

Old Age Pension Commission in Nova Scotia

The appointment of a provincial commission of inquiry into the subject of old age pensions in Nova Scotia was noted in the last issue of the *LABOUR GAZETTE*.

The commissioner is Mr. Harry Edmund Mahon, of Halifax, his duties being defined as follows:—

1. To determine the number of persons who (a) are British subjects, or being widows not being British subjects, were such before their marriage; and (b) have attained the age of seventy years; and (c) have resided in Canada for the last twenty years and in the province of Nova Scotia for the last five years; and (d) are not in receipt of an income of as much as \$365 a year;
2. To determine the proportionate cost of providing such persons with a pension as provided by Chapter 156 of the Revised Statutes of Canada 1927;
3. To determine the cost of administration in connection with the payment of any such pension;
4. To determine what persons, if any, otherwise entitled to a pension under the said Act are in receipt of a pension from any other source;
5. To inquire into and report upon what alternative measure of taxation could be imposed or other means taken to provide the increase in revenue that would be necessitated by the adoption of such scheme.

Old Age Pensions in South Africa.

According to newspaper reports from the Union of South Africa, approximately 30,000 old age pensions will be paid out by the Old Age

Pension Division of the Union Pensions Department before the end of the present financial year. The amount to be paid out in old age pensions for the year ending March 31, 1929, is estimated at £200,000, while for 1929-1930 an expenditure of £800,000 is anticipated.

The new Pensions Department was opened during August. It is administered by a commissioner of Pensions. The *LABOUR GAZETTE*, June 1928, page 589, contained a note on the new pension system. Old age pensions are granted to persons of small means who have reached the age of 65 years. The pension for Europeans is £30 per annum and for coloured persons (not including natives) £18 per annum, the means limit being £54 and £36 respectively. If the income is below £24 and £18 respectively, the full pension is paid, and as the means increase to £51 and £33 respectively, the pension is reduced *pari passu*.

Commission's recommendations on unemployment in Australia.

A report dealing with the problem of unemployment was published recently by the Development and Migration Commission of Australia. The commission

emphasizes the need of establishing, under the leadership of the governments, permanent organizations for studying the problem. A practical scheme of which the commission approves is one to provide homes for married workers, which would encourage rural settlement and ensure a regular supply of labour. In secondary industries a representative committee in each state is needed to provide continuous local investigation. A reduction in the number of types and patterns in all kinds of commodities is, the report says, an economic simplification that would also lead to regularity in output and, consequently, in the demand for labour. Similarly, the report strongly recommends the planning ahead over a period of years of a public works in the hands of the public departments. Educational authorities in the States are recommended to give consideration to the problem of vocational guidance; and banks are advised to take whatever steps are possible towards the stabilization of exchange.

The commission is convinced that relief measures are an inadequate palliative of the evil of unemployment. Seasonal fluctuations in industry are found to be a large factor. Immigration is not considered to be a fundamental cause of unemployment, as the absorption of new settlers increases rather than lessens employment, especially the immigration of skilled workers for new industries.

Organized industrial accident prevention

The Workmen's Compensation Act of Ontario contains a clause authorizing industries in the various classes to set up accident prevention associations, and the

accident experience of the classes taking advantage of this section of the act has been better than that of the classes not organized for accident prevention work. Mr. R. B. Morley, general manager of the Industrial Accident Prevention Associations, states that in the last four years on which complete figures are available the number of death cases in the fifteen classes included in the Industrial Accident Prevention Associations has shown a steady decrease year by year, being 77-54-52 and 45. The pay-roll of the associations is slightly more than half of the total pay-roll under compensation, and 45 death cases in the classes included in that organization out of a total of 308 for all industries is indicative of

improved conditions, particularly when it is remembered that the death cases represent approximately one-fourth of the total cost of compensation year by year.

The Industrial Accident Prevention Associations have a membership of more than 8,700 industrial plants and the total pay-roll in the fifteen classes constituting such membership, as estimated for last year, was over three hundred million dollars.

Migration of British Settlers to Canada.

In accordance with the arrangements outlined in the last issue, British miners to the number of about 8,500 arrived in Canada early in August and were sent on from the port of entry to Winnipeg. Thence they were distributed throughout the Prairie provinces to assist in the harvesting operations.

Lord Lovat, the chairman of the British Overseas Settlement Committee, arrived in Canada in August in the course of a tour of the British Empire for the purpose of consulting the authorities of the several Dominions on matters connected with migration. He held conferences at Ottawa with the Deputy Minister and other officials of the Department of Immigration and Colonization and with representatives of other departments. Conferences were held elsewhere in Canada with members of the Provincial Governments and with various individuals and organizations concerned in immigration problems. It was anticipated that these negotiations would result in a steady increase in the flow of suitable British migrants to Canada. Special stress was laid in the conferences held at Ottawa upon the need for co-operation between the provincial and federal governments in reference to migration and settlement. The detailed arrangements consequent upon the decisions reached in the course of Lord Lovat's tour are to be worked out after consultation between the Department of Immigration and Colonization, the various provincial governments, and the Overseas Settlement Committee in London.

Ontario Apprenticeship Act, 1928.

The Department of Labour of Ontario has published in booklet form the text of the Ontario Apprenticeship Act, 1928, with explanations and an account of the origin and development of the plan of apprenticeship training now in effect in the province. (An address by Mr. A. W. Crawford, provincial Inspector of Apprenticeship, explaining the provisions of the

act, was given in the last issue of the *LABOUR GAZETTE*). Dr. Forbes Godfrey, the provincial Minister of Labour, in an introduction to the booklet, states that the Ontario Apprenticeship Act, 1928, represents the first legislative action in Canada designed to assist industry in its effort to provide adequate training facilities for young persons entering skilled trades. It is the outgrowth of increasing interest and activity on the part of employers and organized labour in the building industry, during the past ten years. The Act is in the form of enabling legislation. It makes provision for Government supervision of apprenticeship programs, and for the setting up of representative provincial and local organizations to promote and develop apprentice training in designated trades. It does not impose regulations on any trade or industry unless and until representations are made to the government, requesting that the provisions of the Act apply to that particular trade or industry. At present, the Act applies only to the building trades, but it is hoped that other branches of industry will make application to come within scope of the law when its effectiveness has been demonstrated in the present limited field.

The minister expresses the hope that, through close co-operation on the part of employers, organized labour, and educationists, together with the concentrated efforts of interested individuals in each trade, there will be developed a new type of apprenticeship which will provide thorough training for young Canadians entering industrial life. "Such development," he says, "will undoubtedly benefit both employers and organized labour, but it should be of even greater benefit to the general public. It will help to stabilize conditions in industry, will make for better industrial relations, will provide opportunities for Canadian boys to develop their powers of craftsmanship, and will eliminate the possibility of half-trained workers demanding and receiving full journeymen's pay."

Benefits of Industrial Pensions.

The problem of pensions is discussed by Mr. A. W. Macdonald, superintendent of the Department of Industrial Relations of the British Empire Steel Corporation, Sydney, Nova Scotia, in the issue of *Industrial Canada* for August, 1928. Rejecting the "deferred wage" theory of pensions, and allowing only a limited validity to the "gratuity" theory, Mr. Macdonald finds that the pension plan

justifies itself on several grounds as one of the industrial relation policies of the employer.

Industrial pensions are found to increase the efficiency of labour by promoting contentment, loyalty, and "morale." Employers find, moreover, that a definite system of pensions is more economical than the practice of retaining old employees on full wages after they have passed their maximum efficiency. On this point Mr. Macdonald says:

"In the larger corporations which employ a great number of men, if no pension plan exists, there is a strong moral obligation to keep workmen on the regular pay roll far beyond a period of real productivity and at a greatly increased pay roll cost to the company. The retention of such employees who have grown old in the service and who have given all of their productive working time to the Company that employs them, might properly be termed "the hidden cost of taking care of long service employees," but such workmen are nevertheless pensioners. They are still in receipt of the standard wages paid by the company, but their efficiency as workmen has been impaired to the point where they in reality are not able to give anything approximating efficient service, and their presence in the shops or other parts of the plant has a tendency to destroy the morale of the other workmen. There are some exceptional cases, of course, where old employees are doing efficient work, but these cases are few, and they will become fewer as time goes by. Pensions taken care of in this way are very costly when buried in the active works pay roll."

Mr. Macdonald concludes his article with an account of the pension plan adopted by his company in 1923. This plan was described in the *LABOUR GAZETTE*, March, 1926, page 237.

Group insurance and production in paper industry.

"The most interesting feature in connection with group insurance in the paper trade is its tendency to increase production and improve quality of products."

This statement is made by Mr. S. K. Hargis in the course of an article in the *Pulp and Paper Magazine*, August 23, entitled "Group Insurance in the Paper Mill: Effect on Turnover and Production." This indirect effect of group insurance in stimulating production is stated to be very apparent in certain mills in Massachusetts. The more immediate result of insurance is to "give the paper worker a keener interest in his job, his plant and the output; that is, when the presen-

tation of the plan to the employee body has been done properly." The most effective plan of group insurance is found to be the joint arrangement whereby the employer pays at least half the premium. "Responsible employees," Mr. Hargis says, "are the best employees in the mill." One thing group insurance has accomplished is "to hold the better types of operatives on the job when they otherwise might shift. A group policy forms another link between worker and management, and the stronger this link becomes, the greater will be the output of the mill and the better its quality."

The writer points out that group insurance is better suited to some industries than to others, according to the type of labour employed. The total amount of group insurance carried by American employees increased from \$500,000,000 in 1917 to \$5,500,000,000 in 1926.

The Industrial Accident Prevention Associations (Ontario) have published in book form the full report of proceedings at the Safety Convention and annual general meeting held last May at Hamilton. Some account of this convention was given in the *LABOUR GAZETTE*, June 1928, page 609.

Rules and regulations under the Manitoba Factories Act respecting dry cleaning, dry dyeing and cleaning business, were published in the *Manitoba Gazette*, August 18. The rules relate to general matters, and to the construction, equipment and operation of these establishments, chiefly with a view to the prevention of fire.

The *British Columbia Gazette* of August 16, contained notice of the incorporation, under the Societies' Act of the province, of the "Mechanics and Automotive Trades Association of Canada." The operations of this organization will be chiefly carried on in British Columbia.

Reports to the Ontario Workmen's Compensation Board show that the number of industrial accidents in the province reached a high point in August, when 8,022 accidents, including 41 fatalities, were reported. This is over 1,000 accidents more than reported in August last year, and is the highest point reached since the commencement of the Act. The benefits awarded during last month amounted to \$553,842.35, of which \$96,298.68 was for medical aid. Benefits in August, 1928, were approximately \$58,000 higher in the same month last year.

GENERAL REVIEW OF THE INDUSTRIAL SITUATION

Employment

THE employment situation at the end of August was reported by superintendents of the Employment Service of Canada to be as follows:—

Crop prospects in the province of Nova Scotia were good, and a quite favourable crop of apples was particularly mentioned. The fishing industry was in receipt of good catches. Considerable construction work was proceeding throughout the province, particularly at Halifax: projects under way reported good progress, and rather steady employment was being afforded to workers in the building and construction industry. Manufacturing industries generally were normal, with iron and steel reported to be fair. Steady time was being worked at the coal mines, and production in this industry was rather good. Transportation and trade were stated to be quite favourable. In the Women's Division there was a fair demand for workers, and a number of domestics were being placed.

As in Nova Scotia, crop prospects in the Province of New Brunswick were good, and steady progress at harvesting was being maintained. The fishing industry in this province reported fair catches. The logging industry was rather quiet, a situation which might be anticipated at this season. Building and construction showed considerable activity throughout the province, especially at St. John: a large pulp and paper mill to be erected at Dalhousie was being started. The different lines of manufactures were normal. The transportation and trade groups were both stated to be experiencing satisfactory activity. A fair demand for women domestic workers was being registered at the offices, and placements were fairly numerous.

A substantial number of farm workers were being placed by Quebec Province employment offices. In this province placements in the lumber woods and mills were fairly heavy. The only feature connected with the mining industry which merited special comment was the placement of a number of workers in mica mines through the Hull employment office. Manufacturing industries throughout Quebec showed very pronounced activity. A steady demand for workers of practically all classes for the construction industry continued in evidence: in this connection Montreal and Hull zones were mentioned especially, while the railway maintenance branch was likewise singled out as showing brisk activity. The transportation industry was active, while trade was

stated to be "very prosperous". In so far as women domestic workers were concerned, the demand continued to be very heavy, and numerous placements were being reported.

In Ontario, owing to the nearing of the completion of the harvest, there was a decided falling off in the demand for farm workers. Throughout this province manufacturing appeared to be continuing at a high level of production, and staffs of quite favourable proportions continued to be engaged. The different branches of the construction industry were very active, with most skilled workers reported as employed at important points. The mining industry in the northern sections of the province was stated to be quiet in the sense that no additional workers were being engaged. With a fair demand for logging workers, there was the usual difficulty in locating men willing to accept such employment at this particular season. A good demand for women domestic workers was not experiencing a counterbalancing supply of applicants.

In the agricultural industry in the Province of Manitoba excellent progress in grain cutting was reported, with the vast bulk of the crop already prepared for threshing which had begun in some districts. A shortage of harvest help was reported in a few places, but on the whole it would appear that sufficient men were available for the work. The wage rates for this latter class of employment appeared to be \$4 per day for stooking, and \$5 for threshing. The construction industry in Winnipeg appeared to be experiencing considerable activity: in other districts, where railroad and highway work predominate in this industry, there appeared to be some difficulty in securing a sufficient number of men to carry on the work in hand, but this situation is a usual complement of the harvesting season. Other groups did not appear to be experiencing any noteworthy activity, and the employment situation seemed to be dominated, as is customary at the season, by the harvest labour situation. A report from north central Manitoba stated that there was not much activity in the mining industry proceeding in that district. The demand for women domestic workers continued, and a fair number of placements were being made.

As in the other Prairie Provinces, the outstanding feature of the situation in Saskatchewan was that concerning harvest labour. It would appear that the demand for farm hands was brisk throughout this province at the close of the month, and numerous place-

ments were being made. While some local shortages and surpluses of applicants were reported, it seemed that the labour then available was just about sufficient to equal demands for workers. The crops were being harvested without any major setbacks having been reported. While building construction was proceeding at a favourable pace, railroad construction appeared to be interfered with by reason of men preferring harvest work. Other groups were reported as quiet, a situation not unusual at this season. The demand for women domestic workers, while not of unduly large proportions, could not be coped with owing to a shortage of applicants.

The immediate placement of harvest labour in the Province of Alberta had been interfered with to some extent by inclement weather. However, with the clearing of the weather toward the close of the month, the situation was eased to a considerable extent, and it was not apparent that there was any substantial surplus of workers available. Building and construction were very busy throughout the province, and tradesmen appeared to be very well employed. From Edmonton a fair demand for lumber mill hands was reported. From Drumheller it was reported that the coal mines were beginning to show activity, several miners having been engaged. The demand for women domestics appeared to slightly exceed the supply. Throughout this province the situation generally so far as employment was concerned was quite satisfactory.

The logging industry was showing some activity throughout British Columbia, and some centres, notably Cranbrook, reported increased placements. While the metal mining industry throughout the Coast province continued active, there were no demands for additional workers. Construction appeared to be quite busy, and several centres reported tradesmen as practically all employed. Partly owing to the departure of some thousands of workers to the Prairie Provinces for harvest work, but in large part due to favourable conditions within the province itself, the general employment situation in the Province of British Columbia appeared to be quite favourable.

EMPLOYERS' REPORTS

Employment at the beginning of August showed a further large increase, according to statements tabulated by the Dominion Bureau of Statistics from 6,500 firms, whose payrolls aggregated 1,003,085 persons, as compared with 973,462 on July 1. This advance involved a much greater number of workers than that registered on August 1 in

any other year of the record, while the index number, at 119.9 on the date under review, continued higher than in any other month since the series was instituted in 1920; on July 1, 1928, it stood at 116.3, and on August 1, 1927, 1926, 1925, 1924, 1923, 1922 and 1921, it was 109.2, 104.2, 96.3, 94.7, 100.2, 93.1 and 88.9, respectively.

Greater activity was shown in all provinces, the improvement in Ontario and the Western Provinces being the most noteworthy. In the Maritime Provinces, manufacturing was slackener, chiefly owing to the completion of the season's work in fish-canneries; and logging and transportation were also seasonally quiet, but the trend of employment was upward in construction, mining and trade. In Quebec, considerable expansion was shown; manufacturing, construction, transportation, mining and communications reported larger payrolls, while trade was rather dull. Employment was in greater volume than at the beginning of August of a year ago, or, in fact, than in any other month of the record. In Ontario, the greatest improvement was in manufacturing and construction, but that in transportation, mining communications and services was also noteworthy. In the Prairie Provinces, the most pronounced improvement was shown in construction, but manufacturing, trade, transportation and mining were also decidedly more active. In British Columbia, continued gains were registered, chiefly in manufacturing, but also in transportation, construction and services.

Employment advanced in Montreal, Toronto, Hamilton, Ottawa, Windsor and the other border cities, Winnipeg and Vancouver, while the tendency was unfavourable in Quebec city. In Montreal, employment showed a further gain, contrasting with the decline recorded on August 1, 1927, when the index was over nine points lower. Manufacturing and construction registered decided improvement, while the fluctuations in other industries were slight. In Quebec, little general change was noted, increases in construction being offset by losses in manufactures. In Toronto, the level of employment was much higher than on the corresponding date of other years of the record. Manufacturing, especially of iron and steel products, construction, transportation, trade and communications recorded heightened activity. In Ottawa, the largest gains were in manufactures and trade. In Hamilton, manufacturing registered general improvement, that in iron and steel plants being most pronounced; activity was greater than in any other period of the record. In the Border Cities, further expansion was

noted, employment being brisker than in any other month of the record. Automobile works largely increased their working forces, while only small changes took place in other industries. In Winnipeg, there were general increases

in manufactures, construction and trade. The improvement evidenced on the corresponding date of last year was less pronounced, and the index then was lower. In Vancouver, manufacturing, transportation and construction reported heightened activity.

MONTHLY STATISTICS REFLECTING INDUSTRIAL CONDITIONS IN CANADA

*Figures for end of previous months. †Bradstreet. ‡Maclean Building Review. §For group figures see articles elsewhere in this issue. **Figures for four weeks ending Sept. 1, 1928, and corresponding previous periods. ***The index of the physical volume of business includes, forestry, mining, construction, manufacturing, trade, imports, exports, car loadings, shares traded and bank debits. Industrial commodity production includes forestry, mining, manufacturing and construction. Manufacturing includes production of flour, sugar, newsprint, pig iron, steel and automobiles; imports of cotton, rubber, wool and petroleum; slaughtering of cattle, sheep and hogs; storage holdings of butter and cheese. ††Preliminary. (1)Excluding lines east of Quebec. (2)Including lines east of Quebec. (3)Life Insurance Sales Research Bureau, Hartford, Conn.

Further gains were made in manufacturing establishments; the most marked increases were in iron and steel, fruit and vegetable canning and lumber factories, but considerable improvement was also registered in pulp and paper, rubber, textile, building material, electric current, mineral product and non-ferrous metal plants, while fish-preserving and chemical factories reported reductions. Employment also showed decided gains in mining, communications, transportation, construction and maintenance, services and trade, while seasonal dullness continued to affect employment in logging camps.

TRADE UNION REPORTS.

The percentage of unemployment reported at the end of July by the 1,600 local trade unions from which reports were tabulated, including a membership of 180,111 persons, stood at 2.5 in comparison with 3.2 per cent of idleness in June and with 3.3 per cent in July of last year. Quebec unions registered the most substantial improvement over June, largely due to a greater volume of employment afforded in the Montreal garment establishments. New Brunswick, Manitoba, Saskatchewan and British Columbia union members were also more fully engaged than in June, though the gains were not so outstanding as in Quebec. Due to less activity in the coal mines, Nova Scotia and Alberta unions reported a somewhat lower level of employment than in June, while the reductions in Ontario were very slight. When a comparison is made with the returns for July of last year Nova Scotia and Alberta unions reported a less favourable situation during the month under review, while more than offsetting increases in employment were registered in the remaining provinces.

A report in more detail of unemployment among local trade unions at the end of July will be found on another page of this issue.

During the month of July, 1928, the offices of the Employment Service of Canada made 38,178 references of persons to positions and effected a total of 36,551 placements. Of these the placements in regular employment were 25,218, of which 20,843 were of men and 4,375 of women. Placements in casual work numbered 11,333. The offices of the Service were also notified of 39,684 vacancies, of which 28,890 were for men and 10,794 for women. Applications for work were registered from 32,888 men and 11,823 women, a total of 44,711. The volume of business transacted during July, 1928, showed an appreciable gain over that recorded both during the previous month and during the cor-

responding period of last year, the reports for June, 1928, showing 36,273 vacancies offered, 42,834 applications made and 33,869 placements effected, while in July, 1927, there were recorded 31,955 vacancies, 38,684 applications for work and 29,521 placements in regular and casual employment. A report in detail of the work of the offices for the month of July, 1928, may be found elsewhere in this issue.

Production and Trade

INDUSTRIAL PRODUCTION.—Some figures indicating the recent movements of trade and industry are given in the table on page 946.

Business operations in Canada were well maintained in most lines during the midsummer period, according to the *Monthly Review of Business Statistics* published by the Dominion Bureau of Statistics. Much of the material for this section is derived from this publication, to which readers are referred for fuller information on current business statistics.

The output of manufacturing concerns in July was nearly on the same level as in June, a reduction in newsprint and steel being practically counterbalanced by increases in other lines. The imports of crude rubber and petroleum indicate an active season for the tire factories and petroleum refineries. The decline in the output of motor cars was somewhat greater than the usual recession from June to July. Contracts placed for new construction showed a recession from the high levels of preceding months, while building permits were at a specially high level. The movement of freight was heavy as shown by the increases in carloadings and the gross operating revenues of the principal railways. Merchandise exports, through the heavy movement of wheat and milled products, were much larger than usual for the month. The output of coal was somewhat less than in June, but exports of metal and Mint receipts indicate that metal mining was more productive than in the preceding month. Judged by the state of employment, retail and wholesale trade was more active at the first of August than at the beginning of July.

EXTERNAL TRADE.—A summary of Canadian trade prepared by the Department of National Revenue shows that in July, 1928, the merchandise entered for consumption amounted to \$103,403,649, as compared with \$110,703,773 in the preceding month and with \$90,598,447, in July, 1927. The chief imports in July 1928, were: Iron and its products, \$29,922,303; fibres, textiles and textile products, \$16,132,905; and non-metallic minerals and products, \$13,468,586.

The domestic merchandise exported in July 1928, amounted to \$125,530,791, as compared with \$107,121,091 in June 1928, and with \$79,395,041 in July 1927. The chief exports in July 1928, 2343: Agricultural and vegetable products, mainly foods \$55,566,021; wood, wood products and paper, \$25,526,383, and animals and animal products, \$16,479,508.

In the four months ending July 1928, exports of domestic merchandise totalled \$409,648,521, and imports to \$406,180,130.

**BUILDING
PERMITS AND
CONTRACTS
AWARDED**

According to a report prepared by the Dominion Bureau of Statistics, the value of the building permits issued in sixty-three cities in Canada during the month of July, 1928, was \$25,896,986 as against \$22,628,907 in June, 1928 and with \$16,369,195 in July, 1927.

The *MacLean Building Review* estimates the total value of the construction contracts awarded in Canada in August, 1928, at \$39,448,500. Of this amount, \$16,266,600 was for business buildings, \$10,901,200 was for engineering and \$10,609,300 was for residential buildings. The apportionment by provinces of the contracts awarded during August, 1928, was as follows:—Ontario, \$14,870,100, Quebec, \$9,908,100; New Brunswick, \$1,772,700; Nova Scotia, \$1,972,500; Prince Edward Island, \$106,100; British Columbia, \$3,889,000; Alberta, \$1,964,100; Saskatchewan, \$2,109,100; Manitoba, \$2,856,800.

The figures for contracts awarded during the past month exceed those for any August on record. The eight months total is now 22.8 per cent ahead of the same period of 1927. The total value of the contracts awarded from January to August being \$334,065,400.

The contemplated new construction in Canada in August, 1928, according to the same *Review*, totalled \$47,162,900; \$16,649,300 of this amount being for business buildings, \$14,533,800 for residential buildings; \$4,983,300 for industrial projects and \$10,996,500 for engineering, including bridges, dams and wharves, sewers, water mains, roads, streets and general engineering.

Strikes and Lockouts

The time loss due to industrial disputes in August, 1928, was greater than during July, 1928, and more than double that during August, 1927. There were in existence during the month seventeen disputes, involving 5,746 workpeople, and resulting in a time loss of 37,634 working days, as compared with eighteen disputes involving 2,449 workpeople and re-

sulting in a time loss of 23,793 working days in July. In August, 1927, there were on record fourteen disputes involving 6,194 workpeople and resulting in a time loss of 14,321 working days. Three of the strikes and lockouts commencing prior to August terminated during the month as did seven of the disputes which commenced during August. At the end of the month, therefore, there were on record seven strikes and lockouts affecting 480 workpeople, not including those strikes and lockouts in which employment conditions were reported to be no longer affected but which had not been formally called off.

Prices

The cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average retail prices in some sixty cities was \$11.08 at the beginning of August, as compared with \$10.80 for July; \$10.93 for August, 1927; \$11.10 for August, 1926; \$10.84 for August, 1925; \$10.19 for August, 1924; \$10.53 for August, 1923; \$10.44 for August, 1922; \$11.44 for August, 1921; \$16.42 for August, 1920; \$16.92 for June, 1920 (the peak); \$13.41 for August, 1918; and \$7.68 for August, 1914. The most important advance was a seasonal increase in the price of potatoes, with the appearance of the new crop, while the prices of both fresh and salt pork, bacon, lard, eggs, butter and cheese were also higher. The prices of mutton, bread, flour, apples and granulated sugar were slightly lower. Including the cost of fuel and rent with that of foods the total budget averaged \$21.31 at the beginning of August, as compared with \$21.01 for July; \$21.11 for August, 1927; \$21.32 for August, 1926; \$21.05 for August, 1925; \$20.57 for August, 1924; \$21.03 for August, 1923; \$20.88 for August, 1922; \$21.98 for August, 1921; \$26.60 for August, 1920; \$26.92 for July, 1920 (the peak); \$21.20 for August, 1918; and \$14.41 for August 1914. Changes in fuel and rent were slight.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics was again slightly lower at 149.1 for August, as compared with 149.6 for July; 152.3 for August, 1927; 154.0 for August, 1926; 158.9 for August, 1925; 156.8 for August, 1924; 153.5 for August, 1923; 151.7 for August, 1922; 165.5 for August, 1921; 250.2 for August, 1920; 256.7 for May, 1920 (the peak); and 202.8 for August, 1918. In the grouping according to chief component materials two of the eight main groups were lower, four were somewhat higher, while two were unchanged. The vegetables and their

products group and the fibres, textiles and textile products group were substantially lower, the former due mainly to lower prices for grains, flour and other milled products, which more than offset higher prices for raw sugar, potatoes, hay and straw; and the latter due to lower prices for cotton, which more than offset slightly higher prices for silk, jute, hessian and sash cord. The groups which advanced were: the animals and their products group, chiefly because of higher

prices for hogs, sheep, meats, butter and eggs; the non-ferrous metals group due to higher prices for lead, tin and spelter, which more than offset declines in the prices of silver and antimony; the non-metallic minerals group, due to advances in the prices of coal oil and gasoline; and the iron and its products group. The wood, wood products and paper group and the chemicals and allied products group were unchanged.

PROCEEDING UNDER THE INDUSTRIAL DISPUTES INVESTIGATION ACT, DURING THE MONTH OF AUGUST, 1928

DURING the month of August the Department received the report of the Board of Conciliation and Investigation established to deal with a dispute between the Ottawa Electric Company and certain of its employees, being members of Local Union No. 586, International Brotherhood of Electrical Workers.

Applications Received

Five applications for the establishment of Boards of Conciliation and Investigation were received during August, as follows:—

(1) From clerks employed in the locomotive and car departments of the Canadian Pacific Railway Company, Eastern Lines, being members of the Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees.

(2) From certain employees of the Atlas Coal Company, Elgin Coal Company, Hy-Grade Coal Company, Caledonian Collieries, Western Gem Coal Company, and Thomas Coal Company, as represented by the Drumheller Local Unit No. 19, Mine Workers Union of Canada.

(3) From certain employees in the street railway service of the cities of Port Arthur and Fort William, being members of Division No. 966, Amalgamated Association of Street and Electric Railway Employees of America. The dispute related to the employees' request for increased wages, 81 employees being directly affected, and 92 indirectly. The authorities of the two municipalities concerned agreed to refer the dispute to a Board of Conciliation and Investigation and a Board was accordingly established on September 1, composed as follows: The Rev. H. R. Grant, D.D., Fort William, Ontario, chairman, appointed on the joint recommendation of the other Board members, Messrs. A. G. Seaman, of Port Arthur, the employers' nominee, and F. E. Moore, of Fort William, the employees' nominee.

(4) From certain employees of the Quebec Railway, Light and Power Company, being motormen and conductors, members of Division No. 985, Amalgamated Association of Street and Electric Railway Employees of America. The dispute related to the alleged unfair dismissal of several employees because of certain union affiliation. Three hundred and seventy-five employees were understood to be directly affected by the dispute, and 100 indirectly. A Board of Conciliation and Investigation was established by the Minister of Labour on September 1, and Mr. J. B. Vachon, of Quebec P.Q., was appointed a member thereof on the recommendation of the employees concerned.

(5) From locomotive engineers in the employ of the Canadian Pacific Railway Company, Eastern Lines, being members of the Brotherhood of Locomotive Engineers.

Other Proceedings

An application for the establishment of a Board of Conciliation and Investigation was reported in the August issue of the LABOUR GAZETTE as having been received from certain employees of J. R. Booth, Limited, of Ottawa, Ontario, being members of Local No. 73, International Brotherhood of Pulp, Sulphite and Paper Mill Workers. One hundred and fifty employees were stated to be directly affected by the dispute, which concerned the employees' request for increased wages. The industry concerned not coming within the direct scope of the Industrial Disputes Investigation Act for adjustment, a Board could be constituted only with the joint consent of the parties to the dispute under Section 64 of the Act. The consent of the employing company being withheld in this case, a Board could not be established.

Reference also appeared in the August issue of the LABOUR GAZETTE to an application for the establishment of a Board which had reached the Department from certain em-

ployees of the Winnipeg Electric Company, being members of the Winnipeg Electric Trackmen's Unit, One Big Union. The dispute grew out of the employees' request for an agreement covering wages and working conditions, 185 employees being directly affected and 1,200 indirectly. Mr. M. S. Campbell, Chief Conciliation Officer of the Department, held several conferences in Winnipeg with the parties to the controversy and a basis of settle-

ment was reached. Difficulty later arose in securing the company's signature to the agreement, the company preferring to merely post on the various bulletin boards a memorandum of the understanding reached, rather than to sign an agreement. This not being satisfactory to the men, the Minister of Labour, himself, while in Winnipeg, took the matter up with the employing company and an agreement satisfactory to both parties was signed.

Report of Board in Dispute Between the Ottawa Electric Company and Its Electrical Workers

A report was received during August from the Board established to deal with a dispute between the Ottawa Electric Company and certain of its employees, being members of Local Union No. 586, International Brotherhood of Electrical Workers. The dispute in question related to the employees' request for increased wages and changed working conditions, 25 men being directly affected and 30 indirectly. The personnel of the Board was as follows: His Honour Judge J. T. Mulcahy, of Pembroke, Ontario, chairman, appointed on the joint recommendation of the other two members, Messrs. A. E. Fripp, K.C., and H. J. McNulty, both of Ottawa, Ontario, nominees of the company and employees, respectively. As a result of the efforts of the Board an amicable settlement of the dispute was reached and the report of the Board was accompanied by a signed agreement between the parties. The text of the Board report and of the agreement follows.

Report of Board

OTTAWA, July 31, 1928.

Registrar of Boards of Conciliation and Investigation, Department of Labour, Ottawa, Ont.

DEAR SIR,—

Re Board of Conciliation, Ottawa Electric Company and Certain Members of Local Union No. 586—International Brotherhood of Electrical Workers.

We desire to report that the Board of Conciliation appointed to deal with this matter have heard the evidence relating thereto and, in the course of our deliberations and after five sessions of the Board had been held, the parties to the investigation have come to an agreement which is mutually satisfactory and a copy of which is attached hereto.

Yours very truly,

(Sgd.) JOHN MULCAHY,

" A. E. FRIPP,

" H. J. MCNULTY.

AGREEMENT

THIS AGREEMENT made the 1st day of August, A.D. 1928, between the Linemen, Linemen's Helpers, etc., of the Ottawa Electric Company, represented by William Ferguson and David Demers, on the First Part, and the Ottawa Electric Company, represented by Colonel D. R. Street, General Manager, of the Second Part.

Whereas a Board of Conciliation and Investigation was requested on behalf of certain employees of the said Ottawa Electric Company being linemen, linemen's helpers, etc.

And whereas His Honour Judge Mulcahy was appointed Chairman and Mr. H. J. McNulty, Barrister, representing the Parties of the First Part, and Mr. A. E. Fripp, K.C., representing the Party of the Second Part, having considered certain evidence placed before the said Board on behalf of the Party of the First Part as well as the Party of the Second Part;

And whereas at the conclusion of the said hearing negotiations were entered into between the Parties of the First Part and the Party of the Second Part as follows:—

It is agreed between the Parties of the First Part and the Party of the Second Part, that the said Parties of the First Part shall in future receive the same bonus as is paid by the Ottawa Hydro-Electric Commission, less the cost of Group Insurance now furnished by the Party of the Second Part to the said Party of the First Part, provided that, in the opinion of the General Manager endorsed by the Superintendent of the Lines Department of the said the Ottawa Electric Company, there have been distinct economies effected in operating expenses through the efforts of the linemen. In no case shall the bonus exceed seven (7) per cent per annum. The said bonus to be effective for the year 1928 and dating from the First of January, A.D. 1928.

It is further agreed between the Parties of the First Part and the Party of the Second Part, that the said Party of the Second Part

will allow the said Parties of the First Part the same consideration with respect to statutory holidays as this class of workmen receive from the Ottawa Hydro Electric Commission, and also for overtime to allow the same rates of pay for work on statutory holidays.

This agreement to be binding on the parties hereto for a period of three (3) years from this date.

In witness whereof the said William Ferguson and David Demers, representing the Parties of the First Part, and the said Colonel D. R. Street, representing the Party of the Second Part, have hereunto set their hands

and seals the day and year first above written.

Signed, sealed and delivered in the presence of,

(Sgd.) W. M. FERGUSON,

(Sgd.) D. DEMERS,

(Sgd.) D. R. STREET,

General Manager.

As to the signature of Col. D. R. Street,

(Sgd.) F. A. WRIGHT.

As to the signatures of William Ferguson and David Demers,

(Sgd.) E. A. SMITH.

ALBERTA LABOUR DISPUTES ACT, 1926

REPORTS of Boards of Conciliation and Investigation established in Alberta under the Labour Disputes Act of the Prov-

ince, in connection with various recent disputes, are given in the following pages:—

Report of Board in Dispute Between Edmonton Automobile Dealers' Association and Local Mechanics' Union

In the Matter of Labour Disputes Act (1926), and a dispute between Edmonton Automobile Dealers' Association, representing certain employers and Local Union Number 1004, International Association of Mechanics, representing employees:

To the Honourable J. W. BROWNLEE,
Minister of Labour,
Province of Alberta,
Edmonton, Alberta.

SIR,—We, the undersigned Members of the Board of Conciliation and Investigation set up under the provisions of the said Act, having before entering upon the functions of our offices, taken oath of office required by the Act, and having taken upon ourselves the burden of investigation, have the honour to report as follows:

Your Board of Conciliation held three meetings for the purpose of taking evidence from the interested parties, namely on June 22nd, June 28th and July 6th, 1928.

On the evidence submitted by representatives of the employees, we have found the following facts:

(a) That approximately 85 per cent of the automobile mechanics of the City of Edmonton belong to the International Association of Mechanics Local No. 1004.

(b) That the Employees ask:

(1) A classification of the mechanics:

(2) Increase in wages. This to include overtime and double time, as well as a minimum weekly wage.

(3) Better working conditions.

(4) Apprenticeship system.

The above requests or suggestions made by the employees are fully set forth in a Memorandum of Proposed Agreement between the Automobile Dealers' Association and the International Association of Mechanics.

The employees produced a considerable amount of evidence to substantiate their claims.

On evidence submitted by the operators, we found the following facts:

(a) That the Edmonton Automobile Dealers' Association was merely a name, and that the Association had no power to bind the individual operator.

(b) That the operators were not aware of any dissatisfaction among their employees.

(c) That the operators were perfectly willing to discuss with their own employees any points of dissatisfaction at any time, but would not consider discussing these points of dissatisfaction with a committee or representative of the employees outside their respective places of business.

(d) That the operators, in some cases at least, were paying a higher wage than that demanded in the Proposed Agreement hereinbefore referred to.

(e) That working conditions are governed by the Factory Act now in force in the Province.

It was stated by the Operators:

- (1) That the aim of the operators was to keep their men perfectly satisfied, and to keep them employed during the whole year, and that the average automobile mechanic received a higher wage than mechanics in other trades, such as bricklayers, plasterers, etc.
- (2) That, on account of the peculiar nature of their business, the operators claim it is not practicable to undertake to employ union men only, inasmuch as the mechanic had a dual position to fulfill, firstly, as a mechanic, and secondly as an employee to meet the general public.

After having carefully considered all the evidence submitted by both parties, your Board is of the opinion that the main contention of the men is a recognition of the union by the operators. We feel that Labour Unions, properly organized, have been a great benefit to mankind, and it is just possible that the contention of the automobile operators—that union employees could not possibly be satisfactory under present conditions—is considerably exaggerated, although made in good faith. We also think that the employees are entitled to overtime, although the operators pointed out very decidedly that they did not wish their men to work overtime, and tried to avoid it as much as possible. It was brought out in evidence however, that owing to a desire of the operators to give service to the Public, and the desire of the employees to co-operate with the employers in this regard, that in many cases overtime was unavoidable. The men, however, frequently

asked for permission to work overtime at regular wages.

Working conditions, although governed by the Factory Act of the Province of Alberta, might be well looked into by the proper Government officials, particularly in reference to the accumulation of deadly monoxide gases.

From the evidence submitted, there is no question in the minds of the Board that in view of the fact that such a large percentage of the employees are already members of the Union, serious consideration should be given to the unrest apparent among the men.

The operators must realize that they have a dual duty to perform—first, to the public, secondly, to their employees. The automobile business has attained tremendous proportions in this province, and assuming that the employees are sincere in the demands made in the proposed agreement (and your Board is of the opinion that this is so) their demands must be given proper and careful consideration.

We would respectively submit, in the interests of all concerned—employees, operators and general public—that the operators meet a committee of the men for the purpose of having a full and frank discussion of all points set forth in the Proposed Agreement.

Dated at Edmonton, this 20th day of August, A.D., 1928.

(Sgd.) THOS. MAGEE,
Chairman of the Board.

(Sgd.) A. FARMILO,
Representative of Employees.

(Sgd.) A. S. MATHESON,
Representative of Operators.

Report of Board in Dispute Between Calgary Automobile Dealers' Association and Local Machinists' Union

The Board of Conciliation and Investigation finally appointed on the 29th day of June to consider the dispute between Local Union No. 1006 International Association of Machinists, Calgary, and Calgary Automobile Dealers' Association, held six meetings as a Board and through one or more of its members assisted at a number of round-table conferences with representatives of the automobile dealers and garage proprietors and representatives of the automobile mechanics from the various Calgary garages, in an endeavour to assist in a settlement of the questions in issue.

It is understood that after the protracted negotiations that became necessary the owners have signified to the Registrar in the manner prescribed by the Act their decision to accept the Board's findings in the matter of the dispute between them and the automobile

mechanics of the city of Calgary and that a similar communication has been sent to the Registrar in accordance with Section 60 of the Act, by the men's organization.

While the Board does not propose to comment upon the initial difficulties that seemed to impede a settlement it would be an unwarranted omission from this report if the Board failed to congratulate both sides upon the spirit of fairness and the serious and honest endeavour for the settlement of the dispute and the advancement of the very important trade affected thereby, which have distinguished the many mutual conferences and the final decision of both parties.

Both employers and employees have expressed their pleasure at the greater knowledge of the difficulties of both sides and the promise of successful and friendly co-operation in a

business so closely affecting the convenience and safety of the public, which have been the natural and happy outcome of the intimate conversations which have been held.

The findings and recommendations which represent the unanimous decision of the Board, are as follows:—

1. No employee shall solicit or do work of the nature of that done by the employer other than in the employer's business or on the employee's own car. Any employee violating this clause shall be liable to dismissal.

2. Employees shall supply all necessary Hand Tools: Special and Cutting Tools, including Files, shall be supplied by the employer.

3. In the opinion of the Board and having regard to the conditions prevailing in other industries and the peculiar conditions prevailing in the industry under investigation, it should be the ultimate object of both parties to bring this industry into line with other trades and be governed by the provisions of an eight (8) hour day. It is realized, however, both by the Board and by both parties to the dispute, that until the public accepts this principle in respect to this trade, difficulties will arise if any sudden change is attempted or made. The Board holds to the opinion, however, that it is both in the public interest and in the interest of both parties to this dispute, for employer and employee to use every effort for the achievement of this end.

4. Each employee shall be entitled to a holiday every other Saturday afternoon from and after 1 p.m. and shifts should be arranged accordingly.

5. For all time worked on Sundays, holidays and over and above nine hours per day, the employee shall for the present, be paid time and one quarter and the employer agrees to use every endeavour to discourage the public from demanding the performance of anything but emergency work on Sundays, holidays and after 6 p.m., it being further understood that when and if satisfactory arrangements have been made by the employer with the public and charges have been generally adjusted, the employee shall be entitled to receive time and one-half for all such overtime or holiday time.

6. The overtime referred to in the last preceding recommendation should not be paid for reasonable and necessary emergency work that is required to be done upon the employer's own cars.

7. Any employee working on Sundays or holidays shall be paid time and one-quarter (and on the happening of the event referred to in paragraph 5, time and one-half) for a minimum guaranteed period of four hours.

8. In the interest of the trade and in the interest of the public, the adoption of an apprenticeship scheme with its guarantee of efficiency and experience on the part of the employee, is recommended. The minimum rate for auto mechanics shall be as follows:—

	per hour
Foreman (wages or salary equivalent to) ..	90c
Journeyman, Class "AA"	85c
Journeyman, Class "A"	75c to 80c
Journeyman, Class "B"	70c to 75c
4th Year Apprentice	70c
3rd Year Apprentice	55c
2nd Year Apprentice	40c
1st Year Apprentice (after 6 months) ..	30c

subject to the following provisions:—

- (a) The classification of journeymen in classes "AA," "A" and "B" shall be made in each garage by the foreman, provided that any employee dissatisfied with his classification may, through the garage shop committee, appeal to the employer; and provided further that no journeyman shall be entitled to be placed in Class "AA" unless he has served at least six years in the trade, is recommended by the foreman and is especially skilled in all forms of labour usually done in a garage and all lines incidental and collateral thereto.
- (b) It is further understood that the above rates are minimum rates and that any employee receiving more than the above-mentioned rates, shall suffer no reduction as a result of any acceptance by the parties of the Board's findings.

9. Employees shall be paid once a week in cash.

10. In case of depression of business, seniority should be the prevailing principle in the laying off of mechanics except in so far as the employees of each garage through their shop committee (to be set up in accordance with paragraph 11 hereof) shall agree otherwise with the employer.

11. There shall be a Shop Committee appointed by the employees of each garage who shall have access to the employer and shall be recognized as an authority to deal with all grievances that may arise.

12. Inasmuch as the suggestions contained herein are experimental and contain in themselves the elements of a possible early change in conditions, it is recommended that the scheme outlined above be effective until the 1st day of June, 1929, after which the situation may be changed or confirmed by mutual experience and agreement.

Report of Board in Dispute Between Riverside Iron Works, Limited, Calgary, and Local Union of Boiler Makers, Iron Ship Builders, Etc.

The Board of Conciliation and Investigation finally appointed on the 4th day of August, A.D., 1928, to consider the dispute between Local Union No. 392, International Brotherhood of Boiler Makers, Iron Ship Builders and Helpers of America, Calgary, Alberta, and Riverside Iron Works, Limited, Calgary, Alberta, held two meetings.

At the first meeting it was able to outline a scheme by which the parties interested in this dispute, viz., the employees of the structural shops of the Riverside Iron Works, Limited, and the officers of the Company, might meet under the Chairmanship of Mr. Fred. White, a member of the Board, in an endeavour to arrive at points of agreement and without bringing into question certain objections to Union organization and recognition. The conference evolved, as it was hoped, into an amicable discussion between the employees and the Company and resulted in harmony on all essential points of difference.

An agreement has been reached between employees of the Riverside Iron Works, Limited, and Riverside Iron Works, Limited, which at the request of both parties at the second meeting of the Board was after full discussion and is hereby made the findings of the Board pursuant to "The Labour Disputes Act, 1926."

While the parties to the agreement are not described identically as the original parties to the dispute, the Board wishes to congratulate both sides upon what is in reality a tribute to the happy relations prevailing in this particular branch of the industry under investigation and constitutes, it is hoped, a basis for satisfactory relationships in the future.

The agreement follows.

(Signed) A. H. GOODALL,

(Signed) FRED. J. WHITE,

(Signed) L. W. BROCKINGTON,

Chairman.

AGREEMENT

THIS AGREEMENT made and entered into this of 1928, Between: Riverside Iron Works Limited and Employees in the Company's Plate and Structural Department including Welders and Burners.

1. *Hours of Labour.*—The regular working day will not exceed eight (8) hours, starting at 8 a.m. and quitting at 5 p.m. with one hour off for lunch between 12 noon and 1 p.m. the first five days of the week and four (4) hours on Saturdays, the shop to close at 12 noon on Saturdays. The Night Shift hours will consist of nine (9) hours per night, starting at 5 p.m. and quitting at 2 a.m. (unless it is mutually agreed between the Employees and the Iron Workers that the starting and quit-

ting time be changed on account of street car accommodation, etc.), and they will be allowed one half hour off for lunch with pay, working five (5) nights per week for which they will be paid forty-five (45) hours.

2. *Overtime.*—All time worked over schedule hours will be considered overtime, and will be paid for at the rate of time and one-half for the first four (4) hours after close of shop hours, and double time thereafter until relieved. Double time for Sundays and all Dominion holidays: New Year's Day, Good Friday, Empire Day, Dominion Day, Labour Day, Thanksgiving Day and Christmas Day. Should any of the aforementioned holidays fall on a Sunday the day substituted by the Federal Government will be observed. In the event of a man being called out at 10 p.m. or any time thereafter he will be paid double time. Double time shall also be paid for all time worked after 10 p.m. The provisions governing overtime shall also be paid in like manner to night workers.

3. *Travelling Wages.*—Employees covered by this agreement, when sent away from Calgary to work will be allowed straight time for all time travelling and waiting, straight time for work performed during regular working hours and overtime rates for work performed during overtime hours and free transportation and necessary expenses for board and lodging. This provision shall be limited to work not exceeding two weeks on any out of town job.

4. *Apprentices.*—Apprentices will serve five (5) years of not less than two hundred and seventy-five (275) working days per year and shall receive instructions in all branches of the trade. The ratio of apprentices will not exceed one (1) for the shop and one (1) for every five (5) mechanics regularly employed. Apprentices to receive signed statement when starting apprenticeship, and failing to qualify in six (6) months to be released from service. On completion of apprenticeship they shall receive the recognized mechanics rate providing their work warrants same. Regular apprentices shall be between the ages of sixteen (16) and twenty-one (21).

Classification of Work

5. Markers or Layer-Outs work will consist of reading drawings, measuring, marking and laying out all kinds of work in the Structural shop and getting it ready for the men who will cut, punch and fabricate same, and in the event of there being no laying out work to be done, it will be necessary for these men to cut, punch and fabricate steel in the Structural shop.

6. Structural Fitters work will consist of cutting, punching, rolling, bending, rivetting, caulking, etc., on all kinds of structural steel, tanks, coal mine equipment, etc., fabricated in the Structural shop.

7. Electric Welders work will consist of erecting and fitting together all kinds of tanks, and other steel work in the Structural shop which has to be welded, and to complete the welding of the joints after it is fitted together. It also consists of building up shafts, welding broken castings and other parts.

8. Acetylene Welders work will consist of chipping broken castings, lining them up, pre-heating them and welding them together, including welding any other kind of machinery or steel and iron work which may require to be welded by acetylene.

9. Acetylene Cutters work will consist of cutting up structural steel, plates, sheets, etc., or any other material required in the Structural shop.

10. Boiler Makers work will consist of cutting, rolling, punching, flanging, rivetting and caulking all kinds of boilers and pressure tanks, including re-tubing patching and repairing boilers.

11. *Wages.*—The classification and wages in the Structural shop shall be as follows:

Classification	Rate per hour
Layers Out or Markers	77c to 80c
Boiler Makers.	75c to 80c
Acetylene Welders.	75c to 80c
Electric Welders.	75c to 80c
Structural Mechanics.	65c to 75c
Burners	55c to 65c
Punch and Shear Operators and Specialists.	55c to 65c
Structural Shop Helpers.	45c to 50c
Apprentices.—	
1st six months	22c
2nd six months.	24c
3rd six months.	27c
4th six months.	30c
5th six months.	35c
6th six months.	40c
7th six months.	45c
8th six months.	50c
9th six months.	57c
10th six months.	64c

With regard to men who may be too old to start as apprentices, but who have been working in the shop for some time, and who wish to learn the trade, these will be known as Helper Apprentices.

Helper Apprentices, when so designated by the Company, will receive their regular

helper's rate for the first six months, and with a two cent per hour increase every six months thereafter, until three years have been served from the date of their first entering the apprenticeship, when, if retained in the service of the company, they will then receive the minimum rate for their class.

12. *Adjustment of Grievances.*—Should any difference arise between the Company and the employees covered by this agreement in reference to this agreement or other matters, that cannot be satisfactorily adjusted between the Foreman and the shop Committee or other higher officers of the Company and the shop Committee, such matters in controversy, shall be referred to the proper officer of the Company for adjustment. There shall be no stoppage of work on the part of the employees or lockout on the part of the Company, while negotiations for adjustment are pending or until after all legal methods have been used to bring about an adjustment.

The Company will not discriminate against any employee who as Committeeman, from time to time, represents other employees.

13. *Duration of Agreement.*—This Agreement to become effective on the 1st day of September, A.D. 1928, and will remain in effect until the 28th day of February, A.D. 1929. Should either party desire a change Thirty (30) days notice must be given before expiration of Agreement, otherwise same will remain in effect for another year.

For the Employees in the Plate and Structural Department of Riverside Iron Works Limited.

For Riverside Iron Works Limited.

The following clause is also part of the contract:—

In the event that notice is not served within thirty days of expiration, the agreement will continue from year to year until thirty days notice is given before each expiration date.

Report of Board in the Matter of the Labour Disputes Act of 1926 and of a Dispute Between Lethbridge Automobile Dealers' Association, Lethbridge, Alberta, and Local Union No. 1057, International Association of Machinists, Lethbridge, Alberta.

To the Honourable the Minister of Labour, Edmonton, Alberta.

SIR,—We, the undersigned members of the Board of Conciliation and Investigation set up under the provisions of the said Act, having before entering upon the functions of our office taken the oath of office required by the Act, and having taken upon ourselves the burden of investigation, have the honour to report as follows:

The Lethbridge Automobile Dealers' Association, Lethbridge, and members of Local Union No. 1057, were represented as per copy of proceedings submitted to you. Further to interim report submitted: Your Board has made every effort to induce the employers to enter

into a friendly agreement with employees to remove any differences that might arise from time to time, and to remove any misunderstanding which might exist at present.

Our efforts, however, have been absolutely unavailing; as the employers will not consider any form of agreement, contending their employees are quite satisfied with present conditions, and if there are any complaints to be adjusted they are quite prepared to meet their individual employees personally, and as far as practicable adjust same.

The employees are prepared to enter into an agreement as drafted by your Board, and submitted to you, and would further add that the men are very open-minded on the situation,

and expressed their willingness to meet the employers in any way possible to arrive at an amicable agreement.

From the evidence given at the hearing, and opinions formed at subsequent respective meetings, your Board formulated the tentative agreement which comprised most of the points to be adjusted, and these we would recommend.

It was your Board's intention that it would form the basis of an agreement and mutual discussion between the parties concerned.

That these suggestions bore fruit is brought out by the fact that at least one garage has materially improved working conditions by paying overtime, increased wages, and allowed holidays with pay.

All of which is respectfully submitted.

Dated at Lethbridge, this 13th day of August, 1928.

(Sgd.) JOHN DOW,
Chairman of Board of Conciliation.

(Sgd.) R. C. FARRIS,
Representing Lethbridge Automobile Dealers' Association, Lethbridge.

(Sgd.) W. ALFORD,
Representing Local Union No. 1057, International Association of Machinists.

MEMORANDUM OF AGREEMENT BETWEEN LETHBRIDGE AUTOMOBILE DEALERS' ASSOCIATION AND GARAGE MECHANICS, LETHBRIDGE.

Hours of Work

(1) Nine hours shall constitute a day, ordinary working-day from eight a.m. till six p.m., except Saturdays, which shall be eight a.m. till twelve noon (49 hours per week).

Where requirements of service demand shift work, any nine consecutive hours, except one hour intermission for meals, shall constitute a day, and such shift hours shall be those the service requires to be fulfilled constantly, inclusive of Saturday afternoons, such assignments of shifts shall not be made for more than fourteen calendar days when practicable.

Overtime

(2) Overtime shall be computed on the basis of nine hours per day, at the standard rate the employee is entitled to in section 12 hereof. All overtime, including Sundays, holidays, and Saturday afternoons, where the 49-hour week is in force, shall be computed at the rate of time and one-half of standard rate of wages paid employees.

(3) Overtime shall only be allowed when authorized by the foreman, or person in charge of the work.

(4) Christmas Day, also Saturday afternoons where covered by the 49-hour week as mentioned in section 1 hereof, and such other

holidays as are observed as general holidays throughout the Province. Bank holidays are not included.

Payments

(5) Employees will be paid once a week, or not later than semi-monthly, subject to mutual agreement.

Classification

(6) "Foreman"—an employee having charge of more than three journeymen or apprentices.

(7) "Journeyman"—an employee who is recognized by the Lethbridge Automobile Dealers' Association at the time of the signing of this agreement as a qualified mechanic; or, in future, one who has been examined by three competent mechanics as called for under section 9 hereof.

Apprentices

(8) A young man entering garage work without previous experience, to be trained in the trade, shall be required to serve an apprenticeship, or training, of four years, unless he is able to qualify as a journeyman under Section 9 hereof before the expiration of four years.

(9) In order for an apprentice to qualify as a journeyman, he must submit to examination, or examinations, by three competent mechanics agreed upon by the respective committees.

General

(10) There shall be no discrimination against employees on account of affiliations or relations they may, or may not, have with any organization.

(11) The Executive of the Lethbridge Automobile Dealers' Association shall receive or discuss any complaints from any employee, or committee of employees at any time.

Wage Schedule

(12)	Foremen	\$ 95 per hour
	Journeymen	85 " "

Apprentices—		
	First six months	10 00 per week
	Second six months	12 50 " "
	Second year	15 00 " "
	Third year	17 50 " "
	Fourth year	25 00 " "

(13) Higher wages than specified in section 12 will be paid when warranted by ability or quality of service rendered (see section 8 hereof).

(14) These regulations and schedule of wages shall continue in force until April 30, 1929, and thereafter from year to year unless notice in writing be given on or before March 30 of each year.

Effective July 1, 1928, and hereafter as per section 14.

LETHBRIDGE AUTOMOBILE DEALERS' ASSOCIATION,
Per Secretary.

COMMITTEE OF GARAGEMEN,
Per Secretary.

STRIKES AND LOCKOUTS IN CANADA DURING AUGUST, 1928

THE number of strikes and lockouts in existence in Canada during August was seventeen as compared with eighteen the previous month. The time loss for the month was greater than during August, 1927, being 37,634 working days as compared with 14,321 working days during the same month last year.

Date	Number of disputes	Number of employees involved	Time loss in working days
*Aug., 1928.....	17	5,746	37,634
*July, 1928.....	18	2,449	23,793
Aug., 1927.....	14	6,194	14,321

*Preliminary figures.

The record of the Department includes lockouts as well as strikes, but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees at its commencement and lasting at least one working day. Disputes of less than one day's duration, and disputes involving less than six employees, are included in the published record only when ten day's or more time loss is caused, but a separate record of such disputes is maintained in the Department, and the figures are given in the annual review.

The figures printed are inclusive of all disputes which come to the knowledge of the Department, and the methods taken to secure information practically preclude probability of omissions of a serious nature. Information as to a dispute involving a small number of employees, or for a short period of time, is frequently not received until some time after its commencement.

Seven disputes, involving 522 workpeople, were carried over from July, and ten disputes commenced during August. Three of the disputes commencing prior to August terminated during the month, as did seven of the disputes which commenced during August. At the end of the month, therefore, there were on record seven strikes and lockouts, as follows: hat factory workers, Montreal, P.Q.; shingle sawyers, Vancouver, B.C.; plumbers, Kingston, Ont.; sheet metal workers, Kingston, Ont.; coal miners, Wayne, Alta.; shoe factory workers, Toronto, Ont.; and garage employees, Saskatoon, Sask.

The record does not include minor disputes such as are described in a previous paragraph, nor does it include disputes as to which information has been received indicating that employment conditions are no longer affected, but which the unions concerned have not yet declared terminated. Information is available as to seven such disputes, namely: ladies' clothing factory workers, Toronto, June 30, 1926; electrotypers, Toronto, Ont., December 20, 1926; bakers, Montreal, P.Q., May 1, 1927; stonecutters, Montreal, P.Q., June 10, 1927; sheet metal workers, Montreal, P.Q., September 1,

1927; coal miners, River Hebert, N.S., February 1, 1928; and fur workers, Toronto, Ont., April 10, 1928, this last dispute being added to the list in August. The dispute of plumbers at Windsor, Ont., April 5, 1927, and the dispute involving printing compositors, pressmen and bookbinders at Hamilton, Ont., June 1, 1928, which were carried in this list for some months, were reported as being called off by the unions concerned during August, in the first case the employer having signed an agreement with the union, and in the other, the employees having been re-instated.

A dispute between the coal handlers' and trimmers' local of the longshoremen's union and certain coal companies in Halifax, concerning the interpretation of certain clauses in the agreement, was reported about July 6, 1928. The union claimed that only members of the union should be employed to bag coal as well as to load the boats, and union men refused to handle coal. The union stated that this was not a strike and the employers secured other workers to handle the coal. Negotiations have been in progress in order to secure a settlement of the dispute as to the meaning of the agreement.

Information also reached the Department as to a dispute involving employees on highway construction in the vicinity of Halifax who demanded an increase in wages about the middle of August. Particulars as to this dispute have not yet been secured by the department.

Of the disputes which commenced during the month two were for increases in wages, one for increase in wages and improved working conditions, two against decreases in wages, one for recognition of union, one for recognition of union and against changes in working conditions, one for a union shop, one to maintain and secure union wages and working conditions, and one for contract rates instead of day rates. Of the strikes and lockouts which terminated during August, one was in favour of the workers, three were in favour of the employers, four resulted in compromises and the results of two are yet recorded as indefinite.

The following paragraphs give particulars in regard to certain disputes, in addition to the information given in the tabular statement.

FUR WORKERS, TORONTO, ONT.—At the end of August the workpeople, fourteen males and six females, who were involved in this dispute, commencing April 10, against an alleged

violation of agreement, were reported as having secured work elsewhere, so that the dispute is recorded as terminated, but not having been called off by the union concerned is transferred to the list of such disputes.

LADIES' CLOTHING FACTORY WORKERS, TORONTO, ONT.—This dispute, an alleged lockout as the result of a reduction in wages, was called off by the union concerned at the end of August, most of the employees concerned having secured work elsewhere.

COAL MINERS, COALHURST, ALBERTA.—Employees ceased work on July 30 to secure the reinstatement of employees dismissed for loading dirty coal. The employer stated that the men had been suspended in accordance with the terms of the agreement in force. This agreement stipulated that workers should not strike, and provided for negotiations and finally arbitration and compensation in such cases. The workers stated that the application of the rule in these cases was unfair and that during the absence of the manager redress could not be secured. The Deputy Minister of Labour

and the Conciliation Officer of the Department for the district interviewed the parties to the dispute at various times between August 10 and August 20. The employees returned to work on August 27, it being agreed that the dockage clause would be amended and the cases of the dismissed employees would be dealt with.

SALMON FISHERMEN, FRASER RIVER DISTRICT, B.C.—Fishermen on the Fraser river and adjacent waters ceased work on August 20 to enforce a demand for increases in the prices of fish to be paid by the canners. The fishermen demanded an increase from 65 cents per fish for sockeye to 75 cents, with similar increases for other varieties. It is stated that last year bonuses were paid by the canners in addition to the contract prices. As a result of further negotiation it was agreed to fix the price for sockeye at 70 cents per fish until September 15, to be adjusted thereafter by a select committee, with a compromise as to the prices of other varieties. Work was resumed on August 23.

STRIKES AND LOCKOUTS IN CANADA DURING AUGUST, 1928

Industry, occupation and locality	Number of employees involved	Time loss in working days	Remarks
(a) Strikes and Lockouts Occurring Prior to August, 1928.			
MINING, NON-FERROUS SMELTING AND QUARRYING— Coal miners, Coalhurst, Alberta.	450	9,450	Commenced July 30, 1928, against dismissal of employees. Terminated August 27, 1928. Compromise.
MANUFACTURING— <i>Fur and Leather Products—</i> Fur workers, Toronto, Ont.	6	78	Commenced April 10, 1928, against violation of agreement. Employees secured work elsewhere by the end of August.
<i>Clothing (Including knitted goods)—</i> Hat factory workers, Montreal, P.Q.	10	260	Commenced July 18, 1928, for recognition of union and increase in wages. Underminated.
Ladies' clothing factory workers, Toronto, Ont.	4	75	Alleged lockout, commenced July 30, 1928; against reduction in wages. Terminated August 31, 1928, in favour of employer.
<i>Saw and Planing Mill Products—</i> Shingle sawyers, Vancouver, B.C.	16	250	Commenced July 3, 1928, for increase in wages. Underminated.
CONSTRUCTION— <i>Buildings and Structures—</i> Plumbers, Kingston, Ont.	21	546	Commenced April 21, 1928, for increase in wages. Underminated.
Sheet metal workers, Kingston, Ont.	15	390	Commenced April 17, 1928; sympathy with striking plumbers. Underminated.

STRIKES AND LOCKOUTS IN CANADA DURING AUGUST, 1928

Industry, occupation and locality	Number of employees involved	Time loss in working days	Remarks
(b) Strikes and Lockouts Occurring During August, 1928.			
FISHING AND TRAPPING—			
Salmon fishermen, Fraser River District, B.C.....	1,500	4,500	Commenced August 20, 1928, for increase in piece rates. Terminated August 23, 1928. Compromise.
MINING, NON-FERROUS SMELTING AND QUARRYING—			
Coal miners, Wayne, Alta.....	300	5,100	Commenced August 13, 1928, for recognition of union and against changes in working conditions. Undermined.
Coal miners, Sydney Mines, N.S.	16	16	Commenced August 24, 1928, for contract rates instead of day rates. Terminated August 25, 1928. Indefinite.
Coal miners, Springhill, N.S....	70	140	Commenced August 24, 1928, against decrease in piece rates. Terminated August 26, 1928. Indefinite.
MANUFACTURING—			
<i>Boots and Shoes—</i>			
Shoe factory workers, Toronto, Ont.....	28	476	Commenced August 13, 1928, to maintain union shop. Undermined.
<i>Textiles</i>			
Textile factory workers, Welland, Ont.....	159	318	Commenced August 8, 1928, against decrease in wages. Terminated August 10, 1928. Compromise.
<i>Clothing (including knitted goods)—</i>			
Men's clothing factory workers Montreal, P.Q.....	3,000	15,000	Commenced August 14, 1928, to maintain and secure union wages and working conditions. Terminated August 28, 1928, in favour of workers.
<i>Iron, Steel and Products—</i>			
Automobile body factory workers, Tilbury, Ont.....	29	29	Commenced August 13, 1928, for increase in wages and improved working conditions. Terminated August 14, 1928. Compromise.
CONSTRUCTION—			
<i>Buildings and Structures—</i>			
Labourers, Quebec, P.Q.....	32	16	Commenced August 13, 1928, for increase in wages. Terminated August 13, 1928, in favour of employer.
SERVICE—			
<i>Custom and Repair—</i>			
Garage employees, Saskatoon, Sask.....	90	990	Commenced August 20, 1928, for recognition of union. Undermined.

COAL MINERS, WAYNE, ALBERTA.—Employees in five mines ceased work on August 13 against payment per ton for screened coal instead of "run of mines", and also to secure recognition of the union. A conciliation board had been established by the Minister of Labour under the Industrial Disputes Investigation Act (LABOUR GAZETTE, August, 1928, pages 827 to 832). On the above points the Board had recommended payment per ton on a screened basis and had determined what increase in the rate per ton would be fair under the new system, and had recommended that for each mine there should be an agreement between the management and a "local union" with the check-off for dues which might be

turned over by the local to any organization. The recommendations of this board were rejected by the employees, and at the end of the month the dispute was undermined, but it was reported that at one mine an agreement had been signed with the union, the Mine Workers' Union of Canada.

COAL MINERS, SYDNEY MINES, N.S.—Bankmen ceased work on August 24, claiming contract rates instead of rates per day, and that attempts to arrange this had been made repeatedly without success. As a result the mine was not operated for two days. The employees, however, agreed to return to work the next day, the union officials having ar-

ranged with the management to negotiate on this question.

COAL MINERS, SPRINGHILL, N.S.—Employees ceased work on August 24, protesting against a rate per ton for new work claimed to involve a reduction in wage rates. After two days, work was resumed, the union officials having informed the men that the management had agreed to postpone putting the new rates into effect for ten days to permit negotiations as to the rates.

SHOE FACTORY WORKERS, TORONTO, ONT.—A number of employees ceased work owing to a dispute, apparently among themselves, over the dismissal of one employee. It is reported that the management had been operating a union shop for some time, and that owing to this dispute have replaced the strikers and are operating an open shop. The strikers, twenty-six females and two males, have arranged to picket the shop. At the end of the month no settlement had been reported.

TEXTILE FACTORY WORKERS, WELLAND, ONT.—Employees ceased work on August 8 against a decrease in wages. Work was resumed on August 10, negotiations between the parties having resulted in concessions being made by both parties.

MEN'S CLOTHING FACTORY WORKERS, MONTREAL, P.Q.—Employees in a number of clothing factories in Montreal were called out on strike by the union on August 14 to secure the enforcement of union conditions, particularly with regard to the forty-four hour week and to stop the practice of manufacturers sending out work to non-union contract shops. From time to time the manufacturers concerned signed agreements with the union and by August 28 it was reported that settlements had been reached in all cases.

AUTOMOBILE BODY FACTORY WORKERS, TILBURY, ONT.—A small number of employees in an establishment ceased work on August 13, without proper authorization of the union, demanding higher wages and better working conditions. As a result of a conference between employees and management work was resumed the following day, the management undertaking to adjust all grievances as to rates of pay and working conditions. A number of the employees had joined a union in process of organization and desired to secure an agreement between the union and the employer. Prior to the strike these requested that the Chief Conciliation Officer of the Department of Labour should mediate with regard to this agreement, but before his arrival the strike had been called and terminated.

LABOURERS, QUEBEC, P.Q.—Labourers on the construction of an elevator at Quebec demanded an increase in wages from 30 and 35 cents per hour to 40 cents, and were informed that those who refused to work at less would be paid off. Some thirty-two ceased work. Other workmen were secured immediately to take their places. It was reported that the strikers threatened to attack the men working but dispersed on the arrival of the police. As a result of the intervention of a representative of the Department of Labour a minimum rate of 35 cents was established.

GARAGE EMPLOYEES, SASKATOON, SASK.—Employees ceased work in six establishments on August 20, their demand for recognition of the union having been refused. Some establishments had signed an agreement with the union and were, therefore, not involved, and later two other establishments were reported to have been brought under this agreement. At the end of the month no settlement had been reported with the others.

STRIKES AND LOCKOUTS IN GREAT BRITAIN AND OTHER COUNTRIES

THE latest available information as to strikes and lockouts in various countries is given in the *LABOUR GAZETTE* from month to month, bringing down to date that given in the issue for February, 1928, in the review of *Strikes and Lockouts in Canada and Other Countries, 1927*. The latter review included a table summarizing the principal statistics as to strikes and lockouts since 1918 in the several countries for which such figures were available. Many countries publish these statistics only once each year, the figures being issued in some cases after an interval of as much as two

years, so that for such countries the latest figures are not for relatively recent dates.

Great Britain

The number of disputes which began during July was 13 and 12 were still in progress from the previous month, making a total of 25 disputes in progress during July, involving about 21,600 workpeople, and resulting in a time loss of 227,000 working days for the month. Of the 13 disputes beginning in July, 5 arose out of proposed reductions in wages, 4 on other wages questions, 3 on questions re-

specting the employment of particular classes or persons and one on a question of trade union principle. Settlements were reached in 15 disputes, one in favour of workpeople, 9 in favour of employers and 5 ended in compromise.

Belgium

During June, 20 disputes began and 15 were still in progress from the previous month, making a total of 35 disputes in progress during June, involving 22,636 workers and resulting in a time loss of 330,870 working days.

Finland

During July, no new disputes began, but 25 were still in progress from the previous month, involving 132 employers and 18,738 workers.

France

The number of disputes reported for October, 1927, was 37 involving 3,188 workers; for November, 29 involving 11,622 workers; and for December, 26 involving 6,977 workers. Wages questions were the chief causes of disputes, of 27 in October, 23 in November and 19 in December. The results of disputes were as follows: in October, 6 ended in favour of workers, 19 in favour of employers, 9 by compromise; in November, 4 were in favour of workers, 12 in favour of employers and 11 ended in compromise; in December, 4 were in favour of workers, 15 in favour of employers and 6 ended in compromise.

Switzerland

During the first half of the year 1928, the number of strikes which ended was 14, affecting 113 establishments. The number of strikers directly affected was 2,573 and the number indirectly affected, 420. The approximate time loss by workers directly affected was 33,887 working days and by all workers, both directly and indirectly affected, 39,025 working days.

New Zealand

During the first six months of 1928, the number of industrial disturbances reported was 19 involving 25 firms and 5,291 workers. The time loss was 13,561 working days and the approximate loss in wages £13,218.

Japan

In the year 1927, there were 383 industrial disputes involving 46,672 workers, with a time loss of 791,599 working days. The most important disputes occurred in the textile trades,

transport trade, the engineering trades and the food and drink trades.

United States

The number of disputes beginning in June was 35 and 81 were in effect at the end of the month, involving 163,738 workers. The time loss for the month was 3,647,370 working days.

Bituminous Coal Miners' Dispute.—Following the decision of the United Mine Workers Union to abandon their original demand for the terms of the Jacksonville agreement, providing for the 1920 wage scale with a minimum of \$7.50 per day, and to allow separate district agreements, an agreement was reached in the southwestern fields between the Southwestern Coal Operators' Association and the United Mine Workers, affecting from 8,000 to 10,000 miners in Missouri, Oklahoma, Kansas, Arkansas, and Texas and providing for the 1917 wage scale based on \$5 per day. The agreement is effective from September 1, 1928, to March 31, 1931. In Ohio, an agreement was reached between the Central Ohio Coal Operators and the Union, also on the same basis, to be effective from September 1, 1928, to March 31, 1930. This agreement affected about 3,000 miners in 14 mines.

Textile Workers, New Bedford, Mass.—No settlement was reached during August of the strike of 28,000 textile workers, which began on April 16 at New Bedford. The strike extended to Fall River during the second week in August when several hundred employees of textile mills at that place were out on strike, but it was reported by August 14 that work had been resumed there. An investigation was begun by the State Board of Arbitration and Conciliation early in August.

The 15th annual report of the State Inspector of Coal Mines for Colorado shows that 221 companies and individual operators worked 271 mines and produced 9,781,580 tons of coal, a decrease of 835,180 tons as compared with 1926. Number of men employed in and about mines averaged 11,453, being 315 men less than the average for the preceding year. Number of man-days worked, 194.3 representing a loss of 8.6 days over the number of man-days worked in 1926.

There were fifty-four men killed in and around the mines, an increase in fatalities of two men, or 2 per cent per thousand employed. The number of men injured was 1,916, an increase of 53 more men injured than in the preceding year.

LABOUR LEGISLATION IN NOVA SCOTIA AND PRINCE EDWARD ISLAND IN 1928

Nova Scotia

A NUMBER of measures of labour interest were enacted during the session of the Nova Scotia Legislature which opened on February 14 and closed on March 30, 1928. Amendments were made to the Workmen's Compensation Act, the Elections Act, the Motor Vehicle Act, the Act governing Miners' Relief Societies, and an Act to Dissolve the Grand Council of the Provincial Workmen's Association of Nova Scotia and all Subordinate Lodges thereof.

Workmen's Compensation

The Workmen's Compensation Act was considerably amended following the report of the Commissioner appointed to investigate the question of compensation in the lumbering and fishing industries.

The Fishing Industry.—The fishing industry was withdrawn from the operation of Part I of the Act and new provisions for its protection were enacted as Part III. Part III applies to the industry of fishing and to any other industry carried on by means of a fishing vessel or vessel usually employed or intended to be employed in fishing, or partly in fishing and partly in other forms of navigation, and all work incidental thereto, and then only to the work or services of an officer or member of the crew of a ship registered in Nova Scotia or operated by an employer residing or having a place of business in Nova Scotia, and for the period that the operations of the vessel are carried on within Nova Scotia, or confined to the making of voyages between places in Nova Scotia, New Brunswick, Prince Edward Island or Newfoundland, or to making of fishing trips or voyages from ports or places in Nova Scotia. Compensation for accidents and industrial diseases is to be paid on the same scale and in like manner and under like circumstances as under Part I of the Act, but does not include burial expenses, medical aid, artificial appliances, the right to rehabilitation or any benefit except compensation payments. The employer must secure the payments by insuring and keeping insured to the extent of his liability with some reliable insurance carrier or underwriter, who is liable, equally with the employer, for the payment of compensation. A sharesman is deemed to be a workman and, where compensation payable depends upon earnings or average earnings, is deemed to earn wages at the rate of \$780

per annum. The owners or persons operating the ship are deemed to be employers.

In case of an accident which causes injuries or loss of life to all or any members of a crew, the limit of liability for all claims may not exceed \$50,000 exclusive of costs and expenses, and if the payment of compensation would exceed such limit the compensation is to be reduced proportionately. If the employer has reason to believe that the claims arising from the accident may exceed the aggregate of \$50,000 he may give notice in writing to each person entitled to make a claim, or he may publish a notice in the press in the manner prescribed by the Act. Such notice will require all persons having claims arising out of such accident to make claim in writing to the employer at an address and before a date to be stated, which date must not be less than three months or more than four months after the service of such notice or the first publication of such advertisement. The employer must notify the insurance carrier or broker of each claim received, and if the employer or insurance carrier disputes the right of any claimant he must give notice to that effect within thirty days of the date on which the claim was received by the employer. Within ten days after the expiration of the time limited to admit or contest the right of the last claimant, the employer must apply to the judge of the County Court for the district in which the employer or managing owner resides, by a Chambers Summons fixing a time for the hearing of all such claims. The employer must, at least ten days before the date fixed for the hearing, serve notice upon every claimant whose right to make a claim has been admitted or contested. On hearing the judge will have jurisdiction to determine whether a claimant whose claim has been contested has a right to compensation, and the amount that any claimant is entitled to, and any other question that may arise. If the aggregate of the compensation that would be payable, including the capitalized value of the periodical payments and estimates, where estimates may be made, is greater than \$50,000 each claim is to be reduced proportionately so that the aggregate shall be \$50,000. No costs are to be awarded to or against any claimant or the employer in connection with the hearing provided that the amount awarded is paid, as provided, within forty days.

Where it is reasonable to believe that the total compensation payable as a result of the accident will not exceed \$50,000, the claimant will give notice of claim to his employer. He may then, after the expiration of thirty days, and the employer may, either before or after such period, apply to the County Court judge for the district in which the employer or managing owner resides, and have the questions arising from the claim determined. The insurance carrier is to be made a party to such proceeding. The decision of the County Court judge is in all cases final and without appeal. The judge has the right to submit his findings to the Workmen's Compensation Board to ascertain the amount that would be allowed if the industry were under Part I of the Act, and the certificate of the Board may be acted upon by the judge.

In every case where the judge finds that a claimant is entitled to periodical payments for life or for any definite period, he is to obtain from the Workmen's Compensation Board a certificate stating the present or capitalized value of such payments with interest computed at the rate of three and one-half per cent per annum, and such amount shall be included in the order against the employer and the insurance company, if a party to the proceedings. The capitalized value of the periodical payments as set forth in the order is to be paid by the employer or insurance carrier to the Workmen's Compensation Board, all periodical payments being then made by the Board. If the employer or insurance carrier fails to make the payment to the Board the claimant may enforce the order by judgment and execution or other order. If the full amount of the capitalized value is not paid to the Board the periodical payments may be proportionately reduced. The Board is given the same powers with regard to cases under Part III as it has under Part I including the commutation of payments, the making of advances and the withholding or suspending of payments.

A workman who meets with an accident causing temporary disability will be entitled to compensation only while residing in Nova Scotia. A workman who sustains a permanent disability, either partial or total is entitled to one-half the compensation when residing outside Nova Scotia that he would receive if living within the Province. A dependant is not entitled to compensation unless domiciled in Nova Scotia at the time of the accident.

Certain sections (11-16 inclusive) of Part I of the Act are applicable to claims arising under Part III. Sections 11 and 12 deal with actions against persons other than the employer. By section 13 the provisions of Part I

are substituted for all rights of action against the employer. Section 14 provides that a workman may not agree with his employer to forego the benefits of the Act. Section 15 forbids employers to make deductions from wages for the purposes of the Act. Section 16 provides that compensation payments may not be assigned or attached except with the approval of the Board. Section 17 of Part I, which is also applicable to Part III with the necessary changes, requires application for compensation to be made within one year and established within fifteen months after the accident or, in case of death, within fifteen months of death. Provision is made, however, for cases in which serious and permanent disability arises after the expiration of twelve months. A section of Part III provides that the judge may extend the time for the giving of any notice or the doing of any act if he is satisfied that injustice would otherwise be done.

Part III invests the County Court Judge with the same powers which Part I confers on the Workmen's Compensation Board (except where they are at variance with the provisions of Part III), and during the period of temporary disability or permanent partial disability he may review a case as often as may be necessary.

Except when the aggregate of compensation payable may exceed the limit of \$50,000, compensation for temporary disability may be paid by the employer or the insurance carrier to the workmen without bringing the case before the County Court Judge. If any dispute arises, however, either party may apply to the Judge. The Lieutenant-Governor in Council may change or add to any of the provisions of Part III relating to the procedure for obtaining compensation, the method of determining the amount to be paid, and the manner of enforcing payment.

The employer or insurance carrier may make provisional payments, or the judge may order such to be made pending the final determination of the amount of compensation to which a claimant is entitled. Members of a crew who charter or otherwise obtain use of a vessel from its owner, and who operate such vessel as partners, are not deemed to be workmen, and as to them, or to persons hired by them, the owners are not deemed to be employers within the meaning of Part III.

In addition to the above amendments, which relate to the industry of fishing, a number of changes were made in the Workmen's Compensation Act. "Navigation" is defined to include all kinds of operations carried on by means of a "ship" as defined by the Canada

Shipping Act. This definition reads "every description of vessel used in navigation not propelled by oars."

Coal Mining.—When a workman is found dead in the underground workings of a coal mine at a place where he had a right in the course of his employment to be, it is to be presumed that his death was the result of personal injury by accident arising out of and in the course of his employment, unless there be evidence, of witnesses present at the time of death, which is sufficient to rebut such presumption. This amendment is retroactive to January 1, 1926, and any person claiming compensation thereunder with respect to an accident which occurred more than six months before its passing, will have six months from the date of the amendment to make his claim and establish his right to compensation.

Defaulters.—An amendment which is retroactive to the date of the commencement of the Workmen's Compensation Act provides that judgments entered against persons defaulting in payment of assessments, or other amounts collectible in the same manner as assessments, shall, even if the amount be less than \$100, be enforced as judgments of the Supreme Court.

Frostbite.—Frostbite is added to the Schedule of industrial diseases for which compensation is payable.

The Board.—The sections dealing with the appointment of members of the Workmen's Compensation Board were replaced by new provisions. Commissioners holding office at the time of the enactment of the amending Act will hold office during pleasure. Commissioners appointed after the passing of the amendment will, subject to the provisions as to age, hold office for ten years but may be removed at any time for cause. A commissioner who has not attained the age of seventy-five years is eligible for reappointment on the expiration of his term of office.

An amendment which is retroactive to January 1, 1926, provides that, if an employer dies intestate and no written notice be given to the Board within three months that administration of his estate has been granted, the Board may pay to the widow of the deceased employer, or, if there be no widow, to any member of the family, any amount, not exceeding \$100, that would have been payable to the employer.

Elections Act

The Elections Act was amended to provide that polls shall be open from 8 a.m. to 6 p.m., instead of from 9 a.m. to 5 p.m. as formerly. A section was added making provision for

advance polls for railway employees, fishermen, sailors and commercial travellers. Such polls are to be open between the hours of 2 p.m. and 5 p.m., and 7 p.m. to 10 p.m. on the Friday and Saturday preceding polling day. At least five days notice of the holding of advance polls must be given and voters must produce a certificate from the returning officer attesting their right to vote thereat.

Miners' Relief Societies

The Act governing miners' relief societies was amended to provide that where no relief association or fund is in operation in connection with any mine, a fund may be established in the manner and for the purposes set forth. A majority of the workmen may authorize the employer to deduct from the wages of each workman the sum of twenty-five cents per month, the decision of the majority being binding upon all the workmen at the mine. The employer will contribute an equal sum, and pay the whole amount to the Workmen's Compensation Board. A contribution may also be made by the Provincial Treasury, the amount and conditions being fixed by the Governor in Council.

The fund thus created is to be used by the Board to pay relief, according to the scale set forth in Part I of the Workmen's Compensation Act, to any workman contributing to such fund, who, while on his employer's working premises, in his capacity as a workman, or in the course of his employment away from the working premises, receives personal injury from an accident which would not entitle him to compensation under Part I of the Workmen's Compensation Act. Where death results from the injury, relief from the fund will be given to the workman's dependants, and funeral expenses up to \$75 will be paid. An injured workman will also receive the same medical and surgical aid, hospital and skilled nursing services and artificial appliances as a workman within the scope of Part I of the Workmen's Compensation Act. If the fund be insufficient, however, the Board may reduce or suspend the compensation payments as well as the right to medical aid and other benefits, the Board not being liable to make any payments except in so far as the fund will permit. If the fund is more than sufficient for the purposes mentioned, additional benefits may be authorized by the Governor in Council.

If funds be created in more than one mine all contributions will go into a common fund to be used for the benefit of all workmen who contribute, and their dependants.

A majority of the workmen at any mine may authorize the employer to make deduc-

tions from wages for the purposes of extending the benefits of the fund to any workmen or dependants where the accident or death occurred before the creation of the fund, whether before or after the passing of the amending Act. As in the case of the original contribution the decision of the majority is binding. The employer must make an equal contribution, and a grant may also be given from the Provincial Treasury.

Other Legislation

The Motor Vehicle Act was revised and consolidated, but the sections dealing with the

licensing of chauffeurs remain practically unchanged.

The Act to dissolve the Grand Council of the Provincial Workmen's Association of Nova Scotia and all subordinate Lodges thereof, was amended to vest in a committee of trustees all real and personal property of the Golden Rule Lodge at Dominion, which has not yet been disposed of. The committee is to consist of three miners residing in the town of Dominion representing the resident miners actually engaged in mining in the town and adjacent collieries.

Prince Edward Island

The session of the Prince Edward Island Legislature opened on March 20, and closed on April 27, 1928. That section of the Public School Act, which requires attendance of children at school for at least sixty per cent

of the days on which the school is in operation was amended to make attendance in the City of Charlottetown and the town of Summerside compulsory on one hundred per cent of the school days.

OLD AGE PENSIONS IN SASKATCHEWAN

THE Public Service Monthly, a periodical bulletin of matters of public interest in Saskatchewan, gives in its issue for August the following account of the early proceedings in connection with the administration of the Old Age Pensions Act in that province (The Regulations governing the payment of Old Age Pensions in Saskatchewan were given in the LABOUR GAZETTE, May, 1928, page 467, and the conclusion of the agreement between the Dominion and provincial governments for the payment of pensions was noted in the issue for June, page 588):—

"The Old Age Pension's Branch of the Bureau of Child Protection which came into operation on the passing of the Old Age Pension Act has been and will be a very busy office for some time to come. In bringing into operation an entirely new activity many difficulties were experienced and the officials had to meet conditions as they arose, and at the same time endeavour to satisfy the numerous applicants who sought the benefit of the legislation. It was not until May 26, that it was possible to send out the printed application forms, and the return of these forms accompanied by the necessary supporting documents commenced to arrive at the office on May 31. From that date until the present, a veritable stream of applications continues to pour in, all demanding prompt attention, many of the applicants apparently expected payment of the pension on the same day as the application was sent to the office. At the present time 3,500 application forms have been mailed to those

requesting them, and of these approximately 2,000 have been completed and returned.

"It is interesting to note that the first application returned and whose number is Number 1 on the pension list, was from Geo. Grant, of Lipton, who, in addition to being over seventy years of age, is also deaf and dumb, and who, in spite of his age and affliction, is remarkably well preserved and retains his faculties to a remarkable degree.

"It is to be regretted that so many of the applicants have a very vague idea of the work involved in the administration of this Act. Sixty per cent of the applications returned are either not completed or are not supported by proof of birth, naturalization certificate, or proof of residence in Canada and Saskatchewan. The want of these documents not only involves a huge amount of correspondence but is also a source of disappointment to the old people who cannot understand the delay. A number of inspectors are at present engaged in making the necessary investigations and up to the present time, 400 applications have been investigated, 336 authorized and pension cheques issued to the applicants. Forty-five applications have been refused for various reasons, and twelve applicants have died since making their application. It is confidently expected that much greater progress will be made in the work from now on, as the organization is now becoming more efficient and with the larger office space which the Bureau now enjoys, more and better work can be done.

LABOUR AND INDUSTRY IN BRITISH COLUMBIA IN 1927

THE tenth annual report of the Department of Labour of British Columbia, recently received, details the administrative activities of the department during the calendar year 1927. Established under the Department of Labour Act of 1917, the Department has authority to require the trade unions, industrial societies and other organizations to supply information as to their rules and practices; to require employers to furnish reports as to their employees with respect to wages, hours of work, etc.; and to obtain from any available source information as to the cost of living, the relations of prices to labour and industrial conditions in the province. Under departmental administration are the employment offices and the Factories Act, while the Deputy Minister of Labour is *ex officio* chairman of the Board of Adjustment under the Hours of Work Act, 1923, which provides for an eight hour working day in the industries of the province with the exception of those expressly exempted by the Board.

The report for 1927 calls attention to the great success which in recent years has attended efforts to preserve amicable relations between employers and employed in the various industries. Contrasting the present situation with that of former times, the report states that the change was due to a number of causes "among which may be mentioned the ameliorating effect of measures that are today among the laws of British Columbia such as the Hours of Work Act, the Minimum Wage Act for male and female workers, the Semi-Monthly Payment of Wages Act, the Old Age Pensions Act, the Mothers' Pensions Act, the Workmen's Compensation Act, and the steps which have been taken from time to time to mitigate the hardships caused by unemployment." It is stated that "such measures, carrying with them a recognition of the point of view of those who labour for a living, cannot but have been an important factor in introducing a better spirit into our industrial affairs."

Industrial Situation

In the matter of industrial advancement the Province made a new record for the year, the industrial payroll reaching a total for 1927 of \$177,522,758.14, which is \$2,348,921.67 more than the previous highest figure, that for 1926. The questionnaire sent out to industrial employers at the beginning of each year, was replied to by 4,597 firms, all of which made returns on payroll information. These firms reported a combined payroll of \$130,047,021.92

as compared with \$129,420,599.55 returned by 4,521 firms for 1926. However, the total payroll of \$177,522,758.14 for all industries includes, in addition to the figures returned by employers, the calculated totals of employers who failed to report, the totals in delayed returns, and a number of supplementary items such as the payrolls in British Columbia of the transcontinental railway systems, wholesale and retail firms, and the salaries of employees of Dominion and Provincial Governments. Of the total payroll, payments to wage earners amounted to 81.22 per cent, the balance being salaries paid to superintendents, managers, salesmen, clerks and stenographers.

The total estimated payroll of the Province in 1927 is divided by districts as follows: Greater Vancouver, \$65,470,393.20; Rest of Mainland, \$77,399,922.55; Vancouver Island, \$34,652,442.39.

The report presents a comparison of the wage payments in different industries with those of 1926, and comments thereon as follows:—

"A good recovery was made last year by coal-mining, where, after the rather poor showing of 1926, the payroll was advanced by over \$650,000, bringing it to approximately the same figure as in 1924 and 1925. The manufacture of food products, which has been a rising factor over a period of years, showed a gain of \$150,000. Laundries, cleaning and dyeing were also \$100,000 ahead of the previous year. This is expressive of the general growth of the Province rather than of any particular section, and the same may be said of the advance made by the metal trades to a figure of \$200,000 higher than the previous year's. The last-mentioned increase, however, is more than accounted for by the growing payroll of garages, other sections of the metal trades showing a slight decrease. As may have been generally expected, the payroll of metal-mining reached a record figure, notwithstanding that the comparatively low prices of metals in 1927 retarded somewhat the development of a number of new mining ventures. The actual total is \$218,000 over that for 1926. Greater activity was also shown in the smelting industry, where the payroll went up by nearly \$400,000. The metal-mining and smelting industries combined have, indeed, more than doubled their annual wage payments in the last five years. The miscellaneous group of industries adds nearly half a million to its total for 1926, and in the printing and publishing industry there is an addition of a quarter of a million. In the public utilities

group, which includes street railways, gas, water-supply, electric lighting and power, and telephones, there was a notable gain of over \$600,000. Minor gains were also recorded by breweries, builders' material, cigar and tobacco manufacturing, garment-making, house-furnishing, jewellery-manufacturing, manufacture of leather and fur goods, and paint-manufacture."

The industries which show a reduced payroll for 1927 include some of the most important in the Province. The falling away of the total for the pulp and paper industry to a figure some \$900,000 less than that for 1926 wipes out more than one-third of the phenomenal gain made by this industry in that year. The reduction in the past year was not unexpected, as the business of paper-making has been passing through a somewhat critical period. Similarly, the lumbering industry had a quiet spell for a considerable portion of the year, and there was a reduction in its payroll of over \$300,000 as against that of 1926, though the industry held a gain of some three millions in comparison with the two previous years. A drop of \$435,000 in coast shipping is not easy to understand. The leading services made rather a better showing than in 1926, but smaller operations had a less active

year, and, moreover, fewer returns were received. The high-water mark in contracting was reached in 1926, and this report shows a reduction from that year's figure of a quarter of a million, which is scarcely surprising in view of the number of important contracts which were completed either in 1926 or early in 1927. However, the demand for new buildings and other important works does not show any real abatement, and in some districts at least the contracting business is again going more strongly than last year. The payroll of explosives and chemicals is about \$100,000 less, though there are good indications of approaching development in this industry, and a slight reduction in oil-refining probably reflects the unsettled conditions of this industry during 1927. For a reduction of \$170,000 in ship building and repairing, we need hardly look for any other explanation than the element of chance which enters so largely into this business. The fall of nearly \$400,000 in the payroll of manufacturing miscellaneous wooden products is, however, somewhat disappointing, as this business had been going ahead rather rapidly in previous years.

A comparison of the payroll in the various industries for the past three years is given in the following table:—

Industry	1925		1926		1927	
	No. of firms reporting	Total Pay-roll	No. of firms reporting	Total Pay-roll	No. of firms reporting	Total Pay-roll
		\$		\$		\$

Weekly Wage Rates.—Changes in wage rates during the year were not very pronounced, although in some groups there was a good advance. In fourteen of the groups there was an average increase in the weekly rates, and in eleven groups an average decrease. Those showing the greatest advances were: Manufacturing leather and fur goods, \$2.52; metal trades, \$1.84; house furnishing, \$1.70; explosives and chemicals, \$1.59. The largest decreases were in the following groups: Jewellery manufacturing, \$5.28; smelting, \$1.75; printing and publishing, \$1.53.

Tables are given showing the number of wage earners in each industry, grouped according to the weekly wages received. These tables indicate the partial elimination of wage earners receiving very low rates of wages. The tables for 1926 showed that there were 9,498 adult male wage earners receiving less than \$19 per week—i.e. less than 40 cents per hour—while in 1927 the number was reduced to 4,409. The report states that the difference is partly explained by the fact that in 1926 an "adult wage earner" was taken to mean a person over 18 years of age, and in 1927 the line of division for adults and under age was set at 21 years in order to place the statistical tables in proper relationship to the Male Minimum Wage Act. Another factor in bringing about this great reduction was the Male Minimum Wage Order in the lumbering industry.

				1,554	

In the last few years there has been a marked increase in the number of apprentices in the industries of the Province. The returns made to the Department for the last four years accounted for 898 apprentices in 1924, 1,115 in 1925, 1,281 in 1926, and 1,554 in 1927.

The accompanying table shows the number of employees by weekly wage groups in 1927.

The report emphasizes that labour disputes were few and of slight importance, the total amount of working time lost during the year from this cause being 17,006 days. This figure is the smallest for any year since the Department of Labour came into existence.

Inspection of Factories.—The Factory Inspection Branch is charged with the inspection of all factories as defined by the Factories Act where three or more persons are employed, passenger and freight elevators, all laundries operated for profit, regardless of whether anyone is employed or not, and all industrial plants designated by the Workmen's Compensation Board. This section of the report outlines the work of the branch along the lines of factory and elevator inspection and the promotion of accident-prevention.

Employment Service.—The statement covering the work of the British Columbia Branch of the Employment Service of Canada indicates that while employment conditions during the year were better than the average, there was a surplus of all classes of labour in every part of the Province, this condition being partly accounted for "by an influx of immigrants from Central European countries." The business transacted by the British Columbia offices in 1927 is summarized as follows: Applications, 111,605; employers' orders, 37,532; placements, 35,652; transfers in British Columbia, 1,826; transfers out of British Columbia, 8,184.

Nationality of Workers.—Under this heading a careful analysis is presented of the nationality of the workers in the various industries. The report states that "an interesting feature of the figures is the proof they afford of the fact that our industries are slowly but surely coming more under the dominance of our own race." Indicating the trend in this direction, the report continues as follows:—

The percentage of employees who were returned as natives of Canada and Newfoundland did show a slight decrease in 1927, being 36.01 as compared with 36.39 in the previous year. Natives of Great Britain have more than recovered the reduction in their percentage last year, rising from 30.42 to 31.87 per cent. This is the highest proportion of British workers for any one of the last four years,

the figures in 1924 and 1925 having been 31.24 and 31.15 respectively. The actual number of British workers employed increased last year by 817. Adding together the number of native Canadians, British, natives of the United States and Australia, we find that natives of English-speaking countries aggregated 72.51 per cent. of the entire number of the industrial workers. This is the best record in the last five years, the percentage having been as low as 69.61 in 1923 and as high as 72.33 in 1924.

Asiatic workers in British Columbia industries were equal to 10.20 per cent of the whole, the smallest percentage in any year since these statistics were first compiled. In the previous year they accounted for 11.56 per cent, and the drop this year is significant. The nation-

ality record began in 1918, when the industrial workers of Asiatic origin were equal to 20.37 per cent. The fall to 18.35 per cent in 1919 and 16.64 per cent in 1920 occasioned little surprise at the time, as a large number of ex-soldiers were gradually resuming their old places in industrial work. There was a further drop to 14.45 per cent in 1921, followed by a rise to 14.61 per cent in 1922, and then a succession of lower figures for the next three years—to 13.85 in 1923, 11.97 in 1924, and 11.30 in 1925. The year 1926 saw a slight upward move to 11.56 per cent, but now the downward movement is resumed. The number of Chinese workers was reduced last year by 1,571, and the number of Japanese by 290, but, oddly enough, there was an increase in the total of Hindus from 750 to 839.

Hours of Work Act in 1927

The operations carried on during 1927 under the "Hours of Work Act," 1923, are outlined in the report of the provincial Department of Labour. It is stated that the provisions of the Act are being very generally observed by both employers and employed. As regards its functioning, the report observes that as the Act has now been effective for three or four years, its novelty has disappeared, and the observance of the legal eight-hour day has become almost a matter of routine in industrial operations. It is pointed out that the principal industry affected by the Act, as well as by the initial order under the "Male Minimum Wage Act," was that of lumbering.

The regulations made by the Board of Adjustment (which administers the Act) were amended on June 23, when Regulation 9, which had provided for the non-application of the Act to ship-repair plants, engineering-works, etc., "when engaged on urgent work which must be done in order that other industries shall not be seriously handicapped in their operations," was rescinded, and a new regulation substituted to the effect that "All persons employed in shipyards, engineering-works, machine-shops, foundries, welding plants, sheet-metal works, belt-works, saw-works, and plants of a similar nature, when engaged on emergency repair-work only, are exempt from the provisions of section 3 of the Act."

It was considered that the original clause was capable of a wider interpretation than the new one, experience having convinced the Board of the necessity for limiting the exemption which was granted three years ago.

The year's experience with the "Hours of Work Act" shows that it has had the

important result of further reducing the average weekly hours of work in industry. The average during the past 12 months was to 48.55 hours weekly, which compares favourably with an average of 48.84 hours in 1926. In the following table a comparison is made of the average weekly hours for the various industries in 1927 and 1926 as well as for 1924, the last year before the "Hours of Work Act" became operative:

AVERAGE WEEKLY HOURS OF WORK, BY INDUSTRIES

Industry	1924	1926	1927

British Columbia Male Minimum Wage Act in 1927

The text of this Act was given in the *LABOUR GAZETTE* for January, 1926, page 17. The report on operations during 1927 under the Act forms part of the annual report of the provincial Department of Labour. It is pointed out that when the Act was passed into law by the Legislature of British Columbia in the latter part of 1925, it was a new departure in economic legislation so far as the American continent was concerned, though many law-making authorities had passed measures affecting the wages paid to women. As such it has attracted considerable attention, not only in the province but over a very wide field outside. Under the law the power of fixing a minimum wage for various industries was conferred upon the Board of Adjustment under the Hours of Work Act. The chairman of the Board is the Deputy Minister of Labour, and the other two members are appointed by the Executive Council on recommendation of the Minister of Labour, who has been guided in his selection by the principle that they should respectively reflect the opinions of the employers and the employed in an industry. To date there have been two orders issued by the Board. The first, which became effective on November 1, 1926, established the minimum wage rate in the lumbering industry at 40 cents per hour (*LABOUR GAZETTE*, October, 1926, page 948). The second order, effective on April 1, 1928, established the basic rate of male employees in the restaurant and catering industry at 40 cents per hour (*LABOUR GAZETTE*, March, 1928, page 260).

In the working of the Lumbering Order considerable experience has now been gained, the basic rate of 40 cents per hour having proved a good working compromise between the request of labour for a higher minimum wage and that of the employers for a lower rate. It is stated that the Order has been loyally accepted by the employers as a whole, and that the process of bringing about an increased rate of pay for several thousands of the lower paid workers in the industry was accomplished with a singularly small amount of friction. It is also pointed out that the fact that 1927 was, on the whole, a good year for lumber production in the province goes to show that the minimum wage set by the Board was not beyond the ability of the industry to pay. With the exception of a few instances of help employed in the kitchens of camps, not a single case has come to the notice of the Board where a worker found it necessary to action in court against his employer to secure the payment of the legal minimum wage.

Under subsection 2 of clause 5 of the Act, the Board have power to grant permits to authorize the payment of a lower wage to employees suffering from a handicap. In the regulations it was laid down that such permits granted should not exceed 10 per cent of the total number of persons employed by any firm. This provision has been found to be more than ample, as not a single firm, according to the report, has ever approached the 10 per cent limit. In one industry, employing approximately 40,000 workers, only 143 permits had been granted up to the end of 1927, while the number of such permits issued during 1927 was 60, various reasons being assigned by the applicants such as debility, loss of limbs, war injuries, unfitness for heavy work, partial paralysis and advanced age. In these cases the hourly rates set have ranged from 25 to 37½ cents. A few permits have been given to able-bodied men learning a trade, a low rate being set for the brief period which was considered necessary to enable them to acquire proficiency.

Inquiry is frequently made, the report states, as to the extent to which Oriental labour has been displaced in the lumbering industry by the operation of the Act. The report outlines this feature as follows:—

“As was explained fully in the report for 1926, the Act makes no distinction between white and Oriental labour. The white employee, the Chinese, the Japanese, and the Hindus are equally entitled to be paid the legal minimum wage. The Board of Adjustment, however, has always taken the view that, if employers were obliged to conform to a higher standard of wages in the employment of Oriental labour, such labour would tend to become less desirable from an employer's point of view, and to a certain extent would be substituted by the employment of white help. Our early inquiries showed unmistakably that, where white and Oriental helpers were engaged in the same class of employment, the white man would usually command about a 25 per centum higher rate of pay, by reason of his greater ability to respond to an unexpected emergency. It seemed to follow that, if employers were compelled to pay their Oriental workers 40 cents an hour, they would either be willing to pay their white workers more for work of the same class, or else bring a larger number of white workers into the mills.

“That this has really happened is shown by a comparison of the figures in our statistical report with those of previous years. These are the totals supplied in returns forwarded to the Department by employers engaged in

all branches of the lumbering industry in all parts of the province. A more exact comparison is possible, however, in the case of thirty-one of the largest saw-mills in the Coast area, whose books have been examined by representatives of the Department. These inspections took place in November, 1926, just after the Lumbering Order had been made operative, and again in October, 1927, and the figures given by the same employers in their annual returns for 1925 have also been segregated for comparison. Compared with 1925, before the Lumbering Order was in effect, the total number of employees working at these thirty-one mills showed an increase of 1,352. The number of white employees

increased by 1,817, and the number of Oriental employees decreased by 465.

"In 1925 there were 55.20 per cent, of white employees and 44.80 per cent of Orientals.

"In November, 1926, there were 65.70 per cent of white employees and 34.30 per cent of Orientals.

"In October, 1927, there were 68.86 per cent of white employees and 31.14 per cent of Orientals.

"These figures show plainly that the amount of employment in the thirty-one mills has increased considerably since the Order was made, and that there has also been a marked decrease, both actually and relatively, in the employment of Orientals."

Minimum Wages for Women in British Columbia in 1927

The tenth annual report of the Minimum Wage Board of British Columbia for 1927 is incorporated in the annual report of the Department of Labour, the Minimum Wage Act being administered by a board of three members; one of whom is the Deputy Minister of Labour.

During the year the Board instituted proceedings against 12 employers for violation of the law. In some instances employees had been required to work in excess of the maximum hours prescribed by Order of the Board, while the remaining infractions pertained to non-payment of the legal wage.

Certain employees experienced tangible benefits during the year in the collection of arrears of wages due them from their employers. It is explained that while the Board does not act as a collecting agency, it often functions in an intermediary capacity to effect adjustments, which otherwise would have to be made through the channels of the Court in actions started by the employees. During the year, \$2,384.17 was paid to employees in amounts ranging from \$1.20 to \$253, representing the difference between what they should have been paid and what they actually received. These women and girls (83 in number) were working in various occupations throughout the province, the delinquent employers being in the majority of cases proprietors of small bakeries, tea rooms, confectionery stores and beauty parlours.

A summary of the Minimum Wage Orders now in force, in addition to that affecting the fruit and vegetable industry already set forth, is as follows:—

Mercantile industry, \$12.75 (hourly rate, 26 $\frac{3}{16}$ cents).

Laundry, cleaning and dyeing industries, \$13.50 (hourly rate, 28 $\frac{1}{2}$ cents).

Public housekeeping, \$14 (hourly rate 29 $\frac{1}{2}$ cents).

Office occupations, \$15 (hourly rate 31 $\frac{1}{4}$ cents).

Personal service occupation, \$14.25 (hourly rate, 29 $\frac{1}{16}$ cents).

Fishing industry (Canneries), \$15.50 (hourly rate, 32 $\frac{1}{24}$ cents).

Telephone and telegraph occupation, \$15 (hourly rate, 31 $\frac{1}{4}$ cents).

Fruit and vegetable industry, \$14.40 (hourly rate, 30 cents).

Manufacturing industry, \$14 (hourly rate, 29 $\frac{1}{2}$ cents).

The payroll returns required each year from employers were sent in by 3,455 firms, being an advance of 332 over the 1926 figure. These employers reported details of wages and working hours for 17,507 female employees as against 16,070 for the previous year. This is not the gross total of women workers in British Columbia for domestic servants, fruit pickers, and farm labourers are excluded from the operation of the Act.

According to the statistics, the average weekly rate for adult and experienced workers in the Province was \$17.06, representing an increase of one cent over 1926. For the group comprised of inexperienced employees, the weekly average was \$10.40 as opposed to \$10.03 for 1926.

Answering the oft-quoted objection to minimum wage legislation—namely, that eventually the minimum would tend to become the maximum for experienced workers—the report declares "it is illuminating to note that after a period of nine years' testing in this Province, out of 17,507 employees only 3,056, or 17.46 per cent, were reported as receiving the actual minimum for their respective classes of work." As regards the higher scales of pay, it is noted

that 10,748 women and girls, or 61.39 per cent, of all those reported, were listed as being in receipt of wages in excess of the legal minimum. This leaves a balance of 3,703, or 21.15 per cent, being paid below the minimum. This last class includes young girls and inexperienced workers, for whom lower rates are set, and employees of experience whose working week was shorter than 48 hours, with a *pro rata* reduction in their remuneration.

The statistical tables record whether an employee is married, widowed or single. From the returns, 19.06 per cent of the employees are married, 4.03 per cent are widowed and 76.91 are single.

The following tables give a statistical summary of all occupations covered by the regulations, and the labour turnover in each group according to years of continuous service:—

SUMMARY OF ALL OCCUPATIONS

The principal legislation affecting labour which was enacted during the recent session of the Parliament of Great Britain was the Shops (Hours of Closing) Act, 1928, received the Royal Assent on August 3. It gives effect, with modifications, to the Report of the Departmental Committee on the Shops (Early Closing) Acts, 1920 and 1921, who recommended that the principle of compulsory closing of shops should be embodied in permanent legislation, and the existing closing hours continued with certain modifications. The first four sections of the Act provide accordingly for the closing hours of shops generally, with special provisions as to those supplying con-

fectionery and tobacco and smokers' requisites. Section 5 permits the local authority in certain circumstances to fix a later closing hour than usual for retail trade or business carried on at an exhibition or show, subject to conditions for securing that the hours of shop assistants affected by the Order are limited. Similarly, Section 6 permits an extension of closing hours for shops at holiday resorts during the season, with a similar proviso as to the limitation of the hours of shop assistants; and further provides that shop assistants affected by the Order, if employed for "extra hours" (as defined), shall be entitled to corresponding holidays with full wages.

WORKMEN'S COMPENSATION IN NEW BRUNSWICK IN 1927

THE ninth annual report of the Workmen's Compensation Board of the Province of New Brunswick for the calendar year 1927 details the work of the Board in the administration of this legislation.

The total income for the year is given as \$589,643.63, and the expenditure at \$568,654.42, leaving a provisional surplus of \$20,989.21. When this is deducted from the actual deficit of \$121,660.24 remaining from 1926, a provisional deficit is left of \$100,671.03, less the estimated profit on bonds of \$72,203.48 or a net provisional deficit of \$28,467.55. The report points out that these figures do not purport to be the actual amount of money to the debit or credit of the various classes of industry, but show what has been collected from the provisional statements filed and what the Board think is a fair income to be expected from the amount to be collected, owing to the expected increase of the actual payrolls over the provisional. The expenditure also shows the same condition. To the amount paid out is added a sufficient sum which the Board estimates will cover the cost of claims in assembly and the claims which may be existing as of December 31, 1927, but not reported to the Board, and also

the estimated amount for claims reported partly paid, but not completed. When the actual figures for 1927 are received and all collections made and all claims adjusted, the figures may vary materially.

The actual and estimated expenditure for 1927 included in the total of \$568,654.42 comprises the following items: Temporary total disability, \$166,530.68; medical aid, including doctors' fees and transportation as well as hospital and nursing services, \$80,249.67; cost of administration, \$49,066.90 (8½ per cent of the total); fatal accidents, \$81,533.15; burial expenses, \$1,822; permanent partial disability, \$50,892.02; unreported claims and uncompleted claims (estimate) \$138,500.

The statistical tables in the report do not include figures for 1927 as the time for reporting accidents was not ended at the date of publication. Final figures, however, are given for the year 1926, and these indicate a decreasing number of fatal accidents as compared with any previous year in the record of the Board. There was, however, a slight increase in the total number of accidents as compared with 1925. The following table shows the number of industrial accidents, according to degree of severity, from 1919 to 1926 inclusive:

INDUSTRIAL ACCIDENTS IN NEW BRUNSWICK 1919-1926

	1919	1920	1921	1922	1923	1924	1925	1926	Total
Fatal accidents.....	25	47	35	30	37	38	31	23	266
Permanent total.....			1	1	2	1	1		6
Contingency.....					4	8	4	16	39
Permanent partial.....	183	254	241	245	244	261	241	218	1,887
Temporary total.....	1,832	2,967	3,032	3,225	4,047	3,823	3,612	3,658	26,196
Minor and medical aid only.	656	796	1,037	1,310	1,835	1,978	2,075	2,150	11,837
	2,696	4,064	4,346	4,811	6,169	6,109	5,970	6,065	40,231

Regulations Under Alberta Workmen's Compensation Act

The Alberta Gazette of July 31, 1928, contains the text of the Regulations so far issued by the provincial Workmen's Compensation Board in accordance with the provisions of the Workmen's Compensation Act (Accident Fund). The general accident prevention regulations have been noted in previous issues of the LABOUR GAZETTE. The following are recent orders which have not been previously published.

Fire and Gas.—Every refrigerating machine shall be equipped with one or more automatic safety valves of proper size, connected to the discharge line between the pressure imposing element and the main discharge stop valve of

the machine. Said safety valves are to be set to relieve excessive pressure and connected to a pipe of sufficient size to carry refrigerant to outside of building or into the low pressure side of the inlet side of main suction stop valve. (The size and pressure at which such valves are to be set for machines of various capacity are detailed).

Handling of Acids.—Transferring acids from carboys to smaller containers shall be by either syphoning or having the carboy resting on a cradle or trunnion specially built for the purpose. Syphoning is the method recommended, great care having to be exercised in the use of a cradle to avoid splashing.

Garages.—Every employer operating a garage or other building to which the Workmen's Compensation Act (Accident Fund) applies.

shall provide and maintain adequate means of ventilation for the removal of smoke, steam, gas, fumes, vapors, dust, or other impurities which are created or generated by any process carried on in such building or workroom.

Salamanders.—Where a salamander or other heating apparatus liable to produce smoke or noxious gases is used for the drying of plaster or for other purposes, it shall be so piped as to convey smoke and gaseous matter to the outside of the building.

Gas and Oil Wells.—This regulation details at length the chief features of the safety construction of gas and oil wells including cellar exits, derrick platforms, ginpoles, auxiliary means of escape, derrick-room exits, snufflines, and lighting.

Buildings and Excavations.—Where material is being constructed or dismantled the employer is required to have the area on each of the floors, below where such work is being done, enclosed or roped off, so as to prevent accidents from falling objects. Dismantled material is to have all nails removed at once, or piled so as to prevent accidents from protruding nails.

A sufficient area underneath all material hoists shall be enclosed or roped off on each floor, where workmen shall not be required to enter during hoisting operations. No lumber or timber shall be hoisted in a single sling.

Other additional regulations are as follows:—

Regulation No. 11.—Where the amount chargeable to the account of any employer during any calendar year is in excess of one hundred and five per cent of the amount of assessment received during such calendar year, the final assessment shall be fixed on such account applicable to the true payroll for the calendar year in question, by being increased to a rate over and above the basic rate of the class or sub-class in which the account is being carried, one per cent on the basic rate for each one per cent that the amount chargeable exceeds one hundred and five per cent of the amount received; but in no case shall the increased rate exceed thirty per cent of the basic rate of the class or sub-class as fixed by the Board; provided, however, that due regard shall be had to the total experience of the account of an employer, and an increase in

assessment rates will only be made when the total amount chargeable to his account exceeds the total amount received from him by one hundred and five per cent.

Regulation No. 12.—Fees for remuneration for Medical Aid furnished under the provisions of the Workmen's Compensation Act (Accident Fund) shall not be more than would be a proper and reasonable charge to the workman if he, himself, were paying the same.

Regulation No. 13.—All reports of accidents required to be forwarded by an employer engaged in the industry of coal mining in accordance with the provisions of Section 65 of The Workmen's Compensation Act (Accident Fund) shall be signed by the manager appointed under the provisions of the Mines Act and where there is no manager, by the over-man.

Regulation No. 14.—(Hotels):—(a) For the purpose of this Act a "hotel" shall mean a place where meals, beds, and lodging accommodation are offered to the public for a consideration, and wherein four or more workmen are employed; also

(b) A place in respect of which a license has been granted by the Alberta Liquor Control Board to a "hotel" wherein one or more workmen are employed.

Regulation No. 15.—"Commercial greenhouse" shall mean a place wholly or partially enclosed with glass, conducting the business of growing plants, flowers, seeds, fruit or vegetables for sale to the public, including the delivery of such products and wherein in season is being operated a steam or water heating plant, and in connection with which place three or more workmen are employed.

With regard to the above Regulations 14 and 15 there is the following notation:—

The Workmen's Compensation Act (Accident Fund) provides that the employer and members of his family are not considered workmen to whom the Act applies, but if such employer desires the protection of the Act for himself and the members of his family, he may make special application to the Workmen's Compensation Board for himself and such members of his family as he may desire to bring within the scope of the Act. Upon the acceptance of the application by the Board, those persons specified in the application will be considered workmen to whom the Act applies.

CANADIAN COUNCIL ON CHILD WELFARE

CHILD Welfare News, the magazine of the Canadian Council on Child Welfare states in its August issue that a child welfare enquiry is being conducted in Manitoba by Dr. Montgomery, at the request of the Minister of Public Welfare. A survey of child welfare in the province of New Brunswick is being made; and an analysis by the Child Welfare Association of Montreal is being conducted into the cause of 1,168 infant deaths occurring in that city.

The Canadian Council on Child Welfare has established in Ottawa a school "to provide intensive individual instruction and care

in a home environment for little girls requiring specialized training and care. The school is private and residential and as the training is almost entirely individual, the number of pupils is limited to a small group admitted at varying ages up to adolescence.

The same issue of *Child Welfare News* deals with the juvenile immigration survey made by the Canadian Council on Child Welfare. This enquiry was made into a representative group of former juvenile immigrants, and one of the first findings from the investigation is:—"That for children who are physically and mentally sound, who are indus-

trious and ambitious and have developed normal moral stamina and self-control, life in Canada offers greater opportunities than in Great Britain at the present time, but for those not so equipped, even with all the safeguards provided, migration and settlement in this country is a hazardous undertaking."

The annual report of the Victorian Order of Nurses and the report of the National Council of Women on Maternal Mortality are also given in *Child Welfare News*. The Victorian Order is at work in 69 centres with 292 nurses. The local associations supporting this work expended \$563,906.60 of which barely 10 per cent (10.9) came from public funds in the form of provincial or municipal grants. Voluntary effort supplied 47.6 per cent of the resources, while the magnificent total of \$233,034, or 41.5 per cent, came from the people served themselves, in amounts varying from thousands of visits at five cents a call, to many, where a dollar was paid. Patients served numbered 57,221

The section of the magazine dealing with education and recreation contains a report by the International Labour Office on "The Utilization of Workers' Spare Time in its Relation to Child Welfare." This report recommended that States should consider the means of so arranging the working day as to make the period of spare time as continuous as possible, and, further, that by means of a well conceived transport system and by affording special facilities in regard to fares and time tables, workers should be enabled to reduce to a minimum the time spent in travelling between their homes and their work.

The report continues as follows:—"These recommendations clearly have an important connection with child welfare. It is desirable in normal cases that the worker should be able to devote a reasonable amount of time to direct contact with his family. The less time wasted in transport and in unnecessary intervals between periods of work, the more time will he have to devote to contact with his family. These considerations hold with even greater force in the case of the working mother. The Recommendations of the International Labour Conference applies to all workers, both male and female. It is clearly important, from the point of view of child welfare, that the working mother should be able to devote as much time as possible to the direct interests of the family."

The magazine also contains an article on "Enforcement of Legislation dealing with Family Desertion." The proposed legislation is fashioned very closely upon the lines of the

Imperial Maintenance Orders Act placed on the Statute Books of England in 1920. This legislation, if put into effect, will go very far toward removing the handicaps at present besetting the deserted wife and child in their striving for justice.

Recent Child Welfare Legislation.—The same issue of *Child Welfare News* reviews the legislation enacted in the several provinces affecting the children and young persons. The new Workmen's Compensation Act of Quebec contains among its provisions a section specifically reserving to minors, fourteen years of age, the right to take proceedings under the Act. In the event of remarriage of the widow of a deceased workman the widow's compensation ceases, but that of the children is continued.

The Ontario Children's Protection Act was amended in the definition of "neglected child." One amendment makes clear that an orphan brought before the judge without the consent of the person in whose charge he or she is, may be dealt with under this clause. The clause defining the child who is neglected by reason of desertion now includes a child who is not deserted by both parents, but "whose other parent is unable to maintain him." A child, whose parent by reason of "infirmity" is unable to maintain him is now included in the same clause. The clause, allowing a finding of neglect to be made against a child of lewd or immoral conduct or language, or of committing any offence rendering him liable to fine or imprisonment, is amended by omitting the clauses referring to conduct and language and inserting the proviso that the offences must be committed "with the consent or connivance" of the parents or parent. Another former clause allowing the finding of neglect to be made against a child who absented himself from school without permission is now limited by the saving words, "without sufficient cause habitually." The clause governing the finding of neglect against a prisoner's child is re-drafted so that it applies to any child who is not being properly cared for, or whose only parent is undergoing imprisonment, and who, in each case, is brought by the person, in whose care he is, to be dealt with under the Act. The words "a child born out of lawful wedlock" are substituted for the words "illegitimate child." The clauses defining the powers of a judge in respect to the disposition of a child brought before him under the Act, are clarified by the substitution of new clauses setting them forth more simply. The same amendment also makes it clear that, during a period of temporary commitment, a Children's Aid

Society may exercise all the powers of guardianship, except those relating to adoption proceedings.

Another amendment safeguards a municipality against an order for maintenance made

under the Act. The former clauses allowing either a society or a foster parent to apply to a judge for variation in a maintenance order is modified by restricting this right to a Children's Aid Society.

Directory of Child Welfare Resources in the Dominion of Canada

The phenomenal growth of modern social work has created some confusion concerning the ramifications of different lines of welfare effort. Social work includes many specialized forms of community effort, and of these child welfare has become one of the most important. Hence the Canadian Council on Child Welfare has performed an important service by compiling and publishing a "Directory of Child Welfare Resources in the Dominion of Canada."

This directory lists the names of selected agencies and institutions, national, provincial and municipal, public and private, engaged in such work in Canada, together with an explanation of their particular fields of activity and the names of their chief executive officers. In the case of municipal agencies, only cities of 10,000 and over have been included. The principle used in selection was to list the agency or institution or organization doing a specific piece of child welfare work. The family work organizations have been omitted, although they touch all phases of family life, including the child.

The Kiwanis, Rotary, Lions, Hundred and Gyro Clubs, etc.; the Imperial Order of the

Daughters of the Empire, the National Council of Women and many other like organizations have been listed only in respect to their general activities, though they all make a very large contribution to the social work of Canada. In some instances these organizations have undertaken the financing of hospitals, summer camps, or institutions which are listed in the directory as a definite piece of child welfare work.

The Provincial Departments of Education in Canada have been omitted for the reason that their work can hardly be termed "social work" with the possible exception of auxiliary classes and school health inspection, which have been included.

The directory contains explanations of the following terms: social work; social case work; family case work; child health and care, including child placing, delinquency agencies, club work and recreation.

The arrangements made in Canada for supplying harvesting labour for the western provinces were outlined in the last issue of the LABOUR GAZETTE, page 879.

Census of Seamen in British Merchant Marine

The *Board of Trade Journal* of Great Britain recently published a report of a special census of seamen taken in Great Britain on March 31, 1927, showing the proportions of British, Lascar and foreign seamen employed in the British mercantile marine. The total number of seamen employed on that date was 200,525, of which 189,202 were on steam vessels, 9,796 on motor vessels and 1,527 on sailing vessels. Of the total number of seamen employed in 1927, 179,242 or about 90 per cent of the total, were engaged in foreign-trade vessels. The seamen employed on home and coasting trade vessels were predominantly British.

The distribution of the seamen by nationality was as follows:—132,384 British; 16,079 foreigners; and 52,062 Lascars. The occupa-

tions of the seamen, by nationality, were as follows:—

Occupations	British	Foreign	Lascars
Deck.....	49,652	4,636	16,107
Engine-room.....	41,197	7,764	22,564
Stewards.....	32,324	3,247	13,391
Others*.....	9,211	432

* Including wireless operators, musicians, etc.

The total sea-faring population (other than fishermen) is estimated at 235,600 (1,600 more than in 1926), by adding to the above figures the numbers of the first crews of vessels of 100 tons or more, which were without crews on the date of the census.

NOTES ON INDUSTRIAL SAFETY AND HEALTH

Quebec Safety League

The industrial section of the Province of Quebec Safety League has a membership of 549 employers, including practically all the largest industrial and utility firms of the province. The League supplies these companies with safety literature, including its periodical publication, the *Signal*. Mr. Arthur Gaboury, secretary general to the league, recently announced that a new service would be offered to the members in the form of gramophone safety records which are to be sent out to the members each month, to be used by them at the noon hour when the employees are having lunch. The talks and illustrations will not, however, be confined to the subject of mishaps in plants and work-shops, but will embrace the dangers that beset the family at home. The purpose which the league has in giving these talks to be recorded to the thousands of men working for the members of the industrial section is indelibly to impress on their minds the loss to themselves, their wives and their children if they meet with an accident.

Protection of Electrical Workers in Saskatchewan

Regulations, dated August 2, 1928, have been issued in Saskatchewan under the Public Utilities Companies Act of the Province, for the protection of workers engaged in the operation or maintenance of electrical transmission and distribution systems without the limits of cities and towns.

Part 1 of the regulations defines the requirements in regard to equipment, and Part 2 gives directions to be observed by electrical workers. A copy of Part 2 is to be kept posted in a conspicuous place in each generating station or sub-station. The regulations provide as follows:—

Grounding Circuits and Equipment.—All circuits and equipment shall, before work is commenced thereon, be adequately disconnected, grounded and short circuited. (Note: Ground should be provided for this purpose.)

Working on Live Equipment.—Except in cases of emergency where work is necessary on a live circuit 750 volts and over to ground, two qualified persons shall be present, and, if practicable, this provision shall also apply where work is to be done on any live circuit.

First Aid Requirements.—Every permanent employee shall be familiar with first-aid requirements, the location and use of fire ex-

tinguishers and the Schäfer prone pressure method of resuscitation. A first-aid kit shall be mounted in a prominent place and all generating stations and indoor substations shall be connected to the exchange communications system or connected by private wire. Outdoor substations, where it may be necessary to work on live circuits, shall also where practicable be so connected.

Protective Devices.—Every station where men are located shall be provided with insulating gloves, sleeves, boots, goggles and insulating shields, covers, mats, stools and special tools for handling or testing live equipment. Grounding devices for making protective grounds, "man at work" signs and portable danger signs shall also be provided.

Inspection of Protective Devices.—Routine periodic inspections and tests shall be made on all protective devices and linemen's safety belts and spurs in order to insure that they are in good working condition.

Inexperienced Men.—Inexperienced men shall not be allowed to work on live equipment except under the direct supervision of a properly qualified person.

Use of Safety Appliances.—Safety belts shall always be adjusted while at work. Supporting structures such as poles or ladders shall be tested and the safety appliances provided shall be used when working on live circuits. All circuits shall be treated as live unless known to be cut out and protectively grounded. Loose clothing shall be avoided when working near rotating machinery or live circuits, and sleeves shall be kept down and no unnecessary metal or inflammable article shall be carried or used. Goggles shall be worn when working on arcing contracts. When working on machinery or circuits, the "man-at-work" sign shall be exhibited, and the special tools provided shall always be used for the purposes for which they are designed.

Restoring Service After Work or Break-down.—Special precautions shall be taken before restoring a circuit into service to see that everything is clear. Circuits on which the protection devices have operated shall not be restored to service until steps have been taken to see that all hazard to life and property has been removed.

Handling Series Circuits.—Secondaries of circuit transformers to meters or other devices shall not be opened when alive until

contacts have been jumpered or short circuited at some other point.

Private Communication Lines.—When private communication lines are on the supply poles they shall be treated as live wires.

Radio Antennae.—Radio antennae or attachments shall not be allowed on any supply pole or structure, and for matters of drop or other clearances shall be treated as a grounded communication line.

Safety Organization in British Factories

The Chief Inspector of Factories and Workshops (Great Britain) in the annual report describing the work of his department in 1927, devotes unusual space to questions relating to accident prevention. He points out that progress in the safety movement has been disappointingly slow, despite the efforts of the inspectors and the striking examples of success attained in individual cases. Last year, a draft order was sent out to manufacturers under the powers conferred upon the Department by Section 29 of the Workmen's Compensation Act, 1923, providing for the establishment of a safety organization of each factory, applicable to the iron and steel trade, to the heavier side of the engineering industry, to the iron foundries in which more than 50 persons are employed, and to ship-building. The chief inspector pointed out that safety organizations are most likely to be effective when they are established on a voluntary basis and that this is one of the main reasons why earlier use was not made of the powers conferred by the Act. The Associations were therefore informed that if the Secretary of State was assured that the employers in any of the industries concerned were ready to adopt effective safety schemes on approved lines, and that effective steps would be taken without delay to institute such arrangements, he would be quite willing to postpone the issue of the Order, so far as that industry was concerned, in order to give employers the opportunity, even now, to deal with the matter on a voluntary basis.

The draft Order required the employment of a competent safety supervisor responsible directly to the employer, his duties including the constant supervision of the plant, the training of new workers, investigation of accidents, co-operation with the management and operatives in the organization of safety first work and the maintenance of first-aid and ambulance arrangements.

Subsequently, it was agreed to suspend the issue of the Order in respect of any associa-

tion which would undertake to take up the matter of safety organization energetically with its members. Several associations gave this undertaking, including the Railway Companies Association, the National Federation of Iron and Steel Manufacturers, the National Federation of Vehicle Trades and others. The procedure of each of these bodies has been to make a higher official chairman of the committee, and to nominate equal numbers from the engineers in charge, the departmental foreman and the workers. The duties of the committee at one of the works are, for example:—

(a) To discuss in general, questions pertaining to accident prevention principles and practice throughout the works, with a view of promoting protection against accidents.

(b) To study reports of accidents and make any recommendations to the management with regard to them, which they may consider desirable.

(c) To maintain supervision over the works machinery and plant in regard to their safety, and report to the management any defects observed.

(d) To see that employees newly engaged or transferred to new work are instructed in "accident prevention" principles in connection with their work.

(e) To see that all devices and applications for protection against accidents, and, in particular, appliances for stopping machinery when it should be stopped, are in proper order.

(f) To see that the First Aid and Ambulance appliances are maintained in an efficient state and to endeavour to secure that a sufficient number of employees in each department are trained and practised in First Aid and Ambulance work.

No Accident Campaign in New Jersey

The New Jersey Department of Labour has organized a "no accident" campaign, to commence on September 17, all industries in the State being invited to participate in the event. Employers have been asked to send in tables showing the man-hours worked and the man-hours lost through accidents. Lectures will be given on preventive methods and prizes will be awarded to plants making the best records. Posters will be distributed and casualty insurance carriers will be asked to send engineering experts into factories to deliver talks on safety.

NOTES ON LABOUR UNION ACTIVITIES

Canadian Legislative Board, Brotherhood of Locomotive Firemen and Engineers

THE triennial convention of the Canadian Legislative Board of the Brotherhood of Locomotive Firemen and Engineers was held at Ottawa during the last week in August the chairman, Mr. William L. Best, presiding.

Legislation proposals passed at the convention were as follows:

To increase the scales of compensation in all Workmen's Compensation Acts;

To require two enginemen on all gas-electric cars or engines;

Elimination of highway crossings with the railway by placing the highway over or under the railway, and pending such level crossing separation adequate protection be provided either by signals or an effective stop law;

The closest possible co-operation between the various provincial highway departments and the Board of Railway Commissioners for Canada was recommended, it being recognized that although both these agencies are rendering valuable service in this direction, closer co-operation should ensure more effective measures being taken and thus conserve many human lives.

In regard to safety appliances and improved operating conditions, the convention proposed amendments to visual and hearing regulations; an order to restrict excessive hours on duty of enginemen engaged in train operation; elimination of "deckless" locomotives as obsolete and unsafe for enginemen, especially in road service; front cab windows of locomotives constructed to ensure clear vision for enginemen; improved location of train order signals at stations to ensure easy and sure observation by enginemen of approaching trains; location of steam whistles of locomo-

tives where the sounds will not injure or impair hearing of enginemen; the discontinuance of objectionable and unsafe methods of trains protection employed by certain railway companies for many years, notwithstanding protests and appeals to the Board of Railway Commissioners for Canada.

The following resolution was adopted dealing with the pact to outlaw war: "That this Board is pleased to note that a number of powerful nations have signed a solemn pact renouncing war as a policy for the solution of international controversies, and also note with pleasure that Canada readily signed this pact."

Election of officers.—Mr. William L. Best, who had held the office of chairman of the Canadian Legislative Board and national representative for the past 18 years, was again re-elected to office. The other officers elected were Messrs.: James Pratt, secretary-treasurer, Toronto; T. L. Bloomer, vice-chairman for British Columbia, Nelson, Geo. W. Yeats, vice-chairman for Alberta, Calgary; E. Bracken, vice-chairman for Saskatchewan, Moosejaw; F. W. Nicks, vice-chairman for Manitoba, Winnipeg; H. B. Crawford, vice-chairman for Ontario, Smith's Falls; Charles Masse, vice-chairman for Quebec, Montreal; J. Frank Cain, vice-chairman for New Brunswick, Moncton; John E. Stewart, vice-chairman for Nova Scotia, New Glasgow; J. A. Hickey, vice-chairman for Prince Edward Island, Charlottetown. Board of directors: J. J. Southern, chairman, Port Arthur; J. G. McLean, secretary, St. Thomas; George Snider, Smiths Falls.

International Stereotypers' and Electrotypers' Union of North America

The International Stereotypers' and Electrotypers' Union of North America held its twenty-seventh annual convention in St. Louis, Mo., July 16-21, 1928, with approximately eighty delegates present from locals in the United States and Canada. The meeting was presided over by W. T. Keegan, international president, who reviewed the matters of interest that had occurred since the last convention and gave in detail the wage scales negotiated during the past year, as well as reporting the proceedings of the three regular meetings of the board of governors of the International Allied Printing Trades Association

which had been held since June, 1927. According to the report of Charles A. Sumner, secretary-treasurer, there was a balance in the treasury credited to all accounts of \$234,344.03, an increase over the previous year of \$33,959.62. The delegates were advised that on January 1, 1928, a burial fund had been established by transferring \$25,000 from the general fund, and that up to April 30, 1928, an additional sum of \$11,832.22 had been added to the fund, notwithstanding the fact that \$11,100 was paid out in death benefits during the same period. During the convention a considerable number of amendments to the constitution and general

laws of the union were adopted, some of which are to be submitted to a referendum vote of the membership during the month of October, 1928. One of the changes made was to increase the president's salary from \$4,000 to \$5,000 per annum and the secretary-treasurer's salary from \$4,000 to \$4,500.

Among the resolutions adopted was one instructing the technical educational committee

of the Union, subject to the approval of the international president, to appoint and have under its supervision, a centrally located technical education committee, so that standardized methods, information relative to the solving of technical problems and such other aid as may be desired, which will tend to the advancement of the industry, will be more easily obtainable.

NOTES ON TECHNICAL EDUCATION AND APPRENTICESHIP

Attitude of Organized Labour Towards Technical Education

The proceedings of the Ontario Education Association at their Annual meeting held in Toronto, on April 9 to 13, 1928, have just been published. At this meeting, Mr. Tom Moore, President of the Trades and Labour Congress of Canada, gave an address on the "Attitude of Organized Labour towards Technical School Education." The following paragraphs form the substance of his address:—

In the days of the hand loom and the guilds, employers took the boy giving him personal instructions and passing on to him all the knowledge they had themselves acquired. As industry developed, this became more and more difficult and it is to-day entirely out of the question, especially where mass production is carried on, for these opportunities of learning a trade to be given. Coincidentally with this, however, machinery has been improved not only in factories but on the farms to the extent where it is no longer possible or profitable to employ an uneducated and unintelligent worker. The damage that such a worker might cause by injury to a machine he does not understand might hold up production and cause financial loss altogether disproportionate to the difference between the wages of a skilled or an unskilled worker.

This situation has created a demand for a new kind of apprentice, one who will have sufficient general knowledge and intelligence to be able to understand the operation of the machine and yet develop the necessary skill and speed demanded in the specialization of industry.

Organized labour in Canada soon noted that lacking the facilities for technical education that industries were prone to seek immigrants and import workers from other countries trained to fill these positions. Based on this knowledge they co-operated with employers and others in urging upon the Government to set up a Commission for the investigation of this whole matter and complying with these representations such a Com-

mission was appointed in 1910, the Trades and Labour Congress of Canada being given representation thereon in the person of one of its Vice-Presidents, Mr. James Simpson of Toronto. * * *

As a result of this investigation, the Federal Government passed an Act in 1919 providing for the appropriation of \$10,000,000 to be expended during the ten year period ending March 31st, 1929, to assist the provinces in developing Technical Education. I assume that most of you are well acquainted with the terms of this measure and it is unnecessary for me to deal with it further. * * * Organized Labour has taken the attitude that whilst education is generally conceded to be a Provincial responsibility under the provision of the British North America Act that there are wide issues which demand the assistance of the Federal Government in this matter.

Canada is a young country and its newer territories must be developed, if the nation is to grow. In this development Canadian workers can play their proper part if given the necessary training. Therefore, it is reasonable to assume that many of those trained at the expense of the older provinces will devote their later activities in the development of newer Canadian territories. * * *

During the period of development of technical training schools, employers and trade unions, in many industries, were co-operating closer together in dealing with the training of apprentices in the shops. As a result of this apprenticeship boards or councils have been formed, the latest one being in the building industry.

The object of these Councils has been to link up the workshop with the school so that the practical training of the apprentice might be given on the job and the additional technical knowledge obtained in the school.

Premier Ferguson has recognized the importance of this development for Ontario, and by legislation, enacted during the last session

of the Legislature, has put the Apprenticeship Council of the Building Trades on a permanent basis. Organized labour would have liked this measure to have been broad enough to have included every industry but there appears to have been some hesitation on the part of employers to allow this at the present time. However, it is confidently believed, by organized labour that the demonstration of its practicability in the building industry will be sufficient to warrant amendments to the Act making it applicable to other industries in the near future.

The development of a new system of education such as that of technical training has been no light task. When the principles on which this should be carried out were finally decided upon the first difficulty which had to be met before proper effect could be given to the same was the training of sufficient teachers. Naturally these were taken largely from the ranks of established teachers with academic knowledge and only a minor number of men with practical journeymen experience co-operated to carry on certain phases of the work.

As the system develops, it is the belief of Organized Labour that better results will be

achieved by recruiting the teaching and administrative staff more and more from the ranks of those who, in addition to other necessary qualifications, have had practical experience in the trades that they are teaching, and that the ultimate control of technical education should come into their hands. * * *

In a recent publication of the International Labour Office a brief summary is given of activities concerning vocational guidance and technical training in Czecho Slovakia, France, Belgium, Switzerland, Germany and Greece in all of which countries, during the past few months measures have been taken to bring their systems up-to-date and develop them to the full.

The British Government is also active in the matter, the last issue of the publication of the British Labour Gazette paying particular attention to the importance of apprenticeship and technical education. Canada is recognized as one of the eight countries of chief industrial importance in the world and even with its wealth of natural resources can only maintain that position if its workers are given the best possible opportunity of developing their knowledge to the full.

Apprenticeship in the Building Construction in the United States

The Bureau of Labour Statistics of the United States Department of Labour recently issued Bulletin No. 459 on "Apprenticeship in Building Construction." This bulletin is the result of an investigation to determine to what extent apprenticeship is a factor in the building construction industry and what effect the agitation for a revival of the apprentice system is having. For this purpose the investigation was made in 19 cities which were considered representative. A brief synopsis of this report follows:—

The bureau limited its study to actual apprenticeship; that is, actual contract or some equivalent obligation extending over a stipulated period of years, by which a boy is to learn and his employer is to teach one of the building crafts. Helpers, who are hired and dismissed according to the needs at the time, were not considered, even when they were boys of apprentice age who might eventually become journeymen. Sources on which the bureau drew for information were local building trade unions, trade associations of employers, builders' exchanges, school authorities, and representative individual employers. Among the individual employers visited were union and open-shop men, and contractors who do and those who do not employ apprentices. The total number of apprentices

in the 19 cities investigated is 19,416 including 7,308 not indentured * * * *.

The primary purpose of the investigation was to find out what is the present trend in producing new mechanics for the building industry, what machinery for training apprentices exists, and how it functions. Systematic school training was encountered in several localities, since to a marked degree the federal vocational education law has been the stimulus for renewed interest in craft training and has indicated the course which training is following. The bureau did not, however, attempt a detailed study of school work.

Organized Systems in Operation—While apprenticeship by formal indenture between employer and boy is not widely practised, there is coming into use a system which amounts to the same thing. That is the joint apprenticeship committee system. These committees are composed of representatives of employers and of journeymen and, in some cases, of the city school boards. Apprentices are under agreement with the committee to serve their full time and to abide by the laws of the committee, which on its part takes the responsibility of seeing that the boy has employment and proper opportunities for training throughout his apprenticeship.

Where joint committees do not operate, the union may serve the same purpose, the apprentice being in effect indentured to the local union and governed by the terms of the working agreement between the union and the employers, with the union acting as placement agent to keep the boy employed. Apprentice training has more vitality, is more closely organized, and is affecting the building situation more definitely in those centres in which the division of vocational education of the local school board, usually acting under the Smith-Hughes law, is co-operating, than in the cities in which the contractors or the unions are trying to work out the problem alone. Probably this condition is not primarily the result of the actual number of hours spent by the boys in apprentice classes, since that is only four hours a week as a rule. More likely it is the result of the organization and co-operation of the employers and the journeymen, which is the machinery demanded by the school boards through which training shall be carried on.

The joint apprentice committee plan, says Prof. Arthur B. Mays in a recent book on industrial education, "has many desirable features, but it is feasible only where there are genuine interest and enthusiasm for apprenticeship, and real, whole-hearted co-operation among the three elements represented. Under such a plan the employee is relieved of any suspicion of exploitation, labour has a legitimate measure of control of the number entering its ranks as well as of the qualifications of the entrants, and the school is able to perform for the young people entering the trades the work it is fitted to do and should do as the educational agent of society. The apprenticeship committee is the nearest approach thus far made to a complete reproduction of the mediaeval master mechanic in his relation to apprenticeship, yet it is essentially modern in its characteristics and is fully in keeping with the requirements of modern production methods. This plan, or some other, much like it, seems to be the only way in which the problem of training apprentices in the building trades can be effectively developed."

Cleveland System.—The Cleveland method, as containing all the elements of systematic apprentice training, is treated as a standard. Cleveland has a system structurally so devised as to cover the building industry, but the foundation of the system is the separate crafts, each functioning through a joint committee of organized workers and organized employers. Co-operating with these committees, but not actually members of them, are the trade

teachers and officials of the division of vocational education of the Cleveland Public School System. These joint apprentice committees are active working bodies, which meet regularly, monthly or oftener, and which are the controlling agency of their respective crafts in all matters pertaining to apprenticeship. Upon action by the committee a formal indenture is made which binds employer and apprentice for the full term of apprenticeship. After the expiration of a probationary period, an employer may not discharge an apprentice and a boy may not change employers without the consent of the committee after a hearing.

One of the fundamental doctrines of the system is continuous employment throughout the apprentice period, in order to keep him in the trade. If the contractor to whom a boy is indentured runs so short of work that he can not keep him busy, a transfer to another contractor is affected through the trade committee until such time as the original employer can resume his obligation. Responsibility for carrying the boy through his apprenticeship remains with the original employer. To facilitate transfer from an idle to a busy contractor when necessary to insure continuity of employment, the Building Trades Employers' Association, which is a federation of various craft organizations of contractors, employs a director of apprentices. Additional duties of the director, who gives his full time to the work, are to act as truant officer for the contractors and to assist in many ways in the orderly working out of the apprentice program.

Supply of Trainees.—The cry that "boys won't go into trades" is not borne out by the investigation. On the contrary, it is quite apparent that the dearth of apprentices in the building trades is not due to a dearth of boys interested in entering those trades. The unions everywhere reported long waiting lists of applicants for apprenticeship, and joint committees agree that the problem does not lie in finding material to train.

Because of the limited opportunities for placing boys with contractors as apprentices, some unions, where they are sufficiently in control, make a practice of confining apprenticeships to the sons and other relatives of the men in the trade. This is especially true in bricklaying and plastering. It is frequently asserted that a boy has no chance to become a bricklayer unless his father is in the trade either as contractor or journeyman, and in a number of cases that is quite true. It has been true also in plumbing in some localities.

Apprentice Quotas.—Union regulations governing the ratio of apprentices to journeymen

prove to be far less a deterring factor in apprentice training than is commonly assumed. Where the highly developed systems prevail union regulations are apt to be abrogated entirely and the whole question of quota is handled by the joint committee on the basis of the number of apprentices the trade can support in continuous employment. Where the method is more desultory the union quota is not an issue for the reason that relatively few contractors have any apprentices at all, and certainly have no disposition to take on more than the union agreement permits. If the union regulations were in fact responsible for restricting opportunities for apprentices, one would expect to find greater development in open-shop centres. Actually, however, it is much harder to find an apprentice in an open than in a closed shop. Only three open-shop contractors were encountered in the course of the investigation who had more apprentices than they would have been granted under union agreement.

Attitude of Contractors.—Those most closely in touch with the situation—school authorities, members of apprenticeship committees, and contractors who are co-operating in the effort to the limit of their ability—declare that the individual contractor is chiefly responsible for the shortage of apprentices and the absence of a training system. Short-sightedness, indifference, and selfishness are the charges brought against their colleagues by the contractors who are carrying the load of apprentice training for the industry.

It is conceded that the provision for continuous employment, the one element which is vitally necessary to keep the boy, is the greatest stumbling block in the path of the contractor doing a small or even a moderately large business. Accordingly, it is the opinion of some of the men in the industry that the problem of seasonal building will have to be met before an effective apprentice system can be evolved.

Attitude of Unions.—As a rule, trade organizations, both of employers and of journeymen, have at least an appreciation of the needs of their respective trades in regard to apprentice training. Where union organization is strongest apprentice systems function most effectively. Local unions were found here and there which definitely oppose apprenticeship but more instances occur in which the unions are doing all that is being

done to provide new mechanics. In one "closed-shop" centre, on the other hand, not only strict limitations as to the number of apprentices, but dictation as to who may become apprenticed are enforced by unions strong enough to impose them upon employers. Instances of wage scales so high that few contractors can afford to pay them to learners suggest restriction by method more indirect and probably more effective than the ratio system.

Training on the Job.—While it is generally admitted that an apprentice is at best a financial liability for the first year, and often longer than that, it is not that phase of the problem which is objected to so much as it is the added difficulties on the job when an apprentice is taken on. The expression most frequently used by contractors is that they "can't be bothered with boys." Rapid building makes training on the job not only unprofitable but well-nigh impossible. Employers and journeymen agree that it is simply not possible to carry out any real program of teaching on the job. To this school authorities and lay opinion, equally interested but not so directly involved add that whether possible or not, there certainly is no training on the job. The boy merely "rubs off" what he can while he is working with journeymen, and where school work is part of his training the school is expected to supply, in a few hours a week, the technical and mechanical knowledge which the job cannot, or at any rate, does not, provide. One authority made the unequivocal declaration that "there simply is no such thing as training apprentices on the building."

Professor Mays explains that "the character of construction work discourages the use of inexperienced labour for skilled operations. The building mechanic does not make a small part of the whole which later will be placed in the finished product, as does the factory tradesman, but his work is performed in the first instance, on the building itself. If a plasterer's apprentice or a tile setter's apprentice makes a mistake, it is made on the finished product and can be corrected only by the expensive process of tearing out materials from the building. This characteristic of building work makes teaching on the job a very expensive procedure and explains in part, the reluctance of contractors to employ any but journeymen mechanics."

Apprenticeship and Training in Great Britain and Northern Ireland

A report of an inquiry into apprenticeship and training for the skilled occupations in Great Britain and Northern Ireland has recently been published by the British Ministry of Labour. This report, together with the six reports* already published on conditions of training in the various industries, provides a complete and authoritative survey.

A great part of the information presented was obtained from the replies of individual employers. Schedules were issued to some 44,000 employers and the response made was highly satisfactory. Almost three-fourths of the employers to whom the questionnaire was addressed, employing nearly three million workpeople, gave the requisite information respecting 137,331 male and 41,530 female apprentices and learners. Information supplementary to that contained in the schedules was also obtained from employers' associations and trade unions and from other sources.

It is estimated that there are some 315,000 boy apprentices and 110,000 boy learners (excluding learners in the textile industries) in Great Britain alone; in other words, nearly one-seventh of the male workpeople in industrial occupations in Great Britain under 21 years of age are apprentices.

When all the industries in which apprenticeship occurs are considered together, it appears that only about a quarter of the employers take apprentices, and only about 30 per cent, employ boys under some recognized form of training. Moreover, the inquiry has brought out the fact that the burden of training apprentices is borne to a greater extent (in relation to their size) by the smaller than by the larger firms.

The report points out that modern apprenticeship is vastly different from that apprenticeship to which it is the traditional successor. Only about 28 per cent of the boys in training are apprenticed under indentures or formal written agreements. Apprenticeship in its stricter forms is indeed showing some decline. Thus, a comparison of the proportion of indentured apprentices in some sixteen industries shows that the proportion of boys in training who were serving under

indentures decreased from about 36 per cent in 1909 to 30 per cent in 1925.

The proportions of apprentices to journeymen in the various occupations show wide differences. In the building industry, the number of journeymen employed to each apprentice varies from 5.7 among masons to 2.2 among plumbers; in the industry as a whole there are nearly 2 apprentices to every journeyman but there are 15.2 journeymen to each apprentice in London as compared with 2.7 in Scotland and the Northern Counties of England.

As regards the age at entry, the majority of boys commence their apprenticeship between the ages of 14 and 16 years, but more commonly at 16 years than at any other age. This implies that in many cases, there is discontinuity between training in the school and in the workshop.

Apprenticeship usually extends for periods of five to seven years, but most commonly for five years, the practice varying according to the industry.

The methods of selection of boys for apprenticeship occupations still most widely adopted are the traditional methods. They consist in selection by the employer, or in some cases by the foreman, after interview or after a preliminary period of probation; in the choice of apprentices preference is sometimes given to the sons of employees or to boys who are personally recommended to the employers. In some establishments these methods are being superseded by others, based on vocational selection according to industrial fitness or on the application of some recognized standard, such as selection by educational qualifications, by written examination, or other test.

So also the traditional methods of training which usually include attaching the boy to a journeyman, or placing him under the supervision of a foreman, or employing him as a mate, are being challenged by more systematic methods, such as training a group of boys under a teacher, or in a special apprentices' shop, or under a systematic scheme of training providing for the regular progression and advancement of the apprentice according to carefully planned courses of work, or by regular stages.

There is an increasing recognition by employers of the advantages to be obtained from a correlation of technical instruction to workshop training. Thus substantial proportions of employers with apprentices pay or refund class fees to those apprentices who produce a record of satisfactory attendance at even-

* Vols. I-VI Printing and Allied Industries; Building, Woodworking and Allied Industries; Mining, Quarrying, Metal Extraction, Chemical, Glass, Pottery and Allied Industries; Textile and Clothing Industries; Government Departments, Public Utility Services, Distributive Industries etc.; Engineering, Shipbuilding and Ship-repairing, and other metal industries; all published by H. M. Stationery Office, London, W.C. 2.

ing classes, or grant time-off during working hours, usually without deduction of wages, in order that the apprentices may attend evening or part-time day classes, or provide facilities for attendance at day technical classes by releasing the apprentice for one or two days per week for this purpose. So also many employers encourage attendance at evening classes by giving extra pay or bonus, according to success attained in technical classes. Some employers make attendance at evening classes a condition of the apprenticeship classes held in the works, while others adopt a "sandwich" system under which the boys are allowed to spend alternate periods in the works and in attendance at technical schools or colleges or universities. Despite all that is being done in this direction, there is evidence in the returns that in some districts facilities for technical instruction are not available. Even where such classes are available, there is room for the establishment of a closer relationship between technical and workshop training; thus, for example, under existing arrangements it is the exception rather than the rule for any distinction to be made in the length of the period of training required to be served by those apprentices who attend for technical instruction and those who do not.

The wages of apprentices are, in general, lower than those paid to juveniles of comparable ages in other occupations, but on the other hand, their wages would appear to have increased to a relatively greater extent than those of the journeymen in the same trades. In the great majority of cases, wages in the last year of apprenticeship are probably between 40 and 50 per cent of the journeyman's rate. * * * * *

The great majority of trade unions have rules relating to apprenticeship dealing with such subjects as entry upon apprenticeship, age at entry, length of apprenticeship, training of apprentices, the ratio of apprentices to journeymen and the wages of apprentices. Some complaint is made of the restrictive effect of these rules in so far as they affect the proportion of apprentices to journeymen that may be employed. Such objections emanate mainly from employers' associations in the printing and wool textile industries, but, except for a limited number of references to the application of the rules to particular establishments, there are relatively few allusions in the returns from individual employers to difficulties experienced in recruiting a sufficiency of skilled men from this cause.

A section of the Report is devoted to an attempt to estimate how far the supply of apprentices is sufficient to meet the future needs of industry. This, it is pointed out, is a problem of unusual complexity. The difficulties of the subject are enhanced by the defects of the available information respecting the relative numbers of apprentices and journeymen, and of juniors and adults, who have in the past entered a particular occupation, and by the uncertainty respecting the future course of any particular industry. The complication introduced by the declining birth-rate is also discussed. The Report attempts, however, on the basis of the Census and other figures, to frame an estimate of the proportion of the apprentices (or learners) to journeymen necessary to maintain the existing number of journeymen in the building, engineering and shipbuilding, printing, and furniture trades.

Vocational Training in Certain Foreign Countries

A revised scheme for the improvement of vocational training in ordnance and clothing factories has been sanctioned by the Government of India. It is proposed to select for training a limited number of boys 12 to 17 years of age, with the object of producing skilled workers from whom a higher grade of temporary supervision than is now obtainable will in time be available. So far as possible, the boys will be recruited from the families of workers in the factories, and the period of training will be normally four years. It is also proposed to give to a small group of carefully selected "apprentices" in certain trades, recruited from every race and creed

found suitable for the work required, a sufficiently thorough training to make them capable of becoming foremen or assistant foremen.

In Rumania, the training of apprentices was first undertaken by the Government in 1920. In 1927 there were 141 schools for apprentices in industry or commerce with a registration of 16,418.

Poland, in 1927, had 1,145 schools or courses for vocational training in industry or agriculture, with 153,000 pupils in attendance.

In France, two recent laws raise the age limit for apprenticeship from 16 to 18 years, and regulate apprenticeship contracts.

LEAGUE OF NATIONS INTERNATIONAL LABOUR ORGANIZATION

Special Maritime Section of the International Labour Conference in 1929

In accordance with decisions of the Governing Body of the International Labour Office, in addition to the regular general session next year, there will be a special session of the International Labour Conference to deal with questions relating to maritime labour. The agenda of this maritime session includes the question of the regulation of hours of work on board ship, that of protection of seamen in case of sickness (including the treatment of persons injured on board ship) and that of seamen's welfare in ports.

In the issue of *Industrial and Labour Information* for August 13, the International Labour Office publishes a number of expressions of opinion relating to these questions. The International Association of Mercantile Marine Officers has decided to intensify individual and collective propaganda in favour of the limitation of hours of work on board ship. Action has also been taken by the mercantile marine officers of Belgium and the Netherlands to further the adoption of the principle of international regulation.

As regards the protection of seamen's health on board ship and in port, various suggestions have been put forward. The mercantile marine officers have drawn up a minimum program which they consider capable of immediate realization. Under this head must be considered all measures calculated to protect human life at sea or provide compensation for victims of shipwrecks, in brief, all efforts to protect seamen physically and morally. In this connection, attention should be drawn to the discussions on the subject of the revision of the International Convention adopted in 1914 relating to the safety of human life at sea (particularly those which took place at the International Shipping Conference) and to the demands of the Japanese trade unions which refer directly to the Convention concerning unemployment indemnity in case of loss or foundering of the ship, adopted by the International Labour Conference in Genoa in 1920.

Abolition of Forced Labour

In view of the inclusion in the Agenda of the 1929 session of the International Labour Conference of the question of forced labour, information relating to the protection of native workers is of growing interest. The International Labour Office, in its *Industrial and Labour Information* of August 6, publishes

articles on "Native and Colonial Labour" which bear witness to a universal desire in the territories concerned to secure for native workers not only normal conditions of work, but also an equitable economic and social position.

Considerable progress has been registered in certain areas in the direction of the limitation or abolition of forced labour. The policy adopted by the Government of Tanganyika Territory is significant. Partisans of forced labour, according to the Governor, must realize that, apart from strong ethical objections, there are insurmountable obstacles of a practical nature in the way of its use. In the Gold Coast, the disappearance of the custom of engaging miners on long-term contracts is leading to excellent results. In other territories, social legislation is being adapted to that of the most advanced countries, and the influence of the standards laid down in International Conventions can already be traced. This is particularly the case as regards the legislation adopted in Palestine and Cyprus on the subject of the employment of women and children. In the Union of South Africa, important suggestions are being made for the improvement of the position of native workers and their relations with workers of European extraction.

Publications of the Office

The August number of the *International Labour Review* contains the following special articles:—

The Eleventh Session of the International Labour Conference.

Seasonal unemployment in the clothing industries: II.

Shop closing legislation in European countries: II.

In the section devoted to Reports and Enquiries are the following:

The regulation of hours of work in European industry: II.

Vocational education in Russia from 1924 to 1927.

Unemployment in Scandinavian countries.

In the section dealing with statistics is included an article on Recent Wage Changes in Spain, the fourth of a series intended to bring up to date the study issued by the Office on "Wage Changes in Various Countries, 1914-1925."

The International Labour Office (League of Nations) has recently published the second volume of an extensive study on "Freedom of

Association." In the first volume, which appeared some months ago, attention was called to the manner in which the enquiry arose, the decision of the Governing Body of the Office in pursuance of which it was undertaken, the plans on which it was carried out, and the objects which the International Labour Office had in view.

The second volume comprises monographs on freedom of association in Great Britain, the Irish Free State, France, Belgium, Luxemburg, the Netherlands, and Switzerland. In each of these monographs a study has been made not only of the national legislation relating to trade unions, but also of the relevant legal decisions and administrative practice and the actual position of trade unions.

These studies have, so far as the differences in the legal system in force permitted, been based on a uniform scheme: the first part traces the history of the trade union movement and trade union law; the second part is devoted to the present legal status of associations; the third part deals with the possible forms of action by trade unions in the various departments of social and economic life and the limits of such action. The conclusion deals with the position of trade unions in law and in fact.

Three other volumes are to follow in the near future containing detailed monographs on the legal position of associations in different countries.

Mining Accidents in the United States

Coal Mine Fatalities

The Bureau of Mines of the United States Department of Commerce has recently published bulletin No. 283 dealing with "Coal Mine Fatalities in the United States; 1926." We learn from this report that the number of deaths caused by accidents in the coal mines of the United States in 1926 was smaller in proportion to the amount of coal produced than ever before recorded except in the three years 1923, 1920 and 1916. In other words, the coal that was mined during the year cost less in human life than in any previous year except those mentioned. Bituminous coal showed a slightly higher loss of life per million tons than in 1925, but a substantial reduction in the rate for anthracite mines brought the rate for the industry as a whole to what, with the three exceptions noted, was a new low record for the United States.

Monthly accident reports furnished by State mine inspectors to the Federal Bureau of Mines and revised by the inspectors at the close of the year showed that 2,514 men were killed by accidents in coal mines during 1926. The production of coal, according to preliminary estimates, of the Bureau of Mines, was 663,290,000 short tons. Thus the death rate per million tons was 3.79, as compared with 3.84 for 1925 and an average of 3.96 for the five years 1921 to 1925. Bituminous coal mines alone had a rate of 3.56 as against 3.53 in the previous year, while anthracite mines showed a rate of 5.33 deaths per million tons, as compared with 6.47 for 1925. It was, as stated before, the reduction in the accident rate for anthracite mines that effected a net reduction for all classes of coal mines.

The output of coal in 1926 included 578,290,000 tons of bituminous and 85,000,000 tons of anthracite coal.

Continuous records, which are now available, covering accidents in coal mines in the United States since 1870 show that in 1870 the loss of life averaged 13.47 per million tons of coal produced; the next year the figure stood at 10.86; for the years 1871 to 1880 it ranged from 10.86 in 1871 to 5.16 in 1880, averaging 7.87 for the 10-year period. During the decade ended with 1890 the average was 5.55, and for the 10 years ended with 1900 it was 5.57. For the decade 1901-1910, a period which witnessed some of the worst coal-mines disasters that have occurred in the United States, the average was 5.80. The average was reduced to 4.27 during the years 1911 to 1920, and finally to 3.96 for the half decade 1921-1925. Thus the price in human life of a ton of coal in shown to have been greatly lowered during the period for which yearly figures on fatal accidents are available.

The Women's Minimum Wage Commission of the Province of Quebec is resuming investigations in September, when an inquiry will be made into the boot and shoe making industry. Later, the garment and allied industries will be investigated with a view to the establishment of minimum rates of wages. The existing orders governing female employment in laundries, and dye works, printing establishments, and textile factories, have been noted in previous issues of the LABOUR GAZETTE.

EMPLOYMENT AND UNEMPLOYMENT IN CANADA DURING JULY

THE following information as to the employment situation in Canada is based upon reports from four sources:—

(1) The Dominion Bureau of Statistics receives reports each month from most of the larger employers of labour throughout Canada in all industries except agriculture, fishing, hunting and highly specialized business, the returns representing firms employing fifteen workers or more. The number of firms so reporting in July was 6,506, their employees numbering 1,003,085 persons. An employment index number is maintained, based on the number of workers employed by such firms in January, 1920, as 100;

(2) The Department of Labour receives reports from local trade unions throughout Canada, showing the number of their mem-

bers who were unemployed in the period under review. The number of unions reporting for July was 1,600, having an aggregate membership of 180,111 persons. It should be understood that the report on the number of unemployed workers refers only to organized labour, no figures being available as to the number of unorganized workers who were without employment;

(3) The Department of Labour receives reports from the 64 offices of the Employment Service of Canada showing the number of applications for work, the existing vacancies and the number of workpeople placed in positions;

(4) The Dominion Bureau of Statistics receives each month detailed statistics from 63 cities throughout Canada, showing the value of permits granted during the period for various classes of building construction.

Employment Situation at the Beginning of August, 1928, as Reported by Employers Making Returns

Employment at the beginning of August showed a further large increase, according to statements tabulated by the Dominion Bureau of Statistics from 6,506 firms, whose payrolls aggregated 1,003,085 persons, as compared with 973,462 on July 1. This advance involved a much greater number of workers than that registered on August 1 in any other year of the record, while the index number, at 119.9 on the date under review, continued higher than in any other month since the series was instituted in 1920. On July 1, 1928, it stood at 116.3, and on August 1, 1927, 1926, 1925, 1924, 1923, 1922 and 1921, it was 109.2, 104.2, 96.3, 94.7, 100.2, 93.1 and 88.9, respectively.

Construction and manufacturing reported unusually pronounced gains, while the tendency was also favourable in transportation, mining, trade, communications and services. On the other hand, logging continued seasonally quiet.

Employment by Economic Areas

Greater activity was shown in all provinces, the improvement in Ontario and the Western Provinces being most noteworthy.

Maritime Provinces.—Statements were tabulated from 554 firms in the Maritime Provinces employing 77,904 persons, as compared with 76,628 in the preceding month. This increase was much larger than that indicated on August 1, 1927, when the index was over four points lower. Manufacturing was slacker,

chiefly owing to the completion of the season's work in fish canneries, and logging and transportation were also seasonally quiet, but the trend of employment was upward in construction, mining and trade.

Quebec.—Considerable expansion was shown in Quebec, according to returns from 1,426 employers with 275,566 workers, as against 268,366 on July 1. Manufacturing, construction, transportation, mining and communications reported larger payrolls, but trade was rather quiet. Employment was in greater volume than at the beginning of August of a year ago, or, in fact, than in any other month of the record.

Ontario.—There was an important advance in employment in this province on August 1, when the 2,961 co-operating firms increased their staffs by 11,346 persons to 411,684. The greatest improvement was in manufacturing and construction, but that in transportation, mining, communications and services was also noteworthy. A slight increase was recorded on the corresponding date last year; the index number was then 11 points lower than at the beginning of August, 1928, when it reached 113.6 the highest in the series.

Prairie Provinces.—Exceeding the gain noted on August 1, 1927, there was a large increase in employment on the date under review in the Prairie Provinces, where 860 employers reported 149,352 workers, or 7,432 more than at the beginning of July. The most pronounced improvement was shown in

construction, but manufacturing, trade, transportation and mining were also decidedly more active. The index number, at 137.5, was many points higher than on the corresponding date in any other period since the record was commenced.

British Columbia.—Continued gains were registered in British Columbia, chiefly in manufacturing, but also in transportation, construction and services. Returns were compiled from 705 firms employing 88,579 persons, as against 86,210 in the preceding month. Smaller increases were indicated at the beginning of August of last year, but the situation then was not so good.

operating firms. Manufacturing and construction registered decided improvement, while the fluctuations in other industries were slight.

Quebec.—Little general change was noted in Quebec City, increases in construction being offset by losses in manufactures. Statements were received from 103 employers whose staffs aggregated 11,783 workers, compared with 11,807 in the preceding month. Advances had been indicated on August 1 a year ago, but conditions then were not so favourable.

Toronto.—There was continued expansion in Toronto, according to data from 831 em-

EMPLOYMENT IN CANADA AS REPORTED BY EMPLOYERS

NOTE.—The curve is based on the number of employees at work on the first day of the month, as indicated by the firms reporting, in comparison with the number of employees they reported in January, 1920, as 100.

Table I gives index numbers by economic areas.

Employment by Cities

Employment advanced in Montreal, Toronto, Hamilton, Ottawa, Windsor and the other Border Cities, Winnipeg and Vancouver, while the tendency was unfavourable in Quebec City.

Montreal.—Employment in Montreal showed a further gain, contrasting with the decline recorded on August 1, 1927, when the index was over nine points lower. A combined payroll of 130,551 employees, or 2,170 more than on July 1, was reported by the 759 co-

employers of 114,137 persons, or 1,716 more than at the beginning of July. The level of employment was much higher than on the corresponding date in other years of the record. Manufacturing, especially of iron and steel products, construction, transportation, trade and communications recorded heightened activity.

Ottawa.—The trend of employment in Ottawa continued upward, 394 workers having been taken on by the 142 co-operating firms, who employed 13,420 on August 1. The largest gains were in manufactures and trade. Rather smaller increases were indicated at the be-

ginning of August, 1927, and the index then was much lower.

Hamilton.—There were additions to staffs on a decidedly larger scale than on the same date last summer, 201 Hamilton employers

reporting 32,988 persons on their paylists, as against 31,939 in their last return. Manufacturing registered general improvement, that in iron and steel plants being most pronounced. Activity was greater than in any other period of the record.

NOTE: Number employed by the reporting firms in Jan. 1920=100 in every case. The "Relative weight" in Tables 1, 2, 3 and 4 shows the proportion of employees in the indicated area or industry to the total number of all employees reported in Canada on the date under review.

Windsor and the Other Border Cities.—Further expansion was noted in the Border Cities, where employment was brisker than in any other month of the record. Statistics were received from 126 firms employing 20,327 workers, or 1,922 more than on July 1. Automobile works largely increased their working forces, while only small changes took place in other industries.

Winnipeg.—Continued advances were shown in Winnipeg, according to 287 firms who had 31,888 employees, as compared with 31,104 at the beginning of July. There were general increases in manufactures, construction and trade. The improvement evidenced on the corresponding date last year was less pronounced, and the index then was lower.

Vancouver.—Manufacturing, transportation and construction reported heightened activity in Vancouver. Returns were compiled from 260 employers whose staffs aggregated 28,719 persons, compared with 27,769 in the preceding month. Curtailment was indicated on August 1, 1927, when the level of employment was much lower.

Index numbers by cities are given in Table II.

Manufacturing

Further gains were made in manufacturing establishments, 3,984 of which reported 534,938 operatives on their payrolls, as compared with 523,342 on July 1; this was an exceptionally large advance for mid-summer, which is often a slack season in this group. The most marked increases were in iron and steel, fruit and vegetable canning and lumber factories, but considerable improvement was also shown in pulp and paper, rubber, textile, building material, electric current, mineral product and non-ferrous metal plants, while fish-preserving and chemical factories showed reductions. A much smaller increase was registered on the same date last year, when the index was nearly nine points lower.

Animal Products, Edible.—Dairies registered further gains, but fish-preserving establishments, particularly in the Maritime Provinces, were slacker. Statistics were received from 226 firms employing 18,916 workers, as compared with 19,071 in the preceding month. This reduction involved a smaller number of employees than that noted on August 1, 1927, but the index then was about a point higher.

Leather and Products.—A slight decrease in

employment was shown in boot and shoe works, 27 persons being released from the staffs of 191 co-operating leather manufacturers, who employed 17,011 on August 1. The situation was practically the same as on the corresponding date last year, when minor gains were noted.

Lumber and Products.—Rough and dressed lumber mills continued to take on help, while the container, match and other branches of the lumber industry were also busier. The advance involved many more workers than that recorded on August 1, 1927, and the index then was slightly lower. The payrolls of the 736 firms furnishing data aggregated 60,522 operatives, as against 58,525 in their last report. There were large increases in all except the Prairie Provinces, where no general change was indicated.

Plant Products, Edible.—Continued and larger additions to staffs were registered in fruit and vegetable canning, sugar, biscuit and other factories coming under this classification; 309 employers reported 30,489 workers, or 2,914 more than at the beginning of July.

The gains, which were made chiefly in Ontario and British Columbia, were on a much greater scale than on August 1, 1927, when employment was in smaller volume.

Pulp and Paper Products.—All branches of this group recorded heightened activity. Statistics were received from 465 manufacturers whose payrolls were increased by 663 persons to 63,678 on August 1. Most of the improvement took place in Ontario and British Columbia. Less extensive advances were noted in the corresponding month last summer; the index at 125.2 on the date under review, was at the highest point so far reached in this record.

Rubber Products.—For the seventh consecutive month, there was a gain in rubber factories, 38 of which had 16,505 persons on their payrolls, compared with 16,107 on July 1. The advance, which took place chiefly in Quebec and Ontario, greatly exceeded that noted on August 1, 1927, when employment was at a decidedly lower level.

Textile Products.—Cotton factories recorded augmented working forces, while there was a

decline in clothing plants. The result was an increase of 723 workers in the staffs of the 515 co-operating manufacturers, who employed 75,233. The tendency was upward in Quebec and Ontario, but elsewhere little change was shown. Small decreases were noted at the

beginning of August, 1927, and the index then was slightly lower.

Tobacco, Distilled and Malt Liquors.—Data were received from 131 establishments in these industries, whose payrolls rose from 14,509 on July 1 to 14,575 workers on the date under

TABLE IV.—INDEX NUMBERS OF EMPLOYMENT IN CANADA BY INDUSTRIES (JAN. 1920 = 100)

Industries	Relative Weight	Aug. 1 1928	July 1 1928	Aug. 1 1927	Aug. 1 1926	Aug. 1 1925	Aug. 1 1924

NOTE.—The "relative weight" column shows the proportion that the number of employees in the indicated industry is of the total number of employees reported in all industries by firms making returns on the date under review.

review. The situation on August 1 last year was not so favourable, despite the fact that larger increases were then reported.

Chemical Products.—Employment in chemical works, mainly in Ontario, showed a falling-off, 295 persons being released from the forces of the 116 firms furnishing data, who had 7,045 employees. The index was higher than on August 1, 1927, although only minor losses had then been indicated.

Clay, Glass and Stone Products.—There was a further advance in building material plants, according to 128 employers with 12,291 workers, or 435 more than in their last report. The bulk of the gain was in Ontario and Quebec. Employment was in greater volume than on the same date last summer.

Electric Current.—Another, and larger increase took place in electric current works, 80 of which reported 14,948 employees, as against 14,254 on July 1. There was general improvement throughout the country, except in the Maritime Provinces where no change took place. The index number on the date under review was at the highest point reached since 1920, when the series was instituted.

Electrical Apparatus.—Employment in 46 electrical apparatus works showed a slight decline at the beginning of August; they employed 12,001 operatives, or 35 less than in the preceding month. The situation was better than on August 1 of last year; or of any other year of the record.

Iron and Steel Products.—Automobile, machinery, agricultural implement and structural iron and steel factories reported additions to staffs, while shipyards were slacker. The gains were exceptionally pronounced for mid-summer, when this group is often dull; the index on the date under review was higher than in any other month since 1920. A combined working force of 151,536 persons was indicated by the 668 co-operating manufacturers, who had 148,699 on July 1. Ontario and the Prairie Provinces registered the bulk of the advance.

Non-ferrous Metal Products.—In contrast with the decrease noted on August 1, 1927, there was an increase in employment on the date under review, 507 workers being added to the staffs of the 111 firms furnishing data, who employed 18,455. Practically all the expansion took place in Quebec and Ontario. Employment was in greater volume than in any other month of the years since 1920.

Mineral Products.—Statistics tabulated from 78 manufacturers of mineral products showed

that they employed 12,724 workers, or 821 more than in the preceding month, most of whom were taken on by establishments in Quebec and Ontario. The index was at its maximum for the record.

Logging

Seasonal dullness continued to affect employment in logging camps, especially in the Maritime Provinces and Ontario, while improvement was noted in Quebec. Statements were tabulated from 223 firms, employing 16,978 men or 221 less than in the preceding month. Rather greater losses were reported on August 1, 1927, when employment was not so active.

Mining

Coal.—There was an increase of 913 employees in the staffs of the 89 operators furnishing returns, bringing them to 25,951 on August 1, 1928. This gain, in which both eastern and prairie coal fields shared, was larger than that registered on the same date in any other year since 1920, in most of which the trend has been unfavourable. The index, however, was slightly lower than on August 1, 1927.

Metallic Ores.—Further large expansion was recorded in metallic ore mines, bringing employment to its highest level in this record. Returns were received from 76 mines, with 14,912 workers, as compared with 14,501 in their last report. The improvement was shown chiefly in Quebec and Ontario.

Non-Metallic Minerals (Other than Coal).—Continued expansion was noted generally in this division, in which 73 employers enlarged their payrolls by 219 persons to 8,993 at the beginning of August. Employment was maintained at an exceptionally high level.

Communications

There was another moderate advance in the personnel of telegraph and telephone companies on August 1, the 182 co-operating branches having 26,863 employees, as against 26,164 in the preceding month. The number engaged in this group was at its maximum for the last nine years.

Transportation

Steam Railway Operation.—The trend of employment in steam railway operation was favourable, except in the Maritime Provinces. The 104 companies and divisional superintendents furnishing data employed 88,322 persons, compared with 86,934 in their last report.

Contractions were recorded on the corresponding date in 1927, when the index was over eight points lower.

Shipping and Stevedoring.—Statements were tabulated from 66 companies in this group, employing 14,243 men, or 627 more than on July 1, 1928. There were moderate increases at all the ports, although curtailment was noted at the beginning of August a year ago, the index number then was higher.

Construction and Maintenance

Building.—Considerable improvement was again reported in building construction, 540 contractors adding 4 333 persons to their staffs, bringing them to 49,199 at the beginning of August. There were increases in all provinces. Conditions were better than in any other month of the record.

Highway.—The number engaged on highway construction and maintenance showed a further important increase in all provinces except British Columbia. Data were received from 173 employers, with 38,546 workers on their payrolls, as compared with 33,992 at the beginning of July. Employment in this industry has been very active in recent months.

Railway.—In contrast with the declines registered in this industry on August 1, 1927 and 1926, there was a large gain on the date under review, 57 companies and divisional superintendents enlarging their staffs from 62,902 on July 1, to 66,454 men at the beginning of August. The index number was higher than

in any other month of the series. The most pronounced expansion was recorded in Ontario and the Prairie Provinces.

Services

Summer hotels and laundries reported further additions to their payrolls; 182 firms employed 19,854 persons, or 499 more than at the beginning of July. This increase was larger than that indicated on August 1, 1927, when the situation was not so favourable; in fact, employment on the date under review was at its maximum for this record.

Trade

Activity in retail and wholesale houses again advanced, according to 647 establishments, which added 1,076 workers to their staffs, bringing them to 75,516 on the date under review. Ontario and the Prairie Provinces registered most of this increase. The gains recorded at the beginning of August last year were smaller, and the index then was much lower.

Tables

Index numbers of employment by economic areas, leading cities and industries, are given in the accompanying tables, in which the columns headed "Relative Weight" show the proportion that the number of employees reported in the indicated area or industry is of the total number of employees reported in Canada by the firms making returns on the date under review.

Unemployment in Trade Unions at the Close of July, 1928

The term unemployment as used in the following report refers to involuntary idleness due to economic causes. Persons who are engaged in work other than their own trades, or who are idle through illness are not considered as unemployed. Unions which are involved in industrial disputes are excluded from our tabulations. As the number of unions making returns varies from month to month with consequent variation in the membership upon which the percentage of unemployment is based, it should be understood that such figures have reference only to the organizations reporting.

The percentage of unemployment reported by local trade unions at the close of July was based on the reports received from 1,600 labour organizations including a membership of 180,111 persons. Of these 2.5 per cent were idle on the last day of the month, which was the smallest unemployment percentage to be recorded since the end of August, 1926. The

situation during July showed improvement both over the previous month and July last year, the percentage of idleness standing at 3.2 in the former month and 3.3 in the latter. In comparison with June, New Brunswick, Quebec, Manitoba, Saskatchewan and British Columbia unions all shared in the upward employment movement indicated in July, Quebec with a gain of 3 per cent showing the most pronounced expansion and the other provinces fractional percentage increases only. On the other hand, Nova Scotia, Ontario and Alberta unions recorded contractions in employment, the most noteworthy of which occurred in Alberta due to inactivity in the coal mines; the declines were on a smaller scale in Nova Scotia, being also due to unemployment among coal miners, while the decline in Ontario was nominal only. All provinces except Nova Scotia and Alberta reported a better situation than in July last year, Quebec as in the previous comparison, showing the largest

gain and Alberta the most substantial reduction.

A separate monthly tabulation is made of unemployment among local trade union members in the largest city in each Province with the exception of Prince Edward Island. The most favourable conditions during July were reported by Regina and Edmonton unions, both of which indicated unemployment percentages of less than one per cent, these being slightly smaller percentages than were registered in the same cities during June. Montreal unions showed the most outstanding improvement when compared with June, the gain being over 4 per cent and almost entirely due to greater activity in its garment establishments. From St. John, Winnipeg and Van-

The manufacturing industries with 452 unions reporting 51,372 members recorded a much better situation during July than in June, the garment trades in Quebec being mainly responsible for the change, though hat and cap makers, leather workers and cigar makers also contributed in a much smaller way to the group advancement. Iron and steel workers, paper makers and printing tradesmen, however, were less fully engaged than in June. The unemployment percentage at the close of July in the manufacturing industries, as a whole, stood at 3.8 as compared with 6.4 per cent of idleness in June. Improvement was also reported during July over the same month in 1927, when 4.8 per cent of unemployment was recorded. Garment work-

PERCENTAGE OF UNEMPLOYMENT AS REPORTED BY TRADES UNIONS

couver unions also a higher level of employment was reported. The reductions in available work registered by Halifax and Toronto unions were very slight. All cities with the exception of St. John indicated better situations during July than in the corresponding month a year ago, the increases in employment ranging from 2.7 per cent in Montreal to .1 per cent in Winnipeg, while in St. John the same percentage of idle members was reported during both months used for comparison.

The chart accompanying this article illustrates the unemployment trend among local trade unions by months from January, 1922, to date. The curve during July traced a course slightly below that of the previous month, indicating that a greater volume of employment was afforded than in June. The level of unemployment at the end of July was also slightly lower than was indicated at the close of the same month in 1927.

ers again accounting for a large share of the change. Wood, textile, hat and cap, iron and steel, and leather workers and printing tradesmen also reported a greater volume of employment and paper makers, glass workers and cigar makers on the contrary somewhat larger percentages of inactivity.

From 43 unions of coal miners with 17,566 members during July, 4.7 per cent were reported idle at the end of the month, contrasted with 2.6 per cent at the close of June and with 0.4 per cent on July 31, 1927. Considerable declines in the amount of work afforded were reported by Alberta coal miners during July both as compared with the returns of the preceding month and July last year, while among Nova Scotia and British Columbia unions the situation was but slightly adverse in both comparisons.

From the 188 unions of building tradesmen whose reports were tabulated at the end of

July comprising a membership of 23,175 persons, 3.3 per cent were reported idle as compared with 3.9 per cent in June. The gains in employment reported by bricklayers, masons and plasterers, electrical workers, granite and stone cutters, painters, decorators and paperhangers, and plumbers and steamfitters during July, were not particularly noteworthy and were offset in part by contractions among carpenters and joiners, tile layers, lathers and roofers, hod carriers and building labourers and bridge and structural iron workers. The situation in the building trades was considerably better during July than in the same month in 1927, when the unemployment percentage stood at 6.9. In this comparison bridge and structural iron workers, bricklayers, masons and plasterers, carpenters and joiners, electrical workers, granite and stone cutters, and painters, decorators and paperhangers all registered an upward employment trend, the most noticeable increase being reported by carpenters and joiners. Plumbers and steamfitters, tile layers, lathers and roofers and hod carriers and build-

ing labourers, however, registered somewhat greater inactivity than in July a year ago.

The percentage of unemployment indicated in the transportation group during July by 684 unions with 62,421 members was 1.1, as compared with percentages of 1.4 and 2.8 in June, 1928, and July, 1927, respectively. Navigation workers, steam railway employees, and teamsters and chauffeurs all contributed in slight measure to the increase in activity reported during July over the previous month, while among street and electric railway employees there was no change in the situation, a nominal unemployment percentage being reported in both months. In comparison with the July, 1927 returns, navigation workers showed marked improvement during the month under review; the steam railway division indicated a somewhat better situation and among street and electric railway employees there was slight gains in employment only. Teamsters and chauffeurs, on the other hand, reported a small fractional percentage of inactivity during July compared with no unemployment in the same month last year.

TABLE I.—PERCENTAGES OF UNEMPLOYMENT IN TRADE UNIONS BY PROVINCE

Month		N.S. and Pr. Edw. Island	New Brunswick	Quebec	Ontario	Manitoba	Saskatchewan	Alberta	British Columbia	Canada
July 1919	4.1	1.5	2.5	1.5	.9	2.8	1.9	5.8	2.4

July 1928	1.5	.7	2.6	2.6	1.8	.6	4.5	2.8	2.5	

Each month a separate tabulation is made showing unemployment conditions among longshore workers. At the close of July, 14 organizations of longshoremen made returns, the combined membership of which included 7,140 persons, 1,195 of whom were idle, a percentage of 16.7 as compared with 15.6 per cent of unemployed members in June and with 13.9 per cent in July last year.

Retail shop clerks were not quite so fully engaged during July as in both the preceding month and July last year. The unemployment percentages, however, in all three months were small.

The 57 unions of civic employees from which reports were tabulated at the end of July showing a total membership of 6,009 persons reported practically no unemployment compared with a similar situation in the previous month and also in July a year ago.

Reports were received at the end of July from 110 unions in the miscellaneous groups of trades with 5,665 members, 4.4 per cent of whom were idle compared with 3.8 per cent in June. Among theatre and stage employees about 4 per cent less work was afforded than in June, while among stationary engineers and firemen there was practically no change in unemployed members. Hotel and restaurant employees and barbers, however, reported nominally improved conditions. The situation in the miscellaneous groups of trades, as a whole, during July remained the same as in the corresponding month last year when 4.4 per cent of unemployment was registered,

though there were fluctuations to some extent within the group. Theatre and stage employees, barbers and stationary engineers and firemen all registered greater activity than in July a year ago, while the unemployment percentage for hotel and restaurant employees was nearly 4 per cent in advance of that reported for July, 1927.

Fishermen with 4 unions reporting 1,679 members were adequately supplied with work during July compared with a fully employed situation in June and with a nominal unemployment percentage in July of last year.

Employment Office Reports for July, 1928

The volume of business transacted by the offices of the Employment Service of Canada during the month of July, 1928, as shown by the average daily placements effected, showed an increase of nearly 8 per cent over that of the preceding period, and of almost 24 per cent above that of the corresponding period last year. All groups, except transportation and services, showed gains over June, while logging alone showed a decline in comparison with July a year ago. In each instance the declines reported were comparatively small.

The accompanying chart shows the trend of employment since January, 1926, as represented by the ratio of vacancies notified and placements effected for each 100 applications for work registered at the offices of the Service throughout Canada, compilations being made semi-monthly. It will be noted that the curve of vacancies and of placements in relation to applications showed a steady upward trend throughout the month, and at the close of the period each was about 4 points higher than that recorded at the close of July, 1927. The ratio of vacancies to each 100 applications was 88.3 during the first half, and 89.1 during the second half of July, 1928, in contrast with the ratios of 79.7 and 85.3 during the corresponding periods of 1927. The ratios of placements to each 100 applications during the periods under review were 81.5 and 82.0, as compared with 74.2 and 78.2 respectively, during the corresponding month of 1927.

The average number of vacancies reported daily by employers to the offices of the Service throughout Canada during July, 1928, was 1,588, as compared with a daily average of 1,279 during the corresponding month a year ago, and with 1,451 recorded daily in June, 1928.

The average number of applications for employment received daily by the offices of the Service during the month under review was 1,789 in comparison with 1,548 in July, 1927.

From lumber workers and loggers 4 reports were received at the close of July showing a membership of 818 persons, 1.0 per cent of whom were idle in contrast with 16.6 per cent in June and with no inactivity in July of last year.

Table I on page 997 summarizes the returns by provinces for July of each year from 1919 to 1925 inclusive and for each month from January, 1926, to date and Table II on page 998 is a record of the unemployment percentages in the various industrial groups for the same months.

Applications for work during the preceding month of 1928 averaged 1,714 daily.

The average number of placements made daily by the offices of the Service during July, 1928, was 1,463, of which 1,009 were in regular employment and 454 in work of one week's duration or less, as compared with a total daily average of 1,355 during the preceding month. Placements in July a year ago averaged 1,181 daily, being 856 in regular and 325 in casual employment.

During the month of July, 1928, the offices of the Service referred 38,178 persons to vacancies and effected a total of 36,551 placements. Of these, the placements in regular employment were 25,218, of which 20,843 were for men and 4,375 for women, while placements in casual work totalled 11,333. The number of vacancies reported by employers was 28,890 for men and 10,794 for women, a total of 39,684, while applications for work numbered 44,711, of which 32,888 were from men and 11,823 from women.

The following table gives the placements effected to date by the offices of the Employment Service of Canada:—

Year	Regular	Casual	Totals
1919 (10 months).....	268,001	37,904	305,905
1920.....	366,547	79,265	445,812
1921.....	280,518	75,238	355,756
1922.....	297,327	95,695	393,522
1923.....	347,165	115,387	462,552
1924.....	247,425	118,707	366,132
1925.....	306,804	106,021	412,825
1926.....	300,226	109,929	410,155
1927.....	302,723	112,046	414,769
1928 (7 months).....	137,872	73,608	211,480

NOVA SCOTIA

Employment opportunities as indicated by orders received at employment offices in Nova Scotia during July were over 2 per cent better than in the preceding month and over 23 per

cent more favourable than during the corresponding month of last year. Placements, however, declined 3 per cent in comparison with June, but were over 21 per cent in excess of July, 1927. All industrial divisions, except manufacturing, mining and communication showed gains over last year, although the changes under this comparison were nominal only, in all groups except farming and services. The gains in the latter group accounted for about 60 per cent of the total increase. Placements by industries included manufacturing, 44; logging, 55; farming, 63; transportation, 37; construction and maintenance,

and maintenance and services showed the largest gains. Industrial divisions in which most of the placements were effected during the month were: manufacturing, 49; logging, 69; farming, 36; construction and maintenance, 123; and services, 405; of which 281 were of household workers. During the month 233 men and 95 women were placed in regular employment.

QUEBEC

There was an increase of 14 per cent in the number of positions offered through employment offices in the Province of Quebec dur-

POSITIONS OFFERED AND PLACEMENTS EFFECTED FOR EACH ONE HUNDRED APPLICATIONS FOR EMPLOYMENT

Applications ————— Vacancies - - - - - Placements o-o-o-o-o

79; trade, 63; and services, 314; of which 220 were of household workers. Regular employment was secured for 189 men and 70 women during the month.

NEW BRUNSWICK

During July, positions offered through employment offices in New Brunswick declined nearly 23 per cent from the preceding month, but were over 3 per cent better than during the corresponding month last year. Placements showed a decline of nearly 20 per cent from June, but were over 7 per cent higher than in July, 1927. Logging and trade were the only groups in which fewer placements were made this year than last. Construction

ing July, when compared with the preceding month, but a decline of over 6 per cent when compared with the corresponding month last year. Placements were nearly 9 per cent higher than in June, but nearly 3 per cent less than in July, 1927. All groups, except mining, construction and maintenance, and trade, showed increased placements over July of last year, but the losses in these groups more than offset the gains in the other divisions. Placements by industries included: manufacturing, 175; logging, 414; farming, 277; construction and maintenance, 753; and services, 621; of which 350 were of household workers. Regular employment was secured for 1,830 men and 477 women.

ONTARIO

The demand for workers, as indicated by orders listed at employment offices in Ontario during July, was nearly 12 per cent greater than in the preceding month and over 32 per cent in excess of the corresponding month last year. There was a gain in placements also of nearly 10 per cent over June and of nearly 34 per cent when compared with July, 1927. The manufacturing industries, construction and maintenance and services showed substantial increases in placements over July last year, and all other groups, except logging, where the decline was nominal only, showed improvement. Placements in the manufacturing industries were nearly twice as heavy as last year. Industrial divisions in which most of the placements were effected during the month were: manufacturing, 2,728; logging, 1,091; farming, 1,996; mining, 128; communication, 68; transportation, 524; construction and maintenance, 3,915; trade, 599; and services, 4,190; of which 2,358 were of household workers. Placements in regular employment numbered 8,960 of men and 1,673 of women.

MANITOBA

During July, orders received at employment offices in Manitoba called for over 13 per cent more workers than in the preceding month and nearly 20 per cent more than during the corresponding month last year. There was a gain of over 7 per cent in placements when compared with June and of over 12 per cent in comparison with July, 1927. Nearly all the gain in placements over July last year was due to increases in the services' group, although manufacturing and construction and maintenance showed improvement. The only decline was in logging, due to fewer bush workers being transferred to Northern Ontario. Farm placements were about the same as last year. Industrial division in which most of the placements were effected during the month were: manufacturing, 248; logging, 59; farming, 1,330; transportation, 51; construction and maintenance, 537; trade, 165; and services, 2,046; of which 1,485 were of household workers. During the month 1,789 men and 691 women were placed in regular employment.

SASKATCHEWAN

Orders listed at employment offices in Saskatchewan during July called for nearly 19 per cent more workers than in the preceding month and nearly 12 per cent more than during the corresponding month last year. There was an increase of nearly 18 per cent in placements over June and also over July, 1927.

Services showed the largest gain in placements over July last year, but there were increases also in construction and maintenance and trade. The changes in other groups were small. Industrial divisions in which most of the placements were effected during the month were: manufacturing, 156; farming, 1,372; transportation, 68; construction and maintenance, 820; trade, 206; and services, 1,436; of which 677 were of household workers. There were 2,183 men and 639 women placed in regular employment during the month.

ALBERTA

Opportunities for employment as indicated by orders received at offices in Alberta during July were nearly 11 per cent better than in the preceding month and nearly 29 per cent more numerous than during the corresponding month last year. There was an increase of over 12 per cent in placements when compared with June, and of nearly 27 per cent when compared with July, 1927. Trade was the only division to show a decline in placements from last year. Construction and maintenance and services showed the largest gains. Placements by industrial divisions included: manufacturing, 382; logging, 69; farming, 1,807; mining, 76; construction and maintenance, 1,064; trade, 119; and services, 866; of which 625 were of household workers. During the month 3,195 men and 366 women were placed in regular employment.

BRITISH COLUMBIA

There was a decrease of over 3 per cent in the number of positions offered through employment offices in British Columbia during July, when compared with the preceding month, but a gain of nearly 36 per cent over the corresponding month last year. Placements were nearly 2 per cent less than in June but nearly 30 per cent higher than in July, 1927. All industrial divisions participated in the gains in placements over July of last year, those in construction and maintenance being the most pronounced. Placements by industrial groups were: manufacturing, 691; logging, 482; farming, 760; mining, 175; transportation, 239; construction and maintenance, 1,133; trade, 191; and services, 870; of which 462 were of household workers. Regular employment was secured for 2,459 men and 364 women during the month.

Movement of Labour

During the month of July, 1928, the offices of the Employment Service of Canada made 25,218 placements in regular employment, 15,057 of which were persons for whom the

employment found was outside the immediate locality of the offices at which they were registered. Of the latter 2,274 were granted the Employment Service reduced transportation rate, 1,668 going to points within the same province as the despatching office and 606 to other provinces. The reduced transportation rate, which is 2.7 cents per mile with a minimum fare of \$4, is granted by the railway companies to bona fide applicants at the Employment Service who may desire to travel to distant employment for which no workers are available locally.

Reduced rate certificates were granted by Quebec offices to 339 persons during July, 51 of whom travelled to points within the province and 288 to outside points. Provincially, the Quebec City office despatched 20 bushmen, and the Montreal office 30 sawmill labourers and 1 camp cook to centres within their respective zones. All the transfers outside the province were of bushmen, Montreal sending 248 to Sault Ste. Marie, and Hull 32 to North Bay and 8 to Cobalt.

The offices in Ontario issued 576 certificates for reduced transportation, 483 of which were provincial and 93 interprovincial. Of the latter, 44 were granted by the Sudbury, Fort William and Port Arthur offices to farm workers going to points within the Winnipeg zone. From Sudbury also, 16 miners, and from Pembroke 30 carpenters, were sent to Winnipeg zone centres and 2 farm hands to Penticton, while from Toronto, 1 farm hand journeyed to Regina. Of the certificates for points within the province 226 were granted to bushmen for employment in northern lumber camps, the majority of whom were despatched by the Ottawa, Fort William and Port Arthur offices. Ottawa in addition transferred 2 millwrights and 1 mill man to Sudbury, and Port Arthur 35 dam construction labourers, 4 cookees, 1 foreman, 2 clerks, 11 carpenters, 1 mill labourer, 1 packer, 1 gas engineer, 1 sawyer, 1 bull edgerman, and 1 engineer to stations within its own zone. Included in the transfers from North Bay were 15 carpenters, 2 painters, 1 waitress, 1 electrician and 2 pipe fitters going to Timmins, 2 farm hands to Pembroke, 1 engineer to Sudbury and 17 muckers, 15 drillers, 8 labourers and 1 steel sharpener to Sault Ste. Marie. From Sudbury 18 carpenters travelled to Timmins, 14 labourers to Sault Ste. Marie, and 26 labourers and 13 mill hands to points within the territory covered by the Sudbury office. From Toronto 26 labourers, 2 line men and 2 cooks were carried at the reduced rate to Ottawa, 1 cook and 1 cookee to Pembroke, 1 butcher to Windsor, and 1 waiter to Kingston. The Timmins zone received 8 carpenters from Cobalt,

3 mill hands and 2 carpenters from Pembroke, and 11 miners despatched from Timmins, while Windsor received 1 female cook from St. Catharines.

Persons who took advantage of the special rate in Manitoba during July totalled 484, of whom 350 travelled to provincial points and 134 to other provinces. All of these received their certificates of reduced transportation from Winnipeg. For employment in various parts of the province Winnipeg transferred 150 farm hands and 20 farm domestics. To Dauphin and vicinity were despatched 1 cook, 1 porter, 1 café general, 2 waitresses and 1 female camp cook, and to Brandon 1 porter, 1 waitress and 1 hotel general. In addition 12 teamsters, 4 cooks, 1 timekeeper, 2 porters, 1 engineer, 2 clerks, 50 railway construction labourers, 2 seamen and 97 construction labourers were transported at the reduced rate to stations within the Winnipeg zone. The transfers outside the province included 38 bushmen, 1 saw operator, 1 construction labourer, 2 cookees, 1 setter, 1 sawyer, 5 cooks, 1 hotel clerk, 5 carpenters, 2 engineers, 3 sawmill labourers and 1 female cook's help going to Port Arthur, 8 construction labourers to Prince Albert, 1 painter and 5 road construction labourers to Swift Current, 1 culvert man to North Battleford, 2 female hotel workers and 1 carpenter to Regina, and 1 general house worker to Timmins. The balance of the movement to other provinces was toward the farming districts, Saskatchewan receiving 48 farm hands and 3 farm domestics, and Alberta 1 farm hand and 2 farm domestics.

Workers securing reduced rate certificates from Saskatchewan offices during July were 179 in number, and of these 142 were destined to points within the province and 37 to outside centres. Of those going to employment within the province, 109 were for the farming localities, Moose Jaw transferring 21 farm hands and 2 farm domestics, Regina 19 farm hands and 3 farm domestics, and Saskatoon 64 farm hands to various rural points. Moose Jaw also despatched 4 teamsters, 2 blacksmiths, 2 chambermaids and 1 painter, and Saskatoon 9 teamsters to points within their respective zones, while from Regina in addition 8 labourers were sent at the reduced rate to Moose Jaw, and 3 labourers to Saskatoon. The balance of the movement provincially included 2 sawmill labourers, 1 cook and 1 cookee travelling from Prince Albert to employment within the same zone. Alberta agricultural districts received 17 of the workers transferred to other provinces, 9 farm hands going from Saskatoon, 7 from Prince Albert, and 1 from Regina. In addition 1 blacksmith, 8 riggers, 8 carpenters and 1 engineer were

transported at the reduced rate from Regina to Dauphin, and 2 bushmen from Prince Albert to Winnipeg.

The transfers at the reduced rate from Alberta offices involved an issue of 467 certificates, and of these 452 were issued to provincial centres, and 15 to points in other provinces. Within the province Edmonton transferred 17 teamsters, 37 road construction labourers, 4 fishermen, 2 engineers, 8 cooks, 1 tractor man, 4 cookees, 58 axe men, 5 blacksmiths, 1 grader man, 31 mill hands, 12 miners, 1 lineman, 2 painters, 2 bushmen, 1 waitress, 1 engineer, 1 fireman, 1 lather, 9 station men, 3 coal mine labourers, 3 carpenters, 1 dish washer, and 1 coal pit boss to points within its own zone; 1 engineer to Drumheller; 23 bushmen and 2 miners to Lethbridge; 2 miners to Calgary, and 126 farm hands and 3 farm domestics to various provincial points. The Calgary office despatched 1 carpenter and 1 waitress at the special rate to Drumheller; 1 cook, 1 maid and 1 cookee to points within its own zone; 1 shingler and 1 lather to Edmonton; 1 cook to Lethbridge and 79 farm hands and 2 farm household workers to various provincial points. The movement outside the province was of farm labour for Saskatchewan centres, 11 farm hands and 1 farm domestic travelling from Edmonton, and 3 farm hands from Calgary.

By British Columbia offices 229 persons were transferred at the reduced rate during July, 190 to stations within the province, and 39 to points outside the province. The Vancouver office was instrumental in effecting the majority of the transfers provincially, being responsible for the movement of 13 miners, 10 bushmen, 8 railroad construction labourers, 1 carpenter, 3 engineers, 5 cooks, 1 watchman, 9 flunkeys, 2 bricklayers, 5 building construction labourers, 2 muckers, 4 sawmill labourers, 14 road construction labourers, 1 electrician's

helper, 1 cement finisher, 4 lathers, 1 general labourer, 1 carpenter's helper, 1 farm hand, 2 teamsters' helpers, 1 swamper to Kamloops; 5 coal miners, 1 auto mechanic, 4 cooks, 1 dish washer, 2 tractor men, 1 labourer, 2 lumber pilers, 2 road construction labourers, 5 mining operators' helpers, 2 flunkeys, 2 general houseworkers, and 1 waitress to Penticton; 7 miners, 2 labourers, 5 carpenters, 6 cooks, 3 engineers, 1 steamfitter, 3 muckers, 1 chuck tender, 2 farm hands, 1 blacksmith and 2 flunkeys to stations within the Vancouver zone; 7 farm hands to Prince George; 5 carpenters and 1 engineer to Vernon; 1 mining labourer, 1 mucker and 1 cook to Revelstoke; 1 carpenter and 1 auto mechanic to Nelson and 1 cook to Prince Rupert. To points within their respective zones Prince George despatched 3 farm hands, 2 sawyers, 1 miner and 1 cook, Prince Rupert 1 carpenter, 1 teamster, 3 cooks, 1 timekeeper, 1 flunkey and 1 miner, and Nelson 2 miners, 1 bushman, 1 farm hand and 1 watchman. From New Westminster 1 bushman travelled to Kamloops. The interprovincial transfers included 23 farm hands and 1 farm domestic going to Alberta rural districts, 4 farm hands, and 2 farm household workers to Saskatchewan centres, and 1 farm hand to Manitoba. The majority of these received their certificates for reduced transportation at Vancouver, Victoria and New Westminster. From Vancouver also 2 bricklayers were transported to Regina, 1 electrician and 1 housekeeper to Edmonton, 1 maid to Prince Albert, and 3 cooks to Calgary.

Of the 2,274 persons who benefited by the Employment Service reduced transportation rate during July, 1,073 were carried by the Canadian National Railways, 1,145 by the Canadian Pacific Railway, 37 by the Pacific Great Eastern Railway, and 19 by the Temiskaming and Northern Ontario Railway.

Building Permits Issued in Canada During July, 1928

The value of the building authorized during July showed an increase of \$3,268,079 or 14.4 per cent as compared with the preceding month, and of \$9,527,791 or 58.2 per cent as compared with July, 1927. The aggregate for the 63 cities was \$25,896,986, as against \$22,628,907 in June, and \$16,369,195 in the same month last year. The total for July, 1928, is the highest for that month since the series was commenced in 1920.

Some 50 cities furnished detailed statistics, showing that they had issued nearly 1,700 permits for dwellings valued at approximately \$7,000,000, and some 2,800 permits for other

buildings estimated at about \$18,000,000. In June, authority was given for the erection of some 1,700 dwellings and 3,600 other buildings, valued at approximately \$9,000,000 and \$12,000,000, respectively.

Increases as compared with June, 1928, were reported in Nova Scotia, Ontario and Saskatchewan, that of \$4,629,679 or 43.3 per cent in Ontario being especially pronounced. Elsewhere there were reductions, of which that of \$1,925,702 or 32.7 per cent in Quebec was most pronounced.

In comparison with July, 1927, all provinces registered improvement, the gain in Ontario

TABLE I—ESTIMATED COST OF BUILDING WORK AS INDICATED BY BUILDING PERMITS ISSUED BY 63 CITIES.

of \$6,394,357 or 71.7 per cent being especially noteworthy.

Of the larger cities, Toronto reported marked increases as compared with June, 1928, and July, 1927; Montreal and Winnipeg recorded losses in the former, and increase in the latter comparison, while in Vancouver there was a falling-off in both comparisons. Of the other centres, Halifax, Fredericton, Moncton, Fort William, Kingston, Welland, Windsor, Woodstock, St. Boniface, Moose Jaw, Regina, Medicine Hat, North Vancouver and Victoria showed gains as compared with both June, 1928, and July, 1927.

Cumulative Record for First Seven Months, 1928.—The following table gives the value of the building authorized by 63 cities during July and in the first seven months of each year since 1920, as well as index numbers for the latter, based upon the total for 1920 as 100. The average index numbers of wholesale prices of building materials in the first seven months of the years since 1920 are also given (1913 = 100).

1920.....	13,743,045	75,497,755	100.0	215.3

The aggregate for the first seven months of this year was greater by 31.2 per cent than in 1927, the previous high level of the record, while the average index numbers of wholesale prices of building materials continued to be lower than in any other year since 1920, except 1927.

The accompanying table gives the value of the building permits issued by 63 cities during June and July, 1928, and July, 1927. The 35 cities for which records are available since 1910 are marked with asterisks.

EMPLOYMENT AND UNEMPLOYMENT IN OTHER COUNTRIES

Detailed reports and tables showing the employment conditions in Great Britain and Northern Ireland are given in the *British Ministry of Labour Gazette* from month to month, a monthly summary of this information also being published. This summary is reproduced below showing the employment situation during July. The following report on employment conditions in the United States is based on the information contained in the *Monthly Labour Review*, published by the United States Department of Labour, each issue containing statistics showing the trend of employment in selected manufacturing industries throughout the country during the second month prior to the date of publication. The statement contained in the August issue relates to the situation existing in June, 1928. The employment situation in the United States is further indicated by unemployment percentages based on statistics compiled each month by the American Federation of Labour, the source of these statistics being returns obtained from the trade union locals in 23 representative cities. Summary figures for the month of June taken from the August issue of the *American Federationist*, the official publication of the organization, are reproduced below.

Great Britain

Employment during July showed a further decline, which extended, in vary degrees, to most of the principal industries.

In the coal mining industry there was a further decline which, however, was rather less severe than in the previous month. Among the other principal industries, the increase in the rate of unemployment was greatest in the pottery, iron and steel, shipbuilding, and vehicle-building industries, in the cotton, wool, and linen textile industries, and in textile bleaching, dyeing and finishing. There was a further seasonal decline in the clothing trades and a sharp decline in the boot and shoe industry. In a number of smaller industries, including the jute textile industry, employment showed some slight improvement.

Among workpeople numbering approximately 11,800,000 insured against unemployment in Great Britain and Northern Ireland, and working in practically every industry except agriculture and private domestic service, the percentage unemployed at 23rd July, 1928 (including those temporarily stopped as well as those wholly unemployed), was 11.7, as compared with 10.8 at 25th June, 1928, and 9.2 at 25th July, 1927. For males alone the per-

centage at 23rd July, 1928, was 13.1, as compared with 12.3 at 25th June, 1928; for females the corresponding figures were 7.9 and 6.9. The percentage wholly unemployed at 23rd July, 1928, was 8.1, as compared with 7.8 at 25th June, 1928. The total number of persons (insured and uninsured) registered at Employment Exchanges in Great Britain and Northern Ireland at 23rd July, 1928, was approximately 1,354,000, of whom 1,058,000 were men and 223,000 were women, the remainder being boys and girls; at 25th June, 1928, it was 1,239,000, of whom 986,000 were men and 198,000 were women; and at 25th July, 1927, it was 1,055,000, of whom 838,000 were men and 153,000 were women.

United States

Both employment and pay-roll totals were slightly greater in June, 1928, than in May, the increase in each instance being 0.1 per cent. This is the first time in five years that employment has not fallen off in June and is the first time in six years that pay-roll totals have not decreased in that month.

The Bureau of Labour Statistics' weighted index of employment for June, 1928, is 85.6, as compared with 85.5 for May, 1928, 85.7 for April, 1928, and 89.1 for June, 1927; the weighted index of pay-roll totals for June, 1928, is 90.2, as compared with 90.1 for May, 1928, 89.9 for April, 1928, 93.3 for June, 1927.

Employment in June, 1928, was 3.9 per cent below the level of employment in June, 1927, and pay-roll totals were 3.3 per cent smaller. The decreases in both these items, comparing 1928 with 1927, were considerably less in June, 1928, than in any previous month of 1928.

The data for June, 1928, were based on returns made by 11,231 establishments in 54 of the principal manufacturing industries of the United States. These establishments in June had 3,091,921 employees whose combined earnings in one week were \$83,523,193.

Twenty-nine of the 54 separate industries had more employees in June, 1928, than in May, and 28 industries reported increased pay-roll totals. The usual seasonal increases in employment appeared in slaughtering and meat packing, ice cream, men's clothing, cement, brick, and cigar and cigarettes.

Petroleum refining after more than a year of declining employment showed a gain of 2.3 per cent; automobile tires reported a belated increase of 2.6 per cent; carriages and wagons showed an unusual gain of over 5 per cent; the machine-tool industry continued this year's

steady upward trend; and woolen goods reported a gain of 1·7 per cent.

The outstanding losses in employment were seasonal decreases in fertilizers, rubber boots and shoes, women's clothing, and millinery and lace goods. Cotton goods, hosiery, silk goods, iron and steel, furniture, book and job printing, and electric-car building and repairing each fell off a little less than 1 per cent in employment. The automobile industry in June reported a cessation of the steady and pronounced upward trend of the last six months with a decline of less than one-tenth of 1 per cent in employment and a decrease of over 5 per cent in pay-roll totals. The strike in the cotton-goods mills of one locality, which caused a notable drop in employment in May, was still unsettled in June; therefore the industry had not yet regained its former level of employment.

Seven of the 12 groups of industries showed increased employment in June, the food and lumber groups leading with increases of more than 1 per cent each, followed by the tobacco and stone-clay-glass groups with increases of slightly less than 1 per cent each, and the iron and steel and vehicle groups with 0·1 per cent each. The textile and non-ferrous metals groups each reported decreased employment of 0·6 per cent, the leather and paper groups losses of 0·2 per cent each, while the chemical group had fallen off nearly 2 per cent in employment owing to the ending season in fertilizers.

Six of the nine geographic divisions showed a gain in employment in June as compared with May, these being the four Western groups, the Middle Atlantic and the East North Central.

Unemployment percentage.—Unemployment statistics collected by the American Federation of Labour and appearing each month in the *American Federationist*, the official publication of the organization, indicate the percentage of unemployed union members in twenty-three representative cities of the United States. The method of compiling as described in the *American Federationist*, March, 1928, is as follows:

"The local unions in the 23 cities under review report monthly their membership and the number of unemployed members at the first of the month or the nearest possible date. From these reports the percentage of unemployed members is calculated for identical unions in the current and the previous month. Thus for every month there are two percentage figures—that is for identical unions in December and January—and for identical unions in January and February, and so on. The final figure for January, then, is calculated by taking the simple arithmetical average of the two January percentages. It may be noted that the reports cover all trades which are organized, factory workers as well as teachers and building trade workers."

By the above method the proportion of unemployed members to the total membership of the local unions reporting, is computed. According to the August issue of the *American Federationist*, the most recent unemployed percentages during the various months in the 23 cities works out as follows: October to December, 1927, 14 per cent; January, 1928, 18 per cent; February, 1928, 18 per cent; March, 1928, 18 per cent; April, 1928, 16 per cent; May, 1928, 13 per cent; June, 1928, 11 per cent.

EMPLOYMENT AND WAGES IN BRITISH MINES IN 1927

CONDITIONS prevailing in the mining industry in Great Britain in 1927 are described in the seventh annual report of the Secretary for Mines. The year was marked by efforts towards recovery from the great strike of 1926, consisting chiefly in an attempt in some of the more important centres to substitute concerted action for the individual action which formerly characterized the British coal mining industry.

The total output of coal in Great Britain in 1927 was 251½ million tons, an increase as compared with 1925 of about 8 million tons. Exports (including foreign bunkers and the coal equivalent of coke and manufactured fuel) amounted to 72 million tons, an increase over 1925 of about half a million tons.

The number of wage-earners employed grew steadily during the early months of the year, and by the end of March reached 1,026,200 or 59,500 more than at the beginning of the year. There were, however, early indications that the number of persons employed had increased more rapidly than the demand for coal, and there was in consequence a good deal of irregularity of working at the pits. The number of days lost through want of trade in the first quarter of the year mounted to 9·61, or nearly twice the amount so lost in the first quarter of 1925.

Reference is made in the Report to the agreement between the Mining Association and the Ministry of Labour to restrict the number of adult entrants into the industry

from other industries, and to the appointment of the Industrial Transference Board, whose Report has just been published.

It is stated in the Report, that while pneumatic (or mechanical) picks and drills have been increasingly introduced in the coal-mining industry of Western Europe, the use of such implements in Great Britain is still largely in the experimental stage; there were, in fact, in 1927 only 5,679 pneumatic picks and drills in use in this country at 557 mines. A considerable proportion of these machines are used for driving headings and for boring shot holes, and little progress has yet been made in their use for coal-getting.

Wages, Price and Profits.—The average earnings per shift of all classes of workers in and about coal mines, of all ages, amounted to 10s. 1d. in 1927, as compared with 10s. 6d. in 1925 and 10s. 8d. in 1924; they were approximately the same as in 1922 and 1923. For the last quarter of the year, however, the figure was about 9s. 7d. The average number of shifts worked per person during the year was 244. This compares with 251 in 1925, 260 in 1924, 266 in 1923, and 251 in 1922. As a result the average earnings per person for the year were £122 12s. 2d. as against £131 15s. 9d. in 1925, £138 4s. 7d. in 1924, £134 6s. 1d. in 1923, £125 2s. in 1922.

In addition to the reductions in earnings, the workpeople were called upon also to work a longer shift. The result was a substantial

increase in the average output per manshift, and a corresponding decrease in the costs of production, even apart from any wage reductions. The average output per man for the whole country rose from 18 cwts. in 1925 to over 20·5 cwts. in 1927, which is equal to a saving of over 12 per cent in labour costs.

Costs other than wages fell on the average by 2½d. per ton, or 4 per cent, and wages costs by 2s. 2d. or 17 per cent., giving a total reduction of 2s. 4½d. per ton as compared with 1925. Most of these savings, however, were offset by a fall of 2s. per ton in the average proceeds, and the net result was only to reduce the average loss of 10½d. per ton (excluding subvention) in 1925 to 5½d. per ton in 1927. Actually, the costs of production fell from an average of 18s. 0½d. in 1925 to 15s. 8½d. in 1927, were proceeds from 17s. 2½d. to 15s. 2½d. If the first three months were excluded (when there was no reduction on 1925, and the industry, as a whole, showed a credit balance of 1s. 2d. a ton), the fall in proceeds would be much greater; in the three succeeding quarters, the average proceeds fell successively to 15s. 1d., 14s. 2d., and 13s. 11d., this last figure representing a drop of 3s. 3d. a ton from the average of 1925.

A table in the report gives the total number of employees in all mining industries as 1,115,568 in 1927, compared with 1,197,694 in 1925. Of this total 1,005,006 were employed in the coal mines; 11,548 in the mining of iron ore and 99,014 in mining of other minerals.

TRANSFERENCE OF LABOUR IN GREAT BRITAIN

EARLY this year the British Government appointed the Industrial Transference Board "for the purpose of facilitating the transfer of workers, and in particular of miners, for whom opportunity of employment in their own district or occupation is no longer available." This Board, in a report recently published, states that a permanent surplus of at least 200,000 workers now exists in the mining industry, while the permanent surplus in ship-building, iron and steel, and heavy engineering is probably over 100,000. It is likely, moreover, that certain sections of the textile industry are showing a permanent contraction from former years.

The Board denies the allegation that the unemployed workers in the heavy industries, especially coal mining, tend to belong to the "unemployable" class. "From our own knowledge," they state, "we can affirm with confidence that this view of the qualities of these workers is based on ignorance, if not on mere

prejudice. . . . Regarded as a type, the British miner is an example to his fellows. Part of his inheritance. . . . is an instinctive loyalty to his comrades, and a capacity for similar loyalty to his employers, so long as unimaginative handling is not permitted to alienate his sympathy."

The report refers to the agreement concluded between the Government and the mine owners in July, 1927, to limit the influx of men over 18 years of age from other industries into the mining. Other suggested remedies were also examined, including a proposal which the Board commended to the notice of employers, for establishing new industries in the depressed areas.

Transference Policy.—The Report states that "the transfer of men to districts not enjoying immunity from unemployment but bearing a relatively lighter load, is the essential and immediate aim of any transfer policy, and the search for openings of employment

must not begin or end with the heavy industries. . . . but must extend to the length and breadth of the land." It is felt that nothing should be done to anchor men to their home district by holding out an illusory prospect of employment. The Board therefore rejects relief works in the depressed areas as unsound policy, temporary in its effect, and to be undertaken only in areas where employment is relatively good.

The Board deals at some length with the objection that vacancies in other districts can only be filled at the expense of people already in employment, or seeking employment in the new area. The employment market, they suggest, is not a static and limited thing; there is a ceaseless ebb and flow of employment, and each man taken on is adding to a flowing stream, not driving another out of a space of fixed dimensions. There are many potential vacancies in industry "at the margin," which materialize upon the appearance of a suitable man. The depressed areas contain many men of the highest employment value, and organized transfer offers employers an opportunity of strengthening their labour personnel. It is declared to be positively uneconomic to leave in areas where a trade revival is unlikely a reserve of labour which could be made available for industrial development elsewhere.

The Board considers that the absorption even of such a large number of unemployed men as 200,000 is not an impossible task. It is pointed out that every week in the year there are at least 120,000 labour engagements; and that the general absorptive capacity of industry is on the increase; during the four years from July, 1923, to July, 1927, industry added rather over 850,000 persons to its employed personnel. Further, the rate of increase in the population is slackening; the number of potential recruits for industry is therefore falling, and will continue to fall for some years.

The Board passes in review the existing machinery for assisting the transfer of labour in Great Britain—the Employment Exchange system, the training centres for adults, the juvenile unemployment centres, the women's training centres; and then proceeds to consider possible extensions of these facilities. The Board appeals to all employers to acquaint themselves fully with the machinery of the Employment Exchange, and to communicate to the Exchange their requirements for men, both to make good wastage and to undertake new work.

The report refers to the cost of moving, and (in some cases) of keeping up two homes.

At the suggestion of the Board, authority has been obtained for advances to be made by way of loan through the Employment Exchanges in suitable cases towards the cost of removal expenses, and towards the maintenance for short periods of the families of married men who take up employment at a distance; also for advances of wages to married men who have to wait for several days before their first payment of wages.

The Board commends the training centres for adults and the juvenile unemployment centres as bridges from the depressed areas to other unemployment and they recommend an extension of these centres wherever it may be necessary.

The Board next considers the openings for employment in Great Britain. They lay stress on the limited part the State can play in finding openings for employment. "State agencies and State action can help, but the problem of unemployment in the depressed industries is one which can only be solved if the whole community realizes its existence and consciously resolves to grapple with it."

Oversea Migration.—The Board finds that the outstanding fact in the emigration situation is that British migration into the Dominions has fallen markedly since the War, while foreign migration has proportionately increased. Thus, migrants from the United Kingdom into Canada averaged over 100,000 a year during 1909-13; since 1922, they have averaged slightly over 50,000 and this, though British migration since 1923 has had the benefit of assistance under the Empire Settlement Act, 1922, while there was no such assistance in pre-war years. Continental migration into Canada, on the other hand, has only declined from an average of about 70,000 to an average of about 55,000 a year, in the same two periods. The Board regard this situation as "deeply disturbing."

The Board observes that the immigrants cannot be brought to believe that the Dominions want them if they are confronted with what appears to be a "formidable tangle of procedure," involving expenses, delay, and often an embarrassing publicity. "All the controversial talk about migration, all the complications and delays and disappointments, at present attendant upon the schemes of assisted passages under the Empire Settlement Act, . . . have undoubtedly induced a general mood of doubt and reluctance that may set into a definite unwillingness . . . unless migra-

tion can be promptly made cheap and easy There is no part of our proposals in regard to migration that we regard as more important than the steady encouragement of the normal flow of migration through un-

official channels, and the need of Government authority to limit its intervention to what is required to prevent abuse, and to the extent that may be necessary to provide special assistance."

ACTION BY BRITISH GOVERNMENT TO ASSIST MIGRATION OF UNEMPLOYED

THE British *Ministry of Labour Gazette* in its issue for August contains the following paragraphs outlining the action taken or proposed by the Government of Great Britain for the relief of unemployed by means of migration, training schemes, juvenile employment centres and Canadian harvester schemes.

In answer to a question in the House of Commons on July 30, the Under-Secretary of State for the Colonies made the following statement of the proposed action of His Majesty's Government:—

"A substantial expansion of the system of preliminary training and testing in this country, which has proved itself a success in enabling non-agricultural workers, including miners, to qualify for assisted passages and land schemes, is in contemplation. We propose, as soon as the necessary arrangements can be made, to open two further training camps under the Ministry of Labour on the lines of those already in operation at Brandon and Claydon. We also hope to secure the provision of training facilities on a larger scale than hitherto by voluntary societies and municipal authorities; and Lord Lovat, the Chairman of the Overseas Settlement Committee, has already consulted the leading voluntary societies with a view to obtaining more extensive co-operation on their part. These training schemes will be dealt with outside the Empire Settlement Act, so as to enable the Government to contribute a larger proportion of the total cost than that prescribed in the Act, and also to enable family allowances to be paid to the dependants of married men during training. Further, schemes to enable migrants to make a career for themselves on the land, whether in the shape of rural housing schemes, of advances to those who have made good as land workers, or of land settlement schemes on a larger scale, are matters for negotiation with the Dominion authorities concerned, and will be actively taken up with them by Lord Lovat, who is leaving in the next few days for Canada, Australia and New Zealand. At the same time, in order to stimulate the normal flow of unassisted migration, as recommended, not only by the Industrial Transference Board, but also by the Canadian Parliamentary Com-

mittee, which recently urged that an effort should be made to secure a reduction in the ordinary Atlantic ocean rate to £10, we propose to enter into negotiations with the shipping companies with a view to ascertaining what it may be possible to do in this direction. The question of the regulations and procedure affecting the admission of migrants into the Dominions, which was also discussed in the Report of the Industrial Transference Board, is, of course, one entirely within the competence of the Dominion Governments concerned. The possibility of their simplification or better adaption to local conditions on this side, is, however, a matter, which, in so far as practical difficulties or inconveniences have arisen or may arise, we shall discuss with the Dominion Governments with a view to seeing how far any modifications may commend themselves to them."

Training Centres, Etc.—In answer to a question in the House of Commons on July 31, the Parliamentary Secretary to the Ministry of Labour, gave the following information:—

"The training centres for young men recently opened at Bristol and Dudley are reserved mainly for men from the distressed mining areas. A further centre will shortly be opened at Glasgow and, in addition, arrangements have been made whereby half the accommodation at the Wallsend and Birmingham centres is available for non-local men. It has been decided to provide a residential farm training centre in Scotland for men going overseas in addition to those at Brandon and Claydon. The Central Committee on Women's Training and Employment has in operation 31 home training centres; of these, 18 are in the distressed mining areas, and the Committee has arranged for places to be reserved at four other centres for women and girls from those areas. In addition, 19 juvenile unemployment centres have been opened for boys in the distressed mining areas since the middle of last December, and six centres which were already in existence have been expanded to meet local requirements. It is anticipated that at least four further centres will be opened before the coming winter."

Canadian Harvest (British Miners).—In answer to another question in the House of Commons on August 1, the Secretary of State for Dominion Affairs made a brief statement regarding the proposed arrangement for 10,000 men to go from Great Britain to work in the Canadian harvest:—

“Arrangements have been made, in consultation with the Canadian Government, under which 10,000 men are to be assisted in going to Canada from this country for work in connection with the Canadian harvest, which is now beginning. By an agreement with the shipping and railway companies, special reduced rates of £2 out and £2 back, i.e., half the ordinary fare, are offered from the port of embarkation in this country to and from Winnipeg. All who go must be used to hard manual labour, and should, as a rule be between 18 and 40 years of age. Single men are preferred, as no provision can be made for the maintenance of families. Before embarkation all men will undergo medical and civil examination by the Canadian authorities. The latest date for sailing is the 18th of August. The average rate of wages is about £3 to £5 a week, with keep.

“The Canadian Government have expressed a special wish that the men should be recruited in the mining areas, and H. M. Government in Great Britain are offering the following special help to suitable men in cases in which they cannot find the cost of the outward journey, namely, a grant of £5 paid to the companies towards the cost of the outward passage and an advance arranged through the companies up to a maximum of £10 to cover the balance of the sea and rail journeys to the destination in Canada, as well as the cost of food on the Canadian railways. The Dominion Government will co-operate with the railway companies in finding work for men at the close of the harvest, but for those who wish to return there will be, as I have explained, special reduced rates.”

The Ministry of Labour made the following announcement with regard to the progress of the Canadian Harvesters' scheme on August 10:—

“The rush of men to enrol under the Canadian Harvesters' Scheme has been so great that up to Friday night, August 10, approximately 25,000 had applied. Allowing for rejections as the result of the civil and medical examination this number is sufficient to fill the quota required, and accordingly, the Employment Exchanges have been instructed to close their lists to further applicants as from Friday night, August 10. This means that as many of the men who have applied as are needed to complete the required quota will

be submitted in their turn for examination by the Canadian Government Authorities and, if approved, will be booked for sailing until the number is made up. But no fresh applications from men requiring Government assistance can now be accepted.”

The following further announcement was issued on 13th August:—

“Up to the week-end, the Canadian Government Authorities had accepted 9,231 of the men submitted to them under the Canadian Harvester's Scheme; and, in the course of the civil and medical examinations to-day (August 13) the full number of acceptances to complete the quota of men required was reached. It has, therefore, been decided to close the Canadian Examination Centres finally as from to-night; and no further men can now be submitted.

“Thus, although the scheme only opened a week ago, and its opening was to some extent limited by the occurrence of the Bank Holiday, 10,000 suitable men have been secured, and some 4,500 have already sailed. This result has been achieved by the close co-operation of the Canadian Authorities, the Steamship Companies and their agents, and the Employment Exchange service.

“Men, who have had to be excluded from examination under the Harvester's Scheme can obtain information from their Employment Exchanges regarding the possibility of securing consideration under alternative schemes. In particular, the Ministry of Labour Training Scheme, under which short courses of training in agricultural work are given to equip suitable men for settlement in Canada and Australia, may provide an alternative avenue for those who have been disappointed in their present application.”

Regulations have been published under the Public Commercial Vehicle Act, 1927, of Ontario, respecting the licensing of public commercial vehicles. Among other provisions it is declared that no person owning, controlling, operating, or managing any public commercial vehicle, used in the transportation of property as a common carrier for compensation shall cause or allow any driver or operator of such public commercial vehicle to work as driver or operator for more than a maximum of ten hours in any twenty-four hour period. Persons to whom licenses are issued are required to notify the provincial Department of Public Highways of all accidents in which their motor vehicles become involved, where such accidents result in loss of life or injury to employees or other persons, or to property.

RECENT INDUSTRIAL AGREEMENTS AND SCHEDULES OF WAGES

A SUMMARY is given below of the more important industrial agreements and schedules of wages and working conditions that have recently been received by the Department. Such agreements are summarized each month in the *LABOUR GAZETTE*. In the majority of cases, the agreements are signed by both employers and employees. Verbal agreements, which are also included in the records, are schedules of rates of wages and hours of labour and other conditions of employment agreed upon between the parties concerned, and in effect though not signed. In addition to these, important schedules of wages are summarized, including civic schedules. In the case of each agreement or schedule, the rates of wages for the principal classes of labour are given with other information of general interest.

Manufacturing: Iron, Steel and Products

OTTAWA, ONTARIO.—MASTER SHEET METAL WORKERS' ASSOCIATION OF OTTAWA AND DISTRICT AND SHEET METAL WORKERS' INTERNATIONAL ASSOCIATION, LOCAL No. 47.

Agreement in effect from May 1, 1928, to April 30, 1929, and from year to year unless notice of change is given by either party three months previous to April 30.

This agreement is similar to the one previously in force and summarized in the *LABOUR GAZETTE* for July, 1926, with the following changes:

An increase in wages of 2½ cents per hour to be given, making the minimum rate for journeymen 87½ cents per hour and for junior journeymen 62½ cents up to December 31, 1928, and a further increase from January 1, 1929 of 2½ cents per hour, making the minimum rate for journeymen 90 cents and for junior journeymen 65 cents per hour from that date to the expiration of the agreement.

For work out of town, travelling time to be paid for at the rate of single time up to eight hours per day.

CALGARY, ALBERTA.—RIVERSIDE IRON WORKS, LIMITED, AND EMPLOYEES IN THE COMPANY'S PLATE AND STRUCTURAL DEPARTMENT, INCLUDING WELDERS AND BURNERS.

An agreement was signed following the award of the board under the Alberta Labour Disputes Act of 1926, and is included in the report of the board on page 954 of this issue.

Manufacturing: Printing and Publishing

ST. JOHN, NEW BRUNSWICK.—CERTAIN EMPLOYING PRINTERS AND THE INTERNATIONAL TYPOGRAPHICAL UNION, LOCAL No. 85.

Agreement in effect from May 1, 1928, to May 1, 1930.

Only members of the local union to be employed if available. Proof readers holding union cards to receive the minimum scale.

Hours: In book and job offices, 8 per day and 4 on Saturdays; in newspaper offices, 8 per day and 7½ for night work.

Overtime and work on statutory holidays, time and one half, Sundays, double time, except that in newspaper offices, the only holidays are Dominion Day, Labour Day and Christmas.

In case of any dispute as to the terms of the agreement, if the matter cannot be settled between the employer and a committee of two from the office, the dispute to be referred to an arbitration committee of three persons, one from each party and a third selected by these two, the decision of such committee to be binding.

Wages per week: In book and job offices, all foremen, linotype operators and machinists, \$35.20; floor hands and monotype keyboard operators, \$33; in newspaper offices, all foremen, linotype operators and machinists, \$36 per week for day work and \$39 for night work; floor hands \$34 for day work and \$37 for night work.

Apprentices: Wages shall be two-fifths of journeymen's pay for the third year, one-half for fourth year and two-thirds for fifth year. Not more than one apprentice to every six journeymen on newspapers and one to four journeymen in job offices, with not more than three in any office. Apprentices to serve five years.

Apprentices to take course of lessons in printing given by the International Union and they are required to make quarterly reports to the local Apprentice Committee showing their proficiency and to take examinations regularly before the local committee and show by their work if they are entitled to the increased wage scale, the employer or his representative to take part in the examinations. Apprentices are not to leave one employer for another without the written consent of the employer and the president of the union.

Offices shall confer with the committee on health and sanitation appointed by the union to insure good working conditions.

OTTAWA, ONTARIO.—THE CITIZEN PUBLISHING COMPANY AND INTERNATIONAL STEREOTYPERS AND ELECTROTYPERS UNION, LOCAL No. 50.

Agreement in effect from August 1, 1928, to August 1, 1931, and from year to year until notice of change is given 90 days before August 1 of any year.

Wages per week: From August 1, 1928, to August 1, 1929, \$42 for day and night work; from August 1, 1929, to August 1, 1930, \$43; from August 1, 1930, to August 1, 1931, \$44.

Only union members to be employed. Hours: 48 per week for both day and night work.

Overtime: Time and one-half; Sundays and holidays, double time.

Apprentices: One allowed to each shift. Apprentices to serve five years and to receive \$9.45 per week for first year, \$12.60 during second year, \$15.75 during third year, \$19.95

during fourth year and \$23.10 during fifth year.

One week's notice of dismissal or resignation to be given.

In case of any disputes or misunderstanding about the terms of this agreement or in case of failure to agree to its renewal or change, the matter shall be referred to a board of arbitration consisting of one member of each party and a third selected by them, the decision of such board to be binding. Should the two representatives be unable to agree in the selection of a third party, the Minister of Labour shall be asked to appoint a third.

SARNIA, ONTARIO.—CERTAIN EMPLOYERS AND THE INTERNATIONAL TYPOGRAPHICAL UNION, LOCAL No. 837.

Agreement in effect from January 1, 1928, to December 31, 1928.

Only union members to be employed.

Hours: In book and job offices, 8 per day, 4 on Saturdays; in newspaper offices, 8 per day for day work and 7 per day for night work.

Overtime: Time and one-half.

Wages per week in book and job offices: foremen \$36 for day work, \$37 for night work; hand compositors, make-ups, proof-readers, machine operators and machinist operators \$35 for day work and \$36 for night work (machinist operators to receive 50 cents per week extra for every additional machine cared for). Wages per week in newspaper offices: foremen \$40 for day work and \$41 for night work; hand compositors, make-ups, proof-readers, machine operators, machinist operators and machinists \$39 for day or night work. Machine learners to be paid 40 cents per hour for first month to 65 cents per hour in sixth month for day work and from 45 to 70 cents per hour for night work.

Apprentices to serve 5 years and to be paid from three-eighths of journeymen's scale in third year to seven-eighths of journeymen's scale in last six months of apprenticeship. Apprentices to be examined yearly by the local apprenticeship committee to show if they are entitled to the increases in wages.

Foremen to employ all help and may discharge employees for certain specified reasons. Any men discharged to decrease the staff must be offered employment again before any new help is employed.

The union reserves the right to refuse to do work received from or destined for struck offices, unfair employers or publications.

A standing joint committee consisting of two representatives of each party to be appointed and all disputes to be referred to this committee. If they fail to agree, a board of arbitration consisting of two representatives of each party and a fifth selected by them shall be appointed, the decision of such board to be binding.

In consideration of the employers accepting the conditions of the agreement, the union agrees to furnish them with the union label.

REGINA, SASKATOON AND MOOSEJAW, SASKATCHEWAN.—CERTAIN PUBLISHERS AND THE INTERNATIONAL STEREOTYPERS AND ELECTROTYPERS UNION, LOCAL No. 116.

Agreement in effect from May 26, 1928, to May 26, 1930.

The union will co-operate with the employer in locating competent stereotypers and only union members to be employed.

Hours: 8 per day, 7½ per night. No pooling of hours allowed.

Overtime: Time and one-half for first four hours and double time thereafter. Work on Sundays and holidays, except when part of a regular jig, double time; on morning newspapers, in lieu of overtime, 5 hours shall constitute a night. Men to be paid \$1 for call-back if no previous notice is given.

Wages: 98 cents per hour for day work and \$3 extra per week for night work. Foreman not less than \$5 per week in addition to journeymen's wage.

One apprentice allowed in each office and one additional apprentice where 6 journeymen are employed.

Wages of apprentices: \$17 per week for day work and \$19 for night work with \$1.50 per week increase every six months.

Union members shall not be asked to furnish or receive any work from unfair shops.

The agreement protects employers against walkouts, strikes, etc. All disputes to be submitted to an arbitration committee consisting of one representative of each party and a third mutually agreed upon and work shall be continued pending settlement.

PRINCE RUPERT, BRITISH COLUMBIA.—CERTAIN EMPLOYING PRINTERS AND THE INTERNATIONAL TYPOGRAPHICAL UNION, LOCAL No. 413.

Agreement in effect from April 1, 1928, to December 31, 1929, for newspaper employees and from April 1, 1928, to February 1, 1929, for job employees.

Wages per week on newspaper work: Compositors \$48, linotype and monotype machinist operators, \$51; foremen in charge of newspaper plant 50 cents extra per shift; foreman in charge of a combined newspaper, book and job plant, \$52.50 per week; night work 75 cents per shift extra.

Hours: 7½ per day.

Wages per week on job work: Compositors, stonemen and proofreaders, \$43.50 for day work and \$47 for night work; foremen 50 cents extra per shift; all operators and machinists, \$45.50 for day work and \$49.90 for night work; machinist operators 50 cents per shift in excess of that paid to operators.

All work over regular hours: Time and one-half up to 7½ hours; thereafter double time; Sundays and holidays, double time.

Machine learners to serve 17 weeks apprenticeship and to be paid from 40 per cent of journeymen's scale for first three weeks to 85 per cent for fourteenth week and thereafter. Machine learners limited to one to each office and must be journeymen members of union.

Apprentices limited to one for every six journeymen, but not more than two in any office and to serve five years. Apprentices to receive one-third of journeyman's wage for third year, one-half of journeyman's wage for fourth year and two-thirds in last year.

Manufacturing: Miscellaneous

CALGARY, ALBERTA.—CERTAIN "INDUSTRIAL PLANTS" AND INTERNATIONAL UNION OF STEAM AND OPERATING ENGINEERS, LOCAL No. 838.

Verbal agreement in effect for 1927-28.

Wages: Second class engineers in charge, \$200 per month; second class engineers on shift, \$185; third class engineers in charge, \$150; third class engineers on shift, \$140.

Two weeks' holidays with pay each year after one year's service.

Uncertified firemen to receive 62½ cents per hour and 10 days holiday per year with pay after one year's service.

Hours: 8 per day, six-day week.

Construction: Buildings and Structures

WINNIPEG, MANITOBA.—MASTER PAINTERS' SECTION OF THE WINNIPEG BUILDERS' EXCHANGE AND THE BROTHERHOOD OF PAINTERS, DECORATORS AND PAPERHANGERS, LOCAL No. 739.

Agreement in effect from June 15, 1928, to January 1, 1929, and from year to year until notice of change is given one month prior to January 1 of any year.

Only union members to be employed if available.

Hours: 8 per day, 4 on Saturdays.

Overtime: Time and one-half to twelve hours; thereafter and all work on Sundays and holidays, double time.

Wages: 85c per hour.

An arbitration committee consisting of three members of each party to be appointed if any dispute arises and their decision to be final and binding.

For work outside the city, fare and board to be paid and travelling time up to 8 hours per day to be paid for.

One apprentice allowed for every shop and one additional apprentice for every 7 journeymen employed. Apprentices to be under the age of 21.

REGINA, SASKATCHEWAN.—MASTER PAINTERS' ASSOCIATION AND BROTHERHOOD OF PAINTERS, DECORATORS AND PAPERHANGERS OF AMERICA, LOCAL No. 509.

Agreement to be in effect from June 1, 1928, to June 1, 1930, and from year to year until notice of change is given by either party three months prior to June 1, of any year.

This agreement is similar to the one previously in force and summarized in the LABOUR GAZETTE for October, 1926, with the following exception:

Wages of journeymen: 85 cents per hour from June 1, 1928, to June 1, 1929, and 87½ cents per hour from June 1, 1929, to June 1, 1930.

CALGARY, ALBERTA.—MASTER PAINTERS' ASSOCIATION AND PAINTING CONTRACTORS AND BROTHERHOOD OF PAINTERS AND DECORATORS, LOCAL No. 583.

Agreement verbally in effect from April 1, 1928, to March 31, 1930.

This agreement is similar to the one previously in force and summarized in the LABOUR GAZETTE for July, 1927 with the following changes:

Wages: 85 cents per hour from April 1, 1928, to March 31, 1929, and 95 cents per hour from April 1, 1929, to March 31, 1930.

For work outside city, travelling expenses, travelling time and an extra living expense allowance of 50 cents per day to be paid.

A standing committee of three members of each party to be formed for the settlement of all grievances.

No journeymen to take work on their own account and no contracting painter to be allowed to employ another contracting painter.

CALGARY, ALBERTA.—ASSOCIATION OF SANITARY AND HEATING ENGINEERS AND UNITED ASSOCIATION OF PLUMBERS, STEAMFITTERS AND GENERAL PIPEFITTERS, LOCAL No. 496.

Agreement in effect from May 4, 1928, to April 30, 1930, and for another year unless notice of change is given by February 28, 1930.

This agreement is similar to the one previously in force and summarized in the LABOUR GAZETTE for July, 1927, with the following changes:

Wages of journeymen: \$1.15 per hour.

The number of apprentices remains the same, one plumber's apprentice allowed for every shop and one for every five journeymen and one steamfitter's apprentice allowed for each shop where a steamfitter is regularly employed. Apprentice to serve five years. All other regulations regarding apprentices are left to a joint apprenticeship committee.

EDMONTON, ALBERTA.—SOCIETY OF DOMESTIC, SANITARY AND HEATING ENGINEERS, INCORPORATED AND UNITED ASSOCIATION OF PLUMBERS, GAS AND STEAMFITTERS, LOCAL No. 488.

Agreement to be in effect from May 1, 1928, to April 30, 1931, and from year to year unless notice of change is given by January 31, of any year.

This agreement is similar to the one previously in force and summarized in the LABOUR GAZETTE for July, 1927, with the following exception:

Wages: From May 1, 1928, to April 30, 1930, \$1.15 per hour; from May 1, 1930, to April 30, 1931, \$1.20 per hour.

VANCOUVER, BRITISH COLUMBIA.—GENERAL CONTRACTORS' ASSOCIATION AND INTERNATIONAL UNION OF STEAM AND OPERATING ENGINEERS, LOCAL No. 844.

Wage scale and working rules verbally agreed upon to be in effect from May 1, 1928, subject to change at expiration of one year by either party giving 30 days' notice prior to date of expiration.

All men to be hired through union headquarters whenever possible.

Hours: 8 per day, 4 on Saturdays, 44-hour week, except on jobs more than 25 miles from the city, when a 48-hour week will be worked. On jobs where two or more shifts are employed, 7½ hours shall be a day's work and shall be paid at rate of 8 hours.

Overtime and work on Sundays and holidays, double time.

For out of town work, fare and travelling time up to 8 hours per day to be paid for.

When engineers are required to raise steam before regular work day starts, a minimum of one hour's time shall be allowed. When an engineer is laid off during forenoon, he shall be paid full half day, or if laid off during afternoon, a full day's pay. If required to wait for material or other reasons beyond his control, he shall be paid a full day.

Wages: On jobs where engineers are required to operate on different classes of engines, the higher rates of pay shall prevail. Clam shell, orange peel, pile drivers, loco cranes, aerial cable ways, \$9 per day; derricks, \$8.50; tower hoists, snubbers, compressors (oil and electric), \$8; firemen and oilers, \$5.50; all unspecified work, a minimum of \$7; on dipper dredges, engineers \$10, cranesmen \$8, firemen \$5.50 and chief engineers \$7; shovel and drag lines, engineer \$250 per month or \$10 per day, cranesmen \$200 per month or \$8 per day, firemen \$160 per month or \$6.50 per day, watchmen \$140 per month; daily rate to apply on all contract jobs within a radius of 25 miles of Vancouver.

VICTORIA, BRITISH COLUMBIA.—GENERAL CONTRACTORS' ASSOCIATION AND UNITED BROTHERHOOD OF CARPENTERS AND JOINERS, LOCAL No. 1598.

Agreement in effect from June 16, 1928, to May 1, 1929. If desired by either party, a committee from each party will meet three months previous to May 1, 1929, to consider this or any new agreement.

Hours: 8 per day, 4 on Saturdays.

Overtime: Time and one-half for first four hours; thereafter and all work on Sundays and holidays, double time.

Wages: \$7 per day.

For work outside city, transportation to be provided by contractor.

Construction: Miscellaneous

VANCOUVER, BRITISH COLUMBIA.—TRADE RULES OF PILE DRIVERS, BRIDGE, DOCK AND WHARF BUILDERS OF BRITISH COLUMBIA, CHARTERED BY THE UNITED BROTHERHOOD OF CARPENTERS AND JOINERS.

Verbally agreed upon and in effect from May 1, 1928, to May 1, 1929.

These trade rules are similar to the ones previously in force and summarized in the LABOUR GAZETTE for July, 1925, with the following exceptions:

Wages of pile drivers: \$1.25 per hour, \$10 per day; crew, bridgemen and wharf carpenters, \$1 per hour, \$8 per day.

The General Contractors' Association and the union also agreed to submit any disputes to a joint committee for settlement. If they fail to agree, the matter to be referred to a joint arbitration committee.

Transportation and Public Utilities: Electric Railways

MOOSE JAW ELECTRIC RAILWAY COMPANY LIMITED AND THE AMALGAMATED ASSOCIATION OF STREET AND ELECTRIC RAILWAY EMPLOYEES OF AMERICA, LOCAL No. 614.

Agreement in effect from June 17, 1927, for one year and thereafter until either party gives 30 days' notice of change.

Wages: For first three months, 40 cents per hour, for second three months, 45 cents; thereafter, 50 cents. Inexperienced operators not to be paid until they have learned the work and are considered competent by the superintendent.

Hours: 9 per day, for which operators will be paid nine and one-quarter hours, which shall include time for reporting.

Overtime: All time over nine hours and fifteen minutes to be considered overtime and paid for at rate of time and one-half. On Sundays and holidays, six and one-half hours to constitute a day's work for which nine hours will be allowed. All time over 6½ hours will be paid for at overtime rates.

Operators must be at least 21 years old.

Every seventh day shall be the day off and if required to work on day off, they shall be paid at rate of time and one-quarter.

Uniforms, changers and change to be supplied.

After one year's service, all permanent employees to receive one week's holiday a year with pay.

Any employee suspended or dismissed may have his case investigated by union officers who may appeal to the manager. If his decision is not satisfactory to the union, the matter will then be referred to a board of arbitration, consisting of one representative of the company and one of the union, who shall select a third. Should they fail to appoint a third, he may be appointed by a Judge of the Supreme Court. The decision of such arbitration board shall be binding.

No discrimination to be made against any employee on account of his membership or activity in the union.

Transportation and Public Utilities: Electricity and Gas

OTTAWA, ONTARIO.—OTTAWA ELECTRIC COMPANY AND THE LINEMEN, LINEMEN'S HELPERS, ETC., EMPLOYEES OF THE COMPANY.

An agreement was signed following the award of the board under the Industrial Disputes Investigation Act, 1907, and is included in the report of the board on page 950 of this issue.

FAIR WAGES CONDITIONS IN DOMINION GOVERNMENT CONTRACTS

THE Department of Labour is furnished from month to month with information regarding the contracts executed by various departments of the Government of Canada which included among their provisions fair wages conditions for the protection of the labour to be employed. The Fair Wages Policy of the Government of Canada has been in effect since 1900 and is now expressed in an Order in Council which was adopted June 7, 1922, and amended April 9, 1924.

The Fair Wages Order in Council requires that "all contracts made on behalf of the Government of Canada for the construction or remodelling of public buildings of all kinds, railways, canals, roads, bridges, locks, dry-docks, elevators, harbours, piers, wharves, lighthouses, and other works for the improvement and safety of transportation and navigation, rifle ranges, fortifications, and other works of defence, dams, hydraulic works, slides, piers, booms, and other works for facilitating the transmission of timber, and all other works and properties constructed or remodelled for the Government of Canada" must contain either a fair wage schedule based on the current wages rates and working hours in the district, or a general fair wage clause requiring adherence to the current wage rates and working hours in the district for the different classes of labour employed, or, in the absence of such standard conditions, fair and reasonable rates and hours. The conditions above-mentioned are referred to in the Order in Council as "A" conditions. Following is the text of the General Fair Wage Clause referred to:—

1. All mechanics, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed for character or class of work in which they are respectively engaged, and if there be no current rates in such district, then fair and reasonable rates, and shall work such hours as are customary in the trade, in the district where the work is carried on, or if there be no custom of the trade as respects hours in the district, then fair and reasonable hours, unless for the protection of life and property, or for other cause shown to the satisfaction of the Minister of Labour longer hours of service are required. The Minister of Labour may at any time and from time to time determine for the purposes of this contract, what are the current or fair and reasonable rates of wages and the current or fair and reasonable hours, and may from time to time rescind, revoke, amend, or vary any such decision, provided that his determination and any amendment or variation shall not be operative prior to the period of

three months immediately preceding the date thereof.

Where there are special circumstances which in the judgment of the Minister of Labour make it expedient that he should do so, he may, in the manner and subject to the provisions hereinabove set forth, decide what are the current or fair and reasonable rates of wages for overtime, and what is the proper classification of any work for the purposes of wages and hours. Immediately upon receipt of notice of any decision of the Minister of Labour hereunder the Contractor shall adjust the wages and hours and classification of work so as to give effect to such decision. In case the Contractor shall fail so to do, or to pay to any employee or employees for any services performed or for any hours of labour, wages according to the rates fixed therefor by the Minister of Labour, the Minister of Labour may authorize and direct the Minister to pay any such wages at the rates so fixed and to deduct the amount thereof from any moneys owing by the Government to the Contractor and any such payment shall for all purposes as between the Contractor and the Government be deemed and taken to be payment to the Contractor, and the Contractor shall be bound in every particular by any such authority, direction and payment as aforesaid. The powers of the Minister of Labour hereunder shall not be exercised as to any employee or employees where it is established to his satisfaction that an agreement in writing exists and is in effect between the Contractor and the class of employees to which such employee or employees belong or the authorized representatives of such class of employees fixing rates of wages, overtime conditions and hours of labour.

It is further provided in the Order in Council that "all contracts for the manufacture and supply to the Government of Canada of fittings for public buildings, harness, saddlery, clothing, and other outfit for the military and naval forces, Royal Canadian Mounted Police, letter carriers, and other Government officers and employees, mail bags, letter boxes, and other postal stores, and any other articles and things hereafter designated by the Governor in Council" must contain provisions for the observance of the current wages rates and working hours in the district, or, in the absence of any such current standards, fair and reasonable rates and working hours. These conditions are referred to in the Order in Council as "B" conditions, and include the following provisions:—

All workmen, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed, and if there be no current rate in such district, then a fair and reasonable rate, and shall work such hours as those fixed by the custom of the trade as respects hours in the district where the work

is carried on, or if there be no custom of the trade as respects hours in the district then fair and reasonable hours, except for the protection of life and property, or on due cause shown to the satisfaction of the Minister of Labour. In the event of a dispute arising as to what is the current or a fair and reasonable rate of wages or what are the current hours fixed by the custom of the trade or fair and reasonable hours it shall be determined by the Minister of Labour, whose decision shall be final; payment may also be withheld of any moneys which would otherwise be payable to the contractor until the Minister of Labour's decision has been complied with.

By the term "current wages" and the term "hours of labour fixed by the custom of the trade" in the foregoing are meant respectively the standard rates of wages and hours of labour either recognized by signed agreements between employers and workmen in the district from which the labour required is necessarily drawn or actually prevailing, although not necessarily recognized by signed agreements.

In both the "A" and "B" conditions of the Fair Wages Order in Council the Minister of Labour is empowered to determine questions which may arise as to what are the current or fair and reasonable wages rates and working hours. The contractor is required to post and keep posted in a conspicuous place on the premises where the contract is being executed, occupied or frequented by the workmen, the fair wages clause or schedule inserted in his contract for the protection of the workmen employed. The contractor is also required to keep proper books and records showing the names, trades and addresses of all workmen in his employ and the wages paid to and time worked by such workmen, these records to be open for inspection by fair wages officers of the Government any time it may be expedient to the Minister to have the same inspected.

It is declared that the contractor shall not be entitled to payment of any money which would otherwise be payable under the terms of contract until he has filed a statement showing: (1) the wage rates and hours of labour which are in force for the various classes of workmen; (2) whether any wages or payments remain in arrears; and (3) that all of the labour conditions of the contract have been complied with. In the event of default being made in the payment of the wages of any workman employed, claim therefor may be filed with the minister of the department with which the contract has been made and payment of such claim may be made by the latter. (Under the "A" conditions these rights extend to moneys payable for the use or hire of horses or teams.)

All workmen employed in the execution of the contract shall be residents of Canada, unless the Minister of the department with which the contract has been made is of

opinion that Canadian labour is not available, or that other special circumstances exist which render it contrary to the public interest to enforce this provision.

Under the "A" conditions clerks of works or other inspecting officers appointed by the Government to ensure the due observance of the contract are specially instructed to do all in their power to see that the labour conditions are fully complied with and to report any apparent violations to the department with which the contract is made.

The "B" conditions provide that the contractor's premises and the work being performed under contract shall be open for inspection at all reasonable times by any officer authorized by the Minister of Labour for this purpose, and that the premises shall be kept in sanitary condition.

Contracts Awarded Recently

During the past month statements were received in the Department of Labour showing that the following contracts were recently executed by the Government of Canada, and that they included either fair wage schedules as shown below, or the general fair wage clause above-mentioned:—

DEPARTMENT OF PUBLIC WORKS

Contracts in Group "A" (Construction, etc.)

Construction of an addition to the public building at North Sydney, N.S. Name of contractor, Hector McNeil, Sydney Mines, N.S. Date of contract, August 1, 1928. Amount of contract, \$9,800. A fair wages schedule was inserted in this contract as follows:—

Trade or Class of Labour	Rates of wages not less than	Hours per day
	cts per hour	
Glaziers.....	80	8
Cement finisher.....	80	8
Terra Cotta layers.....	\$1 00	8
Structural steel workers.....	50 to 70	8
Carpenters.....	60 to 80	8
Sheet metal workers.....	60	8
Roofers (tar and gravel).....	50	8
Kalamein workers.....	90	8
Lathers (metal).....	80	8
Plasterers.....	90	8
Painters.....	80	8
Concrete workers.....	35	9
Labourers.....	35	9

Construction of a tobacco-curing barn at the Experimental Farm, Ottawa, Ont. Name of contractor, Edouard Monette, Ottawa, Ont. Date of contract, August 14, 1928. Amount of

contract, \$4,950. A fair wages schedule was inserted in this contract as follows:—

Trade or Class of Labour	Rates of wages not less than	Hours per day
	per hour \$ cts.	
Carpenters and joiner.....	85	8
Painters.....	65	8
Labourers.....	45	8-10
Concrete mixers.....	45	8
Concrete layers.....	45	8
Concrete finishers.....	75	8
Driver with 1 horse and cart.....	70	8-10
Driver with 2 horses and wagon....	1 00	8-10

Time and one-half for overtime.

Alterations, renovations and additions for accommodation of Bureau of Statistics, Government Building, Green Island, Ottawa, Ont. Name of contractor, Henri Dagenais, Ottawa, Ont. Date of contract, August 24, 1928. Amount of contract, \$61,300. A fair wages schedule was inserted in this contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours per day
	per hour \$ cts.	
Concrete mixers.....	45	8
Concrete layers.....	45	8
Concrete finishers.....	75	8
Bricklayers.....	1 20	8
Masons.....	1 20	8
Structural steel workers.....	80	8
“ riveters.....	80	8
Carpenters and joiners.....	85	8
Sheet metal workers.....	85	8
Roofers—tar and gravel.....	70	8
Terrazzo layers.....	75	8
“ helpers.....	45	8
Lathers—metal.....	75	8
Plasterers.....	1 00	8
“ helpers.....	50	8
Painters and glaziers.....	65	8
Plumbers and steamfitters.....	95	8
Electricians.....	80	8
Labourers.....	45	8-10
Driver with 1 horse and cart.....	70	8-10
Driver with 2 horses and wagon....	1 00	8-10

Time and one-half for overtime.

Deepening the approach to the wharf of the Dominion Trap Rock Company, Bruce Mines, Ont. Name of contractor, The Soo Dredging & Construction Co., Ltd., Sault Ste. Marie, Ont. Date of contract, August 11, 1928. Amount of contract, approximately \$26,690. The General Fair Wages Clause was inserted in the contract.

Repairs to the north pier at Kincardine, Bruce Co., Ont. Name of contractors, Ernest Alfred Henry and David Gordon Ross, Kincardine, Ont. Date of contract, August 13, 1928. Amount of contract, approximately \$21,484.97. The General Fair Wages Clause was inserted in the contract.

Supply and installation of new boilers and alterations to the heating apparatus and plumbing system in the Old Examining Warehouse, Montreal, P.Q. Name of contractor, Frank Joseph Hogan, Montreal, P.Q. Date of contract, August 13, 1928. Amount of contract, \$28,990. The General Fair Wages Clause was inserted in the contract.

Drainage improvement of Sherwood Outlet, Dundee, P.Q. Name of contractors, Oliver F. Cummins and Wm. H. Robinson, “Cummins & Robinson,” Toronto, Ont. Date of contract, August 7, 1928. Amount of contract, approximately \$8,563.20. The General Fair Wages Clause was inserted in the contract.

DEPARTMENT OF NATIONAL DEFENCE
Contracts in Group “A” (Construction, etc.)
Construction of portion of roadway from Montreal highway to Rockcliffe Aerodrome, Rockcliffe, Ont. Name of contractors, E. D. Brule & Sons, Ltd., Billings Bridge, Ont. Date of contract, July 7, 1928. Amount of contract, \$4,320. The General Fair Wages Clause was inserted in this contract.

Construction of a rifle range at Woodstock, N.B. Name of contractor, C. W. Bowlin, Woodstock, N.B. Date of contract, July 17, 1928. Amount of contract, \$7,850. The General Fair Wages Clause was embodied in this contract.

DEPARTMENT OF RAILWAYS AND CANALS
Contract in Group “A” (Construction, etc.)
Construction of standard 100-ton mechanical coaling plant at Savant Lake, Ontario, Canadian National Railways. Name of contractors, Claydon Co., Ltd., Winnipeg, Man. Date of contract, May 2, 1928. Amount of contract, \$15,866. The General Fair Wages Clause was inserted in the contract.

POST OFFICE DEPARTMENT
Following is a statement of payments made in August, 1928, for supplies ordered by the Post Office Department under contracts which were subject to the regulations for the suppression of the sweating system, the securing of payment to the workers of fair wages and the performance of the work under proper sanitary conditions:—

Nature of Orders	Amount of orders
	\$ cts.
Making metal dating stamps and type, also other hand stamps and brass crown seals.....	980 91
Making and repairing rubber stamps, daters, etc.....	134 54
Making-up and supplying letter carriers' uniforms, etc.....	8,141 94
Stamping pads, ink, etc.....	550 16
Bag fittings.....	3,804 61
Scales.....	1,226 75
Satchels.....	88 07

PRICES, RETAIL AND WHOLESALE, IN CANADA, AUGUST, 1928

Cost of Living, Prices of Staple Articles and Index Numbers

THE movement in prices during the month was similar to that in July, the weekly family budget in terms of retail prices being higher, while the Dominion Bureau of Statistics index number of wholesale prices was again lower.

In retail prices the cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average prices in some sixty cities was \$11.08 at the beginning of August, as compared with \$10.80 for July; \$10.93 for August, 1927; \$11.10 for August, 1926; \$10.84 for August, 1925; \$10.19 for August, 1924; \$10.53 for August, 1923; \$10.44 for August, 1922; \$11.44 for August, 1921; \$16.42 for August, 1920; \$16.92 for June, 1920 (the peak); \$13.41 for August, 1918; and \$7.68 for August, 1914. The most important change was a seasonal advance in the price of potatoes, with the marketing of the new crop, while less important advances, also mainly seasonal, occurred in the prices of eggs, butter and cheese, fresh and salt pork, bacon and lard. The prices of mutton, bread, flour, evaporated apples and granulated sugar were slightly lower. Including the cost of fuel and rent with that of foods the total budget averaged \$21.31 at the beginning of August, as compared with \$21.01 for July; \$21.11 for August, 1927; \$21.32 for August, 1926; \$21.05 for August, 1925; \$20.57 for August, 1924; \$21.03 for August, 1923; \$20.88 for August, 1922; \$21.98 for August, 1921; \$26.60 for August, 1920; \$26.92 for July, 1920 (the peak); \$21.20 for August, 1918; and \$14.41 for August, 1914. Changes in fuel and rent were slight.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon the average prices of 236 commodities in 1913 and weighted according to the commercial importance of the commodities, was again slightly lower at 149.1 for August, as compared with 149.6 for July; 152.3 for August, 1927; 154.0 for August, 1926; 158.9 for August, 1925; 156.8 for August, 1924; 153.5 for August, 1923; 151.7 for August, 1922; 165.5 for August, 1921; 250.2 for August, 1920; 256.7 for May, 1920 (the peak); and 202.8 for August, 1918. Thirty-seven prices quotations were lower, thirty-six were higher and one hundred and sixty-three were unchanged.

In the grouping according to chief component materials two of the eight main groups were lower, four were slightly higher and two were unchanged. The Vegetables and their

Products group was substantially lower and exerted the greatest influence on the downward movement of the general index number. The decline in this group was due mainly to much lower prices for grains and for flour and other milled products. The prices of raw sugar, potatoes, hay and straw advanced. The Fibres, Textiles and Textile Products group was also lower, due to a decline in the price of cotton, which more than offset higher prices for silk, jute, hessian and sash cord. The groups which advanced were: the Animals and their Products group, chiefly because of higher prices for hogs, sheep, meats, butter and eggs; the Non-Ferrous Metals group, due to advances in the prices of lead, tin and spelter, which more than offset lower prices for silver and antimony; the Non-Metallic Minerals group, due to higher prices for coal oil and gasoline; and the Iron and its Products group. The Wood, Wood Products and Paper group and the Chemicals and Allied Products group were unchanged.

In the grouping according to purpose consumers' goods advanced substantially, higher prices for fresh and smoked meats, butter, eggs, sugar, potatoes, coal oil and gasoline more than offsetting lower prices for flour, oatmeal, rolled oats and foreign fruits. Producers' goods were considerably lower. In this group producers' equipment, due to advances in the prices of gasoline and coal oil, was higher, while producers' materials declined. In the latter group materials for the textile and clothing industries, for the leather industry, for milling and other industries, as well as miscellaneous producers' materials, were lower, while materials for the metal working industries and for the meat packing industries were somewhat higher.

In the grouping according to origin raw or partly manufactured goods declined, while fully or chiefly manufactured goods were higher. In the former decreases in the prices of grains, cattle, foreign fruits, cotton, rosin and salt more than offset advances in the prices of raw sugar, potatoes, hay, hogs, sheep, beef, eggs, silk and non-ferrous metals; while in the latter higher prices for bacon, ham, mess pork, sugar, butter, gasoline, coal oil and sash cord more than offset lower prices for flour, oat products, millfeed, turpentine and lead. Prices of domestic farm products were lower, articles of marine origin and articles of mineral origin were slightly higher, while articles of forest origin were unchanged.

EXPLANATORY NOTE AS TO WHOLESALE PRICES

The index number calculated by the Dominion Bureau of Statistics is based upon the prices of 236 commodities, price levels in 1913 being taken as the base, that is equal to 100, the figures being weighted according to the commercial and industrial importance of each article included. The index number has been calculated by years back to 1890, being unweighted, however, for the period of 1890 to 1913 and has been calculated by months from 1919 to date for all groupings and from 1913 to date for the principal grouping. Summary tables of the Bureau's index number may be found in the supplement to the LABOUR GAZETTE for January, 1925, January, 1926, and in greater detail in the Report on "Prices and Price Indexes 1913-24," issued by the Bureau. A description of the methods used in the construction of the index number appears in the LABOUR GAZETTE for June, 1923.

The accompanying table gives the index numbers of the Dominion Bureau of Statistics by the principal groups in the three methods of classification and with those of the classification according to purpose or use in detail for the current month and for certain preceding dates.

EXPLANATORY NOTES AS TO RETAIL PRICES

The table of retail prices and rentals shows the prices at the beginning of August of seventy-one staple foodstuffs, groceries, coal, wood and coal oil and the rent of six-roomed houses in some sixty cities throughout Canada. All prices are for delivered goods. The exact quality, for which the quotation is given is set forth in the case of each commodity, and every effort has been made to ensure that the quotations in each case refer to the same class of commodity in order that the statistics may be available for purposes of comparison from month to month, from city to city, etc. The prices of foods and groceries in each city, except milk and bread, are the averages of quotations reported to the Department and to the Dominion Bureau of Statistics by a number of representative butchers and grocers in each. The prices of fuel and the rates for rent are reported by the correspondents of the LABOUR GAZETTE.

Statistics similar to these were published each month from 1910 to 1920, the figures during this period being secured at the middle of each month by the correspondents of the LABOUR GAZETTE resident in each locality from dealers doing a considerable business with workmen's households. From 1910 to 1915 the table contained a list of only the twenty-nine foods included in the family budget, with laundry starch, coal, wood, coal oil and rent. In 1915 when monthly publication of the budget in the LABOUR GAZETTE was begun, it was decided to extend the list of foods to 40, and in 1920 the list of foods and groceries was still further extended to include over 100 items.

Beginning with October, 1922, a number of commodities were dropped from the list, and in the case of a number of articles the average prices of the grades most sold have been given, owing to the impossibility of securing prices for uniform grades for the various cities from month to month.

Oleomargarine was dropped in March, 1924, the provision for its manufacture and sale since 1917, notwithstanding the Dairy Act, expired at the end of February, 1924.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts extensively occupied by workmen. The first class is of houses in good condition, favourably located in such districts with good modern conveniences. The second class is of houses in fair condition less desirably located, but still fairly central, without modern conveniences.

The weekly budget of a family of five, calculated in terms of the average prices in the cities for which reports are received, includes twenty-nine staple foods, laundry starch, coal, wood, coal oil, and rent, these being the items for which statistics have been obtained each month and published in the LABOUR GAZETTE since January, 1910. The quantities of each commodity included are modifications of those employed in similar calculations by various authorities. For some articles comparatively large quantities are included owing to the absence of other important items of the same class. For instance, the only fruits are evaporated apples and prunes, and the only fresh vegetable is potatoes. But as market conditions affecting these usually affect the prices of other fruits and vegetables somewhat similarly, the relative proportions of expenditure on the various classes of foods tends to be maintained. At times when the price of an article heavily weighted for this purpose rises, or falls (abnormally) the increase (or decrease) in food prices so indicated is exaggerated, and this should be taken into account in using the budget as an indicator of changes in the cost of living. In fuel and lighting the quantities are estimated on a similar principle, anthracite coal being used chiefly east of Manitoba, and soft coal and wood in the western provinces, while no allowance is made for the quantities required in the various localities owing to climatic conditions, nor for the differences in the heating value of the various fuels. It was estimated, when the budget was first published in 1912 in the report on wholesale prices in Canada for 1911, that these calculations represented from sixty to eighty per cent of the expenditure of an ordinary family, according to the total income. For the average family of five the expenditure on these items of food, fuel, light and rent would be perhaps two-thirds or about sixty-five per cent of the total income.

While the budget serves to show the increase or decrease from time to time in the cost of the items included, it does not purport to show the minimum cost of food and fuel supplies for an average family in the Dominion or in any one province. The quantities of meats, dairy products, cereals, etc., included were adopted as affording a liberal supply for the healthy family of a man at hard physical work. On the other hand an average family with an income sufficient to do so would buy less meat, etc., but more fruit, fresh and canned vegetables, etc., so that comparative expenditure would be little changed.

Index Number of Changes in the Cost of Living

In March, 1921, the Department published in the LABOUR GAZETTE a table of percentages of changes in the cost of living since 1913 as a tentative cost of living index number, using the figures of the above mentioned budget for the calculation for food, fuel and rent, with

Higher price for petroleum coke. f. Petroleum coke. g. Natural gas used extensively. h. Lignite. i. Poplar, etc. j. In n. Houses with conveniences not extensively occupied by workmen but some at \$35.00. p. Mining Company houses \$20.

Continued from page 1020

preliminary figures for clothing and sundries added and this table has been brought down to date at intervals since. The calculation of a comprehensive cost of living index number covering all items of workingmen's family expenditure in progress since 1918 had been sufficiently advanced to enable the publication

of preliminary figures by groups in a supplement to the LABOUR GAZETTE, January, 1926, on Prices in Canada and in Other Countries, page 9. This table gave figures for June and December each year from 1914 to 1926, inclusive. Figures have since been given for March and September each year since 1917, and the accompanying table gives figures for

INDEX NUMBERS OF WHOLESALE PRICES (WEIGHTED), CALCULATED BY THE DOMINION BUREAU OF STATISTICS (Average Prices 1913=100)

December each year from 1914 to 1917, quarterly from 1918 to 1926, and monthly since January, 1927. As stated in the above-mentioned supplement, the figures in the food

group in the family budget are still used to show the changes in food prices but in the other groups the percentage changes in the prices of each article have been weighted according to workingmen's average family consumption, and in the fuel and light groups, gas and electricity have been included.

CHANGES IN THE COST OF LIVING IN CANADA FROM 1913 TO 1927*

Cost of Electric Current and Gas for Householders

With rates in 1913 as 100, index numbers of electric light rates were 1900, 141.4; 1905, 135.6; 1910, 118.1; 1911, 113.4; 1912, 109.1; 1913, 100.0; 1914, 96.5; 1915, 90.8; 1916, 87.6; 1917, 87.2; 1918, 85.8; 1919, 85.8; 1920, 84.2; 1921, 84.9; 1922, 82.7; 1923, 79.5; 1924, 79.2; 1925, 85.6; 1926, 75.6.

The above figures were arrived at by converting to the base of 1913 as 100, an index number of electric current costs from 1900 to 1913 constructed for the Board of Inquiry into the cost of living in Canada, 1914-15 (Report, Vol. 2, page 318) and bringing the figures down to 1926. The figures are unweighted. The Dominion Bureau of Statistics has recently issued an index number of electric current rates for household consumption as follows: 1923, 73.8; 1924, 72.2; 1925, 69.9; 1926, 68.7. This index number is weighted according to consumption in each city. When the above index number, 1900-1926, is weighted according to population in each city covered for the years, 1923, 1924, 1925 and 1926, the figures are substantially the same as those recently issued by the Bureau.

The following are index numbers of rates for manufactured and natural gas for the years 1913 to 1926 issued by the Dominion Bureau of Statistics (revised, Prices and Price Indexes, 1913-1926): Manufactured gas, 1913, 100; 1914, 98.3; 1915, 98.1; 1916, 96.3; 1917, 100.7; 1918, 107.4; 1919, 111.1; 1920, 125.4; 1921, 143.6; 1922, 140.6; 1923, 135.7; 1924, 134.6; 1925, 131.6; 1926, 131.1. Natural gas, 1913, 100; 1914, 109.6; 1915, 112.8; 1916, 112.8; 1917, 113.6; 1918, 114.2; 1919, 116.2; 1920, 123.8; 1921, 143.0; 1922, 163.1; 1923, 162.9; 1924, 162.6; 1925, 178.7; 1926, 172.2. For the years 1900 to 1913 two index numbers of gas costs calculated for the Cost of Living Inquiry in 1914-1915, have been averaged and converted to the base of 1913 as 100, as follows: 1900, 125.8; 1901, 125.8; 1902, 125.8; 1903, 125.2; 1904, 123.9; 1905, 120.1; 1906, 107.5; 1907, 108.8; 1908, 106.9; 1909, 105.7; 1910, 103.8; 1911, 99.4; 1912, 100.6; 1913, 100.0.

*The figures for "all items" were calculated by giving the following weights to each group: Food 35%; Fuel 8%; Rent 18½%; Clothing 18½%; Sundries 20%.

Retail Prices

Beef prices, which had advanced since the beginning of the year, showed little change in August, sirloin steak averaging 35.8 cents per pound, as compared with 35.7 cents in July; round steak 30.3 cents per pound in August, the same as for July; rib roast 27.6 cents per pound in August, as compared with 27.9 cents in July; and shoulder roast 21.3 cents per pound in August and 21.3 cents in July. Veal and mutton also showed little change, the former averaging 22.6 cents per pound and the latter 29.9 cents per pound. Fresh pork was up from an average price of 28 cents per pound in July to 28.8 cents in August and salt pork from 26.1 cents per pound in July to 26.6 cents in August. Bacon and ham were also considerably higher, the former averaging 43.2 cents per pound as compared with 41.5 cents in July, and the latter averaging 59.6 cents per pound, as compared with 57.8 cents in July. Lard was up from 22 cents per pound in July to 22.2 cents in August.

Eggs showed a general advance, fresh averaging 42.4 cents per dozen, as compared with 38.5 cents in July, and cooking averaging 37.6 cents per dozen, as compared with 34.2 cents in July. Milk was unchanged at an average price of 11.7 cents per quart. Butter was higher in most localities, dairy averaging 39.7 cents per pound in August, as compared with 38.6 cents in July and creamery averaging 44.6 cents per pound in August as compared with 43.3 cents in July. Cheese was also slightly higher, averaging 33 cents per pound.

A decline in the price of bread was reported from Prince Rupert. Flour was slightly lower at an average price of 5.3 cents per pound. Rolled oats, rice and tapioca were steady. Onions were generally lower, the price averaging 7.2 cents per pound in August, as compared with 8.2 cents in July. Potatoes were higher in the average, with the marketing of the new crop. The average price for August was \$1.90 per ninety pound bag, as compared with \$1.45 in July. Evaporated apples declined from an average of 21.9 cents per pound in July to 21.6 cents in August. Prunes were slightly higher, averaging 13.6 cents per pound. Granulated sugar was slightly lower at an average price of 7.9 cents per pound. Tea and coffee showed little change. Anthracite coal averaged \$16.15 per ton in August, as compared with \$16.13 in July. Higher prices were reported from Halifax, Orillia, Stratford and Sarnia. Coke was unchanged

at an average price of \$12.76 per ton. Changes in wood prices were slight, hard averaging \$12.08 per cord and soft \$8.91 per cord.

Wholesale Prices

The following is a summary of a statement on wholesale prices changes during the month issued by the Dominion Bureau of Statistics.

Grain prices moved to substantially lower levels during August, No. 1 Manitoba northern cash wheat, Fort William and Port Arthur basis, averaging \$1.18½ per bushel, as compared with \$1.31 in July. The decline in price was said to be due mainly to the good crop prospects in Canada and the United States. Coarse grains followed the movement in wheat, western barley at Winnipeg declining from 83 cents per bushel to 69 cents; Ontario barley at Toronto from 93 cents per bushel to 71 cents; oats at Winnipeg from 59 cents per bushel to 52 cents; oats at Toronto from 72½ cents per bushel to 41 cents; and flaxseed at Winnipeg from \$1.86½ per bushel to \$1.82. Flour prices moved in sympathy with wheat, declining at Toronto from \$7.81 per barrel to \$7.57. Rolled oats were down from \$3.75 per ninety pound sack to \$3.45. Shorts declined from \$36.25 per ton to \$32.25. Raw sugar at New York rose from \$2.43½ per hundred to \$2.50. Potato prices were higher, with the appearance of the new crop, Quebec grades at Montreal being \$1.07 per bag, as compared with 69½ cents in July; Ontario grades at Toronto \$1.27 per bag, as compared with \$1 in July; and Manitoba grades at Winnipeg \$1.04 per bushel, as compared with 75 cents in July. Rosin declined from \$13.60 per barrel to \$12.80. Hay at Toronto advanced from \$14.50-\$15 per ton to \$16 and straw from \$9.65 per ton to \$9.77½. Western cattle at Winnipeg declined from \$10.41 per hundred pounds to \$10.25 and choice steers at Toronto from \$11.28 per hundred pounds to \$11.23. Hogs at Toronto rose from \$12.60 per hundred pounds to \$13.80 and sheep at Toronto from \$5.94 per hundred pounds to \$7.15. Dressed beef carcass advanced from 22 cents per pound to 24 cents and dressed mutton from \$12 per hundred pounds to \$13. Bacon rose from 28-32 cents per pound to 35-37 cents and ham from 28½-30 cents per pound to 32-32½ cents. Finest creamery butter at Montreal rose from 40 cents per pound to 41 cents and prints at Toronto from 41 cents per pound to 42 cents. Fresh eggs at Montreal advanced from 43-48 cents per dozen to 46-50 cents. Raw cotton at New York declined from 21.7 cents per pound to

19.3 cents. Raw silk was higher at \$4.65 per pound, as compared with \$4.50 in July. In non-ferrous metals tin advanced from 49½ cents per pound to 50½ cents and lead from \$5.83 per cwt. to \$5.99. Spelter declined from

\$7.24 per hundred pounds to \$7.16 and silver from 59 cents per ounce to 58.8 cents. Gasoline at Toronto advanced from 19½ cents per gallon to 20½ cents and coal oil from 21 cents per gallon to 22 cents.

PRICES IN GREAT BRITAIN AND OTHER COUNTRIES

THE following notes give the latest information available as to movements of prices in Great Britain and other countries. The index numbers of retail prices are from official sources unless otherwise stated. The authorities for the wholesale prices index numbers are named in all cases.

Great Britain

WHOLESALE PRICES.—The Board of Trade index number, on the base 1913=100, was 141.1 for July, a decline of one per cent from the level for June. This decline was due to lower prices for foods, the food index falling three per cent. The decline extended to all of the three food groups. In industrial materials, iron and steel, other metals and minerals and miscellaneous products declined, cotton was unchanged and other textiles advanced slightly.

The *Economist* index number, on the base 1901-05=100, declined to 176.9 in July, a decline of 1.8 per cent for the month. There were declines in cereals and meat, other foods and textiles and slight increases in the minerals and the miscellaneous group.

The *Statist* index number (in continuation of Sauerbeck's figures), on the base 1867-77=100, was 120.3 for July, a decline of 1.9 per cent from the June level. Foodstuffs declined 4.2 per cent with declines in all three groups. The decline in all industrial materials was 0.2 per cent owing to lower prices for textiles which was partly counteracted by slight advances in minerals and sundries.

COST OF LIVING.—The index number of the Ministry of Labour, on the base July, 1914=100, was 165 at August 1, showing no change from the previous month. There was a decline in the index number for food of 0.6 per cent owing chiefly to a fall in the price of potatoes and also in bread and flour in some places, partly counteracted by higher prices for eggs, butter, cheese and bacon. The other groups, rent, clothing, fuel and light and sundries, were unchanged.

Austria

WHOLESALE PRICES.—The index number of the Federal Statistical Office, on the base,

prices in gold, first half of 1914=100, was 133 for August, showing no change from June and July. There was a decline of 0.8 per cent in the food group but no change in industrial materials.

COST OF LIVING.—The official index number on the base prices in gold, July, 1914=100, was 108 for August, which is the same figure as for July; the index number for each group showed no change from July.

France

WHOLESALE PRICES.—The index number of *Statistique Générale*, on the base July, 1914=100, was 637 for July, showing a decline of 0.3 per cent from June. Both native products and imported products declined. The decline in the foods group was due to decreases in the animal foods and vegetable foods groups, while sugar, coffee and cocoa advanced. Industrial materials advanced slightly owing to an advance in the miscellaneous group, although there was a small decrease in textiles; minerals and metals were unchanged.

Germany

WHOLESALE PRICES.—The index number of the Federal Statistical Office, on the base 1913=100, was 141.6 for July, an advance of 0.2 per cent from June. Agricultural products advanced 0.4 per cent, colonial products declined 0.7 per cent, industrial raw materials and semi-manufactured goods advanced 0.1 per cent and manufactured goods 0.3 per cent.

COST OF LIVING.—The index number of the Federal Statistical Office, on the base 1913-14=100, was 152.6 for July, an advance of 0.8 per cent. Food advanced 1.3 per cent, heat and light 0.3 per cent, rent 0.1 per cent, clothing 0.1 per cent and sundries 0.3 per cent.

Italy

WHOLESALE PRICES.—The index number of the Milan Chamber of Commerce, on the base 1913=100, was 488.11 for July, a decline of one per cent from June. Both foods and industrial materials declined. All groups declined except construction materials which

were unchanged and animal foods, textiles and miscellaneous industrial materials which advanced.

New Zealand

WHOLESALE PRICES.—The index number of the Census and Statistics Office, on the base, average annual aggregate expenditure, four chief centres 1909-1913=1,000, was 1,561 for June, showing an advance of 0.2 per cent for the month, owing to an increase in foodstuffs, etc., of vegetable origin. Textile manufactures were unchanged and the other groups declined slightly.

COST OF LIVING.—The official index number for May, on the base July, 1914=1,000, was 1,619, an advance of 0.5 per cent over February. Food, clothing and miscellaneous commodities advanced and rent and fuel and light were unchanged.

United States

WHOLESALE PRICES.—The index number of the Bureau of Labour Statistics on the base 1926=100 was 98.3 for July, an increase of 0.7 per cent over June. Farm products advanced 0.3 per cent and foods 2 per cent, with smaller increases in hides and leather products, textile products, fuel and lighting and building materials. Slight declines were noted in metals and metal products, chemicals and drugs, housefurnishing goods and miscellaneous commodities.

The *Annalist* index number, on the base 1913=100, was 150.8 for August, an advance of 0.1 per cent over July. Food products, fuels, metals, building materials and miscellaneous commodities advanced, farm products and textile products declined and chemicals were unchanged.

Bradstreet's index number (showing the cost of a list of 106 commodities) was \$13.2813 at September 1, an increase of 0.6 per cent over the previous month. The most marked increases were in provisions and livestock, although hides and leather, metals, oils, building materials and chemicals and drugs also advanced. Textiles, breadstuffs, naval stores and miscellaneous products declined and coal and coke and fruits were unchanged.

COST OF LIVING.—The index number of the Bureau of Labour Statistics, on the base 1913=100, was 170.0 in June, a decline of 1.2 per cent from the December figure. Food declined 2.1 per cent, clothing 0.2 per cent, rent 1.6 per cent, fuel and light 3.3 per cent, house furnishing goods 1.7 per cent, while miscellaneous commodities advanced 0.2 per cent.

The index number of the National Industrial Conference Board, on the base July 1914=100 was 161.1 for July, an advance of 0.1 per cent over June. Housing declined 0.6 per cent, clothing advanced 1.8 per cent, while food, fuel and light and sundries were unchanged.

Labour Banks in United States in 1927

According to a report by the Industrial Relations Section of Princeton University the total resources of labour banks on December 31, 1927, were \$119,815,386. "This total shows an increase of nearly two and one-half million dollars compared to the resources of October 10, 1927, but a decrease of approximately seven million compared to the year-end figures of 1926. During the year the control of four labour banks shifted to other interests.

"Deposits in labour banks increased almost three million dollars during the last quarter but were, at the end of 1927, approximately five and one-half million below the December, 1926, total.

"The outstanding event of the year in the labour banking movement was the change in the policy of the Brotherhood of Locomotive

Engineers concerning their banking enterprises. The change was reflected both in the transfer of two banks from Brotherhood control and in a reduction in the resources of several of the Brotherhood's banks.

"No banks were added to the labour group during 1927 but several larger banks, especially in New York City and vicinity, and a number of smaller banks elsewhere showed marked increases in resources compared to 1926. The growth of these banks, coupled with the recessions and, in some cases, later increases in the resources of several other banks, indicates that 1927 was a year of stabilization in the labour banking movement."

An article entitled "Seven Years of Labour Banking" published in the *American Federationist*, was noted in the *LABOUR GAZETTE*, November, 1927, page 1205.

RECENT LEGAL DECISION AFFECTING LABOUR

Motor Truck Not a "Factory"

THE driver of a motor truck belonging to an express company in Saskatchewan sustained an injury to his arm while in the course of his employment and engaged in loading a number of milk cans on a truck. Action for compensation being brought by the employee under the Workmen's Compensation (Act of Saskatchewan)* the trial judge allowed the claimant compensation. The case turned exclusively on the meaning to be given to the word "place" in section 3 of the Act, which is as follows:—

"Factory" means a building, workshop or place where machinery driven by steam, water or other mechanical power is used, and includes mills where manufactures of wood, flour, meal, pulp or other substances are being carried on: . . . laundries worked by steam, water or other mechanical power and docks, wharves, quays, warehouses and shipbuilding yards where goods or materials are stored, handled, transported or manufactured."

The trial judge held that the motor truck was a "factory," as being a "place" where machinery driven by motor power is used. In coming to this conclusion he relied strongly on the decision in "Western Trust Company versus Duncan (1915), 21, Dominion Law Reports, 461," where compensation was granted to the dependent of an elevator operator who

* Claims under the Saskatchewan Workmen's Compensation Act are dealt with by means of legal procedure.

was killed while on duty, the view being taken that a place where mechanical power is used may be regarded as a "factory."

The decision of the trial judge was reversed on appeal to the Saskatchewan Court of Appeal, which held that the construction placed upon the words "factory" and "place" by the trial judge was wrong. One of the judges of the Court of Appeal said: "On the face of it, it seems most extraordinary to ask the Court to stretch the meaning of the word "factory" so far as to include an automobile. Nevertheless if the legislature had chosen to say that an automobile, or at least a motor truck, was to be considered a factory, our plain duty would have been to carry out the legislature's intent, however strange such language might sound. . . . It would have been a very simple thing for the legislature to say plainly, if it so intended, that the Act should apply to motor vehicles, as it has done in the case of railways, for instance. But in the absence of any such express provision I have looked carefully into the authorities submitted to us in order to see whether any of them afforded a precedent from which the interpretation contended for could be drawn. As a result, I am convinced that nothing in any of the cases cited authorizes us to go to the length urged by the respondent."

—*Reader v. Moose Jaw Cartage Co. (Saskatchewan) 1928, 3 D.L.R., 533.*

[NUMBER 10

NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

Monthly Summary

A SLIGHT decline in industrial employment in Canada was shown at the beginning of September, according to returns received by the Dominion Bureau of Statistics from 6,567 firms, each with a minimum of 15 employees, representing practically every industry except agriculture, fishing, hunting and highly specialized business operations. These firms employed 1,001,395 persons, as compared with 1,004,286 in the preceding month. The employment index number (with January, 1920, as the base=100), stood at 119.5 on September 1, as compared with 119.9 on August 1, 1928, and with 109.7, 104.9, 96.6, 93.1, 100.0, 93.7 and 88.7 on September 1, 1927, 1926, 1925, 1924, 1923, 1922, and 1921, respectively.

Reports received by the Department of Labour from the offices of the Employment Service of Canada indicated a substantial increase in the volume of business transacted during the month of August, when compared with the business of the previous month or that of August, 1927.

At the beginning of September the percentage of unemployment reported to the Department of Labour by local trade unions stood at 2.4 in comparison with unemployment percentages of 2.5 at the beginning of August, and 3.7 at the beginning of September, 1927. The September percentage was based on reports received by the Department of Labour from 1,604 local trade unions with an aggregate membership of 181,022 persons.

The average cost of a weekly family budget of twenty-nine staple foods was \$11.15 at the beginning of September, as compared with \$11.08 for August, 1928; \$10.87 for September, 1927; \$10.94 for September, 1926; \$10.81 for September, 1925; \$10.28 for September, 1924; \$10.46 for September, 1923; \$10.28 for September, 1922; \$11.82 for September, 1921; \$15.95 for September, 1920; \$16.92 for June, 1920 (the peak); \$13.31 for September, 1918; and \$7.83 for September, 1914. In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon prices in 1913 as 100, was slightly higher at

149.7 for September, as compared with 149.1 for August; 151.3 for September, 1927; 152.5 for September, 1926; 156.2 for September, 1925; 153.9 for September, 1924; 154.6 for September, 1923; 147.5 for September, 1922; 161.7 for September, 1921; 245.5 for September, 1920; 256.7 for May, 1920 (the peak); and 205.0 for September, 1918.

The time loss due to industrial disputes in September, 1928, was less than in the preceding month, but slightly greater than in September, 1927. Ten disputes were in existence at some time during the month, involving 1,414 workers, and resulting in a loss of 10,457 working days. Corresponding figures for August, 1928, were 17 disputes, 5,746 workers, and 37,634 working days and for September, 1927, 13 disputes, 2,016 workers, and 9,231 working days.

Industrial Disputes Investigation Act, 1907

During September the Department received the reports of Boards of Conciliation and Investigation in connection with two disputes, one involving the street railway employees in Port Arthur and Fort William, and the other involving the same class of employees in Quebec. The latter report is given in its original form in the French language together with a version in English. One new application for a Board was received during the month. A Board was established in connection with another dispute, and a settlement was reached through the mediation of the Department in a dispute in which the employees had applied for a Board. A full account of recent proceedings under the act appears on page 1049. This issue also contains a summary of proceedings under the Act since its commencement, and also during the past fiscal year.

Interprovincial Old Age Pension Board appointed

By Order in Council P.C. 1806, approved on October 3, 1928, the members of the Interprovincial Board in connection with Old Age Pensions were appointed. The Regulations pursuant to the Old Age Pensions Act (Re-

vised Statutes of Canada, 1927, Chapter 156) were published in the *LABOUR GAZETTE*, February, 1928, page 138. Number 32 of these regulations authorized the establishment of an Interprovincial Board "with powers to interpret and recommend alterations in the Regulations, such Board to be appointed by the Governor in Council." Accordingly, certain provinces with which agreements had been made under the provisions of the Act having requested that the Board be appointed, the Minister of Labour recommended that the Board members should be appointed as follows:—

- J. D. O'Neill, departmental solicitor, Department of Labour, Ottawa, Ontario.
- E. S. H. Winn, K.C., chairman of the British Columbia Workmen's Compensation Board, Vancouver, B.C.
- F. J. Reynolds, Saskatchewan Commissioner of Old Age Pensions, Regina, Saskatchewan.
- Major C. K. Newcombe, chairman of the Manitoba Old Age Pensions Board, Winnipeg, Manitoba.

The Minister's recommendation was concurred in by the Privy Council.

Workmen's compensation in Quebec

The Workmen's Compensation Commission of the Province of Quebec, it is announced, intends to establish a branch office at Montreal for hearing cases in the western section of the province, where most of its industries are situated. Mr. Robert Taschereau, K.C., chairman of the Commission, in a recent statement in the press, called attention to the necessity for the prompt notification of industrial accidents when they occur. On receipt of a report from the employer the Commission immediately sends forms to be filled by the injured workman and by his doctor. In many cases, it is found, the workman and the doctor neglect to make a return. "Victims of industrial accidents and their dependants may rest assured that it is the Commission's chief concern to protect their interests, and particularly to see that full compensation is paid without delay in accordance with the provisions of the Act. The Commission however is unable to discharge this duty effectively unless particulars are supplied by the workman or his representatives."

"Freedom of labour" in industrial contracts

An outline of the case *Building Trades Council of the Catholic Unions versus Bilodeau Limited*, is given among the Legal Decisions affecting Labour on another page of this issue. In his judgment, Mr. Justice Belleau, of the Superior Court, among other findings, declared that an industrial agreement stipulating that the employer should employ a certain class of labour, is valid in law and does not involve any conflict with the principle of the "freedom of labour." The *Revue du Droit* (Quebec), May, 1928, contained an article on the various points in this case, contributed by Mr. Paul Fontaine. The writer asks the question: "Is the condition (that is, in an agreement), calling for a preference of workers of a certain category, contrary to the freedom of labour?" The answer to the question is as follows:—

"Using the notes of our learned counsel, Mr. Leon Mercier-Gouin of Montreal, professor of industrial legislation at the University of Montreal, we will give the reasons, in our opinion decisive, which makes such a clause entirely legal. A judgment of the Court of Appeal of France sets forth these reasons as follows: 'It is no more forbidden to any union of employers to enter an agreement with a labour union providing that only the latter union should provide the labour required for a particular piece of work, than it is forbidden one or more merchants to take a particular dealer as their exclusive agent, or than it is forbidden to an employer to choose his staff whether among organized or unorganized workers, such freedom being the corollary to the workman's right to hire himself where he desires. The right of one party is limited by the right of the other, and to limit the rights of a union to the merely theoretical study of the interests of the members would restrict the development contemplated by the legislature.'"

Unemployment insurance system for Canada

The Honourable Peter Heenan, Minister of Labour of Canada, issued a statement to the press on October 9, with regard to the question of the establishment of an unemployment insurance system for Canada. He pointed out that this had already been the subject of an investigation by the Parliament of Canada, and that at the last session it was submitted to the Industrial Relations Committee of the House of Com-

mons. This committee received evidence from a large number of witnesses and afterwards made a report to Parliament, expressing the opinion that responsibility for such legislation rested on the Provincial authorities, and recommending that the matter be referred to the various provinces to ascertain whether, and to what extent, they would be prepared to adopt legislation of this character.

In compliance with the report of the committee, the Minister of Labour communicated with the various provinces and received replies from the majority of the provincial governments. Mr. Heenan intimated that these replies would be submitted to Parliament at the next session.

The report of the House of Commons Committee on Industrial and International Relations, on the subject of unemployment insurance was given in the *LABOUR GAZETTE*, June, 1928, page 586.

Old Age Pensions bill to be introduced in Ontario

The Hon. G. Howard Ferguson, premier of Ontario, in the course of an address at Toronto on October 12, intimated that legislation would be introduced at the

next session of the legislature to provide for participation by the province in the federal Old Age Pensions Act.

"Next year," Mr. Ferguson said, "there will be placed on the statutes beneficial legislation which is going to cost the Government a great deal of money. This decision has been entered into, not recklessly, but after a careful survey, to get the very best conditions for our aged and needy people. The province must keep abreast of the most advanced conditions in the world."

Minister of Labour in British Columbia

The Hon. W. A. Mackenzie has been appointed as Minister of Labour for British Columbia. The duties of the Department include the administration of the Fac-

ories Act, the Hours of Work Act, the Male Minimum Wage Act, the Minimum Wage Act for Women, and the Provincial Employment Service. The tenth annual report of the Department, containing valuable statistics of labour and industry in the province, was reviewed in the last issue of the *LABOUR GAZETTE*.

National Industrial Council for Great Britain

The report of the proceedings at the recent convention of the Trades Union Congress, appearing on another page of this issue, records the acceptance by the representatives of organized labour in Great Britain of the principle of a joint National Industrial Council. The establishment of such a council, to be composed of an equal number of employers' and workers' representatives, was among the recommendations contained in the interim report of the joint conference on Industrial Re-organization and Industrial Relations, sometimes known as the "Mond" conference from the name of its chief promoter, Sir Alfred Mond, now Lord Melchett.

The constitution and functions of the proposed Council were outlined in the synopsis of the Interim Report which appeared in the *LABOUR GAZETTE*, August, 1928, page 846. The two parties in this undertaking are the Trades Union Congress, on the side of the workers, and on the other side, the two organized bodies of employers, namely the National Confederation of Employers' Organization, and the Federation of British Industries. The reply of the employers' organizations on the question of participation in the proposed Council was expected late in October, when it was hoped that the employers also would accept the principle of a joint council, though possibly with some suggested changes in regard to certain details.

The three main functions of the Council, as suggested by the Interim Report already mentioned, would be as follows:—

1. To hold regular meetings once a quarter for general consultation on the widest questions concerning industry and industrial progress.
2. To establish a standing joint committee for the appointment of joint conciliation boards.
3. To establish and direct machinery for continuous investigation into industrial problems.

Labour views on alleged misuse of injunctions

An analysis of the facts connected with the alleged misuse of labour injunctions in the United States is given in *Facts for Workers*, a monthly review published by the Labour Bureau, Incorporated (New York). The complaint of labour concerning the prevailing practice is stated to be three-fold, objection being taken to the manner in which injunctions are issued, the nature of the acts enjoined, and the method of enforce-

ing injunction orders. The usual manner of issuing injunctions is described as follows:—

"The employer presents to the court an *ex parte* affidavit, alleging the commission of certain acts which are unlawful in any event, such as the use of violence, or of other acts which, in the employer's judgment, constitute irreparable injury to himself or his property. The court, without holding a trial to ascertain whether these allegations are true, can, and often does, issue a temporary restraining order forbidding not only the unlawful practices alleged, but also forbidding many other practices ordinarily lawful, and essential to the conduct of the strike. A trial is held before the restraining order is made permanent. . . . If, as a result of the subsequent trial the order is not made permanent, or if appeal to higher courts should vacate the order, the damage to the interests of the strikers has been done and is irreparable, and any who may have disobeyed the order and have been punished have no redress."

In regard to the nature of the acts usually enjoined, labour admits that it has no right to practise violence, but contends that there is no justification for the interposition of courts of equity to keep the peace or to punish criminal acts. The courts, it is claimed, have in many cases strained the meaning of "intimidation," and included lawful union activities under the definition of unlawful picketing. The writer suggests the following measures as likely to prevent injunctions in the future from interfering with the essential rights of labour organizations and collective bargaining:—

(1) Regulation of the process by which courts may issue injunctions in industrial disputes—as, for instance, the requirement of a hearing, with an opportunity for the defendant to present evidence, before a preliminary restraining order may be issued;

(2) Regulation of the process by which guilt of constructive contempt may be determined and punishment meted out—as, for instance, the requirement of a trial by jury in such cases, and the limitation of sentences;

(3) A declaration of public policy in favour of collective bargaining and the enumeration and definition, under that declaration, of the substantive rights of labour to perform legitimate acts necessary to further its interest. Such a guarantee of the rights of labour would have to be weighed by the courts against rights asserted for the employer, and against the "right of contract". It would permit emphasis upon the fact that, in most, if not all cases, strikes are carried on, not as conspiracies to injure the employer, but as a

part of the process of collective bargaining to protect the interest of labour;

(4) In furtherance of public policy, an effective exemption for organized labour from the anti-trust laws.

History of technical education in Canada

"History of Vocational Education in Canada" has been issued as a bulletin by the Technical Education Branch of the Department of Labour. As early as 1867, the commissioner of agriculture for Ontario showed the need for vocational education in Canada by stating in his report that "something more is required to give our education a more decidedly practical character, especially in reference to the agricultural and mechanical classes of the community, which compose the great bulk of our population, and constitute the principal means of our wealth and prosperity." The council of Arts and Manufacturers, incorporated in Quebec in 1872, initiated the first system of evening schools in the province; while in 1886 the first mining schools in Nova Scotia were established. In 1907 the legislature of Nova Scotia passed the Technical Education Act, which provided for centralized control of all technical or vocational education in the province. This was the first provincial program of vocational education of less than college grade in Canada. The appointment by the Dominion Government of the Royal Commission on Industrial Training and Technical Education in 1910 coincided with or possibly resulted from an active interest in vocational education throughout the whole Dominion, and marked the beginning of the present development. This commission made its report in 1913 but, owing to the war, it was not until 1919 that its recommendations were given effect by the passing of the Technical Education Act. Under the provisions of this Act the Dominion Government assists in the promotion and development of vocational education of less than college grade by sharing equally with each provincial government approved expenditures on all branches of vocational education except agriculture. The Act provides for the expenditure of \$10,000,000 during the ten-year period ending March 31, 1929.

Cheap passage rates for families of British settlers

An agreement has been concluded between the Canadian and British Governments whereby the wives and children of British settlers now in Canada, not engaged in agriculture, may secure passage to Canada at

a rate of £3 15s. (\$18.25) for adults and free passage for children under 17. The balance of the ocean fare will be borne by the two Governments and the shipping companies concerned. This is an extension of the program of passage assistance to Britishers, which formerly was applicable only to those who settled upon the land.

Applicants for the benefits of this agreement must establish that they arrived in Canada prior to June 6, 1928, are satisfactorily settled in the Dominion and have reasonable prospects of being able to support their families after arrival.

This agreement is the outcome of the recommendation of the Select Standing Committee of the Dominion Parliament appointed last session to inquire into immigration and colonization, which recommended to Parliament as follows: "That measures be taken to extend the assisted passage privileges to the families of immigrants from Great Britain who are now in Canada and who have so far established themselves as to have a reasonable prospect of being able to support their families in this country.

Canadian Pacific Railway colonization schemes

New colonization schemes for placing British settlers on farm lands in Canada have been undertaken by the Canadian Pacific Railway Company through its Department of Coloniza-

tion. The Overseas Settlement Committee of the British Government is co-operating in the arrangements. The details of these schemes were negotiated during the visit to Canada of Lord Lovat, Under-Secretary of State for Dominion Affairs and chairman of the Overseas Settlement Committee, to which reference was made in the last issue of the *LABOUR GAZETTE*.

One undertaking provides for the building of one hundred cottages by the Canadian Pacific Railway Company for the use of British families. The immigrants will be selected and brought to Canada by the Department of Colonization and Development, placed in farm work and established in the cottages. After gaining the necessary experience they will be assisted to settle on their own farms. The cottages thus vacated will be then available for further groups of British colonists.

Another agreement with the Overseas Settlement Committee involves the recruitment, reception, placement on farms, and subsequent supervision of one thousand British families during the next five years. This particular scheme will be carried on as an extension of the work which has already been

done by the Canada Colonization Association, a subsidiary of the Canadian Pacific Department of Colonization and Development, through which organization a considerable number of British families have been already placed.

The new efforts to promote British settlement in Canada are in pursuance of the policy followed by this company during the past eighteen years. In 1910 the Canadian Pacific Railway Company adopted a scheme of ready-made farms, by which over 400 farms were laid out, houses and barns erected, property fenced, wells dug, a portion of the land broken, disced, harrowed, and seeded to crop before the arrival of the settlers. In 1925, through the financial assistance rendered by the company, the establishment of the Clan Donald Colony in Alberta was made possible, and one hundred farms were prepared ready for occupancy on the arrival of the selected families. This year the company is providing \$40,000 for the improvement of twenty additional farms as an extension of this scheme. Under yet another agreement with the Overseas Settlement Committee, the company is preparing one hundred farms, the latter providing the land and \$1,200 to be expended on each farm, while the Overseas Settlement Committee provides \$800.

Changes in earning capacity of American population

The *Statistical Bulletin*, published by the Metropolitan Life Insurance Company, in the issue for August, 1928, has a study of recent changes in the age distribution and relative earning capacity of the population of the United States. These changes are brought about by the steadily declining birth rate and by the recent cutting down of immigration, these factors having resulted in a reduction in the proportion of young people, and in a corresponding increase in that of those of more advanced ages. The male population of the United States is divided, for the purposes of the survey, into four broad age groups, namely 0 to 19 years, 20 to 44 years, 45 to 64 years, and 65 years and over. The age group 0 to 19, comprising children and adolescents, has steadily diminished from 49.5 of the total male population in 1870, to 40.3 per cent in 1920. At the other extreme, the "superannuated" group, composed of persons 65 years old and over, has steadily increased from 2.9 per cent in 1870 to 4.5 per cent in 1920. The *Bulletin* points out that the depressing effect of the increased contingent of the superannuated is more than counterbalanced by the increase in the proportion of

the population within the economically productive age-group of 20-64 years. "Since the average man above the unskilled labouring class increases in earning capacity until well past his fortieth year, a shifting of the centre of the population to a higher age has the effect of increasing the relative earning capacity of the nation." An "index of earning capacity" is given for various years since 1870, based on the earnings per head of the male population, expressed as a percentage of the earnings of males at the age of their maximum earning capacity, as follows: 1870, 43 per cent; 1880, 44 per cent; 1890, 45 per cent; 1900, 47 per cent; 1910, 49 per cent; 1920, 50 per cent.

Labour organization in Australia

Some account of the form of labour organization in the Commonwealth of Australia will be of interest in connection with the recent strike of dock workers which is mentioned elsewhere in this issue in the article entitled "Strikes and Lockouts in Great Britain and other Countries." The Official Year Book of the Commonwealth for 1927 gives the trade union membership in 1926 as 851,478. In the same year there were 372 distinct organizations and interstate groups of organizations in Australia, having 1,960 state branches and sub-branches. The group with the largest membership was Railway and Transport services, with 114,899 members. The Engineering and Metal Work group had 79,201 members; Food, Drink and Tobacco, 67,255; Pastoral and Agricultural, 54,173; Building, 53,881. The Shipping group had 40,594 members. Out of the 372 separate associations and groups of organizations in Australia, 111 are organized on an interstate basis. The members of these 111 unions amounts to 84 per cent of the total membership of all unions. In each of the capital cities, and in a number of industrial centres elsewhere, delegate organizations consisting of representatives from a group of trade unions have been established. Their revenue is raised by means of a *per capita* tax on the members of each affiliated union. In most of the towns where such central organizations exist, the majority of the local unions are affiliated with the central organization, which is usually known as the Labour or Trades Hall Council, or the Labour Federation. In Western Australia a unified system of organization extends over the industrial centres throughout the State. In this State there is a provincial branch of the Australian Labour Party, having a central council and executive, and metropolitan and branch dis-

trict councils, to which the local bodies are affiliated. The central council, on which all district councils are represented, meets periodically. In the other five states, however, the organization is not so close, and, while provision usually exists in the rules of the central council at the capital city of each State for the organization of district councils or for the representation of the central council of the local councils in the small industrial centres of the State, the councils in each State, are, as a matter of fact, independent bodies.

Effect of the mechanization of industry on employment

Mr. Roger W. Babson, of the Babson Statistical Organization of Boston, in a recent weekly statement on the industrial situation discussed the effect of more efficient methods of production on employment. His conclusions confirm the opinion of Mr. M. W. Alexander, president of the National Industrial Conference Board, and of Professor P. H. Douglas, of the University of Chicago, quoted in the *LABOUR GAZETTE*, August, 1928, page 818; July, 1928, page 682. Mr. Babson says:—

"Opportunities for the young man of character and ability were never greater than they are now. While it is true that greater production is being obtained from a smaller number of men than 15 years ago, nevertheless there are more opportunities for good men than ever before. There are two reasons for this. First, high wages and increased purchasing power plus new discoveries and inventions are encouraging the development of new industries, such as aviation, radio, television, rayon, etc. Second, the old type of family-owned, one-man controlled business is giving away to large corporations, owned by large numbers of widely scattered stockholders. Such companies are entirely impersonal. Jobs are no longer handed out on the basis of relationship, favouritism, pull, etc. The young man whose inheritance has been one of toil and poverty, but who has brains, energy and character is the one who is succeeding today. In this age of intense competition, business can no longer tolerate incompetence or even just ordinary performance. This opens the way for young men and women with character and vision, no matter whence they come. This applies in all fields; manufacturing, banking or merchandising. Look at the great banking houses of New York today. Only two or three are being run by the sons of the men who founded them. The great majority are controlled by former clerks who were employees of the founders."

Unemployment insurance in United States

Existing plans for unemployment insurance in the United States are described in the September number of the *American Federationist*, the monthly review published by the American Federation of Labour. Miss Mary B. Gilson, the writer, points out that trade union out-of-work benefits were the first form of compensation for unemployment in the United States as in many other countries. Apart from these benefits, there are two main types of unemployment insurance, first, schemes established by agreement between a union and the employer; and second, those established by individual companies. The first type exists in trades having a large amount of seasonal work. Joint agreement plans are now in effect in the men's clothing industry at Chicago, the ladies' garment industry at Cleveland, and the cloth hat and cap industry at many centres. Small groups of weavers in the lace industry are covered by insurance, and the men's clothing industry at Rochester and New York city will soon have agreements in operation. The number of workers covered by joint plans is about 27,000. In another year about 8,000 workers in the men's clothing industry in Rochester will be included in active working plans, and about 30,000 workers in the same industry will be covered in New York.

It is estimated that about 8,000 workers are now under unemployment insurance plans of the second type, where the benefits are provided by individual companies. Nine companies now provide such plans, the first in the field being the Columbia Conserve Company of Indianapolis in 1917, followed by the Denison Manufacturing Company in 1920.

As to the results of these schemes, Miss Gilson finds it impossible to measure their effect in regularizing employment. However, employers have been led to seek out every possible means for preventing unemployment, some employers testifying that "it was only after their compensation plans were installed that there was any vital interest taken by the sales organization in providing a steady market for plant output." It is pointed out that only a negligible proportion of all the workers in the country are covered by unemployment compensation.

Unemployment insurance in men's clothing industry in New York

In the August issue of the *LABOUR GAZETTE*, page 819, reference was made to the adoption of agreements providing for unemployment insurance schemes in the clothing industry in Chicago and Rochester. Since the ratifica-

tion of these arrangements, the Amalgamated Clothing Workers of America and the New York Clothing Manufacturers Exchange have concluded an agreement by which the benefits of unemployment insurance are extended to the New York clothing market.

The main provisions of the scheme are outlined in the September issue of the *Monthly Labour Review*, published by the United States Department of Labour. They differ from those governing the Chicago and Rochester agreements, in that the employees are not required to contribute to the unemployment insurance fund. The fund is maintained by a weekly contribution by the employers amounting to 1½ per cent of the total labour cost of all clothing manufactured for them, whether in their own inside shops or in contract shops making up work for them. By labour cost is meant the total weekly payroll in both inside and contract shops. The payments by the employers began on September 1, 1928. The fund is under the management of a board of trustees consisting of a chairman and an equal number of representatives of the employers and the union. The impartial chairman of the clothing industry in New York will serve as chairman of the board of trustees. The number of trustees may be changed from time to time by joint action of the Manufacturers' Exchange and the union, but there may not at any time be less than three or more than seven trustees. No benefits will be paid during the first year, but the money collected during that period will be used to establish a reserve from which unemployment benefits will be paid after September 1, 1929.

Objects of the Labour Party of Great Britain

A pamphlet was recently published in London, setting forth the program of the Labour Party of Great Britain, drafted in accordance with instructions given to the Executive by the Conference held at Blackpool last year. The general aims of the party are stated as follows:

(i) To secure to every member of the community the standards of life and employment which are necessary to a healthy, independent and self-respecting existence;

(ii) To convert industry, step by step, and with due regard to the special needs and varying circumstances of different occupations, from a sordid struggle for private gain into a co-operative undertaking, carried on for the service of the community and amenable to its control;

(iii) To extend rapidly and widely those forms of social provision—education, public health, housing, pensions, the care of the sick, and maintenance during unemployment—in the absence of which the individual is the sport of economic chance and the slave of his environment;

(iv) To adjust taxation in such a way as to secure that due provision is made for the maintenance and improvement of the material apparatus of industry, and that surpluses created by social effort shall be applied by society for the good of all;

(v) To establish peace, freedom and justice by removing from among the nations the root causes of international disputes, by conciliation and all-in arbitration, by renouncing war as an instrument of national policy, by disarmament, by political and economic cooperation through the League of Nations, and by mutual agreement with states which are not members of the League.

Compulsory arbitration and collective agreements

Recent events in Norway and in Finland in the field of compulsory arbitration and collective agreements respectively are noted in *Industrial and Labour Information*, the weekly publication of the International Labour Office at Geneva.

In Norway the system of compulsory arbitration established by legislation last year has been seriously challenged as the result of what appears to be an unofficial trade union revolt against an award of the Court of Arbitration providing for a reduction in the wage rates for builders. For two months the building operatives, led by specially-formed "committee of action", abstained from work, while a number of printers who had been subjected to a similar award joined in the strike. Government intervention, by the withholding of unemployment benefit and in other ways, had little effect. The dispute was eventually settled by a compromise suggested by the President of the Permanent Industrial Court; but it seems to have thrown once more into the melting pot the whole question of compulsory arbitration, which has been a subject of sharp controversy in Norway during recent years, and to which the labour movement has been opposed both in and out of Parliament.

The dockers' strike in Finland, it is stated, presents some equally interesting aspects. In substance, if not in form, the dispute has arisen out of an effort by the dock workers to obtain the regulation of their conditions of employment by a collective agreement.

Hitherto, it is explained, employers in Finland have resisted such attempts, on the dual ground that the trade unions are not strong enough to enforce collective agreements and that admirable provision exists in Finnish legislation for individual contracts of service. The issue between collective agreements and individual contracts is not a new one; it has been the occasion of many past struggles in various countries, and the result of the conflict now proceeding in Finland will therefore be watched with interest abroad. The dispute has also assumed unusual importance owing to the adoption of sympathetic action by transport workers in the Scandinavian countries. The final results of this experiment in active international solidarity remain to be seen.

Scientific management of industry

In a recent issue of *Industrial and Labour Information*, the International Labour Office reproduces the declarations of opinion or policy of different countries interested in the scientific organization of production and distribution, otherwise referred to as "rationalization of industry".

In France the Government has taken preliminary steps with a view to a thorough study of the question by the Permanent Committee of the Superior Labour Council, a body which, having regard to the representative character of its composition, may be considered exceptionally qualified to deal with a matter touching so directly all the parties concerned in industry. Questionnaires designed to obtain the necessary data for the consideration of the subject and at the same time define its scope have been issued to trade organizations and factory inspectors. It is not without interest to note that one of the first replies received—that of the Chamber of Commerce of Nantes—is confined to a general pronouncement in favour of the principle of rationalization, accompanied by a plain declaration against any interference by Government with the liberty of producers to work out for themselves the methods of its application.

So far as the workers are concerned, their opinions have again received expression through the recent Congress of the Labour and Socialist International. The Congress, in effect, reaffirmed the attitude already taken by the kindred organization—the International Federation of Trade Unions—which may be briefly described as one of qualified support for measures of rationalization. It is recognized that such measures are inevitable, and indeed desirable, but it is claimed that organized labour should have a voice in de-

termining how those measures shall be carried out, in view not only of the shrinkage of employment which may be their initial result but of the effects on wages, hours and other conditions of work which they may ultimately produce. This claim, it will be recalled, was virtually admitted by the International Economic Conference of last year in a series of resolutions which, it may be noted, have recently received the endorsement of a joint conference of trade union leaders and representative employers in Great Britain.

The September issue of the *Canadian Unionist* contains the call for the second annual convention of the All-Canadian Congress of Labour, which is to open its sessions on Monday, the Fifth of November, the place of meeting being the Prince George Hotel, Toronto.

In the September-October issue of the *Accident Prevention Magazine*, published by the Portland Cement Association, reference is made to the unveiling of the safety trophies at the Hull and Belleville plants of the Canada Cement Company, Limited. The LABOUR GAZETTE, March, 1928, page 273, noted the winning of the trophies by these two Canadian mills.

Professor Horace Taylor, of the Department of Economics at Columbia College, in an address delivered before the New York Women's Trade Union League on September 29 estimated the number of unemployed in the United States at about four million persons. He referred to the recent technical

changes in industrial methods as one of the principal causes of unemployment. The immigration restrictions of recent years has done little, he considered, to ease these conditions.

The Union of Federal Office Cleaners of Ottawa, local 67, recently brought to the notice of the Minister of Labour the conditions of labour of the women engaged in charring work for the Dominion Government. It was pointed out that these women who do their work in the early morning hours receive only \$1.23 per day, pay being stopped in cases of absence through sickness, and no holiday or superannuation privileges existing as in other branches of the Federal Civil Service. Mr. Heenan undertook to call a conference on this subject with the Minister of Public Works at an early date. The women's representatives will request payment to the office cleaners on a basis enjoyed by the permanent employees of the government including the privilege of sick and holiday leave with pay, and a flat increase of \$200 per annum. It will also be urged that a lady supervisor be appointed to look after the 850 women employed at Ottawa in charring work for the government.

The Provincial Board of the British Columbia Women's Institutes is assisting in a survey of the conditions of living in the rural districts in the province, for the purpose of ascertaining whether a higher standard could be established by means of labour saving devices, cottage industries, co-operative marketing, etc.

Industrial Accidents in September

During the month of September a total of 6,094 accidents were reported to the Ontario Workmen's Compensation Board in the industries in Schedule 1 of the Act. Thirty of these were fatal cases; in Schedule 2 industries 507 were reported, including 23 fatal cases; and 431 accidents in Crown industry. 5 of which were fatal, were reported during the month, making in all 7,032 industrial accidents, of which 58 were fatal. Included among these fatalities were fifteen employees on the lake steamer *Manasoo* which foundered in Georgian Bay on September 15. Mr. R. B. Morley, general manager, Industrial Accident Prevention Associations, states that, of the thousands of accidents reported each month to the Compensation Board, about one-tenth show infection in the early stages. This, it is claimed, is largely due to failure

of men to report slight injuries. Some men seem to have a chronic objection to reporting minor cuts and scratches and too often such slight wounds have serious results because infection develops. The awards made by the Board in September totalled \$532,921.20 which included \$84,965.05 for medical aid.

The Workmen's Compensation Board of Nova Scotia states that six fatalities were reported under the act during September. The Alberta Board was notified of four fatal accidents which occurred during the same period.

The Manitoba Workmen's Compensation Board received reports of 1,153 industrial accidents during September, including seven fatalities. One of the fatalities, however, was found not to have occurred in the course of the victim's employment.

GENERAL REVIEW OF THE INDUSTRIAL SITUATION

Employment

THE employment situation at the end of September was reported by the Superintendents of the Employment Service of Canada to be as follows:—

Farm harvesting operations in the Province of Nova Scotia were almost completed and the results seemed to be rather satisfactory. The fishing industry in this Province reported rather good catches. Building and construction continued active, particularly in Halifax, as work was being rushed owing to the advancing season. Manufacturing industries appeared to be operating normally. The coal mines continued to be rather busy, with fairly good production reported. Transportation was very heavy, while the trades remained good. The demand for domestic workers continued to be satisfactory, and several placements of such workers were being made.

The fishing catches in the Province of New Brunswick were reported as fairly satisfactory. Conditions in the logging industry throughout this Province were rather quiet, although some vacancies for workers were being notified. Manufacturing in general appeared to be operating normally, with the pulp and paper group being very active. A fair volume of construction work was proceeding. The trade and transportation groups both appeared to be showing a fair volume of activity.

In Quebec, employment offices reported a falling off in the demand for farm workers. Vacancies for bush workers showed a very heavy increase and a scarcity of suitable applicants was reported by the Montreal employment office. The demand for miners showed a decrease by comparison with the preceding month. Montreal reported the printing and metal trades and textiles and tobacco factories as quite active, while the boot and shoe industry was somewhat quiet. Manufacturing in Quebec City continued to be very good, although the boot and shoe factories operated below capacity. Pulp and paper manufacturing was reported as considerably improved, with orders for workers being received. Throughout Quebec the building and construction groups remained very active. The transportation group showed considerable activity. The demand for women domestic workers continued to exceed the supply of suitable applicants.

The demand for farm workers registered at the Ontario employment offices showed a decided falling off, due to the progress which had been made with operations in the agricultural industry. Manufacturing remained very steady, and although there were a few demands for additional workers, most factories appeared to be well supplied with help. The building and construction industry was very busy, and few building tradesmen throughout the Province of Ontario were unemployed. Throughout the northern section of the Province, there was a heavy demand for logging and bush workers, with the supply inadequate in some districts. The mines in the same section of the Province continued operating on a normal basis, although there were very few vacancies for additional workers being reported. The demands for women domestic workers were quite numerous, with the usual scarcity of experienced cooks-general being noted.

With the threshing practically finished in the Province of Manitoba, the demand for farm workers showed a very marked decrease: the orders being received at the employment offices were in many cases for farm hands for regular fall work; no considerable difficulty was being experienced in securing a sufficient number of workers to fill the vacancies reported from the agricultural industry. While work on highway construction showed some activity, railway maintenance work was closing down. Building construction, particularly in the City of Winnipeg, showed very considerable activity. Manufacturers reported that they were normally busy. The trade group stated that fall business was fairly satisfactory. The demand for women domestic workers, while falling off to some extent, still remained fairly brisk.

There continued to be a fair demand for threshers in the Province of Saskatchewan, with no scarcity of applicants being reported; threshing, however, was rapidly nearing completion. The demand for farm workers for regular fall employment was not yet very pronounced. A fair volume of construction work was proceeding throughout the Province. From Estevan a small shortage of coal miners was reported. Prince Albert reported some demand for logging workers, with an insufficient number of suitable applicants available. The demand for women domestic workers was on the decrease, although still fairly substantial. The general employment

conditions throughout this Province appeared to be quite favourable.

The demand for farm workers, chiefly for threshing operations, reported by the employment offices in Alberta continued to be

fairly good, with no shortage of workers of any consequence. Building and construction, particularly in the larger centres of the Province, continued to be very busy, with Calgary reporting a shortage of labour for this class

MONTHLY STATISTICS REFLECTING INDUSTRIAL CONDITIONS IN CANADA

*Figures for end of previous months. †Bradstreet. ‡Maclean Building Review. §For group figures see articles elsewhere in this issue. **Figures for four weeks ending Sept. 29, 1928, and corresponding previous periods. ***The index of the physical volume of business includes, forestry, mining, construction, manufacturing, trade, imports, exports, car loadings, shares traded and bank debits. Industrial commodity production includes forestry, mining, manufacturing and construction. Manufacturing includes production of flour, sugar, newsprint, pig iron, steel and automobiles; imports of cotton, rubber, wool and petroleum; slaughtering of cattle, sheep and hogs; storage holdings of butter and cheese. ††Preliminary. (1) Excluding lines east of Quebec. (2) Including lines east of Quebec. (3) Life Insurance Sales Research Bureau, Hartford, Conn.

of work. Drumheller reported that coal shipments were on the increase, and that men were being added to crews daily, while Lethbridge reported that applicants for coal mining would not be sufficiently plentiful till harvesting operations had decreased. The demand for women domestic workers was on the decrease, although a fair number of placements were still being made. Employment conditions generally throughout this Province were seasonally good.

In British Columbia the demand for logging workers was on the increase, with some local shortages of suitable workers reported. While employment in the mining industry showed only minor fluctuations, the various mines continued to operate normally. The building and construction group throughout the Province showed a favourable volume of activity, and some centres reported that all local building mechanics were employed. Manufacturing industries showed normal activity. The demands for women domestic workers were rather numerous and Vancouver reports that few applicants for this work are registering at that office. General employment conditions throughout British Columbia seemed to be quite favourable.

EMPLOYERS' REPORTS

There was a slight slackening of industrial activity at the beginning of September, when the 6,567 firms reporting to the Dominion Bureau of Statistics showed a combined working force of 1,001,395 persons, as compared with 1,004,286 in the preceding month. The index number (with Jan., 1920=100) stood at 119.5, as compared with 119.9 on August 1, 1928, and with 109.4, 104.9, 96.6, 93.1, 100.0, 93.7 and 88.7 on September 1, 1927, 1926, 1925, 1924, 1923, 1922 and 1921, respectively.

Somewhat larger payrolls were reported in Quebec and Ontario, while employment in the Maritime and Prairie Provinces and British Columbia declined moderately. In the Maritime Provinces, the reduction was chiefly in highway construction, while gains were noted in manufacturing. In Quebec, there were further advances in manufacturing, construction, communications, transportation and mining, while logging was also reasonably brisker. In Ontario, manufacturing as a whole employed fewer operatives, while logging camps, communications and transportation showed improvement. In the Prairie Provinces, manufacturing, mining, communications, building and highway construction and trade afforded more employment, but railway construction was seasonally slacker. In British

Columbia, there was a decline in employment, chiefly in construction, while communications, transportation, trade and logging reported improvement.

An analysis of the returns by cities shows that employment advanced in Montreal, Quebec, Toronto, Hamilton, Windsor, Winnipeg and Vancouver, while in Ottawa slight curtailment was registered. In Montreal, manufactures showed general improvement, except in iron and steel works, and construction, transportation, communications and trade were also considerably busier. In Quebec, most of the gain took place in construction and manufacturing. In Toronto, manufacturing and communications recorded heightened activity, but construction and transportation were slacker. In Ottawa, declines were noted in trade while construction was brisker. In Hamilton, manufacturing reported increases, especially in electrical apparatus, textile and rubber factories. In Windsor and the Other Border Cities, automobile plants afforded more employment, and construction was also active. In Winnipeg, manufacturing, transportation, construction and trade registered most of the improvement. In Vancouver, reductions in personnel in construction were offset by gains in shipping.

Within the manufacturing group in the Dominion as a whole, there were declines in iron and steel, lumber and pulp and paper factories, while all other divisions reported greater activity. Logging, mining, communications, transportation, building construction, services and trade, on the whole, also reported increased employment.

An article elsewhere in this issue gives in some detail the employment situation as at the beginning of September.

TRADE UNION REPORTS

Employment conditions among local trade unions during August remained much the same as in the preceding month, as was indicated by the returns tabulated from 1,604 labour organizations, with 181,022 members. Of these 2.4 per cent were idle on August 31, compared with 2.5 per cent in July. Improvement over July was registered by Ontario, Manitoba and Alberta unions while from Quebec, Saskatchewan and Nova Scotia slight contractions in employment were reported. No change in the New Brunswick and British Columbia situation, however, was shown from that of July. In comparison with the returns for August of last year when 3.7 per cent of the members were without employment, Nova Scotia alone reported a nominal adverse

change, while in the remaining provinces the volume of work afforded increased to some extent.

On another page of this issue will be found a report in greater detail of the unemployment registered among local trade unions at the close of August.

During the month of August, 1928, the offices of the Employment Service of Canada made 75,541 references of persons to positions and effected a total of 74,234 placements. Of these, the workers placed in regular employment numbered 60,909 of which 54,861 were men and 6,048 women. Those placed in casual work totalled 13,325. Applications for work were received at the offices from 67,660 men and 13,620 women, a total of 81,280, while vacancies reported numbered 76,342 of which 63,182 were for men and 13,160 for women. A substantial increase was shown in the volume of business transacted, when the above figures were compared both with those of the preceding month and with those of August last year, the reports for July, 1928, showing 39,684 opportunities for employment, 44,711 applications made and 36,551 placements effected, while in August, 1927, there were recorded 58,858 vacancies, 64,401 applications for work and 54,743 placements in regular and casual employment. A report in detail of the work of the offices for the month of August, 1928, may be found elsewhere in this issue.

BUILDING PERMITS AND CONTRACTS AWARDED

According to a report prepared by the Dominion Bureau of Statistics, the value of building permits issued in sixty-three cities in Canada during the month of August, 1928, was \$17,383,279, as against \$25,896,986 in July, 1928, and with \$29,478,378 in August, 1927.

The *MacLean Building Review* estimates the total value of the construction contracts awarded in Canada in September, 1928, at \$45,438,900, an increase of 38.5 per cent over the corresponding figure for September, 1927. This was the largest total for any September on record. Of this amount \$19,222,700 was for business buildings, \$13,586,400 was for residential buildings, \$9,865,400 was for engineering construction, including roads, sewers, wharves, etc. The apportionment of the contracts awarded during September, 1928, by provinces was as follows:—Ontario, \$20,082,100, Quebec, \$13,387,100, New Brunswick, \$2,887,900, Nova Scotia, \$508,300, Prince Edward Island, \$124,500, British Columbia,

\$3,516,000, Alberta, \$968,600, Saskatchewan, \$2,374,900, Manitoba, \$1,589,500.

Production and Trade

INDUSTRIAL PRODUCTION. Some figures indicating the recent movements of trade and industry are given in the table on page 1045.

Business operations in Canada were more active in August than in the preceding month, according to the *Monthly Review of Business Statistics*, published by the Dominion Bureau of Statistics. Much of the material for this section is derived from this publication, to which readers are referred for fuller information on current business statistics.

Most manufacturing lines were at a high level, automobile production, after seasonal adjustment were less than in the preceding month. The output of newsprint was larger than in July, while the exports of planks and boards indicated that the lumber industry was less active. Metal mining, judged by the exports and Mint receipts, showed moderate recession, while coal was produced in greater volume. The award of new construction contracts was moderately greater than in July, though building permits showed a decline. Commodity distribution was in lesser volume as indicated by the number of employees engaged in wholesale and retail trade. Revenue carloadings showed considerable increase.

The information available, throwing light on the output of manufacturing establishments indicates that, on the whole, production was greater in August than the preceding month. The resumption of operations by a large mill contributed to the important increase in the output of newsprint. The production of steel ingots and castings was in increased volume, being maintained at a high level for the season. The output of motor cars was greater than in any other month. The imports of raw cotton were at a lower level than in July, while imports of raw wool, on the other hand, showed an increase.

EXTERNAL TRADE.

A summary of Canadian Trade prepared by the Department of National Revenue shows that in August, 1928, the merchandise entered for consumption amounted to \$114,175,346, as compared with \$103,403,649 in the preceding month and with \$99,348,340 in August, 1927. The chief imports in August 1928 were: Iron and its products, \$33,488,964; fibres, textiles and textile products, \$18,726,539; and non-metallic minerals and products, \$15,703,197.

The domestic merchandise exported in August, 1928, amounted to \$112,493,026 as compared with \$125,530,791 in July, 1928, and with \$94,216,194 in August, 1927. The chief

exports in August 1928 were: Agricultural and vegetable products, mainly foods, \$41,453,401; wood, wood products and paper, \$25,414,028; and animals and animal products, \$16,448,971.

In the five months ending August, 1928, exports of domestic merchandise totalled \$522,141,547; and imports \$520,355,476.

Strikes and Lockouts

The time loss due to industrial disputes in September, 1928, was less than during August, 1928, but slightly greater than during September, 1927. There were in existence during the month ten disputes, involving 1,414 workpeople, and resulting in a loss of 10,457 working days, as compared with seventeen disputes, involving 5,746 workpeople and resulting in a time loss of 37,634 in August. In September, 1927, there were on record thirteen disputes, involving 2,016 workpeople and resulting in a time loss of 9,231 working days. Three of the strikes and lockouts commencing prior to September terminated during the month as did two of the disputes which commenced during September. At the end of the month, therefore, there were on record five strikes and lockouts affecting 400 workpeople, not including those strikes and lockouts in which employment conditions were reported to be no longer affected but which had not been formally called off.

Prices

The cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average retail prices in some sixty cities was \$11.15 at the beginning of September, as compared with \$11.08 for August; \$10.87 for September, 1927; \$10.94 for September, 1926; \$10.81 for September, 1925; \$10.28 for September, 1924; \$10.46 for September, 1923; \$10.28 for September, 1922; \$11.82 for September, 1921; \$15.95 for September, 1920; \$16.92 for June, 1920 (the peak); \$13.31 for September, 1918; and \$7.83 for September, 1914. The increase was due mainly to higher prices for sirloin steak, veal, mutton, pork, bacon, lard, eggs, milk, butter and cheese, which more than offset the substantial decrease in the price of potatoes, and the less important decreases in the prices of flour, rice and granulated sugar. Including the cost of fuel and rent with that of foods the total budget averaged \$21.38 at the beginning of September, as compared with \$21.31 for August; \$21.05 for September, 1927; \$19.27; \$21.15 for September, 1926; \$21.02 for September, 1925; \$20.65 for September, 1924; \$20.97 for September, 1923; \$20.90 for September, 1922; \$22.37 for September, 1921; \$26.38

for September, 1920; \$26.92 for July, 1920 (the peak); \$21.11 for September, 1918; and \$14.33 for September, 1914. Fuel and rent were practically unchanged.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics was slightly higher at 149.7 for September, as compared with 149.1 for August; 151.3 for September, 1927; 152.5 for September, 1926; 156.2 for September, 1925; 153.9 for September, 1924; 154.6 for September, 1923; 147.5 for September, 1922; 161.7 for September, 1921; 245.5 for September, 1920; 256.7 for May, 1920 (the peak); and 205.0 for September, 1918. In the grouping according to chief component materials two of the eight main groups were higher, three were lower and three were unchanged. The Animals and their Products group and the Non-Metallic Minerals group advanced, the former due to higher prices for cattle, meats, milk, butter, cheese and eggs, and the latter because of higher prices for coal. The Vegetables and their Products group declined, lower prices for wheat, barley, flour, sugar, potatoes, foreign fruits, cocoa beans and rubber more than offsetting higher prices for corn, flax, oats, oat products and millfeed. The Fibres, Textiles and Textile Products group was lower, mainly because of declines in the prices of cotton, cotton products and jute. The Non-Ferrous Metals group also declined, lower prices for silver, tin and solder more than offsetting higher prices for copper and lead. The Chemicals and Allied Products group, the Iron and its Products group and the Wood, Wood Products and Paper group were practically unchanged.

The Department of Health of Canada has published a booklet (Little Blue Books: National Series, No. 40) containing a statement of the modern principles of child welfare work and giving an outline of the work carried on in Canada by various governmental agencies and by voluntary societies for the protection of children, particularly those coming to Canada from other countries. Dr. Helen MacMurchy, chief of the Division of Child Welfare of the Department, outlines the history of the movement on behalf of immigrant children, concluding with an outline of the recommendations of the delegations from the British Oversea Settlement Committee which visited Canada in 1924. The booklet enumerates the Dominion and provincial acts in effect for the protection of children, giving lists of responsible officials. It concludes with a list of all the voluntary societies interested in the welfare of immigrant children.

PROCEEDINGS UNDER THE INDUSTRIAL DISPUTES INVESTIGATION ACT DURING THE MONTH OF SEPTEMBER, 1928

DURING the month of September the Department received the reports of two Boards of Conciliation and Investigation established to deal with disputes between (1) the cities of Port Arthur and Fort William and certain of their employees in street railway service, being members of Division No. 966, Amalgamated Association of Street and Electric Railway Employees of America, and (2) the Quebec Railway, Light and Power Company and certain of its employees being motormen and conductors, members of Division No. 985, Amalgamated Association of Street and Electric Railway Employees of America.

Application Received

An application for the establishment of a Board of Conciliation and Investigation was received during September from certain employees of the Canadian National Steamships, being machinists, boilermakers, electrical workers, blacksmiths and other marine workers, members of Lodge 631, International Association of Machinists; International Brotherhood of Boilermakers, Iron Ship Builders and Helpers of America; International Brotherhood of Electrical Workers, and International Brotherhood of Blacksmiths, Drop Forgers and Helpers of America, as represented by a Joint Committee.

Other Proceedings

An application for the establishment of a Board of Conciliation and Investigation was reported in the September issue of the *LABOUR*

GAZETTE as having been received from clerks employed in the locomotive and car departments of the Canadian Pacific Railway Company, eastern lines, being members of the Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees. The dispute arose in connection with negotiations concerning an agreement governing wages and working conditions, the parties being unable to agree on three points with respect to working conditions. The employees also claimed that they had been unable to discuss the matter of wages with the employing company. The matter was taken up with the parties concerned by a departmental representative, who intimated the Minister's view that direct negotiations should be continued and every possible effort made to adjust the dispute without the necessity of Board procedure. A meeting was accordingly arranged between the parties and word was received in the Department on September 12th that a settlement had been reached and that the establishment of a Board of Conciliation and Investigation would not be therefore required.

In the case of a dispute between the Canadian Pacific Railway Company, eastern lines, and certain of its employees being locomotive engineers, members of the Brotherhood of Locomotive Engineers, a Board was established composed as follows: Mr. James T. McCall, Montreal, chairman, appointed on the joint recommendation of the other members, Sir William E. Stavert, Montreal, the company's nominee, and Mr. A. Cyril Boyce, K.C., Ottawa, the employees' nominee.

Report of Board in Dispute Between the Cities of Fort William and Port Arthur, and Their Employees in Street Railway Service

On September 17 the Minister received the report of the Board of Conciliation and Investigation established to deal with a dispute between the Cities of Port Arthur and Fort William, being members of Division No. 966, Amalgamated Association of Street and Electric Railway Employees of America. The dispute related to the employees' request for increased wages, 81 employees being directly affected and 92 indirectly. The personnel of the Board was as follows: The Reverend H. R. Grant, D.D., Fort William, chairman, ap-

pointed on the joint recommendation of the other Board members, Messrs. A. G. Seaman, of Port Arthur, the employer's nominee, and F. E. Moore, of Fort William, the employees' nominee. The report of the Board was unanimous and made certain recommendations which the employees have since intimated their willingness to accept as a settlement of the dispute. At the close of the month the Department was awaiting word from the authorities of the two cities as to their attitude toward the Board's findings. The text of the Board's report follows:—

Report of the Board

In the matter of the Industrial Disputes Investigation Act, 1907, and of a dispute between the City of Fort William and the Port Arthur Public Utilities Commission (Employers), and the employees of the above named Street Railways, as represented by Division 966, Amalgamated Association of Street and Electric Railway Employees of America (Employees).

To the Hon. PETER HEENAN,
Minister of Labour,
Ottawa, Canada.

FORT WILLIAM, ONT.,
Sept. 13, 1928.

DEAR SIR,—We, the undersigned members of the Board appointed by the Department of Labour to investigate the dispute between the above parties. *re* a wage scale to be inserted in a pending agreement, beg leave to report as follows:—

The Employers and Employees were faced with the making of a new agreement on May 1, 1928, the old one having expired. After several meetings they were on all points in agreement, except on a wage scale. It was agreed to leave this matter to a Board of Conciliation and Investigation. The Board as constituted sat in Fort William on Wednesday, Sept. 5th, and thereafter in Port Arthur.

The Employees were represented by Mr. Hoover, of Vancouver, Mr. James Douglas, Fort William, and Mr. G. A. Lambert, Fort William. The Employers were represented by Mr. W. H. Russell, Port Arthur, Mr. W. T. Brackenreid, of Port Arthur, and Mr. C. J. Moors, of Fort William.

Mr. Hoover for the Employees submitted a number of exhibits of tables of statistics for the information of the Board. These are as follows:—

1. Associations Statement showing reasons for asking a wage increase.
2. The present agreement.
3. Number of Employees affected—forty-five in each city.
4. Statement of wage increases granted last year to Street Railway Motor-Conductors in Canadian cities west of the Great Lakes.
5. Electric Railway Statistics published by the Department of Trade and Commerce for the year 1926, showing the number of fare passengers carried, the total passenger car

mileage, and fare passengers per car mile in each of the cities referred to in previous exhibit.

6. Motor-Conductors wage statistics for 1926 published by the Federal Department of Trade and Commerce.

7. Statement showing that rates of wages paid in Port Arthur and Fort William to Motor-Conductors are lower than the rates paid to this class of organized employed of any other municipal owned Street Railway in Canada.

8. Maximum wage rates paid one man car operators in some of the American cities where the rates are from 70 to 85 cents per hour.

9. Statement showing wage rates paid employees in car barn department in Fort William and Port Arthur, also wage rate for similar work in western cities and local railway shops.

10. Statement showing wage rates paid employees in the Track Department locally, also wage paid for similar work in western cities.

11. Statement showing wage increases granted employees in local railway shops since 1924.

12. Statement showing Sick Pay, Insurance, etc., granted to Municipal Street Railway Employees in other cities.

13. Comparative statement showing steady increase in passenger revenue, and number of passengers carried on Fort William Railway for the years 1925, 1926, 1927.

14. Comparative statement showing steady increase in passenger revenue, and number of passengers carried on Port Arthur Railway for the years 1925, 1926, 1927.

15. Statement of Sir Henry Thornton that he hopes increased wages on the C.N.R. will result in greater efficiency.

16. Schedule runs with "Spread over Time," in Port Arthur.

17. Synopsis of week day runs in Vancouver, all being based on the eight hour day.

18. Statement regarding the Economy of High Wages.

19. Labour Gazette figures, July, 1928, showing that the cost of living in Port Arthur is higher than the average in Canada; and higher than the average in any province in the Dominion.

20. Labour Gazette, pages 658-663, June, 1928.

21. Comparative cost of living in the cities of Port Arthur, Saskatoon, Calgary, Vancouver from Labour Gazette, June, 1928, based on the prices of 27 articles of food.

22. Actual cost of living budget. Compiled from records as submitted by 30 employees of Fort William and Port Arthur Street Railway, Aug. 1, 1928.

23. Actual cost of family sickness, dental work and time lost through sickness, compiled from cost of living budget submitted by 30 employees, showing average cost of same to be \$12.02 per month or \$144.25 per year.

24. Budget submitted by G. A. Lambert, Fort William, total \$1,799.55. Mr. Nesbit also submitted a budget of \$1,685 under examination before the Board. Mr. James Douglas gave evidence in regard to the qualities an operator must possess, viz.—intelligence, good eyesight, good appearance, courteous with the public, careful, and must also run on time. He may run as a spare for many years.

Mr. A. Hill, Mr. M. Reid, and Mr. J. Edgar also have evidence regarding their duties in the car barn. With this evidence the employees closed their case.

In rebuttal Mr. Brackenreid for the employers called no witnesses, but contented himself with submitting statements as exhibits to refute those of the employees. These were as follows:—

1. The average cost of living at the Head of the Lakes compared with average cost in five cities east and west of equal or larger population.

2. A comparison of average wages all over Canada with those paid at the Head of the Lakes for street railwaymen.

3. Weekly earnings in five cities east and west of the Lakes of operators, car house men, and trackmen.

4. Port Arthur Street Railways employees income tax returns for 1927.

5. Fort William Street Railways employees income tax returns for 1927.

6. Fort William Railway Employees wages in Car House for 1926 and 1927, also the wages of trackmen.

7. Number of passengers carried on Port Arthur Street Railway. Passengers carried per man hour, and the number of man hours for 1920-21-22-23-24-25-26-27. This closed the case for the employers.

With such a mass of exhibits before them in the way of statements it naturally took the Board some time to familiarize themselves with the evidence, and to arrive at a finding. But finally we came to this conclusion unanimously in regard to the wage scale that should be inserted in the 1928-1930

agreement between the Fort William Street Railway and the Port Arthur Public Utilities Commission and their Street Railway Employees.

1. This Wage Scale shall be operative from May First, 1928, until May First, 1930.

2. Regular spare operators working less than six hours (6) in any one day will be paid six hours (6) per day, six days (6) per week, at their respective rates, unless off sick, or unless one has missed his call.

3. The following shall be the scale of wages in the several departments of the Fort William and Port Arthur Street Railways.

(a) Transportation department, these rates are based on a one man car.

Two Man Rate

	Cents per hour
First six months..	45
Second six months..	50
Thereafter..	54½

One Man Rate

First six months..	52½
Second six months..	56½
Thereafter..	62

(b) Car House Department.

Carpenter..	65
Painter..	61
Blacksmith and Mechanic..	65
Pitman First class..	60
Pitman Second class..	55
Labourer and Car Cleaners..	50

(c) Track Department.

Extra gang..	42
Regular Trackmen..	49
Bondermen..	51

All of which is respectfully submitted.

Report of Board in Dispute Between the Quebec Railway, Light and Power Company and Its Motormen and Conductors, Members of Division No. 985, Amalgamated Association of Street and Electric Railway Employees of America

A unanimous report was received from the Board established to enquire into a dispute between the Quebec Railway, Light and Power Company and certain of its employees being members of Division No. 985, Amalgamated Association of Street and Electric Railway Employees of America. The dispute related to the alleged unfair dismissal of several employees because of certain union affiliation. Three hundred and seventy-five employees were stated to be directly affected by the dispute and 100 indirectly. The Board was composed as follows:—The Honourable Mr. Justice Aimé Marchand, Three Rivers, P.Q., chairman, appointed by the Minister in the absence of a joint recommendation from the other Board members, Messrs. Louis G. Demers, K.C., and J. B. Vachon, both of Quebec, P.Q., nominees of the company and employees, respectively. The report of the Board was submitted in French. Following is the French text with an English translation:—

Rapport des commissaires

Au sujet d'un différend entre Quebec Railway Light and Power Company (patron), et certains de ses employés conducteurs et gardes-moteurs, membres de la division n° 985 de "Amalgamated Association of Street and Electric Railway Employees of America" (employés).

A l'Honorable

Le Ministre du Travail du Canada,
Ottawa.

Les Commissaires nommés pour constituer un conseil d'enquête et de conciliation dans cette affaire, savoir:—

Aimé Marchand, Président,

Louis G. Demers, désigné par le patron,

J. B. Vachon, désigné par les employés, ont l'honneur de faire leur rapport de leurs procédés, des faits prouvés devant eux, de leurs démarches en vue de conciliation du différend et du résultat de ces démarches.

PROCÉDÉS

Les Commissaires se sont fait assermenter le 24 septembre 1928, sur la forme d'assermentation fournie, par Sa Seigneurie, l'Honorable Sir F. X. Lemieux, Juge en Chef de la Cour Supérieure de la province de Québec.

Ils ont ensuite procédé à entendre les parties et pour ce faire ont tenu séance au Palais

de Justice à Québec, les 24, 25 et 28 septembre 1928.

Devant eux ont comparu les parties représentées comme suit:—

Le *patron* par M. Eugène Tanguay, son gérant général et Joseph Henri Levasseur, inspecteur général, et

Les *employés* par Alzie Bastien, Lucien Plamondon et Alfred Carrière;

Sur objection des employés les Commissaires ont refusé de permettre aux parties d'être représentées par des avocats;

A l'ouverture de l'enquête, demande a été faite par "La Fraternité des Employés de Québec Incorporée", d'intervenir, et cette demande a d'abord été refusée par vos Commissaires sur objection prise par les employés, l'intérêt de cette union n'apparaissant pas suffisant pour permettre telle intervention; les Commissaires réservant cependant le droit de permettre et de demander telle intervention au cours de l'enquête, s'il apparaissait que telle intervention pouvait être utile ou nécessaire.

Et à l'ouverture de la séance de l'après-midi du même jour les Commissaires ont invité la Fraternité à intervenir, et ses représentants ont alors refusé d'intervenir comme partie, ajoutant qu'elle ne voulait pas entrer en négociations avec les employés et déclarant qu'elle était cependant disposée à négocier avec le patron.

FAITS PROUVÉS

Le quinze mai 1920 la Compagnie a fait une convention avec la "Fraternité Nationale des Employés de Tramways de Québec" où cette union a été reconnue par la Compagnie, dans laquelle une échelle des salaires a été fixée et où il a été stipulé par l'article 2 que nous reproduisons textuellement:—

"2. La Compagnie n'emploiera que les conducteurs et gardes-moteurs qui font partie de ladite association."

Cette convention a été renouvelée le 16 février 1928 et la clause que nous venons de citer a été reproduite dans les mêmes termes et copie de cette dernière convention a été transmise au Département du Travail de la province de Québec, pour enregistrement, le 18 août 1928.

Les employés ont fait entendre des témoins dans le but de prouver que cette dernière con-

vention avait été signée par la Compagnie et la Fraternité en août 1928 seulement et non pas à la date qu'elle comporte, mais les Commissaires sont d'opinion qu'ils ont totalement failli d'établir cette prétention.

En juillet 1928, à la demande d'un certain nombre d'employés déjà membres de la Fraternité, des négociations ont été commencées pour former une division ou conseil local de l'union internationale des employés de tramways, et de fait le 17 juillet un conseil a été établi où ont été affiliés 110 membres et, le 3 août, Alexandre Pruneau et Philippe Morin ont été élus respectivement président et secrétaire de ce conseil.

À la suite de cet établissement trois employés, Robitaille, Pruneau et Morin, membres de ce conseil, ont été congédiés par le patron, pour cause de désobéissance, d'après le patron, ce qui n'a pas été contredit par la preuve.

Le 17 août les employés ont formé la requête pour l'établissement du conseil de conciliation sur lequel les Commissaires ont été nommés.

Le 18 août un avis a été affiché signé par la Fraternité requérant ses membres conducteurs et gardes-moteurs de se présenter devant l'exécutif de l'association sous peine d'être exclus de l'association.

Le 23 août, une lettre a été écrite par la Fraternité au patron donnant une liste des noms des employés ayant, par suite de leur défaut de faire vérifier leur affiliation, cessé d'être membres de la Fraternité. Cette liste comprenait les noms de trente-quatre employés.

Il semble bien ressortir de la preuve que ces employés avaient été exclus de la Fraternité à cause de leur affiliation au conseil local de l'Union Internationale.

Et le patron a, le 27 août, congédié les employés mentionnés dans cette liste.

Les Commissaires joignent à ce rapport les documents suivants produits à l'enquête:—

Comme exhibit A: convention du 16 février 1928, entre le patron et la Fraternité (copie).

Comme exhibit B: convention du 15 mai 1920, entre les mêmes parties (copie).

Comme exhibit C: lettre de la Fraternité au patron du 23 août 1928.

Comme exhibit D: reçu du Département du Travail de la province de Québec du 18 août 1928.

DÉMARCHES POUR CONCILIATION

La position des parties était donc celle-ci: la compagnie se disait liée par un contrat avec la Fraternité Nationale à n'employer que les membres de celle-ci; la "Fraternité" prétendait

avoir, en vertu de ce contrat, le privilège exclusif de fournir à la Compagnie les employés nécessaires; les employés en cause demandaient d'être réinstallés dans leur emploi et d'être payés de leur salaire.

Un règlement ne pouvait donc s'effectuer que dans l'un des cas suivants: 1° Si la Compagnie annulait, comme elle en avait le droit en donnant un avis de deux mois, son contrat avec la "Fraternité"; 2° Si la "Fraternité" renonçait au privilège exclusif qu'elle prétend lui être conféré par son contrat; et 3° Si les employés abandonnaient leurs demandes ou obtenaient leur réinstallation dans les rangs de la Fraternité.

Les Commissaires ont conféré avec la Compagnie. Le résultat de cette conférence a été que la Compagnie ne croyait pas devoir, dans les circonstances, annuler la convention. Les employés ont offert d'abandonner leur réclamation pour salaire pendant le chômage et se sont déclarés prêts à reprendre l'emploi aux salaires déterminés par le contrat.

Les Commissaires se sont crus autorisés à conférer aussi avec la "Fraternité Nationale", bien qu'elle ne fût pas partie au litige. Celle-ci, par ses officiers, a refusé également de mettre fin au contrat et refusé aussi de réinstaller les employés dans ses rangs, collectivement, laissant à chacun de demander leur réadmission et se réservant de juger chaque telle demande à son mérite.

RECOMMANDATION

La cause du différend est évidemment la position faite à la Compagnie par l'engagement qu'elle a pris de n'employer que des membres de la "Fraternité Nationale".

Devant les déclarations de la Compagnie et de la "Fraternité" qu'elles n'entendent pas annuler ou modifier les termes de cette convention, les Commissaires ne croient pas pouvoir faire aucune recommandation utile.

La clause de la convention qui impose à la Compagnie l'obligation de n'employer comme conducteurs et gardes-moteurs que les membres de la "Fraternité Nationale" la lie-t-elle ou justifie-t-elle le renvoi d'employés qui cessent d'appartenir à cette "Fraternité" pour faire partie d'une autre union?

Les Commissaires croient que la décision de cette question est de la compétence des tribunaux civils.

Et les Commissaires ont signé le présent rapport à Québec, ce vingt-huitième jour de septembre 1928.

(Signé) AIMÉ MARCHAND,
président.

(Signé) LOUIS G. DEMERS.

(Signé) J. B. VACHON.

EXHIBITS

Auxquels il est référé dans le rapport des Commissaire re Quebec Railway, Light & Power Company (patron), et certains de ses employés conducteurs et gardes-moteurs, membres de la division n° 985 de "Amalgamated Association of Street and Electric Railway Employees of America" (employés).

CONVENTION

Ce seizième jour de février, l'an mil neuf cent vingt-huit, la Quebec Railway, Light & Power Company (Division des Tramways de la Ville) corps politique et incorporé, ayant son bureau d'affaire en la Cité de Québec, ci-après appelée "La Compagnie" et ici représentée par J. E. Tanguay, son gérant général, et Ralph Mayne Reed, surintendant de la division des tramways. *Partie de la première part et La fraternité nationale des employés de tramways de Québec* (Union des conducteurs et garde-moteurs de la division des tramways de la Ville) ci-après appelée "l'Union" et représentée par le garde-moteur Eugène Giroux, son président, et le garde-moteur Emile Lavoie, son secrétaire. *Partie de la seconde part:* Ont convenu ce qui suit:

1. ENTENDU que la compagnie a reconnu l'Union ci-dessus mentionnée, depuis 1920, et que cette entente va continuer jusqu'à ce qu'elle soit annulée par l'une ou l'autre des parties, en donnant avis de deux mois, par écrit, à cet effet.

2. La compagnie n'emploiera que les conducteurs et garde-moteurs qui font partie de la dite association.

3. Que tout différend concernant les engagements, renvois ou suspensions, ou les conditions de travail des conducteurs et garde-moteurs sera soumis à un comité composé de deux membres de l'association ci-dessus mentionnée et employés de la compagnie, et deux membres de la Compagnie, avec un président de comité. Le président, cependant, n'aura pas le droit de voter sur aucune question soumise au comité et sera nommé par les quatre membres de comité.

4. *Section n° 1.* Les conducteurs et les garde-moteurs devront recevoir à partir du 1er février 1928, une augmentation de (2½) centins, deux centins et demi pour chaque heure de travail, en plus des prix payés à la date du 31 janvier 1928.

L'échelle de prix sera la suivante:

En entrant en service..	37
Après un an de service..	43
Après deux ans de service..	45
Après cinq ans de service..	48

5. *Section n° 2.* Le ou après le 1er janvier 1929, une augmentation de (½) une demi cent, pour chaque heure de travail sera payé aux conducteurs et garde-moteurs en plus des prix payés à la date du 31 décembre 1928.

L'échelle de prix sera la suivante:

	Centins par heure
En entrant en service..	37
Après un an de service..	43
Après deux ans de service..	45
Après cinq ans de service..	48

6. *Section n° 3.* Le ou après le 1er janvier 1930, une augmentation de deux centins (2) par heure, pour chaque heure de travail, sera payée aux conducteurs et garde-moteurs en plus des prix payés à la date du 31 décembre 1929.

L'échelle des prix sera la suivante:

	Centins par heure
En entrant en service..	39
Après un an de service..	45
Après deux ans de service..	47
Après cinq ans de service..	50

7. *Section n° 4.* Les hommes en devoir sur les chars à un homme recevront cinq centins supplémentaires pour chaque heure.

Deux centins supplémentaires seront payés pour chaque heure après une journée de dix heures.

Ces échelles de salaires ci-haut mentionnées seront en force jusqu'au 31 décembre 1932.

La partie de la seconde part devra respecter le contrat actuellement en vigueur entre les conducteurs et garde-moteurs et la partie de la première part.

Fait et passé en la cité de Québec, au bureau de la Compagnie, à la date ci-dessus mentionnée, et lecture faite, lesdites parties ont signé:

THE QUEBEC RAILWAY LIGHT &
POWER COMPANY
(DIVISION DES TRAMWAYS DE LA
VILLE)

Partie de la première part.

par J. E. TANGUAY,
Gérant général.
par R. M. REED,
Surintendant.

LA FRATERNITE NATIONALE DES EMPLOYÉS DE TRAMWAYS DE QUÉBEC
(CONDUCTEURS ET GARDE-MOTEURS)

Partie de la seconde part

Par EUG. GIROUX,
Président de l'Union.
EMILE LAVOIE,
Secrétaire de l'Union.

Témoins: Les parties déclarent en plus qu'elles entendent maintenir en vigueur toutes les clauses des contrats passés depuis 1920.

	31 janvier 1928	1er février 1928
34 centins, augmenté à 36½ centins de l'heure

42 " " "	44½ "	"
45 " " "	47½ "	"

PROJET D'ARRANGEMENT

Ce quinzième jour de mai, l'an mil neuf cent vingt, la Quebec Railway, Light & Power Company (Division des Tramways de la Ville) corps politique et incorporé, ayant son bureau d'affaires en la Cité de Québec, ci-après appelé "La Compagnie" et ici représentée par W. J. Lynch, son gérant général, et Ralph Mayne Reed, surintendant de la division des tramways, *Partie de la première part:* et la Fraternité nationale des employés de tramways de Québec, (Union des conducteurs et garde-moteurs de la division

des tramways de la ville) ci-après appelée "L'Union" et représentée par le garde-moteur Emile Beaulieu, son président, et le Conducteur Joseph Brousseau, son Secrétaire. *Partie de la seconde part*; Ont convenu de ce qui suit:

1. La Compagnie consent à reconnaître l'Union ci-dessus mentionnée, à partir du 15 mai 1920, et jusqu'à ce que cette entente soit annulée par l'une ou l'autre des parties, en donnant avis de deux mois, par écrit, à cet effet.

2. La Compagnie n'emploiera que les conducteurs et garde-moteurs qui font partie de ladite association.

3. Que tout différend concernant les engagements, renvois ou suspensions, ou les conditions de travail des conducteurs et garde-moteurs, sera soumis à un comité composé de deux membres de l'association ci-dessus mentionnée et employés de la compagnie, et deux membres de la Compagnie, avec un président de comité. Le président, cependant, n'aura pas le droit de voter sur aucune question soumise au comité et sera nommé par les quatre membres de comité.

4. L'échelle suivante de gages sera en vigueur le 16 mai 1920.

	Centins par heure
En entrant au service de la Compagnie..	34
Après un an de service..	40
Après deux ans de service..	42
Après cinq ans de service..	45

La partie de la seconde part devra respecter le contrat actuellement en vigueur entre les conducteurs et garde-moteurs et la partie de la première part, lequel n'expirera qu'au 1er mars 1921.

Fait et passé en la cité de Québec, au bureau de la Compagnie, à la date ci-dessus mentionnée, et lecture faite, lesdites parties ont signé:

Secrétaire du Sous-ministre.

QUÉBEC, 18 août 1928.

TRANSLATION

Report of Board

Established in the matter of a dispute between the Quebec Railway Light and Power Company, employer, and certain of its employees, conductors and motormen, members of Division No. 985, Amalgamated Association of Street and Electric Railway Employees of America, employees.

To the Hon. the Minister of Labour,
Ottawa.

The Commissioners appointed to form a Board of Conciliation and Investigation, namely:—

Aimé Marchand, Chairman,
Louis G. Demers, nominated by the employer,

J. B. Vachon, nominated by the employees,

have the honour to submit to you the report of the Board's proceedings, the evidence submitted, the Board's efforts to bring the parties to an understanding, and the results of said efforts.

PROCEEDINGS

The members of the Board were sworn in on September 24, 1928, using the form supplied them by His Lordship, the Hon. Sir F. X. Lemieux, Chief Justice of the Superior Court of the Province of Quebec.

The Board then undertook to hear the parties to the dispute, and to this end held sittings at the Court House, in Quebec City, on September 24, 25 and 28, 1928.

The parties to the dispute were represented as follows:—

For the employer, Mr. Eugene Tanguay, general manager of the company, and Joseph Henri Levasseur, inspector general.

For the employees, Alzie Bastien, Lucien Plamondon and Alfred Carriere.

The employees objected to the parties being represented by lawyers, and this objection was sustained by the Board.

Request to take part in the proceedings was submitted by "La Fraternité des Employés de Québec, Incorporée", at the inaugural meeting, but was turned down at first by your Board on objection from the employees, the interest of this organization in the dispute not appearing sufficient to warrant its intervention; the Board, however, reserving the right to authorize and request said intervention in the course of the investigation, if they thought it necessary and profitable.

Your Board, at the opening of the sitting held in the afternoon of the same day, invited the "Fraternité" to take part in the proceedings, but met with a refusal from the representatives of the organization which did not want to come in as a party to the dispute, adding that their "Fraternité", although willing to negotiate with the employer, did not wish to enter into negotiations with the employees.

EVIDENCE

On May 15, 1920, the company signed an agreement with the "Fraternité Nationale des Employés de Tramways de Québec" giving recognition to said "Fraternité" and providing for a schedule of wages. Article 2 of said agreement provides as follows:—

"2. Company to employ exclusively conductors and motormen members of said Association."

This agreement was renewed on February 16, 1928, without any change in the above-quoted article, and copy of same addressed on August 18, 1928, to the Department of Labour of the Province of Quebec for registration.

Witnesses were brought forward by the employees to prove that the last-mentioned agreement had been signed by the company and the "Fraternité" in August, 1928, and not at the date mentioned therein, but your Board are nevertheless of the opinion that the employees have failed to substantiate their contention.

In July, 1928, at the request of a certain number of employees, members of the "Fraternité", steps were taken with a view to the establishment of a division or local council of the international body of street railway employees, with the result that a council, grouping 110 members, was established July 17, which on August 3 elected Alexandre Pruneau and Philippe Morin as president and secretary, respectively.

Following this, three employees, members of the new council—Robitaille, Pruneau and Morin—were dismissed from the service by the employer for disobedience to orders, a charge that is not disproved by the evidence submitted by the employees.

On August 17 the employees drew up a request for the establishment of a Board of Conciliation and Investigation, which led to our appointment.

Notice issued by the "Fraternité" on August 18, requested, under penalty of dismissal from the organization, all its members, conductors and motormen, to appear before the Executive Board of the "Fraternité".

On August 23, a letter was sent the employer by the "Fraternité" in which were listed the names of employees, thirty-four in number, who, having neglected to have their right to membership in the "Fraternité" established, were no longer considered members of this organization.

It seems clearly shown by the evidence that these men had been expelled from the "Fraternité" by reason of their affiliation with the local unit of the International Union.

On August 27, the employer dismissed from his employ the employees whose names appeared on the above-mentioned list.

To the report of your Board are attached the following exhibits submitted in the course of the investigation:—

Exhibit A.—Agreement signed February 16, 1928, between employer and the "Fraternité". (Copy).

Exhibit B.—Agreement signed May 15, 1928, between same parties. (Copy).

Exhibit C.—Letter addressed, under date of August 23, 1928, by the "Fraternité" to the employer.

Exhibit D.—Acknowledgment from Department of Labour of the Province of Quebec, dated August 18, 1928.

EFFORTS TOWARDS CONCILIATION

The situation, therefore, may be summarized as follows: The company claimed to be bound to the "Fraternité Nationale" by an agreement under which it could employ only members of said "Fraternité"; the "Fraternité" claimed the exclusive right, under the agreement passed with the company, to supply the latter with the men it required; the employees concerned asked to be taken back in the service and to be paid for lost time.

There were only three avenues of settlement opened; (1) For the company to cancel its agreement with the "Fraternité", which it had a right to do, on giving the "Fraternité" two months' notice of its intention; (2) For the "Fraternité" to waive its right to the privilege granted it under the agreement with the company; (3) For the employees to abandon their claims or to be taken back in the membership of the "Fraternité".

Your Board met the company, but the result of the conference was that the company, under the circumstances, did not think it advisable to cancel the agreement. The employees offered to abandon their claim for wages covering the period during which they had been out of work, and stated they were willing to resume work under rates of wages provided in the agreement.

Although the "Fraternité Nationale" was not a party to the dispute, your Board nevertheless felt justified in conferring with this body. Speaking through its officers, the "Fraternité" refused to bring to an end its agreement with the company, and refused also to take back collectively the former members expelled, stating that every one of them must ask individually to be taken back, the "Fraternité" reserving the right to judge every such request on its merits.

RECOMMENDATIONS

The actual cause of the dispute is evidently the position in which the company is placed as a result of its agreement with the "Fraternité Nationale" to employ exclusively members of this organization.

In view of the decision of both the company and the "Fraternité" not to cancel the agreement in force or to amend same, your Board regrets to report that it does not see its way clear to make any useful recommendation.

Does the article of the agreement compelling the company to employ only conductors and

On entering service..	from 34 cents per hour to 36½ cents
After first year..	from 40 cents per hour to 42½ cents
After second year..	from 42 cents per hour to 44½ cents
After fifth year..	from 45 cents per hour to 47½ cents

motormen, members of the "Fraternité Nationale", bind the company or justify the dismissal of employees who leave the "Fraternité" to join up with any other labour union?

Your Board are of the opinion that this matter is one that is within the competency of a civil court.

And the undersigned members of your Board have signed this report in the City of Quebec this 28th day of September, 1928.

(Signed) AIME MARCHAND,
Chairman.

EXHIBITS

Referred to in Report of Board established in the matter of a dispute concerning The Quebec Railway, Light and Power Company, (employer) and certain of its employees, conductors and motormen, members of Division No. 985, Amalgamated Association of Street and Electric Railway Employees of America, (Employees).

"A"
AGREEMENT

On this sixteenth day of February of the year 1928, The Quebec Railway, Light and Power Company (street railway division), an incorporated and political body having its headquarters in the City of Quebec, hereinafter called "The Company" and represented by Mr. J. E. Tanguay, its general manager, and Ralph Mayne Reed, superintendent of the street railway division, *Party of the First Part*; and La Fraternité National des Employés de Tramways de Québec (union of the conductors and motormen of the street railway division of the City of Quebec), hereinafter called "The Union" and represented by motorman Eugène Giroux, its president and the motorman Emile Lavoie, its secretary, *Party of the Second Part*; have agreed as follows:—

1. Whereas the above-mentioned union has been recognized by the company since 1920, and that the present agreement is to remain in force until cancelled by either party by written notice of two months to this effect.

2. Company to employ exclusively conductors and motormen members of said association.

3. Any dispute relating to employment, dismissal or suspension of employees, or to working conditions of motormen and conductors, to be placed before a Board consisting of two

members of the above-mentioned association, employees of the company, and two representatives of the company, together with a chairman selected by the four appointed members of said committee, who, however, will be denied the right to vote on any of the matters brought before said committee.

4. *Section No. 1.* Conductors and motormen to receive from the first day of February, 1928, an increase in pay of two and a half (2½) cents per working hour, in addition to the rates paid from January 31, 1928.

The rates of wages to be as follows—

	January 31, 1928	February 1, 1928
On entering service..	from 34 cents per hour to 36½ cents	36½ cents
After first year..	from 40 cents per hour to 42½ cents	42½ cents
After second year..	from 42 cents per hour to 44½ cents	44½ cents
After fifth year..	from 45 cents per hour to 47½ cents	47½ cents

5. *Section No. 2.* From and after the first day of January, 1929, an increase of half a cent (½) per working hour to be paid conductors and motormen, in addition to rates of wages paid on December 31, 1928.

The rates of wages to be as follows:—

	Cents per hour
On entering service..	37
After first year..	43
After second year..	45
After fifth year..	48

6. *Section No. 3.* From and after the first day of January, 1930, an increase of two (2) cents per working hour to be paid conductors and motormen, in addition to rates of wages paid on December 31, 1929.

The rates of wages to be as follows:—

	Cents per hour
On entering service..	39
After first year..	45
After second year..	47
After fifth year..	50

7. *Section No. 4.* One-man car operators to receive five cents per hour above given rates while on duty.

Two cents above given rates for every hour of work performed over ten per day.

Above-mentioned schedules of wages to remain in force until December 31, 1932.

The Party of the Second Part to abide by agreement signed by conductors and motormen and the Party of the First Part.

Agreement prepared and signed in the City of Quebec, at the offices of the company on the aforementioned date, by all parties thereto, after having read same.

"B"
AGREEMENT

On this fifteenth day of May, 1920, the Quebec Railway, Light and Power Company (Street Railway Department), an incorporated and political body having its headquarters in the City of Quebec, hereinafter called "The Company" and represented by W. J. Lynch, its general manager, and Ralph Mayne Reed, superintendent of its street railway Department, *Party of the First Part*; and "La fraternité nationale des employés de tramways de Québec" (Union of the conductors and motormen of the street railway service of the City of Quebec), hereinafter called "The Union" and represented by motorman Emile Beaulieu, its president, and conductor Joseph Brousseau, its secretary, *Party of the Second Part*; have agreed as follows:—

1. The company agrees to recognize above-mentioned union from May 15, 1920, until present agreement is cancelled by a written notice of two months given by either party.

2. The company to employ exclusively conductors and motormen members of said association.

3. Any dispute relating to employment, dismissal or suspension of employees, or to working conditions of conductors and motormen, shall be submitted to a Board consisting of two members of the above-mentioned association and employees of the company and two representatives of the company, headed by a chairman, who shall be appointed by the four above-mentioned members of the Board, but will have no right to vote on any of the matters coming before the Board.

4. The following schedule of wages to take effect May 16, 1920:—

	Cents
	per hour
On entering service of the company.	34
After first year.	40
After second year.	42
After fifth year.	45

The Party of the Second Part agrees to abide by agreement presently covering conductors and motormen and Party of the First Part, which agreement expires March 1, 1921.

Agreement prepared and signed in the City of Quebec, at the office of the company, on the aforementioned date, by all parties thereto, after having read same.

DEPARTMENT OF PUBLIC WORKS AND LABOUR
OFFICE OF THE DEPUTY MINISTER

Received from M. Emile Lavoie a working agreement, dated February 16, 1928, between The Quebec Railway, Light and Power Company and "La Fraternité Nationale des Employés de Tramways de Québec."

(Signed) ADÉLARD CÔTÉ,
Secretary to Deputy Minister.

Quebec, August 18, 1928.

By an order in council in the Province of Nova Scotia provision is made for the appointment of an advance poll for the benefit of every railway employee, fisherman, sailor and commercial traveller being a voter, whose name is registered on the list of voters of any polling district, and whose employment or calling is such as to necessitate from time to time his absence from his ordinary place of residence, and who has reason to believe that because of necessary absence from such place of residence in the pursuit of his employment or calling he will be unable to vote on polling day.

SUMMARY OF PROCEEDINGS UNDER THE INDUSTRIAL DISPUTES INVESTIGATION ACT

THE tables presented below summarize the proceedings under the Industrial Disputes Investigation Act for the fiscal year ending March 31, 1928, and from March 22, 1907, to March 31, 1928.

Exchange of Student Employees by Great Britain and France

The Governments of Great Britain and France recently concluded a new arrangement for facilitating the interchange of student employees between the two countries. Arrangements have been made from time to time with the authorities of certain countries to facilitate the reciprocal admission of student employees, and since March, 1923, an arrangement of this nature between the British and French authorities has existed, allowing a limited number of French student employees to follow employment except in connection with hotels, restaurants and hair-dressing. From the end of 1924, difficulties in carrying out this arrangement arose owing to restrictions imposed on the visiting employees by both countries under the new arrangement.

French and British "Student employees" may be permitted to take up employment

in the country visited for a limited period, generally one year, in order to perfect themselves in the knowledge of its language or commercial and professional customs.

Student employees may be of either sex. The number of permits is limited to 250 employees of each country for the period of July to December 31, 1928, and is not thereafter to exceed 500 in a year. Student employees will be allowed to follow all employments and professions save those in which the employment of foreigners is forbidden by law. Special conditions must be observed by those obtaining work in hotels and restaurants, hairdressing establishments, banks and hospitals. The competent authorities of both countries undertakes to assist their visitors to find employment.

CANADIAN NATIONAL RAILWAYS EMPLOYEES' BOARD OF ADJUSTMENT No. 2

Report of Proceedings of Board Covering Period September 1st, 1925, to December 31st, 1927

Official statement over signatures of Chairman and Vice-Chairman of Board with record of cases dealt with.

Room 313, 94 McGill Street,
Montreal, Que.

January 1, 1928.

The following is report of Proceedings of the Canadian National Railway Employees' Board of Adjustment No. 2 covering the period from the date of its inception, September 1, 1925, to December 31, 1927.

This Board was established for the purpose of disposing of outstanding grievances or disputes that might arise from the application, non-application, or interpretation of the Schedule of working conditions for "Clerks and Other Classes of Employees as herein named", which are not adjusted between the Officers of the Railway and the Representatives of the employees.

The members of the Board are appointed for a term of one year, subject to reappointment, and it is composed of four members selected by the Management and four members selected by the Representatives of the employees concerned. The decisions of the Board are binding upon the parties to the agreement. Provision was made in the agreement constituting the Board for the appointment of an arbitrator in any case in which the Board might be unable to agree upon an award. Up to the present time in only one case has it been found necessary to appoint an arbitrator.

The Memorandum of Agreement constituting the Board reads as follows:—

MEMORANDUM OF AGREEMENT MADE BETWEEN
THE CANADIAN NATIONAL RAILWAYS ON
THE ONE PART, AND ITS EMPLOYEES
COVERED BY SCHEDULE FOR "CLERKS AND
OTHER CLASSES OF EMPLOYEES AS HEREIN
NAMED", AS REPRESENTED BY THEIR
GENERAL CHAIRMEN, MEMBERS OF THE
EMPLOYEES' COMMITTEE WHICH NEGOTIATED
THIS SCHEDULE, ON THE OTHER
PART.

The parties hereto agree to the establishment of a Board composed of members to be selected as hereinafter prescribed for the pur-

pose of disposing of outstanding grievances or disputes that may arise from the application, non-application or interpretation of the schedule of wages and working conditions now in effect or hereinafter established, which are not promptly adjusted between the Officers of the Railway and the Representatives of the Employees.

Now, therefore, it is agreed by and between the parties as follows:—

1. There shall be created, as soon as practicable, a Board to be known as "Board of Adjustment for Employees covered by Schedule for 'Clerks and Other Classes of Employees as Herein Named'", hereinafter referred to as the "Board", composed of eight (8) members, four (4) to be selected by the Railway, and four (4) to be selected by the Employees. The members shall be appointed for a term of one year, subject to reappointment. Should a permanent vacancy occur on the Board such vacancy shall immediately be filled by the same authority as made the original selection, and in case of a temporary absence of any member, a substitute will be appointed by the same authority as made the original appointment. The employees' representatives on the Board shall be employees of the Railway. When necessary, and when mutually agreed, ex-employees may be named to represent employees.

2. The Board shall meet in the City of Montreal within fifteen (15) days after the appointment of its members, and select a Chairman and a Vice-Chairman who shall be members of the Board. The Chairman or the Vice-Chairman shall preside at meetings of the Board, and both, if present, will be required to vote upon the adoption of all decisions by the Board.

3. The Chairman and Vice-Chairman shall serve for periods of six (6) months, and Representatives of the Railways and of the Employees shall alternate in filling the positions. When the Chairman is a representative of the Railway the Vice-Chairman shall be a representative of the Employees and vice versa.

4. Unless otherwise decided by the majority of the Board all meetings of the Board shall be held in the City of Montreal.

5. The Board shall render decisions on all matters of controversy as provided in the preamble hereto and when properly submitted to the Board. A majority vote of the full Board will be necessary for a decision which shall be binding upon both parties.

6. Cases not decided in accordance with Rule 5 at one session may be placed on the table for reconsideration at the next succeeding session. If no decision is reached either party may, if desired, call upon the other to join in submission of the dispute to an arbitrator to be mutually agreed upon at the time, which request will be promptly complied with.

7. Disputes arising will be handled as heretofore up to and including the General Manager or corresponding officer of another Department. If decision given is not satisfactory to the employees, the case may be appealed to the Board.

8. The Board shall have authority to make its own regulations as to when they shall meet and what records they shall keep, and all other matters pertaining to their activities, except such as are specifically covered by this Agreement. The records to be kept shall include all matters submitted for consideration and all decisions made by the Board.

9. Each party hereto will compensate its own appointed representatives on the Board, and personal expenses will be cared for in the same manner. Any general expenses which may be incurred will be divided equally between the parties hereto.

10. (a) In each case presented to the Board an effort will be made to present a joint concrete statement of facts, but the Board is authorized to require information in addition to the statement of facts, and may call for additional evidence either oral or written, from either side. Either party shall be entitled to an oral hearing before the Board upon request.

(b) No grievance outstanding prior to January, 1925, shall be submitted to this Board for adjustment, unless by mutual consent of both parties to the agreement.

11. All disputes arising out of proposed changes in rates of pay, rules or working conditions, are specifically excluded from the jurisdiction of the Board.

12. This agreement shall become effective as of September 1, 1925, and shall remain in full force and effect until cancelled by thirty (30) days' notice given at any time by either party to the other.

On behalf of the Railways—

(Sgd.) W. U. APPLETON,
General Manager, Atlantic Region.

(Sgd.) A. E. WARREN,
General Manager, Central Region.

(Sgd.) W. A. KINGSLAND,
General Manager, Western Region.

On behalf of the Employees—

(Sgd.) W. C. SMITH,
General Chairman, Atlantic Region.

(Sgd.) J. E. MCGUIRE,
General Chairman, Central Region.

• (Sgd.) R. DYKES,
General Chairman, Western Region.

NOTE.—On November 17, 1925, it was agreed that cases arising under schedules covering Sleeping, Dining and Parlour Car employees could be dealt with by the Board.

During the period covered by this report the following changes have taken place in the personnel of the Board:—

July 19, 1926: Mr. W. A. Kirkpatrick, Railway Representative, Saskatoon, Sask., retired as a member of the Board.

July 19, 1926: Mr. J. M. Grieve, Toronto, succeeded Mr. W. A. Kirkpatrick as Representative of the Railway.

Dec. 1, 1927: Mr. J. M. Grieve, Railway Representative, Toronto, Ont., retired as member of the Board.

Dec. 1, 1927: Mr. G. S. Jessup, Montreal, succeeded Mr. J. M. Grieve as Representative of the Railway.

Officers Elected During Period

Mr. J. F. Aitchison elected Chairman, September 30, 1925.

Mr. A. R. Mosher, elected Vice-Chairman, September 30, 1925.

Mr. A. R. Mosher elected Chairman, May 18, 1926.

Mr. J. F. Aitchison elected Vice-Chairman, May 18, 1926.

Mr. Geo. Turvey elected Chairman, November 16, 1926.

Mr. M. M. McLean elected Vice-Chairman, November 16, 1926.

The Board at present consists of the following members:—

Railways' Appointees

Mr. Geo. Turvey, Toronto, Ont., Chairman.

Mr. H. Morton, Moncton, N.B.

Mr. G. S. Jessup, Montreal, Que.

Mr. J. F. Aitchison, Toronto, Ont.

Employees' Appointees

Mr. M. M. McLean, Ottawa, Ont., Vice-Chairman.

Mr. A. R. Mosher, Ottawa, Ont.

Mr. N. L. Preston, Winnipeg, Man.

Mr. C. H. Minchin, Calgary, Alta.

The accompanying condensed statement of the cases which have been submitted to the Board for consideration and the decisions rendered in regard to them, as well as the financial statement covering the period from September 1, 1925, to December 31, 1927, are issued as a matter of record for the information of all concerned.

(Sgd.) GEO. TURVEY,
Chairman.

(Sgd.) M. M. MACLEAN,
Vice-Chairman.

CANADIAN NATIONAL RAILWAYS EMPLOYEES' BOARD OF ADJUSTMENT No. 2

REPORT OF PROCEEDINGS—Summary of Cases Submitted to the Board from its inception September 1, 1925, to December 31, 1927

Case No.	Case heard	Decision rendered	Department affected	Question	Synopsis of Decision
1	Nov. 17, 1925	Nov. 19, 1925	Traffic Dept., Atlantic Region.	Claim of Miss Annie Leonora Biggs, Stenographer, Gen. Baggage Agent's Office, Moncton, for maximum apprentice rate of pay.	Claim of employees sustained.
2	Nov. 17, 1925	Nov. 19, 1925	Traffic Dept., Atlantic Region.	Claim of J. Edgar Sonier, Gen. Baggage Agent's Office, Moncton, for rate of \$45 per month.	Claim of employees sustained.
3	Nov. 17, 1925	Nov. 19, 1925	Traffic Dept., Atlantic Region.	Claim of Mary I. McCaron, Stenographer, Gen. Baggage Agent's Office, Moncton, for maximum apprentice rate of pay.	Claim of employees sustained.
4	Nov. 17, 1925	Nov. 19, 1925	Traffic Dept., Atlantic Region.	Claim of J. Clifford O'Brien, Clerk, Gen. Baggage Agent's Office, Moncton, for maximum apprentice rate of pay.	Claim of employees sustained.
5	Nov. 18, 1925	Nov. 20, 1925	Sleeping, Dining and Parlour Car Dept.	Claim of Stewards F. J. McHugh and W. S. Farrell and crews. Interpretation of Article 25, Rule "A", "Detention" of Schedule.	Where a crew is late in arriving at any terminal (either home or distant) except when required to double back they shall be paid in accordance with Rule "A". Where called upon to double back, either out of a terminal or en route, they shall be paid for loss of lay-over in accordance with Rule "B". This claim to be settled on the above basis.
6	Nov. 18, 1925	Nov. 20, 1925	Sleeping, Dining and Parlour Car Dept.	Manning of sleeping cars on trains 1-411 and 8-20 between Halifax, N.S., and St. John, N.B.	Referred back to parties concerned to endeavour to arrive at a settlement.
Supp. 1 to 6	Feb. 16, 1926	Feb. 16, 1926	Sleeping, Dining and Parlour Car Dept.	Manning of sleeping cars on trains 1-411 and 8-20 between Halifax, N.S., and St. John, N.B.	While the Board disagreed with certain contentions of the Railway, the Board decides that in view of present conditions trains in question may for time being be operated with a Porter in Charge.
7	Nov. 18, 1925	Nov. 20, 1925	Accounting Dept., Montreal.	Claim of Joseph Jones, Clerk, for position of Local Rates Checker.	Claim of employees declined.
8	Nov. 19, 1925	Nov. 20, 1925	Accounting Dept., Moncton.	Claim that position of Material Distribution Clerk be bulletined.	Position should be bulletined.
9	Nov. 19, 1925	Nov. 20, 1925	Accounting Dept., Moncton.	Claim for continuation of schedule rates for seven positions.	Rate previously shown in schedule for Material Distribution Clerk should be re-established. Claims for other six positions are not a matter for consideration of the Board.
10	Feb. 16, 1926	Feb. 16, 1926	Operating Dept., Central Region.	Claim of 33 freight shed employees at Moreau Street, Montreal, for time lost account laid off at different times.	Claim of employees sustained.
11	Feb. 16, 1926	Feb. 16, 1926	Operating Dept., Central Region.	Claim of A. Bisson for position of janitor, Bunk House, Cochrane, Ont.	That Mr. Bisson be returned to position of janitor.
12	May 18, 1926	May 18, 1926	Operating Dept., Western Region.	Claim of Mr. Thos. Foster, Clerk, Winnipeg Timekeeping Staff, for reinstatement.	Claim of employees denied.
13	May 18, 1926	May 18, 1926	Accounting Dept., Atlantic Region.	Claim of Mr. John I. Gratton, Moncton, for rate of \$135.00 per month.	Claim of employees denied.
14	May 18, 1926	May 18, 1926	Accounting Dept., Atlantic Region.	Claim of Mr. S. Grass to seniority rights in Auditor of Disbursements' Office, Moncton.	Claim of employees sustained.
15	May 19, 1926	May 19, 1926	Accounting Dept., Montreal.	Claim of Messrs. J. C. Belliveau and T. J. Fisher for position of "Shippers' Claims Investigator".	Senior qualified applicant should be awarded the position.
16	May 19, 1926	May 19, 1926	Accounting Dept., Montreal.	Claim of Mr. R. I. Wilson for position of "In Charge of Sections, Station Outstandings".	Claim of employees denied.
17	May 19, 1926	May 19, 1926	Accounting Dept., Montreal.	Claim of Mr. H. O. Bray for position as "In Transit Investigator".	Claim of employees sustained.

CANADIAN NATIONAL RAILWAYS EMPLOYEES' BOARD OF ADJUSTMENT No. 2—Concluded

Case No.	Case heard	Decision rendered	Department affected	Question	Synopsis of Decision
18	May 20, 1926	May 20, 1926	Sleeping, Dining and Parlour Car Dept.	Claim of Messrs. H. Taylor, F. Albers and J. R. Belanger for reinstatement into the service.	That the employees concerned be reinstated and, if desired, the Railway may then hold another investigation in accordance with the schedule.
19	Aug. 16, 1926 Nov. 16, 1926	Nov. 16, 1926	Operating Dept.....	Claim of employees that Messrs. Hugh Fortin and C. E. Chamberlain, who had been laid off in General Superintendent's Office, Quebec, had no right to revert to positions in Superintendent's offices at Quebec and Levis respectively.	Present status of the two employees involved be not changed.

The semi-monthly *Service Letter on Industrial Relations*, published by the National Industrial Conference Board (U.S.A.) contains an article in the issue for September 25, on "Wages in the United States and in Europe," based in part on figures prepared by the International Labour Office at Geneva. Wage figures are shown for December, 1926, and for December, 1927, permitting an examination of the relative change in wage levels over the period of one year. "An important point suggested by these figures is the relative stabil-

ity of wages. For the past five years it has been recognized that wages in the United States have reached a more or less stationary level after the war and post-war fluctuations, and that in spite of marked changes which might take place in individual establishments, or even industries, the general average is fluctuating hardly perceptibly either upward or downward. That this condition obtained also in Europe was not so well known, but these figures indicate a somewhat similar situation in several European countries."

CANADIAN NATIONAL RAILWAYS EMPLOYEES' BOARD OF ADJUSTMENT No. 2

Summary of Recent Proceedings

REPORTS have been received of three cases recently settled by the Canadian National Railways Employees' Board of Adjustment No. 2. The objects of this Board, with the names of its members, are stated in the preceding article.

An outline of earlier cases dealt with by the Board was given in the April, 1928, issue of the *LABOUR GAZETTE*, and in previous issues.

Case No. 31.—Operating Department—Atlantic Region.

A position was created in the office of the division engineer at Edmundston, New Brunswick, and an employee from the central time office at Moncton was assigned by the company to fill it. In making the appointment the company considered that the new position was not covered by any schedule and that it was of a supervisory nature. The employees, however, claimed that as the new position was clerical and of the kind covered by the agreement, it should have been bulletined in accordance with Article 3, Rule (d), and awarded to the senior qualified applicant.

The Board sustained the employees' contention, the rate of the position to be determined in accordance with Rule (c) of Article 11.

Case No. 34.—Operating Department—Western Region.

A controversy arose regarding certain crew clerk positions in the West Yard Office at Winnipeg. The Board appointed one of its members to make a personal investigation in the case, and following his report decided that the dispute did not fall within its jurisdiction.

Case No. 38.—Operating Department—Central Region.

Three storemen's positions at Turcot Roundhouse, Montreal, were formerly under the supervision of the Motive Power Department. This work was taken over later by the Stores Department, the three men being transferred. Subsequently this work was handed over to tool room attendants, and the men were obliged to take other positions within their seniority group. The tool room attendants discharged the duties of looking after the pumps in the roundhouse, issuing stores, attending to time clocks and handing out time slips. The employees claimed that these duties included work of clerks, for the performance of which the clerks held exclusive seniority rights. The Board appointed certain of its members to investigate this case and on their report decided that the dispute was not within the Board's jurisdiction.

Pulverized Coal as Fuel for Ships

Mr. F. D. McHugh, writing in the *Scientific American* states that early this year, the attention of marine engineers and the entire shipping world was centred on the trial trip from New York to Holland and return, of the United States Shipping Board freighter "Mercer." The success of this trip, as announced by the supervising engineers, marked the birth of a new epoch in steam generation for sea-going vessels. The "Mercer" is the first ship to be equipped with burners for pulverized coal and machinery for preparing this fuel. The Germans, the Dutch, and the British are stated to be equipping ships with a similar apparatus, while the United States

Shipping Board has decided to convert six more ships of its fleet as soon as possible.

One English authority has made the statement that he sincerely believes this new ship fuel will, in time, entirely supplant oil in British vessels. British journals see in its successful application a revivifying agent for the British coal industry which now suffers from a surplus of low-grade coal which must be taken from the mines but for which there is little or no sale. Naturally, this would hold true for other coal producing countries; but it would also aid the entire coal industry by releasing high-grade coal for other purposes—and at lower prices too, since the wider use of low-grade coal would reduce mining overhead.

STRIKES AND LOCKOUTS IN CANADA DURING SEPTEMBER, 1928

THE number of strikes and lockouts in existence in Canada during September was ten, as compared with seventeen the previous month. The time loss for the month was larger than during September, 1927, being 10,457 working days, as compared with 9,231 working days during the same month last year.

Date	Number of disputes	Number of employees involved	Time loss in working days
*Sept. 1928.....	10	1,414	10,457
*Aug. 1928.....	17	5,746	37,634
Sept. 1927.....	13	2,016	9,231

*Preliminary figures.

The record of the Department includes lockouts as well as strikes, but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees at its commencement and lasting at least one working day. Disputes of less than one day's duration, and disputes involving less than six employees, are included in the published record only when ten day's or more time loss is caused, but a separate record of such disputes is maintained in the Department, and the figures are given in the annual review.

The figures printed are inclusive of all disputes which come to the knowledge of the Department, and the methods taken to secure information practically preclude probability of omissions of a serious nature. Information as to a dispute involving a small number of employees, or for a short period of time, is frequently not received until some time after its commencement.

Seven disputes, involving 1,171 workpeople, were carried over from August, and three disputes commenced during September. These figures do not include a dispute involving hat factory workers in Montreal which had been terminated in July, but had not been so recorded by the Department at the end of August. Three of the disputes commencing prior to September terminated during the month, as did two of the disputes which commenced during September. At the end of the month, therefore, there were on record five strikes and lockouts, as follows: Coal miners, Wayne, Alta.; plumbers, Kingston, Ont.; sheet metal workers, Kingston, Ont.; plasterers' labourers, Toronto, Ont.; and shoe factory workers, Toronto, Ont.

The record does not include minor disputes such as are described in a previous paragraph, nor does it include disputes as to which information has been received indicating that employment conditions are no longer affected, but which the unions concerned have not declared terminated. Information is available as to eight such disputes, namely: ladies' clothing factory workers, Toronto, June 30, 1926; electrotypers, Tor-

onto, Ont., December 20, 1926; bakers, Montreal, P.Q., May 1, 1927; stonecutters, Montreal, P.Q., June 10, 1927; sheet metal workers, Montreal, P.Q., September 1, 1927, and September 11, 1928; coal miners, River Hebert, N.S., February 1, 1928; and fur workers, Toronto, Ont., April 10, 1928, the second dispute involving sheet metal workers in Montreal being added in September.

Information has reached the Department as to three disputes involving artists in a printing establishment at Toronto, Ont., musicians in a moving picture theatre at Windsor, Ont., and building labourers on one building in Toronto, but particulars as to these disputes have not been received.

Of the disputes which commenced during the month one was against the dismissal of an employee, one for a union agreement, and one was for an increase in wages. Of the strikes and lockouts which terminated during September, two were in favour of employers, one in favour of the workers, one was partially successful and the result of one is recorded as indefinite.

The following paragraphs give particulars in regard to certain disputes, in addition to the information given in the tabular statement.

COAL MINERS, WAYNE, ALTA.—During September another of the five mines in which work ceased on August 13 signed an agreement with the Mine Workers' Union. The Minister of Labour suggested to the strikers that they should resume work for four months under the terms recommended by the Board of Conciliation and Investigation (LABOUR GAZETTE, August, 1928, page 827) namely: payment per ton on a screened basis instead of run of mines, with an increase of 4 cents per ton to offset the loss to the miners on the screenings, and that the management of each mine would have an agreement with a local of its own employees. The strikers, however, refused, and at the end of the month the dispute was still unterminated. It was reported that a large number of the employees of these mines were engaged in harvesting.

COAL MINERS, SYDNEY MINES, N.S.—Coal miners ceased work on August 30 and remained out until September 4 to support a demand for contract rates instead of day rates of pay for bankmen. A stoppage had occurred previously, on August 24, but a smaller number of men had ceased work in support of the bankmen and resumed work the following day with the expectation that there would be further negotiations with the

STRIKES AND LOCKOUTS IN CANADA DURING SEPTEMBER, 1928

Industry, occupation and locality	Number of employees involved	Time loss in working days	Remarks
(a) Strikes and Lockouts Occurring Prior to September, 1928.			
MINING, NON-FERROUS SMELTING AND QUARRYING—			
Coal miners, Wayne, Alta.....	250	6,000	Commenced August 13, 1928, for recognition of union and against changes in working conditions. Un-terminated.
Coal miners, Sydney Mines, N.S.	808	1,616	Commenced August 30, 1928, for contract rates instead of day rates. Terminated September 4, 1928. Indefinite.
MANUFACTURING—			
<i>Boots and Shoes—</i>			
Shoe Factory Workers, Toronto, Ont.....	28	480	Commenced August 13, 1928, to maintain union shop. Unterminated.
<i>Clothing (including knitted goods)—</i>			
Hat Factory Workers, Montreal, P.Q.....			Commenced July 18, 1928, for recognition of union and increase in wages. Terminated July 20, 1928. Compromise.
<i>Saw and Planing Mill Products—</i>			
Shingle sawyers, Vancouver, B.C.....	16		Commenced July 3, 1928, for increase in wages. Terminated September 30, 1928, in favour of employer.
CONSTRUCTION—			
<i>Buildings and Structures—</i>			
Plumbers, Kingston, Ont.....	12	288	Commenced April 21, 1928, for increase in wages. Unterminated.
Sheet Metal Workers, Kingston Ont.....	12	288	Commenced April 17, 1928; sympathy with striking plumbers. Unterminated.
SERVICE—			
<i>Custom and Repair—</i>			
Garage employees, Saskatoon, Sask.....	45	270	Commenced August 20, 1928, for union agreement. Terminated Sept. 10, 1928. Partially successful.

(b) Strikes and Lockouts Occurring During September, 1928.

MANUFACTURING—			
<i>Other Metal Products—</i>			
Auto. Factory Workers, Oshawa, Ont.....	65	15	Commenced Sept. 11, 1928, against dismissal of employee. Terminated Sept. 12, 1928; in favour of workers.
CONSTRUCTION—			
<i>Buildings and Structures—</i>			
Sheet Metal Workers, Montreal, P.Q.....	50	1,000	Commenced Sept. 5, 1928, for increase in wages. Employees secured work elsewhere by end of September.
Plasterers' Labourers, Toronto, Ont.....	128	500	Commenced Sept. 24, 1928, for union agreement. Unterminated.

management. Their demands being refused, the second stoppage occurred and work was not resumed until September 4.

SHOE FACTORY WORKERS, TORONTO, ONT.—
In connection with the strike of shoe factory workers on August 13, 1928, to maintain the union shop, the number of strikers was re-

duced from twenty-eight at the beginning of the dispute to twelve at the end of September, the others having secured work elsewhere.

HAT FACTORY WORKERS, MONTREAL, P.Q.—
In the strike of hat factory workers at Montreal commencing July 18 recorded as unterminated

at the end of August, information recently secured indicates that it was terminated on July 20, the strikers having secured part of their demands.

SINGLE SAWYERS, VANCOUVER, B.C.—This dispute, which commenced on July 3 for an increase in wages, was called off at the end of September by the union involved, the strikers having been substantially replaced by the end of July. The employer is reported to have offered to take back any of the men when vacancies occurred.

PLUMBERS AND SHEET METAL WORKERS, KINGSTON, ONT.—No developments have been reported in connection with these two disputes except that union members have been allowed to work for two of the employers affected so long as no non-union help is employed.

GARAGE EMPLOYEES, SASKATOON, SASK.—This dispute, commencing on August 20, was called off by the union on September 10, ten of the garage firms involved having signed the agreement with the union. It is understood that the remaining strikers secured work in these establishments.

AUTOMOBILE FACTORY WORKERS, OSHAWA, ONT.—Employees in one department are reported to have ceased work for two hours in protest against the dismissal of a union representative as a result of union activities, the discharged employee being reinstated the following day with instructions to drop his union connections. It is understood the striking employees considered the offending employee had exceeded his functions as a union representative but regarded dismissal as an excessive penalty.

SHEET METAL WORKERS, MONTREAL, P.Q.—Sheet metal workers who were employed in the shops of employers refusing to sign an

agreement with the union providing for an increase in wages from 70 cents per hour to 75 cents ceased work on September 5. At the end of the month it was reported that all the strikers had secured work in the union shops. The dispute is therefore transferred to the list of strikes not called off by the unions concerned, although employment conditions are no longer affected.

PLASTERERS' LABOURERS, TORONTO, ONT.—Workers to the number of 128 employed in 44 establishments ceased work on September 24 to secure an agreement with the Master Plasterers' Association and with individual firms. The agreement proposed provided for an increase in wages of five cents per hour from March 1, 1929, making the rate 80 cents per hour, also employment of union members only and the same overtime conditions as for plasterers when employed attending plasterers. It was reported that from time to time individual contractors signed this agreement with the union, so that by the end of the month only twenty-five or thirty workmen were still involved. It was further reported that the plasterers' union was considering giving support to the striking plasterers' labourers.

Five thousand workmen are employed this fall in railway and terminal construction in Northern Manitoba in connection with the Hudson's Bay Railway. It is expected that steel will have been laid in March, 1929, for the full length of the extension from The Pas to Fort Churchill, but considerable ballasting will remain to be done before the new line can be ready for traffic. Modern harbour accommodation and equipment are being installed at Fort Churchill, but this part of the undertaking cannot be completed for about three years. Docks, wharves and workshops are being erected and the channel is being dredged.

STRIKES AND LOCKOUTS IN GREAT BRITAIN AND OTHER COUNTRIES

THE latest available information as to strikes and lockouts in various countries is given in the LABOUR GAZETTE from month to month, bringing down to date that given in the issue for February, 1928, in the review of Strikes and Lockouts in Canada and Other Countries in 1927. The latter review included a table summarizing the principal statistics as to strikes and lockouts since 1918 in the several countries for which such figures were available. Many countries publish these

statistics only once each year, the figures being issued in some cases after an interval of as much as two years, so that for such countries the latest figures are not for relatively recent dates.

Great Britain

The number of disputes which began during August was 12, and 8 were still in progress from the previous month, making a total of 20 disputes in progress during the month,

these disputes involving 5,400 workpeople and resulting in a time loss of 23,000 working days. Of the 12 disputes beginning in August, 6 arose over wages questions, 3 on questions respecting the employment of particular classes or persons, and 3 on other questions. Settlements were reached in 9 disputes, 4 in favour of workpeople, 2 in favour of employers and 3 ended in compromises. In another case work was resumed pending negotiation.

A dispute involving about 2,000 coal miners began at the Featherstone Colliery in Yorkshire on August 22, when the miners refused to work at a reduction in wages of 10 per cent. Through a joint conference, a temporary settlement was reached on September 1, when employers agreed to withdraw the reduction in wages, but on the understanding that deductions from pay be made for excess dirt, pending an enquiry into the situation by workers' representatives.

Belgium

In the month of July, 18 new strikes began and 17 were still in progress from the previous month, making a total of 35 disputes in progress involving 25,702 workers and resulting in a time loss of 236,053 working days for the month.

Hungary

Statistics of labour disputes in Hungary show that for the year 1927, there were 81 strikes and 3 lockouts, involving 24,803 workers and a time loss of 294,941 working days, as compared with 54 strikes and 3 lockouts affecting 9,618 workers and a time loss of 52,203 working days in the year 1926. The principal industries affected in 1927 were the metal, machine, construction and electrical industries. Of the total number of disputes in that year, 48 were wholly or partially successful for workers and 33 unsuccessful.

Australia

A serious dispute involving waterside workers in all of the larger ports of Australia took place following an award of the arbitration court. The award, although favourable to the workers in the matter of wages and overtime pay, provided that workers might be engaged twice a day rather than once a day. The union refused to accept this condition and on September 10 went on strike. No settlement had been reached at the end of the month.

British India

In the first quarter of 1928, 58 disputes were in progress, involving 83,570 workpeople and causing a time loss of 1,005,083 working days. Of these disputes, 25 involving 40,604 workers, were in cotton and woollen mills. The causes of the disputes were: 23 over wages questions, 12 over personnel questions, 4 over leave and hours and 19 over other questions. The results were: 3 in favour of workers, 10 partially successful and 33 unsuccessful, and 12 were still in progress at the end of the month.

United States

The number of disputes which began during July was 42 and 67 were in effect at the end of the month, involving 134,494 workers. The time loss for the month was 3,368,219 working days.

Bituminous Coal Miners' Dispute.—During September further settlements were made. In Illinois an agreement was reached between operators and the union, to be effective from September 16, 1928, to March 31, 1932, by which the basic wage was reduced from \$7.50 to \$6.10 per day, and the tonnage rate from \$1.08 to 91 cents. This agreement affects about 90,000 coal miners.

Textile Workers, New Bedford, Massachusetts.—The strike of 28,000 textile workers, which began on April 16 against a 10 per cent reduction in wages, continued during September. The State Board of Arbitration and Conciliation which made an investigation, recommended that a compromise be made providing for a 5 per cent reduction in wages. This was agreed to by both employers and workers and the mills were reopened on October 8.

The Dominion Government proclaimed the week which commenced on October 7 as "Fire Prevention Week." Among other proposed measures it was recommended that fire drills should be held for the employees in all large stores and factories in order that a greater degree of safety might be ensured by acquainting the occupants with the best and most expeditious mode of exit in time of danger. The proclamation declared that, "at least 80 per cent of the fires which occur originate through inexcusable ignorance and neglect and are therefore preventable, and that the exercise of reasonable prudence and proper carefulness on the part of responsible individuals would reduce the loss by fire in Canada to the comparatively insignificant proportions of loss in other countries."

REPORT OF NOVA SCOTIA DEPARTMENT OF NATURAL RESOURCES FOR 1927

THE Department of Natural Resources of Nova Scotia recently issued its report for the year ending September 30, 1927, giving a summary of the operations of its different branches.

Factory Inspection.—Regular inspections of factories were carried out in the cities and towns throughout the Province and saw-mills were inspected in remote places. There was a reduction of 72 in the total number of accidents recorded for the year as compared with the previous twelve months, but the fatal accidents increased by three over the preceding year. The number of accidents reported, as ascertained from the files of the Workmen's Compensation Board and the Accident Prevention Association was 781, of which 7 were fatal. Among the number injured were 8 women and girls. The classification of accidents by groups indicates a reduction in the severity of injuries, there being not one case of major amputation reported during the year. The number of accidents reported from the various industrial groups during the year were as follows: Saw-mills, 141, including one fatal—a reduction of 47; wood-working (other than saw-mills) 21—a reduction of 97; building material, 9—a reduction of 12; pulp and rossing mills, 45, one of which was fatal—a reduction of 3; furniture, 8—an increase of 5; clothes-pin, woodturning, etc., 2—a reduction of 8; wooden box, 28, an increase of 18; wooden ship building, 19—a reduction of 10; metal trades, 80; car building, 12—a reduction of 10; steel works, 226, including 4 fatal—a reduction of 38; fish products plants, 34, a reduction of 28; confectionery, food and bottling works, 47, including 1 fatal—a reduction of 14; textile mills, 20—an increase of 6; ship yards, 42; miscellaneous industries, 47.

Employment Service.—The report states that during the period under review there was an increase of 226 in the number of placements as compared with the preceding year. The cost per placement was \$1.54 as compared with \$1.56 for the previous year. Domestic help was reported as being in great demand throughout the province with only a small percentage of the requirements in qualified applicants available. Indications for the coming year were considered favourable for mechanics and unskilled workers as well as woodsmen, the demand for whom is expected to be large owing to an improvement in the lumber market.

Land Settlement and Immigration.—A decided increase, it is stated, was shown in Nova

Scotia by countries concerned with emigration. Detailed surveys of several districts were made by the Department to ascertain the vacant and non-producing farms available for settlement. Particulars of these properties, together with the terms of sale asked by the owners, were obtained in the hope that families with farming experience would be induced to take up these vacant farms. The progress made by settlers under the Farm Settlement Act during the year showed a slight improvement. It was reported that with but few exceptions the settlers have met their payments regularly. It is pointed out that according to the returns of the Dominion Department of Immigration and Colonization, 2,247 settlers arrived in Nova Scotia during the twelve months ending September 30, 1927, this being an increase of 795 over the previous period.

A party of 25 boys was sent to the Province through the Overseas Settlement Committee for farm training and farm work. Of these, 18 have indicated a desire of continuing at farm work. The Dakeyne training farm at Falmouth placed 28 Old Country boys on farms after a period of study in Nova Scotian farming methods. It is stated that favourable reports were received concerning the progress of these boys. In addition 22 boys came to the Province through nomination of relatives or friends, and were said to be comfortably settled.

Fifty-three families, comprising 291 children, took advantage of the reduced passage rates afforded settlers by the Empire Settlement Committee, the Dominion Government and the transportation companies, and arrived in the Province. All are reported as making satisfactory progress. Three single persons and seven married couples with eleven children paid the full passage rate to the Province after a study of conditions.

Settlers who declared their intention of remaining in Nova Scotia were drawn mostly from England and Scotland. The other countries of origin were Ireland, Sweden, Finland, Holland, Italy, Germany and Denmark.

Experts of the Ontario Department of Health have designed a new type of gas mask for workers in compressed air, or caisson workers. Research work had been carried on in the government laboratories ever since the disaster at the Hollinger mine on February 10, 1928, when 39 miners were killed. It is stated that the new mask can be used in connection with mine work.

MINIMUM WAGES FOR WOMEN IN ONTARIO

Annual Report of the Board for 1927

THE seventh annual report of the Minimum Wage Board of Ontario, recently published, details the work done during the past year. "It has been a year of increasing industrial prosperity," the Board states, "in which the female workers of the province have shared more largely because of the protection given them. It is not only in times of trade depression that standards of wages tend to fall. Periods of expansion also threaten them, though in quite another way. If, on the one hand hard times mean retrenchment in the wage expenditures, furthered by the underbidding of workers out of jobs, on the other hand, good times mean the starting of new businesses, many of which are in the hands of men without ripe business experience and of very slender resources, whose only wage policy is to keep wages down. A considerable number of the complaints which reach our office, come from such plants, and our investigations show that these employers have never related wages to production nor considered how costly low wages and a high labour turnover may prove."

The Minimum Wage Board made a careful study of the number of women earning \$15 or more per week. The following particulars will serve to show what has happened in the province in regard to female employment since the minimum wage orders went into force in 1921.

—	Number of female workers	Number receiving \$15.00 or more	Per cent
Before orders issued..	44,109	13,863	31.4
After orders issued....	55,598	19,989	36.0

The Minimum Wage orders divide the female workers of the province into fifty-two groups, according to trade and locality. Only seven of these groups, or 13.4 per cent, fail to show increasing numbers of the higher wages, and in these seven groups are found only 3,675, or 6.6 per cent of the entire body of workers. Larger numbers of workers are reported for the later date in the comparison. This is not only because there is now more employment, but because new firms have been added to the lists. These later additions are often responsible for depressing wage averages. The foreboding, that "the minimum will become the maximum" is thus statistically condemned. The elimination of unso-

cially low wages serves to protect rather than injure the higher wage levels.

Four new orders were issued during the year covered by this report. Order No. 43 extends the Custom Millinery regulations, with suitable changes, to cover cities over 30,000 population, excepting Toronto. Order No. 45 further extends it to the line of 4,000 urban population. Order No. 44 extends, in like fashion, the order governing Hairdressing and Beauty Parlour establishments to cover cities over 30,000 population, excepting Toronto. Order No. 46, prescribes regulations for Hotels, Restaurants and Refreshment rooms, extending previous orders in such a way as to cover all urban populations above 4,000.

There are three main lines of activity upon which the Board relies for the enforcement of its orders. The first of these is the posting of the orders within view of the female employees. This is required in all factory trades, and in all others where such a plan is practicable. The Factory Inspection Branch, through its corps of men and women inspectors, regularly reports as to whether the posters are properly maintained.

The second method of enforcement is through the investigation of complaints. Regular meetings are held fortnightly, to deal with these complaints. The complaints are of many sorts, and come from all kinds of people. Almost invariably, they are adjusted in an amicable fashion. In only one instance was the Board forced to prosecute an employer. During 1927 the Board held 25 such meetings and dealt with 275 complaints.

The third resource is based on an analysis of the wage sheets received. These sheets are collected from all firms in the factory trades and from a large number of other establishments. By examining these, the Board is able to determine whether the standards enforced in the orders are being maintained. Sometimes apparent deviations are explained away. Very often the neglect or inadvertence of some foreman or accountant is thus revealed, and the correction is immediately made. During the past year 188 wage sheets have been thus dealt with, and the needed adjustments made.

The board has collected during the year arrears of wages due a number of female workers. Fifty-three firms have made such payments to 146 employees. The total sum collected was \$6,601.02, other arrears have also

been collected privately of which the particulars were not reported.

The Board is accustomed to issue special permits for lower wages to handicapped workers, or variations or suspensions of its orders in certain emergencies. The number of firms to which such permits were issued in 1927 was 41. The Board points out that the number of permits is obviously few and so cannot affect the standards of wages. The permit system, serves, however, to give a valuable degree of flexibility to the administration of

the law, and to enable a number of girls, who otherwise would have been derelicts in the industrial world, to find steady employment.

The Board determines the minimum wage levels by studying the cost of living in the workers' place of residence. The cost of living budget of an average working woman at Toronto, is first estimated as a basis for these calculations, the budget of workers in other localities being adjusted in proportion to a recognized variation in the cost of living as between large and small cities, towns,

AVERAGE WEEKLY WAGES AND HOURS OF FEMALE EMPLOYEES IN VARIOUS INDUSTRIES IN ONTARIO, 1927

Industry	Number of firms	Female employees		Average weekly wage		Average hours per week	Minimum wage (experienced adults)
		Over 18	Under 18	Over 18	Under 18

villages and country districts. The budget for Toronto as revised to October, 1927, allows \$364.00 per year or \$7 per week for board and lodgings; \$127 per year for clothing; \$162 for sundries (including laundry, doctor, dentist, carfare, amusements, church, etc.) making a total of \$653 for the year.

The weekly budget for Toronto is, therefore, as follows: Board and lodging, \$7; clothing, \$2.44; sundries, \$3.06, making a total of \$12.50 per week. The figure thus arrived at is taken as the minimum wage required to provide a female worker at Toronto with the necessities of living.

WORKMEN'S COMPENSATION IN QUEBEC

THE Workmen's Compensation established under the provisions of the Workmen's Compensation Commission Act, 1928, has published a series of Special Rules governing the procedure in connection with the hearing of cases by the Commission and other matters (LABOUR GAZETTE, May, 1928, page 461). These rules fix the limit of time and other conditions for sending to the commission in the notices required by the Workmen's Compensation Act. Other Rules are as follows:—

Physicians, nurses and hospital establishments shall not apply to the Commission for the recovery of the cost of their services from the employer, the head of the enterprise or the insurer, unless they have previously, in the manner hereinbefore prescribed, given notice to such employer, head of the enterprise or insurer, enclosing a detailed statement of their claim, with copies of vouchers in support thereof, and also advice as to the date, hour and place of presentation of their demand to the commission. Duplicates of such documents must immediately be transmitted to the Commission, with the registration certificate and a solemn declaration establishing the serving of the documents aforesaid.

Except in cases where the Commission otherwise decides, the securities which may be submitted for approval, under section 25 of the Workmen's Compensation Act, 1928, shall be: Dominion or provincial stock or debentures guaranteed by the Government of the Dominion or of the province; municipal stock or debentures; bonds or debentures of any school corporation in any city or town of this province; bonds or debentures issued by those who are by law authorized to contract loans for the construction and repair, in this province, of churches, parsonages and cemeteries.

The orders and awards rendered by the Commission shall be signed by one of the commissioners who has heard the case.

All the documents, orders and decisions of the Commission shall be certified by the secretary or the assistant-secretary.

The procedures, files, registers, books or other documents of the Commission must not be removed. They may be examined at the head office of the Commission, by authorization of the president or one of the commissioners.

An application to the Commission to reconsider its decision, pursuant to section 25 of the Workmen's Compensation Commission Act, must contain all the grounds in support thereof, and no submission which has not been set forth therein shall be taken into consideration.

WORKMEN'S COMPENSATION IN MANITOBA IN 1927

THE report of the Workmen's Compensation Board of Manitoba for the year 1927 gives a detailed account of the various activities of the Board in its administration of the Act. In a general review of the history of the workmen's compensation in Canada, reference is made to the Ontario Act, which with certain variations, has served as a model for the Acts now in force in most of the provinces of the Dominion.

In a brief historical review the report outlines the development of compensation legislation in the province as follows:

"The original Act of 1916 required the individual employer to take out an insurance policy covering his workman against personal injury by accident arising out of and in the course of his employment. The injured man was entitled to 55 per cent of his average earnings during the period of disability and to medical aid up to \$100 though neither com-

pensation nor medical aid was paid unless the workman was disabled more than six working days. In case of death of a workman due to industrial accident his widow was entitled to a pension of \$20 per month, with an allowance of \$5 per month for each child under the age of sixteen, provided that the total pension did not exceed 55 per cent of the earnings of the deceased, or at most \$40 per month. A funeral benefit of \$75 was also payable. This act remained in force until 1920. Increased premiums were being demanded by the insurance companies. The workmen were asking increased benefits. In 1920 the Act was revised throughout. Benefits were materially increased. The waiting period was reduced from six to three days, with full medical aid whether the workman lost time from the job or not. The rate of compensation was raised from 55 per cent to 66½ per cent of average earnings. Widows'

pensions were increased from \$20 to \$30 per month. Pensions for children were increased from \$5 per month to \$7.50 and have subsequently (1925) been increased to \$12 per month for the oldest child, \$10 for the next, \$9 for the next, and \$8 for the rest. The limit of \$40 per month or 55 per cent of average earnings was also removed. Funeral benefits were raised from \$75 to \$150.

"To take care of these material increases a system of mutual compulsory state insurance was set up, and the Board carried on the new scale of benefits with the old premium rates. An adjustment of rates was made in 1923, with the object of ironing out certain inequalities, but the general level was not increased.

"On closing the books of 1926 for the six year period it was found that the Board had during that time collected from the general body of employers the sum of \$2,817,946.49, and had expended for compensation, medical aid and reserve for pensions the sum of \$2,876,192.09, a deficit of \$58,245.60.

"It has therefore been found necessary to increase assessment in certain industries where the existing rates did not meet the accident cost."

Relation of Costs to Accident Prevention

The report emphasizes that the compensation budget may be balanced in two ways—"rates may be increased or accidents may be prevented." In regard to the latter alternative, the reports declares: "contact with these cases from day to day convinces one that at least half our accidents are preventable—some by greater precaution on the part of the employer, others by more care being taken by the men on the job."

In last year's report of the Board reference was made to eye injuries and accidents happening by reason of the collapse of scaffolds. The report observes that little, if any, improvement has been noted in the first group, although eye injuries are for the most part preventable by the wearing of goggles.

The report gives the following warning as to the possibility of an increase in the assessments levied under the Act:

"At the present stage it must be clearly understood that the benefits now being paid are as high as the existing rate structure will provide, and unless the whole problem of accident prevention is attacked in a careful and vigorous manner increases in assessments must be expected. There should be the closest co-operation between employers and workmen with the idea of eliminating preventable accidents. To the employer, accidents mean financial loss, with resultant dis-

ruption of organization and reduction of output, but to the workman they mean always wage-loss and suffering and too often the loss of limb or life.

Compensable Accidents in 1927

During 1927, the Board received 10,982 reports of accidents as compared with 10,917 accidents reported during 1926, an increase of 65, or 6 per cent.

The classes designated as "A", "B", and "C" (the steam railways group) and class "G" (The general body of employers) which are the largest groups of employers, reported about the same number of accidents during 1927, as for 1926. The figures are as follows:

Class	Group	1926	1927
'A', 'B', and 'C'.....	Steam Railways.....	3,524	3,528
'D'.....	Province of Manitoba...	50	91
'E'.....	City of Winnipeg.....	229	250
'G'.....	General Body of Employers.....	6,161	6,132
'H'.....	Winnipeg Electric Company.....	114	138
'DA'.....	Dominion Government.	839	843
		10,917	10,982

There were 46 fatal accidents reported in 1927, as compared with 45 reported during 1926. Of these the General Group, Class "G", reported 26 during 1927, as compared with 21 during 1926, and the other classes 20 during 1927, as compared with 24 during 1926.

During 1926 there actually occurred 11,023 accidents. Of these accidents, 69.2 per cent involved the payment of compensation either for medical aid only or for compensation for time loss and medical aid, whilst in 30.8 per cent of cases there was no expense.

On December 31, 1927, the Board had on its books 469 dependants of workmen killed in industry during period March 1, 1917, to December 31, 1927, a net addition of 24 dependants during the year.

During 1927 the Board assessed 4,431 employers in Class "G", as compared with 4,158 assessed during 1926.

The payroll for the year 1927 as reported by employers in Class "G" amounted to approximately \$35,000,000, but cannot be accurately determined until audit is completed.

The actual ascertained payroll of the employers in class "G" for the year 1926 was \$35,583,926.

The assessment paid by Class "G" employers on the 1926 payroll totalled \$542,692.71, whilst \$459,751.63 has been paid with respect

to assessment based on the estimated payrolls for 1927.

The total payrolls in all classes for the years 1926 (actual) and 1927 (estimated) were as follows:—

Class	Actual Payroll 1926	Estimated Payroll 1927
"A"—Canadian Pacific Railway Co.....	\$ 9,889,155 89	\$ 10,000,000 00
"B"—Grand Trunk Pacific Railway.....	1,085,184 25	1,000,000 00
"C"—Canadian National Railways.....	8,359,733 36	8,500,000 00
"D"—Province of Manitoba.....	2,187,795 50	2,100,000 00
"E"—City of Winnipeg....	2,499,645 66	2,737,196 77
"G"—General Body of Employers.....	35,583,926 00	35,000,000 00
"H"—Winnipeg Electric Company.....	2,342,736 16	2,524,944 37
	\$ 61,948,176 82	\$ 61,862,141 14

During 1927, 63 employers had their operations brought under Part 1 of the Act by application approved by the Board, as compared with 17 employers brought under on application during 1926.

At December 31, 1927, there were 191 employers whose operations had been brought under the Act in this manner.

Sixty-six employers made application to the Board during 1927 and were permitted self-coverage for themselves and their dependants, as compared with twenty-five employers who availed themselves of this provision during 1926.

At December 31, 1927, there were 104 employers carrying protection for themselves and their dependants.

Audit of employers' payrolls during 1927 produced additional assessment in the amount of \$14,487.98, whilst new employers to the number of 84 paid assessments to the extent of \$1,576.88.

Refunds amounting to \$454.87 were made to employers as a result of audit.

During 1927, 602 cases of minor injury were treated by the Board's Chief Medical Officer, as compared with 866 during 1926. The aggregate days of disability for all cases so treated in 1927 was 1,592, or an average of 2.64 days per case.

During 1927 the actual cash disbursed by the Board amounted to \$853,235.27, as compared with \$789,807.37 disbursed during 1926, an increase of \$63,427.90.

The number of cheques issued by the Board during the year totalled 29,874 as compared with 27,862 issued during 1926, an increase of 2,012.

The value of Board Orders during 1927 for the payment of compensation, which includes orders respecting Dominion Government employees, and covers amounts set aside to reserve to provide for future payments in fatal and permanent disability cases, was \$862,933.41, as compared with \$766,715.79 during 1926, an increase of \$96,217.62.

Statistical tables are included in the report analysing the accidents compensated in 1926, including cause, nature of disability, time loss, average age, average wage, industry, etc.

THE MINING INDUSTRY IN BRITISH COLUMBIA IN 1927

THE annual report of the British Columbia Minister of Mines for the year ending December 31, 1927, recently received in the Department, gives a comprehensive account of the various phases of the mining industry in the province. Numerous statistical tables detail the total mineral production of the province, and show by districts and divisions the output of the various metals and minerals for the year 1927, with comparative figures for previous years. The reports of the resident mining engineers give much information about the progress of mining, development, and prospecting throughout the province, while the reports of the inspectors of mines cover fully the coal mining industry in British Columbia.

Summary of Production Values

In the general summary, prefacing the statistical review, the Provincial Mineralogist

states that the year 1927 was again a prosperous and satisfactory one for the mineral industry. The gross value of the mineral production was \$60,729,358, as compared with \$67,188,842, a decrease of \$6,459,484, or 9.6 per cent. While the value of the production was less than in 1926, this decrease is accounted for by lowered metal prices rather than to decreased output of minerals. That the actual production in the aggregate did not decrease is shown by the fact that the 1927 output, if valued at 1926 prices, would give a production value of approximately \$1,000,000 greater than in 1926. Furthermore, the tonnage of ore mined amounted to 5,416,021 tons, an increase of 640,948 tons over the 1926 output—the previous record year.

As compared with 1926, the production figures for 1927 show increased outputs of

lead, zinc, and coal, and decreases in gold, silver, and copper. Owing to lower average metal prices the production values of all metals show decreases. The output of structural materials was somewhat less than in 1926, indicating a slight lessening of building activity in the Coast cities, while the production of miscellaneous minerals showed a substantial increase over the 1926 figure.

Since mining commenced in the province in 1852 the total mineral production has been \$1,048,837,828, and over 50 per cent of this has been produced in the last twelve years. British Columbia leads all the Provinces of Canada in the production of silver, lead, zinc, and copper.

The mineral industry of British Columbia, in so far as production is concerned, may be divided into three classes—metal-mining, coal-mining, and the production of structural materials and miscellaneous minerals. Of these, the first is by far the most important, with a production for 1927 valued at \$45,133,329 (including placer gold). This is followed by coal, with an output valued at \$12,269,135, and structural materials and miscellaneous minerals totalling together \$3,326,894. By value, the various products of the mineral industry produced in 1927 are ranked in the following order: Lead, coal, copper, zinc, silver, gold, structural materials, miscellaneous minerals. The quantities of lead and zinc produced in 1927 were the highest in the history of mining in the Province, while the copper output practically equaled that of 1926—the previous record year. It is also pointed out that the British Columbia output of lead is now about 10 per cent of the total world output and the present rate of production will probably increase. In 1926 copper reached second place, having a value of nearly \$700,000 greater than coal, but in 1927 coal resumed second place with an output valued at \$12,269,135, as compared with \$11,525,011 for copper.

Coal-mining has not been in a particularly flourishing condition in recent years, but the outlook now is reported better than for some time past. The production for 1927 showed an increase as compared with 1926. According to the report of the Chief Inspector of Mines, the total tonnage production by the coal mines of the province for the year 1927 was 2,453,827 tons—an increase of 123,791 tons, or 5.3 per cent above production of 1926. The output from the metalliferous mines for 1927 was 5,319,384 tons—an increase of 544,311 tons over the tonnage for 1926.

Labour and Employment

During the year 1927, there were 5,225 persons employed in and about the coal mines of the province, a decrease of about 1.8 per cent as compared with 1926. Of this total, 3,646 men were employed underground. In the supervision of underground employees there were 80 managers, two safety engineers, 27 overmen, 150 fire bosses and shot-lighters—a total of 197, or one official for every 19 persons employed on the ground. There were 4,587 persons employed in and about the metalliferous mines in 1927.

The collieries of the province were entirely free from labour disputes during the year, the only time lost being through lack of trade. Apart from the regular holidays, the mines in Vancouver Island district lost about 12 per cent of the working days through lack of trade. In the Nicola-Princeton district the different collieries worked from 79 to 95 per cent of the working days, averaging for the district about 90 per cent of the working days. The mines in the East Kootenay district worked from 82 per cent at the lowest to 96 per cent at the highest of the working days during the year, and worked for an average for the whole district about 87 per cent of the time.

Fatal Accidents in Mining Industry

Eleven fatal accidents occurred during the year, in coal mining, as compared with ten for 1926. The ratio of fatal accidents per 1,000 persons employed was 2.10 as compared with 1.88 in 1926; in 1925 the ratio was 1.10; in 1924, 1.66; in 1923, 7.32; in 1922, 4.66; in 1921, 1.45; in 1920, 2.67; in 1919, 2.10; in 1918, 5.15; the average for the ten-year period being 3.01. The number of fatal accidents per 1,000,000 tons produced during 1927 was 4.48. During 1926 the fatalities per 1,000,000 tons of coal mined was 4.3; in 1925, 2.45; in 1924, 4.52; in 1923, 1.76; in 1922, 12.01; in 1921, 3.98; in 1920, 6.30; in 1919, 4.98; in 1918, 10.86; the average for the ten-year period being 7.14 per 1,000,000 tons of coal mined.

Of the 11 fatal accidents, 4 were caused by falls of coal; 3 by falls of rock; and 2 by mine cars and haulage; and 2 by explosion of fire-damp.

There were eight fatal accidents in and about the metalliferous mines during 1927, a decrease of one as compared with the figures for 1926. The ratio of fatal accidents was 1.74, compared with 2.07 for 1926, while the ratio for the last ten-year period was 2.03. The tonnage mined per fatal accident was 664,920 compared with 530,564 tons per fatal

accidents for 1926. The tonnage mined per fatal accident for the last ten-year period was 391,877.

Of the eight fatal accidents in metalliferous mining, 3 were caused by falling cage; 3 by underground operations (miscellaneous); 1 by blasting and 1 by falling into chute.

Mine Rescue Training and First Aid

The report of the Chief Inspector of Mines shows that in a few instances during 1927 stoppage of work was ordered by the inspection department in parts of mines until proper remedies were applied for safeguarding those employed. It is stated that usually a willing spirit of co-operation was shown by the various managements at the collieries in applying the required remedies. During 1927, there were nine prosecutions, all of which resulted in convictions.

Many holders of certificates of competency in mine rescue work underwent training at the different stations. Thirty Burrell all-

service gas masks were added to the equipment of the mine rescue stations, making a total of 42 sets of this type of apparatus. During the year several moving pictures devoted to safety practice in coal mining were shown in various localities, and first aid competitions were held by several mine safety associations.

Four mine rescue stations were established under authority of Section 117 of the Coal Mines Regulation Act for the purpose of supplementing, in case of need, the colliery installations of mine rescue apparatus, and also for the purpose of training holders of certificates of competency in the use of mine rescue equipment. In cases of emergency these stations are available for the use of any trained corps of mine rescuers duly qualified medical practitioners, or corps trained in the work of first aid to the injured, subject always to the order of an inspector. These four stations are established at Nanaimo, Cumberland, Middlesboro and Fernie.

Accidents at Metallurgical Works

Technical paper No. 430 issued by the Bureau of Mines of the United States Department of Commerce, deals with "Accidents at Metallurgical Works in the United States, during the calendar year 1926." According to this report a slight rise in the death rate and a small reduction on the lost-time-injury rate were the main facts revealed by an examination of accident records covering the metallurgical industry, exclusive of steel mills, in the United States in the calendar year 1926. Reports from operating companies to the United States Bureau of Mines showed a fatality rate of 0.73 and an injury rate of 111 for each thousand persons employed, as compared with 0.66 and 116, respectively, for the year 1925. These accident rates are based on a standard of 300 working days per employee and include all injuries that disabled an employee beyond the day on which the accident occurred.

The industry as a whole employed 57,726 men, slightly less than the number reported for the previous year. The total working time for all employees was 19,706,098 shifts, an average of 341 days per man. The average number of workdays per man represented an increase of four days over the average for 1925, but the aggregate number of shifts worked by all employees was slightly less than that for the preceding year.

Accidents at the plants resulted in 48 deaths and 7,279 lost-time injuries among employees.

Four of the injuries resulted in permanent total disability, 223 in permanent partial disability, 2,050 in temporary disability, exceeding 14 days, and 5,002 injuries disabling the employees beyond the day of the accident, but for not more than 14 days. Definite information as to the total loss of time which these deaths and injuries represent is not available, but it is estimated, that they represent a loss of 586,000 man days. This estimate of the time-loss equivalent of the deaths and injuries in 1926 represents 3 per cent of the total number of man shifts worked by all employees during the year. The average loss of time per accident in 1926, counting fatalities as well as injuries, was 80 days, as compared with 73 days in 1925. This increase was due to the higher death rate in 1926 and to the fact that each fatality was considered equal to the loss of 6,000 days, a length of time that roughly represents life expectancy in industrial employment.

The tenth annual report of the chief medical officer of New Brunswick, describes the activities of the Department of Health during 1927. The section dealing with vital statistics estimates the population of the province in 1926 at about 407,000 persons. The birth rate is given as 25.4, the marriage rate as 7.2, and the death rate as 12.3 per thousand of population, the natural increase of population during the year having been 5,338.

TRADES AND LABOUR CONGRESS OF CANADA

Resumé of the Proceedings of the 44th Annual Convention

THE 44th annual convention of the Trades and Labour Congress of Canada was held in Toronto, September 10-14, the sessions being held in the assembly hall of the Prince George Hotel. At the opening session an address of welcome on behalf of organized labour was delivered by Mr. Wm. Varley, chairman of the local reception committee. Hon. Dr. Forbes Gcdfrey, Minister of Health and Labour of Ontario, welcomed the delegates on behalf of the Provincial Government. The Hon. Peter Heenan, Federal Minister of Labour, wired to the effect that owing to illness he was unable to be present at the opening meeting but would endeavour to be present at a later session. At the afternoon session His Worship Mayor McBride extended the civic welcome, followed by Mr. C. A. Maguire, one of the Ontario Hydro-Electric Power Commissioners, who gave an account of the hydro-electric development of the province, and also welcomed the delegates. Mr. Tom Moore, president of the congress, in replying to the addresses at the opening session, thanked the local reception committee for the arrangements made for the convenience of the delegates and pointed out that all the delegates were Canadian citizens. Toronto, the president declared, was the birth place of the congress, the membership of which has doubled since the year 1916, when the congress last met in that city. He declared the congress to be a supreme autonomous body, permitting no dictation from outside organizations.

The first order of business was the presentation of the report of the Credential Committee, which was submitted by the chairman, Mr. E. W. A. O'Dell. A question was asked as to the omission of the name of Mr. Jack MacDonald, one of the delegates from the Toronto District Labour Council. The chairman of the committee in reply read a protest which had been presented by the executive council against the seating of Mr. MacDonald, who it was charged had given support to dual unions and opposed the international trade union movement as represented by the Trades and Labour Congress of Canada. The committee upheld the protest of the executive, which after the reading of a memorandum in regard to some of Mr. MacDonald's actions, was sustained on a roll call vote of 223 to 21. The final report of the Credential Committee showed that certificates had been received for 367 delegates, three of which were for the fraternal dele-

gates from the British Trades Union Congress, the American Federation of Labour and the National Women's Trade Union League. The remaining representation was divided as follows: Representatives of international organizations which have affiliated the whole of their Canadian memberships, 46; Federation of Labour, 1; trades and labour councils, 28; local unions, 274; system divisions of railroad telegraphers, 15.

All reports of committees and the various resolutions were read in both English and French, the translator for the latter being Mr. Alphetus Mathieu, of Montreal. Mr. Rod Plant, of Ottawa, was named associate secretary, and H. B. Woodrow, of Toronto, acted as messenger.

Report of Executive Council

At the afternoon session of the first day the executive council of the Congress presented a report in which was given a record of the past year's achievements and also directing attention to a number of important matters upon which the opinion of the convention was desired. The report was divided into several sections, the first of which dealt with the legislative program which had been presented to the Dominion Government on January 9, 1928, and covered the following subjects: (1) Request for renewal of Technical Education Act; (2) fair wage matters; (3) immigration and emigration; (4) Senate reform; (5) eight-hour day; (6) one day's rest in seven; (7) changes in the British North America Act; (8) Criminal Code amendments; (9) unemployment and unemployment insurance; (10) national fuel policy; (11) Militia Act amendments, military training, etc.; (12) International Labour Office; (13) marine matters; (14) Research Council; (15) electoral reform and Election Act amendments; (16) Industrial Disputes Investigation Act; (17) hiring of labour during trade disputes; (18) Alien Labour Act; (19) postal service employees; (20) federal office cleaners' conditions; (21) pensions; (22) co-operative legislation; (23) Bankruptcy Act; (24) prison reform; (25) Tariff Board (asking that a representative of labour be placed thereon); (26) taxation.

The second section of the report dealt with the matters which were before the last session of the Dominion Parliament, and outlined those of interest to labour. The first section referred to immigration matters in which it was reported that the Immigration Act had

been amended by repealing section 41 which made possible the deportation without trial of British-born Canadian citizens. Reference was made to the decisions of the Committee on Agriculture and Colonization, to which body the House of Commons had referred for consideration the Immigration Act and its regulations. Other matters reported on were (1) Criminal Code amendments; (2) unemployment insurance; (3) fair wage contracts on bridges; (4) railways, telegraphs and steamships; (5) harbour commissions; (6) lapsed insurance policies; (7) Civil Service measures; (8) merging of departments; (9) banking laws; (10) re-election of ministers of the Crown; (11) taxation; (12) Naturalization Act; (13) exportation of power; (14) National Research Council; (15) national fuel supply, and (16) Geneva Opium Convention.

Section 3 of the report stated that the provincial executive committees and provincial federations of labour had carried on the legislative activities of the Congress in their respective provinces during the past year and had co-operated with the executive council in the effort to secure the greatest possible degree of uniformity in labour legislation. All of the provinces, except Prince Edward Island, submitted reports giving in detail the work undertaken and the results achieved. From these reports and other sources of information the executive council compiled a summary of the matters of general interest dealt with during the past year, in which gratification was expressed at the result of the effective work of these provincial bodies, not only existing legislation being maintained but by new acts and amendments to present laws many betterments have been secured. Among the subjects particularly referred to in the summary of the executive council were: (1) old age pensions, (2) workmen's compensation, (3) minimum wage acts, (4) unemployment, unemployment insurance, etc., (5) mothers' pensions, (6) eight hour day, (7) Factories Act, (8) Fair Wage Regulations, (9) labour Disputes, and (10) labour departments, together with matters relating to education and technical training, public health and industrial hygiene, freedom of organization, etc.

Section 4.—Affiliations and Advisory Councils—stated that the congress has maintained affiliation with the International Federation of Trade Unions, the Women's Trade Union League, the American Association for Labour Legislation, the Canadian Council on Child Welfare and the League of Nations Society in Canada. Through its representatives, the Congress had co-operated in the work of the International Labour Organization; Research Council of Canada; Dominion Council of Health; Dominion Fire Prevention Asso-

ciation; National Safety League, and the Ontario and Quebec Sections of the League; Employment Service Council of Canada; Canadian Council on Immigration of Women; Frontier College; National Council of Education; Canadian Social Hygiene Council; and the Canadian Engineering Standards Association. Synopses of the activities of the above named advisory councils were also given a place in the report.

Under the caption of "International" it was reported that the International Union of Elevator Constructors and the Switchmen's Union of North America had affiliated their Canadian membership with the Congress and efforts were being made to have other organizations do similarly. Mention was made of the organization of automobile workers in Oshawa, Tilbury and the Border Cities. Mention was also made of the development of friendly relations between the trade union movements overseas and Canada as a result of attending the conferences of the International Labour Organization. Reference was made to the meeting in 1927 of the International Federation of Trade Unions at which the Congress was represented by Mr. Geo. R. Brunet, of Montreal.

Section 6.—Old Age Pensions—pointed out that the policy adopted by the 1927 convention of withholding demands for amendments to the Old Age Pension Act pending the securing of more general adoption of the law throughout the Dominion had met with considerable success. British Columbia, Saskatchewan, Manitoba and the Yukon, it was stated, have put the law into effect, and efforts have been made to have other provinces adopt the law.

Under the heading of "Migration" it was stated that "with the continued improvement in industrial activity during the past year, coupled with the possibility of another record crop being garnered in Western Canada, immigration agencies of all kinds have been increasingly active..." The executive had watched these movements closely and used every means at their disposal to expose attempts to mislead intending immigrants as to the true conditions existing in Canada. The complete immigration program of the Congress had been submitted to the Government, and the section referring to the prohibition of contract labour and other sections concerning the assuring of employment had been taken up with the Employment Service Council by the representatives of the Congress thereon. Items from the immigration program of the Congress which were introduced by the Congress representative at the conference of the Council on Immigration of Women were accepted as part of the confer-

ence agenda, while the whole of the policies enumerated therein were explained by the delegate of the congress to the British Commonwealth Labour Conference held in London, England, in July, 1928. The executive council also stated that wide publicity was obtained both in Canada and Great Britain for the protest against the importation of 10,000 British workers to assist in the western harvest fields, "and though it is reported that 8,500 of these ultimately emigrated we are convinced that our prompt action in this matter resulted in conditions being demanded by the Canadian authorities, particularly with respect to providing for their return to Great Britain, which will be found of material benefit to the men concerned when they have concluded their employment in the harvest fields." Other matters in regard to immigration were also mentioned by the executive. "from all of the above", the report stated, "it will be noted that much progress has been made towards getting Labour's policies more generally understood and accepted by important public bodies."

Section 8.—*Canadian Congress Journal*—gave a summary of affairs connected with the publication, which is the official journal of the Congress, and in which the executive made an appeal for support for the paper.

Section 9.—Unemployment and Sickness Insurance—mentioned that this matter was considered by a special committee of the House of Commons, to which the views of the Congress had been conveyed, and which committee had recommended that the agreement of the provinces should be secured before any legislative action is taken. The executive council, therefore, pointed out the necessity of the provincial executive committees and federations of labour urging this question before their respective legislatures.

Section 10.—Technical Education and Apprenticeship—under this caption the executive reported the decision of the Dominion Government to discontinue the annual grants to the provinces for technical education. It was recommended that the affiliates of the congress make efforts to have the Technical Education Act of 1919 re-enacted at the next session of Parliament. Reference was also made to the passing by the Ontario Legislature of an Apprenticeship Act designed to promote the establishment of a permanent system of apprentice training in the industries of the province.

Section 11.—Union Labels—referred to the meeting on April 23, 1928, of the advisory council on union labels, which body it was recommended should be maintained as an ad-

visory body to the congress executive on label matters.

Section 12.—Hours of Labour and Holidays with Pay—stated that in Canada the eight-hour day is generally in effect in the building trades, printing trades, mining, railroads, clothing industry and other industries where the workers are well organized, and pointed out the success achieved in securing the shorter work day by legislative enactment. In regard to the granting of holidays with pay, mention was made of the action of the Canadian National Railways in giving one week's holidays with pay to those workers of the federated shop trades organization participating in the joint co-operative management plan.

Section 13.—Economic Councils—pointed out the countries in which economic councils have been established by legislation, and stated that these bodies vary in their authority and functions, though in general they are of an advisory character to the different government departments. The majority of trade union opinion, it was stated, is favorable to economic councils, and the possible establishment of a national economic council in Canada had been considered by the executive, but before making any pronouncement upon so important a matter the executive asked for an expression of opinion from the convention.

Section 14 dealt with the "Legal Status of Trade Unions," in which reference was made to a court decision in a case where a trade union sued a manufacturers' association for a breach of contract.* The decision, which entered very fully into the legal status of trade unions, was that on strictly legal grounds the union had no case against the employers. The executive concluded this reference by stating:—

"Having now learned that the Courts are of no value in such cases unions will, undoubtedly, continue in the future, as in the past, to work for industrial stability by organizing workers to the fullest possible extent, negotiating agreements wherever possible and depending upon the integrity of those entering into the same and upon their own power to enforce them in case of violations."

In the last section of the report of the executive council it was recommended that the demands of 1927 which had not been secured be again incorporated in the legislative programme to be presented to the government. The matters referred to in the

* Polakoff et al versus Winters Garment Company et al (LABOUR GAZETTE, February, 1928, page 233).

closing section of the report were (1) The Toronto carpenters' strike; (2) Supporting the Ontario Dental Council in certain demands on the Ontario Legislature; (3) The British Commonwealth Labour Conference; (4) Reporting on taking membership in the Canadian Labour Research Bureau; (5) Report on request for the organization of women and young workers; (6) Covering matters which have been taken up with the government departments at Ottawa; and (7) Referred to the report of the commission which investigated the conditions of employment of the attendants at the Brandon Mental Hospital.

A report was also presented by the fraternal delegate to the American Federation of Labour convention held in Los Angeles, California, in October, 1927, as well as by the fraternal delegate to the British Trades Union Congress, which met in Edinburgh, in September, 1927, and who also attended as a delegate from the congress the convention of the International Federation of Trade Unions held in Paris, where he also acted as a fraternal delegate at the meeting of the General Confederation of Labour of France.

Report of Committee on Executive Council Report

The sections of the report of the executive council referring to migration were referred to a special committee on migration and the section relating to union labels was referred to the Union Label Committee for consideration and report. The committee which reported on the remaining sections of the report of the executive council prefaced its report as follows:—

"Your Committee on Officers' Reports have carefully studied the same and have been impressed with the volume of effort exerted by the officers of this Congress and with their achievements during the past year.

"During the existence of the Trades and Labour Congress of Canada its importance and usefulness to Canadian workers and to the international movement has steadily increased.

"Its affiliations are far flung relating our Dominion movement to the labour movement of Europe and cementing closely the international labour movement of the North American continent.

"Its activities are not confined to purely labour matters in the commonly accepted understanding of those words for it has not hesitated to participate in any effort that has had for its object the elevation of human

standards and the promotion of goodwill between the workers of all nations where such can be achieved without loss of rights secured in the past.

"An examination of the report of the Executive Council will amply demonstrate the truth of these statements and will serve to show that the past year has been one crowned with achievement.

"We are all human and being human we may fail to satisfy all sections of thought in our movement, but our steady growth in influence in the world's working class struggle demonstrates that this Congress has a real place in that struggle and can serve worthily its affiliated units and sections.

"During the development of this Dominion there will inevitably come a time when our class will be completely represented in the legislative chambers of our several provinces and the halls of Parliament at Ottawa. Till then we must continue to increase the usefulness of this Congress in the manner followed by our Executive during the past; especially the past recent years."

The committee noted with approval the co-operation between the Congress and the legislative representatives of the four railroad running trades in legislative matters and recommended that the Minister of Labour be urged to appoint a fair wage officer for the maritime provinces. Satisfaction was expressed at the increase in the membership of the Congress and that the government had recognized the Congress as the "only organization competent to name the workers' representatives to the annual conferences of the International Labour Organization." The committee recommended further effort to secure a renewal of the Technical Education Act and also endorsed all other matters mentioned in the legislative program in the first section of the report. The committee recommended that the provincial executive committees in the provinces which have not adopted the Old Age Pension Act be urged to use their efforts with a view to having the same enacted. Similar recommendation was made in regard to mother's allowances. It was also recommended that efforts be made to secure desired amendments to the minimum wage acts, and the committee was of the opinion that departments of labour should be established in all provinces, and that they should not be linked up with other departmental activities. The committee approved of the interest of the executive in the work of the Employment Service Council of Canada and also noted the work of other advisory councils on which the

congress has representation. It was recommended that the question of economic councils be referred to the executive council for study and report, and also that the congress continue its membership in the Canadian Labour Research Bureau, and that all affiliated bodies become members of the bureau. The other subjects in the report were reported upon by the committee, which expressed satisfaction at the manner in which the affairs of the congress had been handled since the 1927 convention. The convention adopted the report and the recommendations made therein.

Report of Secretary-Treasurer

Mr. P. M. Draper, secretary-treasurer, submitted a report of the financial affairs of the Congress, which showed the receipts for the year, including the balance on hand in 1927, to have been \$28,976.65; expenditures, \$23,173.70, leaving a balance on hand of \$5,802.95. The secretary-treasurer also presented a report of the trustees of the Congress headquarters, showing a revenue of \$1,585; expenditure for maintenance, etc., was \$1,472.16, indicating a surplus of \$112.84, which is included in the balance above mentioned. Five charters had been issued during the year, one of which was to the Civil Service Association of Alberta, the remainder being to local bodies. The actual paid-up membership was 119,243, an increase of 4,881. If they counted the members for whom no *per capita* tax was paid, owing to unemployment or on strike, the total adherents to the Congress, the secretary stated, would be over 140,000. The report was referred to the Audit Committee, on whose recommendation the report was subsequently adopted.

Constitution and Law

Although there were no resolutions submitted to the convention seeking changes in the constitution or bylaws of the Congress the customary committee was appointed with instructions to review the laws of the congress, and if desirable to submit proposed changes. The committee recommend that the executive revise Article 11, sec. 1, of the constitution relating to unions chartered by the congress "in order that fuller protection of the membership against destructive and disloyal activities may be established, and submit their recommendations to the next convention." The committee also recommended that the executive be authorized to amend the form of credentials so that it shall contain a clause to be signed by the elected delegates disassociating themselves from organizations whose policies are "hostile or antagonistic to

the general policy of the Trades and Labour Congress of Canada or the international unions affiliated therewith." These recommendations were concurred in by the convention.

Committee on Migration

The special committee on Migration, to which the references to immigration and emigration in the report of the executive council and a number of resolutions were submitted, reported through Delegate Elmer Roper, the chairman, that they had carefully examined the immigration programme and the pronouncements of the Congress as formulated from year to year, a summary of which was contained in the memorandum submitted by the executive to the Dominion Government, reading as follows:

"(a) Reduction of oriental immigration to a minimum, pending legislation for total exclusion; (b) abolition of bonuses or grants to private agencies and that the British Government be requested to exercise fuller supervision of booking agencies operating in the British Isles; (c) prohibition of entry of labour engaged to replace workers during industrial disputes and "contract labour" unless certified as necessary by the Employment Service of Canada; (d) continued prohibition of entry of children under working age unless accompanied by parents or coming to join them or other responsible relatives; (e) deportation of those entering Canada under assisted passage schemes or exempt class regulations who, within twelve months, seek or accept employment in other occupations; (f) re-introduction of legislation repealing sections of the Act discriminating against British-born citizens; (g) that land settlement and colonization schemes be made equally available to residents of Canada as to those of other countries; (h) that repatriation of Canadian citizens resident in the U.S.A. be actively encouraged; (i) that representations be made to secure from the United States authorities equal rights of entry to the U.S.A. for all bona-fide Canadian citizens irrespective of place of birth; (j) compliance with the recommendation of the International Labour Office (1923) to compile statistics regarding emigration from Canada as well as immigration to Canada; (k) creation of a Dominion Advisory Council on Immigration on which Labour shall have representation; (l) that provision be made holding any Government society, association, company, corporation, person or party or agents for the same who solicit immigrants for Canada financially responsible for said immigrants for a period of not less than one year."

The committee recommended a reiteration of this program as containing the basic pronouncement of organized labour on the question of immigration.

The committee expressed satisfaction at the repeal of Section 41 of the Immigration Act, previously referred to in the report of the executive council.

The committee agreed with the Parliamentary Committee on Agriculture and Colonization that the responsibility for immigration must rest solely and exclusively with the Government of Canada, and recommended that the convention endorse the report of this committee. The committee on migration suggested that the desired control of immigration can best be secured by the creation of an advisory council, and on which the Congress would have proper representation.

The committee recommended (1) That the Congress do all in its power to prevent a relaxation of the regulations requiring medical examination of immigrants in the British Isles; (2) Opposition to immigration of children who are under 16 years of age, unless accompanied by their parents or other responsible relatives; (3) Opposition to domestic servants being brought to Canada under contract conditions, and that steps be taken to ensure that the immigration of this class of workers be brought in line, so far as possible, with the program of the congress.

Satisfaction was expressed with the acceptance of the suggestion of the Congress that residents of Canada be given the same opportunities and assistance in land settlement as are given to residents of the British Isles and foreign countries. The committee concurred in the suggestion of the Committee on Agriculture and Colonization of the House of Commons that the existing railways agreement relating to immigration should not be renewed, and that the regulations under that agreement and the "so-called assured employment scheme should be made so rigid as to remove the abuses which have existed." The committee of Congress pointed out that many of the conclusions of the Canadian Council on Immigration of Women "are in entire harmony with labour's immigration policy."

On the question of the importation of miners for harvesting the committee drew attention of the delegates to the statement of the Executive Council in connection with the importation of 8,500 miners from Great Britain for work in the harvest fields. "Subsequent events," it was stated, "have shown that the protests of President Moore and the Executive Council in connection with this matter were entirely justified. Your com-

mittee is gratified to note that as a result of the prompt action of the Trades and Labour Congress of Canada, conditions were demanded by the Canadian government, particularly with regard to providing for their return to Great Britain, which will be found to be of material benefit to the men concerned when they have concluded their employment in the harvest fields. Your committee strongly recommends that the convention go on record in complete opposition to the importation of harvest labour. We agree with the Executive Council that no language is too strong to denounce any scheme which brings immigrants to Canada, ostensibly for farm work, at this late period of the year, when most farm work and other reasonable occupations are drawing to a close, thus forcing them into keen competition with resident Canadian labour for the few jobs available during the whole of the winter months."

Twelve resolutions on the subject of immigration were referred to the Committee on Migration, one of which urged the passage of a quota law. The committee reported against this resolution, being of the opinion that if an advisory council on immigration were appointed the necessary control would be established. The committee reported in favour of a request that all first class passengers be subject to the same strict examination as second and third class immigrant passengers. A resolution asking that the government or the railway or shipping companies be made responsible for the support of all immigrants brought in by them for a period of not less than two years, was approved, as was also a resolution opposing the finger-printing of immigrants.

The committee recommended referring to the executive resolutions (1) asking that a commission be appointed to obtain full information on the harvest needs each year, and (2) that the period of remaining in Canada of travelling musical organizations be limited to four weeks with a view to protecting Canadian musicians. One of the remaining resolutions which was not concurred in by the committee asked that no further public funds be used for the purpose of inducing immigrants to Canada. The report was taken up seriatim, and after considerable discussion was adopted.

Grants to Fraternal Delegates

The Ways and Means Committee recommended that \$400 be allowed to the fraternal delegate to the American Federation of Labour and \$800 to the fraternal delegate to the British Trades Union Congress. The committee also recommended that the execu-

tive council be authorized to pay all incidental expenses in connection with the convention. The report was adopted.

Union Labels

To the Committee on Union Labels was referred the section of the executive council's report pertaining to union labels as well as two resolutions, one of which called attention to the absence of union labels on correspondence received by the various labour bodies, and asked that such letters be returned to the senders. The committee amended the resolution, urging that where the union emblems were missing the writers be asked to have the union label affixed to their stationery. The second resolution asked that the Congress Journal be printed on union watermarked paper. The committee recommended that this be referred to the executive council.

The committee also recommended the continuance of the Canadian Advisory Council to the Union Label Trades Department of the American Federation of Labour, and suggested that the council should direct its attention to the printing in Canada of all literature used for propaganda purposes by the department. The committee suggested that, as the union labels of most of the affiliated organizations are now registered in Canada and fully protected by law, union label campaigns should be carried on everywhere. The committee stated that their attention had been called to large importations of boots and shoes, and believed that the Canada Marking Act, which requires imported articles to bear a stamp showing the country of origin, should be extended to boots and shoes. The committee recommended that the *Congress Journal* continue to give publicity to union labels and asked that assistance be given to brewery workers in their efforts to organize those employed in the various breweries in the Dominion. The closing paragraph of the report, which was unanimously adopted, was as follows:—

"We believe it is unnecessary to enumerate the various labels, shop cards and buttons, but would point out that the union label shop card and button are the only guarantees of union conditions. We believe that our purchasing power is the greatest of all factors in any community. Our shortsightedness is exemplified by the individual degree of selfishness with which our motives are actuated. It is pathetic indeed to see union men and women contenting themselves with little things when there are so many greater benefits at stake. It is a serious proposition, and it behooves us to see that we play our part more in keep-

ing with our trade union principles and support union labour by the purchase of union labelled articles, patronize union shops and support the union working button and card at all times."

Mr. John Manning, secretary of the Union Label Trades Department of the American Federation of Labour, addressed the delegates on Friday morning on the subject of union label merchandise. He congratulated the Congress on the passage of legislation in Canada to permit the registration of union labels, and also urged the delegates to spend their money in the purchase of goods bearing the union label.

Resolutions

The Committee on Resolutions, whose report was presented by Delegate J. T. Marsh, of Toronto (chairman), stated that three resolutions had been submitted too late to comply with the rules, but as the subject matters were covered by resolutions regularly received, no action had been taken in regard to them. A resolution protesting against the expulsion of Mr. Tim Buck, of Toronto, by the International Association of Machinists had been sent in, but as the matter was one of internal affairs of an international union, the committee recommended that no action be taken as the Congress had no jurisdiction. Another resolution, the chairman, stated, was similar to one that had been ordered deleted from the proceedings by the Edmonton convention of 1927, and therefore it was not inserted in the agenda. The convention approved of the action of the committee.

The first resolution adopted by the convention was one asking that the Civil Service Act be amended so as to place in the hands of the Postmaster General such matters as classification and the fixing of salaries for letter carriers. Other resolutions dealing with matters affecting Dominion Government employees were adopted, as follows: (1) In favour of marine engineers in the employ of the Federal Government being given the benefit of superannuation as provided in the Civil Service Act, (2) That federal office cleaners be paid on an annual salary basis as permanent employees and be granted sick leave, holidays and superannuation.

Marine Regulations

The convention approved of resolutions on the following subjects: (1) That all employees of the Canadian National Steamships become residents of Canada; (2) That all mechanically propelled vessels be required to have certificated engineers; (3) In favour of having certificates issued to engineers by the Canadian Government having the same status

as certificate issued by the British Board of Trade; (4) In favour of seamen who sign on foreign-going Canadian ships being returned to their place of original engagement at the expense of the steamship on which they were employed when they are paid off at any port other than where engaged; (5) In favour of seamen being granted the privilege of exercising their franchise when away from home following their employment as seamen; (6) In favour of a certificated engineer being placed on the examining board for marine engineers, and (7) Asking that the horse-power of the propelling machinery on vessels be determined by brake horse-power of turbine engines and the indicated horse-power be used on all reciprocating engines.

Fair Wages

Under the heading of Fair Wages five resolutions were presented to the convention, the first of which was in favour of asking the Quebec Government to enact legislation which will guarantee to all workers engaged on provincial government contracts the same protection as is provided under the fair wage resolution of the Federal Parliament. The next resolution read as follows:—

“Whereas, the protective tariff has only been of advantage to the manufacturers in Canada without any corresponding benefit either to the employee in the protected industries or to the consumer of protected commodities, and whereas, in many protected industries the workers are refused the right to organize or associate themselves with the trade union movement in this country. Be it resolved, that we, the delegates to the Trades Congress convention, go on record as advocating to the Dominion Government the passing of legislation that all workers in protected industries be included in that section of the Fair Wage laws, which provide that all works aided by Dominion public funds are subject to the provisions of the Act inasmuch as protection itself is but an indirect subsidy by the State to the manufacturers in this country.”

The above resolutions were adopted, as was also another declaring that the fair wage clauses of the Ontario Provincial Government were inadequate, and urging that representations be made to the Government to amend its fair wage regulations so that the prevailing wage rates and hours of labour shall be enforced on all public work paid for or subsidized by the Government.

Industrial Disputes Investigation Act

A resolution setting forth that it was desirable that the Industrial Disputes Investi-

gation Act should become law in the whole Dominion, and asking that the governments of Ontario and Quebec be petitioned to pass enabling legislation so that the act would apply in these provinces, was adopted, along with a request that the provincial executive committees of the congress press for registration enabling civic employees to submit grievances to an investigation or conciliation board.

Old Age Pensions

Seven resolutions submitted were on the question of old age pensions. Three were covered by other resolutions, and two were reported against by the committee on resolutions, and accordingly were not dealt with. The chief resolution declared that “it is most desirable that all provinces of the Dominion should avail themselves of the opportunity of giving protection to their aged and indigent citizens,” and instructed the provincial executive committees in those provinces which have not already adopted the old age pension act to press for the desired legislation. This was unanimously endorsed, as was also a request that the British Columbia Government amend the Superannuation Act so as to cover all employees of public utilities.

The convention also approved of a resolution asking for the establishment of unemployment, sickness and invalidity insurance.

Refusal to Confer with All-Canadian Congress

The following resolution asking that the Trades and Labour Congress of Canada and the All-Canadian Congress open negotiations for amalgamation was reported against by the Committee on Resolutions:

“Whereas, the Trade Union Movement of Canada is weakened by division into Catholic, National, A.F. of L., and Independent International groups, and whereas, the only method by which this weakness can be overcome is by the unification of all these groups into one all-inclusive trade union centre that shall embrace every functioning trade union organization regardless of jurisdictional claims similarly as does the British Trades Union Congress. Therefore, be it resolved, that, as a step towards unity in the Canadian trade union movement, this convention of the Trades and Labour Congress of Canada extends fraternal greetings to the national unions organized in the All-Canadian Congress of Labour, and urges that these two National centres, *i.e.*, the Trades and Labour Congress and the All-Canadian Congress, shall immediately open negotiations for amalgamation; and be it further resolved,

that this convention of the Trades and Labour Congress of Canada invites the All-Canadian Congress of Labour to co-operate in convening an all-inclusive conference of Canadian trade union organizations for the purpose of considering the furtherance of national trade union unity in Canada."

It was moved that the matter be referred back to the committee with instructions to bring in a suitable resolution. After some discussion the previous question was called for and adopted. The motion to refer back was defeated and the report of the committee sustained.

Hours of Labour

Under the heading of "Hours of Labour" the convention approved of (1) legislation that the hours of labour for marine engineers on any steamboat operating for hire shall not exceed eight hours per day, and any steamboat operating more than eight hours per day shall carry at least two certified engineers; (2) three-platoon system for all firefighters; (3) the five-day week of not more than 40 hours; (4) legislation providing for all workers in Canada being given annually not less than two weeks' vacation with pay.

The convention also approved of requesting the Ontario Government to enforce the provisions of the One Day Off in Seven Act, and of asking the Quebec Government to extend to all wage earners in the province the provisions of the law requiring one day's rest of not less than 24 consecutive hours each week.

Proposed Ratification of I.L.O. Conventions

A resolution was introduced declaring that "there has been a regrettable indifference" shown by the various provinces in relation to the conventions of the International Labour Organization and asking that the various provincial executive committees of the congress press upon their respective governments the adoption of such conventions as (a) establishment of the eight-hour day, (b) protection of women and children in industry and commerce, (c) co-operation with other provinces in obtaining ratification by Canada of all these conventions, and (d) that the provinces be urged to be represented at the annual conference of the I.L.O.

Opposition to War

The following resolution approving of the action of the Canadian Government in signing the Kellogg Treaty outlawing war was approved without debate:—

"Whereas, the labour movement is opposed to war and in favour of the substitution of the principle of arbitration in the settlement of all disputes between nations. Therefore, be it resolved, that this forty-fourth convention of the Trades and Labour Congress of Canada expresses its approval of the action of the Federal Government in affixing its signature to the Kellogg Treaty outlawing war; and further, be it resolved, that we urge our Government to also add its signature to those of twenty-seven other nations who have already signed the optional clause of the protocol of the World Court, League of Nations, providing for the judicial settlement of international disputes."

No Recognition of Soviet Russia

The Committee on Resolutions reported against the following resolution asking for resumption of friendly relations with Russia:—

"Whereas, Premier W. L. Mackenzie King admitted that the Canadian Government had no cause for complaint against the work of the trade delegation of the U.S.S.R. in this country; therefore, be it resolved, that this convention of the Trades and Labour Congress of Canada urges that immediate steps be taken to renew the previously existing friendly relations; and, be it further resolved, that to help the development of trade and to assist the workers of the Soviet Union in their work of socialist construction the Federal Government be urged to immediately extend substantial credits to be used in the purchase of manufactured products in this country."

During the debate on the report of the committee, which was taken part in by several delegates President Moore stated that the resolution originated in the Communist Party which was endeavouring to show that the Congress is sympathetic to communist principles and the dictatorship of Russia. It was also stated during the discussion that the emissaries of Soviet Russia were trying to destroy the trade union movement in this country.

The previous question was called and on a vote the report of the committee was adopted by a large majority.

Another resolution which asked that the Canadian Government be requested to renew the former trade agreement with Russia was also defeated.

Organizing Campaigns

A resolution declaring that there are in Canada 100,000 working women employed in manufacturing, asked that international unions and central bodies be urged to cooperate in the initiation of organizing campaigns centering particularly on the organization of unorganized female workers. This was adopted.

There was referred to the executive council a resolution asking for the transfer of all metal polishers now in a union chartered by the Congress to the Metal Polishers' International Union, it being stated that negotiations were progressing with that end in view. Another resolution asking that the congress urge the formation of an international union for civic employees was also referred to the executive council.

Abolition of Child Labour

A resolution urged the abolition of child labour, and with this end in view, "where parents find it difficult to send their children to school owing to their meagre wages, that legislation be enacted to provide financial assistance to enable parents to continue their children at school up to 16 years of age; and further, that arrangements be made to provide for vocational training and general education in apprentice departments, and that the time put in at these training institutions be paid for." This resolution was adopted, as was also a demand that all money grants for cadet training "and other military activity" in the schools be abolished. The committee, however, stated that no opposition was offered to physical training in the schools.

Minimum Wages

The convention approved of a resolution asking that the Quebec Minimum Wage law be broadened in its scope so as to cover women employed in all industrial and commercial establishments. Another resolution asked that efforts be made to secure for all female workers in Ontario the minimum wage, irrespective of any form of piece work which has been established in some industries. This was adopted, together with a request that all provincial governments be urged to enact legislation providing for the fixing of a minimum wage for all male workers.

Mothers' Allowances and Maternity Benefits

The convention approved of a resolution in favour of asking the provinces which have not yet made provision for mothers' allowances to enact the necessary legislation.

A resolution, the preamble of which declared that the number of mothers dying as a result of childbirth in one year in Canada was 1,582, asked that the Dominion Government be requested to appoint a commission to inquire into the various systems of maternity benefits now in operation with a view to establishing similar benefits in Canada, and that organized labour be represented on such commission. This was adopted.

Workmen's Compensation

Nine resolutions dealing with the question of workmen's compensation were submitted. The first asked that the provincial governments be requested to investigate the number and nature of accidents occurring among technical school pupils, and that amendments to the workmen's compensation acts be sought to cover such cases. This was adopted, as well as a request that efforts be made to have the principle of private insurance removed from the newly-enacted workmen's compensation laws of the province of Quebec. Other resolutions under this heading which were approved were (1) That all medical doctors report all cases of occupational diseases in which their services may be required; (2) Asking that workers exposed to acid or potash fumes or salts dust, etc., and lacquer fumes be included in the list for compensation on account of industrial diseases; (3) Against employers discriminating against employees for attempting to carry out the provisions of workmen's compensation acts; (4) Asking the Congress to assist the workers in Saskatchewan in making representations to the provincial government in the matter of amending the present Workmen's Compensation Act.

Health and Safety

The convention approved of (1) the prohibition of the manufacture of clothing for commercial purposes in the home of the workers; (2) legislation to govern the erection and operation of elevators and hoisting machinery used in conveying material, etc.; (3) the appointment of examiners or inspectors holding hoisting and portable engineers' licenses to the Engineers' Board of Ontario; (4) refrigerating machines in Quebec being operated by qualified persons who shall be placed under the board of examiners for the province; (5) amending the Scaffolding Inspection Act of the province of Quebec so that it will apply in all parts of the province; (6) protection of persons employed in bronze welding; (7) licensing laws for barbers where none now exists; (8) further installation of automatic signal systems

on Canadian railways; (9) making it a punishable offense to neglect to strip and wash walls of dwellings before new wall paper is hung; (10) amending the Quebec law relating to moving picture machine operators so that the examination required will more fully cover the work of a picture machine operator; (11) having the National Research Council investigate the health hazard of spray painting; (12) Reiterating objection to the unrestricted use of paint spraying machines.

Revaluation of Government Lines

Approval was given to a resolution which declared that the debt overhanging the Canadian Government railways "is not due to the present administration, but is a legacy from previous administrations of the various railroads" now composing the system, and that these privately-owned enterprises "were only nationalized because the railroads were bankrupt," and asked for endorsement of legislation providing for a revaluation of the assets of the national railways, and that all debts which are not a part of the assets of the railways shall be chargeable to the Dominion public debt.

Support of Auto Workers

Unanimous consent was given to the delegates from the International Automobile Workers' Union, No. 18011, of Oshawa, to introduce the following resolution:—

"Whereas, a discussion arose in this connection on Monday with reference to conditions in automobile factories, with special reference to the Oshawa plant of the General Motors of Canada, Limited, and whereas, we believe as a result of that discussion the General Motors' officials dismissed a member of the Automobile Workers' Union for his activities in the organization, but afterwards reinstated him upon the refusal of the other men in his department to continue work, and inasmuch as such discrimination against union men is apparently the policy of the company.

"Be it resolved, that this 44th convention of the Trades and Labour Congress of Canada urge all delegates, regular and fraternal, upon return to their respective organizations to request all members using this company's products to write the General Motors, Limited, or their respective dealers, protesting against the company's attitude towards the union and its members and its violations of the award of the Board of Conciliation and request the said company to adopt a more favourable attitude towards organized labour."

The chairman of the committee on resolutions announced that a copy of the resolution would be sent to the American Federation of Labour and the British Trades Union Congress with a view to giving the matter the widest publicity. The resolution was adopted.

Other Resolutions

A resolution asked that military bands should only be permitted to play at military engagements under control of the Department of National Defence and at national and patriotic functions. This was referred to the executive council.

Other resolutions adopted by the convention were as follows:—

In favour of trade unionists giving support to the Workers' Educational Association of Ontario;

In favour of the complete abolition of fee charging employment bureaus;

In favour of requiring employers whose employees are on strike, and who advertise for help, to set out in the advertisement that a strike exists;

In favour of an enactment that will remove any doubt as to the legality of peaceful picketing;

In favour of the sale of beer and wine in licensed places for beverage purposes and the lowering of taxes on ale and beer;

In favour of members of the legal profession being required to carry a bond or such other legal safeguard as may be requisite to ensure the protection of the public;

In favour of the payment of wages weekly;

Asking that picture machine operators penalized for violations of the Ontario Theatres and Cinematographs Act be given the right to employ counsel, and that no operator be penalized by any official who is not an appointed judge, and also that no official of the inspection department have the power to suspend an operator's license, and further that efforts be made to secure for operators the necessary ventilation and sanitary conditions.

Fraternal Greetings

The addresses of the fraternal delegates were delivered at the afternoon session of Tuesday, Mrs. Maud Swartz, fraternal delegate from the National Women's Trade Union League, being the first to address the delegates. Mrs. Swartz outlined the objectives of the league, among which are the organizing of women in trade unions and to endeavour to secure what is believed to be favourable legislation for women. The league was the pioneer of the education of women in trade unionism, and as a result some of the mem-

bers of the league had become organizers in the trade union movement. The league also endeavoured to prevent the exploiting of children in industry and aimed to raise the standard of the home. Mrs. Swartz asked the delegates to give attention to the organizing of the women and their welfare in Canada, and asked that the congress send a delegate to the next convention of the league.

Mr. John W. Morton, vice-president of the International Brotherhood of Firemen and Oilers, of Chicago, Ill., fraternal delegate from the American Federation of Labour, in conveying fraternal greetings referred to the "illegal use of the injunction" in the United States. Some progress had been made towards securing a national anti-injunction law; a bill was before the United States Congress and the executive council of the A.F. of L. had been instructed to press for the passage of the bill. Another matter before the people of the United States was prohibition, which in the larger cities was a failure. There did not, however, appear to be much likelihood of a modification of the Volstead Act. He referred to what is known as the "yellow dog" contract, which required employees to sign a pledge that they will not become identified with a labour union, and which the trade unionists were endeavouring to stamp out.

Referring to unemployment in the United States, Mr. Morton stated that this condition was due in part to the highly productive machinery which is in operation in the industrial establishments in the United States. As a means of relieving the situation he favoured a five-day week. Four states had old age pension laws, a measure which the trade unionists were endeavouring to have enacted generally. The speaker referred to communist activities in trade unions in New York city, and stated that in Chicago they had warned the communists from New York to leave Chicago as they wanted no disturbances in the labour movement in that city, and if force was used the Chicago Federation of Labour would meet force with force.

Mr. Chas. Duncan, J.P., M.P., secretary of the General Workers' Union of Great Britain, fraternal delegate from the British Trades Union Congress, referred to the Old Country as the home of the trade union movement, and although some of the younger nations might teach them something, they in England were not doing too badly, and stated that there was a possibility that the next Government in England would be a Labour Government. While there was a trade union law in Great Britain, they did not hear of any injunctions against labour in England. He advised the labour movement in Canada

to use their political power, for as long as they did not use their political arm so long will they be down, the speaker declared. In 1909 there were 29 labour members in the House of Commons, all of whom had been trained in the trade union movement before they became candidates. Since that time there had been a steady increase in the number of Labour representatives, until in 1924 a Labour Government went into power. He paid tribute to Ramsay MacDonald, the Labour leader and to the labour members in the House of Commons. In England, Mr. Duncan stated, they believed in using both the economic and political arms of the labour movement in endeavouring to achieve the objects they had in view. He outlined how the Labour Party had started on the road to political power by electing members to the various local bodies and named some of the localities which were being governed by labour members, who had shown that they were competent to rule. Referring to recent events he mentioned how the trade unions of railwaymen had been called into conference by the managements of the railways, something quite new in the history of the labour movement in Great Britain, which embraced between six and seven millions of workers who were organized to work for better conditions.

At the same session, Mr. W. L. Best, of Ottawa, legislative representative of the Brotherhood of Locomotive Firemen and Enginemen, conveyed the fraternal greetings of the brotherhood, which had had an existence of more than half a century, and which body, he declared, was prepared to co-operate with the congress and other railroad organizations. The question of the affiliation of the B. of L.F. and E. with the Congress was now before a committee to decide. On the question of preparedness Mr. Best stated that it was essential that labour should have representatives in every legislature and should be financially and organizationally strong.

Fraternal messages were received from William Green, president of the American Federation of Labour, as well as from the conventions of the Bricklayers, Masons and Plasterers' International Union, International Association of Firefighters, Commercial Telegraphers' Union and the Brotherhood of Maintenance-of-Way Employees.

Mrs. Maud Swartz was subsequently presented with a crystal necklace, Mr. Morton and Mr. Duncan receiving gold watches suitably engraved. Tie pins were presented to each member of the executive of the local reception committee.

The Minister of Labour

The Hon. Peter Heenan, Federal Minister of Labour, who as above-mentioned was unable to be present at the opening session, addressed the delegates on Thursday afternoon. He thanked the local committee of arrangements for inviting him to the convention and referred to the harmony existing between himself and the Congress to whose representatives at the meeting of the International Labour Organization in Geneva he paid tribute.

Touching on the Old Age Pension Act, which was being misrepresented in some quarters, and which it was stated, when the bill was before Parliament would never be taken advantage of, the minister pointed out that three of the western provinces had passed the necessary legislation to bring the law into effect. He complimented the Congress for the consistent manner in which they had agitated for the law, which he believed would soon be established in all the provinces of the Dominion. He stated it was his intention to establish a board of representatives of the provinces which have adopted the measure to consider improvement in the act.

Referring to immigration Mr. Heenan stated that there was a well thought-out campaign being conducted in Great Britain to stamper the Dominion government into bringing British unemployed to Canada by the shipload. The propaganda was motivated by the desire of certain interests in the Old Country to solve a political problem and was encouraged by persons in Canada who wanted to flood the labour market and provide ten men for every job. As an instance of the working of the scheme, the speaker said that advertisements in England were telling the people that coal miners were wanted in Canada at high wages when as a matter of fact there was a surplus of miners in every coal field in the Dominion. The unemployed in Britain wanted work, he said, and it was false to say that they were content to subsist on the dole; and as they desired employment the false reports of lots of work at high wages in Canada were eagerly accepted.

Discussing immigration in general, Mr. Heenan declared that the regulations gave Britishers an advantage, and that this preference extended to British workmen was worthy. He believed, however, that a square deal should also be given to such immigrants from other countries who found their way to Canada and who displayed a willingness to work and to abide by the laws of the country. Referring to the bringing in of the British miners to assist in harvesting opera-

tions, the minister stated that each year there was a committee who investigated and determined how many men should be sent to western Canada to help to garner the wheat crop. He had sent telegrams to the Premiers of all Eastern provinces inquiring as to what number of men would be available for harvest operations. Some of them had stated that owing to the increased industrial activity not as many men as usual would be available. It was known that men could be secured in other parts of the world, but the British Government offered men, accustomed to hard manual labour, and why should we turn down our own flesh and blood, the Minister asked. The Canadian Government finally had the number limited to 10,000, and the responsibility for their return to England was placed on the British Government and the railway companies. The minister said the Canadian Government was prepared to stand behind the agreement and see that the men who could not be placed in work were returned.

Mr. Heenan referred to the action of the convention in asking for the elimination of private employment offices, which some provinces were encouraging. To curb this practice it might, he thought, be necessary to withhold the grants accruing to the public employment offices under the agreement with the provinces, but he was not sure that that would be the proper step yet.

Speaking of the extension of the Industrial Disputes Investigation Act, the minister held that those provinces which have not passed enabling legislation to permit the act to apply in their respective districts were not contributing to peace in industry. Referring to the right of association which had been incorporated in the Treaty of Versailles, Mr. Heenan pointed out that there were no unions of metal miners in Northern Ontario, and he thought it was the duty of the labour unions to get into the district and organize the workers. He also expressed dissatisfaction with conditions in certain industries in Northern Ontario, where it had been represented to him that men are discharged if they attempt to form or join a union and are compelled to live in company houses whether they want to or not. If Americans desire to come to this country and invest in development, he added, let them do so under Canadian regulations and in the spirit of British fair play.

At the same session Mr. W. D. Mahon, president of the Amalgamated Association of Street and Electric Railway Employees, was given the privilege of addressing the convention on the Union Labour Life Insurance

Company, sponsored by the American Federation of Labour and organized by the trade unions on the North American continent. He stated that the company had \$38,000,000 worth of policies in force, and that many unions had taken out group life insurance for their members. It was proposed, he stated, to soon be in a position to write insurance in Canada.

Officers Elected

The election of officers, which took place on Thursday afternoon, resulted in the former members of the executive council being re-elected as follows:

President, Tom Moore, Ottawa;

Secretary-treasurer, P. M. Draper, Ottawa;

Vice-presidents, R. J. Tallon, Calgary; John T. Foster, Montreal; James Simpson, Toronto.

Provincial Executive Committees—

Quebec—Joseph Pelletier (chairman), Montreal; Omer Fleury, Quebec; Eugene Gilbault, Aylmer; Thos. Black, Montreal.

Ontario—H. S. Mitchell (chairman), Hamilton; Rod Plant, Ottawa; John B. MacKay, Windsor; James Watt, Toronto.

Manitoba—F. MacIntosh (chairman), V. Armand, J. G. Hutchinson and W. B. Lowe, all of Winnipeg.

Saskatchewan—A. McEddy (chairman), Saskatoon; H. Perry, Regina; H. Davis, Prince Albert. The Moosejaw Trades and Labour Council is to name the remaining member.

British Columbia—W. J. Bartlett (chairman), Vancouver. The trades councils in Victoria, Vancouver and Prince Rupert are to name the other members of the committee.

The selection of the executive committee for Nova Scotia was referred to the executive council. The provinces of New Brunswick and Alberta having federations of labour, no committees are named by the congress.

Fraternal delegate to the American Federation of Labour, Wm. Varley, Toronto.

Fraternal delegate to the British Trades Union Congress, John Buckley, Toronto.

St. John, N.B., was chosen as the convention city for 1929.

Among other entertainment provided by the local committee was a trip on Wednesday to Niagara Falls to view the power plants. A dinner was provided by the Ontario Government at the refectory in the park.

NOTES ON LABOUR UNION ACTIVITIES

Federation of Catholic Workers

The seventh annual convention of the Federation of Catholic Workers of Canada was held in Quebec City, September 8-11, with 101 delegates in attendance, representing 92 organizations. His Eminence Cardinal Rouleau and the Hon. A. Galipeault, Provincial Minister of Public Works and Labour, spoke at the inaugural session. Reports were submitted by the members of the executive board and 45 resolutions were adopted, one of which declared for a non-partisan political platform, reading as follows:—

Legislative Programme

(a) Payment of a fair wage sufficient for the maintenance of the worker and his family and covering the risks of illness, unemployment, accident and old age, or application of social insurance legislation calling for government and employers' grants to the existing union funds to which the workers are already contributing. Insertion in all federal, provincial and municipal contracts of a schedule of wages to be fixed yearly by the fair wages officers according to the cost of living in the district.

(b) Proportionate representation of Catholic workers in all public bodies and services and

on all bodies on which organized labour ought to be represented.

(c) Respect and observance of the Lord's Day.

(d) Grants for union employment offices.

(e) Establishment of an Economic Superior Council composed of farmers, workers, manufacturers and conciliation workers.

(f) Drawing up of a labour code by a commission composed of lawyers, economists and workers.

(g) Distribution of federal, provincial and municipal public works in such a manner as to provide work in winter time.

(h) Requesting the city councils to give the preference to their own citizens in the matter of employment.

(i) No abatement in or exemption from taxes for corporations that do not undertake to give the preference in all permanent and temporary work to citizens of the municipality, or to corporations who do not pay the union wage paid in the district.

(j) Ratification of the Draft Conventions of the International Labour Conference.

(k) To accept as immigrants agricultural workers only and in proportion to the country's power of absorption.

Resolutions

The convention went on record in favour of the Quebec Government co-operating with the Federal Government in the establishment of old age pensions.

Besides the passage of a number of resolutions having to do with the internal affairs of the federation, the convention adopted the following, requesting:

(1) That the Federal Government recognize Sunday as a holiday for postal workers and all employees of the Federal Government.

(2) That the Quebec Government compel contractors (a) to use only nails that were heated to a high temperature before packing and (b) to put these nails in clean and sanitary places.

(3) That the Federal Government award all future shipbuilding contracts to Canadian firms.

(4) That the Quebec Government ratify the recommendation of the International Labour Conference concerning the suppression of all night work for women.

(5) That the provincial government amend the Firemen and Policemen's Arbitration Act so as to provide for its compulsory application and sanction in the case of all disputes between civic employees engaged in public services and municipal councils.

(6) That the provincial government amend articles 105 to 109 of the Factories' Act so that they be made applicable to building works.

(7) That the provincial government establish an apprenticeship school at Chicoutimi.

(8) That the provincial government establish a standard eight-hour day.

(9) That with a view to the welfare of the working class and the progress of trade and industry, the giving of night courses on scientific sociology in order to secure the existence and the good management of labour organizations in Quebec province.

(10) That the provincial government re-introduce a bill already adopted in second reading calling for the establishment of the double shift system for firemen.

(11) That the federal and provincial governments (a) Fix the hours of labour in bakery establishments in view of the adoption of an eight hour day in the bakery trade; (b) Prohibit Sunday work in bakery establishments as in all industries not specified in the exceptions to the Federal Lord's Day Act; (c) Abolish night work in all bakery establishments.

(12) That the Minimum Wages Commission start an immediate inquiry into the pastry, confectionery and chocolate trades, and publish an order guaranteeing a fair wage

to the women employed in these trades, and further that there be a better observance of sanitary laws in the above trades, and that the forty-eight hour week be established.

Election of Officers

The following officers were elected for 1928-1929: President, Pierre Beaulé, 308 St. Joseph st., Quebec; First Vice-president, Osias Filion, 7996 Boyer st., Montreal; Second Vice-president, J. A. Guay, Three Rivers; General Secretary, Ferdinand Laroche, 308 St. Joseph st., Quebec; First Director, Gerard Tremblay, 655 Demontigny East, Montreal; Second Director, A. Tremblay, Chicoutimi Centre, Que.

The next meeting place was left for the Executive Board to decide.

Catholic Federation of Building Trades

The fifth convention of the Catholic Federation of Building Trades was held in Quebec City on September 8, there being ten delegates present. A verbal report of the activities of the executive board was submitted and adopted. Besides making some changes in the rules and amending the constitution in certain respects the convention adopted a resolution in favour of asking the provincial government to establish a practical accident prevention bureau and to instruct the proper officials to make a classification of "industrial establishments according to the degree of protection afforded to the staff, and to foster protection by a reduction in insurance premiums for the establishments best protected."

Mr. Pierre Beaulé, president of the Federation of Catholic Workers, who conducted the election of officers, made a short address in which he asked the delegates to beware of communism in Canada and to unite against it everywhere. Mr. Beaulé said that the workers' salvation will be found in the social doctrine of the Roman Catholic Church.

The officers elected were: president, Osias Filion, Montreal; vice-president, A. Martin Boucher, Quebec; general secretary, J. B. Delisle, Montreal; accountant, G. Perrin, Quebec; district members, J. Gregoire, Three Rivers, Jos. Gauthier, Chicoutimi, and M. Lalonde, Lachine.

Catholic Federation of Printing Trades

The annual convention of the Catholic Federation of Printing Trades was held in Quebec City on September 8, with eight delegates in attendance. The secretary reviewed the activities of the past year, in which it was

stated that the federation had taken over the risk of illness which was formerly issued by private insurance companies. Nearly one hundred placements had been made and practically all the unions, at least those in Montreal, had obtained wage adjustments. The receipts for the year totalled \$5,704.67, leaving a balance of \$435.25. The paying membership was 280.

In view of the standardizing of the use of the labels of the affiliated unions the federation decided to have the inscription on the labels read "Allied Printers, National and Catholic Unions, Canada." The word "Mont-

real" will be retained on Montreal labels only. In other localities the general label of the federation will be used. It was decided that the federation should be incorporated.

Officers elected were: Pres., E. Lafontaine, Montreal; Vice-pres., J. O. Poulin, Quebec; General Secretary, C. Paquette, Montreal; Assistant Secretary, G. Tremblay, Montreal; Treasurer, A. Charpentier, Montreal; Accountant, A. Dery, Montreal; Directors: J. E. Poupart, Chicoutimi, and A. Sauvageau, Montreal.

Mine Workers Union of Canada

The third annual convention of the Mine Workers' Union of Canada was held at Calgary, Alberta, September 10-14, 1928, with delegates present from 17 local unions, together with six board members and three resident officers.

In the report of the executive officers, presented by President Frank Wheatley, the activities of the union were outlined, and mention made of new unions organized, recognition of certain unions, higher wages and better working conditions for the members, as well as of the difficulties encountered in endeavouring to extend the influence of the union.

According to the report, a new district, known as district No. 2, was organized, consisting of local units situated at Nanaimo, Extension, South Wellington, Ladysmith and Cumberland, on Vancouver Island, B.C. A further extension of the union was made by the establishing of a local unit at Westville, N.S.

The convention was asked to outline a tentative policy to guide the officers in the establishing of a national governing body.

Attention was called to the alleged "dumping" of 8,500 unemployed miners from Great Britain into Western Canada, where, it was claimed, there were already more competent miners than the industry could absorb, and the convention was asked to make a vigorous protest against the issuance of further miners' certificates. It was further suggested that recommendations be drafted for submission to the provincial government, should the committee on the revision of the Mines Act of Alberta be not appointed as promised.

The report of the secretary-treasurer showed receipts of \$25,033.46; expenditures, \$18,323.74, leaving a balance as at August 31, 1928, of \$6,709.72. The average monthly paid-up membership was 3,582 for the ten-month period ended August 31, 1928.

A recommendation of the executive that the *per capita* be increased to 75 cents per month, 40 cents to be applied to the general fund and 35 cents to a defense fund, was approved by the convention.

Resolutions

Among the resolutions adopted were the following:—

Requiring the management of every mine employing over twenty men to furnish a wash-house of such dimensions that each man shall be furnished with a space of four square feet;

Recommending that every driver-boss shall be a certified first-aid man;

Advocating that the company provide a building to be used exclusively for hospital purposes;

Urging that mining companies place a hand-rail in all travelling ways in pitching seams;

Recommending that the maximum amount of powder allowed each miner in a working place should be five pounds;

Advocating an amendment to the Mines Act of Alberta so that an employee may authorize his employer by written order to apply the whole or any part of the moneys due him, for the payment of hospital dues, sick and accident fund or union dues;

Recommending that cross-cuts every sixty feet be applied to seams where cars can be delivered to the working face;

Advocating that operators be required to show the amount of shifts worked on the pay statements of contract men;

Recommending that the government pay the wages of the employees' inspection committee for the inspection of the mine at least once a month;

Advocating that all fire-bosses be placed under the control of and be paid by the government;

Urging that all workmen employed in sinking shafts, slopes or tunnels have a miner's certificate before being employed at this work;

Petitioning the provincial government to cancel the permit system for miners;

Recommending that the board of examiners for miners' certificates of competency shall consist of the Inspector of Mines for that district, and two other members, one appointed by the minister and the other to be elected by the coal miners of the district, the inspector and appointed member to hold office during the pleasure of the minister;

Advising delegates to advocate that their locals affiliate and pay *per capita* to the Canadian Labour Party;

Advocating that all persons before sitting for examination for certificates of competency produce evidence from their employer or secretary of union to show that they are qualified;

Recommending that the necessary steps be taken with the proper authorities to have the bunkhouse system abolished as speedily as possible;

Advocating the nationalization of all coal mines in Canada;

Urging that the Workmen's Compensation Act of Alberta be amended as follows: (a) That compensation on the basis of 66 $\frac{2}{3}$ per cent of wages be paid from the first day of accident, (b) To have the widows' pension raised from \$35 to \$45 per month, children in proportion, (c) That all compensation cases prior to the change in the Act come under the 66 $\frac{2}{3}$ per cent rate from the day thereof; (d) To have the Compensation Board supply the best of artificial limbs, etc.; (e) That the Workmen's Compensation Board pay the ambulance or taxi to injured workmen's destination, (f) To have the 66 $\frac{2}{3}$ per cent rate paid on a basis of \$2,000, (g) That rheumatism, sciatica and lumbago be included in the industrial diseases;

Protesting against the practice of the Compensation Board in computing into the average earnings the time a mine is suspended from operations by lack of orders or through strikes;

Recommending that the Compensation Board be communicated with by wire when in the opinion of the attending physician the injured workman requires a specialist's advice and treatment;

Advocating that no further agreement be signed at any mine unless it carries with it a minimum wage rate equal to what may be in effect at the majority of the mines under the jurisdiction of the Mine Workers' Union of Canada;

Pledging assistance to the Wayne miners and assessing each member one dollar for that purpose;

Urging that efforts be put forth to organize such fields as Drumheller, Fernie, Michel, Mountain Park and Cadomin;

Recommending that the District Officers endeavour to bring the Hillcrest Miners into the organization;

Endorsing the action of the district officers in organizing the miners of Vancouver Island;

Recommending that the District officers continue their efforts to organize the miners in Northern Ontario and Nova Scotia;

Recommending that representatives of all local unions of the Mine Workers' Union of Canada and district officers, be called into conference three days previous to the next annual convention for the purpose of establishing a national governing body of the organization, and that in the meantime the district executive board draft a national constitution for presentation at conference;

Authorizing the district officers to issue new charters to each local unit;

Authorizing the district officers to give every help and advice possible to some British miner harvesters who are stranded in the city of Calgary.

International Union of Mine, Mill and Smelter Workers

The twenty-fifth convention of the International Union of Mine, Mill and Smelter Workers was held at Salt Lake City, Utah, on August 6-13, with twenty-four officers and delegates present. In his address, President Jas. B. Rankin reviewed the activities of the union since the last convention in January, 1927, when four offices were filled, viz., President, Vice-president and two board members. The president informed the delegates that it had been found necessary to move headquarters from Denver, Col., to Salt Lake City, Utah. In speaking of the state of the

organization in Canada, President Rankin stated that "in Northern Ontario, where we once had large and flourishing locals, internal dissension has completely destroyed them. Representatives of the O.B.U. are located there, but from what I could learn and see they were able to make little or no progress."

According to Secretary-Treasurer E. E. Sweeney, the union, at the close of the last convention had practically no money in the treasury and owed \$19,000 in back salaries and about \$2,000 of other accounts. Up to May 31, 1927, this indebtedness had been taken

care of and on August 1, 1928, there was a cash balance to the credit of the union of \$8,127.

The convention approved of the suggestion of the president that a delegate be sent to the

Trades and Labour Congress of Canada.

The election of officers will be decided by referendum vote of the membership, nominations having taken place during the convention.

International Photo-Engravers' Union

President Matthew Woll presided over the 29th annual convention of the International Photo-Engravers' Union, which was held in Cincinnati, Ohio, August 20-25, with 53 delegates present, representing 31 local unions. The president, in dealing with the activities of the union during the past year, touched on many subjects of interest, such as wage negotiations; shorter work-day; shorter work-week; apprentices; organizing activities; non-unionism and non-union trade schools; union labels; Federal Trade Commission's decisions; technical information and technical research work; extension of benefit system; menace of foreign competition; health conservation and hazard reduction. The president stated that "in addition to giving good business and professional service, our organization is promoting human welfare and progress. It is rendering practical service to industry and society."

Each of the three vice-presidents presented reports dealing with the work of their respective offices.

The total receipts for the year ended May 31, 1928, according to the report of the secretary treasurer, amounted to \$212,390.79, with expenditures of \$227,021.40. This shows a deficit of \$14,630.61, but as explained, this amount is fully covered by outstanding obligations of local organizations to the International Union.

A large percentage of the total expenditure was returned to the members in direct benefits, \$18,392 having been paid in the form of strike and lock-out benefits, \$13,900 account of funeral benefits; \$19,739 account of tuberculosis benefits, \$52,332.38 account of insurance, and \$6,376 account of out-of-work and organizing expenses. The membership as at May 31, 1928, numbered 8,332, comprised in 73 locals, with 161 members at large or international members.

The report of the executive council dealt with a number of subject matters not covered by the report of the officers such as: group insurance; stock-buying by members; defense fund assessment; annual wage survey. Under the heading "Group insurance benefit system" the report showed that a large majority of

the votes cast in the referendum on this question favoured the proposal of insuring the membership through a group insurance policy with the Union Labour Life Insurance Company. By a referendum vote, also, the membership favoured the increasing of the *per capita* payments from \$1 to \$2, and directed that \$1 of this monthly *per capita* be set aside for the purpose of providing for the group insurance benefit system.

Owing to the receding of the defence fund below the minimum set by the laws of the union the Executive Council placed before the convention for approval a recommendation that an assessment of \$2 per month for 5 months be levied in order to restore the defense fund to its maximum amount.

The executive were confident that a meeting between the International Union officials and representatives of employers would take place shortly after the convention for the purpose of discussing the question of a shorter work-week.

Among the resolutions adopted were the following:—

Demanding a full share of benefit and protection for the use of the Allied Printing Trades Council label, and that this label should not be used on any printed matter which contains photo-engraved plates unless such plates are stamped with the International Photo-Engravers' Union label.

Recommending that each delegate at conventions contribute the sum of \$20 for local entertainment purposes and that the International Union appropriate the sum of \$400 for the same purpose, so as to encourage locals to ask for conventions.

Authorizing the executive council to refuse to sanction any new agreement presented which did not provide for a working week of five days of forty-hours or less.

The following officers were re-elected by acclamation: president, Matthew Woll, first vice-president, E. J. Volz; second vice-president, Frank H. Glenn; third vice-president, Charles H. Horrocks; secretary-treasurer, Henry F. Schmal.

New Orleans, Louisiana, was selected as the convention city for 1929.

International Printing Pressmen and Assistants' Union of North America

President George L. Berry presided over the 32nd convention of the International Printing Pressmen and Assistants' Union of North America, held at Pressmen's Home, Tennessee, August 27-September 1, 1928, with delegates present from every local branch of the Union which was entitled to a seat. This was the first time the convention was composed of all the legislative agencies of the several hundred local unions throughout the United States and Canada.

After the opening ceremonies and addresses a service was held in the Memorial Chapel, to pay tribute to the memory of those who engaged in the great world war and to the memory of the 443 members of the International Union had died since the last convention. During the service a mural decoration in the dome of the chapel was unveiled, followed by a brief address by president Berry in which he accepted a pipe organ for the chapel, the gift of Mr. Theodore T. Ellis, Worcester, Mass, who associated himself with the Des Moines Newspaper Pressmen's Union in this connection.

Among the addresses delivered before the convention was one by Mr. Charles Francis, representative of the Printers' League Department of New York City, who advocated the stabilization of wages throughout the United States. He drew attention to the fact that in New York the wages of pressmen were \$56 per week, while in Kingston, 150 miles away, they were \$30 per week, with the result that employers were moving out of large cities to the country and in many cases starting up non-union shops. Concluding he urged a closer unity of the five international unions in the printing industry.

Replying to Mr. Francis, president Berry outlined the efforts put forth by the International Printing Pressmen and Assistants' Union to bring about a stabilization of conditions in the commercial printing industry, and stated that at his instigation a meeting in Chicago was called, where it was hoped that representatives of the employing commercial printers and representatives of the printing trades unions could meet and find a basis of agreement and a solution of existing problems. The meeting proved a failure, as only 62 employers responded to the call. Mr. Berry stated that "the International Printing Pressmen and Assistants' Union will match talents, purposes and moneys with the commercial employing printers of America to reach the end of stabilization in the business, provided they will agree to recognize the world-wide accepted principle of collective bargaining, and in consideration thereof we

will agree to adjust our differences by conciliation and arbitration, to the end that peace may be assured in perpetuity."

The president in outlining the activities of the Union touched on many subjects of interest to the membership, among which were: the pension system; the statistical and arbitration department referendum and financial preparedness; ex-service men and labour; the widows' and orphans' home; the patent and engineering departments; compensation rates; group insurance.

The report of the secretary-treasurer showed a total credit balance of \$656,487.13 and assets amounting to \$1,802,694.51.

The committee on Canadian affairs made reference to the re-affiliation of the Toronto Printing Pressmen and Assistants' Union with the International Union, after an absence of twenty years, the local union having seceded in 1908.

In the report of the committee on officers' reports mention was made of that part of the president's address referring to ex-service men in labour, and the delegates were informed that the International president had presented the American Legion with a site for their orphanage as well as a farm of 160 acres. The president in explaining this transaction advised that there was a stipulation in the deed which provided that if for any reason or cause whatsoever, the American Legion ever abandons its orphanage, it then forfeits the entire property to the International Printing Pressmen and Assistants' Union.

In speaking on the subject of apprentices, president Berry informed the delegates that at least 12½ per cent of the pressmen of America were without a regular position, while a goodly number had no positions at all. He stated that "it is unfair to take the young man through his apprenticeship and give him a journeyman's card without a position to go into."

The committee on technical trade schools and associate matters, in making their report, mentioned that a semi-branch of the technical trade school was established in Hamilton, Canada, which was the result of a contract being arranged between the International officials and the Hamilton Technical Institute. There are, in addition to the mother school at Pressmen's Home and the one just mentioned at Hamilton, Canada, branches of the trade school located at New York, Cleveland and Chicago.

Mr. William Green, president of the American Federation of Labour, was present at

one of the sessions and addressed the delegates, dealing with many of the problems confronting the labour movement and the means that are being adopted to meet them.

The proposal of President Berry to establish a home at Pressmen's Home, Tennessee, for widows and orphans of deceased members of the organization was approved by the convention of 1926, but definite plans for the raising of the money necessary for the project were not outlined. The convention decided that a voluntary payment by each member of twelve dollars a year for three years be made to meet the expense. This would bring into the fund approximately \$1,440,000, which together with contributions by friends would bring the total up to at least \$1,500,000. The Home, according to the plans submitted, would take the form of 100 cottages, and these together with all facilities, except furniture, would cost approximately \$250,000. By investing the balance at six per cent an income of \$75,000 would be derived which would be sufficient to care for 100 widows with an average of two children each. The president pointed out that it was not intended to deny a helping hand to the widow who preferred to remain where she was, to coming to Pressmen's Home.

The Committee on Resolutions non-concurred in a resolution which would provide for (1) The establishing of a death benefit fund for all members in good standing for one year; and (2) for the establishment of sick and accident insurance for the membership. The president informed the introducers of the resolution that the Board of Directors would make a very careful study of their proposal between this convention and the next and endeavour to find a basis of agreement.

Resolutions

A number of changes were made in the constitution, while among the resolutions adopted were the following:

Authorizing the president to appoint a statistician who shall be versed in the custom and affairs of the International union in regard to conciliation and arbitration, conditions of employment, etc., and for which purpose an assessment of ten cents per month per member shall be made;

Recommending that there be but two exceptional conditions depriving a member from pensions, first, his withdrawal from the International Union and second his return to employment of his trade;

Urging the International Union to assert jurisdiction over operators of so-called dupli-

cate printing machines, which use type, plates or stencils;

Advocating that the Allied Printing Trades' union label be substituted for any individual union label in the printing industry;

Urging the United States Congress at the next session to enact an Old Age Assistance Act;

Adopting the four-year convention period and that the term of the officers-elect be extended accordingly;

Authorizing a twenty per cent increase in the salaries of the president, vice-president and secretary.

National Women's Trade Union League of America

Speaking recently at the Pan-Pacific Conference of Women, Miss Elizabeth Christman outlined the quarter of a century history of the National Women's Trade Union League of America, of which organization she is secretary. The League was founded in Boston in 1903. Summarizing its activities, Miss Christman stated that women trade unionists have made it a clearing house for their problems and have found it an effective instrument for collective action. The League, she said, constitutes what may be termed the woman's movement within the labour movement and has gone forward with that movement; and in many phases of woman's advancement it is the organization that has carried high the standard of the woman in industry. Out of this rôle has grown a dual mission—the labour movement looks to the league to be the spokesman for women's interests, and women's organizations ask the league for an interpretation of the problems of the woman worker."

The platform of the League calls for equal work, regardless of sex or race; an eight-hour day and 44-hour week; an American standard of living; full citizenship for women; the outlawry of war, and closer affiliation of women workers of all countries. The following are its purposes:

"To encourage self-government in the workshop; to develop leadership among the women workers; to insure the protection of the younger girls in their efforts for better working conditions and a living wage; to secure for girls and women equal opportunity with boys and men in trades and technical training, and pay on the basis of occupation and not on the basis of sex; to secure the representation of women on industrial tribunals and public boards and commissions, and to interpret to the public generally the

aims and purposes of the trade union movement."

Miss Christman said: "The league's work divides itself naturally into three divisions: organization, education, legislation. Of first importance is the organization of women workers into trade unions so that they may bargain collectively, in this way, multiplying their ability to raise working standards as they relate to shop conditions, hours, wages. In its educational endeavours the league can claim itself the pioneer in the realm of adult workers' education, for in 1913 it originated the plan of offering scholarships for brief study courses to trade union girls who had shown an aptitude for leadership."

Success of Union Cooperation Management on Canadian National Railways

The railway employees at Moncton, N.B., presented an illuminated address to Sir Henry Thornton, president and chairman of the Railways, on August 13, in recognition of his work in developing the principles of union-co-operative management in the shops of the system. The "Union-Co-operation Plan" has been described in the *LABOUR GAZETTE*, February, 1926, P. 134, September, 1925, P. 858, and in previous issues. The address was read by Mr. William R. Rogers, chairman of the Canadian National System Federation No. 11 in the presence of hundreds of railroad workers and a number of executive officers of various railroad organizations. Sir Henry Thornton expressed his sense of the honour

conferred upon him by the railwaymen. Referring to the co-operation plan he said:—

"We find that in industrial organizations which purchase a large amount of material of various kinds, chemists and scientists of all sorts are enlisted to determine specifications which will enable the enterprise to purchase the best material of the kind to be found and to evolve the rules and specifications for the care of that material, so that its useful life may be prolonged. This same principle has never yet been fully applied to another essential factor of an industrial organization, namely, the use of man power, and we believe if there is justification for care in the purchase and preservation of material there is equal justification for care in the preservation of the lives and health of these armies of employees that make for the success of any company. It is likewise a sound industrial principle to get the best and give it the best of care.

"The co-operative movement within our shops, which was first instituted by the International Association of Machinists—and to them must be given the credit for the idea—has more within it than merely appears on the surface. It is an open door to a finer vista of good things that can be done by looking after our man power. We hope with the support of the labour organizations to develop this theory of co-operation until we have reached the point where it will penetrate every grade of the National System and shed its beneficial rays upon every phase of its activities."

TRADES UNION CONGRESS OF GREAT BRITAIN

THE 60th Annual Trades Union Congress was held at Swansea on 3rd September and the five following days. The President was Alderman Ben Turner, Chairman of the General Council.†

The number of delegates appointed to attend the Congress, as shown in the Statistical Statement compiled by the General Council, was 619; the number of organizations affiliated to the Congress (including those organizations, with a membership of about 33,000, which did not appoint delegates) was 160,* with a mem-

bership of approximately 3,815,000, excluding the membership of the National Union of Seamen, which was expelled in the course of the Congress.

The decrease in the number of trade union members represented, as compared with 1927, affected most of the groups of organizations, especially the Government group, unions of Post Office workers and others having been obliged to withdraw from representation at the Congress in consequence of the operation of the Trade Disputes and Trade Unions Act, 1927. The "other transport" group was reduced by the non-representation of the National Union of Seamen. The paper, printing, etc., group, on the other hand, showed an increase owing to the re-affiliation of the National Union of Printing, Bookbinding, Machine Ruling and Paper Workers. In the remaining groups of organizations there were

* In some of the textile trades not only are amalgamated associations represented as such, but the branch associations of which they consist send separate delegates. These branch associations have not been reckoned as separate organizations.

† This account of the proceedings at the convention is taken from the *Ministry of Labour Gazette* (Great Britain), Sept., 1928.

no important changes in constitution, but most groups showed some decline in membership, especially mining and quarrying, general labour, and metals, machines, conveyances, etc.

The Chairman in his opening address reviewed the progress of the movement historically, and touched upon the principal question which would come before Congress, relating to the recent conferences of the General Council with a group of employers.

The principal business of the Congress was the consideration of the General Council's Report (a comprehensive statement covering their work for the past twelve months), and 67 resolutions, with 14 amendments, which had been submitted by the trade unions affiliated. In addition, there was one resolution submitted by the General Council itself.

Co-operation with Employers

Five resolutions related to the industrial conferences of the General Council with certain employers; twenty-two pages of the Report were devoted to this matter. The attitude of the General Council to the question of co-operation with employers was set out as follows:—

“Broadly speaking, there were three possible lines of policy open to the Trade Union Movement. The first was to say, frankly, that the unions will do everything possible to bring the industrial machine to a standstill. . . . The second course was one of standing aside and telling employers to get on with their own job, while the unions would pursue the policy of fighting sectionally for improvements. The third course is for the Trade Union Movement to say boldly that, not only is it concerned with the prosperity of industry, but that it is going to have a voice as to the way industry is carried on, so that it can influence the new developments that are taking place. The ultimate policy of the movement can find more use for an efficient industry than for a derelict one, and the unions can use their power to promote and guide the scientific reorganization of industry as well as to obtain material advantages from the reorganization.

“Faced with the situation that now prevails in this country, the Council has taken the view that the third course was the only one it was possible to take if the Trade Union Movement was to endure as a living, constructive force. That policy affords the best hope of raising the status, security and standard of living of the workers whom the Council represents. At all events, a very grave responsibility would have been taken by any-

one who refused to consider the possibilities of such a course, or who neglected to take any opportunity that offered of pursuing it.”

An acceptance of the Report meant endorsement of the General Council's action and a continuance of the conferences with employers. The acceptance was moved by the Secretary of the Congress, who reviewed the action taken by the General Council and urged that a continuance of that action was in line with intelligent trade union development. Apart from the five resolutions on the agenda relating to this matter, an amendment was submitted by the Amalgamated Engineering Union. The amendment questioned the authority of the General Council to engage in such a conference, and proposed that the matter be remitted to the executives of the respective trade unions for decision; the conferences meanwhile to be suspended. The debate was taken on the proposal for acceptance of the Report and this amendment, and occupied practically the whole of one day. The opposition to the acceptance of the Report on its merits was voiced by the Secretary of the Miners' Federation, who made it clear that he was speaking as an individual delegate and not as a representative of his Federation. He was followed by the President of the Miners' Federation, who spoke for his organization and supported the acceptance of the Report. The decision was taken on a card vote, and resulted in 3,075,000 for the acceptance of the Report and 566,000 against, after the amendment had been defeated by 2,921,000 to 768,000.

Disruptive Activities

Two resolutions and three amendments dealing with the dangers of disruption were put down for consideration. The debate was taken on that submitted by the Railway Clerks' Association, which was as follows:—

“That this Congress, believing that the best interests of the workers can only be served by solidarity and unity of purpose, policy and action, instructs the General Council to institute an inquiry into the proceedings and methods of disruptive elements within the Trade Union Movement (whether such elements manifest themselves amongst the unions or within the General Council itself), and to submit a report, with recommendations, to the affiliated organizations.”

After debate, this was carried.

A resolution calling upon the General Council to appoint a reorganization commission to formulate suggestions for the speedy reorganization of the trade union movement was, after an amendment had been defeated, carried on a card vote by 1,864,000 to 1,231,000.

Unemployment

Four resolutions and two amendments had been submitted on the question of Unemployment Insurance. These were grouped together as a composite resolution and carried. The composite resolution demanded (i) an increase in the State contribution, so as to allow of a payment of not less than 20s. a week to workers 18 years of age and over, with 10s. a week for wife or other adult dependant, and 5s. a week for each child; young persons 16 to 18 years of age to receive 15s. a week, and 10s. for those under 16; (ii) the insurability of young persons at the school leaving age; (iii) the cessation of continual changes in administration which necessitate continual alterations in trade union rules, and a modification of restrictive conditions so as to allow any trade union to pay State unemployment benefit; (iv) that no applicant should be disqualified except for a refusal of an offer of suitable employment; and (v) a modification of the trade dispute disqualification.

A further resolution on unemployment, which urged "His Majesty's Government to make the relief of unemployment a national charge, and pending action in this direction, to remove the restrictive conditions expressed in the Unemployment Grants Committee's Circular letter dated 15th December, 1925, with respect to the issue of unemployment relief works grants to Local Authorities." was strongly supported and carried.

Workmen's Compensation

A number of resolutions were carried relating to workmen's compensation, with special reference to (i) the wages paid to men on their return to work on recovering after an accident, (ii) the position of panel doctors and of medical referees, and (iii) the application of the Workmen's Compensation Acts to artificial silk workers.

8-Hour Day

A resolution upon the Washington Hours Convention was moved as follows:—

"That this Congress requests the Joint National Committee to place the questions of ratification of the Hours of Labour Convention, 1919, and repeal of the Mines Eight Hours Act, in the forefront of the Labour Party Programme at the next General Election, and to pledge the Labour Party if returned to power to repeal the Mines Eight Hours Act, and to ratify the Washington Convention."

and after being strongly supported, was carried unanimously.

Relations with Russia

An attempt to reconstruct the Anglo-Russian Joint Advisory Council was moved by Mr. Brownlie, of the Amalgamated Engineering Union, and supported by the Furnishing Trades Association and the Brass and Metal Mechanics, but was strongly opposed by the General Council and defeated.

An important resolution submitted by the National Union of General and Municipal Workers sought a declaration from the Congress that the method of the automatic adjustment of wages upon a sliding-scale basis in accordance with the cost-of-living figure should be abolished. This was opposed by the National Union of Railwaymen and defeated.

Public Control of Transport

A composite resolution as follows was submitted by the Transport and General Workers' Union and carried unanimously:—

"This Congress declares that the lack of effective public control and regulation of the transport services makes for waste and inefficiency, and produces conditions which are inimical to the public interest and against the welfare of the workers in these services.

"This Congress, recognizing that an efficient transport system is of vital importance to the community, demands that the Government shall give this matter immediate consideration, and take action to establish effective public control, regulation, and co-ordination of all transport facilities.

"It further demands that the Minister of Transport should be empowered to establish national and area transport authorities; to require the compulsory registration of all transport undertakers; to enforce upon all transport undertakers compulsory insurance against accident risks, this insurance to be undertaken by a Government Department, either Road Fund or Post Office, the necessary premiums for insurance to be collected as an addition to the annual tax on vehicles, motor or otherwise; and, further, to impose such other regulations as may be necessary to ensure the greater safety and welfare of the public."

Powers of General Council

The one resolution from the General Council sought an addition to the Standing Orders, the object being to give the General Council authority to deal with any union whose activities are detrimental to the interests of the trade union movement. This was carried unanimously. Action in this connection was taken against the National Union of Seamen

because of their support of the Miners' Industrial Non-Political Union.

A resolution was carried authorizing the General Council to appoint a Committee of Inquiry, to consider and report on a policy of nationalization of the engineering industry, with workers' control.

A resolution was carried declaring "that the generation, transmission and distribution of electricity should be directly owned and controlled by the State."

A resolution calling for the repeal of the Trade Disputes and Trade Unions Act, 1927, was carried.

Other resolutions dealt with the composition of the General Council; the financial and working conditions in the artificial silk industry; extension of housing programme and demolition of slum areas; public contracts and trade union labour; extension of scope of the National Health Insurance Acts; and a large number of other subjects. A resolution permitting Trades Councils to send delegates to the Congress was lost. The debate on a resolution to give legislative force to national agreements entered into by Joint Industrial Councils was terminated by the moving of the previous question.

The election of the General Council resulted in Mr. Wolstencroft, of the Amalgamated Society of Woodworkers, taking the place of Mr. Purcell, of the Furnishing Trades Association, who had resigned. Mr. Gibson, of the National Asylum Workers' Union, took

the place of Mr. Bradley, of the Firemen's Trade Union. Mr. Holmes, of the National Union of Agricultural Workers, took the place of Mr. Walker, resigned.

Convention of the Civil Service Federation of Canada

The Civil Service Federation of Canada, representative of some eighteen affiliated organizations of civil servants in the employ of the Federal Government, held its 1928 convention in Ottawa on October 8 and 9. Matters of general interest to the Civil Service, as well as matters of interest to particular classes of employees, were discussed and policies to be pursued by the Federation with reference to them were determined. Chief among these matters were the questions of superannuation and a National Civil Service Council.

The officers elected for the ensuing term are as follows:—V. C. Phelan, president; T. H. Burns, first vice-president; J. H. Ryan, second vice-president; Miss Edna Inglis, third vice-president; W. J. Callaghan, secretary; V. L. Lawson, treasurer; and Miss M. Lyon, T. R. L. MacInnes, P. L. Smyth, W. J. Cantwell, C. F. Spence, and T. R. Montgomery, executive council. A more extended account of the proceedings of the convention will appear in the next issue of the *LABOUR GAZETTE*.

INDUSTRIAL CONFERENCE IN NEW ZEALAND

Recommendations Regarding Arbitration, Unemployment, Immigration, Etc.

THE Industrial Conference, which was held in New Zealand from March 27 until May 18, 1928, was noted in the *LABOUR GAZETTE*, March, 1928, page 279, and July, 1928 page 707. In the latter issue the failure of the conference to come to a unanimous decision on the matter of amending the Industrial Conciliation and Arbitration Act was described. While the arbitration issue was the chief reason for the convening of the Industrial Conference, other important problems also were discussed. The special sub-committee set up by the Conference submitted a report containing unanimous recommendations on the subjects of unemployment relief, immigration, and the Workmen's Compensation Act.

Unemployment.—As regards unemployment the report of the sub-committee suggested

that the Government "provide out of the Consolidated Fund such sums as might be necessary to cope with the situation." They also suggested that the Government Statistical Department should concentrate upon the collection and compilation of accurate data with the object of determining (1) the causes and volume of periodic unemployment; and (2) the possibility of organizing the Dominion labour demand so as to minimize the effect of seasonal conditions on the regularity of employment. For the purpose of this investigation, and to assist in the administration of temporary members, it was recommended that the Government appoint immediately a committee of three, consisting of a Government representative, and one representative each of employers and workers. However, the workers' representatives on the sub-

committee advocated a committee of five members (one Government representative and two representatives each of employers and employees) and that a scheme of unemployment insurance should be instituted. The sub-committee also urged that "the Government shape the education system in the direction of encouraging as many boys as possible to take up farming operations rather than professional and commercial vocations," it being considered that there were not sufficient opportunities for boys in professional and commercial pursuits, while "farming presents an almost unlimited scope for their employment."

Immigration.—On the subject of immigration, the report of the sub-committee contained the following recommendations:

(1) The strictest possible supervision of the nomination system for all classes of migrants, both as regards the immigrant and the ability and capacity of the nominators to perform their obligations;

(2) That there should be an efficient medical examination of all migrants, assisted or otherwise, and that this examination should take place at the port of embarkation by medical officers appointed by the New Zealand Government;

(3) That immigration should be regulated in accordance with the state of the labour market in New Zealand, and with due regard to the ability of the Dominion to absorb the immigrants in employment;

(4) That the Immigration Department be given control of health examination and financial qualifications of juvenile and adult immigrants, whether assisted or otherwise.

Workmen's Compensation.—As regards the Workmen's Compensation Act, the committee recommend:

(1) That insurance be compulsory, subject to exception where an employer can satisfy a competent authority that either by a mutual insurance scheme or from his own resources the worker is adequately covered;

(2) That it is advisable that the Government should carefully investigate the principles, working and cost of the Ontario system of workmen's compensation, with a view to determining, having regard to New Zealand conditions, which, if any, of its provisions might with advantage be adopted in the Dominion. That in any case it is desirable that medical, surgical and hospital services necessary as a result of the injury and for the rehabilitation of the injured worker should be provided for, provided always that whatever scheme of insurance is adopted it shall

cover all classes of workers at present covered by the New Zealand Act;

(3) That in cases of lump sum payments the Court be empowered to make the payments in such a way as will give protection to all dependents, appointing, if necessary, guardians for children.

Arbitration.—Information recently received in press dispatches indicated that while both parties to the conference had failed to reach an agreement upon one fundamental point—the adoption of an amended arbitration system—yet the attendant discussion served to clearly present in concrete form the divergent opinions on the subject of both the employers and employees' representatives. Both parties presented separate reports to the conference in this issue.

The employers recommended that, if conciliation failed, arbitration should then be resorted to only upon the consent of both parties. The labour representatives reported in favour of retaining the present compulsory arbitration. Analysis of the separate reports shows that substantial agreement was reached upon a number of points. Representation of third parties (a concession demanded by the farmers) was conceded by both sides, though labour stipulated that no third party should be able to re-open questions agreed upon by the main parties. Both parties also suggested some method of establishing industrial committees upon which workers and employers would be represented, and which would consider questions not governed by awards or agreements, also the state of the industry and the demand for labour.

Upon the basic question of compulsory or optional arbitration—the employers recommended the optional method, with modifications to retain compulsory arbitration for women workers' unions and power for a conciliation council to obtain a direction from the Court as to the minimum wage and hours for any industry. This direction would, however, not possess the force of a Court award, unless the parties agreed to regard it as such. The labour delegation stood by the present system of compulsory arbitration, but suggested some modifications, the chief of which was that the Court should be called upon to determine only the basic wage and the working hours, unless the parties agreed to refer other matters for its decision. It was further recommended by labour that all organizations should be required to refer disputes to a national disputes committee before calling a strike or lock-out, except where there was danger to life or limb.

Reorganization of the Coal Industry in Great Britain

Close attention is being given at present by coal-exporting countries to the reorganization which is in progress in the British coal industry. Some of the changes taking place are indicated and in an issue of the London *Times* of recent date from which the following passage is taken:—

“The relentless pressure of economic events is slowly . . . forcing the idea of reorganization upon our principal exporting industries. The general change in outlook that has manifested itself during the last 12 months is nowhere more noticeable than in the coal industry . . . Various plans for co-operative marketing have been drawn up, of which one at least—the Five Counties scheme—has come into full working operation.

. . . Within the past few weeks discussions have been proceeding with a view to establishing a system of marketing organizations for the whole country . . . Combinations of a considerable size have been formed in Yorkshire and in South Wales, where only a few days ago terms were announced for a merger in the anthracite field which, if it is successfully concluded, will control four-fifths of the total output of Welsh anthracite . . .

A solution (of the coal crisis) must be found on more modern and scientific lines. That it can be found in large-scale amalgamations has been proved by ample experience not only in other countries but in our own. It is only by means of large-scale combinations that the activity of the various units composing an industry can be properly co-ordinated . . . The nineteenth century was the golden age of individualism; the twentieth is the age of combination.”

The merger referred to by the *Times* is the combine established as a result chiefly of the enterprise of Lord Melchett, chairman of the Amalgamated Anthracite Collieries,

Limited, which now controls approximately 85 per cent of the total production of the South Wales anthracite coal-field. In 1913, the total quantity of anthracite coal produced in South Wales was 4,833,159 tons, and in the production of that quantity there were engaged over 100 separate and competitive undertakings. In 1927, the total output was 5,747,812 tons, and, as a result of the fusions which have taken place during the last three years, since the formation by Lord Melchett of the Amalgamated Anthracite Collieries, Limited, one central organization now controls between $4\frac{1}{2}$ and $4\frac{3}{4}$ million tons.

Under the British Rating and Valuation (Apportionment) Act productive industries, including coal mines and railways, are to be relieved of three-quarters of their local rates; in the case of the railways, the relief is conditional on the railway companies making equivalent reductions in transport charges, “whenever practicable”. Freight relief to the coal trade is to be confined to coal exported as cargo to foreign destinations, or supplied for the bunkers of steamers engaged in the foreign trade, and to coal supplied to blast furnaces and steel works. It is estimated that the coal export trade of the country will benefit to the extent of about 7d. per ton. Collieries are not to have the benefit of the contemplated reduction of their local rates until October, 1929.

The recommendations of the Royal Commission on the Coal Industry (Great Britain) were outlined in the *LABOUR GAZETTE*, April, 1926, page 393.

NOTES ON VOCATIONAL EDUCATION AND APPRENTICESHIP

Apprenticeship in Ontario

Early in the fall of 1927, the Construction Apprenticeship Council of Ontario approached the provincial government requesting that enabling legislation be enacted to provide for the continuation and further development of the work, under government supervision. Premier Ferguson was interested and requested the council to co-operate with the Department of Labour in drafting the proposed legislation, which was enacted during the recent session. The Act is, therefore, the result of the combined efforts of employers, representatives of organized labour, and educationists, who have been striving to develop a system of apprenticeship which would meet the needs of the construction industry in Ontario.

Commenting on this Act the *Ontario Gazette* for September 1, 1928, states in part:—

It is expected that, through close co-operation on the part of employers, organized labour and educationists, together with the concentrated efforts of interested individuals in each trade, there will be developed a new type of apprenticeship which will provide thorough training for young Canadians entering industrial life. Such development will undoubtedly benefit both employers and organized labour, but it should be of even greater benefit to the general public. It will help to stabilize conditions in industry, will make for better industrial relations, will provide opportunities for Canadian boys to develop their powers of craftsmanship, and will eliminate the possibility of half-trained workers demanding and receiving full journeymen's pay.

The Apprenticeship Act is administered by the Hon. Dr. Forbes Godfrey, Minister of

Labour, acting through the Provincial apprenticeship committee, the Inspector of Apprenticeship and District Apprenticeship Councils.

The provincial apprenticeship committee is as follows:—

Representatives of employers—H. J. Mero, Walkerville; Geo. Oakley, Toronto; Jos. M. Pigott, Hamilton.

Representatives of organized labour:—John W. Bruce, Toronto; J. F. Marsh, Toronto; James Ward, Toronto.

Representative of the Technical Branch, Department of Education of Ontario:—F. S. Rutherford, Assistant Director of Technical Education, Toronto.

Inspector of Apprenticeship:—A. W. Crawford, Department of Labour, Toronto.

At a meeting of the Provincial Apprenticeship Committee held on August 31, 1928, Hon. Dr. Forbes Godfrey stated that 134 indentures had been received from the plumbing trade alone. Many other young men who are learning this trade will have to be apprenticed as a preliminary to participation in the technical education plan. At present, the Act applies to nine designated trades in the construction industry, but provision is made for including others by order in council, if application is made to the Minister by twenty-five employers or by a representative body of men in the trade to be added. The nine designated trades are:—1, bricklayers; 2, masons; 3, carpenters; 4, painters and decorators; 5, plasterers; 6, plumbers; 7, steamfitters; 8, sheet metal workers; and 9, electricians.

Apprenticeship in British Columbia

In May, 1921, a joint conference of the Building and Construction Industries in Canada was held at Ottawa. The report of this Conference contained the scheme of a National Apprenticeship Council, with local apprenticeship councils in various localities, the functions of the National Council to be advisory except in respect to matters referred to it for decision.

In November, 1925, at Vancouver, a joint committee of the General Contractors' Association, the Associated Contractors of British Columbia and the Building Trades Council of Vancouver, B.C., reached an agreement under which a system of apprenticeship, known as the Vancouver Apprenticeship Council was established. While the original plan was drawn up primarily to embrace apprentices in the carpenter trade, it is at the same time sufficiently elastic to apply to all other lines of endeavour in the industry. At present the following crafts: Carpenters, plasterers,

painters, sheet metal workers and mill workers have adopted the principle of this scheme, and either have or will have shortly, boys in those trades training under the jurisdiction of the Vancouver Apprenticeship council. Provision is made that as each craft adopts the principle of this scheme, representation will be given on the apprenticeship council to both employers and employees.

Only recently in January, 1928, the Dominion-wide convention of the Canadian Construction Industries, unreservedly endorsed the Vancouver scheme for the training of apprentices.

Pulp and Paper School for Edmundston, N.B.

According to a statement recently issued by W. K. Tibert, Director of Vocational Education for New Brunswick, the town of Edmundston has organized a pulp and paper school, the second of its kind in the Dominion. The other is at Three Rivers, and is under the direction of the Quebec Department of Lands and Forests. The New Brunswick institution although an outcome of the night school and other courses there, is distinct from it in every way, and is the result of popular demand on the part of the citizens, the majority of whom are connected with the large pulp and paper industry now established there. The growth of the pulp and paper industry in the province, especially in view of recent advancements in the manufacture of newsprint within its boundaries, has contributed to the interest in the plan.

The new course, which will be opened by the Vocational Division of the Department of Education as soon as a suitable instructor is obtained, will be held in the Edmundston composite school, will accommodate a maximum of thirty students and will be eight months in duration. The curriculum will include mathematics, chemistry, electricity, hydraulics and other subjects. Classes will be held in the recently renovated laboratory of the building. The night school course in the same subjects will continue as usual.

New Courses for Saint John Technical School

At a recent meeting of the vocational committee of the Saint John Vocational School authority was given to purchase necessary equipment for a sheet metal work shop which will be opened in the industrial department of the school.

At the same meeting there was much discussion regarding the establishment of a course in hairdressing. It was pointed out that

there was considerable demand for this instruction, as there is no school giving a course in Canada, east of Montreal. Every town and city in the Maritime Provinces offers a good business opportunity to the trained hairdresser but it is now necessary either to have the local residents take their training elsewhere or to import qualified hairdressers from other centres. Mr. Peacock, principal of the school, was asked to submit definite information regarding the local demand for such instruction and the members favoured the opening of the course if the demand warranted. Mr. Peacock will bring in a further report before action will be taken.

Need for Technical Schools

The *North Bay Nugget*, in a recent issue, stated that there was in Northern Ontario a scarcity of men skilled in the building trades, and suggested the development of vocational schools as a remedy. "In North Bay, which is no different in this respect from other northern centres, opportunities for young men are somewhat limited, being confined in the main to railroading, office work or clerking in stores and kindred vocations. It is undeniable, however, that many youths are unsuited physically, by temperament, or

otherwise, to engage in these pursuits. There are, no doubt, hundreds of youths of a mechanical turn of mind, who might, for instance, make woefully incompetent bookkeepers or totally unreliable engineers, but make a huge success of some other job. There are many, too, who might develop into capable bricklayers, carpenters or plasterers who are denied the opportunity to learn the rudiments of one of these trades because contractors cannot spare the time to train novices.

. . . If we are to provide our lads with opportunities to learn one of these trades or some other trade a technical school would prove immensely valuable. If a technical school were located here many boys would take such a course in preference to attending high school. High schools are valuable of course, but a large number of collegiate graduates never capitalize the knowledge acquired in collegiates. This is true of any collegiate course whether it is in North Bay or in New York."

It may be noted that a day commercial vocational school is maintained at North Bay under the Technical Education Act, 177 pupils having been enrolled last year. Evening classes are also conducted in this centre, the enrolment for last year being 449.

The Bonus System in the United States

The Industrial Relations Committee of the National Metal Trades Association in the United States recently undertook an enquiry into wage systems. More than 600 replies were received from members of the association. The enquiry showed that 54 per cent of the firms who are members have adopted some kind of bonus system and that this method of payment applies to more than a quarter of the persons employed by these firms.

The majority of the replies indicate that the introduction of a bonus system brings about an increase in the workers' earnings and a fall in costs. Furthermore, greater stability and a better spirit among the staff, reduced costs of supervision, more accurate costing and better quality of goods were frequently mentioned as advantages gained by the introduction of the bonus system. The last point is particularly worthy of note, since the objection is current that adoption of a bonus system tends to lower the quality of the goods.

Many experiments have proved that preference should be given to such methods of determining wages as can be readily understood

by the wage earners themselves, while great care should be taken to fix an equitable scale of bonuses.

An Encyclopaedia of the Labour Movement has been published recently at London, under the auspices of the British Labour Party (Caxton Publishing Company Limited, 3 volumes, price 60 shillings). It contains sections dealing with every important subject and person connected with the movement in Great Britain and in other countries. The contributors are for the most part connected with the Labour movement, each article being written by an expert in the subject. The editor, Mr. H. B. Lees-Smith, M.P., points out however that the articles include fair statements of every shade of opinion. A number of the articles deal with non-controversial subjects of interest to political students. The Right Hon. J. Ramsay Macdonald in a general introduction, states that "both our defence forces and our critics may turn to these volumes and understand what in truth the Labour Party is, what is its outlook, what its range of vision, what discipline, and knowledge it brings to its work."

NOTES ON INDUSTRIAL SAFETY AND HEALTH

Accident Prevention Committee in Alberta

The regulations of the Alberta Workmen's Compensation Board, lately reissued, as noted in the last issue of the *LABOUR GAZETTE*, require that an accident prevention committee shall be established in every manufacturing plant, construction camp, workshop, etc., coming under the Act, where ten or more workmen are employed. The general duties of the committee are thus defined:—

(a) To make a thorough inspection not less than once a month of the entire plant or place of employment for the purpose of receiving complaints, determining hazardous conditions, and receiving recommendations for their improvement.

(b) To hold regular meetings at least monthly for the discussion of accident prevention, to investigate all serious accidents, reporting their findings and recommendations in writing to their employers and keeping a copy of such findings and recommendations in the records of the committee which shall be available at any time to the Workmen's Compensation Board or its officers.

(c) To educate their fellow-employees against dangerous practices and methods of work.

(d) To investigate fire conditions, examine fire-escapes, fire-extinguishers, water-buckets, sand-buckets and all fire-fighting appliances.

(e) To inspect lighting arrangements in all places of employment, and to report to the employers all insufficiently lighted passage-ways and other places where workmen are liable to be injured in the course of their employment.

(f) To inspect or to arrange for the inspection of all machinery, transmission motor-stops, cables, blocks, slings, chains, tongs, tools and equipment.

(g) To provide at each establishment facilities for receiving written complaints and recommendations.

Employers having less than ten workmen usually employed, must have full First Aid Kits readily available, a special outfit being required where the establishments are more than four miles distant from a drug store. Employers having over 50 workmen are required to have standard instruments, stretchers, drugs and dressings.

Safety Problems of Small Establishments

Dr. Ethelbert Stewart, United States Commissioner of Labour Statistics, in a recent number of the *National Safety News*, states that industrial safety work is confined almost entirely to large plants, and that the workers in smaller plants, which form the bulk of industry, are left almost without the safeguards provided by large employers of labour. The following paragraphs are from Dr. Stewart's article.

The industrial accident-prevention problem, as well as the workmen's compensation problem, that we are facing most seriously to-day, is the problem of the small establishment. The large concerns find it profitable to spend the money required to equip their plants with safety devices, and to install safety methods and schemes that reduce their accidents practically to a minimum. Corporations of this type are practically all self-insurers, and their employees are therefore, thoroughly protected in case of accident.

The serious fact however, is that over 40 per cent of the manufacturing establishments in the United States employ from 1 to 5 persons each, and practically 28 per cent of the manufacturing establishments employ from 6 to 20 wage earners each.

The average in the former group is 2.7 wage earners per establishment; the average in the second group is 11.2 employees per establishment. The total number of employees in these two groups is practically 824,000 workers. It is in these small establishments that accidents are on the increase.

It is not the purpose here to go into the details of causes of increased accidents in smaller plants. As a general proposition it is due to the tendency to push production to the highest possible point by means of improved machinery, new mechanical appliances, conveyors, power hoists, power trucks, and by speeding up the workers. These new devices are not accompanied by the same safety equipment that the large corporations provide when they install the same devices. There is seldom a safety organization in the small plant. The manager and the superintendent or foremen are not acquainted with modern safety rules, and the plants are too small to have a real safety man.

An enormous amount of money is being spent on safety work, and it is having a tremendous effect in the way of accident prevention, but it is being spent in and by the large plants; and the large plants are comparatively few in number. Only nine-tenths of one per cent of the manufacturing establishments employ from 501 to 1,000 wage earners each, and the average of employees in this group per establishment is 690. The next higher group, employing over 1,000, constitutes only one-half of 1 per cent of the total number of establishments; yet those employ more than 24 per cent of all employees and have an average of 2,194 workers each.

We are therefore faced with a peculiar situation—a very few establishments doing an

enormous amount of safety work and making an enormous amount of noise about it and really reducing their accident rates to a very wonderful degree; on the other hand, the great majority of plants—over 90 per cent—doing nothing or practically nothing in the way of safety work and saying nothing about it, and having a rather startling progressive increase in accidents.

Revised Merit Rating System in Ohio

The actuary's statement of the condition of the Ohio State Insurance Fund for 1927 intimates that the merit rating system under the Workmen's Compensation Act has been revised to give more effect to the individual experience of an employer. Employers with an accident cost ratio below the average of their industry will receive greater reward, while employers with a high accident cost ratio will receive a heavier increase in their penalty. The effect of an employer's experience upon his individual rate will increase in proportion to his exposure to the risk of loss through accident. Employers with an exposure of less than \$100 premium over the five years, 1923 to 1927 inclusive, will not be subject to merit rating, but will receive the basic annual rate due to their exposure being too limited to develop a dependable average. Employers with a total premium of between \$100 and \$5,000 will be merit-rated on the cost of all claims up to \$700 per claim. Employers with premium in excess of \$5,000 will be merit-rated on the cost of all claims giving more weight to that portion of the experience that covers the cost of claims up to \$700 per claim, and a lesser weight to that portion of their experience that covers the cost in excess of \$700 per claim. By dividing the loss of an employer into two divisions, i.e., that portion that represents the cost up to \$700 per case and that portion that represents the cost above \$700 per case, a closer criterion of the hazard of an employer's operations is obtained, thus permitting a more direct connection between his experience and his individual rate. By this system an employer with \$10,000 of losses which covers ten separate claims will receive a greater penalty than an employer with the same total of losses but which represents only one accident.

An employer has more control over the prevention of an accident than he has over the extent of the cost of an accident. An accident may cause only a slight injury or the same accident may cause a death. The extent of injury caused by an accident depends on what part of the body receives the force of the accident, on where the employee happens

to be, on how well employee's body responds to medical treatment, and on many other factors. Therefore greater weight is given to the number rather than to the cost of accidents. Employers must therefore first endeavour to prevent the accident and next keep down the cost of accidents that do occur.

"Absenteeism" of Miners in Great Britain

The Industrial Fatigue Research Board of the Medical Research Council of Great Britain recently published Report No. 51, "A Study of Absenteeism in a Group of Ten Collieries" which has been made by the Board's investigators. The "absenteeism" of nearly 23,000 miners, working at a group of ten collieries, was studied for periods of 21 months to six years. It was found that the total absenteeism of the men varied with the depth of the workings. In coal face workers the time lost at a depth of 650 feet averaged 13·8 per cent, whilst that at a depth of 2,160 feet came to 17·0 per cent, or 23 per cent more. The haulage men and others working underground showed less absenteeism, but a greater variation, for absenteeism in the deepest pits was 46 per cent greater than in the shallowest pits.

Absenteeism due to sickness varies greatly with the underground temperature. A rise of 13 degrees F. in the dry bulb temperature was associated with a 63 per cent increase of sickness in the coal face workers, whilst a rise of 10 degrees was associated with a 74 per cent increase of sickness in the other underground men. Presumably this influence depends chiefly on the sudden change of temperature experienced by the men on coming to the surface.

Absenteeism due to sickness is associated with air velocity, for the average time lost by underground workers other than those at the coal face was 85 per cent greater at a velocity of 260 feet than at one of 90 feet. This effect of air currents is probably due to the liability of the very lightly clad men to catch chills.

Absenteeism due to accidents is likewise related to air velocity. Accidents to underground men other than those at the coal face increased steadily at all velocities from 70 feet per minute upwards, and at a velocity of 264 feet they were 68 per cent more numerous than at one of 87 feet.

Accident frequency varies greatly with underground temperature, though accident severity shows but little response as the effect is confined to minor accidents.

The accident rate is greatly affected by the thickness of the seam. One seam was found to vary in thickness from 44 to 72 inches at six collieries, and the accidents from falls of coal and side were four times more numerous when

the seam was at its thickest than when at its thinnest. This effect was just as marked on major accidents as on minor ones.

Accident frequency is related to labour turnover, for minor accidents causing less than 20 days' disablement were three times more numerous at pits where the annual labour turnover was 20 per cent or more, than at those where it was less than 10 per cent.

Accident rates vary considerably with the age of the men, and reach a minimum at the age of 30 to 39. In comparison with this minimum, coal face workers over 60 years of age showed a 41 per cent excess in frequency rate.

Accident frequency varies greatly at different hours of the shift, and in coal face men working at high temperatures it reached a maximum in the last full hour of work but one. In those working at low temperatures it did not reach a maximum till the last full hour.

The time lost by "voluntary" absenteeism (i.e. all absenteeism not definitely attributed to sickness and accidents) was found to vary with the distance walked by the men underground, for men who walked 2,800 yards, showed 58 per cent more absenteeism than the men who walked 1,330 yards. It is related to labour turnover, the men at pits with an annual turnover of 27 per cent showing 24 to 75 per cent more voluntary absenteeism than those at pits with a turnover of 10 per cent. Again, it is related to the distance of the men's homes from the collieries, men living 2.6 miles away showing 80 per cent more voluntary absenteeism than those living 1.6 miles away.

The chief conclusions point to what the investigators describe as the extraordinary sensitiveness of the miner to his conditions of work and his general environment. "Any and every change of condition affects, not only his voluntary absenteeism, but the time lost by sickness and accidents as well." The investigators also say that "our results suggest that the most valuable method of reducing absenteeism is to improve the conditions of work."

Mechanization recommended in Gold Mining Industry

The *Engineering and Mining Journal* (New York), in its issue of August 25, comments on the prevalence of miner's phthisis in the South African gold mines, and suggests the mechanization of the industry as a means of lessening the losses caused by this disease. It is pointed out that "one million pounds sterling—more than 2 per cent of the value of total production and more than 10 per cent of dividends declared—was the toll paid last year by

Rand mining companies to meet the ever-increasing requirements for compensation under the South African Miners' Phthisis Acts."

About 200,000 native labourers are now employed in the Rand gold mines. In the United States, on the other hand, the *Journal* states, the value of the combined production of non-ferrous metals in Utah and Arizona is almost equal to that of the Rand. Yet in these two states there are probably no more than 50,000 men engaged in mining. "Granting that the intelligence of the American worker is greater than that of the native "boy" on the Rand, and that the open-pit mines, which account for a large part of the total of the two states mentioned, require less labour to operate than the deep workings on the Rand, the difference is still so great as to call for some other explanation." The conclusion is reached that mechanization, not legislation, promises the ultimate in reducing to a minimum the hazard to health in the operation of the world's greatest gold field.

National Safety Council (U.S.A.)

The seventeenth annual congress of the National Safety Council (United States) will be held at New York City on October 1-5. The president of the Council, in an introduction to the printed program, states that this congress is dedicated to the presentation of ways and means of reducing the annual loss of lives, limbs and property occasioned through unnecessary and preventable accidents. Approximately 95,600 men, women and children met death during 1927 in such accidents on the streets and highways, in other public places, in their homes and throughout industry. It is the purpose of the Congress to demonstrate that these accidents did not just "happen" but that they were caused by circumstances and conditions within human control; that similar accidents have been prevented by thousands of devoted safety men, whose successes have been achieved under the inspiration of the original founders of the Council who attended the first Safety Congress.

From a mere handful of pioneers, the National Safety Council has grown into an organization of world-wide influence. It is supported by 4,560 members, representing 153 different kinds of industries, government departments, educational institutions, libraries, chambers of commerce, community safety councils, insurance companies, automobile clubs, miscellaneous national, state and local professional, trade and business organizations and public spirited individuals.

Use of Sprayers in Painting

An enquiry was undertaken in 1925 by the Pennsylvania Department of Labour and Industry, with a view to the drafting of regulations governing the use of sprayers in painting. This enquiry was followed by a supplementary investigation organized by the National Safety Committee of the United States. Both enquiries were supervised by Dr. H. F. Smith and the results obtained were combined in an article which appeared in the *Journal of Industrial Hygiene* for June last and which has been summarized by the International Labour Office in the September 3 issue of its weekly publication, *Industrial and Labour Information*.

The results of the spraying of lacquers, etc., were studied in over 150 industrial undertakings, and 177 air samples for benzene were taken. The tests were always accompanied by air velocity measurements. The medical examination covered 291 lacquer sprayers and 266 sprayers of other materials. It was shown that relatively small amounts of benzol in lacquers might give rise to benzol concentrations, in the air breathed by the sprayer, considerably above the limit of 100 parts per million, for continuous exposure, set by the Benzol Committee of the National Safety Council. While adequate exhaust ventilation reduces the benzol concentrations to within the limit of safety, it is not sufficient to ensure the safety of the sprayer. Protection against the danger is best afforded by discontinuing

the use of spraying materials containing more than the minimum amount of benzol that may be present in the best commercial toluol and in denatured alcohol used in the best lacquer manufacture—not over 0.5 per cent.

As regards paint and enamel sprayings, air tests were carried out on 49 occasions in 25 industrial undertakings, and 253 workers engaged in spraying various paints and enamels were examined. The conclusions show that there are so many variable and uncontrollable conditions encountered in the application of materials containing lead in any form that exhaust ventilation, as at present generally practised, cannot always be regarded as an effective protection for the sprayer. Adequate ventilation should provide for an air movement past the sprayer of 150 feet to 200 feet a minute towards the exhaust duct.

Research into the danger of spraying vitreous enamels took the form of 59 tests for suspended particles in 20 undertakings, and X-ray examinations of 84 sprayers of siliceous materials out of 137 examined generally. The risk was found to be especially great in the spraying of materials used for covering sheet metal.

It was found that in all cases the danger could be reduced by effective exhaust ventilation. It is recommended, however, that workers should be protected by masks or respirators, which are the only effective protection in the case of benzol. It is also recommended that workers employed in spraying paint should be subjected to periodical medical examination.

EMPLOYEES' WELFARE PROVISIONS IN ONTARIO INDUSTRIES

Results of Inquiry by Ontario Department of Labour

UNDER the heading of "Industrial Relations," Miss Marion Findlay, senior investigator of the Ontario Department of Labour, contributed to the August issue of *Social Welfare*, the monthly publication of the Social Service Council of Canada, a summary (based on an enquiry made by the Department into the industries of the Province) of the extent to which the problem of scientific management has been met by representative employers. By the term "industrial relations," is meant the application and development in modern industry of such sociological factors as accident prevention, health measures, recreation, holidays with pay, joint councils and shop committees, sickness and group insurance, pensions and annuities, regulation of hours of labour, and bonus and profit sharing schemes. The writer points out that while no attempt

has been made to cover all firms in the province, the 300 firms which provide material for the summary are fairly representative of the manufacturing industries and public utilities. They are situated in all parts of the Province in both large and small centres. The employees in these firms numbering 185,187, of which total 42,813, or 23 per cent, were female workers.

Safety and Health.—The importance of accident prevention in any program of improved management is now widely appreciated, and more effective work in this direction is being done each year by many firms in Ontario. Expert mechanical knowledge is being used in the equipment of dangerous machinery with the most adequate safeguards, and closer attention is being given to the lighting and ventilation of plants as

factors in safety; to good housekeeping methods; to the arrangement of employment so that only men who are physically and mentally fit are placed on jobs to which any hazard is attached; and to the education of every employee in the necessity for safe methods and constant precaution. As a result of these measures many of the 300 firms reported a decided improvement in accident experience.

As regards health conditions and first aid work, the enquiry revealed that many of the firms exceed the requirements of the Workmen's Compensation Act in the provision of first aid kits and first aid rooms, etc. Many firms make provision for hospital accommodation, for nurses for plant duty and visiting the homes of employees, and for the services of doctors for general health purposes as well as in cases of emergency. Two or three rooms are often given over for first aid or hospital purposes, and cots are provided to take care of temporary sickness as well as accidents, a graduate nurse being usually in charge of such increased accommodation. Seventy-three firms reported that they retained the services of one, and in a few cases more than one, graduate nurse, while 18 firms have special first aid attendants. In some plants nursing service in the home is provided by the insurance company under the terms of the policy by which the employees are insured. It is not an uncommon practice for a firm to arrange for the services of a dentist and oculist, or to endow a cot in the local hospital for the use of employees and immediate members of their families without charge. In addition to the firms with doctors on call, several of the larger companies have doctors engaged on salary to give their full time to health matters among employees, and many have doctors on duty in the dispensary for stated hours. Commenting on this phase of industrial health, the writer observes that "the industrial dispensary with a graduate nurse or doctor in charge may become a centre of education in matters of hygiene, and that physical fitness, which is essential to efficiency in work, may be greatly increased with a beneficial effect on production."

Recreation and Cafeterias.—The enquiry showed that the provision of recreation is a considerable factor in the industrial policy of the reporting firms. Approximately 41 per cent of these firms employing three-quarters of the workers, make some provision for the recreation of their employees. The majority have recreation clubs and athletic associations with membership fees, and the firm often makes an annual contribution to the funds or undertakes responsibility for equipment or for

any deficit which may be incurred. Many firms make elaborate provision for recreation in the way of athletic fields, with a baseball diamond, sometimes equipped with a grandstand, a cricket field, putting greens, tennis courts, bowling greens and hockey rinks. In two or three large firms where keen interest in sport is maintained, a sports director on salary from the firm devotes his whole time to managing the athletic activities of the employees. Where recreation or club rooms are established, the equipment varies, and in some cases is on an elaborate scale, including reading rooms, circulating library, lounge, gymnasium or assembly hall, billiard tables, bowling alleys, etc.

Eighty-nine of the 300 firms, employing approximately 50 per cent of the workers, reported having a cafeteria, frequently in charge of a graduate dietitian of long experience, at which a hot, full course dinner practically at cost or less may be obtained, and 20 other firms have lunch rooms where tea, and coffee are served free or at a nominal charge.

Holidays with Pay.—Within the last few years the giving of holidays with pay to production workers and other wage earners has come to be recognized by an increasing number of firms as a possible and desirable arrangement. Of the 300 firms circularized, over 20 per cent, in which are employed 32 per cent of 185,187 workers, allow annual holidays with pay to all workers after a stated length of service. In 96 firms holidays with pay are granted to foremen, time workers and salaried employees only, while in approximately 42 per cent of the firms arrangements may be made under special circumstances for holidays without pay. The usual holiday plan was found to be one in which the length of holiday varied. The most generous provision in this respect is two weeks with full pay for all factory workers with one year's service or over.

Joint Councils and Shop Committees.—The writer describes the establishment of joint industrial councils and shop committees by various large firms in the Province as "an important manifestation of the desire for co-operation between management and men." Of the total of 300 firms which made returns, 21 per cent, employing approximately 48 per cent of the workers, have well organized works councils. The allocation through these councils of certain responsibilities and the giving of some voice in the arrangement of working conditions, wages, hours, safety, recreation and general welfare are reported as being beneficial to both sides.

Sickness and Group Insurance.—Of the 300 firms, 212 reported having some scheme for the financial advancement of their employees. Twenty-six per cent, comprising almost half the employees, have some form of insurance other than group, and approximately 35 per cent, including 28 per cent of the workers, have adopted some system of group insurance. In most firms having any form of sick benefits practically all permanent employees are eligible for membership, usually optional, although in some firms it is a necessary condition of employment, medical examination being sometimes required before application for membership. The majority of sickness insurance schemes are contributory on the part of the employees, and in many cases these contributions alone form the fund from which benefits are paid. Amounts of contributions are based on length of service, earnings or age, or may be set at a flat rate for all members. In some cases female employees are assessed at a rate equal to one-half that of male, the benefits being also proportionate. A feature of sickness insurance is the provision for medical care under many of the schemes. The extent to which firms support sickness insurance schemes in their plants varies from complete responsibility without any contributions from employees to no support whatever. One firm has established a complete system of financial aid through the provision of sickness and group insurance and pensions, with a co-operative trust fund which enables employees to make advantageous investment in the company's stock.

Somewhat over one half of the firms having group insurance were found to pay the premiums in full, but an increasing tendency is noted during the past few years for schemes to be contributory. Usually from three months to three years of continuous service is required before employees are insured, and in many cases female employees are not eligible, or if so, usually at a lower rate. An initial sum of \$500, the minimum amount granted, or \$1,000 increasing with length of service, to a maximum of \$2,000 or higher, is a plan in general use, or a flat rate of \$1,000 for all.

Pensions and Annuities.—It was found that 61 of the 300 firms, with 56 per cent of the employees, make provision for workers who have grown old in service, and several others reported that the matter of establishing a pension plan was receiving attention. Of these 61 firms, 49, employing approximately 100,700 workers, have a regular pension scheme, while the remaining 12 firms take care of old employees by retaining them on the

pay roll as long as they are able to do work of any kind about the plant, and by granting retiring allowances, in which event each case is dealt with on its own merits. The majority of the pension funds are non-contributory. Where they are contributory the firms make substantial contribution to the funds. Under ordinary circumstances from 20 to 25 years' continuous service is required before employees are eligible for pension, and many firms make provision for pension in cases of incapacity after a shorter term of from 10 to 15 years. The retiring age is usually 65 years for men and 55 for women. The amount of superannuation is sometimes calculated at a certain percentage, one or two, of the average earnings for the last five or ten years of employment for each year of service, with a stated minimum and maximum amount, or the sum may vary with length of service only. In the case of the death of the pensioner some firms make provision for the continuance of the pension for the benefit of minor children, or, in whole or in part, to the widow.

Bonus, Profit Sharing and Sale of Stock.—Approximately one-quarter of the 300 firms reported a bonus system of some kind. In many cases there is a simple attendance bonus of a stated amount or percentage of wages per week for punctuality and regularity. A popular means of rewarding length of service is the annual bonus, frequently based upon the company's profits for the year, thus becoming a profit sharing scheme as well. Both wage earnings and length of service are taken into consideration when awarding these bonuses, the amounts of which vary from 5 to 15 per cent of wages after a fair term of employment. In several instances bonuses consisting of the company stock are granted for special service to the firm. Other firms have established some form of thrift plan in order to encourage systematic saving among their employees. Such thrift plans are often operated in conjunction with plans for the purchase of company stock by the employees. It is stated, however, that the sale of company stock to employees has not yet become a common practice in Ontario, although over 40 of the 300 firms were said to have instituted plans with considerable success.

Hours of Labour.—From reports of 276 firms, having 167,634 employees, it was indicated that 122,908 of the employees, or over 73 per cent, work a 48-hour week or less; 37,736, or over 22 per cent, work from 49 to 54 hours per week; and 6,940, or over 4 per cent, work 55 hours per week or longer. Of the 41,988 female workers in these 276 firms, approximately 75 per cent work a 48-

hour week or less; 23 per cent work 49 or 54 hours per week; and less than 2 per cent work a 55-hour week or longer.

Touching on other factors operating toward improving industrial relations, the writer notes that "one of prime importance is the employment department, which brings keen judgment and common sense to bear in the matter of employing workers, investigates

complaints, endeavours to arrive at the true cause of workers quitting their jobs, and to remove such cause in order to cut down labour turn-over." Another such factor is in the definite effort being made by many firms to stabilize employment through the planning of output months in advance. One firm guarantees 48 weeks' employment per year to all permanent employees, which has resulted in a reduction in turn-over.

Superannuation Scheme of Scottish Wholesale Society

Details of a proposed superannuation scheme for the employees of the Scottish Co-operative Wholesale Society were given in the *Co-operative News* for September 1. The report is the outcome of an instruction to the directors of the society in September, 1927, and the scheme is now issued to the share-holding societies for approval.

Under the provisions of the scheme, every male and female employee in the permanent service of the Society, who has attained the age of eighteen, and who is not over fifty at the start of the scheme, may become a member; and every male and female who in future enters the permanent service of the society, and who is not over fifty on entry, must become a member of the scheme. Persons who in future enter the service under the age of eighteen must become members as soon as they attain that age.

Pension.—The pension on retirement will be one-eightieth of the average annual salary or wages in the five years immediately preceding the date of retirement, for each year of service after the date of entry into the scheme, together with one-hundred-and-sixtieth for each year of service prior to entry into the scheme. Not more than forty years' service may be taken into account, nor years of service before the age of eighteen. Any employee now aged twenty-five who joins the scheme and retires at sixty-five will receive half pay under these conditions.

Age at Retirement.—The normal age at retirement has been taken as sixty-five, although the directors would have the right to invite an official or employee to prolong his service from year to year beyond the normal retiral age. But no further contributions would be payable, and any such extended period shall be disregarded in calculating any superannuation allowance. No pension will be granted unless a minimum service of fifteen years has been completed.

Failure of Health.—Employees who have completed fifteen years' service who retire on account of permanent invalidity will receive

a pension calculated in accordance with the above scale. Employees who have not completed fifteen years' service who retire on account of permanent invalidity will be entitled to the return of their contributions with compound interest at the rate of three per cent per annum.

Refunds.—Employees who have not qualified for pension, and who leave the service for reasons other than ill-health, will be entitled to receive back their contributions with 3 per cent, compound interest. On death before superannuation, the representatives of the employee will be entitled to the return of the employee's contributions with compound interest at the rate of 3 per cent per annum. If death occurs after superannuation the representatives of the employee will be entitled to the return of the employee's contributions with compound interest at the rate of 3 per cent per annum, less the payments made by way of superannuation.

Contributions.—Employees entering the scheme will contribute an amount equal to 3½ per cent of their salary or wages (9d. in the pound) from the date of entry into the scheme. The society will contribute an amount equal to that paid by the employee. In addition, the society will pay an annual uniform amount of £3,945 for forty years to establish the solvency of the scheme.

Older Employees.—Older employees, who at the commencement of the scheme were over the age of fifty, would not come under the scheme outlined above.

For such employees contributions would be the same as those payable in respect of the younger employees, namely, 3½ per cent of salary or wages, and a like amount from the society. On death or permanent invalidity there would accrue to them a cash payment consisting of the employees' own and the society's contributions accumulated at 3 per cent per annum compound interest.

If such an employee were to leave the service for reasons other than death, permanent invalidity, or fraud, he would receive back

his own contributions with 3 per cent per annum compound interest. The normal age of retirement would be the same as that of the younger employees, namely, sixty-five; but the directors would have the right to invite such an official or employee to prolong his service from year to year beyond the normal retirement age.

Those now between age fifty and sixty-five would be allowed to continue their contributions as long as they were in the service up to, but not beyond, age seventy.

In the case of those now reaching the age limit, a certain hardship would be experienced by reason of the fact that, at the most, they would only contribute for a comparatively short period. Those, therefore, who at the commencement of the scheme are over sixty

years of age will not be required to retire until they have contributed for five years. But such service shall not extend beyond the age of seventy. Those now over the age of sixty-five are out with the scheme, but shall be permitted to continue in the service up to the age of seventy. None of those employees who, at the commencement of the scheme, are over age sixty-five will be required to retire until they have received at least a year's notice, but these rules are not to interfere with the full discretionary right of the directors to dispense with the service of any employee as and when they see fit.

Number of Workers Affected.—Nearly 10,000 workers are affected by the scheme, and their total wages and salaries amount to £1,280,906.

CANADIAN NATIONAL RAILWAYS FIRST AID COMPETITION, 1927

THE winning teams in the First Aid Competitions held by the Canadian National Railways in 1928 are given below, as compiled by the Company's Department of Safety and First Aid. All the Dominion and regional competitions were conducted by Colonel C. A. Hodgetts, C.M.G., M.D., director-general of St. John Ambulance Association, and were under the special supervision of Vice-President W. D. Robb.

Dominion Trophies (St. John Ambulance Association)

Montizambert cup, representing championship of Canada, open to men. Winners, Canadian National Railways, Team No. 4, Point St. Charles, Montreal.

Wallace Nesbitt Trophy, representing the railway championship of Canada, open to men. Winners, Canadian National Railways, Fort Rouge Shops, Winnipeg.

Lady Drummond Cup, representing championship of Canada (Home nursing only), open to women. Winners, Canadian National Railways, Montreal, Belgo Building.

Sir George Brown Cup, representing championship of Canada (First Aid only), open to women. Winners, No. 32 Division, St. John Ambulance Brigade, Ottawa.

Wallace Nesbitt General Trophy, representing championship of Canada (for other than railway or miners' cups), open to men. Winners, Richards Family, Stratford.

Ontario Province Shield, representing Provincial championship, open to men. Winners, Canadian National Railways, Motive Power, St. Thomas.

Quebec Province Shield, representing Provincial championship, open to men. Winners, Canadian National Railways Team No. 4, Point St. Charles, Montreal.

Manitoba Province Shield, representing Provincial championship, open to men. Winners, Canadian Pacific Railway, Western Shops, Winnipeg.

Saskatchewan Province Shield, representing Provincial championship, open to men. Winners, Canadian Pacific Railway Police, Moose Jaw.

New Brunswick Province Shield, representing Provincial championship, open to men. Winners, Canadian Pacific Railway Police, St. John.

System Championships

Thornton Cup, representing championship of Canadian National Railways System, open to men. Winners, Motive Power Shops, St. Thomas.

Robb Cup, representing championship of Canadian National Railways System, open to women. Winners, Belgo Building Team, Montreal.

Page Medal, representing individual championship of system, open to men. Winner, J. S. Slidders, Winnipeg.

Page Medal, representing individual championship of system, open to women. Winner, M. B. Parker, Battle Creek.

Regional Championships

Chamberlin Shield, representing championship of Central Region, open to men. Winners, Motive Power Team, St. Thomas.

Bowker Cup, representing championship of Central Region, open to women. Winners, Belgo Building Offices, Montreal.

Officers' Cup, representing championship of Grand Trunk Western Lines, open to men, Winners, Detroit General Offices.

Officers' Cup, representing championship of Grand Trunk Western Lines, open to women. Winners, Detroit team.

Officers' Cup, representing championship of Western Region, open to men. Winners, North Shops, Edmonton.

Officers' Cup, representing championship of Western Region, open to women. Winners Union Depot, Winnipeg.

Officers' Cup, representing championship of Atlantic Region, open to women. Winners, no competition.

Officers' Cup, representing championship of Atlantic Region, open to men. Winners, General offices, Moncton.

Officers' Cup, representing championship of Telegraph Department, open to men. Winners, Winnipeg offices.

Barber Cup, representing championship Telegraph Department, open to women. Winners, Montreal offices.

Galloway Cup, representing championship of Electric Lines, open to general competition, Winners, Lambton.

Local Trophies

Hutchison Shield, representing Montreal and District, open to men. Winners, Point St. Charles, No. 4 Team, Montreal.

Bourne Cup, representing Montreal and District, open to women. Winners, Belgo Building, Montreal.

Officers' Cup, representing Transportation Department only, open to men. Winners, Palmerston.

Deacon Shield, representing Stratford Motive Power Shops, open to men. Winners, Stratford Team No. 2.

McNaughton Cup, representing individual championship, Bonaventure Station, open to women. Winner, Miss Mae Stead.

Imperial Service Medals for Canadian Employees

Thirty-four employees of the Department of Railways and Canals of Canada have been awarded Imperial Service Medals by His Majesty, the King. This number included:—

Conductors: Edward James Abell, Moncton, N.B.; Hermenegilde Begin, Levis, Que.; Robert George Duff, Campbellton, N.B.; Napoleon Levesque, Mont Joli, Que.; Bliss Sears, Moncton, N.B.

Locomotive Wiper: François Xavier Boulanger, Joffre, Que.

Enginemen: Edward Brown, Charlottetown, P.E.I.; William John Coffey, St. John, N.B.; Joseph Charles Larouche, Rivière du Loup, Que.; Joseph Eugene Ouellet, Rivière du Loup, Que.; Edwin Sterling, St. John, N.B.; Fred Muir White, Truro, N.S.

Agent: Robert Armour Brown, Salisbury, N.B.

Carman: James Yeo Colwell, N.B.

Machinists: Theodule Darisse, Rivière du Loup, Que.; Octave Alphonse Thivierge, St. Malo, Que.

Roundhouse Foreman: John Gratton, Mulgrave, N.S.

Bridge and Building Master: François Xavier Halle, Levis, Que.

Janitor: Samuel Richard Hayward, Moncton, N.B.

Painter: Henry Conrad Hooper, Charlottetown, P.E.I.

Section Foreman: Norman Van Horne, Durham, N.B.; James David Rolfe, Richmond, N.S.; William Henry Williams, Marshy Hope, N.S.

Boiler Maker: Silas Le Blanc, Moncton, N.B.

Moulder: John McNevin, Moncton, N.B.

Baggagemaster: Farquhar McPherson, Point Tupper, N.S.

Mail Porter: Robert Miller, Winnipeg, Man.

Lightkeeper: Michael Murray, Chatham, N.B.

Police Constable: Thomas Nicholls, Lethbridge, Alta.

Carpenter: Beverly James Price, Moncton, N.B.

Letter Carrier: Thomas Joseph Reading, Toronto, Ont.

Section and Extra Gang Foreman: Thomas Welford, Spencer, N.B.

Trackman: David Sullivan, Tide Head, N.B.

Coach Painter: Frederick Moore Wilson, Moncton, N.B.

Notice of these decorations appeared in the issue of the CANADA GAZETTE of September 29, 1928.

LEAGUE OF NATIONS INTERNATIONAL LABOUR ORGANIZATION

Ratification of Conventions

On August 20 the total number of ratifications of International Labour Conventions registered with the Secretary-General of the League of Nations was 325. At the same date the number of Conventions of which ratification had been authorized by the competent authority in the country concerned, but had not yet been registered with the Secretary-General, was 28.

Between July 21 and August 20 the International Labour Office was informed of the registration of twelve new applications by Holland and Cuba.

Increase in Membership of the Governing Body

The International Labour Office has been informed of the ratification by Persia and Chile of the amendment to Article 393 of the Treaty of Versailles, adopted by the International Labour Conference at its Fourth Session in 1922.

Article 393 fixes the number of members of the Governing Body of the International Labour Office at twenty-four, twelve representing Governments and six each employers and workers. At its Fourth Session the International Labour Conference voted an amendment to this Article to bring the number of members of the Governing Body to 32, sixteen representing Governments, eight representing employers, and eight representing workers. The object of the amendment is to ensure a larger representation in the Governing Body of extra-European countries, and thus give it a composition more in keeping with the universal character of the Organization.

To take effect, the amendment must be ratified by 42 States. So far, including the ratifications of Persia and Chile, it has been ratified by 40 countries. Only two further ratifications are therefore required in order to allow the membership of the Governing Body to be increased, and thus provide for the direct representation of more extra-European countries.

Visit of the Canadian Prime Minister

The Rt. Hon. W. L. Mackenzie King, Prime Minister of Canada, accompanied by Dr. W. A. Riddell, Substitute Member for Canada on the Governing Body, paid a visit to the International Labour Office on September 11. In the absence of the Director, the Prime Minister was received by Mr.

H. B. Butler, deputy-director of the Office, who presented to him the chiefs of Division and Canadian members of the staff, and showed him over the building. Before leaving, Mr. Mackenzie King expressed keen interest in the work of the Office and his cordial good wishes for the future of the Organization.

Publications of the Office

Sickness Insurance in Germany.—The International Labour Office has recently published a study entitled "Benefits of the German Sickness Insurance System from the Point of View of Social Hygiene," prepared by two specialists, Dr. Franz Goldmann, research member of the health office of the municipality of Berlin, and Dr. Alfred Grotjahn, professor of social hygiene at the University of Berlin. The study describes the part played by sickness insurance benefits in the vast organization of social health institutions in Germany. It gives an account of the benefits, estimates their value from the point of view of public health, and analyses the work done and results obtained by insurance in reducing the risks of infection, preventing disablement, and maintaining the health of the insured persons and their families, who together form half the total population of Germany. Finally, the authors draw the outlines of a national health program for the State, and examine the relations which exist or ought to exist between insurance institutions and public health services. This volume should prove a valuable contribution to the study of the problems of co-ordination and collaboration between public health authorities and social insurance institutions for the prevention of disease, which, in accordance with a decision of the Sixth Assembly of the League of Nations, has been undertaken conjointly by the Health Section of the League and the International Labour Office, with the help of an international committee of experts in social insurance and in public health.

Freedom of Association.—The third of five volumes of a study which is being made by the International Labour Office of Freedom of Association has just appeared, dealing with the history, legal status and actual position of trade unions in Germany, the former Austro-Hungarian Empire, Austria, Hungary, Czechoslovakia, Poland, the Baltic States, Denmark, Norway, Sweden and Finland. Reference was made in the LABOUR GAZETTE, February, 1928, to the first volume of this

CANADIAN DELEGATES TO THE 11TH CONFERENCE, INTERNATIONAL LABOUR ORGANIZATION, GENEVA, MAY-JUNE, 1928
 Front Row.—Mr. H. B. McKinnon, Government Advisor; Mr. H. H. Champ, Employers' Delegate; Dr. W. A. Riddell, Government Delegate; Mrs. B. A. Rogers, M.L.A., Government Advisor; Hon. Peter Heenan, Minister of Labour of Canada, Government Delegate; Mr. Tom Moore, Workers' Delegate.
 Second Row.—Mr. T. J. Coughlin, Government Advisor; Mr. E. Blake Robertson, Employers' Delegate; Mr. G. Filion, Government Advisor; Mr. R. J. Tallon, Workers' Advisor.

series, which was devoted to a comparative international survey of trade union law.

Report of Migration Laws and Treaties.—A publication entitled "Emigration and Immigration Legislation and Treaties," was issued by the International Labour Office in 1922. This report, which analysed the laws and treaties of 76 countries and gave a general idea of the measures taken to regulate migration movements, was designed to serve as a handbook of information for those concerned with the protection of migrants, but like all international legislative treatises devoted to a question still in process of evolution, the information it contained soon became out of date. Since 1922 the regulation of migration has been a subject of ever-increasing legislative activity, showing how great is the interest of governments nowadays in this problem. Almost every country has adopted new legislation relating to migration, or has amended its existing laws. During the same period, international action has also progressed. A new publication, in three volumes, has accordingly been prepared in the International Labour Office, dealing with migration laws and treaties on wider lines than the former publication covering the laws and regulations of about 200 sovereign countries, federated states, mandated territories, protectorates, colonies and dependencies.

The three volumes are entitled respectively: (1) Emigration laws and regulations; (2) Immigration laws and regulations; and (3) International Treaties and Conventions. The first two have now been issued.

Occupation and Health.—The International Labour Office has just issued another series of brochures of "Occupation and Health," the Encyclopaedia of Hygiene, Pathology and Social Welfare, which has been in course of preparation for some time. The series comprises monographs on: Candles (Manufacture of); Cellulose; Ferrosilicon; Gas-Works; Laundries; and Lead.

Study of Journalism.—The International Labour Office has in the press, for early publication, an international comparative survey of the conditions of work and life of journalists. The enquiry was undertaken in response to requests from several quarters, and primarily from the International Association of Journalists accredited to the League of Nations. It was carried out with the aid of this and other organizations of journalists in various countries, and latterly with the ready help of the young International Federation of Journalists. Indeed, one of the most interesting sections of the report is that which de-

scribes the present stage and broad tendencies of organization among journalists, on trade union or similar lines. Beyond that, the volume presents a fairly complete and detailed picture of the situation of working journalists to-day, as regards conditions of entry into the profession, securing of tenure in the profession, conditions of employment (hours of work, wage scales, etc.), provision for sickness, old age and kindred risks, provisions against unemployment and facilities for finding re-employment, and other matters affecting their life and work.

The report also touches on the present tendency in several countries towards the formation of huge press combines or syndicates, each owning and controlling a large number of daily and other publications, which may obviously have serious implications for the journalists as well as for the public at large. The publication should therefore be of value not only to the journalists who are endeavouring to safeguard themselves against the possible consequences of the "trust" movement, but also to all who are interested in the effects of modern industrial methods on the workers.

Vacancy for Chief of Statistical Section

The Civil Service Commission of Canada is asked to announce that a selection will shortly be made by the Director of the International Labour Office (League of Nations), Geneva, to fill the post of chief of the Statistical Section. The post is open to candidates of both sexes in all States Members of the International Labour Organization (including officials at present on the staff of the International Office). The salary attached to the post is 28,000 Swiss francs per year, rising by annual increments of 1,000 francs to a maximum of 33,000 francs. This salary is subject to modification in accordance with fluctuations in the cost of living in Geneva. Candidates desiring to apply for the post are to send in their applications to the International Labour Office, Geneva, before December 31, 1928, at the latest. Further information may be obtained from the Civil Service Commission, Ottawa.

The annual report of the Commissioner of Naturalization of the United States for the fiscal year ended June 30, 1927, shows that 5,237 alien residents of Canadian origin were admitted to the citizenship during that period. The largest national group of persons naturalized was the Italian with 45,262, followed by the Polish group with 34,983 naturalizations. The British Empire is next on the list with 28,276, of whom 9,823 were Irish, 7,595 English and 3,386 Scottish.

AMERICAN VIEW OF THE INTERNATIONAL LABOUR ORGANIZATION

Study and Report by National Industrial Conference Board (United States)

THE National Industrial Conference Board (United States) has published in its series of "Studies of International Problems" a study on the work of the International Labour Organization (New York: National Industrial Conference Board, Inc., 198 pp. Price \$2.50). The Board is an organization of American employers designated by and from national and state associations, its object being to provide a bureau of scientific research and a clearing house of information on all phases of industry. The present report therefore discusses the International Labour Organization from the standpoint of American industry, and its judgments and conclusions are primarily intended to answer the question whether or not the United States would benefit by entering the Organization. The study analyses all the Draft Conventions and Recommendations adopted by the International Labour Conference and the action taken by the member nations in complying therewith, its material being mainly based on information contained in the publications of the International Office.

The report dwells on the inherent difficulties in the path of all attempts at international co-operation, particularly in matters connected with industry and employment. "Labour legislation," it is pointed out, "is primarily a domestic problem. Despite the advisability of remedying the competitive inequalities resulting from the differences in the living standards and conditions of employment of various countries, the fact remains that improvement in the status of the worker in any country can be brought about only when public opinion supports, and the domestic economic situation permits, such improvement. A shorter working day and better employment conditions are the results of productive efficiency as well as of legislative decrees. The existing differences in economic development among the nations of the world, therefore, in addition to the linguistic, racial and political obstacles, make international action difficult."

This difficulty, it is claimed, is evident in the structure and operation of the International Labour Organization, which is alleged to have all the disturbing factors associated with internationalism—diversity of language, of political rank and of social structure. Another disorganizing factor is found in the structure of the Organization by groups—em-

ployers, organized workers, and governmental representatives. This system, it is claimed, has been the cause of dissatisfaction for example, among unorganized workers, and has hampered individual action by the delegates at the various conferences. For such reasons as these the activities of the Organization, it is thought, have been "characterized by an elaborate formal and legalistic attitude and procedure. But despite the obstacles confronting it and the resulting complexity of its procedure, the International Labour Organization has proved itself an interesting and valuable experiment in the field of international labour affairs. Whether it has completely fulfilled the expectations of those who were responsible for its creation is open to question. Whether the record of accomplishment furnishes adequate ground for action by the United States in the direction of joining in the work of the Organization is likewise debatable. But there can be no dispute concerning the sincerity and earnestness with which the International Labour Organization has sought to promote the cause of social progress in the interest of the wage earners of the world."

As to the concrete results obtained so far by the International Labour Organization in reaching its objective, which is the improvement of the working conditions of wage earners throughout the world, the investigators find it difficult to trace any body of international labour legislation that may be attributed directly to the action of the Organization. Other agents are at work as well as the International Labour Organization. "The improvement of labour conditions throughout the world is being brought about by a combination of forces and not solely by the legislative activity of the International Labour Organization. Voluntary action on the part of employers, as well as legislation enacted without regard to the particular provisions of the international conventions, is shortening the hours of labour, limiting the work of women in hazardous employments, raising the age at which young persons may enter industry, and in other ways producing the results sought by international legislation. Moreover, even if the ratification of conventions is taken as a measure of the accomplishments of the International Labour Organization, it is obvious that in each country such ratification, and more particularly the subsequent legislative enforcement, is brought about

largely by domestic organizations. In the development of public opinion favourable to labour legislation in each member country, the International Labour Organization has played only a minor part. In short, it might be argued that the movement for improving labour conditions would have proceeded, though perhaps less rapidly, in the absence of any international agency."

On the other hand, the acceptance of the Draft Conventions shows the extent to which the International Labour Conference has formulated practical proposals, and avoided the obstacles to uniform legislation which arise out of differences in political, economic and social systems. The report analyses the ratifications from this point of view and makes the discovery that no convention so far has been ratified by a majority of the countries belonging to the Organization. The investigators find three main obstacles to a more general ratification: first, the federal constitution of some of the countries, such as Switzerland, Australia, and Canada; second, the rigid form of the conventions, which cannot be amended or modified to meet objections on minor points; third, the conference has proceeded without attempting to define the limits of its legislative activities. "As already pointed out, conditions and customs in individual countries vary to an extent which makes absolute uniformity in legislative regulations highly impractical. In such subjects as social insurance and workmen's compensation it would seem inadvisable to attempt anything more than the laying down of certain general principles, leaving the details to be worked out by the individual countries. Whether it is expedient to resort to the method of international legislation for the mere statement of such general principles may be questioned." The report concludes these criticisms by commending the more practical and opportunist policy shown by the International Labour Conference at its recent sessions as compared with the earlier meetings.

Passing to the activities of the International Labour Organization other than legislation, the report declares that the contributions of the Organization to social progress have been highly significant. "The International Labour Office has provided an agency for the centralization of information concerning all phases of the labour problem. Prior to its organization, there was no medium through which interested persons and organizations could keep in close touch with the developments in labour legislation and the changes in the broader field of employment relationships. The special investigations of the Office

have assembled information which would not otherwise be available. The service performed in the collection of material for the use of the International Economic Conference of 1927 was invaluable. Although criticisms have been made of the Office on account of its activities, which have directed primarily toward bringing about the ratification of conventions, it should be recognized that, as a fact-finding and research agency, the International Labour Office has functioned as satisfactorily as the breadth of its field of investigation in comparison with its resources permits."

In regard to the question of the participation of the United States in the work of the Organization the National Industrial Conference Board concludes as follows: "Affiliation of this country with the International Labour Organization does not at present seem necessary or desirable, but co-operation in the research, activities of the International Labour Office and in an exchange of information and views is not only practicable but also desirable and should be encouraged."

The Bureau of Statistics and Information of New York State has published, under the direction of the Industrial Commissioner, a pamphlet giving the text of the codified Labour Law of the State, including also the related sections of other laws. The new State Department law, effective January 1, 1927, reorganized the Department of Labour incidentally to the general reorganization of the State government. It increased the Industrial Board from three to five members, the original number. In 1921 the Legislature had substituted for the Industrial Commission of five members a single industrial commissioner as the administrative head of the Department, and an Industrial Board of three members as a quasi-judicial and quasi-legislative body for determining workmen's compensation questions, etc. At the same time it abolished the Industrial Council. However, in 1924, the Legislature reinstated this Industrial Council with some modifications, the Industrial Commissioner being named as its chairman. The pamphlet also gives references to legal decisions and opinions on labour subjects, and contains a full index of all the subjects for which provision is made in the labour law and related statutes.

INTERNATIONAL ASSOCIATION OF PUBLIC EMPLOYMENT SERVICES OF THE UNITED STATES AND CANADA

Report of Proceedings at Sixteenth Annual Convention

FROM September 18 to 21, 1928, there was held in Cleveland, Ohio, the sixteenth annual convention of the International Association of Public Employment Services. Representatives were in attendance from many of the states of the American Union, and the provinces of Canada, as well as from the Federal Departments of Labour of both countries. The Canadian delegation was composed of: Mr. R. A. Rigg, director, and Mr. V. C. Phelan, secretary to the director, Employment Service Branch, Department of Labour, Ottawa; Mr. A. Crowe, superintendent, Employment Service of Canada, Quebec; Mr. F. Payette, superintendent, Employment Service of Canada, Montreal; Mr. H. C. Hudson, Ontario superintendent, Employment Service of Canada, Toronto; Mr. J. A. Bowman, Manitoba superintendent, Employment Service of Canada, Winnipeg; and Mr. G. E. Tomsett, Saskatchewan superintendent, Employment Service of Canada, Regina.

The conference was opened by addresses of welcome from Mr. John D. Marshall, mayor of Cleveland; Mr. Herman R. Witter, director of the Ohio Department of Industrial Relations; Mr. D. S. Blossom, director, Cleveland Department of Public Health and Welfare; and Mr. Stanley A. Corfman, chairman, employment managers' group, Cleveland Chamber of Commerce. A wide range of subjects was dealt with in papers read to the convention by various officials. Most of the trends of employment and problems incidental thereto were exhaustively discussed by the delegates present. The list of subjects, together with the names of those presenting addresses on them, is as follows:—

The New York State survey of unemployment—its purpose, findings and conclusions, by Mr. James A. Hamilton, Industrial Commissioner, New York State Department of Labour.

What constitutes a good public employment service?—by Dr. William M. Leiserson, professor of economics, Antioch College, Yellow Springs, Ohio.

The creation and maintenance of public interest in public employment offices—by Mr. V. C. Phelan, secretary to director, Employment Service of Canada, Ottawa, Ont.

How can the public employment service best serve in times of unemployment? by Mr. Russell J. Eldridge, United States Employment Service, Newark, N.J.

The states' relationship to fee-charging employment agencies, by Dr. John B. Andrews, secretary of the American Association for Labour Legislation, New York.

Job specifications—the age limits in industry, by Mr. Walter J. Lloyd, Commissioner, Bureau of Employment, Harrisburg, Pa.

The Relationship of the Church to the public employment service, by Rabbi Abba H. Silver, D.D., Cleveland, Ohio.

The public employment service—its weakness and strength, by Mr. J. A. Bowman, provincial general superintendent, Employment Service of Canada, Winnipeg, Man.

The place of the coloured worker in industry, by Mr. T. Arnold Hill, National Urban League, New York.

What the employer expects from the public employment service, by Mr. Oscar Grothe, vice-president, The White Sewing Machine Company, Cleveland, Ohio.

Why and how employers should support the public employment service, by Mr. Charles E. Adams, president, Cleveland Hardware Company, Cleveland, Ohio.

Employment problems of the Southern States, by Mr. F. D. Grist, Commissioner, Department of Labour, Raleigh, N.C.

Is nation wide unemployment primarily a national or a local problem, by Mr. Cyrus Locher, United States Senator, Cleveland, Ohio.

Purposes, accomplishments and possibilities of the International Association of Public Employment Services, by Mr. R. A. Rigg, director, Employment Service of Canada, Ottawa, Ont.

What the public employment service means to the State of Ohio, by Mr. William G. Pickerel, Lieutenant-Governor of Ohio.

Labour saving machinery as a factor in unemployment, by Mr. James J. Davis, secretary, United States Department of Labour.

During the concluding session of the conference resolutions were adopted, dealing with the uniformity of forms, methods and procedure for public employment offices, and other related matters incidental to the operation of public employment services.

The election of officers resulted as follows:—

President, Mr. A. L. Urick, State Labour commissioner, Des Moines, Iowa.

Past President, Mr. R. A. Rigg, director, Employment Service of Canada, Ottawa, Ontario.

First vice-president, Mr. H. C. Hudson, general superintendent, Employment Service of Canada, Toronto, Ont.

Second vice-president, Mr. Francis I. Jones, director general, U.S. Employment Service, Washington, D.C.

Third vice-president, Mr. John S. B. Davie, commissioner, Bureau of Labour, Concord, N.H.

Secretary-treasurer, Mr. B. C. Seiple, superintendent, State-City Employment Service, Cleveland, Ohio.

Executive committee, Mrs. M. L. West, assistant federal director, U.S. Employment Service, Richmond, Va.; Mr. G. E. Tomsett, general superintendent, Employment Service of Canada, Regina, Sask.; Mr. O. W. Brach, chief, Division of Labour, Statistics and Employment, Columbus, Ohio; Mr. Emanuel Koveleski, examiner, U.S. Employment Service, Rochester, N.Y.; Mr. Walter J. Lloyd, director, Bureau of Employment, Harrisburg, Pa.

Philadelphia, Pa., was chosen as the convention city for 1929.

EMPLOYMENT AND WAGES ON RAILWAYS IN UNITED STATES, 1917-1927

THE Bureau of Railway Economics, Washington, D.C., has published "Statistics of Railways of Class 1, United States (1917-1927)," the information being based upon official summaries of the Interstate Commerce Commission for the years named. "Class 1" includes only railways with annual operating resources above \$1,000,000. Switching and

terminal company statistics are not included. Class 1 railways operate about 90 per cent of the total mileage of the United States, and earn about the same proportion of the total revenues. The tables give the following information in reference to employees and their compensation.

UNITED STATES EMPLOYEES AND THEIR COMPENSATION, AND FREIGHT AND PASSENGER TRAFFIC OF CLASS I RAILWAYS IN THE UNITED STATES

Calendar years ended December 31, 1917 to 1927

(Railways having annual operating revenues above \$1,000,000—excludes returns of switching and terminal companies)

Employment in Mining in Canada in 1928

A preliminary report has been published by the Dominion Bureau of Statistics on the Mineral Production of Canada during the six months ending June 30, 1928. Monthly records of employment collected by the Bureau and computed as an index number (January, 1920=100) showed, it is stated, an average of 106.7 for general mining during the half-year ending June, 1928, as compared with 99.2 for the corresponding half-year in 1927. In January, 1928, the index stood at 107.6 and in February at 108.2; but thereafter it declined slightly in March and April, recovering to 106.6 in May and 107.3 in June.

Coal mining showed an average employment index of 87.8 as compared with 85.9 in the first half of last year. Beginning the year at 92.5 the index gradually dropped each month to 82.1 in June. Metal mining, in

contrast, with an average for the half-year of 182.0 as against 155.2 for the first half of 1927, showed a steady advance month by month from 177.0 in January to 187.5 in June. Non-metal mines showed a similar improvement in employment, the index ranging from 99.7 in January steadily upward to 137.8 in June, with an average for the period of 111.2 as compared with 98.5 for the first half of 1927.

Thus, from the general index for mining it appears that employment in this industry, was, on the average, 7 per cent higher during the six months ending June, 1928, than during the first half of 1927 and that in metal and non-metal mining particularly, the improvement this year was in the neighbourhood of 15 per cent over the records for the first half of last year.

Co-operative Associations in Saskatchewan in 1927-28

The fourteenth annual report of the commissioner of co-operation and markets of Saskatchewan for the twelve months' period ended April 30, 1928, has been published recently by the provincial Department of Agriculture. The Co-operation and Markets Branch administers the Co-operative Associations Act, which was amended and consolidated at the last session of the provincial legislature. Under this revision membership in a co-operative association was thrown open to persons of any class, instead of being mainly confined to farmers, as formerly; transient purchasers of merchandise were excluded from the distribution of surplus, and the word "surplus" was employed in the new act, instead of "profit," the latter term being considered a misnomer in connection with co-operative associations. By another amendment the rate of interest was set at 6 per cent, with a provision, however, that by supplemental by-law an association may require that no interest be paid on capital stock, the old act having provided that interest should not exceed 8 per cent. The new act further made it compulsory upon an association to declare patronage dividends, the division of profits having formerly been voluntary. The only organizations now entitled to use the word "co-operative" in their titles are asso-

ciations under the new act, the old act, the Co-operative Marketing Associations Act, or any private act of the Legislature.

The branch administers also the Co-operative Marketing Associations Act and the Produce Merchants Act. The number of shareholders in the associations is given in the report as 13,867, with paid-up capital invested of \$547,888.97. The total sales of the associations amounted to \$3,861,904.71, the net savings being \$128,566.28.

The report notes that the associations are now more independent of departmental aid than formerly. Now that the farm produce marketing bodies are organized on a co-operative basis and are established in business, calls are not so frequent upon the branch to provide speakers for meetings, as the pools, generally speaking, furnish their own, drawing upon their directors and officials for the purpose. The branch, however, continues to assist the associations by means of bulletins by organizing exhibits at fairs, and by information.

The report contains lists of all the associations in the province, with summaries of the business transacted by each. It includes also summaries of other controlled marketing organizations or "pools," all of these indicating progress during the past year.

EMPLOYMENT AND UNEMPLOYMENT IN CANADA DURING AUGUST

THE following information as to the employment situation in Canada is based upon reports from four sources:—

(1) The Dominion Bureau of Statistics receives reports each month from most of the larger employers of labour throughout Canada in all industries except agriculture, fishing, hunting and highly specialized business, the returns representing firms employing fifteen workers or more. The number of firms so reporting in August was 6,567, their employees numbering 1,004,286 persons. An employment index number is maintained, based on the number of workers employed by such firms in January, 1920, as 100;

(2) The Department of Labour receives reports from local trade unions throughout Canada, showing the number of their mem-

bers who were unemployed in the period under review. The number of unions reporting for August was 1,604, having an aggregate membership of 181,022 persons. It should be understood that the report on the number of unemployed workers refers only to organized labour, no figures being available as to the number of unorganized workers who were without employment;

(3) The Department of Labour receives reports from the 64 offices of the Employment Service of Canada showing the number of applications for work, the existing vacancies and the number of workpeople placed in positions;

(4) The Dominion Bureau of Statistics receives each month detailed statistics from 63 cities throughout Canada, showing the value of permits granted during the period for various classes of building construction.

Employment Situation at the Beginning of September, 1928, as Reported by the Employers

Chiefly owing to the demands upon the labour market for workers to harvest the exceptionally large western crop, there was a slight slowing-up of industrial activity at the beginning of September, but the situation continued considerably more favourable than in any month of the years 1920-27. Owing to the smallness of the unit of employment, agriculture is not represented in these statistics, so that the pronounced increase in the numbers employed in that industry cannot here be measured. The Dominion Bureau of Statistics received data from 6,567 firms with a combined working force of 1,001,395 persons on September 1, as against 1,004,286 in the preceding month. The index number stood at 119.5, compared with 119.9 on August 1, 1928, and with 109.7, 104.9, 96.6, 93.1, 100.0, 93.7, and 88.7 on September 1, 1927, 1926, 1925, 1924, 1923, 1922 and 1921, respectively.

Manufacturing, logging, mining, communications and transportation showed heightened activity, while there were heavy seasonal losses in construction, and trade was rather quieter.

Employment by Economic Areas

Quebec and Ontario reported improvement, while employment in the Maritime and Prairie Provinces and British Columbia declined moderately.

Maritime Provinces.—As on September 1 in most years of this record, there was a slackening in activity in the Maritime Provinces,

chiefly in highway construction, while gains were noted in manufacturing. Statistics were received from 533 firms, whose staffs aggregated 76,917 workers, compared with 77,584 in the preceding month. The index of employment was several points higher than on the corresponding date of any other year of the record.

Quebec.—Further gains were noted in manufacturing, construction, communications, transportation and mining, while logging was also seasonally brisker. Within the manufacturing group, the largest increases were in textile, rubber, building material, tobacco, distilled and malt liquor factories. The working force of the 1,455 co-operating employers stood at 279,369 persons, as against 276,163 on August 1. Less extensive advances were registered at the beginning of September, 1927, when the index was several points lower.

Ontario.—Increases on a rather smaller scale than on September 1 a year ago were recorded in Ontario, where 2,997 firms enlarged their staffs by 997 employees to 413,184 on the date under review. Manufacturing as a whole employed fewer operatives, largely on account of losses in iron and steel and lumber plants, while there were gains in the rubber, textile, electrical apparatus, electric current, vegetable food and several other divisions. Logging camps reported considerable seasonal activity, and communications and transportation also showed improvement. The situation was decidedly more favourable than in the

early autumn of 1927, or in any other year since the series was commenced.

Prairie Provinces.—Following five months of uninterrupted expansion, there was a reduction in employment in the Prairie Provinces, where the index continued much higher than on the same date last year. Returns were tabulated from 874 employers of 144,015 workers, as compared with 149,522 at the beginning of August. Manufacturing, mining, communications, building and highway construction and trade afforded heightened employment, but railway construction was seasonally slacker.

firms at the beginning of the month, as compared with January, 1920, as 100.

Employment by Cities

Employment advanced in Montreal, Quebec, Toronto, Hamilton, Windsor, Winnipeg and Vancouver, while in Ottawa slight curtailment was registered.

Montreal.—As on September 1, 1927, there was a large increase in Montreal on the date under review, 3,344 workers being added to the pay lists of the 781 co-operating firms, who employed 134,737. Manufactures (except of iron and steel products) showed general

EMPLOYMENT IN CANADA AS REPORTED BY EMPLOYERS

NOTE.—The curve is based on the number of employees at work on the first day of the month, as indicated by the firms reporting, in comparison with the number of employees they reported in January, 1920, as 100.

British Columbia.—For the first time since the beginning of this year there was a reduction in employment in British Columbia; this took place chiefly in construction, while communications, transportation, trade and logging showed improvement. The working force of the 709 firms furnishing data declined from 88,830 persons on August 1 to 87,910 at the beginning of September. The contraction involved about the same number of workers as that indicated on September 1, 1927, when employment was in smaller volume.

Table I gives index numbers by economic areas. The accompanying chart shows the course of employment in these areas in recent months; the curves are based upon the number of workers indicated by the reporting

improvement; construction, transportation, communications and trade were also considerably busier. The index was higher than at the beginning of September in any other year of the record, which for this city goes back to 1922.

Quebec.—Heightened activity was indicated in Quebec, according to 103 employers of 12,016 persons, as compared with 11,797 in the preceding month. Most of the gain took place in construction and manufacturing. Employment was at its maximum during the four years' record for this city.

Toronto.—Manufacturing and communications afforded more employment, while construction and transportation were slacker.

Statements were received from 844 firms with 114,869 workers, or 242 more than on August 1. Larger increases had been indicated on the corresponding date a year ago, but employment then was below its present level; on the date under review it was, in fact, at its maximum in the record for this city.

Ottawa.—There was a small decline in Ottawa, chiefly in trade, while construction was brisker. The 141 firms furnishing returns reported 13,290 employees, compared with 13,401 in the preceding month. On September 1, 1927, practically no change had been noted, but the index then was many points lower.

Note: Number employed by the reporting firms in Jan. 1920=100 in every case. The "Relative weight" in Tables 1, 2, 3 and 4 shows the proportion of employees in the indicated area or industry to the total number of all employees reported in Canada on the date under review.

TABLE I.—INDEX NUMBERS OF EMPLOYMENT BY ECONOMIC AREAS

	Canada	Maritime Provinces	Quebec	Ontario	Prairie Provinces	British Columbia

Hamilton.—Manufacturing, particularly of electrical apparatus, textile and rubber products, reported improvement in Hamilton, while other industries showed little general change; 208 employers recorded 33,541 persons on their payroll, as against 32,975 on August 1. Employment was in greater vol-

ume than at the beginning of September a year ago, or than in any other month of the record.

Windsor and the Other Border Cities.—Another large advance was registered in the Border Cities, where the 128 co-operating firms reported 21,626 workers, as against 20,388

TABLE IV.—INDEX NUMBERS OF EMPLOYMENT IN CANADA BY INDUSTRIES (JAN. 1920=100)

Industries	¹ Relative Weight	Sept. 1 1928	Aug. 1 1928	Sept. 1 1927	Sept. 1 1926	Sept. 1 1925	Sept. 1 1924

¹The "Relative Weight" column shows the proportion that the number of employees in the indicated industry is of the total number of employees reported in all industries by firms making returns on the date under review.

in the preceding month. Automobile plants afforded increased employment and construction was also more active. A slight gain had been indicated on the same date last year; the index number then was considerably lower.

Winnipeg.—Employment in Winnipeg continued to expand, the increases being on much the same scale as at the beginning of September, 1927, when the situation was not so favourable. Manufacturing, transportation, construction and trade recorded most of the improvement. An aggregate working force of 32,983 persons was reported by the 299 employers whose returns were received, and who had 32,162 employees in the preceding month.

Vancouver.—There was a slight increase in activity in Vancouver, according to statements received from 253 firms employing 28,531 workers, as against 28,514 on August 1. Construction reported reductions in personnel, while shipping was rather brisker. Employment was in greater volume than on the same date a year ago.

Index numbers by cities are given in Table II.

Manufacturing

Iron and steel, lumber, pulp and paper factories showed curtailment, partly seasonal in character, while all other divisions of the group recorded improvement, that in the textile, rubber, electrical apparatus, electric current, food, tobacco, distilled and malt liquor industries being most pronounced. Statements were received from 4,018 manufacturers employing 538,015 operatives, or 1,916 more than at the beginning of August. Employment on September 1, 1927, had declined slightly, and the index then was between nine and ten points lower than on the date under review.

Animal Products — Edible.—Improvement was shown in meat-preserving plants, mainly in the western provinces, while other divisions reported slight declines. The payrolls of the 214 co-operating factories aggregated 19,453 employees, as compared with 19,152 in the preceding month. Employment on September 1, 1927, had decreased and the index number then was lower by nearly six points.

Leather and Products.—A slight increase was shown in leather factories, in which it was smaller than at the beginning of September last year, when the level of employment was rather higher. Statements were received from 190 manufacturers having 17,174 persons in their employ, as against 17,145 on August 1.

Lumber and Products.—The commencement of seasonal inactivity in sawmills caused a reduction in employment, and furniture factories also released help. The decrease, which was reported to a considerable extent in Ontario, was much less extensive than that noted on September 1, 1927; the index then was several points lower. A combined working force of 60,236 persons was registered by the 741 establishments from which returns were received, and which employed 60,737 in their last report.

Musical Instruments.—The trend of employment was upward in musical instrument plants, repeating the movement indicated on the corresponding date a year ago, when the index was rather lower. Statistics were compiled from 40 plants employing 3,160 workers, or 212 more than at the beginning of August. The bulk of the gain was in Quebec.

Plant Products—Edible.—Biscuit, confectionery, chocolate, cocoa, flour and cereal factories reported heightened activity, but the improvement was on a smaller scale than on the same date last year. Data were compiled from 319 firms in the vegetable food group, whose payrolls rose from 30,686 on August 1, to 30,906 at the beginning of September. Ontario reported most of the advance.

Pulp and Paper Products.—Employment in this group showed a reduction, mainly in pulp and paper mills and printing shops; although the tendency was slightly upward on September 1 last year, the index then was several points lower than on the date under review. The forces of the 476 co-operating establishments included 63,083 persons, as compared with 63,821 in the preceding month. A large proportion of this decline took place in Quebec and the western provinces.

Rubber Products.—Further pronounced improvement was indicated in rubber factories, 38 of which employed 17,413 workers, or 908 more than in their last report. Practically all the advance was made in Ontario and Quebec. This gain greatly exceeded that registered on September 1, 1927, while the index on the date under review was at its maximum for this record.

Textile Products.—Continued important increases were noted in textile factories; 524 plants had 76,404 employees, as against 75,001 on August 1. Most of the improvement took place in Quebec, Ontario and the Prairie Provinces. Woollen, knitting and garment factories registered the bulk of the gain. Employment on the corresponding date last year was in rather smaller volume.

Tobacco, Distilled and Malt Liquors.—Further and larger advances were noted in this industry on September 1, when 296 persons were added to the payrolls of the 131 co-operating factories, which employed 14,886 operatives. A large share of the expansion took place in Quebec. The level of employment was much higher than at the beginning of September, 1927, when a smaller gain was noted.

Chemical Products.—Employment in this division showed improvement, according to statistics from 115 employers of 7,210 persons, compared with 7,036 on August 1. Ontario plants absorbed most of these extra workers. The situation was better than on the same date a year ago.

Clay, Glass and Stone Products.—Glass factories released some workers, while the trend was favourable in brick and stone works. Statements were received from 129 plants, having 12,459 employees, as against 12,272 in the preceding month. Quebec registered a large proportion of the increase. A decided reduction had been noted on the corresponding date last year, and the situation then was not so favourable.

Electric Current.—Continued expansion was shown in electric current plants, 89 of which employed 15,610 persons, compared with 15,285 in their last report. Ontario and British Columbia recorded most of the advance. The index stood at the highest point so far reached in the record of nine years.

Electrical Apparatus.—Employment in this group increased substantially on September 1, when 424 workers were added to the forces of the 47 co-operating establishments, which had 12,444 employees. This gain occurred mainly in Ontario; it was rather smaller than that noted on the corresponding date in 1927, when the index was over 18 points lower.

Iron and Steel Products.—Agricultural implement, railway car, ship-building, steel fabrication and some other branches of the iron and steel group recorded contractions in employment, while the machinery, heating appliance, tool, pipe and a few other groups showed improvement. The result was a reduction of 1,554 in the forces of the 670 co-operating firms, who employed 150,162 persons. Activity decreased chiefly in Quebec and Ontario. The trend on September 1, 1927, was also unfavourable and the index number then was much lower than on the date under review.

Non-Ferrous Metal-Products.—Lead, tin, zinc and copper products reported heightened employment, while there were only small,

general changes in other branches of this group; 113 manufacturers employed 18,586 operatives, as against 18,471 on August 1. Practically no change had been indicated on the same date last year, when employment was in much less volume.

Logging

The commencement of seasonal operations in logging camps caused a large increase in employment, chiefly in Quebec and Ontario. The 226 co-operating firms reported 18,570 workers, compared with 17,094 in the preceding month. Employment was rather more active than on September 1, 1927.

Mining

Coal.—Data were received from 89 operators having 26,236 men on their payrolls as compared with 25,951 at the beginning of August. The largest gains were in the Prairie Provinces. Although reductions had been registered on the corresponding date a year ago, the index number then was very slightly higher.

Metallic Ores.—Employment in metallic ore mines continued to advance, according to returns from 72 firms whose forces rose from 14,830 persons on August 1 to 15,112 at the beginning of September. The Prairie Provinces recorded most of the increase. A smaller advance had been shown on September 1, 1927, when the index number was some 27 points lower.

Communications

Further large gains were noted in this division, chiefly in telephone. Statistics were compiled from 187 companies and branches employing 27,737 workers as against 26,893 in their last report. Employment continued in greater volume than on the corresponding date in 1927, or in any other year of the record.

Transportation

Street and Electric Railways and Cartage.—Considerable expansion was shown in local transportation on the date under review, when 324 employees were added to the forces of the 120 firms furnishing data, who had 22,886 in their employ. A large proportion of this advance was in the Prairie Provinces. The index number was over eight points higher than at the beginning of September, 1927, when an important gain was also indicated.

Steam Railways.—There was a decrease in the number employed in steam railway operation on September 1, according to the 106

companies and branches from which returns were received and which reported 87,613 employees, compared with 88,352 on August 1. Employment was at a higher level than on the same date last year, although improvement was then noted. Practically all the contraction took place in Quebec, the Maritime and Prairie Provinces, while elsewhere additions to staffs were registered.

Shipping and Stevedoring.—There was another marked increase in employment in water transportation, in which activity was rather greater than on the corresponding date in 1927. Statements were received from 66 employers of 15,243 workers, as against 14,226 in the preceding month. Most of the advance was reported in Quebec.

Construction and Maintenance

Building.—Further important expansion was shown in building construction, the gains being the largest on September 1 in the last nine years, while the index number, standing at 241.2, was at its maximum since this series was instituted in 1920. Data were received from 552 contractors, whose payrolls rose from 49,030 on August 1 to 51,359 persons on the date under review. The trend was favourable in all provinces except British Columbia.

Highway.—There was a decrease in this group, 1,269 men being released from the forces of the 184 co-operating employers, who had 37,289 workers. Improvement in Quebec, Ontario and the Prairie Provinces was offset by a decline in the Maritime Provinces and British Columbia.

Railway.—A large, seasonal contraction in employment was indicated by the 57 firms

furnishing data in this division, who employed 57,312 persons, as against 66,485 in the preceding month. Practically all the shrinkage was in Ontario and the Prairie Provinces. Although much less pronounced losses had been noted on the corresponding date of 1927, the index number was some 19 points lower.

Services

Minor gains were registered in the service group, which has shown unusual activity this year. Employment on the date under review was at the maximum so far reached in this record. The 177 establishments furnishing returns reported 19,806 assistants, as against 19,730 on August 1.

Trade

There was a slight falling-off in employment in retail trade, while wholesale establishments showed no general change; employment continued at a higher level than in the autumn of any other year of the record, which was instituted in 1920. Returns were received from 644 retail and wholesale houses employing 75,342 persons, compared with 75,579 at the beginning of August.

Tables

Index numbers of employment by economic areas, leading cities and industries, are given in the accompanying tables, in which the columns headed "Relative Weight" show the proportion that the number of employees reported in the indicated area or industry is of the total number of employees reported in Canada by the firms making returns on the date under review.

Unemployment in Trade Unions at the Close of August, 1928

The term unemployment as used in the following report has reference to involuntary idleness due to economic causes. Persons who are engaged in work other than their own trades or who are idle because of illness are not considered as unemployed. Unions which are involved in industrial disputes are excluded from our tabulations. As the number of unions making returns varies from month to month, with consequent variation in the membership upon which the percentage of unemployment is based, it should be understood that such figures have reference only to the organizations reporting.

The unemployment level among local trade unions at the close of August varied but slightly from that of the preceding month according to the reports tabulated from a

total of 1,604 labour organizations with an aggregate membership of 181,022 persons. Of these, 4,274 were without employment on the last day of August, a percentage of 2.4 as compared with 2.5 per cent of unemployed members on July 31, and with 3.7 per cent at the end of August, 1927. It is an interesting feature that the August trade union situation this year is the best for that month which has been recorded since 1923. Quebec unions reported a decline in employment over July of 1.4 per cent, which was followed by nominal recessions in Nova Scotia and Saskatchewan. The improvement registered in Ontario, Manitoba and Alberta, however, was more than sufficient to offset these contractions. The situation for New Brunswick and British Columbia unions remained un-

changed from that of July. In all provinces except Nova Scotia the employment trend was more favourable during August than in the same month a year ago, though the changes were not of particular importance in any one province.

Each month a separate tabulation is made of trade union unemployment in the largest city, in each province with the exception of Prince Edward Island. During August Regina and Edmonton unions reported the best situations of any of the cities used in the comparison, the unemployment percentage in each of these cities being less than 1 per cent, as was the case in July. Montreal, with 3.8 per cent of inactivity, and St. John with 2.6 per cent indicated nominal increases in the volume of unemployment over July, while

than at the close of the same month last year, showing that a greater volume of employment was afforded union members than in August, 1927.

From unions in the manufacturing industries 447 reports were received during August, indicating a membership of 50,826 persons, 3.5 per cent of whom were without work on August 31, contrasted with 3.8 per cent of unemployed members in July. The most noticeable improvement during August was reported by papermakers, though iron and steel workers, cigarmakers, hat and cap, fur and glass workers, and metal polishers also contributed minor gains in employment. On the contrary, garment and textile workers, printing tradesmen, bakers, and leather workers were not so fully engaged as in July.

PERCENTAGE OF UNEMPLOYMENT AS REPORTED BY TRADES UNIONS

Toronto, Halifax and Winnipeg showed slight improvement. From Vancouver the percentage of idleness reported was the same as in July, namely 4.5. When comparison is made with the returns for August, 1927, all cities with the exception of St. John and Regina reported a higher level of employment during the month reviewed, the largest percentage gains being recorded by Montreal and Vancouver unions. The contractions in available work reported from St. John and Regina, however, were very slight.

Accompanying this article is a chart which illustrates the trend of unemployment by months from January, 1922, to date. The curve which has steadily pursued a downward course from the close of February this year showed a slight continuation in this favourable direction during August. At the end of August the curve rested also at a lower level

In comparing with the returns for August, 1927, when the unemployment percentage in the manufacturing industries as a whole, stood at 5.9, practically all tradesmen except bakers and textile workers shared in the group advancement shown during August this year.

The 40 unions of coal miners from which reports were tabulated at the end of August, combining a membership of 17,136 persons, showed a 3.4 per cent increase in employment over July, due largely to heightened activity in the Alberta mines, though Nova Scotia and British Columbia unions also reported nominal improvement. The situation was also slightly better than in August last year, Alberta and Nova Scotia miners as in the previous comparison showing an upward employment trend, while from British Columbia a nominal unemployment percentage was

reported, compared with no idleness in August a year ago.

The building trades, with 191 unions reporting 23,841 members at the close of August, registered 3.5 per cent of unemployment as compared with 3.3 per cent in July, and with 8.5 per cent in August last year. Reductions in activity reported by carpenters and joiners, electrical workers, painters, decorators and paperhangers, hod carriers and building labourers, and bridge and structural iron workers were for the most part, offset by gains in employment for bricklayers, masons and plasterers, granite and stone-cutters, plumbers and steamfitters, and tile layers, lathers and roofers. Apart from hod carriers and building labourers a higher level of employment was maintained by all tradesmen during August than in the same month in 1927, while among the first named the reductions reported were not extensive.

Among transportation workers at the close of August 1.7 per cent of idleness was recorded in contrast with 1.1 per cent in July, and 1.9 per cent in August a year ago. The percentage for August was based on reports received from 684 unions with a combined membership of 63,130 persons. In the navigation division unemployment was in considerably greater volume than in July, while in the steam railway division, the membership of which is over 79 per cent of the total group membership reporting, and among teamsters and chauffeurs a nominal unemployment increase was noted. The situation for street and electric railway employees remained the same in both months. In comparison with the returns for August, 1927, navigation workers again reported marked declines in activity during the month under review, while among steam railway employees and teamsters and chauffeurs conditions were slightly improved. Among street and electric railway employees there was practically no change in the situation.

Longshore men whose reports are tabulated separately each month indicated 17.2 per cent of unemployed members at the close of August, compared with 16.7 per cent of idleness in July, and with 14.0 per cent in August, 1927. Reports were received for August this year from 12 unions of longshore workers with a membership of 7,059 persons.

Conditions among retail shop clerks, as shown by reports tabulated at the end of August from 5 unions with 734 members, were slightly better than in July, though a nominal adverse change was indicated in comparison with August of last year.

From 64 unions of civic employees with 6,454 members at the close of August the per-

centage of unemployment reported was very small, as in both the previous month and August last year.

The miscellaneous group of trades as a whole, as indicated by the returns tabulated from 113 unions with 5,657 members, reported 3.3 per cent of unemployment at the end of August, as compared with 4.4 per cent in July, hotel and restaurant employees, theatre and stage employees, and stationary engineers and firemen all contributing a share to the August employment increase. Barbers, however, were not quite so fully engaged as in July. In comparison with August of last year when 4.9 per cent of inactivity was registered, the most substantial improvement was shown by hotel and restaurant employees, followed by lesser gains for theatre and stage employees and stationary engineers and firemen. Barbers, as in the previous comparison, were not so busy as in August a year ago.

The unemployment percentage reported by the 3 unions of fishermen from which reports

TABLE I.—PERCENTAGES OF UNEMPLOYMENT IN TRADE UNIONS BY PROVINCES

were tabulated at the end of August with 1,415 members, was less than 1 per cent, in contrast with no inactivity in July, and an unemployment percentage of 1.5 in August last year.

Lumber workers and loggers, with 3 unions reporting 797 members, indicated 12.5 per cent of their members unemployed at the end of August, compared with 1.0 per cent

in July, and with a fully engaged situation in August last year.

Table I is a summary of the returns by provinces for August in each year from 1919 to 1925 inclusive, and for each month from January, 1926, to date, and Table II shows the percentages of unemployment registered in the various groups of industries for the same months.

Employment Office Reports for August, 1928

During the month of August, 1928, the reports from the offices of the Employment Service of Canada showed an increase of 88 per cent in the average daily placements over that of the preceding period, while a gain of nearly 36 per cent was also registered when a comparison was made with the average daily

maintenance, manufacturing and services, particularly in the farm household section of this group where many additional workers were required in the Prairie provinces.

The accompanying chart shows the trend of employment since January 1926, as represented by the ratio of vacancies notified and

POSITIONS OFFERED AND PLACEMENTS EFFECTED FOR EACH ONE HUNDRED APPLICATIONS FOR EMPLOYMENT

Applications ————— Vacancies - - - - - Placements o-o-o-o-o

placements effected during the corresponding month a year ago. All industrial divisions except logging, showed a gain under both comparisons. In this group a decline was recorded when a comparison was made with August 1927. The most noteworthy gain in both instances occurred in farming due to the heavy demand for harvesters in the West where the call for workers was made somewhat earlier this year than last. Substantial increases were also shown in construction and

of placements effected for each 100 applications for work registered at the offices of the Service throughout Canada, compilations being made semi-monthly. It will be noted that the curve both of vacancies and of placements showed an upward trend throughout the month, though at the close of the period under review, the ratio of vacancies to applications was somewhat lower than that shown at the close of August 1927, the ratio of placements to applications was over 4 points higher. The

ratio of vacancies to each 100 applications was 90.8 during the first half and 93.9 during the second half of August 1928, in contrast with the ratios of 83.9 and 95.4 during the corresponding periods of 1927. The ratios of placements to each 100 applications during the periods under review were 87.6 and 93.5, as compared with 77.5 and 89.0 respectively, during the corresponding month of 1927.

The average number of vacancies reported daily by employees to the offices of the Service throughout Canada during August 1928 was 2,828 as compared with 1,588 during the preceding month and with 2,180 in August a year ago.

The average number of applications for employment received daily by the offices of the Service during the month under review was 3,011 in comparison with 1,789 in July 1928, and with 2,386 during August last year.

The average number of placements made daily by the offices of the Service during August 1928, was 2,750, of which 2,256 were in regular employment and 494 in work of one week's duration or less, as compared with a total daily average of 1,463 during the preceding month. Placements in August a year ago averaged 2,028 daily, consisting of 1,664 placements in regular and 364 in casual employment.

During the month of August, 1928, the offices of the Service referred 75,541 persons to vacancies, and effected a total of 74,234 placements. Of these the placements in regular employment were 60,909, of which 54,861 were for men and 6,048 for women, while placements in casual work totalled 13,325. The number of vacancies reported by employers was 63,182 for men and 13,160 for women, a total of 76,342, while applications for work numbered 81,280 of which 67,660 were from men and 13,620 from women.

The following table gives the placements effected to date by the offices of the Employment Service of Canada:--

Year	Regular	Casual	Totals
1919 (10 months).....	268,001	37,904	305,905
1920.....	366,547	79,265	445,812

1928 (8 months).....	198,781	86,933	285,714

NOVA SCOTIA

During the month of August 1928, positions offered through employment offices in Nova Scotia were over 3 per cent less than in the

preceding month, but nearly 6 per cent higher than during the corresponding month last year. There was a reduction of nearly 9 per cent in placements when compared with July and of over one per cent in comparison with August, 1927. When comparing placements by industrial groups with the month under review with the corresponding month last year minor changes only were recorded. Logging and farming showed the largest declines and trade the only gain of importance. Industrial divisions in which most of the placements were effected during the month were: manufacturing, 76; logging, 29; farming, 29; transportation, 27; construction and maintenance, 57; trade, 73 and services, 296, of which 221 were of household workers. Placements in regular employment numbered 165 of men and 65 of women.

NEW BRUNSWICK

There was an increase of nearly 17 per cent in the number of positions offered through employment offices in New Brunswick during August when compared with the preceding month and of over 7 per cent in comparison with August of last year. Placements were over 12 per cent higher than in July and nearly 10 per cent in excess of August, 1927. The gain under the latter comparison was nearly all attributable to increased placements in the service group, although mining and transportation also showed increases. Logging showed the largest decline. The changes in other groups were small. Placements by industrial divisions included: manufacturing, 48; farming, 41; transportation, 50; construction and maintenance, 144; trade, 33 and services, 478, of which 369 were of household workers. During the month 251 men and 115 women were placed in regular employment.

QUEBEC

The demand for workers as indicated by orders listed at offices in Quebec during August increased 47 per cent over the preceding month and nearly 16 per cent over the corresponding month of last year. Placements also showed a gain under both comparisons being 46 per cent higher than in July and nearly 25 per cent more than in August 1927. All industrial groups except logging and mining showed gains in placements over August of last year, those in construction and maintenance being the most pronounced. Placements by industrial groups included: manufacturing, 321; logging, 844; farming, 133; transportation, 85; construction and maintenance, 1,212; trade, 76 and services, 709, of which 415 were of household workers. During the month under review 2,714 men and 634 women were placed in regular employment.

ONTARIO

During August orders received at employment offices in Ontario called for nearly 13 per cent more workers than in the preceding month and over 25 per cent more than in the corresponding month of last year. There was an increase of nearly 10 per cent in placements over July and of over 30 per cent when compared with August, 1927. All industrial divisions except logging showed gains in placements over August of last year, the largest increases being in manufacturing, construction and maintenance, farming and services. Placements by industrial divisions included: manufacturing, 2,758; logging, 875; farming, 2,346; mining, 137; transportation, 909; construction and maintenance, 4,362; trade, 612 and services, 4,688, of which 2,517 were of household workers. Placements in regular employment numbered 9,986 of men, and 1,603 of women.

MANITOBA

Orders listed at employment offices in Manitoba during August called for 147 per cent more workers than those received in the preceding month and 87 per cent more than during the corresponding month of last year. There was an increase of 137 per cent in placements when compared with July and of 52 per cent when compared with August, 1927. Construction and maintenance and logging were the only groups in which less placements were made during the month under review than in August, 1927. Farm placements which represented nearly 65 per cent of the total placements within the Province showed the most substantial gain. Industrial divisions in which most of the placements were effected during the month were: manufacturing, 230; logging, 64; farming, 6,822; transportation, 110; construction and maintenance, 670; trade, 373 and services, 2,260, of which 1,747 were of household workers. Regular employment was secured for 7,439 men and 768 women.

SASKATCHEWAN

Opportunities for employment as indicated by orders received at offices in Saskatchewan during August were 262 per cent better than in the preceding month, but nearly 8 per cent less favourable than in the corresponding month of last year. Placements showed an increase of 189 per cent over July, but declined over 11 per cent when compared with August 1927. All groups showed increases in placements over August of last year except farming and logging. The most noteworthy gain was in services. Placements by industrial groups included: manufacturing, 243;

farming, 8,126; communication, 51; transportation, 111; construction and maintenance, 1,185; trade, 405; and services, 1,653, of which 1,096 were of household workers. During the month 9,287 men and 1,071 women were placed in regular employment.

ALBERTA

There was an increase of 307 per cent in the number of positions offered through employment offices in Alberta during August when compared with the preceding month and of 92 per cent when compared with the corresponding month of last year. Placements showed an increase of 264 per cent over July and of 80 per cent when compared with August 1927. All industrial groups participated in the gains in placements over August of last year, those in farming represented about 80 per cent of the total increase. Construction and maintenance also showed a substantial gain. Industrial division in which most of the placements were effected during the month were: manufacturing, 590; logging, 101; farming, 11,859; mining, 184; transportation, 158; construction and maintenance, 1,793; trade, 283; and services, 1,127, of which 707 were of household workers. There were 14,296 men and 562 women placed in regular employment during the month.

BRITISH COLUMBIA

Employment opportunities as indicated by order received at employment offices in British Columbia during August were more favourable than in the preceding month, there being an increase in demand for workers of 15 per cent. When comparison is made with the corresponding month of last year a nominal decline only is recorded. Placements showed an increase of 209 per cent over July and of 66 per cent over August 1927. Logging placements were slightly lower during the month under review than in August 1927, but all other groups showed gains, those in farming, services, manufacturing and construction and maintenance being the most noteworthy. Nearly all the farm placements which constituted over 60 per cent of the total placements made by British Columbia offices were transfers out to Alberta and Saskatchewan. Placements by industrial divisions included: manufacturing, 1,028; logging, 494; farming, 8,882; mining, 175; transportation, 376; construction and maintenance, 1,222; trade, 326; and services, 1,599, of which 1,127 were of household workers. Placements in regular employment numbered 10,723 of men and 1,230 of women.

Movement of Labour

During the month of August, 1928, the offices of the Employment Service of Canada made 60,909 placements in regular employment, 49,367 of which were of persons for whom the employment found was outside the immediate locality of the offices at which they were registered. Of the latter 8,493 were granted the Employment Service reduced transportation rate, 4,237 going to points within the same province as the despatching office and 4,256 to other provinces. The reduced transportation rate, which is 2-7 cents per mile with a minimum fare of \$4, is granted by the railway companies to *bona fide* applicants at the Employment Service who may desire to travel to distant employment for which no workers are available locally.

Transfers at the reduced rate effected by offices in Quebec during August were 462 in number, 251 of which were provincial and 211 interprovincial. Within the province 228 transfers were of bushmen, 129 of whom travelled from Quebec and 99 from Montreal to points within their respective zones. In addition, Montreal despatched 23 sawmill labourers also to employment within the territory covered by the Montreal office. The entire movement outside the province was of bushmen, 186 of whom were conveyed from Montreal to Sault Ste. Marie, while from Hull 21 received reduced rate certificates to Cobalt and 4 to North Bay.

Ontario offices transferred 1,075 persons at the special rate, 524 to stations within the province and 551 to outside centres. Of the workers travelling to other provinces 538 were harvesters, 373 of whom bound for points in Manitoba, 163 for Saskatchewan and 2 for Alberta. A large majority of these secured the reduced rate certificates at Fort William and Port Arthur. The Hull zone received 2 muckers and 3 drift miners from Timmins and 2 carpenters from Cobalt. To the Winnipeg zone Sudbury sent 2 miners and Pembroke 1 carpenter foreman. In addition 3 cooks were despatched to Calgary, 2 from Fort William and 1 from St. Catharines. Within the province North Bay transferred 1 construction labourer, 25 track men, 1 millwright, 4 carpenters, 2 painters and 1 waitress to Timmins; 15 muckers, 2 teamsters, 1 cook, 1 setter, 1 edgerman, 1 trimmer and 1 painter to Sault Ste. Marie; 3 paving construction workers to Toronto; and 6 carpenters and 1 cook to Cobalt. The Toronto office issued certificates to 26 power construction labourers going to Ottawa, one plumber to Sarnia and one blacksmith to North Bay, while from Sudbury 13 carpenters were sent to Timmins, 2 miners to Fort William, 3 carpenters to Sault Ste. Marie

and 10 building construction labourers, 38 railroad construction labourers and 1 camp clerk to points within the Sudbury zone. Timmins received in addition 1 papermaker from St. Catharines and 2 carpenters from Cobalt; Sault Ste. Marie 1 carpenter from Hamilton; Brantford 1 farm hand from Ottawa and Port Arthur 1 hoist man and 4 muckers from Timmins. From Port Arthur 51 construction labourers, 2 carpenters, 1 cook, 15 mill hands, 1 cookee, 9 sawmill labourers, 3 teamsters and 1 farm hand proceeded to points within its own zone, and from Fort William 10 railroad construction labourers went to Sault Ste. Marie and 1 cook within its own zone. The balance of the movement provincially was of bushmen, 259 of whom travelled to employment in the vicinity of Sudbury, Sault Ste. Marie, Port Arthur and Fort William, receiving their certificates for the most part at these points.

Of the 3,907 reduced rate certificates which were issued by Manitoba offices in August, 1,403 were granted to persons travelling to employment within the province and 2,504 to points in other provinces. Apart from the transfer of 2 farm hands from Dauphin to Brandon, the provincial movement had its origin in Winnipeg and was featured by the exodus of 1,228 harvest hands including a few domestic workers to farming districts throughout the province. Included in this movement also were 100 railroad construction labourers, 9 teamsters, 1 grader man, 3 porters, 2 truck drivers, 1 bridgeman, 50 railroad construction labourers, 1 mine sampler and 1 cook going to points within the Winnipeg zone; 2 hotel cooks and 1 hospital cook to Brandon; and 2 female hotel workers to Dauphin. Of those transferred outside the province the Saskatchewan harvest fields received 1,984 workers and Alberta 397. All of these received their certificates for reduced transportation at Winnipeg. From Winnipeg in addition, 67 bushmen, 6 carpenters, 1 cook, 4 female hotel workers, 12 sawmill labourers, 2 construction cooks, 1 waitress, 1 general and 1 construction labourer were carried at the reduced rate to Port Arthur; 1 hair dresser to Fort William; 2 labourers, 4 carpenters, 9 plasterers, 1 railroad construction labourer to Saskatoon; 3 construction labourers and 1 bricklayer to Regina; 2 teamsters to Yorkton; 1 bricklayer to Moose Jaw; 2 railroad construction labourers to Prince Albert; and 1 hotel general to Swift Current. The one remaining interprovincial transfer was of a waitress going from Dauphin to Prince Albert.

From Saskatchewan offices 774 persons travelled at the reduced rate during August, 728 to provincial points and 46 to points out-

side the province. Provincially the transfers included 713 harvest hands, 320 of whom were despatched from Moose Jaw, 175 from Regina, 109 from Saskatoon, 107 from North Portal and 2 from Prince Albert to various rural centres. Saskatoon in addition transferred 8 railroad construction labourers and 1 blacksmith to North Bay; 2 sawmill labourers and 1 railroad construction labourer to Prince Albert; 1 orderly to Regina and 1 railroad construction labourer within the Saskatoon zone, while from Regina 1 motor mechanic went to Swift Current. Of those going to other provinces 45 were harvest hands, 39 of whom were destined to the Alberta harvest fields, and 6 to Manitoba centres. The majority of these received their certificates for reduced transportation at Moose Jaw, from which city also 1 office clerk was carried at the special rate to Vancouver.

Reduced rate certificates granted by Alberta offices during August totalled 1,182, and of these 1,031 were provincial and 151 interprovincial. Of the certificates to points within the province 777 were issued to harvesters going to rural districts, 159 of whom travelled from Calgary and 618 from Edmonton. Edmonton in addition transferred 11 bushmen at the reduced rate to Lethbridge; 2 railroad construction labourers to Drumheller; and 78 mill hands, 69 road construction labourers, 1 maid, 1 dishwasher, 4 cookees, 1 blacksmith's helper, 4 female hotel workers, 4 cooks, 2 handymen, 3 sawmill labourers, 9 carpenters, 1 plasterer, 17 coal mine labourers, 5 bushmen, 3 labourers, 2 rock miners, 9 elevator cribbers, 5 engineers, 1 porter, 1 rock driller, 1 painter and 1 driller's helper to employment within the Edmonton zone. From Calgary also certificates were issued to 10 railroad construction labourers, 1 cook and 1 teamster going to Drumheller; 3 bushmen and 1 labourer to Lethbridge and 1 engineer to Medicine Hat; while from Lethbridge 2 coal miners proceeded to Edmonton. The bulk of the movement outside the province was of harvest labour for Saskatchewan agricultural districts and comprised the transfer of 131 harvesters from Edmonton and 11 from Calgary. The Calgary office was responsible for the balance of the interprovincial movement sending 8 railroad construction labourers to Swift Current and 1 cook to Pembroke.

The volume of business transacted by offices in British Columbia during August involved an issue of 1,093 special transportation rate certificates, 793 of which were to points outside the province and 300 to provincial centres. Of the latter the Vancouver office was instrumental in granting certificates

to 37 vegetable cannery workers, 11 colliery workers, 8 road construction labourers, 3 mine workers, 2 lumber pilers, 1 baker, 2 construction labourers, 1 construction cook, 1 blacksmith, 1 smelter mill operator, 2 smelter mill operator's helpers, 2 bushmen, 3 farm hands and 2 farm household workers going to Penticton; to 32 highway construction labourers, 24 bushmen, 17 vegetable cannery workers, 8 plasterers, 1 plasterer's helper, 1 planer man, 1 hospital orderly, 3 building construction labourers, 2 construction cooks, 1 construction flunky and 1 cement finisher travelling to Kamloops and to 13 tunnel construction labourers, 1 axe man, 3 engineers, 4 cooks, 2 flunkies, 1 storekeeper, 1 hotel maid, 2 blacksmiths and 1 miner travelling to employment within the Vancouver zone. From Vancouver in addition 36 vegetable cannery workers and 9 apple pickers were transferred to Kelowna; 15 building carpenters, 2 cement finishers, 1 mining engineer, 1 clerk, 1 electrician's helper and 1 building labourer to Nelson; 5 carpenters, 2 apple pickers and 1 power company flunky to Vernon; 4 millwrights and 1 steel sharpener to Cranbrook; and 2 mine labourers and 1 cook to Revelstoke. The Prince Rupert office issued certificates to 5 loggers, 2 bush treamsters, 1 cook, 1 building construction labourer, 1 millwright, 3 axe men, 3 sawyers and 1 rock man, the Prince George office to 1 bridge-man and Kamloops to 2 bushmen for points within their respective zones. From Nelson 1 watchman was carried at the reduced rate to Penticton and 2 sawyers within the Nelson zone. Of the workers going to other provinces 789 were harvest hands, 689 of whom were for Alberta harvesting operations and 100 for employment in Saskatchewan. Of these 537 travelled from Nelson, 128 from Kingsgate, 83 from Cranbrook and 41 from Revelstoke. In addition Vancouver despatched 1 housekeeper and 1 tire worker to Toronto and 1 theatre assistant to Brandon while from Prince George 1 farm worker went to employment in the Saskatoon zone.

Of the 8,493 persons who took advantage of the Employment Service reduced transportation rate during August, 2,761 were transported by the Canadian National Railways, 5,691 by the Canadian Pacific Railway, 26 by the Pacific Great Eastern Railway, and 15 by the Timiskaming and Northern Ontario Railway.

In addition to the transportation facilities afforded workers through the 2.7 cents per mile rate referred to in the above the railway companies during August, as in the previous years, granted special harvest excursion rates to the Prairie Provinces. The fares to Winnipeg for harvest hands are \$15

from centres in Ontario and Quebec and \$20 from the Maritime Provinces, the return journey in each case costing an additional \$5. Holders of these excursion tickets are entitled to transportation beyond Winnipeg at a one-half cent per mile rate. All such reduced transportation is secured by direct application to the agents of the railway companies, although employment office officials meet all excursion trains at Winnipeg to advise the workers of available employment. The movement of harvest hands to the Prairie Provinces from British Columbia is recruited entirely by the Employment Service and a special rate is granted by the railway companies to all applicants upon presentation of a certificate furnished by the Employment Service. Such certificates entitle the holder to a rate of \$11 from Victoria

and \$10 from Vancouver or other British Columbia offices (with the exception of Cranbrook, Revelstoke and Nelson where the 2.7 cents per mile rate was in effect) to Calgary or Edmonton, beyond which points the fare is one-half cent per mile. From August 8 to 31, the period in which this special harvest rate was in force this year, 9,032 persons travelled from British Columbia to employment in Alberta and Saskatchewan, the former province receiving 3,986 of these harvest hands and the latter 5,046. Among these were a number of female workers for domestic employment during the harvest season. Of the workers taking advantage of this special harvest rate 3,129 were carried by the Canadian National Railways and 5,903 by the Canadian Pacific Railway.

Building Permits Issued in Canada during August, 1928

There was a decline in the value of the building permits issued during August, 1928, as compared with the exceptionally large totals reported in both July, 1928, and August, 1927, but the aggregate for the elapsed months of this year continued considerably higher than in any other year of the record. The 63 co-operating centres authorized building estimated to cost \$17,383,279; this was 32.9 per cent lower than in the preceding month and 41.0 per cent lower than in the same month last year.

Some 50 cities furnished detailed statistics showing that they had issued over 1,600 permits for dwellings estimated to cost approximately \$8,000,000 and nearly 2,800 permits for other buildings valued at about \$7,650,000. During July, authority was granted for the erection of some 1,700 dwellings and 2,800 other buildings estimated at about \$7,000,000 and \$18,000,000, respectively.

Quebec, Manitoba, Alberta and British Columbia reported gains as compared with July, 1928, that of \$667,070, or 16.8 per cent, in Quebec being most noteworthy. Of the reductions elsewhere registered, that in Ontario of \$8,425,418, or 55.0 per cent, was greatest.

Nova Scotia, New Brunswick, Ontario, Manitoba, Saskatchewan and Alberta reported higher aggregates of building permits issued than in August last year, Nova Scotia showing the greatest proportionate increase and Ontario the largest actual advance. Quebec registered a pronounced decrease from the unusually high total of August, 1927.

Of the larger cities, Winnipeg showed improvement as compared with both July, 1928,

and August, 1927; in Montreal and Vancouver, there were increases in the latter and reductions in the former comparison, while Toronto recorded an increase over the corresponding month of 1927, but a falling-off from July, 1928. Of the remaining centres, New Glasgow, Sydney, Moncton, Quebec, Westmount, Belleville, Brantford, Chatham, Galt, Niagara Falls, Ottawa, Sault Ste. Marie, Ford, Walkerville, Brandon, Regina, Calgary, Point Grey and Victoria reported gains in both comparisons.

Cumulative Record for First Eight Months, 1928.—The following table gives the value of the building authorized by 63 cities during August and in the first eight months of each year since 1920, as well as index numbers for the latter, based upon the total for 1920 as 100. The average index numbers of wholesale prices of building materials in the first eight months of the years since 1920 are also given (1913=100).

Year	Value of permits issued		Indexes of value of permits issued, first eight months (1920=100)	Average indexes of wholesale prices of building materials in first eight months (1913=100)
	In August	In first eight months		
	\$	\$		
1928.....	17,383,279	144,886,463	175.5	149.1
1927.....	29,478,378	126,690,292	146.8	147.4
1926.....	11,672,599	109,211,942	126.5	150.0
1925.....	9,511,008	88,223,328	102.2	154.0
1924.....	9,406,733	81,762,083	94.7	162.6
1923.....	11,425,031	97,551,074	113.0	166.8
1922.....	18,158,932	105,181,416	121.9	161.8
1921.....	10,928,039	77,665,614	90.0	192.1
1920.....	10,805,846	86,303,601	100.0	214.6

The aggregate for the first eight months of this year was 14.4 per cent greater than in 1927, the previous high level of the record, while the average index numbers of wholesale prices of building materials continued lower than in any other year since 1920, except 1927.

The accompanying table gives the value of the building permits issued by 63 cities during July and August, 1928, and August, 1927. The 35 cities for which records are available since 1910 are marked with asterisks.

EMPLOYMENT AND UNEMPLOYMENT IN OTHER COUNTRIES

Detailed reports and tables showing the employment conditions in Great Britain and Northern Ireland are given in the *British Ministry of Labour Gazette* from month to month, a monthly summary of this information also being published. This summary is reproduced below showing the employment situation during August. The following report on employment conditions in the United States is based on the information contained in the *Monthly Labour Review*, published by the United States Department of Labour, each issue containing statistics showing the trend of employment in selected manufacturing industries throughout the country during the second month prior to the date of publication. The statement contained in the September issue relates to the situation exist-

ing in July, 1928. The employment situation in the United States is further indicated by unemployment percentages based on statistics compiled each month by the American Federation of Labour, the source of these statistics being returns obtained from the trade union locals in 23 representative cities. Summary figures for July and previous months taken from the September issue of the *American Federationist*, the official publication of the organization, are reproduced below.

Great Britain

Employment during August, apart from temporary fluctuations at the holiday periods, showed little change in total volume. In the coal-mining industry there was a slight improvement, which reduced the number of

workpeople temporarily suspended from their employment; and there were also reductions in the numbers unemployed in the tinplate, tube, linen, carpet and confectionery industries, and in canal, dock, harbour, etc., service. On the other hand, there were increases in unemployment in a number of industries, including constructional and motor engineering, pottery manufacture, public works contracting, the cotton industry, and most of the clothing trades.

Among workpeople numbering approximately 11,800,000, insured against unemployment in Great Britain and Northern Ireland, and working in practically every industry except agriculture and private domestic service, the percentage unemployed at 20th August, 1928 (including those temporarily stopped as well as those wholly unemployed) was 11.7, as compared with 11.7 at 23rd July, 1928, and 9.3 at 22nd August, 1927. For males alone the percentage at 20th August, 1928, was 13.0, as compared with 13.1 at 23rd July, 1928; for females the corresponding figures were 8.1 and 7.9. The percentage wholly unemployed at 20th August, 1928, was 8.3 as compared with 8.1 at 23rd July, 1928. The total number of persons (insured and uninsured) registered at Employment Exchanges in Great Britain and Northern Ireland at 27th August, 1928, was approximately 1,367,000, of whom 1,055,000 were men and 232,000 were women, the remainder being boys and girls; at 30th July, 1928, it was 1,354,000, of whom 1,058,000 were men and 223,000 were women; and at 29th August, 1927, it was 1,076,000, of whom 845,000 were men and 161,000 were women.

United States

Employment in July, 1928, was 1.1 per cent lower than in June and pay-roll totals decreased 3.1 per cent, according to returns made to the Bureau of Labour Statistics.

The usual closing for inventory taking and the season for repairs and vacations customarily result in a decrease in employment in July and also in a pronounced drop in pay-roll totals. The falling off in employment was, however, considerably *less in July, 1928*, than it was in July of 1923, 1924, 1926, and 1927; it was the same as in July, 1925.

The Bureau of Labour Statistics' weighted index of employment for July, 1928, is 84.7, as compared with 85.6 for June, 1928, 85.5 for May, 1928, and 87.3 for July, 1927; the weighted index of pay-roll totals for July, 1928, is 87.4, as compared with 90.2 for June, 1928, 90.1 for May, 1928, and 89.1 for July, 1927.

Employment in July, 1928, stood 3 per cent below the level of employment in July, 1927, and pay-roll totals were 1.9 per cent smaller. The decreases in both these items, comparing 1928 with 1927, were decidedly smaller in July, 1928, than in any previous month of 1928.

The data for July, 1928, are based on returns made by 11,130 establishments in 54 of the principal manufacturing industries of the United States. These establishments in July had 3,062,147 employees whose combined earnings in one week were \$81,145,928.

Increased employment was shown in July, 1928, as compared with June in 18 of the 54 separate industries and increased pay-roll totals were shown in 12 industries. The notable increase in employment were 11.7 per cent in cane sugar refining, 9 per cent in ice cream, 6.6 per cent in rubber boots and shoes, 5.6 per cent in leather boots and shoes, and 4.5 per cent in automobile tires. The petroleum-refining industry showed a continuation of the mild upward trend begun in June, following a prolonged period of decline during which one-fifth of the industry's employees were dropped.

The pronounced decreases in employment were in knit goods, silk goods, woollen and worsted goods, women's wearing apparel, stoves, pottery, glass, the two tobacco industries, and pianos. The iron and steel industry reported a loss of 1 per cent in employment and the automobile industry a drop of 0.1 per cent in employment. The strike in cotton-goods mills in one vicinity, which occurred in May was still unsettled in July, and the industry therefore had not yet regained any of the employees concerned.

Two of the twelve groups of industries, each considered as a whole, showed more employees in July than in June. These were the leather group with a seasonal gain of 4.3 per cent, and the food group with a gain of 0.5 per cent; employment in the paper group was unchanged. Both industries in the tobacco group and the 10 industries of the textile group reported fewer employees in July than in June, the total results being a drop of 5.4 per cent in the tobacco group and a drop of 3.3 per cent in the textile group. In the stone-clay-glass group, pottery and glass showed customary July drops in employment while brick and cement increased but little, leaving the group with a net loss of 3 per cent. The decreases in the six remaining groups were comparatively small.

The West South Central and Mountain geographic divisions showed a gain in employment in July as compared with June, while each of the remaining seven divisions reported

fewer employees in July, the decreases ranging from less than one-tenth of 1 per cent in the New England States to 3.6 per cent in the East South Central States.

Unemployment percentage.—Unemployment statistics collected by the American Federation of Labour and appearing each month in the *American Federationist*, the official publication of the organization, indicate the percentage of unemployed union members in twenty-three representative cities of the United States. The method of compiling as described in the *American Federationist*, March, 1928, is as follows:

"The local unions in the 23 cities under review report monthly their membership and the number of unemployed members at the first of the month or the nearest possible date. From these reports the percentage of unemployed members is calculated for identical unions in the current and the previous month. Thus for every month there

are two percentage figures—that is for identical unions in December and January—and for identical unions in January and February, and so on. The final figure for January, then, is calculated by taking the simple arithmetical average of the two January percentages. It may be noted that the reports cover all trades which are organized, factory workers as well as teachers and building trade workers."

By the above method the proportion of unemployed members to the total membership of the local unions reporting, is computed. According to the September issue of the *American Federationist*, the most recent unemployed percentages during the various months in the 23 cities works out as follows: October to December, 1927, 14 per cent; January, 1928, 18 per cent; February, 1928, 18 per cent; March, 1928, 18 per cent; April, 1928, 16 per cent; May, 1928, 13 per cent; June, 1928, 11 per cent; July, 1928, 12 per cent.

RECENT INDUSTRIAL AGREEMENTS AND SCHEDULES OF WAGES

A SUMMARY is given below of the more important industrial agreements and schedules of wages and working conditions that have recently been received by the Department. Such agreements are summarized each month in the LABOUR GAZETTE. In the majority of cases, the agreements are signed by both employers and employees. Verbal agreements, which are also included in the records, are schedules of rates of wages and hours of labour and other conditions of employment agreed upon between the parties concerned, and in effect though not signed. In addition to these, important schedules of wages are summarized, including civic schedules. In the case of each agreement or schedule, the rates of wages for the principal classes of labour are given with other information of general interest.

Manufacturing: Iron, Steel and Products

MONTREAL, QUEBEC.—CERTAIN FIRMS AND SHEET METAL WORKERS' INTERNATIONAL ASSOCIATION, LOCAL NO. 116.

Agreement to be in effect from September 1, 1928, to June 30, 1929.

Only union members to be employed.

Hours: 9 per day, 5 on Saturdays.

Overtime: all work between 5 p.m. and midnight and Saturdays between noon and 5 p.m., time and one-half; after midnight and work on Sundays, Christmas and New Year's Day, double time. No work on Labour Day.

Wages: 75 cents per hour.

Travelling time to 10 p.m. at regular rate. All travelling and boarding expenses out of the city to be paid by employer.

Apprentices: one allowed for every three or less journeymen. Helpers not to do journeyman work.

No union member to work on sub-contracts or do any jobbing.

Manufacturing: Textiles

MONTREAL, QUEBEC.—VARIOUS CLOTHING MANUFACTURING ESTABLISHMENTS AND THE MONTREAL JOINT BOARD AMALGAMATED CLOTHING WORKERS OF AMERICA.

Agreement signed at the conclusion of the strike mentioned in the LABOUR GAZETTE for September, page 960.

Agreement to be in effect from August, 1928, to May 31, 1929, and from year to year thereafter unless notice of abrogation or amendment shall be given, in writing, by either of the parties to the other, thirty days prior to its expiration.

If there should be any change in working conditions or hours of work in the clothing industry, such change shall automatically become effective also in the shops of the firm and in the shops of the contractors making work for the firm.

The firm agrees to employ none but union members in good standing. When additional workers should be required, application shall be made to the union, specifying the number and kind of workers needed. If the union should be unable to furnish such additional workers as needed, within a reasonable time, the firm shall then be privileged to secure such workers who, if not members of the union, must become members and secure working cards at the union office, before beginning to work. All cutting and trimming must be done by union members only.

The representatives of the union should at all times have the right to go into the cutting

rooms and check up the amount of work cut and where it is being sent to.

When employing additional workers, two weeks shall be considered probationary period, after which time new engaged workers shall be considered as part of the permanent working force in the shop.

There shall, at all times, be equal division of work among the employees of the shop.

Forty-four hours shall constitute a week's work. Overtime work shall be dispensed with as far as possible. If overtime work shall be required, permission for it shall be secured from the union. All overtime work performed before or after the regular hours of the working day, shall be paid for at the rate of time and one-half. Contractors shall not do productive work in the shops before or after working hours.

Matters in dispute shall be taken up for adjustment by the shop chairman and shop committee and the employer or his representative. If they should be unable to reach an adjustment, the union representative and the representatives of the firm and of the contractors (if contractor is involved) shall then take up the matter and make all possible efforts to reach an amicable adjustment of the matter.

The firm agrees that all garments shall be made in shops recognized by and working under agreement with the union.

The firm agrees not to place any obstacles in the way of the union, to discipline its members in accordance with its rules and regulations.

Change of contractors from those registered as the contractors doing work for the firm to other contractors, can be made for cause and only after consent of the union is secured.

The scales of wages established in the market shall be paid in the shops of the firm and of the contractors working for the firm.

The firm assumes responsibility for contractors doing work for the firm. Conditions and terms of agreement shall prevail in the shops of the contractors as well as in the inside shops (if any) of the firm. The firm also assumes responsibility for the wages of the workers employed by the contractors doing work for the firm.

Manufacturing: Pulp, Paper and Paper Products

PORT ARTHUR, ONTARIO.—THUNDER BAY PAPER COMPANY, LIMITED, AND INTERNATIONAL BROTHERHOOD OF PAPERMAKERS, LOCAL NO. 249, THE INTERNATIONAL BROTHERHOOD OF PULP, SULPHITE AND PAPER MILL WORKERS, LOCAL NO. 134 AND INTERNATIONAL UNION OF STEAM AND OPERATING ENGINEERS, LOCAL NO. 865.

Agreement to be in effect from May 17, 1928, to May 1, 1929.

Union members to be given preference of employment; others employed to join union within fifteen days.

Hours: Four workers and outside day workers, 8 per day, 6 day week; hours for day workers from 8 a.m. to 5 p.m. Only necessary repair work, etc., to be performed between 8 a.m. Sunday and 8 a.m. Monday. Men in all

departments are required to rest one day of every week, including at least one Sunday every three weeks.

Overtime and work between 8 a.m. Sundays and 8 a.m. Mondays and on Victoria Day, Dominion Day, Labour Day and Christmas, time and one-half. Mechanics called in between 5 p.m. and 7 a.m. to be allowed one hour for reporting with a minimum of four hours' pay.

No strike or lockout to occur. Grievance committee to meet regularly with the mill manager. Any grievance is to be reported to the mill manager. If he fails to adjust it, it will then be taken up by the general manager or president of the company and representatives of the international unions. If no settlement is reached, the matter shall be referred to a third party selected by them. If the two representatives are unable to select a third party, the Minister of Labour, Ottawa, shall appoint one. The decision of this arbitration board is to be final and binding.

Wages per hour: Paper mill: machine tenders, \$1.45 and \$1.48; back tenders, \$1.27 and \$1.30; third hands, 87 and 90 cents; fourth hands, 60 cents; fifth hands, 45 to 50 cents; sparehand, 70 cents; oilers, 50 to 73 cents; mixing system operators, 58 cents; broke beater men, 45 cents. Groundwood mill: tour foreman, 70 cents; screen men, 50 cents; grinder men, block pilers, wet machine operators, cleaners and oilers, 45 cents. Sulphite mill: cooks, 80 cents; cook's helper, 60 cents; blow pit men, 48 cents; labour, 45 cents. Boiler house: engineer, 75 cents; fireman, 60 cents; repair man, 78 cents; labour, 45 cents. Finishing room: shipping clerk, 60 cents; head finisher and shippers, rewinder man, 50 cents; coreman, 48 cents; wrapperman, truckers, 45 cents. Mechanics: machinists, millwrights, blacksmith, electrician, pipefitter, 73 cents; mechanics' helpers, 45 to 59 cents.

Transportation and Public Utilities: Electric Railways

WINNIPEG, MANITOBA.—WINNIPEG ELECTRIC COMPANY AND THEIR EMPLOYEES OF THE TRACK DEPARTMENT.

Agreement signed after conciliation by the Department following application under the Industrial Disputes Investigation Act reported in the LABOUR GAZETTE, September, 1928, pages 949 and 950, to be in effect from August 1, 1928, to August 31, 1929, and thereafter from year to year until notice of change is given 30 days before September 1 of any year.

Wages per hour: leading trackmen—in paved track area, 65 cents, in open track area, 60 cents; leading trackmen assistants, 50 cents; electric welders, 70 cents, assistant, 55 cents; acetylene welders, 65 cents, assistant, 50 cents; electric switch and diamond repairmen, 55 cents; grinder men, 55 cents; assistant, 50 cents; flat car motormen, 55 cents, apprentice or part time, 50 cents; compressor men, 50

cents; labourers, 35 to 42 cents; switch cleaners, 45 cents.

Hours: as far as conditions permit, 44-hour week.

Overtime: all time in excess of 8 hours per day or 48 per week and work on Sundays and Dominion holidays, time and one half, except when regular shift comes on Sundays or holidays when straight time shall be paid, but a day off in seven to be given such men.

Neither the company nor the employees to discriminate against any employee for being or not being a union member.

In case of a dispute, if the matter cannot be adjusted by officials of the railway, then it shall be referred to a joint committee of officials and employees for settlement. No outside interference to be allowed.

Transportation and Public Utilities: Local Transportation

VANCOUVER, BRITISH COLUMBIA.—THE YELLOW CAB COMPANY, LIMITED, AND THE INTERNATIONAL BROTHERHOOD OF TEAMSTERS, CHAUFFEURS, STABLEMEN AND HELPERS, LOCAL No. 151.

Agreement to be in effect from June 21, 1928, to June 21, 1930.

All employees must join the local union and the company agrees to deduct from the pay of employees union dues, etc., and pay same over to the union. In consideration of this, the union agrees that should any union member defraud the company of money the amount shall be paid to the company from union funds.

The night shift is to be reduced from 12 to 10 hours.

Wages: for the first thirty days of employment, men to receive 30 per cent of gross takings; after this \$3.25 per day or 30 per cent of gross cab earnings, whichever is greater over a period of a cab driver's working week of six days.

Overtime: at rate of 50 cents per hour or 30 per cent of earnings, whichever is greater.

In case of a reduction of staff, both seniority and efficiency to be considered.

First cab on stand to have preference on pick-ups. The company agrees to bulletin all positions considered promotions and to consider seniority in filling positions.

Any dispute as to the terms of the agreement to be submitted to a board of arbitration consisting of two members appointed by the company and two by the union; if these four cannot agree, a fifth disinterested party to be elected by them. The decision of the board shall be binding and there shall be no suspension of work during such arbitration.

Transportation and Public Utilities: Electricity and Gas

HAMILTON AND ST. CATHARINES, ONTARIO.—DOMINION POWER AND TRANSMISSION COMPANY, LIMITED AND INTERNATIONAL UNION OF STEAM AND OPERATING ENGINEERS, LOCALS NOS. 700 AND 903.

Agreement to be in effect from July 31, 1928, to April 30, 1929, and from year to year until either party gives 60 days' notice of change.

No discrimination to be made against any employee for belonging to or holding an office in the union.

Seniority to be considered in promotions and if staff reduced the youngest men in the service to be laid off first and then re-employed before new men are employed.

A journeyman operator is one who has not less than three years' practical experience in the operation of an electrical generating station or substation. An assistant operator is one who has less than three years' experience.

Any difference between the two parties to be submitted through an employees' committee to the manager. In case of failure to adjust any dispute, no cessation of work shall occur until the highest officials of the union and of the company have endeavoured to reach a settlement.

A committee of employees shall meet the manager once a month to consider matters of interest to both parties. Any employees suspended or discharged may have his case presented to the manager through the Grievance Committee.

All employees to have one full week's holiday with pay each year.

Hours: shift employees to work 8 hours per day, 6 days per week; other employees 9 hours per day, 6 days per week; at the substation and Decew Falls, 9 per day, 5 on Saturdays.

Overtime: for shift employees, time and one half for first four hours and double time thereafter; for other employees time and one half for first three hours and double time thereafter. Employees other than shift employees to be paid double time for work on Sundays and holidays.

Wages: East End Power Station: first engineers, \$172 per month; second engineers, \$158; third engineers, \$142; first relief engineer, \$165; second relief engineer, \$135; pumpmen, \$128; stokers, \$115; locomotive crane engineers, 81 cents per hour; elevatormen, 66 cents per hour; first class repairmen, 76 cents per hour; second class repairmen, 60 cents per hour; operators in charge, \$140 per month; first assistant operator, \$122; second assistant operator, \$115; third assistant operator, \$109; relief operator, \$134; electrician, 76 cents per hour. Decew Falls Power Station: operators in charge, \$157 per month; first wheelmen, \$134; second wheelmen, \$122; third wheelmen, \$109; reliefmen, \$146.

Substation "A": operators in charge, \$140 per month; first assistant operator, \$122; second assistant operator, \$115; third assistant operator and spare assistant operator, \$109.

All Other Substations: Operators, \$128 per month and assistant operators (if any), \$109 per month. Each relief operator, \$134 per month.

Substation Maintenance Men: foremen, 76 cents per hour; fourth year men, 70 cents; third year men, 60 cents; first and second year men, 49 cents.

Terminal Station: fireman, \$130 per month; helper, \$108.

LONDON, ONTARIO.—PUBLIC UTILITIES COMMISSION AND LINE EMPLOYEES.

Agreement to be in effect from June 1, 1928, to June 1, 1929, and from year to year until notice of change is given by either party thirty days prior to expiry date in any year.

No discrimination to be shown against union members.

Wages per hour: foremen, 83 cents; sub-foremen, 75 cents; journeymen, 73 cents.

Hours: 8 per day, 4 on Saturdays.

Overtime: time and one half to 10 p.m., double time thereafter; all work on Saturday afternoons, Sundays and holidays, double time.

For work on high voltage wires, two men to be assigned to job.

For work outside city, railway fares and living expenses to be paid by employer.

After one year's service, a week's holiday with pay will be granted every year.

Seniority to be considered in making promotions.

The manager shall receive a grievance committee, if satisfaction cannot be obtained from the superintendent.

ALBERTA.—THE ELECTRICAL PROPERTIES OF THE CANADIAN UTILITIES, LIMITED, THE UNION POWER COMPANY AND SUBORDINATE COMPANIES OR CONTRACTORS AND THE INTERNATIONAL BROTHERHOOD OF ELECTRICAL WORKERS AND SUBORDINATE LOCALS IN ALBERTA.

Agreement to be in effect from June 30, 1928, to June 30, 1929, and thereafter unless terminated or changed by thirty days' notice given by either party.

Only union members to be employed.

Hours: 9 per day.

Overtime and work on Sundays and holidays, time and one half. Employees called on duty not to receive less than four hours at the standard rate.

Transportation to be provided by employer.

An apprentice is an employee who has worked at least three months at the trade. A journeyman is an employee who has had four or more years' experience and must be able to pass a satisfactory examination. All cable splicers must be journeymen linemen.

Wages of apprentices: 60 cents per hour first year, 70 cents second year, 80 cents third year, 85 cents fourth year.

Work on poles, bridges, towers and fixtures of an elevation of 80 feet or more shall be paid at double the standard rate.

Seniority to be considered in making promotions or in reduction of staff.

Wages: lead-covered cable foreman, \$1.15 per hour; journeymen cable splicer, \$1; foreman, \$1; sub-foreman, 95 cents; journeymen linemen, 90 cents per hour; combination trouble and maintenance men, \$1.80 per month.

Disputes between the two parties are to be referred to a joint committee of two representatives of each party for settlement. If this committee cannot agree a fifth member shall be appointed by mutual agreement and his decision shall be binding.

Service: Public Administration

MOOSE JAW, SASKATCHEWAN.—CITY OF MOOSE JAW AND INTERNATIONAL BROTHERHOOD OF ELECTRICAL WORKERS, LOCAL No. 802.

Agreement to be in effect from April 1, 1928, until 30 days' notice of change is given by either party.

This agreement is similar to the one previously in force and summarized in the *LABOUR GAZETTE* for October, 1924, with the following exceptions:

All employees to receive 14 days' annual holidays with pay after 12 months' service, and all employees who are employed not less than 6 months in any one year, to receive one week's holidays with pay.

Wages: plant electrician, \$195 per month; assistant plant electrician, \$130 per month; meter tester and repairman, \$165 per month; inside wiremen—first class, 90 cents per hour; second class, 85 cents; third class, 75 cents; sub line foreman, 95 cents; journeymen linemen—first class, 90 cents; second class, 85 cents; third class, 75 cents; meter installer—first year, 50 cents; second year, 60 cents; third year, 70 cents; after three years, 80 cents.

Should temporary linemen be engaged during the construction season at a higher rate of pay, the linemen in this agreement will also be paid at the higher rate.

MEDICINE HAT, ALBERTA.—CITY OF MEDICINE HAT AND CANADIAN BROTHERHOOD OF STATIONARY ENGINEERS.

Agreement to be in effect from January 1, 1928, to December 31, 1928, and thereafter until 60 days' notice of change is given by either party.

This agreement is similar to the one previously in force and summarized in the *LABOUR GAZETTE* for September, 1926, with the following exceptions:

All employees working on legal holidays or on their day off to be paid time and one half.

The clause with regard to promotions being made from the staff has been deleted.

Wages per month: second class engineer, \$175; relief engineer, \$150; firemen, \$130; relief fireman and waterworks operators, \$130; waterworks operators, \$140; senior boiler washer, \$130; assistant boiler washer, \$130; machinist, \$170; blacksmith, \$150.

PRINCE RUPERT, BRITISH COLUMBIA.—CITY OF PRINCE RUPERT AND INTERNATIONAL BROTHERHOOD OF ELECTRICAL WORKERS, LOCAL No. 344.

Agreement to be in effect from April 1, 1928, to December 31, 1928, and thereafter unless terminated by thirty days' notice given by either party.

Only union members to be employed, if possible, and the management shall give a hearing to any committee appointed by the union.

Hours: 8 per day. Operators to have one day off per week and 14 days' holidays per year with pay.

Overtime and (except for shift men) work on Sundays and holidays, double time. Telephone troublemen working on Saturday afternoons to receive double the standard rate.

Apprentices must serve three years; not more than one apprentice to every three journeymen in each department.

Two journeymen must be assigned to a job where work is done on high voltage wires.

Work on poles, towers and bridges at an elevation of 85 feet or over, to be paid at double time. For work on high voltage wires, the employer must furnish rubber gloves and protective shields.

Wages: journeymen cable splicer, \$8.50 per day; journeyman linemen, journeymen wiremen, journeymen meter installers, journeymen telephone installers, \$7.50 per day; line foreman, \$9; head lineman, \$8.25; engineer in charge at Shawatlans, \$208 per month; operators, \$186.50 per month; telephone wire chief, \$208 per month.

Wages of apprentices: apprentice linemen, wiremen and metermen, \$5.10 per day for beginners, \$5.50 after 6 months, \$5.70 after 12 months, \$6 after 18 months, \$6.25 after 24 months, \$7.50 after 36 months. Apprentice operators, \$5.10 for beginners, \$5.40 after 12 months, \$5.85 after 24 months and \$186.50 per month after 36 months.

Service: Recreational

WINNIPEG, MANITOBA.—CERTAIN THEATRES AND INTERNATIONAL ASSOCIATION OF THEATRICAL STAGE EMPLOYEES AND MOVING PICTURE MACHINE OPERATORS, LOCAL No. 299.

Only members of the local union to be given preference of employment.

Any theatre having in the projection room a spotlight stereopticon effects, dimmers or other stage paraphernalia shall employ two projectionists. Road show motion picture performances carrying travelling projectionists must also employ one local projectionist at the prevailing scale.

Wages of projectionists per week: in theatres having a capacity of 800 or less, if they open at 6 p.m. or later with Saturday matinee, \$40; if they run continuously from 1 p.m. to 11 p.m., two projectionists at \$55. Theatres having a capacity of 800 to 1,500—if they open at 6 p.m. or later, \$55; if continuous from 1 p.m. to 11 p.m., two projectionists at \$60. Theatres having a capacity of 1,500 to 2,000 running continuously from 1 p.m. to 11 p.m.,

two projectionists at \$65. Theatres having a capacity of over 2,000 running continuously from 1 p.m. to 11 p.m., two projectionists at \$70. Theatres using Movitone or Vitaphone, synchronized or non-synchronized pictures, shall employ one projectionist at each machine per shift at \$75.

Overtime and relief to be paid at rate of \$1.50 per hour. Overtime on Sundays when necessary, double overtime rate. All extra performances, \$5 each man, including Saturdays and holidays.

Service: Personal and Domestic

VANCOUVER, BRITISH COLUMBIA.—CERTAIN HOTELS AND RESTAURANTS AND INTERNATIONAL ALLIANCE OF HOTEL AND RESTAURANT EMPLOYEES No. 28.

Agreement to be in effect from May 22, 1928 to May 22, 1929.

This agreement is similar to the one previously in force and summarized in the LABOUR GAZETTE for August, 1926, with the following exceptions:

Wages per week: pantrymen and cooks' helpers, \$21; male dishwashers and cleaners, \$18. Women cook's scale (also to apply to male apprentices under age of 21 years): women chefs, \$42; women second cooks, night cooks and bakers, \$21; women fry cooks, \$18; pantrywomen, \$15; women utility helpers, \$13.50; women dishwashers and cleaners, \$12. Overtime for all women cooks, pantrywomen, general helpers, dishwashers and cleaners, time and one half. Wages of cafeteria and dairy lunch waitresses, \$12; tea-room waitresses, \$13.50. All other classes of cooks and waiters, same wages as previous agreement.

Wage scale is based on the minimum and includes meals while employed.

After being employed two weeks, all employees must belong to the union. No notice of dismissal or resignation required.

FAIR WAGES CONDITIONS IN DOMINION GOVERNMENT CONTRACTS

THE Department of Labour is furnished from month to month with information regarding the contracts executed by various departments of the Government of Canada which included among their provisions fair wages conditions for the protection of the labour to be employed. The Fair Wages Policy of the Government of Canada has been in effect since 1900 and is now expressed in an Order in Council which was adopted June 7, 1922, and amended April 9, 1924.

The Fair Wages Order in Council requires that "all contracts made on behalf of the Government of Canada for the construction or remodelling of public buildings of all kinds, railways, canals, roads, bridges, locks, dry-docks, elevators, harbours, piers, wharves, lighthouses, and other works for the improvement and safety of transportation and navi-

gation, rifle ranges, fortifications, and other works of defence, dams, hydraulic works, slides, piers, booms, and other works for facilitating the transmission of timber, and all other works and properties constructed or remodelled for the Government of Canada" must contain either a fair wage schedule based on the current wages rates and working hours in the district, or a general fair wage clause requiring adherence to the current wage rates and working hours in the district for the different classes of labour employed, or, in the absence of such standard conditions, fair and reasonable rates and hours. The conditions above-mentioned are referred to in the Order in Council as "A" conditions. Following is the text of the General Fair Wages Clause referred to:—

1. All mechanics, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed for the character or class of work in which they are respectively engaged, and if there be no current rates in such district, then fair and reasonable rates, and shall work such hours as are customary in the trade in the district where the work is carried on, or if there be no custom of the trade as respects hours in the district, then fair and reasonable hours, unless for the protection of life and property, or for other cause shown to the satisfaction of the Minister of Labour, longer hours of service are required. The Minister of Labour may at any time and from time to time determine for the purposes of this contract, what are the current or fair and reasonable rates of wages and the current or fair and reasonable hours, and may from time to time rescind, revoke, amend, or vary any such decision, provided that his determination and any amendment or variation shall not be operative prior to the period of three months immediately preceding the date thereof.

Where there are special circumstances which in the judgment of the Minister of Labour make it expedient that he should do so, he may in the manner and subject to the provisions hereinabove set forth, decide what are the current or fair and reasonable rates of wages for overtime, and what is the proper classification of any work for the purposes of wages and hours. Immediately upon receipt of notice of any decision of the Minister of Labour hereunder the contractor shall adjust the wages and hours and classification of work so as to give effect to such decision. In case the Contractor shall fail so to do, or to pay to any employee or employees for any services performed or for any hours of labour, wages according to the rates fixed therefor by the Minister of Labour, the Minister of Labour may authorize and direct the Minister to pay any such wages at the rates so fixed and to deduct the amount thereof from any moneys owing by the Government to the Contractor and any such payment shall for all purposes as between the Contractor and the Government be deemed and taken to be payment to the Contractor, and the Contractor shall be bound in every particular by any such authority, direction and payment as aforesaid. The powers of the Minister of Labour hereunder shall not be exercised as to any employee or employees where it is established to his satisfaction that an agreement in writing exists and is in effect between the Contractor and the class of employees to which such employee or employees belong or the authorized representatives of such class of employees fixing rates of wages, overtime conditions and hours of labour.

It is further provided in the Order in Council that "all contracts for the manufacture and supply to the Government of Canada of fittings for public buildings, harness, saddlery, clothing, and other outfit for the military and naval forces, Royal Canadian Mounted Police, letter carriers, and other Government officers and employees, mail bags, letter boxes, and other postal stores, and

any other articles and things hereafter designated by the Governor in Council" must contain provisions for the observance of the current wages rates and working hours in the district, or, in the absence of any such current standards, fair and reasonable rates and working hours. These conditions are referred to in the Order in Council as "B" conditions, and include the following provisions:—

All workmen, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed, and if there be no current rate in such district, then a fair and reasonable rate, and shall work such hours as those fixed by the custom of the trade as respects hours in the district where the work is carried on, or if there be no custom of the trade as respects hours in the district then fair and reasonable hours, except for the protection of life and property, or on due cause shown to the satisfaction of the Minister of Labour. In the event of a dispute arising as to what is the current or a fair and reasonable rate of wages or what are the current hours fixed by the custom of the trade or fair and reasonable hours it shall be determined by the Minister of Labour, whose decision shall be final; payment may also be withheld of any moneys which would otherwise be payable to the contractor until the Minister of Labour's decision has been complied with.

By the term "current wages" and the term "hours of labour fixed by the custom of the trade" in the foregoing are meant respectively the standard rates of wages and hours of labour either recognized by signed agreements between employers and workmen in the district from which the labour required is necessarily drawn or actually prevailing, although not necessarily recognized by signed agreements.

In both the "A" and "B" conditions of the Fair Wages Order in Council the Minister of Labour is empowered to determine questions which may arise as to what are the current or fair and reasonable wages rates and working hours. The contractor is required to post and keep posted in a conspicuous place on the premises where the contract is being executed, occupied or frequented by the workmen, the fair wages clause or schedule inserted in his contract for the protection of the workmen employed. The contractor is also required to keep proper books and records showing the names, trades and addresses of all workmen in his employ and the wages paid to and time worked by such workmen, these records to be open for inspection by fair wages officers of the Government any time it may be expedient to the Minister to have the same inspected.

It is declared that the contractor shall not be entitled to payment of any money which would otherwise be payable under the terms of contract until he has filed a statement

showing: (1) the wage rates and hours of labour which are in force for the various classes of workmen; (2) whether any wages or payments remain in arrears; and (3) that all of the labour conditions of the contract have been complied with. In the event of default being made in the payment of the wages of any workman employed, claim therefor may be filed with the minister of the department with which the contract has been made and payment of such claim may be made by the latter. (Under the "A" conditions these rights extend to moneys payable for the use or hire of horses or teams.)

All workmen employed in the execution of the contract shall be residents of Canada, unless the Minister of the department with which the contract has been made is of opinion that Canadian labour is not available, or that other special circumstances exist which render it contrary to the public interest to enforce this provision.

Under the "A" conditions clerks of works or other inspecting officers appointed by the Government to ensure the due observance of the contract are specially instructed to do all in their power to see that the labour conditions are fully complied with and to report any apparent violations to the department with which the contract is made.

The "B" conditions provide that the contractor's premises and the work being performed under contract shall be open for inspection at all reasonable times by any officer authorized by the Minister of Labour for this purpose, and that the premises shall be kept in sanitary condition.

Contracts Awarded Recently

During the past month statements were received in the Department of Labour showing that the following contracts were recently executed by the Government of Canada, and that they included either fair wages schedules as shown below, or the general fair wages clause above-mentioned:—

DEPARTMENT OF PUBLIC WORKS

Contracts in Group "A" (Construction, etc.)

Thos. P. Charleson, Ottawa, Ont. Date of contract, Sept. 10, 1928. Amount of contract, approximately \$14,935. The General Fair Wages Clause was inserted in the contract.

Reconstruction of the lower wharf at Nicolet, P.Q. Name of contractor, Georges Guenard, Cap de la Madeleine, P.Q. Date of contract, Sept. 10, 1928. Amount of contract, \$4,489.29. The General Fair Wages Clause was inserted in the contract.

Repairs to the breakwater at Souris Harbour, King's Co., P.E.I. Name of contractor, H. J. Phillips, Charlottetown, P.E.I. Date of contract, Sept. 11, 1928. Amount of contract, approximately \$62,000. The general Fair Wages Clause was inserted in the contract.

Painting, tinting and interior decorations of Governor General's Quarters, Citadel, Quebec, P.Q. Name of contractors, Marier & Tremblay, Limitée, Quebec, P.Q. Date of contract, Sept. 11, 1928. Amount of contract, \$2,996. The General Fair Wages Clause was inserted in the contract.

Extension to wharf at Petit Saguenay, Chicoutimi Co., P.Q. Name of contractor, Henri Lemelin, St. Romuald, Levis Co., P.Q. Date of contract, Sept. 12, 1928. Amount of contract, approximately \$4,432.40. The General Fair Wages Clause was inserted in the contract.

Reconstruction of revetment wall at St. Grégoire de Montmorency, Quebec Co., P.Q. Name of contractors, Napoleon Trudel & Fils, St. Irene, County of Charlevoix, P.Q. Date of contract, Sept. 13, 1928. Amount of contract, approximately \$3,967.75. The General Fair Wages Clause was inserted in the contract.

Docking, cleaning, painting and repairing Dredge P.W.D. No. 305, "King Edward." Name of contractors, B. C. Marine Engineers & Shipbuilders, Ltd., Vancouver, B.C. Date of contract, Sept. 14, 1928. Amount of contract, \$5,450. The General Fair Wages Clause was inserted in the contract.

Repairs to the wharf at Grosse Isle, Montmagny Co., P.Q. Name of contractor, J. Elzear Boulanger, Montmagny, P.Q. Date of contract, Sept. 15, 1928. Amount of contract, approximately \$9,488. The General Fair Wages Clause was inserted in the contract.

Alterations and additions to the heating plant at the Fort Osborne Barracks, Winnipeg, Man. Name of contractors, Bowyer-Roag, Ltd., Winnipeg, Man. Date of contract, Sept. 15, 1928. Amount of contract, \$39,240. The General Fair Wages Clause was inserted in the contract.

Construction of a frost-proof warehouse at Charlottetown, P.E.I. Name of contractors,

E. F. Powers Construction Co., Fredericton, N.B. Date of contract, Sept. 18, 1928. Amount of contract, approximately \$44,979. The General Fair Wages Clause was inserted in the contract.

Removal of shoal areas in Magnetawan River at Byng Inlet, Ont. Name of contractor, Robt. G. Weddell, Trenton, Ont. Date of contract, August 15, 1928. Amount of contract, approximately \$15,427.50. The General Fair Wages Clause was inserted in the contract.

Dredging a channel at the outlet of the river at Rivière St. François, P.Q. Name of contractor, Aimé Laperrière, Pierreville, P.Q. Date of contract, August 15, 1928. Amount of contract, approximately \$6,900. The General Fair Wages Clause was inserted in the contract.

Improvement to channel at Berthierville, P.Q. Name of contractor, National Dock & Dredging Corporation, Ltd., Quebec, P.Q. Date of contract, August 16, 1928. Amount of contract, approximately \$31,680. The General Fair Wages Clause was inserted in the contract.

Deepening an area to provide a suitable berth available at all times of tide at Lorneville, N.B. Name of contractor, James S. Gregory, Saint John, N.B. Date of contract, August 29, 1928. Amount of contract, approximately \$7,312.50. The General Fair Wages Clause was inserted in the contract.

Extension to slip at the east of the Goderich Elevator Company at Goderich, Ont. Name of contractor, W. L. Forrest, Goderich, Ont. Date of contract, August 31, 1928. Amount of contract, approximately \$85,116.10. The General Fair Wages Clause was inserted in the contract.

Deepening bed of river for an approximate distance of one mile to provide a drainage channel at St. Louis River, P.Q. Name of contractors, Les Chantiers Manseau, Limitée, Sorel, P.Q. Date of contract, Sept. 13, 1928. Amount of contract, approximately \$14,405.36. The General Fair Wages Clause was inserted in the contract.

Deepening area along the harbour wall and removal of an angle of shore line to permit a new alignment of the harbour wall at Owen Sound, Ont. Name of contractors, The Randolph Macdonald Co., Ltd., Toronto, Ont. Date of contract, Sept. 4, 1928. Amount of contract, approximately \$11,020. The General Fair Wages Clause was inserted in the contract.

Deepening an area on each side of the Steel Company of Canada's wharf at Hamilton, Ont. Name of contractors, The Randolph Macdonald Co., Ltd., Toronto, Ont. Date of

contract, Sept. 4, 1928. Amount of contract, approximately \$7,360. The General Fair Wages Clause was inserted in the contract.

Removal of shoal areas of rock, loose rock and boulders in channel leading westward from Little Current, Ont. Name of contractors, The Randolph Macdonald Co., Ltd., Toronto, Ont. Date of contract, Sept. 7, 1928. Amount of contract, approximately \$96,084. The General Fair Wages Clause was inserted in the contract.

Widening a channel from Lake of Two Mountains to Vaudreuil, Vaudreuil, P.Q. Name of contractors, Les Chantiers Manseau, Limitée, Sorel, P.Q. Date of contract, Sept. 10, 1928. Amount of contract, approximately \$14,060.48. The General Fair Wages Clause was inserted in the contract.

Cleaning up the slip at Thunder Bay Elevator and extending it 100 ft.; also widening slip at Saskatchewan Pool Elevator at Port Arthur, Ont. Name of contractors, Canadian Dredging Co., Ltd., Midland, Ont. Date of contract, Sept. 12, 1928. Amount of contract, approximately \$24,000. The General Fair Wages Clause was inserted in the contract.

Deepening berths at the deepwater wharf at Campbellton, N.B. Name of contractor, Felix Michaud, Buctouche, Kent Co., N.B. Date of contract, Sept. 12, 1928. Amount of contract, approximately \$28,750. The General Fair Wages Clause was inserted in the contract.

Deepening an area in front of the University and Hospital's Dock at Kingston, Ont. Name of contractor, Robert G. Weddell, Trenton, Ont. Date of contract, Sept. 14, 1928. Amount of contract, approximately \$11,115. The General Fair Wages Clause was inserted in the contract.

Deepening the channel leading to Government wharf at St. Antoine de Tilly, P.Q. Name of contractors, National Dock & Dredging Corporation, Ltd., Quebec, P.Q. Date of contract, Sept. 15, 1928. Approximate expenditure, \$31,900. The General Fair Wages Clause was inserted in the contract.

Area No. 1, widening present slip in front of the elevator; Area No. 2, enlarging winter storage basin east of Bar Point at Sarnia, Ont. Name of contractors, Canadian Dredging Co., Ltd., Midland, Ont. Date of contract, Sept. 22, 1928. Amount of contract, approximately \$117,920. The General Fair Wages Clause was inserted in the contract.

Dredging basins alongside the new deep-water pier under construction at Sorel, P.Q. Name of contractors, Les Chantiers Manseau, Limitée, Sorel, P.Q. Date of contract, Sept. 25, 1928. Amount of contract, approximately

\$78,110.40. The General Fair Wages Clause was inserted in the contract.

Deepening the approach channel outside the harbour headline in Burlington and slip out of harbour headline at Stipe's Inlet at Hamilton, Ont. Name of contractors, National Dock & Dredging Corporation, Ltd., Quebec, P.Q. Date of contract, Sept. 25, 1928. Amount of contract, approximately \$78,540. The General Fair Wages Clause was inserted in the contract.

Contracts in Group "B" (Interior Fittings)

Supply and installation of interior fittings in the public building at Strathroy, Ont. Name of contractor, John A. Drake, Strathroy, Ont. Date of contract, Sept. 3, 1928. Amount of contract, \$2,923. The General Fair Wages Clause was inserted in the contract.

Supply and installation of new interior fittings in oak in the Post Office, Newcastle, N.B. Name of contractors, The Burchill Woodworking Co., Ltd., South Nelson, N.B. Date of contract, Sept. 18, 1928. Amount of contract, \$1,195. The General Fair Wages Clause was inserted in the contract.

DEPARTMENT OF NATIONAL DEFENCE

Contracts in Group "A" (Construction, etc.)

Construction of new hangar, Rockcliffe Aerodrome, Rockcliffe, Ont. Name of contractors, MacDonald Bros., Ottawa, Ont. Date of contract, August 4, 1928. Amount of contract, \$53,539.75. The General Fair Wages Clause was inserted in the contract.

Renewal of North Pier, King's Wharf, Halifax, N.S., together with construction of landing stage and steps; also repairs to the approach to said wharf. Name of contractors, Standard Construction Co., Ltd., Halifax, N.S. Date of contract, August 20, 1928. Amount of contract, \$22,496. The General Fair Wages Clause was inserted in the contract.

Erection of elevated wooden water tank at Rockcliffe, Aerodrome, Rockcliffe, Ont. Name of contractors, Goold, Shapley & Muir Co., Brantford, Ont. Date of contract, August 28, 1928. Amount of contract, \$4,566. The General Fair Wages Clause was inserted in the contract.

DEPARTMENT OF RAILWAYS AND CANALS

Contracts in Group "A" (Construction, etc.)

Repairs to concrete substructures of bridges on the Manouan, Oskelaneo and Kowkash Subdivision of the Transcontinental Railway. Name of contractors, Metalkote Co. of Canada, Ltd. Date of contract, June 19, 1928.

Amount of contract, approximately \$50,000. The General Fair Wages Clause was inserted in the contract.

Construction, etc., of one hydraulic turbine and auxiliaries for Power House at Cote St. Paul, Montreal. Name of contractors, S. Morgan Smith-Inglis Co., Ltd., Toronto, Ont. Date of contract, September 12, 1928. Amount of contract, approximately \$16,620, plus \$15 per day for erection superintendent. The General Fair Wages Clause was inserted in the contract.

Construction of a concrete dam at Lock No. 25 on the Trent Canal, located about 7½ miles above Peterborough, Ont. Name of contractors, Detroit River Construction Co., Ltd., Windsor, Ont. Date of contract, September 27, 1928. Amount of contract, approximately \$84,113.50. The General Fair Wages Clause was inserted in the contract.

POST OFFICE DEPARTMENT

Following is a statement of payments made in September, 1928, for supplies ordered by the Post Office Department under contracts which were subject to the regulations in the suppression of the sweating system, the securing of payment to the workers of fair wages and the performance of the work under proper sanitary conditions:—

Nature of Orders	Amount of Orders
Making metal dating stamps and type, also other hand stamps and brass crown seals.....	\$ 452 83
Making and repairing rubber stamps, daters, etc.	1,108 98
Making up and supplying letter carriers' uniforms etc.....	23,444 75
Stamping pads, ink, etc.....	163 32
Bag fittings.....	3,417 93
Scales.....	312 50
Satchels.....	69 38
Letter boxes.....	168 30

The September issue of the *Monthly Labour Review*, published by the United States Department of Labour, contains a preliminary report on Union scales of wages and hours of labour from 1913 to 1928 inclusive, in the leading cities in the United States. This is an abridged compilation made from the material collected for a fuller report on the principal time work trades in 67 of the leading cities, which will be published later as a bulletin of the United States Bureau of Labour Statistics. The trades represented in the abridgment are the building and printing trades.

PRICES, RETAIL AND WHOLESALE, IN CANADA, SEPTEMBER, 1928

Cost of Living, Prices of Staple Articles and Index Numbers

The movement in prices during the month was toward somewhat higher levels, both the weekly family budget in terms of retail prices and the Dominion Bureau of Statistics index number of wholesale prices showing a slight advance.

In retail prices the cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average prices in some sixty cities was \$11.15 at the beginning of September, as compared with \$11.08 for August; \$10.87 for September, 1927; \$10.94 for September, 1926; \$10.81 for September, 1925; \$10.28 for September, 1924; \$10.46 for September, 1923; \$10.28 for September, 1922; \$11.82 for September, 1921; \$15.95 for September, 1920; \$16.92 for June, 1920 (the peak); \$13.31 for September, 1918; and \$7.83 for September, 1914. Increases occurred in the prices of sirloin steak, veal, mutton, fresh and salt pork, bacon, lard, eggs, milk, butter and cheese. These increases more than offset a substantial decline in the price of potatoes and less important declines in the prices of flour, rice and granulated sugar. Including the cost of fuel and rent with that of foods the total budget averaged \$21.38 at the beginning of September, as compared with \$21.31 for August; \$21.05 for September, 1927; \$21.15 for September, 1926; \$21.02 for September, 1925; \$20.65 for September, 1924; \$20.97 for September, 1923; \$20.90 for September, 1922; \$22.37 for September, 1921; \$26.38 for September, 1920; \$26.92 for July, 1920 (the peak); \$21.11 for September, 1918; and \$14.33 for September, 1914. Fuel and rent showed little change.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon the average prices of 236 commodities in 1913 as 100 and weighted according to the commercial importance of the commodities was slightly higher at 149.7 for September, as compared with 149.1 for August; 151.3 for September, 1927; 152.5 for September, 1926; 156.2 for September, 1925; 153.9 for September, 1924; 154.6 for September, 1923; 147.5 for September, 1922; 161.7 for September, 1921; 245.5 for September, 1920; 256.7 for May, 1920 (the peak); and 205.0 for September, 1918. Forty prices quotations advanced, forty-one declined, while one hundred and fifty-five were unchanged.

In the grouping according to chief component materials two of the eight main groups advanced, three declined, while three were

practically stationary. The Animals and their Products group and the Non-Metallic Minerals group advanced, the former owing to advances in the prices of cattle, meats, milk, butter, cheese and eggs, and the latter because of higher prices for coal. The groups which declined were: the Vegetables and their Products group, due to lower prices for wheat, barley, flour, sugar, potatoes, foreign fruits, cocoa beans and rubber, which more than offset higher prices for corn, flax, oats, oat products and millfeed; the Fibres, Textiles and Textile Products group, due mainly to declines in the prices of cotton, some cotton products and in jute; and the Non-Ferrous Metals group, due to lower prices for silver, tin and solder, which more than offset increased prices for copper and lead. The Chemicals and Allied Products group, the Iron and its Products group, and the Wood and Wood Products group were practically unchanged.

In the grouping according to purpose consumers' goods advanced, mainly because of higher prices for meats, milk, butter, cheese, eggs, and coal. Producers goods were lower. Of the sub-groups, producers' equipment advanced, owing to higher prices for coal while manufacturers' goods declined, due to lower prices of materials for the textile and clothing industry, for the leather industry, for the meat packing industries, as well as miscellaneous producers' materials. Materials for the fur industry advanced.

In the grouping according to origin raw or partly manufactured goods advanced, while fully or chiefly manufactured goods were lower. In the former declines in the prices of wheat, barley, rye, sugar, potatoes, live stock, cotton, silver, tin and antimony were more than offset by advances in the prices of oats, flax, corn, meats, milk, eggs, silk, coal, copper and lead, while in the latter lower prices for flour, sugar, vegetable oils and cotton yarns more than offset higher prices for smoked meats, butter, cheese and oat products. Domestic farm products, articles of marine origin and articles of mineral origin advanced, while articles of forest origin showed little change.

EXPLANATORY NOTE AS TO WHOLESALE PRICES

The index number calculated by the Dominion Bureau of Statistics is based upon the prices of 236 commodities, price levels in 1913 being taken as the base, that is equal to 100, the figures

(Continued on page 1160)

COST PER WEEK OF A FAMILY BUDGET OF STAPLE FOODS, FUEL AND LIGHTING, AND RENT IN TERMS OF THE AVERAGE PRICES IN SIXTY CITIES IN CANADA*

Table with columns for Commodities, Quantity, and prices for years 1900-1928. Includes sub-totals for All Foods, Fuel and Light, Rent, and a final Totals row.

AVERAGE COST OF STAPLE FOODS BY PROVINCES

Table showing average costs for various staple foods across different Canadian provinces like Nova Scotia, Prince Edward Island, New Brunswick, etc.

*The budget is intended to show the changes in the cost of the items included, not to show the minimum cost for an average family. See text. †December only. ‡Kind most sold. §For electric light see text. **An allowance for the cost of clothing and sundries would increase the figures by about 50 per cent. See text.

Higher price for petroleum coals. f. Petroleum coke. g. Natural gas used extensively. h. Lignite. i. Poplar, etc. j. In a. Houses with conveniences not extensively occupied by workmen but some at \$35.00. p. Mining Company houses \$20.

(Continued from page 1152)

being weighted according to the commercial and industrial importance of each article included. The index number has been calculated by years back to 1890, being unweighted, however, for the period of 1890 to 1913 and has been calculated by months from 1919 to date for all groupings and from 1913 to date for the principal grouping. Summary tables of the Bureau's index

number may be found in the supplement to the LABOUR GAZETTE for January, 1925, January, 1926, and in greater detail in the Report on "Prices and Price Indexes 1913-24," issued by the Bureau. A description of the methods used in the construction of the index number appears in the LABOUR GAZETTE for June, 1923.

The accompanying table gives the index numbers of the Dominion Bureau of Statistics by

the principal groups in the three methods of classification and with those of the classification according to purpose or use in detail for the current month and for certain preceding dates.

EXPLANATORY NOTES AS TO RETAIL PRICES

The table of retail prices and rentals shows the prices at the beginning of September of seventy-one staple foodstuffs, groceries, coal, wood and coal oil and the rent of six-roomed houses in some sixty cities throughout Canada. All prices are for delivered goods. The exact quality, for which the quotation is given is set forth in the case of each commodity, and every effort has been made to ensure that the quotations in each case refer to the same class of commodity in order that the statistics may be available for purposes of comparison from month to month, from city to city, etc. The prices of foods and groceries in each city, except milk and bread, are the averages of quotations reported to the Department and to the Dominion Bureau of Statistics by a number of representative butchers and grocers in each. The prices of fuel and the rates for rent are reported by the correspondents of the LABOUR GAZETTE.

Statistics similar to these were published each month from 1910 to 1920, the figures during this period being secured at the middle of each month by the correspondents of the LABOUR GAZETTE resident in each locality from dealers doing a considerable business with workmen's households. From 1910 to 1915 the table contained a list of only the twenty-nine foods included in the family budget, with laundry starch, coal, wood, coal oil and rent. In 1915 when monthly publication of the budget in the LABOUR GAZETTE was begun, it was decided to extend the list of foods to 40, and in 1920 the list of foods and groceries was still further extended to include over 100 items.

Beginning with October, 1922, a number of commodities were dropped from the list, and in the case of a number of articles the average prices of the grades most sold have been given, owing to the impossibility of securing prices for uniform grades for the various cities from month to month.

Oleomargarine was dropped in March, 1924, the provision for its manufacture and sale since 1917, notwithstanding the Dairy Act, expired at the end of February, 1924.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts extensively occupied by workmen. The first class is of houses in good condition, favourably located in such districts with good modern conveniences. The second class is of houses in fair condition less desirably located, but still fairly central, without modern conveniences.

The weekly budget of a family of five, calculated in terms of the average prices in the cities for which reports are received, includes twenty-nine staple foods, laundry starch, coal, wood, coal oil, and rent, these being the items for which statistics have been obtained each month and published in the LABOUR GAZETTE since January, 1910. The quantities of each commodity included are modifications of those employed in similar calculations by various authorities. For some articles comparatively large quantities are included owing to the ab-

sence of other important items of the same class. For instance, the only fruits are evaporated apples and prunes, and the only fresh vegetable is potatoes. But as market conditions affecting these usually affect the prices of other fruits and vegetables somewhat similarly, the relative proportions of expenditure on the various classes of foods tends to be maintained. At times when the price of an article heavily weighted for this purpose rises, or falls (abnormally) the increase (or decrease) in food prices so indicated is exaggerated, and this should be taken into account in using the budget as an indicator of changes in the cost of living. In fuel and lighting the quantities are estimated on a similar principle, anthracite coal being used chiefly east of Manitoba, and soft coal and wood in the western provinces, while no allowance is made for the quantities required in the various localities owing to climatic conditions, nor for the differences in the heating value of the various fuels. It was estimated, when the budget was first published in 1912 in the report on wholesale prices in Canada for 1911, that these calculations represented from sixty to eighty per cent of the expenditure of an ordinary family according to the total income. For the average family of five the expenditure on these items of food, fuel, light and rent would be perhaps two-thirds or about sixty-five per cent of the total income.

While the budget serves to show the increase or decrease from time to time in the cost of the items included, it does not purport to show the minimum cost of food and fuel supplies for an average family in the Dominion or in any one province. The quantities of meats, dairy products, cereals, etc., included were adopted as affording a liberal supply for the healthy family of a man at hard physical work. On the other hand an average family with an income sufficient to do so would buy less meat, etc., but more fruit, fresh and canned vegetables, etc., so that comparative expenditure would be little changed.

Index Number of Changes in the Cost of Living

In March, 1921, the Department published in the LABOUR GAZETTE a table of percentages of changes in the cost of living since 1913 as a tentative cost of living index number, using the figures of the above mentioned budget for the calculation for food, fuel and rent, with preliminary figures for clothing and sundries added and this table has been brought down to date at intervals since. The calculation of a comprehensive cost of living index number covering all items of workmen's family expenditure in progress since 1918 had been sufficiently advanced to enable the publication of preliminary figures by groups in a supplement to the LABOUR GAZETTE, January, 1926, on Prices in Canada and in Other Countries, page 9. This table gave figures for June and December each year from 1914 to 1926, inclusive. Figures have since been given for March and September each year since 1917, and the accompanying table gives figures for December each year from 1914 to 1917,

quarterly from 1918 to 1926, and monthly since January, 1927. As stated in the above-mentioned supplement, the figures in the food group in the family budget are still used to show the changes in food prices but in the other groups the percentage changes in the prices of each article have been weighted according to workingmen's average family consumption, and in the fuel and light groups, gas and electricity have been included.

Cost of Electric Current and Gas for Householders

With rates in 1913 as 100, index numbers of electric light rates were 1900, 141.4; 1905, 135.6; 1910, 118.1; 1911, 113.4; 1912, 109.1; 1913, 100.0; 1914, 96.5; 1915, 90.8; 1916, 87.6; 1917, 87.2; 1918, 85.8; 1919, 85.8; 1920, 84.2; 1921, 84.9; 1922, 82.7; 1923, 79.5; 1924, 79.2; 1925, 85.6; 1926, 75.6.

The above figures were arrived at by converting to the base of 1913 as 100, an index number of electric current costs from 1900 to 1913 constructed for the Board of Inquiry into the cost of living in Canada, 1914-15 (Report, Vol. 2, page 318) and bringing the figures down to 1926. The figures are unweighted. The Dominion Bureau of Statistics has issued an index number of electric current rates for household consumption as follows: 1923, 73.8; 1924, 72.2; 1925, 69.9; 1926, 68.7. This index number is weighted according to consumption in each city. When the above index number, 1900-1926, is weighted according to population in each city covered for the years, 1923, 1924, 1925 and 1926, the figures are substantially the same as those recently issued by the Bureau.

The following are index numbers of rates for manufactured and natural gas for the years 1913 to 1926 issued by the Dominion Bureau of Statistics (revised Prices and Price Indexes, 1913-1926): Manufactured gas, 1913, 100; 1914, 98.3; 1915, 98.1; 1916, 96.3; 1917, 100.7; 1918, 107.4; 1919, 111.1; 1920, 125.4; 1921, 143.6; 1922, 140.6; 1923, 135.7; 1924, 134.6; 1925, 131.6; 1926, 131.1; 1927, 129.4. Natural gas, 1913, 100; 1914, 107.0; 1915, 112.5; 1916, 112.5; 1917, 113.9; 1918, 114.0; 1919, 116.1; 1920, 125.1; 1921, 137.6; 1922, 163.2; 1923, 163.0; 1924, 162.2; 1925, 179.3; 1926, 172.4; 1927, 165.9. For the years 1900 to 1913 two index numbers of gas costs calculated for the Cost of Living Inquiry in 1914-1915, have been averaged and converted to the base of 1913 as 100, as follows: 1900, 125.8; 1901, 125.8; 1902, 125.8; 1903, 125.2; 1904, 123.9; 1905, 120.1; 1906,

107.5; 1907, 108.8; 1908, 106.9; 1909, 105.7; 1910, 103.8; 1911, 99.4; 1912, 100.6; 1913, 100.0.

CHANGES IN THE COST OF LIVING IN CANADA FROM 1913 TO 1927*

*The figures for "all items" were calculated by giving the following weights to each group: Food 35%; Fuel 8%; Rent 18½%; Clothing 18½%; Sundries 20%.

Retail Prices

Beef prices, for the most part, were higher, sirloin steak being up from an average of 35.8 cents per pound in August to 36.3 cents in September; round steak from 30.3 cents per pound to 30.5 cents; and rib roast from 27.6 cents per pound to 28.3 cents. The price of shoulder roast was unchanged at 21.3 cents per pound. Veal was up in the average from 22.6 cents per pound in August to 23.6 cents in September and mutton from 29.9 cents per pound in August to 30.5 cents in September. Pork also advanced, fresh averaging 31.2 cents per pound in September, as compared with 28.8 cents in August and salt averaging 27.4 cents per pound in September, as compared with 26.6 cents in August. Higher prices were reported from most localities. Bacon rose from an average of 39 cents per pound in August to 40.8 cents in September. Boiled ham was up from 59.6 cents per pound in August to 61.9 cents in September. Fresh fish prices showed little change, cod steak averaging 18.8 cents per pound and white fish 22.1 cents per pound. Lard advanced from an average of 22.2 cents per pound in August to 22.5 cents in September.

The seasonal advance in the price of eggs continued, fresh averaging 46.3 cents per dozen in September, 42.4 cents in August and 38.5 cents in July, and cooking averaging 41.4 cents per dozen in September, 37.6 cents in August and 34.2 cents in July. Increases were substantial in practically all localities. Higher prices for milk were reported from Sorel, Toronto, Brantford, Woodstock and Prince Albert. Butter prices showed a seasonal advance, dairy being up from an average of 39.7 cents per pound in August to 41.3 cents in September, and creamery from 44.6 cents per pound in August to 45.9 cents in September. Cheese was also slightly higher, averaging 33.2 cents per pound.

The price of bread was steady at an average of 7.7 cents per pound, while flour was slightly lower at 5.1 cents per pound. Rolled oats, rice and tapioca showed little change. Onions were substantially lower at 5.9 cents per pound in September, as compared with 7.2 cents in August and 8.2 cents in July. Potatoes also showed a substantial decline, the price per 90 pounds being down from an average of \$1.90 in August to \$1.49 in September. Decreases were pronounced in practically all localities. Evaporated apples and prunes showed little change. Raisins were slightly lower at an average price of 17.4 cents per pound. Granulated sugar was lower in the average at 7.8 cents per pound in September, as compared with 7.9 cents in

August. The price of anthracite coal averaged higher at \$16.20 per ton in September, as compared with \$16.15 in August. Increases were reported from Windsor, N.S., Montreal, Toronto, Niagara Falls, Galt, Sarnia and Timmins. No changes were reported in rent.

Wholesale Prices

The following is a summary of a statement on wholesale prices changes during the month issued by the Dominion Bureau of Statistics.

The movement in grain prices during September was mixed. Wheat was slightly lower, No. 1 Manitoba northern cash wheat, Fort William and Port Arthur basis, averaging \$1.17 per bushel, as compared with \$1.18½ in August. The continued low prices were said to be due to the outlook for exceptionally large crops. Western oats rose from 52 cents per bushel to 54½ cents and Ontario oats at Toronto from 41 cents per bushel to 43¼ cents. American corn also advanced from \$1.08½ per bushel to \$1.18½, while flax was up from \$1.82 per bushel to \$1.86¼. Western barley at Winnipeg was down from 68½ cents per bushel to 66¼ cents and Ontario barley at Toronto from 70¼ cents per bushel to 65 cents. Flour at Toronto declined from \$7.57 per barrel to \$7.29, while oatmeal and rolled oats advanced, the former from \$3.45 per ninety pound sack to \$3.70 and the latter from \$3.80-\$4.35 per ninety-eight pound sack to \$3.96-\$4.50. Shorts rose from \$32.25 per ton to \$33.25. Raw sugar at New York fell from \$2.50 per hundred to \$2.18¾, while granulated at Montreal was down from \$5.70 per hundred to \$5.51. Potatoes were lower in most localities, Ontario grades at Toronto being down from \$1.27 per bag to 98 cents and Manitoba potatoes at Winnipeg from \$1.04 per bushel to 96 cents. Foreign fruits were lower, bananas at Montreal declining from \$3.50-\$4 per bunch to \$3.50 and oranges from \$8-\$8.50 per case to \$7.50-\$7.75. Ceylon rubber at New York declined from 19½ cents per pound to 18½ cents. Rosin was down from \$12.80 per barrel to \$12.35. Choice steers at Toronto were down from \$11.23 per hundred pounds to \$11.15, while western cattle at Winnipeg advanced from \$10.25 per hundred pounds to \$10.64. Hogs at Toronto fell from \$13.80 per hundred pounds to \$13.27 and sheep from \$7.15 per hundred pounds to \$6.87½. Dressed beef, forequarters, at Toronto rose from \$14.50 per hundred pounds to \$15.50 and hindquarters from \$21.50 per hundred pounds to \$22. Veal at Toronto advanced from 23 cents per pound to 25 cents. Bacon was up from 35-37 cents per pound to 37 cents and dressed hogs from \$16.50 per hun-

dred pounds to \$20.50. The wholesale price of milk at Toronto was up from 32 cents per gallon to 35 cents. Finest creamery butter at Montreal was 2 cents per pound higher at 43 cents, and prints at Toronto 1 cent per pound higher at 43 cents. Cheese at Montreal rose from 27 cents per pound to 29 cents. Fresh eggs at Montreal advanced from 46-50 cents per dozen to 50-55 cents. Raw cotton at New York declined from 19.3

cents per pound to 18.6 cents. The movement in non-ferrous metals was mixed, electrolytic copper at Montreal being up from \$16.35 per cwt. to \$16.54, and lead from \$6 per cwt. to \$6.10. Tin declined from 50½ cents per pound to 49¾ cents, silver from 58.8 cents per ounce to 57¼ cents, and antimony from 9¼ cents per pound to 9¼ cents. Anthracite coal at Toronto rose from \$13.27 per ton to \$13.52.

PRICES IN GREAT BRITAIN AND OTHER COUNTRIES

THE following notes and the accompanying tables give the latest information available as to movements of prices in Great Britain and other countries. The index number of retail prices are from official sources unless otherwise stated. The authorities for the wholesale prices index numbers are named in all cases.

Great Britain

WHOLESALE PRICES.—The Board of Trade index number, on the base 1913=100, was 139.3 for August showing a decrease of 1.3 per cent from the July figure. Foods declined 1.3 per cent due to lower prices for cereals and miscellaneous foods, while meat and fish advanced. In the industrial materials group, which declined 1.2 per cent, there was a sharp decline in cotton amounting to 5.7 per cent; other textiles and iron and steel declined slightly, other metals and minerals were unchanged and miscellaneous industrial materials advanced 0.2 per cent.

The *Economist* index number, on the base 1901-05=100, was 174.9 for August, a decline of 1.1 per cent for the month. A decline in cereals and meat was due to falls in the prices of wheat, flour, oats, rice and potatoes; "other foods" advanced owing to higher prices for butter and tea. There was a decline in the textiles group owing to lower prices for cotton. Among the minerals, tin declined, while miscellaneous products were practically unchanged.

The *Statist* index number (in continuation of Sauerbeck's figures) on the base 1867-77=100, was 118.0 at the end of August, a decline of 1.9 per cent from the previous month. Vegetable foods fell 4.6 per cent owing to reductions in the prices of oats, potatoes and wheat; animal foods declined 2.9 per cent due to lower prices for mutton and beef, partly counteracted by rises in pork, bacon and butter. Of the industrial materials groups, minerals advanced slightly owing to a rise in the price of lead; textiles declined

owing to the decreases in prices of cotton, flax and wool; sundries were unchanged.

COST OF LIVING.—The index number of the Ministry of Labour, on the base July, 1914=100, was 165 at September 1, which is the same figure as at August 1. The index for food was unchanged, increases in the prices of eggs and butter being counteracted by reductions in the prices of bread, flour and potatoes. Owing to an increase in coal, the fuel and light group showed a slight advance, but other groups were unchanged.

Belgium

WHOLESALE PRICES.—The index number of the Ministry of Industry, Labour and Social Affairs, on the base April 1914=100, was 841 for July, as compared with 844 in June. There were advances in clay products, resin products, hides and leather products and raw rubber; decreases in tar and products, foods, fuel and fats, metal products, petrol and products, fertilizers and textiles, while five groups, glass products, chemical products, construction materials, tobacco and paper were unchanged.

COST OF LIVING.—The index number of the cost of living of a middle class family of moderate income, on the base 1921=100, was 208.89 for August, as compared with 206.92 for July. All groups showed an advance except clothing which declined very slightly.

Austria

WHOLESALE PRICES.—The index number of the Federal Statistical Office, on the base prices in gold, first half of 1914=100, was 131 for September, a decrease of 1.5 per cent from the previous month, owing to reductions in both the food and industrial materials groups.

COST OF LIVING.—The official index number, on the base prices in gold July, 1914=100, was 109 for September as compared with 108 in August, owing to increases in food and rent, while other groups were unchanged.

(Continued from page 1164)

Germany

WHOLESALE PRICES.—The index number of the Federal Statistical Office, on the base 1913=100, was 141.5 for August, a decline of 0.1 per cent from the previous month. Agricultural products advanced 0.7 per cent due to an advance of about 5 per cent in cattle and in animal foods, partly counteracted by a decline in vegetable foods and fodder; colonial products declined 1.6 per cent. Industrial raw materials and semi-manufactured goods declined 0.6 per cent, the only marked change being in textiles which declined 3.6 per cent; manufactured goods declined 0.1 per cent.

COST OF LIVING.—The index number of the Federal Statistical Office, on the base 1913-14=100, was 153.5 for August, an advance of 0.6 per cent over July. Slight advances were noted in food, rent and heat and light; clothing was unchanged and the sundries group declined 0.1 per cent.

United States

WHOLESALE PRICES.—The index number of the Bureau of Labour Statistics, on the base 1926=100, was 98.9 for August, an increase of 0.6 per cent over the previous month. The group "farm products" was practically unchanged as a whole, decreases in grains being counteracted by advances in live stock and poultry. Foods advanced owing to higher prices for butter, eggs, milk, meats and potatoes. Hides and skins decreased but leather and its products were unchanged. Cotton and woollen goods declined; bituminous coal, petroleum

products and metals and minerals advanced. Building materials, chemicals and drugs and house-furnishing goods showed little change, while miscellaneous commodities declined owing to declines in cattle feed and paper and pulp.

The *Annalist* index number, on the base 1913=100, was 152.9 for September, an advance of 1.4 per cent over August. All groups showed advances except textile products and building materials which declined and chemicals which were unchanged.

Bradstreet's index number (showing the cost of a list of 106 commodities) was \$13.1285 at October 1, a decrease of 1.1 per cent from the previous month. Decreases were noted in live stock, fruits, hides and leather, textiles, oils and miscellaneous products; increases were noted in breadstuffs, provisions, metals, coal and coke, naval stores and building materials, while chemicals and drugs were unchanged.

COST OF LIVING.—The index number of the National Industrial Conference Board, on the base July 1914=100, was 161.4 for August, an advance of 0.2 per cent for the month due to slight advances in food and coal prices, while clothing showed a decline.

The index number of the Massachusetts Special Commission on the Necessaries of Life was 160.3 for August, a decline of 0.1 per cent for July. The index number for food advanced due to higher prices for meat and also for fish, eggs, milk, butter and other foods. There was a small decrease in clothing due to lower prices of cotton goods, men's suits, hats, hosiery, etc. Rent was also lower while fuel and light and sundries were unchanged.

RECENT LEGAL DECISIONS AFFECTING LABOUR

Agreement requiring Employment of Union Labour is Valid

A firm of building contractors in the city of Quebec undertook a contract to construct terrazzo floors in a parish church. The contract contained a clause requiring that members of Catholic Unions should be employed as far as possible in connection with the work, but the contractor failed to observe this condition. The Building Trades Council of the Catholic Unions of the City of Quebec then obtained from the workmen concerned, members of this organization, a transfer to the union of their rights of action in the matter. Acting on behalf of its members, the Council accordingly took action against the contracting firm in the Superior Court

for damages. The contractors in their defence contended that the condition referred to constituted an infringement of the freedom of labour; that it was impossible to give effect to the condition; that the work required the employment of workmen specially skilled in this class of work, such as those actually employed by them; that they had in fact employed, as far as was possible, members of the Catholic union, as required by the contract; that the Building Trades Council not having been a party to the contract had no legal standing in the case; and that the transfer of the workmen's rights to the union was null and void.

Mr. Justice Belleau, who heard the case, found that the evidence showed that the

defendant had refused "peremptorily and obstinately" to employ the Catholic Union workers in the work, which could be done by any workman under the direction of a competent foreman. Several of the Catholic Union workers, moreover, were familiar with the kind of work to be done. Four of them had transferred to the Union their rights of action. The Court found that the contractor had failed to prove the contention that it was impossible to employ members of the Catholic Union on the work in question and that his alleged inability to do so was suggested only by his own unwillingness. Whatever terms might be employed, the fact remained that a collective interest was at stake, and this collective interest was sufficient, in the opinion of His Lordship, to justify the intervention of the union as representing this collectivity. The judgment pointed out that the union had been incorporated under the Professional Syndicates Act of Quebec, its object being to "study, defend, and promote the economic, social and moral interests of the trade," and with powers to enter into contracts in furtherance of these objects. In the present case, the Union was found to have taken the special precaution of having the workmen's individual rights of action transferred to itself prior to the commencement of the work, and the defendants had not disproved the reality or genuineness of this transference. However, the judgment concluded, the plaintiff could not make use of this transfer to establish a claim for \$448, the amount claimed, this sum representing the losses sustained by the individual workmen subsequent to the date of the transfer. The union had paid out the sum of \$37 to assist its members, together with a further sum of \$15 in connection with the protest. The defendant was ordered, therefore, to pay damages in the sum of \$52, with costs.

—*Quebec—Building Trades Council of the Catholic Unions of Quebec vs. Ignace Bilodeau, Ltd.*

Injury Held to be Due to Accident Unless Contrary is Proved

A truck driver employed by a laundry firm in the Province of Quebec, while handling baskets of laundry, struck the ring finger of his right hand on a projection on the inside of his truck. Blood-poisoning set in and two joints of the finger had to be amputated. The accident occurred in October, 1927, and action was taken in the Superior Court at Montreal under the Workmen's Compensation Act, the new act not being applicable to accidents

occurring prior to September 1, 1928 (LABOUR GAZETTE, September 1928, page 937).

The defendants contended that their establishment, being a laundry, did not fall within the provisions of the Act; that the workman had failed to report the accident and secure medical aid, and that he had therefore been guilty of negligence. It was also contended by the employer that the infection of the finger was not caused directly by the alleged accident, but by osteo-arthritis caused by negligence. In this particular, Mr. Justice Bond, who tried the case, applied the decision of Mr. Justice Howard, of the Court of Appeals, in the case of the *Canadian National Railways vs. Trudel*, where His Lordship said:—

"It is now uniformly recognized that, when it is proved that an injury might have resulted from a certain accident, the court will presume, in the absence of proof to the contrary, that it did so result, although it may be shown that it may have been due to any one of a number of causes. In other words, proof that the injury might have been caused by the alleged accident constitutes *prima facie* proof and shifts the burden upon the defendant to prove that it did not so happen."

The court found also that the laundry industry was under the provisions of the Act, and awarded the plaintiff \$929.34 with interest and costs.

Quebec—Choquette vs. Heirs of late Francois Daniel et al.

Unlawful Assembly and Unlawful Arrest

The governmental authorities in the States of New Jersey and Colorado were found, by decisions handed down in 1928, to have exceeded their powers in interfering with certain labour activities arising out of two industrial disputes. These cases are summarized in the *Monthly Labour Review*, September, 1928, as follows:—

From August 1 to October 6, 1924, there was an industrial strike among the workers in the silk mills of Paterson, N.J. On September 26, 1924, and continuously thereafter until and including October 6, 1924, the strikers were prevented from holding their mass meetings in Turn Hall by order of the chief of police of that city. On the evening of October 6, 1924, a procession of persons marched from the union headquarters of the Associated Silk Workers to the City Hall plaza, a distance of a block and a half, led by two women bearing an American flag, behind whom walked John C. Butterworth and others. The purpose of the meeting, as

set out in printed posters, was to protest against the alleged unlawful acts and supposed oppression of the police in excluding strikers from Turn Hall and in preventing the continuing of their daily meetings therein. A police officer read the Riot Act or proclamation and the police dispersed the crowd Butterworth and others were arrested, indicted by the grand jury, and convicted of holding an unlawful assembly based upon the common-law offence declared to be a misdemeanor by section 215 of the Crimes Act of New Jersey. This conviction was affirmed in the Supreme Court of New Jersey on November 1, 1927.

The case was taken to the Court of Errors and Appeals where the judgment of the lower court was reversed on May 14, 1928. (*State v. Butterworth*, 142 Atl. 57). The Court of Errors said that "the right of the people to meet in public places to discuss in open and public manner all questions affecting their substantial welfare, and to vent their grievances, to protest against oppression, economic or otherwise, and to petition for the amelioration of their condition, and to discuss the ways and means of attaining that end, were rights confirmed and guaranteed them by the Magna Charta, Petition of Right, and the Bill of Rights, the mainstay of the British Constitution, and the bases of both our Federal and State Constitutions. Of course, it goes without saying this inestimable boon of liberty was to be enjoyed by the people in a peaceful and law-abiding manner."

The court referred to the constitutional guaranty found in the federal and state constitutions, and summed up the offense of unlawful assembly as "any gathering together of three or more persons, with intent to disturb the public peace, accompanied by some overt act or acts to effect that intent." As illustrations of the character of the overt acts the court pointed out that "if those gathering were armed, or were conducting themselves in such a disorderly manner as to give firm and courageous persons in the neighbourhood reasonable grounds to apprehend a breach of the peace as a result thereof, such gathering would be an unlawful assembly." The court pointed out that in order to institute the offense "it must appear that there was a common intent of the persons assembled to attain a purpose, whether lawful or unlawful, by the commission of such acts of intimidation and disorder which are likely to produce danger to the tranquillity and peace of the neighbourhood, and have a natural tendency to inspire rational, firm, and courageous persons in the neighbourhood with

well-grounded fear of serious breaches of the public peace." The Court found no evidence that any such offense had been committed by the defendant.

The second case arose out of a strike involving an armed clash in Weld County, Colo. Following an attempt of a group of persons to trespass on private property, several ordinary officers of the law fired upon the group, killing and wounding a few. The governor of the State called out the State militia under an order which vested in the militia commander authority to suppress the alleged insurrection by whatever means he, in his good judgment, deemed best. No attempt was made to declare martial law, to suspend the writ of *habeas corpus*, or to put aside the civil authorities in the two counties into which the state militia was sent. The courts within the two counties continued to function the same as they did before the emergency arose. In addition to this regular form of government a body of 35 militiamen, acting under the governor's orders, had exercised arbitrary power, arresting people and holding them, without charges that they had violated the law, committed any act of violence, or resisted or defied the peace officers of the State. Several persons were arrested. An application was made for a writ of *habeas corpus* to secure their release from custody in the United States District Court for the District of Colorado. (*United States v. Adams*, 26 Fed. (2d.) 141, reported June 28, 1928; date of decision not given). The District Court granted the writ and the prisoners were discharged.

The court stated that the proposition presented for decision was that "the governor has the power to grant at will a roving commission to a body of State militia to go into any part of the State that he may see fit, arrest and detain citizens, and deprive them indefinitely of their liberty and the rights guaranteed them by the Federal Constitution, actuated, as in this case, by the best of motives." The court said that "the mere commission of crime does not justify extraordinary remedies or setting aside the constitutional guaranties." It further stated that "there either must be martial law, or no martial law, and, until there is, no rogatory body can lawfully go around in this State, depriving individuals of the rights that the Constitution, both State and Federal guaranties," that "either that martial law is justified and declared, and the territory taken over, and the civil power made subordinate to the military, or else they must recognize the civil power, and allow it to deal with the situation."

FEDERAL AND PROVINCIAL LABOUR DEPARTMENTS, BOARDS, ETC., IN CANADA

Dominion of Canada

Department of Labour:

Ottawa.

THE LABOUR GAZETTE

PREPARED AND EDITED IN
THE DEPARTMENT OF LABOUR, OTTAWA, CANADA

VOLUME 28]

NOVEMBER, 1928

[NUMBER 11

NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

Monthly Summary

INDUSTRIAL activity in Canada showed a further slight decline on October 1, according to statements received by the Dominion Bureau of Statistics from 6,627 employers, each with a minimum of fifteen employees, whose staffs aggregated 998,851 persons, as compared with 1,003,601 in the preceding month. Employment on the same date last year also showed a similar reduction, but the situation then was not so favourable as on October 1, 1928, when the index (with January, 1920, as the base=100) stood at 118.9, as compared with 119.5 on September 1, and with 109.0, 105.2, 98.3, 93.9, 99.5, 94.6 and 90.2, on October 1, 1927, 1926, 1925, 1924, 1923, 1922 and 1921, respectively. These returns are representative of all industries except agriculture, fishing, hunting and highly specialized business.

At the beginning of October the unemployment percentage reported to the Department of Labour by local trade unions stood at 2.2, compared with unemployment percentages of 2.4 at the beginning of September and 3.1 at the beginning of October, 1927. The October percentage was based on the reports received by the Department of Labour from 1,626 labour organizations, with a combined membership of 181,615 persons.

Reports received by the Department of Labour from the offices of the Employment Service of Canada indicated a continued increase in the volume of business transacted during September as compared with the business in the preceding month and also with that in September, 1927.

The average cost of a weekly family budget of twenty-nine staple foods was \$11.28 at the beginning of October, as compared with \$11.15 for September; \$10.99 for October, 1927; \$10.93 for October, 1926; \$10.89 for October, 1925; \$10.31 for October, 1924; \$10.65 for October, 1923; \$10.23 for October, 1922; \$11.48 for October, 1921; \$15.83 for October, 1920; \$16.92 for June, 1920 (the peak); \$13.54 for October, 1918; and \$7.99 for October, 1914. In wholesale prices the index number calculated by

the Dominion Bureau of Statistics, based upon prices in 1913 as 100, was again slightly higher at 150.2 for October, as compared with 149.7 for September; 152.6 for October, 1927; 151.3 for October, 1926; 156.0 for October, 1925; 157.0 for October, 1924; 153.1 for October, 1923; 148.1 for October, 1922; 156.6 for October, 1921; 236.3 for October, 1920; 256.7 for May, 1920 (the peak), and 206.9 for October, 1918.

The time loss due to industrial disputes in September, 1928, was greater than in the preceding month, but slightly less than in October, 1927. Fourteen disputes were in existence at some time during the month, involving 2,623 workers, and resulting in a loss of 38,931 working days. Corresponding figures for September, 1928, were 10 disputes, 1,414 workers, and 10,457 working days, and for October, 1927, 20 disputes, 3,923 workers, and 39,493 working days.

Industrial Disputes Investigation Act, 1907

During October the Department received an amended report from the Board of Conciliation and Investigation established in connection with the dispute involving the street railway employees at Port Arthur and Fort William. The report of this Board appeared in the last issue of the LABOUR GAZETTE. Further particulars on this case are given on page 1189 of this issue. No new applications for Boards were received during the month.

Alberta Labour Disputes Act, 1926

The report of a Board of Conciliation and Investigation appointed under the Alberta Labour Disputes Act in connection with a dispute between the Calgary Master Painter's Association and the Brotherhood of Painters, Paperhangers, and Decorators of America, Local No. 583, Calgary, was given in the LABOUR GAZETTE, July, 1928, page 697. This Board was subsequently reconvened, and conferences, at which the Mayor of Calgary assisted, were held for the purpose of further-

ing the desire of the two organizations to secure a license for contracting painters within the city of Calgary. The Board succeeded in bringing the two parties together, and in arranging a settlement of the dispute according to the terms of an agreement which was signed by the representative of the employers and of the workers' organization. This agreement is identical in its terms with the verbal agreement outlined in the *LABOUR GAZETTE*, September, 1928, page 1014.

Ontario Railway and Municipal Board

Among the "Recent Industrial Agreements" outlined on another page of this issue is an agreement concluded by the Hamilton Street Railway Company and its employees, which was the outcome of arbitration proceedings carried out by the Ontario Railway and Municipal Board. This Board was established in 1906 under the provisions of the Ontario Railway Act passed by the provincial legislature in that year. In addition to its wide general powers in regard to railways (chiefly electric) under provincial jurisdiction, the Board was authorized to act, when requested to do so, as arbitrator in disputes which might otherwise result in a strike or lockout on the railways. The powers of the Board include the enforcement of agreements between the railways and municipalities; the making of final decisions when amicable agreements as to the entrance of radials, etc., cannot be reached, and in general the carrying out of the provisions of the Ontario Railway Act. The Board has all the powers of the High Court of Justice in enforcing these provisions, and its decisions on questions of fact are final. The government has no power to reverse findings or decisions, or to interfere in any way with the Board's work.

Importance of human factor in accident causation

The Bureau of Statistics and Information of the State of New York, in the *Industrial Bulletin* for October, discusses recent tendencies in industrial accident statistics. The general tendency of accidents of all classes to increase is noted, but some causes have leaped ahead while others have moved slowly. The increases vary from one per cent for accidents caused by animals, to 56 per cent for those occurring in connection with the use of hand tools. A remarkable fact is the slight increase in the accidents caused by machinery, which advanced by only 2 per cent between 1924 and 1928, coupled with the large increase of 38

per cent in accidents from "handling objects", and of 49 per cent in accidents from "falls". From these facts it would appear that "the technique of controlling accidents has progressed to a higher point in places where the human factor is less involved."

The relative importance of the human as compared with the mechanical factor is one of the surprising facts revealed by recent industrial accident statistics. Machines have been greatly increasing in use and complexity, and the natural expectation would be to see machine accidents increasing at a faster pace than other accidents or at least as fast. However, laws calling for the installation of safety devices on machines and providing for regular inspection have aided in bringing dangerous machines under better control. The conclusion that there has been greater advance in eliminating machine accidents is corroborated further by the small increase of only four per cent in accidents from hoisting and conveying apparatus. This has occurred in face of the fact that one of the important changes in present day industry is the increased use of mechanical conveyers.

Functions of proposed British National Industrial Council

The attitude of labour in reference to the proposed National Industrial Council for Great Britain was further described in a statement issued during October by Mr. Citrine, secretary of the Trades Union Congress. The constitution and functions of the Council were outlined in the last issue of this *GAZETTE*, page 1037. Mr. Citrine stated that the primary purpose of such a body would be to survey the entire field of industry, and to provide the means by which industrial problems in their widest aspect would be jointly examined and conclusions arrived at which those responsible for the conduct of the nation's economic enterprises could carry out. Its functions, he said, would be merely consultative, and its composition had been carefully considered so as to make it fully representative of industry.

The proposal, he said, involves the creation for the first time of a national body capable of speaking for industry as a whole. Other countries, such as France* and Germany, have established economic councils, but they do not serve the same purpose as the proposed National Industrial Council of Great Britain is designed to fulfil. The British body will be smaller and more practical, and its authority will be derived directly from industry.

**LABOUR GAZETTE*, 1925, page 822.

Discussing the proposal for setting up conciliation boards under the Council for the settlement of industrial disputes, Mr. Citrine was emphatic in stating that the aim is to avoid interference with the beneficial work carried on by the existing machinery of joint negotiation maintained by the trade unions and the employers' organizations, and that the boards would be resorted to only in disputes which fail to find settlement by existing machinery.

Wage order
declared invalid**

The judgment of the Supreme Court of Canada in the case *Field versus the International Timber Company* is printed in full on another page of this issue.

The result of the decision is that the order of the Board of Adjustment under the Male Minimum Wage Act of British Columbia*, fixing 40 cents an hour as the minimum rate of wages to be paid to all employees in the lumber industry, is declared invalid and is no longer in effect. The Supreme Court found that the Act authorized the board to fix minimum rates of wages for employees in various occupations, but not to fix a minimum rate for all grades of workers throughout an entire industry. The only occupations now covered by any order under the Act are those in the catering industry. This order was published early in the current year (LABOUR GAZETTE, March, 1928, page 260).

**Compulsory
arbitration
procedure
in France**

The French government is reported to have acceded to a suggestion made by organized labour for the promotion of legislation to make arbitration procedure

compulsory on the parties to labour disputes. Compulsory arbitration is regarded by labour representatives as a two-edged sword, and is strongly opposed, but on the other hand they desire arbitration procedure, and propose that the adoption of such procedure should be made compulsory. It is claimed that recourse to conciliation would have to be taken ultimately in any event, and often after the expenditure of much time, trouble and energy, which would be unnecessary if conciliation procedure were followed in the early stages of a dispute. In the recent dispute in the textile industry in Northern France the government found itself without legal authority to intervene or compel the employers to come

to the conference table. The government therefore considered with favour the proposal of organized labour for the establishment of machinery for compulsory arbitration procedure.

**Railwaymen
and workmen's
Compensation
in Alberta**

Pursuant to the amendments to the Workmen's Compensation Act (Accident Fund) of Alberta adopted at the last session of the provincial Legisla-

ture, the maintenance of way employees of the Canadian Pacific Railway Company in Alberta are to be brought under the provisions of the Act commencing January 1, 1929. The amendments of last session were summarized in the LABOUR GAZETTE, June, 1928, page 283. The running trades of the railways were expressly exempted from the provisions of the Act as is was first enacted in 1918, the compensation for workmen of this class being governed by the Act of 1908. At the last session the legislature repealed the exemption of "Class D," that is, railway employees, provided that the repeal should not become operative until after 60 days from the enactment of the amendment, and provided further that such exemption "shall continue to any class of workmen whose organization shall in the aforesaid sixty days have filed with the Government an application for a ballot being taken within four months from the date of application being filed among the members of the organization making such application, and further provided, that upon it appearing that a majority of those voting are in favour of being brought under the provisions of this Act, such class shall be brought within the Act by proclamation."

In accordance with these arrangements a vote was taken by the maintenance of way employees of the Canadian Pacific Railway Company, 334 out of 563 members of the union voting, and 197 members voting for inclusion under the Act of 1918, against 100 ballots to the contrary. Similar votes were taken at the same time by the Order of Railway Conductors and the Order of Railroad Trainmen, but the majority of the voters preferred to remain under the earlier Act. The Conductors' total membership in the Province is given as 411, 229 recording votes of which 158 were opposed to and 69 were in favour of inclusion. The trainmen's membership was 1,232, of whom 721 voted, 598 expressing their preference for the old act, and 123 favouring inclusion in the act of 1918.

*LABOUR GAZETTE, October, 1926, page 948.

**Commissioner's
report on
Hollinger Mine
disaster**

Mine last February, are printed on another page of this issue. The first part of the report, detailing the probable causes of the accident, was given in the June issue. The commissioner's recommendations for the amendment of the existing Regulations have the approval of the operators and workmen and also of the chief inspector of Mines of the Province. Stress is laid on the necessity of a knowledge of the English language and of thorough acquaintance with the mining regulations on the part of mine foremen. As to the immediate cause of the explosion on February 10, greater care is recommended in the storing of explosives and combustible material, and provision should be made for cutting off sections of the mine where fire is in progress by means of fire doors. Detailed requirements are given as to the maintenance of mine rescue stations and fire protection stations, fire alarms, etc.

**Developments
of industrial
hygiene in
Canada**

Mr. R. M. Hutton, special investigator of the Division of Industrial Hygiene of the Ontario Department of Health, contributes to the *Journal of Industrial Hygiene* for October an account of the development of industrial hygiene in Canada. Certain provisions have been made for many years in factory and other laws to promote the safety and health of workmen, but Mr. Hutton points out that "industrial hygiene, as a deliberate and self-conscious movement to make man's physiologic requirements the criterion upon which working conditions are based", is the outcome of the war. The modern health movement is a definite offshoot, he states, of the Health of Munition Workers Committee of Great Britain. The purpose of this committee was to ascertain the conditions under which worker's health, energy and output were at their highest, and without which there is waste through ill-health and fatigue. It was the reports of the Health of Munition Workers Committee which led to the establishment in Canada in 1919 of a federal Committee on Industrial Fatigue, as a branch of the Honorary Advisory Council for Scientific and Industrial Research. The committee was composed chiefly of the leading physiologists of the various Canadian Universities.

The recommendations of Judge Godson, the commissioner appointed by the Government of Ontario to investigate the subject of the disaster at the Hollinger

The Committee on Industrial Fatigue, during its eighteen months of active existence at Toronto, studied the health conditions in Canadian industry, brought existing health agencies into touch and built up a valuable library and information bureau. When the committee went out of existence, its staff, equipment and library were taken over by the Ontario Department of Health, which instituted the Division of Industrial Hygiene for promoting this work in Ontario. This Division has been at work already for seven years.

In the Province of Quebec, work of the same character is now being carried on by the division of industrial hygiene as part of the Quebec Health Department of McGill University, Montreal. An account of the work carried on at McGill University was given in the *LABOUR GAZETTE*, July, 1928, page 723.

Mr. Hutton proceeds to describe the growth of the work in his province. The practice of maintaining special medical services is spreading among the industries of Ontario. Many plants now employ a physician for either whole or part time, keep detailed records of loss of time from sickness, etc. At Thorold, there is an interesting example of small plant co-operation, where, as a development of the initial experimental demonstration carried out by the Division, four small plants, of which the largest has only 300 employees, have amalgamated to provide medical service for the employees. The number of industrial nurses also is steadily increasing throughout the province. Physical examination of workers is becoming common and is now practised in all public utilities and in connection with many of the largest industries. In Northern Ontario, where the usual medical facilities are not available, a system has been developed whereby every employer is bound by law to contract with a physician for the medical treatment of his men at a fixed rate per year per employee. Similar measures are being carried on in Quebec and Manitoba.

Mr. Hutton points out that "where the physician is immediately and vitally concerned in keeping down all possible sources of ill health, and where all the plants in the neighbourhood are on a similar system with regard to medical service, so that there is unusual basis for comparison of results, industrial hygiene in all its many sides has an admirable chance of being put to the test."

The Ontario Department is further engaged in the study of occupational diseases with a view to their control, including both ailments common to all industries, and also those involving special inquiries into particular occu-

pations. Mr. Hutton concludes his article with an account of the laws throughout Canada which incorporate provisions safeguarding employees' health.

Child Welfare Association and Juvenile immigration

The Canadian Child Welfare Association held a special session at Ottawa during October for the consideration of juvenile immigration questions. The Department of Immigration and Colonization was asked to permit only properly qualified societies to engage in bringing young persons to Canada. Other recommendations of the conference were as follows:—Thorough inspection should be made of every home in which it is proposed to place children, before the application is approved; every society should be required to provide a receiving home for the children; advice and vocational guidance should be given to immigrant boys and girls at the expiration of their indenture; the inspection staff of the Juvenile Immigration Branch of the Department should be augmented, or arrangements made for fuller co-operation between existing agencies; the Dominion and provincial authorities should co-operate so that no more children than can be absorbed be sent into any province; a better understanding should be reached between the British and Canadian agencies; all agencies sending children to Canada should work through the Canadian advisory committees; and the Canadian Government should continue the age limit of fourteen years for immigrant children as a permanent feature of immigration.

Winter work for British harvesters

A conference called by the Hon. George Spence, Minister of Railways, Labour and Industries of Saskatchewan, was held in the Legislative Building, Regina, toward the close of the season and was attended by representatives of various agencies concerned with or interested in colonization, immigration and employment. The migration of harvest labour from Great Britain was noted in last issue of the LABOUR GAZETTE. The purpose of the conference was to co-ordinate the efforts of the various agencies which are endeavouring to provide employment for British harvesters remaining in Canada during winter. It was found that such co-ordination was essential, and should be undertaken without delay. Individual farmers employing British harvesters were asked to co-operate with

the local lodges of the United Farmers of Canada in providing winter employment. The members of the conference, it is stated, were agreed that as far as Saskatchewan was concerned, no willing and capable British harvester need be without employment this winter. The *Public Service Monthly*, a periodical bulletin of matters of public interest in Saskatchewan, states that 6,000 of the 8,500 British miners brought to Canada for harvest work had found employment in the harvest operations in that Province.

Industry dependent on industrial research

The share of science in modern industry was discussed by Sir William Bragg, F.R.S., in his recent presidential address to the British Association for the Advancement of Science. The president pointed out that at the present time the most active industries are those founded on recent scientific research, the most notable being the electrical engineering industry. While that industry, with all its branches, may be traced, he said, to a single laboratory experiment by William Faraday, it has grown to its immense proportions to-day by the continuous adaptation of fresh streams of knowledge. Huge American corporations maintain research laboratories costing millions of pounds annually, finding that the financial return justifies their policy. The very active motor industry, the aeroplane industry, and the chemical industries are equally important examples of dependence upon intense research in laboratories.

Sir William Bragg contended that while mass production brings many necessities within reach of the public, there is the possibility that it may be carried to a point where its processes call for little intelligence in their working, and that in the end it may be found to be in charge of "cheap people of little intelligence." On the other hand, craftsmanship, to fulfil its task of providing for the people, must continually improve its processes. The improvement of craftsmanship, he added, depends in large part on the absorption and adaptation of scientific discovery, but it is necessary to realize that scientific knowledge and experience, to be of full service, must be in direct contact with the problem to be solved. A new class of worker is growing up, consisting of men engaged in research laboratories. A high value ought to be placed on the services of such men, especially because they form a direct line between the employer and their fellow-workers in the shops. They are in personal

contact both with capital and with labour, and may overcome the dangerous separation that has been in existence on the one hand between the manipulator in the shops and the designer in the drawing office, and on the other, between the factory directorate and scientific knowledge. So far, the president suggested, there has not been sufficient appreciation of the interests and rewards of a student of research, but with the growth of this new class there would be more value attached to the great services it could render to industry and to the public.

International cooperation in mine safety research

Safety in Mine Research Laboratories were opened last month at Sheffield, England, supplementing the service already provided at the similar station opened in June 1927, at Buxton (LABOUR GAZETTE, July, 1927, page 732). The Right Hon. Stanley Baldwin, Prime Minister, in declaring the new offices open, praised the work of the Miners' Welfare Fund and its officials, who had organized these laboratories. He referred to the interchange of safety research workers between Great Britain and the United States, which had been carried on during the past four years (LABOUR GAZETTE, September, 1925, page 864), and intimated that similar exchanges of students and of information would be effected by means of arrangements with France and other countries. "I hope," Mr. Baldwin said, "that the linking up of this work in all countries where the mining industry is carried on may be completed and that no country may be left out."

Most of the money for the new laboratories, amounting in all to £50,000, was obtained from the mine owners, with £2,000 from the government. Herbert Smith, President of the Miners' Federation, paid a tribute to the officials of the Miners' Welfare Fund, including Lord Chelmsford, its chairman. He remarked that something had now been done for the young and middle-aged in the industry, and he hoped the time was not far distant when the veterans who had spent themselves in the industry would be enabled to end their days at their own firesides.

Research in American industry

An American correspondent, writing to *Industrial and Labour Information*, a weekly publication of the International Labour Office, points out that every year shows an increase in the amount of money spent in the United States by corporations, institutions of learning, and federal and state governments for

industrial research. Expenditures for this purpose are now considered by successful producers in the United States to be as essential a feature in the annual budget as are advertising appropriations. According to a report of the National Industrial Conference Board, about \$200,000,000 is spent annually for industrial research in the country. About two-thirds of this sum is spent by individual private corporations or their associations, and about one-third by the government. Mass production, elimination of waste in material and human energy, hand-to-mouth buying, and other features of present day American industrial life are stated to have become possible on account of special research work, conducted in the main by the business concerns themselves, or their associations.

U.S. State Departments of labour

The United States Bureau of Labour Statistics recently issued Bulletin No. 479, dealing with the activities of the forty-three state organizations in the United States having the functions of bureaus of labour statistics. The first state bureau was organized in Massachusetts in 1869. No functions of the Government, it is declared in this report, are more widespread or are accomplishing more, considering financial limitations, than are the various Bureaus of Labour Statistics, yet the work of no state organizations or functions is less understood or less appreciated. Realizing that the work of these bureaus was not known or understood, Massachusetts and New York State have recently been introducing lectures in educational institutions on the functions of the State bureaus of labour. Statistical methods of treatment as now understood have been developed largely in the state and federal bureaus of labour statistics. This bulletin of the Federal Bureau is published as a contribution to the study of statistical methods as applied to industrial and economic problems. Its contents comprise the following sections: the New York Department of Labour and the industrial life of the State; official statistics and their service for business; how general medicine and surgery differ from industrial; industrial hygiene and preventive medicine in industry; how the industrial code is made; the functions of the industrial board; the inspection bureau and its meaning to industry; workmen's compensation; the relation of women in industry to the accident ratio; fitting the young worker to the job; legal aspects of labour problems; prevention or settlement of industrial disputes; preventive of accidents in industry; diet and clothing as factors in production.

Rationalization as an industrial policy

The recent agreement between the employers and organized labour in Great Britain to promote the establishment of a national industrial council (LABOUR GAZETTE, October, page 1037) has raised the question whether the new body, when established, should further the policy known as "rationalization".

It will be recalled that the World Economic Conference held at Geneva in May, 1927, adopted a resolution in favour of the rationalization of industry, this term being defined as signifying "the methods of technique and of organization designed to secure the minimum waste of either effort or material. It includes scientific organization of labour, standardization of both material and products, simplification of processes, and improvements in the system of transport and marketing." (LABOUR GAZETTE, July, 1927, page 770). This resolution of the Economic Conference was sponsored by the German delegation, the new movement having originated in Germany, where it was launched as a definite industrial policy as early as 1925. The effects of this policy are described by Mr. Walter Meakin, in "The New Industrial Revolution", a book recently published in London. (Gollancz). In 1925 and the following years, commencing with coal mining, one German industry after another was transformed by the scrapping of old equipment and by reorganization under centralized control.

As to the possibility of "rationalizing" British industry by these methods, it is pointed out by an English critic in the *New Statesman* that the process of rationalization easily conformed to the economic habits of Germany, where centralizing tendencies had long prevailed, but that its success in British business, with its strongly individualistic traditions, is not so well assured.

Rationalization involves a wholesale shutting down of obsolete and uneconomic plants, followed by wholesale dismissals of work-people necessitating state measures of relief. On the other hand Mr. Meakin shows that in Germany the country where the policy has been actually carried out, dismissed workers have nearly all been absorbed after a time through the development of industry brought about by rationalization. "Production in the rationalized industries was cheapened; more was sold of their products and the prosperity spread to other branches of industry and to agriculture, with the result that far more labour was absorbed than had been originally displaced."

The organization of a Committee on Rationalization of British Industry, under the chairmanship of Sir William Mackenzie, was noted in the LABOUR GAZETTE, March, 1928, page 242.

Problem of the "obsolescent" employee

The *Service Letter on Industrial Relations*, published semi-monthly by the National Industrial Conference Board (U.S.A.) in its issue of October 5, 1928, discusses the problem of the "obsolescent" employee, that is, the workman of advanced age whose productive powers are declining. The steady adoption of machine processes and the accelerated rate of production have drawn the attention of employers to those among their workmen who have passed the adaptable age and now lack alertness and power of concentration. Pension plans and age limits are often introduced by employers for the purpose of disposing of such cases, but the problem remains unsolved, particularly in regard to employees of terms of service less than about fifteen years.

"The problem of the employee who has outlived his productive usefulness, but is still physically capable of earning his living," the *Service Letter* points out, "is likely to grow more rather than less, serious. When Frederick W. Taylor instituted his differential piece-rate method of wage payment, which provided a high reward for exceptional productive accomplishment and correspondingly low reward for failure to reach the standard, he frankly stated that the system was calculated to attract and to retain the exceptional workers and to discourage and eventually to force out those who were not capable of meeting the standard. The criticism of the plan made then, that these less desirable employees must find employment somewhere or they would create a grave social problem, seems to apply to the present situation. The number of obsolescent employees may be comparatively small in each establishment, but if this situation of premature loss of productive value is as widespread as it appears to be throughout industry generally, and if this condition is to be aggravated by progress in manufacturing technique, some adequate, just and equitable solution must be found for the serious economic and social problem which it presents."

The Saskatchewan Teachers' Alliance recently decided to establish at Battleford an information bureau for school teachers and school trustees in the province. The Alliance is said to have 2,500 members in 53 local branches.

GENERAL REVIEW OF THE INDUSTRIAL SITUATION

Employment

THE employment situation at the end of October was reported by the Superintendents of the Employment Service to be as follows:—

In the Province of Nova Scotia the farming industry was engaged chiefly at fall ploughing. Logging operations in this province were not yet of any considerable proportions. Manufacturing industries, including the iron and steel group, were experiencing normal activity. Building and construction were gradually being curtailed, although substantial activity was still being maintained in the city of Halifax where several large undertakings had been under way. Coal mining continued to show rather satisfactory output, and fairly regular working time was the rule. Transportation reported heavy traffic, while trade was reported as good. The demand for women domestic workers remained fair.

As in Nova Scotia, farmers in the Province of New Brunswick were busy on the usual fall work. While the prospects in the logging and allied industries were good, only small orders for workers were being listed at the employment offices. The fishing industry reported fair catches. Building and construction were slackening off to some extent, although in the city of St. John considerable work was still being carried on. Transportation was rather heavy, with the employment incidental to navigation being rather favourable for the season. Manufacturing industries were stated to be normal. Trade was rather quiet. The demand for women domestic workers was fairly satisfactory.

The demands for farm workers being listed at the employment offices in the Province of Quebec were of a satisfactory number, considering the lateness of the season. With quite a few orders for bush workers still being received, the offices in this same province were effecting quite a number of placements. Manufacturing appeared to be generally quite satisfactory, with only minor fluctuations in the different localities reported. Building and construction had not yet begun to show any substantial diminution in volume throughout the province, and numerous orders for the different classes of workers for the industry were still being received and filled. Trade was reported as normal for the time of year. With a satisfactory demand for women domestic workers, a number of applicants were being placed in this class of employment.

Practically all of the Ontario employment offices reported a falling off in the demand for farm help, which fact was accounted for by the advancement of the season. Employment in the building and construction group was being rather well maintained, with the numbers of vacancies for workers, especially carpenters, being of a rather satisfactory character. Although a few factories had slackened off on production for the purpose of taking stock, the manufacturing industries throughout this province were fairly busy. The logging industry was rather quiet, and only small orders were being received. The mining group in the northern section of the province, while taking on very few additional men, continued to operate normally. The demands for house workers, particularly cooks and cooks-general, were again reported as being fairly heavy.

In the Province of Manitoba, with fall farm work being practically completed, vacancies notified to the employment offices for workers for the agricultural industry were chiefly for winter work and were comparatively few in number. While there were some demands for logging workers being registered, they were rather few in number for the time of year. There were still small demands for railway and highway construction workers, in spite of the lateness of the season. Reports this year showed a much heavier total volume of buildings undertaken in the city of Winnipeg, and building construction at that point continued operations on a fairly large scale. Mining activity in the northern section of the province was progressing satisfactorily. There was a good supply of applicants for all branches of work for which women domestic workers were being sought, in comparison with the number of vacancies being listed for such workers.

The outstanding feature of the employment situation in the Province of Saskatchewan was the decrease in the demand for farm workers: those now being sought were chiefly for winter work, and there did not appear to be any shortage of applicants as compared with the number of vacancies being listed. While the demands for workers for the different sections of the construction industry were not in any large volume, some were being recorded, and activity in this group appeared to be fairly well maintained. In the northern section of the province there was some demand for logging workers, although it was not of an outstanding character. Women applicants for domestic service seemed more

plentiful, while vacancies for such workers were not particularly numerous. On the whole the situation throughout this province appeared to be fairly satisfactory for the season.

With the practical conclusion of threshing in the Province of Alberta, vacancies for farm workers being registered at the employment offices were chiefly for winter help; there did not seem to be any shortage of suitable appli-

*Figures for end of previous months. †Bradstreet. ‡Maclean Building Review. §For group figures see articles elsewhere in this issue. **Figures for four weeks ending Oct. 27, 1928, and corresponding previous periods. ***The index of the physical volume of business includes, forestry, mining, construction, manufacturing, trade, imports, exports, car loadings, shares traded and bank debits. Industrial commodity production includes forestry, mining, manufacturing and construction. Manufacturing includes production of flour, sugar, newsprint, pig iron, steel and automobiles; imports of cotton, rubber, wool and petroleum; slaughtering of cattle, sheep and hogs; storage holdings of butter and cheese. ††Preliminary. †††Excluding lines east of Quebec. (2)Including lines east of Quebec. (1)Life Insurance Sales Research Bureau, Hartford, Conn.

cants for such work. With a noticeable decline in the demand for workers for the construction industry, and with a curtailment of operations in this line in view, the activity of building generally appeared to be fairly well maintained. From Edmonton it was reported that the demand for logging workers was holding up fairly well, but weather conditions were impeding operations. In the coal mining industry vacancies were rather scarce, although activity around the mines seemed fairly favourable. The demand for women domestic workers, generally speaking, seemed at least equal to the supply. Although a curtailment of operations adversely affecting employment might be expected in the course of a few weeks, employment conditions throughout Alberta appeared to be maintaining a fairly satisfactory volume for the season.

The logging industry in the Province of British Columbia was rather active in some localities, although in other places reports were not so satisfactory. While there was no new activity of a noteworthy character reported in the metal mining group in this province, it appeared that normal operations were being maintained. Building and construction were fairly active throughout the province, although an industrial dispute in the city of Vancouver was having an adverse effect on operations in that vicinity. From Nanaimo coal mining was reported as being fairly satisfactory. General employment conditions in British Columbia were not unfavourable for the season, although several of the offices reported substantial numbers of transients making application for work, for whom employment was not readily available in a number of cases.

EMPLOYERS' REPORTS.

Industrial activity showed a further slight curtailment on October 1, according to statements tabulated by the Dominion Bureau of Statistics from 6,627 employers, whose staffs aggregated 998,851 persons, as compared with 1,003,601 in the preceding month. Employment on the same date last year had shown a similar slackening; the situation then was not so favourable as on the date under review, when the index stood at 118.9, compared with 119.5 on September 1, and with 109.0, 105.2, 98.3, 93.9, 99.5, 94.6 and 90.2 on October 1, 1927, 1926, 1925, 1924, 1923, 1922 and 1921, respectively. The number of persons employed by the reporting firms in January, 1920, is taken in every case as the base equal to 100.

Ontario firms afforded greater employment, while elsewhere there were contractions, of which the most marked was in Quebec. In the Maritime Provinces, there were further

losses, involving considerably fewer workers than did those registered on the same date last year, when the index was decidedly lower. Construction and services reported the bulk of the decline, while the tendency was favourable in manufacturing, logging, mining and trade. In Quebec, manufacturing and construction registered most of the decrease, while logging, mining and trade afforded more employment. In Ontario, continued improvement was indicated, particularly in manufacturing, logging and trade. On the other hand, there were marked losses in construction and smaller reductions in transportation. In the Prairie Provinces, the falling-off in employment repeated the movement noted on the corresponding date last year; the index number then, however, was lower. The curtailment took place chiefly in construction, but also in services, while manufacturing, transportation and trade were more active. In British Columbia further moderate contractions were noted, mainly in construction, manufacturing, transportation and services, while logging and trade reported heightened activity.

The trend of employment was upward in Toronto and Winnipeg, but downward in Montreal, Quebec city, Ottawa, Hamilton, Windsor and the other Border Cities, and Vancouver. In Montreal, manufacturing, transportation and construction reported the bulk of the reduction, while trade was brisker. In Quebec, practically all the loss took place in manufacturing and transportation. In Toronto, manufacturing was much busier, as were trade, services and building construction. In Ottawa, trade was more active, while construction showed declines. In Hamilton, curtailment was registered in manufacturing, other industries showing little general change. In Windsor and the other Border Cities, there was a falling-off in the number employed, mainly in automobile plants and construction. In Winnipeg, trade was decidedly more active, and manufactures also showed improvement, but there were declines in building. In Vancouver, trade was busier, but manufactures, construction and shipping reported decreases.

There was a further small contraction on the whole, in manufactures, largely in fish-preserving and saw-milling plants, although there was also a falling-off in rubber, pulp and paper, building material, iron and steel, and non-ferrous metal works. On the other hand, vegetable food factories showed important seasonal improvement, and there were also large gains in textile, electrical apparatus and musical instrument plants. Logging, mining,

transportation and trade registered considerable gains, but in construction and services there were extensive seasonal losses.

An article elsewhere in this issue gives in some detail the employment situation as at the beginning of October.

TRADE UNION REPORTS. Reports tabulated at the close of September from 1,626 local trade unions with 181,615 members, indicated an unemployment percentage of

2.2, compared with 2.4 per cent in August, and with 3.1 per cent in September last year. Alberta unions reported an increase in unemployment of 3 per cent over August due to restricted operations in the coal mines of the province, and in British Columbia also employment subsided slightly during September. Fractional increases in work afforded were reported from the remaining provinces, the total gains from these being sufficient to sway the percentage for Canada as a whole, favourably. Alberta was the only province to report reductions in activity during September when compared with the corresponding month in 1927, due as in the previous comparison to unemployment among coal miners. The improvement recorded in the other provinces over September a year ago was not particularly outstanding in any other province.

A review in greater detail of the unemployment situation at the close of September, as indicated by local trade unions, is printed elsewhere in this issue.

EMPLOYMENT OFFICE REPORTS. Reports of the Employment Service of Canada for the month of September, 1928, showed 78,526 references of persons to positions and a

total of 77,027 placements, of which 63,293 were in regular employment and 13,734 in casual work. Regular placements totalled 57,803 for men, and 5,490 for women. Vacancies reported to the Service numbered 86,503, of which 73,368 were for men and 13,135 for women. Applications for work were received at the offices from 70,791 men and 13,754 women, a total of 84,545. There was an increase in the volume of business transacted daily, both when the figures were compared with those of the previous month and also with September last year. As there were fewer working days during September, 1928, than in the corresponding month last year, the total number of vacancies, applications and placements reported was slightly less, there being 88,426 vacancies, 86,797 applications for work, and 77,242 placements in regular and casual employment during September, 1927. The reports for August, 1928, showed 76,342 va-

cancies offered, 81,280 applications made, and 74,234 placements effected. In another section of this issue may be found a detailed report of the work of the offices for September, 1928, and for the quarterly period July to September of the current year.

Production and Trade

INDUSTRIAL PRODUCTION Some figures indicating the recent movements of trade and industry are given in the table on page 1185.

The physical volume of business in Canada showed moderate recession in September compared with the preceding month, according to the *Monthly Review of Business Statistics*, published by the Dominion Bureau of Statistics. Much of the material for this section is derived from this publication, to which readers are referred for fuller information on current business statistics. The decline in automobile production was much greater than would be explained by seasonal tendencies. The imports of raw cotton were below normal, showing that textile mills are not acquiring raw material in usual volume. The imports of crude petroleum indicate that operations of the oil industry continued to expand. The iron and steel industry was again active, showing the influence of large orders from the construction companies and the railways. Construction contracts awarded were exceptionally large, owing to the placing of six contracts in excess of one million dollars. Building permits were also in excess of the preceding month. Revenue carloadings were at a new maximum for the month, the movement of the grain from the Prairie Provinces being the chief factor in the increase.

Coal Production.—According to a monthly report by the Dominion Bureau of Statistics, coal production in Canada during September was 9 per cent lower than in August and 14 per cent greater than the average for the month in the five preceding years. For the first nine months of the calendar year 1928 the output was 17 per cent in advance of the average for the period in the five preceding years. The output for the month was 1,395,753 short tons, including 1,003,752 tons of bituminous coal, 50,509 tons of sub-bituminous coal, and 341,492 tons of lignite coal. Nova Scotia produced 608,423 tons; New Brunswick, 15,716 tons; Saskatchewan's output amounted to 28,939 tons; Alberta produced 533,589 tons, including 170,527 tons of bituminous coal, 50,509 tons of sub-bituminous coal and 312,553 tons of lignite coal; and British Columbia's output was 209,086 tons.

EXTERNAL TRADE. A summary of Canadian Trade prepared by the Department of National Revenue shows that in September, 1928, the merchandise entered for consumption amounted to \$106,066,189, as compared with \$114,175,346 in the preceding month and with \$91,802,777 in September, 1927. The chief imports in August were: Iron and its products, \$28,045,182; Fibres, textile and textile products, \$16,516,814 and non-metallic minerals and products, \$16,203,003.

The domestic merchandise exported during September, 1928, amounted to \$109,828,366, as compared with \$112,493,026 in August, 1928, and with \$97,412,316 in September, 1927. The chief exports in September 1928 were: Agricultural and vegetable products, mainly foods, \$42,440,326; wood, wood products and paper, \$23,823,543; and animals and animal products, \$17,701,568.

In the six months ending September, 1928, exports of domestic merchandise totalled \$631,969,913, and imports \$626,421,665.

BUILDING PERMITS AND CONTRACTS AWARDED. According to a report prepared by the Dominion Bureau of Statistics, the value of permits issued in 63 cities in Canada during the month of September was \$21,302,746 as against \$17,383,279 in August, 1928, and with \$14,462,243 in September, 1927.

The *MacLean Building Review* estimates the total value of the construction contracts awarded in Canada in October, 1928, as \$44,584,900. Of this amount, \$12,122,300 was for residential buildings, \$11,869,400 was for engineering construction, including roads, sewers, wharves, etc., and \$10,846,200 was for business buildings. The apportionment of the contracts awarded during October, 1928, by provinces was as follows: Ontario, \$19,870,500, Quebec, \$16,630,200, New Brunswick, \$129,400, Nova Scotia, \$1,537,000, Prince Edward Island, \$27,500, British Columbia, \$2,765,800, Alberta, \$1,026,100, Saskatchewan, \$1,465,000, Manitoba, \$1,133,400.

Canadian construction for this year now exceeds that for the entire year of 1927 by 1.2 per cent.

Strikes and Lockouts

The time loss due to industrial disputes in October, 1928, was greater than during September but slightly less than during October, 1927. There were in existence during the month fourteen disputes, involving 2,623 workpeople, and resulting in a time loss of

38,931 working days, as compared with ten disputes, involving 1,414 workpeople and resulting in a time loss of 10,457 working days in September. In October, 1927, there were on record twenty disputes, involving 3,923 workpeople and resulting in a time loss of 39,493 working days. Two of the strikes and lockouts commencing prior to October terminated during the month as did five of the disputes which commenced during October. At the end of month, therefore, there were on record seven strikes and lockouts affecting 2,079 workpeople, not including those strikes and lockouts in which employment conditions were reported to be no longer affected but which had not been formally called off.

Prices

The cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average retail prices in some sixty cities was \$11.28 at the beginning of October, as compared with \$11.15 for September; \$10.99 for October, 1927; \$10.93 for October, 1926; \$10.89 for October, 1925; \$10.31 for October, 1924; \$10.65 for October, 1923; \$10.23 for October, 1922; \$11.48 for October, 1921; \$15.83 for October, 1920; \$16.92 for June, 1920 (the peak); \$13.54 for October, 1918; and \$7.99 for October, 1914. The most important advances were seasonal increases in the prices of eggs, milk and butter, while less important advances occurred in the prices of veal, mutton, salt pork, bacon, lard and beans. Potatoes were substantially lower, while the prices of sirloin steak, evaporated apples and yellow sugar showed slight declines. Including the cost of fuel and rent with that of foods the total budget averaged \$21.52 at the beginning of October, as compared with \$21.38 for September; \$21.18 for October, 1927; \$21.14 for October, 1926; \$21.11 for October, 1925; \$20.67 for October, 1924; \$21.16 for October, 1923; \$20.87 for October, 1922; \$22.01 for October, 1921; \$26.46 for October, 1920; \$26.92 for July, 1920 (the peak); \$21.48 for October, 1918; and \$14.48 for October, 1914. Fuel was practically unchanged, while rent was slightly higher.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics was slightly higher at 150.2 for October, as compared with 149.7 for September; 152.6 for October, 1927; 151.3 for October, 1926; 156.0 for October, 1925; 157.0 for October, 1924; 153.1 for October, 1923; 148.1 for October, 1922; 155.6 for October, 1921; 236.3 for October, 1920; 256.7 for May, 1920 (the peak); and 206.9 for October, 1918. In the

grouping according to chief component materials four of the eight main groups advanced, two declined and two were unchanged. The groups which advanced were: the Vegetables and their Products group, due to higher prices for grains, flour and other milled products, oranges, bananas, hay and rubber, which more than offset lower prices for potatoes and sugar; the Fibres, Textiles and Textile Products group, due mainly to higher prices for raw cotton and silk; the Iron and its Products group, mainly because of advances in

the prices of steel billets and steel sheets; and the Non-Ferrous Metals group, due to higher prices for copper, silver, tin, solder and antimony. The Animals and their Products group declined, lower prices for live stock, meats, hides, leather, boots and lard more than counterbalancing advances in the prices of milk, eggs and fish. The Wood, Wood Products and Paper group was also slightly lower, while the Non-Metallic Minerals group and the Chemicals and Allied Products group were unchanged.

PROCEEDINGS UNDER THE INDUSTRIAL DISPUTES INVESTIGATION ACT DURING THE MONTH OF OCTOBER, 1928

DURING October the Department received an amended report from the Board of Conciliation and Investigation established to deal with a dispute between the cities of Port Arthur and Fort William and certain of their employees in street railway service, being members of Division No. 966, Amalgamated Association of Street and Electric Railway Employees of America. The report of the Board as submitted to the Department of Labour on September 13, and which appeared in the October issue of the *LABOUR GAZETTE*, p. 1050, recommended 56½ cents an hour as the rate of pay for one-man car operators for the second six months. The Board subsequently advised the Department that this was an error, as the rate which it was intended to recommend was 57½ cents, and the report was accordingly amended in this respect.

At a joint meeting of the Public Utilities Commission of the city of Port Arthur and the Fort William Utilities Committee, held on October 1, a motion was adopted accepting the findings of the Board of Conciliation and Investigation established in this dispute, "with the exception of the extra gang in the track department, and also the suggestion made in the report that the employers institute an adequate pension plan for their employees, which questions were not in dispute, and that the Managers draw up an agreement in accordance therewith."

This resolution was ratified by the City Council of Fort William on October 9, and was also passed as a resolution of the Port Arthur Public Utilities Commission on October 11.

Modern Problem of Distribution of Goods

Distribution, the process by which goods are transferred from producer to consumer, was stated, in a recent address by William Butterworth, president of the Chamber of Commerce of the United States, to be one of the gravest problems overshadowing American economic progress. It is secondary in importance, he said, only to the problem of creating new markets for farm and factory. "Nowhere," he continued, "is the evolution in business methods more apparent than in changes now occurring in the methods of distributing merchandise to the user. The growth of the chain store system has revolutionized long-established methods of retailing. Will the wholesaler," the president asked, "be put out of business by great retail chains of stores buying direct from manufacturers, or manu-

facturing on their own account? Will manufacturers be placed at the mercy of great distributing chains capable of taking their entire output, or which, dominating retail outlets, foreclose the independent manufacturer's market for his product? Do chain-store methods of distribution mean an economic saving and benefit to our people?"

A survey of distribution in eleven typical cities discloses that nearly 30 per cent of the four billion dollars' worth of goods sold is distributed by chain stores. More than 22,000 independent stores (28 per cent of the total studied) do only 1½ per cent of the total business, and made an average profit of only 32 cents a day. Forty establishments possessed one-sixth of all the business.

CANADIAN RAILWAY BOARD OF ADJUSTMENT No. 1

Summary of Recent Proceedings

SEVEN new decisions were recently given by the Canadian Railway Board of Adjustment No. 1. This Board was established by a voluntary agreement concluded in 1918 between the various railway companies and certain of the railway organizations, its original purpose being to secure uninterrupted service on the railways during the continuance of the war. The Board consists of six representatives of labour, one for each of the following railway brotherhoods: the Brotherhood of Locomotive Engineers, the Brotherhood of Locomotive Firemen and Engineers, the Order of Railway Conductors, the Brotherhood of Railroad Trainmen, the Order of Telegraphers, and the Brotherhood of Maintenance of Way Employees and Railway Shop Labourers. Earlier decisions were outlined in the *LABOUR GAZETTE*, August, 1928, and in previous issues. The third report of the proceedings of the Board, covering the decisions rendered from October 1, 1923, to September 30, 1927, was issued as a supplement to the issue of November, 1927.

Case No. 326.—Canadian National Railways (Western region) and Order of Railway Conductors and Brotherhood of Railroad Trainmen.

The railway company operated an oil-electric train consisting of three coaches between Edmonton and Saskatoon, a distance of about 330 miles, the running time being 13 hours and 20 minutes, and they employed no brakeman on this run. The employees contended that the company's failure to employ a brakeman was a violation of the provision in the schedule requiring the employment of full crews on this part of the line. The company, on the other hand, claimed that in 1918, when the schedules were made, there were no oil-electric or gas propelled passenger cars in service, and that a brakeman was not required for such cars. It was shown at the hearing that there were some runs in motor car and electric service that were manned with less than the full crew required by the schedule, this being done under agreement with the employees. The Board decided that in the absence of any other agreement to the contrary, the train in dispute should be manned with a full crew.

Case No. 332.—Edmonton, Dunvegan and British Columbia Railway and Order of Railroad Telegraphers.

An agent in Alberta was dismissed by the Company owing to an accumulation of demerit marks. These marks were given for breaches of discipline alleged to have been committed on two occasions. On the first occasion he absented himself from duty owing to illness, without obtaining relief. The company contended that this offence was punishable by dismissal, but leniency was exercised, and no protest against the demerit marks was made by the employees for seven months. On the second occasion the employee gave information to the local press concerning the company's financial affairs, this being considered an offence.

The Board decided that removal from the service for one year would be reasonable discipline, but that the agent should be restored to service with seniority rights unimpaired, but without pay for time lost.

Case No. 333.—Canadian National Railways (Atlantic region) and Brotherhood of Locomotive Engineers and Brotherhood of Locomotive Firemen and Engineers.

The engineer and fireman on a way freight train were disqualified from way freight service for delaying yard operations by taking lunch on arrival at the terminal. The company stated that instructions had been issued previously that the cars were to be brought to the freight shed on arrival before supper was taken, and that on this occasion the engine crew failed to inform the despatcher of their intention to take supper. After investigation they were taken off way freight service and assigned to passenger service, but about three weeks later they were restored to a way freight run. The fireman alleged at the inquiry that on the arrival of the train at the terminal, a signal had been received from the rear of the train informing the engine crew that the train crew intended to take supper, and both crews then took supper at the same time.

The employees asked the Board to rule on two points in this case: (1) As to the rights of subordinate officers, not signatories of the schedule agreement, to specify a set time for employees to take meals, or to issue any instructions designed to defeat any rule advantageous to the employees; (2) the claim of the engineer and fireman for the difference in

earnings lost to them, due to discipline administered. In reply, the Board ruled that the first question, as to the issuance of instructions by railway officers, had no bearing on the case. The employee's contention in regard to pay was sustained with regard to payment for the actual time during which the men were held out of service, but not with regard to the difference in the rates of pay received by them while in other service.

Case No. 334.—Canadian National Railways (Western region) and Order of Railroad Telegraphers.

An agent claimed overtime for coming on duty to meet a passenger train after regular working hours for the purpose of handling express shipments only. The employees contended that express commissions were separate and distinct from wages, and that the agent's hours of duty were prescribed by the telegrapher's schedule, which also provides for the payment of overtime rate for service performed outside regular duty. On the other hand, the company claimed that when an agent comes on duty for the sole purpose of handling express business, for which he is paid express commissions, he is not in addition entitled to overtime pay, as though he were called for other work. It appeared that the agent had received overtime pay on other occasions when he came on duty outside of regular for the purpose of handling express.

The Board ruled that overtime is payable by the Railway for duty required by them outside regular hours, but not necessarily for exclusively express service. Overtime payments having been paid under an arrangement made through the company's officers, should be continued, it was held, until the instructions are changed so that such duty shall not be required.

Case No. 335.—Canadian National Railways (Western region) and Order of Railroad Telegraphers.

An operator was discharged from service for failing to report for duty at the appointed hour, resulting in a delay of train service. The employees claimed that the dismissal was not warranted by the facts in the case and that the operator should be reinstated, with pay for all time lost. The evidence showed that the discipline imposed in this case was unusual. The Board sustained the claim of the employees in reference to the agent's reinstatement with full seniority rights, but denied the claim for payment for lost time.

Case No. 336.—Canadian National Railways (Western region) and Order of Railroad Telegraphers.

This case was similar to case No. 335. It concerned a female operator who was dismissed from the service for leaving the office without an operator in charge and without making personal transfer to the incoming operator. The decision was identical with that in the preceding case.

Case No. 337.—Canadian National Railways (Western region) and Brotherhood of Locomotive Engineers and Brotherhood of Locomotive Firemen and Engineers.

A controversy arose as to the interpretation of clauses A and D, Article 2, concerning the method of payment of freight crews, and the interpretation of the detention and switching rule of Engineer's and Firemen's schedules applicable on the Duluth, Winnipeg and Pacific Railway. The Company contended that the correct procedure was that unassigned crews should be used in short turn-around freight service and should be paid terminal time at both ends of the road, together with actual miles or hours (whichever is the greater) for the road mileage travelled. The employees, on the other side, contended that the proper payment for freight crews in short turn-around service was as follows:

Terminal detention and switching at the commencement and ending of the trip, and at the turn-around point, plus 100 miles, if road mileage is less than 100 miles, actual miles if road mileage exceeds 100 miles, plus arbitrary time allowance for preparatory and inspection time.

The employees further contended that during the sixteen years for which the rules have been in force the men had been paid according to this method, without any question being raised; that this interpretation of the rules was mutually agreed to when the rules were first placed in the schedules; and that the officers at present in charge of the railway were not the same officers who negotiated the schedules.

The Board decided that under the circumstances, payment as hitherto made under the rule by mutual understanding should continue in effect.

The Montreal City Council is considering a proposed new by-law to provide for safety of workmen in building operations. A draft of the by-law has been submitted to the local building trades for inspection and suggestions.

STRIKES AND LOCKOUTS IN CANADA DURING OCTOBER, 1928

THE number of strikes and lockouts in existence in Canada during October was fourteen as compared with ten the previous month. The time loss for the month was slightly less than during October, 1927, being 38,931 working days, as compared with 39,493 working days during the same month last year.

Date	Number of disputes	Number of employees involved	Time loss in working days
*Oct. 1928.....	14	2,673	38,931
*Sept. 1928.....	10	1,414	10,457
Oct. 1927.....	20	3,973	39,493

*Preliminary figures.

The record of the Department includes lockouts as well as strikes, but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees at its commencement and lasting at least one working day. Disputes of less than one day's duration, and disputes involving less than six employees, are included in the published record only when ten day's or more time loss is caused, but a separate record of such disputes is maintained in the Department, and the figures are given in the annual review.

The figures printed are inclusive of all disputes which come to the knowledge of the Department, and the methods taken to secure information practically preclude probability of omissions of a serious nature. Information as to a dispute involving a small number of employees, or for a short period of time, is frequently not received until some time after its commencement.

Six disputes, involving 1,276 workpeople, were carried over from September, and eight disputes commenced during October. Two of the disputes commencing prior to October terminated during the month, as did five of the disputes which commenced during October. At the end of the month, therefore, there were on record seven strikes and lockouts, as follows: Pulpwood cutters, Cochrane, Ont.; coal miners, Wayne, Alta.; men's clothing factory workers, Toronto, Ont.; plumbers, Kingston, Ont.; sheet metal workers, Kingston, Ont.; carpenters, Vancouver and New Westminster, B.C.; and building trades, Vancouver and New Westminster, B.C.

The record does not include minor disputes such as are described in a previous paragraph, nor does it include disputes as to which information has been received indicating that employment conditions are no longer affected, but which the unions concerned have not declared terminated. Information is available as to eight such disputes, namely: ladies' clothing factory workers, Toronto, June 30, 1926; electrotypers, Toronto, Ont., December 20, 1926; bakers, Montreal, P.Q., May 1, 1927; stonecutters, Montreal, P.Q.,

June 10, 1927; sheet metal workers, Montreal, P.Q., September 1, 1928; coal miners, River Hebert, N.S., February 1, 1928; fur workers, Toronto, Ont., April 10, 1928; and shoe factory workers, Toronto, August 13, 1928, this last dispute being added during October. The dispute involving sheet metal workers added to this list in September was called off by the union concerned on October 12, 1928, the employers concerned having signed the agreement as demanded by the union.

Information has been received as to a dispute in a restaurant in Edmonton, Alta., employees having ceased work about the end of October against the violation of an agreement. Particulars as to this dispute have not yet been received in the Department.

Of the disputes which commenced during the month two were against the discharge of workers for union activity, two were sympathetic disputes, one was for the employment of members of one union only, one for increase in wages, one for increase in wages and recognition of union, and one was against changes in working conditions. Of the strikes and lockouts which terminated during the month four were in favour of workers, two were partially successful and one was in favour of the employer.

The following paragraphs give particulars in regard to certain disputes in addition to the information given in the tabular statement.

COAL MINERS, WAYNE, ALTA.—Work ceased in connection with this dispute on August 13, 1928, the purpose of the workers being to secure recognition of union and a signed agreement with provision for payment of wage rates per ton on a run-of-mines basis as before, instead of on a screened basis with an increase of four cents per ton, as recommended by the Board of Conciliation and Investigation under the Industrial Disputes Investigation Act, 1907 (LABOUR GAZETTE, October, 1928, page 827). At that time about three hundred miners were employed in the six mines concerned. As the mines are to a great extent closed down during the summer and the employees secure work in harvest fields, this constituted only a fraction of the normal number of workers in these mines. With the return of the miners from the harvest (although an agreement had been reached between the union and one mine in August and another in September with resumption of work) the number involved was greatly increased, and at the end of October was reported to be as high as 1,500.

SHOE FACTORY WORKERS, TORONTO, ONT.—The employees involved in this dispute, commencing August 13, 1928, having secured work elsewhere by the end of October, employment conditions are no longer affected and the dispute is therefore recorded as ter-

minated. As the union concerned has not called off the strike, it is transferred to the list of such disputes given above.

MEN'S CLOTHING FACTORY WORKERS, TORONTO, ONT.—This dispute commenced on August 21, 1928, but information was not re-

STRIKES AND LOCKOUTS IN CANADA DURING OCTOBER, 1928

Industry, occupation and locality	Number of employees involved	Time loss in working days	Remarks
(a) Strikes and Lockouts Occurring Prior to October, 1928.			
MINING, NON-FERROUS SMELTING AND QUARRYING— Coal miners, Wayne, Alta.....	1,200	20,000	Commenced August 13, 1928, for recognition of union and against payment per ton on a screened basis with increase of 4 cents per ton. Un-terminated.
MANUFACTURING— <i>Boots and Shoes (other than rubber and felt)</i> — Shoe Factory workers, Toronto, Ont.	12	160	Commenced August 13, 1928, to maintain union shop. Employees secured work elsewhere by the end of October.
<i>Clothing (including knitted goods)</i> — Men's clothing factory workers, Toronto, Ont.	15	375	Commenced August 21, 1928, against alleged violation of agreement for employment of union members only. Un-terminated.
CONSTRUCTION— <i>Buildings and Structures</i> — Plumbers, Kingston, Ont.....	12	300	Commenced April 2, 1928, for increase in wages. Un-terminated.
Sheet metal workers, Kingston, Ont.	12	300	Commenced April 17, 1928, in sympathy with striking plumbers. Un-terminated.
Plasterers' labourers, Toronto, Ont.	25	100	Commenced September 24, 1928, for union agreement. Terminated October 9, 1928, in favour of workers.
(b) Strikes and Lockouts Occurring During October, 1928.			
LOGGING— Pulpwood cutters, Cochrane, Ont.	300	4,500	Commenced October 15, 1928, for increase in wages. Un-terminated.
MINING, NON-FERROUS SMELTING AND QUARRYING— Coal miners, Drumheller, Alta...	150	150	Commenced October 20, 1928, against change in working conditions. Terminated October 22, 1928, in favour of workers.
MANUFACTURING— <i>Clothing (including knitted goods)</i> — Men's clothing factory workers, Hamilton, Ont.	60	240	Commenced October 3, 1928, for recognition of union and increase in wages. Terminated October 8, 1928, in favour of workers.
Men's clothing factory workers, Toronto, Ont.	190	380	Commenced October 4, 1928; sympathy with strike of clothing workers in Hamilton. Terminated October 6, 1928, in favour of workers.
<i>Knitting factory workers</i> , Guelph, Ont.	42	546	Commenced October 15, 1928, against discharge of worker for union activity. Terminated October 30, 1928. Partially successful.
<i>Pulp and Paper Products</i> — Paper makers, Kapuskasing, Ont.	55	880	Commenced October 1, 1928, against discharge of workers for union activity. Terminated October 19, 1928. Partially successful.
CONSTRUCTION— <i>Buildings and Structures</i> — Carpenters, Vancouver and New Westminster, B.C.	500	10,000	Commenced October 8, 1928, for employment of members of one union only. Un-terminated.
Certain building trades, Vancouver and New Westminster, B.C.	50	1,000	Commenced October 10, 1928, in sympathy with striking carpenters. Un-terminated.

ceived in the Department in time for publication in the September or October issues of the LABOUR GAZETTE. The employees, having a closed shop agreement, ceased work when their demand for the dismissal of certain non-union employees, taken on temporarily during the absence of certain union employees, was not acceded to. The management thereupon secured other employees and operated the establishment without a union agreement. At the end of October the dispute was still unterminated.

PLASTERERS' LABOURERS, TORONTO, ONT.—As reported in the issue of the LABOUR GAZETTE for October, during September a large number of the establishment involved had signed an agreement with the union conceding their demands for increases in wages and certain working conditions. Early in October the remaining employers signed the agreement, and the dispute was terminated on October 8.

PULPWOOD CUTTERS, COCHRANE DISTRICT, ONT.—A number of workers in the district near Cochrane are reported to have ceased work, demanding an increase in wages per month from \$30 to \$50 and in piece rates from \$2.50 per cord to \$3. At the end of the month no termination had been reported.

MEN'S CLOTHING FACTORY WORKERS, TORONTO, ONT., AND HAMILTON, ONT.—Employees in a men's clothing factory in Hamilton ceased work on October 3 to secure recognition of union and increase in wages. On October 4, the workers in an establishment in Toronto under the same management ceased work in sympathy with the strikers at Hamilton. The employer having agreed to the demands of the strikers, work was resumed at Toronto on October 6 and in Hamilton on October 8.

KNITTING FACTORY WORKERS, GUELPH, ONT.—Employees ceased work on October 15 in protest against the discharge of one worker who had been active on a union committee dealing with the management regarding the previous discharge of two other workers for cause. The management stated that the discharged employee involved had been offensive and insubordinate. Through the mediation of officials of the Department of Labour a settlement was reached, all strikers as well as the discharged employee being reinstated without discrimination, and work was resumed on October 30.

PAPER MAKERS, KAPUSKASING, ONT.—Employees ceased work on October 1, in protest against the discharge of workers who were

officers of the union. As a result of the mediation of the Minister of Labour, the Hon. Peter Heenan, a settlement was reached between the parties on October 18, the employer undertaking that there would be no discrimination because of union affiliations of employees, that the strikers would be given back their positions except where a rearrangement of work in the establishment had involved a reduction in the number of employees, and that the former employees would be given the preference in filling the vacancies and in other positions in the plant; it was also agreed that a representative of the Department of Labour and one from the head office of the company should visit the establishment to give effect to this settlement.

CARPENTERS AND SYMPATHETIC STRIKE OF CERTAIN BUILDING TRADES, VANCOUVER AND NEW WESTMINSTER, B.C.—Employees ceased work on October 8 to enforce a demand that only members of their union, the United Brotherhood of Carpenters and Joiners of America, should be employed. The contractors stated that early in the year they had entered into a verbal agreement (LABOUR GAZETTE, April, 1928, page 408) with the above union and also with the Amalgamated Carpenters of Canada as to wages and working conditions and that it was understood that there was to be no discrimination in employing members of either union. The dispute spread to the adjoining city of New Westminster and also to other building trades, members of which refused to work with carpenters not on strike. At the end of October the dispute was still unterminated, but early in November a settlement was reached through the mediation of the Deputy Minister of Labour for British Columbia and the resident officer of the Department of Labour, an agreement being signed providing for a resumption of work under the prevailing conditions before the strike until April, 1930.

Reports presented to the National Conference of Friendly Societies, (Great Britain) at the recent annual meeting showed that the 70 societies represented had a voluntary membership of 8,119,694, and possessed capital amounting to £79,500,027. There was also a state insured membership of 4,691,173. The president stated that the passing of the Unemployment Insurance Act, which was based upon the unanimous recommendations of the Blanesburgh Committee, marked further advance in industrial legislation.

STRIKES AND LOCKOUTS IN GREAT BRITAIN AND OTHER COUNTRIES

THE latest available information as to strikes and lockouts in various countries is given in the *LABOUR GAZETTE* from month to month, bringing down to date that given in the issue for February, 1928, in the review of Strikes and Lockouts in Canada and Other Countries, 1927. The latter review included a table summarizing the principal statistics as to strikes and lockouts since 1918 in the several countries for which such figures were available. Many countries publish these statistics only once each year, the figures being issued in some cases after an interval of as much as two years, so that for such countries the latest figures are not for relatively recent dates.

Great Britain

During September the number of disputes which began was 20, and 11 were still in progress from the previous month, making a total of 31 disputes in progress during the month, involving 10,800 workpeople and resulting in a time loss of about 56,000 working days. Of the 20 disputes beginning in September, 12 arose over wages questions, 6 on questions respecting the employment of particular classes or persons and 2 on other questions. Settlements were reached in 22 disputes, of which 3 were in favour of workpeople, 9 in favour of employers and 10 ended in compromise.

About 3,000 coal miners were involved in a dispute at various collieries in Lanarkshire, as they alleged there was a breach of the agreement when employers did not pay overtime rates to ordinary coal miners working on Saturday afternoons and Sundays. The dispute which began September 17, terminated on September 19 and work was resumed on employers' terms.

Belgium

During August, 11 disputes began and 13 were still in progress from the previous month, making a total of 24 disputes in progress during the month, involving 11,301 workers and resulting in a time loss of 223,258 working days for the month.

France

The number of disputes reported for January, 1928, was 33, involving 4,771 workers; for February, 28 involving 2,177 workers, and for March, 53 involving 33,989 workers. The greater number of these disputes were over wages questions, 21 in January, 18 in Febru-

ary, and 40 in March. The results of the disputes were as follows: in January, 5 ended in favour of workers, 19 in favour of employers, and 7 by compromise; in February, 2 ended in favour of workers, 18 in favour of employers, and 7 by compromise; in March, 10 ended in favour of workers, 25 in favour of employers, and 13 by compromise.

Germany

An award of the arbitration court, which was later declared binding by the Minister of Labour, granted a partial increase in wages to metal workers in the industrial districts of the Rhine and Westphalia. The employers, however, refused to accept this award and, on November 1, locked out their employees to the number of 225,000, it was estimated. The employers hold that the Minister has no power to make the award binding and this is to be tested in the courts.

Two important disputes were in progress during October, one involving about 45,000 textile mill workers in the Duren-Muenchen-Gladbach district, and the other involving about 40,000 shipyard workers in practically all of the North Sea and Baltic shipyards. Both were over wages questions and no settlement had been reported at the end of October.

Poland

During the first quarter of 1928, the number of strikes which began was 148, involving 506 establishments and 29,369 workers. The time loss for all disputes in progress was 183,516 working days. Of the 148 strikes which began, 109 were over wages questions, 3 over questions as to hours, 16 for the reinstatement of discharged employees and the others over various other questions. The number of disputes which terminated in the period was 152, of which 26 ended in favour of workers, 85 partially in favour of workers and 41 in favour of employers.

A strike involving from 100,000 to 200,000 workers in textile factories at Lodz and surrounding towns, which began in September for an increase in wages of from 15 to 20 per cent, continued until October 22, when it was settled by the workers accepting an increase of 5 per cent.

Australia

During the first quarter of 1928, the number of disputes reported was 102, involving 139 establishments and directly affecting 26,105

workers. The time loss was 161,972 working days, and the estimated loss in wages £173,996.

The dispute involving waterside workers which was reported in the *LABOUR GAZETTE* for October, terminated on October 19, the strikers accepting the award of the arbitration court. A large number of the volunteer workers, however, were not discharged and several disturbances between union workers and these volunteer workers were reported after the strike had terminated.

United States

The number of disputes beginning in August was 40, and 67 were in effect at the end of the month, involving 134,050 workers. The time loss for the month was 3,675,508 working days.

Bituminous Coal Miners' Dispute.—In accordance with the decision of the union to permit district settlements of this strike, dating from April 1, 1927, a settlement was made in Indiana on October 31, when the United Mine Workers reached an agreement with the operators providing for a wage of \$6.10 per day and a tonnage rate of 91 cents, for miners at the coal face.

Night Employment of Women in the United States

The Women's Bureau of the United States Department of Labour recently published Bulletin No. 64, on the Employment of Women at Night. It is declared that "experience has proved that night work is harmful to the worker." International measures to make its suppression general have been enacted, but at present only one-third of the American states have any legislation prohibiting night work, and even in these sixteen states the laws are far from complete or effective. The report sums up the results of special inquiries as follows:—

Night shifts for women are frequently employed even in a season of depression. They involve no large percentage, though they constitute considerable absolute numbers of women in industry, rising as high as 500, 700 or even 1,400 in some of the states in the limited groups studied. Of all the night workers found, 3,260 were working 10 or more hours a night. Nearly one-third of these (996) were working 11 or more hours. The night shifts are largely composed of women in the prime of life; of married women; of native Americans in the south, and of a preponderance of foreign-born women in states receiving a large proportion of immigrants; and, lastly, of white women. While the wage rates of night workers are slightly higher than those of day workers, their earnings show a tendency to fall below the corresponding earnings of the day shift. Finally, the essential strain and hardship of night work is needlessly intensified through lack of any thought

or effort to economize the workers' strength, as, for example, by lack of provision for proper intervals or rest pauses, by failure to provide seats, or by occasional undue use of overtime.

Abstract of Labour Statistics of United Kingdom

The Ministry of Labour of Great Britain recently published the 19th abstract of Labour Statistics of the United Kingdom, this being the second issue since the war. Tables have been added summarizing the results of the special inquiries by the Ministry of Labour into earnings and hours of labour in 1924. The statistics are presented in fourteen main sections dealing respectively with population; employment, unemployment and unemployment insurance; wages and hours of labour; profit-sharing and labour co-partnership; wholesale and retail prices and cost of living; strikes and lock-outs; industrial accidents and diseases and workmen's compensation; trade unions and federations; co-operative societies, friendly societies and building societies; national health insurance; old age pensions; poor-law relief; migration; and building plans approved.

The figures summarized are largely compiled by the Ministry of Labour, but summaries are also given of statistics relating to Labour published by other Government departments. In the case of the serial Tables, the figures relate, as far as possible, to the years 1911-27, figures for three pre-war years being thus provided for purposes of comparison.

LABOUR LEGISLATION IN NEW BRUNSWICK IN 1928

DURING the Session of the New Brunswick Legislature which opened on February 23 and closed on March 30, 1928, several measures of labour interest were enacted.

The Factories Act was amended to permit lobster, fish and fruit canning establishments to be brought within the scope of the Act by proclamation of the Lieutenant-Governor in Council. A further amendment provides that where, in the opinion of the inspector, the whole or a substantial portion of the work upon which female employees are engaged can be efficiently performed while they are seated the employer shall provide such chairs

or seats as may be directed, in writing, by the inspector.

The Act providing for pensions and disability allowances to public school teachers and officials was amended to bring vocational school teachers within its scope.

An Act respecting the training and employment of the adult blind empowers cities, towns and municipalities to vote, collect, receive, appropriate and pay all sums of money required to aid the Canadian National Institute for the Blind or other organizations to assist, train and employ adult blind or partially blind persons who have a legal settlement in the province of New Brunswick.

WORKMEN'S COMPENSATION IN QUEBEC

Tariff of Charges for Medical Nursing and Hospital Treatment

A TARIFF of maximum charges that may be made for the services of physicians, surgeons, nurses and hospital establishments in connection with cases treated under the provisions of the Workmen's Compensation Act of the Province of Quebec was recently approved by the Lieutenant Governor in Council.

The Hospital Tariff establishes a rate of \$2.50 for each day in hospital, including bed, board and attendance of orderly.

The Nurses' Tariff fixes a rate of \$4 for each day spent at victim's domicile, when necessary, and of \$1 for each domiciliary visit, including necessary dressings.

The Medical Tariff (ordinary practice) gives the following scale of fees:—

First visit or consultation, with or without dressing, massage, cauterization, cupping:—

To the factory, domicile or hospital.	\$3 00
At the physician's office.	2 00
Subsequent visit at physician's office	1 50
Subsequent visit at hospital.	1 00
Subsequent visit to the domicile.	2 00

Special fees are fixed for special treatments, including serum and sedative injections, etc.

The Surgical Tariff establishes maximum fees to be charged for treatment of fractures, dislocations, amputations and operations, the fee in each case to include charges for the entire treatment if the progress of the patient is normal. When the results are complicated and necessitates dressings the fee may be increased up to 50 per cent. The tariff gives the special fees for simple suture, ligature of

arteries, fractures, osteo-syntheses, reduction of dislocations, amputations, etc. Other tariffs fix the rates for special operations, for electro-radiology, for electro-diagnosis and electro-therapy, for oculists, for laboratory analysis, etc. A fee of \$1.50 may be charged for every medical certificate required by the commission in connection with an accident.

General clauses added to the tariff provide that when the victim resides outside the locality where the physician and those who assist him live, the latter are entitled to travelling expenses equivalent to \$1 per mile travelled from their domicile to that of the victim, without indemnity for the return journey.

No travelling expenses are allowed when the physician and his assistants live in the same city as the victim, irrespective of its size.

When the physician visits at the same time other patients residing in the locality of the victim's domicile, the travelling expenses shall begin to apply from the residence of the last patient visited in that locality.

If the visit or consultation, in urgent cases, takes place on Sunday or on a legal holiday, the fee for the visit or consultation is increased by 50 per cent.

The fee for the visit or consultation is tripled when, in serious and urgent cases, it takes place between 8 o'clock in the evening and 8 o'clock in the morning.

When a colleague has to be called in consultation, in a serious or urgent case, the latter is entitled for the consultation to a

fee of \$9. In such case the attending physician is entitled to \$6.

When the visit is followed by a prolonged surveillance, in case of complications threatening the victim's life, the physician is granted a supplementary fee of two dollars for each half hour of surveillance up to a maximum of ten dollars.

If an operation has to be performed at night, in case of urgency, there is granted to the surgeon, to his aides and to the anesthetist, a supplement of 25 per cent of the tariff.

In the case of any operation whatever provided for by the present tariff, no fee is granted for the visit.

The fee granted for an operation includes only the operation itself. The surgeon is entitled, in addition, to the fees provided by the present tariff for subsequent consultations and interventions.

In operations of major surgery, there is granted a fee of \$10 for the assistant surgeon and the anesthetist, the latter to supply the anesthetic.

WOMEN'S MINIMUM WAGES IN QUEBEC

Revision of Order No. 2 Governing Laundries Outside Montreal District

THE women's minimum wage commission of the Province of Quebec recently revised Order No. 2, governing female employees in laundries, dye works and dry cleaning establishments in the Province, with the exception of the Island of Montreal and a radius of ten miles around and beyond the Island. This order was given in the *LABOUR GAZETTE*, 1927, page 271. The revision abolishes the distinction formerly made between apprentices under 18 years of age and inexperienced workers, all girls under 18 being now classed as "inexperienced workers."

The three learning periods of six months each, formerly served by apprentices, are now reduced to two six-month periods as for the inexperienced class, the rate for beginners also being equalized, and raised from \$6 to \$7 per week.

By another change in the original order the number of inexperienced workers who may be employed in any particular establishment is increased from 35 per cent of the total number employed to 50 per cent.

ANNUAL REPORT OF ALBERTA MINES BRANCH FOR 1927

THE annual report of the chief inspector of mines of the province of Alberta details the activities of the mining industry for the calendar year 1927. The report consists largely of tables, giving statistics of the coal production and numbers employed in each mine; the number of accidents, fatal, serious and slight; the number and nature of the prosecutions under the Mines Act; the certificates issued, etc.

Production in 1927.—The total amount of coal produced in the province during the year was 6,936,730 tons, of which 1,508,089 tons were sold for consumption in the province of Alberta, 2,250,154 tons in other provinces in Canada, 45,160 tons for consumption in the United States, 2,759,765 tons were sold to railroad companies, 19,046 tons were used making briquettes, 287 tons were used making coke, 248,565 tons were used under colliery boilers, 8,264 tons were used by colliery railroads, 44,160 tons were put to stock and 105,974 tons were put on the waste heap. In addition to the coal mined, 44,113 tons of shale

and 2,102 tons of bituminous sands were produced during the year.

The production of coal during the year was 427,872 tons greater than the production for the year 1926, and was the largest output ever produced in the province, being 27,857 tons greater than the production of the year 1920 when 6,908,923 tons were produced.

There were 1 shale mine and 2 open pits producing shale for brick-making, also 325 coal mines in operation during the year 1927; of the latter 22 were opened, 12 re-opened and 63 abandoned. In addition to the mines abandoned 49 were closed temporarily, leaving 259 mines in operation at December 31, 1927.

The production of domestic coal amounted to 3,357,171 tons; sub-bituminous, 595,190 tons, and bituminous coal, 2,934,419 tons. No anthracite coal has been produced in Alberta since 1923. In the year 1927, 22,680 tons of coal were shipped from Alberta to Ontario as compared with 74,559 tons shipped during 1926.

Per Capita Production.—The average number of tons mined per man employed underground during each year since 1919 was as follows:—

1919	958
1920	1,055
1921	824
1922	971
1923	893
1924	982
1925	834
1926	991
1927	970

In calculating the total *per capita* production of men employed underground, the tonnage mined from stripping pits was deducted, and only the tonnage produced from mines was used.

Number of Employees.—There were 11,639 persons employed during the month of December, 1927, which was an increase of 274 over the number employed during the month of December, 1926. The number of men employed in the domestic, sub-bituminous and bituminous mines of the province as at December 31, 1927, by classes is shown in the accompanying table:—

EMPLOYEES IN COAL MINES IN ALBERTA ON DECEMBER 31, 1927

—	Domestic	Sub-Bituminous	Bituminous
<i>Below Ground—</i>			
Officials.....	222	23	148
Hand-cutters.....	87	164	1,471
Machine-cutters.....	511	25	
Machine-loaders.....	2,715	190	
Horse haulage employees.....	582	39	200
Mechanical haulage employees.....	149	22	200
Ventilation employees.....	44	4	54
Roadmakers.....	153	5	65
Timbermen.....	204	35	176
Pumpmen.....	25		18
Other employees.....	169	20	331
Total below ground.....	5,666	527	2,663
<i>Above Ground—</i>			
Administration.....	88	17	21
Foremen and clerks.....	101	23	115
Screenmen and loaders.....	524	55	193
Enginemmen.....	106	36	42
Firemen.....	61	25	54
Machinists.....	35	15	26
Carpenters and masons.....	35	19	27
Other mechanics.....	52	14	37
Surface haulage.....	37	5	37
All other employees.....	368	217	397
Total above ground.....	1,408	426	949
Total above and below ground.....	7,074	953	3,612

Prosecutions.—There were 29 prosecutions instituted for contraventions of the provisions of the Mines Act, a conviction being obtained in each case.

Certificates.—There were issued during the year, 225 provisional certificates giving authority to persons to act as overmen at mines which employed not more than 10 men if the person to whom the certificate was granted was the holder of the third-class certificate, and not more than 5 men to be employed if the person was not the holder of a third-class certificate. In addition to the provisional certificates during the year there were 24 third-class certificates, 6 record class and three first-class certificates issued.

Accidents.—During the year there were 26 fatal accidents, 76 serious accidents and 115 slight accidents recorded. The number of tons of coal mined per accident is given as 266,799 per fatal accident, 91,273 per serious accident, and 60,320 per slight accident. The most frequent cause of accident was haulage operations, with falls of rock accounting for the next largest number of accidents.

Safety Measures.—As regards safety precautions and steps taken in the prevention of accidents, the report makes mention of the following measures:—

An amendment to the Mines Act was passed at the 1927 session of the legislature requiring that “from and after the 30th day of September, no person shall work at the working faces in any mine unless he is the holder of a certificate of competency as a coalminer.” There have been granted by examination to December 31, 1927, 7,480 certificates of competency as coalminers.

Samples of mine air were taken in different mines by the District Inspectors in addition to tests made by them with the Burrell Gas Detector. These samples were forwarded to the Department of Mines, Ottawa, for analysis.

Samples of coal-dust were collected from the roadways in various mines and forwarded to the Scientific and Industrial Research Council for Alberta for screen tests for fineness also for analysis for combustible contents, samples of coal also were taken and forwarded to the Council for analysis.

The regulations requiring that, in mines which are dry and dusty, the roadways must be rock-dusted to the extent that the combustible contents of the dust is kept less than 50 per cent., were passed by Order-in-Council, January 24, 1927, and were put into effect. All bituminous mines which are dry have rock-dusted the main roadways with crushel limestone.

The permitted explosive list was amended during the year by adding as Order No. 27 the explosive known as CXL-ite No. 2, which is used for blasting rock.

PURPOSES, ACCOMPLISHMENTS AND POSSIBILITIES OF THE INTERNATIONAL ASSOCIATION OF PUBLIC EMPLOYMENT SERVICES

*Address delivered by R. A. Rigg, Director, Employment Service of Canada, at the 16th Annual Convention of the International Association of Public Employment Services of the United States and Canada held at Cleveland, Ohio, September, 1928.**

THESE annual conferences constitute the birthday anniversaries of the Association, and birthdays are commonly regarded as occasions calling for happy celebration. In childhood and youth they can, and should be, little more than this. But the burden of responsibilities and the weight of years have a tendency to check among older folk the spirit of hilarity and to balance, if not outweigh, it with more serious thought. As with individuals, so with organizations, occasions which sharply mark off the passage of time should be utilized not merely for the purpose of celebration, but also as opportunities afforded to stand still in order to ascertain our exact position; to look behind and review the path that has been travelled; and to gaze forward toward the horizon, so that an intelligent estimate of direction may be formed.

The reason for our being, the justification for our existence and for its perpetuation—these I take it are involved in the task assigned in the request to which this paper is the response. The subject is too large to permit of comprehensive treatment within the narrow limits at our disposal, and, therefore, our efforts must be confined to the presentation of a somewhat rugged outline.

Origin and Progress of Public Employment Offices

It is eminently appropriate that a halt should be called, and a little time devoted to retrospect, present whereabouts, and prospect at this convention. To the State in which we are meeting belongs the honour of being the trail blazer in the field of public employment activity on this continent. Thirty-eight years ago the legislature of Ohio enacted legislation providing for free public employment offices and five offices were created as a result, one of those being located in the City of Cleveland. During the next two decades the movement in the United States gradually spread. In 1911 a report on unemployment in the State of New York was prepared for the Commission on Employers' Liability and Unemployment by Professor W. M. Leiserson, whom happily we have with us on this occa-

sion. From that report we learn that there were then in existence in the United States sixty-one public employment offices, distributed throughout nineteen states, all of which were conducted by State Governments, with the exception of seven which were established and administered by municipalities. Twenty-eight states had, by 1917, passed legislation authorizing the creation of free, public employment offices, and in January, 1918, Federal legislation creating the United States Employment Service was enacted.

Absorbed in the herculean task of conquering nature and exploiting her rich agricultural and industrial resources, and with a comparatively meager population widely scattered throughout her broad domain, Canada paid little attention to the problem of providing state machinery for a public employment service until the industrial debacle of 1907. In that year the Province of Ontario responded to an agitation conducted for many years by organized labour and made legislative provision for the establishment of free, public employment bureaus. Three years later Quebec followed the lead of her sister province. Distress occasioned by the slump of 1913-14 brought the problem of unemployment sharply to the attention to local authorities, and during that period many of the larger Canadian cities established, and for some years continued to operate, free, municipal employment offices. In May, 1918, the Parliament of Canada enacted the Employment Offices Co-ordination Act, which has been supplemented by ancillary legislation passed by eight provinces, out of the administration of which has grown the Employment Service of Canada.

At the present time there are, in the United States, offices operating in one hundred and seventy-three centres distributed throughout forty-two States, which co-operate with the United States Employment Service. Offices of the Employment Service of Canada operate in sixty-four centres, and all the provinces co-operate with the exception of the small Maritime Province of Prince Edward Island. Such is the sketchy and fragmentary outline of the development of public employment office systems in the United States and Canada.

* An outline of the proceedings at this convention was given in the *LABOUR GAZETTE*, October, 1928, page 1119

Evils of Fee-Charging Agencies

Quite obviously the institution of the public employment office system, developing as it did by slow jerky and manifestly experimental stages during several decades, imposed problems upon those charged with the administration of the offices. The principles involved widely differentiated the new system from that of the private commercial agencies. These latter had demonstrated the need that existed for an agency that would perform the functions of securing workers for employers and employment for workers. The methods of operation in connection with these fee-charging agencies were very simple and their defects need no reference at this point. Suffice to note here that a radical and vital distinction which separates them by an immeasurable gulf exists between these two systems. Fee-charging agencies primarily seek to exploit need for financial gain, while the free, public employment offices exist wholly for the purpose of rendering public service.

This fundamental, motivating distinction is not merely idealistic, but it imposes characteristic and complex responsibilities. Not only must employment office work be viewed from a different angle and approached by other routes, but wider fields must be covered and new methods of operation devised. The problems involved were not merely theoretical and capable of solution by academic treatment. They were of an eminently practical character and were only soluble in the crucible of experience. Lacking the advantage of a knowledge of each other's experience, each administrator naturally devised his own scheme, with the inevitable result that widely different systems were adopted and the much to be desired co-operation rendered impossible.

Aims of the International Association

The consciousness of this serious limitation of the usefulness of public employment service work led to the formation of this Association, which originally bore the title of "The American Association of Public Employment Offices." Here we must pay high tribute and gratefully acknowledge our indebtedness to Professor Leiserson. So far as the records which the writer has at his command testify, to Professor Leiserson must be ascribed the parentage of this organization. It is not proposed to dilate upon the noteworthy achievement of Professor Leiserson. Undoubtedly he finds abundant recompense in the work accomplished by the Association and the substantial progress that has been made during its lifetime in the improvement and

growth which have marked the history of this Branch of public service. As Superintendent of the Wisconsin employment offices, Mr. Leiserson quite obviously keenly sensed the need for an organization of this character. That other officials in charge of similar work experienced the same need is evidenced by the fact that this Association was born.

On June 11, 1913, Mr. Leiserson addressed a circular letter to all public employment office superintendents in the United States, in which he suggested that a conference be called. As vividly illustrative of the purposes which it was sought to accomplish, let extracts culled from this letter speak:—

"Would you be interested in the organization of an American association of public employment offices? Several officers in charge of such offices, with whom I have spoken, have felt that we were not getting the benefit of each other's experience as we should. Your methods of handling men, of registering applicants and sending them to employers, of keeping records and making reports, your attempts at advertising, and your attitude toward private labour agents are things in which we are all interested, and when one has worked out a new, successful method of doing some particular thing, the others should be in a position to learn about it quickly, and to adopt it, if it is suited to their needs."

"I know that what our offices in Wisconsin need is the benefit of the experience of other offices on the problems that come to us, and we could no doubt give to others the benefit of our experience on some points. If we could have a meeting of the superintendents of all the offices to read and discuss papers on the management of employment offices, we might work out a more uniform method of doing business which would make co-operation among the various State offices easier. A system of interchange of reports might also be devised, and from these accurate information as to the condition of the labour market throughout the country might be compiled and circulated."

As a result of this initiatory correspondence a conference was held in Chicago on December 19 and 20, 1913. At this conference, in addition to the reading of papers and discussion thereon, dealing with pertinent subjects, a constitution was drafted in which the objects of the Association were declared to be:—

1. To improve the efficiency of the public employment offices now in existence.
2. To work for the establishment of such offices in all the States.
3. To secure co-operation and closer connection between the offices in each State and among the States.
4. To promote uniform methods of doing business in all the public employment offices.
5. To secure a regular interchange of information and reports among the various offices.
6. To secure a proper distribution of labour throughout the country by the co-operation of municipal, State, and Federal governments.

One of the resolutions adopted suggested that a study of public and private employment offices be made by the Commission on Industrial Relations and, if deemed advisable, a plan of National and State co-operation worked out for distributing labour throughout the country. Another resolution was adopted, the text of which reads as follows:—

“Whereas this meeting has shown that there is such great disparity in methods used in the various public employment offices that their work can not be compared and co-operation in distributing labour is almost impossible: Therefore be it resolved, That the executive committee be instructed to make a study of the methods used in public employment offices throughout the world, and to work out a set of forms to be submitted to the next meeting of this association for discussion and approval”

These references to the first convention are sufficient to broadly register the aspirations of the movement. They reveal the principal purposes which constitute the *raison d'être* of the organization. Because they mark the starting point they also afford to us a means for estimating our achievements, for measuring the degrees of our success, and baring for our inspection the unaccomplished tasks.

Recent Developments in Employment Service

To assume that all the progress made was solely due to the influence of this Association would constitute a ridiculously extravagant claim. It may, however, be truthfully said that the organization has proved itself to be an active and potent agency, making, not only for an improved public employment service, but also for an awakened and enlightened public conscience respecting the problem of unemployment.

The rapid and widespread expansion of the public employment service in the United States and Canada since the formation of this Association has already been indicated. In the United States, offices are established in forty-two states and the District of Columbia, while for practical purposes the whole of Canada is organized to furnish such service. Not only have the offices increased in number and the field been enormously widened, but the technique has been greatly improved and the efficiency of operation considerably increased. This accomplishment has been rendered all the more difficult because this service is financially a one hundred per cent governmental liability. There is no direct financial income derivable to balance, even in part, the expenditure imposed upon the responsible authorities. This feature undoubtedly militates against the popularity of the system from the point of view of those who must bear

the cost. It also tends to stimulate a more critical attitude toward the service than might otherwise be the case. This attitude is one that should be welcomed rather than regretted. The only fear that can legitimately be entertained is lest the work should fall below the standard of good performance. So long as the offices succeed in exploring and exploiting the fields of opportunity for the employment of labour to their utmost capacity, no misgivings need now exist concerning the continued support of our various governments.

A study of the history of public employment service development reveals the fact that the agitation for such service owed its origin principally to the predatory and oft times criminal activities carried on by many private agencies. Allegations that work seekers were deceived and robbed were lodged against agencies and every official investigation into their activities justified the suspicion that a high percentage of private office operators were commonly guilty of mercilessly fleecing their victims. The evil reputation of the private commercial agencies, thus acquired, was undoubtedly one of the potent influences which led to the establishment of free agencies operated under Government control.

Although abuses still exist, it may be granted that the challenge of the public employment service has somewhat checked the vulture-like rapacity previously characteristic of a large proportion of private operators. In addition, the public conscience, awakened to the enormity of the offences practised, has compelled the enforcement of more strict regulations.

To those who regard it to be the duty of the State to provide protection for comparative economic helplessness, it has been noted, with serious misgivings, that a few months ago the United States Supreme Court majority decision in the case of *Ribnik v. McBride* declared the legislation enacted by New Jersey, imposing limits upon the fees which a private employment agent might charge his patrons, to be *ultra vires* of the State Legislature. That three of the judges dissented is the most hopeful feature, but a decision which affords unlimited license to the exploiters of work seekers in the matter of fees levied can not be accepted with equanimity.

So far, Canada has been more happily successful. Five of the provincial governments have condemned the commercial employment bureaus as an unnecessary public evil and outlawed them. British Columbia, Alberta, Saskatchewan, Manitoba, and Nova Scotia have closed the doors of these agencies.

Ontario and Quebec have retained their licensing and regulating powers, but in the former there are only fourteen licensed agencies and in the latter only eleven. The Province of New Brunswick has no law, but the effective competition of the offices of the Employment Service of Canada has practically driven the private agent out of the field.

Need for Centralized Organization

The complete inadequacy of the private agency system to function with any degree of efficiency and its failure to meet the conditions existing during the Great War and the post-war years, furnished eloquent testimony to the need for a more efficient instrument, and this evidence, coupled with the odoriferous taint which attached to commercial bureaus, aroused legislative authorities to action. It is an axiom that legislation trails behind public opinion.

As we have already seen, the objectives of this Association, as enunciated at its first meeting, included fostering nation-wide co-operation, the promotion of uniform methods, the interchange of information and reports, and the securing of a better distribution of labour throughout the country. It is a startling commentary that, although Canada so far as the writer is aware was not represented at the initial meeting of this body and indeed had made only the most meager provision for this work at that time, a practically nation-wide co-ordinated system of employment offices has been operating in Canada since 1919, while in the United States the service is unquestionably rendered less efficient through lack of cohesion, co-operation, and uniformity of procedure.

Obviously the ambitions of the organizers of this Association have not yet been fulfilled. That the weaknesses and deficiencies of a series of disconnected, state systems are at least as keenly appreciated to-day as they were in 1913, is evidenced by the fact that the subject of co-ordination with its concomitants of uniform methods, etc., threatens to acquire the static quality of the hardy annual. Whether this paper was placed on the program with the deliberate design that it should immediately precede the business meeting is unknown. If not, it is an interesting co-incidence that the program is so planned that almost immediately following this reading the convention will be called upon to receive the report of a special committee on uniform methods of procedure. Certain it is that if the United States Employment Service is ever to attain within measurable distance of the glorious achievement which

is possible to it, the existant chaotic condition must be changed, and a uniform and co-ordinated system be evolved. The achievement of this task is the most important problem immediately awaiting us. It constitutes a challenge to us, and untiring zeal should be directed to effect its accomplishment. To be content with less would be our shame.

As a member of the committee above referred to, the writer has submitted material for the use of the committee, showing the plan of organization of the Employment Service of Canada, the methods of procedure adopted, and forms used. It is in no spirit of egoism or boastfulness that this is done. As Canadians we live in too close relationship with the United States and entertain too much respect for its citizens to indulge in vain glorious conceit. We learn much from you, and, if in some measure we can repay the debt, we count it a privilege to be seized as between friends.

The Canadian Employment Service System

In this spirit, as a contribution toward the moulding of public opinion to a favourable appreciation of the practical possibilities that are inherent in a well co-ordinated, nation-wide system of public employment offices, it is proposed to briefly outline the Canadian system. Substantially indetical governmental jurisdictional problems had to be solved in Canada in order to effect co-ordination, as impose themselves in this country. Constitutional authority for the licensing, regulation, or prohibition of private employment offices and the establishment of public employment bureaus is vested in the provincial governments. The Federal Government in Canada has no power to establish or regulate offices, either private or public, except for the convenience of immigrants. The desired result has been attained through the medium of the Employment Offices Co-ordination Act, an Act to aid and encourage the organization and co-ordination of public employment offices, which was passed by the Parliament of Canada in May, 1918.

In accordance with the terms of this legislation, an annual agreement is entered into between the Federal Department of Labour and the provincial governments. For our present purpose it is enough to state that under the terms of this agreement the Federal Government re-imburses the provincial governments to the extent of approximately one-third of their total expenditures in connection with the maintenance and operation of their employment offices. Co-ordination of the activities of all offices throughout the country is effected; uniformity of procedure is in-

sured; identical forms, some thirty in number, supplied free by the Federal Department of Labour are used in all offices; provision is made for interprovincial transfers of labour when deemed desirable and necessary; and weekly reports outlining the industrial conditions prevailing in their respective zones are received from each office and circulated for the information and guidance of the staffs in all the offices. Two interprovincial clearing houses are maintained by the Federal Department of Labour, the headquarters office being located at Ottawa, with a subordinate clearing house for Western Canada established in Winnipeg, Man.

The inevitable limitations of this occasion preclude the amplification of this bare outline. It suffices to show, however, that the original main objectives of this Association have been attained in Canada. The service rendered in Canada would be immeasurably less satisfactory both to employee and employer were it not for the co-ordination and uniformity that are the very foundation stones upon which the Employment Service of Canada has been erected.

The Problem of Unemployment

As has been indicated, the vital function of the public employment office is to render service—service to the unemployed seeking work and service to the employer needing labour. Necessarily, it brings us intimately into contact with the victim of unemployment. This age-old problem of unemployment to-day compels the focusing of public attention to a degree never before known. The establishment of public employment offices is in part an official recognition of responsibility for, and a contribution toward the relief of, unemployment. But the service is also an agency for the educating of the official and public mind concerning this problem. The State can not recognize its responsibility by establishing employment offices without the question of unemployment being more definitely directed to the attention of legislatures.

Increasingly the horrors of unemployment, the physical, mental and moral degradation that it causes, and the social diseases which it creates project themselves before the public vision. Unemployment is an evil that saps the stamina of the body and soul of the individual. It is an enemy of national health and progress. It is more to be dreaded than accident or disease, and it is a greater national curse than the white plague or cattle or crop diseases. It is so fearsome that no nation has yet developed the courage to look it

straight in the eye and grapple courageously with it. But closing the eye to its misery and stopping the ear to its cry provides no escape. Like murder it will not down. To quote statistics indicative of prosperity or to point out that millionaires are rapidly increasing in number to the man or woman without a job, who must work in order to eat, is adding insult to injury.

The rapidly developing control of industry by giant corporations and the increasing mechanization of it are features which exert a dehumanizing influence. The element of human labour in industry is only incidental. No matter whatever idealistic conceptions we may have regarding the responsibility of industry to provide for all, or whatever ethical principles we may think should apply to industry, the fact is that the employment of human labour is of secondary consequence, and industry is endeavouring with feverish intensity to dispense with as much human labour as possible. Even the mechanical man has become a reality.

I confess that I am more concerned about the wastage of man than I am about the wastage of man-power. I care less for the fortunes of business than I do for the fate of men, women, and children. Whether trade languishes or is prosperous is a matter of secondary importance to the heart-rending tragedy which afflicts millions to whom economic injustice bequeaths its legacy of human wretchedness, suffering and despair. It is this warm, pulsing, human interest that gives me the joy I find in this work. It brings us in constant daily touch with those for whom either work must be found or bodies, minds, and souls are going to deteriorate and the joy of life be lost.

I trust you all feel as I do, that by entering the Employment Service you have in no way lessened your opportunity for serving humanity, no matter what your fields of work may have previously been. I know of no way in which we can make more of life than by putting as much as possible of it into this work of ours.

Every unemployed person who seeks the assistance of our offices creates an opportunity for service, and blessing or condemnation depends upon our utilization of these opportunities. By matching the manless job with the jobless man two big things are done, one much bigger than the other. On the one hand, service has been rendered to industry and on the other, a soul has been relieved, at least partially and temporarily, from the blighting curse of unemployment, and he has gone on his way with revived hope, renewed

confidence, and a more cheerful spirit. A great thing to do! Where else shall we go for work which affords more opportunities for the real flushing of the heart with the sense of good wholesome satisfaction?

It is inevitable that mistakes in greater or lesser degree will be made and that disappointment will some times afflict us. There is, however, a vast difference in the standards of quality which apply to the one who, realizing imperfection, strives earnestly to do better, and the one who, with such realization feels himself a beaten man.

Eight Hour Day in France

During 1928 four further decrees have been promulgated in France containing public administrative regulations for the application to various industries of the Eight-Hour Day Act of April 23, 1919. The industries covered and the number of hours of overtime authorized in case of unusual pressure of work are as follows: *Dental Laboratories*—a maximum of 60 hours' overtime a year; *Hides and Leather*—90 hours' overtime a year, this limit being increased to 120 hours in certain specified cases, but in no case may hours of work exceed ten a day; *Glass Industry and Tobacco Manufacture*—100 hours a year overtime, but in no case may hours of work exceed ten a day, with the exception that 11 hours may be allowed in the receiving services during the period of the purchase of raw tobacco, as determined by the prefectural authority. In the two last named industries also, the departmental factory inspector may, after consultation with the employers' and workers' organizations concerned, authorize overtime not to exceed 40 hours a year in compensation for time lost as the result of collective unemployment resulting from the observance of local holidays or other local events, in accordance with usage.

The report of the Select Standing Committee of the House of Commons on Industrial and International Relations upon the question of Insurance against Unemployment, Sickness and Invalidity as ordered by the House on March 21, 1928, has now been published as a blue book. The volume includes a full account of the proceedings and of the evidence presented at the inquiry. The report and recommendations of the committee were printed in the *LABOUR GAZETTE*, June, 1928, page 586; and a summary of some of the evidence was given in the issue for April, page 361.

My time is gone and this address must close. Within its narrow limits the possibilities of this Association have only been dimly suggested. It is hoped that the vista is there, but it must be left to the seeing eye and the interpreting mind to discern the details. A great field of opportunity lies before us, and if we are to be worthy of the trust given us, great things will be accomplished. Let it be ever remembered that the real essence of reward is not alone for those who are perfect, but rather for those who, no matter how far they have to climb, still keep on climbing.

Recent articles on Old Age pensions which appeared in the *Monthly Labour Review*, published by the United States Bureau of Labour Statistics, has been re-issued in booklet form as a Congressional paper under the title "Old Age and Disability Pensions". The subject is discussed from every side. The extent of the problem in the United States, that is the number of aged persons without adequate means of support, is first discussed, and an outline is given of the various existing measures to provide superannuation or relief of the aged. Federal, state and municipal service retirement systems and state and city pension plans for teachers, are outlined. Estimates are made of the cost of almshouses in the United States. Industrial pensions for old age and disability are described, as well as the provision made by trade unions for their sick, aged and disabled members and their dependants. Similar studies are made on the conditions in Great Britain and other countries in regard to the problems of old age and invalidity.

Rules under Mines Act of Manitoba

The *Manitoba Gazette*, October 6, 1928, contains a supplement containing Rules under the Mines Act (Revised Statutes of Manitoba, 1913, chapter 128, as amended by Statutes of 1927, chapter 38, and Statutes of 1928, chapter 41). These rules, with three exceptions, are in effect as from November 1, 1928. The rules are divided into groups under the following headings: Ventilation; Sanitation; Care and Use of Explosives; Protection of Working Places, Shafts, Winzes, Raises, etc.; Scaling, Escapement, Shafts, etc.; Handling Water; Ladderways; Raising or Lowering of Persons; Shaft Equipment; Hoisting; Haulage; Signals; Protection from Machinery; Aid to Injured; Prevention of Dust; Blast Furnaces. Rules governing the use of Electricity; Damage to Property; General.

HOLLINGER MINE DISASTER

Second Part of Report of Judge Godson, Commissioner to Investigate Causes of Explosion on February 10, 1928

THE LABOUR GAZETTE, June, 1928, contained the first part of the report of Judge Godson, of the Mining Court of Ontario, as commissioner to inquire into the circumstances of the disaster at Hollinger Mine at Timmins, Ontario, on February 10, 1928, when 39 miners lost their lives. Part I gave the commissioner's findings as to the causes of the disaster, and the degree of responsibility resting upon the persons concerned. Part II, containing recommendations as to the future conduct of underground mining operations, was published during October, as follows:—

Report of the Commissioner

PART II

The primary object of this Commission was to determine how and why the fire that occasioned this inquiry occurred. I submitted my conclusions thereon in Part I of this report.

Minds had become quickened by the shock of the unexpected. The time was propitious and the stage was set to further inquire into the methods employed by operating and producing mines generally to combat possible or probable fires, their facilities for rescue and resuscitation, and otherwise the means employed for the protection of their underground workmen.

The full purpose of this Commission would not be fulfilled without such inquiry and report upon its deliberations, with such recommendations as the facts necessitate.

I caused a summons to issue directed to the managers of all the producing mines in Ontario and also invited Professor H. E. T. Haultain, of Toronto University, and Professor Graham, of Queen's University, to be present at a sittings of the resumed Commission to be held at the Court House in the Town of Haileybury on the 12th, 13th and 14th days of April. The following were present throughout the hearings:—

J. C. Nicholls, representing the International Nickel Company of Canada; Oliver Hall, representing the Mond Nickel Company, Limited; M. F. Fairlie, representing the Mining Corporation of Canada, Limited; J. G. Dickenson, representing The O'Brien Mine; Hugh Park and E. V. Neelands, representing the Nipissing Mining Company; F. D. Reid, representing The Coniagas Mines, Limited; W. Sixt, representing the Kirkland Lake Gold Mining Company, Limited; D. L. H. Forbes, representing The Teck Hughes Gold Mines, Limited; E. B. Knapp, representing Lake Shore Mines, Limited; J. E.

Grant, representing Wright Hargreaves Mines, Limited; C. E. Rodgers, representing Sylvanite Gold Mines, Limited; A. D. Campbell, representing Castle Trethewey Mines, Limited; R. J. Ennis, representing McIntyre Porcupine Gold Mines, Limited; R. E. Dye, representing the Vipond Consolidated Mines, Limited; A. F. Brigham and A. Young, representing the Hollinger Consolidated Mines, Limited; H. P. DePencier, representing the Dome Mines, Limited; G. C. Bateman, representing the Ontario Mining Association; H. A. Kee, Mining Engineer and operator; and Professor H. E. Haultain.

The market value of the Companies represented approximated a billion dollars.

The Labour representative, Mr. T. B. Roberts, was also in attendance, and the respective interests were represented by the same Counsel who held briefs at the initial inquiry.

On the opening of the sittings, I briefly informed those present the reason of the continued inquiry and solicited their considered opinions upon the various suggestions which were to be put before them.

Having a proper regard of my limitations concerning the technical matters to be discussed, I requested Mr. Balmer Neilly, a Mining Engineer who was present, to assist Counsel for the Commission and be ready to advise me if the occasion arose. He graciously and gratuitously complied.

Mr. G. C. Bateman, Secretary of the Ontario Mining Association, was also in attendance, and, on my suggestion, acted as a Conveyor of the operators and assisted the Commission by suggesting, as a witness, one or more of those present who could speak authoritatively upon a particular subject to be introduced and thereby expedite and facilitate the inquiry.

Mr. T. E. Sutherland, Chief Inspector of Mines, was the first witness heard. He presented, in written form, a number of considered suggestions, some of which he asked should be made additional regulations governing the operation of mines. The balance were introduced for the purpose of discussion and their adoption if approved.

Mr. Roberts, representing the miners, also introduced some proposed additions to the regulations and by himself and through his Counsel, Mr. Gordon, advanced their merits.

These new and specific matters were put before the Commission and witnesses were heard at length on each subject.

After Mr. Sutherland had been heard, and in order to allow those representing the industry to digest his and the Commission's suggestions, an adjournment was taken until the following morning. Mr. Bateman, in the interval, assembled the operators and each matter was fully considered and its purport and application weighed, so that, on the resumption, the Commission had the benefit of thoughtful dissertations from experienced men and those having a knowledge of the particular suggestions he was, or they were, referring to.

Before the inquiry concluded; I named a Committee from those present, composed of: O. Hall and J. C. Nicholls, Sudbury; V. L. H. Forbes and J. Grant, Kirkland Lake; R. G. Ennis and H. P. DePencier, Porcupine; and J. H. Dickenson and Walter Segsworth, Cobalt; and requested that they meet at the earliest moment to review the evidence put in and further consider the suggestions put forward. The committee convened at Toronto on the 7th day of May, at which meeting Mr. Sutherland was present, with Professor W. G. McBride, of McGill University, who, as a mine operator in the Southwestern States of America, had considerable experience in mine fires, fire fighting and mine rescue work. The submission of this committee has been handed to me.

The problem then became mine to unify and settle where there was diversity of thought and opinion. My task has been made easy in consequence of the splendid co-operation of operator, miner, and the Department of Mines. It exemplified, on the part of the operator, a desire by rule, regulation or implication, to provide for the security and safety of workmen, and the preservation of the good name of the industry, which has indelibly written itself into the history of mining in Ontario.

Labour was tolerant in its views and refrained from embarrassing the industry by requesting vexatious regulations. The mining industry of this province employs and is served by efficient, practical and law-abiding miners and workmen. This commendation is in accord with the opinion expressed by a responsible official of the United States Bureau of Mines when present at Timmins at the time of the fire.

Turn the mind back upon the past of the industry, and what does the picture of its active achievements portray? The nickel-copper mines of Sudbury have operated for forty years and the gold and silver mines of this province for twenty-five years, without the occurrence of an underground fire. It was

with warranted pride that Mr. Bateman, in his remarks to the commission, referred to these facts. The record is illuminating and gratifying. It confirms the opinion I have held, based on experience, that operating mining engineers, as a class, are resourceful, tempering vision with stability, and always reliant. These were the men who gave their opinions upon the subjects under discussion.

The statistics of accidents in the mines of Ontario indicate that, with an expanding industry, the average accident rate has decreased. It is to be observed that this average was made under the present mining regulations and indicates that the operator appreciates his responsibility.

In framing further regulations, it is expedient to maintain and continue the distinct relationship of operator and inspector and in doing so avoid multiplication of rules that might embarrass the operator and retard operations without a practical purpose being served.

The burden of responsibility is on the operator and he has always accepted the obligation. The operator uses initiative, is guided by experience and knowledge, and acts in consonance with rules and regulations made by the Department of Mines.

The inspector's duty, as I understand it, is to see that the mining regulations are observed and to formulate further requirements as in his opinion the exigency suggests.

The Mining Act of Ontario in its regulations having reference to the operations of mines shows vision, has breadth in its application, and is reasonable in its restrictions. It is the substance of the joint thought and experience of the Department of Mines and those representing the industry.

Mines in Ontario are to be developed to considerable depth and such expansion begets new conditions. The past is an experience the receptive mind profits from. To provide for the future is the purpose of the suggestions herein submitted.

No matter how the industry is regulated, or regardless of the utmost vigilance of the operator and inspector, unforeseen accidents may happen in the hazardous occupation of mining.

The submissions I herein make have, in the main, the joint approval of operator, labour and the chief inspector of mines, given after full discussion and mature thought.

Those suggestions put forward and not now adopted are held in abeyance for further study as their efficiency and expediency cannot at present be estimated.

Recommendations.—I recommend that the Mining Act of Ontario governing the operation of mines be amended by varying or adding thereto in substance the following submissions:—

1. That every man employed as an underground foreman (meaning thereby one who is exclusively engaged in supervising the work of other men) shall be able to give and receive orders in the English language.

2. That an inspector of mines shall have the right to suspend any foreman or mine captain who is not familiar with or does not understand the requirements of the regulations governing the operation of mines as contained in the Mining Act of Ontario.

3. That the words "above ground" in the first line of section 161, subsection 11, of the Mining Act be deleted and the section read as follows:—

"No building for thawing explosives shall be maintained in connection with any mine except with the written permission of the Inspector of Mines. The site of this building and the style of structure and equipment shall be subject to the approval of the inspector. The building shall be under the direction of the manager or some person authorized by him. The quantity of explosives brought into any thawing house at any one time shall not exceed the requirements of the mine for a period of twenty-four hours, plus the amount that it may be necessary to have thawing to maintain that supply."

4. That all underground structures necessary for the installation, maintenance and repair of machinery and equipment should be fire-proofed.

5. That all fans except "Booster" fans should be placed on the surface and be reversible, and all underground fans should be in fire-proofed housing.

6. That oil and grease kept underground be contained in suitable metal receptacles and should not exceed one week's supply.

7. That there should be a sufficient number of fire doors at every station where practicable, so that the shaft could be completely cut off from the rest of the mine.

8. That all inflammable waste or rubbish should be taken to the surface.

9. That shift bosses and mine captains should certify at least once a week that there is no accumulation of combustible waste or rubbish underground, except as noted, in the area under their supervision.

10. That rescue stations be located at a place selected by the Chief Inspector of Mines in the Timmins, Kirkland Lake and Sudbury

mining areas, and be in charge of one man to be appointed by and under the control and direction of the Department of Mines. It should be the duty of such employee to take care of the apparatus, train men in the mines in his area in rescue work and inspect and report upon the apparatus, if any, maintained at any such mine.

11. That each rescue station should contain the following or other equipment to be ultimately determined:—

- 1 Tool chest.
- 15 Oxygen cylinders—100 cubic feet each.
- 1 Portable Orsat apparatus for making analysis of mine air.
- 1 Anemometer for measuring ventilation.
- 1 Psychrometer for determining humidity of mine air.
- 1 Maximum and minimum thermometer.
- 2 Cabinets (First Aid) with extra bandages and splints.
- 4 Canaries for testing mine air for carbon monoxide.
- 2 Stretchers.
- 12 Self-contained oxygen breathing apparatus with accessories for testing, repairing and re-charging.
- 1 Pyrotannic acid detector for determining carbon monoxide in blood and air.
- 5 All-service gas masks with extra canisters.
- 1 Iodine pentoxide detector for indicating amount of carbon monoxide in the air of the mine.
- 1 Geophone.
- 1 Oxygen inhaler for administering oxygen in conjunction with artificial respiration.
- 1 Oxygen pump for re-charging small tanks for breathing apparatus.
- 1 Lifeline, 1,200 feet, used by rescue crews when exploring mines after fires or explosions.
- 12 Electric cap lamps with accessories and charging equipment.
- 12 Approved type flashlights.
- 20 Bottles for collecting samples of mine air. Carboxide.

The above equipment was suggested and put before the Commission by the Chief Inspector of Mines at the inquiry held at Haileybury. He was not then able, however, to definitely say it should be adopted in its entirety. It should be at once reviewed by the inspector and the committee representing the operators and finally determined. The equipment adopted should be used in all stations so that there would be uniformity.

12. That fire protection systems be installed at all underground crushers, tipples and in dry shafts.

13. That for the purpose of a uniform danger alarm, all mines in Ontario should have equipment for pumping into air lines a stench chemical to be selected and adopted by the Chief Inspector of Mines.

14. That readable signs showing the way to emergency exits should be posted in prominent places underground and all men should be instructed where these emergency exits are placed.

15. That the Chief Inspector of Mines may order an underground connection be made between adjoining mines where he deems it necessary for the safety and protection of underground employees.

This proposed regulation invades the right of ownership, may involve an expense largely for the benefit of an adjoining property and otherwise open up contentious questions. While I deem it expedient to recommend it as a safeguard in a remote but possible contingency, there should be a proviso allowing the right of appeal from the order of the inspector to a person or tribunal to be decided upon.

All of which is respectfully submitted.

T. E. GODSON,
Commissioner.

TORONTO, September 28, 1928.

INDUSTRIAL HYGIENE IN ONTARIO IN 1927

THE annual report of the Department of Health of Ontario gives in detail the work performed during 1927 by the various divisions of the Department. These divisions deal respectively with Preventible Diseases, Industrial Hygiene, Child Hygiene, Sanitary Engineering, Vital Statistics, Dental Services, Laboratories, Public Health, Education and Nurse Registration.

The director of industrial hygiene observes that "there has been more enquiry regarding physical examination among employees, and more plants have instituted this procedure during the past year than in any of the eight years previous." Dealing with occupational poisons, the report states that a considerable variety of these were referred to the Department for advice as to their control, lead and silicosis, both disastrous in their effects on health, receiving most attention.

The following paragraphs from the report relate what is being done to combat lead poisoning, silicosis and caisson disease:—

"Accumulating experience, the result of a co-operative arrangement between certain physicians in lead plants and the Division's clinical and chemical staff, points more and more to basophilic stipling of red blood corpuscles as a valuable practical indicator of the effect of lead inhalation before actual disability supervenes.

"Silicosis has been studied further among hard-rock miners and granite cutters. A number of isolated cases have been observed among workers in other industries exposed to silica dust. The absence of similar effects has been noted among many workers examined after a number of years exposure to dust containing little or no silica. This corresponds with other experience but is extremely

important because of the rapidly fatal termination in silicosis where tuberculosis supervenes. Some cases have been studied at autopsy to throw further light on what may be called atypical manifestations of the disease. The results of these examinations have been described.

"Caisson disease has decreased markedly in frequency and severity in spite of considerable increase in the amount of work done in the province under compressed air. With the help of suitable recording decompression gauges developed in co-operation with the Labour Department and placed on all locks including medical locks, some study is being made to mild cases of 'bends' which occur among certain men who have observed the ordinary precautions while at this kind of work."

As regards the study of ventilation problems, reports were made of work done to determine conditions in two large paper mills in Ontario and in two schools in Hamilton. With reference to schools in general, it is stated that the temperature is ordinarily too high and should be about 68 F. The recording thermometer is suggested as a check on conditions which will result in improvement if the record is used.

Work in Northern Ontario

"The situation in Northern Ontario where direct Government supervision was invoked because of sparse population presents a striking contrast to the remainder of the province in the relation of the physician to the industry. There, the physician is under contract to the employer for medical services to workmen and supervision of conditions affecting health. The interests of employer, employee and

physician closely coincide. The physician has access to the plant and to the men and is part of the plant organization with some conception of the viewpoint of both employer and employee. Without suggesting that this particular system be extended, it is obvious that some more direct arrangement must exist between industry and the physician before any appreciable improvement can take place in either sickness or accident costs."

From the report of the chief sanitary inspector some interesting statistics are presented which indicate the extent of industrial development in Northern Ontario particularly. The market demands for the products of the forests seem to have been slightly greater than last year, but are still far below normal. The number of companies operating during the year was 128, the total number of camps used was 504, and the number of men employed was 24,516. In addition, there were the following industries situated in the unorganized territory: 107 mining camps, employing 6,150; 187 construction camps, including road camps, employing 8,524; 45 saw-mills and paper mills, employing 5,520; 9 fishing stations, employing 375; one stone quarry, employing 150. This represents a grand total of 45,235 men employed in 854 industrial establishments throughout Northern Ontario.

It is pointed out that all of this work has been largely covered by contract, there being in each instance a qualified physician either upon the ground or close by. Each of these companies has filed with the department a signed copy of medical agreement with a physician, and has submitted also the regular annual statement showing the character and extent of the work to be conducted.

The total number of monthly reports received from these physicians during the year was 839, together with 251 sketches of new camps. The total number of camp inspections made by staff inspectors of the department was 539, which, together with inspections made by company physicians for this class of work, gives a total of 1,428 inspections. In addition, there were various other inspections, including mining camps and many small towns scattered through the north, and examinations of dairies, rural schools, summer resorts, etc., which augmented the total official visits to 1,727. This work was classed by the chief inspector "as being the greatest year within my knowledge."

Medical Service Discussed

Continuing, the chief sanitary inspector states that the routine examination of camps, construction companies and such other industries as are operating in the north goes forward with extremely few complaints. It was the intention, therefore, to concentrate for the next year or two upon medical service. In this contemplated undertaking, the inspector's report outlines the problem and its solution as follows:—

"Each of our inspectors make mention that this is the one weak link at present, and attempts will therefore be made simultaneously throughout each of the five districts to bring the captains of industry and the physicians together looking towards a series of frank discussions as to how the medical profession can better serve industry and its employees. From our years of experience on this subject we hope to at least help to introduce the question from a new angle, firmly believing that the physicians of to-day are not accepting their full responsibility in the matter of industrial economics as related to lost time through sickness and accident.

"It is, for example, our firm conviction that some new basis other than the system at present in use in paying for accident disability must be inaugurated. It is not reasonable to suppose that the industrial physician can possibly enthuse over and strive with every means in his power to reduce accident cost, since in so doing he is limiting his own annual earnings from this source; we have ample proof that the industrial doctor who is in perfect accord with his company management, and who is given full power to deal with the accident question, can and actually has reduced the severity of accidents 50 per cent, while the number of accident cases or frequency actually remained the same as during the preceding years when the cost was high. We therefore believe that if some means are found wherein the physician will not have to depend upon accident fees for part of his livelihood, a substantial reduction in accident cost will be forthcoming almost at once.

"Our obligations with respect to the mitigation of infected wounds we find easy to discharge, but this item also depends to a large extent upon some change in policy as is mentioned in the foregoing. We believe there is to be another general rise in compensation rating, and as this has been almost an annual event it would appear reasonable that some drastic action would require to be taken since high compensation cost usually indicates wastage in the manpower of the

province, and an increase in the number of permanent disability cases, and as such adds to the overhead production costs, thus providing a serious handicap in selling our goods in a world market."

The chief sanitary inspector mentions that the year was remarkable in that no serious epidemics occurred throughout Northern Ontario. While there had been sharp outbreaks in certain sections, yet outside of the expenditure of time involved in supervising

these areas, coupled with the liberal use of prophylactic vaccines, there was very little cost either in lives lost or money expended. During the year the scope of the sanitary service was broadened, particularly in the districts of Cochrane, Sudbury and Fort William, and a great deal of time was spent in assisting the district officers and local health organizations in such problems as a sanitary municipal milk supply, scavenging, negotiation of a satisfactory plumbing ordinance, etc.

NOTES ON INDUSTRIAL SAFETY AND HEALTH

Safety Division for Ontario Labour Department

Early in November it was announced that an industrial and safety division, to be in charge of a safety director, would shortly be established in the Department of Labour of Ontario. The provincial Department of Health is expected to co-operate in the work of the new division by providing instruction in first aid work and by the service of its laboratories. The Safety Division will receive the suggestions of employers and workers, and with the help of medical and scientific experts will devise a safety code, to be available for use by manufacturers and their employees.

Results of Safety Work in Lumber Camps

Progress in safety work in the Lumbering Industry was reported at the annual meeting of the Lumbermen's Safety Association held at Sudbury, Ontario, in September, when it was reported that safety measures had already effected considerable reduction in the cost of industrial accidents. Mr. F. L. Thompson, of the Hawkesbury Lumber Company, stated that with the installation of a First Aid room and the inauguration of a safety committee by his company only eight out of 219 accident cases resulted in a prolonged lay-off, or required attention from the Workmen's Compensation Board. Otherwise, the percentage on the compensation list would have been much higher.

Dr. W. S. Barnhardt, medical superintendent of the Association, Ottawa, reported that the accident prevention campaign had been very effective, a large number of operators having actively participated in its program.

The subject of rehabilitation of injured workmen was also discussed, it being explained that in case men on the convalescent list were not capable of going back to their

old jobs, if the lumbermen were willing to provide some kind of employment, paying on a fifty per cent efficiency basis, the Workmen's Compensation Board would be willing to make up the deficit. The provisions of various provincial Workmen's Compensation Acts in regard to rehabilitation were outlined in the LABOUR GAZETTE, February, 1928, page 104 and in previous numbers.

Motor Accidents at Railway Crossings

The Board of Railway Commissioners for Canada has published statistics of accidents at railway crossings, showing the effects of dangerous practices of motorists, drivers of other vehicles and of pedestrians at these points. This negligence is found at both unprotected and protected crossings.

The Canadian National Railways lines from April 1, 1927, to August 31, 1928, show 302 cases where there was danger at protected crossings due to the negligence of those using the crossings. The Toronto, Hamilton and Buffalo lines, from March 16, 1927 to August 31, 1928, show 52 cases. The Canadian Pacific Railway lines, from January 1, 1927, to July 31, 1928, show 375 cases.

Notwithstanding safety devices and cautionery signals, people take chances and disregard safety. Motor accidents are becoming more frequent. Every sane motorist deploras this.

Motor vehicle accidents at public highway crossings, were distributed over the Dominion, by provinces, as follows:—Prince Edward Island —; Nova Scotia, 8; New Brunswick, 9; Quebec, 48; Ontario, 140; Manitoba, 10; Saskatchewan, 16; Alberta, 20; British Columbia, 12.

The number of accidents investigated totalled 263, covering 80 persons killed and 401 injured as compared with 235 accidents investigated during the year 1926, covering

80 persons killed and 341 injured; an increase of 28 accidents and an increase of 60 persons injured. Forty-five accidents occurred at protected crossings, and 218 at unprotected crossings. Out of the total of 263 accidents referred to, 234 occurred at, so-called, improved highways (including provincial highways) viz: paved, macadam, gravel and graded clay. There were 74 accidents as a result of vehicles running into the sides of trains, as compared with 55 in 1926; an increase of 19. Attempting to beat train, disregarding hand signals, and running through crossing gates accounted for 21 accidents.

Vehicles bearing foreign licences were involved in 15 of the total of 263 accidents. Buses were involved in 4 accidents, as compared with 1 in 1926.

Accidents in the province of Ontario totalled 140, as against 142 in 1926. In the provinces of Quebec and Alberta an increase of 23 and 7 accidents respectively, were recorded in 1927 over the figures for the year 1926.

At this juncture the situation, as regards the distribution of these accidents, appears to remain unchanged from that which obtained in 1925, when this record was first compiled.

Industrial Accident Statistics in Ohio

The Industrial Commission of Ohio recently published a detailed statistical study of all accident and occupational disease claims filed with the Commission in 1926, this being the first complete analysis of all accidents to be issued by the state. The statistics in the report are in four groups, giving information respectively as to occupations, localities, nature of injuries, and causes of accidents. Cuts and lacerations formed 38.1 per cent of the total number of all injuries, but caused only 7.6 per cent of the time loss. Fractures, with only 6.1 per cent of the total number of cases, had 24.2 per cent of the total number of days lost. Crushes and bruises had 18.6 per cent of the cases, and 23.1 per cent of the days lost. Infection set in in 16 per cent of the total number of cases filed, these cases carrying time loss amounted approximately to 16 per cent of the time loss from all accidents.

The largest number of accidents and the second largest number of days lost, in so far as the causes of accidents are concerned, were due to working machines, including rolls, hammers, presses, cutting machines, shears, abrasives, saws, screen-mixing, winding and twisting and portable power tools. To this cause has been credited 21 per cent of the

total number of accidents reported and 13 per cent of the total number of days lost. Five classes of industry stand out prominently in the reporting of machinery accidents, their order being (1) Metal goods manufacture, (2) Machinery manufacture, (3) Blast furnaces, steel works, rolling mills and ore refining, (4) Lumber and wood products, (5) Vehicle manufacture. These five industries reported 77 per cent of all the machinery accidents and 65 per cent of the time loss due to this cause.

The cause responsible for the second largest number of accidents was "handling objects," with 20 per cent of the cases and 9 per cent of the days lost. Injuries due to the use of hand tools was third in frequency, while "stepping upon or striking against objects" and "miscellaneous causes" follow.

Ontario Children's Drawing Contest

The Ontario Safety League has organized a School Children's Drawing Contest, the drawing to deal with one of the following subjects: (a) accidents; (b) fires; (c) accident prevention; (d) fire prevention. The pupils competing will be divided into two classes: children of 12 years of age and under, and children of 13 to 16 years. Information as to conditions, etc., may be obtained by writing to Safety Drawing Contest, Ontario Safety League, 1316 Metropolitan Building, Toronto 2.

Safety First Hints by Canadian Forestry Association

1. *Matches*—Be sure your match is out before you throw it away. Matches have heads, but they can't think. Do it for them. Break your match before you drop it.

2. *Tobacco*—Don't throw glowing tobacco from a car into the inflammable material by the roadside. If you simply must get rid of these, it is less dangerous to drop them in the centre of the road.

3. *Making Camp*—Build a small camp-fire. Build it in the open, but not against a tree or a log. Scrape away the debris from all around it.

4. *Bonfires*—Never build bonfires in windy weather or where there is the slightest danger of their escaping from control. Don't make them larger than you need.

5. *Fighting Fires*—If you notice a small fire starting, try to put it out. Larger fires should be reported immediately.

RECENT INTERNATIONAL DEVELOPMENTS OF SOCIAL WORK IN INDUSTRY

WHILE the history of social work in industry, or welfare work, is the history of industry itself, and while it has often actually been the origin of labour legislation, the interest taken in it has never been so widespread and intense as it is to-day. The question occupied an important place in the discussions of three recent international conferences: (1) the International Conference of the "Caritas Catholica", which was held in Basle from May 2-4, 1928, and was attended by over 400 delegates of the "Caritas" and other large Catholic organizations engaged in charitable and social work, such as the International Catholic Social Service Union, the International Union of Catholic Women's Leagues, the International Federation of Catholic Women Workers, and the Catholic Union for International Studies; (2) the International Association for the Study and Improvement of Human Relations and Conditions in Industry, held in Cambridge from June 27 to July 3, 1928, and attended by approximately 150 persons from twenty countries, most of whom held responsible positions in industry either as employers, managers, or workers; and (3) the International Conference of Social Work, held in Paris from July 8-13, 1928, together with the three other congresses associated with it in the International Social Welfare Fortnight, namely, the International Housing and Town-Planning Congress, the International Congress on Statutory and Voluntary Assistance, and the International Child Welfare Congress, which brought together 5,000 people from some forty countries.

In an article under the above title written by G. A. Johnston, Chief of Section, Intelligence and Liaison Division of the International Labour Office, and published in the September issue of the *International Labour Review*, the material provided by the three conferences above referred to is used to throw light on various points, the most important of these being the relation between voluntary social work, and the increasing State intervention in the regulation of industrial conditions; the relation of the workers to welfare work; the functions of welfare work as an auxiliary to labour legislation or to collective agreements, and as a means of improving industrial relations; and certain other features of the modern orientation of social work, such as the increasing emphasis being laid on the importance of research, the necessity of co-

ordinating social effort, and the elimination of waste. A study of the proceedings of the three conferences confirms the impression that throughout the infinitely varied forms of social work in industry runs an underlying unity of conception, the conception of the industrial order as a field for the development of human relationships.

The attitude of organized workers in general has often been unfavourable to voluntary social work in industry, which they have regarded as trifling and unimportant. They have devoted their energies primarily to securing what they considered to be the minima of elementary justice, either through direct trade union action or through political action tending to the adoption of legislation. The author points out, however, that there are certain indications that the attitude of the workers towards social and welfare work in industry, is becoming more favourable. There are various reasons for this. In the first place, the organized workers recognize that, while much remains still to be done in the direction of social justice, certain quite definite advances have been secured within recent years, such as the widespread acceptance by industry of the eight-hour day, higher wages, insurance against unemployment, sickness, invalidity and other social risks, and finally the possibility of securing to the workers their active collaboration in the work of the factories in which they are employed. In the second place the workers in certain countries recognize that results of real importance have been achieved owing to the initiative of voluntary social workers. For example, in the United States, it was the Pittsburgh Survey, initiated and carried out by social workers, which was originally responsible for the elimination of the 12-hour day in the steel industry. In the third place, the worker's attitude to social work in industry or welfare work is becoming more favourable because he is more and more coming to realize that the facilities placed at his disposal in the name of welfare work are not to be regarded as charity doled out to him in a patronizing and paternalistic way, but are rights to which he has a claim in view of the contribution which he has made to the prosperity of industry. Finally, the workers' attitude towards social work in industry or welfare work is becoming more favourable because there is an increasing tendency to associate the workers themselves in the administration of welfare work.

NATIONAL INSURANCE IN AUSTRALIA

Provisions of Bill to Provide for Old Age and Disability

THE Ministry of the Commonwealth of Australia introduced in Parliament during September, a measure to provide for national insurance against old age and invalidity. The provisions of the bill were stated by the Hon. Dr. E. C. G. Page, the Commonwealth Treasurer.

Dr. Page said that the measure was of the greatest importance to the whole community; in all directions it was being recognized that the beneficent principles and practice of insurance should be applied, not only in respect of such casualties as death, fire, shipwreck, or accident, but to the more insidious but no less serious casualties of sickness, invalidity, and senility. He pointed out that, taking into account the exceptions and exemptions provided for, it was estimated that if the measure came into force on July 1, 1929, the number of employed contributors for the year ending June 30, 1930, would be 1,600,000, comprising 1,240,000 males and 360,000 females.

Dr. Page explained at some length the essential difference between prevention and insurance, with a view to making clear to members why it was that the Ministry had brought down a bill dealing with insurance in respect of such matters as sickness, disablement, widowhood, orphanhood, and superannuation, but had reserved for preventive treatment and further investigation the more elusive problems connected with unemployment.

Benefits

It was explained by Dr. Page that the benefits of the bill comprised:—

1. Sickness allowance, payable on and after the fourth day of incapacity, the weekly amount payable to male adults and married minors being 27s. 6d., to female adults and married minors 20s. per week, and to unmarried minors of either sex 15s. a week, but in the last-mentioned case not to exceed one-half the average weekly wage.

2. Disablement allowance, which is really extended sickness allowance, and consists of a sum of 20s. a week, payable in all cases after the receipt of sickness allowance for a continuous period of 26 weeks.

3. Child allowance of 5s. a week, payable during the receipt of sickness or disablement allowance by the insured person in respect of each child under the age of 16 years.

4. Widow's allowance of 20s. a week, payable to the widow of an insured person for a period of three years after the death of her husband, but if any dependent child has not

then reached the age of 16 years, extended until her youngest child reaches that age. Allowance ceases on the death or remarriage of the widow.

5. Orphan's allowance of 5s. per week, payable until the age of 16 years, to the person who maintains the orphan. The term "orphan" is defined as including an ex-nuptial child, a stepchild, and a legally adopted child.

6. Superannuation allowance of 20s. a week, payable to an insured male who has reached the age of 65 years, and to an insured female who has reached the age of 60 years, provided in either case that the person in question has continuously resided in Australia for 20 years, occasional absence not aggregating more than one-tenth of the total period of residence being ignored.

7. Wife's superannuation allowance, payable to the wife of a pensioner from the date on which she attains the age of 60 years, 20s. per week.

8. Widow's superannuation allowance of 20s. a week, payable to the widow of an insured man from the date on which she reaches the age of 60 years, if she is then a widow, or is the wife of a pensioner.

9. Marriage allowance, which in the case of an employed female contributor is a refund without interest of one-sixth of the total contributions made in respect of her by her employer, and is in the nature of a surrender value payable on her withdrawal from insurance.

These benefits were to be supplied to the employed contributors at a direct cost, deductible from wages, of 1s. a week in the case of male workers and 6d. a week in the case of female workers.

Administration

"In the matter of administration the basis provided in the British scheme has been followed with certain modifications," continued Dr. Page. "The principle of enabling insured persons to control their own affairs within the limits of the act has been adopted, and any body of insured persons numbering not less than 1,000 in the whole of Australia is to be allowed to constitute itself a society, and, on compliance with the provisions of the act, to be entitled to become an approved society with extensive powers of self-management, but subject to fairly exacting tests as to the audit of accounts and valuation of assets and liabilities. It is anticipated that friendly societies, life insurance societies,

companies, and trade unions will assist in this matter, and will contribute nuclei about which approved sections will aggregate.

"The central control of this organization is to rest not with a Government department, but with a specially constituted board, having a maximum strength of five and a minimum strength of three, of whom one, the president, appointed by the Government, will be a full-time officer devoting his whole time to the work. Of the members one is to represent employers and one employees, while one is to be an actuary. In each state there will be a full-time commissioner, assisted by an advisory committee.

Contributors

"The bill provides for two classes of contributors, employed (or compulsory) and voluntary. With the exclusion of those in certain excepted employments, as well as certain exempted persons, the compulsory contributors comprise all workers employed under a contract of service, written or oral, express or implied. One of the important excepted employments is that of persons not engaged in manual labour who have a total income exceeding £416. Another important exception from compulsion is that of any employment in which it is proved that the terms are such as to secure provision in respect of sickness and disablement (extended sickness) not less favourable on the whole than the corresponding benefits under the act. A voluntary contributor is a person who is not employed within the meaning of the act, but who is engaged in some regular employment on which he is wholly or mainly dependent and whose total income in the preceding 12 months did not exceed £416. Voluntary contributors will not be admitted after the age of 45 years, and every voluntary contributor must pay the full rate of contribution appropriate to his age at entry, but to give an opportunity to as many as possible to take full advantage of this voluntary provision the Government will make a concession to those who enter insurance within 12 months after the commencement of the act. The amount of total contribution in excess of 2s. a week for males and above 1s. a week for females will, under this concession, be defrayed by the Commonwealth.

Contributions and Finance

"A feature of the bill is the low scale of 1s., which represents the contribution per week on the compulsory side. In the case of male employed contributors the sum of 1s. a week has to be paid by both employer and employee. For the female employed contributor the sum of 1s. a week has to be paid

by employer and employee combined, sharing the cost equally. The method of paying contributions follows the English precedent, and is to be effected by means of stamps, which in the case of employed contributors are to be affixed by the employer to the card of the employee. Voluntary contributors are to affix their own stamps. The financial arrangements made for the scheme also follow closely the English precedent, and provide for a minimum amount of handling of the cash between the time of its payment by the employer to the post office for the necessary stamps, and the crediting of the member in the books of the society, and of the society in the books of the board. Provisions are made by which the board will invest one-half the funds in its hands available for that purpose and will pay over to the societies concerned the other half for investment by them, or will invest it on their behalf according as may be desired. There must be an actuarial valuation of the liabilities and assets of each society at least every five years, and in the event of the contributions under the act being found unsuitable the Governor General may prescribe such variations as are recommended by the board.

"Surpluses disclosed at a valuation and certified by the valuing actuary to be available for distribution are, as to half their amount, to be available to the society concerned for the provision of additional benefits. Four-tenths of such distributable surplus is to be pooled and distributed for the same purpose among all the approved societies on the basis of effective membership. The remaining one-tenth of the surplus is to be paid into a contingencies fund, which is to receive certain other sums, and is to be held by the board for the purpose of assisting, at its discretion, societies which are in difficulties, and for other purposes."

Dr. Page presented an actuarial report certifying to the soundness of the scheme. This was signed by a committee comprising Mr. C. H. Wickens, the Commonwealth statistician and actuary (chairman), Mr. A. W. Sneddon, of the Australian Mutual Provident Society; and Mr. S. Bennett, Government statistician and actuary of Western Australia.

Criticism Invited

On the motion for the adjournment of the House, the Hon. S. M. Bruce (Prime Minister) announced that it was not proposed to carry the measure further during this Parliament. The Ministry deliberately took this course because it was considered desirable that the people should have every opportunity of considering the proposals.

Progress of Co-Operation in India

Considerable progress in the co-operative movement in India in 1926-27 is shown in the annual statements recently published by the Department of Commercial Intelligence and Statistics of the Government of India. Tables are given showing the numbers of societies and members and the amount of working capital, both for the whole of India and by provinces and states. The total number of co-operative banks increased during the period 1926-27 from 567 to 577, and the membership from 197,930 to 214,201. The number of agricultural (excluding insurance) societies increased during the year from 70,733 to 78,538, the members in the later period numbering 2,615,792. The non-agricultural primary societies increased in number from 7,069 to 8,133, with 799,865 members.

The first instalment of a historical survey of co-operation in India is given in the September issue of the *Review of International Co-operation*, the official organ of the International Co-operative Alliance. The writer, Mr. M. L. Tannan, states that the modern movement owes its origin to the severe famine experienced in 1897-1900 by the agricultural workers, who form over 70 per cent of the total population of the country. In the early 'nineties the government had created machinery for agricultural loans, ordinarily for the purpose of land improvements, and later savings banks operated through the post office were established. As these and several other measures of the same nature proved ineffective suggestions were made for the establishment of village banks of the Raffeisen type, and after the famines referred to, the government appointed a committee to study the conditions with a view to the creation of a co-operative credit system. As the result of the recommendations of this committee the Co-operative Credit Societies Act was passed in 1904. The Act permitted the registration of co-operative credit societies composed of any ten persons belonging to the same class or caste, or living in the same town or village, the object of the societies being the encouragement of self-help and thrift among their members. The societies were divided into two classes—rural and urban; the former were bound to accept unlimited liability, and the latter were free to choose whatever form of liability they preferred. Experience of this act brought to light several defects, and a new act was passed in 1912. The Cooperative Societies

Act of that year still governs the formation and working of co-operative societies except in one province.

The Act of 1912 removed the unscientific division of societies into rural and urban and substituted the grouping of societies on the basis of the form of liability they adopted. It prescribed the adoption of unlimited liability by all credit societies composed of agriculturists and of limited liability by all central societies. It defined the objects for which societies could be started, and provided for the registration of societies for purposes other than credit. It also prohibited the use of the word "co-operative" as part of the title of any business concern not registered under the Act.

Under the Indian constitution co-operative societies formed an "All-India" subject until its revision in 1919. In that year co-operation was included in the list of subjects transferred from the All-India government to the control of ministers chosen from the elected members of the Provincial Legislative Council. Mr. Tannan points out that in the Indian co-operative movement, the agricultural society greatly predominates. This is natural, he says, "because in any scheme of organization, particularly among a community, a community of backward peasant proprietors, the provision of a system of co-operative credit has been recognized as an essential step towards progress in other directions. The indigenous system of credit has broken down under modern conditions, and has, with the disruption of the old economic order, been used as an instrument of exploitation of the agriculturist by the money-lender. The cost of credit has been increased beyond a point which the agricultural industry can bear, with the result that the burden of debt on the land has gone on increasing."

The constitution of the agricultural credit societies is modelled more or less on the Raffeisen system. The societies are based necessarily on unlimited liability, they have restricted areas of operations, carry all profits to reserve, grant advances to members only—and mainly for productive purposes, and on a short term basis—accept the principle of one man one vote, and pay no remuneration to the committee of management. In two provinces from the start, and recently in most other provinces, shares of a small denomination payable by half-yearly or annual instalments have been introduced, and, while

the profits are not divided for the first ten years of working, dividends are payable generally after the expiry of that period, subject to a maximum rate fixed under the rules or the by-laws. The supreme seat of authority is the general meeting, which elects the committee annually and prescribes the limit of borrowing for the society itself, and usually fixes limits for individual members as well.

Rates of interest vary from 9½ per cent to 15½ per cent, and these are low compared

with the local lending rates which vary from 12 per cent to 36 per cent. In most provinces, there is a limit to the amount that can be advanced to any one individual, and the periods in which loans for various purposes can be made repayable are also prescribed under the by-laws. The principle is for repayments to be made out of income. The maximum period is ten years for loans advanced for purposes of repayment of prior debts or land improvement, and advances made for the current needs of agriculture are repayable at the next harvest.

NOTES ON LABOUR UNION ACTIVITIES

Federated Association of Letter Carriers

THE twenty-fifth convention of the Federated Association of Letter Carriers was held in the city of Windsor, Ontario, on September 17-19, 1928, with forty-four delegates in attendance, including the Dominion executive officers. According to the report of the finance committee, there had been five new branches formed and three lapses during the two-year period 1927 and 1928. The total membership stands at 1,038, an increase of 283 members since the last convention held in Niagara Falls. The report recommended that the executive devise ways and means to increase the membership of certain of the local branches. The committee could not agree with the three reasons advanced for lack of interest in the organization viz.: (1) local disagreements; (2) inability to pay dues on present salaries; (3) the possibility of being called out on strike.

Considerable discussion took place over the advisability of continuing to publish the *Bulletin*, the official organ of the association. One delegate from each local represented was asked to give the views of his local on this important question. It was finally decided to have a monthly issue of 1,300 copies of the *Bulletin*, the cost to be borne by the Association as in the past.

A number of amendments were made to the constitution and laws of the association. Among the resolutions adopted were the following:—

Recommending that all contributors to the Superannuation Fund be allowed interest in case of withdrawal or dismissal from the service;

Recommending that in case of the death of a contributor to the Superannuation Fund without dependants, the amount contributed by him be paid to his estate, plus interest;

Recommending that the Superannuation Act be revised to the effect that letter carriers be entitled to their pension after 25 years' service without restrictions;

Recommending that the basis of salary requests be \$2,100 maximum;

Advocating a seven-hour day and a five-day week for letter-carriers owing to the arduous nature of their duties;

Petitioning the government on behalf of superannuated letter-carriers to take into consideration the high cost of living and that allowances for pensions or superannuation be increased accordingly;

Requesting the government to inaugurate an up-to-date parcel post service, to handle matter on which parcel post rates have been paid;

Asking the government to make a rule that 35 pounds be the maximum weight of mail which letter carriers should carry;

Asking that the holiday period should be from May 1 to October 31;

Recommending a minimum of seven days for Christmas help for letter carriers;

Asking that where there are more than three suites in one building, it be made compulsory for the owner to install combination mail boxes including one letter box for each suite in the building; All such boxes to be installed on ground floor at nearest entrance to the street;

Asking that there be no delivery of mail on either Christmas or New Year's day;

Recommending that promotions to the positions of senior carriers, overseer, or supervisor of carriers, be made from the letter-carriers and not from the clerical staff;

Advocating that on the question of superannuation a five-year period be substituted for the present ten-year period;

Calling upon the Post Office Department to put into practice as well as theory the merit-system governing promotions, etc., in the department;

Recommending that when carriers are incapacitated for that duty, they be given suitable inside employment;

Advocating that carriers with 35 years' service be allowed to retire on 70 per cent of the salary they have been receiving without the average of three years;

Recommending that in the choice of routes and other matters, seniority be recognized and given the preference;

Asking that postage on circular and advertising matter be increased in order that the Post Office may be able to pay letter carriers a substantial increase in salary.

The officers elected were: President, J. J. Reaves, Toronto, Ont.; First vice-president, D. W. Rehder, London, Ont.; Second vice-president, J. M. Côté, Quebec, Que.; Third vice-president, W. H. Belcher, Edmonton, Alberta; Secretary-treasurer, A. McMordie, Toronto, Ont.

Calgary was chosen as the next place of convention.

United Postal Employees of Canada

With Mr. F. L. Goodwin presiding over approximately thirty-five delegates, the first convention of the United Postal Employees of Canada (formerly the Dominion Postal Clerks Association) was held in Ottawa on September 18-20, 1928. The report of the executive officers mentioned the efforts put forth to secure a substantial salary increase for members of the organization and expressed regret at only half of the expected increase being secured. Referring to the formation of a postal amalgamation, the report showed that only the Postal Porters' and Chauffeurs' Association was unqualifiedly in agreement with the proposal.

A substantial increase in membership was reported for the past year, the postal clerks at the following localities having entered the organization: Amherst, Sydney, Three Rivers, St. Hyacinthe, Montreal, Peterborough, St. Catharines, Stratford and Edmonton.

Satisfaction was expressed at the progress recently made to devise means of adjusting the affairs of civil servants, and mention made of the fact that the Minister of Labour had asked the organization to name a representative on a drafting committee to be convened for the purpose of drawing up a constitution for civil service councils. In closing, the report urged that the organization continue to press for a postal amalgamation.

Hon. P. J. Veniot, Postmaster-General, and Mr. Gaboury, Deputy Postmaster General, addressed the delegates.

Among the resolutions adopted were the following:

Favouring postal amalgamation;

Recommending that the name of the new organization be The United Postal Employees of Canada;

Advocating that all work performed over 44 hours at any period of the year, be paid for at the rate of time and a half, in cash;

Recommending one examination a year and no examination for those who have reached fifty years of age or have twenty-years service;

Advocating that eight hours work be done inside a limit of ten hours;

Advocating that vacancies in city post offices be advertised and filled immediately;

Urging that a new class be created between postal clerk and senior postal clerk for those with a creditable record or over fifteen years' service;

Recommending that a postal helper who has performed the duties of a postal clerk for a period of one year be re-classified as a postal clerk;

Advocating that senior clerks be paid overtime;

Recommending that men doing duty at stations, receive time and a half for all overtime;

Instructing the Dominion executive board to do everything possible to hasten the formation of a Dominion-wide postal workers' organization;

Advocating that nominations on the civil service joint councils consist of one clerk, one railway mail clerk, one letter carrier and one postal clerk.

United Brotherhood of Carpenters and Joiners of America

The 22nd general convention of the United Brotherhood of Carpenters and Joiners was held at the Carpenters' Home, at Lakeland, Florida, commencing September 29, with 463 delegates in attendance, representing 37 states and Canada. The two Canadian organizers were also present. President Wm. Hutcheson presided. The second day's session was abandoned owing to the dedication ceremony in connection with the opening of the newly-constructed Carpenters' Home, which is referred to in an article on another page. When the convention resumed its sessions the reports of the officers for the four years from July 1, 1924, to June 30, 1928, were presented, including that of the president, vice-president, general secretary, general treasurer and the general executive board, all of which covered the major questions, which had been dealt with by them since the previous convention, and contained a vast amount of information respecting the affairs of the organization. The total membership reported was 346,136, comprising 2,039 local unions; 85 of these are in Canada, with a total membership of 11,545. The general treasurer's receipts were \$9,130,-638.54 during the four-year period, being an increase of \$2,132,826.58 over the previous similar period. The available cash balance stood at \$1,143,564.58, in addition to the headquarters property at Indianapolis and the home property of Lakeland.

Canadian locals had received \$21,100 in support of strikes and lockouts; \$25,749 to assist in local organization work, and \$46,330 for death and disability; tax and expenses of delegates to the Trades and Labour Congress of Canada, \$6,250, a total of \$99,429. These figures, it was pointed out, do not include the supplying of the monthly journal to each member, the salary and expenses of a member of the General Executive Board and from two to four organizers.

The general president reported that an agreement had been reached with the sheet metal workers' international Association respecting the erection of metal trim and also with the Wood, Wire and Metal Lathers' International Union respecting the erection of corner beads and celotax.

Interesting information was furnished regarding the operation of the printing plant which, through additions to machinery, etc., was able to increase its production during the latter three years by \$106,000 with a pay-roll increase of only \$8,000. During the past four years, in addition to 16,780,000 copies of the *Journal*, 566,150 application blanks, 368,541

constitutions, 510,136 due books, thousands of cash books, order books, day books, etc., were printed and distributed.

Nominations for officers to be voted on by referendum, and also for representatives to the American Federation of Labour, the Label Trades Department and the Trades and Labour Congress of Canada resulted as follows: General president Hutcheson, 1st vice-president Cosgrove, 2nd vice-president Lakey, general secretary Duffy and treasurer Neale were the only nominations for these positions. The members of the seven districts of the General Executive Board were all nominated, the only names to receive opposition being board member Potts of the 3rd district and board member Muir of the 6th district. Delegates T. Jackson, of Toronto, and P. Lefebvre, of Montreal, were elected to represent the Brotherhood at the convention of the Trades and Labour Congress of Canada, the first named for the first and third years, and the last mentioned for the second and fourth years. The elections for the representatives to the A. F. of L. Label Trades Department, Building Trades Department, and also for the tabulating committee in charge of counting the votes for the general offices, were conducted on roll call. Each member deposited his ballot in the order called.

While a large number of amendments to the general constitution were submitted, comparatively few were accepted, and these will be sent out to the referendum. The most important were those dealing with the home and pension plan; it was recommended that members, to be eligible to the home or pension, must be not less than 65 years of age and have had thirty years' continuous membership in the Brotherhood; that the home be reserved for those who have no means of support, and all others who have reached the above age and have thirty years' continuous membership be paid a pension of \$15 per month irrespective of their personal financial condition. It was also recommended that, in order to provide a fund large enough to pay the above pensions, there should be an increase in the assessment for the home and pension of 15 cents per member, making it 25 cents instead of 10 cents as at present. As the contribution to this fund from members in the Brotherhood had been approximately \$6 each up to the present time it was decided to add \$5 to the initiation fee of each future new member to be sent to the general office and placed in the Pension Fund. Another decision was to place the profits from the printing plant in the pension fund.

The convention went on record as endorsing the principle of the 5-day 40-hour week, and urged all local unions to do their utmost to put this into effect. Another amendment adopted provided for increasing the charge for charters for new local unions from \$10 to \$15.

Among the recommendations defeated by the convention were a number aiming to give power to local unions to refuse acceptance of clearance cards; to raise the death and disability donations to prevent members from moving from one jurisdiction to another without paying the added initiation fees unless they had been members for two years or over; to return to the system of biennial instead of quadrennial conventions.

On the report of the committee on appeals and grievances, the action of the general executive board in cancelling the charter of a New York local union and debarring its members from holding office in any other local union for an indefinite period was upheld by the convention. It was shown that this local union had used its funds for the purpose of propagating communism within the Brotherhood. Arising from the discussion on this appeal, and after evidence had been adduced as to membership in the Communist Party and activities carried on by them for the pur-

pose of disrupting and destroying the Brotherhood, the convention, by practically unanimous vote, expelled several members and placed a number of others from Chicago on probation under the supervision of the District Council of that city.

During the convention a Canadian flag was presented to the home by the delegates and organizers from Canada. This was received with hearty applause by the convention. In accepting the flag President Hutcheson said:

"It is hardly necessary for me, on behalf of the delegates assembled as well as the membership of the Brotherhood, to express to the delegates here from the Dominion of Canada our deep appreciation of your thoughtfulness in bringing to the home the flag of the Dominion of Canada so that it can be shown that we are in truth what we claim to be, the International Brotherhood of Carpenters and Joiners of America."

The convention dealt with a number of resolutions and went on record in one of them as opposing physical examination of men before securing employment. It was also decided that the fiftieth anniversary of the founding of the Brotherhood be celebrated by local unions and District Councils on Labour Day in the year 1931.

Commercial Telegraphers' Union of North America

The fourteenth regular and first biennial convention of the Commercial Telegraphers' Union of North America, attended by over fifty delegates and presided over by international president Roscoe H. Johnson, was held in Chicago, Ill., September 10-14. Among the speakers at the opening session were John Fitzpatrick, president, Chicago Federation of Labour, and Geo. W. Perkins, vice-president, Union Labour Life Insurance Company.

The president, in his address, eulogized the work performed by the officers and members in Canada since the last convention, and strongly recommended "that the convention instruct incoming officers to carry on an uncompromising fight in behalf of our Canadian sisters and brothers—cost what it may—until every vestige of the red wrecking crew has been cleared out of the labour movement in Canada."

The secretary-treasurer reported that the total surplus, in all funds, as at June 30, 1928, amounted to \$12,925.76, which was a slight decrease as compared with the reported surplus in 1925. He stated that "the general fund has been able to withstand the extraordinary expenses involved in protecting the

Canadian membership from Communist wreckers, and the condition of our treasury is practically the same as it was three years ago." A total of 2,847 new members were taken into the Association since the last convention, and according to the report of the secretary-treasurer, "twice that number could have been enrolled if subordinate units had permitted unemployed commercial and press operators to join. The C.T.U.A. has been placed in the unique position during the past three years of rejecting applicants for membership." At a later session William Green, president of the American Federation of Labour, addressed the delegates, who were all individually introduced to president Green.

A number of changes were made in the constitution and laws of the organization, among which were: (1) The holding of conventions every two years instead of every three years; (2) Changing the name of the organization to "The Commercial Telegraphers' Union of North America"; (3) That funeral benefits be payable only to families, heirs, etc.

Among the resolutions adopted were the following:

Asking that wireless equipment be compulsory on all deep-water passenger-carrying vessels and freighters with a crew of twenty or more;

Instructing the funeral benefit committee to draw up a new set of funeral benefit by-laws to be submitted to a referendum vote of the membership on or after October 1, 1929;

Bricklayers', Masons' and Plasterers' International Union of America

The eleventh biennial and fifty-first convention of the Bricklayers', Masons' and Plasterers' International Union of America, presided over by William J. Bowen, was convened in Boston on September 10, 1928, there being present 423 delegates representing a membership of 75,959. The president in addressing the delegates stated that the union had \$3,865,000 in its treasury, compared with \$1,837.56 when he was elected vice-president in 1901, and that during the period of his official life the union had gained 80,000 members. The organization, in ten years, had paid out to aged and infirm members, and in mortuary benefits, more than \$10,500,000, and that each year the union pays out more than \$1,000,000 in relief and more than \$360,000 in mortuary benefits.

Besides making a number of amendments and additions to the constitution, the following resolutions were adopted:

Specifying that after President Bowen retires from the presidency of the International Union, and upon his acceptance of the office of president emeritus, he shall be chairman of the board of trustees of the Bricklayers, Masons and Plasterers International Union of America, maintaining a separate office in the headquarters of the International Union;

Requesting the American Federation of Labour to investigate the manner in which the United States Department of Labour is enforcing the 1924 immigration law, and to inform the members of trade unions of any protective provisions of the law that have been annulled by department proclamations and orders, particularly at the port of Detroit, and further that the American Federation be urged to protest the destruction of any of the im-

Authorizing the purchase of a suitable farewell remembrance for the retiring president, Roscoe H. Johnson.

The officers elected were: president, Frank B. Powers, Chicago, Ill.; secretary-treasurer, W. L. Allen, Winnipeg, Man.; general executive board, W. J. McMahon, Milwaukee, Wis., Cal. McMahon, Saskatoon, Sask., J. G. A. Decelles, Montreal, J. B. Alcorn, Detroit, Mich., and A. T. Maddux, Knoxville, Tenn.

migration laws by injunctions issued by Federal courts;

Recommending that the per capita tax for each member of the Bricklayers, Masons and Plasterers' International Union of America for the next two years be \$1.50 per month;

Favouring amendments to the tariff law so as to protect the American shoe worker against competition of low wages and oppressive conditions of employment;

Extending financial aid to station W.C.F.L., Chicago's labour radio station.

The following matters, among others approved by the convention, were referred to the executive board:

Insurance for every member at a favourable rate;

Relief benefits not being payable to persons residing outside the boundaries of the Bricklayers, Masons and Plasterers' International Union;

Authorizing the payment of the burial expenses of deceased members where same have not been paid from the amount of benefits due such member;

Requesting a new clause in the agreement between the National Association of Marble Dealers and the Bricklayers', Masons' and Plasterers' International Union which will make it compulsory for the former, in securing or operating a contract within the jurisdiction of a local of the International Union, to abide by all conditions relative to fabrication and selling which exist in such locality.

Geo. T. Thornton, Boston was elected president, and John J. Gleeson, Chicago, secretary-treasurer. One of the ten vice-presidents elected was John McLeod, Toronto, Ont. Montreal was selected as the convention city for 1930.

International Typographical Union

With over three hundred delegates in attendance, and presided over by Chas. P. Howard the seventy-third annual convention of the International Typographical Union was

held in the city of Charleston, S.C., September 10-14, 1928. The delegates were welcomed to Charleston by president Nauful of the local Typographical Union, the mayor of the city,

and representatives of various business and civic bodies.

The president in his address contended that no industry should be operated in a manner injurious to the health and well-being of those engaged therein, and approved of the demand for the abolition of piece work and bonus practices. He advised the delegates that a new arbitration agreement would be undertaken when the time appeared opportune. President Howard believed that the printing business had not suffered materially as a result of mergers, consolidations and suspensions in the newspaper field, but to determine accurately the number of members displaced as a result of such mergers, etc., would require an extensive survey. Speaking of the internal affairs of the organization the president expressed the belief that the outstanding development during the fiscal year had been the determination shown by a great majority of the members to adhere to democratic ideals, and return control of internal affairs to their own hands.

Among those who spoke at the convention were: John J. Manning, secretary of the union label trades department of the American Federation of Labour; Spencer Miller, Jr., secretary of the Workers' Education Bureau of America; Frank Morrison, secretary of the American Federation of Labour; and W. W. Barrett, field agent of the International Allied Printing Trades Association.

An amendment to the election laws was adopted, its main feature being to prevent any but members of the union from acting as watchers at election time. Another amendment, submitted by the committee on laws, provided for a referendum vote in local unions on all proposals to levy local assessments or increase local dues.

Several new sections were substituted in the general laws, restating the overtime laws of the organization and requiring payment at the overtime rate for members required to work on their off day or seventh shift in one financial week, as well as establishing a minimum overtime rate of time and one-half.

Among the resolutions adopted, the first

four of which are to be sent to the referendum, were the following:

Recommending that the number of mailers required to obtain a local charter be raised from five to eight, and ordering the striking out of that part of the constitution requiring joint negotiation and concurrent termination of mailers' and typographical scales in local jurisdictions;

Favouring an increase in the salaries of the International officers;

Instructing the executive council to prepare and submit a feasible plan for a board of appeals to act as a court of last resort;

Recommending that the fiscal year of the organization shall commence on the twenty-first day of June in each year;

Authorizing the president to appoint a committee to investigate the feasibility of obtaining group insurance on the lives of the entire membership;

Asking the A. F. of L. to endeavour to have suitable laws enacted at Washington, similar to those now in vogue in Great Britain, compelling all printing matter in the United States to bear the imprint of the printer;

Condemning the misuse of the injunction, and urging the members through the ballot to prevent the election of judges whose record show an unfavourable attitude toward labour in injunction disputes;

Endorsing a bill before the Congress of the United States asking relief from the "unfair and unjust decisions granting injunctions in labour disputes, thus depriving organized labour of its just rights under the constitution";

Urging all local unions to have as their chief objective in future newspaper scale negotiations, a reduction of hours to or below forty-four hours per week;

Instructing the executive council to investigate thoroughly the possibility of a surplus of printers, owing to the increase of schools for teaching printing, and submit a report with recommendations to the convention of 1929.

Seattle was selected as the next convention city.

Brotherhood of Railroad Signalmen of America

The fourth biennial and nineteenth regular convention of the Brotherhood of Railroad Signalmen of America, which was held at Chicago on September 10-15, 1928, was presided over by D. W. Helt and attended by a large number of delegates from Canada and the United States.

In his opening address President Helt drew a comparison between the last convention of the organization held in Chicago twelve years ago, when there were present six grand lodge officers and twenty-two delegates representing a membership of 906, with the present convention, where the delegates represented a

membership over ten times greater and comprised in 170 local lodges throughout the United States and Canada. The president informed the delegates that there were approximately 19,000 signal department employees on the railroads of the United States and Canada, and stated that "ninety-five per cent of this number are receiving wages and enjoying working conditions established by agreements secured through persistent, determined efforts of the Brotherhood of Railroad Signalmen of America. Through the activities of this organization the wages of railroad signal department employees have been more than doubled since that Chicago convention of twelve years ago. The working day has been shortened and other vast improvements made in working conditions." The report of the secretary-treasurer revealed that the membership of the brotherhood had increased about 20 per cent since the 1926 convention and that the financial strength of the organization had improved 50 per cent.

A change in the constitution providing for a board of trustees of three members, and an executive council consisting of the full-time elective grand lodge officers, and abolishing the grand executive board, was adopted.

The date of conventions was changed from the second Monday in September to the third Monday in August. A new article was placed in the constitution providing for the maintenance of a department of statistics under the direction of a new officer to be known as assistant to the president, and who would act as associate editor of the *Signalman's Journal*, the magazine being placed under the direction of the president's office, effective January 1, 1929.

During the morning session of the fifth day, President William Green of the American Federation of Labour, addressed the convention, the doors being thrown open to the public. Many subjects of interest to the labour

movement were touched on in the address, particularly such matters as: high wages; increased productivity of industry; company unions; injunctions; immigration.

A proposal that a committee of three officers be appointed to purchase a headquarters building was defeated. During the discussion it was pointed out by several speakers that an occasion might arise in the near future when it would be desirable to move the headquarters of the organization to Washington, D.C. It was decided to urge the management of all railroads now having or installing retarder layouts in the future, to grant equal recognition in rates of pay and working conditions to retard maintainers as is accorded retarder operators. The convention approved the actions and policies pursued by the Grand Lodge officers in connection with the jurisdictional controversy with the International Brotherhood of Electrical Workers, and reaffirmed that railroad signal work is a craft in itself. In this connection it was decided to refuse to surrender any members whatever who perform railroad signal work to the International Brotherhood of Electrical Workers, and that if necessary to submit, under protest, to temporary suspension of the union's American Federation of Labour charter rather than agree to the "impossible and illogical demands" made upon the signalmen's union.

The officers were re-elected as follows: President, D. W. Helt, Chicago, Ill.; Grand Vice-presidents, D. C. Cone, C. D. Martin, L. W. Givan, L. R. Smith; Secretary-treasurer, T. A. Austin, Chicago, Ill. A. E. Lyon was elected to the newly created position of assistant to the president, while M. C. Merriitts, W. E. Raynes and W. A. Pettit were elected members of the board of trustees.

Denver was selected as the convention city for 1930.

International Union of Operating Engineers

With more delegates in attendance than on any previous occasion, the convention of the International Union of Operating Engineers met at Buffalo on September 10-14. Among those who addressed the convention, were: James O'Connell, president of the Metal Trades Department, American Federation of Labour; Hon. Frank X. Schwab, mayor of Buffalo; Wm. Green and Matthew Woll, president and vice-president respectively of the American Federation of Labour; W. J. McSorley, president of the Building Trades Department of the American Federation of Labour.

President Green in his address reviewed the changes taking place in the industrial world and outlined the steps to be taken to protect labour's interests. He also discussed the questions now confronting the American labour movement, including the five-day week, and the use of injunctions in labour disputes.

President A. Huddell, in his address, touched on many subjects of interest to the membership, including finances; membership; death benefit fund; and international supervision of locals; while secretary-treasurer Evans dealt with the defence fund; death

benefit fund; bonding local financial officers; and the *International Engineer*, the official organ of the organization. The secretary-treasurer informed the delegates that since the death benefit fund payments went into effect 902 death claims were settled, amounting to \$128,650.

Among the resolutions adopted were the following:—

Recommending the raising of the *per capita* tax from 60 cents to 75 cents *per member*;

Urging local unions to affiliate with state federations of labour.

A proposal to change the constitution so as to hold conventions every two years was rejected. Similar action was taken on the proposal to have the international officers elected for two-year periods instead of four.

The selection of the city in which to hold the next convention was left in the hands of the general executive board.

HOME FOR AGED MEMBERS OF THE UNITED BROTHERHOOD OF CARPENTERS AND JOINERS OF AMERICA

THE question of establishing a home or pension for the aged members of the United Brotherhood of Carpenters and Joiners of America has been before the membership at various times. In 1900 the convention, held in Scranton, passed a resolution to pay a pension, but the referendum vote calling for an increase in *per capita* tax to meet the cost of the proposed undertaking failed to carry. The matter was similarly dealt with in 1902, 1908 and 1910. It was again discussed at the convention in Washington in 1912 and at the Fort Worth convention in 1916, but it was not until the convention of 1920 that definite action was taken. Following this convention a committee was appointed to investigate a possible site for a home. As a result the Executive Board unanimously decided on the property situated on the shores of Lake Gibson, Lakeland, Florida, where 1,800 acres were purchased and developed at a cost of close to a million dollars.

After the 1924 convention steps were taken to erect a home on this property, the contract being let on November 23, 1926, for the sum of \$875,848, the building being completed in March, 1928.

Approximately 1,000 acres of the property have been developed for the growing of citrus fruits. At the present time there are approximately 45,000 trees on the land growing grape fruit, oranges and tangerines. The rest of the land is being cleared and set apart for recreation grounds for the inmates of the home, and arrangements are being made for the growing of vegetables, raising of poultry, producing of milk, etc., in order that as much as possible of the food needed for the occupants of the home may be obtained in that way.

In addition to the cost of the building the following expenses have been made: kitchen equipment, \$30,000; laundry equipment, \$19,000; room furnishings on account, \$8,900;

auditorium seats and organ, \$14,000; lighting fixtures, \$7,000.

The total expenses since the inception of this scheme on the home furnishings, development of the citrus groves and property being approximately \$2,250,000. In this connection it is interesting to note that much interest has been shown by a number of affiliated district councils and local unions. The Chicago district council donated the furnishings for the main lobby or lounge, which consist of chesterfields, easy chairs, settees, carpets, window furnishings, etc., at a cost of approximately \$30,000. The New York district council contributed some \$20,000 to defray the expenses of furnishing the dining-room, while the Texas State council furnished the hospital equipment. The cost of furnishing each room, which accommodates two members, has been fixed at approximately \$300. A number of local unions have undertaken to furnish rooms, amongst these being local 27 of Toronto and local 134 of Montreal. Many other splendid donations have been made by individuals and sections of our membership, all adding to the comfort, beauty and utility of the home.

Description of the Home

It is difficult to give a verbal description of this splendid home. It is situated on the banks of a lake, and a small pier has been built where the inmates of the home can sit and fish if they so desire, or row about the lake in boats already provided. Surrounding the home walks have been made under the palm and oak trees with which the property is plentifully supplied, providing ample shade from the heat of the sun. The seats which are placed all along the walks are being paid for by donations of \$10 each, and are named in memory of some past prominent member of the organization.

Home for aged Members of the United Brotherhood of Carpenters and Joiners of America, at Lakeland, Florida.

The home itself has accommodation for 500 members, in addition to the necessary staff. In the rear is a well-equipped laundry, pressing establishment, and necessary conveniences for repairing of clothes, etc. The building (a picture of which appears on page —) is built in the shape of the letter E, with a large covered portico on the front and ornamental gardens in the space between the wings at the back. This arrangement provides splendid light and ventilation to every room. The centre wing is occupied by the assembly hall or auditorium where an organ has been installed in order that the inmates may have the benefit of good music and also have a place where they can arrange entertainments for themselves.

Immediately on entering by the front entrance one finds the registration and administration offices on the left and on the right a spacious comfortably furnished lounge where two or three hundred could be comfortably seated at one time. At the end of this lounge is the entrance to the dining room, which is large enough to comfortably seat the five hundred inmates for which the home has accommodation.

Passing through the lounge is the lobby to the auditorium or assembly hall above referred to. The left wing and upper stories are occupied by the bed rooms, all of which are identical in size and furnishings. These contain two beds, two dressing tables and two arm chairs. There are also two built-in wardrobes in which each inmate may put his own personal possessions, these wardrobes being the only part of the room that can be locked up. Between each two rooms is a toilet and wash room. Along the hallways are well-equipped bath rooms and lavatories, amply furnished with tub and shower baths, all perfectly sanitary, being constructed of tile and marble.

The hospital also is on this floor, having up-to-date operating table and other equipment so that proper medical attention can be furnished to the residents requiring the same.

Though the climate is semi-tropical, there is almost invariably a breeze blowing on this property which is stated to be one of the highest points in Florida, and this tempers considerably the heat of the sun.

Dedication

The dedication of the home took place on the second day of the convention, Monday, October 1, when along with the general officers and members of the general executive

board a large number of representatives of other international unions were present, and in addition C. Waudenberg, secretary of the International Union of Wood Workers, Amsterdam, Holland; William Green and Frank Morrison, president and secretary respectively of the American Federation of Labour, and Tom Moore representing the Trades and Labour Congress of Canada; Jas. J. Davis, Secretary of Labour of the United States; Herbert J. Drane, congressman from Florida; W. F. Reid, mayor of the City of Lakeland and Ira C. Hopper representing the Lakeland chamber of commerce. All spoke very highly of the beauty and utility of the home, and also of the humanitarian ideals being carried out by the carpenters in their home and pension schemes.

The convention adopted recommendations as to the occupancy of the home etc., the final conclusion being that to be eligible for admittance to the home a member must have held thirty years continuous membership in the organization, and be not less than 65 years of age and have no other home or means of support. It was also decided to open the home for general use on January 1, 1929. Members not eligible for the home, but having thirty years membership, and being 65 years of age or over are to be eligible for a pension of \$15 per month, irrespective of their financial means. To meet the cost of this it was also decided to increase the assessment for the home and pension from 10 cents to 25 cents per month.

It is expected that the revenue from the citrus groves will, within the next several years, increase sufficiently to carry the cost of maintaining the home and those resident therein, so that the entire revenue from the *per capita* tax may be available for the pension fund. At the present time the trees on about one-third of the groves are old enough to bear fruit, and when it is noted that this year's crop has been sold for \$60,000 on the trees, the officers of the brotherhood believe that it is not unreasonable to assume that with proper care and business management there should be sufficient revenue from this source to maintain the home. This magnificent home and property though having cost as previously stated approximately \$2,250,000, is entirely paid for from the home and pension assessment contributed by the membership during the past five years at the cost of \$6 per member.

Though other additional expenditure will be necessary to put the citrus groves on a properly paying basis such as the building of

packing plants etc., and other expenses may be necessary before the home is completed, the members of the brotherhood feel proud of what has already been accomplished,

possessing what is said to be the finest home and property that has yet been constructed by any labour organization on the North American continent.

NOTES ON TECHNICAL EDUCATION AND APPRENTICESHIP

THE notes in this section of the **LABOUR GAZETTE** relate to the work carried on by secondary vocational schools which receive federal grants under the provisions of the Dominion Technical Education Act. Other activities which have a direct bearing on the training of apprentices and industrial workers are also noted. The Dominion Government, through annual grants administered by the Technical Education Branch of the Department of Labour, assists the provinces in developing all forms of vocational education and industrial training which are of benefit to workers in various branches of industrial, commercial and home-making activities.

Oshawa Technical School

A Technical school for Oshawa was practically assured by action of the Board of Education at a meeting on September 10 when they approved the recommendation of the Advisory Vocational Committee and instructed them to proceed with a view to erection of a technical school. Estimates submitted by architects indicate that the school will cost about \$200,000. The technical school will be built, it is expected, as an addition to the present Collegiate Institute, and will form the front of the Collegiate building, facing Simcoe Street.

Vocational Teachers of Ontario

The vocational teachers of Ontario held their second annual meeting and banquet in Great Hall, Hart House, Toronto, April 12 after the close of the Ontario Educational Association sessions. The Secretary's report on behalf of the Vocational Standing Committee was read and discussed. This was combined with the report of the representative on the Central Executive. The meeting unanimously committed the male vocational teachers of Ontario to approval of the proposed minimum full time day salary of \$2,000, as approved by the Federation for Secondary Teachers. No opportunity has as yet been afforded for receiving the voice of the women teachers. The meeting expressed a desire in all these matters for stronger support from the whole Federation.

A broad-minded attitude among vocational teachers was shown by their support of the

Training College at Hamilton in aiming at higher qualifications year by year, and at a more rigorous testing of the standing of student teachers before certificates are granted.

Vocational High School for Kingston, Ont.

In reporting to the Board of Education at Kingston at its regular meeting on October 11, Trustee Meiklejohn, chairman of the Advisory Vocational Committee, spoke at some length explaining the work of his committee and the movement on foot for extending the present commercial High School in order to establish a Vocational High School on larger lines.

It appears from this report that the committee investigated the relation between the school and labour, the question of finance, grants on building, and the problem of securing a suitable building. In discussing the need for a vocational school Mr. Meiklejohn said in part:—

"At a meeting with the principals of the schools held a short time ago, and which was fully reported in the press, we obtained a very clear conception of the first problem to be solved when it was definitely stated that from forty to sixty per cent of the students who pass the high school entrance examinations should be in a vocational school and not in an academic institution. If that is true then that is the first real argument for the extension of our present commercial vocational high school along more technical lines."

Applicants for Hair Dressing Course at St. John Technical School

More than one hundred persons have applied for permission to take the proposed course in hairdressing which the Saint John Technical School may give this fall. The equipment necessary for the opening of a hair-dressing department would cost in the vicinity of \$500 to \$700. Mr. Peacock, the principal of the school, states that these classes would have the strong approval of the trade because they would enable the students to obtain expensive training at a nominal charge.

A reference was made in the **LABOUR GAZETTE**, October, 1928, page 1103, to the discussions by the vocational committee of Saint John Technical School regarding the establishment of this course.

Apprentices Paid to Study

Cleveland, Ohio, has an apprentice school in which boys indentured to the carpentry, bricklaying, electrical, painting and decorating, plumbing and sheet metal trades study the technical side of their crafts, being paid for this time as though they were on the job. After the preliminary weeding out during the probation period and the months immediately after, nearly all the boys are said to complete their terms and become journeymen. The practicability of the system is attested by the contractors who have entered into the scheme. Apprentice problems and methods of dealing with them are found to vary widely in different localities and the crafts in the United States, yet there are national programmes of fairly wide application. The tile trade is credited with the most thoroughly organized system for apprentice training. It goes so far as to support its own trade school at Dunwoody Industrial Institute, Minneapolis. This school is operated by the Tile and Mantel Contractors' Association and the Associated Tile Manufacturers. Here eighty tilesetter apprentices from all parts of the country receive thirteen weeks' intensive training every year. The supporting organizations pay for the student's course, his transportation and \$6 weekly towards his living expenses, the balance being generally met by the employer to whom the boy is indentured. A system similar to this is followed by the marble setting trade. The dealers operate a school in Knoxville, Tenn., along the same lines as that at Dunwoody. Effective apprentice plans are in operation also in the plumbing trade in Chicago, Cleveland and Pittsburgh, with employers, organized journeymen and school board co-operating, and the National Association of Master Plumbers has engaged itself enthusiastically in educational activities.

International Exchange of Apprentices

According to the publication of the craft chambers of Alsace and Moselle, a system of exchange of apprentices and journeymen between France and other European countries is being organized, with a view to improving both the vocational training of the persons exchanged and their knowledge of various languages.

It may be recalled that an arrangement was concluded between France and Great Britain early in 1928, according to which young French and British workers not exceeding 500 a year in either case, may take up employment in Great Britain and France respectively for a period of not more than one year or 18

months, in order to complete their training. A similar arrangement is being negotiated between France and Germany.

Further information on these schemes may be obtained from the French Ministry of Labour.

Apprenticeship in New Zealand

The Dominion of New Zealand passed an Apprenticeship Act in 1924. During each of the succeeding four years it has been found that an increasing number of committees have been set up, and in the past year the number increased from 115 to 126, representing twenty-eight industries. On the whole, the representatives of the employers and workers on the various committees are co-operating amicably and, generally speaking, adequate steps are being taken to see that the apprentices and their employers are carrying out their duties to one another and to their industries. The Act does not apply to females unless specially ordered by the Court in any case. In two instances (hairdressing and chemistry) females have been included in the orders covering those trades.

The chief difficulty experienced by the committees in reaching agreements relates to the question of the proportion of apprentices to journeymen. One committee (plumbing trade) was dissolved by order of the Court owing to disagreement between the workers and employers' representatives. The employers in the skilled labour trades are now employing one apprentice to 2.9 journeymen on the average.

The act permits of separate committees being formed in the industries in any particular localities in order that the members may keep in personal touch with the boys and their employers. Accordingly all the committees have been set up for either specified towns or districts. There are only a few unimportant industries in which no apprenticeship committees have been set up or orders of the court made, such as those of coopers, horse-shoers, beamsmen and furriers.

Citizens of North Bay Desire Technical Education

The principal of the North Bay Collegiate Institute, Mr. F. D. Wallace, recently circulated a questionnaire among the parents of the pupils of the public and separate schools of that city. Four hundred and sixty-four replies were returned from the questionnaires that were distributed in the school, and of this number 373 voted yes against ninety-one who replied in the negative. This reveals

that approximately 80 per cent of the parents who now have children preparing for entrance to the collegiate are desirous of having the facilities of technical education provided. A vote was also taken among the pupils in the senior fourth and junior fourth classes. The results showed that in the senior fourth the boys voted 80 per cent in favour of the establishment of technical education, while the girls voted 75 per cent in the affirmative. In

the junior fourth, the vote of the boys was 85 per cent in favour of the suggestion and the girls were 75 per cent favourable. The results will be placed before the advisory Vocational Committee for its information, and it is expected that the strong affirmative vote will cause that body to proceed immediately with plans to provide the school with a technical branch.

School Leaving Age of Juveniles

The Executive Committee of the International Association for Social Progress held a meeting in Geneva recently to prepare for a conference of this body to be held in 1929. The agenda of the conference will include the question of the raising of the school-leaving age. In order to secure the physical, intellectual and moral protection of childhood, it is necessary not merely to prohibit premature employment—before the age of 14 years, according to the Conventions relating to industrial and maritime labour—but also to give attention to the period of compulsory school attendance. Children should be endowed with an adequate education, and care should be taken to see that they are neither overworked—the inevitable result of employment before the age of 14—nor left to their own resources, as happens if the end of the period of compulsory education does not coincide exactly with the minimum age for employment.

In some states the school-leaving age and the minimum age for employment in industrial or other undertakings are both fixed at 14 years. In other states there is still room for reforms, already under way in a number of cases, either in the direction of raising the school-leaving age or by way of raising the age for admission to employment, or both.

The National Safety Council (U.S.A.) has published a useful booklet entitled "Shop Safety" describing the various risks connected with every type of machine shop work, and giving full information as to safe shop practice. Instruction is given for the avoidance of injuries due to clothing, striking against objects, falls, burns, electricity, explosives, poisonous substances, boilers and tanks, power transmission, metal and wood working machines, hoisting apparatus, vehicles, and infection. The pamphlet contains also a clear statement of the principles of first aid and resuscitation.

American Standards Association

The quarterly Bulletin published by the Canadian Engineering Standards Association notes that the American Engineering Standards Committee is being reorganized and will in future be known as the American Standards Association (A.S.A.). The object of the reorganization is to speed up industrial standardization work on a national basis. Heretofore sectional committees have acted under the administrative support and direction of one or more interested bodies who were termed sponsors. In the proposed new arrangement a sectional committee may now operate independently, reporting direct to the A.S.A. or it may act with sponsors as before. Arrangements will also be made to provide for approval of standards based upon the action of general conferences, followed by the acceptance of interested groups, this being similar to the present procedure of the Division of Simplified Practice at Washington. Proposed reorganization is founded on the principle that the basic test to be applied in all cases is the attainment of the assent of groups having substantial interest in any proposed standard. It is understood that interested groups have the right to representation on any committee, but it is not essential that this right be exercised.

The second "All-Ohio Safety Congress" was held at Columbus, Ohio, on November 13-15, under the auspices of the Industrial Commission of the State, its object being to effect a reduction in the number and severity of industrial accidents, and to aid the administration of Workmen's Compensation.

A striking advance was made by co-operation in Great Britain in 1927, according to the official statistics recently issued. The membership of co-operative societies increased during the year by 394,376; the share capital of the societies by £4,840,529; the loan capital by £2,427,460; savings bank deposits by £294,762; and reserve funds by £2,563,001. The trade of the societies increased by £30,187,493, and the number of persons employed by 14,769.

INTERNATIONAL PEACE

Statement by the Prime Minister of Canada on Recent Peace Pact and League of Nations Assembly

THE Right Hon. W. L. Mackenzie King, Prime Minister of Canada, who with Hon. Charles Dunning, Minister of Railways and Canals, and Hon. Senator R. Dandurand, represented Canada at the ninth annual session of the Assembly of the League of Nations in Geneva, was honoured at a non-partisan banquet in Ottawa on November 9, which was given under the auspices of the Ottawa Branch of the League of Nations Society of Canada. The Prime Minister on this occasion delivered a notable address on the significance of the Briand-Kellogg Treaty, otherwise known as the Paris Peace Pact of 1928, which was signed by Mr. King on behalf of Canada, and on the work of the League of Nations in the interest of international peace.

The Prime Minister, who was introduced on this occasion by Right Hon. Sir George Foster, President of the League of Nations Society of Canada, spoke in part as follows:—

It is now eight years since the assembly of the League of Nations held its first meeting in Geneva. Each assembly has been characterized by some discussion or incident which has overshadowed—or perhaps “outshone” would be a better word—all the rest, and has lent its tone and colour to the entire proceedings. . . .

Influence of Peace Pact

The influence which above all others seemed to permeate this year's proceedings, was that of an event not immediately connected with the proceedings of the League, though so completely an expression of its main objective as almost to appear to be a part of it. I mean, of course, the signing by fifteen different nations of the Treaty for the Renunciation of War, which took place at Paris on August 27, just three days prior to the meeting of the Council of the League, and within a week of the opening of the Assembly. Perhaps I cannot do better than to preface what I have to say in reference to the League, by speaking first of the Treaty to which I have just referred, and the features attendant upon its signature.

Genesis of Treaty

First of all, then, a word as to the exact nature and provisions of the Treaty, and how it came into being. As a multilateral treaty open to signature by all the nations of the world, the treaty has come to be associated

with the name of the Hon. Frank B. Kellogg, Secretary of State of the United States. It owes its inception as a bilateral treaty in the first instance not, however, to the government of the United States, but to the government of France; not to Mr. Kellogg, but to M. Briand, the Minister of foreign affairs at Paris. It was M. Briand who proposed to Mr. Kellogg that a treaty should be signed between France and the United States which would renounce war as an instrument of national policy and declare that as between the two great republics some means other than resort to arms would, for all time to come, be found as a means of settling differences which might arise, and of preserving a perpetual peace.

Mr. Kellogg was quick to accept the principle thus enunciated, but not less quick to perceive that its value would be infinitely enhanced were its application made general. He it was who suggested that the Treaty should be so drafted as to permit of other nations becoming parties to it, and he it was who approached the governments of different nations with the view of securing their adhesion. The Treaty, therefore, has not inappropriately come to be referred to alternatively as the Briand-Kellogg treaty, or the Paris Peace Pact of 1928.

The document itself is a very simple and brief one; indeed, simplicity and brevity were essential features, if its great purpose were not to be obscured by exceptions, restrictions, or qualifications. In two pregnant paragraphs the contracting parties undertake first to renounce war as an instrument of national policy in their relations with one another, and second, that the settlement of all disputes or conflicts of whatever nature which may arise among them shall never be sought except by pacific means.

All Nations Represented

I heard it said, and this I believe to be true, that never before have the flags of all the nations of the world been flown together on any government building and certainly not over the Foreign Office of any land. That, of itself, was a symbol of the great event, to participate in which the Government of France had invited the ministers of foreign and external affairs of the several nations which were signatories to the pact. The flags spoke, as neither words nor music could speak,

of the rejoicing of the occasion, and their number told of the thought uppermost in the minds of those associated in the signing of the pact; namely, that its obligations and its blessings might come to be shared by all the nations of the earth. Impressive as was the scene as described, it was rendered even more impressive by the multitudes who waited at the approach to the Foreign Office to watch the arrival of the representatives of the different countries; multitudes whose hearts but ten years before had been torn with terror, and even yet were bleeding or scarred from the wounds of war.

The ceremony of the signing commenced at three o'clock. At a quarter to three the representatives of the several countries signatories to the Pact, were received in the first instance in the office of the foreign minister of France. There they were welcomed by Mr. Briand, Foreign Minister, and Mr. Poincaré, the Premier.

* * * * *

Within a very few minutes of the hour fixed for the signing of the treaty an incident occurred which was scarcely less dramatic than memorable. Immediately in front of Premier Poincaré and Mr. Briand, there was one chair still unoccupied. This of itself might not have been noticed, had it not been for the entrance at the same moment of Herr Stresemann, the minister of foreign affairs of Germany, who, with health much impaired, had left his own land to represent Germany at the signing of the Pact. That circumstance of itself was dramatic enough, but what made the occasion one of more than ordinary historic significance was that the welcome extended at that time and in that place to Herr Stresemann by the prime minister and foreign minister of France marked the first occasion in a period of more than half a century, nearly sixty years, in fact, on which a German foreign minister had been received on French soil. Not since the days of the Franco-Prussian War until that moment had France received a German foreign minister. If there was symbolism in the sunlit folds of the flags of all nations flying gaily to the breeze of summer without, there was even more of symbolism in the clasp of the hand, in that particular environment, of the foreign ministers of Germany and France.

A Significant Address

Precisely at three, the minister of foreign affairs began the delivery, in French, of a brief address. Perhaps nowhere has the real significance of the Peace Pact found nobler expression than in the words with which

Mr. Briand concluded the address which he made in opening the proceedings. With your permission I shall quote them exactly as they were given in the English translation of the speech itself. He said:

"For the first time in the face of the whole world through a solemn covenant involving the honour of great nations, all of which have behind them a heavy past of political conflict, war is renounced unreservedly as an instrument of national policy; that is to say, in its most specific and dreaded form—selfish and wilful war. Considered of yore as of divine right and having remained in international ethics as an attribute of sovereignty, that form of war becomes at last juridically devoid of what constituted its most serious danger—its legitimacy.

"Henceforth, branded with illegality, it is by mutual accord, truly and regularly outlawed so that a culprit would incur the unconditional condemnation and probably the emnity of all its co-signatories. It is a direct blow to the institution of war, even to its very vitals. . . .

"Gentlemen, in a moment the awakening of a great hope will be signalled to the world along the wires. It will henceforth behoove us as a sacred duty to do all that can and must be done for that hope not to be disappointed. Peace is proclaimed. That is well; that is much; but it still remains necessary to organize it. In the solution of difficulties right and not might must prevail. That is to be the work of to-morrow.

"At this unforgettable hour the conscience of peoples, pure and rid of any national selfishness, is sincerely endeavouring to attain these serene regions where human brotherhood can be felt in the beatings of one and the same heart. Let us seek a common ideal within which we can all merge our fervent hopes and give up any selfish thoughts.

"As there is not one of the nations represented here but has shed the blood of her children on the battlefields of the last war, I propose that we should dedicate to the dead, to all the dead, of the Great War, the event which we are going to consecrate together by our signatures."

When Mr. Briand's address had been translated into English, Herr Stresemann, the Minister of Foreign Affairs of Germany, whose seat was immediately to the right of Mr. Briand, rose, and proceeding to the table where the Treaty reposed, affirmed his signature. He was followed by Mr. Kellogg, Mr. Briand, Lord Cushenden, and, to the number of 15 in all, the representatives of Italy, Belgium, Poland, Czechoslovakia and the

British Dominions. With the fixation of the last signature the ceremony concluded by the return of the signatories to the Pact to the office of the foreign minister.

Nations of British Commonwealth

An echo of the signature attached to the Versailles Treaty, so far as the British Empire was concerned, was to be found in the signing of the Paris Pact by separate and distinct representation of the several governments of His Majesty. It will be recalled that Sir Robert Borden and ministers who accompanied him to the peace conference at Paris held very strongly to the position that, having relation to her established position as a self-governing country and having shared so largely in a common service and a common sacrifice, Canada had more than gained the right to be represented on her own behalf as one of the nations which had participated in the Great War, and that her individuality and identity should not be lost by the negotiation and signature of the treaty for the nations of the British Commonwealth solely by ministers of His Majesty's government in Great Britain, but should be emphasized by the signatures of ministers of the government of Canada as well. His Majesty the King in a speech from the Throne delivered in the House of Lords in Great Britain at the beginning of this week, not only dwelt upon the great significance of the signing of the treaty for the renunciation of war at Paris, but also drew attention to the fact that it had been signed by the representatives of all His Majesty's governments.

Effectiveness of Treaty

Whatever view may be taken of the effectiveness of the treaty signed at Paris to achieve the great purpose of prevention of war, which is its aim, there can be no question as to the solemnity of the obligation into which the nations who are signatories to the pact have entered. Unless national honour is something which has fled completely the civilization of our day, there can be no gainsaying how mighty has become the power which now holds the peace of the world as the most sacred of all moral and national obligations.

The Pact and the League

It may seem that, in an address upon the League of Nations and its work, I have dwelt at undue length upon the treaty for the renunciation of war, and its signing, which were, as I have already said, in the nature of proceedings wholly apart and distinct from those at Geneva. It is, however, even more true, as I have also already said, that what trans-

pired at Paris on August 27th was in a very real sense a sublime expression of the main objective of the League. But I believe its association with the League was even more intimate than that. The language of the treaty was of a character with which the world has become familiar through the proceedings of the League from year to year, and the consideration of its main purpose. The declaration of the treaty was one which, in one form or another, the League has sought to attain.

The signatories of the treaty, with one notable exception, were those of the representatives of the countries which are members of the League, and who continued their journey from Paris to Geneva, there to participate in this year's proceedings of the League. That world opinion, within a period approaching ten years of the conclusion of the war, had become so general and powerful that all the leading powers were prepared formally to renounce war as an instrument of national policy, and assert their willingness henceforth to settle such differences as might arise only by pacific means, is, in my humble opinion, due more to the discussions which have taken place at the League of Nations, to the understandings and friendships created and fostered there, than to any other single factor. Indeed, so much is this the case that, as I have already said, the whole proceedings of this year's assembly of the League were permeated and coloured throughout by what transpired at Paris in the days immediately preceding. What I have now to say about this year's proceedings of the League of Nations itself will, I believe, be further evidence of the truth of this intimate association.

(In passing, Mr. King referred to the importance in international affairs of a knowledge of the French and English languages. He mentioned also that it was a gratifying experience for a parliamentary leader to be a member of a council or assembly, the combined effort of whose members is to reach in all things the point of agreement rather than to exaggerate points of difference. Later he continued as follows:—)

Lord Cushendun's Declaration

Let me resume what I said a moment ago about the treaty for the Renunciation of War and its effect upon this year's proceedings. Almost every speaker who addressed the assembly made some reference to the Peace Pact and its significance. I wish there were time to quote the more important utterances. I shall have to confine myself to a portion of one, but it is one which carries with it the

weight of His Majesty's government in Great Britain. It is the reference to the pact made by Lord Cushendun in the course of his very able address. It gives, I think, a perspective which is a very true one, and one from which we should view the treaty, if we are to appreciate its real significance.

"In the great and eloquent oration delivered here yesterday by M. Briand there was no passage which I admired so much as that in which he spoke of the spirit of peace as the flower of the world which must not be allowed to wither or fade. But if that flower is to be kept fresh we must water it with our confidence—confidence, not merely in the ideals that we profess, but in the sincerity with which each of us is striving to attain them. What the world chiefly needs to-day, in my judgment, is to cast aside suspicion and distrust as between nation and nation, and not merely to feel greater confidence in each other, but to display it; and I believe that this will be one of the results to be achieved by the great venture of faith which was entered upon in Paris a fortnight ago. I have very little doubt that this treaty renouncing war as an instrument of national policy will thus give a very wholesome stimulus to the process of international disarmament.

"But do not let us be discouraged or disappointed if we find that the full effect turns out to be neither immediate nor spectacular. It will not necessarily be of less value on that account, for rapid demonstrative action, if due to emotional impulse, often brings about reaction. There is an element in the British character which makes us shrink from expressing in exuberant language the ideals which nevertheless supply the motive power of character, either as individuals or as a nation. I do not hesitate to say that I look upon the Paris Pact as an instrument that proclaims a new era and creates a new outlook. We may not be able immediately to observe this; human beings have to adjust themselves to a new environment, but the upgrowing generation, assimilating the new *Zeitgeist*, will be nurtured in the idea that war, except in *bona fide* self-defence, is not a gallant adventure, but a national dishonour.

"Armaments beyond what are requisite for national safety, as prescribed by the covenant, will be recognized as a costly and discreditable anachronism. If this hope should be even partially realized, then assuredly this year, 1928, will be remembered as a notable landmark in human history, for it will be the fulfilment of the dream of the most ancient visionaries of our race, who imagined an almost incredible golden age, when weapons of

war would be beaten into implements of peace and war itself should cease among men. Throughout the long intervening ages, never till to-day has man made any concerted and determined effort to translate into action the vision of the ancient seer. We are making it now. The Paris Pact, in complete harmony with the work of the League of Nations, is at once our proclamation of purpose and our treatment to posterity. It is the faith of to-day and the hope of to-morrow.

"Hitherto, it has been on conquerors and the great masters of the art of war that history has bestowed her most glittering decorations. Hereafter, a fresh scale of values will be called for. When this new page is turned, we may be sure that we shall find the names of those who initiated the Paris Pact inscribed among the greatest benefactors of mankind."

The declaration that the up-growing generation will be nurtured in the idea that war, except in "*bona fide*" self-defence, is not a gallant adventure but a national dishonour, could not have been uttered with like authority prior to the signing of the Peace Pact by the Great Powers assembled at Paris. It could not hold the place it does to-day and will continue to hold, but for the League of Nations. It might have been uttered in Paris or in London to good effect, and have travelled far beyond the confines of France and Britain; but when it was uttered in Geneva in the presence of the assembled representatives of 50 different nations, it reverberated around the entire globe, and became, for all time, a part of the world's literature.

Disarmament Principal Theme

As will be apparent from what I have just read, what was most clearly seen at Geneva, and what, as a consequence, became most general in the discussion both of the Assembly and one or more of the committees, was the very obvious fact that, if between the Great Powers of the world war has been renounced as an instrument of national policy, then what henceforth is to be the excuse for the piling up of armaments between nations that are signatories to the Pact, and what are the means to be substituted for this now obsolete means of concluding controversies between nations? That led, this year, to a more pertinent discussion than heretofore on disarmament, and on equally pertinent discussion and consideration of methods of international conciliation and arbitration as a means of settling by an appeal to Reason, rather than an appeal to Force, difference which hereafter may arise and assume between nations alarming proportions.

Impetus to Work of League

The signatories of the Peace Pact have pledged the honour of the nations which they represented to find pacific means for settling their future differences. In thus pledging the honour of their respective countries, they have, in one and the same breath, given a new obligation and a new opportunity to those who are striving to bring about disarmament, and to those who are seeking to find pacific means of preventing international conflicts. With the signing of the Peace Pact in Paris, it seems to me that the whole work of the League of Nations has gained fresh emphasis, and the position of the League in international affairs assumes an importance even greater than that which it has heretofore had. The principle to further which it was brought into being, has been conceded as the only right and proper one to govern the affairs of nations in the final solution of their controversies. It is now, as never before, the League's business to see that these evils which make for war, as, for example, competitive arming between nations, are combated as strongly as world public opinion can be made to combat them, and that in their stead are substituted the beneficent means which allegiance to a gospel of peace and good-will alone can afford.

League's Position

I shall have to reserve to some other time and some other place any attempt to revive what has been attempted by, and the degree of success which has attended, the efforts of the League to bring about disarmament between nations. Equally I shall have to forego any attempt more than to outline the League's latest achievement in working out a very complete system of conciliation and arbitration embodied in a general act, which it is hoped in one form or another will appeal to the wisdom and conscience of the different nations of the world. About all I shall say with respect to disarmament is that the progress thus far made has been much slower than the well-wishers of mankind could have hoped it might be but, while this is true, let me say at once that too much must not be expected of any one organization, or of any one country. In the nature of things, disarmament is something which can only be brought about by a consensus of opinion which is wider than that entertained by any one people, or, for that matter, by any limited group of peoples. It must, in the nature of things, be more or less general, if the last state is not to be worse than the first.

As far as the League is concerned, it, at least, holds in its hand the threads that lead to the doors of many chancelleries. It, at least, has a control agency which can be reached by all and can touch all, and our greatest hope, as far as disarmament is concerned, lies, I believe, in the fact that, through the existence of the League, there is in the world an agency which can advise and direct, but which also can expose and make apparent to the world where, in the matter of disarmament, indifference, delinquency, or defiance exists. It can do this, moreover, in a manner which sooner or later must serve to bring to the ear of world opinion the nation or nations which continue to violate the honourable obligations, which, in common with others, they have assumed.

Conciliation and Arbitration

The principal achievement of this the ninth assembly of the League was perhaps the framing in one document of alternative methods of settling international disputes by conciliation or arbitration. As a result of long and careful study of the experience of many countries, and of suggestions from its members, the League has succeeded in compiling in succinct form the most effective methods of substituting the appeal to reason for the appeal to force in the settlement of international differences. The League will seek to have the nations of the world agree to adopt between themselves, either in the form of bi-lateral or multi-lateral treaties, one or other of the methods of settlement of international differences which have been devised.

I shall not attempt to enumerate the methods set forth. In brief, they contemplate three alternative undertakings, of varying degrees of obligation: First, conciliation, an agreement to submit international disputes of any kind to a commission which will endeavour to clarify the question at issue and bring the parties to agreement; second, conciliation plus arbitration, provision being added for reference of justiciable disputes, disputes as to rights rather than as to policies or interests, to the permanent court or some other tribunal for decision, and third, arbitration out and out, with preliminary recourse to conciliation if desired, but in any case, references of all disputes of whatever character to a tribunal for binding decision. Any one of these procedures may be accepted.

Parallel from Scriptures

I confess that, freed of their formal and legalistic dress, they come down, in the last analysis to an effort to put into practice be-

tween nations the teachings of the Founder of Christendom with respect to the best method of the settlement of controversy and removal of injustice. This is simply told in three consecutive sentences as recorded in Matthew's Gospel, in the 18th chapter. It is rather singular that the significance of these sentences in their application to world controversies seems to have escaped the attention they so obviously merit. Let us read the sentences:

v. 15: "If thy brother shall trespass against thee, go and tell him his fault between thee and him alone; if he hear thee, thou hast gained thy brother."

That is the method of conciliation and mediation—the method of conference.

v. 16: "But if he will not hear thee, then take with thee one or two more, that in the mouth of two or three witnesses every word may be established."

That is the method of investigation and arbitration.

v. 17: "And if he shall neglect to hear them, tell it unto the church; but if he neglect to hear the church, let him be unto thee as an heathen man and a publican."

That is the method of reliance upon an informed public opinion, and upon the power of the community to ostracize where a wrong is done its sense of justice. If, in the last verse I have quoted we were to substitute for "the church" "the Council of the League of Nations," you would have pretty much in those three sentences all that the League, indeed, all that mankind, has thus far been able to devise of the only really effective methods of preventing and circumscribing controversy and strife.

It is interesting to note the emphasis laid in teachings of Jesus upon the power of public opinion and the effect of ostracism. It is a part of His larger teaching that no individual liveth unto himself, and that no nation liveth unto itself. The more one studies the work of the League, the more one becomes convinced that fundamentally it is an effort on a world scale to make Christian precepts prevail in the conduct of nations. That perhaps is why the League finds so strongly an ally in the churches of our land.

Position of Canada

In view of what I have said of the importance assumed in discussion of the subjects of disarmament and of methods of settlement of international differences, it is not surprising that what it was possible to say with respect to the position of Canada in relation to her powerful neighbour to the south, should have attracted some little attention. To be able

to point to an unprotected frontier of over 3,000 miles, a frontier stretching from ocean to ocean across an entire continent, along the whole of which not a shot has been fired for over 100 years, and along that whole of which there is neither a fort nor a fortification, was an object lesson impressive enough in itself. More impressive, however, was the circumstances that this condition was the outcome of an agreement which renounced war as an instrument of national policy, and which led to the dismantling of warships upon our Great Lakes, and the avoidance for a century and more of anything in the nature of competitive arming as between the two countries.

Rush-Bagot Treaty

The Rush-Bagot Treaty of 1814 was the infant precursor by more than a century of the Kellogg-Briand Pact, in that its central feature was the renunciation of war as an instrument of national policy as between the United States and His Majesty's Dominion of Canada. It resembled the Kellogg-Briand Pact in yet another particular; it was very simple and very brief; the whole agreement could be conveniently printed on one side of a postal card.

But not only as respects disarmament was it possible for Canada to point to a practical demonstration of the workings of a policy, the effectiveness of which was a main theme of discussion; it was possible to point as well to methods of conciliation and investigation actually in practice between the two countries, and which have operated wholly successfully for a period of nearly 17 years in adjusting all boundary differences referred for adjudication, to a tribunal formed for the purpose of adjusting international differences as they may arise. Subjects of controversy have been referred to the International Joint Commission, and with respect to all a satisfactory solution has been found.

I confess that, after listening to and participating in the proceedings of the League, both on the Council and at the Assembly, I have come back to Canada with a more profound conviction than ever that there is no land on the face of the globe in which the lot of men, women and children is cast in a pleasanter place than in this Dominion; that we have more of liberty and less of fear, more of opportunity and less of poverty, more of the unfettered future and less of the mortmain of the past than any other country on the face of the globe. I feel equally that in what we have been spared of Old World discord and strife, and in what we held of friendliness toward all nations, we have a great trust to acknow-

ledge and maintain. A trust we have towards all who dwell in this New World and share the greater freedom which we here enjoy, a trust towards countries of the Old World to use what influence and power we may possess so to mould and strengthen world opinion that the cause of disarmament may be augmented, and

the cause of conciliation and arbitration correspondingly strengthened in the relations between nations throughout the world. This is a high mission for a young land, but I have faith that as a country we will not be disobedient to the heavenly vision, nor recreant to the call of service to mankind.

LEAGUE OF NATIONS INTERNATIONAL LABOUR ORGANIZATION

Governing Body of the International Labour Office

IN response to a cordial invitation from the Polish Government, the Governing Body of the International Labour Office held its 42nd Session from October 5 to 8, in Warsaw and on October 10 in Cracow. The session provided renewed evidence of the interest and desire for collaboration with which the Polish authorities, employers and workers follow and participate in the work of the Organization.

It was decided that the 12th Ordinary Session of the International Labour Conference should open on May 30, 1929, and the special Maritime Session on October 10, 1929. It was also decided to add to the agenda of the special Maritime Session the question of the establishment by maritime countries of a minimum of professional competency to be required from captains and navigating and engineer officers in charge of watches on board merchant ships.

A large part of the Session was taken up by the discussion of the steps to be taken to give effect to the resolutions adopted by the Conference at its 11th Session. As regards the request for an enquiry into the conditions of work in the textile industry in the different countries, it was decided after an interesting debate, to appoint a committee to make proposals as to the scope of such an enquiry.

In execution of other resolutions adopted by the Conference, it was decided to continue the study of industrial relations and of the causes of decreased production; as regards industrial relations, a special effort will be made to define the methods of developing the spirit of collaboration between employers and workers, while in the investigation of the causes of decreased production special attention will be given to the means of preventing waste in industry.

The Governing Body also decided to maintain the Committee on Article 408, appointed as an experiment two years ago, and re-appointed the existing committee with the addition of two new members.

In order to give satisfaction to a desire repeatedly expressed at sessions of the Conference by far-eastern delegates, and as a mark of the universal nature of the Organization, the Governing Body unanimously approved a proposal that the director should visit the far east, and so establish for the first time direct contact with those distant peoples, who have never ceased to show their devotion to the work of the International Labour Office.

Advisory Committee on Intellectual Workers

The advisory committee on intellectual workers set-up by the Governing Body of the International Labour Office held its first meeting in Geneva last month. From the inception of the Office, in accordance with the general provisions of Part XIII of the Treaty of Peace, attention has been given to intellectual workers, and during recent years their conditions of work and organization have been carefully studied. Reference need only be made to the enquiries made into the situation of musicians, engineers and chemists, and journalists, respectively, dealt with in various articles in the *International Labour Review* and in special reports.

Intellectual workers, however, had no constitutional representation in the work of the Office. When Part XIII of the Treaty was drafted, there were no organizations capable of representing them. Since then, both national and international organizations have been founded, and have expressed a desire to be able to present their views to the International Labour body. It was in response to these requests that the Advisory Committee was set up with instructions for a preliminary study of the problems raised. In addition to the five permanent members who formed the nucleus of the Committee and who are now its executive, the Committee includes representatives of the largest intellectual workers' organizations, together with experts. At this session, the Committee considered the termination of the employment of journalists in the event of a change occurring in the policy of their newspaper, the stipulation concerning

the acceptance of other employment in the case of engineers and technical staff leaving an establishment (radius clause), the finding of employment for theatrical artistes, and the problem of inventions made by employees. A draft report on unemployment among intellectual workers was also submitted to the Committee at this meeting.

Publications of the Office

The October-November number of the *International Labour Review* contains the following special articles:

"Employers' organizations in Italy", by G. Olivetti, general secretary of the General Fascist Confederation of Italian Industry, and Member of the Governing Body of the International Labour Office.

"The financing of house building in countries with rent restriction legislation: II", by Dr.

Karl Pribram, Chief of the Statistical Section, International Labour Office.

The progress of organization among intellectual workers.

The Agricultural Workers' Federation of Palestine, by Dr. Walter Preuss.

In the section devoted to Reports and Enquiries are the following:

The regulation of hours of work in European industry: IV;

The finding of employment for artistes;

Labour conditions in the timber industry in Argentina, Brazil, and the Dutch Indies.

The section dealing with Statistics includes an article on Recent Wage Changes in Germany, one of a series intended to bring up to date the study issued by the Office on "Wage Changes in Various Countries, 1914-1925."

Year Book of National Council of Women of Canada

The National Council of Women of Canada has published a Year Book for 1928, giving particulars of the Dominion-wide activities of this organization. The Council is interested in all legislation affecting social welfare, with particular reference to the conditions of women and children. Among the proposals favoured by the Council or its provincial branches the following may be mentioned: the adoption of the Federal Old Age Pensions Act by those provinces which have not already legislated; the extension of Minimum Wage legislation to include boys; the provision of one day's rest in seven for employees in hotels and restaurants; prohibited immigration of children of school age; increased co-operation between the federal and provincial governments in regard to immigration and settlement; ratification by Canada of the Child Labour conventions of the International Labour Organizations. The Council is active also in promoting a more enlightened system of dealing with delinquent and handicapped children.

The Year Book contains reports of the various important conferences held during the year, and outlines the activities of the central and local councils and their subsidiary organizations during the year. It includes a directory giving the names and addresses of all officials of these societies throughout Canada.

The Consolidated Mining and Smelting Company at Trail, B.C., has financed a fuel scheme for the benefit of its employees, who obtain their winter supply of coal in the fall, making their payments over a period of six months if they so desire. The price charged to them is less than the current price of coal. The supplies are delivered by the local agents, who are not, however, obliged to carry a heavy stock as all coals are delivered from the cars.

The *Alberta Gazette*, October 15, 1928, contained amendments of regulations under the Theatres Act (Regulations under this act were noted in the *LABOUR GAZETTE*, August, 1927, page 846). The changes relate to the yearly renewal of their certificates by moving picture operators. Formerly licenses of the first and second classes only could be renewed without examination; but under the amended regulations, persons holding third class licenses for four consecutive terms immediately before the granting of the expiring license, may renew them without examination; other holders of third class licenses must pass a test before renewal. Licensed projectionists are required to make returns to the chief inspector under the act at the conclusion of the run of each film. Regulations are also given governing the installation and operation of synchronized sound-picture devices in motion picture theatres. Two projectionists holding first class certificates are required to be on duty together for the operation of such devices.

EMPLOYMENT AND UNEMPLOYMENT IN CANADA DURING SEPTEMBER

THE following information as to the employment situation in Canada is based upon reports from four sources:—

(1) The Dominion Bureau of Statistics receives reports each month from most of the larger employers of labour throughout Canada in all industries except agriculture, fishing, hunting and highly specialized business, the returns representing firms employing fifteen workers or more. The number of firms so reporting in September was 6,627, their employees numbering 998,851 persons. An employment index number is maintained, based on the number of workers employed by such firms in January, 1920, as 100;

(2) The Department of Labour receives reports from local trade unions throughout Canada, showing the number of their mem-

bers who were unemployed in the period under review. The number of unions reporting for September was 1,626, having an aggregate membership of 181,615 persons. It should be understood that the report on the number of unemployed workers refers only to organized labour, no figures being available as to the number of unorganized workers who were without employment;

(4) The Department of Labour receives reports from the 64 offices of the Employment Service of Canada showing the number of applications for work, the existing vacancies and the number of workpeople placed in positions;

(4) The Dominion Bureau of Statistics receives each month detailed statistics from 63 cities throughout Canada, showing the value of permits granted during the period for various classes of building construction.

Employment Situation at the Beginning of October, 1928, as Reported by Employers

There was a further small decline in employment at the beginning of October, according to statements received by the Dominion Bureau of Statistics from 6,627 employers, whose staffs aggregated 998,851 persons, as compared with 1,003,601 in the preceding month. Employment on the same date last year had shown a similar slackening; the situation then, however, was not so favourable as on the date under review, when the index stood at 118.9, compared with 119.5 on September 1, and with 109.9, 105.2, 98.3, 93.9, 99.5, 94.6 and 90.2 on October 1, 1927, 1926, 1925, 1924, 1923, 1922 and 1921, respectively. Thus the index on October 1, 1928, was for this time of the year the highest on record.

The most pronounced curtailment was in construction, where it was seasonal in character; activity in this group, however, continued much greater than in the autumn of any other year since the record was commenced in 1920. Manufactures showed a decline, chiefly in lumber mills where the season's cut was approaching completion, and in iron and steel plants, while the personnel of summer hotels was also reduced. On the other hand, logging, mining, transportation and trade registered improvement.

Employment by Provinces

Ontario firms afforded heightened employment, but elsewhere there were contractions, of which the most marked was in Quebec.

Maritime Provinces.—Further and rather larger losses were indicated in the Maritime Provinces, where 551 employers reduced their payrolls from 77,537 persons on September 1, to 76,603 at the beginning of October. This curtailment involved less than half as many workers as that recorded on the same date of last year, when the index was decidedly lower. Construction and services reported the bulk of the decline, while the tendency was favourable in manufacturing, logging, mining and trade.

Quebec.—There was a decrease in Quebec, repeating the downward movement noted on October 1, 1927, when employment was not so brisk. Statistics were compiled from 1,448 firms with 276,080 workers, compared with 279,243 at the beginning of September. Manufacturing and construction registered most of the reduction, while logging, mining and trade afforded more employment.

Ontario.—Continued improvement in the situation was indicated in Ontario, according to 3,032 employers of 416,957 persons, or 2,275 more than in the preceding month. Additions to staffs had also been noted on October 1 a year ago, but employment then was in smaller volume. Manufacturing, particularly of food products, logging and trade showed considerable advances, but there were marked losses in construction and smaller decreases in transportation.

Prairie Provinces.—As on the same date in 1927, there was a falling-off in employment in the Prairie Provinces at the beginning of October, chiefly in construction, but also in services. On the other hand, manufacturing, transportation and trade were more active. Returns were received from 883 firms with an aggregate working force of 142,427 employees, compared with 144,296 on September 1. The index was much higher than on October 1 last year.

British Columbia.—Employment in British Columbia showed further moderate curtailment, mainly in construction, manufacturing, transportation and services, while logging and trade reported heightened activity. Data were

Montreal.—For the first time this year there was a falling-off in employment in Montreal, where the 770 co-operating firms employed 133,145 persons, or 1,178 less than on September 1. Manufacturing, transportation and construction reported the bulk of the reduction, while trade was brisker. Although employment had gained on the corresponding date last year; it was then at a generally lower level.

Quebec.—Employment in Quebec showed a decrease at the beginning of October, 211 workers being laid off by the 101 employers whose returns were compiled, and who had 11,856 on their paylists on the date under review. Practically all the loss took place in manu-

EMPLOYMENT IN CANADA AS REPORTED BY EMPLOYERS

NOTE.—The curve is based on the number of employees at work on the first day of the month, as indicated by the firms reporting, in comparison with the number of employees they reported in January, 1920, as 100.

tabulated from 713 employers, whose payrolls declined from 87,843 persons on September 1 to 86,784 at the beginning of October. Losses on practically the same scale were registered at the beginning of October last year, when the index was several points lower.

Table I gives index numbers by economic areas.

Employment in Cities

The trend of employment was upward in Toronto and Winnipeg, but downward in Montreal, Quebec City, Ottawa, Hamilton, Windsor and the Other Border Cities and Vancouver.

facturing and transportation. The index was higher than at the beginning of October, 1927.

Toronto.—Further expansion was indicated in Toronto, according to 862 firms employing 117,633 persons, compared with 115,453 in their last report. Manufacturing, (particularly of textiles, electrical appliances and food products,) was much busier, as were trade, services and building construction. The additions to staffs reported on October 1 a year ago were on a smaller scale and the situation then was not so favourable.

Ottawa.—Trade was more active, while construction showed declines. The forces of the 140 employers furnishing data aggregated

12,744 workers, or 245 less than on September 1. Employment was better than on the corresponding date in 1927, when small gains had been noted.

Hamilton.—Curtailment was registered in manufacturing, other industries showing little general change. Statements were tabulated from 209 firms with 33,253 employees, compared with 33,823 in the preceding month. The index number at the beginning of October last year was several points lower, although the trend of employment was then upward.

Windsor and the Other Border Cities.—For the first time since the beginning of January, there was a falling-off in the number employed in the Border Cities, mainly in automobile plants and construction. One hundred and thirty-two establishments recorded 21,539 employees, as against 21,764 on September 1. Employment on October 1, 1927, was in much smaller volume.

Winnipeg.—Employment in Winnipeg advanced on October 1, when 214 workers were added to the forces of the 302 co-operating firms, bringing them to 33,216. Trade was decidedly more active, and manufactures also showed improvement, but there were declines in building. Reductions in personnel had been indicated at the beginning of October of a year ago, and the index then was lower than on the date under review.

Vancouver.—For the first time this year there was a contraction in employment in Vancouver, according to 265 employers with 28,438 persons on their payrolls compared with 28,765 on September 1. Trade was busier, but manufacturing, construction and shipping reported decreases. Very little change was recorded on October 1, 1927, when the index stood at 119.0, as compared with 128.2 at the beginning of October this year.

Index numbers by cities are given in Table II.

Manufacturing

There was a further small reduction in manufacturing plants, 4,006 of which reported 537,213 operatives, compared with 538,736 in the preceding month. Similar declines were noted on October 1, 1927, when the index number was much lower. Seasonal losses in fish-preserving and sawmilling factories caused most of the decrease, though there was also a falling-off in activity in rubber, pulp and paper, building material, iron and steel and non-ferrous metal works. On the other hand, vegetable food factories showed important seasonal improvement, and there were also

large gains in textile, electrical apparatus and musical instrument plants.

Animal Products—Edible.—There were continued losses in fish-preserving establishments and in dairies, while meat-packing plants also afforded rather less employment. Statistics were received from 203 manufacturers, employing 18,479 persons, as compared with 19,327 in the preceding month. This contraction, which took place chiefly in Ontario and the Western Provinces, was on a larger scale than that registered on the corresponding date last year, when the index number was rather lower.

Leather and Products.—Tanneries and miscellaneous leather goods factories reported practically no change, while boot and shoe plants were slacker. The result was a decrease of 64 workers in the staffs of the 188 establishments furnishing returns, which employed 16,999 on October 1. Slight improvement was noted at the beginning of October a year ago, when the index number was a few points higher than on the date under review.

Lumber and Products.—Further reductions in personnel on a smaller scale than in the autumn last year were indicated in the lumber group, in which employment was in greater volume than on October 1, 1927. The losses took place almost entirely in rough and dressed lumber mills, while furniture and other wood-working factories were somewhat busier. A combined working force of 58,827 persons was reported by the 737 co-operating manufacturers, as compared with 60,258 at the beginning of September. Although the largest contractions were in Quebec, the tendency was downward in all the provinces.

Musical Instruments.—Continued additions to staffs on practically the same scale as on October 1 a year ago, were registered in musical instrument plants, and conditions were rather better than during last autumn. Forty-two establishments reported 3,415 employees, as compared with 3,220 in the preceding month. The bulk of all the gain was in Quebec.

Plant Products—Edible.—Fruit and vegetable canneries, flour and cereal, chocolate, cocoa and confectionery factories afforded heightened employment, while there was a falling-off in the sugar and syrup division. The staffs of the 318 reporting firms aggregated 33,262 persons or 2,397 more than in their last report. Employment was better in all provinces, Ontario showing the most pronounced expansion. This gain involved fewer workers than that registered on the corre-

sponding date in 1927, when the index was lower than on October 1, 1928.

Pulp and Paper Products.—There was a reduction in the staff reported by 477 employees in this group, who had 63,153 workers on

payroll, as compared with 63,701 at the beginning of September. Pulp and paper mills released some employees, but activity advanced in printing and paper goods plants. In the Prairie Provinces and British Colum-

NOTE: Number employed by the reporting firms in Jan. 1920=100 in every case. The "Relative weight" in Tables 1, 2, 3 and 4 shows the proportion of employees in the indicated area or industry to the total number of all employees reported in Canada on the date under review.

TABLE I.—INDEX NUMBERS OF EMPLOYMENT BY ECONOMIC AREAS

	Canada	Maritime Provinces	Quebec	Ontario	Prairie Provinces	British Columbia
1921						
Oct. 1.....	90.2	93.1	89.2	85.9	100.0	96.4

bia there were small increases, while the tendency elsewhere was unfavourable. A minor decline had been indicated at the beginning of October a year ago, when the index number was lower as it was in the autumn of earlier years since the record was commenced in 1920.

Rubber Products.—Employment in rubber goods showed a decrease on October 1, 1928, but this was smaller than that recorded on the

same date in 1927, and the level of employment continued considerably higher. Data were compiled from 38 firms with 17,128 employees, as against 17,413 in their last report. A large proportion of this curtailment was due to a shutdown for repairs in Quebec, while improvement was shown in Ontario.

Textile Products.—Garment and personal furnishing factories reported increased activity, but the production of cotton goods

TABLE IV.—INDEX NUMBERS OF EMPLOYMENT IN CANADA BY INDUSTRIES (JAN. 1920=100.)

Industries	Relative Weight	Oct. 1 1928	Sept. 1 1928	Oct. 1 1927	Oct. 1 1926	Oct. 1 1925	Oct. 1 1924	Oct. 1 1923

All Industries	100.0	118.9	119.5	109.0	105.2	98.3	93.9	99.5

¹ The "Relative Weight" column shows the proportion that the number of employees in the indicated industry is of the total number of employees reported in all industries by firms making returns on the date under review.

showed a falling-off; 520 manufacturers enlarged their payrolls from 76,795 to 77,258 workers on the date under review. Ontario recorded the bulk of this expansion. Although more pronounced improvement had been noted at the beginning of October last year, the situation then was not so favourable.

Tobacco, Distilled and Malt Liquors.—There was practically no change in employment in these industries on the date under review, according to the 133 establishments furnishing statistics, which employed 14,882 workers. Employment continued in larger volume than in autumn in other years for which data are available. Firms in Ontario recorded an increase, while the tendency was downward in the Western provinces.

Clay, Glass and Stone Products.—Moderate seasonal contractions were indicated in building material plants, in which activity was greater than on October 1, 1927. The forces of the 130 co-operating employers declined by 178 persons to 12,326 at the beginning of October. The largest reductions took place in the Prairie Provinces.

Electric Current.—After seven months of uninterrupted expansion of employment in electric current plants, there was a slight decline at the beginning of October, when 90 establishments reported 15,442 workers, compared with 15,552 on September 1. There were general losses in Quebec and Ontario. Greater contractions were indicated on the corresponding date last year, and the index number then was over twenty points lower.

Electrical Appliances.—Further additions to staffs were made in electrical apparatus works, 47 of which had 12,873 employees, or 433 more than in their last report. This improvement was more pronounced than that noted on the same date in 1927, when the index number was many points lower.

Iron and Steel Products.—The crude, rolled and forged and sheet metal divisions of the iron and steel group registered increases in employment, while there were reductions in the vehicle and other branches. Statements were received from 676 manufacturers, whose payrolls aggregated 148,694 persons, as compared with 150,145 in the preceding month. Employment declined in Ontario and Quebec, but elsewhere there were gains. Rather less marked curtailment had been indicated at the beginning of October last year, when the index number was between 14 and 15 points lower than on the date under review.

Non-Ferrous Metal Products.—The aluminum, lead, tin, zinc, and copper division of this group reported decreases, while the precious metal group was somewhat busier. A combined working force of 18,310 persons was reported by the 112 co-operating employers, who had 18,564 employees at the beginning of September. Reductions took place in Ontario, Quebec and British Columbia. The situation was much more favourable than in the autumn of earlier years of the record.

Logging

Statements were tabulated from 238 logging companies, whose staffs were enlarged by 5,861 workers to 24,388 on the date under review. This advance was on a greater scale than in the early autumn of previous years of the record, in most of which the index was rather lower. Camps in Quebec and Ontario absorbed most of the extra men, but large gains were also noted in British Columbia.

Mining

Coal Mining.—There was a small increase in coal mines, in which employment was in less volume than on October 1, 1927, when the improvement reported was much more pronounced. Returns were received from 90 operators employing 26,279 persons, as compared with 26,255 in their last report. The gains were noted largely in the Eastern coal fields.

Metallic Ores.—Employment in this group on October 1 showed its ninth consecutive increase since the spring; 73 employers reported 15,436 workers, or 277 more than at the beginning of September. The Prairie Provinces and Ontario registered the bulk of the improvement, while in British Columbia the tendency was unfavourable. Similar advances had been noted on the corresponding date last year, when the index number was some 28 points lower.

Communications

Practically no change was noted in communications in which 187 companies furnished data showing that they had 27,818 employees. The index continued higher than in any other month of the record.

Transportation

Street and Electric Railways and Cartage.—Further advances were indicated in local transportation, 101 persons being added to the forces of the 120 co-operating firms, who reported 22,999 on their payrolls. Conditions

in this industry were better than on the corresponding date in 1927, or in any other year since this series was commenced.

Steam Railways.—Statistics were tabulated from 106 employers in the steam railway operation group, whose payrolls rose from 87,621 on September 1 to 88,174 at the beginning of October. This gain was much larger than that recorded on the same date last year, when the index number was about seven points lower. Losses in the Maritime Provinces and Ontario were offset by expansion in Quebec and the Prairie Provinces.

Shipping and Stevedoring.—Curtailment in employment was registered in the water transportation group, in which 65 companies employed 14,888 workers. This was a decline of 411, compared with their payrolls in the preceding month. Quebec and British Columbia reported the most pronounced reductions; in Ontario there were smaller losses, while in the Maritime Provinces the tendency was upward. Increases had been noted on October 1 last year, when the index number was higher.

Construction and Maintenance

Building.—For the first time since the beginning of March, there was a falling-off in employment in building, 74 persons being released from the forces of the 575 co-operating contractors. They had 51,554 employees, a number considerably in excess of that reported at the beginning of October a year ago, when greater seasonal curtailment was indicated. In the Maritime Provinces and Ontario there was further improvement, while the trend was unfavourable in Quebec and British Columbia.

Highways.—Work on highways and streets declined, as is customary at this time of year, but the decreases, like the increases which preceded it, involved a larger number of workers

than in the early autumn in previous years of the record. Statements were tabulated from 189 employers, whose staffs, standing at 32,556, were smaller by 4,770 persons than on September 1. There were marked contractions in all except the Prairie Provinces.

Railways.—Continued reductions in employment were reported on railway construction especially in the Prairie Provinces. The forces of the 55 companies and divisional superintendents furnishing returns declined from 57,260 at the beginning of September to 51,384 on the date under review. This shrinkage was more extensive than that registered on October 1, 1927, but the level of employment then was much lower.

Services

The closing of summer hotels largely accounted for a decrease of 1,121 persons in the staffs of the 189 firms in this group whose returns were received, and who employed 19,092 on October 1. The declines indicated on the same date last year involved a smaller number of workers, but the index then was much lower.

Trade

Trade both retail and wholesale, showed a pronounced increase; 662 establishments reported 77,983 employees, compared with 75,884 in the preceding month. The situation was better than in the autumn in any other year of the record, which was instituted in 1920.

Index numbers of employment by economic areas, leading cities and industries are given in Tables I, II, III and IV, respectively. The columns headed "Relative weight" show the proportion that the number of employees reported in the indicated area or industry is of the total number of employees reported in Canada by the firms making returns on the date under review.

Unemployment in Trade Unions at the Close of September, 1928

Unemployment as used in the following report has reference to involuntary idleness, due to economic causes. Persons who are engaged in work other than their own trades, or who are idle owing to illness, are not considered as unemployed. Unions which are involved in industrial disputes are excluded from our tabulations. As the number of unions making returns varies from month to month, with consequent variation in the membership upon which the percentage of unemployment is based, it should be understood

that such figures have reference only to the organizations reporting.

The percentage of unemployment reported by local trade unions at the close of September was slightly smaller than that of the previous month, 2.2 per cent of the membership covered by the returns being without work in the former month, compared with 2.4 per cent at the end of August. The situation was also better during September than in the corresponding month last year, when the percentage of idleness stood at 3.1. Reports for

September were tabulated from a total of 1,626 labour organizations with 181,615 members, 4,068 of whom were unemployed on the last day of the month. Alberta and British Columbia unions alone reflected less favourable conditions during September than in the previous month, due in Alberta to depression in the coal mining industry, while in British Columbia the unemployment increase reported was quite small and rather generally distributed throughout the various trades and industries. The gains in employment in the remaining provinces, none of which were outstanding, when combined effected a favourable balance for Canada as a whole. The percentages of unemployment recorded in all provinces with the exception of Alberta were smaller during September than in the same

month than in August. The Halifax situation remained unchanged. In comparison with the returns for September last year Halifax, Montreal, Toronto, Winnipeg and Vancouver unions all reported a somewhat higher level of employment, while from Edmonton and Regina the declines registered were nominal. St. John unions recorded the same percentage of idle members in both months of the comparison.

The chart which accompanies this article indicates the unemployment trend by months from 1922 to date. The curve during September projected slightly downward, indicating an increase in the volume of employment afforded over August, and at the end of the month it rested on a level somewhat below that of the same month in 1927.

PERCENTAGE OF UNEMPLOYMENT AS REPORTED BY TRADES UNIONS

month of last year, inactivity in Alberta coal fields, as in the previous comparison, being mainly responsible for the adverse situation in that province.

A separate compilation is made each month of unemployment among trade union members in the largest city in each province except Prince Edward Island. The unemployment percentage in Vancouver at the end of September was 4.9, slightly above that recorded during August. This percentage was the largest to be registered by any of the cities during September. Montreal, with 3.4 per cent of inactivity, was next in line, though indicative of nominal improvement over August conditions in that city. From Edmonton a slightly adverse change was reported. Saint John, Toronto, Winnipeg and Regina members, on the contrary, were afforded a slightly greater volume of employ-

The manufacturing industries, with 450 unions reporting 51,918 members at the end of September, showed a further though moderate advance in employment, 2.8 per cent of the members being idle, compared with 3.5 per cent in August. Garment workers reported the most noticeable increase in work available, which was augmented by gains of lesser magnitude among papermakers, leather, glass and textile workers, and printing tradesmen, bakers and metal polishers. Cigar-makers, on the other hand, were decidedly slacker than in August, and employment for iron and steel and wood workers eased off slightly. In making a comparison with the returns for September last year when 4.0 per cent of unemployment was recorded in the manufacturing industries, iron and steel workers, printing tradesmen, metal polishers, and leather hat, cap and garment workers all re-

ported a higher level of employment during the month under review, while wood workers, cigarmakers and bakers showed curtailment of activity.

Coal miners with 41 unions reporting 16,866 members at the end of September, registered 3.4 per cent of unemployed members, contrasted with 1.3 per cent in August, and with .7 per cent in September last year. The decline in employment at the end of September, both as compared with the previous month and September a year ago, was caused by a shortage of work in Alberta coal mines. The situation for Nova Scotia miners, on the other hand, showed improvement in both comparisons, while in British Columbia nominal percentages of idleness only were reported in both August and September, compared with no inactivity in September of last year. Quarry workers in Nova Scotia registered the same percentage of idleness at the close of September as in August, compared with a fully engaged situation at the end of September, 1927.

The volume of employment reported by the building trades, as a whole, during September slightly exceeded that of the previous month, though fluctuations were apparent in the various trades. At the close of September reports from 206 unions of building tradesmen were tabulated, these including a membership of 24,484 persons, 2.9 per cent of whom were idle at the end of the month, contrasted with 3.5 per cent of unemployment in August, and with 8.3 per cent in September last year. Bricklayers, masons and plasterers, carpenters and joiners, painters, decorators and paperhangers, plumbers and steamfitters, bridge and structural iron workers, tile layers, lathers and roofers, and hod carriers and building labourers all shared in varying measures in the group advancement over August. Slight declines in employment were reported by granite and stonecutters and electrical workers. Compared with the returns for September last year, conditions were substantially better during the month under review for bricklayers, masons and plasterers, bridge and structural iron workers, granite and stonecutters, tile layers, lathers and roofers, and hod carriers and building labourers, while gains on a smaller scale were recorded by carpenters and joiners, electrical workers, and plumbers and steamfitters. Painters, decorators and paperhangers, however, recorded a small unemployment increase over September a year ago.

The transportation industries at the close of September showed very slight change from that of the preceding month the 676 unions

from which reports were tabulated, with a united membership of 62,566 persons, indicating 1.6 per cent of unemployment, compared with 1.7 per cent on August 31. The situation for steam railway employees whose returns constitute over 79 per cent of the entire group membership reporting, remained stationary during September, the percentage of unemployment in both months of the comparison standing at 1.2. Navigation workers registered a moderate advance in employment during September, while among teamsters and chauffeurs the improvement was slight. Nominal declines in work afforded were manifest by street and electric railway employees. An increase in employment of .9 per cent only was reported in the transportation industries as a whole, compared with September of last year, navigation workers and steam railway employees contributing to this minor gain, and street and electric railway employees showing nominal reductions in activity. Teamsters and chauffeurs, how-

TABLE I.—PERCENTAGES OF UNEMPLOYMENT IN TRADE UNIONS BY PROVINCES

Month	N.S. and Pr. Edw. Island	New Brunswick	Quebec	Ontario	Manitoba	Saskatchewan	Alberta	British Columbia	Canada

Sept., 1928.....	.9	.5	3.5	1.2	1.2	.6	4.2	3.3	2.2

ever, registered practically no change in the situation.

From longshore workers, whose returns are tabulated separately each month, 14 reports were received for September, indicating a membership of 7,108 persons, 1,105 or a percentage of 15.5 of whom were idle at the end of the month, compared with 17.2 per cent in August. The situation showed improvement also over September last year when 18.2 per cent of unemployment was recorded.

Retail trade reflected little variation in the percentages of unemployed members in any of the months used here for comparison, the 7 unions from which reports were tabulated at the close of September with 988 members, indicating .4 per cent of inactivity, compared with .8 per cent at the close of August, while in September of last year the unemployment percentage stood at .2.

Civic employees were not quite so fully engaged during September as in either the previous month of September last year, as shown by the reports tabulated from 65 unions with 6,296 members. The percentages of unemployment in all three months, however, were quite small.

From unions in the miscellaneous group of trades, 111 reports were tabulated at the end of September, showing a membership of 5,491 persons, 160 of whom were idle on the last day of the month, a percentage of 2.9 as compared with 3.3 per cent of unemploy-

ment at the end of August, and with 5.2 per cent on September 30, 1927. Theatre and stage employees registered much improved conditions during September when compared with the previous month, and among stationary engineers and firemen the increase in activity recorded was nominal. Hotel and restaurant employees and barbers, on the contrary, registered a slight drop in the volume of work afforded. All tradesmen in the group registered additional employment during September to that afforded in the same month of 1927.

Fishermen showed practically no change in the situation during September from that of August, fractional percentages of idleness being reported in both these months. The level of employment was, however, slightly above that recorded in September a year ago.

From lumber workers and loggers 2 reports were tabulated at the close of September, showing a membership of 794 persons, 6.3 per cent of whom were idle on September 30, compared with 12.5 per cent in August, and with no unemployment in September of last year.

Table I summarizes the returns by provinces for September in each year from 1919 to 1925 inclusive and for each month from January, 1926, to date, and table II indicates the percentages of unemployment registered in the various groups of industries for the same months.

Employment Offices Reports for September, 1928

The volume of business transacted by the offices of the Employment Service of Canada during the month of September, 1928, showed gains of 17 per cent and 4 per cent, respectively, in the average daily placements effected, when comparisons were made with the records of the preceding month and also with those of September a year ago. The increase over August occurred in logging, farming and trade, while all groups except logging and farming showed gains over September of last year.

The accompanying chart shows the trend of employment since January, 1926, as represented by the ratio of vacancies notified and of placements effected for each 100 applications for work registered at the offices of the Service throughout Canada, compilations being made semi-monthly. It will be seen that the curve of vacancies in relation to applications rose to its highest point for the year during the month, the usual seasonal demand for harvesters in the Prairie provinces, being mainly responsible for this situation. The curve of placements in relation to applica-

tions declined somewhat during the first half of the month, but rose slightly during the latter half of the period, and at the close of the month was nearly 6 points higher than that recorded at the end of September a year ago. The ratio of vacancies to each 100 applications was 101.9 during the first half and 102.7 during the second half of September 1928, in contrast with the ratios of 100.2 and 104.4 during the corresponding periods of 1927. The ratios of placements to each 100 applications during the periods under review were 90.4 and 91.7 as compared with 91.0 and 86.0 during the corresponding month of 1927.

The average number of vacancies reported daily by employers to the offices of the Service throughout Canada during September 1928 was 3,605 as compared with 2,828 during the preceding month and with 3,538 in September a year ago.

The average number of applications for employment received daily by the offices during the month under review was 3,523 in com-

parison with 3,011 in August 1928 and with 3,472 during September last year.

The average number of placements made daily by the offices of the Service during September 1928 was 3,210, of which 2,637 were in regular employment and 573 in work of one week's duration or less, as compared with a total daily average of 2,750 during the preceding month. Placements in September a year ago averaged 3,090 daily, consisting of 2,620

Year	PLACEMENTS		
	Regular	Casual	Totals

POSITIONS OFFERED AND PLACEMENTS EFFECTED FOR EACH ONE HUNDRED APPLICATIONS FOR EMPLOYMENT

Applications ————— Vacancies - - - - - Placements o-o-o-o-o

placements in regular and 470 in casual employment.

During the month of September, 1928, the offices of the Service referred 78,526 persons to vacancies and effected a total of 77,027 placements. Of these the placements in regular employment were 63,293, of which 57,803 were for men and 5,490 for women, while placements in casual work totalled 13,734. The number of vacancies reported by employers was 73,368 for men and 13,135 for women, a total of 86,503, while applications for work numbered 84,545 of which 70,791 were from men and 13,754 from women.

The following table gives the placements effected to date by the offices of the Employment Service of Canada:—

NOVA SCOTIA

There was a nominal decline only in the number of positions offered through employment offices in Nova Scotia during September when compared with the preceding month, but a gain of nearly 31 per cent when compared with the corresponding month last year. Placements were nearly 4 per cent higher than in August and over 31 per cent in excess of September, 1927. The manufacturing industries and construction and maintenance showed the most substantial gains in placements over September last year. Industrial groups in which most of the placements were effected during the month were: manufacturing, 89; transportation, 38; construction and maintenance, 118; trade, 51; and services, 286,

of which 226 were of household workers. Regular employment was found for 189 men and 50 women during the month.

NEW BRUNSWICK

The demand for workers as indicated by orders received at employment offices in New Brunswick during September was over 8 per cent better than in the preceding month, and showed an improvement of nearly 20 per cent over the corresponding month last year. There was a gain of nearly 4 per cent in placements over August, and of nearly 9 per cent when compared with September, 1927. Services showed the largest gain in placements over September of last year. The changes in other groups were small. Placements by industries included manufacturing, 36; logging, 79; transportation, 38; construction and maintenance, 119; and services, 524, of which 393 were of household workers. Placements in regular employment numbered 232 of men and 86 of women.

QUEBEC

During September employment offices in the Province of Quebec received orders for nearly 12 per cent less workers than in the preceding month and nearly 7 per cent less than during the corresponding month last year. There was a decrease also in placements of nearly 8 per cent from August and of nearly 6 per cent from September, 1927. Construction and maintenance was the only group to show any appreciable gain in placements over September of last year. The largest decline was in logging. Placements by industries included: manufacturing, 170; logging, 991; farming, 62; transportation, 85; construction and maintenance, 1,154; trade, 73; and services, 600, of which 412 were of household workers. During the month 2,593 men and 517 women were placed in regular employment.

ONTARIO

Orders listed at employment offices in Ontario during September called for nearly 7 per cent less workers than were required during the preceding month, but showed an increased demand of 16 per cent when compared with the same month last year. There was a decline of over 6 per cent in placements in comparison with August, but a gain of nearly 19 per cent over September, 1927. Logging was the only group to show any considerable reduction in placements from last year, and although there were over 1,200 fewer placements in this group, the decline was more than offset by substantial gains in

manufacturing, transportation, construction and maintenance and trade. Industrial divisions in which most of the placements were effected during the month included: manufacturing, 2,428; logging, 992; farming, 1,363; mining, 116; transportation, 1,029; construction and maintenance, 4,402; trade, 807; and services, 4,494 of which 2,738 were of household workers. There were 8,697 men and 1,637 women placed in regular employment during the month.

MANITOBA

Opportunities for employment as indicated by orders received at employment offices in Manitoba during September were nearly 4 per cent less than in the preceding month, but were nearly 6 per cent better than during the corresponding month last year. There was a gain of nearly 4 per cent in placements over August and or nearly 6 per cent when compared with September, 1927. All industrial divisions participated in the gains in placements over September last year, although manufacturing, logging, transportation, construction and maintenance and trade were the only groups to show increases of importance. Placements by industrial groups included: manufacturing, 305; logging, 271; farming, 6,974; transportation, 142; construction and maintenance, 614; trade, 477; and services, 2,126, of which 1,617 were of household workers. There were 7,790 men and 531 women placed in regular employment during the month.

SASKATCHEWAN

There was an increase of 85 per cent in the number of requests for workers registered at offices in Saskatchewan during September when compared with the preceding month but a decline of 2 per cent when compared with the corresponding month of last year. Placements showed a gain of 123 per cent over August and were nearly 10 per cent higher than in September, 1927. All industrial groups participated in the gains over last year, farm placements showing the largest increase. Industrial divisions in which most of the placements were effected during the month were: manufacturing, 199; farming, 23,590; construction and maintenance, 495; trade, 415; and services, 1,486; of which 906 were of household workers. Positions in regular employment were secured for 24,043 men and 809 women.

ALBERTA

Employment opportunities as indicated by orders received at employment offices in Alberta during September decreased nearly

18 per cent when compared with the preceding month and over 32 per cent in comparison with the corresponding month last year. Placements also declined under both comparisons, over 21 per cent from August and over 24 per cent from September, 1927. The latter reduction was attributable to fewer farm placements and, although all other groups showed gains over last September, they were not sufficient to offset the reduction in farm placements. Industrial groups in which most of the placements were effected during the month were: manufacturing, 447; logging, 73; farming, 9,335; mining, 113; transportation, 99; construction and maintenance, 1,111; trade, 431; and services, 1,023, of which 757 were of household workers. Placements in regular employment numbered 10,922 of men and 459 of women.

BRITISH COLUMBIA

During the month of September positions offered through British Columbia offices increased over 17 per cent when compared with the preceding month and over 57 per cent in comparison with the corresponding month of last year. Placements however, were over 52 per cent fewer than in August and 19 per cent less than in September, 1927. The decline in placements from last was nearly all attributable to fewer transfers of harvesters and farm domestics to Alberta and Saskatchewan, which movement was somewhat earlier this year than last. All industrial groups except farming and services showed increased placements over September, 1927. Placements by industrial divisions included: manufacturing, 755; logging, 536; farming, 2,381; mining, 130; transportation, 275; construction and maintenance, 1,177; trade 293; and services, 1,181, of which 710 were of household workers. There were 3,337 men and 1,401 women placed in regular employment during the month.

Movement of Labour

During the month of September, 1928, the offices of the Employment Service of Canada made 63,293 placements in regular employment, 51,867 of which were of persons for whom the employment found was outside the immediate locality of the offices at which they were registered. Of the latter 4,478 were allowed the Employment Service reduced transportation rate, 3,240 travelling to points within the same province as the despatching office and 1,238 to other provinces. The reduced transportation rate which is 2.7 cents per mile with a minimum fare of \$4, is granted by the railway companies to bona fide appli-

cants at the Employment Service who may desire to travel to distant employment for which no workers are available locally.

Certificates for reduced transportation were granted by Quebec offices during September to 587 persons, 345 of whom went to provincial employment and 242 to situations in other provinces. From Montreal the provincial movement included 11 bushmen going to Three Rivers, and 100 bushmen and 11 saw-mill labourers to points within the Montreal zone, while from Quebec 220 bushmen and 3 camp cooks travelled to employment within its own zone. With the exception of one domestic despatched from Hull to Toronto, all the transfers outside the provinces were of bushmen, 190 of whom went from Hull to employment in the vicinity of Sudbury, Cobalt and North Bay and 51 from Montreal to the Sault Ste. Marie zone.

The number of workers travelling from Ontario centres at the special transportation rate during September was 613, of whom 594 were bound for points within the province and 19 for stations outside the province. Provincially the Windsor office despatched 2 carpenters to Pembroke and one cook and one pipe-fitter to Sudbury. From Port Arthur 22 carpenters, 68 construction labourers, 3 drillers, 6 cooks, 5 crib men, 7 harvesters, 22 wood cutters, 6 teamsters and 2 derrick runners travelled within the same zone and from Sudbury 5 rock men were conveyed at the reduced rate to Sault Ste. Marie, 4 carpenters to Timmins and 4 rock men, 20 labourers and one carpenter within the Sudbury zone. Included in the transfers from North Bay were 7 carpenters and one cook going to Cobalt and 2 carpenters, one construction foreman, 41 labourers, one painter and one plasterer to Timmins. The Cobalt office despatched 2 carpenters to Timmins and one millwright and 3 carpenters to points within the Cobalt zone. The Timmins zone also received one tinsmith from Hamilton, and Cobalt one miner from Ottawa. The greater part of the provincial movement was, however, due to the transfer of 353 bushmen for logging activities principally in the northern part of the province. Of those going to other provinces the Winnipeg zone received 4 harvesters, 2 from Port Arthur and 2 from Fort William, and 3 miners from Sudbury, and the Hull zone received one cook from North Bay and one electrician from Sudbury. Fort William, in addition, transferred one separator engineer to Saskatoon and one farm hand to Edmonton. The remaining transfers outside the province were from Toronto, from which centre 5 rubber workers and one millwright

went to Montreal and one housekeeper and one painter to Regina.

From the offices in Manitoba 1,635 certificates for reduced transportation were secured by workers during September, 993 of whom travelled to employment within the province and 642 to points in other provinces. The Winnipeg office was responsible for the entire movement provincially, which was for the most part of harvest hands and harvest domestics, 904 of the former and 17 of the latter receiving certificates for various points within the province. To stations within the Winnipeg zone 33 construction labourers, 15 teamsters, 5 saw-mill labourers, 3 cooks, 2 bushmen, 2 blacksmiths, one fireman, one oiler, one stable man, one gas engineer and one hotel porter were despatched at the reduced rate from Winnipeg. In addition 3 waitresses and one laundress were conveyed to Dauphin at the special rate and 2 hotel waitresses and one hotel cook to Brandon. The transfers outside the province from Winnipeg included 301 harvesters and 4 farm domestics for the Saskatchewan rural districts and 22 harvest hands and one farm domestic for Alberta points. Port Arthur and surrounding district was the destination of 273 bushmen, 20 saw-mill labourers, 4 farm hands, 2 farm domestics, one fisherman, one gas motor engineer, one camp cook, one freighter, one engineer and one cook. All of these travelled on certificates issued at Winnipeg. From Winnipeg also one cook was carried at the reduced rate to Saskatoon, 3 oilers to Prince Albert and 2 cooks to Yorkton. The remaining interprovincial transfers included 2 coal miners going from Brandon to Estevan and one steam engineer from Dauphin to Saskatoon.

Persons taking advantage of the reduced transportation rate from points in Saskatchewan during September were 379 in number, 371 of whom were for provincial centres and the balance for outside points. To employment in the agricultural regions of the province Moose Jaw transferred 89 harvesters, Regina 119, Saskatoon 65 and Weyburn 8. From Moose Jaw also 2 miners proceeded to Estevan, one steam engineer to Swift Current and 3 rough carpenters, one cook, one housekeeper and one hotel porter to points within the Moose Jaw zone. The Regina office in addition transferred one blacksmith to North Battleford, 2 coal miners to Estevan, one fireman, one domestic, 2 gas engineers and one camp cook to Moose Jaw, one teamster, one separator man and one cook to Saskatoon, 2 cooks, one engineer and one stenographer to Swift Current, and one cook within its own zone. From Saskatoon 27

bushmen went to Prince Albert, 26 railroad construction teamsters to North Battleford, and 2 cooks, one cookee, one housekeeper and 4 labourers to employment within the Saskatoon zone, while from Prince Albert 2 bushmen and 2 cooks travelled to points within its own zone. The movement to other provinces comprised the transfer of 4 farm hands and one cook to Calgary, one farm hand and one cook to Brandon, and one farm hand to Winnipeg from Moose Jaw, Regina and Weyburn.

Of the 1,011 special transportation vouchers granted by offices in Alberta during September 753 were issued to persons going to employment within the province and 258 to workers travelling to other provinces. A large percentage of the provincial certificates were granted to harvest hands, 537 of whom were transferred from Edmonton and 50 from Calgary to the agricultural districts. From Edmonton also 2 miners were transported to Calgary, one cook and one miner to Drumheller, 9 log cutters to Lethbridge and 18 mill hands, 16 carpenters, 3 rod men, 3 log cutters, 6 teamsters, 8 elevator cribbers, 5 miners, 4 stationary engineers, 4 cookees, one painter, 38 labourers, one mining engineer, one blacksmith, 2 separator men, one porter, and 2 Fresno teamsters and 11 hotel and domestic workers to employment within the Edmonton zone. The Calgary office despatched 2 flunkies to Lethbridge, 2 stationary engineers to Medicine Hat, 4 railroad construction workers, 3 teamsters and 5 hotel and household workers to Drumheller and 2 teamsters, 2 labourers, one cookee, one truck driver and 7 hotel and household workers within the Calgary zone. Two hundred and fifty-two of the transfers outside the province were of farm hands, all of whom went to employment in Saskatchewan. Practically all of these secured their reduced rate certificates at Edmonton. Included in this interprovincial movement also were one cook and one maid going from Edmonton to Saskatoon and one cook from Calgary to Swift Current, while from Lethbridge one sign writer travelled to Winnipeg and 2 cooks to Saskatoon.

Offices in British Columbia effected transfers during September of 253 persons 184 of whom went to centres within the province and 69 to points in other provinces. Provincially the Vancouver office transferred 19 labourers 12 tomato peelers, 5 harvesters, 4 swampers, 2 flunkies, 2 engineers, 2 carpenters, 2 teamsters, one dishwasher, one hook tender, one road maker, one waitress and one painter to Kamloops, 46 apple pickers, and packers, 5 tomato peelers and 2 teamsters to Kelowna,

3 carpenters, 3 bricklayers, 2 labourers, one rock man, one clerk and one cook to Nelson, 5 fruit peelers, one sawyer, one teamster, one loader and one labourer to Penticton, 3 miners and one cook to Revelstoke, one blacksmith to Prince George, 3 apple pickers to Vernon and 3 harvesters, 3 cooks, 2 steel sharpeners, one dishwasher, 3 engineers, 4 flunkies and 2 waitresses within the Vancouver zone. Nelson despatched 6 sawyers, 5 swamper, one logger, one cook and one labourer, Prince George 4 ice makers and Prince Rupert 6 labourers, 3 teamsters, one blacksmith, one bricklayer, one cook and one axeman to centres within their respective zones. From New Westminster one farm hand was sent to Penticton. Among the transfers to other Provinces from Vancouver were 4 harvesters, one cook, one cooks' helper, 3 lathers, 2 bricklayers and 4 plasterers going to Calgary, one harvest hand to Edmonton, 2 harvesters to Lethbridge, one housekeeper and 5 tomato peelers to Regina and one harvester to employment in the Swift Current zone. The Nelson office transferred one cook and one

rancher to Calgary, one rancher and one swamper to Lethbridge, one labourer and one cook to Regina and 14 harvesters to Yorkton, while from Victoria one farm hand proceeded to Regina. Prince Rupert issued certificates to 5 harvesters, 3 of whom were conveyed to Calgary at the reduced rate, one to Edmonton and one to Regina and from Kingsgate 10 harvesters travelled to points in the Medicine Hat zone. The balance of movement was from New Westminster, from which centre 2 labourers, one carpenter and one domestic were transferred to Calgary, one farm hand and one labourer to Edmonton, one assistant superintendent to Winnipeg and one farm cook to Saskatoon.

Of the 4,478 persons who took advantage of the Employment Service reduced transportation rate during September 1,893 were transported by the Canadian National Railways, 2,555 by the Canadian Pacific Railway, 18 by the Temiskaming and Northern Ontario Railway and 12 by the Pacific Great Eastern Railway.

Building Permits Issued in Canada During September, 1928

The value of the building permits issued by 63 cities during September stood at \$21,302,746; this was an increase of \$3,917,872 or 22.5 per cent as compared with the total of \$17,384,874 reported in August, and of \$6,840,503 or 47.3 per cent, in comparison with the September, 1927, aggregate of \$14,462,243. The September, 1928, total was higher than in the same month of any other year of the record, while the cumulative total for the first nine months of this year exceeds by over \$25,000,000 that for the same months in 1927, the previous high level since 1920.

Some 50 cities furnished detailed statistics, showing that they had issued over 1,200 permits for dwellings estimated to cost approximately \$6,700,000 and nearly 3,000 permits for other buildings valued at almost \$13,500,000. During August, authority was granted for the erection of about 1,600 dwellings and 2,800 other buildings, estimated at approximately \$8,000,000 and \$7,600,000, respectively.

New Brunswick, Quebec, Ontario and British Columbia reported increases in the estimated value of building as compared with August, 1928, British Columbia showing the greatest advance of \$2,913,913, or 217.6 per cent. Of the declines in the remaining provinces, that in Nova Scotia of \$359,725, or 83.2 per cent was most pronounced.

As compared with September, 1927, there were gains in Quebec, Ontario, Manitoba, Saskatchewan, Alberta and British Columbia,

of which that of \$2,648,147 or 165.0 per cent in British Columbia was greatest. In Nova Scotia and New Brunswick reductions were indicated.

Of the larger cities, Montreal and Toronto registered higher totals of permits issued than in either the preceding month or the same month of last year; in Winnipeg, there was a decrease in the former comparison, but an increase in the latter, while in Vancouver, on the other hand, the permits had a higher valuation than in August, but were lower than in September, 1927. Of the other centres, New Glasgow, Shawinigan Falls, Sherbrooke, Three Rivers, Brantford, Fort William, Hamilton, Kingston, Niagara Falls, Owen Sound, Peterborough, Stratford, York Townships, Windsor, Woodstock, Moose Jaw, Saskatoon, Lethbridge, Medicine Hat, New Westminster, Point Grey, South Vancouver and Victoria showed advances in both comparisons.

Cumulative Record for First Nine Months, 1928.—The following table gives the value of the building authorized by 63 cities during September and in the first nine months of each year since 1920, as well as index numbers for the latter, based upon the total for 1920 as 100. The average index numbers of wholesale prices of building materials in the first nine months of the years since 1920 are also given (1913=100).

Year	Value of permits issued		Indexes of value of permits issued, first nine months (1920=100)	Average indexes of wholesale prices of building materials in first nine months (1913=100)
	In September	In first nine months		
1928.....	\$ 21,302,746	\$ 166,290,804	173.0	149.2
1927.....	14,462,243	141,152,535	146.8	147.5

The month of October established a new record in the total number of accidents reported to the Workmen's Compensation Board of Ontario in any one month. Last month there were 8,278 accidents reported to the Board, 51 of which were fatal. This figure exceeds the total for October, 1927 by more than 1,600 reports. Benefits awarded by the Board in October, including a number of heavy cost cases, totalled \$707,471.31, of which \$114,654.47 was for medical aid. Death cases have reached 466 in ten months of 1928 against

The aggregate for the first nine months of this year was 17.8 per cent greater than in 1927, the previous high level of the record, while the average index numbers of wholesale prices of building materials continued lower than in any other year since 1920, except 1927.

429 in the whole of 1927. This year's figures are, of course, swollen by the Hollinger fire in the spring, and the recent Manasoo disaster. On the other hand, Mr. Morley, general manager, Industrial Accident Prevention Association of Ontario, points out that there is every indication that the fatality experience of the classes of industry in the Associations will show little if any change in 1928. Up to date record of deaths in those classes, which represent about two-thirds of the payroll in Schedule 1, is 42 cases in 1928 against 38 in 1927.

REPORT OF THE EMPLOYMENT SERVICE OF CANADA FOR THE PERIOD JULY to SEPTEMBER, 1928

THE business of the offices of the Employment Service of Canada during the third quarter of 1928 exceeded in volume that transacted during the corresponding quarter of last year, as there was an increase of over 13 per cent in opportunities for employment and over 16 per cent in placements in regular and casual employment. All industrial groups except logging, showed improvement, the most noteworthy gains in placements being in construction and maintenance, farming, services and manufacturing. Provincially, Saskatchewan was the only province to show a decline and that in vacancies, only, due to a reduction in orders for farming. The accompanying table gives the vacancies and placements of the Employment Service of Canada by industrial groups in the various provinces July to September, 1928.

From the chart on page 1250 which accompanies the article on the work of the employment offices for the month of September it will be noted that the curve of vacancies representing the ratio of vacancies to applications showed a continuous upward trend throughout the period. During the last month of the quarter, the demand exceeded the supply of workers available, due to the many calls for harvesters in the Prairie provinces. The curve of placements in relation to applications rose during July and August, declining somewhat during the first half of September, but again showed an upward tendency during the latter half of the month. The level then reached was over 5 points higher than that shown at the close of September a year ago. During the period July to September 1927 there was an average of 94.3 vacancies and 85.0 placements for

each 100 applications for employment as compared with 96.1 vacancies and 89.2 placements for each 100 applications during the period under review.

The average number of applicants registered daily during the present quarter was 2,771, of positions offered 2,665 and of placements effected 2,472, in contrast with a daily average of 2,466 applications, 2,328 vacancies and 2,098 placements in regular and casual employment during the corresponding quarter of 1927.

During the three months July to September 1928, the offices reported that they had made 192,245 references to positions and effected a total of 187,812 placements, of which 149,420 were in regular employment and 38,392 in casual work. Of the placements in regular employment 133,507 were of men and 15,913 of women, while casual work was found for 23,276 men and 15,116 women. Comparison with the corresponding period of 1927 shows that 161,506 placements were then made, of which 131,801 were in regular employment and 29,705 in casual work. Applications for employment during the period under review were received from 171,339 men and 39,197 women, a total of 210,536 in contrast with a registration of 189,882 persons during the same period in 1927. Employers notified the Service during the quarter July to September, 1928, of 202,529 vacancies, of which 165,440 were for men and 37,089 for women as compared with 179,239 opportunities for work during the corresponding period a year ago.

In another section of this issue will be found a report in detail of the transactions of the employment offices for the month of September, 1928.

EMPLOYMENT AND UNEMPLOYMENT IN OTHER COUNTRIES

DETAILED reports and tables showing the employment conditions in Great Britain and Northern Ireland are given in the *British Ministry of Labour Gazette* from month to month, a monthly summary of this information also being published. This summary is reproduced below showing the employment situation during September. The following report on employment conditions in the United States is based on the information contained in the *Monthly Labour Review*, published by the United States Department of Labour, each issue containing statistics showing the trend of employment in selected manufacturing industries throughout the country during the second month prior to the date of publication. The statement contained in the October issue relates to the situation existing in August, 1928. The employment situation in the United States is further indicated by unemployment percentages based on statistics compiled each month by the American Federation of Labour, the source of these statistics being returns obtained from the trade union locals in 23 representative cities. Summary figures for August and previous months taken from the October issue of the *American Federationist*, the official publication of the organization, are reproduced below.

Great Britain

Employment during September showed little change, on the whole, as compared with August. In the coal-mining industry there was a further improvement in employment, a slight decline in the numbers wholly unemployed being accompanied by a considerable decline in the numbers temporarily stopped from the service of their employers. There was also some improvement in the iron and steel, pottery, motor vehicle, constructional engineering, boot and shoe, and furnishing industries. On the other hand, there was a decline in employment in the marine engineering, shipbuilding, tinsplate, woollen and worsted, silk, textile bleaching and dyeing, tailoring, building and transport industries.

Among workpeople numbering approximately 11,800,000, insured against unemployment in Great Britain and Northern Ireland, and working in practically every industry except agriculture and private domestic service, the percentage unemployed at September 24, 1928 (including those temporarily stopped as well as those wholly unemployed) was 11.5, as compared with 11.7 at August 20, 1928,

and 9.3 at September 26, 1927. For males alone the percentage at September 24, was 12.7, as compared with 13.0 at August 20; for females the corresponding figures were 8.3 and 8.1. The percentage wholly unemployed at September 24, 1928, was 8.6, as compared with 8.3 at August 20, 1928. The total number of persons (insured and uninsured) registered at Employment Exchanges in Great Britain and Northern Ireland at October 1, 1928, was approximately 1,384,000, of whom 1,064,000 were men and 242,000 were women, the remainder being boys and girls; at August 27, 1928, it was 1,367,000, of whom 1,055,000 were men and 232,000 were women; and at September 26, 1927, it was 1,075,000, of whom 855,000 were men and 155,000 were women.

United States

Employment in manufacturing industries increased 1.5 per cent in August as compared with July, and pay-roll totals increased 3.2 per cent, according to returns made to the Bureau of Labour Statistics.

Increased employment in August is a usual occurrence, owing to the completion of July inventory taking and repairs, but this increase in August, 1928, is significantly greater than in any one of the last five years, and there was actually a falling off in employment in August, 1923. A greater number of separate industries reported increased employment in August, 1928, than in any month since October, 1925.

The Bureau of Labour Statistics' weighted index of employment for August, 1928, is 86, as compared with 84.7 for July, 1928, 85.6 for June, 1928, and 87.4 for August, 1927; the weighted index of pay-roll totals for August, 1928, is 90.2, as compared with 87.4 for July, 1928, 90.2 for June, 1928, and 91 for August, 1927. The monthly average for 1923 equals 100.

The index of employment for August, 1928, is higher than at any time since October, 1927, with the exception of March, 1928, when the index was one-tenth of 1 per cent higher than in August.

Employment in August, 1928, stood 1.6 per cent below the level of employment in August, 1927, and pay-roll totals were 0.9 per cent smaller. The decreases in both these items, comparing 1928 with 1927, were decidedly smaller in August than in any previous month of 1928.

The data for August, 1928, are based on returns made by 11,097 establishments in 54

of the principal manufacturing industries of the United States. These establishments in August had 3,111,655 employees, whose combined earnings in one week were \$84,249,130.

Increased employment was shown in August, 1928, as compared with July, in 40 of the 54 separate industries and increased pay-roll totals were shown in 43 industries.

The notable increases in employment were in the men's and women's clothing industries, and in the millinery, stove, steam fittings, fertilizer, pottery, tobacco, piano, carriage, and automobile industries. The last-named industry reported gains of 6.3 per cent in employment and of 11.4 per cent in pay-roll totals in continuation of its phenomenal activities since November, 1927.

The outstanding decreases in employment were in the slaughtering and meat packing, cotton goods, rubber boot and shoe, ship-building, and machine tool industries. The decrease in machine tools, however, was due to a regular summer letting-up of production in a few establishments and was, in fact, only about one-half as pronounced as in previous years.

Increased employment was shown in all industries of the textile group except cotton goods and shirts, and in all industries of the iron and steel group except cast-iron pipe (0.1 per cent) and machine tools. The iron and steel industry gained 1.3 per cent in employment, woollen goods 2.4 per cent, and petroleum 1.3 per cent, while cotton goods fell off 1.4 per cent.

Eleven of the twelve groups of industries showed gains in employment in August as compared with July, ranging from 7.4 per cent in the tobacco group to 0.2 per cent in the paper and printing group; the food group showed a loss of one-half of 1 per cent in number of employees.

Seven of the nine geographic divisions had more employees in August than in July, the East Central divisions—both the North and the South—leading in this respect with gains

of 3.6 per cent each, followed by the South Atlantic division with a gain of 2.7 per cent; the West North Central and the Mountain divisions both reported moderate losses in employment.

Unemployment percentage.—Unemployment statistics collected by the American Federation of Labour and appearing each month in the *American Federationist*, the official publication of the organization, indicate the percentage of unemployed union members in twenty-three representative cities of the United States. The method of compiling as described in the *American Federationist*, March, 1928, is as follows:—

“The local unions in the 23 cities under review report monthly their membership and the number of unemployed members at the first of the month or the nearest possible date. From these reports the percentage of unemployed members is calculated for identical unions in the current and the previous month. Thus for every month there are two percentage figures—that is for identical unions in December and January—and for identical unions in January and February, and so on. The final figure for January, then, is calculated by taking the simple arithmetical average of the two January percentages. It may be noted that the reports cover all trades which are organized, factory workers as well as teachers and building trade workers.”

By the above method the proportion of unemployed members to the total membership of the local unions reporting, is computed. According to the October issue of the *American Federationist*, the most recent unemployed percentages during the various months in the 23 cities work out as follows: October to December, 1927, 14 per cent; January, 1928, 18 per cent; February, 1928, 18 per cent; March, 1928, 18 per cent; April, 1928, 16 per cent; May, 1928, 13 per cent; June, 1928, 11 per cent; July, 1928, 12 per cent; August, 1928, 9 per cent.

RECENT INDUSTRIAL AGREEMENTS AND SCHEDULES OF WAGES

A SUMMARY is given below of the more important industrial agreements and schedules of wages and working conditions that have recently been received by the Department. Such agreements are summarized each month in the *LABOUR GAZETTE*. In the majority of cases, the agreements are signed by both employers and employees. Verbal agreements, which are also included in the records, are schedules of rates of wages and

hours of labour and other conditions of employment agreed upon between the parties concerned, and in effect though not signed. In addition to these, important schedules of wages are summarized, including civic schedules. In the case of each agreement or schedule, the rates of wages for principal classes of labour are given, with other information of general interest.

Manufacturing: Printing and Publishing

MONTREAL, QUEBEC.—VARIOUS EMPLOYERS AND THE ALLIED PRINTING TRADES COUNCIL OF CATHOLIC UNIONS.

Agreement to be in effect from September 15, 1928, to September 15, 1929.

Union members only to be employed, and in consideration of this closed shop agreement, the union grants the use of the union label to the employer.

Hours: for day work $8\frac{3}{4}$ hours per day with Saturday afternoons off, a 48-hour week; for night work 45 hours per week. No work on certain holidays.

Overtime: for day work, first three hours, time and one-half; after three hours, double time; for night work, double the day rate for all work over 45 hours per week.

Wages per week: typographers, \$37 for job work, \$40 for newspapers; pressmen: cylinder press \$36, assistants \$32, cylinder press feeders \$25, platen press \$29, assistants \$17; bookbinders: men \$33.75, women \$14.75.

Apprentices to be at least 16 years old and be registered with the union. Typographers' and pressmen's apprentices to serve five years, male bookbinders four years, female bookbinders 2 years. Term of apprenticeship may be lengthened or shortened in special cases. One apprentice allowed for every 3 journeymen.

Wages of apprentices for first two years to be at discretion of employer; typographers' apprentices from \$12.50 per week for first 6 months of third year to \$26 per week for last 6 months of fifth year; pressmen's apprentices, \$12 per week for third year and \$17 per week for fourth year; bookbinders' apprentices from \$17 per week for first 6 months of third year to \$29 per week for last 6 months of fourth year; women bookbinders' apprentices \$9.50 per week for the first 6 months of second year and \$11 per week for last 6 months of second year.

Any dispute which cannot be settled by the representatives of the two parties to be referred to an arbitration board consisting of a representative of each party and a third party chosen by them or by the Provincial Minister of Labour, the decision of this board to be binding.

OTTAWA, ONTARIO.—OTTAWA NEWSPAPER PUBLISHERS AND THE INTERNATIONAL TYPOGRAPHICAL UNION, LOCAL 102.

The agreement previously in force which was summarized in the *LABOUR GAZETTE* for April, 1927, and which was in force from October 1, 1926, to September 30, 1928, has been renewed until September 30, 1929, the only change being that one clause has been deleted. This clause provided that when an apprentice becomes a journeyman member of the union, he shall be placed at the bottom of the priority list of employees of one year's standing in the office in which he is working.

Wages per week of assistant foremen, compositors, make-ups, operators, copycutters, bankmen, typesetters, machinists and machine tenders: \$43 per week of $46\frac{1}{2}$ hours on evening newspapers and \$45.50 per week of $43\frac{1}{2}$ hours on morning newspapers.

Construction: Buildings and Structures

MONTREAL, QUEBEC.—VARIOUS EMPLOYERS AND NATIONAL CATHOLIC UNION OF LATHERS OF MONTREAL.

Agreement to be in effect from September 1, 1928, to September 1, 1929.

Only union members to be employed.

Wages: \$4 per thousand for the contractor and \$3.50 per thousand for the worker.

The working day is not to begin before 7 a.m. or extend beyond 6 p.m. No work on Sundays or holidays. If obliged to work these days, double wages to be paid.

Fare and board to be paid by employer for work outside city.

Any dispute to be referred to a representative of the employer and the business agent of the union.

TORONTO, ONTARIO.—VARIOUS CONTRACTORS AND THE PLASTERERS' LABOURERS' ASSOCIATION OF TORONTO, LOCAL 781.

Agreement signed on conclusion of the strike which is reported on page 1194 of this issue, to be in effect from September and October, 1928, to May 1, 1930.

Employers agree to recognize the union and employ union members only.

Wages: 75 cents per hour until March 1, 1929; 80 cents after that date.

Overtime conditions same as plasterers when attending plasterers.

HAMILTON, ONTARIO.—EMPLOYING PLASTERERS AND THE OPERATIVE PLASTERERS AND CEMENT FINISHERS' INTERNATIONAL ASSOCIATION, LOCAL 298.

Agreement to be in effect from May 1, 1928, to April 30, 1929. Ninety days before the date of expiration, a committee shall be appointed to consider renewing or revising the agreement.

Hours: 8 per day, 4 on Saturdays.

Wages: \$1.20 per hour.

Overtime: from 6 to 10 p.m., time and one-half; after 10 p.m. and work on legal holidays, double time.

Foremen must be union members and must be paid at least \$1 per day extra.

Employers to pay all car fare and travelling time one way outside of the Hamilton Street Railway.

Apprentices to be 17 years and under and be registered and indentured for four years. Any firm in business for four years and employing two plasterers may have one apprentice; where an average of eight journeymen are employed, a second apprentice will be allowed.

In case of dispute, there shall be no cessation of work until matter has been referred to a joint arbitration board consisting of three members of each party. In case of disagreement of this board, the dispute shall be referred to the Joint Industrial Council whose decision shall be binding.

CALGARY, ALBERTA.—VARIOUS CONTRACTORS AND THE INTERNATIONAL BROTHERHOOD OF ELECTRICAL WORKERS, LOCAL 348.

Agreement to be in effect from August, 1928, to April 30, 1929, unless terminated by 15 days' notice from either party.

Only union members to be employed.

No union members allowed to take any contract or do jobbing.

Hours: 8 per day, 4 on Saturdays.

Overtime: time and one-half from 5 p.m. to 10 p.m. except Saturday when time and one-half will be paid from 12 noon to 5 p.m.; after 10 p.m. on other days and after 5 p.m. on Saturdays and all work on Sundays and holidays, double time. Night shift to be paid at $1\frac{1}{2}$ times standard rate. Not less than two hours shall be paid for any call on emergency work.

An apprentice is one who has worked 6 months at the trade; a journeyman must have had 4 years' experience at the trade and be able to pass a satisfactory examination.

Only one helper or apprentice to be employed for each journeyman and must work under direct supervision of journeyman for first three years.

Wages per hour: job foreman, \$1.12 $\frac{1}{2}$; journeymen, \$1; apprentices from 40 cents per hour for second 6 months to 85 cents for fourth year.

A committee consisting of two contractors and two union members shall be formed and any disputes to be referred to them. If they are unable to agree, a fifth member shall be chosen by them and the decision of such committee shall be binding.

Transportation and Public Utilities: Electric Railways

HAMILTON, ONTARIO.—HAMILTON STREET RAILWAY COMPANY AND THE AMALGAMATED ASSOCIATION OF STREET AND ELECTRIC RAILWAY EMPLOYEES OF AMERICA, DIVISION No. 107.

Agreement signed following arbitration by the Ontario Railway and Municipal Board, to be in effect from May 1, 1928, to May 1, 1929, and thereafter until either party gives 30 days' notice of change.

Company to continue to treat with its employees who are members of the Association through the officers or representatives of the Association and no prejudice to be shown employees who are officers of the Association.

Wages of motormen and conductors: first year, 42 cents per hour; second year, 46 cents; thereafter, 52 cents; bus and one-man car operators, 5 cents per hour additional. Motormen and conductors shall be paid 5 cents per hour extra for work on snow-plows, sweepers and sand cars; 25 cents per day extra for training students. Extra motormen and conductors who report for duty to be guaranteed a minimum of \$12 per week. All work for extra men to be divided as far as possible equally among them.

Wages of car and shopmen per hour: blacksmiths, 55 $\frac{1}{2}$ cents; blacksmiths' helpers, 48 $\frac{1}{2}$ cents; painters, 51 $\frac{1}{2}$ cents; pitmen—first year 47 cents, second year 51 $\frac{1}{2}$ cents; controller men, 51 $\frac{1}{2}$ cents; car placers—first year 43 cents, second year 48 $\frac{1}{2}$ cents; car cleaners—first year 44 cents, second year 46 $\frac{1}{2}$ cents; store men, 51 $\frac{1}{2}$ cents; engineers, 51 $\frac{1}{2}$ cents; janitors, 46 $\frac{1}{2}$ cents.

Wages of trackmen: 4 cents per hour in addition to former rate of wages. Wages of ticket clerks: \$115 per month.

Hours for motormen and conductors: a minimum of 8 hours and a maximum of 9 $\frac{1}{2}$ hours to be completed in the least number of hours possible to be a day's work for regular men; two hours to be the minimum allowed to regu-

lar trainmen for any one run. Ten minutes at regular rates to be allowed for taking cars out or returning them to shops or yards. Hours for car and shop men: 10 per day, 55-hour week; trackmen, 9 per day; ticket clerks, same hours as previously.

Overtime: all overtime and work on legal holidays, time and one-half; for work on Sundays which is not overtime, 7 cents per hour extra to be paid.

Choice of runs to be given to men according to the length of time they are in the service. Men shall be given the opportunity to qualify as bus operators according to seniority (if competent to operate a bus).

After one year's service one-half cost of new uniform to be paid by the company; after two years' service all uniforms to be supplied by the company.

In case any member is suspended or discharged the company officials will interview the grievance committee and if it is found that the member is not at fault, he shall be reinstated and paid for all time lost.

All disputes or differences to be submitted through representatives of the association to the department superintendent of the company and if they cannot agree, the general manager may be called into conference.

Service: Custom and Repair

SASKATOON, SASKATCHEWAN.—VARIOUS GARAGE FIRMS AND THE INTERNATIONAL ASSOCIATION OF MACHINISTS, LOCAL 703 (AUTO MECHANICS).

Agreement signed in September on the conclusion of the strike reported in the LABOUR GAZETTE for October, page 1067, to be in effect from year to year unless a new agreement is presented 30 days previous to its expiration.

Only union members or those willing or eligible to become such to be employed. Union members not to do work of their trade outside the employer's place of business.

The union will furnish a union shop card for display to the employers signing the agreement.

Hours: 9 per day; 54-hour week; hours from 7 a.m. to 5 p.m. or 8 a.m. to 6 p.m. All work over these hours and all work on Sundays and holidays to be paid at time and one-half. Where regular shifts are used for floormen, 9 hours to be a day's work.

Wages per hour: auto mechanics: first class, 75 cents; second class, 60 cents; third class, 40 cents. First class mechanics to receive a guaranteed wage of \$30 per week, second class mechanics \$20 and third class \$15. If shop has flat rate, full flat rate time must be paid and time and one-half rate for overtime.

An examination board of five members of the local union shall examine all auto mechanics and apprentices and the qualification of auto mechanics shall be left to their discretion. The foremen of each garage may sit with the board to examine his own men.

Each employer may have two apprentices for every five journeymen.

A shop committee appointed by the local union will handle all grievances. Should the shop committee and the employer fail to settle a dispute, the matter will be referred to higher officials of the International Association of Machinists. No strike or lockout while negotiations are in progress for the settlement of any dispute.

FAIR WAGES CONDITIONS IN DOMINION GOVERNMENT CONTRACTS

THE Department of Labour is furnished from month to month with information regarding the contracts executed by various departments of the Government of Canada which included among their provisions fair wages conditions for the protection of the labour to be employed. The Fair Wages Policy of the Government of Canada has been in effect since 1900 and is now expressed in an Order in Council which was adopted June 7, 1922, and amended April 9, 1924.

The Fair Wages Order in Council requires that "all contracts made on behalf of the Government of Canada for the construction or remodelling of public buildings of all kinds, railways, canals, roads, bridges, locks, dry-docks, elevators, harbours, piers, wharves, lighthouses, and other works for the improvement and safety of transportation and navigation, rifle ranges, fortifications, and other works of defence, dams, hydraulic works, slides, piers, booms, and other works for facilitating the transmission of timber, and all other works and properties constructed or remodelled for the Government of Canada" must contain either a fair wage schedule based on the current wages rates and working hours in the district, or a general fair wage clause requiring adherence to the current wage rates and working hours in the district for the different classes of labour employed, or, in the absence of such standard conditions, fair and reasonable rates and hours. The conditions above-mentioned are referred to in the Order in Council as "A" conditions. Following is the text of the General Fair Wage Clause referred to:—

1. All mechanics, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed for character or class of work in which they are respectively engaged, and if there be no current rates in such district, then fair and reasonable rates, and shall work such hours as are customary in the trade, in the district where the work is carried on, or if there be no custom of the trade as respects hours in the district, then fair and reasonable hours, unless for the protection of life and property, or for other cause shown to the satisfaction of the Minister of Labour longer hours of service are required. The Minister of Labour may at any time and from time to time determine for the purposes of this contract, what are the current or fair and reasonable rates of wages and the current or fair and reasonable hours, and may from time to time rescind, revoke, amend, or vary any such decision, provided that his determination and any amendment or variation shall not be operative prior to the period of

three months immediately preceding the date thereof.

Where there are special circumstances which in the judgment of the Minister of Labour make it expedient that he should do so, he may, in the manner and subject to the provisions hereinabove set forth, decide what are the current or fair and reasonable rates of wages for overtime, and what is the proper classification of any work for the purposes of wages and hours. Immediately upon receipt of notice of any decision of the Minister of Labour hereunder the Contractor shall adjust the wages and hours and classification of work so as to give effect to such decision. In case the Contractor shall fail so to do, or to pay to any employee or employees for any services performed or for any hours of labour, wages according to the rates fixed therefor by the Minister of Labour, the Minister of Labour may authorize and direct the Minister to pay any such wages at the rates so fixed and to deduct the amount thereof from any moneys owing by the Government to the Contractor and any such payment shall for all purposes as between the Contractor and the Government be deemed and taken to be payment to the Contractor, and the Contractor shall be bound in every particular by any such authority, direction and payment as aforesaid. The powers of the Minister of Labour hereunder shall not be exercised as to any employee or employees where it is established to his satisfaction that an agreement in writing exists and is in effect between the Contractor and the class of employees to which such employee or employees belong or the authorized representatives of such class of employees fixing rates of wages, overtime conditions and hours of labour.

It is further provided in the Order in Council that "all contracts for the manufacture and supply to the Government of Canada of fittings for public buildings, harness, saddlery, clothing, and other outfit for the military and naval forces, Royal Canadian Mounted Police, letter carriers, and other Government officers and employees, mail bags, letter boxes, and other postal stores, and any other articles and things hereafter designated by the Governor in Council" must contain provisions for the observance of the current wages rates and working hours in the district, or, in the absence of any such current standards, fair and reasonable rates and working hours. These conditions are referred to in the Order in Council as "B" conditions, and include the following provisions:—

All workmen, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed, and if there be no current rate in such district, then a fair and reasonable rate, and shall work such hours as those fixed by the custom of the trade as respects hours in the district where the work

is carried on, or if there be no custom of the trade as respects hours in the district then fair and reasonable hours, except for the protection of life and property, or on due cause shown to the satisfaction of the Minister of Labour. In the event of a dispute arising as to what is the current or a fair and reasonable rate of wages or what are the current hours fixed by the custom of the trade or fair and reasonable hours it shall be determined by the Minister of Labour, whose decision shall be final; payment may also be withheld of any moneys which would otherwise be payable to the contractor until the Minister of Labour's decision has been complied with.

By the term "current wages" and the term "hours of labour fixed by the custom of the trade" in the foregoing are meant respectively the standard rates of wages and hours of labour either recognized by signed agreements between employers and workmen in the district from which the labour required is necessarily drawn or actually prevailing, although not necessarily recognized by signed agreements.

In both the "A" and "B" conditions of the Fair Wages Order in Council the Minister of Labour is empowered to determine questions which may arise as to what are the current or fair and reasonable wages rates and working hours. The contractor is required to post and keep posted in a conspicuous place on the premises where the contract is being executed, occupied or frequented by the workmen, the fair wages clause or schedule inserted in his contract for the protection of the workmen employed. The contractor is also required to keep proper books and records showing the names, trades and addresses of all workmen in his employ and the wages paid to and time worked by such workmen, these records to be open for inspection by fair wages officers of the Government any time it may be expedient to the Minister to have the same inspected.

It is declared that the contractor shall not be entitled to payment of any money which would otherwise be payable under the terms of contract until he has filed a statement showing: (1) the wage rates and hours of labour which are in force for the various classes of workmen; (2) whether any wages or payments remain in arrears; and (3) that all of the labour conditions of the contract have been complied with. In the event of default being made in the payment of the wages of any workman employed, claim therefor may be filed with the minister of the department with which the contract has been made and payment of such claim may be made by the latter. (Under the "A" conditions these rights extend to moneys payable for the use or hire of horses or teams.)

All workmen employed in the execution of the contract shall be residents of Canada, unless the Minister of the department with which the contract has been made is of opinion that Canadian labour is not available,

or that other special circumstances exist which render it contrary to the public interest to enforce this provision.

Under the "A" conditions clerks of works or other inspecting officers appointed by the Government to ensure the due observance of the contract are specially instructed to do all in their power to see that the labour conditions are fully complied with and to report any apparent violations to the department with which the contract is made.

The "B" conditions provide that the contractor's premises and the work being performed under contract shall be open for inspection at all reasonable times by any officer authorized by the Minister of Labour for this purpose, and that the premises shall be kept in sanitary condition.

Contracts Awarded Recently

During the past month statements were received in the Department of Labour showing that the following contracts were recently executed by the Government of Canada, and that they included either fair wage schedules as shown below, or the general fair wage clause above mentioned:—

DEPARTMENT OF NATIONAL DEFENCE

Contracts in Group "A" (Construction, etc.)

Construction of a rifle range at Saskatoon, Sask. Name of contractors, A. W. Heise Co., Ltd., Saskatoon, Sask. Date of contract, September 12, 1928. Amount of contract, \$6,905. The General Fair Wages Clause was embodied in the contract.

Construction of platform at Rockcliffe Aerodrome, Rockcliffe, Ont. Name of contractor, Joseph Cyr, Cyrville, Ont. Date of contract, September 21, 1928. Amount of contract, \$5,776. The General Fair Wages Clause was embodied in the contract.

Construction of a new workshop building at the barracks, St. Johns, P.Q. Name of contractor, D. F. Sheehy, Montreal, P.Q. Date of contract, September 21, 1928. Amount of contract, \$10,500. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages: Not less than	Hours per day
	cts. per hour	
Carpenters.....	60	10
Labourers.....	35	10
Concrete men.....	35	10
Concrete mixer runners.....	50	10
Painters and glaziers.....	55	10
Electricians.....	55	10
Plumbers and steamfitters.....	55	10
Roofers.....	50	10
Driver (horse and cart).....	45	10
Team of horses and driver (wagon or scraper).....	65	10

DEPARTMENT OF PUBLIC WORKS

Contracts in Group "A" (Construction, etc.)

Reconstruction and extension of wharf at Sturdies Bay, B.C. Name of contractors, The Vancouver Pile Driving & Contracting Co., Ltd., Vancouver, B.C. Date of contract, October 17, 1928. Amount of contract, approximately \$5,512. A fair wages schedule was inserted in the contract as follows:—

Trade or class of Labour	Rates of wages not less than	Hours per day	Hours per week
	per day \$ cts.		
Pile driver foreman.....	10 00	8	48
Pile driver engineer.....	9 00	8	48
Fireman.....	5 50	8	48
Pile driver boomman.....	8 00	8	48
Carpenters.....	8 00	8	48
Bridgeman.....	8 00	8	48
Labourers.....	4 00	8	48

Wharf repairs and extension at L'Anse St. Jean, P.Q. Name of contractors, Nap. Trudel & Fils, St. Irénée, P.Q. Date of contract, October 16, 1928. Amount of contract, approximately \$23,023.35. A fair wages schedule was inserted in this contract as follows:—

Trade or Class of Labour	Rates of wages not less than	Hours per day
	per hour cts.	
General foreman.....	60	10
Mechanics.....	40	10
Carpenters.....	40	10
Blacksmiths.....	40	10
Blacksmiths' helpers.....	30	10
Labourers.....	30	10
Carters.....	40	10
Teamsters.....	50	10

Construction of a Customs-Immigration building at Douglas, B.C. Name of contractors, Moncrieff & Vistaunet, Ltd., Vancouver, B.C. Date of contract, October 12, 1928. Amount of contract, \$16,789. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rates of wages not less than	Hours per day
	per day \$ cts.	
Concrete workers.....	4 40	8
Concrete finishers.....	8 00	8
Bricklayers.....	10 00	8
Carpenters and joiners.....	8 00	8
Sheet metal workers.....	8 50	8
Roofers (tar, felt and gravel).....	6 00	8
Lathers.....	8 00	8
Plasterers.....	10 00	8
Painters and glaziers.....	7 20	8
Plumbers and steamfitters.....	9 00	8
Electricians.....	8 00	8
Common labourers.....	4 00	8
Teamsters with team and wagon.....	10 00	8

Reconstruction of pier, Beaverton, Ont. Name of contractors, John Patterson Construction Co., Ltd., Brampton, Ont. Date of contract, October 9, 1928. Amount of contract, approximately \$4,103. A fair wages schedule was inserted in this contract as follows:—

Trade or Class of Labour	Rates of wages not less than	Hours per day
	per hour cts.	
Concrete finisher.....	60	10
Labourers.....	35	10
Pile driver engineers.....	75	10

Letter box locks.....	3,193 00
Cotton duck bagging.....	12,269 45

Benefits of Winter Building Construction

The Philadelphia Building Congress has published a bulletin on "Year Round Construction Facts", showing the benefits of continuing building operations during winter. It is stated that 30 per cent of the population is directly or indirectly supported by the building industry, and that idleness in this group tends to reduce incomes generally. The "start and stop" system of construction is said to be needless and expensive, winter construction being entirely practicable. "Year-round construction keeps contractors, sub-contractors, manufacturers and transportation organizations busy. Men and women in the shops and factories supplying materials and equipment are kept employed as well as architects, engineers and others whose forces can be maintained without rush seasons. This is generally beneficial to all, including prospective owners, tenants and the community."

The bulletin gives striking examples of buildings of various types which were erected last winter in Philadelphia.

The Statutes of the United Kingdom, 1928, include (chapter 12) an "Act to assimilate the Franchises for Men and Women in respect of Parliamentary and Local Government Elections". Chapter 33, an Act to amend the law relating to the closing of Shops, requires that, with certain exceptions, every shop shall be closed not later than 8 p.m. as the general closing hour, or 9 p.m. on the "late day", that is Saturday or such day as may be fixed by the local authority. Chapter 35, provides that, commencing in 1930, Easter day shall be the first Sunday after the second Saturday in April, and in all subsequent years. This Act will not take effect until its proclamation by Order in Council.

PRICES, RETAIL AND WHOLESALE, IN CANADA, OCTOBER, 1928

Cost of Living, Prices of Staple Articles and Index Numbers

THE movement in prices during the month was again toward higher levels, both the weekly family budget in terms of retail prices and the Dominion Bureau of Statistics index number of wholesale prices showing slight advances.

In retail prices the cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average prices in some sixty cities was \$11.28 at the beginning of October, as compared with \$11.15 for September; \$10.99 for October, 1927; \$10.93 for October, 1926; \$10.89 for October, 1925; \$10.31 for October, 1924; \$10.65 for October, 1923; \$10.23 for October, 1922; \$11.48 for October, 1921; \$15.83 for October, 1920; \$16.92 for June, 1920 (the peak); \$13.54 for October, 1918; and \$7.99 for October, 1914. The increase was due mainly to seasonal advances in the prices of eggs, milk and butter, while less important advances occurred in the prices of shoulder roast of beef, veal, mutton, bacon, lard, cheese and beans. The price of potatoes was substantially lower, while slight increases occurred in the prices of sirloin steak, fresh pork, evaporated apples and yellow sugar. Including the cost of fuel and rent with that of foods the total budget averaged \$21.52 at the beginning of October, as compared with \$21.38 for September; \$21.18 for October, 1927; \$21.14 for October, 1926; \$21.11 for October, 1925; \$20.67 for October, 1924; \$21.16 for October, 1923; \$20.87 for October, 1922; \$22.01 for October, 1921; \$26.46 for October, 1920; \$26.92 for July, 1920 (the peak); \$21.48 for October, 1918; and \$14.48 for October, 1914. Fuel was practically unchanged, while rent advanced slightly, due to increases at Woodstock and Medicine Hat.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon the average prices of 236 commodities in 1913 as 100 and weighted according to the commercial importance of the commodities, was again slightly higher at 150.2 for October, as compared with 149.7 for September; 152.6 for October, 1927; 151.3 for October, 1926; 156.0 for October, 1925; 157.0 for October, 1924; 153.1 for October, 1923; 148.1 for October, 1922; 155.6 for October, 1921; 236.3 for October, 1920; 256.7 for May, 1920 (the peak); and 206.9 for October, 1918. Fifty-one prices quotations

were higher, forty-three were lower and one hundred and forty-two were unchanged.

In the grouping according to chief component materials four of the eight main groups were higher, two were lower and two were unchanged. The groups which advanced were: the Vegetables and their Products group, due to higher prices for grains, flour and other milled products, oranges, bananas, hay and rubber, which more than offset lower prices for potatoes and sugar; the Fibres, Textiles and Textile Products group, due mainly to higher prices for raw cotton and silk; the iron and its Products group, mainly because of advances in the prices of steel billets and of steel sheets; and the Non-Ferrous Metals group, due to higher prices for copper, silver, tin, solder and antimony. The Animals and their Products group declined substantially, decreases in the prices of live stock, meats, hides, leather, boots and shoes, and lard more than offsetting higher prices for milk, eggs and fish. The Wood, Wood Products and paper group declined slightly, while the Non-Metallic Minerals group and the Chemicals and Allied Products group were unchanged.

In the grouping according to purpose both consumers' goods and Producers' goods were lower, the former due to declines in the prices of meats, sugar and potatoes, which more than offset higher prices for flour, oat products, milk and eggs, and the latter due to declines in the prices of materials for the leather industry and for the meat packing industries, which more than offset advances in the prices of materials for the textile and clothing industries, for the metal working industries, for milling and other industries, as well as for miscellaneous producers' materials.

In the grouping according to origin raw or partly manufactured goods advanced, higher prices for grains, hay, milk, eggs, cotton, silk, copper, silver, tin and naval stores more than offsetting lower prices for live stock, sugar, potatoes, fresh meats, hides and wool. Fully or chiefly manufactured goods declined, advances in the prices of flour and other milled products, non-ferrous metal products and in some iron and steel products being more than offset by declines in the prices of smoked meats, refined sugar, lard, leather and some cotton products. Domestic farm products, articles of marine origin and articles of mineral origin advanced, while articles of forest origin were lower.

(Continued on page 1280)

COST PER WEEK OF A FAMILY BUDGET OF STAPLE FOODS, FUEL AND LIGHTING, AND RENT IN TERMS OF THE AVERAGE PRICES IN SIXTY CITIES IN CANADA†

†The budget is intended to show the changes in the cost of the items included, not to show the minimum cost for an average family. See text.

†December only. §Kind most sold. *For electric light see text.

††An allowance for the cost of clothing and sundries would increase the figures by about 50 per cent. See text.

EXPLANATORY NOTE AS TO WHOLESALE PRICES

The index number calculated by the Dominion Bureau of Statistics is based upon the prices of 236 commodities, price levels in 1913 being taken as the base, that is equal to 100, the figures being weighted according to the commercial and

industrial importance of each article included. The index number has been calculated by years back to 1890, being unweighted, however, for the period of 1890 to 1913 and has been calculated by months from 1919 to date for all groupings and from 1913 to date for the principal grouping. Summary tables of the Bureau's index number may be found in the supplement to the LABOUR GAZETTE for January, 1925, January,

1926. and in greater detail in the Report on "Prices and Price Indexes 1913-24," issued by the Bureau. A description of the methods used in the construction of the index number appears in the LABOUR GAZETTE for June, 1923.

The accompanying table gives the index numbers of the Dominion Bureau of Statistics by the principal groups in the three methods of classification and with those of the classification according to purpose or use in detail for the current month and for certain preceding dates.

EXPLANATORY NOTES AS TO RETAIL PRICES

The table of retail prices and rentals shows the prices at the beginning of October of seventy-one staple foodstuffs, groceries, coal, wood and coal oil and the rent of six-roomed houses in some sixty cities throughout Canada. All prices are for delivered goods. The exact quality, for which the quotation is given is set forth in the case of each commodity, and every effort has been made to ensure that the quotations in each case refer to the same class of commodity in order that the statistics may be available for purposes of comparison from month to month, from city to city, etc. The prices of foods and groceries in each city, except milk and bread, are the averages of quotations reported to the Department and to the Dominion Bureau of Statistics by a number of representative butchers and grocers in each. The prices of fuel and the rates for rent are reported by the correspondents of the LABOUR GAZETTE.

Statistics similar to these were published each month from 1910 to 1920, the figures during this period being secured at the middle of each month by the correspondents of the LABOUR GAZETTE resident in each locality from dealers doing a considerable business with workingmen's households. From 1910 to 1915 the table contained a list of only the twenty-nine foods included in the family budget, with laundry starch, coal, wood, coal oil and rent. In 1915 when monthly publication of the budget in the LABOUR GAZETTE was begun, it was decided to extend the list of foods to 40, and in 1920 the list of foods and groceries was still further extended to include over 100 items.

Beginning with October, 1922, a number of commodities were dropped from the list, and in the case of a number of articles the average prices of the grades most sold have been given, owing to the impossibility of securing prices for uniform grades for the various cities from month to month.

Oleomargarine was dropped in March, 1924, the provision for its manufacture and sale since 1917, notwithstanding the Dairy Act, expired at the end of February, 1924.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts extensively occupied by workingmen. The first class is of houses in good condition, favourably located in such districts with good modern conveniences. The second class is of houses in fair condition less desirably located, but still fairly central, without modern conveniences.

The weekly budget of a family of five, calculated in terms of the average prices in the cities for which reports are received, includes twenty-nine staple foods, laundry starch, coal, wood,

coal oil, and rent, these being the items for which statistics have been obtained each month and published in the LABOUR GAZETTE since January, 1910. The quantities of each commodity included are modifications of those employed in similar calculations by various authorities. For some articles comparatively large quantities are included owing to the absence of other important items of the same class. For instance, the only fruits are evaporated apples and prunes, and the only fresh vegetable is potatoes. But as market conditions affecting these usually affect the prices of other fruits and vegetables somewhat similarly, the relative proportions of expenditure on the various classes of foods tends to be maintained. At times when the price of an article heavily weighted for this purpose rises, or falls (abnormally) the increase (or decrease) in food prices so indicated is exaggerated, and this should be taken into account in using the budget as an indicator of changes in the cost of living. In fuel and lighting the quantities are estimated on a similar principle, anthracite coal being used chiefly east of Manitoba, and soft coal and wood in the western provinces, while no allowance is made for the quantities required in the various localities owing to climatic conditions, nor for the differences in the heating value of the various fuels. It was estimated, when the budget was first published in 1912 in the report on wholesale prices in Canada for 1911, that these calculations represented from sixty to eighty per cent of the expenditure of an ordinary family according to the total income. For the average family of five the expenditure on these items of food, fuel, light and rent would be perhaps two-thirds or about sixty-five per cent of the total income.

While the budget serves to show the increase or decrease from time to time in the cost of the items included, it does not purport to show the minimum cost of food and fuel supplies for an average family in the Dominion or in any one province. The quantities of meats, dairy products, cereals, etc., included were adopted as affording a liberal supply for the healthy family of a man at hard physical work. On the other hand an average family with an income sufficient to do so would buy less meat, etc., but more fruit, fresh and canned vegetables, etc., so that comparative expenditure would be little changed.

Index Number of Changes in the Cost of Living

In March, 1921, the Department published in the LABOUR GAZETTE a table of percentages of changes in the cost of living since 1913 as a tentative cost of living index number, using the figures of the above mentioned budget for the calculation for food, fuel and rent, with preliminary figures for clothing and sundries added and this table has been brought down to date at intervals since. The calculation of a comprehensive cost of living index number covering all items of workingmen's family expenditure in progress since 1918 had been sufficiently advanced to enable the publication of preliminary figures by groups in a supplement to the LABOUR GAZETTE, January, 1926, on Prices in Canada and in Other Countries,

page 9. This table gave figures for June and December each year from 1914 to 1926, inclusive. Figures have since been given for March and September each year since 1917, and the accompanying table gives figures for December each year from 1914 to 1917, quarterly from 1918 to 1926, and monthly since January, 1927. As stated in the above-mentioned supplement, the figures in the food group in the family budget are still used to show the changes in food prices but in the other groups the percentage changes in the prices of each article have been weighted according to workingmen's average family consumption, and in the fuel and light groups, gas and electricity have been included.

Cost of Electric Current and Gas for Householders

With rates in 1913 as 100, index numbers of electric light rates were 1900, 141.4; 1905, 135.6; 1910, 118.1; 1911, 113.4; 1912, 109.1; 1913, 100.0; 1914, 96.5; 1915, 90.8; 1916, 87.6; 1917, 87.2; 1918, 85.8; 1919, 85.8; 1920, 84.2; 1921, 84.9; 1922, 82.7; 1923, 79.5; 1924, 79.2; 1925, 85.6; 1926, 75.6.

The above figures were arrived at by converting to the base of 1913 as 100, an index number of electric current costs from 1900 to 1913 constructed for the Board of Inquiry into the cost of living in Canada, 1914-15 (Report, Vol. 2, page 318) and bringing the figures down to 1926. The figures are unweighted. The Dominion Bureau of Statistics has issued an index number of electric current rates for household consumption as follows: 1923, 73.8; 1924, 72.2; 1925, 69.9; 1926, 68.7. This index number is weighted according to consumption in each city. When the above index number, 1900-1926, is weighted according to population in each city covered for the years, 1923, 1924, 1925 and 1926, the figures are substantially the same as those recently issued by the Bureau.

The following are index numbers of rates for manufactured and natural gas for the years 1913 to 1926 issued by the Dominion Bureau of Statistics (revised Prices and Price Indexes, 1913-1926): Manufactured gas, 1913, 100; 1914, 98.3; 1915, 98.1; 1916, 96.3; 1917, 100.7; 1918, 107.4; 1919, 111.1; 1920, 125.4; 1921, 143.6; 1922, 140.6; 1923, 135.7; 1924, 134.6; 1925, 131.6; 1926, 131.1; 1927, 129.4. Natural gas, 1913, 100; 1914, 107.0; 1915, 112.5; 1916, 112.5; 1917, 113.9; 1918, 114.0; 1919, 116.1; 1920, 125.1; 1921, 137.6; 1922, 163.2; 1923, 163.0; 1924, 162.2; 1925, 179.3; 1926, 172.4; 1927, 165.9. For the years 1900

CHANGES IN THE COST OF LIVING IN CANADA FROM 1913 TO 1928*

(Average prices in 1913=100)

*The figures for "all items" were calculated by giving the following weights to each group: Food 35%; Fuel 8%; Rent 18%; Clothing 18%; Sundries 20%.

to 1913 two index numbers of gas costs calculated for the Cost of Living Inquiry in 1914-1915, have been averaged and converted to the base of 1913 as 100, as follows: 1900, 125.8; 1901, 125.8; 1902, 125.8; 1903, 125.2; 1904, 123.9; 1905, 120.1; 1906, 107.5; 1907, 108.8; 1908, 106.9; 1909, 105.7; 1910, 103.8; 1911, 99.4; 1912, 100.6; 1913, 100.0.

Retail Prices

The movement in beef prices was mixed sirloin steak and rib roast declining, the former from an average of 36.3 cents per pound in September to 35.9 cents in October, and the latter from 28.3 cents per pound in September to 28.1 cents in October, while shoulder roast was slightly higher, averaging 21.7 cents per pound, higher prices being reported from most localities in Ontario and the prairie provinces. Veal was up in the average from 23.6 cents per pound in September to 23.9 cents in October. Mutton also averaged higher at 31 cents per pound, as compared with 30.5 cents per pound in September. Fresh pork was slightly lower at 31 cents per pound, while salt pork advanced somewhat, averaging 27.5 cents per pound. Bacon advanced substantially, averaging 42.5 cents per pound in October, as compared with 40.8 cents in September. Increases were reported from practically all localities. In fresh fish, cod steak, halibut and whitefish were slightly higher. Lard rose from an average of 22.5 cents per pound in September to 22.9 cents in October.

Eggs showed a substantial seasonal advance, fresh averaging 51 cents per dozen in October, as compared with 46.3 cents in September and 42.4 cents in August, and cooking averaging 45.6 cents per dozen in October, 41.4 cents in September and 37.6 cents in August. Milk advanced in the average from 11.8 cents per quart in September to 12.1 cents in October. Higher prices were reported from St. Hyacinthe, Montreal, Hull, Ottawa, Oshawa, Sudbury, Sault Ste. Marie, Port Arthur, Fort William, Prince Albert, Medicine Hat, Edmonton, Calgary and Lethbridge. Higher prices for butter were reported from nearly all localities. Dairy advanced in the average from 41.3 cents per pound in September to 42.8 cents in October, and creamery from 45.9 cents per pound in September to 47.4 cents in October. Cheese was slightly higher, averaging 33.8 cents per pound.

Bread was unchanged at an average price of 7.7 cents per pound. Soda biscuits, flour and rolled oats were steady. Canned vegetables showed little change. Beans were again

higher, averaging 9.5 cents per pound, as compared with 9.2 cents in September. Onions rose from an average price of 5.9 cents per pound in September to 6.3 cents in October. Potatoes were considerably lower, averaging \$1.28 per bag in October, as compared with \$1.49 in September. Decreases were reported from nearly all localities. Evaporated apples were down from an average price of 21.7 cents per pound in September to 21.5 cents in October. Prunes, raisins and currants showed little change. Granulated sugar was unchanged at an average price of 7.8 cents per pound, while yellow was slightly lower at 7.3 cents per pound. Increases in the price of anthracite coal were reported from Sorel, St. Hyacinthe, Thetford Mines, Belleville, Orillia, and Guelph. Coke was slightly higher, averaging \$12.87 per ton, while hardwood was somewhat lower at an average price of \$7.99 per cord. Increases in rent were reported from Woodstock and Medicine Hat.

Wholesale Prices

The following is a summary of a statement on wholesale prices changes during the month issued by the Dominion Bureau of Statistics.

Grain prices moved to higher levels during October. No. 1 Manitoba northern cash wheat, Fort William and Port Arthur basis, advanced to \$1.24 per bushel, as compared with \$1.17 in September. The high price for the month was \$1.29 $\frac{1}{2}$, reached on the 8th, and the low \$1.20 $\frac{3}{8}$ on the 30th. The higher prices were said to be due to the probability of increased purchases for European countries because of their smaller crops and their generally increased purchasing power. Coarse grains also advanced in sympathy with the movement in wheat. Western barley at Winnipeg was up from 66 $\frac{1}{4}$ cents per bushel to 70 $\frac{1}{8}$ cents; Ontario barley at Toronto from 65 cents per bushel to 70 $\frac{3}{8}$ cents; western oats at Winnipeg from 54 $\frac{3}{8}$ cents per bushel to 56 $\frac{1}{2}$; Ontario oats at Toronto from 43 $\frac{3}{8}$ cents per bushel to 49 $\frac{3}{8}$ cents; flax seed at Winnipeg from \$1.86 $\frac{1}{4}$ per bushel to \$1.92 $\frac{1}{4}$; and rye at Toronto from 93 $\frac{3}{8}$ cents per bushel to \$1.02. Flour at Toronto advanced from \$7.29 $\frac{1}{2}$ per barrel to \$7.41. Rolled oats were up from \$3.70 per ninety pound sack to \$3.85, and shorts from \$33.25 per ton to \$35.19. Raw sugar at New York was down from \$2.22 per hundred to \$2.16, and granulated sugar at Montreal from \$5.51 per hundred to \$5.32. Ontario potatoes at Toronto declined from 98 cents per bag to 92 $\frac{1}{2}$ cents, and Manitoba grades at Winnipeg from 72 cents per bushel to 60 cents. Ceylon rubber was slightly higher at 18 $\frac{3}{8}$ cents per pound. Linseed oil

rose from 81 cents per gallon to 85 cents. Rosin was, up from \$12.35 per barrel to \$13. Hay advanced from \$16 per ton to \$16.50-\$17. Live stock prices were considerably lower, due, it was said, to large supplies on the market. Western cattle at Winnipeg were down from \$10.64 per hundred pounds to \$9.28; choice steers at Toronto from \$11.15 per hundred pounds to \$9.88; hogs at Toronto from \$13.27 per hundred pounds to \$10.66; and choice sheep from \$6.87½ per hundred pounds to \$5.94. Meats also declined in sympathy with the movement in live stock, dressed beef, hindquarter, being down from \$22 per hundred pounds to \$21.13, and dressed hogs from \$20.50 per hundred pounds to \$19.75. Bacon declined from 37 cents per pound to 33½ cents, and ham from 32-32½ cents per pound to 28-29 cents. Milk at Toronto again advanced, the price to producers being up from \$2.30 per eight-gallon can to \$2.40, while at Montreal the price advanced from 20 cents per gallon to 28 cents.

Cheese at Montreal rose 1 cent per pound to 30 cents. Lard was down from 18 cents per pound to 17½ cents. Fresh eggs at Montreal rose from 50-55 cents per dozen to 55-60 cents. Beef hides declined from 19-20 cents per pound to 16-17 cents and calf skins from 24-25 cents per pound to 22-23 cents. Harness leather was down from 58 cents per pound to 55 cents. Raw cotton at New York rose from 18.6 cents per pound to 19.6 cents, due it was said to unfavourable weather and crop reports, which caused lower estimates of the yield. Raw silk was slightly higher at \$4.95 per pound. Steel billets at Montreal advanced from \$34-\$43 per ton to \$34-\$45. The prices of non-ferrous metals were, for the most part, higher, copper being up from \$16.544 per hundred pounds to \$17.024; tin from 49¼ cents per pound to 50¼ cents; lead from \$6.112 per cwt. to \$6.148; antimony from 9¼ cents per pound to 9¾ cents; and silver from 57¼ cents per ounce to 58 cents.

PRICES IN GREAT BRITAIN AND OTHER COUNTRIES

THE following notes give the latest information available as to movements of prices in Great Britain and other countries. The index numbers of retail prices are from official sources unless otherwise stated. The authorities for the wholesale prices index numbers are named in all cases.

Great Britain

WHOLESALE PRICES.—The Board of Trade index number, on the base 1913=100, was 137.6 for September, a decline of 1.2 per cent from August. Foods declined 2.2 per cent with declines in all three groups, the most marked being in cereals. Industrial materials fell 0.6 per cent due to lower prices for cotton and other textiles and miscellaneous products while iron and steel rose; other metals and minerals also advanced due to higher prices for household coal.

The *Economist* index number, on the base 1901-05=100, was 173.2 for September, a decline of one per cent for the month, continuing a steady decline since April. The cereals and meat group declined owing to lower prices for English wheat, barley and oats and meat, although Canadian wheat, butter and tea advanced; other foods advanced slightly. Textiles declined with decreases in the prices of Egyptian cotton, jute and hemp. Minerals advanced owing to higher prices for tin, lead, copper and coal.

The *Statist* index number (in continuation of Sauerbeck's figures), on the base 1867-77=100, was 116.8, a decline of one per cent from August. Foodstuffs declined 1.9 per cent due to a decline of 3.8 per cent in vegetable foods and a decline of 0.7 per cent in animal foods due to lower prices for mutton, bacon and beef, partly counteracted by a rise in the price of butter. There was also a reduction in the price of sugar. Industrial materials declined 0.4 per cent, a decline of 4.3 per cent in textiles being partly counteracted by increases in minerals and sundries.

COST OF LIVING.—The index number of the Ministry of Labour, on the base July 1914=100, was 166 at October 1, an advance of 0.6 per cent over the previous month. Food advanced slightly owing to higher prices for milk, eggs and butter, although potatoes, bread, flour and sugar were slightly cheaper. Fuel and light as a whole advanced owing to higher prices for coal. Other groups were unchanged.

Belgium

WHOLESALE PRICES.—The index number of the Ministry of Industry, Labour and Social Affairs, on the base April, 1914=100, was 831 for August, as compared with 841 for July. There were advances in metal and products, petrol and products, fertilizers; decreases in

food products, tar and products, chemical products, fats, resin products and raw rubber, while fuels, clay products, glass products, construction materials, hides and leather products, tobacco and paper products were unchanged.

COST OF LIVING.—The index number of the cost of living of a middle class family of moderate income, on the base 1921=100, was 211.71 for September, as compared with 208.89 for August. All groups advanced with the exception of heat and light which declined slightly.

Denmark

WHOLESALE PRICES.—The index number of the Department of Statistics for September was 151, a decline of 1.9 per cent. There were advances in animal foods, metal and metal products and declines in vegetable products, fodder, lime, cement, bricks, glass, textiles, leather and footwear; while fertilizers fuel and ore, wood and paper and textiles were unchanged.

Italy

WHOLESALE PRICES.—The index number of the Chamber of Commerce, Milan, on the base 1913=100, was 487.54 for September as compared with 485.73 for August. There were advances in both animal and vegetable foods. Industrial materials also advanced slightly, owing to advances in minerals and metals and various vegetable products, while textile materials, chemical products, construction materials and miscellaneous industrial materials declined.

Australia

WHOLESALE PRICES.—The Melbourne index number, on the base 1911=1,000, was 1,813 for June, as compared with 1,810 for May. Agricultural products, meat and building materials advanced, while jute, leather, etc., dairy produce and groceries declined; metals and coal and chemicals were unchanged.

India

WHOLESALE PRICES.—The index number of the Labour Office, Government of Bombay, on the base prices in July, 1914=100, was 146 for August, as against 147 in July. In the food group, cereals, pulses and sugar advanced and other foods declined. Non-foods declined one per cent owing chiefly to a decline of 11 per cent in raw cotton.

COST OF LIVING.—The working class cost of living index number, Bombay, on the base prices in July, 1914=100, was 145 for Sep-

tember, as against 145 for August. There was a decline of one point in the food group; fuel and lighting declined 7 points due to lower prices for firewood and coal; clothing fell 2 points.

United States

WHOLESALE PRICES.—The index number of the Bureau of Labour Statistics, on the base 1926=100, was 100.1 for September, an advance of 1.2 per cent over August. Farm products advanced with higher prices for grains, live stock and poultry. Foods also advanced due to higher prices for butter, eggs, meats and potatoes, flour and sugar. Hides and skins increased, and leather and its products were little changed. Cotton and woolen goods declined and raw silk advanced. Coal and petroleum products increased, while metal and metal products and construction materials were little changed. There was a slight increase in chemicals and drugs and housefurnishing goods were unchanged.

The *Annalist* index number, on the base 1913=100, was 149.6 for October as against 152.9 for September, a decline of 2.1 per cent owing to a decline of 4 per cent in farm products and smaller declines in food products, building materials and miscellaneous products; on the other hand textile products, fuels, metals and chemicals advanced.

COST OF LIVING.—The index number of the National Industrial Conference Board, on the base July, 1914=100, was 163.4 for September, an advance of 1.2 per cent, due chiefly to an increase of 2.6 per cent in food. Clothing also advanced, as did fuel and light, the latter group due to increases in the prices of coal; housing and sundries were unchanged.

The index number of the Massachusetts Special Commission on the Necessaries of Life was 161.9 for September, an advance of one per cent over August. There was an advance of 2.3 per cent in foods, an advance in fuel and light owing to higher prices for coal, and also a slight advance in clothing; shelter and sundries were unchanged.

The Toronto Board of Control, on the recommendation of the Works Commissioner, decided recently to cancel a contract for sewer construction involving an expenditure of \$15,335, on the ground that the contractor had refused to comply with the usual conditions, that is, to pay a minimum wage of 60 cents an hour and to employ 90 per cent British subjects resident in the city.

FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE THIRD QUARTER OF 1928

THE number of fatal industrial accidents with such fatalities from industrial diseases as are included with fatal accidents by workmen's compensation boards, etc., which were recorded in the Department as occurring during the third quarter of 1928 was 446, there being 143 in July, 157 in August and 146 in September. In the third quarter of 1927, 431 fatal accidents were recorded. In this report it is the custom to record industrial accidents under the dates of the occurrence of the accidents, and fatal industrial diseases under the dates on which they prove fatal.

Reports were received from the Workmen's Compensation Boards, the Board of Railway Commissioners of Canada and certain other official sources; and from the correspondents of the *LABOUR GAZETTE*. Reports of accidents were also recorded from local newspapers.

Fatalities by Industrial Groups

By groups of industries, the fatalities occurred as follows: agriculture, 69; logging, 31; fishing and trapping, 4; mining, non-ferrous smelting and quarrying, 59; manufacturing, 53; construction, 73, transportation and public utilities, 112; trade, 17; service, 28.

Of the mining accidents 30 were in "metalliferous mining", 25 in "coal mining", 1 in "non-metallic mineral mining and quarrying", and 3 in "structural materials."

Of the accidents in manufacturing, 4 were in the group "vegetable foods, drink and tobacco", 2 in "animal foods", 1 in "textiles and clothing", 1 in "leather, fur and products", 15 in "saw and planing mill products", 7 in "pulp, paper and paper products", 8 in "iron, steel and products", 2 in "non-ferrous metal products", 4 in "non-metallic mineral products", 4 in "chemical and allied products", and 5 in "miscellaneous products."

In construction there were 36 fatalities in "buildings and structures", 2 in "railway", 2 in "shipbuilding", 13 in "highway and bridge" and 20 in "miscellaneous construction."

In transportation and public utilities there were 46 fatalities in "steam railways", 3 in "street and electric railways", 34 in "water transportation", 4 in "air transportation", 12 in "local transportation", 8 in "electricity and gas" and 5 in "telegraphs and telephones."

There were 28 fatalities in "service", of which 16 were in "public administration", 3

in "recreational", 2 in "custom and repair", 5 in "personal and domestic", and 2 in "professional."

In trade there were 8 fatalities in "wholesale" and 9 in "retail."

Disasters

The most serious disaster during this period occurred on September 15, when the steamer *Manasso* foundered and sank in a heavy storm off Griffith's Island on the Georgian Bay while carrying a cargo of cattle from Manitoulin Island to Owen Sound. Fourteen members of the crew were drowned and another died from exposure on a raft two days later. There were five survivors including the captain, three other members of the crew and one passenger. A thorough search of the Bay was made by other boats, tugs and aeroplanes for life boats with the missing men but without success. By the verdict of the coroner's jury, the crew were exonerated and blame was placed on negligence in not having had the equilibrium of the boat properly tested. The Dominion Wreck Commissioner in his investigation report attributed the blame to bad stowage, indifference, neglect and carelessness of those in charge.

Another serious disaster took place on the Welland Canal construction at Thorold, Ont., on August 1, when a heavy steel gate fell while being hoisted into position crushing ten workmen to death and injuring several others. The coroner's jury returned a verdict of accidental deaths.

A further serious disaster resulting in six fatalities was caused by a blow out of methane gas in a coal mine at Coal Creek near Fernie, B.C., on August 30. Following an investigation by the chief provincial inspector of mines, operations were discontinued at this mine.

While cleaning a distilling tank following an explosion at a chemical works in Toronto, on September 8, four men were poisoned by carbon monoxide fumes escaping from chemicals. The coroner's jury submitted that the accident was unavoidable.

On July 3, five men engaged in logging operations were drowned at Shelter Bay on the north shore of the St. Lawrence, Quebec, when their boat capsized in the swift current.

On July 12 three members of a train crew were killed near Glacier, B.C., when the boiler of a pusher engine exploded owing to water shortage on a steep grade.

FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE THIRD QUARTER OF 1928

Trade or Industry	Locality	Date	Age	Cause of Fatality
AGRICULTURE AND STOCKRAISING—				
Farmer.....	Ste. Rose, Que.....	July 3	59	Crushed by his horses following collision with motor truck.
Farmer's son.....	Near Sherbrooke, Que.....	" 10	14	Struck by lightning while bringing horses to barn
Farmer's son.....			12	
Farmer's son.....			11	
Farmer.....	Near Neanon, Alta.....	" 12	30	Suffocated when he fell from his wagon into muskeg.
Farmer.....	Moscow, Ont.....	" 13	Fell from load of hay.
Farm worker.....	Near Dodsland, Sask.....	About July 18	Injured by kick from horse, necessitating operation.
Farmer.....	Near Ripley, Ont.....	About July 19	60	Injured by fall from load of hay. Died July 20.
Farmer.....	Beverly Twp., Ont.....	" 21	54	Fell from load of hay, breaking his neck.
Farmer.....	Lachute, Que.....	" 24	Injured while mowing hay.
Farmer.....	Near Pakenham, Ont.....	" 27	27	Killed by mad bull.
Farm labourer.....	Near Charlottetown, P.E.I.....	" 28	62	Fell off load of hay. Died July 30.
Farmer.....	Near Harrison, Ont.....	" 29	20	Struck by car while driving cattle.
Farmer.....	Near Fraserwood, Man.....	" 30	67	Struck by lightning.
Farmer.....	Arrow Park, B.C.....	" 30	64	Collapsed while working in hay field in excessive heat.
Farmer.....	Bass River, N.S.....	Aug. 1	Fell from load of hay, breaking his back.
Farmer's wife.....	Cardigan, P.E.I.....	" 2	67	Fell off load of hay.
Farm labourer.....	Near Vulcan, Alta.....	" 4	50	Thrown from horse.
Farmer.....	Little Woody, Sask.....	" 4	Crushed under automobile while repairing same.
Farmer.....	Near Lindsay, Ont.....	" 9	Collapsed while at work.
Farmer.....	Near Cargill, Ont.....	" 10	35	Struck by lightning.
Farmer.....	Lincoln, N.B.....	" 13	64	Fell from load of hay.
Farmer's son.....	Near Pangman, Sask.....	" 14	16	Poisoned by contaminated well.
Farmer.....	Cochrane, Alta.....	" 15	55	Struck by lightning.
Teamster.....	Burton, B.C.....	" 17	48	Horse stepped on him when he fell from wagon, fracturing spine. Died Aug. 21.
Farmer.....	Elsdale, P.E.I.....	" 17	50	Collapsed from the heat.
Farmer.....	Near Parry Sound, Ont.....	" 18	Killed while towing a car out of ditch.
Farmer.....	Near Bonarlaw, Ont.....	" 2	Landed on handle of pitchfork, which penetrated abdomen when he jumped into mow.
Farmer.....	Near Lindsay, Ont.....	About Aug. 20	66	Fell from load of grain, injuring spine.
Painter.....	Near Radville, Sask.....	" 21	Fell from scaffold while painting barn. Died about Sept. 6.
Farmer.....	Gouldtown, Sask.....	" 23	56	Mutilated by binder when his horses ran away.
Farmer.....	Rock Glen, Sask.....	" 24	83	Overcome by smoke while attempting to put out rubbish fire.
Harvester.....	Moose Jaw, Sask.....	" 26	65	Stumbled in front of train and run over.
Farmer.....	Near Tisdale, Sask.....	Aug. 28	Car turned turtle when wheel gave way.
Farmer.....	Torbrook, N.S.....	" 28	74	Dropped dead while at work.
Farm hand.....	Near Bathurst, N.B.....	" 29	67	While dismantling old building he was crushed by concrete wall.
Farmer.....	Shoal Lake, Man.....	Sept. 1	Trampled on by frightened team.
Farmer.....	Glenboro, Man.....	" 1	Burned in fire which destroyed barn.
Farmer.....	Metaghan, N.S.....	" 3	48	Fell from barn, breaking his neck.
Farm hand.....	Delta, B.C.....	About Sept. 4	Gored by bull.
Farmer.....	Near Guelph, Ont.....	" 5	Injured when double-tree snapped and pierced his abdomen. Died Sept. 12.
Hired man.....	Near Wadena, Sask.....	" 6	Struck by lightning.
Farm hand.....	Near Beaverlodge, Alta.....	" 7	Jolted off hay wagon and broke his neck.
Farmer.....	Near Pembroke, Ont.....	" 7	80	Kicked by horse.
Farm hand.....	Near Oberon, Man.....	" 8	Landed on handle of pitchfork when he jumped from load of sheaves.
Farmer.....	Southey, Sask.....	" 8	Fell into feeder knives of threshing separator.
Farmer.....	Lambton, Que.....	About Sept. 9	Dragged by mower when team ran away.
Farmer.....	Saanich, B.C.....	Sept. 13	28	Struck on head when corn-cutting machine burst.
Farmer.....	Wascana, Sask.....	" 13	28	Wheel of grain wagon ran over his head when team ran away.
Hired girl.....	Near Hearst, Ont.....	" 13	20	Explosion from starting kitchen stove with gasoline.
Farmer.....	Near La Flèche, Sa k.....	" 14	22	His gauntlet became caught in belt and he was thrown on to engine.
Housekeeper.....	Near High River, Alta.....	" 16	28	Explosion from starting fire with kerosene.
Farmer.....	Near Gifford, B.C.....	" 18	Injured when team ran away.
Farmer.....	Near Earl Grey, Sask.....	" 18	30	Hurled into threshing separator when his hair caught in driving belt. Died Sept. 19.
Farmer.....	Near Minnedosa, Man.....	" 19	50	Head battered when he became caught in fly-wheel.
Farmer.....	Near Middleton, N.S.....	" 19	Killed when corn cutting machine exploded.
Farmer.....	Dover, Ont.....	" 20	Injured while repairing radiator of tractor.
Farmer.....	Rosetown, Sask.....	" 22	Injured when his truck collided with team. Died Sept. 23.
Farm hand.....	Near Swift Current, Sask.....	About Sept. 22	59	Fell from grain wagon; broken leg.
Farmer.....	Near Milestone, Sask.....	" 22	45	Fell from grain wagon and was run over.

FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE THIRD QUARTER OF 1928—Continued

Trade or Industry	Locality	Date	Age	Cause of Fatality
AGRICULTURE AND STOCKRAISING—Con.				
Thresher	Near Thorndale, Ont.	Sept. 25		Crushed when tractor backed into threshing machine.
Farmer	Near Guelph, Ont.	" 26	68	Fell from load of hay, fracturing skull.
Farmer	Near Vonda, Sask.	" 27		Fell from wagon, breaking neck when horses bolted.
Herdsmen	Near Winnipeg, Man.	About Sept. 27	24	Electrocuted when he climbed pole to look for cattle.
Farmer	Sutton, Que.	" 27	50	Burned by premature dynamite explosion while blasting stone. Died Sept. 30.
Farmer	Flaxcombe, Sask.	" 28		Thrown from wagon and run over when team were startled.
Farmer	Near Melbourne, Ont.	" 29	71	Thrown to pavement when truck struck his wagon.
Farmer	London, Twp., Ont.	About Sept. 29		Fell from silo when plank gave way. Second man died Oct 2.
Farmer				
LOGGING—				
Logger	Shelter Bay, Que.	July 3		Drowned when their boat capsized in swift current.
Logger				
Logger				
Logger				
Logger				
Logger	Near Sooke, B.C.	" 11		Fell between logs and drowned.
Chokerman	Fanny Bay, B.C.	" 17		Struck by snag.
Logger	Near Beaver, Alta.	" 19	86	Crushed by load of timber which tipped over.
Head faller	Englewood, B.C.	" 21		Log rolled on him crushing his head.
Mill worker	Cranbrook, B.C.	" 23	27	Log rolled over him fracturing his spine. Died Aug. 19.
Chaser	Port Alberni, B.C.	" 27	27	Caught in haulback while unhooking choker.
Logger	Cumberland, B.C.	" 31	22	Struck by falling snag.
Logger	Hardy Bay, B.C.	Aug. 1	20	Struck by falling snag. Died Aug. 2.
Logger	Lake Cowichan, B.C.	" 2	38	Slipped between logs and was crushed.
Logger	Mistassini River, Que.	" 2		Fell from logs and drowned.
Logger	Theodosia Arm, B.C.	" 3	30	Run over by logging locomotive.
Logger	Horne Lake, B.C.	" 3	38	Struck by rolling snag.
Logger	Nanoose Bay, B.C.	" 4	38	Log rolled over him fracturing spine. Died Sept 4.
Faller	Cowichan Lake, B.C.	" 7	40	Crushed between logs. Died Aug. 8.
Logger	Cumberland, B.C.	" 9	19	Crushed between two logs.
Logger	Coquihalla, B.C.	" 15	37	Injured when log jumped chute.
Chokerman	Lake Cowichan, B.C.	" 18	19	Struck on back and neck by a carriage working on sky line when it dropped.
Logger	Glade, B.C.	" 18	20	Struck by falling tree, fracturing skull.
Logger	Great Central Lake, B.C.	" 20	40	Crushed when log rolled over him.
Logger	Duncan, B.C.	" 23	44	Log rolled over him.
Logger	Near Three Rivers, Que.	" 23	36	Killed by dynamite explosion.
Logger	Alco, B.C.	Aug. 31	54	Struck on head by falling tree.
Bucker	Boulder Creek, B.C.	Sept. 1	48	Crushed between two logs.
Logger	Near Steelhead, B.C.	" 6	42	Crushed by load of logs when they shipped down steep trail.
Labourer	Fossmill, Ont.	" 10	45	Gasol ne speeder on which he was riding collided with log train. Both legs broken. Died Sept. 11.
Logger	Alberni, B.C.	" 18	21	Tuberculosis caused by back injury in Oct. 1925.
FISHING AND TRAPPING—				
Fisherman	Lake Winnipeg, Man.	July 5	57	Struck by lightning.
Fisherman	Malignant Cove, N.S.	" 5	18	Drowned when fishing dory upset.
Fisherman	Swanson Bay, B.C.	" 9	30	Suffocated by fumes from engine of gas boat.
Captain of fishing boat	Vancouver, B.C.	Aug. 7	46	Cabin of boat burst into flames when he started fire in stove.
MINING, NON-FERROUS SMELTING AND QUARRYING—				
Metalliferous Mining—				
Trammer	Schumacher, Ont.	July 4	19	Fell into ore pass and crushed beneath cars of ore.
Miner	Near Worthington, Ont.	" 11		Gassed in mine.
Prospector	Pugwash Lake, Ont.	" 16		Drowned when canoe was swamped.
Prospector				
Furnaceman	Trail, B.C.	" 16	32	Explosion of copper matte in furnace.
Furnaceman				
Miner	Rotyn District, Que.	" 24	19	Burned by explosion of stove at mine camp.
Machine runner	Kirkland Lake, Ont.	" 28	27	Buried by rock slide.
Mucker	Britannia Mine, B.C.	Aug. 1	21	Fell 400 ft. in mine.
Carpenter	Nanaimo, B.C.	" 4	45	Struck by piece of timber while tearing down old bunkers.
Cook	Gem Lake, Man.	" 8		Drowned when canoe upset.

FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE THIRD QUARTERS OF 1928—Continued

Trade or Industry	Locality	Date	Age	Cause of Fatality
MINING, NON-FERROUS SMELLING, AND QUARRYING—Con.				
<i>Metaliferous Mining—Con.</i>				
Drill runner.....	Copper Cliff, Ont.....	" 8	28	Silicosis contracted about Aug. 15, 1927.
Prospector.....	Beaver Lake, Sask.....	About Aug. 10	Drowned.
Miner.....	Stewart, B.C.....	" 10	65	Suffocated after fall of rock.
Switchman.....	Schumacher, Ont.....	" 17	40	Struck and run over by car that jumped switch. Died Aug. 20.
Labourer.....	Moyie, B.C.....	" 19	37	Fell from boom and drowned.
First aid man.....	Trail, B.C.....	" 21	42	Stricken with heart failure while at work.
Miner.....	Eldorado Mine, Man.....	" 22	Killed by dynamite blast in mine.
Machine runner.....	Anyox, B.C.....	" 25	21/30	Slipped and fell down slope.
Miner.....
Drill helper.....	Near Larchwood, Ont.....	Aug. 27	17	Drowned when canoe filled and sank.
Mining engineer.....	Near Cochrane, Ont.....	" 27	Struck by train.
Mucker.....	Kirkland Lake, Ont.....	" 27	30	Injured while blasting rock in mine. Died Aug. 28.
Miner.....	Red Lake, Ont.....	Sept. 4	Drowned.
Miner.....	Anyox, B.C.....	" 12	Struck by falling rock.
Labourer.....	Timmins, Ont.....	" 18	44	Silicosis, incapacitated since March 3.
Shaft miner.....	Frood Mine, Ont.....	" 23	27	Crushed by skip in mine shaft.
Prospector.....	Near Chesterfield Inlet, N.W.T.	" 24	Perished in blizzard in Northern wilds.
Driller.....	Timmins, Ont.....	" 26	37	Explosion believed to be caused by drill striking missed hole.
<i>Coal Mining—</i>				
Miner.....	Springhill, N.S.....	July 3	30	Buried by cave in in mine.
Miner.....	Glace Bay, N.S.....	" 6	44	Leg crushed by fall of rock. Died July 16.
Miner.....	Near Nanaimo, B.C.....	" 20	65/45	Asphyxiated from blow out in mine.
Miner.....
Miner.....	New Waterford, N.S.....	" 24	24	Struck by moving coal boxes.
Surface employee.....	Sydney Mines, N.S.....	" 28	34	While unloading rails from flat car, a rail fell on him and broke his neck.
Miner.....	New Waterford, N.S.....	Aug. 6	58	Buried by cave-in at mine.
Miner.....	Struck by fall of rock.
Driver.....	Glace Bay, N.S.....	" 8	19	Run over by a string of run away coal boxes.
Miner.....	Westville, N.S.....	" 13	52	Struck by piece of coal which fell from roof and he was thrown to surface, breaking neck.
Manager.....	Dodds, Alta.....	" 15	Premature dynamite explosion in mine.
Car pusher.....	Corbin, B.C.....	" 27	30	Hemorrhage caused by injuries received in mine.
Oiler.....	Glace Bay, N.S.....	" 28	27	Fell into cog wheel of stone crusher.
Miner.....	40
Miner.....	41
Miner.....	51	Poisoned by blow out of matane gas in mine.
Miner.....	Fernie, B.C.....	" 30	53
Miner.....	54
Miner.....	54
Miner.....	Little Bras d'Or, N.S.....	Sept. 3	37	Bumped by explosion of gas.
Miner.....	Glace Bay, N.S.....	" 5	22	Crushed under fall of stone. Died Sept. 6.
Miner.....	Midlandvale, Alta.....	" 11	45	Crushed by fall of rock.
Miner.....	Springhill, N.S.....	" 17	21	Crushed by fall of stone.
Miner.....	Nanaimo, B.C.....	" 25	37	Struck by falling rock.
Miner.....	Kemptown, N.S.....	" 29	25	Fell down mine shaft, fracturing skull. Died Sept. 30.
<i>Non-metallic mineral mining and quarrying—</i>				
Miner.....	Theftord Mines, Que.....	Sept. 15	28	Buried by cave-in at mine. Died Sept. 22.
<i>Structural Materials—</i>				
Loading machine operator.....	Near Cedar Springs, Ont.....	July 13	62	Caught between loading machine and truck.
Labourer.....	Near Innerkip., Ont.....	" 20	48	Struck on head by steam shovel when brake slipped.
Labourer.....	St. Francois de Sales, Que..	Sept. 3	17	Killed by dynamite blast in stone quarry.
MANUFACTURING—				
<i>Vegetable foods, drink and tobacco—</i>				
Employee of Wine Co	Fort William, Ont.....	July 11	Burned when barrel of gasoline exploded.
Assistant engineer....	Quebec, Que.....	" 20	35	Killed by explosion of ammonia tank.
Grain buyer for miller.	Morden, Man.....	Aug. 13	63	Buried from explosion while cleaning tank with gasoline and turpentine. Died Sept. 14.
Mechanic.....	Toronto, Ont.....	Sept. 3	52	Crushed in elevator shaft by descending car.
<i>Animal foods—</i>				
Employee with packing Co.	Toronto, Ont.....	Aug. 27	61	Scalded when he fell into tank of boiling water.
Butcher.....	Winnipeg, Man.....	Sept. 6	62	Cut his thumb and developed erysipelas. Died Sept. 24.
<i>Textiles and Clothing—</i>				
Elevator operator....	Hull, Que.....	July 13	17	Caught between elevator platform and wall, crushing skull.

FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE THIRD QUARTER OF 1928—Continued

Trade or Industry	Locality	Date	Age	Cause of Fatality
MANUFACTURING—Con.				
<i>Leather, Fur and Products—</i>				
Labourer.....	Huntsville, Ont.....	Sept. 22	16	Caught in conveyor, both legs broken.
<i>Saw and Planing Mill Products—</i>				
Labourer.....	Cache Bay, Ont.....	About July 1	24	Injured when he fell 30 feet.
Millhand.....	Near Moart, Ont.....	" 4	40	Struck by freight train.
Contractor.....	Yearley, Ont.....	" 7	Struck by trunk of tree.
Labourer.....	Rainy Lake, Ont.....	" 14	33	Struck in chest by plank which had been caught in saw carriage.
Millhand.....	Mayo Siding, B.C.....	" 17	44	Struck by log which fell from loader.
Labourer.....	Swift Current, Sask.....	" 21	When tie pick slipped he fell off car and broke his back. Died July 30.
Setter on carriage..	Burks Falls, Ont.....	" 24	Cut his hand while cleaning bark from dogs of carriage. Infection. Died Aug. 3
Millhand.....	Hamilton, Ont.....	" 28	45	Fell from lumber pile fracturing skull.
Labourer.....	Peterborough, Ont.....	Aug. 1	24	Fell under coal car and lost his leg. Died Aug. 3.
Mill worker.....	Englewood, B.C.....	" 1	27	Cut up by saw.
Saw mill operator..	Near Williams Lake, B.C..	" 2	Thrown from load of lumber when team ran away. Died Aug. 3.
Mill worker.....	Nanoose Bay, B.C.....	Sept. 4	Struck by heavy timber.
Mill hand.....	Donnegana, Ont.....	" 12	Piece of lumber fell on him, injuring back and shoulders. Died Sept. 14.
Labourer.....	Audbeg, Ont.....	" 13	63	Fell from car to boardway, injuring back. Died Sept 24
Superintendent.....	Macaza, Que.....	" 24	67	Leg cut off by saw. Died Sept. 25.
<i>Pulp, Paper and Paper Products—</i>				
Elevator operator..	Hull, Que.....	July 13	17	Crushed by roll of paper which fell down elevator shaft.
Labourer.....	Thorold South, Ont.....	" 24	50	Struck on chest by piece of pulpwood which fell from pile.
Oiler.....	Kapuskasig, Ont.....	Aug. 1	24	Fell from crane, fracturing skull.
Mechanic.....	Three Rivers, Que.....	" 6	28	Fell into blowpit and drowned.
Mill worker.....	Bromptonville, Que.....	" 21	22	Head and arm caught in paper cutting machine.
Mechanical Supt....	Dryden, Ont.....	" 25	30	Scalded by caustic soda solution. Died Aug. 26.
Labourer.....	Smooth Rock Falls, Ont....	Sept. 19	19	Drowned from canoe while searching for stop log.
<i>Iron, Steel and Products:</i>				
Steel worker.....	Montreal, Que.....	Aug. 2	29	Electrocuted when a short circuit occurred in crane above them.
Steel worker.....	"	"	22	"
Foundryman.....	Sandwich, Ont.....	" 9	45	Succumbed to extreme heat.
Labourer.....	Montreal, Que.....	" 23	58	Crushed by truck in coal shed.
Crane operator.....	Sydney, N.S.....	" 27	53	Fell from crane platform, injuring head.
Tinsmith's helper..	Fort William, Ont.....	" 30	14	Crushed by falling plates.
Truck driver.....	Montreal, Que.....	" 31	28	Killed when street car collided with truck.
Steel worker.....	Sydney, N.S.....	Sept. 21	71	Brass poisoning.
<i>Non-Ferrous Metal Products—</i>				
Brass worker.....	Toronto, Ont.....	July 17	47	Stricken with heart attack while at work in lacquering room, caused by cyanide poisoning.
Carpenter.....	Port Colborne, Ont.....	Aug. 27	40	Hand caught in knife. Died Sept. 3.
<i>Non-Metallic Mineral Products—</i>				
Teamster.....	Kingsville, Ont.....	Sept. 20	52	Fell from wagon and run over; crushed chest and broken legs. Died Sept. 21.
Treator.....	Calgary, Alta.....	" 27	37	Explosion, Third man died Sept. 28.
Fireman.....			35	
Office manager.....			30	
<i>Chemical and Allied Products—</i>				
Assistant Supt.	Toronto, Ont.....	" 8	32	Poisoned by gas while cleaning distilling tank.
Labourer.....			33	
Labourer.....			21	
Labourer.....			33	
<i>Miscellaneous Products—</i>				
Helper.....	Toronto, Ont.....	July 5	Injured when a mould containing molten lead burst. Died July 9.
Electrician.....	Hamilton, Ont.....	" 8	40	Electrocuted when he slipped and touched a high tension wire.
Millwright.....	Merritton, Ont.....	Aug. 19	52	Injured spine when snub line broke. Died Oct. 28.
Electrician.....	Ford City, Ont.....	" 21	34	Electrocuted when short circuit occurred in switch box at power house.
Engineering student.	Peterborough, Ont.....	Sept. 29	23	Electrocuted while testing switching equipment.

FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE THIRD QUARTER OF 1928—Continued

Trade or Industry	Locality	Date	Age	Cause of Fatality
CONSTRUCTION—				
<i>Buildings and Structures</i>				
Foreman.....	Ashton, Ont.....	July 4	25	Struck by falling timber. Died July 6.
Labourer.....	Toronto, Ont.....	" 7	35	Stepped into hole and fell 40 feet.
Labourer.....	Racine, Que.....	" 9	29	Crushed between crane and bucket.
Bricklayer.....	Ottawa, Ont.....	" 13	53	Fainted from heat, and fell from scaffold, fracturing skull. Died Aug. 25.
Carpenter.....	Reno, Alta.....	" 16	28	Fell from scaffold. Died Aug. 29.
Carpenter.....	St. John, N.B.....	" 17	36	Cut finger with chisel. Died of infection, July 26.
Labourer.....	Tilbury, Ont.....	" 17	45	Killed when truck in which he was riding was wrecked.
Carpenter.....	Halifax, N.S.....	" 19	73	Fell from scaffolding, fracturing spine when overcome with heat.
Labourer.....	Great Falls, Man.....	" 19	Fell from dump car, leg crushed by car wheel. Died July 20.
Brakeman on gravel train.....	West Lorne, Ont.....	" 28	18	Pinned beneath train when it overturned on steep grade.
Painter.....	London, Ont.....	" 30	70	Fell from ladder, fracturing skull.
Carpenter.....	Vancouver, B.C.....	" 30	46	Infection from injury. Died Aug. 8.
Painter.....	Vancouver, B.C.....	Aug. 6	74	Fell from roof. Died Aug. 10.
Labourer.....	Vancouver, B.C.....	" 6	30	Fell from scaffold.
Painter.....	Edmonton, Alta.....	" 14	24	Fell down elevator shaft.
Labourer.....	Chute a Caron, Que.....	" 15	30	Crushed between two locomotives.
Cribber.....	Falher, Alta.....	" 17	28	Fell from top of elevator and broke his neck.
Carpenter.....	Thetford Mines, Que.....	" 20	65	Fell from scaffold.
Carpenter.....	Kapuskasing, Ont.....	" 25	25	Electrocuted when he picked up a live wire.
Foreman.....	Drummondville, Que.....	" 27	Fell down elevator shaft.
Contractor.....	Montreal, Que.....	" 29	48	Fell from scaffold, fracturing skull.
Farmer.....	Near Staveley, Alta.....	Sept. 4	45	Thrown from grader and run over.
Contractor.....	Millardville, B.C.....	" 5	56	Fell from house roof, breaking his neck.
Painter.....	New Glasgow, N.S.....	" 10	81	Fell from ladder.
Labourer.....	Montreal, Que.....	" 11	24	Electrocuted when steel beam came in contact with live wire.
Labourer.....	Toronto, Ont.....	" 12	38	Crushed by heavy granite slab which fell down elevator shaft.
Labourer.....	Montreal, Que.....	" 14	20	Fell down elevator shaft. Died Sept. 18.
Carpenter.....	Iroquois Falls, Ont.....	" 14	35	Fell 50 feet.
Bricklayer.....	Montreal, Que.....	" 16	50	Scalded when pipe burst in boiler room. Died Sept. 22.
Plasterer.....	Orillia, Ont.....	" 18	51	Fell from scaffold and broke his neck. Died Sept. 19.
Carpenter.....	Toronto, Ont.....	" 24	45	Fell from scaffold, fracturing skull.
Plasterer.....	Toronto, Ont.....	" 26	21	Fell from scaffolding; fractured skull.
Painter.....	Port Colborne, Ont.....	" 27	55	Fell from scaffold when rope slipped.
Carpenter.....	Winnipeg, Man.....	" 27	18	Struck by train while going home from work.
Painter.....	Winnipeg, Man.....	Sept. 27	32	Electrocuted while painting high power transmission tower.
Labourer.....	Quebec, Que.....	" 28	32	Fell from top of grain elevator into harbour.
<i>Railway—</i>				
Labourer.....	Flin Flon Rly., Man.....	July 14	50	Killed in dynamite explosion.
Asst. Superintendent	Port Colborne, Ont.....	Aug. 20	Cable slipped and struck him on chest.
<i>Shipbuilding—</i>				
Carpenter.....	Charlottetown, P.E.I.....	July 30	30	Fell through hole in wharf and was drowned.
Riveter.....	St. John, N.B.....	Aug. 8	33	Crushed by crane.
<i>Highway and Bridge—</i>				
Teamster.....	Near Pollockville, Alta.....	July 13	50	Fell under wagon and was run over.
Teamster.....	Birch Island, Ont.....	" 24	46	Thrown from wagon injuring head and back. Died Oct. 10.
Labourer.....	Revelstoke, B.C.....	" 25	47	Killed by dynamite explosion.
Labourer.....	Near Westmoreland, N.B.....	" 30	55	Fell from scow and drowned.
Labourer.....	Near Halifax, N.S.....	Aug. 2	65	Killed by explosion of a box of dynamite caps.
Labourer.....	Westmoreland, N.B.....	" 5	39	Fell from truck. Concussion of brain. Died Aug. 9.
Connector.....	Toronto, Ont.....	" 13	40	Fell 135 feet from bridge pier.
Labourer.....	Near Orillia, Ont.....	" 15	17	Killed when truck in which he was riding overturned.
Bridge worker.....	Near Willowdale, Ont.....	About Aug. 15	Fell from bridge.
Teamster.....	Arnprior, Ont.....	" 31	65	Injured head when thrown from wagon when horses were startled.
Labourer.....	Windsor, Ont.....	Sept. 8	28	Struck by truck fracturing skull.
Labourer.....	Montmagny, Que.....	" 20	Dynamite explosion.
Foreman.....	Near Brockville, Ont.....	" 20	49	Struck by cable wire. Died Sept. 23.
<i>Miscellaneous—</i>				
Tractor operator.....	Port Miller, Ont.....	July 1	23	While operating a tractor towing cars, it turned over and he was injured under cars. Died Aug. 3.

Teamster.....	Newcastle, Alta.....	" 30	Run over when horses were startled by part of load falling from wagon.
Truck driver.....	London, Ont.....	" 30	33	Killed when truck he was driving fell over embankment.
Taxi driver.....	Near Banff, Alta.....	Sept. 8	Pinned under car when it went over embankment.
Truck driver.....	Winnipeg, Man.....	" 15	23	Injured when truck overturned while turning corner. Died Sept. 19.
Truck driver.....	Ancienne Lorette, Que.....	Sept. 19	Killed in collision of his truck with train.
Carter.....	Ville La Salle, Que.....	" 22	20	Crushed between his cart and wall.

FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE THIRD QUARTER OF 1928—Continued

Trade or Industry	Locality	Date	Age	Cause of Fatality
TRANSPORTATION AND PUBLIC UTILITIES—Con.				
<i>Electricity and Gas—</i>				
Lineman	Montreal, Que.	July 11	32	Electrocuted when he fell on live wires.
Power Plant Superintendent.	Wawaits Falls, Ont.	Aug. 8	38	Burned by oil, which sprayed his clothing when a transformer blew off while he was replacing a fuse.
Meter Reader	Halifax, N.S.	" 13	56	Run over by automobile.
Lineman	Brockville, Ont.	" 15	19	Upon touching a high tension wire he fell 25 feet from pole.
Lineman	Port Colborne, Ont.	" 17	35	Electrocuted while at work on pole repairing wires.
Lineman	Port Arthur, Ont.	" 17	42	Electrocuted when he slipped and fell across live wire at substation.
Switchman	Vancouver, B.C.	Sept. 23	42	Electrocuted when he came in contact with high tension wire. Died Sept. 24.
Lineman	Montreal, Que.	" 29	36	Fell from tree, fracturing skull.
<i>Telegraphs and Tele-phones—</i>				
Lineman	Linkinsaw River, B.C.	About July 10	46	Drowned.
Lineman	Winnipeg, Man.	" 30	28	Electrical burns. Died Aug. 18.
Lienman	St. Catharines, Ont.	Aug. 22	30	Fell from platform of repair car, fracturing skull.
Labourer	Quebec, Que.	Sept. 13	15	Electrocuted in handling electric wires.
Lineman	Near Moncton, N.B.	" 26	25	Fell when pole on which he was working broke; fractured skull. Died Sept. 29.
TRADE—				
<i>Wholesale—</i>				
Manager	Radville, Sask.	July 13	40	Crushed by truck while trying to right ditched machine.
Truck driver	Chemainus, B.C.	Aug. 9	29	
Truck driver	Chemainus, B.C.	Aug. 9	Killed when truck he was driving was struck by train.
Clerk	Wenasaga River, Ont.	Sept. 2	20	Drowned.
Fur buyer	Gunflint Lake, Ont.	" 5	Drowned when canoe overturned.
Agent	Near Shelburne, N.S.	" 10	38	Pinned beneath truck which overturned while rounding curve.
Commercial traveller	Quebec, Que.	" 12	32	Slipped from gang plank of ferry and drowned.
Meat dealer	Ingersoll, Ont.	" 28	Truck which he was driving was struck by train.
<i>Retail—</i>				
Deliveryman	Rimouski, Que.	July 3	17	Drowned when his bicycle slipped on edge of wharf.
Woodyard worker	Toronto, Ont.	" 3	17	Struck by lightning while driving wagon.
Truck driver for Piano Co.	Windsor, Ont.	" 5	Collision of street car with truck.
Popcorn dealer	Ville La Salle, Que.	July 13	28	Burned when gasoline tank of popcorn wagon exploded.
Deliveryman	Vancouver, B.C.	" 17	38	Injured by falling.
Butcher	Charlottetown, P.E.I.	" 26	47	Killed when his truck crashed into a tree.
Driver	Near Collingwood, Ont.	" 31	19	Killed when his delivery wagon was struck by train.
Driver	Ottawa, Ont.	Aug. 2	56	Fell from coal cart, fracturing skull.
Milk salesman	Montreal, Que.	" 18	36	Injured his foot in collision of auto with his motorcycle; developed tetanus. Died Sept. 6.
SERVICE —				
<i>Public Administration—</i>				
Fire ranger	Montreal River, Ont.	July 9	54	Drowned.
Forestry student with Prov. Govt.	a Peche Lake, Que.	" 12	20	Drowned.
Mechanic	Near Butedale, B.C.	" 13	30	Killed in crash of fisheries patrol seaplane.
Fire ranger	Near Elk Lake, Ont.	" 13	58	Drowned when canoe overturned.
Foreman	Leaside, Ont.	" 17	61	Asphyxiated.
Traffic officer	Near Iroquois, Ont.	" 25	22	Legs and arms fractured when his motorcycle ran into a tree.
Fire fighter	East Templeton, Que.	" 28	27	Electrocuted by falling live wire while carrying furniture from hotel during fire.
Traffic agent	Near Quebec, Que.	" 30	28	Killed when his motorcycle swerved and struck a pole.
Mail deliverer	Near Kingston, Ont.	Aug. 4	57	Died suddenly while delivering mail.
Labourer with irrigation works.	Baintree, Alta.	" 11	53	Struck by piece of timber while removing cook car body from wheels. Died Aug. 12.
Mail clerk	Near Sackville, N.B.	" 15	69	Collapsed in mail car.
Labourer	Winnipeg, Man.	" 18	38	Injured elbow while taking cover off truck. Died of septocemia on Sept. 13.
Policeman	Montreal, Que.	" 22	44	Injured when his motorcycle collided with automobile.
Engineer Prov. Que Roads Dept.	Lachute, Que.	Sept. 6	37	Killed when their auto collided with train.
Divisional Head " }			44	
Mail carrier	Near Penbroke, Ont.	" 10	67	
<i>Recreational—</i>				
Merry-Go-Round operator.	Toronto, Ont.	July 16	Electrocuted as result of accidental ground of current.
Horse rider	Vancouver, B.C.	Aug. 14	Thrown to race-track when her mount stumbled.
Diving girl	Toronto, Ont.	Sept. 7	Fell 20 feet from ladder.

Trade or Industry	Locality	Date	Age	Cause of Fatality
SERVICE—				
<i>Public administration—</i>				
Government Labourer.....	Toronto, Ont.....	Oct. 24 1927	About 50	While cutting down tree, it fell on him fracturing pelvis. Died Aug. 21, 1928.

SUPPLEMENTARY LIST OF FATAL INDUSTRIAL ACCIDENTS OCCURRING DURING FIRST HALF OF 1928

Trade or Industry	Locality	Date	Age	Cause of Fatality
LOGGING—				
Woodsman.....	Redgewick, N.B.....	Feb. 25	23	Fell on icy log, multiple abcess. Died June 3.
Logger.....	Menzies Bay, B.C.....	About April 15	27	Injured in logging accident. Died about Aug. 14.
River driver.....	Northumberland, N.B.....	May 2	20	Fell into river and drowned.
Logger.....	Mission City, B.C.....	June 6	51	Tree fell and crushed right arm. Died from hemorrhage, June 8.
Surveyor.....	Near Florenceville, N.B....	" 23	19	Drowned from canoe.
FISHING AND TRAPPING—				
Trapper.....	North Woods of Pontiac Co., Que.....	About April 15	Perished when his provisions became exhausted.
MINING, NON-FERROUS SMELTING AND QUARRYING—				
<i>Coal mining—</i>				
Miner.....	Nanaimo, B.C.....	June 13	42	Died from heart trouble while at work in mine.
MANUFACTURING—				
<i>Leather, fur and products—</i>				
Elevator operator....	Vancouver, B.C.....	June 13	39	Fell down elevator shaft fractured skull. Died June 14.
<i>Miscellaneous products—</i>				
Labourer.....	Ford, Ont.....	About June 16	48	Double inguinal hernia. Died June 20.
Assembler.....	Hamilton, Ont.....	June 22	33	Struck her side on bench while carrying irons. Died Aug. 5.

SUPPLEMENTARY LIST OF FATAL INDUSTRIAL ACCIDENTS OCCURRING DURING THE FIRST HALF
1928—Concluded

Trade or Industry	Locality	Date	Age	Cause of Fatality
CONSTRUCTION— Buildings and structures— Carpenter.....	Toronto, Ont.....	May 23	63	Collapsed from heart failure while working on garage.
Carpenter.....	Toronto, Ont.....	June 23	47	Collapsed from heart trouble while at work.
TRANSPORTATION— Steam railways— Section foreman....	Piney, Man.....	May 4	59	Claw bar slipped and struck his head, cerebral hemorrhage. Died July, 28.
Painter.....	London, Ont.....	June 11	48	Lead poisoning contracted March 3.
Local— Driver.....	Montreal, Que.....	" 4	44	Cerebral hemorrhage. Died June 7.
TRADE— Wholesale— Exporter.....	Lake St. Clair near Windsor, Ont.....	June 17	Fell over board from his motor-boat and drowned.
SERVICE— Public administration— Labourer.....	Burnaby B.C.....	" 2	44	Struck by auto. Died June 5.
Fire ranger.....	Teddy Bear River, Ont.....	" 24	22	Dr owned when canoe upset.

(Continued from page 1286)

Three fatalities occurred at an oil refinery at Calgary, Alberta, when an explosion believed to be caused by a blast of oil completely demolished the whole plant on September 27.

It may be mentioned that during this quarter a fatality occurred in a Canadian harbour which is not included in this list owing to the fact that the man was employed by another country,—being a baker on the Cunard Liner SS. *Athenia*, who fell into a hold of the ship at Montreal harbour on September 5.

Supplementary Lists of Accidents.—The supplementary list of fatal accidents occurring in 1927, to be found after the main table of accidents, contains only one fatality which was in service and occurred in October. Concluding the lists is a supplementary list of fatal industrial accidents occurring during the first half of 1928. This includes eighteen fatalities, of which 5 were in logging, 1 in fishing and trapping, 1 in mining, 3 in manufacturing, 2 in construction, 3 in transportation, 1 in trade and 2 in service. One accident was in February, 2 in April, 3 in May and 12 in June.

IMMIGRATION TO CANADA DURING THE SIX MONTHS ENDED SEPTEMBER 30, 1928

THE accompanying tables supplied by the Department of Immigration and Colonization show the nature and extent of immigration to Canada during the six months ended September 30, 1928, with some comparative figures for the corresponding period in 1927. Of a total of 123,713 immigrants 44,876 or 36 per cent were British, 18,707 or 15 per cent from the United States, and 60,130 or 49 per cent from other countries. Comparative figures for 1927 show a total of 109,025 immigrants, of whom 39,621 or 36 per cent were British, 14,641 or 14 per cent from the United States, and 54,763 or 50 per cent from other countries.

CENSUS OF INDUSTRY IN CANADA

Summary Tables for Manufacturing and Mining in Recent Years

THE Dominion Bureau of Statistics, under the Statistics Act of 1918, takes annually by mail an industrial census covering statistics of fisheries, mines, forestry and general manufactures in Canada. The Bureau has issued summary figures for all manufacturing industries for the years 1925 and 1926, while for the manufacture of mineral products, and for chemical and chemical products figures are available for the year 1927 also. The accompanying tables give the figures in some detail for these industries by groups and for the principal sub-groups. A table of statistics on the mining industry for the years 1923 to 1927 is also included.

In Table I a comparative summary of the principal statistics of all manufacturing industries of Canada in recent years is given back to 1922. Table No. II gives these statistics by provinces and by groups of industries for the years 1925 and 1926. Table III consists of a detailed statement of the statistics of the principal industries except manufacturing of minerals and chemicals, for which Table IV gives the statistics for the years 1925, 1926 and 1927, and electric light and power for which the figures appear in Table No. II under the heading "General Electric Stations."

In Tables III and IV the industries within the groups are listed approximately in order of number of wage-earners employed. It will be observed in Table II that the largest number of employees appear in the wood and paper groups, followed by textile group and the iron and steel group. An examination of the figures as to value of products shows the pulp and paper industry to be the greatest followed by flour and grist mills slaughtering and meat packing, sawmilling, automobiles, butter and cheese and electric light and power, all have a production exceeding one hundred million in value. For the year 1926 the figures show an increase over 1925 in each item, the percentage increase in wages paid, value of products, and value added by manufacture being approximately ten per cent, cost of materials being up approximately eight per cent, salaries over six per cent and the other items about five per cent. The figures by provinces and groups of industries also show increases in most of the items.

In Table No. V figures as to mining during 1927 are given as compared with previous years back to 1923. It will be observed that there has been an increase each year since 1924, that for 1927 being considerable, not only in all products but in nearly every item.

TABLE I.—MANUFACTURING INDUSTRIES: PRINCIPAL STATISTICS COMPARED FOR 1922, 1923, 1924, 1925 AND 1926

Items	1922	1923	1924	1925	1926	Increase per cent in 1926 over 1925

Province of Quebec Safety League

The Province of Quebec Safety League is issuing a series of useful Bulletins on various aspects of safety work.

Bulletin 1 describes the effective uses of illustrated company bulletins and bulletin boards, showing how pictures and stories may be used to teach workmen what they should do to protect themselves and others from injury. This is found to be one of the most effective means of obtaining results and maintaining interest in safety work.

Bulletin 2 shows the proper organization of safety committees in industrial plants of various sizes; but the essentials of safety work are the same, whether there are 25 or 250 employees or more. It is pointed out that the operating chief of a plant should be definitely associated with accident prevention work and some employee, perhaps a mechanic or millwright, should be appointed safety director and make periodical inspections, a report of each inspection being made to the safety committee. A safety committee should consist of about five persons, with the manager as chairman, and including the master mechanic, one or more foremen, and generally the safety inspector; the latter being secretary of the committee. In plants of more than 150 employees it is said to be often desirable to have a workmen's committee of not less than three representative men chosen in rota-

tion, to make monthly inspections of the entire plant, investigate accidents, etc. The purpose of this committee is largely educational. The Bulletin outlines the procedure to be followed in connection with the installation of a safety organization.

Bulletin 3 describes the "well-ordered plant", showing the need for good house-keeping, cleanliness and orderly arrangement.

Bulletin 4, on "initiating the new man," starts with the remarkable statement that 85 per cent of the accidents in steel mills are due to the workmen who have been in the mill for less than a month, and 12 per cent to those with less than six months' experience. Definite provision, it is stated, should be made for the systematic instruction of the new employee in regard to safe practices. This tuition, to be profitable, cannot be too thorough. In a large factory, it should be the work of one man. Stress is laid on the need for placing the "green man" in proper relationship with his fellow workmen, so that he may have due consideration and benefit by the experience of the others.

Bulletin 5—"Habit breeds Carelessness"—shows the danger of bad working habits and "trusting to luck". Pictures well placed are recommended as a useful method of keeping the workmen alive to the risks of their work.

RECENT LEGAL DECISIONS AFFECTING LABOUR

British Columbia Male Minimum Wage Order declared Invalid

The Supreme Court of Canada handed down the following judgment on October, 1928, in the case of *International Timber Company versus Field*. Judgment was given by the Right Hon. Chief Justice Anglin, being concurred in by Judges Mignault, Newcombe, Rinfret and Lamont. The circumstances of this case are stated in the course of the judgment. The Chief Justice said:—

Judgment of Supreme Court of Canada

The plaintiff (respondent) was engaged by the defendant company in its logging camp at Campbell River, British Columbia, for two periods during the year 1927,—first as a “dish-washer” at \$3.20 per day and afterwards as a waiter, or “flunkey,” at first at the same wage and later at \$3.45 a day. He appears to have been treated by his employers as liable to contribute to the Workmen’s Compensation Fund a percentage of these wages. R.S.B.C., 1925, c. 278, s. 33.

By an Order of the Board of Adjustment (constituted under the Hours of Work Act, 1923) dated the 29th of September, 1926, and made under the “Male Minimum Wage Act” (B.C. Statutes, 1925, c. 32) the “minimum wage for all employees in the lumbering industry” was fixed at “forty cents per hour.” “Lumbering industry” was by the Order defined to include—

“All operations in or incidental to the carrying on of logging camps, shingle mills, saw-mills, planing-mills, lath-mills, sash and door factories, box factories, barrel factories, veneer factories, and pulp and paper mills, and all operations in or incidental to the driving, rafting and booming of logs.”

Alleging that he was an employee in the “lumbering industry” of the defendants, the plaintiff sued in the County Court to recover the difference between the amounts paid him at the contract prices above stated and 40 cents per hour on the basis of having worked 13 hours per day.

“Employee” is defined by the Act to mean “Every adult male person to whom this Act applies who is in receipt of or entitled to any compensation for labour or services performed for another.”

but, by section 13, the Act is declared inapplicable to the occupations of “farm labourers, fruit-pickers, fruit-packers, fruit and vegetable canners, and domestic servants.”

The County Court Judge found that the working time of the plaintiff amounted in all to only 10 hours per day and that from that time must be deducted 1½ hours to cover meal times, leaving only 8½ hours as the actual working day to which the 40-cent rate per hour could apply. He also held, however, that the plaintiff was a “domestic servant” within section 13 and, accordingly, dismissed the action.

The Court of Appeal for British Columbia reversed this judgment, holding that the plaintiff’s working time was 13 hours per day and that he was not a “domestic servant” within section 13. Judgment was, accordingly, directed to be entered for the plaintiff for the sum of \$187.30 with costs throughout.

Subsequently special leave to appeal to this Court was obtained by the defendant company on the terms of its paying the costs of the Attorney-General and of the plaintiff of the proposed appeal in any event thereof.

As the foundation of his action the plaintiff prefers the Order of the Board of Adjustment and it is obvious that validity of that Order is essential to his success.

We are, with respect, of the opinion that it is apparent on the face of the Order of the 29th of September, 1926, that, in making it, the Board misconceived the nature and scope of its functions under the “Male Minimum Wage Act” and that the Order, as made, is *ultra vires* and invalid.

The following portions of the statute indicate the powers and duties of the Board, so far as presently material:

“3. It shall be the duty of the Board to ascertain the wages paid to employees in the various occupations to which this Act applies, and to fix a minimum wage for such employees in the manner provided in this Act.

5. (1) After inquiry the Board may by order establish a minimum wage for employees, and may establish a different minimum wage for different conditions and times of employment.

13. This Act shall apply to all occupations other than those of farm-labourers, fruit-pickers, fruit-packers, fruit and vegetable canners, and domestic servants.”

It is apparent that the Act deals not with the industries or businesses of employers as such, but with the occupations of employees. The same business or industry may include many different occupations: thus, a bread-making establishment may employ bread-makers, drivers of distributing wagons, book-keepers, shop assistants, etc.; and of such employees each of the classes mentioned would have a different occupation. A fruit rancher may employ fruit-cultivators, fruit-

pickers, fruit-packers, fruit-canners, book-keepers, drivers, etc.; yet, while the fruit-cultivator and the driver and the book-keeper have occupations which may bring them within the Act, the occupations of the fruit-picker, fruit-packer and fruit-canner exclude them from its operation. These illustrations suffice to make it apparent that the occupation of the employee being what the Act is concerned with, the ascertainment of his connection with a particular industry or business does not suffice to determine what will be for him a proper minimum wage.

The enumeration in the Board's Order of the activities included by it in the "lumbering industry" makes it abundantly clear that in making its Order, it had regard rather to the general nature of the industries in the carrying on of which the employees covered by it were engaged than to the particular occupations therein of such employees. The carpenter or painter is not the less engaged each in a different occupation because both happen to be employed in connection with erecting a factory, the one to build it and the other to paint it. The occupation of the driver of a team of horses and that of the river driver are not the less distinct because both may happen to be engaged in handling logs. The pursuits of the stationary engineer and the mill-hand do not cease to be separate and distinct occupations because each is employed in the same sash and door factory. Moreover, for men the nature of whose employment requires them to be continuously "on call" during long hours, though not actually at work (e.g., messengers and watchmen), the same minimum wage per hour of employment is scarcely appropriate as that which would be fixed for men whose employment consists of continual physical work during stated, but comparatively shorter, hours (e.g., woodsmen, or factory hands). That the Provincial Legislature was alive to the difference in regard to the nature and hours of employment between men engaged in actual industrial work and persons employed in incidental work connected with industries such as office clerks, boarding-house and bunk-house assistants is manifest from s. 2 of the "Labour Regulation Act," R.S.B.C., 1924, c. 126.

In a word, what in our opinion the Male Minimum Wage Act contemplates is that the Board in fixing minimum wages will take account of the nature of the employee's work, will consider how exacting it may be, what mental and physical effort it may entail and the conditions under which it is performed, such as the inconvenience, hardship and risk incidental to it, rather than the general char-

acter of the industry or business in the carrying on of which the work will be done or services rendered.

Just as s. 3 requires the Board to deal separately with each kind of occupation, i.e., taking an illustration from the concrete case before us, to distinguish between such entirely different occupations as that of the woodsman and of the dining room waiter, so s. 5 contemplates that it will classify and establish different rates of minimum wages for men pursuing the same trade or calling under different conditions and hours of employment, some entailing greater hardships and inconvenience than others—as, for instance, again using the concrete case before us by way of illustration, between the waiter in the town restaurant and the waiter, or "flunkey," in the distant lumber camp.

That such considerations did not influence the Board in making its order of the 29th of September, 1926, but that, on the contrary, it grouped indiscriminately in that Order all employees engaged in the manufacture or handling of wood products and fixed for all the same minimum wage without regard to the particular occupation of each class of employee seems to us so clear on the face of the Order that its invalidity is beyond doubt. A contrary view was taken by the British Columbia Court of Appeal in *Rex v. Robertson & Hackett Sawmills, Ltd.*, (1926), 38 B.C.R., 222.* That decision has been carefully considered. In so far as it is inconsistent with this judgment it must be overruled, as must also *Compton v. Allen Thrasher Lumber Co.*, (1927) 39 B.C.R., 70.

The appeal will, therefore, be allowed and the action dismissed. Pursuant to the undertaking given, the appellant will pay the costs in this Court of the Attorney General and of the respondent. There will be no costs to either party in the Provincial Courts.

Question of Liability of Local Board for Vocational Education out of District

The Board of School Trustees at Fredericton, New Brunswick, carried on a vocational school under the Vocational Education Act (Statutes of New Brunswick, 1923, chapter 27). A resident in one of the adjoining school districts (known as District No. 2) which did not maintain a vocational school, requested the trustees of that district to apply to the trustees at Fredericton for her admission to that school. District No. 2 trustees refused to comply with the request, and the applicant then appealed to the Vocational Board

*LABOUR GAZETTE, May, 1927, page 586; January, 1927, page 120, etc.

of the province appointed under the Act. The Vocational Board allowed the appeal and directed that the intending student should be admitted to the Fredericton school, fixing the fee to be paid therefor at \$40 per annum. This student attended the school for one year, and another resident in District No. 2, after a similar experience, also attended the Fredericton school for two terms. The Fredericton school trustees then sent to the trustees of District No. 2, a statement of claim for \$120, this sum including \$40 for one student and \$80 for the other. The local Board denied any liability, on the ground that they had refused to make applications for admission to the Fredericton school on behalf of these two students. A summons was then taken out by the defendants to have the points of law raised by them disposed of before the trial of the issue of facts. The York County Court delivered judgment in favour of the plaintiff's claim, but on appeal, the New Brunswick Supreme Court reversed that judgment.

Section 13 of the Vocational Education Act provides as follows:—

"Subject to the provisions of this act, any resident of any city, town, or school district in New Brunswick which does not maintain a Vocational or Pre-Vocational School offering the type of training which he or she desires, may through his or her local school Board make application to any School Board maintaining a school of the desired type, for admission to said school. Any School Board receiving such application may approve or disapprove the same, but in the event of disapproval the application may be made to the Vocational Board, whose decision shall be final. In making its decision, the Vocational Board shall take into consideration the opportunities for free Vocational and Pre-Vocational training in the community in which the applicant resides; the financial status of the community, the age, sex, preparations, attitude and previous record of the applicant and all other relevant circumstances."

The judgment of the Appeal Court pointed out that according to Section 13, application in such cases must be made by the intending pupil through a local School Board, but that in the present cases, the local School Board had made no application. The plaintiffs contended that the section allowed an appeal from the decision of the local Board and that when it refused to further the supplication of the students, the latter appealed directly to the Vocational Board. On this point, however, Chief Justice Hazen, of the Supreme Court, ruled as follows:—

"I cannot find any provision for any such appeal. There is provision for an appeal in case a School Board maintaining a vocational school refuses admission to such school when application is made through the local School Board of the applicant. Had the School

Board of Kingsclear (District No. 2) taken such steps as would have been sufficient to comply with the language of the statute through his or her local School Board, and had application been made to the School Trustees of the City of Fredericton and they had then disapproved of the application, then the applicant might have appealed to the Vocational Board, whose decision would be final. But that was not the case here, and I cannot come to the conclusion that in the case under consideration the appeal provided by the Act was taken, and I conclude that the appeal which was taken was not provided for, as no application was made to the School Trustees of Fredericton through the local School Board of District No. 2, in which the applicants resided."

The plaintiffs action was therefore dismissed with costs.

New Brunswick—School Trustees of Fredericton versus School Trustees of Kingsclear.

Regulation of Fish Canneries *ultra vires* of Dominion

The Supreme Court of Canada recently gave a decision in regard to the interpretation of sections 7A and 18 of the Fisheries Act, 1914, the chief question at issue being whether or not the Dominion has power, under Section 91 (12) of the British North America Act, to make regulations governing fish canneries. Three questions were referred to the consideration of the court:—

Question 1.—Are sections 7A and 18 of the Fisheries Act, 1914, or either of them, and in what particular or particulars, or to what extent, *ultra vires* of the Parliament of Canada? Section 7A was enacted in 1927 as an amendment to the act of 1914, and provides that "No one shall operate a fish cannery for commercial purposes without first obtaining an annual license therefore from the Minister. Where no other fee is in this Act prescribed for a cannery license, the annual fee for each such license shall be one dollar."

Section 18 (as amended in 1919, 1922, and 1924) provides: "No one shall operate a salmon cannery or salmon curing establishment in British Columbia for commercial purposes except under license from the Minister." Subsection (2) fixes the annual fee for a salmon cannery at \$20 with an additional fee for each case of cans according to the species of salmon contained therein; and fixes also the scale of annual license fees to be paid by salmon-curing establishments.

The answer of the Supreme Court of Canada to the first question as to both sections 7A and 18 was "entirely in the affirmative."

Question 2 asked whether, if the provisions of the Fisheries Act mentioned in the previous question are *intra vires* of the Parliament of Canada, the Minister has authority to issue a license for the operation of a floating cannery, subject to restrictions as to place of operations, etc.

The court declared that in view of the preceding answer, this question required no answer.

Question 3 reads as follows: "Under the provisions of the Special Fishery Regulations for the province of British Columbia (made by the Governor in Council under the authority of s. 45 of the Fisheries Act, 1914), respecting licenses to fish, viz., section 14 (c); paragraph (1) or (2) of section 15 (a), and section 24 (g) (1) of the said regulations, or under said section 7A or 18 of the said Act (if these sections or either of them be *intra vires* of the Parliament of Canada), has (a) any British subject resident in the province of British Columbia, or (b) any person so resident who is not a British subject, upon application and tender of the prescribed fee, the right to receive a license to fish or to operate a fish or salmon cannery in that province, or has the Minister a discretionary authority to grant or refuse such license to any such person, whether a British subject or not?"

The Supreme Court of Canada replied to this question as follows:—

As to each of the specified regulations, viz., section 14 (c); paragraphs (1) and (2) of section 15 (a), and section 24 (g), any British subject resident in the province of British Columbia, who is not otherwise legally disqualified, has, according to the true interpretation of these clauses, the right to receive a license, if he submit to proper application and tender the prescribed fee. As to any person resident in the province of British Columbia, who is not a British subject, he is not eligible for a license of the character described in section 14 (c), it being expressly declared by that subsection that "No other than a British subject shall be eligible for such license." And none of the other licenses in question shall, as provided by paragraph (2) of section 15 (a) be granted to any person, unless he "is a British subject resident in the province, or is a returned soldier who has served in His Majesty's Canadian navy or army overseas." It is unnecessary to interpret the regulations with respect to the operation of fish or salmon canneries, inasmuch as sections 7A and 18 are held to be *ultra vires*.

Damages to Workman for Injuries caused by Employer's Negligence

A section hand was employed by the Canadian National Railways in Saskatchewan as a section hand, part of his duties being to assist in putting ice into refrigerator cars (known as icing cars) during the summer months. The ice house from which the ice was taken was beside an elevator siding, from which the workman was required to lift blocks of ice on to the edge of a skid connected with the car. While he was so engaged, the skid slipped from under him and he fell to the ground, sustaining injuries which required treatment in hospital for nearly five months. He brought action against the company on the ground of their alleged negligence, claiming special and general damages on account of his injuries. The case was heard by a jury, which found that negligence had been shown by the defendant, the skid having been defective, and awards the plaintiff \$17,000 in general damage.

On appeal by the company, the Saskatchewan Court of Appeal affirmed the judgment of the lower court. The Appeal Court found that the company had been negligent in regard to the condition of the apparatus used by the plaintiff; that the finding of the jury was sufficiently definite to serve as a basis for the judgment of the trial judge; and that the amount of damages assessed was not excessive. On the latter point the Appeal Court stated that "in actions of the kind under consideration a plaintiff is entitled to a fair compensation for pain and suffering and loss of income and enjoyment in life, by way of general damages."

The appellants had contended that the jury, in arriving at the amount of damages proceeded upon a wrong principle, "in that they awarded a principal sum sufficient to make the income therefrom amount annually to the actual earnings of the plaintiff at the time the accident happened." In regard to this contention the judgment of the appeal court said: "In view of the evidence as to the serious injuries received by the plaintiff, and his helpless and hopeless condition as the result thereof, and his pain and suffering, and the loss of his enjoyment of life, and the express direction of the trial judge to the jury to take these matters into consideration when considering the amount of damages he was entitled to, and the express direction not to estimate the amount of damages for his loss of earning power on the principle of giving him an annuity for life, I cannot draw the inference that the jury proceeded on the principle of awarding the plaintiff a sufficient sum, the annual income of which would

amount to the annual earnings of the plaintiff at the time of the accident."— *Bloudoff versus C.N.R. (Saskatchewan) 1928 4 D.L.R., page 29.*)

Legal Decisions in New York State

The New York State Department of Labour has published a special bulletin (No. 156) containing summaries of Court Decisions on Workmen's Compensation law from January, 1927, to August, 1928, this being the thirteenth bulletin in the series on this subject. The decisions are classified according to subjects, and the book is provided with a table of contents and index which make it useful for reference.

Among the decisions the following may be mentioned:—That assault outside the entrance to the employer's premises in continuance of a quarrel about work within is compensable; that injury to an employee only casually riding to and from work on his employer's vehicle is not compensable; that in-

jury to an employee by fire while retired to his own room upon his employer's premises for sleep, rest, or other personal purpose is compensable; that an employee does not take himself out of his employment by merely crossing from one side of the street to the other; that injury by an object that detaches itself and falls from a building adjoining the employer's premises is compensable; that death by suicide, due to psychosis consequent upon injury, is compensable; that using pails of live coals for warmth is incidental to employment; that an injured employee has a right of action against his physician for malpractice; that an employee has an earning capacity during rehabilitation training; that a minor is not entitled to double compensation for injury due to his employers' negligence, if the Labour Law permitted him to work; that highway employment is not always seasonal; that a carrier's liability to an employee is not vitiated by the employer's false declarations.

Functions of the Department of Labour

Minister—THE HONOURABLE PETER HEENAN
Deputy Minister—H. H. WARD

Labour Gazette.—The monthly publication of the "Labour Gazette" containing a review of the industrial situation throughout Canada, a record of proceedings under the Industrial Disputes Investigation Act, statistics of wages and hours, wholesale and retail prices in Canada and other countries, strikes and lockouts, industrial accidents, summaries of laws and legal decisions affecting labour and other information on current matters of industrial and labour interest.

Labour Statistics and Information.—The collection, compilation and publication of statistics of wages, hours, prices, cost of living, strikes and lockouts, industrial accidents and industrial agreements; also of reports on labour organization and organization in industry, commerce and the professions; the conduct of investigational and research work bearing on industrial relations and labour conditions; the publication of bulletins of information on these subjects.

Industrial Disputes Investigation Act, 1907.—The administration of the Industrial Disputes Investigation Act, Chap. 112, R.S.C., 1927, which provides for the establishment of Boards of Conciliation and Investigation in cases of disputes affecting mines and public utilities.

Conciliation.—The maintenance of a staff of officers at various points whose services are utilized in the adjustment of labour disputes.

Fair Wages.—The administration of Fair Wages policy of the Government of Canada, which provides for the observance of the current wages rates and hours of the district on Government contracts and on railway construction towards which financial aid has been voted by Parliament.

Employment Service of Canada.—The administration of the Employment Offices' Co-ordination Act, Chap. 57, R.S.C., 1927, under which, in co-operation with various Provincial Governments, free public employment offices are maintained in 64 centres; statistical information relative to employment conditions is also collected and published.

Technical Education.—The administration of the Technical Education Act, Chap. 193, R.S.C., 1927, which provides for grants to the provinces for the purpose of promoting technical education; the collection and publication of information in the form of bulletins and otherwise.

Combines Investigation Act.—The administration of the Combines Investigation Act, Chap. 26, R.S.C., 1927, which provides means for investigation of alleged combines.

Dominion Government Annuities.—The administration of the Government Annuities Act, Chap. 7, R.S.C., 1927, whereby provision may be made for old age by the purchase of annuities by individuals, or associations on behalf of their members, or by employers on behalf of their employees.

Old Age Pensions Act.—The administration of the Old Age Pensions Act, Chap. 156, R.S.C., 1927, which provides for a Dominion-Provincial system of non-contributory pensions to needy persons over seventy years of age. The statute becomes operative by agreement with the respective provinces, the latter being entrusted with the payment of pensions and the Dominion Government reimbursing each province coming into the scheme one-half of the sum disbursed in pensions.

Labour Legislation in Canada.—The compilation and publication of reports containing the text of the labour laws of the Dominion and of the Provinces.

Library.—The maintenance of a library of publications on labour and economic subjects.

International Labour Organization (League of Nations).—The collection and transmission of information required by the International Labour Conference and Office; correspondence with Federal and Provincial Government departments and with organizations of employers and employees relative thereto; the representation of Canada at the International Labour Conference and on the Governing Body of the International Labour Office.

Publications of the Department of Labour

Labour Gazette—

Published monthly, in English and French. SUBSCRIPTION RATES: Canada, United States and Mexico, 20 cents per annum, postage prepaid; all other countries, \$1 per annum, postage prepaid. Subscriptions are payable in advance, and should be addressed, with postal note or money order, to Circulation Manager, Department of Labour, Ottawa. Bound volumes for 1927 and for earlier years are available at \$2 each.

Annual Report of the Department of Labour—

An outline of the activities of the Department during the fiscal year ended March 31, 1927. PRICE, 25 cents.

Employment Service of Canada—

Annual Report of the Director. FREE ON APPLICATION.

Technical Education—

Annual Report of the Director. Occasional Bulletins. FREE ON APPLICATION.

Dominion Government Annuities—

Annual Report of the Superintendent. Booklets, Table of Rates, etc. FREE ON APPLICATION.

Combines Investigation Act, 1923—

Report of Commissioner on Alleged Combine in the Distribution of Fruit and Vegetables in Western Canada, Feb. 18, 1925. PRICE, 20 cents.

Report of Commissioner on Alleged Combine amongst Coal Dealers at Winnipeg and other places in Western Canada, Feb. 28, 1925. PRICE, 25 cents.

Report of Registrar on Alleged Combine Limiting Competition in the Marketing of New Brunswick Potatoes, June 9, 1925. PRICE, 20 cents.

Report of Registrar on Alleged Combine in the Manufacture and Sale of Bread in the City of Montreal. March 25 1926. *Out of print.*

Report of Commissioner on Alleged Combine in the Distribution of Fruits and Vegetables Produced in Ontario, July 31, 1926. PRICE, 15 cents.

Interim Report of Registrar on the Proprietary Articles Trade Association, an Alleged Combine of Wholesale and Retail Druggists and Manufacturers, established to fix and maintain Resale Prices of Proprietary Medicines and Toilet Articles, Sept. 6, 1926. PRICE, 10 cents.

Report of Commissioner on the Proprietary Articles Trade Association, Oct. 24, 1927. PRICE, 10 cents.

Labour Organization in Canada—

Published annually. Contains full information on trade unions, their origin, organization, officers, etc., with outlines of chief events in each year in connection with labour activities. PRICE, 50 cents.

Organization in Industry, Commerce and the Professions in Canada—

Published annually. Gives information regarding associations of employers in industry and commerce, and professional and scientific organisations. PRICE, 25 cents.

Co-operative Associations in Canada—

Published annually. A directory of the co-operative movement. PRICE, 15 cents.

Labour Legislation as existing in Canada on December 31, 1920 (with Annual Supplements to 1926)—

Contains text of Dominion and Provincial labour laws, each supplement containing a cumulative index to the series. PRICE, main volumes, 50 cents; supplements, 15 cents.

Reports on Wages and Hours of Labour in Canada, 1900-1927. FREE ON APPLICATION.

Report on Prices in Canada and Other Countries, 1927. FREE ON APPLICATION.

Strikes and Lockouts in Canada and Other Countries, 1925-6-7. FREE ON APPLICATION.

Bulletins of the Industrial Relations Series: PRICE, 10 cents each.

No. 1—Joint Councils in Industry.

No. 2—Report of a Conference on Industrial Relations held at Ottawa, Feb. 21-22, 1921.

No. 3—Joint Conference of the Building and Construction Industries in Canada, held at Ottawa, May 3-6, 1921.

No. 4—Employees' Magazines in Canada.

No. 5—Canada and the International Labour Conference.

No. 6—The International Labour Organization—Laws of Canada bearing on Draft Conventions and Recommendations. (Out of print.)

No. 7—Canadian Railway Board of Adjustment No. 1—Report of Proceedings of Board from Sept. 1, 1920 to Sept. 30, 1923.

No. 8—National Conference regarding Winter Employment in Canada, Sept. 3-4, 1924—Report of Proceedings and Discussion.

No. 9—Canadian Railway Board of Adjustment No. 1—Report of Proceedings of Board from Oct. 1, 1923, to Sept. 30, 1927.

Government Intervention in Labour Disputes in Canada.—FREE ON APPLICATION.

Report of Judicial Proceedings respecting Constitutional Validity of The Industrial Disputes Investigation Act, 1907, and Amendments of 1910, 1918 and 1920—PRICE 50 cents.

Report of Select Standing Committee of the House of Commons on Industrial and International Relations, 1926—FREE ON APPLICATION.

Bulletin entitled "The Legal Status of Women in Canada"—FREE ON APPLICATION.

Report of National Industrial Conference, 1919—PRICE 25 cents.

Report of Royal Commission on Technical Education, 1913—

(In four parts, Part 3 out of print.) PRICE, 50 cents.

VOLUME 28]

DECEMBER, 1928

[NUMBER 11

NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

Monthly Summary

A SLIGHT increase in industrial employment in Canada was recorded on November 1, 1928, in place of the losses usual at this season. The increase is shown in the statements received by the Dominion Bureau of Statistics from 6,609 employers who reported the number of their employees. Each employer so reporting has a staff of at least fifteen employees, all industries being represented except agriculture, fishing, hunting, and highly specialized business. The total number of employees reported increased from 998,325 on October 1, to 1,000,063 on November 1. The employment index (with January, 1920, as the base=100) rose from 118.9 in the preceding month to 119.1 on the date under review, as compared with 107.5, 102.8, 97.1, 93.0, 98.8, 95.8 and 90.2, on November 1, 1927, 1926, 1925, 1924, 1923, 1922 and 1921 respectively. At the beginning of November the percentage of unemployment reported to the Department of Labour by local trade unions was 3.1, in comparison with unemployment percentages of 2.2 at the beginning of October, and 3.9 at the beginning of November, 1927. The October percentage was based on the reports tabulated by the Department of Labour from 1,652 local trade unions with an aggregate membership of 184,580 persons. Reports received by the Department of Labour from the office of the Employment Service of Canada showed a decrease in the number of placements during October, due chiefly to the seasonal curtailment of farming operations.

The average cost of a weekly family budget of twenty-nine staple foods was \$11.28 at the beginning of November, the same as for October, as compared with \$11.07 for November, 1927; \$11.01 for November, 1926; \$11.23 for November, 1925; \$10.46 for November, 1924; \$10.69 for November, 1923; \$10.29 for November, 1922; \$11.08 for November, 1921; \$15.32 for November, 1920; \$16.92 for June, 1920 (the peak); \$13.65 for November, 1918; and \$7.96 for November, 1914. In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon prices in 1913 as 100, was slightly lower at

148.6 for November, as compared with 150.2 for October; 152.2 for November, 1927; 151.4 for November, 1926; 161.2 for November, 1925; 157.7 for November, 1924; 153.3 for November, 1923; 151.9 for November, 1922; 153.6 for November, 1921; 224.5 for November, 1920; 256.7 for May, 1920 (the peak); and 207.4 for November, 1918.

The time loss due to industrial disputes in November, 1928, was much less than in the previous month but considerably greater than in November, 1927. Twelve disputes were in progress at some time during the month, involving 1,752 workpeople, and resulting in a loss of 34,825 working days. Corresponding figures for October, 1928, were 14 disputes, 2,263 workpeople, and 38,931 working days; and for November, 1927, 16 disputes, 1,933 workpeople, and 9,455 working days.

Industrial Disputes Investigation Act, 1907

During November the Department received a unanimous report from the Board of Conciliation and Investigation appointed in connection with dispute between the Canadian Pacific Railway Company, eastern lines, and its engineers. Two new applications were received and Boards were appointed during the month in both cases. In connection with the application from certain employees of the Canadian National Steamships, which was reported in the last issue of the LABOUR GAZETTE, a settlement was effected during November through the mediation of the Minister of Labour, and accordingly no Board was established in this case. The text of the report and a full account of the various proceedings under the act are given on page 1327.

Dominion pays for accident compensation to disabled ex-soldiers

In the course of a recent address to the members of the Canadian Manufacturer's Association at Montreal, Mr. Robert Taschereau, chairman of the Workmen's Compensation Commission of the Province of Quebec, called attention to the provision made by the Gov-

ernment of Canada for the payment of the cost of workmen's compensation to ex-service men having a war disability of 25 per cent or more. Payments in such cases are made by the Department of Pensions and National Health, Ottawa. In the province of Quebec this liability is taken over from the employers and the insurance companies, while in most of the other provinces, it is taken from the Workmen's Compensation Boards. The order is designed to further the employment of partly disabled men who might otherwise have difficulty in securing suitable work.

Mr. Taschereau stated that this order in Council was not generally known, and that it had not been taken advantage of. "If you have disabled ex-soldiers in your employ who have been injured while working for you, you can apply to Ottawa and the government will immediately reimburse you. This is not only in your favour, but also in that of the insurance companies."

The full text of the existing order-in-council on this subject is given on another page of this issue. The order will remain in effect until March 31, 1929, or until a later date if it should be renewed.

Safety work stimulated by workmen's compensation

The results of the first year's administration of the United States Longshoremen's and Harbour Workers' Compensation Act, are summarized in the current issue of the *American Labour Legislation Review*. The provisions of this act were outlined in the *LABOUR GAZETTE*, April, 1927, page 397. "One of the most significant developments during the past year," it is stated, "is the stimulus which the law has given to accident prevention. The Waterfront Employers of Seattle, a leading employers' organization on the Pacific Coast, has for several months been engaged in drawing up safety regulations along the lines now provided in the British Code for longshore work. Shipowners in New York have likewise been devoting increased attention to safety work. The Commission has authorized the appointment of an assistant safety engineer to carry into effect the accident prevention provisions of the law. It is to be hoped that the administrative officials with the co-operation of both employers and employees will promptly formulate a modern safety code for this extra-hazardous employment."

Another effect of workmen's compensation

A less desirable indirect effect of compensation legis-

lation was noted by Mr. C. J. Boyd, general superintendent of employment

offices in Chicago, in the course of an address

at the 15th annual meeting of the International Association of Public Employment offices. Mr. Boyd was discussing "some of the problems of the middle aged man and his chances of securing employment." He noted that a man of 45 years of age or over finds a certain amount of protection from belonging to a trade organization, but that in the present age of "speeding-up" there is a marked tendency in industry to drop the middle aged man. "The compensation law," he claims, "works against the man over 40 years of age. A study made of the workmen's compensation law (that is, of Illinois) for the last ten years shows that as a general rule men are turned down either by the employment manager or the doctor. The children can not go to work because they have not reached the age of 18. What is he going to do? It is a desperate situation. This is universal with the large industries. Some will not employ a man over 35 years of age. They give as an excuse the workmen's compensation and also the insurance and pensions particularly. If a man is employed at 45 years, it is claimed he ceases to be productive. It is a serious question to which our employment offices must give some study and thought."

Jury's recommendation for Great Lake shipping

The verdict of the coroner's jury empanelled to inquire into the circumstances of the foundering of the Steamship *Manasoo* off Griffith's Island on the Georgian Bay on September 15, exonerated the officers of the vessel from blame, and made a number of recommendations for the better protection of shipping on the Great Lakes. This disaster was noted in the *LABOUR GAZETTE*, November, 1928, page 1286. On that occasion fourteen members of the crew were drowned and another died from exposure on a raft two days later. The jury recommended that all freight and passenger boats be tested as to equilibrium under all conditions of loading, this information to be given owners and operators; that life-boat drill be enforced; that a proper number of life-saving stations be established at strategic points on Canadian shores, particularly one at Griffith Island; that all passenger and freight boats be compelled to carry automatic flares which will operate in case of sinking or extreme danger; that all boats carrying passengers be equipped with wireless equipment.

Dr. A. B. Rutherford, the coroner, assured the jury that he was well satisfied with their verdict. He hoped that the authorities would act upon these recommendations immediately.

Co-operation of agriculture and industry

A preliminary conference was held at Toronto on November 27, under the auspices of the Canadian Chamber of Commerce, for the purpose of framing a program of co-operation between agriculture and industry. Every province was represented at the meeting, the delegates including the Hon. W. R. Motherwell, minister of agriculture of the Dominion, and the ministers of agriculture of five provinces; Dr. Tory, president of the National Research Council; and members of the National executive of the Canadian Chamber of Commerce from central, eastern and western Canada. Suggestions were made for developing closer relations between farming and the urban industries, and it was decided that local boards of trade and chambers of commerce should be encouraged to assist in the work of co-ordination. A resolution was passed commending the action of the federal Parliament in creating a National Research Council for the purpose of industrial and agricultural research.

It is stated that a larger conference will be held early in 1929, when the various economic organizations in Canada will be fully represented.

8-hour day legislation in Argentine Republic

A bill for the limitation of hours of work to eight in the day and 48 in the week was passed by the Argentine Chamber of Deputies during the late session. Previously the regulation of hours of work in the Republic had been left to the legislatures of the various provinces. Most of the provinces have enacted legislation governing the conditions of labour, but no federal measures of this class had been adopted before. A similar bill was adopted by the Chamber in 1921, but was rejected by the Senate. During the debate, it was pointed out that the bill embodied a higher standard than that of the Washington Hours Convention of the International Labour Conference, but it is expected that ratification of the Convention by the Argentine Republic would follow the final passing of the new measure. The principal subject of controversy in connection with the bill was the question whether it should apply to agricultural workers and domestic servants, and it was finally decided that these classes should be excluded from the scope of the measure.

The constitution of the Argentine Republic is similar to that of the United States. The Republic is divided into fourteen provinces, ten territories and one federal district (Buenos Aires). Matters affecting the Republic as a

whole are under the control of the central government. The executive power of the Republic is in the hands of the President, who is elected for a term of six years by electors appointed by the provinces and the capital. The governors of the various provinces are invested with extensive powers, and in their constitutional functions are independent of the central executive. The provinces have complete control over their own affairs.

The Hours of Work bill was first discussed in 1921, in connection with a proposed Labour Code, and a draft Code which was still under consideration during the present year included the subject of hours of work.

Ontario Compensation Act as model for Great Britain

The Trade Union Congress of Great Britain, at its recent annual convention (LABOUR GAZETTE, October, 1928, page 1097) adopted the draft of a new Workmen's Compensation Act, which

it is stated will be introduced at the present session of Parliament. According to the General Council's report to the conference the bill is avowedly based on the Workmen's Compensation Act of Ontario, which "has been in operation for thirteen years, has supplied the model for the legislation of other provinces, and is regarded by the Canadian workers as highly satisfactory." The bill would set up a Board to administer compensation, and make insurance compulsory, with a State Accident Fund. The existing rates of compensation are raised considerably, and provision is made for special medical treatment not already available under the National Health Insurance Act. Except for the fact that no right to artificial limbs is given and no provision is made for extra compensation where the accident victim needs constant attendance, the bill would appear to be in harmony with the International Draft Convention on Workmen's compensation of 1925.

The accident risk in respect of which compensation is payable is defined as "personal injury by accident occurring in connection with employment", the words "in connection with" being substituted for the words "arising out of and in the course of," which appear in the existing law. The new definition obviously lends itself to a more elastic interpretation. As regards occupational diseases, the special schemes for compensation for silicosis are abolished, but otherwise the system remains essentially unchanged.

Where death results from the injury, the compensation consists of (i) burial expenses not exceeding £20 and medical expenses; (ii) 30s. weekly to the widow; (iii) 10s. weekly for each child under 16; (iv) 15s. weekly for

each orphan under 16. The maximum total weekly sum must not exceed the deceased's weekly earnings. Thus the present lump sum compensation is abolished.

The waiting period remains fixed at three days. The rate of the weekly payment, however, is raised to 75 per cent of wages in all cases of total incapacity (instead of only in the case of low wage-earners, as at present). The minimum rate is £3 a week (twice the present rate), or actual wages, whichever is less. In cases of partial incapacity, the compensation is equal to the difference between wages before the accident and the wages the workman is able to earn in available employment after the accident. Commutation for a lump sum is allowed by the Board, where it appears to be in the workman's interest. The Board may provide special medical treatment where necessary in order to avoid heavy payment for permanent disability.

Insurance under the bill becomes compulsory, as recommended by the Holman-Gregory report in 1920. An Accident Fund is established under the management of the Board, to which all employers are required to contribute, and out of which all compensation is paid. The rates of premium for each risk class are fixed by the Board. These provisions are closely modelled on those of the Ontario Act.

The Workmen's Compensation Board would consist of seven members, three being lawyers and four experts on medicine, engineering, finance and labour matters. The Board would be exclusively competent to determine all questions arising under the bill and to make regulations for its administration. All claims for compensation would be heard, in the first instance, by a local compensation officer. In the second instance on appeal, a claim would be heard by a local committee of employers and workpeople. Thence an appeal would lie, in the last instance, to the Board. The ordinary courts would have no jurisdiction.

Industrial health research at McGill University

The work and methods of the Division of Industrial Hygiene, created in 1927 as part of the Department of Public Health and Preventive Medicine of McGill University, Montreal, were described by Dr. Frank G. Pedley in the *LABOUR GAZETTE*, July, 1928, page 723. An example of the valuable research work carried on by the Division was given in a recent paper by Dr. Pedley and Dr. Gordon Sproule, contributed to the *Canadian Medical Association Journal*. Ten cases of lead poisoning in bronze foundries are dealt with

in this paper, most of these having passed through the Montreal General Hospital or otherwise come under the observation of the Industrial Hygiene Division. While lead poisoning among bronze foundries must, it is stated, be fairly common, it is remarkable that medical literature contains no reference to this disease. For example Bulletin No. 306 of the United States Bureau of Labour Statistics, which lists in tabular form the various occupations and their hazards, includes brass foundries, but omits to include bronze foundries among those in the lead group. "During the past six months," the writers state "we have had the opportunity of seeing some ten cases of lead poisoning among bronze foundries, and have seen a number of other bronze foundries who showed very suggestive signs of lead poisoning." The ten active cases here mentioned were all more or less typical cases of plumbism. Several were admitted to the Montreal General Hospital, and most of them yielded to the usual treatment and a lead eliminating régime lasting several weeks.

The paper gives a detailed medical analysis of the cases, and describes the industrial processes in bronze foundries and the hazards met with by the workers. As to preventive measures, the authors consider it unreasonable to require men to wear respirators all day long at their work, and believe that some other method of protection should be devised.

"In regard to masks it may be said at the outset that it is very difficult to get men to wear them for eight hours a day. In the presence of dust and heat, masks become very uncomfortable, and at best they should be looked on as a last resort. Furthermore, it is questionable whether the average commercial mask (such as the so-called pig-snout mask) is of much value in the presence of very fine fumes."

More reliance is placed by the authors on proper ventilation. The furnaces, they consider, should be fully equipped with hoods connected with exhaust fans. Certain individuals are more susceptible to lead poisoning than others, and an accurate check should be kept on each man exposed to the hazard of plumbism, inspection being made if possible every week. Milk, the old-fashioned preventive of lead poisoning should be served to the workers, and provision should be made also against the absorption of lead by other means than inhalation, the measures suggested including special quarters for eating, washing facilities, and the forbidding of smoking and chewing while at work.

Old age, widows and orphans' pensions in Great Britain

A revised edition of the Guide to Widows', Orphans' and Old Age Pensions in Great Britain has been published by the "Fleetgate Publications," Daily News, London. The British pension system was outlined in the LABOUR GAZETTE, June, 1925, in connection with the enactment of the Widows' Orphans' and Old Age (contributory) Pensions Act of 1925. This act supplemented the Old Age Pensions Acts of 1908-1924, which provided for the payment of pensions, at varying rates, to persons who have attained the age of 70 years, and who comply with certain stipulated conditions as to means, residence and nationality. The earlier scheme was entirely non-contributory, the entire cost of pensions and their administration being derived from moneys provided by Parliament. In consequence of the passing of the Widows', Orphans' and Old Age (contributory) Pensions Act, 1925, the original old age pensions scheme was considerably affected, inasmuch as any person who receives a pension under the Act of 1925 until the age of 70, is entitled after that age of a continuance of his or her pension under the earlier acts, without regard to the conditions as to means, residence and nationality imposed by those acts.

The act of 1925 was established on a contributory basis, and includes within its scope all persons who are insured for the purposes of National Health Insurance. It makes provisions for the payment of pensions to the widows of insured men; of allowances to widows of insured men in respect of certain children; of pensions in respect of orphans of insured men and women; and of pensions to insured men and their wives, and to insured women, upon attaining the age of 65 years. The rates of benefits and of contributions still remain as they were stated in the LABOUR GAZETTE, June, 1925. The maximum old age pensions payable under both schemes is 10 shillings a week, subject to a reduction according to the private means of the pensioner. The ordinary rate of contribution under the Act of 1925, is, for a man, 9d. a week, and for a woman 4½d. a week, the employer paying half the men's, and 2½d. of the women's contributions.

A number of transitional provisions were included in the act of 1925 for the purpose of meeting the difficulties which arose in some cases on the introduction of the contributory system. The "Guide" states that "the scheme for the provision of Widows', Orphans', and Old Age Pensions has now reached normality, and although a large number of pensions con-

tinue to be payable under the transitional provisions, the general conditions in connection therewith have, in the main, ceased to function."

The course of wholesale prices in Canada

Professor H. Michell, of McMaster University, contributes to the November issue of *Industrial Canada* a study of the course of wholesale prices in Canada in recent years. The series of index numbers calculated by the Dominion Bureau of Statistics shows that since the year 1897, when all prices were at their lowest, the following advances in wholesale prices have occurred:—all commodities, 101 per cent; vegetable products, 123 per cent; animal products, 161 per cent; textiles, 110 per cent; wood products, 130 per cent; iron and steel, 57 per cent; non-ferrous metals, 31 per cent; non-metallic minerals, 92 per cent; chemicals, 64 per cent.

Professor Michell notes the great advance in the wholesale prices of animal products, meats, leather, etc., during the past thirty years, and draws the "obvious conclusion" that the era of cheap meats, leather, boots and shoes, is over forever. The advance in wood products is attributed to the rapid decrease of the world's forest reserves, and here also it is stated that "the world will never see cheap lumber again, and we may anticipate a steadily rising scale of all lumber values. "The difference," Mr. Michell continues, "between the enormous rise in animal products and the very moderate rise in iron and non-ferrous metals, is briefly in the ever-increasing pressure of population upon meat supplies, coupled with greater wealth allowing of a higher consumption of meat, while in the case of metals greater exploitation of natural resources has produced greater supplies, coupled with improved methods of manufacture."

The writer observes that retail prices never move so violently as wholesale prices "for the reason that generally retail markets are less open to speculation, and to all the currents which affect the larger markets." The recent tendency of retail prices to rise notwithstanding a downward movement in wholesale prices indicated, in Professor Michell's opinion, an unhealthy "spread" between the producer and the consumer.

Question of equal work and equal pay for women

The question of special protective legislation for the benefit of women workers has been the subject of discussion in various countries during the past two years. References to this controversy have been

made in recent issues of the *LABOUR GAZETTE* (December, 1927, page 1277; September, 1927, page 926; June, 1926, page 531, etc.)

The United States Women's Bureau of the federal Department of Labour was called on in 1926 to mediate between the contending parties, and an advisory committee was appointed to investigate the effects of the special regulations on behalf of female employees. The report of this committee, recently published, is to the effect that the employment of women has not been restricted in consequence of such regulations.

The same question was debated last year in the British House of Commons, some of the women's representatives, including Miss Margaret Bondfield, opposing special regulations for women, and advocating instead policy of "equal pay for equal work." The same view is taken also by the Viscountess Rhondda, in a letter written from England to the *New Republic* (New York), November, 28, 1928, supporting the views of the National Women's party in the United States in opposition to distinctive laws for women. "Our own experience," she says, "has shown us that the only adequate protection of women lies in giving them equal conditions of work and equal pay. Under a system by which women wage-earners are 'protected' by a series of restrictions based not upon the nature of work but on sex, women are still at the bottom of the wage market, the worst paid and, as you, sir, acknowledge, the least organized section in the industrial community.

"In this country the more important professional women's organizations work for equal conditions of employment, such as the National Union of Women Teachers, the Federation of Women Civil Servants, the Women Engineers and the Women's Electrical Association, the Open Door Council, the Women's Freedom League, and St. Joan's Social and Political Alliance (the Roman Catholic women's organization) and this Society, have all taken a firm stand on this matter.

"This October, at York, the National Council of Women of Great Britain at its annual conference, at which 800 delegates represented women's societies of every kind and occupation, passed by an overwhelming majority a resolution demanding that in industrial legislation all regulations and restrictions in regard to conditions of work should apply equally to men and women.

"Englishwomen are realizing that without equal conditions of work equal pay is almost impossible. Low pay handicaps adequate organization, and ill-organized, low-paid labour will always be liable to exploitation. The only real protection for women lies in equal pay

and improved organization, and we congratulate the National Women's Party on their championship of this principle."

Mediation of labour disputes in Pennsylvania

The mediation of labour disputes is one of the functions of the Department of Labour and Industry of Pennsylvania. This duty is assigned to the Bureau of Industrial Relations, which has authority, in the event of a dispute arising in any industry in regard to wages, hours or conditions of employment, to send a representative for the purpose of securing an amicable settlement by mediation. If a settlement cannot be effected and the dispute is submitted for arbitration, the Department (acting through the Bureau) may name an impartial chairman of the board of arbitration, in the event that the parties to the dispute fail to do so. A special bulletin recently issued describing the various functions of the department states that "the law providing for mediation and arbitration of industrial disputes does not give authority for compulsory arbitration in any controversy. This feature of the law has the apparent approval of both the employers and the employees. It is not the desire of the Department of Labour and Industry to try to settle a labour dispute by force but, to try to prove to both employer and employee that it is to the interests of both groups to meet the controversy as sensible men, and to consider all factors of the dispute. The bureau endeavours to secure settlement that will allow the employees to return to their work feeling that the settlement is just, thereby, encouraging a mental attitude that will tend to greater efficiency in their work."

A study of employment fluctuations

The Pennsylvania Department of Labour and Industry recently published a special bulletin (No. 24) on "Employment Fluctuations in Pennsylvania, 1921-1927." The writer, Mr. J. Frederic Dewhurst, points out that this State, owing to the great diversity and size of its industries, constitutes a good industrial cross-section of the country, and his conclusions have therefore a wide application. His purpose is to find the basis of a true index number of employment, this index expressing the employment figures in a given month as a percentage of the corresponding figure for a selected base period. Mr. Dewhurst selected the three-year period from 1923 to 1925, inclusive, as the base period most suitable for his purpose. Adjustments were made to the changes in population over the base period, and to the seasonal variations in the several

industries, and final weighted or adjusted index numbers were obtained for each manufacturing group and for all industries combined.

The writer finds that the index numbers thus established reveal the same fluctuations as other indicators of business and financial conditions such as freight car loadings, power production, rates of bank loans to deposits, and volume of retail sales, showing striking interdependence among the various phases of economic activity. "Labour," he says, "is the keystone of the economic arch, providing on the one hand the human effort required to produce and distribute goods, and on the other, the buying power necessary to purchase and consume these goods."

Mr. Dewhurst comments on the effects of the recent tendency to displace labour by machinery, resulting from greater industrial efficiency, and finds that the low level of the employment index in 1921 and 1924, and more recently in 1927, reflected a considerable amount of unemployment, outside of a shift of workers from manufacturing to other occupations. On the general subject of unemployment he says:—

"Unemployment, moreover, is not confined to these periods of 'cyclical' depression. Even in years of prosperity a considerable amount of seasonal unemployment exists, as evidenced by the fluctuations recurring regularly each year in retail trade, in the building industry, and quite noticeably in over half of the manufacturing industries included in the index. Unemployment of labour, whether it be seasonal or cyclical, or of that transitory type resulting from the voluntary or involuntary shift of workers from one industry to another or from one plant to another, is an economic and social burden which, in the last analysis, rests not only upon the worker but upon the employer and the entire community. Unemployed labour usually connotes unemployed capital; in either case, unused capacity, an overhead charge upon the community which results in reduced output, higher costs and weakened labour morale.

"These problems arising from the instability of our economic system, cannot be solved by arbitrary dictum or by official action; their solution must await a better understanding of the complex relationship and interdependence of the various phases of industrial and commercial activity. Study of these perplexing problems is one which offers impelling possibilities both for the economist and the statistician."

The Montreal Construction Council recently asked the city Public Works Committee to take new measures designed to ensure the

safety of workmen in the building trades. The suggestions include closer supervision of scaffolding, hoists and derricks; a system of signals for use in construction to prevent accidents on derricks; inspection of all false work, cribs, and similar construction pertaining to building operations, etc.

In an address delivered at a meeting of a Toronto local union of the International Photo-Engravers' Union in December, vice-president Vola stated that the general adoption of a five-day working week of 40 hours was sought by the international union as a measure tending to relieve unemployment.

Compulsory extension of the provisions of the provincial Workmen's Compensation Act to include farmers was advocated at a convention of local farmers' institutes held at Kelowna, British Columbia, in November.

The Shipping Federation of Canada has made representations to the Department of Marine and Fisheries with a view to the enactment of a provision which would require the retirement of pilots at the age of 65 years and the yearly renewal of licenses after pilots have reached the age of 60 years.

The *Manchester Guardian* recently reported that the transference of young miners from the stagnant districts in Great Britain to less depressed areas was continuing and about 600 were being transferred every week. "There is a seasonal lull in overseas migration, but it is satisfactory to know that half of the 8,500 miners who went to Canada for the harvesting are remaining there, and that of those who have returned several hundreds are undergoing training in agriculture to enable them to migrate with success. The government will be able to announce preparations for more extended migration in the spring."

A representative meeting of employees of various municipalities in Saskatchewan, held at Moose Jaw during November, adopted a resolution recommending the adoption of a plan of superannuation applicable to all municipal employees in the province.

The total coal production of the State of Ohio for 1927 was 15,762,369 tons, and the numbers of employees for the week of greatest employment was 38,440. Number of fatal accidents in the mines during the year was 61, the frequency of fatalities being one to every 630 men employed and to every 258,399 tons of coal mined.

GENERAL REVIEW OF THE INDUSTRIAL SITUATION

Employment

THE employment situation throughout Canada at the end of November was reported by superintendents of the Employment Service of Canada to be as follows:—

Although open weather in the Province of Nova Scotia had facilitated ploughing, outdoor farm work was practically at a close. While logging operations in this province were momentarily rather quiet owing to the mild weather, prospects were good and some men were being engaged. Manufacturing throughout the province was normally active, with the iron and steel group showing a fair volume of production, having received some orders of consequence. Building and construction in Halifax continued on a favourable scale, but in the rest of the province there was not much doing in this industry. Coal mining showed a rather satisfactory level of production. The demand for women domestic workers continued good.

As in Nova Scotia, outdoor farm work in the Province of New Brunswick was practically at a close for the season. The fishing industry reported fair catches. The logging industry was active, with some men being taken on. Although there was nothing of an outstanding character reported in the manufacturing industry, the different establishments continued to work on a normal basis. Construction and building were fairly active for the season, but seasonal curtailment had set in. The demands for women domestic workers were quite numerous with no shortage of applicants reported.

From the Province of Quebec it was reported that the number of orders for farm workers was at a minimum. The Quebec City and Hull employment offices stated that conditions in the logging industry were very active, while Three Rivers showed some bushmen returning from the woods on account of the lack of snow; the Montreal office continued to show normal placements in this line. Manufacturing was reported as generally satisfactory in all the industrial districts, with no outstanding feature in this industry. The advancement of the season had caused a decrease in the numbers of workers required in the building and construction groups, although Montreal, Sherbrooke and Hull districts were commented upon as showing a continuation of substantial construction works. Transportation was satisfactory throughout the province, while trade showed the usual seasonal increase.

Farm orders being registered at the Ontario employment offices were not very numerous.

With very few building trades workers reported as unemployed, construction appeared to be continuing on a larger scale than is customary in this province at this season. Although factories were not increasing staffs to any appreciable extent, the manufacturing situation continued to be quite favourable. Orders for workers in the logging and allied groups were not numerous, and those that were being received were for the most part for replacement purposes. The mining industries in the northern section of this province showed normal activity, but as usual requirements of workers were not on a very large scale. The most prominent feature of the employment situation so far as women domestic workers are concerned was the continued scarcity of experienced cooks-general.

Orders for and placements of farm workers in the Province of Manitoba showed a slight downward fluctuation with no scarcity of applicants for winter farm work. The situation so far as the placement of logging workers from Winnipeg was concerned was stated to be none too favourable, for while many applicants were willing to accept such employment the prospect of vacancies materializing was not particularly promising. Building and construction seemed to be holding up unusually well for the time of year, and considerable activity continued in the city of Winnipeg where the value of building permits issued up to December 1 exceed the total for 1927 by some thirty per cent. All manufacturing plants continued to operate normally. The demand for women domestic workers showed a falling off as did also the number of applications being received from workers of this class.

Orders for farm workers for winter being received by employment offices throughout Saskatchewan were not very numerous, while suitable applicants were quite sufficient to take care of all such vacancies being notified. Building and construction showed about normal activity for the time of the year. Some few placements were being made in the logging industry. Requests for women domestic workers were fairly numerous with applicants apparently sufficient in number. While the employment situation in the Province of Saskatchewan showed no substantial fluctuations, it was rather favourable for the time of year.

The demand for farm workers in the Province of Alberta was rather quiet, and plenty of applicants were available for winter employment. Building and construction appeared to be furnishing quite a volume of employment considering the lateness of the season, although

additional workers were not being taken on in any considerable numbers. There were some requests for logging workers being registered at the different offices. Although an industrial dispute was effective in the coal

mines in the Drumheller zone, practically all the mines were reported as running with reduced crews, although it was stated that the continued mild weather was having its effect on the output of the mines in the district in

question. The general employment situation throughout Alberta seemed quite favourable for this season.

While some districts in the Province of British Columbia reported logging and lumbering industries as rather quiet, others showed a reasonable amount of activity, with some additional workers being engaged. The metal mining industries of the province were not taking on any considerable number of workers, but so far as activity was concerned they seemed reasonably active. Building and construction, while not reporting outstanding activity, were fairly busy for the time of year. Manufacturing industries continued to operate on a normal basis. General conditions throughout this province seemed not unfavourable for the season.

EMPLOYERS' REPORTS.

Employment at the beginning of November showed a small advance, instead of the losses usually indicated in the late autumn, while activity continued at a higher level than on the corresponding date in any other year since 1920. The Dominion Bureau of Statistics tabulated statements from 6,609 employers, whose payrolls were enlarged from 998,325 persons on October 1, to 1,000,063 at the beginning of November. Reflecting this increase, the index number (with January, 1920, as the base equal to 100) rose from 118.9 in the preceding month to 119.1 on the date under review, as compared with 107.5, 102.8, 97.1, 93.0, 98.8, 95.8 and 90.2 on November 1, 1927, 1926, 1925, 1924, 1923, 1922 and 1921, respectively.

Heightened employment was registered in Quebec, Ontario and the Prairie Provinces, but the trend was downward in the Maritime Provinces and British Columbia. In the Maritime Provinces, there were continued reductions, particularly in construction, but also in manufacturing, while logging, mining and transportation reported important seasonal increases. In Quebec, manufactures, trade and transportation showed moderate improvement, and there were marked seasonal advances in logging, but construction and services recorded curtailment. In Ontario, employment again advanced; the most extensive recessions were mainly of a seasonal nature in construction, canning, saw-milling and iron and steel plants, while logging, textiles, transportation and trade were decidedly busier. In the Prairie Provinces, steam railway operation, coal mining, logging and trade were much more active; on the other hand, manufacturing, construction and services showed contractions. In British Columbia, the greatest losses were in manufacture and

construction, while logging and mining afforded heightened employment.

Additions to staffs were registered in Montreal, Toronto and Hamilton; in Quebec, Ottawa, Windsor and the Other Border Cities, and Vancouver there were reductions, while practically no general change was noted in Winnipeg. In Montreal, manufacturers, transportation and trade reported increased activity, but seasonal losses were recorded in construction and services. In Quebec city, construction showed curtailment, while other industries reported only slight changes. In Toronto, the bulk of the advance was in manufacturing, construction and transportation. In Ottawa, practically all the curtailment took place in construction, but trade showed greater activity. In Hamilton, the most marked advances were in manufactures and construction. In Windsor and the Other Border Cities, seasonal dullness in automobile plants caused the decrease. In Winnipeg, trade reported considerable gains, but construction released help. In Vancouver, construction and manufactures showed most of the reduction.

Further shrinkage of a seasonal character was noted in manufactures, chiefly in the lumber and food-canning industries, while textile, pulp and paper, rubber, electrical apparatus, non-ferrous metal and some other factories registered pronounced advances. There were also large increases in logging, mining, transportation and trade, but construction and maintenance and services showed decided seasonal losses.

An article elsewhere in this issue gives in some detail the employment situation as at the beginning of November, 1928.

TRADE UNION REPORTS.

The 1,652 labour organizations from which reports were tabulated on October 31 with 184,580 members indicated 3.1 per cent of unemployment as compared with 2.2 per cent in the previous month, this being the first variation from the favourable trend which has been indicated since the close of February this year. This decline in employment during October may be largely attributed to the setting in of seasonal quietness in a number of trades and industries. Alberta unions reported less unemployment than in September, especially for coal miners who, however, indicated a large amount of short time. In all the other provinces slightly adverse conditions prevailed, the reductions in Nova Scotia, New Brunswick, Ontario, Manitoba and Saskatchewan being less than one per cent and Quebec and British Columbia showing contractions in employment of 2.2 per cent and 2.5 per cent respectively. The

situation was more favourable during October than in the same month of last year when the unemployment percentage stood at 3.9, Ontario, Manitoba, Saskatchewan and Alberta unions all reporting additional employment available during the month under review. In New Brunswick, Quebec and British Columbia nominal declines in activity were recorded, while in Nova Scotia the same percentage of idle members was registered in both months of the comparison.

A more detailed report of the situation among local trade unions at the close of October appears elsewhere in this issue.

During the month of October, 1928, the offices of the Employment Service of Canada referred 59,382 workers to positions and effected a total of 57,740 placements. Of these the placements in regular employment were 43,293, of which 38,512 were of men and 4,781 of women. The placements in casual work numbered 14,447. Employers notified the service of 61,926 vacancies, of which 49,896 were for men and 12,030 for women. Applications for work were received at the offices from 56,533 men and 14,270 women, a total of 70,803. A marked decline is noted in the volume of business transacted when the above figures are compared with those of the preceding month, but an increase is shown in the records when compared with those of October last year, the reports for September, 1928, showing 86,503 vacancies offered, 84,545 applications made, and 77,027 placements effected, while in October, 1927, there were recorded 48,678 vacancies, 56,600 applications for work, and 45,365 placements in regular and casual employment. A report in detail of the work of the offices for the month of October, 1928, will be found elsewhere in this issue.

Production and Trade

Industrial production in October, allowing for seasonal tendencies, was at a higher level than in any other month in the post-war period, according to comprehensive series compiled by the Dominion Bureau of Statistics and published in the *Monthly Review of Business Statistics*. The production of newsprint exceeded all previous records, while employment in logging indicates that preparations were being made to expand greatly the output of forestry products. The following several months of moderate purchases of raw material, the cotton mill companies imported a very large volume of raw cotton in preparation for the season's operations. The employment in tex-

tile mills expanded greatly, the index number on November 1 being 102.7, the highest level in eight years. The output of steel was nearly 109,000 tons, or greater than in any month since last June. The building industry continued in a high state of activity, the contracts placed in October, after seasonal adjustment, showing an increase over September. The total was expanded by the placing of a contract for a forge and furnace building at Hamilton valued at \$7,000,000 and a power house at High Falls, Quebec, for \$5,000,000. The value of building permits was greater than in any other October, while the cumulative total for the elapsed ten months exceeded by nearly \$28,000,000 the previous high level of the record attained in the corresponding months of 1927. Judged by the available statistics, mining was more productive in October than in any other month during the present year, the trend of production statistics being confirmed by indexes of employment.

A summary of Canadian Trade prepared by the Department of National Revenue shows that in October, 1928, the merchandise entered for consumption amounted to \$112,340,617 as compared with \$106,966,189 the preceding month and with \$93,935,872 in October, 1927. The chief imports in October, 1928, were: iron and its products, \$25,867,095; non-metallic minerals and products, \$18,244,939; and fibres, textiles and textile products, \$17,807,277.

The domestic merchandise exported during October, 1928, amounted to \$141,816,210, as compared with \$109,828,366, in September, 1928, and with \$103,884,933 in October, 1927. The chief exports in October, 1928, were: agricultural and vegetable products, mainly foods, \$64,313,896; wood, wood products and paper, \$27,624,187; and animals and animal products, \$19,298,764.

In the seven months ending October, 1928, exports of domestic merchandise totalled \$773,786,123 and imports \$738,762,282.

According to a report published by the Dominion Bureau of Statistics, imports of coal into Canada during October amounted to 2,192,214 tons, including 1,981,337 tons from the United States, 109,775 tons from Great Britain, and 1,102 tons from other countries. By kinds of coal the imports were, anthracite, 474,542 tons; bituminous, 1,616,422 tons; and lignite, 1,250 tons. Imports in September totalled 1,925,793 tons.

Exports of coal in October amounted to 90,472 tons, comprising 38,431 tons through the ports of the eastern provinces and 52,041 tons from the western provinces.

BUILDING PERMITS AND CONTRACTS AWARDED According to a report prepared by the Dominion Bureau of Statistics, the value of permits issued in 63 cities during October was \$21,508,672, as compared with \$21,302,285 in September, 1928, and with \$18,848,019 in October, 1927.

The *Maclean Building Review* estimated the total value of the construction contracts awarded in Canada in November, 1928, as \$29,038,200. Of this amount, \$11,387,200 was for residential buildings; \$10,673,800 was for business buildings; \$3,957,000 was for industrial buildings and \$3,020,200 for engineering construction. The apportionment of the contracts awarded during November, 1928, by provinces is as follows: Ontario, \$12,493,400; Quebec, \$7,492,400; New Brunswick, \$470,200; Nova Scotia, \$603,500; Prince Edward Island, \$31,500; British Columbia, \$4,068,100; Alberta, \$751,900; Saskatchewan, \$1,857,600; Manitoba, \$1,269,600.

Strikes and Lockouts

The time loss due to industrial disputes in November, 1928, was much less than during October, the number of employees involved being much lower, but the time loss in man working days was considerably greater than in November, 1927. Most of the time loss in November, 1928, was due to disputes involving coal miners at Wayne, Alta., and certain building trades in Vancouver, B.C. There were in existence during the month twelve disputes, involving 1,712 workpeople, and resulting in the time loss of 21,953 working days, as compared with fourteen disputes, involving 2,623 workpeople, and resulting in a time loss of 38,931 working days in October. In November, 1927, there were on record sixteen disputes, involving 1,933 workpeople and resulting in a time loss of 9,455 working days. Two of the strikes and lockouts commencing prior to November terminated during the month as did all four disputes which commenced during November. At the end of the month, therefore, there were on record six strikes and lockouts affecting 738 workpeople, not including those strikes and lockouts in which employment conditions were reported to be no longer affected but which had not been formally called off.

Prices

The cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average retail prices in some sixty cities was \$11.28 at the beginning of November, the same figure as for October, as compared with \$11.07 for November, 1927;

\$11.01 for November, 1926; \$11.23 for November, 1925; \$10.46 for November, 1924; \$10.69 for November, 1923; \$10.29 for November, 1922; \$11.08 for November, 1921; \$15.32 for November, 1920; \$16.92 for June, 1920 (the peak); \$13.65 for November, 1918; and \$7.96 for November, 1914. The most important increases were seasonal advances in the prices of eggs, milk and butter, while the prices of beef, veal, mutton, fresh and salt pork, bacon, lard, flour, prunes, sugar and potatoes declined slightly. Including the cost of fuel and rent with that of foods the total budget averaged \$21.52 for the beginning of November, the same figure as for October, as compared with \$21.27 for November, 1927; \$21.24 for November, 1926; \$21.51 for November, 1925; \$20.81 for November, 1924; \$21.19 for November, 1923; \$20.89 for November, 1922; \$21.60 for November, 1921; \$26.13 for November, 1920; \$26.92 for July, 1920 (the peak); \$21.61 for November, 1918; and \$14.36 for November, 1914. Fuel and rent were practically unchanged.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics was slightly lower at 148.6 for November, as compared with 150.2 for October, 152.2 for November, 1927; 151.4 for November, 1926; 161.2 for November, 1925; 157.7 for November, 1924; 153.3 for November, 1923; 151.9 for November, 1922; 153.6 for November, 1921; 224.5 for November, 1920; 256.7 for May, 1920 (the peak); and 207.4 for November, 1918. In the grouping according to chief component materials four of the eight main groups were lower, three were higher and one was unchanged. The groups which declined were: the Vegetables and their Products group, mainly because of lower prices for wheat, barley, corn, rye, flour, oat products, potatoes, coffee, sugar, rubber and foreign fruits; the Animals and their Products group, due to lower prices for cattle, hogs, meats and lard, which more than offset higher prices for eggs, butter, hides and fish; the Fibres, Textiles and Textile Products group, due to lower prices for wool, jute and manila rope, which more than offset higher prices for cotton, cotton yarn and silk; and the Chemicals and Allied Products group, because of declines in the prices of sulphuric acid and putty. The Iron and its Products group advanced, chiefly because of higher prices for steel bars and steel sheets. The Non-Ferrous Metals group was higher, due to increases in the prices of copper, tin, lead and brass sheets. The Wood, Wood Products and Paper group also showed a slight increase, while the Non-Metallic Minerals group was unchanged.

PROCEEDINGS UNDER THE INDUSTRIAL DISPUTES INVESTIGATION ACT DURING THE MONTH OF NOVEMBER, 1928

DURING the month of November the Department received the report of the Board of Conciliation and Investigation established to deal with a dispute between the Canadian Pacific Railway Company, Eastern Lines, and certain of its employees, being engineers, members of the Brotherhood of Locomotive Engineers.

Applications Received

Two applications for the establishment of Boards of Conciliation and Investigation were received during November as follows:—

(1) From employees of the Hull Electric Company, being members of Division No. 591, Amalgamated Association of Street and Electric Railway Employees of America. The dispute grew out of demands made by the employees for increased wages and improved working conditions, ninety employees being directly affected. A Board of Conciliation and Investigation was established shortly after the close of the month, constituted as follows: Mr. Harold Fisher, K.C., Ottawa, chairman, appointed on the joint recommendation of the other Board members, and Messrs. Hamnett P. Hill, K.C., and W. L. Best, both of Ottawa, members appointed on the recommendation of the company and workmen, respectively.

(2) From the employing printers of Calgary and the Calgary Typographical Union No. 499. The application was signed jointly by the chairman of the employers' committee, and the president of the trades union concerned. The matters in dispute related to a minimum wage scale, the employment of non-union men when the union is unable to furnish union

men promptly, employment of apprentices and scale of wages for apprentices. Forty employees were stated to be directly concerned in the controversy. The Minister of Labour established a Board of Conciliation and Investigation on November 29 and appointed Board members as follows: on the employers' recommendation, Mr. James H. Garden, of Calgary, Alberta, and on the employees' recommendation, Mr. Andrew Davison, of the same city. A chairman had not been appointed at the end of the month.

Settlement Effected

An application for the establishment of a Board of Conciliation and Investigation was reported in the October issue of the *LABOUR GAZETTE* as having been received from certain employees of the Canadian National Steamships, being machinists, boilermakers electrical workers, blacksmiths and other marine workers, members of Lodge 631, International Association of Machinists, International Brotherhood of Boilermakers, Iron Ship Builders and Helpers of America, International Brotherhood of Electrical Workers, and International Brotherhood of Blacksmiths, Drop Forgers and Helpers of America, as represented by a joint committee. The number of employees directly affected was given in the application as seventy-five, and the cause of the dispute as the employees' demands for increased wages and changed working conditions. Through the mediation of the Honourable Peter Heenan, Minister of Labour, a compromise was effected with which both sides expressed satisfaction. No Board was therefore established.

Report of Board in Dispute Between Canadian Pacific Railway Company and Locomotive Engineers on Eastern Lines

A report was received on November 30 from the Board of Conciliation and Investigation established to deal with a dispute between the Canadian Pacific Railway Company, Eastern Lines, and certain of its employees, being locomotive engineers, members of the Brotherhood of Locomotive Engineers. The Board was composed of Mr. James T. McCall, Montreal, chairman, appointed on the joint recommendation of the other members, Sir William E. Stavert, Montreal, and Mr. A. Cyril Boyce, K.C., Toronto, nominated by the company and employees respectively. The text of the unanimous findings of the Board is given below.

Report of Board

In the Matter of the Industrial Disputes Act, R.S.C. 1927, and of a dispute between; The Canadian Pacific Railway Company (Eastern Lines), employers, and certain of its employees, being Locomotive Engineers, Members of the Brotherhood of Locomotive Engineers, employees.

To The Hon. Peter Heenan, a Member of His Majesty's Privy Council for Canada, and Minister of Labour.

The report of the Board of Conciliation and Investigation constituted under date of September 6th last, for the investigation of

the dispute above mentioned, respectfully sets forth as follows:—

The matter forming the subject of the dispute is the failure of the Canadian Pacific Railway Company to give effect to a revision of Article 31 of an agreement existing between the Canadian Pacific Railway Company, the Brotherhood of Locomotive Engineers and the Brotherhood of Locomotive Firemen and Enginemen, concerning the Rates of Pay and Rules governing the service of Locomotive Engineers, Firemen and Hostlers, of the Canadian Pacific Railway, (Eastern Lines). A copy of the proposed revision of Article 31 is attached to the application, and is also attached as part of this report.

The Board heard such evidence as was tendered by the applicants (the Brotherhood of Locomotive Engineers), and on behalf of the Canadian Pacific Railway Company, also a representative of the Brotherhood of Locomotive Firemen and Enginemen as a witness.

It immediately became apparent to the Board, as is set forth by the Railway Company in its letter of 1st September as answer to the application to the Minister for the granting of this Board, that there existed no real conflict of opinion amounting to a dispute as between the Railway Company and the Brotherhood of Locomotive Engineers, the real difficulty of making effective the proposed amendment to Article 31 being a difference of opinion existing between the Brotherhood of Locomotive Engineers on the one hand, and the Brotherhood of Locomotive Firemen and Enginemen, on the other. The Board considers that this difference of opinion between these two Brotherhoods is alien to the question which is referred by the Minister to the Board, and therefore this Board is of the opinion that it is not called upon to adjudicate upon such differences between the Employees named, but that its functions under the Act must be confined to what it considers, as stated above, is the actual matter of dispute which was the subject of application for the Board, and in respect of which the Board was granted by the Minister.

The Board feels that reference might well be made to the answer of the Canadian Pacific Railway Company, of September 1st, 1928, directed to the Acting Deputy Minister of Labour, and filed in these proceedings, and referred to at the hearing. That answer of the Railway Company sets forth clearly what we have referred to above, viz., that the dispute in question is more one between the Locomotive Engineers and Locomotive Firemen than between the Railway Company and

its Locomotive Engineers. That the Railway could readily reach an agreement in connection with the matter in question with its Locomotive Engineers were it not for the fact that the Locomotive Firemen have protested claiming that it would be a violation of their agreement as above referred to with the Company to grant the changes requested by the Locomotive Engineers.

The Railway Company has set forth in its answer that if such claim were justified, and the Railway agreed to the revision of Article 31 of its agreement with the Locomotive Engineers as desired by them, it would also be claimed by the Firemen that the Railway Company was violating the letter and intent of Section 58 of the Industrial Disputes Investigation Act, and that as the Company does not desire to leave itself in such a position as that indicated as between any two groups of its Employees, it had declined to put into effect the changes desired in the agreement with its Locomotive Engineers, which it would otherwise be prepared to do.

The Board feels that the answer of the Railway Company as above summarized correctly and properly sets forth the attitude of the Company in this matter, and indicates the real nature of the difficulty in the way of agreement between the Brotherhood of Locomotive Engineers and the Company.

The Brotherhood of Locomotive Engineers submitted to the Board that it was empowered to enter into an agreement for the revision of Article 31 with the Railway Company, by virtue of the individual power it possesses as a Brotherhood acting within its powers as such and affirmed by Article 24 of the agreement concerning Rates of Pay and Rules hereinbefore referred to, and reserves to itself the right to independently contract with the Railway Company with respect to matters affecting the interests of the Locomotive Engineers.

This Article is in the following language, which the Board considers is abundantly plain for the purpose:

Article 24

(a) The right to make and interpret contracts, rules, rates and working agreements for locomotive engineers shall be vested in the regularly constituted committee of locomotive engineers.

This Article is subscribed to by the representative of the Brotherhood of Locomotive Engineers, Brotherhood of Locomotive Firemen and Enginemen, and the Canadian Pacific Railway Company, respectively.

This Board is of the opinion, therefore, that the Brotherhood of Locomotive Engineers does possess the undoubted independent power to enter into such agreements as are mentioned

in the Article above quoted, and to make rules, rates and working agreements for itself and for its members, independently of any other Organization.

The Board is also of the opinion that when the Brotherhood of Locomotive Engineers under Article 24, above quoted, assumes to act, that is enter into agreements within the scope contemplated by Article 24, in the interests of Engineers, that it may be regarded as representing "Acting" or "Spare" Engineers.

Having, therefore, affirmed as above set forth the right of the Brotherhood of Locomotive Engineers to enter into the Agreement for revision of Article 31, the Board concludes that the Railway Company would be justified in giving effect to the provisions thereof, without further restraint, and the Board so finds, and does respectfully report accordingly.

(Sgd.) J. T. McCALL,
Chairman.

(Sgd.) W. E. STAVERT,
(Sgd.) A. C. BOYCE..

MONTREAL, November 29, 1928.

REVISION OF ARTICLE 31 OF SCHEDULE AS
PROPOSED FOR ENGINEERS

Article 31

(a) When, from any cause, it becomes necessary to reduce the number of Engineers on the Engineers' working lists, on any seniority district, those taken off may, if they so elect, displace any fireman their junior on that seniority district under the following conditions:

First.—That no reductions will be made so long as those in assigned or extra passenger service are earning the equivalent of 4,000 miles per month; in assigned, pooled or chain gang freight, or other service paying freight rates, are averaging the equivalent of 3,200 miles per month, on the road extra list are averaging the equivalent of 3,200 miles per month.

Second.—That when reductions are made they shall be in reverse order of seniority.

(b) When hired engineers are laid off on account of reduction in service, they will retain all seniority rights: Provided, they return to actual service within 30 days from the date their services are required.

(c) Engineers taken off under this rule shall be returned to service as engineers in the order of their seniority as engineers, and as soon as it can be shown that engineers in assigned or extra passenger service can earn the equivalent of 4,800 miles per month; in assigned, pooled, chain gang, or other regular service paying freight rates, the equivalent of 3,800 miles per month or in extra service the equivalent of 3,800 miles per month. Engineers in any of the foregoing services will be required to lay off when in any monthly period

they have made the mileage stated in this clause for the class of service in which they are engaged.

(d) In the regulation of passenger or other assigned service, sufficient men will be assigned to keep the mileage or equivalent thereof within the limitations of 4,000 and 4,800 miles for passenger and 3,200 and 3,800 miles for other regular service, as provided herein. If in any service additional assignments would reduce earnings below these limits regulations will be effected by requiring engineers to lay off when the equivalent of the maximum miles in his class of service has been reached. Engineers in combination service will be permitted to earn the equivalent of 3,800 miles per month at freight rates.

(e) Under this rule it is understood that after all engineers who have been taken off have been returned to service as engineers, this rule shall not apply with respect to further additions.

(f) When regulating working lists in the respective classes of service, each list will be handled separately.

(g) If any engineer exceeds his maximum miles or days in any monthly period, the excess will be charged to his miles or days in his following working period, this not to apply to men who after reaching their maximum mileage are required through shortage of men to work further during their month.

(h) All mileage in excess of the maximum will go to spare engineers, except that excess mileage of assigned runs may be used to build up mileage on assigned runs with mileage less than the minimum.

(i) When there are no spare engineers available the senior demoted engineer, except in cases of emergency, will be called, provided he has not in his current mileage period already made 3,800 miles in any class of service.

(j) (1) The regulation of mileage and checking periods will be handled between Locomotive Foreman and Local Chairman for Engineers, or his authorized representative.

(2) Engineers will upon arrival at home station register in ink the total number of miles they have in for the current mileage period, in the column provided for the purpose in the inward report book.

(3) Engineers assigned to service at outside points will be required to advise their Locomotive Foreman by wire when their maximum mileage will be in. Locomotive Foreman will furnish a relief engineer as soon as possible as per Clause H of this Article.

(4) Engineers not complying with these regulations and failing to book their correct mileage or to advise their Locomotive Foreman in connection therewith will not be called until they have done so, unless other engineers are not available.

(k) Time allowed for hostling engines at the beginning or end of runs or shifts, also the time for repairing engines when laid up at any place other than the regular roundhouse with regular shopmen, will not be included in computing the mileage that engineers are permitted to make under the above regulations.

(l) The Company is not to be put to any additional expense for deadheading or otherwise by the application of this rule.

STRIKES AND LOCKOUTS IN CANADA DURING NOVEMBER, 1928

THE number of strikes and lockouts in existence in Canada during November was twelve as compared with fourteen the previous month. The time loss for the month was slightly less than during the previous month, the number of employees involved being considerably less, but the time loss was considerably greater than in November, 1927. Most of the time loss in November, 1928, was due to disputes involving coal miners at Wayne, Alta., and building trades in Vancouver, B.C.

Date	Number of disputes	Number of employees involved	Time loss in working days
*Nov. 1928.....	12	1,712	21,953
*Oct. 1928.....	14	2,623	38,931
Nov. 1927.....	16	1,933	9,455

*Preliminary figures.

The record of the Department includes lockouts as well as strikes, but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees and lasting at least one working day. Disputes of less than one day's duration, and disputes involving less than six employees, are included in the published record only when ten day's or more time loss is caused, but a separate record of such disputes is maintained in the Department, and the figures are given in the annual review.

The figures printed are inclusive of all disputes which come to the knowledge of the Department, and the methods taken to secure information practically preclude probability of omissions of a serious nature. Information as to a dispute involving a small number of employees, or for a short period of time, is frequently not received until some time after its commencement.

Eight disputes, involving 1,382 workpeople, were carried over from October, and four disputes commenced during November. Two of the disputes commencing prior to November terminated during the month, as did all four disputes commencing during November. At the end of the month, therefore, there were on record six strikes and lockouts, as follows: Pulpwood cutters, Northern Ontario; coal miners, Wayne, Alta.; men's clothing factory workers, Toronto, Ont.; plumbers, Kingston, Ont.; sheet metal workers, Kingston, Ont.; and restaurant employees in Edmonton, Alta.

The record does not include minor disputes such as are described in a previous paragraph, nor does it include disputes as to which information has been received indicating that employment conditions are no longer affected, but which the unions concerned have not declared terminated. Information is available as to seven such disputes, namely: electrotypers, Toronto, Ont., December 20, 1926; bakers, Montreal, P.Q., May 1, 1927; stonemasons, Montreal, P.Q., June 10, 1927; sheet metal

workers, Montreal, P.Q., September 21, 1927; coal miners, River Hebert, N.S., February 1, 1928; fur workers, Toronto, Ont., April 10, 1928; and shoe factory workers, Toronto, Ont., August 13, 1928. The dispute involving ladies' clothing factory workers in Toronto, Ont., since June 30, 1926, carried in this list for some months, is reported as having lapsed in July, 1928.

Information has reached the Department as to a dispute involving employees in a clothing factory in Toronto in the last week in November, but particulars have not yet been received.

A dispute involving pile drivers at New Westminster, B.C., toward the end of the month has been reported also, but no details have as yet been secured.

Of the disputes which commenced during the month one was for increase in wages, one against discharge of a worker, one against a decrease in piece rates, and one against alleged violation of agreement. Of the strikes and lockouts which terminated during November three were in favour of the employer; one in favour of the workers; in one a compromise was reached, and the result of one is recorded as indefinite.

The following paragraphs give particulars in regard to certain disputes in addition to the information given in the tabular statement.

PULPWOOD CUTTERS, NORTHERN ONTARIO.—

At the end of the month it was reported that 35 out of the 45 employees who ceased work in the vicinity of Cochrane on October 15, to secure higher rates of wages per cord, were still on strike, ten having secured work in other camps. It was reported that a number of employees in a camp near Port Arthur ceased work toward the end of the month for the same cause.

COAL MINERS, WAYNE, ALTA.—At the end of November it was reported that a number of the miners involved in the strike beginning August 13, 1928, for recognition of their union and against payment per ton for mining coal on a screened basis, had returned to work.

CARPENTERS AND SYMPATHETIC STRIKE OF CERTAIN BUILDING TRADES, VANCOUVER AND NEW WESTMINSTER, B.C.—As stated in the LABOUR GAZETTE for November, these two disputes were settled early in November. The settlement is described in a special article in this issue, containing the agreement signed.

RESTAURANT EMPLOYEES, EDMONTON, ALTA.— Reference was made in the November issue of the LABOUR GAZETTE to a dispute involving employes of a restaurant in Edmonton. Information as to this dispute indicates that work ceased on October 22, 1928, the employer having cancelled his agreement with the union which provided for the employment of union

members only, because, it is alleged, two of the employees were suing him for breach of contract. It is understood that the employer had replaced two of the cooks. The union thereupon claimed that the employer had locked out all union employees. Of the nineteen employees involved at the commencement of the strike, eight were still in-

STRIKES AND LOCKOUTS IN CANADA DURING NOVEMBER, 1928

Industry, occupation and locality	Number of employees involved	Time loss in working days	Remarks
(a) Strikes and Lockouts Occurring prior to November, 1928.			
LOGGING— Pulpwood cutters, Northern Ontario.	100	1,120	Commenced October 15, 1928, for increase in wages. Underminated.
MINING— <i>Non-Ferrous Smelting and Quarrying—</i> Coal miners, Wayne, Alta.....	600	15,000	Commenced August 13, 1928, for recognition of union and against payment per ton on a screened basis with an increase of four cents per ton. Underminated.
MANUFACTURING— <i>Clothing (including knitted goods) —</i> Men's clothing factory workers Toronto, Ont.	10	250	Commenced August 21, 1928, against alleged violation of agreement for employment of union members only. Underminated.
CONSTRUCTION— <i>Buildings and Structures—</i> Plumbers, Kingston, Ont.....	10	250	Commenced April 2, 1928, for increase in wages. Underminated.
Sheet metal workers, Kingston, Ont.	10	250	Commenced April 17, 1928, in sympathy with striking plumbers. Underminated.
Carpenters, Vancouver and New Westminster, B.C.	545	3,350	Commenced October 8, 1928, for employment of members of one union only. Terminated November 8, 1928; open shop agreement with union signed.
Certain building trades, Vancouver and New Westminster, B.C.	88	700	Commenced October 10, 1928, in sympathy with striking carpenters. Terminated November 13, 1928, in favour of employers.
SERVICE— <i>Personal and Domestic—</i> Restaurant employees, Edmonton, Alta.	19	325	Alleged lockout, October 22, 1928, of union employees, agreement cancelled. Underminated.
(b) Strikes and Lockouts Occurring during November, 1928.			
MINING— <i>Non-Ferrous Smelting and Quarrying—</i> Coal miners, Westville, N.S..	100	300	Commenced November 16, 1928, for increase in wages for certain boys. Terminated November 20, 1928. Indefinite.
MANUFACTURING— <i>Clothing (including knitted goods) —</i> Knitting factory workers, Hamilton, Ont.	175	263	Commenced November 5, 1928, against discharge of worker. Terminated November 6, 1928, in favour of employer.
Hat factory workers, Brockville, Ont.	30	120	Commenced November 14, 1928, against decrease in piece rates. Terminated November 19, 1928, in favour of workers.
CONSTRUCTION— <i>Buildings and Structures—</i> Lathers, Toronto, Ont.....	25	25	Commenced November 16, 1928, against alleged violation of agreement re working conditions. Terminated November 19, 1928. Compromise.

volved at the end of November, the others having secured work elsewhere.

COAL MINERS, WESTVILLE, N.S.—A dispute in a colliery, owing to the demand that boys engaged on certain work should receive the labourers' rate of \$3.30 per day instead of the boys' rate of \$2.95 per day resulted in a cessation of work by one hundred boys, with the result that the mine was tied up from November 16 to November 20, about 500 other employees being indirectly involved. The management had stated that it was admitted that no boys were employed at that particular work, and had undertaken that no boy would be so employed as it was too hard for a boy. On November 20 work was resumed.

KNITTING FACTORY WORKERS, HAMILTON, ONT.—A number of employees ceased work on November 5 because a foreman who had been for twenty years in the employ of the company had been dismissed. The following morning, understanding that the foreman was to be reinstated, they returned to work; but, learning that this was not so, they ceased

work again. The strikers, however, resumed work in the afternoon at the request of the dismissed foreman.

HAT FACTORY WORKERS, BROCKVILLE, ONT.—Finishers in the employ of a hat factory ceased work on November 14, 1928, against a proposed reduction in the piece rates of wages. Work was resumed on November 19, it having been agreed that the previous rates would continue until June 1, 1929, through the mediation of one of the service clubs.

LATHERS, TORONTO, ONT.—Twenty-five employees ceased work because the windows of the building in which they were employed had not been covered with cheesecloth or canvas after November 15 as required by the agreement with the employers. It was reported that plasterers and plasterers' labourers were, therefore, compelled to cease work also. It was reported that the failure of the contractor to cover the windows was an oversight as the weather was warm; and on the next work day, Monday, November 19, work was resumed, the union having agreed to give the contractor a week's extension.

STRIKES AND LOCKOUTS IN GREAT BRITAIN AND OTHER COUNTRIES

THE latest available information as to strikes and lockouts in various countries is given in the *LABOUR GAZETTE* from month to month, bringing down to date that given in the issue for February, 1928, in the review of Strikes and Lockouts in Canada and Other Countries in 1927. The latter review included a table summarizing the principal statistics as to strikes and lockouts since 1918 in the several countries for which such figures were available. Many countries publish these statistics only once each year, the figures being issued in some cases after an interval of as much as two years, so that for such countries the latest figures are not for relatively recent dates.

Great Britain

The number of disputes which began was 27, and 9 were still in progress from the previous month, making a total of 36 disputes in progress during the month, involving 7,000 workpeople and resulting in a time loss of 59,000 working days. Of the 27 disputes beginning in October, 12 arose over wages questions, 5 on questions respecting the employment of particular classes or persons, 3 on questions of hours, 4 on other questions of working arrangements and 3 on questions of trade union principle. Settlements were

reached in 21 disputes, of which 6 were in favour of workers, 5 in favour of employers and 10 ended in compromise. In another dispute, work was resumed pending negotiations. There were no disputes involving large numbers of workers reported during the month.

Belgium

During September, 22 disputes began and 8 were still in progress from the previous month, making a total of 30 disputes in progress during the month, involving 18,817 workers and resulting in a time loss of 249,936 working days for the month.

Germany

The lockout of 225,000 metal workers in the industrial districts of the Rhine, which was mentioned in the *LABOUR GAZETTE* for November, continued during the month. The lockout began on November 1, when employers refused to accept the award of the arbitration court, which was declared binding by the Minister of Labour and which provided for an increase in wages. The case was referred to the Labour Court in Duisberg, which upheld the contentions of employers and declared the arbitration award invalid. An appeal from this decision was made to the

Supreme Industrial Court, but no decision had been reported at the end of the month. Both parties, however, agreed to submit the dispute to the Minister of the Interior, and it was reported on December 3 that pending his decision work was being resumed at the former wage rates.

Sweden

The number of disputes in the year 1927 was 189 involving 334 establishments and 9,477 workers. The time loss for the year was

400,000 working days. This is the least number of disputes, workers involved, and working days lost occurring in any year since 1915.

United States

The number of disputes beginning in September was 34 and 59 were in effect at the end of the month, involving 109,461 workers. The time loss for the month was 2,651,055 working days.

DOMINION GOVERNMENT LIABILITY FOR INDUSTRIAL ACCIDENTS TO EX-SERVICE MEN

THE Government of Canada decided early in the present year to continue in effect until the end of the current financial year the existing arrangements under which the Dominion relieves employers and the various provincial Workmen's Compensation Boards, or insurance companies, of responsibility for the payment of compensation in respect of industrial accidents sustained by ex-service men having a disability of 25 per cent and upwards. The text of the earlier order was given in the LABOUR GAZETTE, March, 1922, page 310; October, 1924, page 833; etc. The new order in Council is as follows:—

P.C. 446

CERTIFIED to be a true copy of a Minute of a Meeting of the Committee of the Privy Council, approved by His Excellency the Governor General on the 22nd March, 1928.

The Committee of the Privy Council have had before them a Report, dated 19th March, 1928, from the Minister of Soldiers' Civil Re-establishment, submitting that Order in Council P.C. 558 dated the 29th March, 1927, being the authority under which the Department of Soldiers' Civil Re-establishment may pay compensation in respect of industrial accidents sustained by pensioners of 25 per cent and upwards, expires on the 31st March, 1928.

That this authority has proved to be of great assistance in the placing of disabled men in industry as it relieves the employers of the liability incurred through accidents or industrial diseases;

That representations have been made to the Minister of Soldiers' Civil Re-establishment by Workmen's Compensation Boards, by veterans' organizations, by the Canadian Manufacturers' Association, by the railroads and others, that the authority should be continued; and

That the annual cost is less than One Hundred Thousand Dollars (\$100,000.).

The Committee, on the recommendation of the Minister of Soldiers' Civil Re-establishment, advise that the provisions of Order in Council P.C. 558 dated the 29th March, 1927, be continued in force until the 31st March, 1929.

(Sgd.) E. J. LEMAIRE,
Clerk of the Privy Council.

P.C. 558

CERTIFIED to be a true copy of a Minute of a Meeting of the Committee of the Privy Council, approved by The Deputy of His Excellency the Governor General on the 29th March, 1927.

The Committee of the Privy Council have had before them a Report, dated 25th March, 1927, from the Minister of Soldiers' Civil Re-establishment, submitting that by Order in Council P.C. 4432 dated the 29th December, 1921, as amended by Order in Council P.C. 2247 dated the 27th October, 1922, provision was made for the reimbursement by the Department of Soldiers' Civil Re-establishment of the amount of assessments paid to a Workmen's Compensation Board by employers of pensioners in receipt of a disability pension of not less than 20 per cent, also the reimbursement to a Workmen's Compensation Board or an employer of the full cost of compensation with respect to all accidents to such pensioners;

That it was originally intended that the provisions of the said Order in Council as amended should be operative until the 31st August, 1924, but extensions have been granted to the 31st March, 1927; and

That the employment situation in Canada insofar as disability pensioners are concerned has materially improved since the passing of the said Order in Council and it is considered

that certain modifications may now be made;

The Minister, therefore, recommends that the said Order in Council be allowed to lapse and that as from the 1st April, 1927, the Government of Canada assume the liability imposed by provincial Workmen's Compensation Acts or by Common Law in respect of industrial accidents, upon employers of disabled former members of the Forces to whom a pension of 25 per cent or over is payable by or through the Government of Canada or the British Ministry of Pensions in respect of disabilities received in or attributable to the Great War subject to the following regulations;

1. (a) "Pensioner" shall mean a former member of the Forces resident in Canada, who is in receipt of a pension payable by or through the Board of Pension Commissioners for Canada, or the Canadian office of the British Ministry of Pensions, in respect of disabilities incurred during or attributable to service in the Great War, of not less than 25 per cent in the case of an accident occurring after the 31st March, 1927, or of not less than 20 per cent in the case of an accident occurring prior to the 31st March, 1927.
- (b) "Department" shall mean the Department of Soldiers' Civil Re-establishment.
- (c) "Compensation" shall mean and include all amounts to which a pensioner is, or, in the case of his death, his dependents are, entitled under or by virtue of any Workmen's Compensation Act in force in any province of Canada.
- (d) "Full cost of compensation" shall include compensation, burial expenses, the cost of furnishing medical aid, and all other amounts payable under or by virtue of a Workmen's Compensation Act in force in any province of Canada by reason of a pensioner's meeting with an accident or by his contracting an industrial disease, compensable under any of said acts, and shall include the capitalized sum or present value of the amount required, as determined by the Workmen's Compensation Board having jurisdiction with respect thereto, to provide for future payments of compensation to the pensioner or his dependents.
- (e) "Accident" shall include an industrial disease compensable under a Workmen's Compensation Act in force in the province where such disease is contracted.

2. The Department shall pay to the Workmen's Compensation Board the full cost of compensation with respect to all accidents to pensioners in the province, such payment or payments to be made upon receiving a certificate from the Board of the full cost of compensation, which certificate may be accepted by the Department without other proof.

3. Where the employer of a pensioner entitled to compensation is individually liable for the payment thereof under a Workmen's Compensation Act, or under what is known in the Ontario Act as Schedule 2, the Department shall refund to the employer the full

cost of compensation upon the employer submitting to the Department a certificate of the Workmen's Compensation Board, showing the amount thereof.

4. In the event of a claim for damages being made against the employer by a pensioner who is injured, or by the dependents of a pensioner who dies, by reason of an accident to such pensioner while employed in an industry not within the jurisdiction of a Workmen's Compensation Board, and in the event of liability therefor and the amount of the damages sustained by the pensioner thereby being admitted by the employer with the consent and approval of the Department, or if damages be awarded against such employer by any court or authority other than a Workmen's Compensation Board, the Department shall submit all the evidence available and a statement of the facts as found by the court or other authority, if the damages shall have been adjudged by any such court or authority, to the Workmen's Compensation Board for the province in which the accident occurred, or if the accident did not occur in a province in which there is a Workmen's Compensation Board, the same shall be submitted to the Workmen's Compensation Board of any adjoining province or if there be no adjoining province having a Board, or if the accident happens outside of a province, the same shall, in the discretion of the Department, be submitted to any Workmen's Compensation Board for the purposes of ascertaining what amount or amounts such Board would allow if the accident were one for which compensation would be payable under the Workmen's Compensation Act of the Province for which such Board was appointed if the industry were within the jurisdiction of the Board, and the Department shall pay to the employer the amount as agreed upon as aforesaid or awarded by the court or other authority, as the case may be, against the employer if the same be less than the amount as determined by such Board, and if it be greater the Department shall pay to the employer the amount as determined by such Board.

5. Where the accident happens outside of a province the employer shall not be entitled to any benefits under these provisions unless the pensioner's employment with such employer commenced in the province and his employment was continuous to the time of the accident and the accident happens within six months from the last time the pensioner was in the province.

6. The Department shall repay to each employer of a pensioner the amount of assessment, if any, paid by such employer to a Workmen's Compensation Board with respect to the wages paid to such pensioner during the period 1st January, 1926, to 31st March, 1927, provided that said employer shall furnish to the Department a statement giving the following information in respect of such pensioner:—

- (i) Name, address, ex-regimental number or pension number;
- (ii) Date employment commenced;
- (iii) Date employment ceased if pensioner is not employed at the time of making the statement;
- (iv) Total amount of wages paid or other allowances made during the period for which reimbursement is claimed;

(v) Rate of assessment levied by the Workmen's Compensation Board upon the wages paid to such pensioner;

and shall furnish a certificate from the Workmen's Compensation Board that the assessment has been duly paid to the Board; provided also that a claim for such repayment shall be made to the Department on or before the 30th April, 1927, in respect of assessment on wages paid during 1926 and on or before the 31st March, 1928, in respect of assessment on wages paid from the 1st January, 1927, to the 31st March, 1927.

7. No payment shall be made by the Department in respect of an accident which occurred before the 1st October, 1926, unless notice of

such accident is received by the Department on or before the 30th April, 1927, and except as herein provided no payment shall be made by the Department in respect of any accident unless notice of such accident is received by the Department within six months of its occurrence.

8. This Order in Council shall remain in force until the 31st March 1928.

The Committee concur in the foregoing recommendation and submit the same for approval.

(Sgd.) E. J. LEMAIRE,
Clerk of the Privy Council.

SPECIAL EFFORT TO SECURE RATIFICATION BY CANADA OF CHILD LABOUR CONVENTIONS

AT the ninth annual meeting of the Canadian Council on Child Welfare held at Ottawa recently, Mrs. C. H. Thorburn, the president, intimated that a special effort would be made during the coming year among all the associated organizations to obtain the adherence of all the provinces of Canada to the proposals which are contained in the child labour draft conventions of the International Labour Conference. During the past year the Council continued its campaign for the ratification of these conventions, but found that while action had been taken in some of the provinces the general situation was somewhat discouraging. The recent pronouncement in Geneva of the Prime Minister, the Right Hon. W. L. Mackenzie King, that he would do all in his power to bring about the adherence of Canada, has revived the hopes of all the organizations in Canada that are interested in the welfare of young workers.

The new movement was opened by a round-table conference held at Ottawa on October 22, under the chairmanship of the Hon. Peter Heenan, federal Minister of Labour, the occasion being a dinner given by the minister to the members of the executive committee of the Canadian Council on Child Welfare from the various provinces who were attending the convention.

Reference was made in the discussions at the conference to the laws which already exist on this subject in the different provinces in Canada and to the steps which would be requisite to bring about full compliance on the part of Canada with the several proposals which have emanated from Geneva, as follows:—

Draft Convention fixing the age of admission of children to industrial employment at fourteen years.

Draft Convention concerning the night work of young persons employed in industry.

Draft Convention fixing the age for the admission of children to employment in agriculture at 14 years, during hours fixed for school attendance.

Recommendation requesting the regulation of the night employment of children and young persons in agriculture, assuring them of a period of rest suited to their physical needs—in the case of children under 14, not less than 10 consecutive hours, and in the case of young persons between 14 and 18 years of age, not less than 9 consecutive hours.

Recommendation excluding women, children and young persons from various classes of employment likely to be injurious or dangerous due to the possibilities of lead poisoning.

Draft Convention fixing the minimum age for the admission of young persons to employment as trimmers or stokers at eighteen years of age.

Draft Convention requiring compulsory medical examination at least once a year of all children and young persons under the eighteen years of age employed on board ship.

Draft Convention fixing the minimum age for the admission of children to employment at sea at fourteen years.

Draft Convention concerning the employment of women in industry before and after childbirth.

Draft Convention concerning the employment of women in agriculture before and after childbirth.

Miss Charlotte Whitten, executive secretary of the Council, made a comprehensive statement indicating the details of legislative ac-

tion which would be necessary within each province in order to permit of our acceptance of the above-mentioned international child labour conventions and recommendations. This was followed by brief addresses from the provincial representatives in which the support of the latter was pledged to bring about the acceptance of the program of legislative action outlined by the Executive Secretary of the Child Welfare Council.

Hon. Peter Heenan, Minister of Labour, referred to the fact that three Draft Conventions of the International Labour Conference affecting young people had been found by the law officers of the Crown in Canada to come within federal jurisdiction. All of these proposals have been accepted by legislation, and the formal adherence of Canada, he said, had been given to these respective Conventions.

In addition to its activities in furthering the ratification of the Draft Conventions, the Canadian Council on Child Welfare adopted at its annual convention the following lines of further action:—

(a) A study as to whether there is need of the numerous exemptions for seasonal industries such as canning, etc.

(b) An endeavour to include boys in the minimum wage provisions, so as to overcome the present abuses of substituting low-paid male labour for female workers.

(c) The immigration placement of juvenile workers, especially in commercial occupations, for example in banks, etc.

(d) The abolition of commercial home work (clothing, etc.), as this affects child labour.

STATE PRICE FIXING IN QUEENSLAND

THE fixing of maximum wholesale and retail prices for a large number of commodities which enter into the budget of the working man was continued by the government of the State of Queensland during the year ended June 30, 1928. This type of state control over prices in Queensland has been exercised under the terms of the Profiteering Prevention Act of 1920 since March, 1920, when that measure came into force.¹ The Profiteering Prevention Act replaced in the State of Queensland similar regulation of prices by the Federal Government of Australia under a Prices Adjustment Board which had functioned from March, 1916, to August, 1920.

All of the Australian States, other than Tasmania, had in 1914, within two months after the commencement of the war, established boards for the regulation of commodity prices.² In 1919 these states resumed policies of price-fixing under authority of legislation of 1914 or in accordance with new acts passed in 1919. In Queensland the control of prices had been exercised under the Control of Trade Act, 1914. This act provided for the division of the state into two districts, each under a Board of Control which recommended maximum selling prices to the State Government. After the proclamation of these prices by the Government, selling at higher

prices constituted an offence punishable by fine or imprisonment. Refusal to sell at the fixed price was declared to be similarly punishable. Control of prices was resumed under this Act in December, 1919.

In the following year the present Profiteering Prevention Act of 1920 replaced the Control of Trade Act. Under the terms of the 1920 Act, a Commissioner of Prices was appointed with power to inquire into all costs of production and to fix maximum selling prices for foods and other commodities in various districts of the State. Severe penalties were provided for violations of the rulings of the Commissioner. Services might also be declared by proclamation to be commodities within the meaning of the Act.

Administration of the Act was transferred in 1925 to a Board of Trade and Arbitration consisting of three members in accordance with the provisions of the Industrial Arbitration Act Amendment Act of 1925. It is required that the President of the Board shall be a judge of the Supreme Court of Queensland. The judicial functions of the Board consist of the arbitration of industrial disputes according to the terms of the Industrial Arbitration Acts, 1916 to 1924. Its administrative functions include, in addition to the administration of the Profiteering Prevention Act of 1920, the duty of reporting on "any matter referred to it as to the prices of commodities and services and as to whether or not monopolies or trade rings exist for the purpose of unfairly keeping up the prices of commodities".

¹ See THE LABOUR GAZETTE, November, 1926, p. 1049, "Profiteering Prevention in Australia."

² See THE LABOUR GAZETTE, May, 1917, p. 392, "Government Regulation of Prices During the War."

The price-fixing measures enacted by the other States of the Commonwealth were all repealed previous to 1923 or had been permitted to expire; with the exception of the New South Wales Fair Rents Act, 1915 as amended in 1920. The Queensland Fair Rents Act, 1920, also remained in force in 1927. The terms of the latter two Acts provide for the regulation of house rents by the separate judicial rulings of Fair Rents Courts established for that purpose.

The report of the Board of Trade and Arbitration under the Profiteering Prevention Act of 1920, for the twelve months ended June 30, 1928, states that the cost of living in the State of Queensland continued to remain lower than in any other State of the Commonwealth. The basic wage in Queensland of £4 5s. per week is stated to be equivalent in food, groceries and housing to the following amounts in the other Australian States:

	Food, Groceries, and Housing		
	£	s.	d.
Queensland	4	5	0
Tasmania	4	8	4
Western Australia	4	10	2
South Australia	4	14	0
Victoria	4	14	5
New South Wales	4	19	5

During the year 105 notifications were gazetted, and price lists were issued and prices reviewed in 884 other cases. Gazetted notifications are orders for changes in prices which have been published in the official State gazette. This policy has been adopted in cases where it was considered possible that

the prices listed might be contested or that efforts might be made to evade them. Prices of bread were fixed during the year for 77 towns, making a total of 139 towns in the State with controlled retail prices of bread. Retail meat prices were fixed for 53 country centres, and the total number of towns with controlled prices of meat was 168 at the end of the period under review. The retail prices of principal items of groceries were fixed for 26 towns, and were controlled in 58 centres at the end of the year. Considering commodities other than those commonly viewed as necessities, maximum retail prices of gasoline were fixed for 114 towns, bringing the total number of towns with fixed prices of gasoline to 157. Other articles subject to retail price control included milk and clothing, the latter including hats and footwear.

Fixed gross profit margins for distributors were required with respect to wholesale trading in flour and other commodities, and retail distribution of commodities including butter, onions, and potatoes. Notifications setting the prices of cash and carry stores at 10 per cent under the fixed prices of service stores were enforced during the year. Several proclamations were gazetted declaring various services to be commodities within the meaning of the Act and notifications were subsequently issued fixing the maximum prices to be charged for these services. The report also includes a detailed discussion of the recommendation of the Beef Cattle Industry Commission that the domestic price-fixing of retail prices of beef be abolished.

MOTHERS' ALLOWANCES IN ONTARIO AND ALBERTA

Ontario

THE seventh report on Mothers' Allowances in Ontario describes the work carried on by the commission for the last two financial years no report having been prepared hitherto for the period 1925-26. It will be recalled that the Mothers' Allowances Act of 1920 provided for the establishment of a provincial board of five persons to consider the applications received from local boards on behalf of mothers of two or more dependent children. The municipality in which a beneficiary has resided for one year is required to contribute one-half the amount of the allowance granted in each case the remainder being paid by the province. The cost of administration of the Act also is borne by the province. The amount of the allowance is determined by the Board within limits fixed by regulation under the Act. The

rate in cities is \$40, \$45, \$50 and \$55 per month for mothers with 2, 3, 4 and 5 children; in towns and country districts the rates are lower. The commission may grant an additional allowance for larger families. The commission is now composed of the following members: the Hon. David Jamieson, M.D., M.C.P.S. (former speaker of the provincial legislature), chairman; Miss Belle Thompson, vice-chairman; Mrs. Minnie Singer; Lieutenant-Colonel T. J. Murphy, K.C.; and Mr. A. J. Reynolds. The report refers to the work of the former chairman, the Reverend Peter Bryce, who held this position since the inception of the Act until his resignation in May, 1928, and to his executive ability and business-like methods of administration.

A continuous and steady increase in the number of beneficiaries under the Act during

the last financial year period is noted, this increase being even greater than might be expected from the growth in the population of the province. The increase is explained by the fact that the provisions of the Act are now more widely known than formerly, and by the additional fact of the growth of urban population, the conditions that render assistance necessary being found more commonly in cities and towns than in rural districts.

The number of beneficiaries varies from month to month. On October 31, 1927, the last month of the financial year, there were 5,540 families with 16,060 dependent children, in receipt of allowances. On October 31, 1926, there were 5,215 families with 15,115 children. The disbursements during the financial year 1926-27 amounted to a total of \$2,017,614, as compared with \$1,876,885 in 1925-26. The amount disbursed in Toronto in 1926-27 was \$445,718, and the other large cities in the province took a like proportion of the total disbursements.

As already stated, half the disbursements for mothers' allowances are borne by the province, the payments by the local authorities having been \$905,739.50. Besides bearing an equal share of the outlay in municipal areas, the province pays the entire amounts disbursed in judicial districts, as well as the total disbursements to mothers lacking one year's municipal residence. The province also carries the total cost of administration, amounting in 1926-27 to \$75,370.63. The report explains that the Board maintains eighteen paid investigators in the field, devoting their whole time to visiting applicants and beneficiaries, often in remote parts of the

province. It is claimed that the cost of administration compares very favourably with other provinces and with American states, being as low as 3.93 per cent in 1925-26, and 3.7 per cent in 1926-27.

Tribute is paid in the report to unselfish work performed by the 101 local boards, with over 500 members, who "very generously devote themselves, giving their time unsparingly without fee or reward, except necessary travelling expenses and hotel bills when attending meetings of their several boards".

The report of the chief investigators states that hundreds of cases are on file where it would have been impossible for the home to have been kept intact without monthly allowances, and many examples are given to prove the truth of this statement. Moreover, valuable social work is being done by the investigators in homes which cannot be reached by any other organization.

Of the 5,540 families on the pay-list in October 31, 1927, 2,662 were in cities, 2,235 were in the country, and 84 were in towns. The average number of children in these families was 2.71 in cities, 3.0 in the country, and 2.82 in towns.

In addition to the 4,209 cases where the dependency was caused by the father's death, there were 843 cases where the father was totally incapacitated, the chief causes of this condition being tuberculosis and insanity. In 46 cases both parents were dead, and the children were in charge of a foster parent.

Of the total number of families benefiting, 65.1 per cent were British and 8.6 were of foreign birth (including American).

Alberta

The administration of the Mothers' Allowance Act of Alberta is in charge of the Superintendent of Neglected Children, who also has charge of the Children's Protection Act and other acts relating to the welfare of children in the province. The Alberta Act provides allowances for the mothers of one or more dependent children. The amount of the allowances is designed to make up the difference between the normal expenditure and the actual income of a family. As in Ontario, the financial burden is shared equally by the province and the several municipalities.

The superintendent's report for the financial year 1926-27 notes a large increase in the number of mothers in receipt of allowances. The total number of mothers in receipt of pensions during the year 1927 was 968, as compared with 907 in 1926; 828 in 1925; 742 in 1924; 758 in 1923; 721 in 1922; 562 in 1921; 477 in 1920; and 245 in 1919. The

total amount expended in payment of allowances during 1927 was \$348,940, of which sum the municipalities refunded \$169,088 to the province.

The number of mothers receiving allowances in December, 1927, was 852, and the number of then dependent children was 2,455. Of these mothers, 147 had each one child; 240 had two children; 222 had three; 128 had four; 69 had five; 28 had six; 10 had seven; 6 had eight; one had nine; and one had ten children.

Inspections under the act to the number of 230 were carried out during the year by male inspectors and 20 by female inspectors. The superintendent notes a certain difficulty in reaching a uniform standard owing to the varying points of view of the district inspectors in presenting their cases, but this difficulty is being overcome.

CAMP REGULATIONS IN SASKATCHEWAN

REGULATIONS have been issued in Saskatchewan under the Public Health Act, 1924, for the sanitary control and prevention of communicable disease in sawmills, lumbering, mining, railway construction, or threshing camps and other industries.

Employers of labour are required to notify the Public Health Department of the establishment of a camp. The site is to be chosen with proper regard to sanitation, and so that it will not contaminate any lake, stream, etc. The camp is to be supplied with an adequate supply of drinking water, protected from contamination. Chlorination or some other approved method of sterilization is to be installed if there is any possibility of contamination. Stables are to be built not nearer than one hundred yards from any hospital, cook-house, eating room, bunk house or water course, and are to be situated so that the drainage will not contaminate the water course.

Sleeping Quarters.—The bunk house or sleeping quarters of employees must contain at least three hundred feet of air space for every occupant. There are to be windows which can be opened, and roof ventilators sufficient to permit of a continuous circulation of air, also a window in each gable, which must be opened every morning for half an hour. The windows and doors are to have screens sufficient to prevent the entrance of flies. All lighting and ventilation will be subject to the approval of a health officer.

Each employee must have a separate bunk, and clean disinfected bedding is to be supplied to every new employee. Double tier bunks must be constructed of steel or wood, with wire screen bottoms. Where double tier bunks are used the minimum height of the side of the wall must be eight feet. The bottom bunk must be at least fifteen inches from the floor and have at least two feet clear space on either side of the tier. The floors of the sleeping quarters are to be at least one foot above the ground, double boarded, or so built as to allow no cracks and finished smooth to admit of cleaning and scrubbing. Provision must be made for the storage of boots and such articles, as placing them under the bunks will not be allowed. Floors and bunks are to be cleaned at least once a week. Sand or sawdust spit boxes are to be provided, and these must be kept clean and sanitary. The sleeping quarters are to be kept at a temperature of at least 65 degrees Fahrenheit. A pan of water must be kept on top of the stove.

Washing Facilities.—Washing accommodation is to be provided for the use of the employees. The use of a common or roller towel will not be allowed, and each employee must provide his own towel. A building with hot and cold water must be provided for bathing and laundry purposes, and facilities supplied to enable all employees to bathe weekly.

The clothing of all employees is to be laundered once a week, at a charge of not more than \$1 per month, which sum will be deducted from the pay of each employee.

Cook Houses.—A building or tent must be provided in every camp, properly constructed as a kitchen or cook house, with an eating room connected therewith. This room may not be used for any other purpose. Separate sleeping quarters must be provided for the cook and his assistants. Kitchens and cook houses must have windows to provide light and ventilation, subject to the approval of a health officer. Fly screens must be provided for all windows and doors of cooking and dining rooms.

Provision is made for the proper disposal of refuse, for the construction of latrines, etc.

Medical Care.—Every employer must contract with one or more legally qualified medical practitioners for the medical and surgical care of his employees, and for the payment of such services he is to deduct from the pay of each employee a sum not exceeding \$1 per month. This sum will be paid to the practitioners without rebate or reduction. Every practitioner must supply medical attention and medicine to the employees. If an employee becomes ill and is discharged or sent from the camp as the result of accident or sickness, the owner will be liable for his maintenance in hospital or elsewhere to the extent of \$2.50 a day during the period of his illness, and for any expense incurred in his removal from the camp to the place of treatment. Where there are more than five hundred employees in the camp, an additional practitioner must be provided for every five hundred men, or fractional number thereof over five hundred. Every medical practitioner is required to supervise and control the sanitation of the camp and to visit it once a week or more often if in the opinion of the minister the sanitary conditions render more frequent inspection necessary.

Hospitals.—Each camp must be provided with a hospital building with floors constructed in such a manner as to admit of scrubbing and cleaning. A temperature of 65 degrees

Fahrenheit to be maintained, an air space of eight hundred cubic feet being allowed for each patient. All windows and doors must have fly screens. Every employee who becomes sick is to be removed to the hospital, and to receive, at the expense of the owner of the camp, such nourishment, medical attendance and nursing as his condition requires.

The hospital accommodation is to be as follows: In camps where there are less than 50 men, two beds must be provided, and in camps with 50 to 100 men four beds, and one additional for every 100 men more, or fractional number thereof, with such further accommodation as circumstances may require.

A suitable and sufficient supply of bandages, dressings, and other requisites in case of accident, must be provided by the owner, and also a supply of such medicine as the medical practitioner in charge prescribes for use in case of sickness.

Special provisions are made for the prevention and control of communicable diseases, including isolation hospitals, quarantine and vaccination.

Posting of Regulations.—A copy of the regulations is to be posted in the office of every camp in such a location that it may be read by the employees. The owner and medical practitioner are held responsible for the enforcement of the Public Health Act and of the regulations. Any person who fails to comply with any of the provisions of the regulations, will be guilty of an offence and liable on summary conviction to a penalty not less than \$5 or more than \$100 for each offence. The convicting magistrate, in addition to any penalty imposed, may order the notice or notices of the health authorities to be carried out at the expense of the party in default.

NOTES ON INDUSTRIAL SAFETY AND HEALTH

Accident Prevention in Alberta

The report of the special committee appointed by the Alberta Legislature in 1927 to inquire into the subject of Workmen's Compensation, recently published, contains the following statement by Mr. W. Smitten, Commissioner of Labour:—

Until recently the generally accepted idea was that all industrial accidents were due to risk of industry.

The introduction of safety and accident prevention work has changed this thought and as a result of investigations made and experiences gained it is now considered that not more than twenty-five per cent of industrial accidents are due to risk of industry and that the balance may, with the exercise of proper care, be prevented. Of the preventable accidents approximately thirty per cent are due to the operation of machinery and apparatus and the balance to the human factor.

As accident prevention work is only in its infancy there will no doubt, with its further development, be a number of accident causes which are now considered as risk of industry removed to one or other of the preventable groups.

What is being done, and what further steps can be taken to prevent accidents?

The work in respect of machinery and apparatus can be divided under three heads:

1. Material and construction.
2. Installation.
3. Inspection during operations.

Under the first heading pressure vessels are required to be constructed of material conforming to fixed formulas, designs are approved and affidavits required of manufacturer that material conforms to formula and that construction is in accordance with approved designs and then maximum working pressures are fixed.

The provisions as to pressure vessels have been standardized throughout the Dominion as a result of conferences of representatives of the various Provincial Boiler Departments. The fact that we have had no explosion of a boiler for fifteen years, while they are of common occurrence across the line and in other countries, demonstrates the value of this phase of our work. While the greatest advance towards standardization of construction has been made in respect of pressure vessels the fact that the provisions for guarding machinery adopted by the various Provincial Inspection Departments are very similar has been the means of having the necessary guards made an integral part of the machine by the manufacturer. There is need for considerable improvement, however, as a large proportion of the machinery manufactured is built having in mind only the ability to produce a given number of a specified article with no thought being given to safety of operation.

Under the second heading we have authority in the Factories Act to require plans of all new factories to be approved and have,

in respect of factories, built recently, in which there is a quantity of machinery, advised with owners as to location and installation and have been able to have machinery located and guarded in a manner which experience has taught is best calculated to prevent accidents.

Under the third heading periodical inspections are made of all places while machinery is in operation, with a view to examination as to use made of guards, deterioration and possible new risks. We have been able to obtain the best results where we have been able to get the employer to recognize that the presence of the Inspector was not for the purpose of interference but with a view to assist and advise in a co-operative manner to the end that accidents may be prevented.

The best results can be obtained from inspection work when there is co-ordination of activities under one department where there is the necessary machinery for giving advice and assistance in respect of all the factors mentioned.

The human element may be a factor in causing an accident in almost any manner, but there are a few outstanding causes, as: loose and waste material left in passageways workmen must use; leaving material lying loosely where it can easily be dislodged; throwing down boards with protruding nails sticking upwards; removing loose material from dangerous parts of machinery while same is in motion; oiling machinery in motion; neglect to consider effect of what is being done on other workmen in immediate vicinity. These are things noticed by an inspector on his visit and are called to the attention of the employer or foreman. It should, however, be recognized that the inspector is only in a factory for a short time and that unless a spirit of co-operation is developed his advice and suggestions have very little general value in this regard. With a view to bringing about a recognition of the importance of accident prevention I am of opinion that it is advisable representative committees be formed in the various localities who would undertake the creating of the necessary atmosphere that would bring about an enthusiasm on the part of employers and employees in respect of accident prevention.

Respiratory Diseases in Industry

Mr. R. M. Hutton, senior investigator in the Division of Industrial Hygiene in the Ontario Department of Health, contributes an article on this subject to the *Journal of Industrial Hygiene*, November, 1928. The most constant fact that comes out of the studies

which are being made of industrial sickness is, he writes, that half the lost time in industry is caused by respiratory disease. This is an understatement, moreover, for most of the data are drawn from the records of benefit associations where only sickness lasting for a week or over is reckoned, and respiratory disease, which includes the common cold, is the commonest cause of sickness of short duration.

It is found that while respiratory diseases are almost invariably the major cause of industrial disabilities, there is a wide range between their occurrence in the various types of industry. "The important question," Mr. Hutton points out, "is whether the variations in the amount of respiratory disease between plant and plant reflect variations in the inherent conditions of the processes, or merely variations in the medical service supplied and the preventive health measures in force." On this point he finds that apart from the notoriously dangerous trades where silica dust is a factor and silicosis a recognized industrial disease, there is no definite clue as to the causes of respiratory diseases in general or their fluctuation throughout the industries.

Workers in the following industries suffer most from respiratory diseases of all types—respiratory tuberculosis, diseases of the respiratory system, bronchitis, and pneumonia:—

Tin and copper miners, both above and below ground (pneumonia excepted);

Grinders in the cutlery trade;

Metal grinders;

File cutters;

Earthenware, china, etc., kiln and oven men;

Potters' mill workers;

Cotton strippers;

Cotton blow room operatives;

Cotton carders.

The other trades with a high mortality for one or other of the respiratory diseases are:—

Respiratory tuberculosis: slate masons and workers.

Bronchitis: glass blowers and finishers, and metal grinders.

Pneumonia: foundry furnacemen, both brass and iron, and puddlers.

Miscellaneous: barmen, dock labourers, and stevedores.

The conclusions drawn from this list are given as follows:—

The worst respiratory mortality is experienced by:—

(a) Notably, those exposed to silica dust (tin and copper miners, grinders in the cutlery trade, metal grinders, file cutters, earthenware and china workers, potters, and slate masons).

(b) Less notably, those exposed to other dust (cotton workers, of whom, note, it is the workers exposed to the most dust, not those exposed to artificial heat and humidity, who must suffer most).

(c) Those exposed to heat and trying changes of temperature (brass foundry furnacemen, iron foundry furnacemen, and puddlers).

(d) Least notably, those exposed to weather conditions (dock labourers and stevedores.)

Mr. Hutton finds further that the trades which are outstandingly bad for respiratory diseases are also bad for other diseases (including those of the circulatory group, the digestive systems, and chronic nephritis), and are "from all angles dangerous trades where the expectation of life is bad".

The following general conclusion is reached:

With regard to respiratory disease as a whole, dust seems undoubtedly to be the most determining factor, and it is significant that it is the dusty cotton processes that have high rates rather than the hot and wet processes.

A closer analysis does, however, show some cases where hot wet processes are associated with more mortality than the corresponding dry ones, as is seen by comparison between (a) cotton and wool (spinning, weaving, and doubling) and (b) wet and dry cotton weaving. Here, however, the mortality experience is at variance with the only morbidity available.

From the fact that some of the cotton processes have such high respiratory mortality, the question arises whether or not the organic dust trades show similar effects. For the most part they do not. Rag pickers and sorters have low mortality except for bronchitis, which is moderate; woolworkers in woollen trades have low or moderate mortality; and bakers, grain and flour millers, and tobacco workers all have low mortality. In these instances, then, organic dust does not lead to a high mortality from respiratory diseases.

Mr. Hutton points out that in estimating the prevalence of industrial diseases mortality statistics are to be used with caution, as the diseases which caused most deaths are not as a rule those which cause most disability.

Canadian Electrical Code

The publication of the Canadian Electrical Code by the Canadian Engineering Standards Association in 1927 was noted in the LABOUR GAZETTE, February, 1928, and the progress made in its adoption by the provinces was described in the issue of May, 1928 (page 444). The October issue of the *Bulletin* of the Hydro-Electric Power Commission of Ontario contains information as to the present standing of the Code in Canada, as follows:—

"The matter of legislating regarding electrical inspection is within the jurisdiction of the Provinces and municipalities, and the situation when the Code work was undertaken was that many different sets of rules were in operation in the various provinces, and in many cases in different cities within the same province. This condition imposed hardship and inconvenience upon manufacturers of electrical equipment and upon inspectors and contractors, and was therefore highly undesirable. The Canadian Engineering Standards Association undertook the work of preparing a code, and after several years of effort the first draft of the Canadian Electrical Code was adopted at a meeting in Winnipeg in June, 1927.

"After the adoption of the Code at the Winnipeg meeting, it was published and distributed to all parts of the country. It was within a year adopted by the Provinces of British Columbia, Saskatchewan, Ontario, Quebec and Nova Scotia. In Ontario the

Hydro-Electric Power Commission was empowered by legislation to administer such rules for many years. In British Columbia and Nova Scotia the conditions were somewhat similar, but in the other provinces it was necessary to enact legislation before the code could be adopted. As it has just been stated, legislation was enacted in Quebec and Saskatchewan in 1928, and it is expected that several provinces will follow suit in 1929. The progress of the Canadian Electrical Code has thus been very satisfactory, and it may be stated that the work has been very successful since the most populous provinces of the Dominion have adopted the code.

"It is expected that no major revisions will be required for at least two years, and the next meeting of the main code committee is tentatively arranged for 1930. In the meantime the provincial committees will meet regularly and will exchange views on the suitability of the rules and on suggestions for revision."

The Code, as its name implies, is a set of rules governing inside electrical installations. Its preparation was undertaken by the Canadian Engineering Standards Association several years ago following requests from various electrical interests throughout the country, and in answer to a practically universal demand from many sources for rules which would be uniform throughout Canada.

Proposed Labour Legislation in Mexico

During November, President-elect Gil of Mexico submitted to the National Congress of Representatives of Workers and Employers, for their study and approval, a program of legislation which he described as an "advanced ideal on behalf of labour."

There are ten main provisions in the projected legislation. First and principal among them is the establishment of the elaborate system of labour courts. The courts would have their base in the plant itself where tribunals composed of an equal number of representatives of workers and employers would have authority to compose labour differences in the plant, and the power to advise as to the conduct of the business.

A system of Appellate Courts is provided, the first to be Municipal Courts, of which the Judge would be appointed by the Governor of the State, and the two other members representatives of employers and workers. This court would handle such disputes as the company courts were unable to settle themselves.

Next would be central arbitration boards in the capital of each state, composed of a judge and three workers and three employers, which would handle cases which the Municipal Courts have been unable to settle.

The nation itself would be divided into six districts with labour tribunals made up of a judge and workers and employers to handle disputes involving two or more states. The peak of the system would be a national court of labour with five magistrates named by the president. This national court would have the final word in the findings of the district tribunals and would maintain official relations with the International Labour Bureau of the League of Nations.

There would also be a National Labour Council of three representatives of workers, three of employers, one representative from each Labour Court, one representative from each of the Ministries of Industry, Agriculture and Finance and the National Department of Accountancy, one representative of the banks and one from the National Economic Council. This National Labour Council would be presided over by a representative of the Court of Labour and would have charge of obligatory arbitration disputes of a general nature and would arrange agricultural credits, regulate the general scale of salaries, promote industry through conferences, and the like.

The second provision is for a corps of labour inspectors to be created under the supervision of the Secretary of Industry and Pub-

lic Employment with offices in the capitals of the various states.

Third, the projected law recognizes the right to strike, but not of violence, and provides for voluntary, then obligatory arbitration of disputes.

Fourth, it fixes an eight-hour day and a six-day week, with four annual holidays as obligatory, and also makes obligatory annual vacations with pay.

Fifth, it stipulates the founding of a government obligatory insurance organization, at the Government's own expense, to be maintained thereafter by contributions as follows: Employes, 5 per cent of salaries, and employers, 7 per cent of salaries paid out. This is based on the principle of a part of the company's profits being used to benefit employee.

Sixth, it declares that every able-bodied citizen must learn a trade or profession, and work at it at least one year in Mexico. When the nation's interests demand it he must place himself at the disposal of the nation, working at least one month in a post assigned to him by the Labour authorities.

Seventh, 70 per cent of the workers of every factory must be Mexicans, and only Spanish-speaking persons will be allowed to occupy the posts of managers and superintendents, doctors and foremen.

Eighth, saloons and gambling houses are banned in labour centres.

Ninth, a minimum wage would be fixed in accordance with the cost of living.

Tenth, employers would be obliged to obtain the consent of the Labour Court and then give employees a month's notice before closing their businesses.

The first carpenter from Canada to enter the new home for aged members of the United Brotherhood of Carpenters and Joiners of America at Lakeland, Florida, is Mr. Richard Southwell, of local union 27, Toronto. International organizer James March announced recently that Mr. Southwell intended to leave Toronto in December, to enter the home when it opens on January 1. "With his departure," he said, "the trade union movement will lose a representative who took a leading part in its activities in early days." An account of the new home was given in the last issue of the *LABOUR GAZETTE*, page 1224.

NOTES ON APPRENTICESHIP AND TECHNICAL EDUCATION

THE notes in this section of the LABOUR GAZETTE relate to the work carried on by secondary vocational schools which receive federal grants under the provisions of the Dominion Technical Education Act, 1919. Other activities which have a direct bearing on the training of apprentices and industrial workers are also noted. The Dominion Government through annual grants administered by the Technical Education Branch of the Department of Labour, assists the provinces in developing all forms of vocational education and industrial training which are of benefit to workers in various branches of industrial, commercial and home-making activities.

New Vocational School for Chatham

The city council of Chatham, Ontario, recently assented to the request of the Board of Education for an issue of debentures to cover the cost of the construction of the first unit of a new vocational school for the city. This matter has been under consideration for a couple of months while aldermen and trustees have been discussing the problem. The motion finally carried with only three votes cast against the proposal. In commenting on the decision of the city council, the *Chatham News* suggests that "the thing to do now is to get ahead with the building of this new educational unit as soon as possible, in order that a very cramped and inefficient condition may be corrected at the vocational school."

Proposed New Vocational School for Saskatoon

The Buena Vista Home and School Club of Saskatoon went on record on November 15 as requesting a new vocational school for Saskatoon. A resolution to this effect was unanimously passed by a largely attended meeting. Principal Cameron of Nutana Collegiate gave statistics to show the growth in the demand for vocational training. In 1909 Saskatoon had eleven students taking vocational classes. Now there are 300 in the commercial department of the collegiate with six teachers giving all their time and an equal number giving 80 per cent of their time. Two hundred and ninety-one students are now attending night classes in vocational training.

Kingston to have Technical School

Representatives of industrial houses and business concerns who met with the advisory vocational committee of the Board of Educa-

tion of Kingston on November 15, for the purpose of discussing the proposal of establishing a technical school in that city, unanimously adopted a resolution endorsing the general principle of establishing a system of vocational technical education. About three local concerns were represented at this meeting. Trustee Allan Meiklejohn, chairman of the Advisory Committee, explained the general principles of technical education as adopted in Ontario under the Vocational Education Act, stating that the committee had in mind at the present time the construction of a technical school on some suitable site, the total cost to be about \$300,000. He emphasized the fact that while the city would be required to issue debentures for the total cost, fifty per cent of this would be paid as the debentures became due by the provincial government, this making the actual cost to the city only \$150,000.

The representatives of industrial firms were unanimously of the opinion that at the present time it was exceedingly hard to obtain boys as apprentices and that training such as would be received in a technical school would greatly help in solving this problem.

Ontario Apprenticeship Committee

The appointment of four assistant inspectors, whose duty will be to organize apprenticeship work in the Toronto, Hamilton, Ottawa and London-Windsor districts was favoured at a meeting of the Provincial Apprenticeship Committee held on November 16, and this recommendation was forwarded to the government. The appointees were Messrs. Fred Haws, Hamilton; Walter Thorne, Toronto; James Johnson, Ottawa; George Evans, Weston. All but Mr. Evans have held cards in the international trade union movement. Mr. J. M. Pigott of Toronto was appointed chairman of the Board. This committee functions under the Ontario Apprenticeship Act, adopted at the last session of the provincial legislature (LABOUR GAZETTE, May, 1928, page 464). The whole question of the control of apprenticeship was debated at the meeting.

Apprenticeship System Proposed in Alberta

In a letter addressed recently to the *Alberta Labour News*, Mr. T. J. Thornton, business agent of the United Brotherhood of Carpenters and Joiners of America, Local 1325, stated that the building trades of Alberta at the present time lack one important piece of

machinery, that is an apprenticeship system. He says in part:—

"The deficiency of an apprenticeship system at the present time is caused by the get-rich-quick conditions in a new and prosperous country, the constant specializing of short-cut mechanical methods whereby a person is not allowed the freedom to use his mental capacities, but must perform every task as a clock goes round the dial in a twenty-four-hour-day by spring, wheels and cogs. . . . It is essential if there is to be progress that the physical and mental abilities must work in equal harmony to bring the future tradesman to that position whereby craftsmanship, art, and quality are the prime factors in all our future building programs.

The Construction Apprenticeship Council of Ontario calls for a harmonious working agreement between architects, employers, organized labour, technical instructors and apprentices, to establish a standard of skilled workers in the building and construction industries by supervising the technical training, transferring apprentices, granting diplomas and organizing special committees for educational and practical purposes. If Alberta is to keep in the vanguard the time is ripe for our organized central bodies to take this matter in hand the same as our railway organizations have done in the past, to man our future transportation system."

Technical Education and Employment

Very little information is available showing the capacity of the various industries to absorb new recruits. As a consequence of this lack of information young people are sometimes trained for a type of work which does not really require their services or which will require their services only as junior workers, but cannot absorb them as adult workers. It is interesting to learn that the Technical Education Committee of the National Joint Industrial Council for the Flour Milling Industry, London, England, has recently made a study of the need for technical training of employees in the milling industry. From a publication issued by the council in July, 1928, we learn that a questionnaire headed "Recruitment of Labour and Technical Education" was sent on November 1, 1927, to all federated firms, to the English and Scottish Co-operative Wholesale Societies, and to a selected list of 52 non-federated firms. In a letter accompanying the questionnaire, it was pointed out that the personnel of the employees of most mills is, under ordinary conditions, changed to a small extent only, and it was not suggested that existing employees

should be displaced in favour of trained youths. At present, however, employment in flour mills is, for many youths, a blind alley occupation because the industry is unable to absorb all the youths employed at full adult rates of pay, payable at the age of 21. The letter proceeded: "The Joint Committee is most strongly of the opinion that this unorganized and undesirable state of affairs should be superseded, and that an attempt should be made to ascertain the number of persons which the industry requires and can absorb per annum." The following were the questions asked:—

(1) If a scheme for the training and technical education of youths be accepted as satisfactory by the National Joint Industrial Council for the Flour Milling Industry of Great Britain, are you willing in engaging fresh persons to give a preference to youths so trained?

(2) On the basis of your present output and in view of the latest provisions by the State for Old Age Pensions at 65, how many vacancies are likely to occur per annum in your male adult mill and warehouse staff?

(3) How many youths are at present employed in your mill and warehouse between: (a) the ages of 16 and 18; (b) the ages of 18 and 21.

The total number of replies received was 71. Of these 71, three are in the negative; two do not answer the question as they are closing down; five reply that they are not interested as they (a) do not employ youths, (b) are not likely to have any vacancies for youths.

The remaining 61 firms (including the three groups referred to above, replied favourably to question 1, and in their replies to questions 2 and 3, indicate that there is sufficient ground to justify the Council in proceeding further in the matter. The matter was accordingly remitted to a sub-committee.

The sub-committee believes that it should be made possible for youths recruited in accordance with the recommendations contained in the memorandum to attend day classes in the employer's time, and that the education so received should be vocational, that is to say, it should, even in respect of science subjects, be framed with a view to fitting the students for employment in the flour-milling industry.

It is suggested that the accompanying proposals should be regarded as in some measure designed to restore the apprenticeship system of former days, and it is hoped that an employer, likely to retain the adult services of the youths in his employ, or some of them,

will support the scheme by providing facilities for education on the lines suggested. This will be in his own interest, and in the interest of future generations of flour mill workers.

Co-ordinating Officers in Ontario

The vocational schools in some of the larger centres in Ontario have appointed co-ordinating officers. The Ontario Vocational Education Act, 1921, section 12, subsection 5, authorizes the appointment of co-ordinating officers in the following terms:—

“Subject to the approval of the Minister, an advisory committee may appoint one or more officers with qualifications approved by the Minister to bring to the attention of employers and employees the work of the schools and departments, and to make the necessary arrangements between employers, employees, and the schools or departments for the conduct of part-time or co-operative classes, and, in general, to act as a co-ordinating officer between the local industries and the schools or departments and every such person so appointed shall be subject to the control of the advisory committee.”

In one of the cities in the United States a study has been made of the qualifications desirable for such an officer. From this, we learn that “since the co-ordinator’s work is largely on the secondary school level it is desirable that he have high school certification. Since he is dealing with employers, employees, and parents, it is important that he understand the problems of industry, preferably through first-hand experience. Since he will deal largely with problem pupils, he must understand adolescents, and have such a personality that boys and girls will give him their confidence and good-will. A co-ordinator, therefore, should be the most capable person available, provided only, that he can also work well with boys and girls.”

Trade School Courses in Quebec

A 1928 amendment to the Quebec Technical or Professional Schools Act authorizes the Lieutenant-Governor in Council to organize Arts and Trades Schools in any municipality whenever he deems it necessary; to assist in the development of primary technical education, and to appoint directors and professors and provide for their remuneration.

The Montreal Technical School now offers a trade school course, and as a certain amount of confusion has arisen among the general public as to the distinction between the technical course and the trade school course given

at this school the following explanation has been published in *Technique* (a monthly publication issued under the direction of the Director of Technical Education for Quebec) for November:—

“As its name implies, the trade school course is intended to teach a definite trade, such as carpentry, pattern making, cabinet making, moulding, blacksmithing, machinist, tool making, etc. When a young man enters the trade school, he does so with the definite idea of spending at least two years in learning his trade, and outside of six hours per week, devoted to class work, such as the necessary arithmetic, mensuration, sketching, etc., to help him in the shops, the whole of his time is devoted to shop-work.

“Before deciding what particular trade he wishes to follow each pupil is required to spend three weeks in each one of the shops, at the beginning of his first year and, after this preliminary introduction to the different classes of work carried on by the school, he is then expected to make a definite choice. During the balance of his time at school, he remains in that shop most closely connected with the trade chosen. At the end of about two years, the average pupil is sufficiently equipped to go out to earn his living at his trade, and on passing all the requisite examinations, is given a certificate indicating the particular trade he is qualified to follow.

“The case of the technical student is quite different. In the first place he has already acquired a much better education before entering because all candidates are required to have done some high school work (preferably two years) before being admitted to this section. Besides, in his first year, the technical student instead of spending six hours per week in class and the balance in the shops, does just the reverse. He puts in six hours per week in the shops and the balance of the time in class. In other words the technical man gets very much more theory than his comrade in the trade school because his outlook in life is quite different. In his second and third years the technical student devotes one half his school time to class work and the other half to the shops. No pupil in the technical course specializes till he reaches his second year, the first year being designed to give an all-round general training in the various branches of mathematics, chemistry, physics, materials of construction, drafting, etc., and even during the two years of his specialization, the young technical student is required to continue his general training in mathematics, chemistry, electricity, drafting, etc., except that during his second and third years he now devotes more time to his spe-

cialty than to other subjects. When he has completed his third year and passed the final examination satisfactorily he receives a diploma (not a certificate) in which the specialty he has followed is indicated, and with this diploma he is now qualified to call himself a technician, which his confrere of the trade school may not do."

Technical High School Opened at Vancouver

Vancouver's Technical High School was formally opened on November 30, by Hon. Joshua Hinchcliffe, Minister of Education in British Columbia. The present day enrolment is 760 pupils. Mr. J. G. Lister, principal of the school, reviewed the history of technical schools in Canada and the United States. He said that at the present time, five divisions are in operation in the new Vancouver institution. The first division provides for boys who have graduated from the public schools. They take a four-year matriculation course, entitling them to entry into university.

In the second division, boys who have taken their entrance are given a straight three-year technical course, which, academically, is the equal of matriculation except for languages and history.

In the fourth group, assorted types mingle. There are boys who are taking their fourth and fifth years in the school; there are others who, having completed high school, find themselves illy fitted to earn a livelihood; there are university graduates seeking to fit themselves as architects and draftsmen; there are

boys without high school education who are taking different combinations of technical work; and there are a few adults striving to overcome the handicaps which have faced them in the workaday worlds in which they have been living.

As an instance, there was a man who operated an engine shop on one of the islands off the British Columbia coast. His daily tasks included refitting fishing boats, and he found himself lacking in the technique of lathe work. So, in an off season, he packed his bag and came to Vancouver, where, after paying his fee, he entered the technical shops and became initiated into the mysteries of the craft in which he had been lacking. He has taken three courses already at the school, and he is recognized to-day as one of the best machinists on the coast.

There are men, too, coming to Vancouver after an autumn's harvesting on the prairies, who enroll at the Technical School, specialize in some branch of industrial endeavour, and thus hoist themselves by the bootstraps out of the class of "mossless" rolling stones. And all these students are included in the fourth group.

The fifth group are the boys who have failed to get their entrance examinations. They enter the technical school, where they are divided into three classes, according to their adaptabilities, and are eventually turned into industry as mechanics, electricians, or carpenters.

Proposed Mine Safety Program

The *American Labour Legislation Review* states that from and including 1922 to the end of August, 1928, 2,184 miners in the United States lost their lives in "major" coal mine explosions. From January to August this year 308 men were killed in eleven explosions.

The program of the Association for making safety work in the mines more effective includes the following suggested measures:—

1. The adoption of uniform legal minimum standards of safety;

2. The use underground of no explosive that is not after scientific investigation numbered among the "permissibles;" the strict limitation of "shooting off the solid;" and the use of shale or approved rock dust to check the spread of coal dust explosions;

3. Reward careful employers and penalize the less scrupulous by the universal adoption of schedule rating for insurance under accident compensation laws, with a further graduated penalty for cases of wilful failure to put into effect legal safety regulations;

4. An adequate mine inspection staff selected upon a merit basis of training and experience, fairly paid, for reasonably long tenure of office, and protected from partisan interference whether political or industrial;

5. Greater public authority, federal and state, to procure and disseminate information, and to establish and maintain on a uniform basis reasonable minimum standards of safety.

ALL-CANADIAN CONGRESS OF LABOUR

Proceedings of Second Annual Convention

THE second convention of the All-Canadian Congress of Labour, which was held in Toronto from the 5th to the 9th of November, 1928, was attended by 147 delegates representing local branches of the following organizations:—Amalgamated Carpenters of Canada; Auto Workers' Industrial Union of Canada; Canadian Association of Railway Enginemen; Canadian Brotherhood of Railroad Employees; Canadian Electrical Trades Union; Canadian Federation of Bricklayers, Masons and Plasterers; Electrical Communication Workers of Canada; Lumber Workers' Industrial Union of Canada; Mine Workers' Union of Canada; National Union of Painters, Decorators and Paperhangers of Canada; One Big Union; General Workers' Union of Canada; Grain Workers Industrial Union of Canada; National Union of Theatrical Employees.

Mr. A. R. Mosher, the president, informed the delegates that the congress had been established for the purpose of co-ordinating the work of its affiliates and to provide assistance to Canadian workers in industries where labour had not been organized. He reviewed the accomplishments of the congress during the past year and the efforts put forth for its consolidation. It was the opinion of the president that the most pressing duties of the congress was to supply leadership and inspiration to unorganized workers.

Report of Executive Board

The report of the executive stated that the chief purpose of the congress being the organization of the workers in autonomous bodies for economic action, the work of the board had been directed chiefly along two lines—first, to strengthen the sentiment for national labour autonomy among the affiliated membership and to consolidate the various units of the movement; second, the organizing of the unorganized workers, either in existing national unions or in new unions associated with the congress. Reference was made to the *Canadian Unionist* and other publications issued by the various adjuncts of the congress. Lists were given of the organizations which had affiliated with the congress since its inception as well as of the local unions and labour councils which had been granted charters. The report stated that the board had carried out the instructions of the first convention in (a) representations to the Dominion Government; (b) negotiations for the exchange of fraternal delegates with the

British Trades Union Congress, and (c) co-ordinating the efforts of the various labour bodies in the relief of unemployment through the labour councils of the congress. Representations had also been made to the proper departments in reference to (1) Waterfront accidents at Vancouver; (2) Amendments to the Shipping Act; (3) Representation on the Canadian National Railways derictorate; (4) Representation on Geneva delegations and on other Government bodies; (5) Pensions for the blind; (6) Unemployment Insurance, and (7) Military training in schools.

It was reported that the board had adopted an emblem for the congress and also that subscription had been made to the Canadian Labour Research Bureau, which body had passed out of existence.

According to the report, the main task of the congress was the organization of the unorganized, all other activities being subordinated to this objective. The attitude of the congress towards the Trades and Labour Congress of Canada was defined as one that should be marked by a willingness to co-operate for any common purpose and that it should be recognized that the declared objective of both organizations is the welfare of the workers of Canada. It was also recommended that an intensive campaign be conducted by affiliated bodies amongst the workers to organize on an industrial or class basis, and that steps be taken to supplement industrial by political action with the ultimate object of the establishment of a national labour party.

Under the heading "Remedial Legislation" mention was made of certain problems in which the workers were intimately concerned but which lay beyond the normal scope of union activities. Among these were: Old Age Pensions, Workmen's Compensation, Unemployment and Invalidity Insurance, Immigration, Public Ownership of Natural Resources and Public Utilities, International Relationship, etc. It stated that "until such time as labour is adequately represented in legislative bodies your executive has no alternative but to make representations to the provincial and federal Governments respecting desired legislation."

Favourable comment was made on the passing of the Old-Age Pensions Act and of the efforts put forth by the Labour and Progressive members in the House of Commons in this direction. Mention was also made of the favourable report on unemployment in-

insurance presented by the Parliamentary Committee on Industrial and International Relations at the last session of Parliament, and it was stated that "unemployment insurance should be supplemented by sickness and invalidity insurance, so as to provide against unemployment from any cause whatsoever."

Under the caption of "Immigration" it was reported that the board disagreed with the present policy of allowing interested parties to bring people into this country through the inducement of the assisted passage. It was suggested that "immigration should be taken out of the sphere of politics, and urged that a commission be set up by the government, composed of representatives of all interested groups, including adequate representation of labour, to make a survey of the natural resources of the country and thus ascertain what opportunities exist for the absorption of additional population."

In regard to co-operation between Capital and Labour, mention was made of the establishment of an industrial conference between representatives of employers and labour unions in England, and the suggestion was made that efforts should be made in Canada to promote a better understanding among the employing class and the general public regarding the aims of labour.

The report of the executive board made two recommendations—first that the per capita of local unions directly chartered by the congress be reduced from twenty-five cents per member per month to fifteen cents and that fifty per cent of such amount be applied to defray the cost of supplying each such member with a monthly copy of the *Canadian Unionist*, the official organ of the Organization; second, that the new by-laws as drafted by the executive board for the government of local labour councils be incorporated in the constitution.

Financial Report

The financial report of the secretary-treasurer, Mr. W. T. Burford, showed a membership in affiliated national and chartered local unions of 51,365. The receipts for the period between the last convention, March, 1927, and September 30, 1928, amounted to \$23,025.47, while the disbursements totalled \$21,741.89.

The only constitutional changes made by the convention provided for a reduction of per capita tax, payable by local unions directly chartered by the Congress, which in future will be at the rate of fifteen cents per member per month instead of twenty-five cents; and for the addition of a new article to the constitution providing uniform by-laws for all the labour councils of the Congress.

Resolutions

Among the resolutions adopted were: (1) Recommending the setting aside of a day for meetings of protest against interfering with peaceful picketing; (2) Favouring the resumption of relations with Russia; (3) Seeking co-operation among national unions in disputes; (4) Advocating the abolition of paint-spraying machines; (5) Protesting against discrimination alleged to be practised by United States corporations having branches in Canada against employment of Canadian union members; (6) Favouring Federal unemployment insurance legislation; (7) Urging provision by the Department of Labour of more adequate statistics on unemployment; (8) Advocating the five-day week of forty hours; (9) Urging the organization of women workers; (10) Favouring the education of children up to the age of sixteen; (11) Adopting industrial unionism as the basic organizational principle of the congress; (12) Urging the organization of young persons in labour unions; (13) Recommending holidays with pay for all workers; (14) Protesting against persecution for political or religious opinions; (15) Demanding recognition of Canadian unions by employers; (16) Advocating support for any union which inaugurates an active organizing campaign among the miners of Northern Ontario; (17) Seeking to secure improvements in working conditions for women; (18) Recording opposition to company towns; (19) Advocating the organization of auto car workers; (20) Urging the extension of the benefits of the Old Age Pension Act; (21) Protesting against the refusal of United States vaudeville troupes to work with members of Canadian unions; (22) Advocating the establishment of a minimum wage commensurate with living conditions; (23) Calling for the cessation of military preparations and military teaching in schools.

Officers Elected

The election of officers resulted as follows: President, A. R. Mosher, Ottawa; Vice-presidents, Omer Deleau, Montreal, and Frank Wheatley, Calgary; Secretary-treasurer, W. T. Burford, Ottawa; Executive Board members, M. M. Maclean, Ottawa, S. Sykes, Winnipeg, G. W. McCollum, Toronto.

The next convention of the Congress will be held in Winnipeg in November, 1929.

Among the entertainment features provided was a tour of the city and neighbourhood by arrangement of the Toronto Labour Council. A banquet was held in the evening at which Mr. W. J. McPherson presided. Mr. Samuel McBride, Mayor of Toronto; Hon. Dr. Forbes

Godfrey, Provincial Minister of Labour; Hon. Peter Heenan, Dominion Minister of Labour; Mr J. H. H. Ballantyne, Provincial

Deputy Minister of Labour, and Mr. A. R. Mosher, President of the Congress, spoke in the order named.

NOTES ON LABOUR UNION ACTIVITIES

United Association of Journeymen Plumbers and Steam Fitters of the United States and Canada

THE twenty-second convention of the United Association of Journeymen Plumbers and Steamfitters of the United States and Canada, attended by approximately 800 delegates, was held in Atlantic City on September 17-21, 1928.

The report of the general executive board gave a review of the work accomplished since the last convention. In speaking of conditions in Canada the report stated that "the situation in Canada has been unsatisfactory due to the fact of a very serious division in the labour movement."

According to the report, the greatest accomplishment of the organization had occurred in the City of Montreal, where an organizing campaign had been carried on. By this means, "a condition was created that made it possible to bring within the fold of the organization, the members of the National Catholic Syndicate . . . with the result that an agreement was reached last November with the employers, the first in almost thirty years, in which was secured a recognition of the organization, the union shop, and a graduated increase in wages".

The executive board pointed out that the locals in Canada had been making wage increases, the highest rate obtained being \$10 per day, while the great majority of the members received \$8 per day. It was the opinion of the executive board members that the membership in Canada was about to enter a period of renewed activity and that they could be relied upon to take full advantage of future opportunities.

The report made special mention of an act passed by the Provincial Legislature providing for regulation and control of apprentices. The Act was considered by executive members as the most outstanding legislation that has been adopted recently. In referring to Workmen's Compensation legislation in the Dominion, the report stated that "Canada enjoys some of the best Workmen's Compensation Acts in the world."

The executive board urged the convention to approve group insurance coverage for all members to the amount of \$1,000 each.

In advocating the shorter work-week the report of the board informed the delegates that thirty of the local unions had secured, through mutual agreement, the five-day week. At the same time the membership was cautioned not to take any aggressive strike action on the subject, it being a matter of education, and would come gradually and surely by the enlightened method of conciliatory reasoning.

The executive report showed receipts from all sources amounting to \$3,429,416.80 for the period July 1, 1924, to and including June, 1928. The total disbursements for the same period amounted to \$2,521,115.67 while the assets of the United Association totalled \$1,834,778.29.

According to the report of the committee on officers reports the membership numbered 65,180 an increase of 6,953 members within the last four years.

A number of additions and amendments were made to the constitution and laws of the organization.

Among the resolutions adopted were: (1) Opposing the submission of members to a physical examination; (2) requesting that the age limit be extended for applicants for employment in the Federal Government; (3) recommending the removal of headquarters of the organization to Washington providing a favourable sale of the present property can be negotiated and all other conditions are equally advantageous; (4) favouring the complete abolition of the power of the courts to issue injunctions against the organized labour movement and wage earners generally; (5) recommending that the incoming general officers of the Association use every endeavour to put the five-day week into effect throughout the entire jurisdiction.

Officers elected were: President, John Coefield; Secretary-treasurer, Thomas E. Bourke; Assistant secretary, Frank J. Kennedy. Among the vice-presidents elected were Louis Guerard, Montreal, Que., and S. G. Smylie, Winnipeg, Man.

International Moulders' Union of North America

The twenty-seventh convention of the International Moulders' Union of North America was held in Montreal, Que., from September 24 to October 9, 1928, with approximately three hundred delegates in attendance, the chairman being the president, M. J. Keough. After the address of welcome by the Mayor of Montreal, the president took the chair and addressed the convention. After referring to the friendly relationship existing between the Union and the Manufacturers' Protective and Development Association, the president called attention to the rapid development of the moulding machine and its introduction into the foundry as a factor in producing castings. On this question, president Keough recommended that all interests would be served best by placing machine work on a piece price basis. He also advocated the changing of the law governing the admission of machine operators to membership in the Union. Among the other subjects dealt with by the president were: organization work; death benefits; sick benefits; out of work benefits; finances; emergency strike fund; injunctions.

Secretary Kleiber's report contained a synopsis of all the executive board meetings during the past term, and it also showed that the expenses since the last convention amounted to \$1,039,306.58. The treasurer's report indicated a balance on hand as at June 30, 1923, of \$38,264.04, receipts for the five year term amounted to \$3,354,491.61, while disbursements for the same period totalled \$3,332,606.68.

The report of the financier called attention to the fact that disbursements from the sick benefit fund had exceeded the receipts every year since 1920, with the exception of 1923. After a careful study of the financier's report, the committee on beneficial features, recommended that eleven cents out of each seventy-five cent stamp sold be apportioned to this fund. This recommendation was concurred in by the convention, and beginning January 1, 1929, the new apportionment will become effective. As a further protective measure the delegates decided to reduce the sick benefits from \$7.60 to \$6.75 per week. In addition to this, the convention limited the amount of sick benefits to thirty-nine weeks in any one five year period. By action of the convention the time was extended from fifteen to twenty years of continuous membership before a member was entitled to draw an honorary beneficial card, while the dues for these members were increased from thirty-five to forty cents per week. Another important change made in the laws governing the payment of death and disability benefits, was the placing

of all members initiated or re-instated after December 1, 1928, on a graduated scale from \$250 up to \$700, according to length of membership.

Among the resolutions adopted were: (1) Favouring State and National legislation which will prescribe reasonable and proper sanitary and other general working conditions in all factories, especially foundries; (2) Urging that future agreements provide for a weekly pay day; (3) Instructing the officers to endeavour to secure the passage of the bill now before Congress providing for the five and one-half days each week, with pay, for all navy yard and arsenal employees; (4) Recommending that the incoming officers submit a plan to the next convention for the organizing of foundry labourers machine moulders; (5) Authorizing the appointing of organizers to the limit of the resources of the organization; (6) Favouring the immediate affiliation with the Railway Employees Department of the American Federation of Labour; (7) Recommending that apprentice boys be partial members of the Union and that the question of their dues and benefits be referred to the incoming officers.

The officers elected were: President, M. J. Keough, Cincinnati, Ohio; Secretary, Victor Kleiber, Cincinnati; Treasurer, John Gill; Financier, Fred. L. Baumgartner. Among the vice-presidents elected was J. H. Barnett, Toronto, Ont.

During the month of November, a total of 6,105 accidents were reported to the Workmen's Compensation Board of Manitoba, in the industries of Schedule 1 of the Act, 38 of which were fatal cases; in Schedule 2 industries 529 were reported including 11 fatal cases; and 387 Crown, 2 of which were fatal, were reported during the month, making in all 7,021, of which 51 were fatal.

A joint committee of the New York Tuberculosis and Health Association and Columbia University reported that on a recent examination of 208 rock drillers, blasters and excavators in New York, 118 were found to be suffering from silicosis, the lung disease contracted through constant exposure to silica dust. The report recommends that men employed in such occupations should be granted compensation for disability due to silicosis. (Provision is made in Ontario for the payment of workmen's compensation to workmen suffering from silicosis).

NEW PUBLICATIONS

“History of Trade Union Organization in Canada”

A valuable contribution to the literature of the Canadian labour movement has been published by the University of Chicago Press under the title “The History of Trade Union Organization in Canada.” It is the work of a Canadian author, Mr. Harold A. Logan, now professor of economics and sociology at Randolph-Macon Woman’s College, Lynchburg, Virginia. (The Canadian publishers are the MacMillan Company of Canada, St. Martin’s House, Toronto.)

The book is arranged by periods in order of the events described, beginning with the early labour movement from 1825 to 1880. The materials for this period are slight, labour activities being scattered and not yet co-ordinated in a national movement. Professor Logan gives a sketch of the early occupational background and conditions of life in Canada. He finds that the social conditions prevailing in those early days, when the country was mainly agricultural and the craftsmen catered only for local needs, determined the form that was later to be assumed by labour organization, and still persists. “In Canadian experience,” he says, “labour organization has not waited upon factory system. Rather it has risen and persisted for decades among hand-workers or journeymen confronted with a common interest (cobblers, typographers, shipbuilders, etc., first of separate towns, later in unions embracing different centres) when it was felt that this interest could be served by united action.”

It is significant that labour even in those days of sparse settlement had serious emigration problems. “The heavy immigration of British, in addition to agriculturists, contained,” it is stated, “a large element of skilled artisans who had little liking for throwing away the benefits of their years of apprenticeship, and who consequently stood doggedly by their trades. It also contained many labourers bound to particular employers by contracts already entered into before they reached this country. Due to both these circumstances, as well as to others, the net effect of immigration, stimulated as it was by assistance in passage, was to overload the labour market in the towns in periods of slackness or depression—that market, after all, possessing relatively little elasticity. Oftentimes a surer safety valve for labour surplus seems to have been found in emigration, for

although we must not overstress the poor condition of employment in the trades as a leading cause of this phenomenon, there can be little doubt that it played an important part in the loss to Canada of 750,000 of her native-born who settled in the United States in the decades 1850-80.”

Professor Logan takes the years from 1880-1902 as the second formative period in the development of labour organization in Canada. Already, during the first period, with the opening of the country by railways, heavy immigration, and the building up of the Ontario towns and of labour associations, there had been signs of awaking sense of labour unity. This development was completed in the second period when Canada was assuming its modern industrial shape. The expansion of the labour movement during the eighties is described, including the non-craft Knights of Labour and the Provincial Workmen’s Association. Special sections of the book are devoted to the early history and later development of the Trades and Labour Congress of Canada, and to its legislative aims as expressed in its annual series of resolutions. Geographically, he notes, the Congress was, until 1889 (when it held its first convention in Montreal), for all practical purposes an Ontario organization, and down to the end of the century its meetings were composed largely of delegates from the two provinces, Quebec and Ontario.

Copious materials exist for the modern history of the Canadian labour movement, commencing with 1900. In that year the publication of the *LABOUR GAZETTE* was begun, as well as the simultaneous unbroken record of the Trades and Labour Congress of Canada. A separate section is assigned to the Provincial Workmen’s Association “owing to its accomplishments over a long period of years and to its unrivalled position as the outstanding example of pure Canadian unionism.” The more recent Catholic movement of Quebec also receives special treatment “because on account of its principles and politics it stands unique among labour movements on the North American continent.” The last chapter gives an account of the rise and decline of the One Big Union. The book contains a useful bibliography, and also a full index which adds to its value as a work of reference.

"American Labour Dynamics in the Light of Post War Developments"

A review of labour tendencies during the past ten years is given in a work of composite authorship recently published at New York (Harcourt, Brace and Company) under the above title. Among the authors of the various papers are several well known labour names, but the general point of view is stated to be that of a "sympathetically interested observer, and an active, yet sufficiently objective participant." Mr. J. B. S. Hardman, the editor and one of the group of contributors, points out that the book analyses only such problems and issues as came to a head in the last two or three years, but it draws also the general outlines of a wider background.

Reviewing events of the past decade—"the frontier decade of a new epoch"—the editor recalls the incipient revolutionary movement of 1919, the unsuccessful efforts to form an independent political labour party, the equally abortive movement towards the amalgamation of labour forces, and the ultimate "dulling of labour's economic consciousness" during the prosperous period which culminated about 1923. During the era of industrial prosperity, "labour, the machine, the consumer, advertising, the credulity of the public—all elements, means, devices—were obliged to serve one end: the declaring of more and bigger dividends." At the same time, however, labour, it is claimed, began to come nearer to an understanding of its functional significance in the life of the nation.

This opinion as to labour's new outlook is confirmed by Leo Wolman in a contribution giving an account of recent trends in the union movement. He notes that the sharp decline in trade union membership in the seven years since 1920 has brought a gradual change in union policy. "Organized labour," he says, "has begun to learn that it must accept an increasing measure of industrial responsibility; it must adjust its economic policies to the needs of a changing industry, and that it must discard many restrictive practices." The Baltimore and Ohio plan of labour co-operation with management is cited as an example of a new "healthy trend," and of a more realistic union policy.

A chapter on "The New Capitalism" declares that the so-called revolution in the distribution of income and wealth is a myth, as there has been practically no decline in the concentration of wealth. Labour's capital resources are found after all to be trifling, but on the other hand, competitive capitalism is being transformed into monopoly and imperialism. "What remains of competitive small-scale industry has been bludgeoned into

submission, while the middle class comes more and more to consist of well paid employees depending upon monopolistic enterprises and to develop a stock-and-bond aristocracy of its own, abandoning liberal traditions." As to the position of labour in the new order, it is declared that "of the increased productivity during the past 35 years, perhaps 20 per cent may have gone to labour; the balance has gone into larger profits, increased concentration of income and wealth, the staggering wastes of distribution, advertising, financing and speculation."

The concluding chapter of the retrospect discusses the evolution of the social mind during the past ten years. Although this has been an era of "material emulation," the real social issues are found to be becoming clearer: "slowly we shall develop a social intelligence which knows a force when it sees one; later we may be able to develop techniques for making these forces function without conflict or destruction."

Part II discusses the "problems of a labour union somewhere in the United States." It is declared that the accumulation of power is the chief function of the trade-union movement, and that the technique of organization must be related to this function. Present labour issues in industry and politics are discussed in Part III, the fundamental issue being stated to be the problem how labour should meet the new industrial technology and the geographical shifting of industry. These questions are considered in relation particularly to coal mining, building, and the cotton industry. Company unions, craft unionism, shop committees are discussed in detail. The strike and boycott are declared to be nearly obsolete weapons, and reliance is placed rather on "organized skill, keen judgment of economic trends, accurate knowledge of business conditions, tact in negotiation, administrative capacity, organization, discipline." Unionism now "looks to the growing participation of the rank and file of workers in the fruits of the productive process through the growing share in its control on the part of their organizations."

The thesis of the concluding section of the book, on "the mind of labour, ideas and leadership," is that labour should abandon its present opposition to all theorizing, and should endeavour to reach a new generalization from existing facts.

The book is a substantial volume of 432 pages. It is dedicated to the Amalgamated Clothing Workers of America, "a body of organized labour—men and women, imaginative, daring, responsible, dependable."

LEAGUE OF NATIONS INTERNATIONAL LABOUR ORGANIZATION

Forty-Second Session of the Governing Body

At the invitation of the Polish Government, the Governing Body of the International Labour Office held its 42nd Session in Warsaw from October 5-8, 1928, and in Cracow on October 10, 1928, under the chairmanship of Mr. Arthur Fontaine, French Government delegate. The Polish Minister of Labour and Social Welfare welcomed the Governing Body on behalf of the Polish Republic, and expressed the hope that their visit would strengthen the ties between his country and the International Labour Organization. He stated that Poland had ratified 14 Conventions and that her attitude to the Organization was reflected both in its social legislation and in the manner in which that legislation was applied. The principle of the 8-hour day, generally regarded as the basis of all social legislation, had been fully recognized in the new social legislation of the Polish Republic, and that principle had been so far applied that the day was rapidly approaching when there would be no exceptions to the fundamental rule. The Ministry of Labour's bill for the codification of all social insurance legislation contained clauses instituting a system of old age and invalidity insurance for the workers of the whole of Poland. When this bill was adopted Poland would possess two great insurance institutions covering all the occupational risks of manual and intellectual workers.

The Governing Body, which was elected by the International Labour Conference at its session of May-June, 1928, reappointed its various committees and nominated its representatives on the following bodies: The Joint Maritime Commission, the Mixed Advisory Agricultural Committee of the Office and the International Institute of Agriculture, the Correspondence Committee for Industrial Hygiene and Safety, the Advisory Committee on Intellectual Workers, and the Managing Committee of the Management Institute.

In accordance with a recommendation made by the Joint Maritime Commission at its 8th session, the Governing Body added the following item to the agenda of the Maritime Session of the International Labour Conference, which it was decided should open on October 10, 1929:

Establishment by each maritime country of the minimum of professional competency exigible from captains and navigating and engi-

neer officers in charge of watches on board merchant ships.

It was decided by the Governing Body that the General Session of the next International Labour Conference should open on May 30, 1929.

The Governing Body considered the resolutions adopted by the International Labour Conference at its 1928 Session, most of which either laid stress on the importance of studies already undertaken by the office or asked it to investigate new questions. Among the resolutions discussed were those concerning accidents due to coupling on railways, conditions of work in the textile industries, and the official languages of the International Labour Organization from both the technical and the financial point of view.

The next session of the Governing Body is to open on March 11, 1929.

Visit of the Director to the Far East

Mr. Albert Thomas, Director of the International Labour Office, accompanied by his principal private secretary, Mr. Viple, and the Chief of the Diplomatic Division, Mr. Phelan, left Geneva on October 31 for a visit to the far east. This visit was undertaken in response to invitations from the far eastern countries, especially Japan, which have frequently expressed a keen desire for closer relations with the Organization. At each session of the International Labour Conference for some years the employers' and workers' representatives, as well as Government delegates, have suggested that the Director should establish personal contact with their respective States and see for himself the conditions of life and work which prevail within their vast territories.

The Director is visiting China, Japan and the Dutch Indies. The new Chinese Government informed him of its interest in his visit to the far east and of its desire to give evidence of a new spirit in relation to labour problems and social legislation. Mr. Thomas intended to spend a month in Japan, coming into contact with the most representative workers' and employers' organizations, and discussing with the responsible authorities the situation of Japan as regards International Labour Conventions and the possibility of further ratifications. From Japan the Director proceeds to Batavia in order to spend a few days in the Dutch East Indies in response to an invitation from the Government of the

Netherlands. He will arrive back in Geneva in February.

"Immigration Laws and Regulation"

Under this title the International Labour Office recently published the second volume of a study on "Migration Laws and Treaties" in the different countries of the world. This second volume brings up to date, and develops, in about 500 pages, the highly condensed documentary material of the work published in 1922, entitled "Emigration and Immigration: Legislation and Treaties." The new volume contains an analysis of the provisions in force in nearly all the countries of the world, showing the evolution of the regulation of immigration—an evolution which has become much more strongly marked during the last few years, sometimes in the form of encouragements to immigration, but more frequently of restrictions, and nearly always of a more and more systematic selection. It

also includes a list of the laws and regulations in force in more than 160 countries, dependencies, territories, provinces, etc., and reviews successively: immigration legislation in general; the definition of an immigrant; employment conditions, and the recruiting and placing of alien workers; protection of the immigrant in his dealings with transport and other agents; the transport of the immigrant, his arrival at his destination, his possible rejection and repatriation; the treatment of immigrants by the authorities of the countries of immigration; continental and frontier zone immigration.

The third and last volume of the same study, which will probably appear early in 1929 under the title "International Treaties and Conventions," will contain, in addition to a systematic survey of the different kinds of international agreements concerned with migration and migrants, an extensive index with all useful references.

New Settlement Scheme for Boys and Domestic in Canada

The Hon. George Spence, Minister of Railways, Labour and Industries of Saskatchewan, recently announced that the provincial government would co-operate with the Dominion and the British Government in a new scheme for the settlement of British boys of approved type in the province. This scheme is one of the results of the tour of the British Empire carried out last year by Lord Lovat, chairman of the Overseas Settlement Committee (LABOUR GAZETTE, September, 1928, page 942).

Under the boy settlement plan, the Provincial, Dominion and Imperial Governments join forces to give British boys opportunities of becoming farmers in Saskatchewan. The Provincial and Federal Governments each bear one-quarter of the transportation and other expenses involved in bringing the lads from the British Isles, the Imperial Government bearing the remaining one-half of the charge. The Provincial Government, for its part, undertakes the reception, supervision, distribution and after-care of the young immigrants and a hostel at the University of Saskatchewan will be utilized for the purpose as headquarters, in charge of Mr. J. G. Rayner, Director of Agricultural Extension.

The first party of boys is expected to arrive in the province early next spring. It is anticipated that Saskatchewan will be able to absorb one hundred of the young immigrants during the summer. The boys, between 15 and 20 years of age will come from better class homes in the old country, being carefully selected by the Empire Settlement Committee.

The boys must undertake to engage in farm work for a period of three years. The University building will be used as an assembling and distributing point, but the boys will in reality be under almost constant supervision during their period of farm "apprenticeship." In effect, they will be under ward of the province until they are able to fend for themselves in agriculture.

In the interval before the arrival of the first party the provincial Department of Railways, Labour and Industries will receive applications from farmers in the province who are prepared to give these boys an opportunity of acquiring practical knowledge of farm work and live stock. These applications will be reviewed and data forwarded to Ottawa advising of Saskatchewan's participation in the scheme, this material being supplied to the Federal authorities to enable them to prepare the advertising matter relative to the province.

The Hon. Mr. Spence stated that while the scheme is essentially an immigration scheme, all the facilities established will be available for any Canadian boy who desires to take advantage of them. He further intimated that, in the past, parents and boys of the type desired had been somewhat reluctant to permit their sons to emigrate to Canada to engage in farm work without some guarantee they would be well looked after following their arrival. With the facilities provided at the university the boys are assured of every attention in sickness or other eventuality.

EMPLOYMENT AND UNEMPLOYMENT IN CANADA DURING OCTOBER

THE following information as to the employment situation in Canada is based upon reports from four sources:—

(1) The Dominion Bureau of Statistics receives reports each month from most of the larger employers of labour throughout Canada in all industries except agriculture, fishing, hunting and highly specialized business, the returns representing firms employing fifteen workers or more. The number of firms so reporting in October was 6,609, their employees numbering 1,000,063 persons. An employment index number is maintained, based on the number of workers employed by such firms in January, 1920, as 100;

(2) The Department of Labour receives reports from local trade unions throughout Canada, showing the number of their members who were unemployed in the period un-

der review. The number of unions reporting for September was 1,652, having an aggregate membership of 184,580 persons. It should be understood that the report on the number of unemployed workers refers only to organized labour, no figures being available as to the number of unorganized workers who were without employment;

(3) The Department of Labour receives reports from the 64 offices of the Employment Service of Canada showing the number of applications for work, the existing vacancies and the number of workpeople placed in positions;

(4) The Dominion Bureau of Statistics receives each month detailed statistics from 63 cities throughout Canada, showing the value of permits granted during the period for various classes of building construction.

Employment Situation at the Beginning of November, 1928, as Reported by the Employers

In place of the losses in employment usually registered at this time of the year, there was a slight increase in industrial activity on November 1, when the 6,609 firms making returns to the Dominion Bureau of Statistics reported 1,000,063 employees, compared with 998,325 on October 1. Reflecting this gain, the index number rose from 118.9 in the preceding month to 119.1 on the date under review, as compared with 107.5, 102.8, 97.1, 93.0, 98.8, 95.8 and 90.2 on November 1, 1927, 1926, 1925, 1924, 1923, 1922 and 1921, respectively.

The most pronounced curtailment again took place in construction, and manufactures showed further seasonal dullness, while logging, mining, transportation and trade reported considerable improvement, also largely seasonal in character.

Employment by Economic Areas

Heightened employment was registered in Quebec, Ontario and the Prairie Provinces, but the tendency was downward in the Maritime Provinces and British Columbia.

Maritime Provinces.—Continued reductions were noted in these provinces, particularly in construction. There were also further decreases in manufacturing, notably in saw-mills, while logging, mining and transportation reported important seasonal gains. The contraction involved a smaller number of workers than that indicated on November 1,

1927, when the index, as on the same date in earlier years of the record, was lower. Returns were received from 543 employers, with 73,168 workers on their payrolls, or 3,267 less than at the beginning of October.

Quebec.—As on November 1, last year, there was a slight upward trend in Quebec, where the 1,455 co-operating firms enlarged their staffs by 951 employees, bringing them to 277,289. Manufactures, trade and transportation reported moderate improvement, and there were marked seasonal advances in logging, while construction and services registered seasonal curtailment, that in the former being especially noteworthy. Employment was in much greater volume than on the corresponding date a year ago, or of any other year since 1920, when the record was instituted.

Ontario.—Employment again advanced in Ontario, where the situation continued decidedly more favourable than in the autumn of earlier years of the record, in most of which reductions were noted at the beginning of November. The most extensive recessions on the date under review were mainly of a seasonal nature, in construction, canning, saw-milling and iron and steel plants, while logging, textiles, transportation and trade were decidedly busier. A combined working force of 419,377 persons was registered by the 3,012 employers whose data were tabulated, and

who had 416,305 on their payrolls in the preceding month.

Prairie Provinces.—There was an increase in the Prairie Provinces, contrasting with the losses indicated in the same month of 1927, while employment was better than in the autumn in any other year since the record was commenced in 1920. Returns were compiled from 883 firms having 144,915 employees, as against 142,607 at the beginning of October. Steam railway operation, coal mining, logging and trade afforded considerably more employment; on the other hand, manufacturing, construction and services showed contractions.

Ottawa, Windsor and the other Border Cities and Vancouver there were reductions, while practically no general change was noted in Winnipeg.

Montreal.—The trend of employment in Montreal was upward, 625 persons having been added to the staffs of the 778 co-operating firms, who employed 134,044. Manufactures, transportation and trade reported increased activity, while seasonal losses occurred in construction and services. Considerable improvement had been indicated on November 1, 1927, when the index was many points lower.

EMPLOYMENT IN CANADA AS REPORTED BY EMPLOYERS

NOTE.—The curve is based on the number of employees at work on the first day of the month, as indicated by the firms reporting, in comparison with the number of employees they reported in January, 1920, as 100.

British Columbia.—Further declines in personnel were recorded by the 714 employers furnishing returns in British Columbia; their staffs aggregated 85,314 workers, compared with 86,640 in the preceding month. The greatest losses were in manufactures and construction, while logging and mining were much more active, the former showing especially marked improvement. Employment was decidedly better than on November 1 of last year, when the movement was also unfavourable.

Quebec City.—Employment in Quebec again declined, according to 104 employers of 11,466 persons, compared with 11,727 on October 1. Construction showed curtailment, while other industries reported only slight changes. The situation was not quite so favourable as on the same date last year.

Table I gives index numbers by economic areas.

Toronto.—There was a further increase in the number of workers on the payrolls of 852 firms in Toronto, who had 119,894 in their employ, or 2,235 more than in the preceding month. Most of the advance took place in manufacturing, construction and transportation. A falling-off had been noted at the beginning of November a year ago, and the index then was lower.

Employment by Cities

Additions to staffs were registered in Montreal, Toronto and Hamilton; in Quebec,

Ottawa was in construction, while trade showed

heightened activity. The 140 employers furnishing data reported 12,788 workers, as against 12,903 on October 1. Employment was in greater volume than on the same date in 1927, when larger contractions were indicated.

Hamilton.—Important gains were noted in Hamilton, 1,052 persons being added to the staffs of the 207 firms whose returns were received and who had 34,139 employees. The most marked advances were in manufactures

NOTE: Number employed by the reporting firms in Jan. 1920=100 in every case. The "Relative Weight" in Tables 1, 2, 3 and 4 shows the proportion of employees in the indicated area or industry to the total number of all employees reported in Canada on the date under review.

TABLE I.—INDEX NUMBERS OF EMPLOYMENT BY ECONOMIC AREAS

	Canada	Maritime Provinces	Quebec	Ontario	Prairie Provinces	British Columbia
Nov. 1..... 1921	90.2	91.4	87.5	87.0	102.6	94.3
Nov. 1..... 1922	95.8	91.7	92.7	94.9	105.0	100.2
Nov. 1..... 1923	98.8	95.2	103.2	96.0	99.2	102.8

and construction. The movement on November 1 last year was also upward, but the index then was lower by several points.

Windsor and the Other Border Cities.—Employment in the Border Cities showed a further decrease; 132 employers reported 19,205 persons on their payrolls, compared with 21,537 at the beginning of October. Seasonal dullness in automobile plants caused the decrease, which was on a larger scale than that indicated on the same date a year ago. Employment then, however, was much slacker than during this autumn.

Winnipeg.—Very little change was noted in Winnipeg, according to 295 firms employing 33,105 workers at the beginning of November. Trade reported considerable advances, while construction released help. Minor losses had been recorded on November 1, 1927, when employment was at a much lower level.

Vancouver.—Repeating the downward movement indicated on the same date last year, there was a falling-off in employment in Vancouver on November 1; 264 employers had 27,396 persons on their staffs, or 918 less than in the preceding month. Manufactures and construction showed most of the reduction. The situation was more favourable than at the beginning of November of last year.

Index numbers by cities are given in Table II.

Manufacturing

Further shrinkage of a seasonal character was noted in manufactures, chiefly in the lumber and food-canning industries, although there were also losses in iron and steel and building material works. On the other hand, pulp and paper, textile, rubber, electrical apparatus, non-ferrous metal and some other factories registered considerable advances. The declines, on the whole, involved many less workers than those shown on November 1 in the last five years, in all of which the index was lower. The 3,974 co-operating manufacturers reported 534,329 operatives, as against 536,276 at the beginning of October.

Animal Products—Edible.—Dairies and fish canneries reported seasonal curtailment, while meat-packing plants afforded more employment. Statistics were received from 196 manufacturers, employing 17,955 persons, as compared with 18,495 in the preceding month. This contraction, which took place chiefly in Quebec and British Columbia, was rather larger than that registered on the corresponding date last year, when the index number was slightly lower.

Lumber and Products.—Further reductions in personnel involving a much smaller number of employees than in autumn last year, were indicated in the lumber group, in which employment was in greater volume than in any other November of the record. The losses took place almost entirely in rough and dressed lumber mills, while furniture, match and some other divisions were busier. A combined working force of 54,623 persons was reported by the 717 co-operating manufacturers, as compared with 58,165 at the beginning of October. There were large contractions in all provinces.

Musical Instruments.—Continued additions to staffs on a greater scale than on November 1, 1927, were registered in musical instrument factories, in which the situation was better than in other autumns of the record. Forty-two establishments had 3,690 employees, as compared with 3,415 in the preceding month. Ontario and Quebec reported almost the entire gain.

Plant Products—Edible.—Fruit and vegetable canneries made large seasonal reductions in their payrolls, while flour mills, sugar and confectionery factories showed an advance. The forces of 317 reporting firms aggregated 31,796 persons, or 1,374 less than in their last return. Employment improved in Quebec and the Maritime Provinces, while in Ontario and British Columbia there were important seasonal losses. This decrease involved many less workers than that registered on the corresponding date in 1927, when the index number was much lower than on the date under review.

Pulp and Paper Products.—There was a large increase in the number reported by employers in this group, 475 of whom had 64,064 workers on payroll, as compared with 63,043 at the beginning of October. All branches of the group showed gains. The tendency was favourable in all except the Maritime Provinces, the largest additions being made in Quebec and Ontario. Considerable losses had been indicated at the beginning of November a year ago, but the index number then, as in the autumn of earlier years since the record was commenced in 1920, was lower.

Rubber Products.—Employment in rubber goods showed considerable expansion on November 1; data were compiled from 39 firms with 18,453 employees, as against 17,160 in their last report. This increase of nearly 1,300 persons, which took place chiefly in Quebec, brought employment to its maximum since 1920.

Textile Products.—Garment and personal furnishings, hosiery and knitting and cotton factories reported increased activity, but the production of headwear showed a slight falling-off; 513 manufacturers enlarged their payrolls from 77,166 on October 1 to 79,268 on the date under review. A large proportion of the increase took place in Ontario and Quebec. A much smaller gain had been noted at the beginning of November last year, when the situation was not so good.

Tobacco, Distilled and Malt Liquors.—There was a slight decrease in employment in these industries, 182 persons being released from the staffs of the 134 establishments furnishing statistics, which employed 14,716. Quebec registered most of the loss. An upward movement was noted on the corresponding date last year, but the index then was lower by nearly 11 points.

Clay, Glass and Stone Products.—Seasonal curtailment was indicated in building material plants chiefly in Ontario, but employment generally was at a much higher level than on November 1, 1927. The forces of the 128 employers from whom information was received, declined by 347 persons to 11,839 at the beginning of November.

Electrical Appliances.—Further additions to staffs were made in electrical apparatus works, 47 of which had 13,133 employees, or 279 more than in their last report. This advance was more pronounced than that noted on the same date last year, when the index number was decidedly lower.

Iron and Steel Products.—The crude, rolled and forged, general plant machinery, agricultural implement, iron and steel fabrication and some other divisions of the iron and steel group registered increases in employment, while there were large reductions in automobile and railway car shops. Statements were received from 676 manufacturers whose payrolls aggregated 147,523 persons, as compared with 148,609 in the preceding month. Employment declined in Ontario and British Columbia, while in Quebec improvement was noted. Less extensive curtailment had been indicated at the beginning of November last year, but the situation then was not nearly so favourable as on the date under review.

Non-ferrous metal products.—Data tabulated from 110 firms in the non-ferrous metal group showed that they employed 18,514 workers, or 274 more than on October 1. Smelters and refineries recorded most improvement, although all branches were busier. Employ-

ment was more active than on the same date of 1927, or of any other year of the record.

Mineral Products.—For the first time this year there was a decline in employment in mineral product factories, 81 of which released 164 persons, bringing their staffs to 12,745 at the beginning of November. Practically all the reduction occurred in Quebec. The index was considerably higher than on November 1, 1927, when a small gain was indicated.

Logging

Statistics were tabulated from 247 firms employing 34,485 men, or 9,943 more than in the preceding month. This advance was the largest on record for November, and brought employment to its highest level in the autumns since 1920. All provinces shared in the upward movement which, however, was most noteworthy in Ontario.

Communications

Telephones and telegraphs showed the reductions in personnel usual at the time of the year, according to 187 companies and branches, with 27,577 workers in their employ, a loss of 239 since October 1. Conditions continued better than on November 1 of other years of the record.

Transportation

Street Railways and Cartage.—There was an increase in employment in local transportation, according to 123 firms whose staffs advanced from 23,047 employees on October 1 to 23,632 at the beginning of November. Improvement was reported in Ontario and Quebec. Activity was greater than on the corresponding date in 1927, when the movement was unfavourable.

Steam Railways.—Statistics were tabulated from 106 employers in the railway operation group, in which their payrolls rose by 814 persons to 89,045 on October 1. This gain exceeds that recorded on the same date last year, when the index was much lower. The increase was largely confined to the Prairie Provinces, while elsewhere seasonal contractions were registered.

Shipping and Stevedoring.—Additions to staffs were noted in water transportation, 68 companies employing 15,230 workers, as compared with 14,905 in the preceding month. The Maritime Provinces, Quebec and Ontario reported increased activity. Shrinkage was recorded on November 1 last year, but employment then was at a slightly higher level.

Construction and Maintenance

Building.—There was a further falling-off in building, 832 persons being released from the forces of the 588 co-operating contractors, who had 50,730 employees, a number considerably greater than that reported at the beginning of any other November in the last nine years. The largest losses took place in Quebec, while the trend was generally favourable in the Maritime and Prairie Provinces.

Highways.—Work on highways and streets again declined seasonally, the reduction involving a larger number of workers than in the autumn of 1927, when employment was in rather greater volume. Statements were tabulated from 188 employers, whose staffs, standing at 25,432, were smaller by 7,252 persons than on October 1. All provinces shared in the downward movement, which was most pronounced in the Maritime Provinces.

Railways.—Further curtailment of railway construction was reported, especially in the Maritime Provinces, Ontario and British Columbia. The forces of the 54 companies and divisional superintendents furnishing returns declined from 51,440 persons on October 1, to 50,161 at the beginning of November. This shrinkage was decidedly less than that registered on the corresponding date in 1927, when the level of employment was much lower.

Unemployment in Trade Unions at the Close of October, 1928

The term unemployment as used in the following report has reference to involuntary idleness due to economic causes. Persons who are engaged in work other than their own trades or who are idle due to illness are not considered as unemployed. Unions which are involved in industrial disputes are excluded from our tabulations. As the number of unions making returns varies from month to month with consequent variation in the membership upon which the percentage of unemployment is based, it should be understood that such figures have reference only to the organizations reporting.

Contrary to the steady improvement which has been indicated among local trade union members from month to month since the close of February, the situation in October declined slightly from that of the preceding month, due to a slackening off in employment in a number of industries with the approaching winter season. Returns were tabulated for October from a total of 1,652 labour organiza-

Services

There were continued decreases in the personnel of hotels and restaurants, as the tourist and vacation season closed; 187 firms in the service division employed 18,056 persons, as against 19,096 at the beginning of October. The index was considerably higher than on November 1 in other years of the record.

Trade

The trend of employment in trade continued upward, 1,082 workers being added to the forces of the 651 retail and wholesale establishments furnishing returns, whose staffs aggregated 78,781. Most of the advance was made in the former division. The number of persons reported was higher on November 1, 1928, than in any other month since this series was instituted in 1920, and further pronounced gains may be expected during the next few weeks, in preparation for the Christmas and holiday trade. The advances recorded on the corresponding date last year also gave employment to a large number of workers.

Index numbers of employment by economic areas, leading cities and industries are given in the accompanying tables. The columns headed "Relative Weight" show the proportion that the number of employees reported in the indicated area or industry is of the total number of employees reported in Canada by the firms making returns on the date under review.

tions representing 184,580 members, 5,705 of whom were without work on the last day of the month, a percentage of 3.1, compared with 2.2 per cent of unemployment in the previous month, and with 3.9 per cent in October last year.

All provinces with the exception of Alberta reflected less favourable conditions during October than in September, British Columbia with an unemployment increase of 2.5 per cent and Quebec with 2.2 per cent showing the most outstanding contractions in employment, while the reductions in the other provinces were fractional only. In Alberta the improvement was caused by the situation which obtained for coal miners who, while reporting little actual unemployment during the month under review, indicated a considerable number of their members on reduced time. Alberta, Saskatchewan, Manitoba and Ontario unions all participated in the employment gain recorded over October of last year, while in New Brunswick, Quebec and British Columbia atti-

vity was very slightly reduced and in Nova Scotia there was no change shown in the situation.

A tabulation is made separately each month of unemployment in the largest city in each province with the exception of Prince Edward Island. Of these Halifax and Montreal reported nominal gains in activity during October when compared with the preceding month, while in the remaining cities a lower level of employment was indicated, the reductions ranging from 5.5 per cent in Regina to .2 per cent in Edmonton. When a comparison is made with the October returns of last year Montreal, Winnipeg, Toronto and Halifax registered employment increases of 3.2, 3.0, 1.7 and 1.0 respectively during the period under review, while Regina as in the previous comparison reported the largest unemployment gain.

October of last year. Pulp and paper makers largely owing to the temporary closing of an Ontario mill, were slacker during October than in September, and among iron and steel workers lessened activity was registered, railway carmen in Quebec being for the most part responsible for the adverse situation. Employment for general labourers, particularly in Quebec, was also considerably reduced during October, and cigar makers, printing tradesmen, hat and cap makers, leather and fur workers and metal polishers reported less favourable conditions. Among garment workers practically no change occurred. Of the gains in employment afforded the most noteworthy was reported by glass workers, who, however, formed but a small percentage of the members reported in the manufacturing industries as a whole. Textile workers, and bakers and confectioners, in addition, registered nominally

PERCENTAGE OF UNEMPLOYMENT AS REPORTED BY TRADES UNIONS

The accompanying chart illustrates the trend of unemployment by months from January 1922 to date. The course followed by the curve has been in a downward direction without interruption since the close of February, but in October the projection was slightly upward, an indication of somewhat lessened employment. The October trend was parallel to that of the same month in 1927, the level attained at the close of October this year being, however, slightly lower than last year.

The manufacturing industries registered a slightly larger proportion of their members unemployed at the close of October than in the preceding month, as shown by the reports received from 465 unions with a combined membership of 53,009 persons. Of these 4.5 per cent were idle on October 31 compared with percentages of 2.8 in September and 5.0 in

improved conditions. The higher level of employment indicated in the iron and steel trades during October over the corresponding month in 1927 accounted to a large extent for the better situation reported in the manufacturing industries as a whole, though contributing gains in employment, of much smaller degree, were recorded by garment workers, hat and cap makers, leather and glass workers. On the other hand, unemployment for paper makers, cigar makers, wood workers and general labourers was in greater volume.

From unions of coal miners 44 reports were tabulated at the end of October showing 17,853 members, 169 of whom were idle, a percentage of .9 contrasted with 3.4 per cent in September and with 2.8 per cent in October last year. That the percentage for October was smaller than in September was attributed to

the unemployment decline reported in Alberta from which province, however, considerable short time was registered. Nova Scotia and British Columbia unions, on the other hand, reported nominal reductions in activity. In comparison with returns for October last year coal miners in Alberta, as in the previous comparison, indicated substantial improvement during the month under review, while in Nova Scotia and British Columbia the contractions in employment afforded were nominal. Quarry workers in Nova Scotia registered the same number of idle members as in September compared with no unemployment in October last year.

The building and construction trades, due to the setting in of seasonal quietness, reported a somewhat larger percentage of idleness during October than in September. The situation, however, showed considerable improvement over October, 1927. Reports were tabulated at the end of October from a total of 196 unions, the combined membership of these aggregating 23,938 persons, 5.1 per cent of whom were unemployed compared with 2.9 per cent in September and 10.0 in October last year. Bricklayers, masons and plasterers, painters, decorators and paper hangers and carpenters and joiners reported the most noteworthy contractions in employment when compared with September, which were augmented by declines on a smaller scale among hod carriers and building labourers, tile layers, lathers and roofers and plumbers and steamfitters. Granite and stone cutters, electrical workers and bridge and structural iron workers, however, reported minor increases in activity. Most of the increase in employment over October last year in the building trades, as a whole, was indicated for bricklayers, masons and plasterers, who were afforded a much greater volume of work during the month under review while among the remaining tradesmen with the exception of plumbers and steamfitters, improvement in varying measures was noted. Among plumbers and steamfitters, however, the decline in activity was scarcely perceptible.

The reports tabulated during October from 718 unions of transportation workers with 65,353 members indicated that 1,479 were idle at the end of the month, a percentage of 2.3, as contrasted with an unemployment percentage of 1.6 in September. In this comparison employment for navigation workers showed a large falling off during October, and steam railway employees and teamsters and chauffeurs reported somewhat lessened activity. Among street and electric railway employees the improvement was nominal only. The trans-

portation industries absorbed a slightly larger number of workers during October than in the same month last year, when 3.0 per cent of the members were reported idle, navigation workers, steam railway employees and teamsters and chauffeurs all contributing to this group expansion. Street and electric railway employees, however, reported the same percentage of idleness in both months of the comparison.

Owing to the casual nature of employment afforded longshoremen reports from unions of these workers are tabulated separately each month. For October 13 reports were received from associations of longshoremen with a combined membership of 6,501 persons, 16.2 per cent of whom were unemployed on the last day of the month, compared with 15.5 per cent in September. The situation was less favourable also than in October last year, when the unemployment percentage stood at 15.6.

TABLE I.—PERCENTAGES OF UNEMPLOYMENT IN TRADE UNIONS BY PROVINCES

Month		N.S. and Pr. Edw. Island	New Brunswick	Quebec	Ontario	Manitoba	Saskatchewan	Alberta	British Columbia	Canada

Reports were tabulated during October from 6 organizations of retail clerks with 742 members, which indicated .7 per cent of the membership idle at the close of the month as compared with .4 per cent in September and .3 per cent in October, 1927.

Civic employees with 65 unions embracing a membership of 6,888 persons at the close of October indicated a nominal percentage of unemployment only as both the preceding month and October, 1927.

According to the reports tabulated from 106 unions in the miscellaneous group of trades with 5,169 members at the end of October the unemployment volume was 2.2 per cent in excess of that indicated at the end of the preceding month, the percentage of idleness on October 31 standing at 5.1. This downward employment tendency was manifested, for the most part, among hotel and restaurant workers, though theatre and stage employees and barbers were also contributing factors. Among theatre and stage employees, on the contrary, the situation was more favourable. Nominal improvement only was indicated in the group

as a whole when comparison is made with the returns for October last year, hotel and restaurant employees, stationary engineers and firemen and theatre and stage employees all indicating a somewhat higher level of employment and barbers slight reductions in activity.

From unions of fishermen 2 reports were tabulated at the close of October, these unions having a membership of 755 persons, 30 of whom, or a percentage of 4.0, were idle at the close of the month, contrasted with .8 per cent in the preceding month and 3.5 per cent in October last year.

Lumber workers and loggers with 2 unions reporting 794 members registered 12.6 per cent of unemployment, compared with 6.3 per cent in September and a fully employed situation in October a year ago.

Table I is a summary of the returns by provinces for October of each year from 1919 to 1925 inclusive and for each month from January, 1926, to date and table II records the percentage of idleness in the different groups of industries for the same months.

Employment Office Reports for October, 1928

During the month of October, 1928, the reports from the offices of the Employment Service of Canada showed a decrease from the preceding month of 33 per cent in the average daily placements, while an increase of over 22 per cent was registered when a comparison was made with the average daily placements effected during the corresponding month a year ago. The decrease in placements from September was due chiefly to curtailment in farming operations, counteracted, in part, by gains in logging and services. In comparison with last year, all groups showed an improvement, except mining, wherein only a nominal decline was reported. Farming showed the largest gain, followed by noteworthy improvement in construction and maintenance, services and manufacturing.

The accompanying chart shows the trend of employment since January, 1926, as represented by the ratio of vacancies notified and of placements effected for each 100 applications for work registered at the offices of the Service throughout Canada, compilations being made semi-monthly. It will be noted that the curves of vacancies and placements in relation to applications declined sharply throughout the period, but were on a higher level during the first half of the month than that recorded during the same period last year, although during the latter half of the month falling to a level below that shown during the latter half of October, 1927. The ratio of vacancies

to each 100 applications was 92.6 during the first half and 79.3 during the second half of October, 1928, in contrast with ratios of 86.9 and 85.1 during the corresponding periods of 1927. The ratios of placements to each 100 applications during the periods under review were 85.6 and 75.1 as compared with 80.6 and 79.7 during the corresponding month of 1927.

The average number of vacancies reported daily by employers to the offices of the Service throughout Canada during October, 1928, was 2,294, as compared with 3,605 during the preceding month and with 1,873 in October a year ago.

The average number of applications for employment received daily by the offices during the month under review was 2,623 in comparison with 3,523 in September, 1928, and with 2,177 during October last year.

The average number of placements made daily by the offices of the Service during October, 1928, was 2,139, of which 1,604 were in regular employment and 535 in work of one week's duration or less, as compared with a total daily average of 3,210 during the preceding month. Placements in October a year ago averaged 1,745 daily, consisting of 1,287 placements in regular and 458 in casual employment.

During the month of October, 1928, the offices of the Service referred 59,382 persons to vacancies, and effected a total of 57,740 placements. Of these the placements in regular employment were 43,293, of which 38,512 were

for men and 4,781 for women, while placements in casual work totalled 14,447. The number of vacancies reported by employers was 49,896 for men and 12,030 for women, a total of 61,926, while applications for work numbered 70,803, of which 56,533 were from men and 14,270 from women.

The following table gives the placements effected to date by the offices of the Employment Service of Canada:—

October, 1927. Manufacturing, was the only industry in which there was a gain of importance in placements, in comparison with October last year, other groups showing nominal changes only. Industrial divisions in which most of the placements were effected during the month included: manufacturing, 74; logging, 32; farming, 25; transportation, 31; construction and maintenance, 81; trade, 76; and services, 345, of which 264 were of house-

NOVA SCOTIA

During the month of October, 1928, positions offered through employment offices in Nova Scotia were nearly 7 per cent higher than in the preceding month, and nearly 12 per cent above the corresponding month last year. There was an increase of nearly 8 per cent in placements when compared with September, and of over 9 per cent in comparison with

hold workers. During the month 147 men and 77 women were placed in regular employment.

NEW BRUNSWICK

There was a decline of nearly 4 per cent in the number of positions offered in New Brunswick during October when compared with the previous month, but a gain of nearly 12 per cent in comparison with the corresponding month last year. Placements showed an increase of less than 1 per cent, but were more than 9 per cent higher than during October, 1927. All groups except logging and trade showed increases in placements over October of last year, those in the services division being the largest. Industrial divisions in which most of the placements were effected during the month were: manufacturing, 43; logging, 36; construction and maintenance, 124; and services, 586, of which 419 were of household

*251 placements effected by offices since closed.

workers. Placements in regular employment numbered 173 of men and 104 of women.

QUEBEC

Orders listed at employment offices in the Province of Quebec during October called for nearly 24 per cent more workers than in the preceding month, and nearly 32 per cent more than during the corresponding month last year. There was a gain of 24 per cent in placements over September, and of nearly 18 per cent when compared with October, 1927. Logging, mining, and trade showed minor declines only in placements when compared with October last year, while all other groups showed increases, the most noteworthy being in construction and maintenance. Placements by industrial divisions included: manufacturing, 201; logging, 1,312; farming, 51; transportation, 90; construction and maintenance, 1,389; trade, 92; and services, 749, of which 575 were of household workers. During the month 3,129 men and 712 women were placed in regular employment.

ONTARIO

Opportunities for employment as indicated by orders received at employment offices in Ontario were nearly 6 per cent better than in the preceding month, and nearly 19 per cent in excess of the corresponding month last year. There was a gain of over 5 per cent in placements when compared with September, and over 26 per cent in comparison with October, 1927. Increased placements were reported in all groups except logging and mining, when compared with October last year, the gains in the manufacturing industries, construction and maintenance being the most noteworthy. Industrial groups in which most of the placements were effected during the month were: manufacturing, 2,540; logging, 2,478; farming, 1,163; mining, 83; communication, 88; transportation, 790; construction and maintenance, 3,900; trade 661; and services, 4,817, of which 2,852 were of household workers. Placements in regular employment numbered 9,389 of men and 1,772 of women.

MANITOBA

The number of positions offered through employment offices in Manitoba during October was over 53 per cent less than in the preceding month, but nearly 2 per cent higher than during the corresponding month last year. Placements declined about 50 per cent when compared with September, and were over 10 per cent less than in October, 1927. Large reductions in bush and farm placements were responsible for the decline from October last

year as the gains in other groups, of which the most noteworthy were in services, were not sufficient to offset these reductions. Placements by industrial groups included: manufacturing, 206; logging, 637; farming, 1,021; transportation 58; construction and maintenance, 362, trade, 347; and services, 2,789, of which 2,092 were of household workers. There were 1,867 men and 722 women placed in regular employment during the month.

SASKATCHEWAN

Employment opportunities as indicated by orders received at employment offices in Saskatchewan during October were 37 per cent less than in the preceding month, but 114 per cent better than in the corresponding month last year. There was a decline of nearly 25 per cent in placements when compared with September, but a gain of nearly 149 per cent in comparison with October, 1927. All groups participated in the gains in placements over October last year, those in farming being the largest, and almost entirely responsible for the increase under this comparison. Industrial divisions in which most of the placements were effected during October were: manufacturing, 171; logging, 332; farming, 16,166; mining 58; transportation, 116; construction and maintenance, 1,070; trade, 345; and services, 1,554, of which 818 were of household workers. Regular employment was secured for 17,518 men and 700 women during the month.

ALBERTA

Alberta orders during October called for over 44 per cent less workers than in the preceding month and about 20 per cent less than during the corresponding month last year. Placements were about 49 per cent below September and nearly 36 per cent less than in October 1927. Increased placements over October of last year were made in all groups except farming and mining. The reductions in the former, however, were large, and more than offset the gains in the other divisions. Industrial groups in which most of the placements were effected during the month were: manufacturing, 293; logging, 995; farming, 2,214; mining, 211; transportation, 104 construction and maintenance, 1,229 trade, 380; and services, 1,024, of which 720 were of household workers.

BRITISH COLUMBIA

There was a decline of over 38 per cent in the number of positions offered through employment offices in British Columbia during October, when compared with the preceding

month, but a gain of nearly 14 per cent in comparison with the corresponding month last year. Placements were over 41 per cent less than in September, but over 15 per cent higher than in October, 1927. Manufacturing, logging and transportation showed the largest gains in placements over October last year, and these increases were more than sufficient to offset reductions in placements under construction and maintenance and farming. Industrial divisions in which most of the placements were effected during the month were: manufacturing, 485; logging, 1,023; farming, 252; transportation, 312; construction and maintenance, 668; trade, 233 and services, 901, of which 499 were of household workers. Regular employment was secured for 1940 men and 319 women during the month.

Movement of Labour

During the month of October, 1928, the offices of the Employment Service of Canada made 43,293 placements in regular employment, 31,661 of which were of persons for whom the employment found was outside the immediate locality of the offices at which they were registered. Of the latter 3,586 were granted the Employment Service reduced transportation rate, 2,474 travelling to points within the same province as the dispatching office and 1,112 to other provinces. The reduced transportation rate, which is 2.7 cents per mile with a minimum fare of \$4, is granted by the railway companies to bona fide applicants at the Employment Service who may desire to travel to distant employment for which no workers are available locally.

All persons transferred at the special rate from Quebec centres during October were bushmen and numbered 729. Of these 285 went to provincial employment and the balance represented an interprovincial movement. Within the province 57 travelled from Montreal and 228 from Quebec to logging districts within their respective zones. The transfers outside the province were all to Northern Ontario points, Montreal dispatching 133 to Sault Ste. Marie and Hull 238 to North Bay; 48 to Cobalt and 25 to Sudbury.

In Ontario 1,227 reduced rate certificates were granted during October, 1,207 to centres within the province and 20 to points in other provinces. Of the provincial certificates 1,123 were issued to bushmen going to camps in the vicinity of Fort William, Port Arthur, Sault Ste. Marie, Pembroke, Sudbury and North Bay. The majority of these were recruited by the Northern Ontario offices. In addition, the London office transferred 3 bricklayers to North Bay; Pembroke, one cook to Sudbury; and Windsor, one tool and die maker to

Oshawa. From Toronto 3 carpenters and 1 hotel chef were dispatched to Timmins and 2 cooks and 1 waitress to Sarnia; while from Port Arthur 3 carpenters, 6 road cutters, 4 cooks, 4 teamsters, 9 construction labourers and 1 clerk went to employment within the same zone. At the North Bay office certificates were granted to 6 carpenters, 2 electricians and 4 painters going to points within the Timmins zone, and also to 1 bricklayer, 1 farm hand, 1 cook, 2 carpenters and 1 camp clerk proceeding to Cobalt. Transportation was arranged at the reduced rate by the Sudbury office for 8 carpenters and 1 painter travelling to Timmins; 1 houseman to Sault Ste. Marie; and 11 labourers and 2 carpenters to points within the Sudbury zone. Timmins also received 1 carpenter and 1 handyman from Cobalt and Port Arthur and 1 miner from the same centre. From Oshawa 1 labourer was conveyed to employment within its own zone. Of those going outside the province 6 were bushmen for the Hull zone and transported from North Bay. For employment in the Winnipeg zone 12 miners travelled from Sudbury, and to Calgary 1 locomotive engineer and 1 machinist journeyed from St. Catharines.

Transportation vouchers were issued by Manitoba offices during October to 828 persons, 194 of whom went to provincial points and 634 outside the province. Of those travelling within the province Winnipeg transferred 142 farm hands, 14 construction labourers, 1 carpenter, 1 photographer, 1 foreman, 1 stableman and 3 camp cooks to various points within its own zone; 1 bushman, 1 domestic and 2 hotel workers to Dauphin; and 3 farm generals, 2 charwomen, 1 town domestic and 7 hotel workers to Brandon. In addition 8 bushmen and 6 labourers were conveyed from Dauphin to employment within the same zone. A large part of the movement outside the province was to Ontario points, Port Arthur and surrounding districts receiving 484 bushmen, 7 rock men, 6 labourers, 1 camp cook, 1 farm general, 1 hotel porter, 1 pipefitter, 1 blacksmith, 1 waitress and 1 chambermaid; Timmins 75 bushmen, and Fort William 1 structural iron worker and 1 hotel clerk, all of these travelling from Winnipeg. Certificates were issued at Winnipeg also to 1 waitress going to Estevan; 1 oiler to Moose Jaw; 1 cook and 1 waitress to Saskatoon; 4 cookees, 1 farm general, 1 chambermaid and 2 camp cooks to Regina; 7 pulp cutters and 1 oiler to Prince Albert; and 4 station men, 1 hotel cook and 1 construction labourer to Yorkton. For farm operations in the rural districts of Saskatchewan 21 workers were dispatched from Winnipeg. The remainder of the interprovincial movement included 3 coal miners and 1 domestic proceeding from

Brandon to Estevan, and 1 cook and 1 domestic from Dauphin to Prince Albert.

Transfers from Saskatchewan centres which involved the special reduced rate during October totalled 237, of which 227 were to points within the province, the remainder going to other provinces. Provincially from Regina 5 bushmen, 1 housekeeper, 1 labourer and 1 time-keeper were carried at the special rate to Prince Albert; one carpenter to Saskatoon; 2 telephone workers and one blacksmith to Moose Jaw; and 3 coal miners to Estevan. From Moose Jaw 1 building labourer and 1 bushman were transported to Prince Albert; 1 cook to Regina; and 12 construction labourers, 4 teamsters and 1 blacksmith to points within the Moose Jaw zone; while Prince Albert dispatched 56 bushmen and 2 cooks within the same zone; and Swift Current 1 coal miner to Estevan. Included in the transfers from Saskatoon were 74 bushmen going to Prince Albert; 2 bushmen and 14 teamsters to North Battleford; and 5 hotel and household workers to employment within its own zone. The balance of the movement within the province was of farm hands, 38 of whom were issued certificates at Regina and Moose Jaw to farming centres throughout the province. Among the workers transferred outside the province were 2 bushmen for the Dauphin zone, one travelling from Prince Albert and one from Regina, while from the latter city also 1 domestic was sent to Sarnia; 1 cook to Dauphin; 2 domestics to Calgary; and 1 farm hand and 2 household workers to Winnipeg. In addition 1 clerk was conveyed from Yorkton to Prince Rupert.

Alberta offices granted 342 certificates for reduced transportation during October, 340 of which were provincial. The majority of these were issued at Edmonton, from which centre 50 loggers journeyed to Lethbridge; 1 fireman, 1 engineer, 1 miner, 2 harvesters, 1 tailor, and 1 window dresser to Calgary; 1 farm hand and 1 miner to Drumheller; and 16 cribbers, 15 cooks, 1 blacksmith, 13 carpenters, 1 dishwasher, 95 bushmen, 11 teamsters, 15 farm hands, 1 farm domestic, 9 mill hands, 23 labourers, 12 miners, 1 saw filer, and 1 watchman to employment within the Edmonton zone. In addition the Calgary office trans-

ferred 6 farm hands, 2 waitresses, 1 cook, 1 sheep herder, and 1 hotel worker to Drumheller; 46 loggers, 5 teamsters and 1 flunky to Lethbridge; and 3 farm hands and 1 farm domestic within the Calgary zone. The two transfers outside the province were of farm hands, one going to Saskatoon and one to North Battleford, and both receiving their certificates for reduced transportation at Edmonton.

Workers benefiting by the reduced transportation rate in British Columbia during October were 223 in number and of these 221 were destined to centres within the province. The Vancouver office was instrumental in effecting transfers of 32 bushmen, 4 sawyers, 1 time-keeper, 1 farm hand and 1 auto mechanic to Prince George; 1 construction foreman, 1 carpenter, 2 rod men, 1 painter, 2 road makers, 1 rigger, 1 hook tender, 1 plasterer, 1 teamster, 1 tile setter and 2 tile setter's helpers to Kamloops; 2 rock labourers, 2 blacksmiths, 2 flunkies, 2 cooks and 1 dishwasher to Penticton; 1 electrician, 1 cook, 1 machinist, 2 boiler makers, 2 farm hands and 1 flunky to Vernon; 3 miners, 2 muckers, 1 cook and 1 flunky to Revelstoke; 3 bricklayers, 1 glacier, 1 lead burner and 1 steel sharpener to Nelson; 4 millwrights to Cranbrook; and 5 miners, 2 muckers and 1 engineer to points within the Vancouver zone. From Prince George 86 bushmen and 2 cooks travelled to employment within the territory covered by that office, which zone also received 15 bushmen, 1 farm hand and 1 cook from Prince Rupert. The Nelson office dispatched 2 miners to Revelstoke, and 14 bushmen, 2 miners and 2 cordwood cutters to centres within its own zone. From Penticton 1 farm worker was conveyed to a point within the same zone. The interprovincial movement was of 2 plasterers bound for Calgary and travelling from Vancouver.

Of the 3,586 persons who took advantage of the Employment Service reduced transportation rate during October, 2,659 were carried by the Canadian National Railways, 902 by the Canadian Pacific Railway, 17 by the Timiskaming and Northern Ontario Railway, 7 by the Pacific Great Eastern Railway and 1 by the Kettle Valley Railway.

Building Permits Issued in Canada During October, 1928

The estimated value of the building authorized by 63 cities during October was \$21,508,672; this was an increase of \$206,387 or nearly 1 per cent as compared with the September total of \$21,302,285 (revised figure), and of \$2,660,653, or 14.1 per cent, over the aggregate of \$18,848,019 for October, 1927. The

value in the month under review was greater than in October of any other year for which statistics of these centres are available, while the cumulative total for the elapsed 10 months of 1928 exceeds by nearly \$28,000,000 that for the same months in 1927, the previous high level of this record, which was commenced in 1920.

Some 50 cities furnished detailed statistics, showing that they had issued over 1,300 permits for dwellings estimated to cost approximately \$7,800,000 and about 3,500 permits for other buildings valued at almost \$11,700,000. During September, authority was granted for the erection of about 1,200 dwellings and 3,000 other buildings estimated to cost approximately \$6,700,000 and \$13,500,000, respectively.

Nova Scotia, Quebec, Ontario, Manitoba, and Saskatchewan registered increases in the value of authorized building as compared with September, 1928, that of \$2,279,554, or 27.0 per cent in Ontario being most noteworthy.

In the more significant comparison with October, 1927, there were gains in Nova Scotia, New Brunswick, Quebec, Ontario, Manitoba and Saskatchewan. In this comparison, Saskatchewan recorded the greatest gain, of \$1,414,750, or 324.2 per cent.

Toronto and Winnipeg showed improvement over both September, 1928, and October, 1927; in Montreal, there was a reduction in comparison with the preceding month, but an increase over the same month in 1927, while in Vancouver the total was lower than in either comparison. Of the other centres, Halifax, Sydney, Moncton, Quebec, Guelph, Niagara Falls, St. Catharines, St. Thomas, Sarnia, Sault Ste. Marie, York Townships, Windsor, Ford, Sandwich, Woodstock, Brandon, St. Boniface, Regina and Edmonton registered increases as compared with September, 1928, and October, 1927.

Cumulative Record for First Ten Months, 1923.—The following table gives the value of the building authorized by 63 cities during October and in the first ten months of each year since 1920, as well as index numbers for the latter, based upon the total for 1920 as 100. The average index numbers of wholesale prices of building materials in the first ten months of the years since 1920 are also given (1913=100).

Year	Value of permits issued in October	Value of permits issued in first ten months	Indexes of value of permits first ten months (1920=100)	Average indexes of wholesale prices of building materials in first ten months (1913=100)
1928.....	\$ 21,508,672	\$ 187,697,420	176.2	149.2

¹Report not received.

²Revised total.

The aggregate for the first ten months of this year was 17.3 per cent greater than in 1927, the previous high level of the record, while the average index numbers of whole-

sale prices of building materials continued to be lower than in any other year since 1920, except 1927.

EMPLOYMENT AND UNEMPLOYMENT IN OTHER COUNTRIES

DETAILED reports and tables showing the employment conditions in Great Britain and Northern Ireland are given in the *British Ministry of Labour Gazette* from month to month, a monthly summary of this information also being published. This summary is reproduced below showing the employment situation during October. The following report on employment conditions in the United States is based on the information contained in the *Monthly Labour Review*, published by the United States Department of Labour, each issue containing statistics showing the trend of employment in selected manufacturing industries throughout the country during the second month prior to the date of publication. The statement contained in the November issue relates to the situation existing in September, 1928. The employment situation in the United States is further indicated by unemployment percentage based on statistics compiled each month by the American Federation of Labour, the source of these statistics being returns obtained from the trade union locals in 23 representative cities. Summary figures for September and previous months taken from the November issue of the *American Federationist*, the official publication of the organization, are reproduced below.

Great Britain

Employment, on the whole, showed a further decline during October. The principal industries in which the rate of unemployment increased included coal mining, shipbuilding and marine engineering, the building trade, public works contracting, brick and tile manufacture, shipping, rail and road transport, hotel and boarding house service, and the distributive trades. In coal mining, a reduction in the numbers recorded as wholly unemployed was more than counterbalanced by an increase in the numbers temporarily stopped from the service of their employers.

On the other hand, there was some improvement in a number of important industries, including pig-iron manufacture, the motor-vehicle industry, the cotton, woollen and worsted, linen, hosiery, lace, and carpet industries, the clothing trades (except hat and cap manufacture), the boot and shoe industry,

paper-making, pottery manufacture, and the brush and broom industry.

Among workpeople, numbering approximately 11,880,000, insured against unemployment in Great Britain and Northern Ireland, and working in practically every industry except agriculture and private domestic service, the percentage unemployed at 22nd October, 1928 (including those temporarily stopped as well as those wholly unemployed) was 11.8, as compared with 11.4* at 24th September, 1928, and 9.5 at 24th October, 1927. For males alone the percentage at 22nd October, was 13.3, as compared with 12.6 at 24th September for females the corresponding figures were 7.8 and 8.1*. The percentage wholly unemployed at 22nd October, 1928, was 8.9, as compared with 8.6* at 24th September, 1928. The total number of persons (insured and uninsured) registered at Employment Exchanges in Great Britain and Northern Ireland at 29th October, 1928, was approximately 1,421,000, of whom 1,118,000 were men and 227,000 were women, the remainder being boys and girls; at 1st October, 1928, it was 1,384,000, of whom 1,064,000 were men and 242,000 were women; and at 31st October, 1927, it was 1,132,000, of whom 904,000 were men and 162,000 were women.

United States

Employment in manufacturing industries increased 1.5 per cent in September as compared with August, and pay-roll totals increased 1.3 per cent, according to returns made to the Bureau of Labour Statistics.

An upward trend of employment is customary in September owing to the autumn impetus of expanding trade, but this increase of 1.5 per cent in September, 1928, has been exceeded only twice during the years 1923 to 1927, inclusive, and then slightly. Payroll totals do not always increase in proportion to employment, being somewhat affected by the labour holiday.

The Bureau of Labour Statistics' weighted index of employment for September, 1928, is 87.3, as compared with 86.0 for August, 1928, 84.7 for July, 1928, and 88.0 for September, 1927; the weighted index of pay-roll totals for September, 1928, is 91.4, as compared with 90.2

* Revised figure.

for August, 1928, 87.4 for July, 1928, and 90.1 for September, 1927.

While employment in September, 1928, was 0.8 per cent below the level of employment in September, 1927, it was, nevertheless, at a higher level than at any time since October, 1927.

Pay-roll totals were 1.4 per cent greater in September, 1928, than in September, 1927, and also greater than at any time since June, 1927.

The data for this August-September, 1928, report are based on returns from 11,443 establishments in 54 of the leading manufacturing industries of the United States. These establishments in September had 3,176,563 employees, whose combined earnings in one week were \$85,358,595. These employees represent one-half of the employees in the 54 manufacturing industries covered by this survey and nearly 40 per cent of the employees in all manufacturing industries of the United States.

Thirty-nine of the 54 separate industries and 11 of the 12 groups of industries had more employees in September, 1928, than in August.

The group increases ranged from 7.2 per cent in chemicals to 0.2 per cent in leather; the stone-clay-glass group fell off 0.3 per cent. Among the separate industries, aside from such large seasonal increases in employment as 32.6 per cent in fertilizers and 18.8 per cent in confectionery, there were increases of considerable size in baking, hosiery, shirts, women's clothing, millinery, paper boxes, chemicals, hardware, machine tools, stoves, furniture, cigars, electric machinery, and rubber boots; the cotton-goods industry gained 2 per cent, iron and steel and sawmills 0.5 per cent each, and automobiles 2.9 per cent.

There were seasonal decreases in employment of 9 per cent in ice cream, 3.1 per cent in cement, and 2 per cent in brick; woollen and worsted goods fell off 2.2 per cent and the steam-fitting industry lost 4.4 per cent of its employees.

Eight of the nine geographic divisions showed gains in employment in September as

compared with August, the New England States leading with an increase of 2.3 per cent while seven other divisions showed increases ranging from 0.7 per cent to 1.8 per cent each; the West North Central division fell off in employment 0.2 per cent.

Unemployment percentage.—Unemployment statistics collected by the American Federation of Labour and appearing each month in the *American Federationist*, the official publication of the organization, indicate the percentage of unemployed union members in twenty-three representative cities of the United States. The method of compiling as described in the *American Federationist*, March, 1928, is as follows:—

"The local unions in the 23 cities under review report monthly their membership and the number of unemployed members at the first of the month or the nearest possible date. From these reports the percentage of unemployed members is calculated for identical unions in the current and the previous month. Thus for every month there are two percentage figures—that is for identical unions in December and January—and for identical unions in January and February, and so on. The final figure for January, then, is calculated by taking the simple arithmetical average of the two January percentages. It may be noted that the reports cover all trades which are organized, factory workers as well as teachers and building trade workers."

By the above method the proportion of unemployed members to the total membership of the local unions reporting, is computed. According to the November issue of the *American Federationist*, the most recent unemployed percentages during the various months in the 23 cities work out as follows: October to December, 1927, 14 per cent; January, 1928, 18 per cent; February, 1928, 18 per cent; March, 1928, 18 per cent; April, 1928, 16 per cent; May, 1928, 13 per cent; June, 1928, 11 per cent; July, 1928, 12 per cent; August, 1928, 9 per cent; September 1928, 10 per cent.

RECENT INDUSTRIAL AGREEMENTS AND SCHEDULES OF WAGES

A summary is given below of the more important industrial agreements and schedules of wages and working conditions that have recently been received by the Department. Such agreements are summarized each month in the *LABOUR GAZETTE*. In the majority of cases, the agreements are signed by both employers and employees. Verbal agreements, which are also included in the records, are

schedules of rates of wages and hours of labour and other conditions of employment agreed upon between the parties concerned, and in effect though not signed. In addition to these, important schedules of wages are summarized, including civic schedules. In the case of each agreement or schedule, the rates of wages for the principal classes of labour are given with other information of general interest.

Manufacturing: Food, Drink and Tobacco

CALGARY, EDMONTON AND LETHBRIDGE, ALBERTA.

—THE BREWERIES OF ALBERTA AND THE INTERNATIONAL UNION OF THE UNITED BREWERY, FLOUR, CEREAL AND SOFT DRINK WORKERS OF AMERICA, LOCALS NOS. 124 (CALGARY), 314 (EDMONTON) AND 354 (LETHBRIDGE).

Agreement to be in effect from June 1, 1928 for locals 124 and 354 and from August 1, 1928 for local 314 until March 31, 1930 for all three local unions. If either party wishes a change, they shall give 30 days' notice previous to the expiration of the agreement, and employers agree to meet a negotiating committee one week prior to the expiration date.

Only union members to be employed, if available. Extra help may be employed if they hold permits from the union and receive union rate of wages, preference to be given to returned soldiers first and second to Canadian citizens. No discrimination against employees on account of union activities.

The breweries agree to give preference to union-made materials and machinery, if possible, and if quality and price are the same.

The use of the union label shall be allowed to all breweries keeping the terms of this agreement, the union label to appear on all packages and cooerage.

Hours: from March 1, to November 1, 9 hours per day, 5 on Saturdays; from November 1, to Mareh 1, 8 hours per day and 4 on Saturdays. Engineers and firemen, 8 per day with 6-day week.

Overtime and all work after 6 p.m. on first five days of week and after 2 p.m. on Saturdays (except as specified elsewhere), time and one-half; double time for work on Sundays and holidays.

Wages: Engineering Department: Chief or acting chief engineers \$210 per month; other wages per hour: second class engineers 81½ cents, third class engineers, 79 cents, firemen 66½ cents, general mechanics 78½ cents, pipe fitters 75 cents, mechanic and pipe fitters' helpers 62½ cents. Brewery Department: first cellar man \$169 per month; other wages per hour: first brew house man 81½ cents, first wash house and fermenting cellar men 75 cents, cellar brew house and washhouse helpers 71½ cents. Bottling Department: per hour: soaker feeders helpers 62½ cents, soaker feeders 68½ cents, rinsing machine men with inspection 68½ cents, filler men 75 cents, crowner men 71½ cents, pasteurizer men 68½ cents, labeller 75 cents, labeller assistant 68½ cents, assistant shipper 71½ cents, wrapper men first with inspection 75 cents, wrapper men second with inspection 68½ cents, wrapper men and no inspection 62½ cents, packers 68½ cents, header up and trucker from packers 68½ cents, relief men 68½ cents, bailing and sealing machine men 68½ cents; labourers, inside and loading 62½ cents; labourers, outside after 6 months' service 62½ cents; labourers, outside first six months 57¼ cents, first bottle yard men \$156 per month. Coopering Department: wages per hour: tight barrel coopers 78½ cents, slack barrel coopers (hand work) 75 cents, slack barrel coopers (machine work) 68½ cents. Soft Drink Department: filler men 75 cents, crownners 68½ cents, labellers 68½ cents, soakers 62½ cents, labourers 57¼ cents.

Delivery Department: truck drivers \$150 per month, truck drivers' helpers \$140, teamsters, \$130. Special Men: maintenance men 75 cents per hour, Apprentices, first year 43 cents, second year 48 cents.

Preference for advancement to be given according to seniority, if competent. In ease of depression of business, union men to be laid off in rotation and for not longer than 6 days at a time.

Sickness shall be no excuse for discharge.

Free beer to be supplied to employees three times a day and employees may buy beer at reduced prices for their own use.

Union to have the right to discuss grievances with the management if not satisfactorily settled by the foreman or brew master.

Any difference with regard to the interpretation of this agreement to be referred to a board of arbitrators consisting of a representative of each of the three local unions, parties to this agreement, and three representatives of the breweries of Alberta. If these six fail to agree, they shall elect a seventh disinterested party, the decision of such board to be binding.

Manufacturing: Printing and Publishing

OTTAWA, ONTARIO.—OTTAWA NEWSPAPERS' SUBSCRIPTION BUREAU AND THE MAILERS' UNION No. 60, A SUBORDINATE UNION OF THE INTERNATIONAL TYPOGRAPHICAL UNION.

Agreement to be in effect from September 1, 1927 to September 1, 1929.

Hours: 48 per week.

Overtime: time and one-half; for work on evening newspapers on Sundays and legal holidays, double time.

Wages per week: journeymen in charge, \$36; journeymen \$32.

Wages of apprentices per week: from \$9 for first six months of third year to \$18 for second six months of fifth year, bonus \$1 per week; upon completion of apprenticeship \$19 per week and \$1 per week bonus.

If an apprentice, who has completed his time and received his certificate, is unable to find employment as a journeyman, he may continue to work as an apprentice until he secures a journeyman's position.

Two apprentices for two journeymen on day work and three apprentices for two journeymen on night work.

Apprentices are to be at least 16 years of age and be registered with the union. They must serve five years and try yearly examinations before the local committee on apprentices.

No strike or lockout while terms of agreement are carried out. Any misunderstanding about the interpretation of this agreement or its renewal or change to be referred to a board of arbitration consisting of one member from each party and a third chosen by them, the decision of such board to be binding.

TORONTO, ONTARIO.—PUBLISHERS OF FOUR TORONTO DAILY NEWSPAPERS AND THE INTERNATIONAL STEREOTYPERS AND ELECTROTYPERS UNION, LOCAL No. 21 (NEWSPAPER AGREEMENT).

Agreement to be in effect from July 1, 1928, to June 30, 1931.

Hours: 8 per day, six day week for day work; 7 hours for night work.

Overtime: time and one-half; Sundays and legal holidays, double time except in case of morning papers, but if any morning paper turns out special editions on these days, work on same to be double time.

Wages per week for journeymen: from July 1, 1928, to June 30, 1929, \$44.50 for day work and \$45 for night work; from July 1, 1929 to June 30, 1930, \$45.50 for day work and \$46 for night work; from July 1, 1930 to June 30, 1931, \$46.50 for day work and \$47.50 for night work.

Wages per week for apprentices: at least \$14 to start and from \$16 during first half of third year to \$30 during last half of fifth year. The ratio of apprentices to be one for first four journeymen and one to each additional five journeymen.

If, in case of emergency, a man is called back half an hour after he has left the office, he shall be guaranteed not less than one hour's overtime.

If called back after completion of shift to work on next shift, he shall be given a half day or night's work at rate of time and one-half, but not more than a full day or night's pay if required to work full time.

The union reserves the right to refuse to handle work coming from or destined for an office where there is a strike or lockout in existence which directly affects the interests of this union.

Any difference in the interpretation of this agreement or concerning its renewal or a new agreement after its expiration, which cannot be settled by conciliation, shall be referred to arbitration under the provisions of the most recent International Arbitration Agreement between the American Newspaper Publishers' Association and the International Stereotypers and Electrotypers Union.

TORONTO, ONTARIO.—EMPLOYING ELECTROTYPE-ERS AND STEREOTYPERS OF TORONTO AND THE INTERNATIONAL STEREOTYPERS AND ELECTRO-TYPERS UNION, LOCAL No. 21 (COMMERCIAL AGREEMENT).

Agreement to be in effect from July 1, 1928 to June 30, 1931.

Hours: 48 hours per week, work to stop on Saturday at noon; for stereotypers employed on column-plate work at night, 40 hours per week.

Overtime: time and one-half up to four hours work after regular quitting time; double time thereafter; work on statutory holidays, double time.

Wages per week for electrotypers and job stereotypers: from July 1, 1928 to June 30, 1929, \$44; from July 1, 1929 to June 30, 1930, \$45; from July 1, 1930 to June 30, 1931, \$46.

Wages per week for apprentices: for first six months wages to be fixed by employer; for second six months, $\frac{2}{3}$ of journeymen's scale; second year $\frac{3}{4}$ of journeymen's scale; third year, $\frac{1}{2}$ of journeymen's scale; fourth year $\frac{3}{4}$ of journeymen's scale; fifth year $\frac{3}{4}$ of journeymen's scale.

Apprentices to electrotyping: one allowed to each branch of the business (i.e. one to the foundry and one to the finishing department). When 10 journeymen are regularly employed, one additional apprentice allowed.

Apprentices to stereotyping: one apprentice allowed when two journeymen stereotypers are regularly employed.

Apprentices to serve five years. The principle of indenturing apprentices is endorsed. If no journeymen members of the union are available for employment, a senior apprentice may be temporarily advanced.

The duties of helpers is defined but there is no limit to the number to be so employed.

No strike or lockout to occur during the term of this agreement. Any dispute to be referred to a board of two members from each party. If they cannot agree, they shall select a fifth, the decision of such board to be final and binding.

HAMILTON, ONTARIO.—PUBLISHERS OF TWO LOCAL NEWSPAPERS AND THE INTERNATIONAL PRINTING PRESSMEN AND ASSISTANTS' UNION, LOCAL No. 176.

Agreement to be in effect from January 1, 1928 to December 31, 1929.

Union members only to be employed except as provided in apprentice provisions, but if union unable to supply journeymen, other printing pressmen may be employed who shall receive union rate of wages.

Hours: 8 per day for day work and 7½ hours for night work.

Wages per week for journeymen: \$40.50. Where there are four or more journeymen pressmen employed, one shall be assistant head pressman and receive at least \$1 per week over the regular rate. Publishers will grant a Christmas bonus of one week's wages to regular journeymen and apprentices.

Wages per week for apprentices: at least \$14, with increase of \$2 per week each year during apprenticeship. Apprentices to take correspondence course of the International Union in the fourth year of their apprenticeship.

Overtime: time and one-half to 10 p.m.; after that and work on Sundays and holidays, double time.

The agreement specifies the minimum number of men to be employed on each type of press.

The head pressman of a web pressroom shall be a practical web pressman and he shall hire and discharge all help under his charge.

Union members reserve the right to refuse to execute struck work.

Regular journeymen and apprentices to be given one week's vacation with full pay, such vacations to take place between June 15th and September 30th, subject to the regulation of the foreman. Union members will do their best to prevent normal cost of production being increased during the holiday period.

Correction

VICTORIA, BRITISH COLUMBIA.—LOCAL NEWS-PAPERS AND JOB PRINTING OFFICES AND THE INTERNATIONAL PRINTING PRESSMEN AND ASSISTANTS' UNION, LOCAL No. 79.

These two agreements for the periods January 1, 1928 to December 31, 1930 and from January 1, 1928 to June 30, 1929 respectively, were summarized in the LABOUR GAZETTE for August on page 904, but were, in error, placed under a heading indicating that they were between the employers and the International Typographical Union, Local No. 201.

AGREEMENTS IN SETTLEMENT OF DISPUTE BETWEEN BUILDING CONTRACTORS IN VANCOUVER AND CARPENTERS

AS stated in the November issue of the *LABOUR GAZETTE*, a dispute involving carpenters and members of certain other building trades employed on certain buildings in Vancouver and New Westminster was settled early in November by the signing of an agreement as to wages and working conditions, the text of which is given herewith along with the text of a short agreement also signed at the same time terminating the dispute.

The origin of the dispute arose from a demand by the carpenters, members of the United Brotherhood of Carpenters and Joiners of America, on certain buildings, that members of that union only be employed. This being refused, they ceased work on October 8. The contractors affected, members of the General Contractors' Association of Vancouver, thereupon locked out the members of that union on all other buildings under construction by members of the Contractors' Association. This was followed by the refusal of members of other building trades crafts on such buildings to work with men employed to take the places of carpenters on strike or locked out. The Contractors' Association stated that early in the year they had entered into a verbal agreement as to wages and working conditions with the United Brotherhood of Carpenters and Joiners of America (*LABOUR GAZETTE*, April 1928, page 408) and also with the Amalgamated Carpenters of Canada, copies of the clauses as to wages and working conditions being filed with the resident representative of the Federal Department of Labour in Vancouver, and that each party understood that members of both unions were to work on the jobs without discrimination. The United Brotherhood in demanding the closed shop on certain buildings held that it was in the interest of the carpenters to establish the trade rule that all men working on jobs should belong to their union.

On October 30 the Deputy Minister of Labour for British Columbia and the resident representative of the Federal Department of Labour met the parties to the dispute and negotiations (with a view to settlement of the dispute) were carried on. The Contractors desired the inclusion of a clause in the agreement to provide against the recurrence of such disputes and this, with certain other proposals, was agreed to, including one from the union that the carpenters in New Westminster should be included in the agreement. Work

was resumed on November 8, except that the pile drivers did not resume work until November 13.

THIS AGREEMENT, made at Vancouver, B.C., this 7th day of November, in the year One Thousand Nine Hundred and Twenty-eight, by and between the United Brotherhood of Carpenters and Joiners of America, Local No. 452, hereinafter called the Party of the First Part, and the General Contractors' Association of Vancouver, hereinafter called the Party of the Second Part:

Whereas there has been recently considerable friction between the parties to this agreement, and it is in the interests of both parties that there shall be harmonious working in the building industry so far as the parties hereto are able to secure. With this in view the following agreement is entered into:—

1. No stoppage of work by the Party of the First Part for similar reasons to that which brought about the present strike and lockout: no stoppage of work by either party until any other matter in dispute has been considered by representatives of both parties to this agreement, and a thorough investigation made as to the cause of grievance. If unable to agree, a Board of Conciliation shall be chosen, composed of three from each party to the agreement, each party hereto being at liberty to select their own representatives. This Board shall meet upon notification by either party within 24 hours of such notification and shall render its decision within a further 24 hours of such meeting, unless the latter period is extended by mutual consent.

2. In the event of any other trade dispute on a job, the Party of the First Part shall not be asked to work with strike breakers attempting to carry on the said work, or to work under police protection. If the dispute has reference to Firms working Union and non-Union men, if non-Union men continue to work when Union men are called off, they shall not be classed as strike breakers.

3. The present rate of wages i.e. \$1 per hour, an eight hour day, 44 hour week, to remain in force for the period of this agreement. Time and one-half for overtime for the first four hours, after that double time. Double time on Saturday afternoons, Sundays and Holidays. The recognized Holidays are: New Years Day, Good Friday, Empire Day, Dominion Day, Labour Day, Thanksgiving Day, Christmas Day.

4. Unless wages be paid in cash, they shall be paid not later than Friday in any one week.

5. This agreement shall remain in force until April 1, 1930, and should either party wish to change, add to or amend this agreement at that time, sixty days' notice in writing shall be given with the proposed changes, additions or amendments attached thereto.

Providing no such notice is given by either party, this agreement shall remain in force from year to year until such notice is given as herein provided.

When such notice has been served, the parties to this agreement shall appoint committees composed of five members of each party who shall meet within 10 days to come to a decision.

6. Copy of this agreement to be deposited with the Dominion Fair Wage Officer and also with the Deputy Minister of Labour for the Province of British Columbia.

In witness whereof the parties hereto have hereunto affixed their hands and seals on the day and date above mentioned having been fully authorized so to do by their respective organizations.

Short Agreement to End Strike and Lockout

THIS AGREEMENT, made at Vancouver, B.C., this 7th day of November, in the year One Thousand Nine Hundred and Twenty-eight, by and between the United Brotherhood of Carpenters and Joiners of America, Local No. 452, hereinafter called the Party of the First Part, and the General Contractors' Association of Vancouver, hereinafter called the Party of the Second Part:

Whereas the friction which has recently existed between the parties to this agreement

having been settled by the signing of an agreement to govern conditions under which members of the Party of the First Part will be employed on the various building operations carried on by members of the Party of the Second Part.

Now it is agreed between the parties to this agreement that the strike and lockout are called off forthwith and the members of the Party of the First Part will be taken back to work on all jobs being carried out by the members of the Party of the Second Part, as opportunity offers and as they may be required, as from Friday morning, November 9, 1928.

It is further agreed by the Party of the Second Part that no discrimination will be shown against any member of the Party of the First Part in consequence of the recent friction.

Copy of this agreement to be deposited with the Dominion Fair Wage Officer and also with the Deputy Minister of Labour for the Province of British Columbia.

In witness whereof the parties hereto have hereunto affixed their hands and seals on the day and date above mentioned, having been fully authorized so to do by their respective organizations.

Coal Production in Canada in Third Quarter of 1928

The quarterly report published by the Dominion Bureau of Statistics shows that Canada's coal production during the third quarter amounted to 4,300,689 tons, as compared with 3,890,486 tons for the corresponding quarter in 1927, marking an increase of 10 per cent. All coal producing provinces reported greater outputs than during the third quarter of 1927. The total production for the first nine months of the year was 12,569,790 tons as against 12,318,529 tons during the same period of 1927.

Total imports of coal into Canada during July, August and September, were 35 per cent greater than during the third quarter last year. The figures were 5,429,379 tons, comprising 5,158,898 tons from the United States, 270,153 tons from Great Britain and 328 tons from British South Africa this year, as against 5,217,803 tons, of which 4,913,312 tons were from the United States, 299,140 tons from Great Britain, 5,155 tons from the Netherlands and 196 tons from Japan in the third quarter of 1927.

The total imports of coal into Canada during the first nine months of 1928 were 12,063,494 tons as against 14,796,482 tons during the corresponding period of 1927.

Exports of Canadian coal for the third quarter of 1928 amounted to 226,364 tons as against 214,879 tons during the corresponding period in 1927. Exports from Nova Scotia, New Brunswick and Quebec amounted to 113,113 tons as against 124,392 tons in the third

quarter of 1927, while Manitoba, Saskatchewan, Alberta and British Columbia cleared 113,251 tons as against 90,497 tons during the third quarter of last year. During the nine months ending September 30th, 1928, Canada exported 602,204 tons as compared with 813,562 tons during the first nine months of 1927.

Computed from figures on output, imports and exports, the quantity of coal made available for consumption in Canada during the third quarter of 1928 was 9,503,704 tons or 7 per cent greater than the tonnage for the corresponding period in 1927.

The average number of men employed in the coal mines of Canada during the third quarter of the year numbered 27,507. Of these, 6,377 worked on the surface and 21,130 underground. The average production per man for the period was 156.3 tons and the average output per man-day was 2.4 tons. Tonnage lost during the period (table 4) was largely due to "lack of orders."

The President of the Board of Trade of Great Britain, announced in the House of Commons, on December 11 that Canada and the other Dominions would be invited to an international conference in London in April next to consider the safety of life at sea. The report of the load line committee, when completed, will be sent to the Dominions and to foreign countries with a view to an international agreement.

FAIR WAGES CONDITIONS IN DOMINION GOVERNMENT CONTRACTS

THE Department of Labour is furnished from month to month with information regarding the contracts executed by various departments of the Government of Canada which included among their provisions fair wages conditions for the protection of the labour to be employed. The Fair Wages Policy of the Government of Canada has been in effect since 1900 and is now expressed in an Order in Council which was adopted June 7, 1922, and amended April 9, 1924.

The Fair Wages Order in Council requires that "all contracts made on behalf of the Government of Canada for the construction or remodelling of public buildings of all kinds, railways, canals, roads, bridges, locks, dry-docks, elevators, harbours, piers, wharves, lighthouses, and other works for the improvement and safety of transportation and navigation, rifle ranges, fortifications, and other works of defence, dams, hydraulic works, slides, piers, booms, and other works for facilitating the transmission of timber, and all other works and properties constructed or remodelled for the Government of Canada" must contain either a fair wage schedule based on the current wages rates and working hours in the district, or a general fair wage clause requiring adherence to the current wage rates and working hours in the district for the different classes of labour employed, or, in the absence of such standard conditions, fair and reasonable rates and hours. The conditions above mentioned are referred to in the Order in Council as "A" conditions. Following is the text of the General Fair Wage Clause referred to:—

1. All mechanics, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed for the character or class of work in which they are respectively engaged, and if there be no current rates in such district, then fair and reasonable rates, and shall work such hours as are customary in the trade in the district where the work is carried on, or if there be no custom of the trade as respects hours in the district, then fair and reasonable hours, unless for the protection of life and property, or for other cause shown to the satisfaction of the Minister of Labour, longer hours of service are required. The Minister of Labour may at any time and from time to time determine for the purposes of this contract, what are the current or fair and reasonable rates of wages and the current or fair and reasonable hours, and may from time to time rescind, revoke, amend, or vary any such decision, provided that his determination and any amendment or variation shall not be operative prior to the period of

three months immediately preceding the date thereof.

Where there are special circumstances which in the judgment of the Minister of Labour make it expedient that he should do so, he may in the manner and subject to the provisions hereinabove set forth, decide what are the current or fair and reasonable rates of wages for overtime, and what is the proper classification of any work for the purposes of wages and hours. Immediately upon receipt of notice of any decision of the Minister of Labour hereunder the contractor shall adjust the wages and hours and classification of work so as to give effect to such decision. In case the Contractor shall fail so to do, or to pay to any employee or employees for any services performed or for any hours of labour, wages according to the rates fixed therefor by the Minister of Labour, the Minister of Labour may authorize and direct the Minister to pay any such wages at the rates so fixed and to deduct the amount thereof from any moneys owing by the Government to the Contractor and any such payment shall for all purposes as between the Contractor and the Government be deemed and taken to be payment to the Contractor, and the Contractor shall be bound in every particular by any such authority, direction and payment as aforesaid. The powers of the Minister of Labour hereunder shall not be exercised as to any employee or employees where it is established to his satisfaction that an agreement in writing exists and is in effect between the Contractor and the class of employees to which such employee or employees belong or the authorized representatives of such class of employees fixing rates of wages, overtime conditions and hours of labour.

It is further provided in the Order in Council that "all contracts for the manufacture and supply to the Government of Canada of fittings for public buildings, harness, saddlery, clothing, and other outfit for the military and naval forces, Royal Canadian Mounted Police, letter carriers, and other Government officers and employees, mail bags, letter boxes, and other postal stores, and any other articles and things hereafter designated by the Governor in Council" must contain provisions for the observance of the current wages rates and working hours in the district, or, in the absence of any such current standards, fair and reasonable rates and working hours. These conditions are referred to in the Order in Council as "B" conditions, and include the following provisions:—

All workmen, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed, and if there be no current rate in such district, then a fair and reasonable rate, and shall work such hours as those fixed by the custom of the trade as respects hours in the district where the work is carried on, or if there be no custom of the

trade as respects hours in the district then fair and reasonable hours, except for the protection of life and property, or on due cause shown to the satisfaction of the Minister of Labour. In the event of a dispute arising as to what is the current or a fair and reasonable rate of wages or what are the current hours fixed by the custom of the trade or fair and reasonable hours it shall be determined by the Minister of Labour, whose decision shall be final; payment may also be withheld of any moneys which would otherwise be payable to the contractor until the Minister of Labour's decision has been complied with.

By the term "current wages" and the term "hours of labour fixed by the custom of the trade" in the foregoing are meant respectively the standard rates of wages and hours of labour either recognized by signed agreements between employers and workmen in the district from which the labour required is necessarily drawn or actually prevailing, although not necessarily recognized by signed agreements.

In both the "A" and "B" conditions of the Fair Wages Order in Council the Minister of Labour is empowered to determine questions which may arise as to what are the current or fair and reasonable wages rates and working hours. The contractor is required to post and keep posted in a conspicuous place on the premises where the contract is being executed, occupied or frequented by the workmen, the fair wages clause or schedule inserted in his contract for the protection of the workmen employed. The contractor is also required to keep proper books and records showing the names, trades and addresses of all workmen in his employ and the wages paid to and time worked by such workmen, these records to be open for inspection by fair wages officers of the Government any time it may be expedient to the Minister to have the same inspected.

It is declared that the contractor shall not be entitled to payment of any money which would otherwise be payable under the terms of contract until he has filed a statement showing: (1) the wage rates and hours of labour which are in force for the various classes of workmen; (2) whether any wages or payments remain in arrears; and (3) that all of the labour conditions of the contract have been complied with. In the event of default being made in the payment of the wages of any workman employed, claim therefor may be filed with the minister of the department with which the contract has been made and payment of such claim may be made by the latter. (Under the "A" conditions these rights extend to moneys payable for the use or hire of horses or teams.)

All workmen employed in the execution of the contract shall be residents of Canada, unless the Minister of the department with which the contract has been made is of opinion that Canadian labour is not available, or that other special circumstances exist which render it contrary to the public interest to enforce this provision.

Under the "A" conditions clerks of works or other inspecting officers appointed by the Government to ensure the due observance of the contract are specially instructed to do all in their power to see that the labour conditions are fully complied with and to report any apparent violations to the department with which the contract is made.

The "B" conditions provide that the contractor's premises and the work being performed under contract shall be open for inspection at all reasonable times by any officer authorized by the Minister of Labour for this purpose, and that the premises shall be kept in sanitary condition.

Contracts Awarded Recently

During the past month statements were received in the Department of Labour showing that the following contracts were recently executed by the Government of Canada, and that they included either fair wage schedules as shown below, or the general fair wage clause above mentioned:—

DEPARTMENT OF NATIONAL DEFENCE

CONTRACTS IN GROUP "A" (CONSTRUCTION, ETC.)

Rebuilding portion of wall at the Dominion Arsenal, Quebec, P.Q. Name of contractor, Emile Cote, Quebec, P.Q. Date of contract, October 20, 1928. Amount of contract \$5,862. The General Fair Wages Clause was inserted in the contract.

Renewal of roof of University Avenue Armoury, Toronto, Ont. Name of contractors, The A. B. Ormsby Co., Ltd., Toronto, Ont. Date of contract, October 22, 1928. Amount of contract, approximately \$6,400. The General Fair Wages Clause was inserted in the contract.

Construction of Central Heating Plant and Concrete Conduit at the Rockcliffe Aerodrome, Rockcliffe, Ont. Name of contractor, Wm. J. Wills, Ottawa, Ont. Date of contract, October 22, 1928. Amount of contract, \$11,500. A

fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rates of wages: Not less than	Hours per day
	per hour \$ cts.	
Bricklayers.....	1 20	8
Bricklayers, Labourers.....	45	8

Grading of the parade ground at H.M. Canadian Dockyard at Halifax, N.S. Name of contractors, Frank L. Boone, South Devon, and Alexander R. Voye, Fredericton, N.B. Date of contract, October 27, 1928. Amount of contract, approximately \$8,996.20. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rates of wages not less than	Hours per day
	per hour cts.	
Labourers.....	35	9
Driver with one horse and cart.....	55	9
Driver with team and wagon.....	75	9

DEPARTMENT OF PUBLIC WORKS
CONTRACTS IN GROUP "A" (CONSTRUCTION, ETC.)

Construction of Hangar No. 1, Montreal Air Harbour, at St. Hubert, County of Chambly-Verchères, P.Q. Name of contractor, Albini Lacroix, St. Lambert, P.Q. Date of contract, October 10, 1928. Amount of contract, \$10,258. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rates of wages not less than	Hours per day
	per hour \$ cts.	
Carpenters.....	75	9
Joiners.....	75	9
Bricklayers.....	1 12½	8-9
Painters.....	70	9
Glaziers.....	70	9
Roofers.....	60	9
Sheet metal workers.....	70	9
Labourers.....	35	10
Driver (with one horse and cart).....	50	10
Driver (with two horses and wagon)....	70	10

Renewal of the wharf head at Port Simpson, B.C. Name of contractors, John Currie & Son, Prince Rupert, B.C. Date of contract, November 10, 1928. Amount of contract, approximately, \$7,525.72. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rates of wages not less than	Hours per day
	per day \$ cts.	
Pile driver foreman.....	\$10 00	8
Pile driver engineer.....	9 00	8
Fireman.....	5 50	8
Pile driver man.....	8 00	8
Pile driver boomman.....	8 00	8
Bridgeman.....	8 00	8
Carpenters.....	8 00	8
Labourers.....	4 00	8

Reconstruction and extension of breakwater at Roberval, P.Q. Name of contractors, Gagnon & Freres of Roberval, Ltd., Roberval, P.Q. Date of contract, October 27, 1928. Amount of contract, approximately \$27,749.50. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rates of wages not less than	Hours per day
	per hour cts.	
General foreman.....	60	10
Carpenters.....	45	10
Blacksmiths.....	50	10
Blacksmiths' helpers.....	35	10
Mechanics.....	45	10
Labourers.....	30	10
Carters—single.....	40	10
Teamsters.....	50	10

Construction of a pyro-metallurgical laboratory building on Booth street, Ottawa, Ont. Name of contractor, Edouard Monette, Ottawa, Ont. Date of contract, November 15, 1928. Amount of contract, \$12,950. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rates of wages not less than	Hours per day
	per hour \$ cts.	
Labourers.....	45	8-9
Concrete workers.....	45	8
Bricklayers and masons.....	1 20	8
Structural steel workers.....	80	8
Carpenters and joiners.....	85	8
Sheet metal workers.....	87½	8
Plasterers.....	1 00	8
Metal Lathers.....	75	8
Painters and glaziers.....	65	8
Plumbers and steamfitters.....	95	8
Electricians.....	80	8
Driver (1 horse and cart).....	70	8
Driver (2 horses and wagon).....	1 00	8

Supply and installation of a water works system at the Montreal Air Harbour, St. Hubert, Que. Name of contractors, Oliver F. Cummins and Wm. H. Robinson, Toronto, Ont. Date of contract, November 16, 1928. Amount of contract, \$95,645.75. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rates of wages not less than	Hours per day
	per hour	
	\$ cts.	
Cement or concrete finishers.....	65	9
Foreman.....	60	10
Mechanics.....	60	10
Firemen.....	40	10
Stone crusher operator.....	60	10
Concrete mixer operator.....	40	10
Carpenters.....	75	9
Labourers.....	35	10
Watchman.....	per day 3 00	(night)
	per hour	
Plumbers.....	85	8
Drillers.....	50	10
Blasters.....	50	10
Carters.....	50	10

Roofers.....	60	9
Electricians.....	70	8

Deepening channel through the existing shoals in the Athabaska River at Athabaska, Alta. Name of contractors, Wm. Brown, Sr., and Wm. C. Brown, Jr., Edmonton, Alta. Date of contract, October 22, 1928. Amount of contract, approximately \$60,656.40. The General Fair Wages Clause was inserted in the contract.

Alterations and additions to pump house and provision and installation of new motor generator set for ships lighting at Esquimalt Graving Dock, Esquimalt, B.C. Name of contractors, J. P. Hodgson and W. C. Marble, Vancouver, B.C. Date of contract, October 24, 1928. Amount of contract, \$17,500. The General Fair Wages Clause was inserted in the contract.

Construction of an earthen mound and timber superstructure control dam across the Okanagan river at Penticton, B.C. Name of contractors, L. H. Rawlings, of Nakusp, and Henry P. Leaks of Balfour, B.C. Date of contract, October 27, 1928. Approximate expenditure, \$27,881.30. The General Fair Wages Clause was inserted in the contract.

Extension to Deer Lodge Hospital, Winnipeg, Man. Name of contractor, J. L. Guay, St. Boniface, Man. Date of contract, October 27, 1928. Amount of contract, \$131,571. The General Fair Wages Clause was inserted in the contract.

Construction of an immigration hall at Prince Albert, Sask. Name of contractor,

Arthur William Haynes, Prince Albert, Sask. Date of contract, October 29, 1928. Amount of contract, \$36,940. The General Fair Wages Clause was inserted in the contract.

Repairs to breakwater at Port Colborne, Ont. Name of contractors, The C. S. Boone Dredging & Construction Co., Ltd., Toronto, Ont. Date of contract, October 30, 1928. Amount of contract, approximately \$114,017. The General Fair Wages Clause was inserted in the contract.

Construction of an extension to the wharf at Natashquan, Que. Name of contractor, Joseph Gagnon, Natashquan, Que. Date of contract, November 3, 1928. Amount of contract, approximately, \$33,948.20. The General Fair Wages Clause was inserted in the contract.

Construction of a public building at Rosethorn, Sask. Name of contractors, Shoquist Brothers, Saskatoon, Sask. Date of contract, November 7, 1928. Amount of contract, \$29,380. The General Fair Wages Clause was inserted in the contract.

Supply and installation of 2 electric elevators and 2 movable platforms at Digby Pier, Digby, N.S. Name of contractors, Otis-Fensom Elevator Co., Ltd., Montreal, P.Q. Date of contract, November 8, 1928. Amount of contract, \$18,030. The General Fair Wages Clause was inserted in the contract.

Wharf repairs and improvements at St. Andre, Kamouraska County, P.Q. Name of contractors, Cloutier & Gaudreau, L'Islet, P.Q. Date of contract, November 8, 1928. Amount of contract, approximately, \$3,591. The General Fair Wages Clause was inserted in the contract.

Construction of an extension at each end of the mooring wharf across the west side of the inner harbour at Goderich, Ont. Name of contractors, Jackson Construction Co., Ltd., Sorel, P.Q. Date of contract, November 8, 1928. Amount of contract, approximately, \$51,235. The General Fair Wages Clause was inserted in the contract.

Reconstruction of the wharf at Hudson, P.Q. Name of contractors, F. A. Grothe & Fils, Montreal, P.Q. Date of contract, Nov. 8, 1928. Amount of contract, approximately \$3,995. The General Fair Wages Clause was inserted in the contract.

Construction of a pile wharf at Clark's Harbour, N.S. Name of contractor, R. L. Hogg, Crowells, N.S. Date of contract, Nov. 8, 1928. Amount of contract, approximately \$11,828. The General Fair Wages Clause was inserted in the contract.

Wharf enlargements and repairs at Ste. Anne de la Pocatiere, Kamouraska Co., P.Q. Name of contractors, Cloutier & Gaudreau

Trois Saumons, P.Q. Date of contract, Nov. 8, 1928. Amount of contract, approximately \$4,622.40. The General Fair Wages Clause was inserted in the contract.

Reconstruction of wharf No. 5 and crane foundation of wharf No. 4 at H. M. Canadian Dockyard, Halifax, N.S. Name of contractors, Stephen Bros., Ltd., Halifax, N.S. Date of contract, Nov. 9, 1928. Amount of contract, approximately \$31,108.20. The General Fair Wages Clause was inserted in the contract.

Additions and alterations to the Public Building at Sudbury, Ont. Name of contractor, Ludger Lacasse, Sudbury, Ont. Date of contract, Nov. 9, 1928. Amount of contract, \$15,400. The General Fair Wages Clause was inserted in the contract.

Repairs to the head block and face timbers of the west pier at Port Maitland, Ont. Name of contractors, N. K. Cameron and D. E. Phin, Welland, Ont. Date of contract, Nov. 10, 1928. Amount of contract, approximately \$18,058.50. The General Fair Wages Clause was inserted in the contract.

Repairs and improvements to the wharf at Ste. Petronille, P.Q. Name of contractors, Ludger Lemieux, Ltée, Ste. Marie de Beauce, P.Q. Date of contract, Nov. 13, 1928. Amount of contract, approximately \$6,360. The General Fair Wages Clause was inserted in the contract.

Erection and completion of the new postal station at Outremont, P.Q. Name of contractors, Walter G. Hunt Co., Ltd., Montreal, P.Q. Date of contract, Nov. 17, 1928. Amount of contract, \$46,388. The General Fair Wages Clause was inserted in the contract.

Renewal of and repairs to flooring of Interprovincial Bridge at Matapedia, Bonaventure Co., P.Q. Name of contractor, Zenon Ouellet, Rimouski Ville, P.Q. Date of contract, Nov. 18, 1928. Amount of contract, approximately \$3,403.60. The General Fair Wages Clause was inserted in the contract.

Addition and alterations to Customs Examining Warehouse at Oshawa, Ont. Name of contractor, D. J. Riordan, Oshawa, Ont. Date of contract, Nov. 19, 1928. Amount of contract, \$17,262. The General Fair Wages Clause was inserted in the contract.

Construction of a pile breakwater at Vercheres, County of Vercheres, P.Q. Name of contractor, J. Alphonse Lemay, Portneuf, P.Q. Date of contract, Nov. 20, 1928. Amount of contract, approximately \$6,850. The General Fair Wages Clause was inserted in the contract.

Construction of a public building at Tisdale, Sask. Name of contractors, Wilson & Wilson, Ltd., Regina, Sask. Date of contract, Nov. 20, 1928. Amount of contract, \$25,247. The General Fair Wages Clause was inserted in the contract.

Reconstruction of the wharf at Les Escoumains, Que. Name of contractors, Ludger Lemieux, Ltée, Ste. Marie de la Beauce, P.Q. Date of contract, Nov. 20, 1928. Amount of contract, approximately \$36,046. The General Fair Wages Clause was inserted in the contract.

Installation of elevator and improvements to the public building at Oshawa, Ont. Name of contractor, A. E. Carbutt and N. A. Campbell, Oshawa, Ont. Date of contract, Nov. 20, 1928. Amount of contract, \$7,495. The General Fair Wages Clause was inserted in the contract.

Construction of a pier at Lameque, N.B. Name of contractors, George S. Whitehead, Saint John, N.B. Date of contract, Nov. 21, 1928. Amount of contract, approximately \$53,693. The General Fair Wages Clause was inserted in the contract.

DEPARTMENT OF RAILWAYS AND CANALS

CONTRACTS IN GROUP "A" (CONSTRUCTION, ETC.)

Delivery and erection of steel water tanks at Sackville, N.B., and Newcastle, N.B. (capacity of each 60,000 Imperial gallons). Name of contractors, Horton Steel Works, Ltd., Montreal, P.Q. Date of contract, November 9, 1928. Amount of contract, \$14,760. The General Fair Wages Clause was inserted in the contract.

POST OFFICE DEPARTMENT

Following is a statement of payments made in November, 1928, for supplies ordered by the Post Office Department under contracts which were subject to the regulations for the suppression of the sweating system, the securing of payment to the workers of fair wages and the performance of the work under proper sanitary conditions:—

Nature of Orders	Amount of Orders
Making metal dating stamps and type, also other hand stamps and brass crown seals.....	\$ 1,814 27
Making and repairing rubber stamps, daters, etc	357 34
Making up and supplying letter carriers' uniforms etc.....	23,633 69
Stamping Pads, ink, etc.....	190 05
Bag Fittings.....	12,511 67
Scales.....	236 50
Letter Boxes.....	1,075 00
Cotton Duck Bagging.....	5,465 57

UNION WAGES AND HOURS OF LABOUR IN THE UNITED STATES

THE United States Bureau of Labour Statistics compiles each year data as to rates of wages, hours of labour, etc., under the union scales for certain trades in the principal cities in the United States. The information secured is published in detail annually in special reports issued the following year; but summaries of the figures are given in the *Monthly Labour Review* published by the Bureau. The issues for September and November contain information as to the figures for May 15, 1928, with comparisons with previous years.

The Bureau publishes the hourly rate of pay for each trade in each city on May 15, as specified in the agreements between the unions and employers. The number of employees working under these agreements is also given, the hours per week and the weekly wages for a full week's work. It is stated that it has not been found practicable to secure from the unions or the employees themselves data as to actual or average weekly earnings.

It may be mentioned here that the Bureau also compiles and issues reports on wages and hours of labour in various industries in the United States, the data being taken from the pay rolls of employers by agents of the Bureau, and for these reports data as to actual weekly earnings are secured and also as to hours worked.

INDEX NUMBERS OF UNION WAGE RATES AND HOURS OF LABOUR IN THE UNITED STATES AS OF MAY EACH YEAR, 1907 TO 1926.

(1913=100.0)

Year	Index numbers of—		
	Rate of wages per hour	Full-time hours per week	Rate of wages per week full time
1907.....	89.7	102.6	91.5
1908.....	91.0	102.1	92.5
1909.....	91.9	101.9	93.3
1910.....	94.4	101.1	95.2
1911.....	96.0	100.7	96.5
1912.....	97.6	100.3	97.7
1913.....	100.0	100.0	100.0
1914.....	101.9	99.6	101.6
1915.....	102.8	99.4	102.3
1916.....	107.2	98.8	106.2
1917.....	114.2	98.4	112.4
1918.....	132.7	97.0	129.6
1919.....	154.5	94.7	147.8
1920.....	199.0	93.8	188.5
1921.....	205.3	93.9	193.3
1922.....	193.1	94.4	183.0
1923.....	210.6	94.3	198.6
1924.....	228.1	93.9	214.3
1925.....	237.9	93.0	222.3
1926.....	250.3	92.8	233.4
1927.....	259.5	92.4	240.8
1928.....	260.6	91.9	240.6

The Bureau analyses the data as to trade union scales, calculating index numbers of rates of wages per hour, full time hours per week and wages per week full time. The preceding table gives these index numbers for all trades and cities for previous years, the data going back to 1907.

The data cover Bakers, Building Trades, Chauffeurs, Teamsters and Drivers, Granite Cutters and Stonecutters, Laundry Workers, Linemen, Longshoremen, Printing Trades (book and job offices), motormen, conductors and bus drivers. The number of employees included in the compilation was 839,955 in 67 cities. It will be observed that figures for railway employees, coal miners, iron and steel workers, etc., are not included.

The average rate per hour for all trades included in the calculation was found to be \$1.159 in 1928 as compared with \$1.154 in 1927.

A table is included showing index numbers of changes in the wages of the building trades since 1913.

INDEX NUMBERS OF UNION RATES OF WAGES PER HOUR IN THE BUILDING TRADES.

(1913=100)

Year	Index numbers
1913.....	100
1914.....	102

1928.....	258

The Regina Trades and Labour Council has published its third annual edition of the Union Label Guide, containing a list of firms where union men and women may purchase goods bearing the union label and also manufactured in Canada. The Guide is a useful and compact directory to local trade unions at Regina and their activities, and contains other information of interest to labour, including a concise account of labour legislation in the province of Saskatchewan.

PRICES, RETAIL AND WHOLESALE, IN CANADA, NOVEMBER, 1928

Cost of Living, Prices of Staple Articles and Index Numbers

THE movement in prices during the month was slight, the weekly family budget in terms of retail prices being practically unchanged from the October level, while the Dominion Bureau of Statistics index number of wholesale prices was slightly lower.

In retail prices the cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average prices in some sixty cities was \$11.28 at the beginning of November, the same as for October, as compared with \$11.07 for November, 1927; \$11.01 for November, 1926; \$11.23 for November, 1925; \$10.46 for November, 1924; \$10.69 for November, 1923; \$10.29 for November, 1922; \$11.08 for November, 1921; \$15.32 for November, 1920; \$16.92 for June, 1920 (the peak); \$13.65 for November, 1918; and \$7.96 for November, 1914. Substantial seasonal advances occurred in the prices of eggs, with less important increases in the prices of milk, butter and beans, while the prices of beef, veal, mutton, pork, bacon, lard, flour, prunes, sugar and potatoes were lower. Including the cost of fuel and rent with that of foods the total budget averaged \$21.52 for the beginning of November, the same figure as for October, as compared with \$21.27 for November, 1927; \$21.24 for November, 1926; \$21.51 for November, 1925; \$20.81 for November, 1924; \$21.19 for November, 1923; \$20.89 for November, 1922; \$21.60 for November, 1921; \$26.13 for November, 1920; \$26.92 for July, 1920 (the peak); \$21.61 for November, 1918; and \$14.36 for November, 1914. Fuel and rent showed little change.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon the average prices of 236 commodities in 1913 as 100 and weighted according to the commercial importance of the commodities, was somewhat lower at 148.6 for November, as compared with 150.2 for October; 152.2 for November, 1927; 151.4 for November, 1926; 161.2 for November, 1925; 157.7 for November, 1924; 153.3 for November, 1923; 151.9 for November, 1922; 153.6 for November, 1921; 224.5 for November, 1920; 256.7 for May, 1920 (the peak); and 207.4 for November, 1918. Forty-three price quotations declined, forty-five advanced and one hundred and forty-eight were unchanged.

In the grouping according to chief component materials four of the eight main groups

were lower, three were higher and one was unchanged. The groups which declined were: the Vegetables and their Products group, mainly because of lower prices for barley, corn, rye, flour, oat products, potatoes, coffee, sugar, rubber and foreign fruits; the Animals and their Products group, due to lower prices for cattle, hogs, meats and lard, which more than offset higher prices for eggs, butter, hides and fish; the Fibres, Textiles and Textile Products group, due to lower prices for wool, jute and manila rope, which more than offset advances in the prices of cotton, cotton yarn and silk; and the Chemicals and Allied Products group, because of declines in the prices of sulphuric acid and putty. The Iron and its Products group advanced, because of higher prices for steel bars and steel sheets. The Non-ferrous Metals group was higher, because of increases in the prices of copper, tin, lead and brass sheets. The Wood, Wood Products and Paper group was also higher, while the Non-Metallic Minerals group was unchanged.

In the grouping according to purpose both consumers' goods and producers' goods declined. In the former lower prices for flour, oat products, potatoes, coffee, meats, oranges and bananas more than offset advances in the prices of butter, eggs and dried fruits. In producers' goods building and construction materials were slightly higher, while manufacturers' materials were lower. Of these, materials for the textile and clothing industries, for the chemical using industries, for the meat packing industries, for milling and other industries, as well as miscellaneous producers' materials declined, while materials for the fur industry, for the leather industry, and for the metal-working industries advanced.

In the grouping according to origin raw or partly manufactured goods were lower, decreases in the prices of wheat, potatoes, coffee, sugar, livestock, meats, wool and naval stores more than offsetting higher prices for butter, eggs, cotton, silk and non-ferrous metals. Fully or chiefly manufactured goods also declined, higher prices for butter, prepared fish, cotton yarn, rolling mill products and copper products being more than offset by lower prices for flour, smoked meats, lard and sulphuric acid. Domestic farm products and articles of forest origin were lower, while articles of marine origin and articles of mineral origin were higher.

EXPLANATORY NOTE AS TO WHOLESALE PRICES

The index number calculated by the Dominion Bureau of Statistics is based upon the prices of 236 commodities, price levels in 1913 being taken as the base, that is equal to 100, the figures being weighted according to the commercial and industrial importance of each article included. The index number has been calculated by years back to 1890, being unweighted, however, for the period of 1890 to 1913 and has been calculated by months from 1919 to date for all groupings and from 1913 to date for the principal grouping. Summary tables of the Bureau's index number may be found in the supplement to the LABOUR GAZETTE for January, 1925, January, 1926, and in greater detail in the Report on "Prices and Price Indexes 1913-24," issued by the Bureau. A description of the methods used in the construction of the index number appears in the LABOUR GAZETTE for June, 1923.

The accompanying table gives the index numbers of the Dominion Bureau of Statistics by the principal groups in the three methods of classification and with those of the classification according to purpose or use in detail for the current month and for certain preceding dates.

EXPLANATORY NOTES AS TO RETAIL PRICES

The table of retail prices and rentals shows the prices at the beginning of November of seventy-one staple foodstuffs, groceries, coal, wood and coal oil and the rent of six-roomed houses in some sixty cities throughout Canada. All prices are for delivered goods. The exact quality for which the quotation is given is set forth in the case of each commodity, and every effort has been made to ensure that the quotations in each case refer to the same class of commodity in order that the statistics may be available for purposes of comparison from month to month, from city to city, etc. The prices of foods and groceries in each city, except milk and bread, are the averages of quotations reported to the Department and to the Dominion Bureau of Statistics by a number of representative butchers and grocers in each. The prices of fuel and the rates for rent are reported by the correspondents of the LABOUR GAZETTE.

Statistics similar to these were published each month from 1910 to 1920, the figures during this period being secured at the middle of each month by the correspondents of the LABOUR GAZETTE resident in each locality from dealers doing a considerable business with workingmen's households. From 1910 to 1915 the table contained a list of only the twenty-nine foods included in the family budget, with laundry starch, coal, wood, coal oil and rent. In 1915 when monthly publication of the budget in the LABOUR GAZETTE was begun, it was decided to extend the list of foods to 40, and in 1920 the list of foods and groceries was still further extended to include over 100 items.

Beginning with October, 1922, a number of commodities were dropped from the list, and in the case of a number of articles the average prices of the grades most sold have been given, owing to the impossibility of securing prices for uniform grades for the various cities from month to month.

Oleomargarine was dropped in March, 1924, the provision for its manufacture and sale since

1917, notwithstanding the Dairy Act, expired at the end of February, 1924.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts extensively occupied by workingmen. The first class is of houses in good condition, favourably located in such districts with good modern conveniences. The second class is of houses in fair condition less desirably located, but still fairly central, without modern conveniences.

The weekly budget of a family of five, calculated in terms of the average prices in the cities for which reports are received, includes twenty-nine staple foods, laundry starch, coal, wood, coal oil, and rent, these being the items for which statistics have been obtained each month and published in the LABOUR GAZETTE since January, 1910. The quantities of each commodity included are modifications of those employed in similar calculations by various authorities. For some articles comparatively large quantities are included owing to the absence of other important items of the same class. For instance, the only fruits are evaporated apples and prunes, and the only fresh vegetable is potatoes. But as market conditions affecting these usually affect the prices of other fruits and vegetables somewhat similarly, the relative proportions of expenditure on the various classes of foods tends to be maintained. At times when the price of an article heavily weighted for this purpose rises, or falls (abnormally) the increase (or decrease) in food prices so indicated is exaggerated, and this should be taken into account in using the budget as an indicator of changes in the cost of living. In fuel and lighting the quantities are estimated on a similar principle, anthracite coal being used chiefly east of Manitoba, and soft coal and wood in the western provinces, while no allowance is made for the quantities required in the various localities owing to climatic conditions, nor for the differences in the heating value of the various fuels. It was estimated, when the budget was first published in 1912 in the report on wholesale prices in Canada for 1911, that these calculations represented from sixty to eighty per cent of the expenditure of an ordinary family according to the total income. For the average family of five the expenditure on these items of food, fuel, light and rent would be perhaps two-thirds or about sixty-five per cent of the total income.

While the budget serves to show the increase or decrease from time to time in the cost of the items included, it does not purport to show the minimum cost of food and fuel supplies for an average family in the Dominion or in any one province. The quantities of meats, dairy products, cereals, etc., included were adopted as affording a liberal supply for the healthy family of a man at hard physical work. On the other hand an average family with an income sufficient to do so would buy less meat, etc., but more fruit, fresh and canned vegetables, etc., so that comparative expenditure would be little changed.

Index Number of Changes in the Cost of Living

In March, 1921, the Department published in the LABOUR GAZETTE a table of percentages of changes in the cost of living since 1913 as

(Continued from page 1386)

a tentative cost of living index number, using the figures of the above mentioned budget for the calculation for food, fuel and rent, with preliminary figures for clothing and sundries added and this table has been brought down to date at intervals since. The calculation of

a comprehensive cost of living index number covering all items of workmen's family expenditure in progress since 1918 had been sufficiently advanced to enable the publication of preliminary figures by groups in a supplement to the LABOUR GAZETTE, January, 1926, on Prices in Canada and in Other Countries,

INDEX NUMBERS OF WHOLESALE PRICES (WEIGHTED) CALCULATED BY THE DOMINION BUREAU OF STATISTICS (Average Prices 1913=100)

page 9. This table gave figures for June and December each year from 1914 to 1926, inclusive. Figures have since been given for March and September each year since 1917, and the accompanying table gives figures for December each year from 1914 to 1917, quarterly from 1918 to 1926, and monthly since January, 1927. As stated in the above-mentioned supplement, the figures in the food group in the family budget are still used to show the changes in food prices but in the other groups the percentage changes in the prices of each article have been weighted according to workingmen's average family consumption, and in the fuel and light groups, gas and electricity have been included.

Cost of Electric Current and Gas for Householders

With rates in 1913 as 100, index numbers of electric light rates were 1900, 141.4; 1905, 135.6; 1910, 118.1; 1911, 113.4; 1912, 109.1; 1913, 100.0; 1914, 96.5; 1915, 90.8; 1916, 87.6; 1917, 87.2; 1918, 85.8; 1919, 85.8; 1920, 84.2; 1921, 84.9; 1922, 82.7; 1923, 79.5; 1924, 79.2; 1925, 85.6; 1926, 75.6.

The above figures were arrived at by converting to the base of 1913 as 100, an index number of electric current costs from 1900 to 1913 constructed for the Board of Inquiry into the cost of living in Canada, 1914-15 (Report, Vol. 2, page 318) and bringing the figures down to 1926. The figures are unweighted. The Dominion Bureau of Statistics has issued an index number of electric current rates for household consumption as follows: 1923, 73.8; 1924, 72.2; 1925, 69.9; 1926, 68.7. This index number is weighted according to consumption in each city. When the above index number, 1900-1926, is weighted according to population in each city covered for the years 1923, 1924, 1925 and 1926, the figures are substantially the same as those recently issued by the Bureau.

The following are index numbers of rates for manufactured and natural gas for the years 1913 to 1926 issued by the Dominion Bureau of Statistics (revised Prices and Price Indexes, 1913-1926): Manufactured gas, 1913, 100; 1914, 98.3; 1915, 98.1; 1916, 96.3; 1917, 100.7; 1918, 107.4; 1919, 111.1; 1920, 125.4; 1921, 143.6; 1922, 140.6; 1923, 135.7; 1924, 134.6; 1925, 131.6; 1926, 131.1; 1927, 129.4. Natural gas, 1913, 100; 1914, 107.0; 1915, 112.5; 1916, 112.5; 1917, 113.9; 1918, 114.0; 1919, 116.1; 1920, 125.1; 1921, 137.6; 1922, 163.2; 1923, 163.0; 1924, 162.2; 1925, 179.3; 1926, 172.4; 1927, 165.9. For the years 1900 to 1913 two index numbers of gas costs calculated for the Cost of Living Inquiry in 1914-

*The figures for "all items" were calculated by giving the following weights to each group: Food 35%; Fuel 8%; Rent 18%; Clothing 18%; Sundries 20%.

1915, have been averaged and converted to the base of 1913 as 100, as follows: 1900, 125.8; 1901, 125.8; 1902, 125.8; 1903, 125.2; 1904, 123.9; 1905, 120.1; 1906, 107.5; 1907, 108.8; 1908, 106.9; 1909, 105.7; 1910, 103.8; 1911, 99.4; 1912, 100.6; 1913, 100.0.

Retail Prices

Beef prices, which had advanced almost continuously since the beginning of the year, showed a downward tendency during the month, sirloin steak averaging 35.1 cents per pound at the beginning of November, as compared with 35.9 cents in October; round steak 30 cents per pound in November, as compared with 30.5 cents in October; rib roast 27.6 cents per pound in November and 28.1 cents in October; and shoulder roast 21.6 cents per pound in November and 21.7 cents in October. Veal was down in the average from 23.9 cents per pound in October to 23.5 cents in November. Mutton declined from an average of 31 cents per pound in October to 29.7 cents in November. In November both fresh and salt pork were lower, the former being down from an average of 31 cents per pound to 28.4 cents, and the latter from 27.5 cents per pound to 27.1 cents. Decreases were general. Bacon was down from an average of 42.5 cents per pound in October to 40.5 cents in November. In fresh fish cod steak and halibut were slightly higher.

Eggs showed a substantial seasonal advance in practically all localities, fresh being up from an average of 51 cents per dozen in October to 57.4 cents in November and cooking from an average of 45.6 cents per dozen in October to 49.2 cents in November. Milk advanced in the average from 12.1 cents per quart to 12.3 cents. Higher prices were reported from Sherbrooke, Thetford Mines, Ottawa, Kingston, Orillia, Owen Sound, North Bay, Sudbury and Cobalt. Butter also increased, the price for dairy averaging 43.3 cents per pound in November, as compared with 42.8 cents in October, and creamery averaging 47.6 cents per pound in November and 47.4 cents in October. Cheese was slightly lower at 33.7 cents per pound.

Bread was unchanged in the average at 7.7 cents per pound. Soda biscuits were slightly higher, averaging 18.4 cents per pound. Flour, rolled oats and rice showed little change. Canned vegetables were steady. Beans advanced in the average from 9.5 cents per pound in October to 9.8 cents in November. Onions also were higher, averaging 6.6 cents per pound. Potatoes showed little change, the price averaging \$1.26 per ninety pounds in November, as compared with \$1.28 in Oc-

tober. Prunes were slightly lower at 13.4 cents per pound. Granulated sugar was down in the average from 7.8 cents per pound in October to 7.7 cents in November. Coffee and tea showed little change. Anthracite coal averaged \$16.26 per ton in November, as compared with \$16.21 in October. Higher prices were reported from Halifax, Montreal, Sherbrooke, Niagara Falls, Kitchener, and London. Bituminous coal showed little change at \$10.05 per ton. Wood was practically unchanged in the average, hard being \$11.99 per cord and soft \$8.84 per cord. A slight decrease in rent was reported from Thetford Mines.

Wholesale Prices

The following is a summary of a statement on wholesale prices changes during the month issued by the Dominion Bureau of Statistics.

Grain prices, on the whole, were slightly lower in November. No. 1 Manitoba northern cash wheat, Fort William and Port Arthur basis, averaging \$1.21 per bushel, as compared with \$1.23½ in October. The high price for the month was \$1.24½ reached on the 17th, and the low \$1.16½ on the 30th. The movement in coarse grains was mixed, western barley declining from 70½ cents per bushel to 68½ cents, and American corn from \$1.14 per bushel to \$1.01½, while Ontario barley rose from 70½ cents per bushel to 71½ cents, and flax from \$1.92¼ per bushel to \$1.95½. Flour at Toronto was down from \$7.41 per barrel to \$7.37. Rolled oats at Toronto declined from \$3.70 per ninety-pound sack to \$3.55, and oatmeal from \$4.23-\$4.75 per ninety-eight-pound sack to \$4.08-\$4.40. Shorts rose from \$35.19 per ton to \$36.80. Raw sugar at New York declined from \$2.15½ per hundred to \$2.06¼, which was the lowest point in several years. Prunes at Toronto advanced from 9½-11 cents per pound to 10½-11 cents, and raisins from 10½ cents per pound to 11 cents. Oranges were down from \$8-\$9 per case to \$5.50-\$6, and bananas from \$5 per bunch to \$4.25-\$4.50. Quebec grades of potatoes at Montreal declined from 98 cents per bag to 90 cents, Ontario grades at Toronto from 92½ cents per bag to 87½ cents, and New Brunswick grades at St. John from \$1.65 per barrel to \$1.50. Coffee at Toronto was slightly lower at 28 cents per pound. Ceylon rubber was down from 18½ cents per pound in October to 18½ cents in November. Western cattle at Winnipeg declined from \$9.28 per hundred pounds to \$8.87, and choice steers at Toronto from \$9.87½ per hundred pounds to \$9.28. Hogs at Toronto were down from \$10.66 per hundred pounds to \$9.65. Dressed beef, fore-quarters, at Toronto was down from \$15.50

per hundred pounds to \$14.90, and hindquarters were down from \$21.12 per hundred pounds to \$17.90. Veal declined from 25 cents per pound to 22½ cents, and dressed hogs from \$19.75 per hundred pounds to \$16.30. Beef hides rose from 16-17 cents per pound to 17-18 cents, and calf skins from 22-23 cents per pound to 24-25 cents. Creamery butter at Montreal was 1 cent per pound higher at 43 cents. Fresh eggs at Montreal rose from 55-60 cents per dozen to 65-75 cents, and storage at Toronto declined from 41-42 cents per

dozen to 38-40 cents. Lard at Toronto was down from 17½ cents per pound to 16½ cents. Raw cotton at New York was up from 19.62 cents per pound in October to 19.89 cents in November. Electrolytic copper was up from \$17.02 per cwt. to \$17.60; sheet copper from 28¼ cents per pound to 29 cents; and brass sheets from 28½ cents per pound to 30 cents. Lead rose from \$6.15 per hundred pounds to \$6.22, and tin from 50¼ cents per pound to 52¼ cents. Sulphuric acid was down from \$1.75 per cwt. to \$1.60.

COMPARISON OF PURCHASING POWER OF WAGES IN TERMS OF FOOD AND RENT IN CITIES IN VARIOUS COUNTRIES

SINCE July, 1924, the International Labour Office has maintained the record of the comparative real wages in various countries, compiled and published by the British Ministry of Labour in the *Ministry of Labour Gazette* since 1923. Summaries of these figures were given in the *LABOUR GAZETTE* in August, 1923, June, 1924, December, 1924, November, 1925, February and December, 1927. The accompanying table shows the index numbers of real wages as on the date July 1, 1928, and is taken from the *International Labour Review* for October-November, 1928.

As before, the purpose of the calculations is to show the comparative amounts of food which can be purchased in the various cities with the wages of forty-eight hours' work. For this purpose index numbers were calculated by taking 100 to represent the amount of each article of food which forty-eight hours' normal wages in each of eighteen trades would purchase in London, and then finding what ratio of 100 would represent the corresponding amount for each article of food and each trade in each other city included. These ratios or "index numbers" were then averaged for each city for all trades included. The

INDEX NUMBERS OF COMPARATIVE REAL WAGES IN VARIOUS CITIES AT JULY 1, 1928

(Base: London, July 1, 1928=100)

Index numbers based primarily on quantities of food consumption in:

City	Belgium and France	Central European countries	Great Britain	Southern European countries	Scandinavian countries	Oversea countries	General average index numbers based on food only	General average index numbers with allowance for rent

Prague.....	45	42	43	47	48	47	45	48
Rome ¹	44	38	40	47	43	46	43	39
Stockholm ²	81	70	86	85	95	92	85	83
Tallinn.....	38	42	34	38	48	43	41	43
Vienna.....	37	42	40	40	51	45	43	48
Warsaw.....	42	43	40	38	46	42	42	42

¹ The low figures for Rome may be accounted for in part by the differences in the items of food consumption in the Southern European countries from those ordinarily consumed in most of the other countries included in the table.

² The figures are based on wages in the building, furniture-making, and printing industries only. For other cities, the metal industry is also included.

International Labour Office in calculating the averages has continued the practice of the British authorities in weighting the figures according to British standards of consumption, but has also produced averages weighted according to standards in various groups of countries with more or less similar standards of living.

In addition by taking an average of the results according to the six standards so adopted, a general average is produced which stands as an international average by means of which the standard of living in each city can be compared to that in London.

A calculation has also been made as to the comparative purchasing power of the wages if an allowance is made for rent payments as well as for food costs and this appears in the last column of the table of index numbers.

It is pointed out that the data used for the comparisons are not strictly comparable owing to differences in consumption in the various countries, that the wages data are for only four industries, building, metal, furniture and printing trades, that the prices data are for only eighteen items of food, and that while a percentage allowance of the cost of food is made for rent no allowance is made for fuel, clothing and miscellaneous items.

PRICES IN GREAT BRITAIN AND OTHER COUNTRIES

THE following notes give the latest information available as to movements of prices in Great Britain and other countries. The index numbers of retail prices are from official sources unless otherwise stated. The authorities for the wholesale prices index numbers are named in all cases.

Great Britain

WHOLESALE PRICES.—The Board of Trade index number on the base 1913=100, was 137.9 for October, an advance of 0.2 per cent over September. Foods advanced 0.5 per cent, due to advances in cereals and other foods, except meat and fish which declined. Industrial materials as a whole were unchanged, slight advances in metals and minerals, cotton and miscellaneous products being counteracted by a decline in textiles other than cotton.

The *Economist* index number, on the base 1901-05=100, was 173.5 for October, an advance of 0.2 per cent over September. Cereals and meat advanced, while other foods showed a decline. Textiles also declined, and minerals and miscellaneous commodities advanced.

The *Statist* index number (in continuation of Sauerbeck's figures) on the base 1867-77=100, was 116.8 for October, showing no change from the previous month. Foodstuffs advanced 0.1 per cent. In this group, vegetable foods advanced 5.4 per cent as practically every item either advanced or was unchanged; animal foods, on the other hand, declined 4.1 per cent, every item showing declines or no change, the most noticeable decline being in pork and bacon. Industrial materials declined 0.1 per cent, showing advances in minerals, chiefly tin and copper, and textiles, and a decline in the sundries group, owing chiefly to a fall in the price of hides and olive oil.

COST OF LIVING.—The index number of the Ministry of Labour, on the base July, 1914=100, was 167 at November 1, an advance of 0.6 per cent over the previous month. Food advanced slightly owing chiefly to a seasonal advance in the price of eggs. There was a slight decline in rent and other groups were unchanged.

Italy

WHOLESALE PRICES.—The index number of the Chamber of Commerce, Milan, on the base 1913=100, was 491.94 for October, as compared with 487.54 for September. With the exception of the group "miscellaneous vegetable products," all groups advanced, the most marked advance being in foods, both vegetable and animal foods.

Sweden

WHOLESALE PRICES.—The index number of the Department of Commerce on the base average prices in 1913=100, was 145 for October, as compared with 146 in September. There were no marked changes. The groups vegetable foods, animal foods, fertilizers, textiles, hides and leather showed slight declines while fuels and oils, mortar, bricks, cement and glass and chemical products advanced. The other groups, feed and forage, iron and products, lumber, pulp and paper and rubber goods showed no change.

New Zealand

WHOLESALE PRICES.—The official index number of the Government Statistician, on the base 1909-1913=1000, was 1557 for September as compared with 1553 for August. There were advances in foodstuffs, etc. of vegetable origin, wood and wood products and metals,

while the groups, textile manufactures, animal products and non-metallic minerals declined.

COST OF LIVING.—The official index number on the base July, 1914=1000 was 1613 for August, as against 1621 in May. The food group as a whole was unchanged, declines in groceries and dairy produce being counteracted by an advance in meat; rent advanced, while fuel and light, clothing and miscellaneous products declined.

United States

WHOLESALE PRICES.—The index number of the Bureau of Labour Statistics, on the base 1926=100, was 97.8 for October, a decline of 2.2 per cent. The most marked decrease was in farm products, amounting to almost 5 per cent, due to reductions in prices of cattle, hogs, sheep, potatoes and other farm products. Foods were also considerably lower due to lower prices for meats, lard, butter, flour and sugar. Hides and leather products also declined. Other groups showed only slight variations from the previous month.

The *Annalist* index number, on the base 1913=100, was 148.3 for November, a decline of 0.9 per cent from October. There were declines in farm products, food products, fuels, building materials and miscellaneous products. The only group showing an advance was metals, while textile products and chemicals were unchanged.

Dun's index number showing the cost *per capita* of a year's supply of commodities was \$193.543 at December 1, as compared with \$192.945 at November 1. There were no marked changes; the groups, meat, dairy and garden products declined, while breadstuffs, other foods, clothing, metals and miscellaneous products advanced slightly.

COST OF LIVING.—The index number of the Massachusetts Special Commission on the Necessaries of Life was 160.5 for October, a decline of 0.9 per cent. The food group declined owing chiefly to lower prices for meats and smaller declines in butter, cheese, coffee, sugar, etc. Clothing also declined and other groups were unchanged.

RECENT LEGAL DECISIONS AFFECTING LABOUR

Condoned Misconduct May be a Ground for Dismissal

A wholesale agent was employed by an automobile company in Alberta to call on dealers, establish agencies and sell motor cars for re-sale. In the discharge of these duties he was considered by the company to be neglectful, but he continued to hold the position until he was detected by the employers in a more flagrant dereliction of duty during a certain trip. The employer thereupon dismissed him, the reasons for dismissal being stated as including the entire series of alleged misdemeanours. The employee brought action against the company for wrongful dismissal, and was awarded damages on the ground that the employer had condoned the earlier delinquencies.

On appeal by the defendant, the Alberta Supreme Court reversed the decision of the lower court, finding that there was sufficient evidence of disobedience and inattention on the employee's part to justify his dismissal. As to the plea of condonation, the Court stated that when the later offences occurred, "it then became permissible for the defendant (i.e. the employer) to take into account previous delinquencies, for, as decided in *McIntyre and Hockin* (1889), 16 A.R. (Ont.) 498, page 502, condonation is subject to an

implied condition of future good conduct, and whenever any new misconduct occurs, the old offences may be invoked and may be put in the scale against the offender as cause for dismissal." The appeal was therefore allowed with costs. *Lucas versus Premier Motors Ltd. Alta. 1928, 4 D.L.R., page 526.*

Piece Work Wage System Involves Greater Risks to Workers

The Quebec Court of Appeal recently commented on the additional risks involved for workmen who are employed under the piece-work system of wage payment, as compared with the time rate system. The case was an appeal by the Asbestos Corporation against the judgment of a lower court awarding \$1,000 to the father of a young employee who had been killed in the course of his employment. The Court of Appeal found that there had been negligence on the part of both parties, and reduced the amount of damages to \$500.

The following comments were made by the Hon. Justice Letourneau concerning the merits of the case:—

"The company, in preferring to have its employees work under the 'box' system, instead of paying them fixed wages, created a new situation which, for the sake of greater

economic profits, brought an additional risk to the men, who worked with greater haste and less caution under this system. It was therefore the duty of the company to exert greater care and not tolerate any practice likely to induce any young worker to carelessness. The company neglected its duty in leaving it to the men to decide for themselves when dynamite was to be used. In other words, the company closed its eyes and let the men take all the chances they wanted. The lower court, with reason in my opinion, found that the company had been guilty of negligence. In not instructing its employees, and in neglecting to exercise over them, particularly the young and inexperienced workers, the control which it was its duty to exercise, the company was careless and neglectful. On the other hand, the deceased was imprudent in exposing himself to danger. Knowing that by venturing where he did, he placed himself in the most hazardous spot that could be found, and contributed to the accident by his carelessness.

"If it be true that to create a dangerous situation in principle is a fault, it is also true that it is a fault to expose oneself deliberately and voluntarily to such danger, and should an accident happen in such a case, should not the accident be attributed to contributory fault on the part of both parties? I believe so, and this is the conclusion to which I come in the present case."

—*Quebec—Roy versus Asbestos Corporation.*

A municipal council in Saskatchewan has no authority to delegate to an examining board its power to issue a license to a workman to practise his trade within the limits of the municipality. This decision was given

by the magistrate at Saskatoon in the case of a plumber who was prosecuted by the city council for working in the city at his trade without a license. The magistrate dismissed the case, ruling that the decision as to the granting of a license to a candidate rested with the council, and could not be delegated to a committee or board.

The Hon. L. A. Taschereau, premier of Quebec, replying to a delegation of bakery employees at Montreal on the subject of Sunday work, stated that action would be taken by the government to enforce the observance of the provisions of the provincial Lord's Day Act in this respect. He pointed out that a legal decision had been given to the effect that work in bakeries on Sundays was contrary to the law.

The sense in which the term industrial accident is understood by the Workmen's Compensation Commission of the Province of Quebec was explained by Mr. Robert Taschereau, the chairman, in a recent address at Montreal. Quoting from a definition given in the Montreal Superior Court by Mr. Justice Martin he stated that an accident is the cause of a bodily injury arising from a sudden or fortuitous external event. From the construction placed on the term in many cases on record in the courts, the term could not be made to include cases of disease resulting from the special nature of the employment, such for instance as occupational disease. To fall within the Workmen's Compensation Act, an accident was necessary, and a disease resulting from a given occupation could not be made the basis of a claim.
