ing court or investigation at the request of the company.

Linemen who are transferred will receive free transportation for themselves, dependent members of their families and for their household goods.

Wages: Eastern district: linemen \$143 to \$146 per month, with exception of Montreal, where linemen paid \$150, city foreman, \$155, cable splicer, \$160; telephone maintainers, \$172.

Central District: linemen, \$143 to \$147 per month with exception of Toronto where wages are same as in Montreal; telephone maintainers, \$172.

Western District: linemen, \$150 to \$155 per month with exception of Winnipeg, where they will be paid \$158 and \$160 per month.

Pacific District: linemen, \$150 to \$155, with exception of Edmonton where they will be paid \$157 per month.

BUILDING PERMITS ISSUED IN CANADA DURING FEBRUARY 1928

THE value of the building permits issued by 63 cities during February, as compiled by the Dominion Bureau of Statistics, was higher by \$2,610,801 or 33.9 per cent than in the preceding month, and by \$2,685,229 or 35.2 per cent than in February last year; the total stood at \$10,323,405 during the month under review, as compared with \$7,712,604 in January, 1928, and \$7,638,176 in February, 1927. The February, 1928, total was the highest for that month in the record for the 63 cities, which goes back to 1920, while building costs continued lower than in earlier years of the record.

Some 50 cities furnished detailed statistics, showing that they had granted over 700 permits for dwellings, valued at almost \$3,400,000 and nearly 1,600 permits for other buildings, estimated to cost in excess of \$6,860,000; the latter included the permit for a grain elevator in Vancouver, valued at \$2,000,000. In January, authority was given for the erection of some 600 dwellings and 1,200 other buildings, estimated at approximately \$3,000,000 and \$3,900,000, respectively.

New Brunswick and the four Western Provinces reported increases in the value of the permits issued as compared with January, 1928, while elsewhere comparatively small declines were indicated. The largest gain of \$2,308,482, or 192.2 per cent, took place in British Columbia; this was chiefly due to the authorized construction of a grain elevator in Vancouver, already mentioned.

As compared with February, 1927, Quebec, Manitoba, Saskatchewan, Alberta and British Columbia registered improvement, that of \$1,919,547, or 120.7 per cent in the last named being especially noteworthy. The decreases in the remaining provinces were small.

Montreal recorded an increase in the value of the permits issued as compared with January, 1928, but a slight reduction as compared with February last year. In Toronto, Winnipeg and Vancouver there were advances in both comparisons. Increases over the preceding month and the same month last year were also reported in Halifax, St. John, Three Rivers, Westmount, London, Oshawa, Owen Sound, Peterborough, St. Thomas, Welland, Woodstock, Brandon, St. Boniface, Regina, Saskatoon, Calgary, Lethbridge, Kamloops, New Westminster, Point Grey, North and South Vancouver and Victoria.

Cumulative Record for First Two Months, 1928.—The following table gives the value of the building authorized by 63 cities during February, and in the first two months of each year since 1920, as well as the index numbers for the latter, based upon the total for 1920 as 100. The average index numbers of wholesale prices of building materials in January and February of the same years are also given (1913=100).

Year	Value of permits issued		Indexes of value of permits issued (1920=100)	Average indexes of wholesale prices of building materials in first two months (1913=100)
	In February	In first two months		
	\$	\$		
1928.....	10,323,405	18,036,009	177.3	147.8
1927.....	7,638,176	13,314,713	130.8	147.8
1926.....	7,139,549	11,859,083	116.6	152.7
1925.....	5,902,118	11,349,388	111.6	155.5
1924.....	4,093,800	8,554,379	84.0	167.5
1923.....	5,679,671	9,819,169	96.5	164.3
1922.....	4,738,105	8,064,642	79.3	161.6
1921.....	3,683,359	6,278,923	61.7	209.7
1920.....	6,156,287	10,173,311	100.0	205.2

The aggregate for the elapsed months of 1928 was higher by 35.4 per cent than the total for the same months of 1927, the previous high level of this record of nine years.

The accompanying table gives the value of

the building permits issued by 63 cities in January and February, 1928, and February, 1927. The 35 cities for which records are available since 1910 are indicated by asterisks.

FAIR WAGES CONDITIONS IN DOMINION GOVERNMENT CONTRACTS

THE Department has received information regarding contracts recently executed by the Government of Canada, which included among their provisions the fair wages conditions sanctioned by Order in Council for the protection of the labour to be employed. The contracts (Group "A") awarded in connection with the works of construction contained the following fair wages clause:—

1. All mechanics, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed for character or class of work in which they are respectively engaged, and if there be no current rates in such district, then fair and reasonable rates, and shall work such hours as are cus-

tomary in the trade, in the district where the work is carried on, or if there be no custom of the trade as respects hours in the district, then fair and reasonable hours, unless for the protection of life and property, or for other cause shown to the satisfaction of the Minister of Labour, longer hours of service are required. The Minister of Labour may at any time and from time to time determine for the purpose of this contract, what are the current or fair and reasonable rates of wages and the current or fair and reasonable hours, and may from time to time rescind, revoke, amend, or vary any such decision, provided that his determination and any amendment or variation shall not be operative prior to the period of three months immediately preceding the date thereof.

Three of the contracts above mentioned contained schedules of rates and hours based on the current standards of the district in these respects. The schedules are given below.

Two contracts were awarded for interior fittings (Group "B") containing the general fair wages clause and other conditions for the protection of the labour employed, as sanctioned by the Fair Wages Order in Council which reads as follows:—

All workmen, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed, and if there be no current rate in such district, then a fair and reasonable rate, and shall work such hours as those fixed by the custom of the trade as respects hours in the district where the work is carried on, or if there be no custom of the trade as respects hours in the district then fair and reasonable hours, except for the protection of life and property, or on due cause shown to the satisfaction of the Minister of Labour. In the event of a dispute arising as to what is the current or a fair and reasonable rate of wages or what are the current hours fixed by the custom of the trade or fair and reasonable hours it shall be determined by the Minister of Labour, whose decision shall be final; payment may also be withheld of any moneys which would otherwise be payable to the contractor until the Minister of Labour's decision has been complied with.

By the term "current wages" and the term "hours of labour fixed by the custom of the trade" in the foregoing are meant respectively the standard rates of wages and hours of labour either recognized by signed agreements between employers and workmen in the district from which the labour required is necessarily drawn or actually prevailing, although not necessarily recognized by signed agreements.

A statement was also received as to supplies ordered by the Post Office Department subject to the regulations for the suppressing of the sweating system and the securing of fair wages, etc.

The general labour conditions sanctioned by the Fair Wages Order in Council are as follows:—

Where there are special circumstances which in the judgment of the Minister of Labour make it expedient that he should do so, he may decide what are the current or fair and reasonable rates of wages for overtime, and what is the proper classification of any work for the purposes of wages and hours. Immediately upon receipt of notice of any decision of the Minister of Labour hereunder the contractor shall adjust the wages and hours and classification of work so as to give effect to such decision. In case the contractor shall fail so to do, or to pay to any employee or employees for any services performed or for any hours of labour, wages according to the rates fixed therefor by the Minister of Labour, the Minister of Labour may authorize and direct the Minister to pay any such wages at the rates so fixed and to deduct the amount thereof from any moneys owing by the Government to the contractor and any such payment shall for all purposes as between the contractor and the Government be deemed and taken to be payment to the contractor, and the contractor shall be bound

in every particular by any such authority, direction and payment as aforesaid. The powers of the Minister of Labour hereunder shall not be exercised as to any employee or employees where it is established to his satisfaction that an agreement in writing exists and is in effect between the contractor and the class of employees to which such employee or employees belong or the authorized representatives of such class of employees fixing rates of wages, overtime conditions and hours of labour.

2. The contractor shall post and keep posted in a conspicuous place on the premises where the contract is being executed, occupied or frequented by the workmen, the Fair Wages Clause or Schedule inserted in his contract for the protection of the workmen employed, also any decision of the Minister of Labour under the preceding paragraph.

3. The contractor shall keep proper books and records showing the names, trades, and addresses of all workmen in his employ and the wages paid to and time worked by such workmen, and the books or documents containing such record shall be open for inspection by the Fair Wage Officers of the Government at any time it may be expedient to the Minister of Labour to have the same inspected.

4. The contractor shall not be entitled to payment of any money which would otherwise be payable under the terms of the contract in respect of work and labour performed in the execution of the contract unless and until he shall have filed with the Minister in support of his claim for payment a statement attested by statutory declaration, showing (1) the rates of wages and hours of labour of the various classes of workmen employed in the execution of the contract; (2) whether any wages in respect of the said work and labour remain in arrears; (3) that all the labour conditions of the contract have been duly complied with; nor, in the event of notice from the Minister of Labour of claims for wages, until the same are adjusted. The contractor shall also from time to time furnish the Minister such further detailed information and evidence as the Minister may deem necessary in order to satisfy him that the conditions herein contained to secure the payment of fair wages have been complied with, and that the workmen so employed as aforesaid upon the portion of the work in respect of which payment is demanded have been paid in full.

5. In the event of default being made in payment of any money owing in respect of wages of any workmen employed on the said work and if a claim therefor is filed in the office of the Minister and proof thereof satisfactory to the Minister is furnished, the said Minister may pay such claim out of the moneys at any time payable by His Majesty under said contract and the amounts so paid shall be deemed payments to the contractor.

6. These conditions shall extend and apply to moneys payable for the use or hire of horses or teams, and the persons entitled to payments for the use or hire of horses or teams shall have the like rights in respect of moneys so owing them as if such moneys were payable to them in respect of wages.

7. With a view to the avoidance of any abuses which might arise from the sub-letting of contracts it shall be understood that sub-letting, other than such as may be customary in the trades concerned, is prohibited, unless the ap-

approval of the Minister is obtained; sub-contractors shall be bound in all cases to conform to the conditions of the main contract, and the main contractor shall be held responsible for strict adherence to all contract conditions on the part of sub-contractor; the contract shall not, nor shall any portion thereof be transferred without the written permission of the Minister; no portion of the work to be performed shall be done at the homes of the workmen.

8. All workmen employed upon the work comprehended in and to be executed pursuant to the said contract shall be residents of Canada, unless the Minister is of opinion that Canadian Labour is not available or that other special circumstances exist which render it contrary to the public interest to enforce this provision.

DEPARTMENT OF PUBLIC WORKS

Contracts in Group "A" (Construction, etc.)

Erection and completion of buildings at Esquimalt Dry Dock, B.C. Names of contractors, James Parfitt and Fred Parfitt, ("Parfitt Brothers, Limited"), Victoria, B.C. Date of contract, February 13, 1928. Amount of contract, unit prices, approximate expenditure, \$15,196.

Erection and completion of conveyers and chutes in Postal Station "A", Toronto, Ont. Name of contractors, Mathews Conveyer Company, Limited, Port Hope, Ont. Date of contract, March 8, 1928. Amount of contract, \$55,395.

DEPARTMENT OF RAILWAYS AND CANALS

Contracts in Group "A" Construction, etc.

Construction of an eight yard dipper dredge for service at the Hudson Bay Terminus of the Hudson Bay Railway. Name of contractors, Canadian Vickers Limited, Montreal, P.Q. Date of contract, March 30, 1928. Amount of contract, \$395,440.

The manufacture, delivery and erection complete in place of the superstructure of "Bridge No. 10" only over the Welland Ship Canal at the crossing of the Canadian National Railways, Welland Division, including the taking down and loading on cars of the deck plate girder span now carrying the railway tracks across the canal at a point about 110 feet south of the centre line of said "Bridge No. 10." Name of contractors, The Canadian Bridge Company, Limited, Walkerville, Ont. Date of contract, March 8, 1928. Amount of contract, schedule rates (approximately \$598, 642.50, estimated from estimated quantities).

The manufacture, delivery and erection complete in place of the superstructure of "Bridge No. 21" over the Welland Ship Canal at Clarence Street, Port Colborne, Ont. Name of contractors, The Hamilton Bridge Works Company, Limited, of Hamilton, Ont. Date of contract, March 9, 1928. Amount of contract, schedule rates (approximately \$510,539 estimated quantities).

Construction and delivery of a "Steel Pontoon Lock Gate Lifter" required for the Welland Canal. Name of contractors, Collingwood Shipyards, Limited, Collingwood, Ont. Date of contract, March 26, 1928. Amount of contract, \$25,000.

Extending contract No. 26599, dated June 18, 1926, for the erection of an additional pair of steel mitring lock gates. Name of contractors, The Steel Gates Company, Montreal, P.Q. Date of supplemental agreement, March 15, 1928. Amount of agreement, schedule rates.

POST OFFICE DEPARTMENT

The following is a statement of payments made in March, 1928, for supplies ordered by

the Post Office Department under contracts which are subject to the Fair Wages policy:—

Nature of Orders	Amount of Orders	
	\$	cts.
Making metal dating stamps and type, also other hand stamps and brass crown seals ...	1,109	89
Making and repairing rubber stamps, daters, etc.	170	20
Making up and supplying letter carriers' uniforms, etc.	17,227	39
Stamping pads, ink, etc.	673	05
Bag fittings	4,091	06
Scales	189	99
Rural mail boxes	26,225	00
Letter boxes	1,182	55

Australian Maternity Allowances

The annual report of the Commissioner of Maternity Allowances, Commonwealth of Australia, for the year ending June 30, 1927, recently received by the Department, details the number of claims granted and rejected, expenditure and cost of administration during the twelve months period. During the year 132,056 claims were paid, and 1,122 rejected. The amount paid in maternity allowances was £660,280, while the cost of administration was £16,181. Since the Act became effective on October 10, 1912, 1,952,640 claims have been paid and 8,555 claims have been rejected, while the amount paid in allowances totalled £9,763,198, the total cost of administration being £202,732.

Under the Commonwealth Maternity Act, 1912, a sum of £5 is paid to every mother giving birth to a child in Australia, subject to residence qualifications. These allowances are

claimed and paid, irrespective of the financial status of the mother, and no distinction is made between married and unmarried mothers. Certain groups of persons are excluded—natives, because they are cared for through other means, and Asiatics. Only one allowance is paid for a confinement, regardless of whether there are one or more children at birth. If the child was not born alive or dies within 12 hours after birth, the claimant must present a medical certificate to the effect that the child was a viable child, this provision being added to avoid payments for intentional abortions. The administration of the law is under the Treasury Department, the actual duties of administration being delegated to a commissioner of allowances, an assistant commissioner, and such deputy commissioners as are necessary.

Child Protection in Ontario

The report of the Provincial Secretary of Ontario for the branch of his department charged with the administration of the laws for the protection of children shows that 686 children were taken care of last year by being made wards of Children's Aid Societies by court orders. Altogether, since the inauguration of this service some thirty-four years ago, 27,243 children have been assisted in this way. The work is done through Children's Aid Societies throughout the Province, which last year raised the sum of \$403,126, mainly

through voluntary effort, and spent \$412,642 in their operations.

Commenting on this work the report says: "Our Ontario system of child-protection is made effective through "the organization of local Children's Aid Societies composed of progressive citizens who from a desire to be of service give freely of their time and thought. Over sixty of these societies are in active operation and the publicity given to their proceedings assures the prompt exposure of child neglect or ill-treatment and the creation of healthy and happy social conditions."

PRICES, RETAIL AND WHOLESALE, IN CANADA, MARCH, 1928

Cost of Living, Prices of Staple Articles and Index Numbers

THE weekly family budget in terms of retail prices moved to slightly lower levels during the month, while the Dominion Bureau of Statistics index number of wholesale prices advanced.

In retail prices the cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average prices in some sixty cities was \$10.92 at the beginning of March, as compared with \$11.03 for February; \$11.05 for March, 1927; \$11.46 for March, 1926; \$10.74 for March, 1925; \$10.58 for March, 1924; \$10.79 for March, 1923; \$10.54 for March, 1922; \$13.23 for March, 1921; \$15.98 for March, 1920; \$12.66 for March, 1918; and \$7.68 for March, 1914. The decline was due mainly to a substantial seasonal fall in the price of eggs, but there were slight declines also in the prices of sirloin steak, fresh pork, bacon, lard, granulated sugar and butter. Slight increases occurred in the prices of beef roast, mutton, beans, evaporated apples and potatoes. Including the cost of fuel and rent with that of foods the total budget averaged \$21.15 at the beginning of March, as compared with \$21.25 for February; \$21.29 for March, 1927; \$21.77 for March, 1926; \$21 for March, 1925; \$21 for March, 1924; \$21.42 for March, 1923; \$20.96 for March, 1922; \$23.87 for March, 1921; \$25.01 for March, 1920; \$20 for March, 1918; and \$14.35 for March, 1914. Fuel was unchanged. An increase in rent was reported from Woodstock.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon the average prices of 236 commodities in 1913 as 100, and weighted according to the commercial importance of the commodities, advanced to 152.8 for March, as compared with 150.8 for February; 148.7 for March, 1927; 160.0 for March, 1926; 161.6 for March, 1925; 154.4 for March, 1924; 159.9 for March, 1923; 153.6 for March, 1922; 186.0 for March, 1921; 241.3 for March, 1920; and 194.3 for March, 1918. Fifty prices quotations advanced, twenty-nine declined and one hundred and fifty-seven were unchanged.

In the grouping according to chief component materials four of the eight main groups advanced and four were lower. The Vegetables and their Products group and the Animals and their Products group showed substantial advances, the former due mainly to higher prices for grains and vegetables, and the latter due mainly to higher prices for but-

ter. In this group eggs declined substantially. The Fibres, Textiles and Textile Products group and the Wood, Wood Products and Paper group were slightly higher. The groups which declined were: the Iron and its Products group; the Non-Ferrous Metals and their Products group; the Non-Metallic Minerals and their Products group; and the Chemicals and Allied Products group.

In the grouping according to purpose both consumers' goods and producers' goods advanced. In the former the increase was due mainly to higher prices for potatoes, butter, cheese, lard, pork products and apples, while in the latter the advance was due mainly to higher prices for materials for the textile and clothing industries, for the milling and other industries, as well as for miscellaneous producers' materials. Materials for the metal-working industries, for the chemical-using industries and for the meat-packing industries were slightly lower.

In the grouping according to origin raw or partly manufactured goods were substantially higher, increases in the prices of grains, raw sugar, potatoes, hogs, fish, cotton, silk, wool, silver and spelter more than offsetting lower prices for rubber, cattle, eggs, lemons, oranges, copper, lead and tin. Fully or chiefly manufactured goods advanced slightly, due mainly to higher prices for flour, sugar, butter, cheese, canned vegetables, pork products, boots and shoes. Domestic farm products, articles of marine origin and articles of forest origin advanced, while articles of mineral origin were slightly lower.

EXPLANATORY NOTE AS TO WHOLESALE PRICES

The index number calculated by the Dominion Bureau of Statistics is based upon the prices of 236 commodities, price levels in 1913 being taken as the base, that is equal to 100, the figures being weighted according to the commercial and industrial importance of each article included. The index number has been calculated by years back to 1890, being unweighted, however, for the period of 1890 to 1913 and has been calculated by months from 1919 to date for all groupings and from 1913 to date for the principal grouping. Summary tables of the Bureau's index number may be found in the supplement to the LABOUR GAZETTE for January, 1925, January, 1926, and in greater detail in the Report on "Prices and Price Indexes 1913-24," issued by the Bureau. A description of the methods used in the construction of the index number appears in the LABOUR GAZETTE for June, 1923.

The accompanying table gives the index numbers of the Dominion Bureau of Statistics by

the principal groups in the three methods of classification and with those of the classification according to purpose or use in detail for the current month and for certain preceding dates.

EXPLANATORY NOTES AS TO RETAIL PRICES

The table of retail prices and rentals shows the prices at the beginning of March of seventy-one staple foodstuffs, groceries, coal, wood and coal oil and the rent of six-roomed houses in some sixty cities throughout Canada. All prices are for delivered goods. The exact quality, for which the quotation is given is set forth in the case of each commodity, and every effort has been made to ensure that the quotations in each case refer to the same class of commodity in order that the statistics may be available for purposes of comparison from month to month, from city to city, etc. The prices of foods and groceries in each city, except milk and bread, are the averages of quotations reported to the Department and to the Dominion Bureau of Statistics by a number of representative butchers and grocers in each. The prices of fuel and the rates for rent are reported by the correspondents of the *LABOUR GAZETTE*.

Statistics similar to these were published each month from 1910 to 1920, the figures during this period being secured at the middle of each month by the correspondents of the *LABOUR GAZETTE* resident in each locality from dealers doing a considerable business with workingmen's households. From 1910 to 1915 the table contained a list of only the twenty-nine foods included in the family budget, with laundry starch, coal, wood, coal oil and rent. In 1915 when monthly publication of the budget in the *LABOUR GAZETTE* was begun, it was decided to extend the list of foods to 40, and in 1920 the list of foods and groceries was still further extended to include over 100 items.

Beginning with October, 1922, a number of commodities were dropped from the list, and in the case of a number of articles the average prices of the grades most sold have been given, owing to the impossibility of securing prices for uniform grades for the various cities from month to month.

Oleomargarine was dropped in March, 1924, the provision for its manufacture and sale since 1917, notwithstanding the Dairy Act, expired at the end of February, 1924.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts extensively occupied by workingmen. The first class is of houses in good condition, favourably located in such districts with good modern conveniences. The second class is of houses in fair condition less desirably located, but still fairly central, without modern conveniences.

The weekly budget of a family of five, calculated in terms of the average prices in the cities for which reports are received, includes twenty-nine staple foods, laundry starch, coal, wood, coal oil, and rent, these being the items for which statistics have been obtained each month and published in the *LABOUR GAZETTE* since January, 1910. The quantities of each commodity included are modifications of those employed in similar calculations by various authorities. For some articles comparatively large quantities are included owing to the absence of other important items of the same class. For instance, the only fruits are evaporated apples and prunes, and the only fresh vegetable is potatoes. But as market conditions affecting these usually

affect the prices of other fruits and vegetables somewhat similarly, the relative proportions of expenditure on the various classes of foods tends to be maintained. At times when the price of an article heavily weighted for this purpose rises, or falls (abnormally) the increase (or decrease) in food prices so indicated is exaggerated, and this should be taken into account in using the budget as an indicator of changes in the cost of living. In fuel and lighting the quantities are estimated on a similar principle, anthracite coal being used chiefly east of Manitoba, and soft coal and wood in the western provinces, while no allowance is made for the quantities required in the various localities owing to climatic conditions, nor for the differences in the heating value of the various fuels. It was estimated, when the budget was first published in 1912 in the report on wholesale prices in Canada for 1911, that these calculations represented from sixty to eighty per cent of the expenditure of an ordinary family, according to the total income. For the average family of five the expenditure on these items of food, fuel, light and rent would be perhaps two-thirds or about sixty-five per cent of the total income.

While the budget serves to show the increase or decreases from time to time in the cost of the items included, it does not purport to show the minimum cost of food and fuel supplies for an average family in the Dominion or in any one province. The quantities of meats, dairy products, cereals, etc., included were adopted as affording a liberal supply for the healthy family of a man at hard physical work. On the other hand an average family with an income sufficient to do so would buy less meat, etc., but more fruit, fresh and canned vegetables, etc., so that comparative expenditure would be little changed.

Index Number of Changes in the Cost of Living

In March, 1921, the Department published in the *LABOUR GAZETTE* a table of percentages of changes in the cost of living since 1913 as a tentative cost of living index number, using the figures of the above mentioned budget for the calculation for food, fuel and rent, with preliminary figures for clothing and sundries added and this table has been brought down to date at intervals since. The calculation of a comprehensive cost of living index number covering all items of working men's family expenditure in progress since 1918 had been sufficiently advanced to enable the publication of preliminary figures by groups in a supplement to the *LABOUR GAZETTE*, January, 1926, on Prices in Canada and in Other Countries, page 9. This table gave figures for June and December each year from 1914 to 1926, inclusive. Figures have since been given for March and September each year since 1917 and the accompanying table gives figures for December each year from 1914 to 1917, quarterly from 1918 to 1926, and monthly since January, 1927. As stated in the above-mentioned supplement, the figures in the food group in

(Continued on page 424)

COST PER WEEK OF A FAMILY BUDGET OF STAPLE FOODS, FUEL AND LIGHTING, AND RENT IN TERMS OF THE AVERAGE PRICES IN SIXTY CITIES IN CANADA:

Table with columns for Commodities, Quantity, and prices for years 1900 through 1928. Includes items like Beef, Butter, Flour, and various oils. Includes a 'Totals' row at the bottom.

AVERAGE COST OF STAPLE FOODS BY PROVINCES

Table showing average costs for various provinces: Nova Scotia, Prince Edward Island, New Brunswick, Quebec, Ontario, Manitoba, Saskatchewan, Alberta, British Columbia.

The budget is intended to show the changes in the cost of the items included, not to show the minimum cost for an average family. See Text. †December only. §Kind most sold. *For electric light see text.

‡An allowance for the cost of clothing and sundries would increase the figures by about 50 per cent: see text.

RENTALS IN CANADA AT THE BEGINNING OF MARCH, 1928

Fish									Eggs		Butter

Cost of Electric Current and Gas for Householders

the family budget are still used to show the changes in food prices but in the other groups the percentage changes in the prices of each article have been weighted according to workmen's average family consumption, and in the fuel and light groups, gas and electricity have been included.

With rates in 1913 as 100, index numbers of electric light rates were 1900, 141.4; 1905, 135.6; 1910, 118.1; 1911, 113.4; 1912, 109.1; 1913, 100.0; 1914, 96.5; 1915, 90.8; 1916, 87.6; 1917, 87.2; 1918, 85.8; 1919, 85.8; 1920, 84.2;

1921, 84.9; 1922, 82.7; 1923, 79.5; 1924, 79.2; 1925, 85.6; 1926, 75.6.

The above figures were arrived at by converting to the base of 1913 as 100, an index number of electric current costs from

1900 to 1913 constructed for the Board of Inquiry into the cost of living in Canada, 1914-15 (Report, Vol. 2, page 318) and bringing the figures down to 1926. The figures are unweighted. The Dominion Bureau of Statistics has recently issued an index number of electric current rates for household consumption as follows: 1923, 73.8; 1924, 72.2; 1925, 69.9; 1926, 68.7. This index number is weighted according to consumption in each city. When the above index number, 1900-1926, is weighted according to population in each city covered for the years 1923, 1924, 1925 and 1926, the figures are substantially the same as those recently issued by the Bureau.

The following are index numbers of rates for manufactured and natural gas for the years 1913 to 1926 issued by the Dominion Bureau of Statistics (revised, Prices and Price Indexes, 1913-1926): Manufactured gas, 1913, 100; 1914, 98.3; 1915, 98.1; 1916, 96.3; 1917, 100.7; 1918, 107.4; 1919, 111.1; 1920, 125.4; 1921, 143.6; 1922, 140.6; 1923, 135.7; 1924, 134.6; 1925, 131.6; 1926, 131.1. Natural gas, 1913, 100; 1914, 109.6; 1915, 112.8; 1916, 112.8; 1917, 113.6; 1918, 114.2; 1919, 116.2; 1920, 123.8; 1921, 143.0; 1922, 163.1; 1923, 162.9; 1924, 162.6; 1925, 178.7; 1926, 172.2. For the years 1900 to 1913 two index numbers of gas costs calculated for the Cost of Living Inquiry in 1914-1915, have been averaged and converted to the base of 1913 as 100, as follows: 1900, 125.8; 1901, 125.8; 1902, 125.8; 1903, 125.2; 1904, 123.9; 1905, 120.1; 1906, 107.5; 1907, 108.8; 1908, 106.9; 1909, 105.7; 1910, 103.8; 1911, 99.4; 1912, 100.6; 1913, 100.0.

Retail Prices

Changes in beef prices during the month were slight, increases in some localities being offset by declines in others. Sirloin steak averaged 33.2 cents per pound in March, as compared with 33.5 cents in February; round steak 28.1 cents per pound in March, as compared with 27.9 cents in February; rib roast 26 cents per pound in March, as compared with 25.9 cents in February; and shoulder roast 19.8 cents per pound in March, as compared with 19.6 cents. Veal was down in the average from 22.4 cents per pound in February to 22 cents in March. Mutton was slightly higher at an average price of 30.1 cents per pound. Fresh pork was down in the average from 25.3 cents per pound in February to 25.1 cents in March. Bacon, unsliced, averaged 35.8 cents per pound in March, as compared with 36.8 cents in February. Boiled ham was also slightly lower, averaging 57.3 cents per

*The figures for "all items" were calculated by giving the following weights to each group: Food 35%; Fuel 8%; Rent 18%; Clothing 18%; Sundries 20%.

†Figures for Sundries since 1920 have been revised and this has affected for certain dates "all items".

pound. In fresh fish halibut and whitefish were slightly lower. Lard was down from an average of 21.9 cents per pound in February to 21.7 cents in March.

Eggs showed a substantial seasonal decline, lard prices being reported from practically all localities. Fresh averaged 46.1 cents per dozen in March, 51.8 cents in February and 64.3 cents in January, and cooking averaged 40.1 cents per dozen in March, 44.2 cents in February and 50 cents in January. Prices are now somewhat lower in the prairie provinces and in British Columbia, where the decline has been more pronounced than in other localities. No changes were reported in milk prices, the average being 12.3 cents per quart. Butter was slightly lower in the average, dairy at 41.6 cents per pound in March, as compared with 42.3 cents in February, and creamery 45.6 cents per pound in March, as compared with 46.4 cents in February. Prices averaged slightly lower in most localities.

Bread was unchanged at an average price of 7.7 cents per pound. Soda biscuits, flour and rolled oats were steady. Canned vegetables showed little change. Beans were up from an average price of 7.8 cents per pound in February to 8.3 cents in March. Onions also were higher, averaging 5.6 cents per pound in March, as compared with 5.1 cents in February. Potatoes showed a slight increase, being up from \$1.63 per ninety pounds in February to \$1.66 in March. Prices for the most part in the prairie provinces and in British Columbia were lower, but these decreases were more than offset by the advances in other localities. Evaporated apples rose from 19.4 cents per pound in February to 20.3 cents in March. Prunes showed little change at an average price of 13.3 cents per pound. Granulated sugar was slightly lower at an average price of 8 cents per pound. Fuel prices were practically unchanged, anthracite coal averaging \$16.44 per ton, bituminous coal \$10.20 per ton, coke \$13.06 per ton, and hardwood \$12.06 per cord. An increase in rent was reported from Woodstock.

Wholesale Prices

The following is a summary of a statement on wholesale prices changes during the month issued by the Dominion Bureau of Statistics.

Grain prices moved to higher levels during March, No. 1 Manitoba northern cash wheat, Fort William and Port Arthur basis, averaging \$1.48½ per bushel in March, as compared with \$1.42½ in February. The low price for the month was \$1.44 per bushel, reached at the beginning, and the high \$1.50½, reached

at the end. The unfavourable crop conditions in foreign countries together with the decrease in available supplies, were said to be the causes of the higher prices. Coarse grains were also higher, western barley advancing from 86¼ cents per bushel to 91¼ cents; Ontario barley from 84¼ cents per bushel to 91½ cents; western oats from 64 cents per bushel to 68 cents; Ontario oats from 60½ cents per bushel to 65½ cents; flaxseed from \$1.83½ per bushel to \$1.90¼; and peas from 60½ cents per bushel to 65½ cents. Flour prices moved in sympathy with wheat, being up at Toronto from \$7.87 per barrel to \$7.90. Millfeed rose from \$36.50 per ton to \$40.50. Raw sugar at New York rose from \$2.43¼ per cwt. to \$2.75. Prices of potatoes were generally higher, Quebec grades at Montreal being up from \$1.12½ per bag in February to \$1.44½ in March; Ontario grades at Toronto from \$1.32½ per bag to \$1.72½; and New Brunswick potatoes at St. John from \$2.95 per barrel to \$3.70. Rubber prices continued toward lower levels, a grade of Ceylon being down to 32½ cents per pound to 26½ cents. Black pepper at Toronto advanced from 47 cents per pound to 53 cents. Hay rose from \$15.50 per ton to \$15.75. Western cattle at Winnipeg declined from \$10.19 per hundred pounds to \$9.76, while choice steers at Toronto were unchanged at \$10.25 per hundred pounds. Hogs at Toronto were up from \$9.20 per hundred pounds to \$9.44, and barrelled pork from \$33.50 to \$34.50. Finest creamery butter at Montreal advanced from 39 cents per pound to 43 cents and prints at Toronto from 42 cents per pound to 44 cents. Cheese was up from 26 cents per pound to 27 cents. Lard rose from 15 cents per pound to 16½ cents. Fresh eggs at Montreal fell from 48-50 cents per dozen to 44-47 cents. Men's boots showed advances of from 5 to 15 cents per pair. Raw cotton rose from 18.4 cents per pound in February to 19.4 cents in March. The low price during the month was 18.9 cents at the beginning and the high 20 cents, reached toward the end. Raw silk rose from \$4.85 per pound to \$5.05. Wool showed an advance of 2 cents per pound, the price ranging from 30 to 33 cents. Hemlock rose from \$30 per M ft. to \$32, and spruce from \$34 per M ft. to \$35. In non-ferrous metals tin declined from 55 cents per pound to 54½; lead from \$6.10 per cwt. to \$5.95; copper from \$15.90 per cwt. to \$15.87; and copper wire from 18½ cents per pound to 18½ cents. Zinc advanced from \$7.15 per cwt. to \$7.20, and silver from 57½ cents per ounce to 57½ cents.

PRICES IN GREAT BRITAIN AND OTHER COUNTRIES

THE following notes and the accompanying tables give the latest information available as to the movements of prices in Great Britain and other countries. The index numbers of retail prices are from official sources unless otherwise stated. The authorities for wholesale prices index numbers are named in all cases.

Great Britain

WHOLESALE PRICES.—The Board of Trade index number, on the base 1913=100, was 140.9 for February, a decline of 0.4 per cent from the previous month. Foods declined 1.1 per cent, due to a sharp decline in meats and fish and a slight decline in cereals, while miscellaneous foods showed an advance. Industrial materials also declined with declines in all groups with the exception of textiles other than cotton, which advanced slightly.

The *Statist* index number (in continuation of Sauerbeck's figures) on the base 1913=100, was 121.1 for February, an advance of 0.2 per cent over the January level. The food-stuffs group rose 2.9 per cent, owing chiefly to increases in prices of maize, potatoes, beef, mutton, pork and butter, which was partly counteracted by declines in barley, rice and tea. Industrial materials declined 1.6 per cent, with substantial falls in the prices of tin, lead and coal, but a rise in textiles, principally cotton, flax and wool, while sundries declined 2.8 per cent owing to lower prices for olive oil, leather and hides.

The *Times* index number was 141.8 at the end of February, an increase of 0.1 per cent over the previous month. In the foods group, cereals were unchanged, meat and fish declined 2.9 per cent owing to lower prices for fish and eggs, and other foods advanced 3.2 per cent with advances in cocoa, butter and tea. Of the industrial materials, iron and steel advanced 0.6 per cent, other metals and minerals declined 2.4 per cent, cotton advanced 2.4 per cent, other textiles 1.3 per cent and other materials declined 1.7 per cent.

COST OF LIVING.—The Ministry of Labour index number, on the base July, 1914=100, was 164 at March 1, a decline of 1.2 per cent from the previous month. The index number for food fell 2.5 per cent owing to lower average prices of eggs, fish, flour, bread and meat. The index number for clothing averaged between 215 and 220 as compared with 215 in February. Other groups were unchanged.

Austria

WHOLESALE PRICES.—The index number of the Federal Statistical Office, on the base, prices in gold, first half of 1914=100, was

129 for March as compared with 128 in February. The index number for food rose from 119 to 120 and for industrial materials fell from 147 to 146.

COST OF LIVING.—The official index number on the base prices in gold, July, 1914=100, was 107 for March, showing no change from the previous month.

Denmark

WHOLESALE PRICES.—The index number of the Department of Statistics, on the base 1913=100, was 152 for February, a decline of one point from January. Vegetable foods, animal foods, fodder, fuel and oil, lime, cement, bricks and glass and chemicals declined, while textiles and clothing, hides, leather and footwear advanced. Fertilizers, metals and metal products and wood and paper were unchanged.

Italy

WHOLESALE PRICES.—The index number of the Milan Chamber of Commerce, on the base 1913=100, was 488.74 for February, a decline of 0.2 per cent from January. The food group showed a rise of 1.4 per cent with an advance both in vegetable and animal foods. Industrial materials declined 0.9 per cent with declines in all groups.

Australia

WHOLESALE PRICES.—The Melbourne wholesale price index number, on the base 1911=1000, was 1848 for December, as compared with 1892 for November. Metals and coal, jute, leather, etc., agricultural produce, etc., dairy produce, groceries and meat declined; building materials advanced and chemicals were unchanged.

New Zealand

WHOLESALE PRICES.—The index number of the Census and Statistics Office, on the base, average annual aggregate expenditure, four chief centres, 1909-1913=1000, was 1579 for January, an increase of 0.9 per cent over the previous month. Of consumers' goods, food-stuffs advanced and non-foods declined. Of producers' goods, materials for building and construction declined and materials for farming and other industries advanced.

United States

WHOLESALE PRICES.—The index number of the Bureau of Labour Statistics, on the base 1926=100, was 96.4 for February, as com-

pared with 96.3 for January. Farm products, textile products, chemicals and drugs, house-furnishing goods and miscellaneous commodities declined; foods, hides and leather products, fuel and lighting, metals and metal products and building materials advanced.

The *Annalist* index number, on the base 1913=100, was 146.1 for March, an advance of 0.1 per cent over February. There were decreases in the prices of farm products, food products, textiles, building materials and chemicals and slight advances in fuels and metals.

Bradstreet's index number, showing the cost of 106 commodities, was \$13.4161 at April 1, an advance of 0.5 per cent over the March level. Advances were shown in breadstuffs, live stock, hides and leather, textiles, non-ferrous metals, oils and chemicals; declines were shown in provisions, fruits, coal and coke, naval stores, building materials and miscellaneous products.

Dun's index number, showing the cost *per capita* of a year's supply of commodities, was \$195.415 at April 1, an increase of 0.7 per cent over March. Breadstuffs advanced 7.7 per cent, meat declined 4.2 per cent while the other groups showed only very slight variations from the previous month.

COST OF LIVING.—The index number of the National Industrial Conference Board, on the base July, 1914=100, was 161.5 for February, a decline of one per cent from January, owing chiefly to a decline in food of 1.9 per cent and slight declines in both shelter and clothing. Fuel and light and sundries were unchanged.

The index number of the Massachusetts Special Commission on the Necessaries of Life was 158.9 for February, a decline of one per cent from January. Foods declined 0.8 per cent and the other groups showed practically no changes.

RECENT LEGAL DECISIONS AFFECTING LABOUR

Master's Liability for Action of Servant Outside Working Hours

A mining company sent out two employees on prospecting work and to assist in uncovering phosphate seams by digging trenches and cutting trails. The rate of wages of these men was \$5 per day, the employees to provide their own board, the company supplying them with all necessary tools and cooking utensils, and with a tent. A fire lit by these employees for the purpose of cooking their breakfast escaped from their control, causing damage to timber and other property, the owner of which brought an action against their employer. The employing company denied the liability on the ground that the fire in question was not started by the men in the course of their employment. The trial judge decided in favour of the plaintiff, this decision being confirmed later by the British Columbia Court of Appeal.

Referring to the question of the company's responsibility for the actions of their employees in connection with the preparation of their breakfast, one of the judges in appeal pointed out that these acts could not be regarded as being in the same category as unauthorized acts by third parties. "It was quite different," he said, "from a situation where workmen reside in cities or in more settled parts, and board in houses owned by themselves or others, or even in houses owned by their employers where they provide for their own wants before and after returning from work. In the latter case, without special

circumstances, there is no liability in the employer for acts of negligence committed outside of working hours. * * * Being therefore of opinion that in determining the scope of the servants' authority we must have regard to the nature of the work and its incidental requirements, believing also that the lighting of the fire was a necessary part of the day's work involving no interruption of the employment, and that their act in lighting the fire was not so remote as to be beyond the sphere of their duties, I must hold that the appellant is liable for the loss occasioned by the acts of its servants and that the appeal fails."

—*British Columbia—Murdoch versus Consolidated Mining, Smelting and Power Company, Limited.**

Hospital Liable for Injuries caused by Special Nurse

A patient in a hospital in Nova Scotia received injuries through the negligence of a nurse who was not a regular hospital attendant, but was called in as a special nurse for the patient, payment for this special nurse being charged to the patient. In an action by the patient against the hospital for damages, the trial judge found that the plaintiff could not have had adequate service with the ordinary nursing staff of the hospital, and for this reason a special nurse had been required. This nurse was engaged without the patient's

* Dominion Law Reports, 1928, 1, page 853.

consent, but the patient afterwards consented to pay the required fee. The trial judge held that in these circumstances the hospital was liable for damages, and on appeal by the defendant this decision was affirmed by the Nova Scotia Supreme Court.

—*Nova Scotia—Logan versus Colchester County Hospital.**

Limit of Damages for Injury caused by Explosive

A young man was seriously injured while clearing bush for a farmer when his axe struck an undischarged cartridge which had been left over in clearing operations in the previous summer. It occasionally happens that the fuse burns out without an explosion. The practice is then to place another charge close to the unexploded one and discharge it, with the result almost invariably that the one first loaded is also exploded. It may occasionally happen that the cartridge in the first charge may be blown away 50 to 150 feet, and separated from the dynamite without being exploded, but a cartridge is so small that only by pure accident would one be likely to find it and ascertain the fact.

This case not coming under the Workmen's Compensation Act (Revised Statutes of Alberta, 1922, chapter 177) the workman had recourse to an action. The conclusion of the trial judge was that the injury sustained by the plaintiff was from an unexploded cartridge which the plaintiff had struck by pure chance, and that the farmer could not be made liable in the absence of any negligence. On appeal this decision was affirmed by the Alberta Supreme Court, which commented on the great hardship resulting to the plaintiff from his not benefiting by workmen's compensation, but added that it would equally be a hardship to hold the farmer liable if he had been in no way at fault. On this point the trial judge said: "I find that defendant used the highest degree of care called for on his part and that the accident was the result of a risk inseparable from blasting. To make him liable in such a case would seem unreasonable to me, would in fact make this method of clearing impossible."

—*Alberta—Pietrzak versus Rocheleau.**

Combine to Restrain Commerce is Illegal

The Court of Appeals at Montreal recently gave a judgment defining the limits to be observed by companies which enter into agreements in restraint of trade. The Stinson

Reeb Building Supply Company, Limited, the W. & F. P. Currie and Company, Limited, and the Ontario Gypsum Company engaged in the manufacturing and selling of plaster, were charged with contravening Article 498 of the Criminal Code.

According to the judgment given by Mr. Justice Rivard, the defendants with others in the same line formed a Manufacturers' Association, together with a Dealers' Association, other firms who sold the products being also members of the latter association. The groups, he said, were not legally incorporated, but it was recognized that each of the members was under an obligation toward the others. Thus it was agreed that no member should buy from anyone outside the group and the manufacturers in the group could not sell to anyone outside. The terms of sale and payment were fixed by the manufacturing members and the other members had to sell at these prices. Four manufacturers found themselves masters of the Montreal market; they agreed on a single sale price; all orders forwarded by the secretary were distributed among them according to their productive capacities, and a sort of compensation was established to equalize the cost of shipment. "This particular object of the agreement in itself," said Judge Rivard, "does not appear to me to be stained with illegality, but the equalization of shipment prices and the proportional distribution of orders constituted only a means to the attainment of another end." Mr. Justice Rivard pointed out that at least, one outside manufacturer had been forced out of the Montreal market and that the plaintiff, a Montreal firm, had been unable to obtain supplies because of the action of the members of the Manufacturers' Association. It was true that the plaintiff had been offered material, but at a price which made it almost as profitable to buy retail. Mr. Justice Rivard concluded: "I am of the opinion that the accused, with the other corporations acting in concert with them, have conspired and co-operated to limit unduly the facilities for supply and sale of plaster, to restrain traffic and commerce in this article, and to decrease competition in the market. I conclude, therefore, that the appellants were justly condemned for an infraction of article 498 of the Criminal Code. In consequence, I dismiss the appeal."

Compensation for Accident where no Witnesses were Present

The Court of Appeals at Montreal on March 27 confirmed a recent decision of the Superior Court at Hull, Quebec, awarding \$3,080 to a workman in compensation for

* Dominion Law Reports, 1928, 1, page 1129

* Dominion Law Reports, 1928, 2, page 46.

personal injuries received while he was employed by a contracting firm in the Province of Quebec. For the defendant company it was contended that there were no eye-witnesses of the accident for which the plaintiff claimed compensation, and that his injuries were in consequence of previous ailments. The Court found that the plaintiff had met with an accident while he was on the company's premises, even though there were no witnesses of the incident. One of the three judges of the Court of Appeals dissented.

Doctrine of "Common Employment" and Employers' Liability

A musician employed by an entertainment syndicate in England in the orchestra at a theatre, was injured by an Indian club which slipped from the hand of a female member of an entertainment party. The performer in question had previously complained that the clubs were too heavy for her. The musician brought an action for damages against the syndicate in the King's Bench Division of the High Court of Justice (England). In this case the point at issue was whether an employee who is injured owing to the negligence of a fellow-servant in supplying defective appliances for his work is debarred from suing his employer, or whether an absolute duty, which cannot be delegated, rests on the employer to see that such appliances are safe, so that it is no answer for him to say that having deputed the selection and supervision of such appliances to a fellow-servant of the injured person he is consequently protected by the doctrine of common employment.

The jury found that the facts in the case showed: (1) That there was no negligence on the part of the syndicate as regards the supply of the clubs; (2) That the syndicate had not been guilty of negligence in selecting the stage manager for the work he was employed to do; (3) That the stage manager had not been negligent in regard to the supply of the clubs; (4) That the performer when using the clubs had been negligent.

On these findings of fact by the jury Mr. Justice Finlay held that the syndicate (the employers) were not liable to the plaintiff. He was of opinion that they were entitled to delegate the duty of supplying proper appliances to their employee (the stage manager), who had been carefully and properly selected by them to fill that post, and that there was no absolute duty incumbent on them to see that, notwithstanding such delegation, the appliances supplied were fit for the purpose for which they were intended. This being so, the plaintiff could only rest his case on the negligence of a fellow-servant, and the doctrine of "common employment" applied so as to exonerate the employer.

Wages governed by Contractor's Place of Domicile

Chief Justice Taft, on March 12, announced the decision of the United States Supreme Court in the case reported in the LABOUR GAZETTE, December, 1927, page 1370, involving the question, whether the Barker Painting Company of New York, who were engaged in operations in the City of Washington, were obliged to pay their workmen the wages current in New York, or in Washington. The rule of the Brotherhood of Painters, Decorators and Paperhangers of America is to the effect that a contractor domiciled in one city and having a contract in another city must adopt the scale calling for the highest wages and the shortest week. The wage scale for painters in New York is \$10.50 a day for five days a week, and in Washington \$9 for 5½ days a week. The Brotherhood having insisted that the higher scale should be paid in this case, the contractors obtained an injunction prohibiting the Brotherhood from interference. This injunction was dissolved later by a higher court, and on appeal the District of Columbia Court of Appeals sustained the rule of the union, holding that it was not arbitrary or illegal, and did not constitute a conspiracy in restraint of trade. On further appeal by the contractors the United States Supreme Court refused to intervene in the case.

[NUMBER 5

NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

Monthly Summary

INDUSTRIAL employment in Canada at the beginning of April showed a slight decline, according to returns tabulated by the Dominion Bureau of Statistics from 6,191 employers of labour, each with a minimum of 15 employees, representative of all industries except agriculture, fishing, hunting and highly specialized business. The working forces of these firms aggregated 842,940 persons, as compared with 844,294 in the preceding month. The employment index declined from 101.4 on March 1, to 101.1 at the beginning of April, as compared with 96.2, 91.4, 87.2, 89.3, 87.6, 80.8 and 84.1 on April 1, 1927, 1926, 1925, 1924, 1923, 1922 and 1921, respectively. The number of workers employed by the reporting firms in January, 1920, forms the base, equal to 100, upon which these index numbers are computed. Reports received from the offices of the Employment Service of Canada indicated substantial increases in the volume of business transacted during March as compared with the preceding month and also as compared with the corresponding period last year. All groups except logging showed increased placements under both comparisons, the gains in farming and domestic service being the most pronounced. At the beginning of April, 1928, the percentage of unemployment reported by local trade unions stood at 6.5 as compared with 7.0 per cent of idleness at the beginning of March, and with 5.7 per cent at the beginning of April, 1927. The percentage for April was based on the reports tabulated by the Department of Labour from 1,705 labour organizations, with a combined membership of 183,846 persons.

The average cost of a weekly family budget of twenty-nine staple foods was \$10.87 at the beginning of April, as compared with \$10.92 for March; \$10.80 for April, 1927; \$11.36 for April, 1926; \$10.56 for April, 1925; \$10.16 for April, 1924; \$10.64 for April, 1923; \$10.26 for April, 1922; \$12.68 for April, 1921; \$15.99 for April, 1920; \$12.57 for April, 1918; and \$7.51 for April, 1914. In wholesale prices the index number calculated by the Dominion Bureau

of Statistics, based upon prices in 1913 as 100, advanced to 153.2 for April, as compared with 152.8 for March; 148.5 for April, 1927; 160.2 for April, 1926; 156.5 for April, 1925; 151.1 for April, 1924; 156.9 for April, 1923; 153.7 for April, 1922; 179.5 for April, 1921; 251.0 for April, 1920; 256.7 for May, 1920 (the peak); and 195.0 for April, 1918.

The time loss due to industrial disputes in April, 1928, was greater than during March, 1928, and also greater than during April, 1927. Seventeen disputes were in existence at some time or other during the month, involving 1,818 workpeople and resulting in a time loss of 21,757 working days. Corresponding figures for March, 1928, were: Eleven disputes, 773 workpeople and 6,105 working days; and for April, 1927, fourteen disputes, 1,973 workpeople and 14,478 working days.

Industrial Disputes Investigation Act, 1907

During April the Department received the report of a Board of Conciliation and Investigation in connection with a dispute between the General Motors of Canada, Limited, and certain of its employees at Oshawa, Ontario. Two other applications for the appointment of Boards were received, a Board being established during the month in one case. The services of the conciliation officers of the Department were utilized in connection with all these disputes. The text of the report, and a full account of the recent proceedings under the Act, are given on page 452.

Progress of Old Age Pension Legislation in Canada

Further progress towards provincial co-operation in the Federal scheme of old age pensions was made during the past month. The Hon. G. Howard Ferguson, Premier of Ontario, made the following announcement on May 2:—

“The Government has formulated its plan to survey the province to secure reasonably accurate data as to the number of persons over 70 years of age who would be eligible

for old-age pensions in this Province. J. A. Ellis, director of the bureau of municipal affairs, has been given authority to undertake the work. His first step will be the sending out of a circular request to the different municipal councils asking that the assessors in the respective municipalities be instructed to prepare such information upon the subject as they can secure. With this general survey as a basis the organization under Mr. Ellis will be able to make an intensive study of the cases of all those who are over 70 years, so that the Government will have available most reliable information as to the number of persons eligible, and the aggregate cost to the province. It should be pointed out that the Dominion legislation sets out a number of conditions that must be complied with, and it will be the duty of the Municipal Bureau to learn how far these conditions are applicable to the various cases. Moreover, the province of Ontario has a law which requires children to maintain their parents where they are in a position to do so. This feature of the problem must be studied. Altogether, the task involves very considerable work, but by beginning this study at once, the Government feels assured that the reports will be completed in ample time next fall to enable the legislation to be submitted to the Legislature."

The Hon. W. H. Price, Attorney General of Ontario, had previously announced that already preliminary investigation had been made with the result that it was shown that in Ontario about 34 in every 1,000 of the population were of pensionable age, as compared with 18 per thousand in British Columbia, 11 per thousand in Alberta and Saskatchewan, and 16 per thousand in Manitoba. Mr. Price estimated that if 35 per cent of the persons in Ontario over 70 years were given benefits, the total pensions would amount to about \$9,000,000. Half of this amount would be paid by the province and half by the federal government.

The Hon. John Brownlee, Premier of Alberta, announced on May 4 that careful inquiry into the question of old age pensions would be made before the next session of the provincial legislature, and that the information thus secured would decide whether the federal scheme would be applied to Alberta.

In the last issue of the LABOUR GAZETTE, page 339 it was noted that the Old Age Pensions Act (Revised Statutes of Canada, 1927, chapter 156) had been adopted in the provinces of British Columbia, Manitoba and Sas-

katchewan and in the Yukon Territory. An outline of the Manitoba act is given on another page of this issue.

The text of the Old Age Pensions Act, 1927, was given in the LABOUR GAZETTE, April, 1927, page 375. It establishes a system of pensions for persons of seventy years of age and upwards, whose income from other sources is less than \$365 per year, the maximum rate of pension being \$20 a month, which is lessened by the amount of private income. One half of the amount of the pension payable is borne by the federal government, and the other half by the governments of such provinces as enact legislation giving effect to the pension system, the cost of administration being borne by the respective governments. The Old Age Pensions Act is effective only in those provinces in which the provincial legislatures have enacted special legislation expressly for this purpose.

Old age pensions in United States

In view of the progress of old age pension legislation in Canada it may be noted that the American Association for Labour Legislation has commenced a study of the operation of existing old age pension laws, so that full information may be ready for the forty-two state legislatures and congress at the opening of their regular sessions in 1929. The current issue of the *American Labour Legislation Review*, the quarterly publication of the Association, recalls that in 1922, following official investigation, notably in Pennsylvania, interest in old age pensions legislation developed to a point where at least four organizations—three of them national in scope—were preparing drafts of old age pension bills. At that time the Association proposed the holding of a representative conference in the interest of improved draftsmanship and uniform legislation. Out of this effort there emerged one draft standard bill. Six states—Montana and Nevada (in 1923), Wisconsin (1925), Kentucky (1926), Colorado and Maryland (1927)—and the territory of Alaska, have already adopted straight old age pension laws, based on the "standard bill." The "standard bill" would provide that a citizen of 70 years or upward, who has also resided continuously 15 years in the state, shall, if the value of the applicant's property does not exceed \$3,000, be entitled to a pension which, when added to other income, shall not exceed a total of \$1 a day. A state-county system of administration is provided on an economical basis with provision for careful local investigation and general supervision.

Technical education bulletins

Two bulletins (numbers 26 and 27) have recently been issued by the Technical Education Branch of the Department. The first mentioned is a directory of vocational education. It was compiled at the request of officials of the various provinces and is intended as a guide and mailing list for those interested in vocational education in all parts of Canada. It contains a list of names and addresses of the provincial officials in charge of vocational education, a list of day vocational schools in Canada, indicating the nature of the courses of study being carried on in each school, and a list of the municipalities conducting evening classes. Only those schools receiving grants under the federal Technical Education Act are mentioned.

Bulletin No. 27 is a list of textbooks and references on home economics subjects. This publication also was prepared at the request of officials of the different provinces. The list was issued as a guide to teachers and school librarians in selecting textbooks and references for Canadian vocational schools. It is hoped that its publication will encourage those in charge of the schools to build up small reference libraries for the use of teachers and pupils. In order to assist teachers in selecting the most suitable books for local requirements, a brief review of each book has been included. In preparing the list, the Technical Education Branch has co-operated with the provinces and has had the advice and assistance of a committee of representative teachers named by the provincial officials.

Maternal mortality in Canada

The Division of Child Welfare of the Department of Health of Canada has published a report on an inquiry recently carried out by the Division at the request of the first conference on Medical Services in Canada, held at Ottawa in December, 1924. The information upon which this report is based was collected by means of questionnaires sent to physicians throughout the Provinces who signed death certificates of women in the year ended June 30, 1926. These questionnaires were sent in all cases where the recorded cause of death did not clearly eliminate conditions related to childbirth. A large proportion of the physicians concerned responded to the questionnaires, and these replies and the added comments are analyzed in the report, with quotations from many letters.

The total number of deaths from causes connected with childbirth was found to be 1,532, a rate of 6.4 per 1,000 live births. The age of the mothers ranged from 15 to 48, the average age being 31. They left 5,073 motherless children, 768 of whom were new born. In the letters from physicians and others who replied to the questionnaires lack of pre-natal care was mentioned more often than any other one factor contributing to these deaths. The report calls attention to the fact that there is no reason to believe that the number of maternal deaths in the year studied was any greater than in any other recent year, or than it will be in 1928 unless something is done to improve conditions. As remedies the report urges a greater appreciation of the seriousness of this matter on the part of both physicians and the general public, to be brought about by knowledge of the facts, and an intelligent and determined effort to reduce the risks of maternity.

The report points out that vital statistics in Canada are entirely of recent date. "Up to the time when, by the Statistics Act of 1918, the Dominion Bureau of Statistics was established and a Dominion Statistician appointed, we had no national vital statistics. The Dominion Government takes the census, but other vital statistics were, before 1918, under the sole direction of the Provincial Governments. They are so still, but a system of co-operation has since been founded and carried on by the Dominion Statistician. Since January 1, 1926, all the provinces have co-operated. National vital statistics were first issued in 1921 and the first publication of the Statistics of Maternal Mortality in Canada was made in one of the publications of the Department of Health, the Handbook of Child Welfare Work in Canada for the official year ended March 31, 1922. In 1920, when the Division of Child Welfare of the Department of Health of Canada was organized, maternal mortality did not appear as a separate item in the official records of the Dominion Bureau of Statistics. Infant mortality was given in a separate column, but not maternal mortality. In the short space of seven years this subject has become a leading problem of preventive medicine and public health, and not only the profession, but the general public are demanding action to reduce our maternal mortality. In 1921, maternal mortality appeared side by side with infant mortality and our national vital statistics have been of value in arousing interest in this subject among the profession and the public."

Incidence of pneumonia and tuberculosis among workers

The monthly *Statistical Bulletin* published by the Metropolitan Life Insurance Company calls attention to the striking differences in the distribution of deaths from specified causes among occupational groups of the company's policy holders. For example pneumonia and other respiratory diseases are found to be particularly rife among iron foundry workers. Pneumonia accounted for 15.9 per cent of all deaths among these workers, while only 7.7 per cent of the deaths among all occupied males were attributed to this cause. The percentage of deaths among foundry workers is well above the average at every age of the main working period of life, 15 to 64 years. In the age period 25 to 34 years it is over three times the average. The very lowest relative percentage is found in the period 35 to 44 years, and even here it is 86 per cent above the average. Not only have iron foundry workers the highest percentage of deaths from pneumonia of any occupational class, but there were actually more deaths from this cause among them than from any other cause. This is true of no other occupational class included in the Metropolitan's investigation.

The *Bulletin* calls attention also to variations in the incidence of tuberculosis among the industrial populations of Canada and the United States, and between different regions of Canada. "Among more than 1,000,000 Canadian industrial policyholders of the Metropolitan Life Insurance Company, in 1927, the tuberculosis death rate was 102.1 per 100,000, whereas among approximately 14,500,000 white industrial policyholders in the United States, it was only 71.0. These figures, however, are composites for the total industrial populations of the two countries. An inspection of the figures for the individual Canadian provinces shows that the higher death rate in Canada is due entirely to conditions in Quebec, Nova Scotia, and New Brunswick, and that the group of western provinces, Manitoba, Saskatchewan, Alberta and British Columbia, have a lower tuberculosis death rate than any other broad region of either country."

Criminal Code amendment

The Hon. Ernest Lapointe, Minister of Justice, introduced a bill in the House of Commons on April 23 to amend the Criminal Code by repealing the sections added in 1919 relating to unlawful associations and the printing and distribution of seditious literature, and by re-enacting the sections which were repealed in 1919, providing that a person might do certain things with-

out being deemed to have seditious intention. The minister in explaining the bill said:—

"A bill similar to this has been adopted by this house five times, and in each case it has been rejected by the other chamber. Section 98, which this bill seeks to repeal, was placed in our statutes in 1919; at that time the sections affected were 97a and 97b, but the number of the section was changed in the revision which took place last year. At the time these two sections were inserted in the Criminal Code it was suggested that there was some unrest in the country; it was just after the war, and it was thought desirable to define certain kinds of what might be called sedition. Sedition is already subject to the disposition of the criminal code and more particularly of the common law. Ever since this amendment of 1919 was adopted the labour community of Canada have felt that it was aimed to prevent them from pursuing their ordinary activities. I do not say that that is the correct interpretation, but I know that since 1921, when I became a member of the government, every year that the Trades and Labour Congress sent delegates to interview the government this was one of the matters which they urged more particularly. They have received advice from the legal advisers of the labour unions to the effect that by stressing the point the courts might even decide that a strike was an unlawful association under the provisions of that section. I repeat that I do not say they are right in that contention, but this has been a sore spot with them ever since 1919. This house has voted five times to eliminate this section, and we are doing so again this year."

The bill passed its third reading in the House of Commons on April 27, without a division. On its second reading in the Senate, on May 8, it was again rejected, the vote being 22 for and 32 against.

Commission on pensions and returned soldiers' problems

A special committee of the House of Commons was appointed on the motion of the Hon. J. H. King, Minister of Soldiers' Civil Re-establishment, on February 15, to deal with all matters connected with pensions and returned soldiers' problems. The committee consisted of the following members: Messrs. Adthead, Arthurs, Black (Yukon), Clark, Fiset (Sir Eugene), Gershaw, Hepburn, Ilsley, McLean (Melfort), McGibbon, McPherson, MacLaren, Power, Ross (Kingston), Sanderson, Speakman and Thorson.

The report of the committee was tabled in the House on April 30. It included the fol-

lowing recommendations, among others, which are incorporated in a suggested Act to amend the Pension Act:—

Removal of time limit for filing applications for pension.

Establishment of new class of pensioners to make eligible widows who married soldiers after appearance of disability.

Extension of Returned Soldiers' Insurance Act so that applications may be receivable until 1933.

Enlargement of class of dependent parents or those in place of parents who are entitled to receive pensions.

Broadening of application of meritorious clause.

Pensions to dependants where aggravation substantially contributed to death.

Formulation of policy to give immediate relief of pressing cases of unemployment and an investigation by commission or otherwise of methods in use in Canada or other countries for dealing with ex-soldiers' unemployment problem by way of institutional care or otherwise.

Proposal for settlement of disputes between the Board of Pension Commissioners and Federal Appeal Board whereby disputes with regard to diagnosis would be decided upon by appointment of board of medical experts and disputes respecting jurisdiction adjudicated upon by reference to the Exchequer Court.

Co-ordination of work of Department of Soldiers' Civil Re-establishment, Employment Service of Canada, Returned Soldiers' Association, Soldiers' Aid Commission and Citizens' Rehabilitation Board in respect to soldiers employable only in restricted occupations in the general labour market.

Enlargement of Vetcraft Shops, more vigorous advertising campaign of Vetcraft products and continuation of present policy in respect to returned soldiers not employable in general labour market.

Free hospitalization of indigent pensioners.

Re-enactment of recently rescinded regulations providing treatment for certain diseases.

Allowance for last illness and funeral expenses of deceased pensioners increased from \$100 to \$150.

Increased allowance granted for wear and tear of clothing in respect to certain classes of pensioners.

Fuller information to be furnished to applicant for pension by Board of Pension Commissioners.

The suggestions of the Canadian Legion were accepted in respect to the following: (a) pensions for widows who married after the appearance of the soldiers' disability; (b) treat-

ment for certain aggravated types of disease; (c) abolition of time limit for applications; (d) indigent veterans; (e) death from aggravated condition; (f) insurance; (g) appeals; (h) appearance of injury or disease; (i) funeral allowance; (j) information to be given to Board of Pension Commissioners; (k) free treatment. Several other suggestions, in whole or in part, put forward by the Legion, were also accepted.

The economic value of accident prevention

Reference is made in another column of this issue to the work of the United States Steel Corporation in reducing the number of industrial accidents in its various plants by means of a systematic and sustained safety campaign. This work is described in an article on "the economic value of accident prevention," contributed to the April issue of *Safety Engineering* by L. H. Burnett, vice-president of the Carnegie Steel Company, Pittsburgh. The movement was initiated twenty years ago when Judge Gary, chairman of the corporation, brought the problem of accident prevention before a meeting of the casualty managers of the larger subscribing companies. Mr. Burnett points out that it is difficult, if not impossible to separate completely the humanitarian from the economic side of safety work. "The underlying motive has been and always will be the humanitarian side, but experience has taught us that many economic advantages inevitably flow from intensive safety work, such advantages being so extensive as to make safety work highly desirable from a purely dollar and cents standpoint."

The experience of a large foundry company with an average working force of 500 men affords an excellent example of money saving due entirely to intensive safety work: In 1925 time lost due to accidents was 62½ days per 100 tons of castings shipped; the cost of accidents being 66 cents out of every \$100 of payroll. In 1926 the lost time was 30 per 100 tons of castings shipped; the accident cost being 19 cents per \$100 of payroll. In 1927 they conducted an intensive safety campaign, and as a result the time lost was a half day per 100 tons of castings shipped; costing one cent per \$100 of payroll. The actual reduction in costs, due to accident prevention is indicated by the following figures: the 1925 cost of accidents was \$7,033.03; the 1926 cost of accidents was \$3,132.88 and in 1927 the cost of accidents was \$121.50.

A public utility employing an average force of 1,500 men, by reducing accidents, cut their compensation costs from 30 cents per \$100 of payroll in 1926 to 6½ cents in 1927.

A large steel works employing 5,000 men cut compensation costs from \$24,378.89 in 1926 to \$10,407.45 in 1927; showing a saving of \$13,971.44. These figures do not include savings due to decrease of medical and hospital service.

One of the largest car and foundry companies in the corporation spent \$1,000,000 for accident prevention in 14 years and saved \$2,700,000. It is said that the United States Steel Corporation spent \$9,763,063 in safety work in 10 years and showed an actual saving of \$14,609,920.

The writer concludes by forecasting further progress in the future. "The campaign of accident prevention," he says, "is founded upon reason and common sense. It will go on, gathering power and momentum as it goes, until the unnecessary sacrifice of life and limb has been abolished. We have learned that it pays, but let us not forget that the highest aim of safety work must always be the prevention of accidental injury and death and the pain and sorrow which inevitably follow."

President Green's analysis of unemployment problems

President William Green, writing in the April issue of the *Federationist*, the official monthly publication of the American Federation of Labour, expresses the hope that the existing unemployment conditions in the United States may lead to an advance towards a permanent solution of this recurring difficulty. He notes that there are two kinds of unemployment; one is seasonal, and for this the stabilization of industrial production is the final solution; the other is the result of the increasing productivity of industry, the worker to-day producing more in one hour than ever before. "Total production," Mr. Green declares, "is not increasing corresponding to increasing productivity, and therefore either fewer hours of work or fewer workers are necessary to produce the output required for the market. In recent years it has been the policy of manufacturing industry to dismiss workers rather than to shorten hours of work. And this is the kernel of the unemployment problem, the chief question which manufacturers and labour have to face; should we dismiss an ever-increasing number of workers, or should we shorten hours of work? And if we have to dismiss workers, how can we find work for them? Do newly developing industries absorb the mass of workers yearly dismissed by manufacturing industries? These are the questions to be studied, these are questions which should concern government, manufacturers and labour."

For the seasonal type of employment Mr. Green finds two solutions, namely, stabilization of industrial production by industrial managements; and,—as a more immediate remedy for distress—unemployment insurance, which should be the joint concern of employers and trade unions. Stabilization may be effected if the managements can adjust production to the market without having recourse to large additions to their labour forces in rush periods, and to corresponding "lay-offs" in dull seasons. Already a few far-seeing employers have successfully made these adjustments, but a general movement towards stabilization will be needed before the workers can hope for secure wages. Unemployment insurance is regarded as being merely a palliative for existing evils until more stable employment can be assured. Protection through insurance or benefits is within the reach of nearly all union members, but stabilization is a larger program.

British unemployment insurance changes in effect

The British Unemployment Insurance Act, 1927, began to take effect on April 19, 1928. The provisions of the new act were outlined in the *LABOUR GAZETTE*, February, 1928, page 154. A summary of the previous acts, 1920 to 1927, as amended by the new Act, has just been published by the British Ministry of Labour. Men with dependants now receive a higher rate than formerly, while those without dependants receive one shilling less. The rates for boys and girls aged 16 and 17 are also reduced. For a transitional period varying from one to two years in individual cases claimants are required to prove payment of eight contributions in the last two years or thirty contributions at any time. After the transitional period claimants will have to prove payment of thirty contributions during two years. For disabled ex-service men, however, the requirement is ten contributions instead of thirty. A claimant may stand out for a reasonable interval for employment in his usual occupation, but afterwards he must accept any suitable employment. From July 1 reduced rates of contributions and benefits will be payable in respect of young men and young women aged 18, 19 and 20.

Seasonal unemployment in various countries

The International Labour Office (Geneva) gives the results of a recent investigation into the problems of seasonal unemployment in the *International Labour Review* for March. It is shown by a study of

the unemployment statistics that there are wide differences between one country and another in regard to the prevalence of seasonal unemployment. In some countries, such as Great Britain, the United States and Germany, the seasonal fluctuations in the labour market as a whole are found to be slight, while in other countries, such as Denmark, Sweden and the Netherlands, they are very strongly marked. "Seasonal unemployment" is defined, for the purposes of statistics, as "that unemployment which for each monthly average over a series of years is expressed by the difference between the figure for the particular month and that for the most favourable month." The writer discusses the question, which is specially important in Canada and the United States, whether the available statistics fairly represent the situation as a whole. He believes that "the absence of certain industries or their insufficient representation does not prevent the curve from following very much the same course as it would have done if the statistics actually covered the whole." In Canada agriculture, logging and other mostly unorganized industries are not fully represented in the monthly reports published in the *LABOUR GAZETTE* on "Unemployment in Trades Unions" on which the unemployment percentage is based, and perhaps the same may be said in regard to the reports of the employment situation in the United States. With this limitation in view, seasonal unemployment may be said to exist to some extent in Canada from November to May among the organized trades, according to the *Review*, the fluctuations in employment being most marked in transportation, the metal industries, building and construction, textiles, public services and mining. The Canadian records have only existed for the past eight years, and as the writer states, "care should be taken not to draw too precise conclusions, particularly as to the months in which the seasonal fluctuations reaches its maximum, and the amplitude of the fluctuations."

The figures for Great Britain show that unemployment has: (1) an almost constant tendency to increase in December, since 31 of the 34 years observed showed an increase; (2) a marked tendency to fall during the first four months of the year; (3) an equally marked tendency to increase in August and decrease in November.

From the figures for the United States the writer reaches the following conclusions:— (1) There is a marked seasonal reduction in employment in January; (2) February and March, on the contrary, are months of revival, but depression is still perceptible in February;

(3) There is renewed depression in April and May, and still more marked depression in July and August; (4) This is followed by a period of increasing employment until December, the most favourable month of the year.

These seasonal tendencies, which, it may be added, need confirmation by observations over a longer period, differ perceptibly in their general character from those observed in Germany and Great Britain. It seems clear, however, that, as in those two countries, the seasonal fluctuations are comparatively small.

Reports on World Economic Conference, 1927

The final report of the World Economic Conference, held at Geneva in May, 1927, and the separate report of the Canadian delegates, have just been printed at Ottawa for the League of Nations, and may be obtained from the King's Printer, Ottawa, for 25 cents each. The proceedings at this conference were outlined in the *LABOUR GAZETTE*, July, 1927, the information in that issue being based on a comprehensive summary made by the president, M. Theunis, former premier of Belgium. The Canadian delegates to the conference were Messrs. Albert Matthews, of Toronto; Joseph Daoust, of Montreal, and Dr. Adam Shortt, C.M.G., of Ottawa.

In their report the delegates present a general sketch of the work of the conference. They state that one of the most vital questions considered was that of the "rationalization" of industry. This expression was defined at the conference as signifying "the methods of technique and of organization, designed to secure the minimum of waste of either effort or material." "Rationalization" therefore includes the most efficient organization of labour, the standardizing of materials and processes, and the simplification of all processes from raw materials to the delivery of finished goods into the hands of the consumers. This is expected to lead, ultimately, to an increase of returns for their efforts to both employer and employees, as rationalization in the best sense aims at economy and efficiency for both labour and capital. The conference regards the League of Nations as the most effective means for placing industry on a rational basis. The Canadian delegates report upon this feature of the conference as follows:—"Experience would indicate that there is little prospect of satisfactory results by the direct application of political powers to the supervision of international agreements incidental to rationalization. The League of Nations, however, in its purely arbitral advisory capacity, without any of the coercive powers which naturally excite

suspicion, is rather obviously indicated as the most promising instrument in view by which the various international interests of producers and consumers may be adjusted through their own media. Public opinion, both national and international, resting on such fair and adequate knowledge as can best be furnished through the League, will be much the more effective because the more general and least arbitrary of the forces which can be invoked to support the advisory findings of the League. At the same time these findings will lack influence in proportion as they tend to outrun intelligent public opinion."

The delegates were impressed by the evidence of recent developments in the structural organization of industry. It is pointed out that while the development of large industrial units has an element of danger on the social side, this movement on its good side, tends towards the rationalization of industry. It is accompanied by a steady growth of the practice of "framing agreements between the chief economic factors" without recourse to legislation. "The essential factor in the whole of this development has been the direct enlistment of intelligent self-interest as framing, adjusting and maintaining these bonds of mutual interest."

Benefits of Industrial Standardization

The second year book of the Canadian Engineering Standards Association, recently published, notes a genuine awakening of interest in the work being carried on by the Association. Canadian industry, it is stated, is rapidly coming to realize the economic value of the service it offers. An account of the origin, purposes, and work of the organization was given in the *LABOUR GAZETTE*, February, 1928, p. 156, in the course of a note on the publication of the Canadian Electrical Code, which is stated to be the outstanding feature of the year's work. The Code has now been officially adopted by the Hydro-Electric Power Commission of Ontario. The new Electrical Inspection Act of Quebec gives it official recognition in that province, and similar legislation has been framed in British Columbia and Nova Scotia. In Saskatchewan the new Department of Railways, Labour and Industries (*LABOUR GAZETTE*, April, 1928, page 369) will, it is understood, favourably consider the Code in framing electrical regulations under the Public Utilities Act.

The Year Book outlines the benefits rendered by standardization both to the manufacturer and to the user. It is stated that success in manufacture is becoming more and more a question of the ability to employ mass production as against specialized production in

any article. Industrial standardization may often be limited to what is commonly termed Simplified Practice, or Waste Elimination, by which a reduction is effected in unnecessary varieties in sizes and types of commonly used commodities, without the attendant specifications for quality, etc., required for a complete standard. This class of work has proved of enormous value in many industries and is capable of almost infinite development.

The purpose of the Canadian Engineering Standards Association is to provide the facilities by which manufacturers and users of engineering materials can get together and formulate mutually satisfactory standards. It has had the support of the government from its inception and is now receiving a considerable measure of assistance from the industries. As a result of its activities a number of important standards have already been nationally adopted, but it is as yet only at the commencement of its work. A vast field is open in which further standardization can be undertaken with the greatest advantage to the manufacturers and users in Canadian industry.

Conference of British employers and Trade Union Congress

Reference was made in the *LABOUR GAZETTE*, March, 1928 (page 278), to the industrial conference in Great Britain between certain employers and the General Council of the Trades Union Congress. It was there stated that at a joint meeting held in January between a representative group of employers and the general council, Sir Alfred Mond, on behalf of the employers, suggested certain topics for investigation and discussion. Following this meeting the General Council gave consideration to the program of inquiry, and decided to submit for the consideration of the employers a more detailed list of subjects for discussion, as follows:—

Trade Union recognition; victimization; collective bargaining; the legal regulation of hours; unemployment; management and labour; works councils; high wages policy; participation of labour in the benefits of increased production; minimum wage principles; publicity for the facts of industry; the effect of unnecessary internal competition on labour standards; competition of countries with lower labour standards; international agreements and conventions; International Economic Conference; the organization, technique, and control of industry; distribution; technical education; industrial finance; banking and credit systems and policy; taxation and local rates.

The sub-committee of the General Council and of the Representative Group of Employers met on March 21, when the question of the agenda was discussed fully, and it was decided that the agenda agreed by the Joint

Committee should be referred respectively to the General Council of the Trades Union Congress and the Representative Group of Employers. It was arranged that for the consideration of the various items on the agenda further joint committee meetings should be held weekly.

The Joint Committee have drawn attention to the fact that, in view of the large field of industrial problems covered by the agenda, some time must elapse before any complete and detailed information can be made public. Arrangements will be made for further full joint conferences as required.

Proposed Indian bill regarding freedom of association

A Bill was introduced in the Indian Legislative Assembly on February 9, 1928, to amend the Penal Code by adding the following proviso to Section 43:—

“Provided that nothing is illegal if done or procured to be done by two or more persons in contemplation or otherwise of a trade dispute or in restraint of trade, unless it be an offence when committed by one person.”

Under the existing criminal law, an agreement between two or more persons to do an illegal act is an offence, and an act done by two or more persons in contemplation or furtherance of a trade dispute or in restraint of trade may afford a ground for civil action and thereby would be “illegal.” Such an act was not considered to be an offence before the Indian Penal Code was amended in 1913 and is not an offence under the English law.

The Bill in question therefore seeks to modify the definition of the term “illegal” for the purpose of amending the existing criminal law for the protection of the members and office-bearers of unregistered trade unions and unorganized workers.

The Industrial Disputes Investigation Act (Alberta), 1928, being chapter 42 of the Statutes of Alberta, 1928, became effective on April 2, by a proclamation to that effect in accordance with section 5 of the Act, which provided that it shall come into force upon a date to be fixed by proclamation of the Lieutenant Governor in Council. The provisions of this Act were outlined in the last issue of the LABOUR GAZETTE (page 340).

Commenting on the general support given in the Ontario legislature to the establishing of a system of apprentice training in the building trades in Ontario, the *Contract Record and Engineering Review* finds in it an indication that “the Canadian Construction

Association through its committee on apprenticeship and through the efforts of its apprenticeship advisor, G. L. Sprague, has done its work well. It is also a vindication of the principle of government sponsorship in apprenticeship matters, laid down many years ago by those who, on behalf of the construction industry in Ontario, first began to give some thought to the development of an adequate and comprehensive system of apprentice training in the building trades.”

The Hon. Ernest Lapointe, Minister of Justice, stated in the House of Commons on April 23, in reply to a question by Mr. H. B. Adshead, East Calgary, that the government was seriously considering the strong recommendation made by the Superintendent of Penitentiaries in his annual report that prisoners should be given paid employment in order that they might support their families, who are often in great want.

The last annual report of the Department of Mines of Canada includes an account of the Explosives Division of the department, which issued licenses for three new factories during the year. The production of commercial explosives continued to show an increase. Particulars are given of a fatality which occurred during the year at Quebec, and formed the subject of a special report. Information was obtained of accidents with explosives in all circumstances and these, for the year 1926, have been classified and published in the annual report for the Division. Playing with explosives is still found to be the prime cause of accident, and the most difficult to prevent. Insistence on security of keeping is this division's policy, but it is difficult in the case of occasional users, and impossible where small quantities are kept at home.

Correction

In the last issue of the LABOUR GAZETTE (page 374) cement manufacture was erroneously included among the industries for which there was an increase in the provisional assessments for 1928 under the Workmen's Compensation Act of Ontario. The cement industry was among those having a reduction, the provisional rate per \$100 of payroll for cement manufacture being reduced from \$2 in 1927 to \$1.75 in 1928. This decrease is an indication of the efficient safety work carried on in the cement industry in recent years. The rates have been lower each year since 1923, when the provisional rate was \$5; for 1924 it was \$4; for 1925, \$3.50; for 1926, \$3; for 1927, \$2 and for 1928, \$1.75.

GENERAL REVIEW OF THE EMPLOYMENT SITUATION

Employment

THE employment situation at the end of April was reported by the Superintendents of the Employment Service of Canada to be as follows:—

The backwardness of the weather had somewhat interfered with the farming industry in Nova Scotia, although spring work was being done. Spring fishing catches in this province were reported to be good. River driving was the feature of the logging industry. Building and construction activity was brisk, particularly at Halifax where substantial works were under way. The manufacturing industries, including the iron and steel group, showed satisfactory activity. Coal production was about normal for the season. The demand for women domestic workers was fair. While transportation was brisk, trade was reported as showing some improvement.

As in Nova Scotia, farmers in New Brunswick were doing the usual spring work. The opening of the lobster season at the close of the month was the most important feature in the fishing industry. Logging activity in this province was quiet, the only type of work being carried on to any extent being river driving. Manufacturing was reported as only fair. Building and construction work was quite active, and the anticipated opening up of road construction would add still further to the volume of work in these industries. The outstanding feature of the transportation industry in this province was the closing out of winter port activities at St. John on April 25, which had substantially decreased employment in the industry at that point. Trade was reported to be very good.

The demand for farm workers in Quebec increased during the month of April. Log drivers were being engaged for the usual spring work in the logging industry. In Montreal manufacturing in the printing, textile and clothing trades was reported as good; the boot and shoe and metal trades, however, were not very active. In Quebec city manufacturing was quite satisfactory, while from Three Rivers it was reported that the pulp and paper mills were not running at capacity. Building and construction throughout the province were showing the usual spring improvement, and this was being reflected in the receipt of orders for tradesmen at the employment offices. Owing to the fact that the opening of navigation on the St. Lawrence was extremely late, the demand for workers in the transportation industry was adversely affected.

Trade remained normal. The demand for women domestic workers for this province was active, and toward the close of the month some shortages of applicants developed. The spring outlook was promising, with the result that improvement in the employment situation might confidently be looked forward to.

Although farm orders in Ontario showed the usual spring evidence of increase, backward weather was momentarily delaying their receipt at the employment offices. The general situation as far as manufacturing was concerned was showing steady improvement in many districts, and the receipt of a limited number of orders for skilled workers of various types at certain of the offices indicated that any fluctuations in manufacturing were in the direction of improvement. With prospects for building and construction activity very bright, work was opening up in this group at a satisfactory pace. The river drive in the logging industry being delayed, there was practically no demand for workers in this industry. As customary there was very little demand for workers in the mining industry, although activity continued normal. With the demand for women domestic workers remaining constant, some local shortages of certain classes, particularly cooks-general, were reported.

Demands for farm workers registered with the Manitoba employment offices were on the increase, and still further increases were looked for as the weather improved. Construction activity throughout the province appeared to be general and increasing, with Winnipeg reporting a substantial building program in prospect. The demand for casual labour was a little better than usual. Trade conditions, generally speaking, were fair. The number of women domestic workers being placed showed some improvement, due to an increased demand.

With the advent of seasonable weather in Saskatchewan the number of orders for farm workers was greatly increased, and in some cases the employment offices reported inadequate numbers of applicants to fill the vacancies. Construction was quiet, although the opening up of railway work was absorbing a considerable number of unskilled labourers. The demand for women domestic workers was steady, and the usual local shortages were reported. While apart from the increased number of orders for farm workers there was no outstanding feature in the employment situ-

ation of the province, the general situation seemed to be quite satisfactory, and the prospects were encouraging.

Vacancies for farm workers in the province of Alberta showed a decided increase, and while placements likewise increased, local

shortages were reported from some of the larger centres. Building construction, particularly at Calgary and Edmonton, was reported to be brisk, with numerous contracts under way. There was a good demand for mill hands for the mills of the province. Manu-

*Figures for end of previous months. †Bradstreet. ‡Maclean Building Review. §For group figures see articles elsewhere in this issue. **Figures for four weeks ending April 23, 1928, and corresponding previous periods. ***The index of the physical volume of business includes, forestry, mining, construction, manufacturing, trade, imports, exports, car loadings, shares traded and bank debits. Industrial commodity production includes forestry, mining, manufacturing and construction. Manufacturing includes production of flour, sugar, newsprint, pig iron, steel and automobiles; imports of cotton, rubber, wool and petroleum; slaughterings of cattle, sheep and hogs; storage holdings of butter and cheese. ††Preliminary. (1)Excluding lines east of Quebec. (2)Including lines east of Quebec. (3)Life Insurance Sales Research Bureau, Hartford, Conn.

facturing remained normal, with some increase being shown. While orders for women domestic workers were increasing in number, substantial shortages of applicants were not apparent. As in Saskatchewan, employment conditions in the province of Alberta for the season of the year were very favourable, and the prospects of such workers as were unemployed being absorbed in the near future were bright.

The logging industry in British Columbia continued to show practically no new activity. Metal mining remained normal, with considerable development and prospecting work in prospect, and in some cases being initiated. The building and construction industries showed rather satisfactory activity, and appeared to be in quite a satisfactory state throughout the whole province. While there was little or no demand for workers in the manufacturing industry, this group continued at its normal rate. Due to the general opening up of work consequent upon the arrival of spring, there appeared to be a substantial improvement in conditions in the Coast province, and such unemployment as did exist did not appear of unusual proportions.

EMPLOYERS' REPORTS. Employment at the beginning of April showed a slight decline, which was somewhat smaller than that noted on April 1, 1927, and considerably less extensive than the reductions indicated in the spring of earlier years of the record. The Dominion Bureau of Statistics tabulated returns from 6,191 firms whose staffs aggregated 842,940 persons, compared with 844,294 in the preceding month. The index number (with January, 1920, as the base equal to 100) stood at 101.1, as compared with 101.4 on March 1, and with 96.2, 91.4, 87.2; 89.3, 87.6, 80.8 and 84.1 on April 1, 1927, 1926, 1925, 1924, 1923, 1922 and 1921, respectively.

The Maritime and Prairie Provinces and British Columbia reported improvement, while curtailment was registered in Quebec and Ontario. In the Maritime Provinces there were increases in employment in manufacturing, mining, transportation and construction, but logging was seasonably slack. In Quebec, manufactures and trade afforded more employment; on the other hand, logging and construction reported seasonal contractions. In Ontario, seasonal losses were shown in logging, while manufactures and construction recorded large increases in employment, and smaller gains were noted in mining, communications, services and trade. In the Prairie Provinces, the advance took place chiefly in manufacturing and construction, and to a smaller extent, in

transportation, services and trade, but logging and mining were seasonally dull. In British Columbia, the greatest gains were in manufacturing, notably in lumber mills, and in construction, service and trade, while logging camps released some help.

Employment increased in the eight cities for which special tabulations are made, the gains in the Border Cities and Toronto being most noteworthy. In Montreal, iron and steel plants, trade and transportation recorded heightened activity, but textile, electric current and tobacco factories and construction were slacker. In Quebec, boot and shoe and pulp and paper plants registered the most outstanding gains, while there were losses in transportation and construction. In Toronto, considerable increases were registered in manufacturing, notably in iron and steel, and in building, transportation, services and trade. In Ottawa, there was a small, general advance. In Hamilton, the increase took place mainly in building material and iron and steel works, only small changes occurring in other industries. In Windsor and the Other Border Cities there was pronounced expansion, principally in automobile plants. In Winnipeg, manufactures, especially pulp and paper and iron and steel plants, were busier, while smaller gains were shown in construction and services. In Vancouver, the most marked increases were in construction and trade.

An analysis of the statistics by industrial groups shows further marked improvement in manufacturing, particularly in the iron and steel industry, but also in lumber, food, building material, mineral product, non-ferrous metal, chemical and electric current plants. Communications, transportation, building and highway construction, services and trade also reported considerable improvement. On the other hand, there were pronounced seasonal losses in logging, and smaller reductions in coal mines, on highway construction and in factories turning out pulp and paper, tobacco and textile products.

An article elsewhere in this issue gives in some detail the employment situation as at the beginning of April, 1928.

TRADE UNION REPORTS. Slight improvement in the local trade union situation was indicated at the close of March over the preceding month by the 1,705 reporting trade unions, whose membership aggregated 183,846 persons. Of these 11,965, or a percentage of 6.5, were idle on March 31, compared with 7.0 per cent at the close of the previous month. The volume of unemployment at the end of March, however, was slightly above

that which was registered in the same month last year, when 5.7 per cent of the members were out of work. The employment increase reported during March over February was due for the most part to the better conditions prevailing in the manufacturing industries and building trades in Quebec, and in the fishing industry and building trades of British Columbia, which the declines in available work for Nova Scotia coal miners and Saskatchewan building tradesmen partly offset. In comparison with the March, 1927, returns, when 5.7 per cent of the members were out of work, all provinces with the exception of Nova Scotia shared in the downward movement of employment, Saskatchewan unions reporting the most substantial of the contractions.

Elsewhere in this issue will be found a more detailed report of the situation as affecting local trade unions at the close of March.

EMPLOYMENT OFFICE REPORTS. During the month of March, 1928, the references to employment made by the offices of the Employment Service of Canada numbered 26,216,

while the placements effected totalled 24,730, of the latter the placements in regular employment were 11,750 of men and 3,890 of women, a total of 15,640 and the placements in casual work were 9,090. Applications for work reported at the offices numbered 36,762, of which 25,820 were of men and 10,942 were of women workers. Employers notified the Service during the month of 16,881 vacancies for men and 9,926 for women, a total of 26,807. An increase was shown in the volume of business transacted when the above figures were compared with those of the preceding month and also with those of the corresponding period last year, the records for February, 1928, showing 21,092 vacancies offered, 30,733 applications made and 19,690 placements effected, while in March, 1927, there were recorded 24,657 vacancies, 35,993 applications for work and 21,898 placements in regular and casual employment. A report in detail of the work of the offices for the month of March, 1928, and also for the quarterly period January to March may be found elsewhere in this issue.

Production and Trade

INDUSTRIAL PRODUCTION IN CANADA. Some figures indicating the recent movements of trade and industry are given in the table on page 447. The physical volume of business in Canada was well maintained in March, according to an index in the *Monthly Review of Business Statistics* published by the Dom-

inion Bureau of Statistics. Much of the material for this section is derived from this monthly publication, to which readers are referred for fuller information on current business statistics. The index stood at 163.9 in March, which was only slightly higher than in the preceding month. The building industry, after seasonal adjustment, was active in March, although new contracts did not equal the high total of February. While the export movement of lumber was greater than in the preceding month, the increase was less than normally takes place at this season. The production of newsprint was the largest on record, resulting from better demand in the United States markets. The primary iron and steel industry was especially active, the production of steel being greater than in any other month in the post-war period. While the output of motor cars was greater than in February even after seasonal adjustment, it was considerably less than in the corresponding period of 1927. The extensive importation of crude petroleum indicates active conditions in the oil industry. The imports of crude rubber showed recession in March, while the imports of raw cotton were moderately greater than in the preceding month.

The value of field crops in Canada in 1927 was \$1,134,193,000 compared with \$1,104,983,000 in 1926, an increase of 2.6 per cent according to a recent official report. The gross agricultural revenue in 1927 was \$1,736,439,000, an increase of nearly \$53,000,000. The gross agricultural wealth, including lands, buildings, implements, live stock, poultry, animals on fur farms and production for the year, was estimated at about \$7,963,000,000, compared with \$7,818,000,000, the estimate for 1926, an increase of \$146,000,000 or 1.9 per cent.

Production of coal from Canadian mines in February, 1928, was less than in January, 1928. The output for the month was 1,413,853 short tons, including 1,034,732 tons of bituminous coal, 309,679 tons of lignite and 69,442 tons of sub-bituminous coal. Nova Scotia's output amounted to 450,551 tons; New Brunswick mined 18,744 tons; Saskatchewan produced 50,341 tons; Alberta, 638,511 tons including 309,731 tons of bituminous, 259,338 tons of lignite and 69,442 tons of sub-bituminous; and British Columbia's output was 255,706 tons.

EXTERNAL TRADE. A summary of Canadian trade prepared by the Department of National Revenue shows that in March, 1928, the merchandise entered for consumption amounted to \$120,418,027 as compared with \$85,932,397 in February, 1928, and \$110,581,152 in March, 1927. The chief imports in

March, 1928, were: Iron and its products, \$35,055,472, and fibres, textiles and textile products, \$21,581,737.

The domestic merchandise exported amounted to \$106,974,564, as compared with \$83,565,196 in February, 1928, and \$105,605,107 in March, 1927. The chief exports in March, 1928, were in the group of agricultural and vegetable products, mainly foods, \$36,248,123, and wood, wood products and paper, \$28,312,348.

In the twelve months ending March, 1928, exports of domestic merchandise totalled \$1,228,207,606, and imports \$1,108,919,808.

**BUILDING
PERMITS AND
CONTRACTS
AWARDED.**

According to a report prepared by the Dominion Bureau of Statistics the value of the building permits issued in sixty-three cities in Canada during the month of March, 1928, amounted to \$14,916,247 as compared with \$10,323,405 in February, 1928, and \$11,713,640 in March, 1927. The March, 1928, total was the highest for that month in the record of the 63 cities.

The *MacLean Building Review* estimates the total value of the construction contracts awarded in Canada in April, 1928, at \$56,345,800. Of this amount \$17,194,300 was for residential work; \$28,050,000 for business building; \$3,577,500 for industrial work, and \$7,524,000 for engineering. The apportionment by provinces during April, 1928, was as follows: British Columbia, \$2,954,600; Prairie Provinces, \$7,136,100; Ontario, \$23,712,600; Quebec, \$19,985,000, and the Maritime Provinces, \$2,557,500.

The April contracts awarded total for the whole Dominion exceeded the corresponding figure for 1927 by 46 per cent, and that of 1926 by 51 per cent. The total for 1928 to the end of April was greater than the relative figure for 1927 by 36 per cent, and exceeded the figure for 1926 by 50 per cent.

The total of \$56,345,800 for all of Canada during the month of April was the largest total for any month ever recorded except May, 1926, when \$57,139,700 worth of new work was contracted for. During the past month \$116,962,300 was the total of contemplated work for the Dominion. This total is the largest ever recorded for any month without exception.

The total of accumulative contracts awarded for the first four months of the year appears large when compared with previous years, standing at \$125,647,100. This total divided into classifications shows as follows: Residential, \$37,204,800 or 29.6 per cent. Business buildings, \$52,002,000, or 41.4 per cent, industrial, \$10,109,700, or 8 per cent; engineering,

\$26,330,600, or 21 per cent. By provinces, the record shows, British Columbia, \$11,594,300, or 9.2 per cent; Prairie Provinces, \$12,385,400, or 9.9 per cent; Ontario, \$50,282,200, or 40 per cent; Quebec, \$48,199,500, or 38.4 per cent, and the Maritime Provinces, \$3,185,700, or 2.5 per cent.

The "contemplated new construction" in Canada during April, 1928, according to the same *Review*, totalled \$116,962,300, \$19,063,300 of this amount being for residential buildings; \$29,994,900 for business building; \$16,858,500 for industrial building, and \$51,045,600 for engineering, including bridges, dams and wharves, sewers, water mains, roads, streets, and general engineering.

Strikes and Lockouts

The time loss due to industrial disputes in April, 1928, was greater than during March, 1928, and also greater than during April, 1927. There were in existence during the month seventeen disputes, involving 1,818 workpeople and resulting in a time loss of 21,757 working days, as compared with eleven disputes, involving 773 workpeople and resulting in a time loss of 6,105 working days in March. In April, 1927, there were on record fourteen disputes, involving 1,973 workpeople and resulting in a time loss of 14,478 working days. Four of the strikes and lockouts commencing prior to April terminated during the month, as did five of the disputes commencing during April. At the end of the month, therefore, there were on record eight strikes and lockouts affecting 409 workpeople, not including those strikes and lockouts in which employment conditions were reported to be no longer affected but which had not been formally called off.

Prices

The cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average retail prices in some sixty cities was \$10.87 at the beginning of April, as compared with \$10.92 for March; \$10.80 for April, 1927; \$11.36 for April, 1926; \$10.56 for April, 1925; \$10.16 for April, 1924; \$10.64 for April, 1923; \$10.26 for April, 1922; \$12.68 for April, 1921; \$15.99 for April, 1920; \$12.57 for April, 1918; and \$7.51 for April, 1914. The slightly lower level was due mainly to a seasonal fall in the price of eggs, although there were slight declines in the prices of veal, mutton, pork, bacon, lard and flour. The prices of potatoes, beef, butter, cheese, evaporated apples and sugar were somewhat higher. Including the cost of fuel and rent with that of foods the total budget averaged \$21.11 at the

beginning of April, as compared with \$21.15 for March; \$21.02 for April, 1927; \$21.64 for April, 1926; \$20.82 for April, 1925; \$20.58 for April, 1924; \$21.21 for April, 1923; \$20.66 for April, 1922; \$23.31 for April, 1921; \$26.92 for July, 1920 (the peak); \$25.34 for April, 1920; \$20.01 for April, 1918; and \$14.32 for April, 1914. Fuel and rent were practically unchanged.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics advanced to 153.2 for April, as compared with 152.8 for March; 148.5 for April, 1927; 160.2 for April, 1926; 156.5 for April, 1925; 151.1 for April, 1924; 156.9 for April, 1923; 153.7 for April, 1922; 179.5 for April, 1921; 251.0 for April, 1920; 256.7 for May, 1920 (the peak); and 195.0 for April, 1918. In the grouping according to chief component materials two of the eight main groups advanced and three declined, while three were practically unchanged. The Vegetables and their

Products group advanced, mainly because of higher prices for grains, flour and milled products, refined sugar, hay, straw and apples. The Non-Ferrous Metals and their Products group was also somewhat higher, electrolytic copper, lead, tin and spelter advancing, while antimony and lead pipe declined. The groups which declined were: the Animals and their Products group, due to lower prices for cattle, meats, butter, cheese, eggs, lard and some lines of fish, which more than offset advances in the prices of hogs, sheep and leather; the Fibres, Textiles and Textile Products group due to declines in the prices of certain cotton fabrics and in silk products, which more than offset advances in the prices of raw cotton, jute and wool; and the Non-Metallic Minerals and their Products group, due mainly to seasonal declines in the prices of coal. The Iron and its Products group, the Wood and Wood Products group, and the Chemicals and Allied Products group were practically unchanged.

Licensing of Electricians at Toronto

The City of Toronto gave effect on May 1 to a revised bylaw to provide for examining, licensing and regulating electrical workers. It provides that the Board of Commissioners of Police shall appoint a Board of Examiners consisting of five persons, one of whom shall be a qualified electrical contractor, one a qualified electrical journeyman, one a representative of the District Inspection Department of the Hydro-electric Power Commission of Ontario, one the City Architect of Toronto and the fifth shall be a representative of some independent body such as the Toronto Electric Commissioners or the Board of Fire Underwriters.

The board of examiners is authorized to make rules for the examination of applicants for licenses, and as to the fees to be paid by the applicant. No examination in writing is to be required, and persons who held licenses for 1926 as required by the previous bylaw are to be entitled to receive licenses for 1928 if they applied before April 1, 1928. Three forms of licenses may be issued under the new bylaws: (a) A journeyman electrician license; (b) a company electrician license, which may be granted any company, association or corporation doing or wishing to do business as a contractor for electrical installation, provided one of the members of such company, association or corporation, or a regular employee thereof, having charge of such work, is duly licensed as a journeyman electrician; (c) a contractor's electrician license.

Contractors must file a bond with the city treasurer in the penal sum of \$1,000, conditioned on the faithful performance of their duty as licenses contractors.

Future of Retail Stores in Canada

The last monthly letter issued by the Bank of Montreal discussed the future of the retail merchant in Canada as follows:—

“Despite the healthiness of the business situation as a whole in Canada, misgivings are expressed nevertheless in more than one province as to the position of the retail merchant. A gradual revolution has occurred in methods of merchandising, and while the development of the chain store and the multiplication of departmental stores has resulted in many places in a lowering of prices to the consumer, it is certainly making life more difficult for the retail storekeeper. Careful students of the problem believe that whatever economies in the handling of goods may be brought about by resort to large-scale distribution, there is a place still for the independent retail merchant, in close personal touch with customers and acquainted with their individual needs. Nevertheless the position of many, whether because they find themselves especially exposed to the new competition, or because they have failed to keep up-to-date with modern methods, is at the present time precarious.”

PROCEEDINGS UNDER THE INDUSTRIAL DISPUTES INVESTIGATION ACT FOR THE MONTH OF APRIL, 1928

DURING the month of April three applications for the establishment of Boards of Conciliation and Investigation under the Industrial Disputes Investigation Act were received as follows:—

(1) From the General Motors of Canada, Limited, and certain of its employees at Oshawa, Ontario. The dispute arose out of changes in methods of production in connection with which a new scale of piece rates had been adopted which employees in the trimming department alleged to be 30 or 40 per cent lower than those previously in force, but which the employer claimed would yield as large daily earnings as before. A strike of 450 employees directly concerned occurred on March 24. During the next day or two 1,500 employees ceased work in sympathy with the trimmers. Before the strike ended the remainder of the employees either joined the strikers or were forced to cease work as the result of the several departments being unable to function. The plant accordingly became idle, and employees estimated to number between 4,500 and 5,000 were out of work. At the request of the employees the Minister of Labour instructed Mr. M. S. Campbell, Chief Conciliation Officer of the Department, to proceed to Oshawa and endeavour to bring the parties together. The Minister of Labour himself visited Oshawa on March 30, and secured the consent of the parties concerned to reference of the dispute to a Board of Conciliation and Investigation, the management agreeing to pay the rates in force before the reduction pending the report of the Board and to return all employees to their former positions. A Board of Conciliation and Investigation was accordingly established during April composed as follows: His Honour Judge J. H. Denton, Toronto, Ontario, chairman, appointed on the joint recommendation of the two other members of the Board, Mr. W. E. Davis, Oshawa, Ontario, nominated by

the company, and Mr. James Simpson, Toronto, Ontario, nominated by the employees. Early in May the Department received the unanimous report of the Board, the text of which is given below.

(2) From the Dominion Rubber Company, Limited, and certain of its employees at Montreal. A strike of approximately 810 employees had occurred in this case owing to the introduction of a new manufacturing method in certain departments of the shoe plant in Montreal, with changes in piecework rates which the employees contended would reduce their daily earnings, while the company claimed the men would earn as much, and in many cases more, than they earned under the old rates. As a result of the efforts of Mr. M. S. Campbell, Chief Conciliation Officer of the Department of Labour, the company agreed to refer the dispute to a Board of Conciliation and Investigation under the Industrial Disputes Investigation Act, and to make certain concessions in the meantime, if the employees would resume work. The suggestion was accepted by the employees and a Board was accordingly established by the Minister of Labour, the personnel being as follows: Mr. Leon Mercier Gouin, Montreal, chairman, appointed on the joint recommendation of the other two members of the Board, namely, Messrs. A. Whitehouse and Clovis Bernier, both of Montreal, nominated by the company and employees respectively.

(3) From certain employees of the Dominion Bridge Company, Limited, Canadian Vickers Company, Limited, and Canadian Bridge Company, Limited, being members of Local Union No. 307, International Association of Bridge and Structural Ironworkers. The application was received towards the close of the month, and Mr. E. McG. Quirk, representative of the Department in Montreal, was instructed to get in touch with the parties concerned and offer his services as mediator.

Report of Board in Dispute Between General Motors of Canada, Limited, and Certain of Its Employees

In the Matter of the Industrial Disputes Investigation Act, 1907, and of a dispute between General Motors of Canada, Ltd. (Employer), and certain of its Employees at Oshawa, Ontario (Employees).

To the HON. PETER HEENAN,
Minister of Labour,
Ottawa, Ont.

We, the undersigned, members of the Board of Conciliation and Investigation, set up un-

der the provisions of the said Act, having, before entering upon the functions of our office, taken the oath of office required by the Act and having taken upon ourselves the burden of the investigation, have the honour to report as follows.

The employees were represented before us by Robert W. Stuart, Robert Montgomery and H. C. Cox. The Company was represented by its General Manager, Mr. H. A.

Brown, Mr. W. H. Clark, of the Standards Department, and Mr. W. A. Coad, Factory Manager. The employees' representatives presented the grievances of the men in detail and, with the exception of the matters hereinafter specially referred to, these grievances have all either been already remedied or are in process of being remedied by the Company. Many of the complaints presented by the men related either to individual cases or to specific or particular acts or omissions, all of which have been remedied or, as above stated, are in process of being remedied. The Company has undertaken to remedy all these matters to the satisfaction of the men. It is unnecessary to refer in detail to these complaints inasmuch as they are already out of the way by the action or undertaking of the Company. It is advisable, however, to refer to one matter which was the subject of very general complaint, that is the Cumulative Earning System which has already been or is in process of being abolished by the Company. The two exceptions to which reference must be specially made are—

1st. The Company has consented to continue to pay, until the new 1929 Models of cars are introduced, the rates of pay in force before reductions were made in March. When these new Models are introduced, a new rating will be established and submitted to the employees. When the new rates are accepted they shall continue in force (subject to such minor changes as are not of a fundamental character) as long as such Models are in vogue.

In justification of the position taken by the Company in reducing the rates in March last, the Company produced figures which, in the

absence of any refutation, we felt bound to accept. These figures show the ratio of production in other plants of the Company is greater than in the Oshawa plant. Conditions in the Oshawa plant being equal to those in the other plants, we are of the opinion that this differential in efficiency can and should be reduced.

2nd. The Company agrees that in the employment, dismissal or treatment of their employees they will not discriminate between such as are members of a Labour Union and such as are not.

All the minor or specific complaints having been already remedied, or are in process of being remedied, and the Company having agreed to the matters firstly and secondly set out, we are glad to be able to report that a satisfactory adjustment or settlement of all matters in dispute between the Company and its employees has been made.

It is a pleasure to be able to state that the representatives of the men, as well as the representatives of the Company, have acted throughout the inquiry with a genuine desire to bring about a settlement of all matters in dispute and to establish the most cordial relationship between employer and employees.

Dated at Oshawa this 4th day of May, 1928. We have the honour to remain,

Your obedient servants,
 (signed) J. H. DENTON,
 Chairman.
 (signed) JAMES SIMPSON,
 Representing the Employees.
 (signed) W. E. DAVIS,
 Representing Company.

STRIKES AND LOCKOUTS IN CANADA DURING APRIL, 1928

THE number of strikes and lockouts in existence in Canada during April was seventeen as compared with eleven the preceding month. The time loss for the month was greater than during April, 1927, being 21,757 working days as compared with 14,478 working days during the same month last year.

Date	Number of disputes	Number of employees involved	Time loss in working days
*April 1928.....	17	1,818	21,757
*March 1928.....	11	773	6,105
April 1927.....	14	1,973	14,478

*Preliminary figures.

The record of the Department includes lockouts as well as strikes, but a lockout, or an industrial condition

which is undoubtedly a lockout, is rarely encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees at its commencement and lasting at least one working day. Disputes of less than one day's duration, and disputes involving less than six employees, are included in the published record only when ten day's or more time loss is caused, but a separate record of such disputes is maintained in the Department, and the figures are given in the annual review.

The figures printed are inclusive of all disputes which come to the knowledge of the Department, and the methods taken to secure information practically preclude probability of omissions of a serious nature. Information as to a dispute involving a small number of employees, or for a short period of time, is frequently not received until some time after its commencement.

Eight disputes, involving 432 workpeople, were carried over from March, including one

dispute as to which information was not received until April. Four of these disputes terminated during the month, and five of the nine disputes commencing during April also terminated during the month. At the end of April, therefore, there were on record eight strikes and lockouts, as follows: coal miners, Canmore, Alberta; cap factory workers, Toronto, Ont.; stonecutters, Montreal, P.Q.; asbestos and insulation workers, Toronto, Ont.; fur workers, Toronto, Ont.; granite cutters, Toronto, Ont.; plumbers, Kingston, Ont. and carpenters, masons and sheet metal workers, Kingston, Ont.

The record does not include minor disputes such as are described in a previous paragraph, nor does it include disputes as to which information has been received indicating that employment conditions are no longer affected, although the unions concerned have not yet declared them terminated. Information is available as to nine such disputes, namely, ladies' clothing factory workers, Toronto, Ont., June 20, 1926; electrotypers at Toronto, Ont., December 20, 1926; plumbers at Windsor, Ont., April 5, 1927; blacksmiths, etc., Saskatoon, Sask., May 17, 1927; sheet metal workers at Montreal, P.Q., September 1, 1927; coal miners, River Hebert, N.S., Feb. 1, 1927; bakers, Montreal, P.Q., May 1, 1927; men's clothing factory workers, Montreal, P.Q., Nov. 8, 1927; and men's clothing factory workers, Montreal, P.Q., Dec. 23, 1927, the last three being added during April.

Of the disputes which commenced during the month three were for increase in wages, one for increase in wages and shorter hours, two against reduction in wages, one against violation of agreement, one against discharge of employees and one was a sympathetic dispute. Of the strikes and lockouts which terminated during April four were in favour of the employer, one in favour of the workers, three resulted in compromises, and the result of one was recorded as indefinite.

The following paragraphs give particulars in regard to certain disputes, in addition to the information given in the tabular statement.

COAL MINERS, CANMORE, ALBERTA.—On March 20 the coal miners ceased work owing to the discharge of two miners charged with allowing explosives to go out of the mine in the coal from their work places, an offence under the mining laws for which legal proceedings were instituted. On March 23 the strikers returned to work, the question being discussed between the pit committee and the management as required by the agreement as to wages and working conditions. It is re-

ported that the pit committee claimed that the explosives were placed in the car by persons other than the two miners who filled it with coal. The management offered to submit the matter of the discharge to arbitration, but this was refused. On March 26 the men again ceased work and at the end of the month the strike was unterminated.

BAKERS, MONTREAL, P.Q.—In this dispute, which commenced May 1, 1927, the employees demanding an increase in wages from \$41.00 to \$44.00 per week, as reported in the *LABOUR GAZETTE* for February it was agreed to refer the dispute to arbitration. It is reported that arbitrators have been appointed but that the dispute has not yet been dealt with. At the end of April it was reported that the remainder of the employees affected had secured work with other employers. The dispute is, therefore, recorded as terminated as employment conditions are no longer affected, but it is transferred to the list of disputes not called off.

MEN'S CLOTHING FACTORY WORKERS, MONTREAL, P.Q.—Two disputes involving men's clothing factory workers, one commencing November 8, 1927, and the other December 23, 1927, regarding wages and working conditions, are recorded as terminated at the end of April, the remainder of the employees involved having secured work with other employers. As the disputes have not been called off, they are transferred to the list of such disputes, employment conditions no longer being affected.

UPHOLSTERERS, TORONTO, ONT.—In this dispute, commencing March 26, against changes in wages and conditions, a settlement was reached and work was resumed on April 10. It appears that there had been a change in the goods produced and the dispute was as to the piece rates and the time on the new operations. On these points a compromise was reached.

RUBBER FACTORY WORKERS, MONTREAL, P.Q.—On April 2, 110 employees ceased work owing to the introduction of a new manufacturing method with a reduction in piece rates, the employer contending that earnings under the new system would be as high as previously. On April 4, 100 additional employees became involved in the dispute and on April 9 about six hundred more, seventy-five per cent of the employees involved being female. The chief conciliation officer of the Department of Labour brought the parties to the dispute together and it was arranged that the dispute would be referred to a Board of Conciliation and Investigation under the Indus-

trial Disputes Investigation Act, 1907, the employer to make certain concessions in the meantime, and the employees returned to work on April 12.

FUR WORKERS, TORONTO, ONT.—Employees ceased work on April 10 alleging that the employer had violated the agreement with the union as to wages, working conditions, apprenticeship, overtime, etc., the union officials stating that for some time they had been unable to negotiate with the employer with regard to these alleged violations. At the end of the month the dispute was still un-terminated.

WINDERS, BRANTFORD, ONT.—Employees in a knitting factory ceased work on April 2 owing to the introduction of new machinery and new piece rates of wages. As the result of negotiations in which the employer pointed out that earnings under the new system would be as high as previously, the employees returned to work on April 4.

GRANITE CUTTERS, TORONTO, ONT.—Employees ceased work on April 2 demanding an increase in wages from \$1.00 per hour to \$1.12½ per day of eight hours. At the end of the month the strike was still un-terminated.

PAINTERS, VANCOUVER, B.C.—Employees ceased work on April 2 for an increase in wages from \$7.00 per day of eight hours to \$8.00. The resident conciliation officer of the Department of Labour arranged a conference between the two parties and a settlement was reached, work being resumed on April 30 at 90 cents per hour until March 31, 1929.

An agreement was signed between the Master Painters' and Decorators' Association and the United Brotherhood of Painters, Decorators and Paperhangers of America, Local 138, providing that hours and other working conditions should be the same as prior to the strike, eight hours per day and the forty-four hour week, wages time and one-half for overtime and double time for Sundays and holidays, but that a committee composed of three members of the Master Painters' and Decorators' Association and three members of the union would form a committee and elect a chairman to work out an agreement as to working conditions and other matters in the painting industry "in order to co-ordinate the whole painting industry to the material benefit of both sides. The chairman to have no vote." The agreement also provides that an apprentice system under the rules and regulations of the Vancouver Ap-

prenticeship Council should be put in force forthwith. There is also provision that in case of any dispute there shall be no stoppage of work by either party until the matter has been considered by representatives of both parties to the agreement. If they are unable to agree, a Board of Conciliation is to be chosen consisting of three representatives of each party to the agreement, the Board to meet within twenty-four hours of notification by either party and render its decision within a further twenty-four hours unless the period is extended by mutual consent. If either party desires any change in conditions, ninety day's notice is to be given previous to a date to be fixed by the committee drawing up the agreement.

PLUMBERS AND SYMPATHETIC STRIKE OF CERTAIN BUILDING TRADES, KINGSTON, ONT.—Plumbers ceased work on April 2 on the termination of their two-year agreement, demanding an increase in wages from 90 cents per hour to \$1 and a reduction in the number of apprentices employed, namely to have one apprentice to a shop or one apprentice to three journeymen. During the month negotiations between the parties were carried on but no settlement was reached. On April 17 carpenters, masons and sheet metal workers ceased work on certain buildings in sympathy with the plumbers, and at the end of the month both disputes were still un-terminated. Early in May the Minister of Labour sent the chief conciliation officer of the Department to Kingston to assist in bringing about a settlement.

CARPENTERS, CORNWALL, ONT.—Carpenters employed by one contractor ceased work on April 2 owing to the discharge of workers, the strikers stating that the workers in question had been dismissed for union activity. A representative of the union reached a settlement with the contractor under which the discharged men were reinstated and work was resumed on April 6.

LATHERS, TORONTO, ONT.—Work ceased on April 16, the employees demanding an increase in wages from \$9 per day to \$12, and a decrease in working time from eight hours per day, forty-four hours per week, to a five-day week. Work was resumed on April 24, an agreement having been reached for wages at \$10 per day and the five-day week, with a provision that when every member of the union is employed and the contractors are in a serious need of labour, lathers will work one-half day on Saturday.

STRIKES AND LOCKOUTS IN CANADA DURING APRIL, 1928

Industry, occupation and locality	Number of employees involved	Time loss in working days	Remarks
(a) Strikes and Lockouts occurring prior to April, 1928.			
MINING—			
<i>Non-ferrous smelting and quarrying—</i>			
Coal miners, Canmore, Alta..	270	6,480	Commenced March 20, 1928, against discharge of employees. Underminated.
MANUFACTURING—			
<i>Vegetable Foods—</i>			
Bakers, Montreal, P.Q.....	73	350	Commenced May 1, 1927, for increase in wages. Employees secured work elsewhere by April 30, 1928.
<i>Clothing (including knitted goods)—</i>			
Men's clothing factory workers, Montreal, P.Q.....	10	120	Alleged lockout, commencing Nov. 8, 1927; union conditions as to overtime. Employees secured work elsewhere by April 30, 1928.
Men's clothing factory workers, Montreal, P.Q.....	10	120	Commenced December 23, 1927; renewal of previous dispute re union wages and working conditions. Employees secured work elsewhere by April 30, 1928.
Cap factory workers, Toronto, Ont.....	5	80	Commenced January 17, 1928, against reduction in wages. Underminated.
<i>Other Wood Products—</i>			
Upholsterers, Toronto, Ont....	55	358½	Commenced March 26, 1928, against reduction in wages. Terminated April 10, 1928. Compromise.
<i>Non-metallic Mineral Products—</i>			
Stonecutters, Montreal, P.Q..	4	96	Commenced June 10, 1927, for increase in wages. Underminated.
CONSTRUCTION—			
<i>Buildings and Structures—</i>			
Asbestos and insulation workers, Toronto, Ont.....	5	120	Commenced February 6, 1928, for increase in wages. Underminated.
(b) Strikes and Lockouts occurring during April, 1928.			
MANUFACTURING—			
<i>Rubber Products—</i>			
Rubber factory workers, Montreal, P.Q.....	810	3,435	Commenced April 2, 1928, against reduction in wages. Terminated April 12, 1928. Indefinite.
<i>Fur and Leather Products (other than boots and shoes)—</i>			
Fur workers, Toronto, Ont....	20	360	Commenced April 10, 1928, against violation of agreement. Underminated.
<i>Clothing (including knitted goods)—</i>			
Winders, Brantford, Ont.....	25	30	Commenced April 2, 1928, against reduction in piece rates. Terminated April 4, 1928, in favour of employer.
<i>Non-metallic Mineral Products—</i>			
Granite cutters, Toronto, Ont.	30	720	Commenced April 2, 1928, for increase in wages. Underminated.
CONSTRUCTION—			
<i>Buildings and Structures—</i>			
Painters, Vancouver, B.C.....	320	7,360	Commenced April 2, 1928, for increase in wages. Terminated April 30, 1928. Compromise.
Plumbers, Kingston, Ont.....	50	1,200	Commenced April 2, 1928, for increase in wages. Underminated.
Carpenters, Cornwall, Ont.....	43	172	Commenced April 2, 1928, against discharge of employees. Terminated April 6, 1928, in favour of workers.
Carpenters, masons, and sheet metal workers, Kingston, Ont.....	28	336	Commenced April 17, 1928; sympathy with striking plumbers. Underminated.
Lathers, Toronto, Ont.....	60	420	Commenced April 16, 1928, for increase in wages and five-day week. Terminated April 24, 1928. Compromise.

STRIKES AND LOCKOUTS IN GREAT BRITAIN AND OTHER COUNTRIES

THE latest available information as to strikes and lockouts in various countries is given in the *LABOUR GAZETTE* from month to month, bringing down to date that given in the issue for February, 1928, in the review of Strikes and Lockouts in Canada and Other Countries, 1927. The latter review included a table summarizing the principal statistics as to strikes and lockouts since 1918 in the several countries for which such figures were available. Many countries publish these statistics only once each year, the figures being issued in some cases after an interval of as much as two years, so that for such countries the latest figures are not for relatively recent dates.

Great Britain and Northern Ireland

There were 31 new disputes reported as beginning in March and 15 were still in progress from the previous month, making a total of 46 disputes in progress during the month, involving 38,000 workpeople and resulting in a time loss of 168,000 working days. Of the 31 disputes beginning in March, 11 arose out of proposed reductions in wages, 8 on other wages questions, 8 on questions respecting the employment of particular classes or persons, and 4 on other questions. Settlements were reached in 18 disputes. Of these, 11 were settled in favour of employers, 7 ended in compromise, and in 5 other cases work was resumed pending negotiations.

The principal disputes occurred in the coal mining industry. About 16,300 coal miners in Northumberland and 10,250 in Durhamshire were either directly or indirectly involved at various times during the month owing to dissatisfaction with reduced wages awarded by the arbitrator. By the end of the month work had been resumed on the terms of the arbitrator's award, although certain grievances were promised further consideration. In another case, near Durham, 6,500 coal miners were thrown out of employment for about 10 days when collieries were closed owing to restriction of output by putters, who were dissatisfied with reduced wages awarded by the arbitrator. Work was resumed on the understanding that restriction of output was to cease.

France

The number of disputes reported for July, 1927, was 31, involving 3,941 workers; for August, 37, involving 4,539 workers; and for September 20, involving 3,276 workers. Ques-

tions concerning wages were the most frequent cause of disputes accounting for 21 disputes in July, 25 in August, 15 in September, and the reinstatement of discharged workers was the object of 3 disputes in July, 8 in August and 2 in September.

The results of disputes were as follows: in July, 3 were in favour of workers, 21 in favour of employers, and 4 ended in compromises; in August, 2 were in favour of workers, 21 in favour of employers and 6 ended in compromises; in September, 2 were in favour of workers, 11 in favour of employers and 5 ended in compromises.

Germany

During the fourth quarter of 1927, 167 strikes and 48 lockouts terminated, involving 2,428 establishments. The total number of workers affected was 111,406, of whom 109,006 were directly and 2,400 indirectly affected. The time loss for all workers involved was 1,312,680 working days, of which 1,299,125 were lost by workers directly involved and 13,555 by workers indirectly involved. Classified by causes, 107,175 workers were involved in disputes concerning wages, 6,093 in disputes concerning hours, and 2,369 in disputes concerning other questions. Classified by results, 4,424 workers were concerned in disputes which terminated in favour of workers, 99,964 in disputes which ended in compromises, and 4,618 in disputes which terminated in favour of employers.

Two serious disputes were in progress in Germany during April. One, it is reported, concerned approximately 40,000 coal miners in the Ruhr districts who were on strike for an increase in wages of 15 per cent. An arbitration commission decided in favour of an 8 per cent increase, which decision was not accepted by either party. A decision of the Federal Labour Minister, however, on April 23 made the award of the Arbitration Commission mandatory. The other dispute concerned metal workers. About 20,000 metal workers in Saxony went out on strike, demanding a fixed minimum pay for time work and guaranteed payments for piecework. Later, when these strikers refused to return to work, the employers' association declared a general lock-out in the industry, thereby throwing out of employment 250,000 workers.

British India

The number of disputes beginning in 1927 was 129, these disputes involving 131,655 work-

ers and resulting in a time loss of 2,019,970 working days. The accompanying table gives a classification of disputes according to classes of establishments:—

INDUSTRIAL DISPUTES IN BRITISH INDIA
DURING 1927

Class of Establishments	Number of disputes	Number of work-people involved	Number of working days lost
Cotton Mills.....	60	36,089	350,011
Jute Mills.....	11	34,296	234,715
Engineering Workshops.....	6	4,042	27,095
Railways (including Railway Workshops).....	3	32,114	1,250,421
Others.....	49	25,114	157,728
Total.....	129	131,655	2,019,970

The principal cause of disputes was the wages question, accounting for 61 disputes; questions of personnel accounting for 36; leave and hours for 5; and other causes for 27 disputes.

Settlements were reached in 126 disputes; workpeople were successful in 15 cases, partially successful in 32, and unsuccessful in 79 cases.

United States

During February, 31 disputes began, involving 34,115 workers, and 64 disputes involving 110,510 workers were in progress at the end of the month. The number of working days lost was 2,207,044.

Bituminous Coal Miners.—The Senate Committee on Interstate Commerce continued its investigations during April into conditions resulting from the dispute which began April 1, 1927, with the purpose in view of drafting legislation to remedy conditions in the coal mining industry. A number of officers of coal companies were called upon and testified as to wages paid to various classes of labourers in mines, total tonnage produced, cost of production, sales realization on all coal produced, information as to tonnage and sales realization on coal sold to railroad companies, etc.

Textile Workers, New Bedford, Mass.—A strike involving 27 textile manufacturing establishments and approximately 27,000 workers began on April 16 as a protest against a 10 per cent reduction in the wages of mill workers.

Regulation of Apprenticeship in France*

Under an Act of March, 1928, the provisions of the French Labour Code relating to contracts of apprenticeship were amended with a view to strengthening their legal application and instituting a closer supervision of the training of apprentices. Such contracts must, in future, be drawn up in writing in the form of a legal deed or a deed under private seal, both the employer and the legal representative of the apprentice retaining a copy and a further copy being forwarded to the local Probiviral Council. The existence of the contract must also be recorded by the employer in the apprentice's "work-book" (*Livret de Travail*). The contract must be framed with due regard to the usages and customs of the occupation and under the supervision and guarantee of the regularly constituted associations for apprenticeship, where such exist.

In addition to particulars establishing the identity of the contracting parties, the contract must specify the financial conditions agreed upon, the occupational training courses which the employer undertakes shall be attended by the apprentice in accordance with the law on technical instruction, and also the amount of compensation payable in the event of a breach of contract by either party. The Act also pro-

vides that the right of the employer to undertake the training of apprentices may be limited or suspended, if the training given is manifestly inadequate, or in the event of serious irregularities of which the apprentice would be the victim. On the other hand, general and persistent lack of application or obvious incompetence on the part of the apprentice may constitute a ground for the annulment of the contract.

On completion of the term of his apprenticeship, the apprentice is required to submit to an examination by the responsible local vocational and technical education authorities, and, if successful, he is to be awarded a diploma.

The California State Building Trades Council, at the recent annual convention held at Petaluma, California, went on record as being in favour of a 5-day week for public works. The council officials were instructed to submit a bill to the next legislature providing that the state law be amended so that five days will constitute a week's work in all state departments where work is performed directly for the state or through the agency of contractors doing work for the state for any subdivision thereof.

**Journal Officiel*, 22nd March, 1928. Paris

LABOUR LEGISLATION IN QUEBEC, MANITOBA AND ONTARIO

Quebec

DURING the Session of the Quebec Legislature which opened on February 9 and closed on March 22, 1928, a considerable amount of legislation of interest to labour was enacted, including a new Workmen's Compensation Act and an Act establishing a Workmen's Compensation Commission; a revision of the Public Building Fire Protection Act; a law providing for provincial health units; and amendments to the Technical or Professional Schools Act and the Public Health Act.

Workmen's Compensation

The Workmen's Compensation Act, which comes into force on September 1, 1928, is wider in its scope than its predecessor, and applies to the work of building, including the business of demolishing; to factories, manufactories, or workshops; stone, wood or coal yards; lumbering operations, including protection service and the floating of timber; any transportation business by land or by water or loading or unloading; any gas or electrical business; the business of building; repairing, or maintaining public roads, railways, tramways, telephones, telegraphs, water works, drains, sewers, dams, wharves, docks, elevators, bridges or other similar work; mines or quarries; any industrial enterprise or yard in which explosives are manufactured, used or kept, or in which machinery is used, operated by mechanical power, but only if the accident is caused by such machine or the discharge of such explosives; any commercial establishment, but only if the accident which happens in such an establishment is caused by an elevator to the persons in charge of same, or if the accident happens in a workshop forming part of the establishment, and is caused to workmen of such workshop by machinery operated by mechanical power.

Agricultural industries and domestic service are excluded, as is also navigation by means of sails, even when the vessel is equipped with an auxiliary motor. An employer of less than seven workmen is not subject to the provisions of the Act, but may place himself under its provisions by giving notice in proper form to the Workmen's Compensation Commission. The Provincial Government and corporations are subject to the Act when carrying on any enterprise within its scope. Employers to whom the Act does not apply may place themselves under its provisions by entering into a written agreement with workmen individually in the form prescribed by the Com-

mission. A minor fourteen years of age may proceed alone to recover compensation due him under the Act. Workmen domiciled in the Province and engaged therein to go and work outside cannot claim compensation for accidents happening outside the Province except where the law of the place where the accident occurred grants them no compensation.

Benefits.—In case of permanent total incapacity the injured person is entitled to 66⅔ per cent of his annual wages but the aggregate of the sum paid may not exceed \$10,000. The loss of both eyes, both hands and both feet constitutes total and permanent incapacity in all cases.

Permanent partial incapacity entitles the injured workman to a rent equal to 66⅔ per cent of his yearly wages for the period of time fixed, on a basis of four weeks for each 1 per cent of incapacity. In the cases enumerated in the schedule to the Act the degree of incapacity is deemed to be that mentioned in the said schedule. The schedule is as follows.—

Loss or Loss of Use of: Percentage of incapacity

Arm at shoulder*—	
Right	55%
Left	50%
Arm between shoulder and elbow*—	
Right	46%
Left	38%
Arm below elbow or hand at wrist*—	
Right	42%
Left	32%
Thumb*—	
Right	12%
Left	8%
Index finger*—	
Right	9%
Left	5%
Middle finger*—	
Right	3%
Left	2%
Ring or little finger*—	
Right	2%
Left	1%
First phalange of finger except of thumb and of index finger*—	
50% of incapacity for whole finger.	
First phalange of thumb or of index finger*—	
75% of incapacity for whole finger.	
More than one phalange of finger or thumb*—	
Incapacity the same as for whole finger or thumb.	

*In the case of a left-handed person, the percentages of compensation for right and left hands and arms are reversed.

Multiple finger injuries*—

Incapacity equal to the sum of that awarded for each finger but not to exceed 25%

Leg at hip	75%
Leg between hip and knee	50%
Leg at knee	44%
Foot at ankle	38%
Great toe	3%
Any other toe	1%

First phalange of toe—

50% of incapacity for whole toe.

More than one phalange of toe—

Incapacity the same as for whole toe.

Multiple toe injuries—

Incapacity equal to the sum of that awarded for each toe but not to exceed 6%

One eye	20%
Both ears (hearing)	25%
One ear or hearing of one ear	3%

In cases not provided for in the schedule the degree of incapacity is determined by the nature of the injury, taking into account the incapacity mentioned in the schedule as well as the victim's ability to continue the same kind of work or to take up another occupation. The aggregate of the sum paid in cases of permanent partial incapacity may not exceed \$5,000.

Temporary total incapacity lasting less than seven days entitles the injured person to medical attendance only, but lasting more than seven days is compensable at the rate of 66 $\frac{2}{3}$ of daily wages payable from the eighth day. If the incapacity lasts for six weeks or more, however, compensation is paid from the day of the accident.

In cases of permanent incapacity or temporary total incapacity the compensation may not exceed \$20 per week nor be less than \$6 per week unless the workman's wages were less than this amount when the compensation is equal to the amount of wages.

When an accident results in death compensation equal to 30 per cent of the yearly wages of the deceased workman is payable to the consort until death or remarriage, with an additional allowance equal to 10 per cent of wages for each child under 16 years of age to the number of three. Orphan children under 16 years of age receive 20 per cent of wages each with a maximum payment of 60 per cent of wages. If no consort or children survive, the ascendants and descendants of whom the deceased workman was the principal support are entitled an allowance equal to 10 per cent of wages each with a maximum of 30 per cent of wages. For this purpose wages in excess of \$1,560 per annum are not reckoned and the

* In the case of a left-handed person, the percentages of compensation for right and left hands and arms are reversed.

aggregate sums awarded to the consort and other beneficiaries may not exceed \$6,000.

In addition to compensation the injured workman is entitled to all medical, surgical, pharmaceutical and hospital charges according to a tariff approved by the Lieutenant-Governor in Council, as well as to transportation to the nearest hospital, and to the supplying and normal renewing for a period of twelve months of necessary prosthetic and orthopedic appliances. The employer must procure for an injured workman whose mother tongue is French or English a physician and, if necessary, nurses, speaking his language. Should he fail to do so the workman may provide them for himself at the expense of the employer.

Wage Basis.—The yearly wages upon which the compensation allowance is based are, in the case of a workman engaged in the business during the twelve months previous to the accident, the actual remuneration allowed him whether in money or in kind. In the case of a workman employed less than twelve months the wages are the actual remuneration received during the time he was employed in the enterprise plus the average remuneration received by workmen of the same class during the time necessary to complete the twelve months. Application for compensation must be made within twelve months from the date of the accident.

Insurance.—All employers in enterprises covered by the Act, with the exception of the Crown and municipal, school, ecclesiastical, and governmental corporations, and of railways under the control of the Parliament of Canada, must insure in an approved fixed premium or mutual insurance company. The Commission may, however, at its discretion exempt an employer and grant him a license to be his own insurer. An application to the Commission for such license must be accompanied by

(a) A statement of the wages paid for the previous year, with the number of employees;

(b) An estimate of the total payroll and number of employees for the coming year.

(c) A statement of the sums due for past workmen's compensation accidents;

(d) A certificate of the deposit or an authentic copy of the surety bond or guarantee policy required in such case by this Act.

The statements which accompany the demand must be sworn to.

In order to guarantee payment of the compensation the self-insurer must either deposit in a chartered bank or an approved trust company a sum of money or securities for an amount equal to what he owes for workmen's compensation with, in addition, five per cent

of the aggregate wages paid in the previous year, the whole not to be less than \$10,000 or more than \$50,000; or furnish to the Commission a surety bond guarantee or guarantee policy by an approved insurance Company.

Employers are forbidden to make any deduction from wages of employees for purposes of accident insurance except in cases where employees take out supplementary policies and give written orders to their employers to pay the premiums out of their wages.

Workmen's Compensation Commission.—The Workmen's Compensation Commission Act, which comes into force on proclamation, establishes a Commission of three members with headquarters in the city of Quebec. They will be named by the Lieutenant-Governor in Council and must attend exclusively to the duties of their office, not engaging in any other employment. The president will receive a salary of \$10,000 per annum and the other two members \$8,000 each. A secretary will also be appointed, who, in addition to the duties assigned to him by the Commission, will be obliged to assist those applying for compensation. The salaries of the Commissioners and expenses for office accommodation and furniture together with such other expenses as may be authorized by the Lieutenant-Governor in Council will be paid by the Government. Except for these salaries and expenses the cost of administering the Workmen's Compensation law is to be borne by the insurers.

The Commission is the only authority to interpret and carry out the Workmen's Compensation Act and the Workmen's Compensation Commission Act. It is provided that the Commission is to have jurisdiction to the exclusion of every other tribunal and without appeal in all matters connected with the awarding of compensation. The Commission may, moreover, on complaint to it or on its own initiative exercise a power of supervision, control and direction over the establishments within the scope of the compensation law, with a view to preventing accidents, and may inspect such establishments and order the owners and employers to take such precautionary measures as it deems proper. It is also authorized to promote the rehabilitation of injured workmen and to take proper measures to aid in their re-establishment in industry in the province. The commission is empowered to carry out any special investigations which it may deem useful in the discharge of its duties, and also on request or on its own initiative, to revise its own awards in

any case where it is shown that there has been a fraud. It is to have the powers of the Superior Court in the matter of summoning witnesses, but is not obliged to follow the ordinary rules of evidence in civil matters and may use all legal means which it deems best in conducting its enquiries. The Commission may adopt special rules for the conduct of its affairs, which rules must be approved by the Lieutenant-Governor in Council and published in the *Quebec Official Gazette*.

Provision is made for examination of an injured workman by one or more physicians selected by the Commission and at its expense. The Act provides for a written agreement, properly attested, between the insured and employer in the one hand and the injured workman or his representatives on the other, to be forwarded to the Commission. If the Commission is satisfied that the agreement expresses the wishes of the parties and is in accordance with the Workmen's Compensation Act, it may approve it in its award, which shall be the final judgment in the matter. If within ten days of its receipt of the agreement the Commission has not expressed its disapproval the agreement shall be deemed to have been approved by it. An agreement made within fifteen days after the date of the accident or one which has not been transmitted to the Commission is voidable at the option of the workmen or his representative. Failing agreement or if the Commission fails to approve the agreement made, or if the parties fail to agree as to the continuance of payments to be made under an approved agreement, the Commission on being informed of these facts by either party may make an investigation and render its award. The parties interested may, at any time within thirty days after the making of the award, ask for its reconsideration. Within two years following its first award, if the incapacity is increased or lessened, or if the injured person dies as a result of the accident, the Commission may, of its own motion, or on request of one of the parties, revise the award. The judgments of the Commission will be upheld as are judgments of the Superior Court, even in judicial holidays. The award is to be executory against the employer and against the insurer within fifteen days, but execution against the insurer must always be preceded by a notice of five days to the Commission. The Commission must keep records of its proceedings in the manner determined by the special rules. The Commission cannot award any costs on account of the proceedings held before it in the carrying out of the Workmen's Compensation Act.

Fire Protection

In the revision of the Public Building Fire Protection Act, the definition of a public building is broadened to include everything except strictly private houses. On and after July 1, 1928, all plans for electrical installation and all changes in existing installations must be approved by the Department of Public Works and Labour. All persons engaged in electrical installation work must obtain permits from the board of examiners appointed under the provisions of the Act.

Persons making installations either as contractors or as journeymen electricians must first obtain a license from the board of examiners. Six license forms are provided for. License A may be issued to any person who has satisfactorily passed the examination for journeymen electricians and has filed an application to be registered as a contractor or master electrician. License B may be granted to any company, association, or corporation wishing to do business as contractor for electrical installation provided that one of the members of the company holds a license as journeyman electrician. License C is given to a journeyman electrician having at least four years' experience who has passed a successful examination. License D authorizes the holder to take charge of a moving-picture machine. The applicant must be not less than 18 years of age and must pass the required examination. License E is a special license authorizing a person with a knowledge of electricity to do work in repairing and maintaining electrical installations in the establishment in which he is employed. The applicant must pass an examination. License F may be granted to any person in charge of the running of machinery operated by electricity, such as cranes, winches, carriers or other machinery which the board of examiners may declare to be dangerous. No apprentice, labourer or other person not provided with a license may put in electrical installation except as assistant to a licensed journeyman electrician and working constantly under his supervision. The fee for licenses A and B is \$25 a year, for license C \$5, and for licenses D, E and F \$3. Outside companies may obtain temporary licenses to do work in the province on payment of \$50. The National electrical code or the Canadian electrical code will be used as the basis of the examinations at the discretion of the Lieutenant-Governor in Council.

County Health Units

An Act respecting Health Units authorizes the Lieutenant-Governor in Council to estab-

lish, on the recommendation of the Director of the Provincial Bureau of Health, public health services in the counties or groups of counties applying for them. These services are to be known as "County health units" and are intended to promote and protect public health. One-half of the cost of maintaining the services is to be paid out of the consolidated revenue fund of the province. The county units are to be under the direction of the Provincial Bureau of Health and in charge of a medical officer appointed by the Lieutenant-Governor in Council.

Technical Schools

An amendment to the Technical or Professional Schools Act, which comes into force on proclamation, authorizes the Lieutenant-Governor in Council to organize arts and trades schools in any school municipality whenever he deems it necessary to assist in the development of primary technical education, and to appoint a staff and also a council of improvement of seven members appointed for three years. The provincial secretary, the director-general of technical education, the director of the School of Fine Arts of Montreal, and the superintendent of education are to be members *ex officio*, the provincial secretary being also chairman. The members are to serve gratuitously. A board of patrons is also to be appointed composed of persons of standing in every field whose influence may promote the development of the schools and who will also serve gratuitously.

Public Health

The Public Health Act was amended to add industrial and other camps to the list of subjects upon which regulations may be made under the Act. Provision is also made for regulations relating to the declaration of industrial diseases in industrial establishments. The inspectors of the Provincial Bureau of Health and the inspectors of industrial establishments are to be associated with the sanitary physicians in enforcing the regulations and by-laws concerning industrial establishments which are made under authority of the Public Health Act. It is also provided that after July 1, 1928, every municipality having a population of 5,000 or more and which does not form part of a county health unit must maintain a health service directed by a physician appointed by the Lieutenant-Governor in Council on recommendation of the municipal council.

Manitoba

The Legislature of Manitoba, which was in session from December 1, 1927, until March 16, 1928, passed several laws of labour interest, including acts providing for old age pensions and for a weekly rest-day and an amendment to the County Courts Act. Provision was also made for two new departments dealing respectively with mines and natural resources and with health and public welfare.

Old Age Pensions

The Old Age Pensions Act, which comes into force on proclamation, empowers the Lieutenant-Governor in Council to enter into an agreement with the Governor-General in Council as to a general old age pension scheme pursuant to the provisions of the Dominion Old Age Pensions Act, 1927, and the regulations made thereunder, and for the payment by the Dominion to the Province of one-half of the net sum paid out for pensions. The province's one-half share of the cost is to be met by a levy on municipalities and on school districts in unorganized territory. Provision is also made for a temporary loan until such time as the revenue for the Commissioners' levy is collected. The Workmen's Compensation Board is charged with the administration of the Act.

Weekly Rest

An Act to provide for one day of rest in seven for certain employees makes provision for at least twenty-four consecutive hours' rest in every seven days for employees engaged in the industries mentioned in the schedule to the Act, if such industries are carried on within the limits of a city or town. Whenever possible the rest-day must be a Sunday. The schedule of industries includes practically all mills and factories, laundries, dyeing and cleaning; cartage, scavenging, street-cleaning, building and construction; operation of theatre stage or moving pictures; street railways, car and machine shops, steam and power plants, and the trade or business of a municipal corporation or any commission having the management of any work or service owned or operated for a municipal corporation, or a board of school trustees, and policemen, firemen, and ferrymen employees of such corporation. Hotels and restaurants in which the

services of more than two of any class of employees are engaged are also included.

The Act does not apply to (a) watchmen, janitors, stationary boiler engineers or firemen or to employees engaged in the receiving or transmitting of telegraph messages; (b) employees who are not usually employed for more than five hours in any one day; (c) employees occupying supervisory, managerial or confidential positions; (d) Employees engaged in repairing or replacing equipment or machinery by reason of breakage or engaged in work of a similar emergency nature; (e) employees employed for a period not exceeding three hours during their period of rest for the sole purpose of feeding and attending horses when such is part of their usual duty;

The Lieutenant-Governor in Council may extend the territory to which the Act applies, and may exempt any industry in the schedule or add industries thereto. The council of any city may by by-law exempt any class of its own employees from the operation of the Act. The Bureau of Labour is charged with the administration of the Act. The secretary or the chief inspector of the Bureau of Labour may exempt for a period not exceeding one year any employer to whom the operation of the Act would prove a hardship. An employer whose application for exemption has been refused by the Bureau of Labour may appeal to the Minimum Wage Board.

Garnishee

The County Courts Act was amended to provide that the judge may forbid the issuing of a second garnishing order in respect to wages. The memorandum to garnishee must set forth particulars of the exemptions from garnishment allowed by the Garnishment Act. The section requiring that no judgment summons shall issue, until an execution against the goods and chattels of the judgment debtor has been returned "*nulla bona*," is repealed.

Group Insurance for Teachers

An amendment to the Public Schools Act empowers school boards to place group life insurance on teachers and other employees and to pay the premiums either in whole or in part.

Ontario

Several laws of labour interest were enacted during the session of the Ontario Legislature which opened on February 9 and closed on April 3, 1928. These included an Act Respecting the Training of Apprentices and amendments to the Workmen's Compensation Act, the Mothers' Allowances Act, and the Mining Act.

Apprentice Training

The Apprenticeship Bill, on its introduction in the Legislature was described in the *LABOUR GAZETTE* for March, 1928, page 269. The only change made during its passage through the House was the addition of the clause providing for the appointment of a Provincial Apprenticeship Committee composed of an equal number of employers and of employees and of a chairman, to advise the Minister on all matters connected with the conditions governing apprenticeship.

Workmen's Compensation

The Workmen's Compensation Act was amended in several respects. In cases where a workman deserts his family or fails to provide adequately for them so that an order of the court is issued for support or for alimony, the Board may divert the compensation payments in whole or in part for the benefit of such workman's wife or children.

The section fixing the salaries of members of the Workmen's Compensation Board and providing for their payment from the Consolidated Revenue Fund was repealed and replaced by a section authorizing the Lieutenant-Governor in Council to fix the salaries, which will be paid from the accident fund as part of the administration expenses of the Board.

The section on industrial diseases was amended so as to define tuberculosis for the purposes of the Act as meaning tuberculosis of the respiratory organs.

The Board is empowered to appoint such medical officers as may be required to carry out the provisions of the Mining Act with regard to examination of employees or applicants for employment, the salaries of such officers to be paid out of the rates imposed for the payment of silicosis claims.

Mining Act

A section was added to the Mining Act providing for an annual medical examination of underground workers in mines. A similar examination is required for workers engaged in rock crushing operations at the surface, except where the ore or rock is crushed in water or

kept constantly moistened with a chemical solution. If the medical officer finds that the workman is free from tuberculosis of the respiratory organs he will give a certificate to that effect. The chief inspector of mines may exempt such mines as do not contain silica in quantity likely to produce silicosis, or those which for other reason he deems should be exempt. Workmen who are employed underground for less than fifty hours in one calendar month are not subject to examination. The section will come into force on proclamation of the Lieutenant-Governor in Council.

Mothers' Allowances

The Mothers' Allowances Act was amended to require an applicant for an allowance to have been a resident of Ontario at the time of the death or total disability of the father of the children, and for a period of two years prior to making application for an allowance.

According to the annual report of the Canadian National Railways System for the year ending December 31, 1927, 26 employees, with fifty or more years of service, were placed on pension during the year. The Pensions Plan of the Grand Trunk Railway System (which is in effect throughout the entire system pending the adoption of the new pension scheme of the Canadian National Railways) was described in the *LABOUR GAZETTE*, January, 1924, pages 33 to 35.

The Saskatchewan Government has appointed as members of the Telephone Department's Superannuation Board, Messrs. T. A. Naismith, superintendent of rural telephones (chairman); George Milne, chief accountant; and Omar C. Yager, construction foreman (employees' representative). The provisions of the Telephone Department's Superannuation Act, 1928, were outlined in the last issue of the *LABOUR GAZETTE*, page 369, in an account of the legislation enacted at the recent session of the provincial legislature.

The Ontario Workmen's Compensation Board, during April received reports of 5,521 accidents, of which 27 were fatal. This shows a decrease from March when there were 5,711 accidents reported, including 26 fatalities. The total benefits awarded during April were \$548,096, of which \$89,128.60 was for medical aid. This is a marked decline from March when \$764,263 was awarded, including \$108,025 for medical aid.

FEDERAL ASSISTANCE GRANTED IN CONNECTION WITH UNEMPLOYMENT RELIEF

FOLLOWING is a statement regarding the financial assistance which has been granted by the Federal Government towards the relief of unemployment under the authority of successive orders-in-council which have been adopted since January, 1921, the provisions of the orders in council being referred to briefly and a tabular statement appended showing the amounts which have been disbursed by provinces during the fiscal years 1920-1921, 1921-1922, 1922-1923, 1923-1924, and 1926-1927.

1. P.C. 139, January 24, 1921.

This order in council authorized payment by the Federal Government of one-third of the emergency disbursements made by municipalities for the relief of unemployment; while assistance from the Provincial Governments on an equal scale was suggested, payment of the Federal grant was not made conditional on participation in the relief scheme by the provinces. Some provinces co-operated and others did not.

2. P.C. 3831, October 7, 1921.

This order in council undertook to continue the policy of allowing a federal grant in reimbursement of municipalities to the extent of one-third of monies expended on relief of unemployment, but made payment of the federal grant conditional upon the provinces participating on an equal basis. This regulation further provided for the federal government participating in the cost of work specially undertaken by municipalities during the winter season to relieve unemployment, the federal government undertaking to bear one-third of the actual disbursements of the municipality in excess of the estimated cost of the undertaking during the normal working season, the federal grant being again made conditional on the province participating on an equal basis.

The following principles were laid down in the order in council as a basis for the federal grant, namely:—

1. Unemployment relief always has been, and must necessarily continue to be, primarily a municipal responsibility, and in the second instance the responsibility of the province.

2. That because of the present situation being due to causes beyond the power of local, or even national, control, provincial and federal governments should co-operate with municipal authorities in

(a) helping to create and provide employment

(b) where employment cannot be furnished to workmen who are willing to work, to aid in providing food and shelter for themselves and dependents until the present emergency period is past.

3. That federal funds used for unemployment relief or for relief work must be disbursed only through responsible municipal authorities, who in each case shall bear at least one-third of the total or extra cost.

3. P.C. 191, January 25, 1922.

This order in council continued the system in relief of unemployment substantially as laid down in P.C. 3831, though increasing at several points the assistance given to municipalities. In the case of relief work undertaken by a municipality, the federal proportion of the excess cost was increased to fifty per cent, payment of the federal grant being conditional on the province assuming responsibility for one-third of the excess expenditure and leaving with the municipality, therefore, responsibility for only one-sixth of the excess expenditure. As in the case of P.C. 3831, the federal grant was under P.C. 191 payable to a municipality to the extent of one-third of disbursements on account of direct relief, payment being conditional on the province assuming responsibility in equal proportion. P.C. 191 provided also for federal assistance to provincial governments with respect to unorganized districts where no municipal government existed and where distress arising from unemployment was found to exist; the federal grant allowed in such cases was fifty per cent of the provincial expenditure. A further provision in P.C. 191 reimbursed municipalities to the extent of one-half the disbursements made for unemployment relief afforded to unemployed former members of the Canadian or British Forces physically fit and not entitled to receive relief from the Department of Soldiers' Civil Re-establishment, payment of the federal grant being conditional on the remaining quota being contributed in equal parts by the provinces and municipality respectively.

P.C. 191 took practically the same view as P.C. 3831 as to the relative responsibilities of federal, provincial and municipal authorities, expression of which, as well as of other related points, is found in the following paragraphs:—

1. The present administration, assuming office at the close of the year 1921, finds that a condition of unemployment beginning in the late months of 1920 and continuing throughout the year 1921 does not promise any material

abatement during the early winter months of 1922.

2. Consideration has been given to the means which would seem best adapted to the relief of the distress resulting from severe unemployment conditions and the provisions to this end of P.C. 3831 have been carefully noted.

3. The Minister concurs in the view that the question of unemployment relief is fundamentally a municipal and provincial responsibility; that the abnormal economic and industrial conditions now existing and arising in a measure out of the late war alone afford justification for action on the part of the federal authorities; that federal action must therefore supplement municipal and provincial efforts, must be designed on lines permitting close and effective co-operation with and supervision by municipal and provincial authorities, and must be proportioned by the efforts of those authorities.

4. That municipal undertakings in the nature of public works are important factors in meeting unemployment conditions, but such undertakings cannot be proceeded with during the winter months save at a considerably increased cost, which is in many cases beyond the financial resources of the municipalities.

6. It is to be noted that these regulations do not seek to meet the case of disabled members of the Canadian Overseas Forces and other classes of returned soldiers which fall within the jurisdiction of regulations administered by the Department of Soldiers' Civil Re-establishment; or of persons (where such exist) whose necessities do not clearly arise from inability to secure employment and with whose necessities the municipal authorities have been accustomed to deal.

7. It is the expectation of the federal authorities that the provisions herein will be interpreted broadly and generously by the municipalities and the province so that no resident of Canada willing and able to work and unable to secure employment shall lack food, clothing or shelter for himself or herself and dependants.

4. *P.C. 258, February 4, 1922*

In Montreal much distress among returned soldiers developed and the authority granted under P.C. 191 proving inadequate, authority was taken under P.C. 258 to render necessary assistance in relief of unemployed returned soldiers direct to an organization which had assumed charge of the situation.

5. *P.C. 78/472, March 8, 1922*

The Province of Nova Scotia had not undertaken to assume any share of responsibilities

arising under the federal regulations with respect to unemployment. P.C. 78/472 permitted payment of the federal grant to the municipality of Halifax in reimbursement to the extent of fifty per cent of expenditures made to meet the necessities of unemployed ex-service men.

6. *P.C. 4/630, March 18, 1922*

The preceding regulations respecting unemployment relief had made relief payable only to March 31, 1922, the close of the fiscal year. P.C. 4/630 extended certain phases of relief until April 15 and April 30 respectively, provided other authorities concerned contributed in the proportions laid down.

7. *P.C. 120/1018, May 9, 1922*

This order in council further extended unemployment relief in the Province of Manitoba to May 15 in certain exceptional cases, provided province and municipality contributed their shares in the proportions laid down.

8. *P.C. 220, February 5, 1923*

This order in council provided for federal assistance to the extent of one-third of disbursements made in aid of distress arising from unemployment in municipalities where "central bodies, composed of representatives of the municipality and of the various charitable and veteran organizations, have been formed for the administration of relief to ex-service men unable to procure work and in necessitous circumstances," such ex-service men not being eligible to receive assistance extended by the Department of Soldiers' Civil Re-establishment.

9. *P.C. 1153, June 25, 1923*

This order in council extended the provisions of the order in council P.C. 220 of February 5, 1923, until May 31, 1923, in order to permit of federal contributions to unemployment relief among ex-service men in Toronto.

10. *P.C. 2206, November 26, 1924*

This order in council extended the provisions of P.C. 1153 of June 25, 1923, in order to permit of federal contributions towards unemployment relief among ex-service men in Montreal.

11. *P.C. 315, March 2, 1926*

This order in council provided for federal assistance to the extent of one-third of the excess cost of work undertaken by municipalities to provide employment, effective from January 1, 1926, until March 31, 1926, on the following basis: (a) municipality to bear the

normal cost, that is to say, the cost of carrying on the said work in the normal working season; (b) estimate of normal cost to be approved by Federal Government's engineers in the Department of Public Works; (c) that municipal, provincial and federal governments bear equally and jointly the actual cost over the estimated normal cost, thereby encourag-

ing the creation of employment where possible.

12. P.C. 5/2159, December 22, 1926

This order in council authorized a federal contribution towards the relief of distress growing out of a serious explosion which occurred in the coal mines at Coleman, Alberta, on November 23, 1926.

UNEMPLOYMENT RELIEF

COMPARATIVE STATEMENT of amounts expended by Dominion Government in Unemployment Relief, by provinces, during the fiscal years 1920-21, 1921-22, 1922-23, 1923-24 and 1926-27

OLD AGE PENSIONS IN SASKATCHEWAN

BY a proclamation published in the *Saskatchewan Gazette*, May 5, 1928, the Old Age Pensions Act, being chapter 75 of the Statutes of Saskatchewan, 1928, came into force on May 1, 1928. Section 8 provides that the Act shall come into force upon a date to be determined by proclamation of the Lieutenant Governor.

The same issue of the *Saskatchewan Gazette* contains the regulations under the Act, and a memorandum of agreement between the federal and provincial governments in regard to payment of pensions.

REGULATIONS GOVERNING THE PAYMENT OF OLD AGE PENSIONS

Interpretation.—1. In these regulations, the expression:

- (1) "Act" means The Old Age Pension Act, 1928, chapter 75 of the Statutes of Saskatchewan, 1928;
- (2) "Minister" means the minister from time to time in charge of the administration of The Old Age Pension Act, 1928;
- (3) "Commissioner" means the Commissioner of Old Age Pensions.

Duties of Commissioner.—2. The commissioner shall:

- (a) keep such books and records as may be necessary;
- (b) do all such other acts and things as are incidental, conducive or necessary to the proper administration of the Act and The Old Age Pensions Act, chapter 156 of

The Revised Statutes of Canada, 1927, and the regulations made thereunder, and to the operation of the pension scheme therein contained.

Applications for Pensions.—3.—(1) Every applicant for a pension shall complete such forms and furnish such evidence and proofs of his claim as the minister may from time to time prescribe.

(2) No application shall be deemed to have been received by the commissioner unless it is made on the prescribed form.

Commissioner's Report.—4. The commissioner shall inquire into the merits of all applications for pensions and advise the minister as to the expediency of granting, continuing, altering or withdrawing the same.

Minister's Approval.—5. No pension shall be paid, altered or withdrawn unless with the approval of the minister.

Requisition to Treasury.—6.—(1) The payment of any pension, or of any expense incurred in administration, shall be made upon a requisition in writing signed by the commissioner, directing the issue of a cheque by the Provincial Treasurer for the amount named in the requisition. Such direction shall be final and conclusive.

(2) Cheques shall be signed by the Deputy Provincial Treasurer and the Provincial Auditor or by such other officials as may be designated for the purpose by the Treasury Board.

Date of Payment.—7. The payment of pensions shall be made at the end of each month.

Amount of First Payment.—8. In the event of a pension commencing on a day other than the first day of the month the first payment shall be such proportion of the monthly pension as the balance of the month bears to the whole month.

Evidence of Signature of Pensioner.—9.—(1) Every cheque issued in payment of a pension shall be indorsed by the payee in the presence and over the signature of the manager or the accountant of a bank, a doctor, clergyman, justice of the peace, postmaster or the secretary treasurer of any town, village or rural municipality, who shall sign a certificate which shall appear on the back of the cheque in the following form:

"I hereby certify that the person by whom this cheque is indorsed is the payee and that he resides in the Province of Saskatchewan at (name of place)

(2) The Provincial Treasurer may, in any exceptional case, designate a person other than those mentioned in subsection (1), who may sign the said certificate.

Statutory Declaration of Pensioner.—10. Every pensioner shall from time to time, when so required by the commissioner, on a form to be provided by him, furnish a statutory declaration or a witnessed certificate that he is the person to whom the pension is payable, and shall give such other information as the commissioner may from time to time require.

Duty of Departments to Supply Information.—11. The commissioner shall be entitled to obtain without charge from any department of the Government of Saskatchewan any available information which he may deem necessary in the administration of the Act or The Old Age Pensions Act, chapter 156 of *The Revised Statutes of Canada, 1927.*

AGREEMENT UNDER THE OLD AGE PENSION ACT

Regina, Friday, April 27, 1928.

Under the provisions of section 2 of The Old Age Pension Act, 1928, being chapter 75 of the Statutes of Saskatchewan, 1928, His Honour the Lieutenant Governor, by and with the advice of the Executive Council has been pleased to order that His Honour's Order do issue approving the attached Memorandum of Agreement and authorizing the execution thereof, in duplicate, by the Minister in charge of the administrations of The Old Age Pension Act, 1928.

J. W. McLEOD,
Clerk Executive Council.

Memorandum of Agreement made the day of A.D. 1928. Between: The Governor General of the Dominion of Canada in Council, represented by the Minister of Labour for Canada, hereinafter called "the Dominion," of the First Part, and The Lieutenant Governor of the Province of Saskatchewan in Council, represented by the Minister in charge of the administration of The Old Age Pension Act, 1928, hereinafter called "the Province," of the Second Part.

Whereas by The Old Age Pension Act, 1928, of Saskatchewan, hereinafter called the provincial Act, the Lieutenant Governor in Council is in effect authorized to enter into an agreement with the Governor General in Council as to a general scheme of old age pensions in the Province, pursuant to the provisions of The Old Age Pensions Act of Canada, and the regulations made thereunder, said Act and regulations together with such alterations in the regula-

tions as may be made from time to time with the consent of the Province being hereinafter called the Dominion Act, and for the payment by the Dominion to the Province quarterly of an amount equal to one-half of the net sum paid out during the preceding quarter by the Province for old age pensions pursuant to the provisions of the provincial Act and Order of the Lieutenant Governor in Council hereinafter referred to; and

Whereas section 3 of the provincial Act provides, in effect, that the Lieutenant Governor in Council may by order authorize and provide for the payment of old age pensions to the persons and under the conditions specified in the Dominion Act; and

Whereas by Order of the Lieutenant Governor in Council dated the twenty-seventh day of April, A.D. 1928, provision has been made for payment of the said old age pensions pursuant to the terms of this agreement; and

Whereas under the provisions of the Dominion Act the Governor in Council is in effect authorized to enter into an agreement with the Province for the payment to the Province quarterly of an amount equal to one-half of the net sum paid out during the preceding quarter by the Province for pensions pursuant to the provincial Act and providing for the payment of such pensions under the conditions specified in the Dominion Act; and

Whereas the Governor in Council has by Order in Council of the 25th June, 1927 (P.C. 42/1232), made regulations under the powers conferred by The Old Age Pensions Act of Canada, which regulations have been amended by Order in Council of 26th September, 1927 (P.C. 66/1882) and Order in Council of 16th January, 1928 (P.C. 66/81); and

Whereas the Governor in Council has approved the scheme for the administration of pensions proposed to be adopted by the province and which scheme of administration is set out in the Order of the Lieutenant Governor in Council hereinbefore mentioned; and

Whereas the Minister of Labour for Canada, and the Minister in charge of the administration of The Old Age Pension Act, 1928, of Saskatchewan, have been respectively authorized by the parties hereto to enter into an agreement in the terms hereinafter set forth.

NOW, IN CONSIDERATION OF THE PREMISES AND THE RESPECTIVE AGREEMENTS BY OR ON BEHALF OF THE PARTIES HERETO, HEREINAFTER SET FORTH, THIS MEMORANDUM OF AGREEMENT WITNESSETH:

1. On, from and after the first day of May, 1928, the Province agrees to pay to each person who, upon application by such person, is found by the pension authority to be entitled to receive a pension under the provisions of the Dominion Act, the sum of two hundred and forty dollars yearly, each of such payments to be subject to reduction as provided by the Dominion Act, and all of such payments, whether as to amount or otherwise, to be subject to and governed by the provisions of the Dominion Act.

2. The Province further agrees on its part to comply with all the provisions, stipulations, provisos and conditions contained in the Dominion Act.

3. The Dominion agrees to pay to the Province quarterly in accordance with and subject to the provisions of the said Dominion Act an amount equal to one-half of the net sum paid out during the preceding quarter by the Province, pursuant to the provisions of this agreement.

CANADIAN GOVERNMENT ANNUITIES

Address delivered over the Canadian National Radio System by Mr. E. G. Blackadar, Superintendent of Canadian Government Annuities

By the courtesy of Sir Henry Thornton, the radio broadcasting stations of the Canadian National Railways have been made available from coast to coast for the purpose of giving publicity to the system of Canadian Government Annuities, administered by the Department of Labour of Canada. In accordance with this arrangement Mr. E. G. Blackadar, Superintendent of the Annuities Branch of the Department, gave, on March 22, the first of a series of addresses at station CNRO (Ottawa), this station being linked up with the Canadian National Railways Radio Stations at Quebec and Montreal. Mr. Blackadar's address was as follows:—

If you are a young man or woman this little talk carries to you a wonderful opportunity to secure comfort and independence in your old age. Listen to every word of it. Bear in mind that if you would have an old age free from want or dependence, you must save and invest wisely in your youth. If you are an older man or woman with limited capital and your earning days are over, this talk carries a message of comfort and cheer. It tells how you can invest your capital in a way which will give you a safe, steady and dependable income for the rest of your life, an income guaranteed by the entire Dominion of Canada.

Let me now tell you what a Government Annuity is: it is a fixed yearly income paid to you by the Government of Canada. You can buy these annuities the same as you would deposit your money in a Savings Account, during the productive years of your life. Payment of the Annuity ordinarily commences when your earning powers have departed because of old age—and continues as long as you live. This assures you a safe and profitable investment of your earnings while you are young, with the certainty of a definite, liveable income when your working days are over. If you are young, middle life may seem too far away to think about. But when you consider the fact that 46 out of every 100 average Canadian men and women are absolutely penniless at 65, you will realize the importance of making provision for your old age without delaying another day.

Perhaps you may say, "I have no one dependent upon me, why should I bother?" But think again. Before many years there will be an old person dependent upon you. That will be yourself. Hadn't you better start now, to think about that old person? No

one wants to be dependent on friends, relatives, government or other charities. It was to give you this security and sense of pride and independence that the Annuities Act was passed. No matter what your income is today, the turn of fortune's wheel may find you penniless when old, unless your future income is guaranteed.

Annuities are divided into two classes—(1) Deferred Annuities; (2) Immediate Annuities.

Deferred Annuities.—If you are still earning your own living and do not think of retiring for a good many years, a Deferred Annuity is the class of annuity you should decide to purchase. There are several different plans upon which you may purchase a Deferred annuity, each, having features that will commend it to you.

PLAN A offers to you and your family a two-fold protection. If you die before the annuity commences, all the money you have paid in will be paid back to your family, plus 4 per cent compound interest. If you reach the age at which your annuity begins you will receive whatever amount your annuity calls for, for the rest of your life, even if you live to be 100 years of age.

A Guaranteed Deferred Annuity is exactly like PLAN A—but with still another advantage. Like PLAN A all the money you have paid in will be paid back to your dependents, with 4 per cent compound interest added, if you should die *before* the annuity begins. Under this plan, however, if death occurs *after* the annuity period commences, the annuity will continue to be paid to your family or heirs for a fixed period—10, 15 or 20 years—whichever you desire. If you live beyond the guaranteed period, the annuity will be paid you for life.

Deferred Annuities may be purchased by small monthly, quarterly, half-yearly or yearly payments, or by the payment of a lump sum. Payments may be made at any Postal Money Order Office in Canada. There is no forfeiture if payments are not kept up, but they may be made later; if not, the amount of annuity to be received will be adjusted accordingly.

Immediate Annuities.—The second class is of particular interest to older people who find it necessary to retire and to receive an income commencing at once. Under the Immediate Ordinary Life Plan all the money you have to pay for the annuity is paid in

one lump sum. Your annuity commences three months from this date, and you receive an income cheque quarterly for life, even if you live to be 100. Immediate Annuities may also be guaranteed for a definite number of years—ten, fifteen or twenty. If your death occurs before the guaranteed period expires, the remaining payments will be continued to your heirs. If you live longer than the guaranteed period you receive your annuity just the same—as long as you live.

The Immediate Last Survivor Annuity Plan is purchased by two people—generally man and wife. The annuity is paid to both as long as both live, and to the survivor as long as he or she lives.

Briefly the advantages of Canadian Government Annuities are as follows:—

A Canadian Government Annuity is the safest investment you can make.

The security of the whole Dominion is behind your purchase.

It is free from Dominion Government taxation.

It is payable for life.

It cannot be seized or levied upon by any law or court.

No medical examination is required.

Everyone from 5 years to 85 is eligible to purchase an annuity from \$10 to \$5,000. The sooner you start to pay for an annuity the lower will be the cost. The system is so designed that it is of interest to young and old, the poor and the person of moderate means. This is your own system, and it is provided by the Government at less than cost. Every resident of Canada should take advantage of it.

TECHNICAL EDUCATION ACT

Prime Minister's Statement of Policy Regarding Continuance of Federal Grants

THE Right Hon. W. L. Mackenzie King, Prime Minister, replying in the House of Commons on April 23 to a question by the Hon. R. J. Manion, Fort William, stated that the intention of the government is to discontinue grants under the Technical Education Act which expires on March 31, 1929. Mr. Manion said that the question was raised in view of the fact that members of the House were receiving from all over the country communications opposing any withdrawal of federal aid to technical education. The Prime Minister replied as follows:—

“With regard to the Technical Education Act, as my hon. friend knows, the intention as expressed at the time the act was introduced was to make from the federal treasury a contribution only over a period of years, primarily with the object of helping the provinces to inaugurate a system of technical education, and secondarily to insure in whatever they might undertake some degree of symmetry and uniformity among the provinces themselves. But it was never contemplated that the federal treasury should continue indefinitely to contribute to technical education. At the recent conference there was considerable discussion on the question of scientific and industrial research which, as my hon. friend knows, is closely allied to that of technical education, and in this connection it was felt that the establishment of scientific research laboratories should be undertaken by the federal government. The Minister of Trade and

Commerce (Mr. Malcolm) has already intimated to this house that the government has decided to ask parliament to make a substantial grant towards establishing in the capital laboratories for scientific and industrial research, to serve the needs of the entire Dominion. We feel that if we undertake this obligation and establish scientific and industrial research laboratories on the scale which is intended—and the decision was reached after discussion with the provinces themselves—we are going as far as we should be expected to go in dealing in a combined way with scientific research and technical education.

“The aid given under the Technical Education Act does not expire until 1929. It was two or three years ago that the first notification was sent to the provinces that on the expiry of the present act its provisions would not be renewed, and the provinces have had ample opportunity, and still have ample opportunity, to make provision themselves for satisfactory carrying on the work which has been undertaken. We may consider continuing assistance for a period of time to correspond with that which the act was originally intended to serve, to provinces that have not taken full advantage of the act, but those that have been receiving aid for the full period of time under the provisions of this act will at the expiration of the act be expected to carry on the work for which this assistance was given them in order to enable them to make a beginning in a satisfactory way.”

The Prime Minister further said: "I think it might as well be understood first as last that the matter is one of government policy. It is only part of the broader policy of seeking to have the provinces continue to deal with matters coming primarily within their own jurisdiction, a practice which came to be subject to some considerable variation only during the war period. At that time there were placed upon the federal treasury a number of obligations which had theretofore been provincial obligations. We feel it is going to be better for all concerned to have the Dominion parliament take care of those matters which are assigned to it under the British North America Act and have the provinces do the same with respect to theirs."

Delegation to Government

A large delegation organized by the Urban School Trustees' Association of Ontario, and representing educational and labour interests in Ontario and Quebec waited on the Federal government on May 3 to urge the government to reconsider the question of continuing for a further period of ten years the federal grants in aid of technical education. The Prime Minister received the delegates, accompanied by the Hon. J. A. Robb, Minister of Finance, Hon. Peter Heenan, Minister of Labour, and the Hon. P. J. Veniot, Postmaster General. Mr. King's reply indicated that no change would be made in the policy as stated in the announcement he had made in the House of Commons. He intimated that an exception might be made in the cases of those provinces, such as Saskatchewan, Alberta and Prince Edward Island, which have not received the full financial benefits of the Act.

The Prime Minister said that the members of the cabinet were one in believing in the necessity of provision being made for technical education in Canada. He stated that a strong case for such education had been made to the cabinet by the Minister of Labour. Mr. King reviewed his connection with technical education from the days when, as Minister of Labour, he had prevailed upon the government to make a beginning in assisting technical education by means of federal grants, to be given under certain conditions. It had always been recognized, he said, that under the British North America Act, education was primarily a provincial responsibility. However, owing to the heavy cost of establishing vocational schools and of providing them with proper equipment, the government of the day had accepted the recommendation of the Royal Commission on Technical Education (LABOUR GAZETTE, July, 1913. page 65), and

had decided to make federal grants for a ten-year period. It was never contemplated, the Prime Minister said, that grants from the federal treasury should be perpetual grants, and the Ministers of Education in the several provinces were advised three years ago when they received their grants that the act under which these grants were made would expire in 1929, and that the federal government did not propose to renew it. He believed that the provinces would do their part in the matter of technical education, but so long as the federal grants were continued there would be a tendency to lean upon them.

The Prime Minister, replying to a question in the House of Commons by Mr. H. B. Adshhead, East Calgary, on May 4, as to the intention of the government to make an exception to their present policy by continuing the federal grants to Saskatchewan, Alberta and Prince Edward Island, stated as follows:—

"With respect to grants to technical education the government has under consideration a policy similar to that adopted with respect to grants for road and highway construction at the time those grants expired under the statute by which they were provided. That is to say, in the last few years where provinces have not made use of the opportunity which they have had, the government will be prepared to consider extending the time for them. I think my hon. friend may rely upon the extension being considered favourably."

The 1928 edition of the Labour Year Book, published under the auspices of the Trades Union Congress and the Labour Party of Great Britain, contains in addition to its usual features, a number of special sections as follows: (1) The labour movement—activities of the National Labour Party, the Parliamentary Labour Party and the Trades Union Congress for the year 1927; (2) Political—analysis of bye-elections since the general election of 1924, sale of honours, the House of Lords; (3) Industrial—wages, hours, disputes, employment, unemployment insurance; analysis of trade disputes and the Trades Unions Act; (4) Finance and commerce—trade and production, capital, profits and banking, central government and local government finance; (5) Social services—poor law, housing education, public health; (6) Land and agriculture—a survey dealing with various aspects of land and agriculture; (7) International—working of the Dawes Scheme, world war debt settlements, armaments, etc.

WHAT TECHNICAL SCHOOLS HAVE DONE TO MEET THE RECOMMENDATIONS OF THE ROYAL COMMISSION ON TECHNICAL EDUCATION

Paper read by Mr. F. S. Rutherford, Assistant Director of Technical Education for the Province of Ontario, before the Technical Section of the Ontario Education Association in Toronto on April 12, 1928.

IN order to discuss this question intelligently, it might be well to refresh our minds as to some of the recommendations of the Royal Commission on Industrial Training and Technical Education. The following seem to have a direct bearing:—

1. Secondary vocational education should be provided for those who are to follow manual industrial occupations, producing occupations, such as agriculture, conserving occupations, such as housekeeping, and commercial and business occupations:

2. Such persons should have opportunities for acquiring secondary education which would be as fully advantageous to them in their vocations as the secondary education provided in the general school system has been advantageous to those who enter the learned professions, other professional occupations, or the leisure class:

3. Secondary education for those who have gone to work should be provided in day and evening classes in close correlation with their occupations while they are still learners as apprentices or otherwise, and also when they have become skilled workmen or journeymen, or have come to fill positions as foremen, superintendents, or managers:

4. Industrial training and technical education should be provided in order that the interest of boys and girls in their own training and instruction might be increased and an understanding of their relation to working for a living might be clearer to themselves from twelve years of age onwards:

5. In order that the period of organized education should be prolonged during adolescence:

6. In order that the nation as a whole might be more intelligent, capable, and prosperous:

7. In order that all might become qualified to the full extent of their capacities to fill their places as individuals, as contributing earners, and as members of the race:

8. That effort should be directed to provide an adequate supply of competent instructors as well informed and as well trained as practicable to carry on the work which may be attempted:

9. The establishment of classes for foremen and other intelligent and highly-skilled workmen should be undertaken for the first object

of giving such men greater qualifications for their own occupations. Such classes would primarily be for the benefit of those who attend them and shaped to meet their needs.

10. It should provide educational opportunities for those who have gone to work and also for those who are able to return and to devote their time for some months or years to a course of instruction and training.

These are excerpts from the many recommendations of the Commission. Let us see to what extent these have been realized in our technical schools.

Results Already Reached

What has been done as to number of schools? In 1918-1919 eleven were offering vocational education; in 1926-1927 the number had increased to thirty-eight. In 1918-1919 the grants paid on buildings totalled \$64,000; in 1926-1927 the allotment of grants towards buildings by the Government was \$310,000. The schools for which these grants were given are, with one or two exceptions, commodious, with some architectural beauty, and a credit to the Province. The next year or two will see the opening of several new schools. A serious attempt has been made to provide satisfactory equipment. It can readily be seen that there is practically no limit to the sums that might be spent in this way. The provincial grants in 1918-1919 for equipment were \$40,000; in 1923-1924, \$350,000; in 1925-1926, \$180,000; and in 1926-1927, \$39,000. This is, of course permanent equipment, subject only to natural wear and tear. The total of grants from 1918 to 1927 was \$1,219,310, representing less than fifty per cent. of the equipment installed in the schools in operation in the latter year. We may conclude that a serious effort has been made to provide adequate equipment.

An examination of the growth in enrolment shows that the province of Ontario has come to realize the value of this kind of training. In 1918-1919 there were in attendance at the day technical schools in the province 4,739 pupils. In 1926-1927 the number reached the total of 17,329. In the evening classes the attendance in 1918-1919 was 16,733; in 1926-1927 there were registered in our evening classes 37,434 pupils. It may be pointed out that

these numbers are constantly increasing, so that in the next two or three years, through the natural growth in the schools already in operation, and through the addition of new schools, these totals will be much larger.

It will be recalled that one of the recommendations of the Commission was directed towards the organizing and training of an adequate body of teachers. In 1918-1919 there were employed in the day schools 155 teachers, and in the evening classes 611. The year 1926-1927 found 755 day teachers and 1,297 evening teachers in employment. The recently opened Training College for Technical Teachers is supplying the necessary training for the day school teachers, and consequently for a number of evening class teachers, while the extension work of the College is carrying teacher-training to the remaining evening class teachers.

Definite courses of study have not been prescribed by the Department for the various schools. It has been felt that the course should always aim to meet local needs, and that prescribed courses might interfere with this local freedom. However, the teachers in each industrial subject have been required to organize courses of study for their departments; in some cases the principal or shop director has undertaken this work, so that in all of our technical schools definite and more or less satisfactory industrial courses are in operation. In this respect the evening classes are not so satisfactory, but as the extension work from the Teacher-Training College requires the teachers or evening classes to organize courses, this weakness will be remedied to some extent in the course of time.

The express recommendation of the Commission pointing out the necessity for co-ordination between labour and technical education has been established in Hamilton in arrangements whereby apprentices in carpentry, bricklaying, printing, and electricity are required to spend a certain definite time at the technical school. Similar co-ordination has been obtained in Toronto in connection with the carpenters' apprentice class.

One more item along the line of what has been accomplished will probably be sufficient. What becomes of the product of our technical schools? Do the graduates actually go into the occupations for which the schools have given them preparation.

An effort was made to obtain reliable information on this question. A questionnaire was sent to the principals asking them to give, so far as they were able, the numbers of students from their schools who were actually engaged in vocations for which vocational courses might be considered preparatory. The diffi-

culty of obtaining such information can be well understood when it is remembered that the principals have not been requested to keep such records and had no means except memory, actual contact with specific cases, information possessed by the remainder of the staff, etc.

The information received from this source is extremely gratifying, and, beyond doubt, hereafter with better organization for compiling such information the work accomplished by our schools in this regard will be most convincing. The printed table contains a summary of the information received. A few figures will be quoted here, but a close study of the table would be well worth while. We have the record of 251 young men actually engaged in machine shop practice, and 62 in tool-making, 116 were traced in carpentry, 123 in automobile mechanics, 337 in printing and binding, 251 are machine operators, and 238 are engaged in electrical construction and maintenance. These figures do not represent the actual numbers, but these are authentic cases, and they show that the schools are functioning in the capacity for which they are intended.

Where Further Development is Desired

Home Economics.—The home-making course has not had the development which was anticipated by the Royal Commission. With the exception of one or two places in the province, the numbers of pupils entering this course are much below what might be expected. Let us honestly face the fact that certain fundamental difficulties lie in the way. Owing to a commonly accepted notion that girls who become household employees lose caste, it is almost impossible to induce our adolescent girls to take up this specialized training. What seems to be required is that householders and parents should receive a course of education which would show them, on the one hand, that there is not necessarily a loss of caste, and that, on the other hand, the courses offered as preparatory for this work contain both the elements of culture and trade skill. It may be possible that there was something unfortunate in the selection of the name of this course—Home-Making. Adolescent girls appear to resent being termed home-makers. It is possible that they may feel embarrassed in the announcement that they are seeking to become home-makers.

Specialization.—One of the outstanding recommendations of the Royal Commission was that for a short period at the beginning of the industrial course the shops should be

utilized to afford the students try-out opportunities, and when the student had shown aptitude for some particular form of occupation he should be given the opportunity of specializing in that shop. Experience has shown, and those responsible have become convinced, that this try-out period should not exceed one year. This allows two years for specialization, a period not too long to give a fair knowledge of the elements of the trade, together with some skill in the manipulative processes of that trade. Reduced to figures, this means that if the student spends two hours per day in his selected occupation, he will have a total of approximately 75 working days in the two years. When compared with apprenticeship, this appears like a very short time.

Co-ordination.—The commission appeared to have in mind a close association between the industry and the school. This is evidenced by giving the control of the schools into the hands of an advisory committee in which labour and industry are represented.

To what extent has this relationship with the working world been established? Only very slightly. Some of our schools decline to deal with labour or to give consideration to its demands or wishes; some claim to have no room for accommodation beyond the needs of the regular school population. It is intended that secondary education in Ontario shall be free. It ought to be especially true in the case of vocational schools where they are supported so liberally by Federal and provincial grants. Yet in the face of this, there are still cases where the unemployed adult, who is preparing for a vocation or is seeking up-grading in his selected vocation, is charged a tutorial fee. The spirit of this condition is diametrically opposed to the spirit of the report of the Royal Commission.

In the experience of the writer, and in the experience of the department, those schools which work most closely with organized labour, on the one hand, and with the industrial employer, on the other, have become the most effective; indeed, it is only necessary to point to the bricklaying trade to show that little or no progress can be made without this co-ordination.

Vocational Guidance.—One of the more recent developments in education is the effort made to give to the student, in addition to a general training, a very specific instruction in that type of vocation for which he seems to be adapted. There is some difference of opinion as to how effectively occupational guidance can be given, but the fact remains that the great majority of our boys and girls at

the present time go into vocations or take positions with little or no consideration for their own aptitudes or the conditions which affect the trade or vocation in which they find themselves. It may be noted here that the Royal Commission expressed itself in favour of rational efforts to ascertain the proper occupational field for the youth of the country. A beginning has been made to give formal vocational guidance in one or two centres, but many of our schools have not yet learned the value to be derived from this type of instruction.

Educational Aim of the Industrial and Home-Making Courses

The following recommendation of the Commission is quite explicit in its implication:—

“Secondary vocational education should be provided for those persons who are to follow manual industrial occupations, producing occupations, such as agriculture, conserving occupations, such as housekeeping, commercial and business occupations. Such persons should have opportunities for acquiring secondary education which would be as fully advantageous to them in their vocations as the secondary education provided in the general school system has been advantageous to those who enter the learned professions, other professional occupations, or the leisure class.”

It will be observed that there is no suggestion of a general preparation of the students of these schools for matriculation into the university. The statement is definitely related to the secondary education of those preparing for manual or commercial vocations. We still have teachers who are not seized with the value of the industrial and home-making courses, nor do they realize the opportunity which these courses afford to give adequate training to that eighty (80) or ninety (90) per cent of our school population who, from economic and other reasons, will never attend a university.

Doubtless the failure in this respect arises from the fact that many of our teachers are not acquainted with the rich teaching content of vocational subjects. Were they to spend a summer or two in coming directly in contact with the materials and processes of so-called mechanical operations, their minds would undergo a very great change.

What Remains to be Done to Meet the Requirements of the Royal Commission?

Contact with Organized Labour and Industry.—As already stated, these technical schools become more effective when co-ordinated with organized labour and industry. This is the

condition which might naturally be expected. The great majority of the students pass into industry, and as workmen will probably become members of the organized labour groups now generally recognized as legitimate and beneficial. These labour organizations in co-operation with employers determine rates of pay, hours of labour, and standards of trade efficiency. To prepare students for trade occupations without considering organized labour and the industrial employer is wholly inconsistent; indeed, we may go still further and point out that organized labour played an important part in pressing the Federal Government to adopt the report and set aside a grant for the establishment of technical education. Is it now fair or wise to neglect the organized labour group in the management of these schools?

One of the important functions of the principal of a technical school is to make this co-ordination speedily and effectively between his school and organized labour and industry. This can only be done by frankly meeting and discussing with representatives of the various groups the needs and requirements of the vocational field and the standard of training which is required.

Making Shop Courses More Vocationally Effective.—In this province vocational teachers are selected from the trades, because it was considered that these were the only persons who could give effective trade instruction. Trade operations and processes are constantly changing, and the wise trade teacher will find frequent opportunity to go back to trade for short periods to refresh himself with the new developments. The rapid change in automotive construction is an example of the necessity of close contact in order to be informed of recent changes. The training should be as far as possible the actual trade work for which the student is preparing. Two or three years of taborer and flower-stand construction are not a preparation for the building trades as practised in this province. An analysis or survey of these trades will show what should be taught to meet the requirements of the trade. It is not sufficient to keep the student employed in some more or less attractive project. A well-organized vocational school should have a well-defined aim in each department. It should be understood that the machines are not for the convenience of the teachers, but for the instruction of the pupils. Regularly organized instruction in the use of the machines and in safety precautions will, to a great extent, obviate the dangers which are anticipated in using machinery. Due

consideration should be had for the demand and supply of trained mechanics in determining the field into which our students should go. Automotive construction and repair has become one of the most important occupational outlets on the continent, and yet we have schools in large centres which as yet offer little and, in some cases, no instruction in this important vocation.

Increasing Service.—The expenditure of large amounts for buildings, equipment, and maintenance can only be justified by an ever-widening field of service. The day is long past when five and one-half hours should be considered a complete school day, or when the school attendance should be confined to the children of the community. Adult education through the medium of day classes is a generally recognized function of a vocational school.

Through recent legislation new life has been given to an apprenticeship system in the building trades. We may as well face the fact that our schools, if they were providing sufficient numbers of trained youths for these trades, were not directing their product in such a way that the students entered these vocations. The contractors, master builders, and others, of their own initiative, organized a movement resulting in legislation, which in its effect upon technical education will possibly be farther reaching than any previous step taken to fulfil the needs for apprenticeship training as recognized by the Royal Commission. The technical schools must be alive to the possibilities of this movement and furnish leadership toward the realization of a system for the training of apprentices to meet the requirements of the various trades.

Further fields of service might be mentioned. The upgrading of temporarily employed workers—those persons handicapped in industry (i.e., persons who through industry find themselves forced to learn new occupations), an extension of co-operative classes wherein junior employees spend a definite portion of their time in the school under instruction in those subjects which pertain to the trade. The alert principal will doubtless find other fields in which the school may be of service to the community.

Admission of Pupils Below Entrance Standard.—In dealing with this question the Royal Commission report deals very plainly, as will be seen in the following quotation from the report:—

(1) That all children to the age of fourteen years should receive the benefits of elementary

general education up to at least the standards provided by the school system of the place or province where they live;

(2) That the experiences of the school should tend more directly towards the inculcation and conservation of a love of productive, constructive, and conserving labour;

(3) That, after twelve years of age, for the children whose parents expect or desire them to follow manual occupations, the content of the courses, the methods of instruction, and the experience from work undertaken at school have as close relation as practicable to the productive, constructive, and conserving occupations to be followed after the children leave school:

(4) That benefits from such pre-vocational education would accrue (a) from the interest awakened in manual occupations; (b) from the discovery through their experiences at school to the pupils themselves, and to the teachers and to the parents, of the bent of their abilities and aptitudes; and (c) from the taste and preference thus developed, leading the children to follow skilled occupations for which they are suited;

(5) That further advantage would result, because the interest which this form of education would arouse in the children would dispose them to desire further education after they had begun to work and cause them to keep in touch with educational effort in some form;

(6) That the time and attention devoted to pre-vocational or trade preparatory work in no way detracts from or hinders progress in general education of a cultural sort.

It will be seen from this that students below entrance standing, where desired, should receive the benefits of technical education. Doubtless abuses have arisen, and pupils of low mentality have been passed on to vocational schools. The regulations give the technical school principal the control of admission of these pupils, but there is certainly no intention that this control should be so rigid as to exclude all pupils below entrance standing. Students of this grade who, in the opinion of the principal, are capable of carrying on the work should be accepted and organized into preparatory classes distinct from those of entrance grade with their own course of study and their own shop classes. It is possible that for this preparatory year more academic work than shop work may be required. The principal and committee should ever remember that the greatest value for the money invested in the institution is obtained when the greatest number of individuals are given an opportunity to prepare for their life vocation.

Conclusions

In conclusion, let me just point out that the present century is Canada's. The last twenty-five years have brought remarkable improvements and inventions, remarkable trade expansions, and a world-wide advertisement of the name, fame, and possibilities of this Dominion. When it is considered that we have just begun the development of our great natural heritage of minerals, power, forests, and productive land areas, and that the greatest factor in this development will be the youths who are to-day being trained in our schools, the importance of the technical school contribution can be seen, for it is those technically trained in agriculture, mining, electrical operation, building and construction, commerce, and home-making who will direct this development. It will be seen, therefore, that the character of the training given to pupils at present enrolled in our technical schools will have a large part in the future industrial and commercial expansion of Canada.

TABLE I.—STATISTICAL STATEMENT SHOWING DEVELOPMENT OF TECHNICAL EDUCATION, 1918-1927

Year	Day			Evening		
	No. of Schools	No. of Teachers	No. of Pupils	No. of Schools	No. of Teachers	No. of Pupils
1918-19.	11	155	4,739	36	611	16,733

NATIONAL RESEARCH COUNCIL

Proposed Establishment of Research Laboratories

THE Minister of Trade and Commerce (the Hon. James Malcolm) announced in the House of Commons on February 13 that the Government proposed to expand the work of the National Research Council, and that for this purpose the sum of \$3,000,000 would be appropriated, to be spent over a period of ten years. In pursuance of this program, the sum of \$750,000 will be spent during the present year for the erection of national laboratories. The new National Research Laboratories will combine the functions of the Bureau of Standards at Washington and the Mellon Institute at Pittsburgh. It is stated that when these laboratories have been established it will be possible for the council to carry on national standardization and research service for Canada such as now exists in practically every important industrial country throughout the world. The council will also be enabled more effectively to assist Canadian industries in the solution of their technical problems and in the development of natural resources.

The Minister further announced on April 24 that Dr. Henry Marshall Tory, D.S.C., LL.D., F.R.S.C., president of the University of Alberta since its inception in 1908, had decided to retire from that position to accept the presidency of the National Research Council of Canada, an office which he has held in an honorary capacity since October, 1923. The appointment will become effective on June 1, 1928, and is in accordance with the expansion of the activities of the National Research Council. Because of such expansion it has been regarded as essential that the president should devote his entire time to its activities.

Annual Report for 1926-7

The annual report of the president of the Honourary Advisory Council for Scientific and Industrial Research details the extent and cost of its activities during the year ending March 31, 1927. The first section reviews the functions and operations of the Council since its establishment in 1916 to co-operate with the British Department of Scientific and Industrial Research in developing such studies throughout the British Empire. The origin and scope of the National Research Council were detailed in the LABOUR GAZETTE for June, 1926, pages 558 and 559. Generally, the objective of the organization is to promote the utilization of the natural resources of Canada by undertaking or promoting researches with

the object of improving conditions in agriculture and also the technical processes and methods used in Canadian industries.

During the year reviewed by the report, the council concentrated its energies on three specific major activities as follows:

(1) The development, co-ordination and prosecution of research work throughout Canada, especially through the organization of associate committees of the council. Each committee is thoroughly representative of all groups or institutions interested in the particular problem with which the committee has been charged, or in the case of committees of an advisory nature, representative of the science which the committee is intended to serve.

(2) The training of research workers through the awarding of post-graduate scholarships in science and research to outstanding university graduates.

(3) The investigation of special problems by granting financial assistance to qualified investigators working in established laboratories, thus utilizing the latent scientific man power and laboratory equipment available throughout Canada.

Organized Research.—The policy adopted by the National Research Council of utilizing to the fullest possible extent the trained man power and the laboratory equipment existing in university, departmental and industrial laboratories, both through its system of research grants and in connection with the activities of its associate committees, has resulted not only in stimulating research work from coast to coast, but also in building up in Canada, at comparatively small cost to public funds, an effective and active research organization.

The council serves as the national co-ordinating agency through which all persons working on any problem of major importance may be brought into close contact, thus avoiding unnecessary duplication of effort and greatly enhancing the prospect of a successful solution of the problem in the shortest possible space of time and at minimum cost.

At the close of the year 1926-27, there were organized under the National Research Council nineteen associate committees which were in active operation. These committees were composed of 268 persons, who without remuneration gave of their time and experience in furthering the work of the council. During the year under review sixty-eight researches

were in progress in laboratories from coast to coast, each investigation being supervised without remuneration by a highly trained research worker specially qualified to direct research on the particular problem entrusted to him. During the same period, forty-four post-graduate research scholarships were also in active operation under the auspices of the council with the object of training outstanding university graduates in science and research so as to build up in Canada a corps of men thoroughly qualified to undertake such work.

Commenting on this phase of its activities, the report makes the following observation: "Obviously, co-operation and co-ordination must be the key notes of an organization of this nature, and it is due to the persons who are directing this work and to the laboratories with which they are connected that attention should be very definitely drawn to the fact that the greater part, by far, of the cost of the research work carried out on a voluntary basis under the auspices of the council, is borne by the co-operating laboratories which furnish accommodation and all ordinary laboratory equipment required in connection with the work carried out, while all persons co-operating in the direction of research give their time and experience without cost to public funds. It would be quite impossible for the council to pay for the service rendered and to provide the whole cost of the work carried out under its auspices, even if its financial resources were much larger than at present. A very real contribution is being made by these men and by the laboratories which they represent in the development of scientific research in Canada."

Assisted Researches.—As mentioned previously, during the past year sixty-eight researches to which financial assistance was granted were in progress in twenty-three departments of science. These investigations were carried out in the various departments of science at ten Canadian universities and in eleven government or industrial laboratories. Twenty researches were carried out in departments of physics, twelve investigations in the various departments of chemistry, six in botany, seven in mining engineering, four in biochemistry, three in biology, two researches each in the departments of field husbandry and electrical engineering, and one investigation was carried out in each of the following departments of science: geology, entomology, bacteriology, pathology, plant pathology, animal pathology, plant biochemistry, plant breeding, general agriculture, food chemistry, forestry, general engineering, engineering standardization, civil engineering and mechanical engineering.

Training Research Workers.—Three classes of post-graduate scholarships are awarded annually by the National Research Council, viz., Bursaries, Studentships and Fellowships, having an annual value of \$750, \$1,000 and \$1,200, respectively. These awards are intended to enable students who have graduated with distinction from a university to continue their training in science until they have qualified for a Ph.D. degree, three years being the maximum assistance granted to an individual candidate under any combination of the above named awards. These scholarships are awarded to the best qualified applicants therefor. The minimum qualification for a Bursary is graduation with distinction from an approved university. An applicant for a studentship must have had at least one year of post-graduate research experience, while fellowships are awarded only to persons who possess very high qualifications, and who have demonstrated beyond question their ability to carry on independent research.

During the past year, the council awarded seven fellowships, seventeen studentships and twenty bursaries. Three times as many applications were received as there were awards available, and it was considered that "while this ensures that the groups of men who are granted awards were of the most desirable type and possessed very high qualifications, it also suggests that there is great need in Canada for additional post-graduate research scholarships. In this respect, it was emphasized that "the main difficulty lies in the fact that there are so few scholarships available in Canada to promising university graduates, with the result that many of them complete their training in foreign countries under awards available there with the obvious result that their services are generally lost to Canada."

The forty-four awards held during the year 1926-27 were won by graduates of eleven Canadian universities as follows: University of British Columbia, 6; University of Alberta, 2; University of Saskatchewan, 6; University of Manitoba, 4; University of Toronto, 6; University of Western Ontario, 2; Queen's University, 2; McGill University, 9; University of Montreal, 2; University of Lennoxville, 1; Dalhousie University, 4.

Co-operation with Federal Departments.—The report states that it has always been the policy of the National Research Council to co-operate in every way possible with the various departments of the Federal Government and to avoid duplication of effort. The council is a co-ordinating agency for the purpose of the promotion and development of research wherever possible throughout the whole of Canada, and, to this end, co-operates

with and assists the scientific divisions of the government service in every possible way in furthering any research work which they are in a position to undertake.

As an indication of the extent to which the National Research Council has co-operated with the various federal departments, the report details its activities in co-ordination with the following departments: Agriculture, Customs and Excise, Interior, Marine and Fisheries, Mines, National Defence, Trade and Commerce.

Finance.—During the fiscal year 1926-27 the National Research Council received from all sources a total revenue of \$163,332.37. Of this amount, \$150,000 was provided by the Federal Government; \$10,000 by the Sun Life Assurance Company of Canada as a special grant to assist in the co-operative researches on tuberculosis conducted by the council; and \$3,332.37 was secured from miscellaneous sources, including refunds from research grants and scholarships.

The expenditures of the council during the year totalled \$163,326.06. Of this amount \$41,105 was expended on post-graduate scholarships; \$79,233.45 on research activities, including assisted research grants; \$2,278.37 on the library of the Council and in the publication of scientific papers; \$2,651.70 in connection with conferences on research co-ordination and meetings of advisory committees; \$3,690.11 in travelling expenses of members of the National Research Council and of its staff; \$6,292.91 in the administration of the office of the Council and of all its activities including all committees associated with the Council; and \$23,074.52 was expended in the payment of the salaries of the staff of the Council.

The total research staff actively at work under the auspices of the National Research Council during the year numbered 513 persons, of whom 401 persons served without remuneration.

WORKMEN'S COMPENSATION IN NOVA SCOTIA IN 1927

THE annual report of the Workmen's Compensation Board of Nova Scotia for the calendar year 1927, shows that the total number of accidents reported during the year was slightly in excess of 1926, the total number for 1927 being 7,424 as against 7,196 in the previous year, a difference of 228. There was a large increase in the number of fatal accidents owing to the loss of four fishing vessels, which brought the number of fatalities in 1927 up to 147, as compared with 107 in 1926. In 1926 also there was a fishing disaster which took a toll of 50 lives, but even leaving out both these disasters seven more workmen met with fatal accidents in 1927 than in 1926.

In a general review, the report indicates that during the eleven year period from January 1, 1917 (when the Act became operative) to the end of 1927, accidents to the number of 74,041 in the industries within the jurisdiction of the Board, were reported. During that time, 1,096 workmen were killed. The amount actually paid to workmen or their dependants was \$6,050,052, and the amount, at the end of 1927, required for the purpose of paying life and other pensions and compensation to disabled workmen, was \$5,477,168. The total compensation paid or payable to workmen and their dependants for the eleven years amounts to \$11,527,220. This amount does not represent the entire cost of the accidents for the eleven year period as the administration expense is not included. There were 579 widows awarded pensions for life or until remarriage; 1,393

children under sixteen years of age were awarded monthly pension while under that age; dependent mothers and fathers to the number of 324 were awarded compensation; 29 members of the family, other than widows, children and parents, more or less dependent upon workmen who had been killed, received benefits; and life pensions were awarded to 2,696 workmen who were disabled, wholly or partially, for life. Prior to January 1, 1920, medical aid was not furnished except in special cases. Since that date injured workmen have been entitled to free medical aid for thirty days from date of disability, and during the eight years that have elapsed the amount of \$475,995.60 was paid for such purpose.

Fishing Fleet Disasters.—The report makes special reference to the assessments rates for the fishing industry. In the early part of 1927 the Board found it necessary to increase the assessment rates in the deep sea fishing industry carried on by the Lunenburg fleet of fishing schooners owing to the loss of two vessels in 1926, with all members of both crews numbering 50 men. After notice of the increased rate had been sent to the owners, a large delegation from Lunenburg County represented to the Government that the fishing industry could not stand the increase in rates, with the result that an Act was passed on March 11, 1927, preventing any increase in the rate of assessment for 1927 upon owners of vessels in the fishing industry.

Subsequently a Commission was appointed by the Government to ascertain whether the rate levied upon the fishing industry unduly affected that industry, and if so, to what extent, and if the rate that the industry is able to pay should not be sufficient to cover the accident loss, to ascertain what other system of insurance, if any, would be practicable. (The report and recommendations of this Commission were detailed in the LABOUR GAZETTE for February, 1928, page 150).

In August, 1927, while the Commission was conducting its investigations, another unfortunate disaster occurred when four vessels of the Lunenburg fleet were lost with all their crews, numbering 83 men. The compensation loss was estimated at over \$200,000. This amount would have been much larger but for the fact that there were on board the schooners nineteen men whose dependants were not entitled to compensation as they reside in Newfoundland.

The report of the Commission was to the effect that the fishing industry could not bear a rate sufficient to cover the experience while under the Compensation Act. During the investigation it was represented that insurance underwriters at Lloyd's would carry the risk at a rate considerably less than the rate that the Commission considered it would be necessary for the Compensation Board to impose, but nevertheless considerably higher than the rate the industry could fairly stand.

In the early part of 1928 it was announced that the Government would pay the difference between the rate which the Commission recommended the industry could bear, and the rate charged by the insurance underwriters, and a bill was introduced in the Legislature to remove the fishing industry from the jurisdiction of the Board under Part I of the Compensation Act, and to provide for individual liability of employers, who are obliged to insure their liability with responsible underwriters.

Business Conditions in 1927.—At the time the report was published the final returns for 1927 had not been received, but from those already obtained it would appear that the amount of wages paid in 1927 was \$1,650,000 greater than in 1926, although an examination of the various industries showed that a considerable number did not share in the improvement. The totals for the past eleven years were as follows: 1927, \$48,715,647; 1926, \$47,061,035; 1925, \$40,718,139; 1924, \$46,758,029; 1923, \$54,681,998; 1922, \$47,128,057; 1921, \$57,712,724; 1920, \$74,600,999; 1919, \$60,017,418; 1918, \$51,108,492; 1917, \$39,326,243.

Benefit of Act to Workmen.—The actual payments for compensation and medical aid in 1927 amounted to \$824,834. Of this amount, \$509,490 was paid to workmen other than pensioners, and \$315,343 was paid to those entitled to pensions. During the past year, 5,161 workmen, wholly disabled for seven days and upwards, were paid compensation for the period of disability. At the end of the year the persons receiving compensation in the form of a monthly pension were as follows:—

Widows..	433
Children under 16..	914
Dependent mothers..	71
Dependent fathers..	41
Other dependants..	15
Workmen disabled for life (partially or wholly)..	576

Accident Costs—The increased cost of accidents in 1927 was about \$231,000 greater than in the previous year. In coal mining the increase was about \$96,000; in shipping and navigation over \$60,000; in iron and steel manufacturing about \$57,000; in the Provincial Highways Department about \$34,000. On the other hand there were decreases in accident cost in lumbering about \$9,000; in public utilities about \$7,315; in transportation about \$7,076, and also in general manufacturing and the Halifax Relief Commission.

The nature and severity of the accidents compensated during the eleven years of the operation of the Act are shown as follows:

Fatals, compensable..	1,033
Permanent partial disability..	2,696
Temporary total disability..	51,923
Medical aid only..	6,865
<hr/>	
Total compensable claims..	62,517
Pending adjustment..	234
Fatals not compensable (1921 to 1927 inclusive)..	63
Other non-compensable accidents (fatals included for 1917-1920)..	11,227
<hr/>	
Totals..	74,041

Medical Aid.—The Act provides for thirty days medical aid following the date of disability. The estimated cost of providing medical aid in 1927 amounted to \$88,514 compared with \$81,190 in 1926. The ratio of the cost of medical aid to the compensation cost of accidents in those classes in which the Board paid medical aid for 1926 and 1927 is as follows:

	1926	1927
Lumbering, sawmills, etc..	15.5	18.2
General manufacturing.	17.5	17.2
Building and construction..	11.1	13.1
Public utilities..	5.9	9.3
Transportation..	9.1	11.7

The ratio is not given in the mining and iron and steel classes as the greater portion of the medical aid in connection with those classes is furnished under medical aid schemes adopted by the workmen or by the employer and consequently is not furnished by the Board. In the navigation class, medical aid is as a rule furnished under the Merchants' Shipping Act.

Income and Expenditure by Classes.—The income and expenditure of the Board in respect to each class of industry according to the provisional statement of such to December 31, 1927, were as follows:

Class	Income	Expenditure
	\$ cts.	\$ cts.
Mining.....	632,135 88	654,261 34
Lumbering and woodworking.....	88,551 80	174,454 42
Iron and steel.....	161,445 74	132,979 73
Manufacturing and operating not otherwise specified.....	115,951 97	42,570 49
Building and construction.....	133,917 96	31,462 27
Public utilities.....	146,880 59	44,140 36
Transportation.....	123,154 83	61,128 65
Shipping and navigation.....	-82,458 20	251,794 11
Halifax Relief Commission (in a class by itself).....	11 88	11 88
Dominion Government employees.....	48,702 21	48,702 21
Provincial Highways Dept. (in a class by itself).....	47,227 92	47,227 92

In the shipping and navigation class there is a total deficit of \$334,252.31 caused by the two disasters which occurred in the Lunenburg fishing fleet in 1926 and 1927.

The ratio of administration expenses to the compensation cost of accidents for eleven years was 7.59 per cent.

New Regulations Under Alberta Workmen's Compensation Act

Regulations 14 and 15, issued by the Workmen's Compensation Board of Alberta in accordance with the provisions of the Workmen's Compensation Act (Accident Fund), contain definitions of the terms "hotel" and "commercial green house" for the purposes of the Act. A hotel is defined as (a) "a place where meals, beds, and lodging accommodation are offered to the public for a consideration, and wherein four or more workmen are employed; also (b) a place in respect of which a license has been granted by the Alberta Liquor Control Board to a hotel wherein one or more workmen are employed."

A commercial greenhouse means "a place wholly or partially enclosed with glass, conducting the business of growing plants, flowers, seeds, fruit or vegetables for sale to the public, including the delivery of such products and

wherein in season is being operated a steam or water heating plant, and in connection with which place three or more workmen are employed."

A note is appended to the new regulations pointing out that the act provides that the employer and members of his family are not considered workmen to whom the act applies, but if such employer desires the protection of the act for himself and the members of his family, he may make special application to the Workmen's Compensation Board for himself and such members of his family as he may desire to bring within the scope of the act. Upon the acceptance of the application by the Board, those persons specified in the application will be considered workmen to whom the act applies.

Labour Courts in Poland

The Polish Government recently promulgated a Legislative Decree providing for the establishment of special labour courts in former Austrian and Russian territories, the decree to come into force throughout these territories three months after the date of publication.

The new labour courts will have jurisdiction in all disputes between employers and workers relating to labour or vocational training, and also in cases arising out of breaches of

labour legislation. Disputes in agricultural and forestry undertakings will not be submitted to the labour courts unless their competence has been extended to that effect by a special decree of the Ministers concerned. The jurisdiction of the courts as regards breaches of labour legislation will extend to offences relating to hours of work, holidays, the work of women and children, labour contracts, pledges, the engagement of workers, and industrial hygiene, provided that such offences were formerly dealt with by justices of the peace.

PROPOSED NATIONAL CIVIL SERVICE COUNCIL

A DELEGATION, composed of officials of various civil service organizations waited on the Honourable Peter Heenan, Minister of Labour, on May 9, for the purpose of requesting the government to take action at the present time in the matter of establishing a committee to draft a constitution for a National Civil Service Council. As was reported in the *LABOUR GAZETTE* for April, the Select Standing Committee on Industrial and International Relations of the House of Commons reported to the House at its present session that such action should be taken, and the report was subsequently adopted.

Mr. T. R. L. MacInnes, spokesman for the delegation, told the Minister of Labour that the civil service was anxious to see the report of the Parliamentary Committee implemented. He further pointed out that, as the Minister had been a member of the committee in question, and as his interest in matters of industrial relations was widely known, it was considered advisable to approach the government on the question through him.

Mr. Heenan stated that his attitude on the subject was one of entire sympathy, and that

the attitude of the government, as had previously been expressed, was wholly favourable to the end sought. The Minister was not certain, however, that he was the appropriate member of the cabinet to take an initiative in the matter, although he would be only too pleased to co-operate toward the end desired in whatever manner might be possible.

The following executive members of the Civil Service Federation of Canada constituted the delegation:—

Mr. T. R. L. MacInnes, President; Mr. T. H. Burns and Mr. W. J. Cantwell, Vice-Presidents; Mr. J. H. Ryan, Secretary; Mr. V. C. Phelan, Treasurer; and Mr. W. J. Callaghan and Mr. V. L. Lawson, Executive Members. Besides being executive members of the Civil Service Federation of Canada, Mr. Callaghan and Mr. Burns hold the offices of President of the Civil Service Association of Ottawa and Dominion Secretary of the Dominion Customs and Excise Officers' Association, respectively.

Statistics of the Civil Service of Canada for Year ending March 31, 1927

A report was issued recently by the Finance Statistics Branch of the Dominion Bureau of Statistics, dealing with statistics of the Civil Service of Canada, for the fiscal year ending March 31, 1927. The total expenditure on the salaries of the Civil Service for the year 1926-27 was \$76,227,878, as compared with \$74,692,000 in 1925-26—an increase of \$1,535,877. The expenditure for permanent employees in 1926-27 was \$43,499,102 as compared with \$42,570,163 in 1925-26—an increase of \$928,939. The expenditure for temporary employees was \$14,022,149.52 as compared with \$14,163,157 in 1925-26—a decrease of \$141,007. The salaries of the non-enumerated classes amounted to \$18,706,625 in 1926-27, while in 1925-26 they were \$17,958,679, showing an increase of \$747,946. It is explained that non-enumerated classes consist of employees engaged by several departments in work of a casual nature, who do not come under the operation of the Civil Service Act, the record of their number not being always available, though the expenditures on salaries and wages are recorded. Examples are: labourers hired by surveying parties, extra staff engaged by revenue postmasters, census enumerators, R. C. M. Police Force, etc.

The report indicates that the total number of employees in the enumerated classes (per-

manent and temporary) in March, 1927, was 39,592, as compared with 39,154 in March, 1926.

It is stated that the increase in the number of employees largely explains the increased expenditure on salaries for the fiscal year 1927 over 1926, added to which were the customary annual increments as well as certain deferred salary revisions. It is pointed out that a very large proportion of the expenditure on salaries, while paid out of consolidated revenue, is recouped to the Government through the services of employees in such departments as that of Postal Service, Customs, Excise and Insurance.

The central organization of vocational-guidance offices in Czechoslovakia has drawn up a scheme for the setting up of 400 vocational-guidance offices in that country during the next 20 years. It is proposed that the cost of opening and maintaining these offices should be borne one-third by the employers, one-third by the workers, and one-third by the State, the Provinces, and the municipalities. The central organization suggests that the payments of the employers and the workers might take the form of supplementary contributions to social insurance, and it estimates that the individual payments would be very small.

TRADE UNIONISM IN CANADA

Synopsis of Seventeenth Annual Departmental Report on Labour Organization

ACCORDING to the Seventeenth Annual Report on Labour Organization in Canada, covering the calendar year 1927, which has just been published by the Department, the labour movement of the Dominion includes the following classes of unions:—

- (1) Local branches of international craft organizations, having headquarters in the United States;
- (2) One Big Union, an international industrial union, with headquarters in Winnipeg;
- (3) Local branches of the Industrial Workers of the World, a revolutionary industrial union which seeks to abolish the wage system, with headquarters in Chicago;
- (4) Canadian central labour organizations;
- (5) Independent trade union units, and
- (6) National and Catholic unions.

The international craft union group, which consists of the Canadian members of 85 organizations, four less than in 1926 (one of the losses being occasioned by the transfer of the Canadian Brotherhood of Railroad Employees to the Canadian group), has 1,869 branches in the Dominion, 142 less than in the previous year, with a combined membership of 180,755, an increase of 1,488. The One Big Union claims 50 local units in Canada, with a combined membership of 19,245, a loss of 10 units, but a gain in members of 580. The Industrial Workers of the World with seven local branches, a gain of one, shows a decrease in members of 200, now having 4,400. The group comprising Canadian central organizations, which number 24, an increase of four, have between them 537 local branches, with a total membership of 48,435, which show 241 more branches and 13,598 members than were recorded in this class in 1926. The independent units have decreased by one, now being 37, the combined membership of which is 12,447, an increase of 212. The national and Catholic group of unions number 104, a gain of one, with a combined membership of 25,000, the same number as reported for the three previous years. The net increase in local branch unions was 89 and the gain in membership 15,678, making a grand total of 2,604 branches of all classes of unions in the Dominion, with a combined reported and estimated membership of 290,282. The accompanying chart, which is taken from the report, indicates the fluctuations in the number of trade unionists

in Canada from 1911 to 1927, the period covered by these annual reports on labour organization.

Another chart published in the report shows that the 290,282 trade union members in the Dominion are divided by trade groups as follows:—

- Railroad employees, 82,822 members, or 28.53 per cent of the total;
- Public employees, personal service and amusement trades, 32,700 members, or 11.27 per cent;
- Building trades, 30,751 members, or 10.59 per cent
- Other transportation and navigation trades, 25,507 members, or 8.79 per cent;
- Mining and quarrying, 25,027 members, or 8.62 per cent;
- Metal trades, 22,237 members, or 7.66 per cent;
- Printing and paper making trades, 14,291 members, or 4.90 per cent;
- Clothing, boots and shoes, 11,908 members, or 4.10 per cent;
- All other trades and general labour, 45,039 members, or 15.52 per cent.

Trade Union Membership by Provinces.—

The division by provinces of the 2,604 local branch unions of all classes is as follows: Ontario, 1,014; Quebec, 476; Alberta, 263; British Columbia, 254; Saskatchewan, 184; Manitoba, 166; Nova Scotia, 127; New Brunswick, 108, and Prince Edward Island, 12,

There are 32 cities in the Dominion in which not less than 20 local branch unions of all classes are operating, and between them they represent approximately 58 per cent of the local branch unions in Canada and contain about 50 per cent of the total Canadian trade union membership. Besides the local branch unions of international and Canadian organizations and independent units in Montreal and Quebec, the first named city has 32 national and Catholic unions and Quebec 24. Of the 2,000 unions which reported their membership 20 have 1,000 or more members, the largest reporting union having 3,459 members.

The Trades and Labour Congress of Canada, which was originally established in 1873, is the recognized head of the internationally organized wage-earners in the Dominion. The American Federation of Labour and 54 of its more important affiliates have affiliated the

' SEVENTEEN YEARS OF TRADE UNIONISM IN CANADA

MEMBERS

whole of their Canadian membership by paying to the congress the regular per capita tax. A number of local branches of international organizations which had affiliated individually also paid per capita tax. The congress has under direct charters three Canadian central organizations, two provincial federations of labour, 40 trades and labour councils, and 46 local unions, the fully paid-up membership being 114,362.

The All-Canadian Congress of Labour, which was organized in March, 1927, and which absorbed the Canadian Federation of Labour, declares "the Canadian labour movement must be freed from the reactionary influence of American-controlled unions," and that "Canadian workers require a new medium through which they may collectively promote their general welfare and raise their economic and social standards." At the close of the year the new congress had under charter ten central organizations, including the Canadian Brotherhood of Railroad Employees and the One Big Union, and 16 local unions, the combined membership being reported at 46,279.

A chapter is devoted to the national and Catholic unions, which so far as Canada is concerned had their inception in 1902 in the province of Quebec, where, with the exception of one union in Ontario, all of such bodies are located.

The report makes extended reference to the various classes of delegate bodies which have been formed as a part of the plan of labour organization in North America with a view to co-ordinating the activities of unions of closely allied or particular trades in dealing with matters of like concern to all members of the bodies represented.

Organized Workers in Various Countries.—In addition to the information given in the report in regard to the membership of labour organizations in Canada and the United States figures are published showing the numerical strength of organized workers in 45 other countries, the total for the 47 countries being 40,355,764. Of this number about 18,000,000 (though not in direct affiliation) are sympathetic towards the principles of the International Federation of Trade Unions, with which organization the Trades and Labour Congress, with its 114,362 members, is affiliated. The following are the latest revised figures for the various countries as taken from the report:—

Argentine..	120,000
Australia..	800,000
Austria..	756,392
Belgium..	726,126
Brazil..	104,000
Bulgaria..	49,803

Canada..	290,282
Chili..	162,000
China..	3,000,000
Cuba..	100,000
Czecho-Slovakia..	1,379,779
Denmark..	274,428
Dutch East Indies..	60,000
Egypt..	12,000
Estonia..	30,000
Finland..	62,056
France..	1,068,046
Germany..	5,077,309
Great Britain and North Ireland..	5,531,000
Greece..	88,000
Guatemala..	3,000
Holland..	517,914
Hungary..	267,885
Iceland..	4,000
India..	195,800
Ireland (Free State)..	148,501
Italy..	2,234,520
Japan..	235,000
Latvia..	38,867
Lithuania..	28,250
Luxembourg..	14,451
Memel..	3,894

Revolutionary Labour Organizations.—The report states that the chief revolutionary political body is the Third (Communist) International, which was formed in Moscow on March 6, 1919, with the objective of organizing the working class for the overthrow of capitalism, the destruction of the bourgeois state and the establishment of the dictatorship of the proletariat. With a view to having a medium through which to propagate the communist doctrine among the organized workers the Moscow body in July, 1921, set up the Red International of Labour Unions, whose official representative in the United States and Canada is the Trade Union Educational League, with headquarters in New York City. The Canadian representative of the Communist International is the Communist Party of Canada, which was formed on February 17, 1922, with head office in Toronto, and which recognizes the Moscow body as the only real centre of world revolutionary activities.

An adjunct of the Communist Party is the Young Communist League, which was formed in July, 1922, and which with its children's section known as the Young Pioneers, declares its mission to be to penetrate the mass

of the working class youth with communist agitation and education, for which purpose the league favours the establishment of schools by the parent Canadian communist body. It was reported that there are three communist Sunday schools in Toronto, made up of members of the Young Pioneers. Abbé Philippe Casgrain of Quebec, who made a tour of Canada in the winter of 1926, stated that there were about 40 of these "revolutionary schools," attended by approximately 2,000 children.

The report contains a synopsis of the reports presented and the business transacted at the 1927 convention of the Communist Party of Canada, among which was a resolution on trade union work, in which among other things it was declared (1) That the characteristic feature of the trade union movement in Canada during the years 1925-1927 had been passivity; (2) that the characteristic feature of Canadian industry during the same period has been steady expansion; (3) that the immediate task of the trade union movement in Canada is to initiate aggressive struggles on the part of the workers to secure a larger share of the increased wealth production, and (4) that the Communist Party of Canada will strive to initiate and develop wage and general economic demands and will strive to draw masses of the workers into ever widening struggles. The convention also endorsed a program of action to facilitate the work of the Communist Party in the agrarian field, the object of the party being declared to be to separate the poorer farmers from the influence of the rich and to win them over as allies of the workers in a joint onslaught on capitalism.

The report makes extended reference to the opposition of certain labour organizations to the tactics of the communists. To investigate the ramifications of communism throughout the country the Toronto District Labour Council appointed a committee, which, however, up to the close of the year had not made a report. Following a raid on May 12, 1927, on the premises in London occupied by Arcos (the All-Russian Co-operative Society), the chief agent of the Soviet Government for trading under the terms of the British-Russian trade agreement, for the purpose, it was stated, of regaining possession of certain missing documents of an official and highly confidential character, announcement was made that the British Government had decided to sever all relations with Russia. In doing so the Prime Minister gave information to the House which had come into the hands of the Government "showing that the offices of Arcos and the Soviet trade delegation had been habitually used as a clearing house for subversive correspondence." The British Labour Party sub-

sequently adopted a resolution condemning the Arcos raid and the breaking off of diplomatic relations with Russia. On May 25, 1927, the Canadian Government terminated the trade agreement with Russia, and for so doing the Communist Party of Canada and two local bodies passed condemnatory resolutions.

International Federation of Trade Unions.—The report deals with the 1927 meeting of the International Federation of Trade Unions, held in Paris, at the opening session of which Mr. A. A. Purcell, the president, aroused the antagonism of the continental delegates for his communistic sentiments, so much so that the other members of the executive committee repudiated the views of the president. Internal dissensions, arising from the alleged former pro-Russian policy of the general council of the British Trades Union Congress, were also brought into the open, two of the secretaries were dropped, and the continental delegates refused to support Mr. Purcell for reelection on the executive, electing another British delegate instead. Notwithstanding the differences which were aired in the convention, the delegates adopted a number of resolutions on important subjects such as (1) International fight for the eight-hour day, and (2) Disarmament and the fight against war. The International Federation has 25 national centres in affiliation, with a combined membership of 12,839,174. Reference is made to the proposal of the All-Russian Central Council of Trade Unions for an unconditional conference with the International Federation of Trade Unions for the purpose of effecting a "united front of labour against war and Fascist reaction," a proposition which was supported by the general council of the British Trades Union Congress, but which the International Federation declined to accept, maintaining its decision of 1925, viz., that the federation would admit the Russian body to membership when it made application coupled with a declaration that a conference would be called with a view to an exchange of opinions as soon as possible after the All-Russian Council expressed its desire to be admitted to the I.F.T.U.. With a view to establishing a close link between the Russian and British workers so as to secure the attachment of the Russian trade unions with the International Federation the British Trades Union Congress became a party to the setting up of the Anglo-Russian Joint Advisory Council. Fraternal delegates from the Russian body were received by the British Congress, but in 1926 the British Government debarred the Russian delegates from entering the country. The chairman of the All-Russian Council sent a message to the convention of the B.T.U.C. attacking the British Govern-

ment and also the general council of the congress for calling of the general strike. The general council protested against the criticism and abuse of certain members of the council, which it termed "intolerable interference in British trade union affairs." The British Congress, however, adopted a resolution urging the general council to continue its efforts to bring about international trade union unity. To the 1927 convention of the British Congress the general council reported that a statement concerning the attitude and policy of the Russian trade unions had been sent to Moscow with an intimation that future policy of the British Congress in regard to the Anglo-Russian Joint Council would depend on the reply received. The reply from Russia being regarded as a tirade against the British labour leaders, the general council suggested to the convention that no good purpose could be served by continuing the joint council while the present attitude of the Russian trade unions was maintained. The report was adopted by nearly two million majority, thus breaking off all relations with the Russian unions.

Industrial Workers of the World.—Reference is made in the report to the Industrial Workers of the World, commonly known as the I.W.W., which is the advocate of what is termed revolutionary industrial unionism with its objective the abolition of the wage system. In 1905, when the organization was formed, a membership of 400,000 was reported, but the dissension which has from time to time occurred in its ranks, combined with the prosecution of a large number of its members by the United States Government under a charge of having interfered with the carrying out of certain war time measures of the republic has had the effect of lessening the activities of the organization. At the close of 1927 the reported membership of the I.W.W. was 36,500, of which 4,400 belong to the seven Canadian branches.

Registered Unions.—The report states that with two registrations in 1927 there are now eleven existing registered unions operating under the provisions of the Trade Unions Act which was adopted by the Dominion Parliament in 1872. There are 30 labour bodies in Quebec which are registered under the Professional Syndicates Act of that province, a statute which was passed in 1924 by the Provincial Legislature at the solicitation of the Federation of Catholic Workers of Canada.

Union Label Registration.—Since the enactment in 1927 by the Dominion Parliament of legislation providing for the registration of

trade union labels, the report states that eighteen labour organizations have taken advantage of the law to protect their respective labels in Canada.

Sacco and Vanzetti.—Given a place in the report is a statement concerning the trials and conviction of Nicola Sacco and Bartholomeo Vanzetti on the charge of murdering a paymaster and guard in South Braintree, Massachusetts, and on whose behalf demonstrations of protest were held in several Canadian localities.

Labour in Politics.—The report discusses the early demand for independent political action on the part of organized labour and points out how, at the suggestion of the Trades and Labour Congress of Canada, the Canadian Labour Party was formed, and which now has five provincial sections. There are also independent labour parties in three provinces. In the Manitoba provincial election held in June, 1927, the Independent Labour Party had nine candidates, three of whom were elected. In the same election the Communist Party put up a candidate, but he was defeated. Because the Ontario section of the Canadian Labour Party, which it is claimed is dominated by communists, adopted what they considered revolutionary resolutions, several delegates held a caucus and decided to organize (or revive) the independent labour party of the province. In 23 localities 106 candidates were nominated or endorsed for municipal office by labour political parties or organized labour bodies, of which 39 were elected to the following positions: •Alderman, 24; school trustees, 13; commissioners, 2.

Trade Union Benefits.—The report shows that for 1927 nine Canadian labour organizations made payments for benefits, the total expenditure being \$43,673, an increase of \$10,700.65 as compared with 1926. Of the 87 international organizations having branches in Canada, 61 had expenditures for one or more benefits, payments on account of death benefits being made by 56, unemployed and travelling by 7, strike by 29, sick and accident by 22, and old age pensions by 9. The total expenditure for benefits of central organizations was \$24,445,535, an increase of \$1,889,678 as compared with 1926. The 1927 disbursements for the various classes of benefits were as follows:—

Death	\$13,349,076
Unemployed and travelling	927,735
Strike	1,475,056
Sick and accident	3,646,695
Old age pensions and other benefits	5,056,973

In addition to the amount expended by the headquarters of the international organizations, the report indicates that 533 of the local branch unions in Canada made benefit payments to their own members, as did also 63 branches of Canadian bodies, 10 independent and 23 national and Catholic unions, the total expended being \$263,261, a decrease of \$53,731 as compared with the outlay by 654 local branches in 1926. The expenditures for 1927 by the local branches were for the following benefits:—

Death	\$ 88,606
Unemployed	13,703
Strike	23,874
Sick	107,199
Other benefits	29,879

Non-Trade Union Associations.—Given space in the concluding chapter of the report

is a class of associations in no way identified with the labour movement, but which are in the main composed of wage-earners and regarding which information is frequently sought. There are 81 of such bodies, the principal ones being composed of school teachers, Government employees and commercial travellers, with a combined membership of 106,866.

The Seventeenth Annual Report on Labour Organization in Canada, like its predecessors, makes a most complete labour directory, containing as it does not only the names and addresses of the chief officers of local branch unions and delegate bodies in the Dominion, but also those of the central organizations with which the Canadian organized workers are affiliated.

CANADIAN NATIONAL RAILWAYS JOINT CO-OPERATIVE PLAN

Constitution and Rules of Operation

A CONSTITUTION governing action and procedure of the Canadian National Railways Joint Co-operative plan was published last year. Accounts of this plan, which was originally modelled on that in existence in the car shops of the Baltimore and Ohio Railway Company, have been given in the *LABOUR GAZETTE* from time to time (May, 1924; September, 1925, etc.). The principle of co-operation between the management and the workmen for mutual benefit was adopted by the Canadian National Railway System Federation of Shop Trades and the Canadian National Railways, becoming effective on January 1, 1925. No definite rule or plans of procedure were adopted at the beginning, but last year the experience gained warranted the framing and adoption of the following constitution, which is now in effect:—

CONSTITUTION

Article 1.—The plan shall be known as the Canadian National Railways Joint Co-operative Plan.

Article 2.—Joint Co-operative Committees shall be appointed at each large Motive Power and Car Repair Shop, and also at Locomotive roundhouses and car repair points, including repair tracks, where approximately fifty or more men are employed.

Article 3.—*Shops Committees.* At major shops the committees shall consist of one representative from each shop craft, appointed by the respective crafts, the members of this committee to act for a period of one year from the date of their appointment. At the larger roundhouses and car repair points the committee shall consist of three representatives of the employees. At smaller points the committee shall consist of two representatives of the employees.

Should the craft representative be removed from the locality or service, the craft affected shall appoint a representative from its membership to fulfil the term of office.

The Railway Company shall also appoint an equal number of representatives from the local superintendent's staff, including one representative from the Stores Department.

The local shop superintendent or head of the department shall act as chairman at all meetings. In case of emergency it shall be the privilege of the committee to call on any employee to attend a meeting when necessary.

Article 4. Regional Committee.—A regional committee shall be appointed consisting of the executive officers of each shop craft. An equal number of representatives shall be appointed by the General Manager on the respective regions to represent the Company. The chairman to be appointed by General Manager.

Article 5. System Committee.—A system committee shall consist of officers appointed by the vice-president of operation of the Railway Company, and the following representatives of the employees:—Chairman of Division No. 4; Chairman of Canadian National System Federation No. 11; Secretary of Canadian National System Federation No. 11, and the federation representative from any region or craft not directly represented. This committee to have the privilege of calling in any executive officer of the company or any representative of the men mutually desired.

Article 6. Meetings.—The joint committee at each major locomotive and car repair shop shall meet twice each month, on the first and third Tuesdays. The joint committee at all roundhouses and car repair points shall meet once each month, on the first Tuesday. The regional committee shall meet at the call of the chairman, once every six months. The system committee shall meet at the call of the chairman once each year.

NOTE.—It shall be the privilege of the chairman of the regional committee or system com-

mittee to call an additional meeting at any time. It is left within the jurisdiction of the regional committee to reduce the meetings at all major shops from two meetings per month to one, if such action is felt desirable.

Article 7. Minutes.—Minutes of all meetings and records of proceedings shall be accurately kept, copies of these minutes to be supplied to each member of the committee. Copies of all local minutes to be sent to Secretary, Division No. 4; Secretary, regional Federation; Secretary system Federation.

Copies of regional minutes to be sent to:—Secretary Division No. 4; Secretary, C. N. System Federation No. 11, and to General Superintendent of Motive Power or General Superintendent of Car department on each region, General Supervisor of Shop Methods.

Article 8. Action and Procedure.—All recommendations and subjects should be discussed and prompt decisions arrived at. A unanimous decision should govern the action to be taken—no subject which would affect wage agreements already in operation shall be considered.

The committee shall confine their recommendations to such subjects as apply only to the advancement of the industry under the jurisdiction of the chairman, or to the welfare of the employees under his jurisdiction and to the betterment of the railway's service to the public.

W. R. ROGERS,

Chairman, C.N.R. Federation No. 11.

S. J. HUNGERFORD,

Vice-President of Operation.

NOTES ON INDUSTRIAL SAFETY AND HEALTH

Regulations for Industrial or Construction Camps in Nova Scotia

IN the LABOUR GAZETTE, May, 1924, page 354, an outline was given of the health bylaws under the Quebec Public Health Act, as applied to lumbering and mining camps, etc. Specifications for construction camps for Alberta, issued by the Provincial Board of Health for that Province, were detailed in the issue for February, 1928, page 160. Somewhat similar regulations respecting industrial or construction camps in Nova Scotia have been recently issued under the Public Health Act of that Province. The regulations apply to all industrial or construction camps in which provision is made for the housing and feeding of labourers or employees numbering ten or more for a period of one month or more.

Among the chief regulations governing such camps in Nova Scotia are following:

Ventilation and Lighting.—Every sleeping place shall contain 400 cubic feet air space for each regular occupant thereof and there shall be provision for adequate ventilation and light on the basis of at least one foot of glass to each twenty feet of floor surface. At least one half of the windows shall be capable of being opened for ventilation purposes.

Location and maintenance.—The location of any such camp shall be selected with due regard to the health of its inmates, and the health of inmates of other camps, or habitations. No building which is a portion of the camp shall be located nearer than 100 feet from any lake or stream.

The ground within the area occupied by such a camp and its outbuildings, stables, etc., shall be kept clean, and no rubbish or garbage or refuse material of any description shall be permitted to collect. No stable, privy or

closet shall be within 150 feet of any building used as a cookhouse, nor shall it be so located that it shall contaminate any water supply. Stable manure shall be collected and so disposed of by burning or removal to a distance from the camp that it shall not be or become a nuisance.

Sleeping Quarters.—Bunks shall be single, but these may be in two decks or tiers. A passageway of at least 18 inches shall separate the bunks and there shall be at least three and one half feet between two bunks in a tier. Ticks or mattresses and clean blankets shall be provided for each occupant.

The building intended as a bunkhouse and that intended for the cookhouse and the serving of meals shall be separate and distinct where the number of men regularly occupying the camps exceed thirty. If the number is less than thirty, one building so divided by a permanent partition and suitable doors that communication between the two portions can be closed when necessary, may be used.

There shall be arrangements under which there shall be provision that ten per cent of the sleeping accommodation can be so separated from the rest that it can be used as isolation quarters for the sick or for the use of persons joining the camp and whom it is not desirable to permit to sleep in the regular sleeping quarters.

Sanitation.—There shall be facilities for ablation on a scale of at least one basin for each person in camp. A common towel or roller shall not be used. All drainage from the ablation room shall be disposed of in a sanitary way by connection with a cesspool.

There shall be privy seats provided on a scale of one for every ten persons. They shall be of some approved pattern, shall be screened against flies, shall not be so situated that

drainage therefrom shall constitute a nuisance and must be maintained at all times in a sanitary condition. Night urinal buckets shall not be allowed at any time in the cookhouse, or between the hours of 6 a.m. and 9 p.m. in the bunkhouse. They shall be emptied, scalded and disinfected daily.

There shall be facilities for washing of clothing and blankets and for the drying of wet clothing.

Provision shall be made which will permit the bathing of all employees at least once a week and if necessary for the disinfection of clothing.

Refuse material shall be burned or passed through an incinerator being collected regularly and at frequent intervals.

Water shall be obtained from a source not liable to be contaminated. The watering place shall be marked, and there shall be separate watering places for procuring water for ablution and drinking purposes, and for the use of animals.

Waste water from ablution tables and from the cookhouse shall be disposed of in a covered cesspool, constructed in accordance with sanitary principles and so placed that any overflow cannot contaminate the drinking water or constitute a nuisance.

The cookhouse shall be provided with fly screens and the room in which the food is stored either before or after cooking shall be kept clean of all vermin. All dishes and cooking utensils shall be kept clean and in a sanitary condition, being passed through boiling water, after use.

Before being assigned to sleeping quarters, the clothing and bedding of all employees shall be disinfected if necessary. No individual joining the camp, after the same has been in operation, shall be assigned sleeping quarters until this has been done.

In the event of an outbreak of infectious or notifiable disease, the foreman of the camp shall be responsible for the notification of the same to the medical health officer of the municipality, and the prompt reporting to the physician who may be employed to attend to the employees.

All the sanitary arrangements shall be inspected at least once a month by the physician who has been employed to attend the employees, and the employees of the camp may have a certain proportion stopped from their wages for the employment of a physician for this purpose and attending them if sick or injured.

Every employee shall, if so required by the Provincial Health Officer, furnish or show to the foreman, prior to employment or later if necessary, a certificate of successful vaccina-

tion or revaccination within seven years. Failing this and the outbreak of smallpox in the camp, the camp shall be placed under quarantine for such period as is necessary for public protection.

Failure to comply with the above regulations carries a penalty of \$25 for each offence or a fine of \$5 per day for each day during which after due notification such offence is permitted to continue.

"Safety Flag" at Three Rivers Plant

Industrial Canada, the monthly publication of the Canadian Manufacturers' Association, in its issue for April, describes a new plan for stimulating the interest of all concerned in the safety of employees as follows:—

"What would appear to be a new and effective way of interesting the staffs of manufacturing plants in safety work has been adopted by the Three Rivers plant of the Canada Iron Foundries Limited, where some 600 men are employed. A handsome flag is daily run up a flagpole and this flag continues to fly so long as no accident occurs. When an accident, no matter how trivial, is reported, the flag is taken down. The object of the staff is, therefore, to keep the safety flag flying.

"To carry the idea a step further, each department of the plant has its own flag and, it is stated, there is very keen rivalry among the departments as to which flag will remain hoisted the longest. This plan has increased the efficiency of the whole personnel and everybody is so anxious to maintain the safety record that the month of March bade fair to show an absolutely clean slate.

"The commendable efforts of this company, with which every employee is so heartily in accord, are bringing excellent results. Accidents at the plants in Three Rivers, Hamilton, St. Thomas and Fort William have been reduced to a minimum and daily efforts are being made to lessen every possible mechanical and human risk."

Safety Record of Caledonia Mine

The *Canadian Mining Journal* calls attention in a recent issue to the remarkable absence in recent years of fatalities at No. 4 Colliery of the Dominion Coal Company, better known as the Caledonia Mine. No fatal accident has occurred at this mine since May, 1924, a million and a quarter tons of coal having been mined without loss of life. The Caledonia mine has been producing coal for more than sixty years, and now has workings two miles distant from the shaft bottom and one and a half miles under the sea. The

Journal gives full credit for the mine's fine safety record to its manager, Mr. J. R. Dinn. "When safety first campaigning was less approved of than it is to-day, Caledonia Colliery, under Manager Dinn's direction, was dotted all over, from the colliery entrance gates to the working faces, with notices concerning safety. But practice as well as precept has been followed until a whole colliery organization has been imbued with the saving grace of carefulness."

Co-operation in Accident Prevention

At the presentation of prizes at the recent annual competition of the St. John Ambulance Brigade at Winnipeg recently, Mr. E. McGrath, Secretary of Labour for Manitoba, appealed to employers and workers to co-operate in promoting safe conditions of work. He said: "I have often heard it said that workmen have no voice in matters such as building scaffolding or other safety precautions in connection with their work. I do not believe this, and my advice to workmen would be, that in case of any unguarded machinery being used in their plants, or any scaffolds being erected which they thought were not safe, to make an appeal to the foreman on the job, then direct to the employer if necessary, who, I feel sure, would welcome such information and co-operation. If redress could not then be obtained, I would suggest that the workmen communicate with the Bureau of Labour, who would be only too willing to make an inspection of any such conditions and issue such orders as were deemed necessary."

Six teams competed representing Western Canada Flour Mills, T. Eaton Company, Manitoba Telephones, Swift Canadian Company, Marshall-Wells Company, and the J. W. Crosthwaite team. There were five men in each team and excellent work illustrating first aid to an injured man was shown. The T. Eaton Company team won first, Marshall-Wells second, and J. W. Crosthwaite's team third.

Respiratory Diseases as a Cause of Disability Among Industrial Workers

As a cause of absence from work among employees of a large electric light and power company in the United States no other disease group approached respiratory diseases in importance according to a recent statement by the United States Public Health Service. In fact, the respiratory diseases caused more absences than all other diseases combined. The United States Public Health Service re-

gards this sickness experience as more or less representative of the experience of other groups of employed persons. The sickness records of the electric light and power company showed, also, that the average loss of time on account of sickness was approximately six days a year per man on the payroll. Approximately three of the six days lost from work per annum were lost on account of respiratory diseases.

The records of employee benefit associations scattered over the northern and eastern part of the United States tell much the same story, it is stated. From the recorded experience of 35 different sick-benefit associations having a combined membership of nearly 100,000 persons, it was found that respiratory diseases caused 47 per cent of all the cases of illness for which sick-benefits were paid from 1921 to 1926, inclusive. This source of information covers only the more serious sicknesses, because these associations made payments to their members only when illness caused inability to work for 8 days or longer. Thus, whether we consider all absences from work on account of sickness, or only those illnesses which lasted longer than one week, we find that approximately one-half of the cases were some form of respiratory sickness.

The worst offender in the family of respiratory diseases, from the standpoint of time lost, is the common cold which, according to the record of the company mentioned, caused 70 per cent of the absences resulting from diseases of the respiratory system. Colds caused the disability of 4 out of 10 men annually, and of 7 out of 10 women each year.

The next most important respiratory disease from the standpoint of time lost by industrial employees is influenza or grippe. In the five years ending with 1924, grippe disabled members of sick benefit associations at a rate which was more than six times the frequency of all the other epidemic and infectious diseases put together.

The third largest group contains tonsillitis, sore throat, and quinsy. In the experience of sick benefit associations, diseases of the pharynx and tonsils ranked next to grippe in frequency.

The rate of respiratory sickness was found to be very different among the employees of certain industrial establishments as compared with others. Over a three-year period in the establishment showing the highest rate of respiratory illness there were five times as many cases of respiratory disease causing absence from work for more than one week, per 1,000 men on the payroll, as occurred

among the employees of the establishment which showed the lowest rate. Wide differences in the death rate as well as in the frequency of disabling sickness from the respiratory diseases are found in different industrial

groups, communities, and cities. A careful study of the causes of these differences would yield information which doubtless could be used to advantage in the work of preventing and controlling the diseases in this group.

LEAGUE OF NATIONS INTERNATIONAL LABOUR ORGANIZATION

Eleventh Session of the International Labour Conference

THE Eleventh Session of the International Labour Conference opens in Geneva on May 30. The agenda of this Conference consists of the following items:—

- I. Minimum wage fixing machinery (final discussion);
- II. Prevention of Industrial Accidents, including accidents due to coupling on railways (first discussion).

Besides dealing with the two items on its agenda, the 1928 Session of the Conference will have to proceed to the election of the Governing Body in accordance with the procedure laid down in Article 20 of the Standing Orders. The last election took place at the Seventh Session of the Conference in 1925. The Conference will also, as in preceding years, have to take note of the Director's Report.

The Canadian delegation to the Conference is made up as follows:—

Government Delegates.—The Honourable Peter Heenan, Minister of Labour of Canada; and Dr. W. A. Riddell, Canadian Advisory Officer, League of Nations, Geneva, Switzerland.

Technical Advisers to Government Delegates.—Mr. T. J. Coughlin, Ottawa, Canada; Mr. G. Filion, Montreal, P.Q.; Mrs. B. A. Rogers, M.L.A., Winnipeg, Man.; and Mr. H. B. McKinnon, Kenora, Ont.

Employers' Delegate.—Mr. H. H. Champ, vice-president, Steel Company of Canada, Ltd., Hamilton, Ont.

Technical Adviser to Employers' Delegate.—Mr. E. Blake Robertson, Ottawa representative, Canadian Manufacturers' Association, Ottawa, Ont.

Workers' Delegate.—Mr. Tom Moore, president, Trades and Labour Congress of Canada, Ottawa, Ont.

Technical Adviser to Workers' Delegate.—Mr. Robert J. Tallon, vice-president, Trades and Labour Congress of Canada, Montreal, P.Q.

Proposed Amendment to Treaty

A proposed amendment to Article 393 of the Treaty of Versailles, adopted by the 4th session of the International Labour Conference in 1922, would increase the membership of the Governing Body of the International Labour Office from twenty-four to thirty-two, made up of sixteen representatives of Governments, eight of employers and eight of workers, in order to secure the representation of a larger number of countries and thus make the composition of the Governing Body reflect more closely the world-wide character of the International Labour Organization.

Amendments to Part XIII of the Treaty require ratification by all the States represented in the Council of the League of Nations and by three-fourths (42) of the States members. There are still five ratifications required by May 30, 1928, when the next session of the Conference meets, if the election of a new Governing Body at that session is to take place on the new basis; otherwise the Governing Body will consist of only twenty-four members for a further period of three years. It is hoped, however, that the necessary ratifications will be registered before that date and that the Governing Body will accordingly be increased by eight members, in order to give effect to a desire frequently expressed by non-European and especially by Latin American States.

A ruling was given by the Council of the League of Nations in 1922 whereby Canada was declared to be one of the eight states of chief industrial importance, which under the provisions of Article 393 are entitled to seats on the Governing Body. The representation of Canada on the Governing Body, therefore, is not affected by the proposed enlargement of the membership.

Joint Maritime Commission

The 8th Session of the Joint Maritime Commission was held in Geneva on March 24 and 26, 1928, under the chairmanship of Mr. Arthur Fontaine (France), chairman of the Governing Body of the International Labour Office, there being present representatives of the employers' and workers' groups of the Gov-

erning Body, and representatives of both the ship owners of Great Britain, France, Germany, Norway, Japan, Netherlands and Belgium, and of the seamen of France, Great Britain, Germany, Netherlands, Sweden and Belgium.

The report of the director of the International Labour Office on its general work on maritime questions was considered by the Commission, and it was noted that the number of ratifications concerning maritime labour has increased during the year from 69 to 76.

The Commission was requested to take note of the work carried out by the Office in preparing the questions on the agenda of the Maritime Conference in 1929 and to make suggestions for the continuation of this work. Among these questions are: the regulation of hours of work on board ship; the protection of seamen in case of sickness or injury on board ship; the promotion of seamen's welfare in ports.

A resolution inviting the Governing Body to examine the possibility of placing on the agenda of the 1929 Conference the question of the institution of a minimum international standard of professional qualifications for masters, navigating officers and engineer officers in charge of watches on merchant vessels, was unanimously adopted.

In connection with the general problem of safety at sea, particular attention was given to the question of uniform load-line regulations, and the Commission unanimously passed a resolution noting with satisfaction that this problem is at present being examined by the competent technical authorities with a view to the holding of an international diplomatic conference to examine the possibility of adopting international uniform load-line regulations.

Publications of the International Labour Office

Occupation and Health.—The International Labour Office has recently issued two further brochures of "Occupation and Health," the encyclopaedia of hygiene, etc., which is in course of publication. The first relates to: Accumulators (storage batteries); Acetylene; Aniline; Arseniuretted Hydrogen; Aviation or Aviators' Sickness; and Tetra-Ethyl Lead. The second brochure deals with: Bakery Trade; Bleaching; Breathing Apparatus, Respirators, Gas Masks; Cadmium; Carbon Bisulphide; Carbon Tetrachloride; and Cobalt.

Organization of Agricultural Workers.—Among the latest publications of the International Labour Office is an important report on

"the Representation and Organization of Agricultural Workers," which is worthy of attention not only among agriculturists but also among all who are interested in the progress of trade unionism generally. In virtue of the guiding principles laid down in the "Labour" part of the Treaties of Peace, agricultural, as well as industrial labourers, are entitled to be represented in the International Labour Organization and to benefit by its work. The report summarizes the discussions which have taken place on this subject from time to time in various bodies of the League of Nations. The peculiarities of agricultural work and the large number of different classes of persons employed in agriculture, however, create problems in connection with the organization and representation of these workers which are of a specially complicated and delicate kind.

The definition of the term "agricultural worker", for example, must not merely lay down the branches of work which are to be regarded as agricultural, but also distinguish those persons engaged therein who are to be considered "workers." Between the employer and the hired labourer as such, there are in agriculture many different types of tenants, small holders and other persons who, in some respects, are independent employers or contractors, but in other respects resemble paid workers. This problem is also discussed in the report.

The greater part of the report is devoted to a comprehensive summary of the facts at present ascertainable relating to existing organizations of agricultural workers, their history, membership and importance. This is in accordance with the instructions contained in a resolution adopted by the Seventh Session of the International Labour Conference in pursuance of which the present study has been carried out.

According to the latest returns, nearly 45 per cent of the population of Saskatchewan was born within the province itself, and of the 820,738 persons listed, 624,548 are of British origin, according to a provincial report. Native-born Canadians comprise 525,372; those from the British Isles 98,041, and from other British possessions 1,060. Of the foreign-born citizens, numbering 196,190 or nearly 24 per cent, Russia is the largest contributor with 27,227. Austrians are second with 11,594, and Ukrainians third with 10,607. There are 8,284 Galicians, 7,356 Germans, 9,240 Norwegians, 7,282 Swedes, and 2,066 Danes.

REPORT OF COMMISSION ON SEASONAL UNEMPLOYMENT IN MANITOBA

THE appointment by the Government of Manitoba of a special commission to investigate the question of Seasonal Unemployment in Manitoba was announced in the *LABOUR GAZETTE* of November, 1927. The Commission was made up of Dr. R. W. Murchie (Chairman), Professor in the Manitoba Agricultural College; Mr. W. H. Carter, President of the Carter-Halls-Aldinger Company, contractors, Winnipeg; and Mr. F. J. Dixon, a former labour member of the Manitoba Legislature. This commission's report, presented to the Manitoba Government some weeks ago, has recently been printed. The report is of some eighty pages and the headings of its sections will give some idea of the general scope of the consideration given to the matter by the commission. These are as follows:—Introduction; (1) Summary and Recommendations; (2) Statistical Information; (3) Agriculture; (4) Construction; (5) Manufacturing; (6) Lumbering and Mining; (7) Transportation; (8) Employment Service of Canada; (9) Unemployment Insurance; (10) Unemployment Relief.

The method of procedure adopted by the commissioners is stated as having been: (1) A study of statistical and other data already compiled; (2) A series of interviews with leaders in the industrial world, both employers and employees; (3) Interviews with men and women who have been closely associated with the relief of unemployment; (4) Informal public conferences at which views of various citizens were heard; (5) Correspondence with authorities in other centres; (6) A study of literature already published on unemployment.

Recommendations

The recommendations of the commission; based upon its investigations, are as follows:—

Construction.—With a view to extending the building and construction season, it is unanimously recommended:

1. That a long time building program be arranged by the Provincial Government to act as a safety valve for unemployment in the building trades, and that the terms of contracts should be such as would compel the continuance of the work throughout the winter.

2. That when buildings of a particular type are desired, municipal authorities should encourage the building program by agreeing to remit for a short period of years the building improvements portion of the Municipal Tax on buildings of the desired type when constructed during the winter season.

3. That in order to stimulate winter construction the Municipal authorities should consider the advisability of remitting for a short period of years the building improvements portion of the Municipal Tax on buildings erected in winter.

4. That the city authorities should enforce the by-laws in respect to tenement houses. Such an enforcement of law would improve health conditions and the remodelling of such tenements would afford work for mechanics in winter.

5. That as much interior and frontage alterations as possible be undertaken in winter, since this type of work can be efficiently and economically done during that season.

6. That the attention of interested parties be directed to the beneficial effects of winter building campaigns in other cities on this continent.

7. That the work of the Board of Trade and other organizations of making a continuous appeal to the public on the subject of winter employment should be continued.

8. That a further study of winter construction be pursued by the Builders' Exchange and the Building Trades with a view to determining what types of building can be economically constructed in winter.

9. That Municipalities should plan their public improvements program before the end of the year in order to enable some of the work to be done during winter and to advance their program so as to avoid the fall rush for completion which frequently necessitates competition between civic improvements and harvest in the labour market in August and September.

10. That a long time program of road construction, with as much standardization as possible, be arranged to enable the road construction season to be extended by beginning earlier in the spring, and to enable the fabrication of bridges and other structures during the winter season.

Manufacturing.—With respect to the stabilization of employment within the manufacturing industries the following recommendations are unanimously made:

11. That manufacturers, individually and collectively, should attempt off-season advertising in order to induce customers to place their orders so as to obtain off-season prices and take advantage of the greater efficiency obtainable in slack periods.

12. That the Department of Public Works of the Province of Manitoba should plan an extensive program covering a three- to five-year period, and wherever possible should so place orders for the materials necessary to that program that those who supply the materials may take advantage of the slack season.

13. That the purchasing departments of the Dominion, Provincial and Civic Governments and large corporations be approached with a view to budgeting their purchases so as to place more orders during the off-season.

14. That the educational campaign sponsored by the Industrial Development Board should be continued by that body.

Employment Service.—In order that the Manitoba Branch of the Employment Service of Canada may be enabled to become a clearing house for all labour within the province the following recommendations are made:

15. That the Manitoba Employment Service be placed under the direction of the Bureau of Labour, instead of under the Department of Agriculture as at present, in order to bring the Service into closer touch with industry in the province.

16. That the Manitoba Employment Service should, by personal canvass and by extensive advertising, seek to obtain access for its applicants to a greater variety of jobs.

17. That the Employment Service maintain a closer touch with rural districts in order to predict more accurately the number and type of workers likely to be demanded.

18. That the Manitoba Employment Service should endeavour to obtain transportation rates for Manitoba harvesters similar to those obtained by eastern harvesters.

19. That the Women's Branch of the Manitoba Employment Service should be placed in a separate location from the general office.

Relief.—In order to prevent acute distress due to unemployment it is recommended:

20. That a definite agreement between the Dominion, Provincial and Municipal authorities covering the financing of unemployment relief is absolutely necessary before any comprehensive and uniform plan can be devised.

21. That the Provincial Government should, in co-operation with the Dominion Government, consider the advisability of establishing a national unemployment insurance covering all industries.

The report is a contribution of consequence in the field of literature on unemployment as affecting Canada, and it will no doubt be widely studied by those interested in the problem. In this notice no attempt is made to summarize the numerous findings of the commission which lead in each case to an appropriate recommendation for an amelioration of the condition complained of. The report contains numerous charts, quotations, and statistics in support of its conclusions. The findings of the commission were unanimous, except in so far as one item is concerned: while the other two commissioners felt that, for the purpose of encouraging more building in the winter time, some special arrangement or adjustment on the matter of rates of pay for workers in the construction industry (which, they hold, are now based on seven or eight months' work) should be made to cover the winter season. Mr. Dixon expressed his entire dissent from this view.

Employment Statistics

A reference to Canadian statistics of employment and unemployment, however, deserves a passing mention. After stating that trade union unemployment reports, employers' reports on employment, and the records of the Employment Service of Canada furnish

what information may be secured on the employment situation, each of these three classes of statistics is dealt with separately.

With regard to the trade union unemployment reports, it is stated that "it may be said that they are totally inadequate because the number of unions reporting is so small compared with the total number of unions in Canada and these unions report only very irregularly, so that it is impossible to compare figures given one month with those of another month." This statement is less than fair to this class of statistics, as approximately two-thirds of all local trade unions in Canada report to the Department of Labour each month—quite a representative number. For the last reporting date, more than 1,700 out of a total of slightly more than 2,600 local trade unions reported. Moreover, the variation is not great from month to month, being not more than 10 per cent. Statistically, the figures are quite comparable, one month with another.

Dealing with the index numbers derived from the employers' reports on employment, it is stated that "if a firm which had fifteen or more employees in 1920 has in the meantime absorbed some other establishment and so increased its business, the index of employment will now be high, although the total number of employees may be less than the total number of employees originally on the payrolls of the establishments which have been amalgamated." In compiling these statistics the base number for each firm is always used. Thus, if two or more firms amalgamate, the base number used in respect of the amalgamation is the total of the bases for the individual firms, being the figures of January, 1920, in each case.

Dealing with the Employment Service of Canada figures, the report says (in part): "Also, many classes of workmen and working women do not care to register at the Employment Service, so that the bulk of the work done by the Employment Service is in placing agricultural labour, unskilled labour and the placing of men and women in casual employment." While it is true that in Manitoba and, likewise, in Alberta and Saskatchewan, due to the preponderance of agriculture in the province, agricultural placements constitute a large proportion of the work of the employment offices, in other provinces the situation is not the same, and the figures for placements by industry show that only about 30 per cent of the offices' placements are in agriculture—not a particularly large percentage when the importance of agriculture is remembered. Besides, a substantial percentage are placements of skilled workers, so that the statement that the bulk of the work performed by the Ser-

vice is in placing the classes mentioned in the report is not borne out by the figures.

Summarizing the value of all these statistics, it is said: "One year may be compared with another, but this type of comparison is limited because changes in the method of the collection of statistics have made long-time com-

parisons impossible." This statement is rather unusual, in view of the fact that in the case of no one of the three classes of statistics has any change of method occurred since their earliest collection, which would in any degree vitiate the value of comparisons between any two dates.

NINTH ANNUAL MEETING OF THE EMPLOYMENT SERVICE COUNCIL OF CANADA

THE Employment Service Council of Canada held its ninth annual meeting in Room 268 of the House of Commons, Ottawa, on April 19 and 20, 1928. It will be recalled that the Employment Service Council is a body composed of representatives of the Department of Labour and the provincial departments connected with the Employment Service of Canada, in addition to representatives of those interests throughout the country chiefly concerned in the general question of the employment situation and the proper functioning of the public employment offices under the Employment Offices' Co-ordination Act.

The meeting of the Council was formally opened by an address of welcome by the Hon. Peter Heenan, Minister of Labour. Mr. James Simpson, chairman of the Council, presided throughout the sessions.

The agenda of the meeting contained the following items:—

1. The question of increasing the number of returns submitted by local trade unions on the subject of unemployment.

2. Unemployment as affecting ex-service men.

3. The movement of harvest labour to the west, as affecting both the east and the west.

4. Immigration: its effects on the employment situation, especially as bearing on the work of the Employment Service of Canada.

5. The question of the relationship of private employment agents to the Employment Service of Canada.

6. The desirability of closer inspection of bush camps.

7. The question of the unemployable.

8. Methods of dealing with casual workers (both male and female).

9. The possibilities and difficulties of mobilizing labour.

10. The possible reaction of current employment conditions in the United States of America on conditions in Canada.

11. Seasonal unemployment, with special reference to the recommendations of the National Conference regarding Winter Employment in Canada in 1924.

All of these topics were discussed at length, and in line with the past policy of the Council, recommendations concerning them were

adopted for presentation to the Minister of Labour at a later date by the executive.

The representatives attending the Conference were as follows:—

Representing their respective provinces—Hon. J. A. Walker, Halifax; Mr. Geo. R. Melvin, Saint John; Mr. Joseph Ainey, Montreal; Mr. J. H. H. Ballantyne, Toronto; Mr. J. A. Bowman, Winnipeg; Mr. G. E. Tomsett, Regina; Mr. Walter Smitten, Edmonton; Mr. J. D. McNiven, Victoria.

Representing the Canadian Manufacturers' Association—Mr. H. W. Macdonnell, Toronto.

The Trades and Labour Congress of Canada—Mr. J. T. Foster, Montreal, and Mr. James Simpson, Toronto.

The Railway Association of Canada—Mr. C. P. Riddell, Montreal.

The Canadian Railway Brotherhoods—Mr. S. N. Berry, Cedar Rapids.

The Canadian Council of Agriculture—Mr. Bruce McNevin, Omeme, and Mr. J. W. Ward, Winnipeg.

The Returned Soldiers' Organizations—Mr. George Herwig, Ottawa.

The Canadian Construction Association—Mr. J. Clark Reilly, Ottawa.

The Canadian Lumbermen's Association—Mr. R. L. Sargent, Ottawa.

The Department of Soldiers' Civil Re-establishment—Mr. E. H. Scammell, Ottawa.

The Department of Labour—Mrs. Chas. Caucutt, Kenora; Mrs. Edith Rogers, M.L.A., Winnipeg; and Mr. R. A. Rigg, Ottawa.

Mr. E. Blake Robertson, Ottawa, one of the two members of the Council representing the Canadian Manufacturers' Association, was unable to attend owing to the fact that he had left for Europe, where he will attend the International Labour Conference at Geneva.

The election of officers resulted in the selection of Mr. James Simpson as Chairman (for a second term); Mr. J. Clarke Reilly as Vice-Chairman; and Mr. R. A. Rigg as Secretary (re-elected). The full Executive Committee will be composed of the three officers elected and three additional members, one to be named by each of the following:—The Trades and Labour Congress of Canada, the Canadian Manufacturers' Association, and the Canadian Council of Agriculture.

EMPLOYMENT AND UNEMPLOYMENT IN CANADA DURING MARCH

THE following information as to the employment situation in Canada is based upon reports from four sources:—

(1) The Dominion Bureau of Statistics receives reports each month from most of the larger employers of labour throughout Canada in all industries except agriculture, fishing, hunting and highly specialized business, the returns representing firms employing fifteen workers or more. The number of firms so reporting in March was 6,191. An employment index number is maintained, based on the number of workers employed by such firms in January, 1920, as 100;

(2) The Department of Labour receives reports from local trade unions throughout Canada, showing the number of their members

who were unemployed in the period under review. The number of unions reporting for March was 1,705. It should be understood that the report on the number of unemployed workers refers only to organized labour, no figures being available as to the number of unorganized workers who were without employment;

(3) The Department of Labour receives reports from the 64 offices of the Employment Service of Canada showing the number of applications for work, the existing vacancies and the number of workpeople placed in positions;

(4) The Dominion Bureau of Statistics receives each month detailed statistics from 63 cities throughout Canada, showing the value of permits granted during the period for various classes of building construction.

Employment Situation at the Beginning of April, 1928, as Reported by the employers Making Returns to the Dominion Bureau of Statistics

Employment at the beginning of April showed a slight decline, which was somewhat smaller than that noted on April 1, 1927, and considerably less extensive than the reductions indicated in the spring of earlier years of the record. The situation continued decidedly better than on April 1 of any other year since 1920. The Dominion Bureau of Statistics tabulated returns from 6,191 firms whose staffs aggregated 842,940 persons, compared with 844,294 in the preceding month. The index number stood at 101.1, as compared with 101.4 on March 1, and with 96.2, 91.4, 87.2, 89.3, 87.6, 80.8 and 84.1 on April 1, 1927, 1926, 1925, 1924, 1923, 1922 and 1921, respectively.

The most outstanding changes in employment were the heavy seasonal losses in logging, where staffs were reduced by nearly 17,000 persons, and the pronounced advances in manufactures and construction. Transportation, trade, services and communications also recorded improvement.

Employment by Economic Areas

The Maritime and Prairie Provinces and British Columbia reported heightened activity, while curtailment was registered in Quebec and Ontario.

Maritime Provinces.—There was an increase in employment in the Maritime Provinces in the period under review, when the 516 co-operating employers enlarged their payrolls by 645 persons to 64,888. Manufacturing, min-

ing, transportation and construction were busier, but logging was seasonally slack. The index was slightly higher than at the beginning of April in any of the last four years.

Quebec.—Manufactures showed improvement, notably in the iron and steel division, and trade also afforded more employment, while logging and connections reported seasonal contractions, those in the former being especially marked. Statements were received from 1,369 firms, with 233,765 employees, as against 237,723 on March 1. The index was much higher than on the corresponding date in any other year of the record.

Ontario.—The trend of employment was slightly downward in Ontario, where 2,836 employers released 609 workers from their staffs, bringing them to 358,908 on April 1. A small increase had been indicated by the 2,728 firms making returns for the same date in 1927, but the index then was over five points lower than at the beginning of April this year. Seasonal losses were shown in logging, while manufactures and construction recorded large increases in employment, and smaller gains were noted in mining, communications, services and trade.

Prairie Provinces.—In contrast with the losses usually shown at the beginning of April, there was a slight advance in the Prairie Provinces in the period under review. This took place chiefly in manufacturing and construction, and to a smaller extent in transportation, services and trade, while logging and

mining were seasonally slack. The working forces of 819 co-operating employers aggregated 109,857 persons, compared with 109,639 on March 1. The index, at 102.6, was nearly eight points higher than on April 1, 1927; it was also higher than on the same date in any other year since 1920.

British Columbia.—Continued improvement was noted in British Columbia, according to returns tabulated by the Bureau from 651 firms with 75,522 employees, or 2,350 more than in the preceding month. Additions to staffs had also been indicated on April 1 a year ago, when employment was in smaller

been indicated. Iron and steel plants, trade and transportation recorded heightened activity, but textile, electric current and tobacco factories and construction were slacker.

Quebec.—Boot and shoe and pulp and paper plants registered the most outstanding gains in Quebec City, while there were losses in transportation and construction. Statements were received from 98 employers with 10,094 workers, as compared with 9,957 in the preceding month. Although the improvement indicated on April 1, 1927, was more pronounced, employment then was in smaller volume than on the date under review.

EMPLOYMENT IN CANADA AS REPORTED BY EMPLOYERS

NOTE.—The curve is based on the number of employees at work on the first day of the month, as indicated by the firms reporting, in comparison with the number of employees they reported in January, 1920, as 100.

volume. The greatest gains at the beginning of April were in manufacturing, notably in lumber mills, and in construction, services and trade, while logging camps released some help.

Table I gives index numbers by economic areas.

Employment by Cities

Employment increased in the eight cities for which special tabulations are made, the gains in the Border Cities and Toronto being most noteworthy.

Montreal.—Further expansion was shown in Montreal, according to 736 firms who reported the addition of 956 persons to their staffs, bringing them to 114,918 on April 1. The situation was considerably better than on the same date last year, when increases had also

Toronto.—Further and larger gains were reported in Toronto, where conditions were much better than at the beginning of April, 1927. The working forces of the 816 co-operating firms totalled 106,680 persons, or 1,425 more than on March 1. Considerable increases were registered in manufacturing, notably in iron and steel, and in building, transportation, services and trade.

Ottawa.—There was a small advance in employment in Ottawa; an aggregate payroll of 10,598 workers was reported by the 132 employers whose statistics were tabulated, and who had 10,540 in their last report. The index was several points higher than in the spring of 1927.

Hamilton.—Manufacturing afforded increased employment in Hamilton, mainly in building

material and iron and steel works, while only small changes occurred in other industries. Returns were compiled from 200 firms employing 30,011 persons, or 499 more than on March 1. The level of employment was slightly higher than on the same date a year ago, although the gains then indicated were rather larger.

Windsor and the Other Border Cities.—There was a pronounced expansion in employment in the Border Cities on April 1, which resulted in a more favourable situation than in any other month since 1925, when the record for these cities was commenced. Data were received from 121 firms employing 14,272 workers, as against 11,765 in the preceding month. Automobile plants reported a very large share of the advance.

Winnipeg.—Employment increased in Winnipeg, where 571 persons were added to the payrolls of the 292 employers furnishing statistics, who reported 28,456 workers. Manufactures, especially pulp and paper and iron and steel plants, were busier, while smaller gains were shown in construction and services. On April 1, 1927, a minor decline had been indicated, and the index was several points lower.

Vancouver.—Continued improvement was noted in Vancouver, according to 247 firms with 25,685 employees, as compared with 25,234 in the preceding month. The most marked increases were in construction and trade. Smaller gains had been made at the beginning of April last year, when the index was slightly lower.

Index numbers by cities are given in Table II.

Manufacturing

Further marked improvement was recorded in manufacturing, particularly in the iron and steel industries. Lumber, food, building material, mineral product, non-ferrous metal, chemical and electric current plants also afforded increased employment, while pulp and paper, tobacco and textile works showed curtailment. Statements were received from 3,834 manufacturers, employing 488,267 operatives, as compared with 479,231 in the preceding month. The situation continued better than on the corresponding date in any other year since 1920; in most of the intervening years the trend has been upward, but the advance this spring was above the average.

Animal Products, Edible.—Improvement was noted in fish and meat-preserving establishments, chiefly in Quebec and British Columbia. Statements were tabulated from 169 firms employing 15,275 workers, as against

14,779 at the beginning of March. This increase was similar in size to that recorded on April 1, 1927, when the index number was several points lower.

Leather and Products.—Boot and shoe factories reported seasonal reductions in personnel, while minor gains were noted in other branches of this group. The 190 co-operating employers reduced their payrolls from 18,408 persons in the preceding month, to 18,354 at the beginning of April. A considerable falling-off had been indicated on April 1 a year ago, and employment then was below its level at the time of writing.

Lumber and Product.—Seasonal expansion was indicated in rough and dressed lumber mills, and furniture and other wood-using works were also busier. The improvement was more pronounced than on the corresponding date a year ago, when the index was lower. Statistics were compiled from 686 manufacturers with 45,220 employees, as compared with 43,508 at the beginning of March. The tendency was generally upward except in the Prairie Provinces, but the largest gains were in British Columbia.

Musical Instruments.—There was a decrease in musical instrument factories, 40 of which employed 2,852 persons, or 145 less than on March 1. The reduction took place in Quebec and Ontario. Employment was not so active as at the beginning of April, 1927, improvement having then been noted.

Plant Products, Edible.—In contrast with the contraction indicated on the same date last year, there was an increase in employment in the period under review, chiefly in flour and other cereal, biscuit and sugar and syrup factories. Returns were tabulated from 303 firms whose payrolls rose from 25,366 persons in the preceding month to 26,759 at the beginning of April. Quebec and Ontario reported most of the advance. The index was rather higher than in the spring last year.

Pulp and Paper Products.—The movement in pulp and paper factories was downward, while there were small increases in other branches of this group, according to the data received from 478 firms. They employed 60,008 workers as compared with 60,751 in their last report. A large proportion of the shrinkage was in Quebec and Ontario. Employment was in considerably greater volume than on April 1 in other years of the record; the tendency in the spring of 1927 was upward.

Rubber Products.—Activity in 37 rubber works advanced slightly, 97 persons being added to their staffs, which totalled 15,018. Practically no change had been shown on the corresponding date last year, when the index was some 10 points lower.

Textile Products.—There was a reduction in employment in textiles at the beginning of April, chiefly in cotton and woollen mills, while garment and personal furnishing factories were busier. Although improvement had been noted on the corresponding date in 1927, the situation then was not so favourable. Statements were compiled from 513 manufacturers with 76,270 employees, or 274 less than on March 1. Most of the decline was in Quebec.

Tobacco, Distilled and Malt Liquors.—Decreases in employment on a larger scale than on April 1, 1927, were recorded in this group, 643 persons being released from the working forces of the 125 co-operating establishments, which employed 13,835 workers. The contraction took place chiefly in tobacco works in Quebec and Ontario. The index was higher than in the spring of any other year since the series was instituted in 1920.

Chemicals and Allied Products.—One hundred and thirteen plants turning out chemical and allied products reported 7,127 employees, as compared with 6,977 in their last return. Quebec and Ontario* registered practically all the gain. Conditions were better than on April 1 in other years for which data are available.

Clay, Glass and Stone Products.—Further general increases in personnel were noted in building material works, 120 of which employed 10,305 persons, as against 9,534 in their last report. This increase was over twice as large as that registered on the corresponding date in 1927, when the situation was not so favourable. All except the Prairie Provinces shared in the upward movement, which, however, was most pronounced in Ontario.

Electric Current.—Further improvement was shown in this group, in which 89 plants reported 12,868 workers, or 156 more than at the beginning of March. British Columbia registered most of the advance. The level of employment was higher than in the spring of any other year of the record.

Iron and Steel Products.—Statistics were received from 656 manufacturers in this group, whose staffs were enlarged by 6,488 employees to 141,358 at the beginning of April. There were considerable gains in automobile and other vehicle factories, as well as additions to

payroll on a smaller scale in rolling mills, heating appliances and other branches of the industry. Improvement was shown in all provinces except British Columbia, that in Ontario being most noteworthy. Less marked expansion had been recorded in the same period last year, when the index number was many points lower than on April 1, 1928.

Non-ferrous Metal Products.—Returns tabulated from 107 manufacturers in this group showed that they employed 17,299 persons, as against 17,044 on March 1. Most of the increase took place in Ontario. The level of employment was considerably higher than in the spring of earlier years of the record.

Mineral Products.—Heightened activity was reported in these industries at the beginning of April, 322 workers having been added to the forces of the 73 co-operating establishments, in which 10,289 persons were employed at the beginning of April. Gas, oil and other mineral product works shared in the advance, which was largely made in the Prairie Provinces. The volume of employment in this group also was greater than in the same period of other years since the series was commenced.

Logging

Continued and greater seasonal losses were shown in logging camps, 259 of which reduced their payrolls from 37,536 men on March 1 to 20,675 on the date under review. The most extensive decreases were in Quebec and Ontario, although all provinces indicated reductions. Smaller contractions had been reported on April 1, 1927, but employment then was in somewhat smaller volume.

Mining

Coal.—In contrast with the increase shown at the beginning of April last year, there was a falling-off in employment in coal mines during the period being reviewed, mainly in the Prairie Provinces. Data were received from 89 operators, whose staffs included 26,648 employees, as against 27,823 in their last report. The index was the same as in spring last year.

Metallic Ores.—Reports were received from 64 firms in this group employing 13,617 workers, or 128 more than at the beginning of March. Most of the gain was in Ontario. Improvement had been indicated on the corresponding date in 1927, but the index number then, as in other years of the record, was lower.

NOTE.—Number employed by the reporting firms in Jan. 1920=100 in every case. The "Relative Weight" shows the proportion of employees in the indicated area to the total number of all employees reported in Canada on the date under review.

TABLE I.—INDEX NUMBERS OF ALL EMPLOYMENT BY ECONOMIC AREAS, AND OF DOMINION EMPLOYMENT IN MANUFACTURING

	Canada	Maritime Provinces	Quebec	Ontario	Prairie Provinces	British Columbia	All manufacturing
Apr. 1, 1921.....	84.1	87.2	80.4	83.5	88.7	88.1	80.7
Apr. 1, 1922.....	80.6	80.6	77.5	81.1	82.1	85.9	78.0
Apr. 1, 1923.....	87.6	90.5	85.5	88.4	83.5	92.8	85.6
Apr. 1, 1924.....	89.3	84.6	91.5	87.6	87.0	99.6	86.5
Apr. 1, 1925.....	87.2	83.4	89.8	84.9	84.1	100.1	84.3
Jan. 1, 1926.....	89.6	84.4	90.7	86.3	95.1	100.5	83.2
Feb. 1.....	90.7	85.1	92.6	88.1	90.7	103.6	85.9

All Industries	100.0	101.1	101.4	96.2	91.4	87.2	89.3

¹The "Relative Weight" column shows the proportion that the number of employees in the indicated industry is of the total number of employees reported in all industries by firms making returns on the date under review.

Non-metallic Minerals, other than Coal.—Continued advances were registered in quarries and other divisions of this group; 69 firms employed 6,420 persons, as compared with 6,318 in the preceding month. Rather greater advances were indicated by the 66 employers furnishing statistics on April 1 last year, when the situation was not so favourable.

Communications

According to information received from 183 communication companies and branches, they enlarged their staffs by 278 employees to 24,745 on April 1. Conditions continued better than in the spring of other years of the record, in most of which the trend was also upward.

There were general gains throughout the Dominion, the largest being in Ontario.

Transportation

Small changes only were shown in local and steam railway operation, but in shipping and stevedoring a considerable advance was made. Statistics were compiled from 268 employers of 109,049 workers, as compared with 107,990 on March 1. Of the former number, 20,373 persons belonged in the local transportation, 77,024 in the steam railway and 11,652 in the water transportation division. In all these branches, employment was in greater volume than on the corresponding date last year; the general improvement then was on a smaller scale.

Construction and Maintenance

Building.—Employment in building construction continued at a high level, although the index was very slightly lower than on April 1, 1927, when the additions to staffs were smaller. Statements were compiled from 479 contractors with 29,166 persons in their employ, or 2,523 more than in their last report. Quebec, Ontario and British Columbia recorded most of the improvement, while in the remaining provinces curtailment was indicated.

Highway.—Further seasonal reductions were noted on highway construction and maintenance; 121 contractors employed 6,014 men, as compared with 7,070 in the preceding month. Quebec and the Prairie Provinces registered a large share of the decline. Although increased activity had been shown on April 1, 1927, the number then reported in this work was smaller than in the period under review.

Railway.—There was a substantial increase in employment in the construction departments of the railways in the Maritime and

Western Provinces and Ontario. The working forces of the 36 co-operating contractors and divisional superintendents aggregated 32,992 men, whereas in the preceding month they had 29,867 employees. The index number was higher than in the spring of any other year since 1920.

Services

This group showed further gains, according to 175 firms with 16,175 employees, compared with 15,700 in the preceding month. Laundries and cleaning establishments registered the greatest improvement, mainly in Ontario and the Western Provinces.

The trend was also upward at the beginning of April, 1927, but the advances were on a smaller scale and employment was in less volume than on the date under review.

Trade

There was a gain of 1,012 persons in the forces of the 614 wholesale and retail establishments making returns, which employed 69,172 workers on April 1. A less pronounced increase had been indicated on the same date a year ago; employment then, as at the beginning of April in every other year of the record, was lower than on the date under review. The improvement in retail stores was particularly marked, although the trend was also upward in wholesale houses. There were increases in all provinces.

Tables I, II and III give index numbers of employment by economic areas, leading cities and industries, respectively. The columns headed "relative weight" show the proportion that the number of employees reported in the indicated area or industry, is of the total number of employees reported in Canada by the firms making return on April 1, 1928.

Unemployment in Trade Unions in Canada at the Close of March, 1928

The term unemployment as found in the following reports refers to involuntary idleness due to economic causes. Persons who are engaged in employment outside their own trades, or who are idle due to illness, are not considered as unemployed. Unions which are involved in industrial disputes are not included in these tabulations. As the number of unions making returns varies from month to month, with consequent variation in the membership upon which the percentage of unemployment is based, it should be understood that such figures have reference only to the organizations reporting.

The percentage of unemployment reported by local trade unions at the close of March was slightly smaller than that recorded at the end of the preceding month, although somewhat in excess of the percentage indicated on the last day of March, 1927. For the month under review reports were tabulated from 1,705 labour organizations, with a united membership of 183,846 persons, 11,965, or a percentage of 6.5 of whom were idle on March 31st, compared with percentages of 7.0 in February and 5.7 in March last year. British Columbia unions, with a gain in employment of 3 per cent, and Quebec unions

with a 2.1 per cent increase, were the only provinces to register improvement during March over the previous month, fishermen and building tradesmen being mainly responsible for the advance in the former province, and the garment, iron and steel and building trades in the latter. In all other provinces there were reductions in the volume of work available, the most noteworthy of which occurred in Nova Scotia, where a net decline of 1.9 per cent was recorded, due to greater inactivity in coal mining areas, and in Saskatchewan where the unemployment increase was 1.5 per cent, owing to less favourable conditions in the building trades. When comparing the situation with that which existed in March of 1927, Nova Scotia unions alone registered additional employment, while in the

comparison with the returns of March, 1927, Regina was the only city to register greater activity during the month under review. In Montreal there was no change in the percentage of idle members, while in all other cities employment declined.

The accompanying chart is an indication of the unemployment trend among trade union members by months from January, 1922, to date. Contrary to the upward course, followed by the curve in the first two months of this year, during March the projection was slightly downward, showing a gain in the amount of work afforded. The unemployment level was, however, higher during March than that reached in the same month of 1927.

In the manufacturing industries unemployment was less prevalent in March than in the

PERCENTAGE OF UNEMPLOYMENT AS REPORTED BY TRADES UNIONS

remaining provinces there were declines in work afforded, ranging from .5 percent in Quebec to 3.4 per cent in Saskatchewan.

A separate record is kept each month of unemployment among trade union members in the largest city of each province with the exception of Prince Edward Island. During March, Halifax, although showing the largest percentage of inactivity of any of the cities used in the comparison, namely 9.2 per cent, yet indicated an improvement of 4 per cent over February. From Edmonton 8.5 per cent of idleness was reported in March, a slightly greater percentage than in the previous month, while Vancouver with 8.2 per cent of idle members registered slightly better conditions than in February. Regina unions showed the most favourable situation of any of the cities, 4.0 per cent of the members being without work, this percentage indicating a considerable increase in employment over February. In

preceding month, the percentage of idleness at the close of the month standing at 6.1 as compared with 7.3 per cent in February. From unions in the manufacturing industries 445 reports were received during March, comprising a membership of 50,086 persons, 3,039 of whom were without work at the close of the month. The garment trades reported the most substantial improvement over February with contributory gains, although of lesser magnitude, among wood and iron and steel workers. Cigarmakers, glass workers, paper makers and fur workers, however, showed a considerable falling off in employment. When comparing with the situation in March, 1927, when 5.2 per cent of the members were idle, iron and steel, glass and wood workers, papermakers and cigarmakers all reported a drop in available work, and the garment, textile and printing trades, and metal polishers slightly greater activity.

From unions of coal miners reports received for March totalled 41, indicating a membership which aggregated 16,862 persons, 1,589 or a percentage of 9.4 of whom were out of work at the close of March, contrasted with 4.9 per cent in February and 11.3 per cent in March last year. The increase in unemployment over February and attributable for the most part to greater inactivity among both Nova Scotia and Alberta coal miners, though British Columbia miners also reported a nominal adverse change. The situation in the Nova Scotia coal mines was, however, somewhat better than in March last year: in Alberta there was slight curtailment of operations, and in the British Columbia mines the increase in employment reported was very small. The situation for quarry workers in Nova Scotia showed advancement during March over the preceding month but a somewhat larger number of idle members was reported than in March last year.

Due to the commencement of seasonable activity in building operations, the percentage of unemployment in the building group during March showed a decline, when compared with that of February. Returns were tabulated

TABLE I.—PERCENTAGES OF UNEMPLOYMENT IN TRADE UNIONS BY PROVINCES

from 201 unions of building tradesmen at the close of March, with a membership of 21,281 persons, 4,067 of whom, or a percentage of 19.1, were idle, compared with 23.2 per cent in February. The increase in activity during March was apparent mainly among bricklayers, masons and plasterers, painters, decorators and paperhangers, carpenters and joiners, plumbers and steamfitters, and steam shovel and dredgemen, and in much lesser degree among electrical workers, and hod carriers and building labourers. Extensive contractions in employment were reported by bridge and structural iron workers, and reductions on a smaller scale by tile layers, lathers and roofers, and granite and stonecutters. In comparing with the March, 1927, conditions, when the unemployment percentage stood at 18.7, painters, decorators and paperhangers, granite and stonecutters, tile layers, lathers and roofers, bricklayers, masons and plasterers, and steam shovel and dredgemen all indicated a slightly upward trend of employment, while of the reductions in the remaining trades which more than offset these gains, the most noticeable was that reported by bridge and structural iron workers.

The change in the percentage of idleness in the transportation industry as a whole, during March as compared with the previous month was so small as to be almost negligible. Fluctuations, however, were registered in the various divisions of the industry. For March returns were received from 701 unions of transportation workers with a membership of 63,681 persons, 4.0 per cent of whom were reported idle at the end of the month, as compared with 4.1 per cent in February. The steam railway division, whose returns included over 82 per cent of the entire group membership reporting, registered but a nominal increase in the volume of activity, while among navigation workers, street and electric railway employees, and teamsters and chauffeurs, miner reductions in employment were reported. The situation in the transportation industry as a whole was less favourable during March than in the same month last year when 2.9 per cent of inactivity was registered, navigation, steam and street and electric railway employees, teamsters and chauffeurs all contributing a small quota to the unemployment gain.

From longshore workers during March, whose returns are tabulated separately 17 reports were received, comprising a membership of 7,877 persons, and indicated 18.0 per cent of idleness compared with 13.4 per cent in February. Unemployment also increased when compared with March, 1927, the percentage of slackness at that time standing at 14.7.

Very little change was shown during March from either the previous month or March last year by the 143 unions of public service employees from whom reports were tabulated, and whose membership netted 13,180 persons, the percentage of unemployed members in each month being less than one per cent. Federal employees in the three months used here for comparative purposes reported all their members busy, while civic employees were more actively engaged than in February, but were afforded less work than in March last year.

In the miscellaneous group of trades the 105 returns tabulated included a membership of 5,083 persons, 7.0 per cent of whom were idle on March 31 compared with 8.0 per cent at the close of February. The employment tendency among hotel and restaurant employees, barbers, theatre and stage employees, and office workers was better during March than that of the previous month, while the percentage of idleness for stationary engineers and firemen remained the same for both months under comparison. During March last year

the percentage of unemployed members in the miscellaneous group as a whole stood at 5.5, the increased slackness recorded during March this year in comparison occurring among stationary engineers and firemen, hotel and restaurant employees, barbers and office workers. On the other hand, employment for theatre and stage employees improved considerably.

Fishermen with 3 unions reporting 1,019 members, indicated a fully engaged situation during March contrasted with 27.5 per cent of unemployment in February, and with no inactivity in March last year. Among lumber workers and loggers a small percentage of idleness was registered during March, compared with no unemployment in either the previous month or in March, 1927.

Table No. 1 on page 506 summarizes the returns by provinces for March of each year from 1919 to 1925 inclusive, and for each month from January, 1926, to date, and table No. II on page 507 shows the percentages of idleness registered in the various groups of industries for the same months.

Employment Office Reports for March, 1928

Substantial increases were noticeable in the volume of business transacted by the offices of the Employment Service of Canada during the month of March, 1928, when the figures were compared with those of the preceding month and also with those of the corresponding period last year. The percentage of gain in the former instance was over 16 per cent, while in the latter comparison it was almost 13 per cent. All groups except logging showed increased placements under both comparisons, the gains shown in farming and services being the most pronounced.

The accompanying chart shows the trend of employment since January, 1926, as represented by the ratio of vacancies offered and placements effected for each one hundred applications for work registered at the offices of the Service throughout Canada, computations being made semi-monthly. The curves of vacancies and placements in relation to applications rose steadily during the month, and at the close of the period the levels shown by both were considerably higher than those registered at the close of the corresponding period a year ago. The ratio of vacancies to each one hundred applications was 71.5 and 74.1 during the first and second half of March in contrast with the ratios of 67.5 and 69.4 during the same periods of 1927. The ratios of placements to each one hundred applications during the periods under review were 65.4 and

68.8 as compared with 60.2 and 61.4 during the corresponding month of 1927.

The average number of applications for employment received daily by the offices of the Service throughout Canada was 1,264 during the first half of March, as compared with 1,195 during the preceding period, and with 1,293 daily during the first half of March, 1927. Applications for work during the latter half of the month numbered 1,453 daily in contrast with 1,371 daily during the latter half of March a year ago.

The average number of vacancies reported by employers to the Service daily was 903 during the first half, and 1,077 during the latter half of the month under review, as compared with the daily average of 873 and 952 vacancies during the month of March, 1927. Vacancies offered to the Service during the latter half of February, 1923, averaged 825 daily.

The average number of placements made daily by the offices of the Service during the first half of March, 1928, was 827, of which 502 were in regular employment and 325 in work of one week's duration or less, as compared with the total average placement during the preceding period of 775 daily and with 779 daily during the first half of March a year ago. During the latter half of the month under review placements averaged 1,000 daily (651 regular and 349 casual), as compared with an

average of 841 daily during the corresponding period of 1927.

During the month of March, 1928, the offices of the Service referred 26,216 persons to vacancies and effected a total of 24,730 placements. Of these the placements in regular employment were 15,640, of which 11,750 were for men and 3,890 for women, while the placements in casual work totalled 9,090. The number of vacancies reported by employers was 16,881 for men and 9,926 for women, a total of 26,807, while applications for work numbered 36,762, of which 25,820 were from men and 10,942 from women.

NOVA SCOTIA

During March orders received at employment offices in Nova Scotia called for nearly 16 per cent more workers than in the preceding month but over 10 per cent less than in the corresponding month last year. Placements were over 14 per cent higher than in February but more than 11 per cent below March, 1927. The manufacturing industries and construction showed the largest declines in placements from March last year, while services and trade showed the largest gains. The changes in other groups were small. Industrial divisions in which most of the place-

POSITIONS OFFERED AND PLACEMENTS EFFECTED FOR EACH ONE HUNDRED APPLICATIONS FOR EMPLOYMENT

The following table gives the placements effected to date by the offices of the Employment Service of Canada:—

Year	Placements		
	Regular	Casual	Totals
1919 (10 months).....	268,001	37,904	305,905
1920.....	366,547	79,265	445,812
1921.....	280,518	75,238	355,756

1928 (23 months).....	40,820	24,559	65,379

ments were effected during the month included: manufacturing, 42; logging, 39; construction and maintenance, 25; trade, 58; and services, 383, of which 287 were of household workers. Placements in regular employment numbered 67 of men and 56 of women.

NEW BRUNSWICK

Orders listed at offices in New Brunswick during March called for over 19 per cent more workers than in the preceding month and nearly 20 per cent more than during the corresponding month last year. There was a gain of over 21 per cent in placements when compared with February and of nearly 19 per cent

in comparison with March, 1927. Although logging was the only group in which fewer placements were made during the month under review than in the corresponding month last year, nearly all the gains under this comparison were in services, there being small gain only or no change in the other groups. Placements by industrial divisions included: manufacturing, 35; transportation, 36; construction and maintenance, 35; trade, 21; and service, 445, of which 328 were of household workers. Regular employment was found for 82 men and 71 women during the month.

QUEBEC

Opportunities for employment as indicated by orders received at employment offices in the Provinces of Quebec during March were over 7 per cent better than in the preceding month, but nearly 32 per cent less in February than in the corresponding month last year. There was a decline of nearly 6 per cent in placements when compared with February, and of over 26 per cent in comparison with March, 1927. Reduced placements in the logging industry were mainly responsible for the decline from last year, although there was a substantial reduction in placements of construction workers. The only groups to show any gain were farming and trade. Industrial divisions in which most of the placements were effected during the month included: manufacturing, 98; logging, 123; farming, 38; construction and maintenance, 289; trade, 40; and services, 533, of which 393 were of household workers. During the month 596 men and 508 women were placed in regular employment.

ONTARIO

There was an increase of over 11 per cent in the number of positions offered through offices in Ontario during March when compared with the preceding month and of over 1 per cent in comparison with the corresponding month last year. Placements were over 8 per cent higher than in February and over 6 per cent in excess of March, 1927. Farming was the only industry to show any appreciable decline in placements from last year. The most noteworthy gains were in construction and maintenance and services. Placements by industrial divisions included: manufacturing, 1,591; logging, 949; farming, 716; mining 119; transportation, 204; construction and maintenance, 2,079; trade, 348; and services, 3,378, of which 2,160 were of household workers. There were 4,123 men and 1,290 women placed in regular employment during the month.

MANITOBA

Employment opportunities as indicated by orders listed at offices in Manitoba during

March were nearly 20 per cent better than in the preceding month and 5 per cent better than in the corresponding month last year. There was a gain of nearly 29 per cent in placements over February, and of nearly 8 per cent when compared with March, 1927. The manufacturing industries and farming were the only groups to show declines in placements from March last year, and these were small. Construction and maintenance and services showed the largest gains. Industrial divisions in which most of the placements were effected during the month included: manufacturing, 81; logging, 245; farming, 968; construction and maintenance, 174; trade, 195; and services, 1,707, of which 1,280 were of household workers. Regular placements numbered 1,380 of men and 648 of women.

SASKATCHEWAN

During the month of March positions offered through employment offices in Saskatchewan were 83 per cent higher than in the preceding month and 21 per cent above the corresponding month last year. There was an increase in placements of 71 per cent over February and of 25 per cent when compared with March, 1927. All groups except transportation, construction and maintenance and trade participated in the gains in placements over March last year, those in farming and services being the most noteworthy. Placements by industrial divisions included: manufacturing, 74; farming, 1,552; transportation, 52; construction and maintenance, 183; trade, 85; and services 1,043, of which 680 were of household workers. During the month 1,710 men and 602 women were placed in regular employment.

ALBERTA

There was an increase of 60 per cent in the number of positions offered through offices in Alberta during March when compared with the preceding month and also in comparison with the corresponding month last year. Placements were nearly 54 per cent higher than in February and nearly 60 per cent above March, 1927. All industrial groups except manufacturing participated in the gains in placements over the corresponding month last year, those in farming being the most pronounced. Industrial groups in which most of the placements were effected included: manufacturing, 229; logging, 208; farming, 1,782; mining, 49; transportation, 50; construction and maintenance, 328; trade, 87; and services, 812, of which 632 were of household workers. Regular employment was procured for 2,386 men and 432 women during the month.

BRITISH COLUMBIA

The demand for workers as indicated by orders listed at offices in British Columbia during March was nearly 36 per cent higher than in the preceding month and 13 per cent above the corresponding month last year. There was an increase of nearly 47 per cent in placements over February and of nearly 18 per cent over March, 1927. Mining, services and trade showed reductions in placements from March last year, but all other groups showed gains, the most noteworthy being in construction and maintenance and farming. Most of the placements in the latter group were transfers to the Prairie Provinces. Placements by industrial divisions included: manufacturing, 413; logging, 269; farming, 449; mining, 74; transportation, 163; construction and maintenance, 647; trade, 98; and services, 856, of which 491 were of household workers. During the month 1,406 men and 283 women were placed in regular employment.

Movement of Labour

During the month of March, 1928, the offices of the Employment Service of Canada made 15,640 placements in regular employment, 9,659 of which were of persons for whom the employment found was outside the immediate locality of the offices at which they were registered. Of the latter 2,075 were granted the Employment Service reduced transportation rate, 1,323 travelling to points within the same provinces as the despatching office and 752 to other provinces. The reduced transportation rate which is 2.7 cents per mile with a minimum fare of \$4, is granted by the railway companies to *bona fide* applicants at the Employment Service who may wish to travel to employment at a distance for which no workers can be secured locally.

The Quebec offices transferred 50 bushmen at the reduced rate. Hull despatching 39 to Sudbury regions and 5 to each of the Cobalt and North Bay zones and Montreal one to a point within its own zone.

The number of workers travelling from Ontario centres at the special rate was 318, of whom, 279 were conveyed to stations within the province and 39 to points in other provinces. Those who profited by the reduced rate provincially from North Bay included one steel sharpener going to Cobalt, 29 bushmen to Timmins and 2 farm labourers to the Brantford zone, while from Cobalt 3 hand drillers and 5 miners went to Port Arthur and 3 cooks, 2 firemen and one carpenter to Timmins. Sault Ste. Marie received one engineer and one fireman from Pembroke, Ottawa 8 hydro labourers from Toronto, Timmins one farm hand

from Niagara Falls and Cobalt one cook from Hamilton. To points within their respective zones Port Arthur transferred 8 bushmen and 3 building construction labourers, Timmins 4 machine runners, 2 blacksmiths and 7 mine workers, Sudbury 32 bushmen, 6 building construction labourers and 3 carpenters and Fort William 127 bushmen and 29 construction labourers. For operations in the mining regions of the Winnipeg zone 13 shaft miners were sent from Sudbury and 19 miners, one deck man and one hoisting engineer from Cobalt. From Sudbury also 2 miners travelled to employment in the Hull zone. The remaining 3 transfers outside the province were of 2 coopers going from Hamilton to Montreal and of one farm hand from Kingston to Drumheller.

Transfers from Manitoba offices involved an issue of special rate certificates numbering 783, of which 440 were provincial and 343 inter-provincial. Persons travelling on certificates from Winnipeg and destined for points within the province included 8 construction labourers, 2 hotel cooks, one engineer, one track foreman, one carpenter, 2 kitchen maids, one crane man, one fireman, one camp cook and 2 bartenders for Dauphin and vicinity, 3 hotel workers for Brandon, 43 construction labourers, 28 rock men, 3 steel sharpeners, 3 cooks, one clerk and one hotel porter for stations within the Winnipeg zone and 312 farm hands and 22 farm household workers for various provincial farming localities. In addition 2 rock men, one labourer and one section man went from Dauphin to employment within the territory covered by that office. Of those conveyed to points outside the province the Winnipeg office despatched 138 bushmen, 23 sawyers, 7 teamsters, 3 camp repairers, 2 camp cooks, 2 millwrights, one farm hand and 4 female hotel workers to stations in the Port Arthur zone, 5 section men and one shovel man to Saskatoon, 3 female hotel workers to Regina, one waitress to Estevan, one kitchen maid and one waitress to Prince Albert, one cooper to Montreal, 126 farm hands and 3 farm domestics to Saskatchewan districts and 19 farm hands to points in Alberta. From the Brandon office one farm labourer and one farm housekeeper were shipped to the Saskatoon zone.

Of the 177 certificates issued by Saskatchewan offices 174 were granted to persons going to employment within the province and 3 to other provinces. Provincially 141 of the transfers were of farm hands and 8 of farm domestics for various rural parts, the majority of whom were granted certificates by the Saskatoon and Moose Jaw offices. From Saskatoon also 6 bushmen travelled to employment in

the Prince Albert zone and from Moose Jaw one porter was sent to Regina and one gas engineer and one hotel housekeeper to points within its own zone. Those transferred from Regina included 2 housekeepers and one domestic for Moose Jaw, one auto trimmer, 2 domestics and one housekeeper for Saskatoon, 4 bushmen for Yorkton, one blacksmith for Swift Current and one housekeeper for Weyburn. The remainder, 2 teamsters and one bushman, were despatched from Prince Albert to points within its own zone. The movement outside the province was of 2 housekeepers and one farm hand, who were sent at the special rate from Regina to Edmonton zone.

Persons in Alberta using reduced rate certificates numbered 334, of whom 289 went to employment in various parts of the Province and 45 to outside centres. Of the former, Calgary transferred one bushman, one male cook and 2 male hotel workers to points in the Edmonton zone, one carpenter and one construction cook to Lethbridge, one hotel cook and one hotel housekeeper within the Calgary zone and 64 farm hands and 5 farm domestics to positions chiefly in the Calgary, Drumheller and Edmonton zones. From Edmonton 74 farm hands, 5 farm domestics, 68 bushmen, 8 miners, 3 cookees, 10 teamsters, 11 carpenters, one mine labourer, one blacksmith, 2 bricklayers, one hotel porter, 2 labourers, 3 housekeepers, 4 cooks, one tailoress, one engineer, one fireman, 6 sawmill workers, one camp cook, and 2 waitresses all were sent to points within the Edmonton zone, 2 farm hands and one miner to the Calgary zone, 2 farm hands to Lethbridge and one farm hand to each of the Drumheller and Medicine Hat zones. All persons who travelled outside the province were for Saskatchewan farming regions, 37 of whom were farm hands and 8 farm domestics, mainly for work in the vicinity of Saskatoon.

Building Permits Issued in Canada During March, 1928

According to returns tabulated by the Dominion Bureau of Statistics, the value of the building permits issued by 63 cities during March was \$14,916,247; this was an increase of \$4,592,842 or 44.5 per cent over the February total of \$10,323,405, and of \$3,202,607 or 27.3 per cent, as compared with the aggregate of \$11,713,640 reported for the corresponding month in 1927. The March, 1928, total was the highest for that month in the record of the 63 cities. Building costs, as shown by the Bureau's index number of wholesale prices of building materials, continued lower than in earlier years of the record.

British Columbia offices issued 413 certificates for reduced transportation, 140 to provincial districts and 273 to points in other provinces. Vancouver effected transfers of 113 persons to points within the province including 7 carpenters, 3 bushmen, 3 gardeners, 2 engineers, 2 farm labourers, one flunkey, one dam labourer, 2 machine drillers, one cook and one mucker for the Penticton zone, 19 bushmen, 2 farm labourers, 9 miners, one cook, 4 mining construction labourers and 23 railroad construction labourers for the Kamloops zone, 18 carpenters for Nelson, one steel sharpener and one mucker for Prince George, one veneer maker for Cranbrook and 5 miners, 3 waitresses, 3 cooks and one farm labourer for employment within the Vancouver zone. In addition, Prince George despatched 10 sawmill labourers, 3 bushmen, 2 bridge men, one engineer, one river man and 2 axe men, Prince Rupert 4 miners and one cook, and Penticton and Nelson each one farm hand to points within their respective zones. From New Westminster also one carpenter was sent to employment in Nelson. The movement to other provinces was for the most part of farm labour, Alberta receiving 179 farm hands and 3 farm domestics, Saskatchewan 75 farm hands and 5 farm household workers and Manitoba 2 farm hands. Practically all of these travelled from Vancouver. The Vancouver office also issued certificates to one accountant going to Regina, one cook and one housekeeper to Moose Jaw, one diamond drill setter to Cobalt, one cook and 3 household workers to Edmonton and one domestic to Medicine Hat.

Of the 2,075 persons who took advantage of the Employment Service reduced transportation rate 1,103 were conveyed by the Canadian National Railways, 886 by the Canadian Pacific Railway, 78 by the Temiskaming and Northern Ontario Railway, 7 by the Pacific Great Eastern Railway and one by the Kettle Valley Railway.

Some 50 cities furnished detailed statistics, showing that they had granted over 1,100 permits for dwellings valued in excess of \$5,100,000 and for some 2,200 other buildings estimated to cost approximately \$9,600,000. In February, authority was given for the erection of over 700 dwellings and nearly 1,600 other buildings, estimated at approximately \$3,400,000 and \$6,800,000, respectively; the latter included the permit for a grain elevator in Vancouver, valued at \$2,000,000.

All provinces except British Columbia reported increases in the building authorized during March as compared with the preceding

month. The greatest absolute gain was that of \$1,871,832 or 45.0 per cent in Ontario, but larger proportionate increases were shown in the other provinces.

As compared with March, 1927, Nova Scotia, Quebec, Ontario, Manitoba, Saskatchewan and Alberta recorded increases, that of \$1,195,742, or 76.5 per cent, in Quebec being most pronounced. There were decreases in New Brunswick and British Columbia, the former showing a decline of 80.8 per cent and the latter of 17.0 per cent.

Of the larger cities, Montreal, Toronto and Winnipeg registered increases as compared with the preceding month and also as compared with March last year. In Vancouver, on the other hand, there were decreases in both comparisons. Of the smaller centres, Halifax, Westmount, Belleville, Brantford, Hamilton, Kingston, Kitchener, Niagara Falls, Oshawa, Port Arthur, St. Boniface, Regina, Saskatoon, Edmonton, Lethbridge, Medicine Hat, Nanaimo, Prince Rupert and South Vancouver reported higher totals than in either February, 1928, or March, 1927.

Cumulative Record for First Quarter, 1928.—

The following table gives the value of the building authorized by 63 cities during March, and in the first three months of each year since 1920, as well as index numbers for the latter, based upon the total for 1920 as 100. The average index numbers of wholesale prices of building materials in the first quarter of the same years are also given (1913=100).

Year	Value of Permits Issued		Indexes of value of permits issued first quarter (1920=100)	Average indexes of wholesale prices of building materials in first quarter (1913=100)
	In March	In first quarter		
1928.....	\$14,916,247	\$32,952,256	174.3	147.8
1927.....	11,713,640	25,028,353	132.4	147.3
1926.....	10,634,491	22,493,574	119.0	152.3
1925.....	8,631,627	19,981,015	105.7	153.8
1924.....	9,493,620	18,047,999	95.4	167.3
1923.....	9,658,950	19,478,119	103.0	164.9
1922.....	10,615,531	18,680,173	98.8	161.1
1921.....	7,290,589	13,569,512	71.8	207.8
1920.....	8,736,675	18,909,986	100.0	208.1

The aggregate for the elapsed months of 1928 was higher by 31.7 per cent than the total for the same months of 1927, the previous high level of this record of nine years.

The accompanying table gives the value of the building permits issued by 63 cities in February and March, 1928, and March, 1927. The 35 cities for which records are available since 1910 are indicated by asterisks.

¹ Report not received.

REPORT OF THE EMPLOYMENT SERVICE OF CANADA FOR THE PERIOD JANUARY TO MARCH, 1928

THE volume of business transacted by the offices of the Employment Service of Canada during the quarter January to March, 1928, showed improvement over that effected during the corresponding quarter of 1927, as there was an increase of over 4 per cent in the vacancies offered and of nearly 5 per cent in the placements effected in regular and casual employment. All groups, except logging and finance, registered gains in both instances. In the former there were marked declines, but in finance the contractions were nominal only. The most noteworthy gains occurred in construction and maintenance and in services. All provinces, except Nova Scotia and Quebec, showed increases under both comparisons, reductions in logging being the determining factor in the decline shown in Quebec. The accompanying table gives the vacancies and placements in the Employment Service of Canada by industrial groups in the various provinces during the period January to March, 1928.

From the chart on page 509 which accompanies the article on the work of the employment offices for the month of March, it will be seen that the curves representing the ratio of vacancies and of placements in relation to applications rose steadily throughout the quarter. Though the levels reached during January of this year were not so high as those recorded in January a year ago, yet at the close of the quarter under review the level of vacancies was about 5 points higher than that shown for the latter half of March, 1927, while the curve of placements was over 7 points above that attained during the corresponding period last year. During the period January to March, 1928, there was a ratio of 67.9 vacan-

cies and 62.7 placements for each one hundred applications for employment as compared with 66.9 vacancies and 61.0 placements during the corresponding period a year ago. The average number of applications registered daily during the quarter under review was 1,354, of positions offered 919, and of placements effected 850, in contrast with the daily average of 1,334 applications, 892 vacancies and 814 placements in regular and casual employment during the first quarter of 1927.

During the three months January to March, 1928, the offices of the Service reported that they had made 69,969 references to positions and had effected a total of 65,379 placements, of which 40,820 were in regular employment and 24,559 in casual work. Of the placements in regular employment 30,366 were of men and 10,454 of women, while casual work was found for 13,701 men and 10,858 women. A comparison with the same period of 1927 shows that 61,842 placements were then made, of which 40,616 were in regular employment and 21,226 in casual work. Applications for employment during the period under review were received from 72,651 men and 31,578 women, a total of 104,229, in contrast with the registration of 101,346 during the same period of 1927. Employers notified the Service during the first quarter of 1928 of 70,763 positions, of which 45,177 were for men and 25,586 for women, as compared with 67,767 opportunities for work offered during the corresponding period of 1927.

In another section of this issue will be found a report in detail of the transactions of the employment offices for the month of March, 1928.

EMPLOYMENT AND UNEMPLOYMENT IN OTHER COUNTRIES

DETAILED reports and tables showing the employment conditions in Great Britain and Northern Ireland are given in the *British Ministry of Labour Gazette* from month to month. A monthly summary of this information is also published, and this summary is reproduced below, showing the employment situation during March. The following report on employment conditions in the United States is based on the information contained in the *Monthly Labour Review*, published by the United States Department of Labour, each issue containing statistics showing the trend of employment throughout the country during the second month prior to the date of publication. The statement contained in the April issue relates to the situation existing in February, 1928.

Great Britain

Employment showed a continued steady improvement during March. There were further seasonal increases in the numbers employed in the building trades and public works contracting, in the allied industries of brick, tile, and cement manufacture, in woodworking and furniture making, and in the tailoring and dressmaking trades. There was also an improvement in the pottery, glass bottle, motor vehicle, rubber, tinplate, and wool textile industries, and in the shipping service. In coal mining, a slight increase in the numbers wholly unemployed was more than balanced by a decrease in the numbers temporarily stopped. On the other hand, employment showed a slight decline at coke-oven and by-product works, in iron and steel manufacture, in the ship-building and ship-repairing industry, in the linen industry, and in the dock, canal, river, etc., service.

Among the workpeople (aged 16-64 inclusive, and numbering approximately 11,800,000) insured against unemployment under the Unemployment Insurance Acts in Great Britain and Northern Ireland, the percentage unemployed (including those temporarily stopped as well as those wholly unemployed), in all industries taken together was 9.6 at 26th March, 1928, as compared with 10.4 at 20th February, 1928, and 9.8 at 21st March, 1927.

The percentage wholly unemployed was 7.7 at 26th March, 1928, as compared with 8.2 at 20th February, 1928; while the percentage temporarily stopped was 1.9 as compared with 2.2. The total number of applicants for employment registered at Employment Exchanges in Great Britain and Northern Ireland at 26th March, 1928, was approximately 1,063,000 of

whom 858,000 were men and 146,000 were women, the remainder being boys and girls. At 27th February, 1928, it was 1,139,000, of whom 911,000 were men and 158,000 were women; and at 28th March, 1927, it was 1,115,000, of whom 905,000 were men and 153,000 were women.*

United States

According to the April issue of the *Monthly Labour Review*, employment in manufacturing industries in the United States increased 1.5 per cent in February, 1928, as compared with January, 1928, and pay-roll totals increased 4.9 per cent. These increases more than overcame the decreases in both items reported in January, which were mainly due to inventory taking and repairs, so that employment in February stood at a higher level than it has since November while pay-roll totals were greater than at any time since October.

The Bureau of Labour Statistics weighted index of employment in manufacturing industries for February, 1928, is 85.5, as compared with 84.2 for January, 1928, 85.1 for December, 1927, and 91.0 for February, 1927; the weighted index of pay-roll totals for February, 1928, is 90, as compared with 85.8 for January, 1928, 89.3 for December, 1927, and 96.4 for February, 1927.

The data for February, 1928, are based on reports from 10,807 representative establishments in 54 of the chief manufacturing industries of the United States. These establishments in February had 2,984,424 employees, whose combined earnings in one week were \$80,904,364.

Employment in January and February.—Thirty-nine of the 54 separate industries had more employees in February than in January, and 39 industries reported increased pay-roll totals, although the two lists of industries were not in every instance identical.

Notable increases in employment were as follows:—9.5 per cent in the automobile industry, 3.3 per cent in iron and steel, 16.5 per cent in fertilizers, 13.8 per cent in stoves, and 4.1 per cent in automobile tires. Other industries showing marked improvement in employment were: slaughtering and meat packing, sugar refining, silk goods, clothing, foundry and machine shop products, pottery, stamped

*THE LABOUR GAZETTE, April, 1928, quoted a note (page 386) by Sir William H. Beveridge, director of the London School of Economics, describing the basis of the official estimate of unemployment in Great Britain.

ware, carriages, agricultural implements, and pianos. Decreases in employment were not of any great size in any industry. Cotton and woollen goods both fell off slightly as did saw-mills, paper and pulp, cement, and electrical machinery and supplies. Ship-building showed a decrease of over 5 per cent.

It is indicated that substantial gains in employment were shown in February in 9 of the 12 groups of industries, the vehicle group leading with a gain of 4.4 per cent; the lumber group showed no change; the paper groups a slight decrease, and the group of miscellaneous industries a loss of 1.6 per cent.

The vehicle and iron and steel groups of industries reported gains in pay-roll totals of 13.8 per cent and 9.6 per cent respectively.

Each of the nine geographic divisions reported both increased employment and increased pay-roll totals in February. These increases were especially marked in both the East North Central and the West North Central divisions, and also in the East South Central division.

Employment in 1927 and 1928.—A section of the chapter on the trend of employment deals with a comparison of employment and pay-roll totals in February, 1928, and February, 1927. The level of employment in manufacturing industries in February, 1928, was 6 per cent below the level of employment in February, 1927, and pay-roll totals were 6.6 per cent lower.

Comparing conditions in February, 1928, with February, 1927, decreased employment is shown in each of the 12 groups of industries. The outstanding decreases occurred in the

miscellaneous, iron and steel, stone-clay-glass, and lumber groups, and the smallest decreases in the food, paper, tobacco, textile, and vehicle groups.

The food group of industries, as a whole, reported an increase of 1.7 per cent in pay-roll totals, but the remaining 11 groups reported decreased pay-roll totals ranging from 0.3 per cent in the paper group to 15.8 per cent in the group of miscellaneous industries.

The notable increases in separate industries over this 12-month period again were made in the automobile industry—6.4 per cent in employment and 14.1 per cent in pay-roll totals—followed by agricultural implements, rubber tires, rubber boots and shoes, fertilizers, flour, slaughtering and meat packing, and silk goods, with substantial though smaller increases.

The pronounced decreases in employment from February, 1927, to February, 1928, appeared in the ship-building (29 per cent), petroleum refining (18 per cent), piano, steam railroad car building and repairing, cast iron pipe, foundry and machine shop products, steam fittings, and stove (10.6 per cent) industries. The iron and steel industry had dropped 6.9 per cent of its employees, and woolen and worsted goods and saw mills each had 8.3 per cent fewer employees.

The East North Central geographic division showed a slight increase in employment over this 12-month period, but the remaining eight divisions had fewer employees at the end of the period than at the beginning, the losses having been greatest in the West South Central, Middle Atlantic, and New England divisions and smallest in the West North Central, South Atlantic, and Pacific divisions.

AGREEMENT BETWEEN NOVA SCOTIA COAL MINERS, UNITED MINE WORKERS OF AMERICA, DISTRICT 26, AND THE PRINCIPAL MINE OPERATORS

AN agreement was signed on May 3, 1928, between the United Mine Workers of America, District 26, representing the coal miners employed by the subsidiary companies of the British Empire Steel Corporation, Limited, operating coal mines in both Cape Breton Island and the mainland, namely, the Acadia Coal Company Limited, Stellarton, in Pictou County; the Cumberland Railway and Coal Company, Springhill, in Cumberland County; the Dominion Coal Company Limited, Glace Bay, in Cape Breton Island; and the Nova Scotia Steel and Coal Company, Limited, Sydney Mines, in Cape Breton Island. The agreement previously in effect expired on January 31, 1928, and negotiations for a re-

newal have been in progress since the latter part of 1927. The text of the expired agreements with the four companies is practically identical in each case with the exception of the wage scales, datal and piece rates, and was printed in the *LABOUR GAZETTE* for April, 1926, pp. 388-392.

The new agreements are substantially renewals of these with certain additions, and are to be in effect from Feb. 1, 1928, to Jan. 31, 1930.

The miners, following the District Convention, November 29, 1927, had proposed increases in wages of 20 per cent for all datal miners at \$4 per day and less, 15 per cent for datal men between \$4 and \$4.75, and 10 per cent increase for datal men above \$4.75 per

day and for all contract miners, and the operators maintained their inability to meet such higher mining costs. The expiring agreement, like the present, had been based upon the recommendations of the Royal Commission appointed by the Provincial Government, October 31, 1925, of which Sir Andrew Rea Duncan, Chairman of the Advisory Committee of the British Mines Department, was chairman, printed as a supplement to the *LABOUR GAZETTE* for January, 1926. In Section 2, the Commission recommended that in future wages should be "in accordance with the ability of the industry to pay, as determined by the proceeds of the coal operations."

In Sections 16 and 17 the Commission recommended provisions for adjusting the payment to the mine employees according to the proceeds from the coal mining operations separately and to have the books of the coal operators gone over by accountants on behalf of the employees. During the negotiations the union representatives maintained that as a result of market conditions the corporation could afford to increase the wages, the officers of the corporation not agreeing. On the last day of January, the agreement expiring, both parties agreed that work should continue under the terms of the expiring agreement while negotiations were carried on. Shortly after this there was a change in the controlling interests of the corporation and several new directors were chosen. Negotiations were resumed between the new officers and the union but did not at once result in any settlement, and were, indeed, about to be broken off when, through the efforts of the Minister of Labour, the Honourable Peter Heenan, there was further consultation, and following a conference at Montreal on March 24 the basis of an agreement was reached. Subsequently the representatives of both parties proceeded with the draft of the agreements for the four coal companies and these were agreed to on April 5. The agreements were submitted to a referendum of the miners on April 19 and approved by a vote of 7,182 in favour, with 1,494 against, a majority of 5,688.

The arrangement is that profits from coal operations above those for 1927 (approximately \$1,000,000) up to \$300,000 are to be divided among the datal miners below \$4.00 per day and of any additional profits 25 per cent is to be divided among all the miners. A preliminary distribution of \$12,500 per month from January to October is to be made and at the end of the year the remainder of the miners' share is to be paid out. Early in May the amounts for the period January to May were distributed, amounting to 10 cents per day for those on day wages from \$3.25 to \$3.50 per

day, 8 cents per day for those up to \$3.70 per day and 6 cents per day for those up to \$4.00.

The following is the text of the agreement with the Dominion Coal Company, Limited, the text of the others being practically identical, and the attached memorandum of the basis of the agreement and the day wage schedules for the four coal companies are included.

Agreement between the Dominion Coal Company, Limited, and District No. 26, of the United Mine Workers of America

Preamble—This agreement is made on the basis, and in accordance with the terms of the Royal Commission, composed of Sir Andrew Rae Duncan, Chairman, Major Hume Cronyn and Reverend H. P. McPherson, D.D., dated January 8th, 1926.

The parties hereto agree that during the period of this agreement, the scale of wages for labour shall be as set forth in the schedules attached thereto.

This agreement is also made on the basis of and in accordance with the terms of the memorandum attached to the schedule of wages covering arrangements arrived at between the President and others representing the Corporation and members of the U. M. W. Executive, April 2nd and 3rd, 1928.

No. 1. Hours of Labour:—The collieries will commence to hoist coal at 7 a.m. at which time all the men must be in the mine. The day's work will cease at 3 o'clock, when all arrangements will be available for conveying men to the surface. The surface men around the bankhead and screens, associated with the handling of coal, are to be on duty between the hours of 7 a.m. and 3 p.m., and for a short time after, if necessary, for the purpose of attending to such duties as will facilitate their own work, such time not to exceed a half hour. The standard of other surface labour around the collieries to be from 7 a.m. to 4 p.m. with half an hour for dinner. Where continuous attendance is required, the shifts will be eight (8) hours both surface and underground.

No. 2. Observance of Mining Laws: This contract shall conform to existing mining laws in the province of Nova Scotia, and both parties agree to co-operate in the observance of said laws.

No. 3. No Stoppage of Work:—It is distinctly understood and agreed that in case of all disputes and grievances of every nature arising under this contract, the mines shall continue to work pending settlement.

No. 4. Method of Settling Disputes:—(a) There shall be a Pit Committee consisting of three men at each mine, two of them must be practical coal miners.

(b) The duties of the mine committee shall be confined to the adjustment of disputes between the mine manager and the miners or mine labourers arising out of this agreement, or any district or local agreement made in connection therewith.

(c) When any grievance or grievances arise between the mine manager and the miners or

mine labourers and they fail to reach an agreement, the miners or mine labourers shall refer the grievance or grievances to the Pit Committee, and should they fail to reach an agreement with the mine manager, they shall refer grievance or grievances to the Local Superintendent and the District Executive should they fail to reach an agreement the grievance or grievances shall be referred to the General Manager and the District Executive.

(d) It is contrary to the spirit and intent of this Clause for any employee to attempt to, or to lay any mine or section of the mine idle for the purpose of forcing a settlement of any grievance.

No. 5. Duties of the Pit Committee:—The Pit Committee in the discharge of its duties shall under no circumstances go around the mine for any cause whatever unless called upon by the Mine Manager or his representatives and by a miner or Company man who may have a grievance he cannot settle with the Mine Manager or his representative; however, it is mandatory for the Mine Manager or his representative and the miner or Company man affected to make a request for the Pit Committee to come to the place or places where the grievance is at once, so that a thorough investigation can be made and adjustment of grievance made if possible.

Any Pit Committee-man who shall attempt to execute any local rule or procedure in conflict with any provision of this contract, or any made in pursuance hereof, shall be forthwith deposed as a Committee-man. The foregoing shall not be construed to prohibit the Pit Committee from looking after the matter of membership, dues and initiation in any proper manner.

Members of the Pit Committee employed as day men shall not leave their places of duty during working hours, except by permission of the Company, or in cases involving a stoppage of the mine.

No. 6. Hiring, Discharging and Time to be Paid for:—(a) The management of the mine, the direction of the working force, and the right to hire and discharge are vested exclusively in the operator, and the United Mine Workers of America shall not abridge these rights. It is not the intention of this provision to encourage the discharge of employees or the refusal of employment to applicants because of personal prejudice or activity in matters affecting the United Mine Workers of America. If any employee shall be discharged or suspended by the management, and it is claimed that an injustice has been done him, an investigation, to be conducted by the parties and in the manner set forth in Section 4, shall be taken up promptly and if it is proved an injustice has been done the management shall reinstate said employee and pay him full compensation for the time he has been suspended and out of employment.

NOTE.—Our understanding of Paragraph "A," Section No. 6, relating to "Discharge" is that no man shall be discharged except for sufficient cause other than personal prejudice or activity in matters relating to the United Mine Workers of America.

(b) Provided that if at the end of five days after the discharge of an employee who claims an injustice has been done him, and an investigation has not been made and a final decision reached within that time, such discharged employee will be given employment pending the final disposition of the case.

If the discharged employee be a miner, the employment given under this clause will be his regular working place, and, if a day man, he will be given such employment at day work as the management elects and that he is competent to perform, if such employment takes a lower rate of wages than that at which he was employed at the time of his discharge and the final decision of the case be in his favour, he will be paid in the final compensation and adjustment of the case at the same rate of wages he was receiving at the time he was discharged.

(c) In order that the no dispute will arise, it is hereby agreed that the foregoing paragraph of this section shall be construed that day men shall receive the scale wage for the work at which they were employed when suspended and miners \$4.15 per day.

(d) When the foreman, as provided for in Paragraph "A" of this section, directs an employee to do labour, the scale of wages being lower than his regular scale, he shall be paid the wage scale as paid for labour from which he was transferred during time employed.

(e) No member of the United Mine Workers of America shall be denied employment except for sufficient cause other than personal prejudice or activity in matters affecting the United Mine Workers of America, and when an applicant for work is denied employment and it is claimed by him an injustice has been done said applicant, investigation shall be conducted by the tribunals and in the manner set forth in Section No. 4 for the adjustment of grievances, and shall be taken up promptly. If it is proven an injustice has been done, the mine management shall give employment to said applicant. The reasons assigned for not employing said applicant shall be set forth during the investigation. It is understood and agreed that the taking-up and investigation of discharge of applicant case will take precedence over all other cases except shutdowns and no list shall be kept for the purpose of regulating the employment of applicants in violation of this contract.

(f) It is provided, however, the above provisions of this section shall not apply to a man that is a menace to the safety of the lives of himself or other employees in such mine. Neither shall it apply to an applicant who is incompetent to perform such labour or to men who continue to neglect their work, or for any other justifiable cause, for such refusal of employment, and no one shall be considered as coming under the provisions of above paragraphs who, when making application for work, is at the time employed elsewhere, or has an application for work pending at another mine.

(g) It is understood and agreed that the Company shall select its day and monthly men based upon their qualifications and fitness for the work to be performed, provided, however, an applicant claiming he has been discriminated against shall have the right of appeal as provided for in Paragraph "E" of this section and a hearing and final disposition of said appeal shall be made in conformity with Paragraphs "E" and "F" of this section. It is further provided that no day or monthly men employed at such work shall be transferred to mining ahead of any applicant waiting for employment as a miner, at the time said day or monthly man was employed.

(h) It is agreed that when a boy reaches the age of eighteen years, the management has the right to move him along to a higher classification of work, provided he is capable of performing such work.

No. 7. Day Men to Perform Work Assigned Them.—All day men shall do any class of work in or around the mine that the management may require of them; provided, however, he is paid scale price for such work, no man transferred to other work shall be paid less than his regular wages, any man transferred to other work carrying a higher rate of wages shall be paid the higher rate.

No. 8. Miners Requested to Fill Place of Other Employees.—When a miner shall be requested to fill the place of another employee, he shall receive the rate of wages paid for miners which is \$4.15, and each and every miner when called upon, who is competent to perform such work, shall take his turn in performing the work assigned him by the management for the day in question.

No. 9. Any Employee Absenting Himself from Work.—Any employee absenting himself from work two days and not reporting for work on the morning of the third day, shall forfeit his right to his working place, unless excused by the Mine Manager, but shall be given another place in turn; provided, however, this shall not apply in case of sickness.

No. 10. In Case Men Refuse to Continue at Work Because of a Grievance.—If any man refuses to continue at work because of a grievance which has not been taken up for adjustment in the manner provided herein, and such action shall seem likely to impede the operation of the mine, the Mine Committee, when called upon by the Mine Manager, shall immediately furnish a man or men to take such vacant place or places, in order that the mine may continue at work, and it shall be the duty of any member or members of the United Mine Workers who may be called upon, provided he is competent, when called upon by the Mine Manager, and Mine Committee, to immediately take the place or places assigned to him or them in pursuance thereof.

No. 11. No Grievance To Be Taken Up When Mine is Idle in Violation of Contract.—Under no circumstances shall a grievance be taken up for adjustment during a suspension of work in violation of this contract.

No. 12. Falls in Working Places.—Where a fall occurs in any working place, and which prevents the miner or miners from working at the face, the official in charge of the section, on being notified by the workmen, will immediately make arrangements to have the same cleaned up, providing he deems it advisable to do so. This work, when done by the miner, to be paid at rate of miners taken out of place.

No. 13. Deficient Work.—If any place in a mine becomes deficient for any reason other than the intervention of stone, the management and the men affected shall agree on a rate to be paid, while the place is deficient. Should they fail to agree, the men concerned shall continue to work in the place at the rate paid miners taken from place, which is \$4.15 per day, until such time as they elect to go on the regular rate of the place.

No. 14. Check Weighman.—Miners may elect a checkweighman, who must be an employee in or around the mine at the time and for at least three (3) months previous to his election, and the Company shall furnish him with a check number and he shall credit to his number the portion of coal checked off or deductions made from each and every man due to pay the check weighman for his day's work, or part of day, to pay his wages.

The Company shall give any man so elected a place in or around the mine at the end of his labours as check weighman.

No. 15. Re-employment of Officers.—The Company agrees that all men leaving their employment to accept elected or appointed positions with the United Mine Workers of America, will, at the expiration of their official duties, be given employment at the mine.

No. 16. Maintenance Men During Suspension of Mining.—In case of either local or general suspension of mining, either at the expiration of this contract or otherwise, the engineers, firemen, pumpmen, fanmen and such other maintenance men necessary to protect the mines shall not suspend work, except at the option of the operator, but shall fully protect all the Company's property under their care and operate fans and pumps and lower and hoist such men or supplies as may be required to protect the Company's property and any and all coal necessary to keep up steam at the Company's coal plants. But, it is understood and agreed that the operator will not ask them to hoist any coal produced by non-union labour for sale in the market. The operator, at his option, to retain only such engineers, firemen, pumpmen, fanmen and such other maintenance men necessary to protect the mines as are required, but with the understanding that all of the engineers, firemen, pumpmen, fanmen and such other maintenance men necessary to protect the mines employed at the time of the suspension shall be those regularly engaged at maintenance work. The operator will not employ officials on continuous service positions.

Should the interest of the engineers, firemen, pumpmen, fanmen and such other maintenance men necessary to protect the mines, be directly involved in any issue at the expiration of this contract, and any engineers, firemen, pumpmen, fanmen and such other maintenance men necessary to protect the mines cease work, the United Mine Workers of America will provide competent men to perform the emergency work above recited at the scale price in effect at the time of the suspension, subject to any subsequent settlement.

No. 17. Changes of Contract.—It is agreed that during the life of this contract nothing shall be done to decrease the earning power of the employees, or to increase the cost of production to the Company, also, it is hereby understood that no custom or condition in effect at any mine can be changed unless mutually agreed to by both parties to the contract.

No. 18. New Work.—When the development of a new mine is begun during the period of this agreement, or new machinery or methods of handling the products is installed, a scale of wages covering the labour at such new mines and under such changed conditions will be the same as in other mines in the neighbourhood where similar conditions exist. Where no simi-

lar conditions exist, a scale of wages and conditions will be made by the District Executive and the representatives of the Company.

No. 19. Placing Men Formerly on Local Contract.—Men who were formerly working on local contract will be given an opportunity to get to the coal face wherever and whenever possible.

No. 20. Recognizing the Pit Committee.—The Company will recognize the Pit Committee in the discharge of their duties, as provided for in this agreement.

No. 21. Check-off.—(a) The Company agrees to check off all dues, fines and initiations from all members of the United Mine Workers of America, employed in and around the collieries, also check-offs for assessments or levies for strictly United Mine Workers' purposes, authority to make such deductions to be given the Company by the President and Secretary of District No. 26, United Mine Workers of America, such authorities to state the purpose for which the assessment or levy is to be made.

(b) The maximum amount to be deducted for United Mine Workers' purposes in any one month shall not exceed Five Dollars.

No. 22. Deaths and Funerals.—(a) In the event of an instantaneous death by accident in the mine, employees shall have the privilege of discontinuing work for the remainder of that day only. Work, at the option of the operator shall be resumed the day following and continue thereafter.

(b) In case the operators elect to operate the mines on the day of the funeral of the deceased as above, or where death has resulted from an accident in the mine, individual employees may, at their option, absent themselves from work for the purpose of attending such funeral, but not otherwise, each member of the United Mine Workers of America employed at the mine at which the deceased member was employed, shall contribute Fifty Cents (50c) and the Operators Fifty Dollars (\$50) for the benefit of the family of the deceased or his legal representatives, to be collected through the office of the Company.

(c) Except in case of fatal accidents, as above, the mine shall in no case be thrown idle because of any death or funeral, but in the case of the death of any employee of the Company or member of his family, any individual miner may, at his option, absent himself from work for the purpose of attending such funeral, but not otherwise.

No. 23. Violation of Agreement.—No laws or rules shall be made by any local union or group of local unions in violation of this contract, joint agreements to have precedence over National, District and Local constitutions.

No. 24. Preparation of Coal.—The ability of the Company to sell coal and to pay wages being recognized as largely dependent upon the coal being clean and marketable, it is mutually agreed and understood that the miners will produce their coal in such manner as not to increase the percentage of fine coal, either by carelessness or the use of unnecessarily large quantities of powder, and will load coal free as possible from all impurities.

No. 25. Price of Workmen's Coal.—Workmen will be supplied with run-of-mine coal at \$3.65 per ton at the mine or coal yard.

Where it is necessary to transport the coal over a railway in order to make delivery, the

cost of transportation shall be added to the price.

No. 26. Sections of Mines Shut Down Indefinitely.—It is agreed wherein any section of a mine is shut down for an indefinite period, that the opportunity of a division of the work will be given to each and every man thrown out of employment. However, it is understood the question must be taken up with the management and an understanding reached as to the method that may be put into effect.

No. 27. Application of this Agreement.—The terms of this agreement apply only to men who are members of the United Mine Workers of America working in and around the mines and all who are eligible to membership in the United Mine Workers of America as set forth in the Constitution of the International Union.

No. 28. Expiration of Contract.—The contract is in effect from February 1, 1928, and will continue in full force and effect until January 31, 1930, and from year to year thereafter, unless notification to reopen contract is served by either of the parties hereto, such notification to be served not later than October 1st in any year later than the year 1928.

Upon receipt of such notification, the parties hereto agree to meet immediately thereafter with the object of adjusting any matters requiring attention in the present contract or of making a new contract.

No. 29. Obligations.—(a) All provisions and terms of this contract are hereby mutually agreed to by and between the Coal Company and all the miners of District No. 26 and signed by the representatives of the parties hereto, who have been duly authorized to execute the same on behalf of the Dominion Coal Company and on behalf of District No. 26 of the United Mine Workers of America, respectively.

(b) That the fulfilment of this agreement entered into is guaranteed by the International Union and the fulfilment of joint agreements entered into is guaranteed by the officers of the District, and it is their duty to see that all such agreements are carried out both in the letter and in the spirit.

Proposal Upon Which New Contract is Based

"On April 2 at a conference held between the U.M.W. Executive and President McNaught, J. H. Gundy, J. E. McLurg, and H. J. McCann, Mr. McNaught made the following written proposal:

"1. That all additional profit made during 1928 and 1929 above 1927 profits up to \$300,000 shall go exclusively to the men and be distributed to the lower paid datal men on a basis to be agreed upon forthwith.

"2. In addition to the above, 25 per cent of any further profits realized shall be paid pro rata to all of the men who work at least 85 per cent of the available time during the season of open navigation (excepting time lost due to sickness and accidents.)

"3. This arrangement to continue until January 31, 1930, and so long thereafter as may be mutually agreed upon.

"On the afternoon of the 3rd inst. the following details were agreed to:

"4. The U.M.W. Executive and the Company representatives will arrange a scale of wages

for the low paid datal men, increasing the total amount they will earn per annum by \$300,000 if the profits for 1928 exceed those for 1927 by \$300,000.

"5. Although the new contract will date from February 1, 1928, to January 31, 1930, it was agreed that the basis will be the profits earned during the fiscal years January 1, 1928, to December 31, 1928, and January 1, 1929, to December 31, 1929.

"6. (a) The Company agreed to pay during the year 1928, \$125,000 of its profits to the low paid men, on the following schedule:—

January..	\$12,500
February..	12,500
March..	12,500
April..	12,500
May..	12,500
June..	12,500
July..	12,500
August..	12,500
September..	12,500
October..	12,500

(b) It was agreed that as two or three weeks will elapse before the contract can be submitted to the men for approval by vote, the payment of \$50,000 for the months of January, February, March and April would be made to the men as early in May as possible, after the contract had been voted on favourably by the men. This payment will be made on the basis of the number of days worked during January, February, March and April.

(c) The subsequent monthly payments will also be distributed on the basis of the number of days worked during the previous month.

(d) By December 15 the Company will have a general idea of what its profits for the current year will be and if the indications are the profits will be in excess of \$125,000 over the profits for 1927, the Company will make a further distribution on or before December 22 on the basis of the number of days worked from January 1 to November 30.

(e) The profits of the Company for the year under review will be definitely known by January 15 following and between that and the end of the month the final distribution of profits up to and including \$300,000 in excess of the profits for 1927 will be distributed to the men affected on the same basis.

(f) Twenty-five per cent of all profits if earned in excess of \$300.00 for the year, over the profits of 1927 will be distributed on a percentage basis, based on the earnings of all men on regular schedule and contract rates, who have worked at least 85 per cent of the available time during the season of open navigation, excepting the time lost as under:

Sickness and accident according to compensation and relief fund records.

Saturday night shift work.

Men regularly employed who report for work and who for any cause are prevented from working.

Men off work on U.M.W. business. Records of these to be submitted by Sec'y.-Treas. of District at end of each month.

For the purpose of this agreement, the open season of navigation will be from May 1 to November 30 each year and this will apply to all employees of the Dominion Coal Company

and the Nova Scotia Steel and Coal Company covered by this agreement. This distribution of 25 per cent will apply to all employees of the Cumberland Railway and Coal Company and the Acadia Coal Company Limited covered by this agreement, who have worked at least 85 per cent of the available time during the winter period, October 1 to April 30.

"7. During the course of negotiations, the Company has agreed to grant increases in datal rates to certain classifications of men and the Company agrees that these increases in rates will date from February 1, 1928, and after the contract has been signed, payment will be made of these increases to the men affected from February 1 to date. The distribution of profits will apply on the schedule of rates of the contract dated February 1, 1928.

"8. All payments to employees to be made as detailed in Paragraphs "A," "B," "C" and "D" Section 3, must be claimed in full by the employees to whom they are due, by December 31 of each year and any payments unclaimed by that date will be included in the amount available for distribution in the following January.

"9. Since the last contract was signed in March, 1926, there has been an improvement in the relations between the men and management. The officials of the Company and the members of the U.M.W. Executive are on record in expressing their individual opinions that co-operation between the men and management is the first essential for the success of the coal mining industry in this province. The real purpose and object of this profit-sharing plan is improved co-operation, increased efficiency and reduced costs, thus enabling larger and broader markets to be secured and a greater number of days worked per year.

"10. It is agreed that during the life of the present contract there will be no undue increase in the number of datal men participating in the division of profits as arranged in the present contract, based on present operations, and that monthly statements giving statistics as to the number of datal men employed will be furnished the Sec'y.-Treas. of the District."

Datal Wage Schedules DOMINION COAL COMPANY LIMITED ALL COLLIERIES

Schedule of Datal Rates—Effective February 1, 1928

Classification	Rate per Day
SURFACE	
Tally boys, boys under 17 years (except as otherwise stated)	\$2 50
Lamproom boys, machinists' apprentices, compressor oilers, boys between 17 and 18 years (except as otherwise classified)	2 80
Labourers, masons' helpers, washhouse tenders (where not tending boilers), bank and screenmen, pit tub oilers, pickmen, ash wheelers and coal to fires, blacksmiths' helpers, single teamsters	3 25
Checkers and car haul men No. 1-B bank-head, double teamsters, tippelmen, unhookers and grabmen at head of slopes, washhouse and boiler tenders, fan enginemen, small steam engines and motor fans	3 40

Classification	Rate per Day
Tipplemen—1B bankhead, conveyormen, headmen (attending man cages and coal hoisting cages where men are lowered and dumping cage men), box car enginemen, fan enginemen, large steam fans or fan men doing extra work except at No. 2, screen and bank mechanic, brook and reservoir pumpmen, tubemen and 2nd class carpenters, lamp-room men, head screenmen, compressor-men with oilers.	3 65
Stokers, ordinary; car shunters and trimmers	3 75
Blacksmiths, 2nd class; main endless haulage enginemen, fan enginemen (Nos. 2 and 9 combined), machinists, 2nd class; electricians, carpenters, 1st class; bank and screen mechanics, No. 12	3 80
Blacksmiths, 1st class	3 95
Head stokers	4 00
Compressormen, doing own oiling or looking after fans or dynamos; machinists, 1st class	4 15
Main enginemen, shafts and man rake haulage, Nos. 1-B, 2, 4, 12, 14, 16.	\$4 25
Hoisting enginemen, not otherwise specified.	4 25
Hoisting enginemen, Nos. 4 and 10.	4 50
Shaftmen.	4 65
Hoisting enginemen Nos. 12, 14 and 16.	4 75
Masons (surface) hoisting enginemen (No. 2 colliery and 1-B, day shift)	5 00
Stablemen (monthly)	105 75

Hours of Labour

Surface men around Bankhead and Screens associated with the handling of coal are to be on duty from 7 a.m. until 3 p.m. and for a short while after, if necessary, for the purpose of attending to such duties as will facilitate their own work such time not to exceed one half-hour.

The standard of other surface men around the colliery to be from 7 a.m. until 4 p.m., with one half-hour for dinner.

Where continuous service is required the shift will be eight hours.

Where not more than one shift is in effect the hours of labour will conform to the above.

Boys' Rates

Boys over seventeen years of age capable of performing to the satisfaction of the management the duties of any classified job at which they may be employed will be paid the schedule rate applicable to such job.

Payment for Overtime

Time and one-half for overtime and double time for Sundays and Statutory Holidays will be paid to the undernoted classes:—

Machinists, carpenters, blacksmiths, electricians; Shaftsmen, No. 2 colliery; Masons, No. 4, colliery.

This does not apply to continuous service men or to men supplying for absentees.

UNDERGROUND

Pipemen—1st class, boss drivers, onsetters—headmen ..	3 80
Rope splicers ..	4 10

Classification	Rate per Day
Deep road men, pumpmen—big pumps, masons, machine repairers, engine repairmen—1st class ..	3 90
Brushers—ordinary, miners—taken from face to do other work, moving pans—man in charge, mechanic in charge of longwall equipment ..	4 15
Brushing in stones' steel booming and in longwall, roadmakers—in charge of sections (see note), chock drawers ..	5 00

The collieries will commence to hoist at 7 a.m., at which time all men must be in the mine. The day's work will cease at 3 p.m., when all arrangements will be available for conveying men to the surface.

Where more than one shift is in effect the hours of labour will conform to the above.

Miners out of places will be paid classification rate applicable to the work at which they are employed.

When men are taken from their ordinary occupation to do other work, they shall be paid the higher of the two classification rates. This applies to both full shifts and broken time.

NOTE.—Roadmakers: The management reserves the right to place helpers with Roadmakers and pay helpers at labour or other classification rate.

Payment for Overtime

Rope Splicers at Princess, when putting on new rope will be paid time and one-half for overtime and double time for Sundays and legal holidays, but not otherwise.

Boys' Rates

Boys between the ages of 16 and 18 years, other than Trappers, to be paid \$2.70 per shift, but boys over 17 years may be paid the classification rate applicable to any job at which they may be employed, provided they can perform such work to the satisfaction of the management.

SCHEDULE OF RATES—NORTH SYDNEY PIER

Classification	Rate per Day
Caretaker—12 hours..	\$3 25

Shovel Operator..	4 55
Boom Operator..	4 10
Firemen..	3 29

NOTE.—A shift shall consist of 8½ hours' work.

Payment for Overtime

Shovel Operator and Boom Operator shall be paid double time when called out on Sundays or legal holidays to repair shovel, but not otherwise.

WAGE AGREEMENTS AND NEGOTIATIONS IN COAL MINES IN ALBERTA AND SOUTHEASTERN BRITISH COLUMBIA

NEGOTIATIONS have been in progress in recent months as to the renewal of agreements as to wages and working conditions in the principal coal mines in Southern Alberta and Southeastern British Columbia entered into toward the end of 1924 and at various dates during 1925 (LABOUR GAZETTE, February, 1926, p. 186 and preceding issues). The agreements between the Crow's Nest Pass Coal Company at Fernie and Mitchell, B.C., and the British Columbia Miners' Federation, a local organization, have been renewed with an increase in wages of 15 cents per day, dating from April 1, 1928, to be in effect three years. The scale in these collieries was somewhat lower than in some of the others. The agreement concluded by certain operators in the Red Deer Valley at Drumheller has also been renewed for three years with substantially no changes. The Mine Workers Union of Can-

ada asked the operators to meet its representatives in Calgary on March 8 but none did so. The executive of this union was authorized to ask for an increase of 15 per cent in day wages and 20 per cent in contract rates. On the refusal of the operators to negotiate with representatives of the Mine Workers' Union of Canada with which a number of local organizations had become affiliated since the previous agreements were signed in 1925, the Union took a strike vote on April 13 and at the end of April announced that application was being made to the Minister of Labour for a Board of Conciliation and Investigation under the Industrial Disputes Investigation Act, 1907, in order to deal with these disputes. Copies of the above agreements are expected to be available for publication in an early issue.

RECENT INDUSTRIAL AGREEMENTS AND SCHEDULES OF WAGES

A SUMMARY is given below of the more important industrial agreements and schedules of wages and working conditions that have recently been received by the Department. Such agreements are summarized each month in the LABOUR GAZETTE. In the majority of cases the agreements are signed by both employers and employees. Verbal agreements, which are also included in the records, are schedules of rates of wages and hours of labour and other conditions of employment agreed upon between the parties concerned, and in effect though not signed. In addition to these, important schedules of wages are summarized, including civic schedules. In the case of each agreement or schedule, the rates of wages for the principal classes of labour are given, with other information of general interest.

Construction: Buildings and Structures

HALIFAX, N.S.—THE CONSTRUCTIVE MECHANICAL TRADES EXCHANGE, INCORPORATED AND THE BROTHERHOOD OF PAINTERS, DECORATORS AND PAPERHANGERS OF AMERICA, LOCAL No. 425.

Agreement to be in effect from May 1, 1928, to May 1, 1929. Sixty days' notice must be given by both parties before agreement is renewed.

Hours: 8 per day, between 8 a.m. and 5 p.m.; 4 hours' work on Saturdays.

Wages: 66 cents per hour.

Overtime: time and one-half from 5 p.m. to 10 p.m. and double time from 10 p.m. to 8 a.m., with one hour at midnight for lunch. Work on Sundays and certain holidays, double time; work on Saturday afternoons, time and one-half.

For work outside city limits, all expenses including travelling expenses and board to be paid.

No union member to do any work after 5 p.m. on his own accord without the consent of his employer.

EDMONTON, ALBERTA.—CERTAIN EMPLOYERS AND THE BROTHERHOOD OF PAINTERS, DECORATORS AND PAPERHANGERS OF AMERICA, LOCAL No. 1016.

Agreement to be in effect from April 1, 1928 to April 1, 1929.

Hours: 8 per day; 4 on Saturdays.

Wages: 90 cents per hour.

Overtime: between 6 p.m. and 12 p.m., time and one-half if 8 hours shift has already been worked. After 12 p.m. and on Sundays, double time.

No work on Saturdays between 12 noon and 5 p.m., nor on Labour Day.

For out of town work, travelling time and transportation one way to be paid and employers also to pay the difference in the cost of living that workmen incur by leaving home.

VANCOUVER, B.C.—CERTAIN EMPLOYERS AND THE BROTHERHOOD OF PAINTERS, DECORATORS AND PAPERHANGERS, LOCAL No. 138.

Agreement, in effect from April 30, 1928.

For provisions of this agreement, see article entitled "Strikes and Lockouts in Canada during April 1928."

Transportation and Public Utilities: Water Transportation

MONTREAL, QUEBEC.—VARIOUS SHIPPING COMPANIES AND THE ASSOCIATION OF THE SYNDICATED LONGSHOREMEN OF THE PORT OF MONTREAL.

Agreement and schedule of working conditions to be in effect from April 24 to December 31, 1928.

The agreement including wage rates in effect in 1927 was summarized in the LABOUR GAZETTE, June, 1927, and the schedule of working conditions in the issue of October, 1927. The new agreement and the schedule of working conditions embody no material changes with the exception that the clause requiring each longshoreman to sign a personal contract has been deleted.

MONTREAL, QUEBEC.—VARIOUS SHIPPING COMPANIES AND THE INDEPENDENT ASSOCIATION OF CARPENTERS AND SHIPLINERS OF THE PORT OF MONTREAL.

Agreement to be in effect from April 27 to December 31, 1928.

This agreement is the same as that for 1927 which was summarized in the LABOUR GAZETTE for June, 1927, with the addition of the following clause:

"That, provided the Shipliners can supply the full number of men required, a minimum gang of twelve men shall be employed when holds require shifting boards fore and aft and have no permanent longitudinal bulkheads, but that members of this gang can be utilized for minor work, such as making separations, the balance of the gang continuing their work whilst these members are so employed. In the event of the Shipliners being unable to furnish the full number of men required, the Companies and or Contracting Stevedores have the right of distribution of the men available."

FAIR WAGES CONDITIONS IN DOMINION GOVERNMENT CONTRACTS

THE Department has received information regarding contracts recently executed by the Government of Canada, which included among their provisions the fair wages conditions sanctioned by Order in Council for the protection of the labour to be employed. The contracts (Group "A") awarded in connection with the works of construction contained the following fair wages clause:—

1. All mechanics, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed for the character or class of work in which they are respectively engaged, and if there be no current rates in such district, then fair and reasonable rates, and shall work such hours as are customary in the trade, in the district where the work is carried on, or if there be no custom of the trade as respects hours in the district, then fair and reasonable hours, unless for the protection of life and property, or for other cause shown to the satisfaction of the Minister of Labour, longer hours of service are required. The Minister of Labour may at any time and from time to time determine for the purpose of this contract, what are the current or fair and reasonable rates of wages and the current or fair and reasonable hours, and may from time to time rescind, revoke, amend, or vary any such decision, provided that his determination and any amendment or variation shall not be operative prior to the period of three months immediately preceding the date thereof.

One of the contracts above mentioned contained schedules of rates and hours based on the current standards of the district in these respects. The schedules are given below.

Two contracts were awarded for interior fittings (Group "B") containing the general fair wages clause and other conditions for the protection of the labour employed, as sanctioned by the Fair Wages Order in Council which reads as follows:—

All workmen, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed, and if there be no current rate in such district, then a fair and reasonable rate, and shall work such hours as those fixed by the custom of the trade as respects hours in the district where the work is carried on, or if there be no custom of the trade as respects hours in the district then fair and reasonable hours, except for the protection of life and property, or on due cause shown to the satisfaction of the Minister of Labour. In the event of a dispute arising as to what is the current or a fair and reasonable rate of wages or what are the current hours fixed by the custom of the trade or fair and reasonable hours it shall be determined by the Minister of Labour, whose decision shall be final; payment may also be withheld of any moneys which would otherwise be payable to the contractor until the Minister of Labour's decision has been complied with.

By the term "current wages" and the term "hours of labour fixed by the custom of the trade" in the foregoing are meant respectively the standard rates of wages and hours of labour either recognized by signed agreements between employers and workmen in the district from which the labour required is necessarily drawn or actually prevailing, although not necessarily recognized by signed agreements.

A statement was also received as to supplies ordered by the Post Office Department subject

to the regulations for the suppressing of the sweating system and the securing of fair wages, etc.

The general labour conditions sanctioned by the Fair Wages Order in Council are as follows:—

Where there are special circumstances which in the judgment of the Minister of Labour make it expedient that he should do so, he may decide what are the current or fair and reasonable rates of wages for overtime, and what is the proper classification of any work for the purposes of wages and hours. Immediately upon receipt of notice of any decision of the Minister of Labour hereunder the contractor shall adjust the wages and hours and classification of work so as to give effect to such decision. In case the contractor shall fail so to do, or to pay to any employee or employees for any services performed or for any hours of labour, wages according to the rates fixed therefor by the Minister of Labour hereunder regarding overtime and classification, the Minister of Labour may authorize and direct the Minister to pay any such wages at the rates so fixed and to deduct the amount thereof from any moneys owing by the Government to the contractor and any such payment shall for all purposes as between the contractor and the Government be deemed and taken to be payment to the contractor, and the contractor shall be bound in every particular by any such authority, direction and payment as aforesaid. The powers of the Minister of Labour hereunder shall not be exercised as to any employee or employees where it is established to his satisfaction that an agreement in writing exists and is in effect between the contractor and the class of employees to which such employee or employees belong or the authorized representatives of such class of employees fixing rates of wages, overtime conditions and hours of labour.

2. The contractor shall post and keep posted in a conspicuous place on the premises where the contract is being executed, occupied or frequented by the workmen, the Fair Wages Clause or Schedule inserted in his contract for the protection of the workmen employed, also any decision of the Minister of Labour under the preceding paragraph.

3. The contractor shall keep proper books and records showing the names, trades, and addresses of all workmen in his employ and the wages paid to and time worked by such workmen, and the books or documents containing such record shall be open for inspection by the Fair Wage Officers of the Government at any time it may be expedient to the Minister of Labour to have the same inspected.

4. The contractor shall not be entitled to payment of any money which would otherwise be payable under the terms of the contract in respect of work and labour performed in the execution of the contract unless and until he shall have filed with the Minister in support of his claim for payment a statement attested by statutory declaration, showing (1) the rates of wages and hours of labour of the various classes of workmen employed in the execution of the contract; (2) whether any wages in respect of the said work and labour remain in arrears; (3) that all the labour conditions of the contract have been duly complied with; nor, in the event of notice from the Minister of Labour of

claims for wages, until the same are adjusted. The contractor shall also from time to time furnish the Minister such further detailed information and evidence as the Minister may deem necessary in order to satisfy him that the conditions herein contained to secure the payment of fair wages have been complied with, and that the workmen so employed as aforesaid upon the portion of the work in respect of which payment is demanded have been paid in full.

5. In the event of default being made in payment of any money owing in respect of wages of any workmen employed on the said work and if a claim therefor is filed in the office of the Minister and proof thereof satisfactory to the Minister is furnished, the said Minister may pay such claim out of the moneys at any time payable by His Majesty under said contract and the amounts so paid shall be deemed payments to the contractor.

6. These conditions shall extend and apply to moneys payable for the use or hire of horses or teams, and the persons entitled to payments for the use or hire of horses or teams shall have the like rights in respect of moneys so owing them as if such moneys were payable to them in respect of wages.

7. With a view to the avoidance of any abuses which might arise from the sub-letting of contracts it shall be understood that sub-letting, other than such as may be customary in the trades concerned, is prohibited, unless the approval of the Minister is obtained; sub-contractors shall be bound in all cases to conform to the conditions of the main contract, and the main contractor shall be held responsible for strict adherence to all contract conditions on the part of sub-contractor; the contract shall not, nor shall any portion thereof be transferred without the written permission of the Minister; no portion of the work to be performed shall be done at the homes of the workmen.

8. All workmen employed upon the work comprehended in and to be executed pursuant to the said contract shall be residents of Canada, unless the Minister is of opinion that Canadian Labour is not available or that other special circumstances exist which render it contrary to the public interest to enforce this provision.

DEPARTMENT OF PUBLIC WORKS

Contracts in Group "A" (Construction, etc.)

Construction of a breakwater extension at Escuminac, N.B. Name of contractor, Ashley A. Colter, Fredericton, N.B. Date of contract, April 3, 1928. Amount of contract, unit prices, approximate expenditure, \$61,729.

Construction of a breakwater extension at Point Sapin, Kent County, N.B. Name of contractor, Alexander Rowland Voye, Fredericton, N.B. Date of contract, April 5, 1928. Amount of contract, unit prices, approximate expenditure, \$11,401.

To furnish all material, construct and deliver afloat at Port Hawkesbury, N.S., ten 80 foot steel pontoons and six 40 foot steel pontoons for dredge P.W.D. No. 5. Name of con-

tractors, Robb Engineering Works, Limited, Amherst, N.S. Date of contract, April 18, 1928. Amount of contract \$29,460.

Contracts in Group "B" (Interior Fittings)

Furnish material and construct alterations to third floor of the new Examining Warehouse, Montreal, Que. Name of contractors, Munn and Shea, Limited, Montreal, Que. Date of contract, April 14, 1928. Amount of contract, \$10,800.

Safety Competition for Pulp and Paper Mills

In 1926, the *Pulp and Paper Magazine* offered a trophy for the safest mill in Canada in the pulp and paper industry. The competition for the six months' period from July 1 to December 31, 1927, was won by the Laurentide Company, Grand'Mère, Quebec, in the class "A" group, including the larger companies. The runner-up in this class was Price Brothers' mill at Kenogami, Quebec. In the class "B" division, for smaller companies, three mills went through the period without an accident of any kind. The judges therefore awarded first place to the mill having the greatest hazard. Thus first place in this group was won by the Lincoln mill of the Lincoln Pulp and Paper Company at Merritton, Ontario, while the Garden City Paper Company's mill, also located at Merritton, was second. There will be a similar competition under the same terms during 1928.

The results of the competition of 1926 were given in the *LABOUR GAZETTE* for March, 1927, page 289.

WAGES OF EMPLOYEES ON FARMS IN CANADA 1925-1927

THE Dominion Bureau of Statistics secures each year from its agricultural correspondents throughout Canada information as to the wages of employees on farms in Canada during the year just ended. The figures so secured are published in the *Monthly Bulletin of Agricultural Statistics* for the February of the following year. Tables of these figures

have appeared in the reports on Wages and Hours of Labour in Canada issued as supplements to the *LABOUR GAZETTE* for January, 1925 to 1928 inclusive, the first of these giving figures back to 1914. The accompanying figures are taken from the issue of the *Bulletin* for February, 1928, and give figures for the years 1925 and 1926 as well as for 1927.

PRICES, RETAIL AND WHOLESALE, IN CANADA, APRIL, 1928

Cost of Living, Prices of Staple Articles and Index Numbers

THE weekly family budget in terms of retail prices was again slightly lower, while the Dominion Bureau of Statistics index number of wholesale prices continued toward somewhat higher levels.

In retail prices the cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average prices in some sixty cities was \$10.87 at the beginning of April, as compared with \$10.92 for March; \$10.80 for April, 1927; \$11.36 for April, 1926; \$10.56 for April, 1925; \$10.16 for April, 1924; \$10.64 for April, 1923; \$10.26 for April, 1922; \$12.68 for April, 1921; \$15.99 for April, 1920; \$12.57 for April, 1918 and \$7.51 for April, 1914. Eggs showed a substantial seasonal decline, while there were less important declines in the prices of veal, mutton, fresh and salt pork, bacon, lard and flour. Prices of beef, butter, cheese, evaporated apples, sugar and potatoes were somewhat higher. Including the cost of fuel and rent with that of foods the total budget averaged \$21.11 at the beginning of April, as compared with \$21.15 for March; \$21.02 for April, 1927; \$21.64 for April, 1926; \$20.82 for April, 1925; \$20.58 for April, 1924; \$21.21 for April, 1923; \$20.66 for April, 1922; \$23.31 for April, 1921; \$26.92 for July, 1920 (the peak); \$25.34 for April, 1920; \$20.01 for April, 1918; and \$14.32 for April, 1914. Fuel and rent were practically unchanged.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon the average prices of 236 commodities in 1913 as 100, and weighted according to the commercial importance of the commodities advanced to 153.2 for April, as compared with 152.8 for March; 148.9 for April, 1927; 160.2 for April, 1926; 156.5 for April, 1925; 151.1 for April, 1924; 156.9 for April, 1923; 153.7 for April, 1922; 179.5 for April, 1921; 251.0 for April, 1920; 256.7 for May, 1920 (the peak); and 195.0 for April, 1918. Forty-three prices quotations were higher, thirty were lower and one hundred and sixty-three were unchanged.

In the grouping according to chief component materials two of the eight main groups advanced, three declined, while three were practically unchanged. The Vegetables and their Products group was substantially higher, mainly because of higher prices for grains, flour, milled products, refined sugar, hay, straw and apples. The Non-Ferrous Metals and their Products group was also somewhat higher, electrolytic copper, lead, tin and spelter advancing, while antimony and lead pipe de-

clined. The groups which declined were: the Animals and their Products group, due to lower prices for cattle, meats, butter, cheese, eggs, lard and some lines of fish, which more than offset higher prices for hogs, sheep and leather; the Fibres, Textiles and Textile Products group, due to declines in the prices of cotton fabrics and silk products, which more than offset advances in the prices of raw cotton, jute and wool; and the Non-Metallic Minerals and their Products group, due mainly to declines in the price of coal. The Iron and its Products group, the Wood, Wood Products and Paper group, and the Chemicals and Allied Products group were practically unchanged.

In the grouping according to purpose consumers' goods declined, while producers' goods advanced. In the former the lower level was due to declines in the prices of eggs, butter, cheese, beef, lard, potatoes and coal, which more than offset advances in the prices of flour, sugar and fruits. In the latter group building and construction materials advanced, as did also materials for the leather industry, for the metal working industries, for the meat packing industries, for milling and other industries, as well as for miscellaneous producers' materials. Producers' equipment was lower and materials for the textile and clothing industry, for the fur industry and for the chemical using industries were also lower.

In the grouping according to origin domestic farm products, articles of forest origin and articles of mineral origin were higher, while articles of marine origin were lower.

EXPLANATORY NOTE AS TO WHOLESALE PRICES

The index number calculated by the Dominion Bureau of Statistics is based upon the prices of 236 commodities, price levels in 1913 being taken as the base, that is equal to 100, the figures being weighted according to the commercial and industrial importance of each article included. The index number has been calculated by years back to 1890, being unweighted, however, for the period of 1890 to 1913 and has been calculated by months from 1919 to date for all groupings and from 1913 to date for the principal grouping. Summary tables of the Bureau's index number may be found in the supplement to the LABOUR GAZETTE for January, 1925, January, 1926, and in greater detail in the Report on "Prices and Price Indexes 1913-24," issued by the Bureau. A description of the methods used in the construction of the index number appears in the LABOUR GAZETTE for June, 1923.

The accompanying table gives the index numbers of the Dominion Bureau of Statistics by

(Continued on page 542)

COST PER WEEK OF A FAMILY BUDGET OF STAPLE FOODS, FUEL AND LIGHTING, AND RENT IN TERMS OF THE AVERAGE PRICES IN SIXTY CITIES IN CANADA*

Table with columns for Commodities, Quantity, and years from 1900 to 1928. Rows include various food items like Beef, Mutton, Eggs, Milk, and Fuel.

AVERAGE COST OF STAPLE FOODS BY PROVINCES

Table with columns for Province and various food items with their average costs. Rows include Nova Scotia, Prince Edward Island, New Brunswick, Quebec, Ontario, Manitoba, Saskatchewan, Alberta, and British Columbia.

*The budget is intended to show the changes in the cost of the items included, not to show the minimum cost for an average family. See Text. †December only. ‡Kind most sold. ‡For electric light see text.

**An allowance for the cost of clothing and sundries would increase the figures by about 50 per cent: see text.

RETAIL PRICES OF STAPLE FOODS, GROCERIES, FUEL AND LIGHTING AND

LOCALITY	Beef					Veal, shoulder, roast, per lb.	Mutton, leg, roast, per lb.	Pork		Bacon		Ham, boiled, sliced, per lb.
	Sirloin steak, per lb.	Round steak, per lb.	Rib roast, prime, per lb.	Shoulder roast, per lb.	Stewing, per lb.			Fresh, leg roast, per lb.	Salt mess, short cut, per lb.	Breakfast, not sliced, per lb.	Breakfast, sliced, per lb.

the principal groups in the three methods of classification and with those of the classification according to the purpose or use in detail for the current month and for certain preceding dates.

EXPLANATORY NOTES AS TO RETAIL PRICES

The table of retail prices and rentals shows the prices at the beginning of April of seventy-

one staple foodstuffs, groceries, coal, wood and coal oil and the rent of six-roomed houses in some sixty cities throughout Canada. All prices are for delivered goods. The exact quality, for which the quotation is given is set forth in the case of each commodity, and every effort has been made to ensure that the quotations in each case refer to the same class of commodity in order that the statistics may be available for purposes of comparison from month to month, from city to city, etc. The prices of foods and

groceries in each city, except milk and bread, are the averages of quotations reported to the Department and to the Dominion Bureau of Statistics by a number of representative butchers and grocers in each. The prices of fuel and the rates for rent are reported by the correspondents of the LABOUR GAZETTE.

*The figures for "all items" were calculated by giving the following weights to each group: Food 35%; Fuel 8%; Rent 13½%; Clothing 13½%; Sundries 20%.

†Figures for Sundries since 1920 have been revised and this has affected for certain dates "all items".

Statistics similar to these were published each month from 1910 to 1920, the figures during this period being secured at the middle of each month by the correspondents of the LABOUR GAZETTE resident in each locality from dealers doing a considerable business with workingmen's households. From 1910 to 1915 the table contained a list of only the twenty-nine foods included in the family budget, with laundry starch, coal, wood, coal oil and rent. In 1915 when monthly publication of the budget in the LABOUR GAZETTE was begun, it was decided to extend the list of foods to 40, and in 1920 the list of foods and groceries was still further extended to include over 100 items.

Beginning with October, 1922, a number of commodities were dropped from the list, and in the case of a number of articles the average prices of the grades most sold have been given, owing to the impossibility of securing prices for uniform grades for the various cities from month to month.

Oleomargarine was dropped in March, 1924, the provision for its manufacture and sale since 1917, notwithstanding the Dairy Act, expired at the end of February, 1924.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts extensively occupied by workmen. The first class is of houses in good condition, favourably located in such districts with good modern conveniences. The second class is of houses in fair condition less desirably located, but still fairly central, without modern conveniences.

The weekly budget of a family of five, calculated in terms of the average prices in the cities for which reports are received, includes twenty-nine staple foods, laundry starch, coal, wood, coal oil, and rent, these being the items for which statistics have been obtained each month and published in the LABOUR GAZETTE since January, 1910. The quantities of each commodity included are modifications of those employed in similar calculations by various authorities. For some articles comparatively large quantities are included owing to the absence of other important items of the same class. For instance, the only fruits are evaporated apples and prunes, and the only fresh vegetable is potatoes. But as market conditions affecting these usually affect the prices of other fruits and vegetables somewhat similarly, the relative proportions of expenditure on the various classes of foods tends to be maintained. At times when the price of an article heavily weighted for this purpose rises, or falls (abnormally) the increase (or decrease) in food prices so indicated is exaggerated, and this should be taken into account in using the budget as an indicator of changes in the cost of living. In fuel and lighting the quantities are estimated on a similar principle, anthracite coal being used chiefly east of Manitoba, and soft coal and wood in the western provinces, while no allowance is made for the quantities required in the various localities owing to climatic conditions, nor for the differences in the heating value of the various fuels. It was estimated, when the budget was first published in 1912 in the report on wholesale prices in Canada for 1911, that these calculations represented from sixty to eighty per cent of the expenditure of an ordinary family, according to the total income. For the average family of five the expenditure on these items of food, fuel, light and rent would be perhaps two-thirds or about sixty-five per cent of the total income.

While the budget serves to show the increase or decrease from time to time in the cost of the items included, it does not purport to show the minimum cost of food and fuel supplies for an average family in the Dominion or in any one province. The quantities of meats, dairy products, cereals, etc., included were adopted as affording a liberal supply for the healthy family of a man at hard physical work. On the other hand an average family with an income sufficient to do so would buy less meat, etc., but more fruit, fresh and canned vegetables, etc., so that comparative expenditure would be little changed.

Index Number of Changes in the Cost of Living

In March, 1921, the Department published in the LABOUR GAZETTE a table of percentages of changes in the cost of living since 1913 as a tentative cost of living index number, using the figures of the above mentioned budget for the calculation for food, fuel and rent, with preliminary figures for clothing and sundries added and this table has been brought down to date at intervals since. The calculation of a comprehensive cost of living index number covering all items of workmen's family expenditure in progress since 1918 had been sufficiently advanced to enable the publication of preliminary figures by groups in a supplement to the LABOUR GAZETTE, January, 1926, on Prices in Canada and in Other Countries, page 9. This table gave figures for June and December each year from 1914 to 1926, inclusive. Figures have since been given for March and September each year since 1917 and the accompanying table gives figures for December each year from 1914 to 1917, quarterly from 1918 to 1926, and monthly since January, 1927. As stated in the above-mentioned supplement, the figures in the food group in the family budget are still used to show the changes in food prices but in the other groups the percentage changes in the prices of each article have been weighted according to workmen's average family consumption, and in the fuel and light groups, gas and electricity have been included.

Cost of Electric Current and Gas for Householders

With rates in 1913 as 100, index numbers of electric light rates were 1900, 141.4; 1905, 135.6; 1910, 118.1; 1911, 113.4; 1912, 109.1; 1913, 100.0; 1914, 96.5; 1915, 90.8; 1916, 87.6; 1917, 87.2; 1918, 85.8; 1919, 85.8; 1920, 84.2; 1921, 84.9; 1922, 82.7; 1923, 79.5; 1924, 79.2; 1925, 85.6; 1926, 75.6.

The above figures were arrived at by converting to the base of 1913 as 100, an index number of electric current costs from 1900 to 1913 constructed for the Board of

Inquiry into the cost of living in Canada, 1914-15 (Report, Vol. 2, page 318) and bringing the figures down to 1926. The figures are unweighted. The Dominion Bureau of Statistics has recently issued an index number of electric current rates for household consumption as follows: 1923, 73.8; 1924, 72.2; 1925, 69.9; 1926, 68.7. This index number is weighted according to consumption in each city. When the above index number, 1900-1926, is weighted according to population in each city covered for the years 1923, 1924, 1925 and 1926, the figures are substantially the same as those recently issued by the Bureau.

The following are index numbers of rates for manufactured and natural gas for the years 1913 to 1926 issued by the Dominion Bureau of Statistics (revised, Prices and Price Indexes, 1913-1926): Manufactured gas, 1913, 100; 1914, 98.3; 1915, 98.1; 1916, 96.3; 1917, 100.7; 1918, 107.4; 1919, 111.1; 1920, 125.4; 1921, 143.6; 1922, 140.6; 1923, 135.7; 1924, 134.6; 1925, 131.6; 1926, 131.1. Natural gas, 1913, 100; 1914, 109.6; 1915, 112.8; 1916, 112.8; 1917, 113.6; 1918, 114.2; 1919, 116.2; 1920, 123.8; 1921, 143.0; 1922, 163.1; 1923, 162.9; 1924, 162.6; 1925, 178.7; 1926, 172.2. For the years 1900 to 1913 two index numbers of gas costs calculated for the Cost of Living Inquiry in 1914-1915, have been averaged and converted to the base of 1913 as 100, as follows: 1900, 125.8; 1901, 125.8; 1902, 125.8; 1903, 125.2; 1904, 123.9; 1905, 120.1; 1906, 107.5; 1907, 108.8; 1908, 106.9; 1909, 105.7; 1910, 103.8; 1911, 99.4; 1912, 100.6; 1913, 100.0.

Retail Prices

The advance in beef prices continued, sirloin steak averaging 33.7 cents per pound in April, as compared with 33.3 cents in March; round steak 28.2 cents per pound in April and 28.1 cents in March; rib roast 26.2 cents per pound in April and 26 cents in March; and shoulder roast 20 cents per pound in April and 19.8 cents in March. Veal and mutton were slightly lower, the former averaging 21.8 cents per pound and the latter 29.2 cents per pound. Fresh pork was down from an average of 25.1 cents per pound in March to 24.9 cents in April; and salt pork from 25.3 cents per pound in March to 25 cents in April. Bacon and ham were also lower, the former averaging 39.9 cents per pound in April, as compared with 40.4 cents in March, and the latter 56.7 cents per pound in April, as compared with 57.3 cents in March. In fresh fish, cod steak declined, while whitefish advanced slightly. Finnan haddie was down from an average of 20.3

cents per pound in March to 20.1 cents in April. Lard was slightly lower at an average price of 21.6 cents per pound.

Eggs showed a substantial seasonal decline, the price being lower in practically all localities. Fresh averaged 40.2 cents per dozen in April, 46.1 cents in March, and 51.8 cents in February, and cooking averaged 35 cents per dozen in April, 40.1 cents in March and 44.2 cents in February. Prices of butter were slightly higher, dairy averaged 42.4 cents per pound in April, as compared with 41.6 cents in March, and creamery 47.4 cents per pound in April, as compared with 45.6 cents in March. Cheese was slightly higher, averaging 32.6 cents per pound.

Bread was unchanged at an average price of 7.7 cents per pound. Soda biscuits and flour were steady. Canned vegetables showed little change. Onions were up from an average price of 5.6 cents per pound in March to 6.7 cents in April. Potatoes advanced in the average from \$1.66 per ninety pounds in March to \$1.78 in April. Prices in most localities in Ontario and the eastern provinces were substantially higher but were lower in many localities in the western provinces. Evaporated apples rose from an average price of 20.2 cents per pound in March to 20.8 cents in April. Prunes, raisins and currants showed little change. Marmalade was slightly higher at 64.9 cents per four-pound tin. Granulated sugar was slightly higher, averaging 8.1 cents per pound, as compared with 8 cents in March. Anthracite coal showed little change at an average price of \$16.41 per ton. Lower prices were reported from Sorel, Brockville, Toronto and Hamilton. Wood was practically unchanged, hard averaging \$12.10 per cord and soft \$8.98. No changes were reported in rent.

Wholesale Prices

The following is a summary of a statement on wholesale prices changes during the month issued by the Dominion Bureau of Statistics.

Grain prices moved to substantially higher levels during April. No. 1 Manitoba Northern cash wheat, Fort William and Port Arthur basis, averaged \$1.56½ per bushel, as compared with \$1.48¼ in March. The low price for the month was \$1.50½ per bushel on the 2nd, and the high \$1.65¾ reached on the 30th. Weather conditions in the United States, Canada and Australia were said to be the causes of the higher prices. Coarse grains also continued their upward movement, western barley at Winnipeg advancing from 91¼ cents per bushel to 93 cents; western oats from 68½ cents per bushel to 72 cents; Ontario barley at Toronto from 91½ cents per bushel to 94 cents; oats

from 65¼ cents per bushel to 70 cents; American corn from \$1.09¾ per bushel to \$1.15½; and flaxseed at Winnipeg from \$1.90¼ per bushel to \$1.94. The higher price for wheat was also reflected in the price of flour, which advanced from \$7.90 per barrel to \$8.42½. Shorts at Toronto rose from \$40.50 per ton to \$42.25 and rolled oats from \$3.85 per 90-pound sack to \$3.90. Granulated sugar at Montreal was up from \$5.93¾ per cwt. to \$6.08, and yellow from \$5.65¾ to \$5.79½. Raw sugar at New York, however, was lower. Evaporated apples rose from 16-17 cents per pound to 17-18 cents. Rubber prices declined substantially following the announcement that the restrictions would be removed. Ceylon rubber was down from 26¾ cents per pound to 18½ cents, the lowest price reached since 1922. Quebec grades of potatoes at Montreal were down from \$1.44½ per bag to \$1.28 and Manitoba grades at Winnipeg from 81 cents per bushel to 75 cents. The price at Toronto, however, was slightly higher at \$1.82½ per bag. Baled hay was up from \$14.25 per ton to \$14.50, and straw from \$9.19 per ton to \$9.50. Rosin was down 50 cents per barrel to \$12.50. Linseed oil was slightly higher at 88 cents per gallon. The live stock markets were generally higher, western cattle at Winnipeg being up from \$9.76 per hundred pounds in March to \$9.93 in April; hogs at Toronto from \$9.44 per hundred pounds to \$9.70; and choice sheep from \$6.75 per hundred pounds to \$8.50. Dressed beef at Toronto was down from \$19.75 per hundred pounds to \$18.38. Mink skins were down \$3 each to \$9 and muskrat from \$1.35-\$1.80 per skin to \$1.20-\$1.50. Finest creamery butter at Montreal was down from 43 cents per pound to 41 cents, and creamery prints at Toronto from 44 cents per pound to 43 cents. Cheese was slightly lower at Toronto at 21½ cents per pound. Fresh eggs at Montreal were down from 44-47 cents per dozen to 36-38 cents. Raw cotton at New York rose from 19.4 cents per pound to 20.6 cents. The increase was said to be due to unfavourable weather and crop conditions. Several lines of manufactured cottons declined, denim from 61.2 cents per pound to 55.2 cents; ticking from 62 cents per pound to 59 cents; and shirting from 66 cents per pound to 63 cents. Copper at Montreal rose from \$15.87½ per cwt. to \$16; copper wire from 14½ cents per pound to 14¼ cents tin ingots from 54 cents per pound to 54¾ cents lead from \$5.95 per cwt. to \$6 and zinc from \$7.20 per cwt. to \$7.27½. Antimony at Montreal declined from 10.3 cents per pound to 9.9 cents. Anthracite coal at Toronto was down from \$13.52 per ton to \$13.02. Cement at Montreal rose from \$1.35 per barrel to \$1.60.

PRICES IN GREAT BRITAIN AND OTHER COUNTRIES

THE following notes give the latest information available as to movements of prices in Great Britain and other countries. The index numbers of retail prices are from official sources unless otherwise stated. The authorities for the wholesale prices index numbers are named in all cases.

Great Britain

WHOLESALE PRICES.—The Board of Trade index number, on the base 1913=100, was 140.8 for March, an increase of 0.4 per cent for the month. Foods advanced 0.3 per cent with a decline in meat and fish and an advance in cereals and other foods. Industrial materials advanced 0.5 per cent, showing a sharp advance in cotton of 4.1 per cent and a slight advance in iron and steel, while other metals and minerals, textiles other than cotton, and miscellaneous commodities declined.

The *Economist* index number, on the base 1901-05=100, advanced to 180.3 in March, a rise of 1.2 per cent over the previous month. There were advances in the groups, cereals and meat, textiles, minerals and declines in other foods, and miscellaneous commodities.

The *Statist* index number (in continuation of Sauerbeck's figures) on the base 1867-77=100, was 123.6 at the end of March, showing a rise of 2.1 per cent over February. Food-stuffs rose 4.7 per cent with advances in all groups and industrial materials rose 0.3 per cent with advances in minerals and sundries and a slight decline in textiles, owing to lower prices for flax.

The *Times* index number, on the base 1913=100, was 143.7 at the end of March, showing an advance of 1.3 per cent over February. Food prices rose one per cent with a decline in meat and fish and an advance in cereals and other foods. Industrial materials rose 1.6 per cent with an advance of 5.9 per cent in cotton, slight advances in iron and steel, other metals and minerals, textiles other than cotton and a decline in other materials.

COST OF LIVING.—The index number of the Ministry of Labour, on the base July 1914=100, was 164 at March 31, showing no change for the month. In the food group, reductions in the prices of eggs were counteracted by advances in the prices of potatoes, butter and meat, leaving the index number for the group unchanged at 155. Rent, clothing and the sundries group were also unchanged, while fuel and light declined from 170 to between 165 and 170.

Austria

WHOLESALE PRICES.—The index number of the Federal Statistical Office, on the base prices in gold, first half of 1914=100, was 131 for April as compared with 129 in March. The index number for foods rose from 120 to 123 and industrial materials were unchanged at 146.

COST OF LIVING.—The official index number on the base prices in gold, July 1914=100, was 107 for April, showing no change from the previous month.

France

WHOLESALE PRICES.—The index number of *Statistique Générale*, on the base July, 1914=100, was 636 for March, showing a rise of 14 points or 2.2 per cent. Native products advanced 2.7 per cent and imported products 1.5 per cent. Foods advanced 5.0 per cent with advances in all groups, and industrial materials 0.1 per cent with advances in minerals and metals and textiles and a decline in miscellaneous commodities.

COST OF LIVING.—The official index number of the cost of living, Paris, on the base 1914=100, was 507 for the first quarter of 1928, an advance of 1.8 per cent over the level of the last quarter of 1927. Food advanced, heat and light declined and the other groups showed no change.

Germany

WHOLESALE PRICES.—The index number of the Federal Statistical Office, on the base 1913=100, was 138.5 for March, an advance of 0.4 per cent over the February level. Agricultural products advanced 0.9 per cent, provisions 3.2 per cent, manufactured goods 0.3 per cent, while raw materials and semi-manufactured goods declined 0.1 per cent.

COST OF LIVING.—The official index number on the base 1913-14=100, was 150.6 for March, showing no change from February. Food declined 0.1 per cent, clothing advanced 0.5 per cent, sundries 0.1 per cent and the other groups showed no change.

Italy

WHOLESALE PRICES.—The index number of the Milan Chamber of Commerce, on the base 1913=100, was 490.69 for March, an advance of 0.4 per cent over February. Foods rose 0.9 per cent with advances in both animal and vegetable products. Industrial materials rose 0.2 per cent with a rise of 4.5 per cent in textiles and declines in the other groups.

United States

WHOLESALE PRICES.—The index number of the Bureau of Labour Statistics, on the base 1926=100 was 96.0 for March, a decrease of 0.5 per cent from February. Farm products declined nearly one per cent due to lower prices for cattle, eggs and tobacco. Foods, fuel and light, chemicals and drugs and miscellaneous commodities declined slightly and other groups showed little or no change.

The *Analyst* index number, on the base 1913=100, was 148.0 for April, an advance of 1.3 per cent over March, owing chiefly to advances in farm products. Other groups showed only slight variations.

Bradstreet's index number (showing the cost of a list of 106 commodities) was \$13.4376, a

rise of 0.1 per cent over the previous month. There were advances in breadstuffs, live stock, hides and leather, textiles, oils and building materials and declines in provisions, fruits, metals, naval stores, chemicals and drugs and miscellaneous commodities. There was a marked advance in farm products, especially grains and raw cotton and in the goods manufactured from these products and a decline in rubber and in non-ferrous metals.

COST OF LIVING.—The index number of the National Industrial Conference Board, on the base July 1914=100, was 161.1 for March, a decline of 0.2 per cent for the month, which is the lowest point reached in five years. Foods and sundries each dropped one point and clothing increased two points. There was no change in fuel and light and shelter.

FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE FIRST QUARTER OF 1928

THE number of fatal industrial accidents and such fatalities from industrial diseases as are included with fatal accidents by workmen's compensation boards, etc., which were recorded in the Department as occurring during the first quarter of 1928 was 321, there being 101 in January, 142 in February, and 78 in March. In the first quarter of 1927, 255 fatal accidents were recorded. In this report it is the custom to record industrial accidents under the dates of the occurrence of the accidents, and fatal industrial diseases under the dates on which they prove fatal.

Reports were received from the Workmen's Compensation Boards, the Board of Railway Commissioners and certain other official sources; from certain large employers of labour; and from the correspondents of the *LABOUR GAZETTE*. Reports of accidents were also recorded from local newspapers.

By groups of industries the fatalities occurred as follows: agriculture, 20; logging, 34; fishing and trapping, 8; mining, non-ferrous smelting and quarrying, 79; manufacturing, 44; construction, 36; transportation and public utilities, 67; trade, 9; service, 24. Of the mining accidents 63 were in "metalliferous mining," 14 in "coal mining," 1 in "non-metallic mineral mining and quarrying," and 1 in "structural materials." Of the accidents in manufacturing, 3 were in the group "vegetable foods," 13 in "saw and planing mill products," 5 in "pulp, paper and paper products," 15 in "iron, steel and products," 1 in "non-ferrous metal products," 1 in "non-metallic mineral products," 4 in "chemical and allied products," and 2 in "miscellaneous products."

In construction, there were 20 fatalities in "buildings and structures," 8 in "bridge and highway," and 8 in "miscellaneous construction." In transportation and public utilities there were 36 fatalities in "steam railways," 9 in "water transportation," 1 in "air transportation," 6 in "local transportation," 3 in "storage," and 12 in "electricity and gas." There were 24 fatalities in service, of which 10 were in "public administration," 1 in laundering, dyeing and cleaning," 4 in "custom and repairs," and 9 in "personal and domestic service." In trade, there was one fatality in "wholesale," and 8 in "retail."

The most serious disaster occurring during this period was caused by a fire which broke out in a stope at the 550-foot level of the Hollinger Consolidated Gold Mines at Timmins, Ontario, on February 10, when 39 miners were trapped and suffocated by carbon monoxide gas and smoke. The fire was caused by spontaneous combustion in an old stope where waste material had been dumped. The verdict of the coroner's jury published in the *LABOUR GAZETTE* for April, 1928, page 378, was that the fire was due to gross negligence on the part of the mine operators in permitting such conditions, and recommended that old stopes should be cleaned out and that more inspectors should be employed. There were between 700 and 800 men underground when the blaze was discovered about 10 a.m., but the great majority of men were brought to safety. Rescue parties searching for the remaining men were driven back by smoke and gas. A first-aid car with a fully equipped mining rescue crew belonging to the United

States Government was rushed from the mines of Pennsylvania, and, although they arrived too late to save any lives, their activities made the recovery of the bodies possible. A Royal Commission was appointed, on February 17, by the Government of the province of Ontario under the Inquiries Act, to investigate the causes of the disaster. The Commissioner, Mr. Justice Godson, began the inquiry on February 27 at Timmins, and sittings were continued in the district until April 14, when it was announced a further session would be held at Toronto to consider suggestions as to safety measures.

Another serious disaster resulting in nine fatalities was caused by a fire breaking out in a large bunkhouse belonging to the Granby Consolidated Mining and Smelting Company at Copper Mountain, B.C., on March 18, in which about eighty miners were sleeping. The jury at the coroner's inquest submitted in their verdict that the origin of the fire was undetermined.

Several other accidents involved a number of fatalities. In water transportation, four

members of the crew of the motor schooner *Noble*, Vancouver, were drowned when the boat crashed on a reef when lost in a fog, off the coast of Vancouver Island, on January 5. In manufacturing, iron, steel and products, 3 painters at the boiler shop of the Canadian Vickers, Limited, Montreal, were crushed by large plates which were knocked down by the beam of a crane. In transportation and public utilities, steam railways, three section labourers were buried beneath a landslide in a Canadian National Railway tunnel near Savona, B.C. At Mulgrave, N.S., a waitress and two kitchen maids lost their lives when the hotel at which they were employed was destroyed by fire.

Supplementary List of Accidents.—The supplementary list of accidents occurring during 1927 includes 29 fatalities, of which 8 were in logging, 2 in mining, 2 in manufacturing, 3 in construction, 6 in transportation and public utilities, 1 in trade and 7 in service. Two accidents occurred in July, 2 in August, 4 in September, 3 in October, 9 in November, and 9 in December.

FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE FIRST QUARTER OF 1928

Trade or Industry	Locality	Date	Age	Cause of Fatality
AGRICULTURE AND STOCKRAISING—				
Straw cutting machine operator	Near Kleinburg, Ont.	Jan. 7	28	Hand caught in wheel and cut by revolving knives.
Farmer	Humboldt District, Sask.	Feb. 2	Burned in fire which destroyed his house.
Farmer	Ste. Justine de Newton, Que.	3	30	Crushed by falling tree.
Farmer	Near Grimsby, Ont.	6	Was attempting to draw truck out of mud when horses ran away throwing him in front of truck which ran over him.
Farmer	Paynton, Sask.	11	59	Suffocated when loose sand in a dugout buried him.
Farm hand	Merrickville, Ont.	12	17	Gored by bull; died Feb. 14.
Farmer	St. Narcisse, Que.	18	21	Crushed beneath tractor which he was repairing.
Farmer	Portage La Prairie, Man.	20	57	Caught in sawing machine.
Farmer	Welwyn, Sask.	20	52	Sleigh load of wheat upset and smothered him.
Farm hand	Near Tottenham, Ont.	23	Slipped and fell while carrying a fence post which swung around and dislocated his neck.
Farmer	Near St. Thomas, Ont.	28	15	Killed by falling tree.
Farmer	Near Listowel, Ont.	—	67	Knocked down and trampled on by horse.
Farm hand	Near Winnipeg, Man.	Mar. 4	15	Burned in fire which destroyed farm house.
Farmer	Near Inwood, Ont.	9	Fell on buzz saw; head and shoulder severed.
Farmer	Near Dauphin, Man.	10	Burned by fire that destroyed barn.
Farmer	Marden, Ont.	15	Trampled on and dragged by run away team. Died March 18.
Farmer	Glasgow Road, P.E.I.	27	32	Killed while operating circular saw.
Farmer	Union Bay, B.C.	29	16	Boat upset while salvaging drifted logs and he was drowned.
Farmer's helper	Russellville, Sask.	30	Fell under wheels of wagon.
Farmer	Shediac, N.B.	—	72	Thrown from wagon when horse ran away. Died April 4.
Logging—				
Tie cutter	Ignace, Ont.	Jan. 2	Tree fell and struck him on the head.
Logger	Kildale Arm, B.C.	about Jan. 3	Gas boat exploded and he was drowned.
Chokerman	Halfway River, B.C.	9	22	Struck by sapling which was knocked by log.
Logger	Near Nanaimo, B.C.	10	23	Struck by falling snag, fracturing skull.
Labourer	Dean Lake, Ont.	11	Struck by load of logs.
Labourer	Watcomb, Ont.	11	30	Struck by tree.
Labourer	Birch Point, Man.	11	30	While cutting roads, struck by falling tree, fracturing skull.
Labourer	Flanders, Ont.	16	35	Struck by tree.
Logger	Cowichan Lake Road, B.C.	20	25	Struck by falling snag.

FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE FIRST QUARTER
OF 1928—Continued

Trade or Industry	Locality	Date	Age	Cause of Fatality
LOGGING—Con.				
Loader.....	Stupart, Ont.....	" 23	23	Skull crushed by faling log while making load of logs.
Logger.....	Seeley Beach, N.B.....	about Jan. 26	22	While chopping down tree, branch fell on him.
Wood Bucker.....	Fanny Bay, B.C.....	" 27	21	Falling snag struck him on head.
Logger.....	Duncan, B.C.....	Feb. 2	41	Struck by log which fractured his skull and broke legs.
Logger.....	Belle River, Man.....	" 3	19	While chopping down trees, one fell on him, crushing back.
Hookman.....	Waldo, B.C.....	" 4	40	Fell from log rollway, fracturing skull.
Logger.....	Cortez Island, B.C.....	" 4	22	Struck on head by falling tree. Died Feb. 5.
Labourer.....	Rainy Lake, Ont.....	" 6	31	Struck by tree.
Lumber cutter.....	Near Wellandport, Ont.....	" 6	Shack in which he was sleeping burned; died Feb. 8.
Logger.....	Near Doheny Station, Que.	" 16	Log he was pushing with peavey rolled over him.
Logger.....	Greencourt, Alta.....	" 17	22	Kicked by horse. Fractured skull.
Logger.....	Near Cranbrook, B.C.....	" 17	24	Killed when tree he was felling loosened a lodged tree and fell on him.
Logger.....	Elsas, Ont.....	" 17	17	Thrown into river when pile of logs collapsed; drowned.
Teamster.....	Near St. Martin's, N.B.....	" 18	45	Steel cable holding team snapped, causing man to lose control of horses going down an incline, and logs rolled over him.
Foreman.....	Smoky Falls, Ont.....	" 20	37	Crushed by ties.
Logger.....	St. Alexis des Monts, Que.	" 22	70	Crushed by falling tree.
Logger.....	Denbigh, Ont.....	" 22	20	Struck by falling tree.
Logger.....	Neuville, Que.....	" 24	20	Struck by falling tree; died Feb. 25.
Labourer.....	Fort Frances, Ont.....	" 27	28	Struck by tree.
Logger.....	River's Bight, B.C.....	" 29	27	Leg became entangled in log boom, resulting in leg being amputated. Died of shock on March 1.
Loader.....	Englewood, B.C.....	Mar. 6	Log rolled over him, crushing abdomen.
Labourer.....	Flanders, Ont.....	" 7	Struck by tree.
Logger.....	Near Ste. Veronique, Que.	" 7	33	Caught against wall of shanty by tractor. Died March 8.
Logger.....	Nanaimo, B.C.....	" 20	31	Struck by falling tree, fracturing skull.
Foreman.....	Fox Lake, Ont.....	" 24	60	Rollway gave way and logs rolled over him.
FISHING AND TRAPPING—				
Fisherman.....	Ruskin, B.C.....	Jan. 11	Drowned when boat was upset by swift current.
Fisherman.....	Lunenburg Harbour, N.S.....	about Jan. 29	21	Drowned when motor boat struck cake of ice and sank.
Fisherman.....	Off Lunenburg, N.S.....	" 29	24	Washed overboard and drowned.
Mate of fishing schooner.	Off coast of Bermuda.....	Feb. 10	31	Washed overboard and drowned.
Hunter.....	Near Prince Rupert, B.C.....	about Mar. 21	28	Killed when shotgun fell and discharged.
Fisherman.....	Shag Harbour, N.S.....	" 29	33	Drowned when skiff capsized.
MINING NON-FERROUS SMELTING AND QUARRYING—				
Metalliferous Mining—				
Mine Foreman.....	Mammoth Mine, Near Silvertown, B.C.....	Jan. 3	45	Carried down mountain by snow slide and buried.
Miner.....	Frood Mine, near Sudbury, Ont.....	" 7	22	Struck by falling rock in mine, injuring arm and shoulder; died Jan. 22.
Miner.....	Timmins, Ont.....	" 9	41	Jammed between truck and mine timbers.
Mine blaster.....	Creighton, Ont.....	" 30	Premature explosion in hole for blasting; died Feb. 29.
Metal Miner.....	Copper Mountain, B.C.....	Feb. 3	29	Was dislodging a heavy piece of ore stuck in chute, and as it loosened, he slipped and was crushed by rock.
Miner.....	Timmins, Ont.....	" 3	35	Was engaged in blasting operations and returned to charge of dynamite just before it exploded.
Teamster.....	Jackson Manion, Ont.....	" 5	55	Leg crushed by runner of sleigh; infection.
1 Chute blaster.....	Timmins, Ont.....	" 10	36	
1 Helper.....	".....	" 10	42

Nipper.....			30	
Carpenter.....			61	
Shift boss.....			57	
Miner.....	Notre Dame des Anoges, Que.....	" 26	Buried under cave-in in zinc mine.
Shift boss.....	Frood Extension, Ont.....	" 31	40	Caught between ascending cage and timbers of shaft.
<i>Coal Mining:—</i>				
Miner.....	Nordegg, Alta.....	Jan. 3	Struck by mine car. Fractured pelvis.
Miner.....	Stellarton, N.S.....	" 10	48	While operating a saw, plank flew and struck him.
Miner.....	Minto, N.B.....	" 21	41	While timbering level in mine, roof collapsed, crushing him.
Miner.....	Brule Mines, Alta.....	" 30	30	Rock fell on him breaking leg, requiring amputation.
Coal miner.....	New Waterford, N.S.....	Feb. 7	17	Was riding a trip which jumped track; died Feb. 10.
Miner.....	Merritt, B.C.....	" 11	40	Collapsed and died while at work in mine.
Miner.....	Sydney Mines, N.S.....	" 14	Crushed by coal falling on him.
Miner.....	Coleman, Alta.....	" 16	34	Piece of coal fell on him; died Feb. 25.
Miner.....	Wabamun, Alta.....	" 20	37	Buried in cave-in of clay at mine.
Miner.....	Mountain Park, Alta.....	" 21	26	Fell under truck, fracturing skull.
Miner.....	Glace Bay, N.S.....	" 22	50	Fall of coal and stone.
Car handler.....	Nordegg, Alta.....	" 22	54	Caught arm between rope and capstan, pulling him around car and breaking his neck.
Miner.....	Dominion, N.S.....	about Mar. 7	Fell from ladder. Developed pleural pneumonia. Died March 11.
Machine operator.....	Glace Bay, N.S.....	" 16	45	Killed by fall of stone.
<i>Non-metallic mineral mining and quarrying, n.e.s.—</i>				
Labourer.....	St. Alban, Que.....	Mar. 22	40	Caught in jaws of crane, fracturing skull; died March 24.
<i>Structural Materials:—</i>				
Labourer.....	Near Oshawa, Ont.....	Mar. 24	19	Buried by cave-in at gravel pit.
MANUFACTURING—				
<i>Vegetable foods, drink and tobacco:—</i>				
Baker.....	Montreal, Que.....	Jan. 8	57	Caught in machinery; broken legs; fractured skull.
Engineer.....	Toronto, Ont.....	" 11	Crushed by radiator necessitating operation.
Labourer.....	Montreal, Que.....	" 19	52	Arm crushed when clothing caught in conveyer belt; died Jan. 21.
<i>Saw and planing mill products:</i>				
Lath bolter.....	Victoria, B.C.....	Jan. 6	41	While feeding lath machine, a lath flew back, striking him in abdomen; died Jan. 9.
Sawmill operator.....	Shoal Lake, Alta.....	" 9	Caught in revolving belting and crushed to death.
Labourer.....	Rainy Lake, Ont.....	" 14	Explosion.
Logger.....	New Westminster, B.C.....	" 13	19	While driving logs fell into river and was drowned.
Sawmill worker.....	Lachute, Que.....	" 24	33	Apparently was struck by a board when saw shifted.
Labourer.....	Niagara Falls, Ont.....	Feb. 1	Hit in stomach by piece of wood.
Saw operator.....	—, N.S.....	" 6	Finger cut off by rotary saw; died while under anaesthetic.
Night foreman in shingle mill.....	Pitt River, B.C.....	" 9	62	Was inspecting shafting and was caught in revolving shaft.
Saw mill employee.....	Lampedo, N.B.....	" 24	Killed when freight train crashed into siding where victim was loading lumber.
Labourer.....	Ground Hog River, Ont.....	Mar. 6	Slipped and fell; strained stomach.
Crane operator.....	Vancouver, B.C.....	" 9	When cable slipped, load of timber slipped, fracturing his skull.
Labourer.....	Erickson, Man.....	" 24	24	Struck on head by board thrown from saw.
Sawing machine operator.....	Fergus, Ont.....	" 29	His clothing got caught in machinery and he was thrown on to saw.

FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE FIRST QUARTER
OF 1928—*Continued*

Trade or Industry	Locality	Date	Age	Cause of Fatality
<i>MANUFACTURING—Con.</i>				
<i>Pulp, paper and paper products:</i>				
Superintendent.....	Milton, N.S.....	Jan. 23	61	Ice on which he was standing gave way and he fell into stream and was drowned.
Electrician.....	Near Kenogami, Que.....	Feb. 8	27	Electrocuted when engaged in repairing high voltage wire.
Paper mill worker...	Grand'Mere, Que.....	" 29	50	Burned by gas escaping suddenly from digester.
Boiler room man....	Madawaska, Ont.....	Mar. 10	33	Burned by explosion of mass of powdered coal.
Mill hand.....	La Tuque, Que.....	" 19	35	Struck on head by belt which slipped off pulley
<i>Iron, Steel and products:</i>				
Labourer.....	Hamilton, Ont.....	Jan. 2	51	While moving coke which had caught fire, was crushed in grip of huge crane.
Operator.....	Sault Ste. Marie, Ont.....	" 17	Explosion.
Steel mill worker....	Sault Ste. Marie, Ont.....	" 18	Explosion of blast furnace.
Master mechanic....	Hamilton, Ont.....	" 19	56	While cleaning plugged main pipe hole with steel pole, the pole touched a high tension wire and he was electrocuted.
Painter.....	Montreal, Que.....	" 20	39	Crushed by circular plates which were knocked down by beam.
Painter.....			35	
Painter.....			32	
Machinist.....	Kingston, Ont.....	Feb. 4	53	Caught fingers in brick; infection.
Foundry employee...	Amherst, N.S.....	" 27	Pulled wrong cord, causing elevator to move up quickly and victim was caught between floor of elevator and a girder.
Iron worker.....	Kitchener, Ont.....	" 6	60	Struck on head by piece of iron; died on Mar. 7 from cerebral hemorrhage.
Moulder.....	Montreal, Que.....	Mar. 9	28	Crushed beneath box of sand when chain of crane broke.
Boiler room man....	Sydney, N.S.....	" 15	26	Clothes caught in revolving shaft and he was whirled to death.
Boiler room man....	Sydney, N.S.....	" 15	Attempting to rescue fellow workman who was caught in shaft his arm become mutilated, necessitating amputation; died March 19.
Iron worker.....	St. Thomas, Ont.....	" 22	50	When elevator cable broke the balance weight fell on him, fracturing skull; died March 23.
Grinder.....	Toronto, Ont.....	" 26	51	Emery wheel burst and large piece struck and crushed his head.
<i>Non-ferrous metal products:</i>				
Executive officer....	Ottawa, Ont.....	Feb. 7	Car struck by train.
<i>Non-metallic mineral products:</i>				
Riveter with oil refinery.....	Ioco, B.C.....	Mar. 9	24	While working on top tank, he fell to ground and was killed.
<i>Chemical and allied products:</i>				
Teamster.....	Toronto, Ont.....	Jan. 19	70	Skull fractured when team drawing his lorry was struck by street car; died of pneumonia Jan. 25.
Installer.....	Waterloo, Ont.....	" 20	35	While installing fire extinguishing sprinklers, slipped into open trap door; fractured skull.
Chemical worker....	Beloeil, Que.....	" 21	30	Killed by explosion of nitro-glycerine in work hut.
Oiler.....	Hillsboro, N.B.....	" 23	27	While oiling pulley clothes became caught in shafting and he was whirled around and mutilated.
<i>Miscellaneous products:</i>				
Night watchman at electrical works....	Brockville, Ont.....	Feb. 9	Apparently dropped dead while engaged in duties.
Student engineer with electric Mfg. Co.....	Peterborough, Ont.....	" 28	23	Electrocuted while testing armature coils.
<i>CONSTRUCTION—Buildings and structures:</i>				
Labourer.....	Montreal, Que.....	Jan. 3	27	Remained too near source of blasting and struck by flying stone.
Carpenter.....	Montreal, Que.....	" 5	51	Found dead in cellar; probably caused by gas poisoning.
Labourer.....	Montreal, Que.....	" 12	33	Fell from scaffold.
Plumber.....	Montreal, Que.....	" 14	47	Electrocuted when he touched circuit breaker with his wrist.
Labourer.....	Bonnington, B.C.....	" 18	Fell from scaffold; died Jan. 24 of blood poisoning.
Labourer.....	Montreal, Que.....	" 23	26	Lost balance and fell down elevator shaft of building under construction.
Carpenter.....	Levis, Que.....	" 25	62	Struck by beam which was dislodged by avalanche of snow.

FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE FIRST QUARTER
OF 1928—Continued

Trade or Industry	Locality	Date	Age	Cause of Fatality
CONSTRUCTION—Con- Building and Struc- tures—Con.				
Bricklayer.....	Corbyville, Ont.....	" 26	42	Lost footing and fell 60 feet.
Construction super- intendent.....	Port Haney, B.C.....	Feb. 1	26	Was superintending installation of water sprinkler system in sawmill, and he fell from a beam onto saw.
Labourer.....	Toronto, Ont.....	" 3	25	Cave-in in excavation for new building.
Labourer.....	Montreal, Que.....	" 3	28	Slipped from roof.
Labourer.....	Montreal, Que.....	" 3	67	Slipped from wagon, fracturing spine.
Labourer.....	Ottawa, Ont.....	" 17	55	Struck on head by piece of ice falling from build- ing.
Labourer.....	Montreal, Que.....	" 17	21	Struck on head by beam; died Feb. 26.
Labourer.....	Toronto, Ont.....	" 22	Run over by truck which was backing out of ex- cavation.
Structural steel worker.....	Port Robinson, Ont.....	" 27	36	Crushed beneath steel girder which was being raised into position when chain of hoist col- lapsed.
Structural steel worker.....	Ottawa, Ont.....	Mar. 6	27	Fell from steel structure; died March 7.
Plumber's apprentice	Ottawa, Ont.....	" 14	17	Fell from steel structure, fracturing skull; died March 15.
Painter.....	Winnipeg, Man.....	" 22	53	Fell while painting ceiling, when steel beam gave way.
Plumber.....	Quebec, Que.....	" 23	37	Asphyxiated while making gas pipe connection.
Bridge and highway:				
Concrete labourer...	Toronto, Ont.....	Jan. 10	35	Crushed by falling beam.
Labourer.....	Edwardsburg, Ont.....	" 12	Blown up by charge of dynamite.
Bridgeman.....	Mountainside, Man.....	" 21	27	Peavy slipped and he fell over side of bridge.
Labourer.....	Ottawa, Ont.....	" 23	24	Lost foothold on trestle work of bridge and was drowned.
Labourer.....	Near Transcona, Man.....	" 30	62	While loading cars in gravel pit piece of frozen earth fell on him and fractured skull.
Structural steel worker.....	Toronto, Ont.....	Feb. 3	51	Fell from bridge while helping to lower girder; died Feb. 4.
Labourer.....	Near North Bay, Ont.....	" 9	Buried in cave-in while engaged in highway con- struction; died few days later.
Bridgeman.....	Theodosia Arm, B.C.....	Feb. 29	38	Struck by line from donkey engine and was thrown off bridge.
Miscellaneous:				
Labourer.....	Chute-à-Caron, Que.....	Jan. 4	33	Large block of earth rolled over him and crushed him.
Track repairman...	Welland, Ont.....	" 17	40	Fell 60 feet from trestle, fracturing skull.
Foreman.....	Welland Canal, Ont.....	Feb. 4	55	Fell 60 feet to concrete floor of lock while instal- ling steel gates.
Labourer.....	Allanburg, Ont.....	Feb. 4	32	Struck by flying rock following premature ex- plosion while they were rock blasting.
Labourer.....	Welland Canal, Ont.....	" 4	38
Bolt man.....	Welland Ship Canal Ont....	" 17	35	While walking through tunnel was drowned in water hole.
Labourer.....	Welland, Ont.....	Mar. 10	30	Crushed by clam while working in gravel pit.
Labourer.....	Merritton, Ont.....	" 29	45	Fell from top of lock to bottom.
TRANSPORTATION AND PUBLIC UTILITIES—				
Steam railways:				
Engineer.....	Rigaud Station, Que.....	Jan. 2	34	Fell from tender of engine.
Brakeman.....	Kakabeka Falls, Ont.....	" 5	58	Rear collision and derailment of grain cars.
Carman.....	Near Hutton, B.C.....	" 6	46	When the car on which he was working was struck by other cars he was knocked beneath the car and the wheels passed over him.
Fireman.....	Near Point Fortune.....	" 6	35	Slipped and fell from train and fractured his skull.
Hump rider.....	Neebing, Ont.....	" 9	27	Fell under cars.
Fireman.....	Near Hope, B.C.....	" 11	24	When train was derailed by washout he was crushed by engine.
Electrician.....	Toronto, Ont.....	" 11	38	While operating electric crane, received electric shock and fell from bridge; died from con- cussion of brain.
Trainman.....	Yale, B.C.....	" 19	39	Back broken in train accident; later developed pneumonia; died Jan. 29.
Bridge worker.....	Near Lillooet, B.C.....	" 21	49	Struck by crane used in dismantling bridge.
Bridge worker.....	" 21	35
Labourer.....	Fort William, Ont.....	" 26	26	Fell between moving cars.
Pilot engineer.....	Near Limoges, Ont.....	" 30	Killed by derailing of train caused by switch being knocked open by a runaway team at- tached to sleigh.
Track patrolman...	Squeah, B.C.....	Feb. 4	45	Train struck speeder.
Brakeman.....	Elk Point, Alta.....	" 6	63	Slipped and fell between coupling.
Conductor.....	North Bend, B.C.....	" 6	48	Stepped in front of shunting engine.

FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE FIRST QUARTER
OF 1928—Continued

Trade or Industry	Locality	Date	Age	Cause of Fatality
TRANSPORTATION AND PUBLIC UTILITIES—				
<i>Concluded.</i>				
<i>Steam railways—Con.</i>				
Conductor.....	Birkendale, Alta.....	" 8	48	Run over.
Boiler washer.....	Belleville, Ont.....	" 9	65	Apparently fell from engine which he was cleaning in roundhouse; died Feb. 12.
Section man.....	Near Painsec, N.B.....	" 14	52	Derailment of gasoline speeder.
Railway bridge worker.....	Near Hartley Bay, Ont.....	" 16	27	Placed his peevy against a heavy springer which was being lowered into place and was thrown from bridge by its momentum.
Trainman.....	Blairmore, Alta.....	" 16	31	Fell under work train.
Railway shop worker	Montreal, Que.....	" 17	53	Finger crushed while at work in shops; died from tetanus on Feb. 20, following its amputation.
Engineer.....	Casey Station, Que.....	" 20	40	Derailment of freight train.
Brakeman.....	Englehart, Ont.....	" 21	34	While attempting to throw switch was apparently caught in trucks of car.
Foreman.....	Windsor, Ont.....	" 26	35	Fell from flat car and run over.
Labourer.....	Near North Bay, Ont.....	Mar. 3	Struck by train.
Brakeman.....	Sydney, C.B.....	" 9	45	Car jumped track and he was crushed beneath it.
Brakeman.....	Garneau, Que.....	" 10	35	Slipped under cars when getting off engine.
Section labourer.....	Near Savona, B.C.....	" 13	Buried beneath a land slide in tunnel.
Section labourer.....		" 13	
Section labourer.....		" 13	
Section man.....	Winnipeg, Man.....	" 13	45	Struck by train injuring head and fracturing leg.
Extra gang foreman	Maple Creek Sd., Sask.....	" 15	43	Slipped under car when getting off same.
Switchman.....	Blackrock, Ont.....	" 15	Struck by freight train.
Carman.....	Toronto, Ont.....	" 17	44	Killed by locomotive.
Brakeman.....	Ingersoll, Ont.....	" 17	49	While riding on front of engine the pilot broke, throwing him under wheels.
Conductor.....	Sydney, N.S.....	" 31	45	Struck and run over by shunter. Fractured skull.
<i>Water transportation:</i>				
Captain.....	Off coast of Vancouver Island, B.C.....	Jan. 5	Schooner crashed on reef when lost in fog.
Chief engineer.....		" 5	
Chief officer.....		" 5	
Cook.....		" 5	
Longshoreman.....	St. John, N.B.....	Feb. 14	32	Leg caught in wire hawser; died of shock from amputation.
Longshoreman.....	Genoa Bay, B.C.....	Feb. 21	38	Died from injuries received while loading ship when he fell from ship to water on March 20, 1923.
Seaman.....	Off coast of N.S.....	" 27	19	Slipped on icy deck and fell overboard.
Seaman.....	St. John, N.B.....	Mar. 17	Fell into hold of ship.
Boilermaker.....	Vancouver, B.C.....	" 20	Lost footing and fell from upper deck, fracturing his skull.
<i>Air transportation:</i>				
Air pilot.....	Le Pas, Man.....	Jan. 5	Killed when engine stalled and plane fell.
<i>Local transportation:</i>				
Liveryman.....	Arborg, Man.....	Jan. 2	50	Found dead lying over burnt out fire which he had probably built when caught in storm.
Plumber with express Company.....	Montreal, Que.....	Feb. 8	48	Truck skidded on rails and collided with street car.
Tractor driver.....	Bluffey Lake, Ont.....	Feb. 9	22	Fell off tractor, fracturing skull.
Labourer.....	Montreal, Que.....	Mar. 3	24	Chopping pile of frozen sand, when lump fell on him.
Teamster.....	Ottawa, Ont.....	" 26	73	Stricken with heart failure and fell from wagon.
Teamster.....	Montreal, Que.....	" 29	60	Found dead in stable.
<i>Storage—</i>				
Labourer.....	Lockport, N.S.....	Jan. 5	60	Fell in harbour as he was reaching for barrel on wharf; died of shock.
Ice house employee..	Montreal, Que.....	Feb. 21	32	Struck on head by support bar of ice hoist.
Sweeper.....	Saskatoon, Sask.....	Mar. 2	37	Caught by belt running tripper machine.
<i>Electricity and gas:</i>				
Electrician.....	Pembroke, Ont.....	Jan. 7	40	Electrocuted.
Labourer.....	Peterborough, Ont.....	" 16	73	Fell downstairs; died of heart failure.
Employee of power company.....	Montreal, Que.....	" 18	35	Truck on which he was riding collided with street car.
Power plant employee.....	Bonnington, B.C.....	" 24	55	Struck by train; died of heart failure.
Operator.....	Peterborough, Ont.....	" 25	61	Thrown from cutter.
Electrician.....	Richmond, Que.....	" 27	19	Electrocuted.
Lineman.....	Near Cooksville, Ont.....	" 30	35	Fell from hydro pole; died April 1.
Lineman.....	Winnipeg, Man.....	Feb. 15	25	Was helping to transfer lines from one pole to another and was electrocuted.

FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE FIRST QUARTER
OF 1928—*Concluded*

Trade or Industry	Locality	Date	Age	Cause of Fatality
TRANSPORTATION AND PUBLIC UTILITIES—<i>Concluded.</i>				
<i>Electricity and Gas—</i>				
Lineman.....	Kitchener, Ont.....	" 18	48	Fell from pole; died Feb. 20.
Electrician.....	Winnipeg, Man.....	" 18	36	Electrocuted at power plant.
Watchman.....	St. Jerome, Que.....	" 23	33	Accidentally touched live wire as he stepped from roof.
Night watchman...	Montreal, Que.....	" 29	32	Descended gas-filled man-hole and was asphyxiated.
TRADE—				
<i>Wholesale:</i>				
Engineer.....	Toronto, Ont.....	about Jan. 16		While repairing coal chute plate slipped and crushed his leg, causing sepsis; died Feb. 8.
<i>Retail:</i>				
Coal driver.....	Montreal, Que.....	Jan. 3	40	Fell beneath coal cart and run over.
Driver.....	Hannon, Ont.....	" 21	33	While driving his truck was struck by train and suffered fractured skull; died Jan. 23.
Electrical worker...	Vancouver, B.C.....	" 27	29	While erecting radio aerial he was dragging it across some high tension wires and was electrocuted.
Milk driver.....	Toronto, Ont.....	" 29		Thrown from milk wagon when it was struck by street car; died Jan. 30.
Truck driver.....	Hantsport, N.S.....	Feb. 3		Died from exposure to severe cold weather.
Driver.....	Coalhurst, Alta.....	" 6	29	Fell under loaded car of coal, fracturing skull.
Labourer.....	Forest, Ont.....	" 13	70	Crushed under car of coal which broke loose.
Teamster.....	Guelph, Ont.....	Mar. 24	28	Accidentally shot by boy, target shooting.
SERVICE—				
<i>Public administration:</i>				
Traffic officer.....	Near Manotick, Ont.....	Jan. 12	43	While attempting to steer motorcycle out of rut was thrown to ground and run over by truck.
Labourer.....	Quebec, Que.....	" 18	40	Fell into man-hole and carried through sewers; died Feb. 4.
Labourer.....	Vancouver, B.C.....	" 27	42	Died of injuries received during blasting operation.
Snow carter.....	Quebec, Que.....	" 30	23	Fell into river while dumping snowcart and drowned.
Wood cutter.....	Winnipeg, Man.....	Feb. 1	41	While loading wood on sleigh log slipped and fell on him; died April 21.
Labourer.....	Brighton, Ont.....	" 11	33	Crushed under frozen earth.
Fireman.....	Winnipeg, Man.....	" 15	36	Suffocation by smoke while at fire in Nov., 1924; developed anaemia; died Feb. 15, 1928.
Police chief.....	Granby, Que.....	Mar. 4	44	Going to fire when fire wagon collided with automobile.
Fireman.....	New Toronto, Ont.....	" 12		Fell from roof while fighting fire.
Labourer.....	Township of Sunnidale, Ont.	" 13		Hit by frozen piece of earth.
<i>Laundrying, dyeing and cleaning:</i>				
Plant engineer.....	Truro, N.S.....	Mar. 7	69	Hand caught in pulley belt and was thrown against shafting; broken neck.
<i>Custom and repair:</i>				
Electrician.....	Ottawa, Ont.....	Jan. 26	33	Touched live wires when testing motor and was electrocuted.
Blacksmith.....	Edson, Alta.....	Feb. 2	49	Ruptured while lifting.
Blacksmith.....	Winnipeg, Man.....	" 8	32	While working on bull dozer, leg caught in machine, fracturing thigh.
Mechanic.....	Victoria, B.C.....	Mar. 19	34	While working under auto, clothing got caught in shaft, breaking his neck.
<i>Personal and domestic:</i>				
Caretaker.....	Montreal, Que.....	Jan. 19	64	Slipped and fell downstairs, fracturing skull.
Sawing machine operator.....	Pleasant Lake, N.S.....	" 23	32	Caught in driving belt of motor and thrown against shaft, fracturing his skull.
Labourer.....	Quebec, Que.....	" 23	20	While working at foot of freight elevator shaft, counter-poise of passenger elevator struck and fractured skull.
Gardener.....	Peterborough, Ont.....	" 27		Struck on forehead by falling limb.
Waitress.....			22	
Kitchen maid.....	Mulgrave, N.S.....	Feb. 26	19	Hotel at which they were employed destroyed by fire.
Kitchen maid.....			18	
Cemetery caretaker.....	Glenwood, Ont.....	Mar. 9		When cutting down tree it fell on him.
Boarding house keeper.....	Paugan Falls, Que.....	" 26		Burned by explosion of coal-oil while lighting fire with it; died March 27.

SUPPLEMENTARY LIST OF FATAL INDUSTRIAL ACCIDENTS OCCURRING DURING 1927

Trade or Industry	Locality	Date	Age	Cause of Fatality
LOGGING—				
Chaser.....	Reid Bay, B.C.....	Oct. 24	28	While pulling slack on haulback, machine started, throwing him into air; died Jan. 5, 1928.
Water boy.....	Victoria Co., N.B.....	Nov. 11	16	Stepped off moving truck and was struck, fracturing skull.
Logger.....	Restigouche Co., N.B.....	" 29	18	Struck arm against tree; infection.
Labourer.....	Restigouche Co., N.B.....	" 29	19	Struck by falling tree.
Labourer.....	McMurrich Twp., Ont.....	Dec. 3	34	Tripped on log and fell, fracturing leg; pneumonia.
Sawyer.....	Madawaska Co., N.B.....	" 8	20	Struck by falling tree, fracturing spine.
Loader.....	Bloedel, B.C.....	" 10	39	While loading logs log slipped and struck him.
Rigger.....	Englewood, B.C.....	" 28	24	Struck by sapling.
MINING, NON-FERROUS SMELTING AND QUARRYING—				
<i>Metaliferous mining:</i>				
Trackman.....	Kimberley, B.C.....	Dec. 26	37	Piece of ore fell on him, injuring his back on March 3, 1926.
<i>Structural materials:</i>				
Attendant.....	Colquitz, B.C.....	Nov. 5	19	While excavating sand, bank fell in, burying him.
MANUFACTURING—				
<i>Pulp, paper and paper products:</i>				
Engineer.....	Sault Ste. Marie, Ont.....	Sept. 15	57	Fell off tug into crib at dock, injuring hips and spine
<i>Chemical and allied products:</i>				
Chemist.....	Vancouver, B.C.....	Nov. 3	54	Acid burns on arm which developed into erysipelas; died Nov. 17.
CONSTRUCTION—				
<i>Buildings and structures:</i>				
Stonecutter.....	Toronto, Ont.....	Sept. —	55	Silicosis.
Floor layer.....	Vancouver, B.C.....	Nov. 28	42	Ran two splinters of lumber in finger; died Dec. 9.
<i>Bridge and highway:</i>				
Bridge worker.....	Vaudreuil, Que.....	Nov. 25	33	While repairing bridge, slipped and fell into water and drowned.
TRANSPORTATION AND PUBLIC UTILITIES—				
<i>Steam railways:</i>				
Material handler.....	Winnipeg, Man.....	Nov. 12	59	Injured while unloading iron from box car; died April 26, 1928.
Labourer.....	Niagara Falls, Ont.....	Dec. 16	38	Crushed between cars.
<i>Local transportation:</i>				
Truck driver.....	Saanich, B.C.....	Sept. 17	49	Truck collided with street car.
Truck driver.....	Near St. Donat, Que.....	" 29	Fell asleep in closed van of truck with engine running and was asphyxiated.
<i>Electricity and gas:</i>				
Labourer.....	Toronto, Ont.....	Aug. 6	66	Fell out of car on head.
Electrician.....	Winnipeg, Man.....	Dec. 18	40	Schlerosis, aggravated by falling downstairs, fracturing his arm on Feb. 18, 1925.
TRADE—				
<i>Wholesale:</i>				
Sales manager with oil company.....	Lorne Park, Ont.....	July 13	26	Collided with truck.
SERVICE—				
<i>Public administration:</i>				
Fire ranger.....	Missinabia River, Ont.....	Aug. 5	23	Drowned.
Lightkeeper with Government Dept.	Near Atherley, Ont.....	about Sept. 30	Struck elbow while repairing lighthouse.
Railway employee..	Newtonville, Ont.....	Oct. 3	Wagon hit by car, thrown to ground; broken thigh.
Labourer.....	Kitchener, Ont.....	" 22	57	Crushed by cave-in.
Policeman.....	Victoria, B.C.....	Dec. 17	30	Struck by speeding car; died Dec. 19.
<i>Laundrying, dyeing and cleaning:</i>				
Foreman, steam laundry.....	London, Ont.....	Dec. 8	60	Elevator dropped.
<i>Personal and domestic:</i>				
Labourer.....	Montreal, Que.....	Nov. —	49	While removing yacht from river, it slipped and fell on him; died March 6, 1928.

IMMIGRATION TO CANADA DURING THE FISCAL YEAR ENDED MARCH 31, 1928

THE accompanying tables from the Department of Immigration and Colonization show the nature and extent of immigration into Canada during the fiscal year ended March 31, 1928, with some comparative figures for the previous fiscal year. Out of a total of 151,597 immigrants, 50,872 or 34 per cent were British, 25,007 or 16 per cent were from the United States, and 75,718 or 50 per cent from other countries. This compares with 143,991 in the previous fiscal year, of whom 49,784 or 34 per cent were British, 21,025 or 15 per cent from the United States, and 73,182 or 51 per cent from other countries. During the year 39,887 Canadians returned from the United States, as compared with 56,957, the number previously given for 1926-1927. If these are included with those of general immigration the totals are 191,484 for 1927-1928 and 200,948 for 1926-1927.

STATEMENT OF IMMIGRATION TO CANADA, FOR
THE FISCAL YEAR ENDED MARCH 31, 1928,
COMPARED WITH THAT OF THE PRECEDING
FISCAL YEAR

Effects of Paint Spraying on Health

The Department of Labour and Industry of the State of Pennsylvania recently published a special bulletin (No. 16, 1926) giving the report of a committee appointed to study paint spraying. The results of the investigation are summarized as follows:—

The purpose of the study was to determine whether there is a health hazard involved in the coating of surfaces with paint, varnish, lacquer, shellac, enamel, and similar materials by the spray method; and if such hazard is present, in what manner it is manifested and to what extent.

In the field survey 233 establishments were visited; 383 physical examinations were made; 168 air velocity measurements were taken; and air was sampled and determinations made for the presence of benzol (91 samples), total solvents (10 samples), lead (22 samples), and dust particles (26 samples).

No cases of marked ill health which could be attributed to the work of the individual examined were found, although some histories to this effect were obtained.

The health hazards encountered in spray coating processes may be overcome by the use of materials of nontoxic and nonirritating character, by the use of materials in which these elements are reduced to a minimum, and by requiring that when the spraying process is used certain definite precautions must be observed. With this in mind the Department of Labour and Industry has formulated tentative regulations covering this subject which will be discussed at public hearings and which will then form the basis of the regulations adopted and enforced by the Department.

As the composition of lacquers has not been standardized and as almost all lacquer makers are continually changing their formulae and attempting to use entirely new solvents, the effect of which upon the health is or may be unknown, we feel that the indicated precautions will be advisable even though benzol itself may be entirely eliminated.

Industrial Litigation in Italy

Under new regulations for the hearing of labour disputes issued in Italy by a Decree of February 26, 1928, which is to come into force on October 1, 1928, the arbitration boards and private employment commissions are abolished. In future, justices of the peace or the ordinary courts (according to the amount involved) will deal with individual litigation connected with relations regulated by an individual or collective labour agreement or by some other method equivalent to a collective agreement. They will also deal with actions brought against employers or workers by legally recognized associations.

It is announced that John Moore, woollen manufacturer of Bradford, England, will transfer his woollen industry to Victoria, British Columbia, where twenty-seven acres have been secured for the purposes of the company. The entire operating plant is to be transferred from England.

RECENT LEGAL DECISIONS AFFECTING LABOUR

Closed Shop Agreement with Union must be Observed

The Building Trades Council of the Catholic Unions, an incorporated organization, obtained a judgment in the Superior Court at Quebec on May 8, in an action against the Ignace Bilodeau Company, Limited, in regard to the employment by this company of workmen other than members of the union. In February, 1927, the company, which had a building contract in connection with a church building at Québec, agreed with the owners to employ on this work, as far as possible, only workmen who were members of the Catholic unions, but as the work proceeded other workmen were employed. The union brought an action for damages against the company for \$500. The company contended that the condition in the agreement in reference to the employment of union labour only constituted a violation of the principle of freedom of work; that this condition was impossible to carry out, the work calling for special workmen; and that the union had not been a party to the agreement and therefore had no standing in the case. The court denied these pleas, finding that the work in question could have been carried out by workmen of ordinary intelligence. In regard to the claim of the union to take action on behalf of its members, the judgment pointed out that the action of the union was taken on the ground of "collective interest." The union, it was further stated, was incorporated under the law governing professional syndicates (Statutes of 1924, Chapter 112), having for its exclusive object the study, defence and promotion of the economic, social and moral interests of the several professions or trades. The union therefore had the right to take action in connection with any contracts in which these interests were in question. The court fixed the amount of damages at \$87 with costs.

Payment of Army Pension not Enforceable

The mother of a deceased ex-service man presented a petition in the Exchequer Court of Canada for the payment of a pension under the Pensions Act, 1919, at the rate of \$60 per month from June, 1922, to December, 1925. She alleged that this son had been her sole support up to the time of his death. He enlisted for service in May, 1916, and served overseas until his discharge in June, 1919. While serving overseas he was gassed, and

after his return to Canada was sick and ailing, although able to work occasionally, giving her support at such times. After the death of her son the mother applied to the Board of Pension Commissioners for a pension as a dependent mother, but the Board refused to grant her application upon the ground that the condition resulting in her son's death was not attributable to military service. The petitioner thereupon appealed to the Federal Appeal Board, which on October 26, 1925, determined that the death of the young man was attributable to military service. In December, 1925, the Board of Pension Commissioners ruled that a pension would be paid the applicant at the rate of \$60 per month, beginning December, 1925. The petitioner subsequently applied to the Pension Commissioners at various intervals for retroactive pension from the date of her son's death up to the date of the decision of the Federal Appeal Board, this claim amounting to \$2,440. The Commissioners refused to make the pension retroactive "in view of the contributions made by the Canadian Patriotic Fund, and contributions from other persons interested in your suppliant's welfare, as well as income from other sources."

The Exchequer Court found that the suppliant's right to recover the amount claimed depended wholly upon a relation of contract subsisting between her and the Crown, as represented by the Board of Pension Commissioners. Mr. Justice Maclean, in the course of his judgment, denied the existence of such a contract. "I cannot see," he said, "in any section of the entire Act any specific contractual relations, established between the soldier and his dependants, and the Crown or the board. The provisions of section 34 of the Pensions Act are relied upon by the suppliant, and while that section enacts that a parent 'shall be entitled' that expression does not carry the case any further than the statutes and royal warrants upon which the English cases have been decided. The whole case has to be looked at as involving an act of bounty by the Crown, and the administration of such act of bounty is left in the discretion of an arm of Government, known as the Pensions Board. So far as the court is concerned no review can be made of the decisions of the Pensions Board, even if the board goes wrong, and I think it is quite clear that such was the intention of the statutes. The only appeal in, or review of, such matters from the Pensions Board is to the Federal Appeal Board, as provided for by 1923 (Can.), chapter 62, section

11. For the reasons given I am of the opinion that the suppliant is not entitled to the relief claimed."

---(*Exchequer Court of Canada, Thomas versus the King.*)*

Question of Privileged Statement made before Workmen's Compensation Board

The Supreme Court of Canada on February 7, 1928,† reversed the judgment of the Ontario Court of Appeal in the case *Halls versus Mitchell*, which had in turn reversed the decision of the County Court which first tried the case. The judgment of the trial judge, however, was varied by the Supreme Court, which reduced the damages awarded the plaintiff from \$700 to \$500, with costs in both appeals. The earlier stages of this case were noted in the *LABOUR GAZETTE*, January 1, 1927, page 122, and November, 1926, page 1,172. It will be recalled that the plaintiff was a returned soldier who had been employed by the Canadian National Railways. He claimed that as the result of an accident in the course of his employment he contracted a condition of the eye known as iritis. On applying for workmen's compensation the Board refused the claim, on the evidence of the defendant, a doctor, who divulged certain information said to have been communicated to him confidentially in his capacity as a medical practitioner. This information was contradicted by the plaintiff, and was not substantiated by the plaintiff's record in the army. The plaintiff therefore brought an action against the doctor for libel and slander. One of the questions involved in this case was whether statements made to the workmen's compensation were in the nature of privileged communications that otherwise would be actionable as defamatory.

Mr. Justice Duff, in giving judgment in the Supreme Court of Canada, stated the underlying principle on which such privilege is founded as being "the general interest of society." He held that "there was no duty resting upon the respondent (the doctor), and no interest committed to his charge, of sufficient weight and importance to require that the libels in question, involving the disclosure of professional confidences, should be protected in the "general interests of society." Moreover, assuming such a duty or interest existed as might warrant such disclosures if necessary in the last resort, the protection ought not, (considering the gravity of the matter of the libels), to be extended beyond the strict neces-

sities of the occasion, or to disclosures made secretly without communicating with the appellant (the plaintiff) giving him an opportunity of explanation, and endeavouring to attain the object sought by other means, entailing no injury to the appellant's reputation. In all the circumstances, such disclosures made in the absence of such precautions, can not be said to be fairly warranted by any reasonable occasion or exigency."

(*Supreme Court of Canada—Halls versus Mitchell*)

Meaning of "Contributory Negligence"

A woman left the sidewalk of a street in Vancouver and proceeded to cross the street without having looked to see if cars were approaching. At the same time two automobiles approached, and the second car struck the woman, the driver having his view obstructed by the car in front. The woman was seriously injured, and she brought an action for damages for personal injuries. The British Columbia Supreme Court found that the plaintiff and defendant had shown negligence in equal degree, and awarded damages at \$2,884, with judgment to the plaintiff for one-half that amount, or \$1,442.

Mr. Justice McDonald, in giving judgment cited a similar Ontario case, *Walker versus Forbes* (1925), 2 Dominion Law Reports, p. 725. He noted that the Ontario Statute, with which Mr. Justice Riddell dealt in that case, "is not by any means in the same terms as our own statute, and that of New Brunswick, which two latter appear to be identical. Except in the title," the judge continued, "our statute makes no reference whatever to 'contributory negligence, while the Ontario Statute does, and I can well understand that cases may arise where, on the same facts, a different decision might be reached in the different provinces. With the greatest respect to those judges who have dealt with various phases of these statutes I suggest that in our Act the legislature intended to do away with all the old difficulties which have been so long the nightmare of judges and juries, and which arose from the use of the words 'contributory negligence' and 'ultimate' negligence. As a matter of fact, the word 'negligence' is not used except in the title. The simple word 'fault' is used, and I suggest that the intention was that a judge or a jury in trying one of these cases should eliminate, as far as possible, the very difficult questions which formerly arose and apply the simple questions: By whose fault was the accident caused, by

*Dominion Law Reports (1928) 2, Part 6.

†Dominion Law Reports (1928) 2, pages 97-120.

one of the parties alone, or by both parties, and, if so, in what proportions?"

*(British Columbia—Harper versus McLean)**

Commenting on the foregoing decision the editor of the Dominion Law Reports (1928) 2, Part 3, said: "At common law if both parties were guilty of negligence contributing to the accident, neither could recover. The primary purpose of the statute was to change that rule and adopt an apportionment of the damages in the ratio of the degree of contribution to the accident. That is the Admiralty rule and certainly was the main purpose of the statute. The statute is therefore derogatory of the common law and must be strictly construed in any event. To hold that the use of the word 'fault' throughout the statute in place of negligence, in addition to the accomplishment of the statute's main purpose, imposes a liability for negligence not a proximate cause of the accident, is, it seems to us, with all deference, to give the statute a wider construction than its nature allows. We imagine that the only thing in the contemplation of legislature when passing it was the alleviation of the obvious hardship in cases where a plaintiff was guilty of some slight act of contributory and lost his whole remedy at common law. The point is worth bearing in mind and will no doubt produce an interesting argument when squarely raised."

The provisions of the Contributory Negligence Act of New Brunswick were outlined in the LABOUR GAZETTE, July, 1925, page 668, and the Acts of Ontario and Nova Scotia were noted in the issue for August, 1925, page 774, where a note was given explaining the nature of the reform which was effected by means of this legislation.

Question of Constitutionality of U. S. Longshoremen's Act

The Supreme Court of the United States will be asked to decide the question of the constitutionality of the Longshoremen's and

Harbour Workers' Compensation Act, which took effect in the United States on July 1, 1927 (LABOUR GAZETTE, April, 1927, page 397).

Chernik, a longshoreman, was injured while on a lighter which was being used for unloading a steamship at New York. Rather than accept the compensation provided under the Act, the employee sued in the county court to recover damages. The Clyde Steamship Company, the employer, moved to dismiss this suit on the ground that by reason of the Longshoremen's Act the court had no jurisdiction. The latter motion was granted by the court, this decision being upheld later by the Court of Appeals. Counsel for the longshoremen then announced that the United States Supreme Court would be asked to give an opinion on the constitutionality of the Act, on the grounds that it deprives the courts of jurisdiction which is vested in them by the constitution; that it violates the fifth amendment to the Constitution which states that no man shall be deprived of life, liberty and property without due process of law; that it is class legislation and that it violates the seventh constitutional amendment, which provides that all cases of admiralty and maritime jurisdiction shall save to suitors the right of a common law remedy where the common law is competent to give it.

Harry S. Austin, attorney for the International Longshoremen's Association, has filed a brief in which he denies the charges of unconstitutionality and terms the law "humanitarian legislation." He says: "Maritime workers injured upon the land or extensions thereof were covered by the compensation acts of the various states of the union, and an amazing situation was thereby created which was, through congressional enactment, sought to be remedied. Prior to this law becoming effective, maritime employees injured in the course of their employment upon navigable waters had no other recourse than by way of an action at common law or in admiralty, as they might be advised. This necessarily entailed costly litigation, delayed and sometimes inadequate payment, to say nothing of improper, insufficient and oft-times delayed medical or surgical attention."

*Dominion Law Reports (1928) 2, Part 3, page 220.

THE LABOUR GAZETTE

PREPARED AND EDITED IN

THE DEPARTMENT OF LABOUR, OTTAWA, CANADA

VOLUME 28]

JUNE, 1928

[NUMBER 6

NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

Monthly Summary

INDUSTRIAL employment in Canada showed a considerable improvement at the beginning of May, according to returns received by the Dominion Bureau of Statistics from 6,504 firms, each employing a minimum of 15 workers and representative of all industries except agriculture, fishing, hunting and highly specialized business. The working forces of these firms aggregated 883,047 persons, as compared with 846,977 in the preceding month. The employment index number (with January 1920, as the base equal to 100) stood at 105.5, as compared with 101.1 on April 1, and with 100.6, 94.3, 90.8, 91.8, 91.4, 83.3 and 84.1 on May 1, 1927, 1926, 1925, 1924, 1923, 1922 and 1921, respectively. Reports received from the offices of the Employment Service of Canada continued during April to show a steady increase in the volume of business transacted, gains being recorded in comparison both with the previous month and with April last year, the latter gains being chiefly due to increased placements in farming and in building. A decline however was noted in connection with logging operations. At the beginning of May, 1928, the percentage of unemployed members registered by local trade unions stood at 5.2, contrasted with 6.5 per cent unemployed at the beginning of April and with 6.0 per cent at the beginning of May, 1927. The May percentage was based on the reports tabulated by the Department of Labour from 1,642 labour organizations with an aggregate membership of 185,318 persons.

The average cost of a weekly family budget of twenty-nine staple foods was \$10.80 at the beginning of May, as compared with \$10.87 for April; \$10.76 for May, 1927; \$11.29 for May, 1926; \$10.48 for May, 1925; \$9.89 for May, 1924; \$10.36 for May, 1923; \$10.22 for May, 1922; \$12.25 for May, 1921; \$16.65 for May, 1920; \$12.66 for May, 1918; and \$7.43 for May, 1914. In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon prices in 1913 as 100, was slightly lower at 152.9 for May, as compared with 153.2 for April; 151.9 for May, 1927; 156.8 for May, 1926; 158.8 for May,

1925; 150.6 for May, 1924; 155.2 for May, 1923; 153.9 for May, 1922; 170.5 for May, 1921; 256.7 for May, 1920 (the peak); 201.4 for May, 1919; and 194.6 for May, 1918.

The time loss due to industrial disputes in May, 1928, was greater than during April, 1928, and also greater than during May, 1927. Twenty disputes were in existence at some time or other during the month, involving 3,078 workpeople and resulting in a time loss of 35,024 working days. Corresponding figures for April, 1928, were: seventeen disputes, 1,818 workpeople and 21,757 working days; and for May, 1927, twenty-one disputes, 5,669 workpeople and 27,765 working days.

Industrial Disputes Investigation Act, 1907

The Department received during May the report of the Board of Conciliation and Investigation in connection with a dispute between the Dominion Rubber Company and its employees. Six new applications for the establishment of Boards were received during the month, boards being established in three of these cases. The text of the report, and particulars of the recent proceedings under the Act, are given on page 573.

Old age and invalidity pensions in South Africa

The Minister of Finance of the Union of South Africa announced in his recent budget speech in the House of Assembly that the government had decided to introduce a measure providing for old age and invalidity pensions, to take effect from January 1, 1929. The report of the commission appointed in 1926 to inquire into this subject, is outlined on another page of this issue. The intention is to grant old age pensions to persons of small means who have reached the age of 65 years. The pension for Europeans will be £30 per annum and for coloured persons (not including natives) \$18 per annum, the means limit being £54 and £36 respectively. If the income is below £24 and £18 respectively, full pension will be paid, and as the means increase to £51 and £33 respectively, the pension will be reduced *pari passu*. On the basis of

the proposals it is estimated that the cost of the scheme for the first full year will not exceed £780,000. The cost will increase annually by about one-half per cent.

Workmen's Compensation inquiry in Saskatchewan

The commission recently appointed by the Saskatchewan government to inquire into the subject of workmen's compensation in the province (LABOUR GAZETTE, April, 1928, page 344) heard evidence during the past month at various industrial centres. The witnesses generally agreed that Saskatchewan should have an act providing for the establishment of an accident fund after the plan of the acts in force in Manitoba and other provinces. Many railway employees, on the other hand, are stated to have expressed their preference for the system now in force in the province under which workmen's compensation cases are dealt with by actions at law. In a hearing at The Pas an opportunity was given to employers and workers in the lumbering industry to present their views to the commission. The employees stated that the medical aid now available in the smaller lumber camps is inadequate, though the employees contribute from their wages about 25 cents monthly for this purpose. The Commission visited Manitoba during the month for the purpose of studying the operation of the Workmen's Compensation Act of that province.

Workmen's compensation in District of Columbia

A Workmen's Compensation Act for the District of Columbia was passed by the United States Congress during May. It protects about 85,000 workers other than federal employees, civil servants being provided for by an Act of 1916. The new Act provides for the payment of compensation for industrial accidents up to a maximum of 66⅓ of the amount of the weekly wage. It contains a schedule of awards for particular injuries. In fatal cases the limit of compensation for the widow and the dependent children is fixed at \$7,500. Medical aid and hospital treatment are also provided. In regard to the method of insurance the new measure is based on a compromise between the state fund and private insurance plans. Private companies write the business, but the system is to be administered by the United States Employees' Compensation Commission, the same body which administers the Act of 1916, providing for employees of the Federal Government, and also the Longshoremen's Compensation Act passed by Congress early in 1927 (LABOUR GAZETTE, April 1, 1927, page 397).

Manitoba Legislative Year Book for 1928

The Winnipeg Trades and Labour Council has published the "Legislative Year Book" for 1928, containing the latest information in regard to the social and industrial legislation, both federal and provincial, which affects the members of labour organizations in the province. The articles in the Year Book are contributed by leading labour men and other experts in the various subjects dealt with. The history of the council since its organization in 1894 is outlined, the progress made during this time being summarized as follows:—"Conditions have changed during the last 25 years. Unions at that time did not count for much, and organization was in its infancy. Most men worked 55 to 60 hours per week. There was no 8-hour day, no Saturday afternoon off, no fair-wage clause to protect the worker against the unscrupulous contractor. There was no Compensation Act for the injured, and sometimes a fight took place before a man could be taken to the hospital because he was minus the price of the ambulance to take him. In those days there were no grievance committees to take care of the petty injustices such as 'ragging on the job'. Extra pay for overtime was seldom thought of in those days, and sometimes even Sunday work was performed at the same rate of pay."

Every year since the organization of the Council in 1894, it has prepared and presented to the Government labour's budget of desired legislation, which contained amendments to existing laws and such new legislation as the Trades Council thought necessary in the interests of the workers. Each year following the presentation of the budget a conference takes place between the provincial cabinet and a committee from the Trades Council, the Manitoba Executive of Trades Congress, and a committee from the railway running trades. At these conferences a very full discussion takes place as to the legislative needs of labour. The result of this constant effort on the part of the Council is that each year some legislative gain on behalf of labour is secured. Sometimes the gain is very slight and sometimes it is substantial. The last most notable gain was at the session of 1924, when conferences on workmen's compensation were held between a committee representing labour, a committee of the employers, a committee of members of the House, and the Workmen's Compensation Board. Compensation is now paid on a basis of 66⅓ per cent of the average yearly earnings; widow's compensation \$30 per month; the allowance for children was increased from \$7.50 to \$12, \$10, \$9 and \$8 for all subsequent

children; medical aid was increased from a limit of \$100 to no limit, and funeral benefits from \$100 to \$150.

The Year Book is divided into the following sections, each subject being treated both historically and analytically; workmen's compensation (by Charles K. Newcombe, chairman of the Manitoba Board); Old Age Pensions; "Education and Jobs," describing the work of the Manitoba Department of Education under the federal Technical Education Act of 1919; the Industrial Development Board of Manitoba. (Under this head it is stated that "it is not too much to say that Winnipeg has come into its own as a manufacturing centre since the commencement of the Board's activities");* "Canadian and States problems," showing the social effects of the new policies of "stabilization" and "standardization;" Labour Legislation enacted by the Dominion Parliament; the Manitoba Bureau of Labour, which administers the Factory, the Minimum Wage, Building Trades Protection, Steam Boiler, and numerous other Acts; Co-operation to Prevent Accident and Injury; the Evolution of the Machinists' Organization with the Machine; a message to the workers of Manitoba, by President William Greene of the A.F. of L.; the Trades and Labour Congress of Canada, by president Tom Moore; the Role of Organized Labour in the World; Co-operative Credit Unions; the Progress of Winnipeg; Trades Unionism as Workers' Defence, by Frank Morrison; the Union Label, etc.

One week off with pay for Canadian National rail- way shopmen

Arrangements were recently completed for the granting of one week's holiday annually, with pay, for all shopmen coming under the union-management co-operative program on the system lines of the Canadian National Railways. This announcement was made during the last sessions of the Canadian National System Federation No. 11, at Winnipeg, and was confirmed later by Mr. S. J. Hungerford, vice-president of the system. Accounts of the "co-operative plan" now in effect in the railway shops have been given in previous issues of the LABOUR GAZETTE (December, 1926, page 1177; September, 1925, page 858, etc.); and notes on the prevailing practice in Canada and other countries in regard to annual vacations with pay appeared in the issues of April, 1925, page 334 (United Kingdom), page 335; October, 1924, page 817; (United States) August, 1924 (page 638).

Inspector of Apprenticeship for Ontario

Mr. A. W. Crawford has resigned his position as Federal Director of Technical Education to become Inspector of Apprenticeship for the province of Ontario. Mr. Crawford had been associated with the Department of Labour since November, 1920, when he was appointed Assistant to the Director of Technical Education. In 1921, on the resignation of the Director, Prof. L. W. Gill, he succeeded to that position.

Mr Crawford is a native of Sarnia and an honour graduate in applied science of Toronto University. On the outbreak of the war he enlisted and was on active service until 1917. In 1918 he was appointed District Vocational Officer, under the Department of Soldiers' Civil Re-establishment, for the Hamilton district, where he had charge of the training and re-establishment of disabled soldiers in different trades and occupations. He retained that position until he came to the Department of Labour. Mr. Crawford's new duties will be to administer the Apprenticeship Act (reviewed in the March issue of the LABOUR GAZETTE) and to promote and develop apprentice training throughout the province of Ontario. The act now applies to the building trades but it is hoped that when the training programs in the building industry have been thoroughly established the work will spread to other industries

On the occasion of his change of position, Mr. Crawford was honoured with a presentation of a silver tea service by his colleagues in the Labour Department. Mr. H. H. Ward, the Deputy Minister, expressed the regret of the department at his leaving.

New Bulletins on Technical Education

Two bulletins have just been published by the Technical Education Branch of the Department, one dealing with the carpentry trade and the other with the bricklaying trade. The bulletins are two of a proposed series of studies in occupations. These studies are intended to inform young Canadians regarding the nature and requirements of occupations open to boys and girls leaving school during the "teen age." The immediate purpose is to create an interest in the study of occupations and to assist young people to make a decision in selecting vocations and how to fit themselves into the work they choose. It is also hoped that the studies may be of value to teachers and counsellors in giving information about the occupational world. They may be used as text material for occupational study groups or as supplementary reading for interested individuals.

*LABOUR GAZETTE, February, 1926, page 84; May, 1925, page 443.

Estimate of the extent of seasonal unemployment

The last issue of the *LABOUR GAZETTE* contained a notice of the report recently presented by the commission which was appointed last year by the Government of Manitoba to investigate seasonal unemployment in the province. The commissioners were impressed by the magnitude of the problem. While accurate statistics are not available to warrant a definite statement of the amount of such unemployment, the commission was able as a result of its special enquiries, to make an estimate for Manitoba. "A conservative deduction from the statistics now available and from inquiries made by the commission would be that 25 per cent to 30 per cent of those gainfully employed in Manitoba do not find employment at their regular occupations during the winter months. In addition to this number many others are under-employed in shops and factories where short time is the rule and others find only casual employment. This might be construed as an alarmist statement, but it must be remembered that a large percentage of those who are thus unemployed have, during the period of employment, enjoyed comparatively high rates of wages based on the supposition that they would be unemployed during part of the year; others have drawn considerable sums to overtime wages at overtime rates. Thus, many of those who are seasonally unemployed are able to provide for themselves and their families throughout this period from their savings. The economic waste is none the less and might be estimated at a quarter of a year's wages of a quarter to one-third of the wage earners. This periodic unemployment becomes also a direct charge on the community through the necessity of providing unemployment relief for the destitute unemployed. The total cost of this relief in Manitoba from the winter of 1920-21 to the winter of 1926-27 averages approximately a quarter of a million dollars per annum, while the direct cost to the provincial government has averaged in the same period \$62,000 per annum. These direct and indirect costs represent an economic waste which cannot be regarded with indifference."

Apprenticeship still common in British industry

The British Ministry of Labour has recently published the sixth volume of the report of an inquiry made in 1925 and 1926 into Apprenticeship and Training for the skilled occupations. It is stated that apprenticeship is still the method most usually adopted for the recruitment of boys for the skilled occupations in the

larger industries. Thus, of the 92,871 boys in training included in the returns, nearly four-fifths were apprentices, and little more than one-fifth learners. In engineering, three-quarters, and in shipbuilding, practically all, of the boys in training were apprentices. In some of the smaller metal industries, however, "learnership" is more usual than apprenticeship, as for example, in railway carriage and wagon building, in cutlery and edge tool making, and in the several industries to which the provisions of the Trade Boards Acts have been applied; the same is true of some districts even as regards the larger industries, learnership being almost as common as apprenticeship in the engineering industry at Leeds and in the North and West Midlands; while in London there are more than twice as many learners as apprentices in engineering firms. A large majority of the firms making returns in the shipbuilding and in the engineering industries reported that they took apprentices. In the smaller metal industries only a minority of the firms take apprentices.

Collective System of Piece Work

The *New Statesman* calls attention to a tendency in Great Britain to replace individual by collective systems of piece-work. The attitude of trade unions towards systems of payment by results varies in accordance with the work to be done. Building tradesmen, for example, object to the system, owing to the nature of the materials of the trade, uncertain weather conditions, etc. Spinners and weavers, on the other hand, favour piece-work as ensuring them remuneration corresponding in some degree to the effort expended. Both time-work and piece-work systems exist in the engineering industry, the latter showing an increase in favour in proportion to the growth of standardized processes. The collective system of piece-work is applied to jobs carried on by a group, where it is impossible to distinguish the exact value of the work of an individual member of the group. A collective price is paid for the whole job, each member of the group sharing in this price according to his appropriate standard rate for wages.

The *New Statesman* points out that collective piece-work on these lines has long been the rule in the most important sections of the Yorkshire dyeing trade, and the trade unions are now seeking to have it made general.

"This is a highly significant movement. Collective piece-work, in those dyeing trades in which it has been given a long trial, has been an unqualified success. This, of course, is not to say that it would be equally successful in all other industries; for clearly there is

a peculiar suitability of the technique of dyeing, with the predominance of squad work, to the collective method of payment. But it is the case that collective systems of remuneration are now being tried on a considerable scale in industries where squad work in the ordinary sense does not predominate, and that in these cases as well they appear to be giving satisfaction to workmen and employers alike.

Clearly, no one form of payment is ever likely to suit all industries. But the moral of these recent developments and of the present situation in the dyeing trades is that far more attention, in industry generally, ought to be paid to the working out of collective methods of wage-payment. They are no panacea for industrial evils; but they may well afford, over a wider field than is at present realized, one important means of meeting the needs of both employer and employed, by raising wages and at the same time lowering the labour cost of production."

**Insurance
Journal
favours
Unemployment
Insurance**

Canadian Insurance (Toronto), a weekly publication in the interest of insurance men, contained in its issue of May 30, the following editorial, entitled "The Canadian Worker," suggested by the French social insurance law, which is outlined on another page of this issue:—

"France has passed a new law which becomes effective on February 12, 1930, by means of which wage-earners of both sexes, whose annual earnings are below a certain figure, come under an insurance system compulsorily. The premium is fixed at 10 per cent of the wage of the individual, half to be paid by the worker and the remainder by the employer. Insurance against sickness, old age, death, unemployment, maternity charges, premature incapacitation and other contingencies is provided for. Great Britain has already effected these changes for her people, giving old age pensions, unemployment insurance, sickness insurance, maternity benefits, and various sorts of co-operative organizations. These things give a large measure of security to British workers.

"In Canada, where workmen do not have these benefits, labour is not so secured. And yet the same arguments hold good for unemployment insurance and other safeguards for the worker here. It would be a good thing for the insurance companies if the worker was assured of a steady income. More insurance would be purchased, and if an assured would always be able to pay his premium regularly lapses would tend to become infrequent. Un-

employment insurance is the natural result of industrialism and is becoming inevitable. It would seem to be a good thing for the country and for business as a whole."

**Co-operative
policy of
coal company
in Colorado**

The Rocky Mountain Fuel Company was one of the companies which were involved in the strike which began in the lignite coal district of Colorado last

October and continued for about three months (LABOUR GAZETTE, November, 1927, page 1164, March, 1928, page 259, etc.). This strike was accompanied by serious disorders, and by the shooting of a number of striking coal miners by state troopers. Shortly after peace was restored the policy of the company was changed, the controlling interest having passed into the hands of Miss Josephine Roche, and a new president, Merle D. V. Vincent, being elected. Mr. Vincent on taking office announced that the company's policy would be based henceforth on the fact "that the men employed are as much an essential factor in the industry as the capital invested in it . . . and will accordingly look toward dealing between management and employees through their own independent organizations on a basis of equality."

Miss Roche further describes the new policy in the course of a letter addressed to the *Survey* (New York) and published in its issue of May 15. "Our original statement of policy," she writes, "all our succeeding statements, and every practical step we have taken, are based on our recognition of labour's right to organize independently in an organization of its own choice and to deal collectively and on equal terms with capital. Long before the strike of last fall was contemplated, Mr. Vincent and I were determined to put such a policy into effect as soon as we had sufficient control to do so. Such a policy has, in other industries, repeatedly proved to be not only the just and decent policy to pursue, but equally a common sense and good business one. Organized labour fully understands our position and determination, as is evidenced by recent articles in *Labour*, and by resolutions just passed by the Denver Trades and Labour Assembly endorsing our stand and pledging us the support of the assembly so long as our efforts continue in harmony with the ideals and principles of the American Federation of Labour."

**"Agreed to"
legislation in
Ohio**

Mr. John P. Frey, president of the Ohio Federation, and secretary of the Metal Trades Department of the American Federation of Labour, in the course of an address

before the last "All Ohio Safety Congress," called attention to the fact that "it is in Ohio and in this state alone that year after year a Joint Committee, representing the State Employers' Association and the State Federation of Labour, meet months before the General Assembly to consider such amendments as seem advisable to the law. This is the only state in the Union where agreed-to bills are introduced. The agreed-to bills serve notice upon the General Assembly that this bill has organized employers behind it, and organized labour behind it, and that any other kind of a bill that is introduced does not meet with their approval. The degree of co-operation between organized employers and organized workmen in Ohio on the question of compensation is so immeasurably in advance of that in all of the other industrial states that it is impossible to make any comparison.

"If you are to establish confidence in industry," Mr. Frey continued, "so that there can be co-operation, management and labour jointly must make the rules which govern them, just as the Ohio Manufacturers' Association and the Ohio State Federation of Labour jointly work out the problems of compensation legislation, and appear before the General Assembly, a united body on that question. So in industry what we need now to bring about this co-operation is a closer touch between management and labour, a recognition by management that labour must have a voice in working out safety programs, that labour must have a voice in determining the rules under which safety will be carried on."

Mr. Frey attributes the success of the safety movement in recent years to the co-operation of both parties in the movement, the new spirit being contrasted with the antagonism of earlier years.

Conference on new methods of utilizing coal

for the purpose of reviewing the results of the most recent studies of methods of utilization and combustion of coal. The first conference to be held on this continent for the study of the recent advances of science in this direction was held at the Carnegie Institute last November, and attracted wide attention on account of the important developments in the coal industry that were suggested. A large number of scientists and fuel technologists are to contribute to the discussions next November. The program will include the discussion

A second International Conference on bituminous coal is to be held at the Carnegie Institute of Technology at Pittsburgh, Pennsylvania, next November,

of low temperature distillation, high temperature distillation, coal tar products, power, smokeless fuel, complete gasification of coal, hydrogenation, pulverized fuel and its new applications, fixation of nitrogen, coal beneficiation, etc.

Among the distinguished scientists in Europe who have either definitely or tentatively accepted invitations to speak at the second congress are the Right Hon. Sir Alfred Mond, Harald Nielsen, Dr. Cecil H. Lander, and Dr. R. Lessing, of England; Donat Agache, president of the executive board of the Kuhlmann plants, André Kling, director of the Municipal laboratories of Paris, and Henri Lafond, International Company for the manufacture of gasoline and oils of France; Dr. Friedrich Bergius, inventor of the Bergius Process for the production of oil from coal, Dr. Franz Fischer, director of the Kaiser Wilhelm Institute for Coal Research, Professor Fritz Hoffman, inventor of a process for manufacturing synthetic rubber from coal, Dr. Carl Krauch, director of the I. G. Dye Trust, and Rudolph Rawlikowski, of the Cosmos Machine Construction Institute, of Germany.

Progress in industrial accident prevention

The annual report of the National Safety Council (United States) on the industrial accident experience of its members in 1927 and previous years shows that the organized safety movement has had a marked effect. The annual report is issued with a three-fold purpose: (1) to enable each establishment to compare its own record with the record of others in the same line of business; (2) to provide a typical cross-section of the experience of American industries so that the national trends of lost time accidents may be studied; (3) to convince sceptics that accidents can be reduced through organized and well directed efforts.

The report shows that 133 business organizations in the United States completed the year 1927 without a "lost-time" accident. Represented in this group are 8 automotive establishments, 12 chemical plants, 29 food, 13 metals, 3 packers and tanners, 14 paper and pulp, 8 power press, 15 public utilities, 2 quarries, 4 textile, 10 woodworking and lumber manufacturing and 15 miscellaneous factories. A single group of 429 industrial establishments whose consecutive records are available for the years 1925, 1926 and 1927, show an average accident frequency rate of 23.59 for 1927, which is 12 per cent below 26.63, the rate for 1926; and the 1926 rate is 14 per cent below 31.05, the rate for 1925. The accident severity rate for these same plants is 1.61 for 1927,

which is 8 per cent below that of 1.74, the rate for 1926; and likewise is 14 per cent below 1.97, the rate for 1925.

**British
State Aided
Emigration**

The Oversea Settlement Committee (United Kingdom) in their report for 1927, discuss the causes which have prevented a large transfer of population from the United Kingdom to the Dominions under the provisions of the Empire Settlement Act. These hindrances they find to a certain extent in unsatisfactory trade conditions, and in the improvement of social conditions in England through schemes of social insurance. But the chief adverse factor is stated as being that the Dominions, for the most part, restrict the benefits made available by the Act to farm workers and household helps, classes especially welcomed in the Dominions, but which can ill be spared at home. The committee are of the opinion that the opposition on the part of the Oversea Governments to state-aided immigration on a large scale is based on the fear that a too rapid increase of population might tend to congest the labour market, and thus bring about a fall in wages and an increase in unemployment.

The following table shows the total of departures under the Act to the several Dominions in each year 1925-1927:—

	1925	1926	1927
Canada.....	8,779	20,862	29,244
Australia.....	22,527	32,678	29,132
New Zealand.....	8,097	11,795	4,446
South Africa.....	126	195	205
Total.....	39,529	65,530	63,027

Of the total of 63,027 who emigrated in 1927, 20,169 were men, 18,010 were women, and 24,848 were children.

The plumbing examining board at St. Catharines, Ontario, have drafted a form of examination which all plumbers will be required to pass before they receive a license.

The national committee of the Amalgamated Engineering Union of Great Britain decided at a meeting held at Southport in May to give official recognition to the system of piece-work and payment by results. A large proportion of the members are paid under this plan, which was formerly opposed by the union.

A delegation representing labour bodies in British Columbia met the provincial Workmen's Compensation Board during May to discuss a proposal to amend the Act by providing compensation for the employees of casual contractors, and for workmen engaged in work outside their usual line, and by new provisions in regard to industrial diseases contracted in mine work from inhaling dust, etc.

A workman in Quebec who had contracted blood poisoning through the breaking of blisters on his hands, obtained judgment under the Workmen's Compensation Act for \$1,170.40. (*Fortin versus Davie Shipbuilding Company.*)

During May, 5,640 industrial accidents were reported to the Ontario Workmen's Compensation Board in the industries in Schedule 1 of the Act, 29 of which were fatal cases; in Schedule 2 industries, 541 accidents were reported, including 12 fatalities, and 357 Crown cases, with 5 fatalities, were reported, making in all 6,538 industrial accidents during the month, of which 46 were fatal.

Canadian Child Welfare News, published by the Canadian Council on Child Welfare, notes that in the United States first work permits were granted in 1926 in 10 states and 24 cities (outside these states) reporting, to 107,257 children 14 or 15 years of age. The permits in 1926 exceeded those issued in 1925 by 5 per cent, while 1925 represented an 8 per cent increase over 1924. The report calls attention to the fact that improved child labour laws, or enforcement, as well as economic fluctuation, may affect an increase in permits issued. An interesting section of this part of the report deals with the effect of educational as well as age requirements in the movement of young children into industry.

The act providing for one day of rest in seven, passed at the recent session of the Manitoba legislature, took effect on May 15. The provisions of this act were fully described in the last issue (page 463).

The Famous Players Corporation of Canada recently agreed to give moving picture operators employed in its houses in Toronto one week's holidays with pay during the present summer. Forty-two operators in Toronto will benefit by the new order.

GENERAL REVIEW OF THE INDUSTRIAL SITUATION

Employment

THE employment situation at the end of May, 1928, was commented upon by the superintendents of the offices of the Employment Service of Canada, covering their respective territories, as follows:—

Although farm work in the Province of Nova Scotia had progressed rather favourably toward the end of the month, it had been held up by heavy rains. Fairly good catches of fish were being reported from the different centres. The chief activity in the logging industry was the preparation for pulp wood cutting and peeling. While construction at points outside of Halifax did not show any considerable amount of activity, a substantial amount of building was going ahead in that city, with the result that tradesmen seemed fairly well employed. In the coal mining districts the output of the collieries appeared to be rather favourable for the season. Manufacturing industries showed normal activity. Transportation was reported to be fair, while trade seemed to be on the increase. A satisfactory demand for women domestic workers continued to be registered at the different employment offices.

As in Nova Scotia the farming industry in the Province of New Brunswick was fairly well ahead with the spring work, although heavy rains had interfered to some extent toward the end of the month. Fishing reported fair catches in this latter province, although a rather severe storm entailed some loss to the industry in the vicinity of Chatham. In the logging industry preparations were being made for pulp wood cutting, and some orders were being listed for men to do this class of work. Manufacturing industries did not report any fluctuation of consequence. With the opening of highway work and with the usual spring undertaking of building, construction showed a favourable amount of activity. The demand for female domestic workers continued in about the usual volume.

From the Province of Quebec it was reported that numerous orders for farm hands were being placed with and filled by the local employment offices. The lumbering industry in this province was fairly quiet, with vacancies being notified being chiefly for river drivers; toward the close of the month, however, there were indications of a revival of activity in this line. Manufacturing in the City of Montreal appeared to be satisfactory, with some industries stated to be busier than usual; from Quebec City conditions were reported as not being as favourable as might be

hoped for; reports from the City of Hull were encouraging and from Three Rivers factories were reported as operating normally. Although the weather had not been favourable for the opening up of building and construction, this industry seemed to be showing a very satisfactory amount of activity, with several works of consequence being carried on throughout the province. Transportation and trade both reported improvements. The demands for female domestic workers exceeded the supply at Montreal and in some other localities. Generally speaking, the employment situation throughout the Province of Quebec was showing the anticipated improvement incidental to the coming of summer weather.

While some vacancies for farm workers were being listed with the employment offices in the Province of Ontario the demand for workers of this class were not exceptionally heavy throughout the province. Manufacturing industries were in a very satisfactory condition, with some centres reporting marked improvement. As customary at the time of year, the building and construction group was showing steady progress with increasing numbers being employed. Although the mining industry in the northern section of the province was not taking on workers in any considerable numbers, nevertheless work continued at a normal rate. In the same section of Ontario there was a fairly good demand for river drivers for the logging industry, although workers of this class were not very plentiful. In the Women's Division of the offices the outstanding feature was the continued shortage of competent cooks-general.

Although too early in the season to form a reliable opinion it was stated by Manitoba officials that the outlook regarding the crops at this early date was favourable. Orders for farm workers continued to come in, but not in any unusual numbers. Building construction issued to date this year showed a substantial increase over the number issued during the corresponding period of 1927. Railroad construction and other classes of building in outlying districts showed a fair amount of activity. The demands for labour in miscellaneous industries and for casual work were not particular heavy, although from Winnipeg it was reported that some men had been placed in the logging and mining groups. The demands for women domestic workers were fairly numerous.

As seeding had been finished in some parts of Saskatchewan, there was a consequent de-

crease in the number of vacancies for farm workers being listed at the employment offices, and while there was no difficulty in filling them with competent workers, there did not appear to be any substantial surplus of men

seeking farm employment registered at the various offices. In the larger centres fairly large building and construction programs appeared to be under way, while with the opening up of railroad construction and road

*Figures for end of previous months. †Bradstreet. †Maclean Building Review. §For group figures see articles elsewhere in this issue. **Figures for four weeks ending May 26, 1928, and corresponding previous periods. ***The index of the physical volume of business includes, forestry, mining, construction, manufacturing, trade, imports, exports, car loadings, shares traded and bank debits. Industrial commodity production includes forestry, mining, manufacturing and construction. Manufacturing includes production of flour, sugar, newsprint, pig iron, steel and automobiles; imports of cotton, rubber, wool and petroleum; slaughtering of cattle, sheep and hogs; storage holdings of butter and cheese. ††Preliminary. (1)Excluding lines east of Quebec. (2)Including lines east of Quebec. (3)Life Insurance Sales Research Bureau, Hartford, Conn.

work throughout this province, the numbers engaged in the building and construction group appeared to be increasing to a quite favourable figure. There did not seem to be any surplus of women domestic workers, and in fact some sections of the province reported shortages. Conditions generally in this province appeared to be quite favourable with no outstanding adverse situation in any industry.

Seeding in the Province of Alberta was likewise nearing completion, with the result that the number of farm vacancies being listed was showing a substantial decrease, and in many cases workers wanted were for stone picking, irrigation work and miscellaneous chores on the farms; while there did not appear to be any difficulty in securing substantially enough workers to fill such farm jobs as were being notified, on the other hands there did not appear to be any noteworthy surpluses of applicants for this class of employment. In Calgary and Edmonton building programs of substantial proportions were in prospect, and fair progress was being made. An industrial dispute affecting carpenters at the former point, which had been interfering with work, had been tentatively settled around the end of the month. With the opening up of railroad construction at several points large extra gangs were being dispatched from urban centres, and their departure was thus relieving the employment situation in those places. The coal mining situation was still commented upon as being quiet. From Edmonton the logging and lumbering industries were reported as being in a fair condition. Some local shortages of women domestic workers were reported.

Although the logging industry in the Province of British Columbia was stated to be somewhat quiet, a few placements were being made at different points, and this fact would indicate that some very slight improvement was taking place. While the mining industry appeared to have practically sufficient workers already engaged, the industry continued to operate on a rather satisfactory basis. Building and construction of all kinds were gaining in momentum, and additional workers were being engaged in practically all branches of this industry. Lumber mills appeared to be increasing in activity, while other branches of the manufacturing group remained normal. In Vancouver and Victoria demands for women domestic workers still tended to outnumber applications, particularly in respect of cooks-general. The employment situation as a whole in the Province of British Columbia was improving and was not unfavourable for the season.

EMPLOYERS' REPORTS.

The Dominion Bureau of Statistics tabulated returns on employment from 6,504 firms who reported a decidedly upward movement in employment on May 1, when they increased their pay-rolls by 36,070 persons to 883,047. Reflecting this gain of over four per cent, the index (with January, 1920, as 100), rose to 105.5, as compared with 101.1 on April 1, and with 100.6, 94.3, 90.8, 91.8, 91.4, 83.3 and 84.1 on May 1, 1927, 1926, 1925, 1924, 1923, 1922 and 1921, respectively.

Heightened activity was recorded in all provinces, but Quebec and Ontario registered the largest increases. In the Maritime Provinces, manufacturing, mining and construction showed the greatest advances, while transportation and logging were seasonally slacker. In Quebec, large increases were shown in manufacturing, transportation and construction and maintenance, and there were smaller gains in services, trade, mining, communications and logging, those in the last-named being due to river drives. In Ontario, manufacturing, construction and transportation reported the most pronounced increases, but the movement was also upward in mining, communications and some other industries, while logging was seasonally slacker. In the Prairie Provinces, manufacturing, transportation, trade, communications, services and construction showed heightened activity, the advances in construction being most marked. In British Columbia, manufacturing, logging, transportation and construction were decidedly busier, the greatest improvement taking place in the last-named group.

The eight cities for which separate returns are tabulated showed considerably increased activity, Montreal and Toronto firms adding the largest numbers to their staff. In Montreal, transportation, construction and manufacturing recorded the greatest gains. In Quebec, most of the improvement took place in transportation. In Toronto, manufacturing, transportation and construction reported important increases in personnel. In Ottawa, lumber mills and construction registered most of the increase. In Hamilton, manufactures were busier, as was construction. In Windsor and the other Border Cities, considerable advances were noted, chiefly in automobile factories, but also in construction. In Winnipeg, construction, manufacturing and trade reported the most noteworthy expansion. In Vancouver, construction, transportation and manufacturing registered the greatest increases.

An analysis of the return by industries shows that there were important advances

in manufacturing, particularly in iron and steel works and in lumber mills, in which they were of a seasonal character. Marked improvement also took place in fish-packing, pulp and paper, rubber, tobacco, distilled and malt liquor, building material, electric current, electrical apparatus, mineral product and some other divisions, while boot and shoe, musical instrument and vegetable food factories were slacker. Mining, transportation, communications, services, trade and construction and maintenance also registered large increases in employment, those in the last-named being especially pronounced. On the other hand, logging camps released employees.

An article elsewhere in this issue gives in some detail the employment situations as at the beginning of May, 1928.

TRADE UNION REPORTS

The upward movement of employment, manifested by local trade union reports, during the month of March continued into April, as shown by the reports tabulated from 1,642 labour organizations with 185,318 members, 5.2 per cent of whom were idle on April 30, as compared with 6.5 per cent in March, 1928, and with 6.0 per cent in April last year. Increases over March in the volume of work afforded were reported by unions in all provinces with the exception of Alberta where reductions in coal mining activity were responsible for the adverse situation indicated. In comparing with the returns for April, 1927, Quebec members were more fully employed during the month under review, owing largely to a greater volume of work in the garment trades of the province, and improvement on a smaller scale was recorded by unions in New Brunswick, Manitoba, Saskatchewan, Alberta and British Columbia. Nova Scotia unions, on the other hand, suffered curtailment of operations and the reduction in employment registered by Ontario unions was nominal.

An article elsewhere in this issue gives in greater detail a summary of unemployment as reported by local trade unions at the close of April, 1928.

EMPLOYMENT OFFICE REPORTS.

During the month of April, 1928, the offices of the Employment Service of Canada made 34,834 references of persons to positions and effected a total of 33,444 placements. Placements in regular work during the period were 19,009 of men and 4,047 of women, a total of 23,056, while those in casual work numbered 10,388. Applications for work reported by the offices totalled 44,152, of which 32,819 were from men and 11,333 from women workers. Em-

ployers notified the Service of 25,818 vacancies for men and 11,011 for women, a total of 36,829. Substantial increases are recorded in the transactions when the above figures are compared, both with those of the preceding month and with those of the corresponding period last year, the records for March, 1928, showing 26,807 vacancies offered, 36,762 applications made, and 24,730 placements effected, while in April, 1927, there were recorded 33,199 vacancies, 41,077 applications for work, and 29,949 placements in regular and casual employment. A report in detail of the work of the offices for the month of April may be found elsewhere in this issue.

Production and Trade

INDUSTRIAL PRODUCTION IN CANADA.

Some figures indicating the recent movements of trade and industry are given in the table on page . . . The physical volume of business in Canada showed moderate recession in April, according to the *Monthly Review of Business Statistics* published by the Dominion Bureau of Statistics. Much of the material for this section is derived from this monthly publication to which readers are referred for fuller information on current business statistics. The decline was due in part to the shortness of the month, there being five Sundays in the 30 days. Manufacturing production on the whole was in lesser volume, although the output of automobiles was greater than in March even after adjustment for seasonal tendencies. The production of newsprint and of iron and steel showed recession from the preceding month, though operations were still at a high level. According to the latest available reports, flour mills and sugar refineries were more active, while the packing companies turned out a reduced product. Imports of raw cotton and wool showed considerable recession, indicating possible curtailment of operations. Mining output was less in April, coal production showing a marked decline. Employment in retail and wholesale trade expanded moderately, according to the reports received from employers, and car loadings showed improvement in the distribution of merchandise.

Production of coal from Canadian mines in March was slightly less than in February. The output for the month was 1,405,423 short tons, including 1,095,774 tons of bituminous coal, 269,607 tons of lignite coal and 40,042 tons of sub-bituminous coal. Nova Scotia produced 478,352 tons, New Brunswick mined 20,907 tons; Saskatchewan's output amounted to 38,269 tons; Alberta produced 616,063 tons including 344,683 tons of bituminous coal, 231,-

338 tons of lignite coal and 40,042 tons of sub-bituminous coal; and British Columbia's output was 251,832 tons.

Nova Scotia's output showed a gain of 6.1 per cent and New Brunswick 11.5 per cent over the February figures; but the other provinces showed decreases; Saskatchewan, 11.5 per cent; Alberta, 3.5 per cent; and British Columbia, 1.5 per cent.

Production of coal from Canadian mines in April was 20 per cent lower than in March. The output for the month was 1,123,087 short tons, including 908,551 tons of bituminous coal, 174,989 tons of lignite coal and 39,547 tons of sub-bituminous coal. Nova Scotia produced 439,993 tons; New Brunswick mined 15,083 tons; Saskatchewan's output amounted to 26,384 tons; Alberta produced 441,094 tons, including 252,942 tons of bituminous coal, 148,605 tons of lignite coal and 39,547 tons of sub-bituminous coal, and British Columbia's output was 200,533 tons.

EXTERNAL TRADE.

A summary of Canadian trade prepared by the Department of National Revenue shows that in April, 1928, the merchandise entered for consumption amounted to \$78,490,470, as compared with \$120,418,027 in March, and with \$74,297,628 in April, 1927. The chief imports in April, 1928, were: Iron and its products, \$24,823,414; fibres, textiles and textile products, \$12,408,119 and agricultural and vegetable products, mainly foods, \$7,948,969.

The domestic merchandise exported amounted to \$58,975,315, as compared with \$106,974,564 in March, 1928, and \$77,337,964 in April, 1927. The chief exports in April, 1928, were: Wood, wood products and paper, \$17,564,768, and agricultural and vegetable products, mainly foods, \$16,908,467.

Strikes and Lockouts

The time loss due to industrial disputes in May, 1928, was greater than during April, 1928, and also greater than during May, 1927. There were in existence during the month twenty disputes, involving 3,078 workpeople and resulting in a time loss of 35,024 working days, as compared with seventeen disputes involving 1,818 workpeople and resulting in a time loss of 21,757 working days during April. In May, 1927, there were on record twenty-one disputes, involving 5,669 workpeople and resulting in a time loss of 27,765 working days. Three of the strikes and lockouts commencing prior to May terminated during the month as did five of the disputes which commenced during May. At the end of the month, therefore, there were on record twelve strikes and lockouts affect-

ing 1,267 workpeople, not including those strikes and lockouts in which employment conditions were reported to be no longer affected but which had not been formally called off.

Prices

The cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average retail prices in some sixty cities was \$10.80 at the beginning of May, as compared with \$10.87 for April; \$10.76 for May, 1927; \$11.29 for May, 1926; \$10.48 for May, 1925; \$9.89 for May, 1924; \$10.36 for May, 1923; \$10.22 for May, 1922; \$12.25 for May, 1921; \$16.65 for May, 1920; \$12.66 for May, 1918; and \$7.43 for May, 1914. The most important declines occurred in the prices of eggs, milk, butter and potatoes. Slight advances occurred in the prices of beef, mutton, fresh and salt pork, lard, cheese, flour, beans and evaporated apples. Including the cost of fuel and rent with that of foods the total budget averaged \$21.04 at the beginning of May, as compared with \$21.11 for April; \$20.95 for May, 1927; \$21.54 for May, 1926; \$20.72 for May, 1925; \$20.24 for May, 1924; \$20.90 for May, 1923; \$20.57 for May, 1922; \$22.84 for May, 1921; \$26.44 for May, 1920; \$26.92 for July, 1920 (the peak); \$20.09 for May, 1918; and \$14.21 for May, 1914. Fuel and rent showed little change.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics was slightly lower at 152.9 for May, as compared with 153.2 for April; 151.9 for May, 1927; 156.8 for May, 1926; 158.8 for May, 1925; 150.6 for May, 1924; 155.2 for May, 1923; 153.9 for May, 1922; 170.5 for May, 1921; 256.7 for May, 1920 (the peak); 201.4 for May, 1919; and 194.6 for May, 1918. In the grouping according to chief component materials two of the eight main groups were lower, five were higher, and one was unchanged. The Vegetables and their Products group declined, higher prices for grains, flour, oat products, foreign fruits, apples, coffee, hay and straw being more than offset by lower prices for potatoes, sugar, millfeed, tea, rosin and turpentine. The substantial decline in potato prices was the most important factor in the downward movement of the index. The Animals and their Products group was also lower, declines in the prices of milk, butter, furs, and sheep more than offsetting advances in the prices of cattle, hogs, meats, eggs and leather. The groups which advanced were: the Fibres, Textiles and Textile Products group, due to higher levels for cotton and wool; the Wood, Wood Products and Paper group, due to higher prices for some lines of lumber; the

Non-Ferrous Metals group, because of higher prices for silver, copper, tin and spelter; the Iron and its Products group and the Chemi-

cals and Allied Products group. The Non-Metallic Minerals group was practically unchanged.

PROCEEDINGS UNDER THE INDUSTRIAL DISPUTES INVESTIGATION ACT FOR THE MONTH OF MAY, 1928

DURING the month of May the Department received the report of the Board of Conciliation and Investigation established to deal with a dispute between the Dominion Rubber Company and its employees. The text of this report is given below.

Applications Received

Six applications for the establishment of Boards of Conciliation and Investigation under the terms of the Industrial Disputes Investigation Act were received during the month as follows:—

(1) From certain employees of the Canadian Pacific Railway Company at Galt Mines, as represented by Local Unit No. 6, Mine workers Union of Canada. Five hundred men were stated to be directly affected by the dispute, which arose in connection with the proposed renewal of the agreement. A Board of Conciliation and Investigation was established by the Minister of Labour, the personnel being as follows: Mr. H. M. E. Evans, of Edmonton, chairman, appointed on the joint recommendation of the other two members of the board, namely, Messrs. A. L. Smith, K.C., of Calgary, and Donald McNab, of Lethbridge, nominated by the company and employees respectively.

(2) From certain employees of the Quebec Railway, Light, Heat and Power Company, Limited, being clerks, freight handlers, yard masters and telephone operators, members of the Canadian Brotherhood of Railroad Employees. The number of employees affected was 24, and the dispute arose out of the request of the employees for an agreement governing wages and working conditions, also the dismissal of three employees. A Conciliation Board was established by the Minister of Labour and the following members appointed thereto: Mr. O. S. Tyndale, K.C., of Montreal, chairman, appointed on the joint

recommendation of the other two members of the Board, namely, Mr. Paul Taschereau, of Quebec, and Mr. Norman S. Dowd, of Ottawa, nominated by the company and employees respectively.

(3) From certain employees, as represented by Wayne Local Unit, No. 16, Mine Workers Union of Canada, of the Rosedeer Coal Company; Jewel Collieries; Sovereign Coal Company; Excelsior Coal Company; Ideal Coal Company, all of Wayne, Alberta.

(4) From the Montreal District Council of the United Brotherhood of Carpenters and Joiners of America to deal with a dispute between said organization and the General Contractor Section of the Montreal Builders' Exchange, Inc.

(5) From certain employees of the Winnipeg Electric Company, members of the Gas Workers' Unit of the One-Big Union in connection with the dismissal of an employee.

(6) From the Calgary General Contractors Association and the Calgary Local Union of the United Brotherhood of Carpenters and Joiners. The dispute arose as a result of the demand of the employees for an increase in wages. As mentioned in the article on Strikes and Lockouts in this issue, the men had been on strike since May 1. Through the efforts of the Conciliation Officers of the Department, Messrs. M. S. Campbell and F. E. Harrison, on May 28 the parties to the dispute agreed to refer the matter to a Conciliation Board under the Industrial Disputes Investigation Act, the men to resume work forthwith. A Board of Conciliation and Investigation was accordingly established and composed the following members: The Honourable Mr. Justice A. H. Clarke, Calgary, chairman, on the joint recommendation of the other two members of the board, namely, Messrs. James H. Garden, and Robert Hewitt, both of Calgary, nominated by the company and employees respectively.

Report of Board in Dispute between the Dominion Rubber Company and its Employees

The findings of the Board of Conciliation and Investigation established to deal with a dispute between the Dominion Rubber Company and its employees were received. The Board was composed of Mr. Leon Mercier Gouin, Montreal, chairman, appointed on the joint re-

commendation of the other two members of the Board, namely, Messrs. A. Whitehouse and Clovis Bernier, both of Montreal, nominated by the company and employees respectively. The dispute concerned the conditions of work of the employees under the new

manufacturing method used by the company. The text of the unanimous findings of the Board is given below.

Report of Board

In the matter of the Industrial Disputes Investigation Act, 1907, and of a dispute between the Dominion Rubber Company Limited, employer, and its employees.

To the Hon. PETER HEENAN,
Minister of Labour,
Ottawa, Canada.

We, the undersigned, members of the Board of Conciliation and Investigation, set up under the provisions of the said Act, after having duly taken the oath of office required by the Act, have duly investigated the matter referred to us, and we have the honour to report as follows:—

The employees were represented, at the first sittings, before us, by Mr. Arthur Boucher, Miss Ida Rochon and Miss Genevieve Girard, and by various other representatives at the various following sittings of the Board.

The Company was represented by its vice-president, Mr. Geo. W. Charles, Mr. W. M. Carment and Mr. C. C. Thackray.

The members of the Board duly visited the plant of the Company so as to ascertain the conditions of work of the employees under the new methods used by the Company in the three following departments: 1. lightshoe; 2. clothmakers and 3. quarter makers.

The Board held several sittings, namely: 16, including 12 at the Court House. Sheriff Omer Lapierre having been kind enough to put at the disposal of the Board a room at the Montreal Court House.

After investigating very carefully the above matter and after hearing several witnesses on behalf of the employees and on behalf of the company, the undersigned, members of the Board, unanimously agree to make the following recommendations:—

LIGHT SHOE DEPARTMENT AND CLOTH DEPARTMENT

(1) We come to the conclusion and we recommend that a bonus shall be established weekly and paid weekly for the months of April, May, June and July, to make the average hourly earnings of the operators on Light and Cloth Shoes equal to the average hourly earnings for 1927.

As it is now June 2, the first payment of bonus to include the bonus already due for the months of April and May.

(2) In addition, that if by July 31, 1928, the employees have not demonstrated their abil-

ity to earn the same average hourly earnings as in 1927, the company shall set new prices which will enable the operators to earn the equivalent of their 1927 average earnings.

QUARTER-MAKERS DEPARTMENT

(3) With regard to the Quarter-Makers, it is agreed that the piece-work prices shall be the equivalent of the present base rate.

In order that there shall be no question as to the amounts to be paid the employees by way of bonus, the company undertakes, if requested, to employ a duly qualified auditor, to audit the figures and certify their accuracy. The Board recommends Price Waterhouse and Company.

We sincerely believe that the above report is fair and just for both parties and we are satisfied that we have conscientiously weighed the evidence and discharged our duties.

Yours most sincerely,

(Sgd.) LEON-MERCIER GOUIN,

Chairman.

(Sgd.) CLOVIS BERNIER,

Representing the employees.

(Sgd.) A. WHITEHOUSE,

Representing the company.

MONTREAL, June 2, 1928.

Pilotage Bylaws for Quebec District

Pilotage bylaws issued under the Canada Shipping Act for the Pilotage District of Quebec were published in the *Canada Gazette*, May 19, 1928, on the recommendation of the Minister of Marine and Fisheries. The pilots are required to appoint annually from among themselves a committee of six to represent them in negotiations with the Pilotage Authority. The Regulations include rules regarding pilotage dues, apprenticeship, licensing, annual examinations, general duties, protection of the channel, complaints against pilots. Apprentices must be between the ages of 18 and 25 years. Before the expiration of three years from the granting of his license an apprentice must have served at least 34 months before the mast on a sea-going vessel and obtained a certificate of a grade not lower than that of a mate coasting, failing which his license as an apprentice will be cancelled. The term of apprenticeship is to be six years, unless the applicant enters the service with his sea-going service completed and a certificate not lower than that of a mate coasting, in which case the term of apprenticeship is five years. All pilots are required every year to undergo an examination of eyesight, hearing, colour and form vision, those failing to pass this test being retired, subject however to the right of appeal to the Pilotage Board.

STRIKES AND LOCKOUTS IN CANADA DURING MAY, 1928

THE number of strikes and lockouts in existence in Canada during May was twenty, as compared with seventeen the preceding month. The time loss for the month was greater than during May, 1927, being 35,024 working days as compared with 27,765 working days during the same month last year.

Date	Number of disputes	Number of employees involved	Time loss in working days
*May, 1928.....	20	3,078	35,024
*April, 1928.....	17	1,818	21,757
May, 1927.....	21	5,669	27,765

*Preliminary figures.

The record of the Department includes lockouts as well as strikes, but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees at its commencement and lasting at least one working day. Disputes of less than one day's duration, and disputes involving less than six employees, are included in the published record only when ten day's or more time loss is caused, but a separate record of such disputes is maintained in the Department, and the figures are given in the annual review.

The figures printed are inclusive of all disputes which come to the knowledge of the Department, and the methods taken to secure information practically preclude probability of omissions of a serious nature. Information as to a dispute involving a small number of employees, or for a short period of time, is frequently not received until some time after its commencement.

Ten disputes, involving 436 workpeople, were carried over from April, including two disputes as to which information was not received until May, and ten disputes began during May. Three of these disputes commencing prior to May terminated during the month, as did five of the disputes which commenced during May. At the end of May, therefore, there were on record twelve strikes and lockouts, as follows: coal miners, Canmore, Alberta; fur workers, Toronto, Ont.; two disputes involving embroidery workers, Toronto, Ont.; asbestos and insulation workers, Toronto, Ont.; plumbers, Kingston, Ont.; carpenters, masons and sheet metal workers, Kingston, Ont.; teamsters, Winnipeg, Man.; ladies' clothing factory workers, Toronto, Ont.; painters, Toronto, Ont.; structural iron workers at Montreal, P.Q., and Toronto, Ont., and teamsters, Edmonton, Alberta.

The record does not include minor disputes such as are described in a previous paragraph, nor does it include disputes as to which information has been received indicating that employment conditions are no longer affected, although the unions concerned have not yet declared them terminated. Information is available as to ten such disputes, namely:

ladies' clothing factory workers, Toronto, Ont., June 30, 1926; electrotypers at Toronto, Ont., December 20, 1926; plumbers at Windsor, Ont., April 5, 1927; bakers, Montreal, P.Q., May 1, 1927; blacksmiths, etc., Saskatoon, Sask., May 17, 1927; sheet metal workers at Montreal, P.Q., September 1, 1927; men's clothing factory workers, Montreal, P.Q., Nov. 8, 1927; men's clothing factory workers, Montreal, P.Q., Dec. 23, 1927; coal miners, River Hebert, N.S., Feb. 1, 1928; and stoncutters, Montreal, P.Q., June 10, 1927, the latter being added during May.

Of the disputes which commenced during the month four were for increases in wages, two against discharge of workers, one for increase in wages and recognition of union, two against changes in working conditions and one for shorter hours. Of the strikes and lockouts which terminated during May three were in favour of the employers, two in favour of the workers, two resulted in a compromise, and one was referred to a Board of Conciliation under the Industrial Disputes Investigation Act, 1907.

Information as to a dispute in a rubber factory at Toronto, causing a stoppage of work from March 9 to March 14, was received in the Department too late for inclusion in the last issue of the LABOUR GAZETTE. The cause of the dispute was reported to be a demand for an increase in piece rates paid under a new method of performing certain operations. Some of the employees returned to work and the others were replaced, the employer guaranteeing minimum earnings of 62 cents per hour.

A strike of plumbers at Prince Rupert involving four employees in one shop for two days was reported, and is, therefore, recorded in the list of disputes involving less than ten days' time loss. The employees demanded an increase in wages from \$8.50 per eight-hour day to \$9 per day, the employer offering a compromise of \$1.10 per hour. After two days the employer granted the demands of the union.

Miners, at Thorburn, Pictou County, N.S., were reported to have ceased work on May 29 because eight men refused to join the union, returning to work the following day when they had done so. Full particulars were not received in the Department so that the dispute cannot yet be placed in the detailed list.

A brief cessation of work by longshoremen was reported at Charlottetown, Prince Edward Island, when union men employed at 60 cents

STRIKES AND LOCKOUTS IN CANADA DURING MAY, 1928

Industry, Occupation and Locality	Number of employees involved	Time loss in working days	Remarks
(a) Strikes and Lockouts Occurring Prior to May, 1928.			
MINING, NON-FERROUS SMELTING AND QUARRYING— Coal miners, Canmore, Alberta..	270	7,020	Commenced March 20, 1928; against discharge of workers. Underminated.
MANUFACTURING— <i>Fur and Leather products:</i> Fur workers, Toronto, Ont....	20	520	Commenced April 10, 1928; against violation of agreement. Underminated.
<i>Clothing (including knitted goods):</i> Cap factory workers, Toronto, Ont.	2	24	Commenced Jan. 17, 1928; against reduction in wages. Terminated May 15, 1928, strikers replaced but secured work elsewhere.
Embroidery workers, Toronto, Ont.	5	130	Alleged lockout, commenced April 24, 1928; against discharge of worker. Underminated.
<i>Non-Metallic Mineral Products:</i> Stonecutters, Montreal, P.Q.—	4	50	Commenced June 10, 1927; for increase in wages. Workers secured work elsewhere by May 31, 1928.
Granite cutters, Toronto, Ont.	0	0	Commenced April 2, 1928; for increase in wages. Terminated May 1, 1928; compromise.
CONSTRUCTION— <i>Buildings and Structures—</i> Asbestos and Insulation workers, Toronto, Ont.....	5	130	Commenced Feb. 6, 1928; for increase in wages. Underminated.
Plumbers, Kingston, Ont.....	38	1,000	Commenced April 2, 1928; for increase in wages. Underminated.
Carpenters, masons and sheet metal workers, Kingston, Ont.	38	750	Commenced April 17, 1928; sympathy with striking plumbers. Underminated.
TRANSPORTATION— <i>Local—</i> Teamsters, Winnipeg, Man.....	54	1,300	Commenced April 26, 1928; against discharge of workers. Underminated.
(b) Strikes and Lockouts Occurring During May, 1928.			
MINING, NON-FERROUS SMELTING AND QUARRYING— Coal miners, Reserve, N.S....	600	600	Commenced May 14, 1928; for contract rates instead of day rates. Terminated May 15, 1928, in favour of employer.
Coal miners, Caledonia, N.S..	650	5,000	Commenced May 18, 1928; as a result of the discharge of worker. Terminated May 28, 1928, in favour of workers.
MANUFACTURING— <i>Clothing (including knitted goods):</i> Embroidery workers, Toronto, Ont.	11	242	Commenced May 7, 1928; against discharge of workers. Underminated.
Ladies' clothing factory workers, Toronto, Ont.	19	306	Commenced May 17, 1928; against changes in working conditions. Underminated.
CONSTRUCTION— <i>Buildings and Structures:</i> Carpenters, Calgary, Alberta	400	5,000	Commenced May 1, 1928; for increase in wages. Terminated May 29, 1928, by reference to arbitration under the Industrial Disputes Investigation Act, 1907.
Plumbers, Calgary, Alberta...	70	350	Commenced May 1, 1928; for increase in wages. Terminated May 7, 1928. Compromise.
Painters, Toronto, Ont.....	2	52	Commenced May 1, 1928; for increase in wages. Underminated.
Structural iron workers, Montreal, P.Q., and Toronto, Ont.	750	10,750	Commenced May 11, 1928; for increase in wages and recognition of union. Underminated.
Carpenters (floor-layers), Vancouver, B.C.	80	240	Commenced May 1, 1928; for 5-day week. Terminated May 4, 1928. In favour of workers.
TRANSPORTATION— <i>Local—</i> Teamsters, Edmonton, Alta..	60	1,560	Commenced May 25, 1928; for increase in wages. Underminated.

per hour claimed the work done by non-union men at 75 cents per hour. No change was made, as apparently there were not sufficient union men available to do the work.

Information has appeared in the press that stoncutters in Toronto ceased work at the beginning of May to secure increases in wages from \$1.12½ per hour to \$1.25. The union has reported that a new agreement had been reached for work at the previous rate of \$1.12½ per hour and that no strike occurred.

Employees in an automobile factory at Toronto were reported in the press to have ceased work early in May to secure an increase in wages. It appears that there was a brief cessation of work which occurred owing to a shortage of material, not because of any dispute as to wages.

The following paragraphs give particulars in regard to certain disputes, in addition to the information given in the tabular statement.

COAL MINERS, CANMORE, ALBERTA.—In connection with this dispute which began on March 20 against the discharge of employees charged with allowing explosives to go out of the mine with the coal, during May the charges were dealt with in court and two of the miners were fined for this offence, but two who had been discharged were acquitted. At the end of the month conciliation officers of the Department of Labour conferred with the parties to the dispute. In the meantime the agreement between the operator of the mine and its employees had expired, and a dispute as to its renewal was also dealt with. Early in June the parties concerned reached an agreement. It was reported that the settlement provided for a renewal of the agreement on substantially the same terms as before with provision for a Conciliation Board to deal with any disputes which may arise, but with provision for wage increases to certain classes and the reinstatement of the two miners discharged.

CAP FACTORY WORKERS, TORONTO, ONT.—This dispute, beginning on January 17, 1928, owing to a reduction in wages, was called off by the union on May 15. The employer claimed to have replaced the strikers some time after the beginning of the strike and most of the strikers secured work elsewhere in the meantime.

EMBROIDERY WORKERS, TORONTO, ONT.—This dispute, commencing April 24, is stated by the union to be a lockout, certain employees having been discharged, and the union alleging that there was discrimination in the distribution of work. The information as to this

dispute was not available in the Department in time to be included in the May issue of the LABOUR GAZETTE. At the end of May the dispute was still unterminated.

STONECUTTERS, MONTREAL, P.Q.—Demanding an increase in wages, stoncutters had ceased work on June 10, 1927. From time to time since that date certain of the strikers secured work elsewhere and by the end of May this year there were none on strike. The union, however, has not called off the dispute with the firms affected, these having in the meantime replaced the strikers. The dispute is, therefore, transferred to the list above of disputes not called off though no longer affecting employment conditions.

GRANITE CUTTERS, TORONTO, ONT.—As reported in the LABOUR GAZETTE for May, the employees ceased work on April 2 to secure an increase in wages from \$8.00 per 8-hour day to \$9.00. Toward the end of April as a result of negotiations between the parties, it was agreed that wages would be increased to \$8.25 per day for a period of one year and \$8.50 per day for the next year.

PLUMBERS AND SYMPATHETIC STRIKE OF CERTAIN BUILDING TRADES, KINGSTON, ONT.—Some of the trades who ceased work on April 17 in sympathy with plumbers on strike since April 2 are reported to have returned to work. At the end of May the sheet metal workers, however, were reported to be still on strike as well as the plumbers.

TEAMSTERS, WINNIPEG, MAN.—Teamsters employed by a cartage company in Winnipeg ceased work on April 26 because two employees had been dismissed for activity in connection with securing members for the One Big Union. The employer from time to time replaced the strikers. On May 14 a Conciliation Officer of the Department took the matter up with the parties concerned. The strikers were willing to return to work without insisting upon the reinstatement of the two men dismissed. The employer, however, was willing to take back only those for whom he had vacancies as he had substantially replaced the strikers. The union rejected this offer and later the employer made his previous offer conditional upon the men giving up their membership in the One Big Union. At the end of the month the strike was still unterminated.

COAL MINERS, RESERVE, N.S.—Three bottomers in a colliery at Reserve in the Glace Bay District of Cape Breton Island refused to work on May 14 as a demand that they should be paid at piece rates instead of day rates was not being dealt with by the

employer. As other miners refused to take their places, the mine was closed down for one day shift and one night shift, involving approximately six hundred men. In accordance with the agreement with the company, the union officials refused to take up the grievance in question until work was resumed, and the employees returned to work the following day. It was reported that the three bottomers failing to return to work were dismissed and that the union officials refused to take up their case.

COAL MINERS, CALEDONIA, N.S.—The miners in a colliery at Caledonia in the Glace Bay District ceased work on May 18 in protest against delay in dealing with the case of and to secure the reinstatement of a driver who had been laid off pending an investigation into a charge of cruelty to a horse, information having been laid against him by the company. The trial before the magistrate was postponed once at the instance of each party. The case against the driver was dismissed on the 23rd. On May 22 the employees' representatives notified the management that they were willing to return on the following day, but were informed that owing to a lack of shipping the mine would not be operating. Work was resumed on May 28, and the driver was reinstated.

EMBROIDERY WORKERS, TORONTO, ONT.—Embroidery workers ceased work on May 7 to secure the reinstatement of an embroiderer worker discharged for alleged inefficiency. The union claimed that he had been recognized as a skilled worker for three years. At the end of the month the dispute was not terminated.

LADIES' CLOTHING FACTORY WORKERS, TORONTO, ONT.—The employees in one establishment ceased work on May 17 when the employer introduced into the factory a contractor for whom the employees on designated machines refused to work, not recognizing him as their employer, whereupon they were dismissed. At the end of the month the dispute was still un-terminated.

CARPENTERS, CALGARY, ALTA.—Carpenters in Calgary ceased work on the expiration of their agreement, demanding an increase in wages from \$8 per day to \$9, hours to be unchanged at 44 per week. It was reported that four hundred out of five hundred and twenty carpenters affected ceased work on May 1 and that the others secured employment at the rate demanded, namely \$1.12½ per hour, also that as time progressed the number receiving this rate increased to over two hundred as certain con-

tractors agreed to pay such rates. Later in the month the contractors proposed that work should be resumed at \$1 per hour, the new rate of wages to be arbitrated. The union refused this proposition. It was reported that there was some likelihood that other building trades would become involved. Toward the end of the month Conciliation Officers of the Department of Labour took the matter up with the parties to the dispute, and it was agreed to refer the dispute to a Board of Conciliation and Investigation under the Industrial Disputes Investigation Act, 1907, both parties to abide by the report of the Board. Work was accordingly resumed on May 30. The report of the Board early in June recommended no change from \$1 per hour while a minority report by the member nominated by the carpenters, recommended an increase to \$1.12½ per hour.

PLUMBERS, CALGARY, ALBERTA.—On the expiration of their agreement, plumbers ceased work demanding an increase in wages from \$9 per day to \$10, hours per week to be forty-four as before. On May 7 work was resumed, an agreement having been reached providing for \$1.15 per hour for two years.

PAINTERS, TORONTO, ONT.—Two painters employed in one establishment in Toronto were called out by the international union to secure their demands for recognition of union and increase in wages from 75 cents per hour to 80 cents. About the middle of May the employer secured an interim injunction against picketing by the union. This was dissolved on May 30. At the end of the month the strike was still un-terminated.

STRUCTURAL IRON WORKERS, MONTREAL, P.Q., AND TORONTO, ONT.—Employees of certain firms ceased work in Montreal on May 11 and in Toronto on May 15 to secure an increase in wages to \$1 per hour, and to secure recognition of their union. Wages were reported to have ranged from 55 cents per hour to 90 cents, the majority of the men receiving 65 cents and 75 cents until building became active in the spring when in a great many cases the rates were advanced to 85 cents per hour with five cents extra on tall buildings and higher rates for dangerous work such as bridges, and 15 cents per hour extra for outside work that is away from the city. On May 17 the Honourable Peter Heenan, Minister of Labour, discussed the strike with representatives of the union and with the chief employers in Montreal. The latter offered to give an undertaking that if the men returned to work the maximum rate of 90 cents per hour would be main-

tained for one year. The union representatives stated they would withdraw their demand for recognition of the union and would call off the strike if a minimum rate of 90 cents per hour for all competent workmen were conceded. The employers not agreeing to this, the strike was unteminated at the end of the month. In Montreal the employer replaced the strikers to some extent and some of the strikers returned to work. Early in June the union called off the dispute in Montreal. In Toronto the erection of steel was stopped for some time, but was resumed about May 22 on one building, by a small number of men which was gradually increased. The Building Trades Council notified the contractors that members of other unions could not be permitted to work with strike breakers erecting steel, and under an agreement between the Building Trades Council and the General Contractors Association (LABOUR GAZETTE, March, 1928, page 306) called upon the contractors to appoint representatives to a Conciliation Board to deal with this case. The Contractors' Association stated that they were not involved in the dispute as it concerned only the sub-contractors erecting the steel. From time to time this question continued to be discussed, the unions concerned postponing the date on which their members would be called off work on the building where the strike breakers were employed. On June 6, however, bricklayers and hoisting

engineers on this building were called out. Reports in the press stated that structural iron workers were on strike at various other points in Ontario and Quebec, and also that a sympathetic strike had been called in British Columbia, but the Department has not yet been able to secure particulars as to these strikes.

HARDWOOD FLOORLAYERS, VANCOUVER, B.C.—Employees ceased work on May 1 to secure a reduction in hours, namely, the five-day week. After three days the employers reached an agreement with the union providing for this for one year from June 1, this contract being summarized in the article on industrial agreements in this issue. Some establishments were not affected by the strike, having agreed to these conditions.

TEAMSTERS, EDMONTON, ALBERTA.—Teamsters ceased work on May 25 demanding an increase in wages. In connection with picketing one man was charged with intimidation and appeared before the magistrate, but the hearing was adjourned. At the end of the month the strike was still unteminated, but two out of the four firms affected were reported to have signed an agreement with the union providing for an increase of 50 cents per day, making the rate \$4.50 per day of nine hours, 7.30 a.m. to 5.30 p.m., with overtime at straight time rates from 5.30 p.m. to 6 p.m., and time and one-half rates after six and for all Sunday and legal holiday work.

STRIKES AND LOCKOUTS IN GREAT BRITAIN AND OTHER COUNTRIES

THE latest available information as to strikes and lockouts in various countries is given in the LABOUR GAZETTE from month to month, bringing down to date that given in the issue for February, 1928, in the review of Strikes and Lockouts in Canada and other Countries, 1927. The latter review included a table summarizing the principal statistics as to strikes and lockouts since 1918 in the several countries for which such figures were available. Many countries published these statistics only once each year, the figures being issued in some cases after an interval of as much as two years, so that for such countries the latest figures are not for relatively recent dates.

Great Britain and Northern Ireland

The number of trade disputes beginning in April was 16, and 24 disputes were still in progress from the previous month, making a total of 40 disputes in progress during the month,

involving 2,900 workpeople and resulting in a time loss of 30,000 working days. Of the 16 disputes beginning in April, 3 arose out of proposed reductions in wages, 5 were on other wages questions, 6 on questions respecting the employment of particular classes or persons, and 2 on other questions. Settlements were made in 18 disputes, of which one was in favour of workpeople, 9 were in favour of employers, and 8 ended in compromise. In another case, work was resumed pending negotiations.

Revised figures for the year 1927 show 308 disputes beginning in the year, 114,200 workers involved in all disputes in progress during the year and a total time loss of 1,174,000 working days.

Belgium

During March, 15 new disputes began while 17 were still in progress from the previous month, making 32 disputes in progress involving 9,350 workers and resulting in a time loss of 166,529 working days.

Czechoslovakia

In the year 1927, the number of industrial disputes which occurred was 198, involving 3,469 establishments and 170,702 workers, and resulting in a time loss of 1,395,024 working days. The industries most affected were building, the textile industry, the stone and clay industry and the clothing industry. Classified by causes, 105 disputes were for increase in wages, 11 for the maintenance of existing wages, and 32 concerned the engagement or dismissal of workers. Classified by results, 24 disputes ended in favour of workers, 92 partially in favour of workers and 51 in favour of employers.

Finland

The number of disputes in progress during March was 8, involving 14 establishments and 2,464 workers.

Latvia

During 1927, the number of establishments concerned in disputes was 95, involving 5,273 workers and resulting in a time loss of 60,267 working days.

Poland

During the third quarter of 1927, the number of disputes which began was 184, involving 1,267 establishments, 48,343 workers and resulting in a time loss of 393,225 working days.

Spain

The number of strikes occurring in Spain in 1926 was 96, involving 21,851 workers with a time loss of 247,223 working days. The corresponding figures for 1925 were 181 disputes, 60,120 workers and 839,934 working days. In 1926, wages questions caused 57 per cent of the disputes and questions relating to the engagement and dismissal of workers caused 15 per cent.

British India

Three important disputes were in progress in India during May. A strike in the Bombay mills began early in April, involving, it was reported, over 70 mills and 150,000 workers. This strike was against a policy adopted by several employers to reduce costs of production by employing more skilled workers at higher wages, but reducing the total number of workers. There were also in progress two railway strikes which began in March and involved 20,000 workers in the East Indian Railway workshops and 10,000 in the employment of private firms. These strikes were featured by a number of riots causing loss of life.

United States

The number of disputes beginning in March, according to preliminary figures, was 25, while 64 were in effect at the end of the month, involving 81,209 workers. The number of man days lost was 2,421,794.

Bituminous Coal Miners' Dispute.—The suspension of work which began April 1, 1927, continued during May. An appeal was sent out by the American Federation of Labour, urging members of all trade unions in the United States to contribute one day's pay for the relief of the striking miners.

During May, the Senate Committee on Interstate Commerce concluded its hearings, and the general counsel of the United Mine Workers was asked to draw up a bill which would provide for the stabilization of the industry and the protection of the liberties of employees. A bill was drawn up providing for the establishment of a coal commission similar to the Interstate Commerce Commission, with power to fix maximum prices, arrange for marketing pools and providing that all coal companies operate only under license from this commission and that all employees have the right to belong to labour unions. This bill was introduced into the House of Representatives and the Senate on May 25.

The Consolidation Coal Company, operating mines in Pennsylvania and West Virginia, during May announced a new policy of closing down its less efficient mines, thereby reducing the staff but providing steady work for employees of the remaining mines, stating that only in this way and not by reducing wages could the present situation in the bituminous coal mining industry be permanently remedied.

Textile Workers, New Bedford, Mass.—The strike of 27,000 textile workers against a ten per cent reduction in wages, which began on April 16, continued during May. Before the strike only a small proportion of these workers were organized and these in an independent union, the American Federation of Textile Workers. On May 7, the strikers voted to join the United Textile Workers, which is affiliated with the American Federation of Labour. No attempt was made to introduce strike breakers, the mills being shut down. Communists were reported to have entered the district, organizing textile mill committees, conducting demonstrations and giving relief to the strikers' families.

LABOUR LEGISLATION ENACTED BY THE PARLIAMENT OF CANADA AND BY THE LEGISLATURES OF BRITISH COLUMBIA AND ALBERTA

Parliament of Canada

THE Parliament of Canada which was in session from January 26 to June 11, 1928, passed only one measure of labour interest, an amendment to the Immigration Act repealing the section enacted in 1919 and replacing it with the section then repealed. The section passed in 1919 provided for the deportation of persons, other than those who are Canadian citizens by birth or naturalization in Canada, who seek to overthrow the Government or otherwise incite to public disorder or who assume any powers of government in Canada. The section as re-enacted reads as follows:

"Whenever any person other than a Canadian citizen advocates in Canada the overthrow by force or violence of the government of Great Britain or Canada, or other British dominion, colony, possession or dependency, or the overthrow by force or violence of constituted law and authority, or the assassination of any official of the Government of Great Britain or Canada or other British dominion, colony, possession or dependency, or of any foreign government, or shall by word or act create or attempt to create riot or public disorder in Canada, or shall by com-

mon reputed belong to or be suspected of belonging to any secret society or organization which extorts money from, or in any way attempts to control, any resident of Canada by force or threat of bodily harm, or by blackmail; such person for the purposes of this Act shall be considered and classed as an undesirable immigrant, and it shall be the duty of any officer becoming cognizant thereof, and the duty of the clerk, secretary or other official of any municipality in Canada wherein such person may be, to forthwith send a written complaint thereof to the Minister giving full particulars."

A Bill to amend those sections of the Criminal Code which deal with unlawful associations was passed by the House of Commons but defeated in the Senate. Particulars of this Bill were given in the *LABOUR GAZETTE* for May, 1928, at page 440.

Pursuant to a resolution of the House of Commons the Select Standing Committee on Industrial and International Relations investigated the question of unemployment, sickness and invalidity insurance. The Report of the Committee is published in this issue of the *LABOUR GAZETTE* at page 586.

British Columbia

During the Session of the British Columbia Legislature which opened on January 24 and closed on March 14, 1928, a number of measures of labour interest were amended, including the Semi-monthly Payment of Wages Act, the Coal Mines Regulation Act, the Mechanics' Lien Act, the Woodmen's Lien for Wages Act and the Superannuation Act.

Payment of Wages

The Semi-monthly Payment of Wages Act was amended to bring the outside employees of municipal corporations within its scope.

Coal Mines

A section was added to the Coal Mines Regulation Act providing that a mine employee may, by a written order signed by himself request the mine agent or manager of the mine to apply the whole or part of the money due such employee to the payment of hospital dues, sick and accident fund dues or union dues. Such an order is only effective for the amounts specified therein.

Mechanics' Liens

An amendment to the Mechanics' Lien Act provides that the claimant shall file a *lis pendens* in the Land Registry Office where the affidavit required by the Act is filed, immediately after the institution of proceedings to enforce the lien. Failure to file the *lis pendens* within thirty-one days or within the extended time provided for by the Act will result in the cancellation of the lien from the records of the Land Registry Office.

Woodmen's Liens

The Woodmen's Lien for Wages Act was amended to make provision for seizure of the logs or timber in cases where the claimant makes an affidavit to the effect that he has good reason to believe and does believe that the logs or timber are about to be removed from the locality in which they lie. The section dealing with the sale of timber to satisfy claims and costs is also amended. The amendment provides that where the judge is satisfied, having regard to the saving of costs

or necessity of expedition of a sale, the interests of all parties would be better served he may order the logs or timber to be sold forthwith by order of the court to such purchaser and at such price as may be agreed to by the parties before the court.

Superannuation

A number of changes were made in the Superannuation Act. The Minister of Finance is empowered to invest at his discretion any moneys at the credit of the superannuation fund. If a contributor dies after service of fifteen years or longer a monthly allowance will be granted to any dependent relative who has been nominated by the contributor, or, failing such nomination, to his widow. The allowance thus granted will equal the superannuation allowance which would be payable had the contributor been retired from the service prior to his death and been granted a superannuation allowance on the joint life and last survivor plan provided for in the Act, in respect of which the relative so nominated, or the widow, had become the survivor. Provision is made that the amount standing to the credit of a deceased contributor may be paid to his dependents without the usual letters of administration. The amendment also makes legally binding the inclusion of the balance of employees over and above the 75 per cent necessary to negotiate an agreement to secure the benefits of the Act. All new employees of the employer in the group to which the agreement applies

are also to be included. When the Act becomes applicable to the employees of a municipality or any group thereof, any employee of that municipality or of that group, who was granted a pension or retiring allowance under a by-law of the municipality may, with the approval of the Civil Service Commission, enter into an agreement to substitute an allowance under the Act for the allowance granted him under the by-law. Employees of a school board, or a group thereof, may come under the Act on application signed by 75 per cent of their number.

Miscellaneous Acts

An amendment to the Election Act provides that polls shall be open until 8 p.m. instead of 7 p.m. as formerly. Minor changes were also made in the method of taking absentee votes.

The Municipal Act was amended to provide that municipalities may pass by-laws appointing electrical inspectors and defining their duties and also for regulating, inspecting and controlling electrical installation, repair, etc., within the municipality. The exercise of these powers is subject to the provisions of the Electrical Energy Inspection Act.

The Motor-Vehicle Act was amended to provide for examination of applicants for new drivers' licenses and also for the calling up and examination of those already in possession of license cards. Drivers of farm tractors and other implements of husbandry are not required to possess licenses.

Alberta

The Legislature of Alberta was in session from February 2 to March 21, 1928, and enacted a number of measures of interest to labour, including an Act respecting the Industrial Disputes Investigation Act of Canada, an Act for the Better Securing of the Payment of Wages to Workers in Coal Mines, an Act setting up the Alberta Women's Bureau. There were also amendments to the Workmen's Compensation Act (Accident Fund), the Minimum Wage Act, the Boilers Act, the Building Trades Protection Act, and the Woodmen's Lien Act.

Industrial Disputes Investigation Act

The Industrial Disputes Investigation Act (Alberta) makes the provisions of the Federal Industrial Disputes Investigation Act applicable to disputes of the nature therein defined which are within the exclusive legislative jurisdiction of the province. The Lieutenant-Governor in Council is empowered

to issue a proclamation applying the provisions of any future amendment to the Federal Act to disputes within the exclusive legislative jurisdiction of the province. The Labour Disputes Act (LABOUR GAZETTE, May, 1926, page 447) is amended to make it applicable only to disputes which have not been made subject to the Industrial Disputes Investigation Act of Canada. The Industrial Disputes Investigation Act (Alberta) came into force on proclamation on April 2, 1928.

Coal Miners' Wages

The Coal Miners' Wages Security Act provides that every mine owner shall, on the fifteenth day of May in each year, deliver to the Minister a statement of the total amount of wages paid during the preceding twelve months. If and when required by the Minister to do so a mine owner must also deliver to him a statement showing the assets of the mine owner and his liabilities and

setting out in detail all mortgages or charges against his assets as at the last day of the month preceding that in which the statement is delivered. On or before the first day of June in each year every mine owner must furnish a bond or other security to the satisfaction of the Minister in an amount equal to the largest amount paid by him for wages in one month during the previous twelve months, to secure the due payment of all wages payable by him during the then current period of twelve months. In the case of a mine owner who has not been operating for a full period of twelve months the amount of the bond is to be determined by the Minister. In lieu of a bond the Minister may accept a deposit of a sum in cash which is to be invested and held by him as security for the due payment of wages. A fine of not less than \$100 and not more than \$1,000 and costs is provided for a mine owner who makes default in delivering the required statement, and, in default of payment of the fine, a term of imprisonment not exceeding three months. A fine of not less than \$1,000 or more than \$2,500 and costs is provided for failure to furnish the required bond and continuing to operate his mine with hired employees after such default. In default of payment of the fine a term of imprisonment not exceeding three months may be imposed. A mine owner may, upon ten days' notice to the Minister, apply to the Board of Public Utility Commissioners for a certificate of exemption, which the Board is empowered to grant on being satisfied that the mine owner has sufficient resources to insure the due payment of wages to all coal miners in his employ. A certificate of exemption is good for a period not exceeding twelve months and may be cancelled by notice in the *Alberta Gazette*. This Act came into force by proclamation on May 23, 1928.

Women's Bureau

The Alberta Women's Bureau Act sets up a Women's Bureau consisting of such persons as may from time to time be appointed by the Minister of Agriculture. Among the aims and objects of the Bureau are, to collect and tabulate information and statistics with regard to any condition relating to the occupation or work of women, and, generally, to conduct research work into matters affecting women.

Workmen's Compensation

A number of changes were made in the Workmen's Compensation Act (Accident Fund) following the report of the Commission appointed pursuant to a resolution passed at

the 1927 session of the Legislature.* The definition of "workman" was extended to include the driver of a vehicle doing work for another, whether the former supplies the vehicle or not, provided the relationship of master and servant exists between the two. The chairman of the Workmen's Compensation Board is to hold office for ten years and the other two commissioners for eight years, and no commissioner may engage in any other employment for remuneration.

Establishments, or any branch thereof, which are not within the scope of the Act may be brought under its provisions upon application to the Board by a majority of the workmen or by the employer. It is provided, however, that the Board shall not give effect to any application affecting persons excluded by the Act except in the case of employees in the farming or ranching industry, who may be included with the consent of the employer. Notice must be given to the Board of any building permit involving an expenditure of more than \$100 and the holder of the permit is within the provisions of the Act.

The three day waiting period is made applicable to all cases regardless of the duration of the disablement. Provision is made for the payment of compensation to workmen who are residents of Alberta, or usually employed in Alberta, who are under the Act, and who may be injured while working in a state or province where there is no system of state insurance similar to that provided by the Act, if the place or chief place of business of the employer is in Alberta, and employment out of the province has immediately followed employment within the province and has lasted less than six months. Where the accident happens under circumstances which would ordinarily entitle the workman or his dependants to take an action against some person other than the employer the workman or his dependants, if entitled to compensation under the Act, are not entitled to bring an action. The Board, however, may bring such action.

If a workman is injured through the negligence of an employer other than his employer the Board may direct that the compensation be charged against the class to which the first-mentioned employer belongs. A workman to whom compensation is payable is not entitled to a continuation of payments if he leaves the province, unless he first obtains permission to leave from the Board.

The Lieutenant-Governor in Council is authorized to appoint from the medical staff of the University of Alberta an advisory board to which the Workmen's Compensation Board may refer cases for examination as it

* LABOUR GAZETTE, July, 1927, page 700.

sees fit, and, upon written request of the workman or his employer, give an opportunity to him of appearing before it in person. Compensation is not to be payable in respect of hernia unless it is a clinical hernia of a disabling character and of recent primary demonstrability, and its onset can be shown to have been immediately preceded by a strain or other accident, and it can be shown that at the time of the occurrence of the strain or other accident the workman immediately reported his condition to his employer, or ceased work at the time and reported within twenty-four hours. If the workman does not submit to an operation for radical cure within two weeks of the occurrence compensation will cease. The period of disability will cease after the expiration of forty-two days after such operation, which period may be extended if complications have arisen.

The Board is authorized to take such measures as may be necessary for the retraining of permanently disabled workmen, the expense of such retraining not to exceed \$20,000 per annum. Where such assistance increases the earning capacity of the workman the Board may reduce the compensation payments accordingly. Provision is made for a review of any payments to a workman at the request of an employer.

The amount payable in respect of funeral expenses is raised to \$125. The Board is empowered to reduce the compensation payable to dependants who are aliens residing outside of Canada to such sum as will maintain them in their place of residence in the same degree of comfort as dependents of the same class residing in Canada.

The rate of compensation is increased from 62½ per cent to 66⅓ per cent of average earnings. In computing average earnings the Board will take into consideration the actual earnings of the workman during the previous twelve months if the same are ascertainable, but if not then any number of weeks during which the workman has been employed by any employer previous to the happening of the accident. The section which limited the amount of compensation payable in any case to \$1,250 per annum was repealed.

Provision is made for the payment of a *per diem* subsistence allowance of not more than \$2.50 nor less than \$1.50 to an injured workman where he is, under its direction, undergoing treatment in a place other than that in which he resides. The penalty for violation of the Act "not exceeding \$500" has been changed to "not less than \$5" and for further violation after a conviction from \$25 a day to "not less than \$5 a day."

Under the direction of the Lieutenant-Governor in Council, restaurants and retail shops, or either of such classes of employment, may be brought within the scope of the Act and upon such inclusion the Board is empowered to define what constitutes a restaurant or a retail shop.

The section of the Act exempting railway employees is repealed but the repeal does not take effect until sixty days after the Act comes into force. This exemption period is extended in the case of workmen whose organization shall have filed with the government within the 60 days an application for a ballot to be taken within four months from the date of application therefor. If a majority of those voting are in favour of being brought under the provisions of the Act such class will be brought within the Act by Proclamation. Hotels and commercial green-houses are brought within the scope of the Act.

The amended schedule of industrial diseases includes a number of diseases not previously compensable namely, glanders; inflammation or infection of the skin or contact surfaces, due to oils, cutting compounds or lubricants, dust, liquids, fumes, gases, or vapours; pneumoconiosis, which shall be deemed to be silicosis, siderosis, lithosis; poisoning by benzol or by nitro and amide derivatives of benzol, anilin and others; and subcutaneous cellulitis of the hand (beat hand). Anthrax, and poisoning by lead, mercury, and arsenic, which were in the old schedule are also included.

Minimum Wages for Women

The Minimum Wage Act was amended to include as an employer within the meaning of the Act a person who employs another whether for wages or not. The Board is empowered to fix minimum wages whether the employee is remunerated otherwise than by way of wages or not at all. The Board may also permit an employer to transfer an employee who has been employed in one branch of work at a minimum wage to another branch of work in the same trade or occupation at such rate less than the minimum wage as the Board may determine.

Boilers Act

An amendment to the Boilers Act provides a minimum penalty of \$10, where formerly only a maximum penalty of \$50 was provided, for operating an unlicensed boiler or one which is not owned or controlled by a registered dealer. The employer of a non-certificated person was formerly liable on summary conviction to a penalty of not less than \$50 nor more than \$100. This liability has been changed

from "the employer of any person" to "every owner employing any person." Authority is given for the issue of provisional certificates to persons who have served twelve months as firemen to qualified engineers, in lieu of having to serve for twelve months as firemen to holders of a final engineer's certificate. A minimum penalty of \$10 is provided for a breach of the Act for which no penalty is specified. The sections which provided for licensing of boilers are repealed as from January 1st, 1929.

Building Trades Protection

The Building Trades Protection Act was the subject of several amendments which come into force on proclamation. All inspectors must now be appointed by the Lieutenant-Governor in Council. A minimum penalty of \$5 has been provided in cases of conviction for refusal or neglect to carry out an order of an inspector. Formerly only a maximum penalty of \$50 was provided. The regulations set out in the Act will now apply to all buildings instead of only to those over two stories in height. The Lieutenant-Governor in Council is empowered to cancel, vary, or add to any of the regulations contained in the Act. In the event of conflict between the regulations made under the Act and any municipal by-law the former shall prevail.

Woodmen's Liens

An Act amending the Woodmen's Lien Act was to come into force on proclamation which was made on April 10th bringing the Act into operation from that date. The interpretation of "logs and timber" is extended as from October 1st, 1927, to include lumber, and the interpretation of "labour service and services" has been extended to include the supply of articles of food to any person engaged in a contract, while engaged in the performance of such contract. The section setting forth the nature of the lien is repealed and a new section enacted which provides that any person performing labour service or services in connection with any logs or timber other than lumber shall have a lien for the amount due him for such labour service or services upon any logs or timber in respect of which such labour service or services were rendered, and any other logs belonging to the same owner which have become mixed with them; and upon any lumber made out of such logs or timber so long as such lumber is at the date of the filing of the lien or the commencement of any other proceeding under the Act either upon the premises of the mill where it

was milled, or at or near any railway siding or spur track, and has not been loaded in cars for delivery or delivered to any bona fide purchaser without notice of the lien, or, having been so loaded or delivered, remains unpaid for: provided that where lumber has been so loaded or delivered the amount of the lien created shall not exceed the sum due from the purchaser at the said date. The lien is to be a first charge upon the logs, timber and lumber having precedence over all claims except claims of the Crown for dues or charges. A lien on lumber created before March 2nd, 1928, does not, however, take any such precedence. Any contract or agreement to deprive any person of his lien is null and void. In the above provisions the expression "person" include clerks, time-keepers, cooks, store-keepers, blacksmiths, artisans and all others usually employed in connection with such labour, service or services.

An amendment to the Police Pension Act which comes into effect on July 1st, 1928, empowers the Commissioner to invest pension funds in bonds, debentures, debenture stock or other securities of or guaranteed by the Province or by the Dominion of Canada.

Resolution

During the session the following motion was carried:

"That in the opinion of this House, the Government should, in co-operation with the recognized organizations representing ex-service men, continue to give careful consideration to the educational and other needs of dependent children of ex-service men who were disabled in active service in the late war, or who died while engaged on, or a result of such service, and during the interval before the next session of the Legislature consider the question of providing adequate assistance towards the education of the dependent children of disabled workmen who have suffered disability arising out of their employment, or who have been killed, or died as a result of such injuries received during their employment, and in addition thereto, the dependent children of mothers who are in receipt of the Mothers' Allowance."

Industrial accidents reported to the Workmen's Compensation Board of Manitoba during May numbered 1,096, this number including three fatalities.

UNEMPLOYMENT, SICKNESS AND INVALIDITY INSURANCE IN CANADA

Report of Committee Adopted by House of Commons

A RESOLUTION was adopted by the House of Commons on June 6, 1928, adopting a report dealing with the subjects of insurance against unemployment, sickness and invalidity, which had been under investigation during recent weeks by the committee of the House of Commons on Industrial and International Relations. The text of the committee's report is given below.

Reference was made in the April issue of the LABOUR GAZETTE (page 361) to the adoption by the House of Commons on March 21 of a resolution which was introduced by Mr. A. A. Heaps (Winnipeg North) directing that the Committee of the House of Commons on Industrial and International Relations should be authorized to investigate and report on insurance against unemployment, sickness and invalidity. The article in the LABOUR GAZETTE contained a summary of the evidence which was given by Mr. Gerald H. Brown, Assistant Deputy Minister of Labour. The members of the Committee were also furnished with copies of memoranda of information on unemployment, sickness and invalidity insurance which had been prepared in the Department of Labour. An outline of this memorandum was given in the April LABOUR GAZETTE, and reference was made to the evidence of Mr. R. A. Rigg, Director of the Employment Service of Canada, who was examined in relation to the operation of that Service, and to available statistics as to unemployment in different branches of employment in Canada.

Meetings of the committee were subsequently held on April 11, 19, 24, 27 and on May 3, 10 and 15. The following witnesses were examined: Mr. Pierre Beaulé, president, Confederation of Catholic Workers of Canada; Mr. A. R. Mosher, president, All-Canadian Congress of Labour; Mrs. Edith Rogers, M.L.A., Winnipeg; Mr. Tom Moore, president, Trades and Labour Congress of Canada; Messrs. W. C. Coulter and H. W. Macdonnell, chairman and secretary respectively of the Industrial Relations Committee of the Canadian Manufacturers' Association; Miss Gertrude Childs, secretary, Social Service Commission, Winnipeg; Mr. Howard T. Falk, secretary, Montreal Council of Social Service Agencies, and Mr. W. Stuart Edwards, Deputy Minister of Justice. The foregoing witnesses, with the exception of the Deputy Minister of Justice, were examined with reference to the special knowledge which they had gained through

their respective positions concerning the existence of unemployment in various branches of industry and the measures which, in their opinion, should be adopted in the relief of unemployment where it occurs.

Messrs. Beaulé, Mosher and Moore, on behalf of the Confederation of Catholic Workers, the All-Canadian Congress of Labour and the Trades and Labour Congress of Canada, pronounced themselves in favour of the adoption of a system of unemployment insurance. The evidence of Mrs. Rogers, Miss Childs and Mr. Falk was also favourable to the establishment of unemployment insurance. The two representatives of the Canadian Manufacturers' Association who were heard intimated that their organization had not had an opportunity of considering the subject of insurance against unemployment, sickness and invalidity, and that therefore they were not in a position to express an authoritative view on behalf of their Association.

The Deputy Minister of Justice was called before the Committee in order to advise them as to the jurisdiction of the Dominion Parliament or of the provincial legislatures on the subject of insurance against unemployment, sickness and invalidity. His evidence was to the effect that insurance generally is not mentioned in any of the enumerated subjects of jurisdiction conferred upon the Dominion Parliament by the British North America Act, but that it does fall within the subject of property and civil rights which is conceded to the provincial legislatures by that Act. The Deputy Minister was asked if the Dominion Parliament would have power to contribute towards unemployment, sickness and invalidity insurance. His reply was that he thought the Dominion would be free to make such a contribution if it thought fit, although the matter had never been tested in the Courts.

The report of the Committee was presented to the House of Commons on May 16 by Mr. C. R. MacIntosh, chairman, and was adopted by the House of Commons on motion of the latter on June 6. The report of the Committee is in the terms following:—

REPORT OF COMMITTEE

Your Committee has had under consideration a Resolution, which was adopted by the House of Commons on March 21st, in the following terms:—

“That in the opinion of this House, the Committee on Industrial and International Relations be authorized to investigate and report

on insurance against unemployment, sickness and invalidity."

Your Committee proceeded, as directed, to investigate the subject of insurance against unemployment, sickness and invalidity. The Assistant Deputy Minister of Labour, who was the first witness, presented memoranda of information dealing with the systems of insurance against unemployment, sickness and invalidity which exist in various countries, also a memorandum of information relative to systems of voluntary sickness insurance and benefits which have been developed in this country. The Director of the Employment Service of Canada furnished the Committee with an outline of the operations of the free employment offices which have been established by the Provincial Governments in sixty-four centres throughout the Dominion, and which are assisted by a Federal grant. Witnesses appeared before the Committee on behalf of organized labour, Public Welfare Associations, and the Canadian Manufacturers' Association, and expressed the views of their respective organizations on the subject matter of reference.

The Deputy Minister of Justice gave evidence on the question of the respective jurisdiction of the Dominion and Provincial Governments regarding unemployment, sickness and invalidity.

While the time at the disposal of your Committee has been too short to make as comprehensive a report as the importance of this matter demands, your Committee submits the following recommendations:—

1. That the necessity of providing some method of unemployment insurance is one that will inevitably have to be dealt with before long, as a solution, in part, of the industrial problems of the present day.

2. That we accept and endorse the principle of unemployment insurance, based on compulsory contributions derived from the State, the Employer and the Employee. In this connection, we would point out that a somewhat similar decision was arrived at by a Royal Commission on Industrial Relations, which dealt with this subject in 1919.

3. That the evidence of the Justice Department makes it clear that the responsibility for such legislation rests on the Provincial authorities, it being within their jurisdiction under the provisions of the B.N.A. Act, but that it would be within the power of Parliament to contribute by grant, to such Provinces as adopted such legislation, following the precedent set in the matter of Technical Education, Highway Construction and, more recently, the Old Age Pensions Act.

4. That, whereas the conditions of unemployment vary so much more from Province to Province, than those relating to old age, it would be very desirable, for the success of any plan of unemployment insurance that several of the provinces should be willing to act simultaneously. In view of these circumstances, we are of the opinion that this matter should be referred to the various provinces, to ascertain which of them would be prepared to consider adopting legislation of this character, and to what extent.

5. On the very important subject of the cost of unemployment insurance, your Committee has experienced great difficulty in arriving at any definite conclusion owing to the lack of

data as to the amount of unemployment, either constant or occasional in character. There appears to be no definite method of ascertaining the unemployment at any given point for any length of time. We, therefore, recommend that the Government immediately devise some means whereby the amount of unemployment, over a period of years, could reasonably be calculated.

6. That as unemployment insurance has been in operation for a number of years in Great Britain, and has recently been thoroughly investigated by a strong committee, and the system re-organized on the basis of their report, your Committee would suggest to the Government the advisability of obtaining, from Great Britain, expert advice on the subject, which would be of service in the formulation of a plan or plans suitable to conditions in Canada, and in arriving at the approximate cost.

7. In order that this matter might be further dealt with, your Committee recommends to Parliament that at the next Session this question be again referred to the Committee on Industrial and International Relations.

8. Your Committee further recommends that 750 copies in English, and 250 copies in French, of this report, and the evidence upon which it is based, be printed in blue book form, and that Standing Order No. 64 be suspended in relation thereto.

C. R. McINTOSH,
Chairman.
WALTER HILL,
Clerk of Committee.

Population of Soviet Russia

The results of the census of December 17, 1926, recently published at Moscow, show that the population of the whole of the Union of Socialist Republics at that date was 146,989,460, or 71,026,864 men and 75,962,596 women. This is the first census embracing the whole of the territory of the Union, and it is, therefore, not possible to compare the results with those of a previous census. The population of the various federated Soviet Republics, distinguishing the urban and rural inhabitants, is shown in the table below:—

---	Urban	Rural	Total
Russian Socialist Federative Soviet Republic.....	17,440,478	83,417,507	100,857,985
Ukraine.....	5,374,047	23,646,257	29,020,304
White Russia.....	848,557	4,135,327	4,983,884
Trans-Caucasia.....	1,407,469	4,452,868	5,860,337
Uzbek.....	1,102,538	4,172,460	5,274,998
Turcoman.....	136,809	855,143	991,952
Soviet Union....	26,309,898	120,679,562	146,989,460

According to the results of the census, there are in the Union six towns with a population of more than 400,000; these are Moscow (2,025,947), Leningrad (1,614,008), Kiev (513,789), Baku (452,808), Odessa (420,888) and Kharkov (417,186).

OLD AGE PENSIONS IN CANADA

Statement of Payments made for Pensions in British Columbia

THE Hon. J. A. Robb, Minister of Finance, laid on the table in the House of Commons on June 1 the following report received from the Deputy Minister of Labour on the agreements made in accordance with the provisions of the Old Age Pensions Act between the Dominion Government and the governments of the provinces of British Columbia and Saskatchewan, and on the moneys paid by the Dominion under each of these agreements.

The report was as follows:—

OTTAWA, May 28, 1928.

To the Hon. J. A. ROBB,
Minister of Finance.

SIR,—I have the honour to submit the following report in accordance with the provisions of section 17 of the Old Age Pensions Act, R.S.C. 1927, Chapter 156, as to the operation of the agreements made pursuant to that Act and of the moneys of Canada paid to the provinces under each of the several agreements entered into pursuant thereto.

By Order of His Excellency the Governor in Council dated the 28th day of September, 1927, (P.C. 1812) an agreement was entered into with the province of British Columbia, a copy of which is hereto attached and marked "A"¹. The amounts paid by the province of British Columbia for pensions pursuant to the provisions of that agreement are as follows:

September and October	\$42,296 58
November.	32,743 88
December.	34,760 55
<hr/>	
Four months ending December, 1927	\$109,801 01
January, 1928.	\$46,747 59
February.	52,199 04
March.	54,278 67
<hr/>	
Quarter ending March 31, 1928.	153,225 30
<hr/>	
Total paid for pensions.	\$263,026 31
Amounts recovered from estates of deceased pensioners under the provisions of section 9 (3)	\$ 55 34
Amounts improperly paid and recovered by Province under provisions of Regulation 26.	66 93
<hr/>	
Total deductions	122 27
<hr/>	
Net amount expended for Old Age Pensions	\$262,904 04

On the 27th of March, 1928, cheque No. 19199 for \$54,900.50, being one-half the net amount paid by British Columbia for pensions during the period ending December 31, 1927,

was forwarded to the Deputy Minister of Finance for British Columbia.

On the 30th of April, 1928, cheque No. 19733 for \$76,551.51, being one-half the net amount paid for pensions by that province for the quarter ending March 31, 1928, was forwarded to the Deputy Minister of Finance for British Columbia, the total amount of the half share paid by the Federal Government being \$131,452.01.

Agreement with Saskatchewan

By Order of the Deputy of His Excellency the Governor in Council dated the 8th day of May, 1928, (P.C. 767) an agreement was entered into with the province of Saskatchewan for the payment of Old Age Pensions, a copy of which agreement is hereto attached and marked "B"¹. No moneys have, as yet, been paid by the Dominion under the provisions of this latter agreement.

No other agreements have been made under the provisions of the Old Age Pensions Act and no moneys paid by Canada except the moneys paid to the province of British Columbia.

Attached hereto and marked "C" is a detailed statement of the operation of the Act in British Columbia.

I have the honour to be, sir,

Your obedient servant,

H. H. WARD,
Deputy Minister of Labour.

C. STATEMENT OF OPERATION OF THE OLD AGE PENSION ACT OF BRITISH COLUMBIA

Number of pensioners	2,712

OLD AGE AND INVALIDITY PENSIONS RECOMMENDED IN SOUTH AFRICA

THE Government of the Union of South Africa appointed a commission in 1926 to examine and report upon (a) the payment of pensions by the State to necessitous, aged, and permanently incapacitated persons who are unable to maintain themselves and for whom no provision at present exists; (b) a system of national insurance as a means of making provision for the risks of sickness, accident, premature death, invalidity, old age, unemployment and maternity. The commissioners recently published their first report, giving the results of an exhaustive study of pension systems in other countries, and of the situation existing in South Africa. Their principal recommendations are as follows:—

A. 1. Pending the institution of a contributory scheme the government should come to the assistance of the aged and infirm by instituting without delay a system of non-contributory pensions.

2. Old Age Pensions should be granted only to those who have been British subjects for five years, and been ordinarily resident in the Union for fifteen out of the twenty years immediately preceding the date of the application.

3. The pensionable age should be 65 for both sexes.

4. The rate of pension should be 10 shillings a week.

5. The pension should be arrived at by deducting the amount of the claimant's income from £52 and dividing the balance by two.

B. Invalidity Pensions, at the same rate and on the same basis as Old Age Pensions, should be granted to every person of 21 years of age and over who has not reached the age of 65 and who is totally and permanently disabled.

These Invalid Pensions should be granted only to those—

(1) who are resident in the Union at the time the application is made;

(2) who have been resident in the Union for at least five years;

(3) who have not deprived themselves of property or income to qualify for pension;

(4) who have become permanently incapacitated or blind whilst domiciled in the Union, or who, if the invalidity is due to a congenital defect, were brought into South Africa before attaining the age of three years, or have resided in the Union continuously for twenty years;

(5) whose invalidity was not self-induced; and

(6) whose means are inadequate and whose relatives are not in a position to maintain them.

C. (1) The administration should vest in the Treasury, subject to the control of the Minister of Finance.

(2) Claims should be lodged annually, considered by the Magistrate in Chambers and reported by him to the Central authority, by whom the applicant should be given the right to appeal against the Magistrate's award.

(3) Advances should be made to local authorities so that houses or rooms may be provided for such of the aged and infirm as have need thereof.

(4) Pensions should lapse during absence from the Union, unless the pensioner has gone to a country which has entered into a reciprocal arrangement with the Union.

(5) Pensions should be withheld during imprisonment and during compulsory detention in State institutions.

(6) Pensions should lapse when they have not been drawn for six months.

(7) The inmates of charitable institutions should be eligible for pensions.

(8) The acceptance of poor relief either be-

fore or after the grant of the pension should not be a disqualification.

(9) Pensions should be inalienable, and not attachable for debt.

(10) Pensions should be paid in advance on a fixed day in each week at the nearest Post Office.

(11) If one or more of the children of a pensioner is in a position to maintain him, power should be given to collect the amount of the pension through the Magistrate.

D. The recommendations in A, B and C are not intended to apply to natives, who when aged and necessitous should continue to be assisted from the votes for poor relief, but the rations issued to them should be on a more generous scale than at present.

SOCIAL INSURANCE IN FRANCE

New Act Providing Various Benefits for Industrial Population

THE French Parliament finally adopted on March 14, 1928, an Act on social insurance. (The general subject of social insurance was reported on by the International Labour Office at Geneva, these reports being reviewed in the *LABOUR GAZETTE* for June, 1925, pages 578-9.) The new Act establishes compulsory insurance for sickness, maternity, invalidity, old age, death, and family responsibilities, and will apply to 8,500,000 insured persons and 13,000,000 beneficiaries, entailing annual expenditure amounting to 5,000,000,000 francs.

General Provisions

Under the new Act, compulsory insurance applies to all wage earners of either sex whose total annual remuneration does not exceed 15,000 francs. This limit is increased to 18,000 francs in the case of wage earners having a dependent child, and it is further increased by 2,000 francs in respect of each child after the first.

By "family responsibilities" is meant the care of children aged more than six weeks and less than sixteen years old, who are not wage earners and who are brought up at the expense of the insured person, whether they are legitimate, natural, acknowledged, adopted, or foundlings.

Share-farmers, who usually work alone or with the help of members of their family—wives, relatives, or children—and who do not own any part of the live stock are considered as wage earners, while the owners of property let out under the share-farming system are classed as employers.

Foreign wage earners who have their real and permanent domicile in France are insured in the same way as French wage earners, but they do not benefit by certain allowances and certain pension additions.

Liability to compulsory insurance ceases at the age of 60 years when the insured is entitled to an old age pension. However, the insured person has the right to defer from year to year the payment of his pension until the age of 65 years. In such case he remains liable to compulsory insurance if he continues to be a wage earner.

Employees of the State, departments, communes, railways, tramways, and miners and slate quarrymen, registered seamen and other persons employed on board ship, are respectively covered by insurance legislation or regulations in force prior to the passage of the new Act. A special law will determine the rules for the co-ordination of these various schemes with the general system of social insurance. Certain departments, where social insurance schemes have been in operation, are also exempt until such time as the adoption of a special law will make the Act applicable.

The financial resources of the scheme consist of the contributions of insured persons, the contributions of employers and a subsidy from the State. The contributions of the insured person and of the employer amount together to 10 per cent of wages up to 15,000 francs, 5 per cent being payable by the insured person and 5 per cent by the employer. It is provided, however, that the payment of the total contribution must be made by the employer, who, on each pay-day, deducts

from wages the contributions due by each insured person. The employer is alone responsible, and the insured person does not lose his rights to the benefits of insurance even if his employer has omitted to pay the contributions provided for by the law. The employer is exclusively responsible for his own contribution, any agreement to the contrary being null and void.

Provision is made whereby insured agricultural workers who are employed only intermittently for wages may make voluntary payments for the time during which they are employed and still be considered compulsorily insured, provided that they work for wages at least 120 days in the year, and that the voluntary payments are equal to at least 10 per cent of the average daily wages in the agricultural region in which they are employed.

A home worker, compulsorily insured, who is paid by the job or piece by a manufacturer, is not responsible, as employer, for the contributions of other workers who are employed with him for the same manufacturer, but such contributions are paid by the manufacturer, who is liable therefor notwithstanding any agreement to the contrary.

Wage earners or their employers may voluntarily add to their compulsory payments, without any limitation as to the amount, for the purpose of securing additional benefits.

The amount of the annual state subsidy is to be equal to the credit opened by the Finance Law of 1926 in the budget of the Ministry of Labour in respect of workers' pensions. This credit will amount to 240,000,000 francs. The subsidy is increased by the payment of half the savings which the State will effect in the various expenses resulting from public assistance.

Sickness Insurance

The sickness insurance phase of the Act covers the cost of general and special medical care, medicines and appliances, costs of treatment in a hospital or curative institution, and the cost of necessary surgical operations not only for the insured person but for his wife and children under 16 years of age who are not wage earners. Among the conditions governing this section of the Act are the following:—

In order to establish a title to receive benefits, the insured person must have paid the statutory contributions for twenty days during the month preceding the illness, and, beginning with the fourth month following the coming into force of the law, for sixty days during the three preceding months. Benefits date from the commencement of the illness, and continues for a period of six months. Any

relapse which occurs in the two months following is considered as a continuation of the original illness.

The insured person has free choice of a doctor. Medical consultations are given at the doctor's office unless prevented by the condition of the insured. If medical attention has to be given in the home, however, the injured person is limited to the services of physicians or midwives in the commune, or if there are none they must be chosen from the nearest commune. When the insured wishes to summon a doctor other than the one chosen, the additional expenses which may be entailed are paid by the person concerned.

Treatment either at home, or in a hospital or sanitarium, is regulated by agreements between insurance funds and the professional organizations, account being taken of the ordinary rates and of the local rates resulting from these agreements.

The cost of treatment is paid for by the fund, or the insured person is reimbursed for the treatments, depending upon the terms of the contract. The share of the medical cost paid by the insured is fixed at between 15 and 20 per cent, and that of the pharmaceutical and other costs is uniformly established at 15 per cent of the total.

After an experience of at least two years, any insurance fund may be authorized, at its request and upon approval of the Superior Insurance Council, to reduce the percentage which the insured pays for treatment, as well as the waiting period before he is eligible for cash payment.

If the sick insured is unable to continue or resume work, this condition being attested by a medical certificate, he is entitled to a cash benefit equal to half his daily average wages for every workday lost, this benefit dating from the sixth day following the commencement of the illness or accident. The daily allowance is to be increased to as much as 60 per cent of wages when the latter, calculated on a basis of normal work during the year does exceed a minimum determined annually by decree.

In case of hospitalization, the costs paid by the fund will be limited to the rates at present in existence in regard to industrial accidents and public assistance. The daily sickness cash benefit is reduced, in the case of hospital treatment, by one-third if the insured supports one or more children of less than sixteen years, or one or more relatives; by one-half if the insured person is married, without child or relative to support; and by three-quarters in all other cases.

During incapacity the general insurance fund pays into the account of the pension

fund the worker's share of that part of the contributions which would go toward the old age risk.

Sickness and injuries covered by workmen's compensation are exempted from benefits under the Act, as well as any infirmity resulting from the intentional fault of the insured person.

Maternity Benefits

Maternity benefits include medical and pharmaceutical benefits for insured women or the wives of insured persons; a daily cash benefit during the six weeks preceding and the six weeks following child-birth; special benefits in cases of pathological pregnancy; and finally allowances during the period of nursing, or milk vouchers. The monthly nursing benefit (for a period not exceeding one year) amounts to 100 francs during the first two months, 75 francs the third, 50 francs from the fourth to the sixth, 25 francs from the seventh to the ninth, and 15 francs for the remainder of the year. An insured woman who is unable to nurse her child may receive a milk allowance, not exceeding in value two-thirds of the nursing bonus. The grant of nursing benefit and milk vouchers is dependent upon the observation by the mother of prescriptions to be established by the insurance fund, especially as regards periodical examinations at home, and the regular attendance at maternity and infant welfare clinics.

Invalidity Insurance

Invalidity pensions are payable to insured persons who are incapacitated either as a result of sickness or accident so that their working capacity is reduced at least two-thirds, this insurance becoming effective at the expiration of the six months' period prescribed as the duration of sickness. If the insured contests the percentage of invalidity which has been attributed to him, or if a new examination of his case is necessary a professional commission of doctors determines the degree of incapacity.

For persons insured before reaching the age of 30 the disability benefit is equal to at least 40 per cent of the annual wages calculated according to the compulsory contributions paid annually since the age of 16. This amount is increased up to a maximum of 50 per cent of the annual wages by one per cent of the wages for each year of at least 240 work days in excess of 30 years. For persons insured after the age of 30 the amount of the benefit is reduced by one-thirtieth for each year between that age and the age of entry. If payment of contributions has been discon-

tinued for one year or more during the insurance period, the disability benefit is reduced one-thirtieth for each year that it has not been paid. The minimum benefit for persons insured after the age of 30 is 1,000 francs if they have contributed to the insurance fund for at least six years, but this amount will be diminished 100 francs for each year of membership under six, to a minimum of 600 francs. In order to receive an invalidity benefit a person must have been a member of the fund at least two years and have to his credit contributions corresponding to 480 working days during the two years preceding the sickness or accident.

Invalidity pensions are awarded in the first place provisionally, and subsequently, if necessary, definitely. The disablement pension is fixed provisionally for a period of five years. During this period, and under penalty of having his pension suspended, the pensioner must submit to medical examinations, which at all times may be requested by the insurance fund. The pension is withdrawn if the working capacity becomes higher than 50 per cent, this suppression taking effect from the date of the medical report. At the expiration of the provisional period of five years, and after expert medical opinion, the pension is confirmed. However, after a further period of five years, the pensioner must, at the request of the fund, submit himself to a final expert medical examination.

Old Age Pensions

Old-age insurance guarantees a retiring pension to the insured person on reaching the age of 60 years. Payment of the pension may be postponed until the age of 65 years.

Any insured person who is able to establish at the age of 60 years, or until the age of 65 years, that he has at least 30 entire years of contributions, each corresponding to a minimum of 240 working days, to his credit, is entitled to an old age pension which must not be less than 40 per cent of his average annual wages calculated from the compulsory contributions paid in respect of each year from the age of 16 years. If he is unable to establish the required minimum of contributions, he is only entitled to the annuity resulting from the capitalization of amounts paid into his personal account.

The insured persons of the transition period, who, since the coming into force of the law, shall, have to their credit, each year, in respect of the wages which constitute their principal income, contributions corresponding to at least 240 working days, will be entitled to an old-age pension at least equal to as many thirtieths of the normal pension as the insured

persons shall have years of contributions to their credit. Nevertheless, the amount of the pension thus constituted must not be less than 600 francs a year. If the minimum of contributions has not been attained, the pension is reduced to the annuity resulting from the capitalization of amounts paid into the personal account in respect of old-age insurance.

Death Benefits

The death insurance provisions guarantee to the legal representatives of the insured person the payment at his death of a lump sum fixed at 20 per cent of his average annual wages. This lump sum must not be less than 1,000 francs in the case of an insured person who has regularly made the annual contributions. Nevertheless, the lump sum may not exceed two-thirds of the average annual wages of the deceased person.

In order to establish a claim to death benefit, the insured person must have, since the coming into force of the law, at least one year's contributions to his credit.

The payment of the lump sum is made to the wife, if she survives, or to the children, or, failing these, to relatives who, at the time of death, were supported by the insured person.

Family Allowances

The scheme makes provision towards the expense of rearing children by the grant of special allowances. Benefits in respect of family responsibilities include, on the one hand, increases of benefits due in cases of sickness, invalidity, maternity, or death, and on the other hand, temporary benefits for orphans. These increases represent in the case of each child: (1) an increase of 50 centimes in the daily sickness or maternity benefit; (2) an increase in the invalidity pension, fixed at 100 francs a year; (3) an increase of 100 francs in the lump sum payable at death. In cases where in one family the husband and the wife are entitled at the same time to insurance benefits, only one increase in respect of family responsibilities will be paid.

Temporary Pensions for Orphans

Widows of insured persons, who have at least three children living, legitimate or acknowledged, of less than 13 years of age, are entitled to a temporary pension for orphans in respect of each of their children of less than thirteen years of age, beginning with the second.

When the children of an insured man or woman have lost both their parents, each of them who is less than 13 years of age is entitled to a temporary pension.

Children of less than 16 years of age of whom it can be established that a written contract of apprenticeship has been drawn up, or that they are continuing their studies in public or private educational establishments, or that they are infirm or suffering from an incurable disease (except when such are receiving hospital treatment at the expense of the State), are classed as children of less than 13 years of age. Orphans' pensions may not be less than 90 francs a year for each child beneficiary, and the insured person must have contributed for at least one year.

Unemployment Guarantee

The unemployment guarantee is not an insurance against unemployment. It does not secure to the unemployed person a daily allowance intended to compensate for the loss of wages; it merely replaces the unemployed person as the source of payment of the insurance contributions in order to preserve the right to benefits of the insured person who is out of work. In short, the unemployment guarantee provides that the contributions will be regularly continued, and that the unemployed will conserve his rights to the benefits arising from social insurance, at least during a considerable period.

The right to the unemployment guarantee arises under the following conditions: (1) The workman must be a compulsorily insured person involuntarily unemployed through lack of work; (2) He must be of French nationality; (3) At the time immediately preceding the period of unemployment he must have been uninterruptedly a member of the social insurance fund for a complete year and he must comply with the same conditions relating to contributions as those imposed in connection with sickness insurance, that is to say, he must have paid the statutory contributions for 60 days during the preceding three months.

The unemployed insured person is maintained in his rights to insurance during a period of six months. During a first period of three months in each period of 12 months the right to benefits is entirely maintained, whereas during the succeeding three months the right to benefits will only be calculated on half the average wage preceding loss of employment.

The unemployment guarantee fund is assured by means of a deduction of one per cent from the contributions of the insured person and of the employer. The resources thus produced are paid into the special account of the Augmentation and Solidarity Fund.

When the special unemployment guarantee account shows a credit balance in excess of the total amount of contribution received during the last year in respect of which an audit has been effected, a grant of subsidies from the balance may be permitted by authorization of the Standing Committee of the Superior Social Insurance Council, in favour of unemployment insurance of relief funds, unemployment funds created by the departments and communes, trade union funds or occupational mutual benefit societies, or agricultural insurance societies or agricultural mutual re-insurance societies. The amount of these subsidies must not exceed 33 per cent of the allowances paid during the preceding year by the funds or institutions themselves.

Voluntary Insurance

In addition it is provided that farmers and agriculturists not covered by compulsory in-

surance, artisans, small proprietors, non-salaried intellectual workers, and in general all persons who, without being on salary, live principally on the products of their labour, may take out voluntary insurance if they are of French nationality and their earnings do not exceed 18,000 francs, this maximum being increased 2,000 francs for each child, beginning with the third and reduced by 3,000 francs if the insured person has no children. Persons whose earnings have increased beyond the limit fixed for wage earners, and who, therefore, cease to be compulsorily insured, may be voluntarily insured if their income does not exceed the limit fixed for wage earners by more than 1,000 francs. All persons taking out voluntary insurance must be under 50 years of age, and free from acute or chronic disease or any disability which might increase the tendency to sickness.

SOCIAL INSURANCE IN GERMANY IN 1927

GERMAN social insurance legislation insures manual and non-manual workers against sickness, occupational disability and invalidity (including old age), maternity, accidents and death. Sickness insurance was established in 1883, while accident and invalidity insurance followed within a short period. On January 1, 1913, a special insurance scheme for non-manual workers was established, and on January 1, 1924, a Federal system of insurance for mining workers became operative. There is also an unemployment relief scheme, which is a compromise between pure relief and insurance, as both employers and workers are required by law to pay contributions, the workers, when unemployed, having only a conditional claim to benefit. (The German unemployment scheme was reviewed in the LABOUR GAZETTE for October, 1927, pages 1059-61).

The total cost of social insurance in Germany during 1927 was estimated at 3,560 millions of Reichsmarks, according to a report made by the German Federal Ministry of Labour in connection with the debates on the Budget for the financial year 1928.* This amount is exclusive of the cost of unemployment insurance. In 1926 the cost of social insurance was 3,130 millions of Reichsmarks, while in 1925 it was 2,679 millions.

The depreciation of the currency in 1922-1923 affected the contributions to and the

benefits paid by the various forms of social insurance to such an extent that the insurance schemes became practically of no value to the workers. When the currency was restored to a firm basis the social insurance organizations revived; contributions began to come in again, and the insurance funds were then able to guarantee reasonable benefits.

Sickness Insurance and Maternity Benefit

The estimated total cost of sickness insurance during 1927 amounted to 1,600 million Reichsmarks plus the federal grant of 25 million towards the cost of maternity benefit. The membership of sickness funds was 18,400,000 in 1926 (the last year for which complete figures were available), as compared with 15,600,000 in 1913, although, generally speaking, there has been little change in the categories of workers liable to insurance. Nearly every sickness fund has made provision for the insurance of dependents, and in all from fourteen to fifteen millions of insured persons' dependants are eligible for benefit.

All manual workers and those non-manual workers whose annual earnings do not exceed 2,700 marks (the pre-war limit was 2,500 marks) are insured against sickness. Experience has shown that one in every two industrial workers, and one in every three agricultural workers, falls sick once a year, the average duration of sickness being 20 days. Sickness insurance is carried by a variety of bodies, such as local or rural sickness funds,

* The par value of the Reichsmark in Canadian currency is 23.82 cents.

factory funds set up for individual works, guild funds, etc., this diversity of organization being due to the fact that the system has developed on the basis of former voluntary schemes, and much of the old machinery has been retained. The funds are under the supervision of the State insurance authorities, and the rates of contribution are fixed by the committees of management according to current requirements. Benefits vary in amount according to wages and the rules of the individual sickness fund.

Maternity benefit for insured women and the wives of insured men falls within the scope of the sickness insurance scheme, and such benefits were increased by an Act of July 31, 1924. In the case of maternity benefits, there is a Federal contribution, which amounted to 25 million Reichsmarks in 1927.

Accident Insurance

In 1927, the cost of industrial accident insurance was 323 million Reichsmarks, as compared with 227 million Reichsmarks in 1913. Compensation rates in relation to wages are no higher than before the war; the cost of compensation in 1926 was 1.44 per cent of the total wage bill, as compared with 1.45 per cent in 1913.

The accident insurance scheme provides compensation in respect of occupational accidents to manual and non-manual workers employed in certain industrial and in all agricultural undertakings. It covers 780,000 industrial undertakings employing 9.4 million insured workers, and 4.5 million agricultural undertakings with 14 million insured persons; and, in addition, undertakings owned by the Reich, by the States, and by the communes employing about 900,000 insured workers. About 600,000 incapacity pensions and 120,000 dependants' pensions are now being paid. The employer is wholly liable for the cost of accident insurance, and the rates of premium are fixed according to actual requirements. An Order of May 12, 1925, places certain occupational diseases on the same basis as accidents, particularly industrial complaints due to lead, phosphorus, mercury, and other poisonous substances, miners' ankylostomiasis, glass workers' cataract, sickness due to X-rays, etc.

Invalidity and Old Age

The total estimated cost of invalidity insurance during 1927 was approximately 1,082 millions of Reichsmarks, of which amount 845 million constituted the contribution of the employers and employees, while the federal grant amounted to 237 millions.

Under the invalidity insurance scheme approximately 17 million manual and other workers are insured against invalidity (including old age) and death. The number of invalidity pensioners in 1927 was 1,800,000 persons, as compared with 1,100,000 in 1913, while 320,000 widows and 800,000 orphans are receiving pensions, as compared with 12,000 and 83,000 respectively in 1913. The large increase in pensioners since 1913 is chiefly due to the inclusion in the scheme of war widows and orphans, and to the lower age at which invalidity commences. The contributions of the insured vary according to their yearly earnings. The average monthly invalidity pension is at present 30 Reichsmarks—25 in rural districts, and from 33 to 35 in industrial centres. Generally speaking industrial workers are now in receipt of the pensions they would have received had there been no war and no inflation, *plus* certain allowances in respect of children. Widows and orphans receive a proportion of the pension payable to the breadwinner. The insurance is carried by insurance institutes under Government control, and with the co-operation of employers' and workers' representatives.

Miners' Insurance

The estimated cost of miners insurance in 1927 amounted to 215 million Reichsmarks. There are three forms of insurance—invalidity, sickness, and old age—in force in the mining industry under special scheme or arrangements. The general invalidity insurance scheme was found to be inadequate for the miner and the needs of the mining industry. Accordingly, the Federal Miners' Insurance Act, which has been in force since January 1, 1924, grants to workers incapacitated for mining work an invalidity pension amounting, in the case of miners who have completed 25 years' service, to at least 40 per cent of the average hewer's wage, and in the case of non-manual workers to the same percentage of the wage of a mining foreman. This Act further takes into account the special requirements of mining work in that it prescribes that occupational incapacity may be regarded as existing when the miner has attained the age of 50, having completed 25 years' service, including 15 years of actual employment as a miner, and no longer performs work at standard rates of pay.

The miners' pension insurance scheme is, it is stated, in a difficult position as the number of pensioners is extremely high in proportion to the total membership. In the manual workers' pension fund, there is one pensioner for every three members, while in the general invalidity insurance scheme, covering all other industries, there is only one pensioner for

every five insured persons. The pension insurance contribution amounts on an average to between 10 and 11 per cent of wages in the manual workers' section, and to between 12 and 13 per cent of salary in the non-manual workers. For each ton of coal raised in the Ruhr, the total contributions to miners' insurance amounted to 1.80 Reichsmarks in 1924, 1.81 Reichsmarks in 1925, and 2.03 Reichsmarks in 1926. The authorities are thus faced with the serious problem of maintaining a permanent balance between income and expenditure without imposing an unduly heavy burden on insured persons and their employers.

Non-Manual Workers' Insurance

In 1927, the total number of non-manual workers insured in respect of superannuation, disability and death was 2,800,000 as compared with 1,500,000 in 1913. The increase is partially attributable to the fact that persons who were formerly in possession of independent incomes are now compelled to earn their own

living, but it is mainly due to the growth of population.

The scheme comprises all non-manual workers whose annual salary does not exceed 6,000 marks (the limit in 1913 was 5,000 marks). Contributions vary according to the amount of salary. The minimum monthly pension payable to insured contributors consists of a basic pension of 40 marks, plus an additional 7.50 marks for each child under 18, and a supplementary pension varying according to the period during which the contributions have been paid and the rate of such contributions.

Costs

The insurance schemes are financed by means of workers' and employers' contributions, and, in the case of invalidity insurance, also by means of Federal grants. Workers' and employers' contributions are equal, except that in sickness insurance (apart from the miners' insurance funds) they are in the ratio of 2 : 1, and that the cost of accident insurance is borne entirely by the employers.

Unemployment Insurance in Queensland

Recent amendments to the Act providing for unemployment insurance in Queensland, Australia, were described in the *Queensland Industrial Gazette*, December 24, 1927. The Queensland Unemployed Workers' Insurance Act of 1922 applied to every worker over eighteen years of age, employed within Queensland, whose rate of wages, salary or allowance was fixed by award or industrial agreement made under the Queensland Industrial Arbitration Act of 1916. Workers employed in industries for which Federal awards were in force were excluded from insurance under the Act; and it was subsequently held by the High Court that workers in an industry for which a State award had been superseded by a Federal award were also excluded, although the State award may not have been repealed. A large number of workers were thus declared to be uninsurable, in spite of the fact that they had been paying contributions regularly, and a voluntary scheme was inaugurated to cover them temporarily. The amending Act of December, 1927, removes this anomaly by admitting to the scheme, in addition to workers covered by State awards, those who are covered by any other contract, agree-

ment or award. In the latter case, however, the employer is made responsible for both his own and the worker's contributions, and is required to pay double the normal employer's contribution, the half of this (equivalent to the worker's contribution in the normal case) being recoverable from the worker as a debt due from worker to employer. The worker cannot claim benefit unless his debt to the employer on this account has been liquidated.

The amending Act also provides that workers who are bona fide residents in Queensland but who are temporarily absent from the State (*e.g.*, sheep drovers) may claim to have the condition of six months' residence prior to benefit waived in their favour.

The original Act excluded from benefit (a) repatriated soldiers and sailors whilst in receipt of unemployment allowance from any Repatriation Department, (b) any person in receipt of an old age pension under the laws of the Commonwealth, and (c) any person in receipt of periodical payments under the Workmen's Compensation Acts. The Amending Act adds to the categories of persons excluded, any person in receipt of an invalid pension under the laws of the Commonwealth.

SOLDIERS' CIVIL RE-ESTABLISHMENT IN CANADA

THE annual report of the Department of Soldiers' Civil Re-establishment for the fiscal year ending March 31, 1927, recently received, details the activities of the department in the interests of disabled ex-service men.

Vocational training was given to a limited number during the year, chiefly because of increase in war disability which prevented the applicants from carrying on in either their pre-war occupations or the occupations for which they had been previously trained by the department. There were 55 trainees on departmental strength at the close of the year; 75 were accepted during the year, and 98 either completed training or had their courses discontinued, leaving a total strength of 32 at the close of the year.

Employment.—Under an arrangement with the Department of Labour, the Employment Service of Canada undertakes to carry on the work formerly done by the Department of Soldiers' Civil Re-establishment in finding employment for disabled ex-service men. In addition to the work of the Employment Service, special rehabilitation committees have been operating in Toronto, Montreal and Edmonton. The activities of these committees are detailed in the report.

During the year there were 17,826 applications for employment from ex-service disabled men registered with the Employment Service of Canada. Of this number 10,425 were placed in employment, 5,421 applications were cancelled, and 1,980 were pending placement. The applications for assistance in obtaining employment decreased by 147. The number of men for whom employment was found increased by 523, while the number of men who were shown as unemployed decreased by 596. The number of disability pensioners in Canada on March 31, 1927, was 39,916, of which number 1,980, or 4.9 per cent, were registered as unemployed.

The department has continued to maintain close relations with the Civil Service Commission and other federal departments for the purpose of assisting disabled former members of the forces to obtain employment in the federal Civil Service of Canada.

The Toronto Rehabilitation Committee during the past three years made 685 placements, of which 563 were on permanent work, and 112 were on work of a temporary nature, and among these were 306 problem cases. The Toronto committee makes the following observation as a result of its study of this problem: "Successful rehabilitation requires per-

manent employment, consequently the committee has made no effort to place men in casual or temporary work. In cases where we believed temporary work would lead to permanent employment, or where we desired to check a man's ability or inclination to work, however, we made exceptions to this policy. The fact that 48 per cent of men placed in 1925, 51 per cent of men placed in 1926, and 65 per cent of men placed in 1927 or 55 per cent of all placed in permanent positions are still working indicates that these men will respond to scientific methods of placement."

The Montreal Rehabilitation Committee, comprised of prominent professional and business men, is under the chairmanship of Sir Arthur W. Currie, G.C.M.G., K.C.B., and its report showed that there were 2,685 placements during the year. Of this total, 1,637 were designated as temporary, 520 as semi-permanent, and 528 as permanent. The number recorded as still unemployed on the books of the committee at March 31, 1927, was 716.

In Edmonton, the citizens' committee have found it only necessary to function during the winter and early spring months. At the commencement of the season's operations in 1927 had 148 listed as unemployed. As in previous years it was expected that all the men registered would be placed in employment by the end of May.

Sheltered Employment.—The department continues to operate sheltered employment workshops wherein Canadian pensioners who are unfit for employment in the general labour market are admitted subject to certain conditions. The only change during the year was with regard to the operations of the Winnipeg workshop, which was taken over by the department from the Canadian Red Cross Society on April 15, 1926.

The workshops operated by the department are located at Toronto, Hamilton, Halifax, St. John and Winnipeg, and the Canadian Red Cross Society have been very successful in the operation of its workshops at Montreal, Victoria and Vancouver. In the latter city, a new workshop has been erected by the society, supported by the Lion's Club of that city.

The Toronto, Hamilton, Winnipeg and Halifax shops are operated along the same lines, and a permanent business is being developed in the sale of standard Vetreft articles. The principal ones are porcelain top and plain kitchen tables, washboards, wooden kitchenware, juvenile furniture, children's blackboards, and a very complete line of wooden toys and playthings. The sales show a good increase in

spite of the competition met from the leading manufacturers of similar products.

In the Red Cross workshops, the work done is more of the special order and repair class for which there always seems to be a demand. The poppies and wreaths which are distributed on Armistice Day are manufactured in the workshops. The number of men employed in the workshops on March 31, 1927, was 248, of which number 79 were in the Red Cross and 169 in the shops of the Department.

Relief.—The number of men to whom relief was granted during the winter season of 1926-27 was 4,079. These individuals were granted relief 32,999 times, or an average of 8.09 times per month. The actual expenditure on relief during the fiscal year was \$333,222, which is a decrease of more than eight thousand dollars over that of the previous year. Relief is not granted in cash, but the issue of orders to grocers, coal dealers, landlords, etc., whose accounts are duly paid when submitted.

Workmen's Compensation in Respect of Pensions.—Under the authority of an Order in Council passed on December 29, 1921 (reference to which was made in the LABOUR GAZETTE, March, 1922, pages 310-312), the

Dominion Government assumed the liability imposed upon employers on account of industrial accidents sustained by disabled ex-service men to whom a pension of 20 per cent or over is payable in respect of disabilities received in or attributable to war service. Acting upon this Order in Council, the Department of Soldiers' Civil Re-establishment has since paid compensation through Workmen's Compensation Boards, and to employers direct in respect of accidents sustained by such pensioners. It has also, in certain cases when application therefor has been made, repaid to employers premiums paid to Workmen's Compensation Boards in respect of such pensioners. The Order in Council expired in 1927, and a new Order in Council was passed, effective with the commencement of the fiscal year 1927-28, which practically re-enacted the former provisions with slight modifications, the principal changes being that accident liability is assumed in respect of pensioners rated as 25 per cent disability, and that no repayment is now made to employers for premiums. During the year 1926-27 the number of claims was 203, and the total amount of compensation paid in the same period was \$57,113.

FAMILY ALLOWANCES

Proposed Solution of the Problem of the Large Family in Canada

THE problem of the large family in Canada is discussed by the Reverend Father Léon Lebel, S.J., in a pamphlet published at Montreal on "Family Allowances." An introduction to the English edition is contributed by Mr. Frederick Wright, of the Municipal Service Bureau of Montreal.

The author discusses the recent social changes which have brought the problem to a head both in Canada and elsewhere. Some years ago the general standard of living was based upon the requirements of a large family, and as most adults had large families, plain living was the general rule. Latterly the standard of living has become complicated, and a disproportionate burden has been thrown on the heads of families. "During the last twenty-five years," Father Lebel writes, "and specially since the war, conditions have been turned topsy-turvy. The increase in the cost of living in the last decade has particularly made itself felt; and the spending and luxury indulged in by young people of both sexes as soon as they are earning a salary, delay young men in establishing homes. Before they obtain the income necessary to support a family, ten, fifteen or perhaps more years have usually slipped by. This is why the

number of bachelors and married men with small families has increased considerably." Another factor in the situation is the improvement in the method of hygiene, which has lowered the rate of infant mortality and brought about the survival of children who would formerly have ceased to be a financial burden to their parents. The exactions of modern civilization have thus lowered the living standard of the married wage earner as compared with his comrades who are without family responsibilities. Even the child labour and other laws which are properly regarded as marking a social advance, operate in practice to the disadvantage of the parents of large families, since the wage earner is obliged to keep his family at school and to pay for their maintenance beyond the age at which children were able in former years to earn wages. Father Lebel sees evidence on all sides of a tendency "to organize everything in favour of a society of celibates or of small families." The remedy he proposes is the family allowance.

In considering family allowances, the writer points out that it is necessary to find some method of reconciling the two following principles: (1) "The just wage must be a family

wage"; (2) "Equal work for equal pay". The "family wage" is generally understood as a wage adequate to maintain a family of five, that is, the parents and three children. But even if minimum wages for such a standard family have been fixed there will still remain the problem of the family of six, eight, or ten children. For these families provision must be made, not in the form of additional wages, but as a supplementary allowance. "The family allowance," the writer states, "is not pay given in return for work done, neither is it alms or charity offered to the head of a family because he is in need or in trouble. It is a remuneration for eminent services rendered to the state, services which no one had thought of remunerating hitherto, but which the special conditions of present-day economics compel society to recognize and to reward."

After a short account of the origin of family allowances, which were first paid in France in 1888, the writer discusses the necessity for some such measure for the protection of workers in Canada with large families. In this connection he discusses the "family budget," as published each month in the LABOUR GAZETTE, and various other budgets which estimate the minimum requirements of a family of five members. The evidence shows, he considers, that the average wages now paid in Canada are below the requirements of the most conservative budgets. How then, he

asks, will workers with large families exist on wages that are insufficient even for a small family?

Father Lebel proposes the establishment of a Family Allowance Fund, for the benefit of families of three children or more. He estimates the number of children of such families in Canada as numbering, on a liberal estimate, about 950,000, who would be the beneficiaries of the fund. At \$50 per child the maximum annual cost would be about \$47,500,000. It is suggested that this expenditure might be met from the following sources:—

The Federal Government.	\$ 5,000,000
The Provincial Governments (rated according to population)	5,000,000
The employers.	20,000,000
Unmarried men.	10,000,000
Married men without children.	2,500,000
Municipalities.	5,000,000
Total.	<u>\$47,500,000</u>

Under this system the problem of the family would be handled very much as the other problems resulting from old age, workmen's accidents, unemployment, sickness and premature incapacity against which, in various countries, compulsory social insurances have been established. These insurances exist already in Belgium and are provided for by means of a national fund supplied after the manner indicated above.

REHABILITATION AND WORKMEN'S COMPENSATION IN ONTARIO

MR. V. A. Sinclair, K.C., chairman of the Workmen's Compensation Board of Ontario, addressed the annual meeting of the Industrial Accident Prevention Associations, held at Hamilton during May, his subject being "Rehabilitation and Workmen's Compensation." In a general discussion of the Act in relation to the prevention of industrial accidents, Mr. Sinclair described the system of merit and demerit rating as follows:

Merit Rating

During the past year, this Association has been before the Board on a number of occasions, and two things which I will mention we have had the pleasure of granting on requests which they made, which we thought reasonable and should be put into effect. In the first place, they have been trying, ever since I have been on the Board, to have an annual merit rating. Merit rating, you will understand, is for a good accident experience, and there is no excuse, and I know of no scientific basis, for

a merit rating except as a means of encouraging accident prevention, and it is impossible to give any scientific basis on which to grant a merit rating. The Board tried out this annual rating in the past, and did not consider that it was a good thing, because it did not sufficiently eliminate chance. A man might get credit one year for something he is not entitled to, when it simply chanced that he had not a bad accident year. To pay him for the good fortune which he had did not seem to be encouraging accident prevention. The Board felt that the matter should be thoroughly discussed. We took it up with representative body such as the Accident Prevention Associations and Manufacturers Associations to see if the employers were behind us in granting an annual merit rating, or whether they wanted to do away with it altogether. We found that the manufacturers were practically a unit in saying they wanted the merit rating continued. Then, in the past, we have made a demerit rating, charging those who have had a bad

accident experience with an extra assessment, when their accident experience was more than 10 per cent to the bad. The Board asked those employers if they wanted the demerit rate continued, and almost as unanimously as the desire for merit rating, the answer was "Do away with demerit rating". But that does not mean that the man who has a bad accident experience is free from all responsibility for his bad experience.

Penalty for Bad Experience

As you know, there is a section in the Act, by which the Board can impose a special rate on any firm or plant where the Board considers they are not using proper accident prevention methods or not having sufficient regard for the safety of their employees. That section may be brought into effect by your own Association. If your inspectors go into a plant and order the employer to put in certain improvements which will make for safety among his employees, there is not any power in the Accident Prevention Association to do anything to that particular employer if he does not do what they have requested, but you may ask the Board to have an enquiry to see why this employer has not carried out the reasonable requests of the Association, and ask the Board to impose a special rate upon that particular plant for the disregard of what should be reasonable safety practice. And it was suggested, and it will be carried out, that this particular section will perhaps be brought into force more than in the past, because, having done away with demerit rating, in order to bring into practice this same system of making careless employers take care, this section may be used more freely in the future to make a careless employer look after his plants; and I can assure you that the Board will lend their ready ear to any complaints from the Association showing that accident prevention work or safety work is not being carried on in that particular plant, because, I think, if your request is reasonable and not too extravagant for the plant where it is being requested, that you should have the assistance of the Board in making your work effective in that regard.

Refunds Now Made Annually

We also decided the question of whether the rates should be triennial or annual, and we made a compromise on that that we would have an annual merit rating, but we would base it on the average experience for the three preceding years, so that every time you have a merit rating, it will be based on

the average of the two preceding years, together with the year in which you get it, and during the present year, you are receiving merit rating based on the last three years. We have made the change that this is not going out separately, but is going out on your regular assessment slips by way of a reduction on your assessment, and it is all being handled at the same time, and you will find, those that are entitled to merit rating, that there is a separate note at the bottom of your assessment slip, saying that you are entitled to so much. In that way, the Board is spending this year \$300,000 of your money, in giving it back to those who have had good accident experience. I think one plant had the good fortune to get over \$5,000. It is impossible to make that 100 per cent effective, because then you would have individual rating, and that is not the principle of the Act. The principle of the Act is collective liability on all employers in the industry for the accident cost in the industry as a whole, and we cannot depart from that to the extent of giving a 100 per cent rebate for a good accident experience, but we want to make it substantial enough to be some incentive to those who have good accident experience.

Now, we have raised the ante, you might say, to 25 per cent. Your accident cost must not exceed 75 per cent of your assessment, or you won't get any merit rating, and we are not making a merit rating where employers would be entitled to under \$25. We want it to be a return for accident prevention work; and I think, in that way, you will find that every year those who have a good accident experience will get some return for it in the course of their assessment. We are not thinking we are all-wise. There may be many improvements in the plan which will work themselves out, but, without the demerit rating, you must pay the full assessment in your rates of the different classes, and the whole class pays for the cost of the merit rating, which goes to those who have a good accident experience; the full \$300,000 is now assessed against the different classes which receive the merit rating, so that you pay part of your own in the merit rating, but the employer who gets it gets very much more than he pays.

New First Aid Regulation

Now, there is another matter which the Association brought before the Board under the Act, as it stands at the present time, in plants where there are fifteen workmen or under, there is no provision for a First Aid

kit of any kind. Your Association has been very insistent that everybody should have some kind of First Aid kit, and as First Aid kits can be obtained from 20c. to almost any sum you want to pay, within reason, it was not thought it was a hardship on the poorest employer to go at least to the expense of a 20c. First Aid kit for the purpose of keeping down accidents. So I have just received from the Government, who has to pass our regulations, as they have to be approved by the Lieutenant-Governor-in-Council, the following regulation: "Every employer having fifteen or less workmen usually employed shall provide and maintain in his factory, or place of employment, a First Aid kit suitable to the employment carried on by him." We did not put in the specific kind of First Aid kit; but it must be one which is suitable to the employment which is carried on. Possibly among 25,000 employees, some will escape the eagle eye of the Board, especially when we have no Inspectors, except our Auditors going around, when they have not a First Aid kit, but we ask the help of the Inspectors of this Association and the Directors in this Association to see that this regulation of the Board is given attention by all employers where fifteen workmen or under are employed, and that some kind of First Aid kit be provided for use.

Rehabilitation

I have been asked to speak to-day on "Rehabilitation," and it is a matter which is of very vital importance in connection with the successful working of the Board. It has been receiving a great deal of attention by the public. The public feel that, not only are you entitled to pay a man while he is disabled by reason of industry, but, if he is so badly disabled that he cannot work, or is prevented from carrying out the same occupation as formerly, that there is a burden upon industry to see that he gets into some occupation which he is fitted to carry on and suited for.

The Legislature, in 1924, passed an amendment to the Compensation Act which gave us some power in that connection. As it took effect on the 1st of January, 1925, it is still in its infancy. That Act gave the Board power to aid in getting an injured workman back to work, and to assist in lessening or removing the handicap resulting from his injuries, and we were authorized to take such measures and pay such amounts as might be necessary for that purpose, but not to exceed \$100,000.00 per year. We have the right to charge against industry, sufficient to take care of this par-

ticular work of the Board, and we have been trying to make that section of our work effective. It is not just as easy as you might think. You can divide those requiring rehabilitation into two sections. We have those who require permanent rehabilitation; taken from one kind of work that they carried on and given some other kind of entirely new work, because they are unsuited for the particular kind of work which they previously carried on. You have the other class, which is temporary rehabilitation. A man may not be permanently disabled, but he has a temporary disability which prevents him being as effective as he formerly was in his work. Suited only for light work, as we say, and the necessity to get him back to work and not carry him on compensation longer than is necessary.

Now, so far as the first class is concerned, those permanently disabled for all time, and who must have some new form of work to carry on, are not as many as you might think. Take last year—we had 61,000 cases, which were allowed out of 72,000 reported. Out of that 61,000 allowed cases, there were only 2,349 who received a permanent disability award. That is, this 2,349 had some permanent disability. I have not the figures for 1927 complete as to just what per cent of disability these men suffered, but take the figures for 1926, which are complete, and are very much the same. There are about 2,400 in that year who had a permanent disability and got a permanent disability award out of the thousands which were compensated. Of that 2,400, there were 2,100 who were less than 10 per cent disabled; and 2,300 of the 2,400 were less than 30 per cent disabled; so that you can see there was only about 100 out of those who have a disability of over 30 per cent and the probabilities are that workmen who are only 25 per cent disabled in most cases will rehabilitate themselves. So that the field for the permanent rehabilitation is narrowed down to perhaps 100 in a year. You cannot do much for a good many of them, because there are many handicaps. You may have a foreigner that you cannot teach any other occupation. He has been a labourer all his life. He has had no education, practically, or his education has been in some country where it is of no service to him here, and it is very difficult to change his form of occupation. He is a labourer and he must carry on as a labourer, so that we are driven to the employer in that case to get the man back to some form of work that he can do, and re-adjust himself in that industry to some other class of work in the particular industry, or in some other industry. *But get him back to work.* Then you have the uneducated man.

You have the man of mature years, who has carried on till perhaps he is thirty-five, forty or forty-five, as a labourer. You could not teach him any occupation in an office. You could not teach him anything but a labourer's position because he has been all his life at that kind of work. So that you narrow down your field again. We have a number of young chaps who have had some education, or who are not too old to pick up an education—these we can teach clerical work. We are giving a number a Business College Education, so that we can take them out of their ordinary labouring work and put them into something of that kind. We have a number who are taking training in connection with telegraphy, radio work, electrical work of different kinds, light work of a safe character, and giving them such courses as are necessary to fit them for carrying on with a new type of work. But as you see, we are limited in that field, both in number and in those who are fitted for that kind of work. So that, in the class of permanent disability, in a great percentage of the cases, we have got to have the help of the employer who will give work to that badly maimed man which is suitable to his condition and change him from the department where he has to use the particular arm or limb which is disabled or lost into some other department where he can do without it. I feel very strongly that, just the same as the casualties in war are a duty which is incumbent upon the nation to look after, so industry has a corresponding duty to look after the casualties in connection with industry, and the public feel that the industry must look after those who are maimed and injured in that way, and there is not any work which will better improve the feeling or have a better taste in your mouth than to assist in getting one of these maimed men back to work. They come to us. We have no means to provide employment. We write to their employer, and we say, "Here is a man who has been injured in your employment. Cannot you give him some class of work which he is competent to do?" And I must say that a great many employers are most willing and put themselves out a great deal to give these maimed men work, and to put them in some new sphere where they are not exposed to danger, and where their handicap does not affect them. I think all that is necessary is that the employers as a whole should get the feeling or responsibility for the men who are injured in their employment sufficiently to help in this most laudable work.

Temporary Disablements

Now, there is a great deal larger field in those who are temporarily disabled and who

have to be got back to work. There is a selfish side, and there is an unselfish side. There is the selfish side, inasmuch as it will reduce your accident cost very materially if you do it. There isn't anything that will rehabilitate a man better than work if you will give it to him. We can give those partially disabled men courses. They come to us with a stiff wrist, a stiff ankle, or some particular section of the body is stiff and cannot be used, and he is slowed up so that nobody wants to employ him. We can give them a course in occupational therapy, which is really only the kindergarten method of getting a man back to work, because they give him some occupation which is interesting, and he works away with a fret saw and working with his foot. The first thing he knows he is exercising his ankle and his ankle is gaining strength and he is interested in the work he is doing, and he forgets he is getting the very treatment which he could have got by working at this work. He is getting it in an interesting way; and soon his ankle is much better and he is able to get trained in the same way. We have them do brass work, or some other kind of interesting work, with a little hammer, and gradually increase that, under medical advice, until you get a man so that he has got the use of his wrist back again. There is not any kind of work which cannot be done if you will take a little bit of care in most plants. Now, take the costs—if we send him to occupational therapy, we pay the costs of the occupational therapy school, we pay the man's compensation while he is there, and we are paying large amounts out, which you could do just as well in your own plants without any cost at all except the wage of the man; and if a man is so disabled that he cannot earn his pay while he is in your plant, the Board are prepared to implement his wage out of the appropriation for rehabilitation work and see how much this man is worth to you to take back. If he is only worth 50 per cent of his ordinary wage, we will pay the other 50 per cent, so that you can get him back to work and perhaps, in a month or two, you have given him the additional practice, the additional exercise which he needs, to get that particular joint back into work again.

Board Will Assist

Help in that way is not only good for the man, because you restore his morale, but you get him back to work while he is desirous of work, and he feels he is earning his living. He is doing his bit. He is getting his wage that way, and it is very much better for the man and, at the same time, it is very

much better for you, because if you are paying under compensation, you will be paying two-thirds of his wage, you are probably paying the medical bill and possibly a hospital bill, so that you have all that to offset the amount you are paying the man. Our difficulty is a man is reported as fit for light work by the Doctor. As a rule, a Doctor hesitates to report him as fit for light work, because he knows he cannot get it. So he says, "I am not going to have this man reported fit for light work and have the Compensation Board reduce his compensation to half, because I know he cannot get a job." The Doctor hesitates to put the man on half compensation, when he knows he cannot get work. He is reported fit for light work. The man writes in and says, "That is all right; I can do light work, if they would give me a light job, but there are lots of men who are fit for heavy work who are looking for jobs. What chance have I got, if I am only fit for light work, of getting a job? I can't get it." And we know that is true. If that condition can be removed, and we know many of the employers are taking men back and rehabilitating them by work suited to their conditions, you are helping the men, you are

helping yourselves, you are reducing the cost of compensation, and the whole thing in running properly and you are taking care of your casualties to the full limit. I feel that that duty is very strongly upon industry to do that, and if you will each one look after, to the full power that you have in your plants, the people who are injured in your own plants, you are solving a problem which is very hard to solve. If you turn them down, another employer says, "I have no responsibility to this man whatever. He was not injured in my plant. He cannot do the work an ablebodied man can do, and we are not going to have him around"; and from a financial standpoint, you cannot blame him, because he is not their charge. The Board, on the other hand, as I say, have no means of giving him employment except through the industries, and I am satisfied that you can do an immense amount of good. You can save an immense amount of money, both in compensation and medical fees, and in manpower, if you will do it, and help them out. Make yourselves an association for the prevention of unemployment among injured workmen.

REPORT OF THE DEPARTMENT OF LABOUR OF ONTARIO FOR 1927

THE eighth annual report of the Department of Labour of Ontario, recently received in the Department, contains a survey of industrial conditions throughout the province during the fiscal year ending October 31, 1927, and outlines the activities of the various branches in the administration of the following Acts: the Sanitary and Hoisting Engineers' Act; the Factory, Shop and Office Building Act; the Employment Agencies Act; the Steam Boiler Act. In addition, the activities of the Ontario Government Offices of the Employment Service of Canada are also described.

Factory Inspection.—This section of the report details the work of the Factory Inspection Branch, and it is stated that favourable results have been obtained from the work of the factory inspectors in effecting general improvement in conditions under which employees work. During the year, a total of 18,870 inspections (451 more than last year) were made by the inspection staff, while 6,924 orders were issued relating to accident prevention, hours and conditions of employment for female workers and youths, health, sanitation and general matters pertaining to the welfare of employees. In the firms visited,

275,357 persons were employed, and 1,202 permits were issued, the great majority of which were overtime or contract clothing permits. The following tables show the number of employees by sex and age in industrial and mercantile establishments and office buildings, and their hours of work, during 1926 and 1927:

NUMBER OF EMPLOYEES IN FACTORIES IN ONTARIO			
	Employees	1927	1926
Males over 16		202,417	200,241
Males 14-16		699	459
Females over 18		69,420	72,564
Females 14-18		2,821	3,321
Children under 14 dismissed		38	64
Total		275,357	276,649

HOURS OF LABOUR IN FACTORIES IN ONTARIO			
		Number of Employees	
Males			
45 hours per week		90,857	
50 hours per week		48,679	
54 hours per week		29,636	
58 hours per week		4,072	
60 hours per week		18,363	
Females			
45 hours per week		45,652	
50 hours per week		13,574	
54 hours per week		5,211	
58 hours per week		719	
60 hours per week		3,791	

One hundred and forty-eight complaints were received during the year. Upon investigation 87 were upheld, 47 not upheld, 11 were pending investigation at the close of the year, and 3 did not come within the jurisdiction of the branch. Some investigations covered more than one complaint.

Proceedings were taken against four firms for violation of the Factory, Shop and Office Building Act. Two firms were prosecuted for working overtime without a special permit; convictions were recorded, and fines imposed on each firm. Action was taken against two firms for non-compliance with inspector's orders to provide a fire escape and elevator interlocks, resulting in conviction and fine in each case. The total fines amounted to \$150.

The fact that only one fatal elevator accident was reported for the year was emphasized as illustrative of what can be done by united action in having all power operated elevators equipped with mechanical devices which will prevent the removal of an elevator car from any floor until the gates are effectively closed and locked.

Employment Service.—It is stated that the increased volume of work accomplished by the twenty-five Ontario offices of the Employment Service of Canada is indicative of the improved industrial conditions already noted in the province as it has been the experience of officials that the extent to which the employment service is utilized by employers and applicants varies in direct ratio to the opportunities for employment. During the year 199,332 applicants were registered, or an increase of 8,746 as compared with 1926; 159,729 vacancies were reported, an increase of 2,734 and 136,897 placements were made, an increase of 1,566 over last year. Eighty-five per cent of the vacancies reported were filled and 68 per cent of the applicants were placed. The placement of 3,169 handicapped workers by the special sections of the offices is stated to be very gratifying, especially as an improvement in the type of placements has been accomplished through further study of the cases and the information now available from the Department of Soldiers' Civil Re-establishment and the clinics of the General Hospital. An important feature of the work of the Employment Offices is the Clearance System, through which 5,158 transfers were effected during the year. It is stated that in thus providing for the movement of workers in accordance with the demand a gratifying service in organizing the labour market has been rendered by the public employment offices during the past ten years, a service which is possible only through a co-ordinated system.

Stationary and Hoisting Engineers.—The report of the Board of Stationary and Hoisting Engineers shows an increase in the volume of work accomplished by the Board during 1927 as compared with the previous year. A total of 16,254 certificates were granted, 434 more than last year, and were made up as follows: 1,365 by examination, 18 provisional, 18 duplicate certificates, 14,731 renewals and 122 plant owners' registration certificates. This increasing demand for certificates is regarded as being illustrative of the opportunities of employment for competent engineers. No certificates were cancelled or suspended during the year. The candidates for examination before the Board numbered 1,855 or 109 more than the preceding year and the number of failures was less in spite of the fact that the standard of examination is being raised gradually each year.

Steam Boiler Branch.—The work of the Steam Boiler Branch showed expansion in every department of its activities during the fiscal year 1926-27. The number of drawings and specifications surveyed, registered and re-registered totalled 483 as compared with 443 in 1926. The new pressure vessels inspected numbered 462 as compared with 346, or an increase of 33.5 per cent, and of these sixty-three more than last year were constructed in Ontario. Nine hundred and ninety-five first, second or final inspections were given these pressure vessels. The number of pressure vessels inspected when repaired, sold or exchanged increased 23 per cent and the annual inspections 10 per cent, making together a total of 1,534 as compared with 1,304 last year. An interesting feature in the work of annual inspection was the inspection of sixty-six boilers in public institutions coming under the jurisdiction of the Ontario Government. The number of certificates in each class issued in 1927 was greater and the total, 3,026, was 20 per cent in advance of the previous year. The revenue of the Branch showed a resultant increase for the year of 17 per cent, having been \$19,102.16 as compared with \$16,249.76 in 1926. The staff of inspectors attached to the Steam Boiler Branch was increased from eight to nine, exclusive of the chief inspector.

Compressed Air Regulations.—During the year the work of the Department was further extended through the administration of the Regulations respecting the Protection of Persons working in Compressed Air. This feature of departmental activity has proved to be a very beneficial one to the workers concerned. Compressed air is being used on sewer construction work to a greater extent than ever

before, but there are certain health hazards to workers in compressed air which must be taken into careful consideration. The Department acknowledges its indebtedness to both employer and employee on sewer construction work under compressed air conditions for the assistance forthcoming in making the respective regulations effective, and one tangible result of such co-operation being the decrease in caisson sickness.

Accidents.—There were 5,425 accidents reported during the fiscal year, 34 of which were fatal, as compared with 4,929 reported in 1926 with 46 fatal.

The accompanying table shows the distribution of industrial accidents by industries and by causes.

Wages and Hours of Labour.—The feature of this section of the report outlines the results of an inquiry made by the Department regarding the length of the working day and the week, the survey covering firms which are fairly representative of the manufacturing industries, shops, transportation and public utilities situated in all parts of the province in both large and small centres. From the reports of 276 firms having 167,634 employees, it was found that 122,908 of these

SUMMARY OF INDUSTRIAL ACCIDENTS IN ONTARIO IN 1927 BY INDUSTRIES AND CAUSES

Cause of Injury	Totals		Class of Industry

employees, or over 73 per cent, work a 48-hour week or less; 37,786, or over 22 per cent, work from 49 to 54 hours per week and 6,940, or over 4 per cent, work 55 hours per week or longer. Of the 41,988 female workers employed in these 276 firms, approximately 75 per cent work a 48-hour week or less; 23 per cent work 49 to 54 hours per week, and less than 2 per cent work a 55-hour week or longer.

Industrial Conditions.—The deputy minister, Mr. Jas. H. H. Ballantyne, makes the following comment on the general trend of industry in the province during 1927:

“The industrial situation in Ontario during the fiscal year 1927 was probably the most encouraging of any year since 1920. Expansion

was not confined to any one industry or group of industries nor to any short period which might be due to a special rush demand, but was general in all industries with the possible exception of lumber products and over the whole year. Greatest progress was made in construction, in which division the activity far surpassed the two preceding years. In the building trades an increase of approximately 21 per cent in the value of building permits issued is an indication of improved conditions, and the fact that blueprints of buildings valued at nearly \$20,000,000, the great majority being for factory buildings, were examined by the special examiner attached to the Factory Inspection Branch, reflects a favourable state of affairs in both building trades and the manufacturing industry.”

WORKMEN'S COMPENSATION IN ONTARIO

Report of Board on its Activities during 1927

THE report of the Workmen's Compensation Board of Ontario for the year 1927, which is the thirteenth year of the operation of the Act, indicates another increase in the number of accidents.

Number of Industrial Accidents.—Accidents reported during the year numbered 71,979, as compared with 65,916 in 1926, and 60,012 in 1925. It is stated that one reason for this increase in the number of accidents may have been the greater industrial activity during the year. While it is not possible to state accurately from the available returns the number of employees engaged in industry, it would appear that the number of employers increased from 24,492 at the end of 1926 to 24,700 at the end of 1927, and the wage expenditure (calculated on provisional figures) would show \$440,578,000 in 1927, as compared with \$411,013,000 in 1926. This large increase in wage expenditure suggests that there was a substantial increase in the number of employees engaged in industry. Once more the month of August has made a record in the number of accidents reported, these being 7,010 in August, 1927, as compared with 6,595 in the same period in 1926. The fatal accidents reported during the year were 429 as compared with 400 in 1926, and with 345 in 1925.

Out of the total number of accidents reported in 1927 compensation or medical aid was allowed in 61,078 cases, as compared with 56,870 cases in 1926. This figure amounts to nearly 85 per cent of all cases reported. Out of the total cases allowed, 355 were death cases, 18 were permanent disability cases, 2,349

were permanent partial disability cases, 31,330 were cases in which temporary disability and medical aid only were involved, and 27,026 were cases in which medical aid only was paid. These figures do not include medical aid cases in Schedule 2 and Crown cases, which are paid directly by the employer. Out of the total number of cases allowed in Schedule 1 over 48 per cent consisted of medical aid only. Schedule 1 comprises industries under the collective liability system, the employer not being individually liable for accidents to his workmen but being assessed to provide a general fund out of which accidents occurring in his class of industry throughout the province are taken care of. In Schedule 2 industries the employer is individually liable for accidents to his workmen. The greater number of industries are under Schedule 1.

Benefits.—The total amount of benefits awarded under the Act during the year 1927 was \$6,084,655, as compared with \$5,821,352 in 1926, and with \$5,565,443 in 1925. Of the total benefits so awarded in 1927, \$4,993,277 were Schedule 1 industries, while \$1,091,378 were in Schedule 2 industries. Of the \$4,993,277 benefits in Schedule 1, \$3,930,418 were compensation and \$1,062,860 medical aid. The amount paid for medical aid showed an increase of \$74,373 over the medical aid paid in 1926, and represents a little over 21 per cent of the total amount awarded for benefits in Schedule 1. In this respect the Board draws the attention of the employers to this steady increase in the cost of medical aid, and recommends that they “use their best endeavours to see that

this expense is not greater than is justified by the condition of the workmen, and while they should be careful to see that the workmen secure all reasonable medical aid they should also make sure no undue prolongation of medical attendance or unnecessary charges are made in this respect." The total benefits awarded from the commencement of the Act to the end of 1927 amounted to \$63,400,102, while the accidents reported during the same period numbered 639,909.

Average Rates of Assessment.—Based on the provisional wage expenditures, the average rate of assessment on all classes in Schedule 1, per \$100 of payroll, was \$1.17 for 1927 as compared with \$1.25 for 1926.

Administration Expenses.—The administration expenses for the year amounted to \$283,719 as compared with \$277,939 in 1926. While the salary list was increased \$9,559, the administration expenses as a whole have only increased \$5,779. In explanation of such increase it is stated that there was nearly 10 per cent increase in the number of accidents which had to be investigated and reported upon, and also the natural increase in work which comes from continuing claims and the additional pension payments which are increasing each year. The total administration expenses in 1927 were 4.66 per cent of the benefits awarded, as compared with 4.77 per cent in 1926, and with 4.84 per cent in 1925.

Safety Associations.—In furthering safety work, the Board spent during the year the sum of \$117,982 divided as follows: Industrial Accident Prevention Associations, \$79,062; Lumbermen's Safety Association, \$21,420; Ontario Pulp and Paper Makers' Safety Association, \$10,500; and the Electrical Employers' Association of Ontario, \$7,000. The work of the safety associations is under the charge and supervision of the employers, the directors being appointed by the employers in each class, and their work is carried on subject to the approval and control of the Board. The cost of carrying on these different associations is charged to the different classes and is included in the ordinary rates levied in each class, as though the work were carried on directly by the Board. It is pointed out that most harmonious relations exist between the Board and the different safety associations, and that the most hearty co-operation and safety work has been most enthusiastically and efficiently carried on by these associations.

Rehabilitation.—The Board draws attention to the fact that it has devoted a good deal of consideration to the rehabilitation of in-

jured workmen in suitable occupations. The importance of this work has been stressed by the Trades and Labour Congress of Canada.* The Board states that "rehabilitation is a good deal more limited than is ordinarily supposed, because out of 61,078 cases allowed during 1927 only 2,349 were permanent partial disability cases, and the greater percentage of these are cases of minor injuries which do not disable sufficiently to cause the injured workman to seek new employment. The last completed figures are for the year 1926, when out of 2,421 cases of permanent disability 2,116 were less than 10 per cent disabled, and 2,307 were less than 30 per cent disabled, and in most cases of less than 25 or 30 per cent of disability rehabilitation is not necessary. This, it is pointed out, would limit the number of cases in which rehabilitation would be necessary to very few. Quite a number of these return to their former occupation, and many are men who are incapacitated by age or foreign nationality or lack of education from taking any course to fit them for some other method of earning their livelihood, so that the number of cases is again very substantially reduced. Therefore in very few cases each year can rehabilitation be successfully applied. Where young men of fair education suffer a severe injury they can be frequently rehabilitated by being sent to a business college or by a course in telegraphy, radio work, or electrical work of different kinds, and the Board is paying for such courses where the injured workman is capable of taking such a course." The Board finds great difficulty in the rehabilitation of men of advanced years and those who have no education or who speak a foreign language, and it is declared that the only successful method of rehabilitation in such cases is by the use of different plants where these men can be placed at work. In such cases, the Board has adopted the plan of paying part of the wages of these men, so that while the employer pays what this special type of employee is worth to him, the Board supplements this by sufficient to permit the man to earn a living wage until he becomes used to new conditions. Arrangements are also made with the Ontario Government Employment Agency so that its services can be used to help injured men to secure suitable employment. The Board welcomes suggestions from labour organizations or from employers which would assist it in this very important branch of its work.

* The LABOUR GAZETTE, July, 1927, page 702, had a note on vocational rehabilitation in Canada and the United States. The new Quebec Act provides for rehabilitation. LABOUR GAZETTE, May, page 461.

First Aid.—Under this heading the attention of employers is drawn to the necessity of careful supervision and attention to first aid kits and first aid establishments in all plants. It is suggested that some form of first aid kit, even though it may be very inexpensive, should be kept by every employer, and a regulation is contemplated which will call for the provision by every employer of first aid kit suitable to the nature of the industry conducted.

Merit Rating.—Merit rating is the system whereby individual distinction between employers even in the same line of industry is made according to their accident experience. This system has been effective in periods of three years. In cases where the accident cost exceeds, or falls short of, the amount of the assessment by a stated percentage, a merit-rating charge, or a merit-rating refund, is made within specified limits. The periods of merit rating for the last three years having expired, the Board held a conference with the directors of the different safety associations and the Ontario Division of the Canadian Manufacturers' Association and other representative employers, and discussed the entire problem. As a result, it was decided to continue merit rating as an aid to accident prevention work; that the demerit rating would be eliminated and demerit as to different employers, whose accident rating was bad, would be dealt with by special report, provided for in section 83 of the Act, under which section the Board has power to increase the rates on individual employers in case of bad accident experience. It was also decided that merit rating would be made annually instead of triennially, based upon accident costs and assessments paid for the preceding three years; that every employer whose total cost of compensation and medical aid is less than 75 per cent of his assessments, and whose refund would amount to \$25 or over, would receive merit rating in accordance with a schedule prepared, not, however, to exceed in any case 30 per cent of assessments; and that this merit rating would be given in connection with the annual assessment. Merit rating is being carried out in connection with the assessments for the year 1928. Nearly \$300,000 will be paid in merit rating and the cost levied against the employers in the different classes in accordance with the amount refunded in such classes.

The report contains detailed information regarding compensation and assessments in the various industries, and explanations and particulars of the different funds of the Board; also an analysis and tabulation of the causes

of accidents, the nature of industries, and other information concerning accidents and workmen.

Completed Statistics for 1926

In a special chapter of the report are detailed the operations for 1926 containing information as to which was not available when the report for that year was made. The following paragraphs are taken from this chapter of the report:—

Comparison of accident frequencies can be made by correlating the number of accidents with the total number of full-year workers, data for this being available, however, only in Schedule I. Eliminating accidents in which medical aid only was paid, the number of accidents for each 100 full-year workers for the different years are:—

Year	Temporary disability	Permanent disability	Death	Totals
1915.....	3.63	.58	.12	4.32
1916.....	4.99	.79	.10	5.88
1917.....	5.78	.72	.07	6.57
1918.....	5.81	.66	.07	6.54
1919.....	5.81	.68	.07	6.56
1920.....	6.23	.67	.07	6.97
1921.....	6.25	.60	.05	6.90
1922.....	5.82	.52	.06	6.40
1923.....	6.02	.51	.05	6.58
1924.....	6.08	.54	.06	6.68
1925.....	5.94	.51	.05	6.50
1926.....	5.84	.54	.05	6.43

On the same basis of calculation the frequency of medical aid only cases has been: 1918, 3.66; 1919, 3.70; 1920, 4.26; 1921, 4.24; 1922, 4.67; 1923, 4.96; 1924, 5.84; 1925, 6.09; and 1926, 6.37.

The average age of workmen receiving compensation in 1926 was 35.19 years. The average weekly wage for 1926 was \$22.64, as compared with \$22.29 for 1925, and \$22.96 for 1924. The total time loss in temporary disability cases was 563,121 days, or an average of 20.74 days, as compared with an average of 20.68 days in 1925, and 20.21 days in 1924.

The total cost of all accidents in Schedule I for 1926 was \$4,711,970.90, of which \$3,707,291.97 was for compensation (including payments for rehabilitation) and \$1,004,678.93 was for medical aid.

Of the \$3,707,291.97 compensation cost, \$1,221,846.92 was for temporary disability cases, \$1,734,966 was for permanent disability cases, and \$750,479.05 was for death cases.

The average cost of temporary disability cases was \$77.41, of which \$52.77 was for compensation and \$24.64 was for medical aid, the average in 1925 being \$75.47, and in 1924, \$79.69.

The average cost of permanent disability cases was \$996.17, of which \$217.70 was for temporary disability, \$637.80 for permanent disability, and \$140.67 for medical aid.

The average cost of death cases where there were dependents was \$4,756.87, and the average cost for all death cases was \$3,648.50, of which \$21.57 was for temporary disability, \$119.80 for burial expenses, \$57.69 for medical aid and \$3,449.44 for death benefits.

The average cost of all cases in which compensation was paid was \$180.18, of which \$146 was for compensation and \$34.18 for medical aid, as compared with \$180.60 for 1925, and \$195.55 for 1924.

The average cost of medical aid in medical aid only cases was \$5.42, as compared with \$5.21 in 1925, and \$5.16 in 1924.

In 48 per cent of the cases the disability terminated in from one to two weeks. In twenty-nine cases the disability lasted more than a year.

During 1926 there were 9,823 cuts, lacerations and punctures; 6,647 bruises and abrasions; 2,784 sprains, strains, twistings, and wrenchings; 2,756 fractures; 2,314 crushes; 1,198 scalds and burns; 858 injuries to eyes; 194 dislocations; and 168 herniae, among the temporary disabilities.

Among the 2,421 permanent disabilities were 18 permanent total disability cases, and 305 cases exceeded 10 per cent of earning capacity.

There were 230 industrial disease cases, of which 100 caused temporary disability, 123 permanent disability, and 7 deaths. Included in these totals are 49 cases of lead poisoning, 1 case of mercury poisoning, 55 cases of caisson disease and 125 cases of silicosis and miners' phthisis. There were six deaths from silicosis and miners' phthisis and one from caisson disease.

Machinery was responsible for 10,821 cases of accident out of a total of 55,209, or 19.60 per cent of all cases as compared with 19.39 per cent in 1925 and 20.95 per cent in 1924.

INDUSTRIAL ACCIDENT PREVENTION ASSOCIATIONS OF ONTARIO

Proceedings at Annual Convention held at Hamilton, May, 1928

THE 1928 Safety Convention of the Industrial Accident Prevention Associations of Ontario was held at Hamilton on May 8 and 9, and was attended by over 1,100 delegates, the actual registration figures being 1,108. These included representatives from the provinces of New Brunswick, Quebec and Ontario, also from Massachusetts, New York, Ohio, Wisconsin, Kentucky, Michigan and Pennsylvania.

The morning of the first day was devoted to the class association meetings, the Industrial Accident Prevention Associations being a federation of the safety associations of fifteen of the twenty-four classes under compensation in Ontario. The first general meeting was in the form of a luncheon on May 8, at which Mr. W. S. Campbell of the Canadian General Electric Company, Toronto, presided. Sir Henry Thornton, president of the Canadian National Railways, who was the chief speaker, brought out the need for safety work in industry. Mr. V. A. Sinclair, chairman of the Ontario Workmen's Compensation Board, spoke on the work being done by that body and stressed the value of rehabilitation. Mr. S. Horace Disston, vice-president of Henry Disston & Sons, Incorporated, Philadelphia, spoke on the development of the circular saw and its relation to safety, showing a number of slides illustrating the earliest known types of saw.

At the annual general meeting of the Industrial Accident Prevention Associations, Mr.

W. C. Coulter, of the Coulter Copper & Brass Co., Toronto, was elected chairman in succession to Mr. W. S. Campbell. Mr. A. E. Adam, Canadian Cottons, Hamilton, was named first vice-chairman, and Mr. C. H. O. Pook, Canadian Westinghouse Co., Hamilton, second vice-chairman. During the meeting, the report of Mr. R. B. Morley, the general manager of the Industrial Accident Prevention Associations, was presented and the financial statement and auditor's report were approved.

The morning session on the second day of the convention opened under the chairmanship of Mr. F. M. Morton, executive head of the International Harvester Company of Canada, Hamilton, who outlined certain phases of the safety work successfully carried on by his company. A first-aid display was put on by the Hamilton division of the St. John Ambulance Association, which was followed by an address on first-aid delivered by Col. C. A. Hodgetts, C.M.G., the head of the association in Canada.

Dr. J. G. Cunningham, director of the Division of Industrial Hygiene, and chairman of the Silicosis Board, Toronto, spoke on "Silicosis and Other Compensable Diseases," giving those present a word picture of the problems facing certain lines of industry. Mr. Henry Bernstein of the Swift Canadian Company, Toronto, presented the workers' view-point in

telling of the safety campaigns carried on at the plant at which he works.

A safety play was presented by the Essex-Kent Division of the Industrial Accident Prevention Associations, under the chairmanship of Mr. G. A. Kuechenmeister, author of the play. The story of the play is based on the failure of a superintendent to insist on the use of goggles.

The luncheon and afternoon session were under the chairmanship of Mr. W. C. Coulter of Toronto, the newly-elected chairman. Mr. A. C. Tagge, president of the Canada Cement Company, Montreal, spoke on "Getting Results," and outlined the campaign conducted in various cement industries in Canada and the United States. It is interesting to note for the last three years, at least one of the plants of the Canada Cement Company has won the Portland Cement Association Trophy for operating a full year without a lost-time accident.

Hon. Leeming Carr, M.B., of Hamilton, spoke on "Some Aspects of Medical Aid." Mr. A. L. Kaems, of the Simmons Company, Kenosha, took as his theme "Safe-Guarding Punch Press Operations," and with a wealth

of detail and by a demonstration of dies indicated the manner in which his plant and others had reduced the punch press hazard by at least 75 per cent.

The final paper on the program was presented by Mr. L. W. Gill, principal of the Hamilton Technical School, whose subject, "Specialized training for an Industrial life," indicated the close relation between technical training and industrial safety.

The Safety Exhibit of the 1928 Convention was far superior to anything yet done by the Industrial Accident Prevention Associations and many comments on the value of a practical display of this type were made. The film, "We're For Safety, Are You?", was shown for the first time here and was remarkably well received.

The organization for the Safety Convention was headed by the Hon. W. D. Ross, Lieutenant-Governor of Ontario, as honorary chairman; Mr. W. C. Coulter, Toronto, was general chairman, with Mr. A. E. Adam of Hamilton as vice-chairman.

The 1929 Convention will be held in Toronto early in May.

CO-OPERATIVE HEALTH SERVICE TO SMALL PLANTS

Paper by Dr. Frank G. Pedley, of the Industrial Clinic, Montreal General Hospital, and Dr. A. Grant Fleming, of Montreal, read before the Canadian Manufacturers' Association, May, 1928.

WE have seen, during the past thirty years, a substantial increase in life expectancy. In 1900, the expectation of life at birth for males was about 48 years; in 1920, it had risen to over 54 years. This increase in life expectancy is due almost entirely to a greatly decreased infantile death rate and to the control of certain communicable diseases. It affects to a very slight degree those of us who have survived the hazards of childhood. It is a fact that adults have very much the same expectancy of life to-day that they had thirty years ago. This is true in spite of the fact that many diseases from which adults die are preventable.

The program of Public Health in Canada has notably neglected the field of Industrial Hygiene. Much time and money have been spent on the health of the baby and the school child, with results which warrant even further expenditure, but practically nothing has been spent on the health of the industrial worker. There are some 200,000 men and women employed in industry in Montreal, many of whom are being slowly incapacitated by disease which can be prevented.

We believe that it is of mutual advantage to employer and employee that some supervision be exercised over his physical state. I wish therefore to outline, as briefly as possible, a program of health supervision in industry, which experience has shown can be conducted efficiently and economically.

No argument is needed, at this time, to persuade industrial executives that the supervision of industrial accidents is necessary; the decrease in cases of infection or "blood-poisoning," which follows proper supervision of accidents, is enough to make an accident service worth while. When a man is injured at work, there is an obvious drain on industry since, under the law, a proportion of his wages must be paid him. When a man is sick, the loss to industry is not as obvious, but it is just as real, for his services are lost, and so, the profit derived from his services. It has been estimated that each day's absence from work costs industry as much as it costs the man. Thus, if a man earning three dollars a day is away sick, he loses three dollars, and his employer loses about the same amount from lost production. What industry loses by

a man at work who is half-sick cannot be estimated, but it must be a very definite loss. Now, sickness causes seven or eight times as much lost time as accidents in industry and, therefore, the actual financial loss to industry, from sickness, is much greater than from accidents. It is not possible to eliminate entirely this great loss to industry and greater loss to industrial workers, but something can be done to reduce it.

The activities designed to supervise the health and safety of industrial workers can now be enumerated:—

(1) *Examination of all new employees.* This is not done with a view to selecting the cream of the labour market, but with a view to placing prospective employees on jobs for which they are physically fitted. It also protects the employer from fraudulent claims for hernias developed, and from blindness, etc. Many men who are temporarily unfit can rehabilitate themselves and, occasionally, men suffering from contagious diseases can be prevented from passing on the infection to other men in the plant.

(2) *The treatment of industrial accidents.* In small plants, it is not advisable to carry on much major surgery, but the great majority of industrial accidents are very minor in character and can be treated much more economically in the plant than elsewhere. The new Workmen's Compensation Act requires employers to furnish medical attention to workmen injured at work.

(3) *The diagnosis and treatment of minor diseases.* This service is recommended so that disease may be detected in its incipency, when it is most amenable to treatment.

(4) *The periodic examination of the apparently healthy worker.* The experience of great life insurance companies illustrates the value of this service to individuals, but it is often of even greater value to industry in keeping valuable men from early breakdown.

(5) *The visiting of sick absentees by a nurse.* We do not advocate home visits by a doctor, since that is properly the function of the private physician, but the nurse's visit is highly important. It discourages malingering or "soldiering" and, in the case of real sickness, ensures proper attention of the sick man.

(6) *The supervision of the sanitation and safety of the plant.* The doctor and the nurse bring medicine to industry; they endeavour, by various means, to educate the industrial worker in healthful habits, and they suggest, when necessary, improvements in the work surroundings.

Many industries here and elsewhere have undertaken some or all of the activities enumerated above. But the small industry, that

is, the industry of 100 or 200 employees, has not been able to undertake this program. We believe that practically any plant can avail itself of these benefits of it acts in a co-operative way. If six or eight plants, with a combined personnel of 700 or 800 men, were to group themselves together, all these activities could be carried on, directed from some central point. It would be necessary for each plant to equip and maintain a small first aid room, and to pay its share of the actual cost of doctor's and nurse's salaries, but this cost would not be high. In actual practice, the doctor and nurse would visit each plant once a day, or once every two days, depending upon the size of the plant, and see the various cases. In the interim between visits, the minor accidents could be handled by first aid workers specially trained, and serious accidents could be treated at one of the hospitals.

In the matter of sickness and accident, it is of mutual advantage to employer and workman that treatment be prompt, efficient and inexpensive. We believe that this type of service to small plants fulfils these requirements.

Minimum Wages for Women in Saskatchewan

At a recent meeting of the Minimum Wage Board of Saskatchewan, held at Saskatoon, the Local Council of Women asked the Board to add to their regulations provisions similar to those contained in clause 8 of the Minimum Wage Regulations of Manitoba, which is as follows:—

"Health and Injuries. All machinery and danger points shall be protected as far as possible by the best safety devices known. All protection possible against occupational diseases shall be provided. Each establishment shall keep a first-aid kit, to be approved by the bureau of labour, and at least one reliable member of the working force shall be trained to its use. A couch or stretcher shall be provided for emergencies, and where no dressing room or similar apartment exists, a screen shall be provided."

The members of the Board undertook to consider this suggestion.

The annual general meeting of the Canadian Manufacturers' Association was held on June 4-7, on board the Steamship St. Lawrence, in the St. Lawrence River. An account of the proceedings will be given in the next issue.

HOLLINGER MINE DISASTER

Report of Judge Godson, Commissioner appointed to investigate Cause of Death of 39 Men at Timmins, Ontario, on February 10, 1928.

THE appointment of Mr. Justice T. E. Godson, of the Mining Court of Ontario, to act as commissioner to inquire into the causes of the disaster at the Hollinger Mine at Timmins, Ontario, on February 10, 1928, when 39 miners lost their lives, and the verdict of the coroner's jury at the inquest, were noted in the

LABOUR GAZETTE, April, page 378. Part I of Judge Godson's report, dealing with the causes of the fire, was made public on May 23, by the Hon. Charles McCrea, Minister of Mines for Ontario. Part II containing suggestions and recommendations, will be published later.

Report of the Commission

In the matter of a fire that occurred in the Hollinger Consolidated Gold Mines, Limited, and in the matter of an inquiry under the Public Inquiries Act, R.S.O., Chapter 20.

PART I—CAUSE AND RESPONSIBILITY Facts

The Hollinger Consolidated Gold Mines, Limited, employs approximately 2,500 men, and at the time of the outbreak of the fire in question 921 workmen were employed underground.

The fire started in stope 55-A east of crosscut 12 on the 550-foot level of the Hollinger Consolidated Gold Mines, Limited, at approximately fifteen minutes past nine o'clock on the morning of the 10th day of February, 1928.

The material in the stope was dry refuse from the thaw house, and fuse and cap houses situate on the 550-foot level, and consisted of paraffin wrapping paper, powder boxes, box lids, sawdust, fuse ends, and some detonators.

This refuse in the stope covered a surface of twelve feet wide by one hundred feet long with a depth of about forty-five feet, and appeared to have been placed on waste rock fill.

Smoke and poisonous gas generated by the fire was driven by its volume against the natural air currents in the drifts and travelled approximately in length one-quarter of a mile and in width one-eighth of a mile on the 550-foot level within fifteen minutes after smoke was seen or recognized. It also penetrated in similar density, and in about the same period of time, portions of the 425 and 625-foot levels.

At 10 a.m. on the morning of the fire, workmen were being actively withdrawn from the mine, and at 3.30 p.m. after a complete checking up of the men and their locations, it was ascertained that 49 men still remained underground.

At 10 a.m. of the morning of the 10th the body of Ira Graham was recovered and brought

to the surface from the 625-foot level, and at 10.45 a.m. the body of W. M. Stevens was recovered in crosscut M-4 on the 425-foot level.

Twelve of the 49 men then unaccounted for were located and brought to the surface in fair physical condition at various times not later than 3.15 p.m. on the 11th.

The first of the imprisoned men to reach the surface was G. Zolob, a scaler, who, at 1.00 p.m. of the 11th made his way from the 675-foot level to the open, unaided, and beset by difficulties and dangers. The resourcefulness and encouragement given by F. Jackson, a scaler, (a Lancashire miner and one of Zolob's entrapped companions), made it possible for Zolob to maintain sufficient strength to attempt the effort to gain the surface.

By achieving his objective, Zolob probably saved the lives of his four companions and gave information that was of the utmost value to the rescue parties. Zolob and Jackson need no commendation from me. They have written their names on the scroll of brave and resourceful men.

Between 10 p.m. of the 11th and 7.30 p.m. of the 13th, and at various times on the intervening days, the bodies of 37 men were taken from the mine by the several rescue parties.

The fire caused 39 fatalities, death resulting from Carbon Monoxide poisoning.

The origin of the fire has not been determined.

The levels affected, the men working thereon, and the fatalities are as follows:—

Level	Men at	
	Work	Fatalities
425	51	5
550	73	15
675	53	14
800	52	5

Findings

Dry thaw house refuse in its parts and in substance was of an inflammable nature and as such an apparent fire hazard. Its proper

disposition, therefore, was of the utmost importance as a measure of protection against the occurrence of fire.

There was an omission on the part of the General Manager in not inquiring or knowing how and where such inflammable matter was being placed.

The Assitant General Manager was remiss in not personally satisfying himself that thaw house refuse was being disposed of through the central waste pass, or by other proper method diluted or mixed with waste rock and other material as he had been informed was the practice of the company with respect thereto.

Methods of disposal of thaw house refuse were—

1. Sent to the surface and burned under mine boilers. This practice was stopped on account of minor explosions occurring presumably from detonators, or dynamite, which had become mixed with the refuse.

2. By decision of the General Superintendent and the Mine Superintendent, made in 1923 or thereabout, two options for disposal of thaw house refuse were given:

- (a) Through the current waste pass.

Being sent through current waste pass, it would intermingle with the waste flow, be drawn off at the lowest level, used as backfill, or taken to the surface, redumped, and again sent down the mine to be used where needed. This process was a reasonably safe method of disposal.

- (b) Direct to stopes which were being back-filled.

This method, without complete dilution or mixing of the refuse with waste, imported danger. A duty was therefore imposed upon the General Superintendent and Mine Superintendent to keep themselves informed if this prescribed manner of disposal was being properly and safely carried out. In this duty they failed.

3. Dumping of thaw house refuse in empty stopes where backfilling was not being done.

This dangerous and hazardous plan seems to have been adopted without orders from the General Superintendent or the Mine Superintendent. From a system of permissible dilution as referred to in Clause 2, the practice became one of complete segregation of inflammable refuse and rubbish.

Officials who issued orders pertaining to methods and practices to be observed and carried out in the disposal of thaw house refuse underground failed to keep themselves informed if such methods and practices were being maintained.

Verbal orders were given where written orders were advisable in order to fix responsibility and as a precautionary measure.

The failure to issue written orders respecting the method of disposal of thaw house refuse as determined by the General Superintendent and Mine Superintendent, and the absence of any complete record prior to April, 1927, of stopes in process of being backfilled were contributing causes of the fire.

The lack of co-ordination in the organization of the company resulted in a disjointed system of control, thereby permitting the improper dumping of thaw house refuse in empty stopes where there was no concurrent act of backfilling or covering.

The General Manager and the Assistant General Manager cannot dissociate themselves from responsibility for their own Organization; and, in my opinion, the responsibility of a General Manager and Assistant General Manager is not limited in extent or time, where it concerns the safety or protection of the workmen or others under them.

It is a fact that thaw house refuse was being placed in Stope 55-A for a period of two or two and a half years prior to the time of the fire, and it is an admitted fact that Stope 55-A had not been backfilled since April, 1927. It is further in evidence, and I find as a fact, that this condition prevailed during the year 1926 or earlier.

Those workmen who placed it, and those who saw or knew of it being so placed, were intelligent, practical miners, capable of appreciating the danger of the act and owned a duty to their fellow workmen to report the fact to the Safety Inspector, their superior officer, or the Government Mine Inspector.

The General Superintendent, the Mine Superintendent, the Production Superintendent, and Transportation Foremen under him, later the Superintendent of Transportation, Transportation Bosses and Company Safety Inspectors knew, or should have known that thaw house refuse was not being thoroughly mixed with or completely covered by waste rock, sand or gravel, and therefore in this condition, constituted a menace.

These officials in their respective responsible positions formed links in the chain that bound the executive and management with the workmen and should have cemented the whole as a compact Organization. Failure to properly instruct, to inquire, to know, prevented cohesion and let in a practice which in an insidious manner, silently grew into a recognized system, or accepted policy, thereby creating a condition which made possible the fire in question.

The danger was not recognized by those who ordered or permitted it, or by those who actually disposed of such refuse. From the General Manager down the scale of the Organi-

zation to the muckers, no one thought of a fire occurring underground. All minds were oblivious to the fact that thaw house refuse, being highly inflammable, was therefore a dangerous substance when so left underground.

This security of mind is, I think, mainly accounted for by a number of accumulated circumstances.

On the part of the Management and Organization of the Company:—

- (a) Concentration on production.
- (b) Immunity from metal mine fires in Ontario.
- (c) A wet quartz mine.
- (d) The absence of timbering in quantity.
- (e) The amount of material involved in the disposal of thaw house refuse being insignificant in comparison with other major operations of the mine, it became obscured and was overlooked.

By the men who placed the waste or saw it being placed without complaint:

- (a) The habitual and long use of oil-skins as protection against wet and dampness in a cool, damp mine, induced a placid state of mind undisturbed by thoughts of fire.
- (b) A reliance upon the judgment of experienced officials over them who ordered or permitted the practice.
- (c) The stope itself with its dripping walls not being combustible presented the security of an incinerator.
- (d) That a fire could start within such a receptacle was a remote possibility and, if it did occur, would be harmless.
- (e) Familiarity with powder fumes.

These suppositions are in extenuation of the omission to realize the menace that such combustible material presented. It was not a neglect of a condition that was realized, but an omission to realize a condition.

Section 171 of the Mining Act defines the powers and duties of a Government Mine Inspector as follows:—

Subsection (1) "It shall be the duty of every Inspector, and he shall have power,—

- "(c) To examine into and make inquiry respecting the state and condition of any mine. . .and all matters and things connected with or relating to the safety of the persons employed in or about the mine. . .and to give notice to the owner or agent in writing of any particulars in which he considers such mine or any portion thereof, or any matter, thing or practice to be dangerous or defective. . .and to require the same to be remedied within the time named in such notice."

His duty is, therefore, two-fold: To examine into and make inquiry.

The Inspector of Mines of the Porcupine Mining Division did make inquiry as to how thaw house refuse was being disposed of and upon being assured by the then Hollinger Safety Inspector that such refuse was being sent through the central waste pass, his mind was satisfied and the inquiry ended. The answer from the standpoint of safety was a satisfactory one and reassuring to the Inspector. The Inspector, however, did not examine into the "state and condition of the mine" respecting the disposal of a dangerous material such as thaw house refuse. An examination of the mine with reference to this material would have shewn that the Safety Inspector's statement was partially but not wholly true, as the fact was that thaw house refuse was being sent only at times through the central waste pass and more frequently to stopes where backfilling was in process or had been definitely suspended.

The Inspector made it a practice on his visits to this mine to inspect the thaw house and his mind was necessarily affected by the knowledge that there would be inflammable debris to be disposed of after the powder was removed from the boxes. It was not, therefore, forgetfulness, but passivity, on his part. An assurance had been given and accepted. It ended there.

The Inspector was misinformed by the Safety Inspector, a responsible official of the mine from whom he had a right to assume a candid and accurate answer would be given to his inquiry. It was not a wilful misstatement of a fact, but a reply given in ignorance of a fact that it was his, the Safety Inspector's, duty to know.

An Inspector, to justify his appellation and purpose, should be satisfied only with what he actually knows to be a fact, not what he is told or hears. He should be thorough, possessed of an inquiring mind, and eternally vigilant. With these attributes, he will at once impress upon (as the fact should be), a mine organization and employees that the spirit of the regulations of the Mining Act must be strictly and closely observed.

The Department of Mines is impotent in its effectiveness if it cannot rely upon its officials in their several responsible positions. The Department had a right to assume that its Inspector would inspect in the full sense of the term, and as interpreted by the language and essence of the Regulations of the Mining Act.

The Mining Act imposes upon the Inspector the duty of examining into and inquiring respecting "the state and condition of any mine" and "all matters and things connected

with, or relating to the safety of the persons employed."

The safety of the persons employed may not be protected without an examination into the state and conditions of the mine. The two requirements of the Section, if exercised, should give the assurance aimed at. The proper disposal of thaw house refuse is closely allied with safety. An inquiry, therefore, without examination, was not a compliance with the Act. The Inspector was remiss in accepting a statement concerning a possible dangerous condition as a fact without a continued personal confirmation of it.

The statutory duty of the Inspector and the responsibility of the operators and management are separate and distinct obligations. Each has a stern duty imposed by law. The neglect of one does not relieve the responsibility of the other. The duties of a Government Mine Inspector are circumscribed; those of an operator or management unconfined in connection with or relating to the safety of the persons employed in a mine.

The fact appears to be that, in no part of the North American Continent, where metal mines are in operation, is there a specific requirement by law or regulation that empty boxes, paper and combustible refuse must be brought to the surface, and the further fact is that such refuse, as a general practice, is placed underground when it is accompanied by a filling of waste rock or other similar material.

The management of the company, its officials and workmen used expedition in locating and removing the men from underground. From the moment smoke was detected and reported, officials and workmen, unmindful of danger, gave freely of their services in the common task of rescue.

After consultation and thorough consideration, Mr. McMillan, the Government Mine Inspector from the Cobalt District, at 1.00 a.m., Saturday, the 11th, ordered the fan to exhaust. The evidence indicates his decision to have been practical and salutary.

The appliances gratuitously supplied and brought to the mine by the Consumers' Gas Company, Limited, of Toronto, aided the respective acts of resuscitation and rescue.

The complete rescue equipment and apparatus kindly sent by Mr. Scott Turner, Director of the United States Bureau of Mines, in charge of experts in the science of fighting and controlling underground fires, were effectively used in subduing the fire, restoring the normal air currents and thereby permitting with safety the examination of the mine

and the recovery of the bodies of those who had lost their lives.

No boundary line was recognized in the act of co-operation between neighbours interested in the same industry. In sharing a burden, the tie of comradeship became more closely knit.

The evidence supports the supposition that, with the density of smoke that prevailed in the parts of the mine affected, no known or adopted rescue apparatus or equipment would have saved a life that was lost.

As a measure of protection, it is not so much the nature of the equipment required to meet and contend with an emergency as the exercise of constant vigilance and anticipation of and concentration on essentials by all interested or employed in the development of a mine. An underground fire need not occur in a metal mine except from means beyond the control of man.

Conclusion

The Commission which issued under "The Public Inquiries Act" required me to inquire into, investigate and report upon the causes of the fire which occurred in the Hollinger Mine between the 10th and the 15th days of February, 1928, and to fix responsibility therefor and to make such suggestions and recommendations in connection with or arising out of the said fire as in my judgment the circumstances warranted and to report the evidence and facts brought out, together with my findings, and generally to exercise all such authority as might be essential for a full and complete inquiry.

Pursuant thereto, notice was publicly given that the Commission would hold its first sittings at the Town of Timmins on Monday, the 27th day of February, 1928, to inquire into and investigate the causes of the said fire and to fix responsibility therefor.

Mr. Peter White, K.C., acted as Counsel for the Commission, and with him was associated Dr. George Nasmith in a consulting capacity; W. A. Gordon (associated with Mr. T. B. Roberts in his capacity as practical miner), represented the miners; Mr. Gordon Gauthier; Finlander labourers affected; and Mr. A. G. Slaght, K.C., represented the Hollinger Consolidated Gold Mines at the sittings.

The inquiry at Timmins occupied eleven consecutive week days, and during that time 57 witnesses were heard and an inspection made of the stopes and other workings which were the subject of the evidence and relative to the issues being heard.

That an underground fire had not occurred in the mines of the Province of Ontario was the justified boast of the mining industry. Suddenly, quietly, unobserved, a flame burst out. A fire had been kindled; it blazed; then smouldered; then ceased. In the brief time of its cruelty, thirty-nine human lives had been terminated by the outpouring of its smoke and gas. Consternation followed complacency; chagrin replaced pride. The feelings of 2,500 workmen and officials of the Hollinger Mine had been rudely and ruthlessly shocked.

The evidence was that of workmen and officials of the Hollinger Mine, then or heretofore in its employ. Quietly and with dignity, they told what they knew. There was hesitation through diffidence, but restraint through fear was not manifest or admitted. As witness followed witness until the research was exhausted, the paramount note of their evidence was, "We did not think of fire"; "It never entered our minds." Men with university degrees, skilled in their profession, practised in its application; workmen, experienced and tried in underground mining, gave no thought or heed to the possibility of fire arising from the manner and method of the practised disposal of the thaw house refuse; in the subsequent light of what occurred, a seemingly extraordinary admission, but, viewed in the atmosphere of their environment, a state of mind that can be understood.

That the scales of justice should be evenly balanced, it was necessary that I should weigh the evidence unaffected by the glare of the fire, I have, therefore, dissociated my mind from the demonstrated fact that thaw house refuse was highly inflammable and required the utmost care in its disposal. I have heard a mass of evidence on the nature of thaw house refuse, its disposal, and the inconsequential attitude of mind of all concerned in respect thereto. Was it a menace that should have been realized? Were the conditions at the Hollinger Mine such that what in itself was dangerous had been reduced to a degree of safety by its assumed or known practice of disposal? What should trained and experienced miners have anticipated? If the danger was realized, had it been carelessly overlooked in the effort to get increased production, or otherwise? All these pertinent and moot questions and other relevant facts I analyzed and carefully considered and have found the facts accordingly.

Those of the public unfamiliar with the industry of mining with its many pressing geological, metallurgical and economical problems, and without a conception of the vast-

ness or physical interior of this, the largest gold mine on the Continent, must necessarily fail in forming a sound opinion of the degree of responsibility for the cause of the fire.

Those who guided the activities of the mine, and those who gave their services, one and all testified to a belief in a state of physical security. This outstanding fact must be based upon some common reason and cannot lightly be dismissed in measuring the degree of neglect or responsibility for what occurred. I have given reasons why this state of mind prevailed, and if the suppositions which I advance are tenable, the omission can be said to be a neglect of a condition that became obscured; lost track of in the concentrated effort for increased production which the Directors, as a body of businessmen, properly sought if the mine lent itself to it, and which the shareholders would have a right to expect.

The evidence does not indicate, nor do I find, that a recognized danger was carelessly cast aside in order to achieve major production. It was thought the material was being safely placed. If so, the omission was to know that it had been so placed.

There was a dependence by the management upon officials under them, and these officials upon the workmen, but no one saw to it that the chain of continuity of action was complete.

I am deeply impressed with the magnitude of the responsibility the management has in the conduct of this mine. It employs approximately 2,500 men, of whom 1,540 work underground; 89 bosses direct the workmen under them; there are 100 miles of drifting and crosscutting; 8 miles of raises and shafts. The water pumped from the mine amounts to 835,000 gallons a day; there were 370,000 tons of waste rock put back in stopes last year, and 306,000 tons of sand and gravel were placed in worked out stopes between May and November of 1927. There are

- (a) 156 working stopes
- (b) 113 stopes ready to be filled
- (c) 35 empty stopes not filled
- (d) 29 stopes in process of being filled
- (e) 153 stopes partially filled
- (f) 42 stopes filled and ready to recover sills or in process of recovering.

A mighty undertaking, and a tribute to the management that brought it out of its swaddling clothes in 1912 to an amalgamation of properties with its present production of over 6,000 tons per day.

The mining industry of Ontario has no occasion to bow its head. It stands at the forefront of management and achievement; and

my association with the industry, embracing as it does the prospector who leads the way to discoveries, the bona fide promoter who starts the prospect on its way to development, the management which wins the ore from the rock aided by workmen loyal and contented, is my most treasured asset.

The quiet, unobtrusive and unbiased manner in which the testimony was given by all, the composure of those, interested as bereaved or in the safety of their fellow workmen, sitting with outwardly tranquil minds through the trying ordeal of eleven days of testimony immediately following the tragedy, was impressive and dignified, and bespoke the spirit of those who dwell in the North.

Environment moulds character. Tragic circumstances evolves heroes. I vividly remember Fred Jackson, quietly and unostentatiously telling his story of conflict with Nature's forces. Without exaggeration or boastfulness, he recited how he and his four companions retreated from one vantage point to another, slowly and stubbornly backing away from the fumes of the deadly gas; how he turned on the air and directed it against a plank to cause the current to rebound; connected lengths of hose in an attempt to blow the smoke away; and how he cut his smock in four pieces and unselfishly gave his companions a piece to place over their mouths.

And then Zolob's determination to break through the impenetrable barrier of smoke and win his way to the surface. What took place between Jackson and Zolob at that critical moment is best told as Jackson gave it. Jackson said:

"My light was only a light about half an inch. Zolob put it into his lamp and fixed his lamp and got a light, put his packet on his back, took a piece of blasting stick about four feet long, and he said, 'I go try'. I says, 'God bless you'. He says, 'I try go out. Maybe I die, maybe not.' I says, 'Don't go, George.' He says, 'Oh, yes, I go'; so he got up and set off down the crosscut."

"Maybe I die, maybe not". Failure meant death; success, life to himself and his companions. The die was cast. The courage was there, and Zolob fought his way to the light of day—Jackson's resourcefulness, reflecting the motto of the St. John Ambulance Corps, of which he was a member, "*Pro Fide, pro Utilitate Hominum,*" and Zolob's strength and determination accomplished the seemingly impossible.

And then Villaincourt, the cagetender. The smoke was seen, the signal given. Up went

the cage to investigate, and then to report at the surface. Down again to give warning. And so, up and down with his message of warning until he lost control. Fred Poulin, the shift boss, hunting his men, courting death, a duty to be done; George Pond, the foreman, who thought of his men and not of himself: and so many more wonderfully courageous men it was my privilege to hear as witnesses. The Mine Manager, Officials and workmen all ready and anxious to make the descent; not a refusal, not a hesitant amongst them; a tribute to the manhood of the North, made sturdy, strong and true by their contact with Nature's forces and their fellowman.

The Fire Department of the City of Toronto sent its best. The Consumers' Gas Company of the same City answered the call; and the Bureau of Mines of the United States of America, without a moment's delay, hastened on its way their mine rescue car, fully equipped and manned by distinguished officials. The railroads opened their line, and 1,000 miles was covered in a period eleven hours less than would be taken by the fastest express train.

So full is this tragedy of duty well done that it deserves the pen of one worthy of the material. It is not for me to dilate at further length.

The dependants of those who lost their lives may have the assured consolation that all that human ingenuity or resourcefulness could do was done, that no human agency could have saved a life that was lost and that those whose hour had come passed on their way to other and higher activities without a struggle, quietly, calmly and unconsciously stepping across the Great Divide.

As Commissioner, I am deeply indebted to the workmen of the Hollinger Mine, to the dependants of those who lost their lives and to the citizens of Timmins, for the confidence they reposed in the Commission and all associated with it, and for their deportment during the hearing.

"Behold how great a matter a little fire kindleth"; James, 3: 5. Out of a chaos of facts, a simple lesson emerges: It need not have been: a sad refrain, but how true and beyond cavil or contradiction.

Let the curtain drop on what has been and rise on what is to be, thereby allowing confidence and morale to restore itself, is my parting word.

(Sgd.) T. E. Godson,
Commissioner.

TORONTO, May 17, 1928.

NOTES ON INDUSTRIAL SAFETY AND HEALTH

Safety Work in Ontario Mines

The *Sudbury Star* on May 23, stated that "one of the immediate effects of the Hollinger disaster which occurred last February has been to bring to the attention of all the mines of Northern Ontario the need of improved rescue apparatus and also the need of trained crews to operate the equipment.... Four, at least, of the largest mines of Ontario have taken steps to provide themselves with rescue apparatus and to train special crews in rescue work. These mines are Hollinger and McIntyre in Porcupine, Lake Shore in Kirkland Lake, and International Nickel in the Sudbury district. In addition to installing its apparatus the International Nickel Company made arrangements with the United States Bureau of Mines to send a special rescue expert to train crews in rescue work. These crews have been specially picked from among the men who are most easily available at all times. There will be two breathing apparatus parties and two special gas mask parties. The survey of underground hazards in the mines of the province, instituted by the Chief Inspector of Mines after the Hollinger fire, has now been practically completed with the exception of the Hollinger, where on account of the extent of the underground workings greater time is required to complete the work than in the other mines. Another general survey has been started, it is understood, with the object of eliminating if possible fire hazards on surface, particularly in the neighbourhood of shaft houses, where a fire might easily be led into the underground workings of the mines."

Study of Silicosis in Ontario

The *Journal of Industrial Hygiene*, published by the Harvard School of Public Health, contains in its May issue an article entitled "Some Clinical and Pathologic Observations on Silicosis in Ontario," by Dr. A. R. Riddell and Mr. H. E. Rothwell. The writers give some of the results of studies carried on during the past two and a half years by the Division of Industrial Hygiene of the Ontario Department of Health. In the course of these studies 1,487 workers in dusty trades were examined, these trades including mining, quarrying, stonecutting, sand blasting, grindstone operating, smelting, moulding, and iron working. All these operations expose an operator to dust, silica being present in all except that produced in marble cutting in operating artificial grindstones, and in wrought iron work. All but these last operations were found to produce

silicosis. Among the 1,487 workers examined 53 had silicosis in the ante-primary stage, 16 in the primary and 11 in the secondary stage. In addition 37 persons in whom silicosis could not be demonstrated were found to be suffering from tuberculosis. Particulars of typical cases are given, the article illustrated by views of diseased tissues etc. The rates of compensation paid in Ontario for silicosis were given in the *LABOUR GAZETTE* April 1928, page 341. The legal classification of cases was described in the issue of May, 1926, page 450.

Locomotive Cab Curtains in U.S.A.

In an order dated May 7 and published May 10, the United States Interstate Commerce Commission, by unanimous action, ordered the installation of cab curtains on all steam locomotives in the states north of the southern boundary of Virginia, Kentucky, Missouri, Kansas, Colorado and a line drawn from Carson City, Nevada to the Pacific. This includes 34 states, the District of Columbia, and the northern half of California. Curtains in all this territory are to be installed by November 1 this year, and from that time on, are to be in use on all locomotives in service from November 1 to April 1. Wisconsin curtains—that is, those prescribed by the Wisconsin Railway Commission—have been taken as a standard, and all protective devices are intended to be at least equal to Wisconsin curtains. The commission further orders that all locomotives in the territory covered shall be fitted with storm windows, or wind shields. Exceptions are made only in cases where it can be shown that the clearance is too small to permit such shields to be installed. Oil burning locomotives are to be equipped with an air intake opening below the floor of the cab, or in some other manner outside the cab. This the commission declares to be necessary to protect engineers and firemen from the tremendous draft. Air rushing into the firepot of an oil burning locomotive is said to reach a speed of 42 miles per hour by actual measurement.

The new order meets the recommendations frequently made by the Railway Brotherhoods.

Safety Organization in Ohio

The Division of Safety and Hygiene of the Industrial Commission of Ohio recently published a bulletin on Accident Prevention and First Aid Suggestions. The Division maintains a staff of safety engineers to advise employers on all phases of accident prevention

work, and to instruct them as to any conditions that may not be in accord with legal standards and how to bring their establishments up to the highest standards of safety. Speakers are supplied by the Division to take part in safety meetings of workmen and committees, and a free bulletin service is maintained. Employers also receive the benefit of a consulting service which helps them to solve special accident problems as they arise. The Division further co-operates with employers' associations in carrying out surveys of a particular industry for the purpose of locating the principal causes of accidents. Speakers and safety motion pictures are available for meetings as desired. Finally the Accident Analysis Laboratory of the Division issues a detailed monthly analysis of all accidents reported in the preceding month which is mailed free of charge on request.

The new Bulletin is a concise summary of conclusions based on past experience of safety organization, and should be of great service in accident prevention in large or small industrial establishments. In addition to the list of rules for general organization for safety the Bulletin contains a chapter on First Aid to serve as a guide in industrial emergencies when medical attention is not present or immediately available, together with rules to be observed in emergency cases.

The results of a "no-accident month" campaign conducted in April by the Division of Safety and Hygiene of the Industrial Commission of Ohio, are reflected in the statistical returns showing the accident experience of Ohio industries during that month. The month of April, 1928, won the distinction in the industries of Ohio of having the smallest number of industrial fatalities of any month since January 1, 1926, only 63 having been reported to the Industrial Commission. No records for comparison were compiled by this division prior to 1926. The record is 13 less than for the preceding month and 22 less than for April, 1927. Only 11 cities had fatalities in April. The report for April also shows a gratifying reduction in the total number of accidents, which was 16,583, for the month, or over 1,800 less than for April, 1927, and 851 less than for March, 1928. In causes of injury, machinery is highest with 3,596; handling objects second with 3,026; stepping upon or striking against objects third with 1,758; hand tools fourth with 1,536 and falls of persons fifth with 1,283. The latter cause ranks highest in severity and is charged with 90,303 days lost; motor vehicles caused 83,693 days lost and machinery caused 81,707 days lost.

Radium Poisoning

A joint suit for \$1,250,000 against the United States Radium Corporation, of Orange, N.J., brought by five women who were declared by reputable medical authorities to be dying of radium poisoning contracted as employees of the corporation, was settled out of court on June 4.

The settlement, announced by Federal Judge William Clark, who entered the case as mediator from humanitarian reasons, after he had read of the victims' plight, binds the corporation to the following provisions:

Each of the five women will receive \$10,000, payable on or before June 11.

Each woman also will receive a pension of \$600 a year payable quarterly beginning September 11.

All previous medical expenses, not to exceed \$7,500 in the aggregate and to be approved by Judge Clark, will be paid by the corporation.

Fees of the attorneys for the women, an amount fixed at \$15,000, will be paid by the corporation.

For legal expenses incurred by the same attorneys, the corporation will advance \$4,500.

All "ordinary and reasonable" medical expenses of the women for the future will be a recognized debt of the corporation, such medical treatment and expenses to be determined by a board of three physicians, all experts in radium poisoning treatment.

The board will consist of one physician named by the women, one by corporation and a third expert to be selected by the first two physicians.

Judge Clark also revealed that a wealthy New Jersey business man and philanthropist, whose name he did not disclose, had volunteered to guarantee the \$3,000 a year pension money in case the corporation meets financial reverses in the future, a contingency regarded as most unlikely.

Hon. James Murdock, former Minister of Labour in the Dominion Government, was re-elected vice-president of the Brotherhood of Railroad Trainmen at the convention of that organization recently held in Cleveland, Ohio. Seven general chairmen of important United States lines were in competition for this office, but Mr. Murdock was elected on the first ballot, receiving 475 of the 903 votes cast. The convention defeated William G. Lee, who had been president of the Brotherhood for 19 years, Mr. A. F. Whitney was elected president, while Mr. Lee became secretary.

NOTES ON LABOUR UNION ACTIVITIES

Railway Division No. 4 (Canada) of American Federation of Labour

THE seventh convention of Division No. 4, Railway Employees' Department, American Federation of Labour, was held in Winnipeg from April 16 to 20, 1928. Nearly 200 delegates were present, representing approximately 30,000 members of shop craft organizations of every railway in Canada.

The reports of the president, Mr. R. J. Tallon, detailed the activities of the organization along the lines of union-management co-operation, schedule negotiations, abolition of bonus system, pensions, etc. Dealing with the results of the co-operative program, the president stated that "One has only to check up on the subject matter of our various convention proceedings and note those things we have been trying to do: abolish the bonus or piece work system; secure stabilized work hours in accordance with our wage agreement; secure more liberal pension administration; recognition of our committees and our organization. Then we have only to investigate the extent of our progress along these lines by way of our co-operative program, it gives us an approach to management on a great number of questions which we would not have by any other means, and while the possibilities are too great to go into any detail on this matter, I feel that I should refrain from doing so at this time, the fact that we have been working under the program for over three years now, and that today at every point where it has been in operation, the men are in hearty approval of its continuance, should be sufficient answer to those who have had no experience, but who nevertheless constitute themselves as authorities on this and all other matters which affect the worker."

The report of the secretary-treasurer, Mr. Chas. Dickie, indicated that the organization was numerically stronger than at any other period in its history with "a better and more loyal spirit prevailing amongst the membership than ever before."

Recommendations of Schedule Committee

The resolutions allotted to the Schedule Committee and its recommendations, with the action of the convention thereon, constituted one of the most important features of the sessions.

As regards the schedule amendments, the committee originally submitted the following recommendation:—

1. The incoming Executive be instructed to immediately give the Railway Association of

Canada the necessary thirty days' notice to open schedule negotiations, and press for the following amendments to the wage agreement:

2. Minimum rates of pay as follows:

(a) 85 cents per hour for Mechanics in the Basic trades.

(b) 80 cents per hour for Mechanics recognized in the Freight Carmen's classification.

(c) 40 cents per hour for Regular Apprentices as the first six months rate, with corresponding increases thereafter.

(d) 62 cents per hour for Helpers.

(e) 62 cents per hour for Coach Cleaners.

3. Two weeks holiday each year with pay.

4. Overtime rates for all Sunday work.

5. A standard forty hour week for all classes governed by our wage agreement.

The convention adopted clauses 3 and 4 without discussion. After considerable debate, Clause 1 was referred back to the committee. Subsequently, this question formed the subject of a number of resolutions, and the committee, after reconsideration, practically reaffirmed its former attitude by recommending concurrence in the following resolution:

"That thirty days notice be served on May 1, 1928, by the executive of Division No. 4, on the Railway Association of Canada, to the effect that the Division desires to open the existing wage agreement No. 6 for the purpose of amending the rules and the wage scale."

Several delegates wished to leave the matter to the executive; others were for immediate action, and finally, on a roll call vote, the committee's recommendation was adopted by a vote of 60 to 50.

Clause 2 was debated and it was decided that the clause be referred back, and the committee was instructed to bring in a report on the basis of a 40-hour week and a flat daily rate of wages. After further consideration of the wage structure, and the committee recommended the following as a minimum scale with the present differential rates to continue in effect:

	Per day
Mechanics, all trades.	\$7 50
Mechanics, other carmen.	7 10
Helpers, all crafts.	5 66
Regular apprentices—	
1st six months.	4 06
and corresponding rates, thereafter.	
Coach cleaners.	5 66

An amendment was submitted that the wage rate of 1920 be the basis of the demands, but this was defeated and the recommendation of the committee adopted.

As regards Clause 5, the convention decided in favour of reductions in working hours as

industrial conditions warrant, consistent with a continuous improvement in standards of living.

Resolutions

Among other adopted recommendations of the schedule committee were: (1) That the three shift system now worked in main shops be abolished and the two shift system be substituted; (2) That where three shifts are worked by round-house and train service men, twenty minutes with pay will be allowed for lunch period on each shift; (3) that the old rule be inserted in the agreement restoring time and one half for working, waiting or travelling to employees regularly employed in roundhouses, shops, etc.; (4) requesting a uniform type of indenture papers for apprentices of shop craft organizations with the elimination of the objectionable clause with reference to membership in trade unions; (5) urging that at all main shops a suitable place be provided for the care of injured employees with permanent nurse and certified medical attention together with the maintenance of a company ambulance; (6) re-iterating the stand of the Division for the abolition of piece work system, and instructing the officers to enter negotiations with a view to meeting the desires of the membership.

Old Age Pensions

The subject of old age pensions provided the Resolutions' Committee with a considerable proportion of its work. Considering that, "in the majority of instances the provincial governments have directly ignored the demands of the workers" for old age pension enactments, the convention adopted a resolution, concurred in by the committee, urging upon such provincial legislatures, which had not yet adopted the Federal scheme, the "immediate necessity of such protection for retired railroad employees of their province." Since the railroads had determined 65 years as the retiring age of employees, whereas the Old Age Pension Act provided for pension at 70 years, another resolution urged upon the Prime Minister to amend this age limit to conform to the railway retirement age of 65, this resolution being forwarded to the Trades and Labour Congress of Canada.

The convention adopted a resolution instructing its officers to protest to the Railway Association of Canada "the action of individual managements whereby employees of long service, regardless of their mental and physical condition, are being compulsorily retired from the service, resulting in severe hardship on the majority so retired." This resolution

also urged the officers of the Division to "do all in their power to have amendments made with a view to have the clauses objectionable to organized labour removed from the present Old Age Pension Act."

Exercise of Franchise

The convention adopted a resolution, which, after declaring that "railroads of Canada are among the chief offenders of the election laws," (through men losing time while exercising their franchise) petitioned the federal and provincial governments to impose a penalty "that will ensure the employers of labour respecting those laws governing the privileges of the workers who desire to use their franchise."

Compensation Acts

Considerable debate was occasioned by the submission of a resolution instructing the incoming executive to interview the railway authorities with a view to arriving at "some definite understanding regarding the application and administration of the various Provincial Compensation Acts, to the end that the railways will go along with the intent, purpose and spirit of the various Provincial Compensation Acts." A number of delegates felt that this was a question to be dealt with by the Trades and Labour Congress, and the convention decided to dispose of the matter by forwarding the resolution to the T. & L.C. as an indication of the decision of the various organizations affiliated with the Division.

The election of officers resulted in the following being unanimously returned to office: President, R. J. Tallon; vice-president, Frank McKenna; secretary-treasurer, Chas. Dickie. Winnipeg was again chosen as the next convention city.

Labour Educational Association of Ontario

The 26th annual convention of the Labour Educational Association of Ontario was held in Kitchener on May 24, with about 80 delegates in attendance. Mr. Otto Boll, president of the Kitchener Trades and Labour Council, extended a welcome to the delegates. Mr. William Varley, president of the association, referred to the increasing membership of the trades unions, and to the organization of the automobile workers in Oshawa, with 4,200 paid-up members, the first organization in the auto industry. In Toronto several dual unions had been absorbed by the international unions. The president also referred to the strike of the steel erection workers for recognition, and suggested that a resolution

be sent to the Federal Government regarding the right to organize.

The executive report dealt largely with the question of the proposed provincial labour paper. Several of the delegates endorsed the labour paper proposal, after which all the delegates pledged themselves to work for the success of the venture.

The auditors' report showed the books and finances to be in a satisfactory condition. During the year the number of affiliations had grown from 83 to 138 with a corresponding increase in income.

Resolutions in favour of the following proposals were adopted.

Sale of beer by the glass in Ontario;

Legislation to protect union labels;

Extension of the Ontario Mothers' Allowance Act to cover mothers with one child;

Investigation by the Dominion Government of the strike of the Toronto structural iron workers;

Transfer of the control of salaries of postal employees from the Civil Service Commission to the Federal Government;

Fixing of a minimum wage of \$15 per week for boys of 16 to 18 years of age;

Provision of training in first aid in all school grades from senior third upward;

Continuation by the Dominion Government of financial assistance for technical education;

That the association assist in organizing the common labourers throughout the province;

That the Provincial Government investigate accidents in technical schools, and that the Workmen's Compensation Board be empowered to compensate students injured in these schools;

Unemployment insurance.

A resolution from the Women's Educational Federation requesting support for a movement in favour of civil marriages was withdrawn and referred to the new executive officers, as was also a resolution in favour of the appointment of women jurors.

The convention approved of the following recommendations of the resolutions committee: Enactment of an Old Age Pension Act in Ontario;

Reiteration of the stand of the Trades and Labour Congress of Canada on immigration;

Opposition to dual labour organizations.

The following officers were elected: President, Rod Plant, Ottawa; vice-president, Larry O'Connell, Toronto; secretary-treasurer, Joseph T. Marks, Toronto; executive board, F. Ackernecht, Kitchener; Geo. Lewis, Toronto; E. J. Folwell, Belleville; Mayor Wm. Stokes, St. Thomas; Colin Cashore, Owen

Sound; R. Foxcroft, London; H. S. Asseltine, Hamilton; Donald Dear, Ottawa, and Wm. Guy, Guelph.

The convention for 1929 is to be held in St. Thomas.

Lumber Workers' Industrial Union

The Lumber Workers' Industrial Union met in convention in Port Arthur, Ontario, on March 31—April 3. Eleven delegates, representing 1,800 members, were present. The financial report and the annual report were adopted. It was decided that the *Vapaus* should be the official organ for the Finnish members of the union.

A resolution was adopted expressing the opinion that the trip of the Secretary-treasurer to Soviet Russia "had been of great importance to the organization in that it had helped to strengthen the international ties and had brought about greater unity with the economic organizations of Europe as well as with the left wing movement of the whole world."

It was also decided that the union should follow plans and resolutions made by those within the organization, "as it has been the experience in the past that any interference on the part of persons or organizations outside of the union had resulted in misunderstandings."

A resolution was adopted proposing that more attention be given to the organization of general labourers in order to get them into the union, especially in those localities where the lumbermen must look for other employment when the working season in the woods closes. It was also decided that more attention be given to organizing other nationalities than the Finnish, especially the French workers.

The delegates expressed their appreciation of the help given by the Communist Party of Canada, it being stated that the aim of the Lumber Workers' Industrial Union is to work in understanding with the party and with the Finnish organization, as well as with the left wing movement of Canada in general.

"Transport House"—New British Labour House

The Transport and General Workers' Union (United Kingdom) have published an elaborately illustrated souvenir volume to commemorate the official opening on May 15 of Transport House, now the home of the union in London. The ceremony was performed by the Rt. Hon. J. Ramsay Macdonald and the general Executive Council of the Union. The building is situated on Smith Square, Westminster, close to the Houses of Parliament, and is handsome and commodious, in

the Georgian style of architecture suited to the location. It provides a central home for labour in the heart of the administrative district of London, and will serve as the headquarters of the Trade Union Congress and Labour Party, the Workers' Travel Association, the International Textile Workers' Federation, a branch of the Co-operative Wholesale Banking Society, Limited, and several commercial banking and commercial establishments.

"The Transport and General Workers' Union," it is stated, "represents an epoch in the history of trade unionism in Great Britain. It came into being as the result of a determined effort to unite the transport workers and many other workers engaged in the producing trades who were organized in various sectional unions of a kindred character, the original members being the National Union of Dock, Riverside and General Workers; the Dock, Wharf, Riverside and General Workers' Union; Scottish Union of Dock Labourers; National Amalgamated Labourers' Union of Great Britain and Ireland; National Shipping Clerks' Guild; National Union of Docks, Wharves and Shipping Staffs; Amalgamated Stevedores, Labour Protection League; North of England Trimmers' and Teemers' Association; Labour Protection League (South Side); Cardiff, Penarth and Barry Coal Trimmers' Union; Amalgamated Society of Watermen, Lightermen and Bargemen; Weaver Watermen's Association; Mersey Watermen, and National Union of Ships Clerks, Grain Weighers and Coalmeaters."

Labour Conditions in Tropical Forests

The International Union of Woodworkers recently published at Amsterdam a pamphlet describing the unfavourable conditions of

labour which are stated to exist among the lumber workers in the tropical forests of Argentine, Brazil and the Dutch East Indies. It is intended to serve as the starting point of action by trade unions and workers' political organizations to secure relief for these workers, if possible through the agency of the International Labour Organization. The report states that the most elementary rights of man are trodden under foot by the employers in the tropical forests. It is proposed that action should be taken to limit the working period to eight hours per day, that wages adequate to secure a decent standard of life should be paid; that payment of wages in credit notes should be prohibited; that housing conditions should be made tolerable; that safe and sanitary conditions of work should be provided; and that the right of association should be recognized. The pamphlet points out that in view of the threatening shortage of wood supplies in the older timber-exporting countries, industrialists are giving more and more attention to the timber resources of the tropical and sub-tropical zones and seeking to use these to satisfy the timber requirements of the world. At various national and international forestry congresses which have been held within the last few years, there has been lively discussion of the opening up of the forests of Latin America, Asia and Africa. In view of these projected developments, it is not merely the bounden duty of the woodworkers of the advanced countries to champion the cause of the exploited workers of the tropical and sub-tropical countries; it is also a case of enlightened self-interest, for these oppressed workers threaten to compete more and more with their more fortunate fellow-workers in other countries.

TRADE UNION HOMES AND HEALTH INSTITUTIONS

AN article entitled "Union Homes and Health Institutions" by Herbert A. Spence, which appeared in the April issue of the *Canadian Congress Journal* describes the provisions made by various trade union organizations for their aged and infirm members and also for the care of tubercular members.

Carpenters' and Joiners' Home.—Mr. Spence first refers to the Home for aged members, erected by the United Brotherhood of Carpenters and Joiners of America, which is being formally opened at this year's convention of the Brotherhood. It is situated at Lakeland, Florida, the grounds com-

prising 1,684 acres, of which 594 were in grove trees, and the balance of citrus and vegetable land on which was a large amount of merchantable pine. The property was purchased at a cost of \$632,393 initial payment being made on December 15, 1923. Subsequently it was considered that a more suitable site was available on the shores of Lake Gibson, and it was decided to release 310 acres of the original purchase, and acquire the new tract of 400 acres, making the present holdings approximately 1,826 acres. In January, 1927, the general executive board let the contract for the home at a cost of \$875,000 and construction was commenced. The

Home has the appearance of a fine hotel, and in no way resembles an institution. The architecture is of Spanish design, and there is accommodation for 400 residents, the building being so planned that its capacity may be doubled if necessary. Full details of the building are given in the *Congress Journal*. The original plans call for the construction of a casino, boat house and band shell on the lake, and game courts, a croquet and bowling green. There are 50,000 citrus trees on the estate, and more than 8,000 boxes of fruit had been shipped prior to December 1, 1927. It is planned to add strawberries and other crops in order that eventually the institution may become self-supporting.

Conductors' Home.—The Home for aged and disabled members of the Order of Railway Conductors, at Savannah, Georgia, was formally dedicated on November 10, 1927. It is situated on an island ten miles from the city, whose citizens gave one hundred acres of land and \$20,000 toward the enterprise. The Home is an attractive structure of Georgian architecture, and represents an investment of approximately \$350,000, the entire building and fittings being constructed by organized labour. The main building is 250 feet in length with two wings 108 feet deep, containing sixty-seven bed-rooms. The second floor of one wing is entirely taken up with a completely equipped hospital. As a contributing factor toward making the Home largely self-sustaining, the board of directors purchased a plantation of 3,650 acres at Albany, Ga., peculiarly adapted for the culture of pecan trees, of which over 25,000 have been planted, with several thousand more to be added. With the additional cost of acquiring the plantation the total amount expended in building the home, clearing and improving and landscaping approximated \$600,000.

Brotherhoods' Home.—A union institution of long standing is the Highland Park Home, Illinois, which has been functioning for thirty-seven years under the joint ownership of three of the Transportation Brotherhoods—the Brotherhood of Locomotive Engineers, the Brotherhood of Locomotive Firemen and Enginemen and the Brotherhood of Railroad Trainmen—the Home being operated by a board of directors of equal representation from the three organizations. The building was remodelled and extended in 1924, and at the present time the structure with grounds and equipment is valued at over \$400,000. The main building has four floors, and there is a hospital section with sixteen beds. The Brotherhood of Firemen and Enginemen cares for its tubercular members by making provision whereby those so afflicted have a choice

of benefits of \$75 per month if they remain at home, or of treatment at the nearest sanatorium at the expense of the Brotherhood, together with cash benefits of \$15 per month for personal expenses while confined to the institution. Provision is also made for its tubercular members by the Brotherhood of Railroad Trainmen, which arranges for treatment, unlimited as to time, in any sanitarium to which the member wishes to go.

Union Printers' Home.—One of the largest investments in this phase of union enterprise is that involved in building and maintaining the home and the sanitarium established by the International Typographical Union. The cost of this undertaking to May 31, 1923, amounted to \$2,828,025. It is maintained by members of the Union through payment of a *per capita* tax of 40 cents per month. The home for the aged, invalid and infirm members is situated on an eminence overlooking Colorado Springs, Colorado, and commands an extensive view. It is a four storey structure of white lava stone with red sandstone trimming 300 feet long by 50 feet wide with two wings and contains 190 rooms. Because of the prevalence of tuberculosis in the printing trade, it was decided in 1896 to build in addition a Sanitarium. At first a two storey structure was built and in 1904 an additional floor was added. The demand for accommodation increased, and in 1907 a building called the "solarium" was built. In addition there is a tent colony which has aroused wide interest because of its equipment and service.

Printing Pressmen's Home.—A somewhat similar program has been developed by the International Printing Pressmen and Assistants' Union, which has established a community of institutions known as the "Printing Pressmen's Home," Tennessee. These institutions are on an estate of 2,200 acres, and consist of a sanitarium with accommodation for 200 tubercular members; a home for aged and incapacitated members with accommodation for 350 members; and a Technical School equipped with printing presses and machinery valued at \$580,000, together with an hotel for the accommodation of visitors. In order to provide additional accommodation for the widows and orphans of members, the delegates to the 1926 convention pledged a considerable sum of money to be paid over a period of three years.

Stereotypers' Home.—The "Costello home" is described as a cottage colony for tubercular patients on the outskirts of Denver, Colorado, and it is operated by the Denver Local Lodge of the International Stereotypers and Elec-

trotypers' Union of North America. Only members in good standing of the Stereotypers and Electrotypers' Union, suffering from tuberculosis, and whose condition appears to be capable of improvement, are admitted to the Home. The present value of the institution is estimated at \$6,500.

Ladies' Garment Workers.—Mr. Spence refers to the movement as a sequel to the great strike of workers in the cloak and suit trade in New York which occurred in 1910. Among the clauses in the "protocol of Peace" was one establishing a Joint Board of Sanitary Control, which was to undertake the task of setting sanitary standards for the industry and to enforce these by its own efforts. In 1919, the New York City local branches of the International Ladies' Garment Workers' Union decided to take over the medical and dental clinics established by the Joint Board of Sanitary Control, and to organize these clinics into a separate institution under the name "Union Health Center." For this purpose, the Union Sanitarium Association was incorporated, and a three storey and basement building located at 131 East 17th Street, New York, was purchased. The total investment in the building and its equipment on January 1, 1924, was \$112,456. This Union Health Center operates several departments including a health school, a health forum, a health exercise class and a medical department with its general and special clinics, treatments, X-rays and laboratories, etc. During the early part of 1928, a new regulation was adopted whereby unemployed members of labour organizations may be treated free of charge at the Center if recommended by the secretary of their union. It is now pro-

posed to convert the Union Health Center into a Health Center for Organized Labour, and a conference to discuss this proposal was held on March 30, 1928, at which the various labour organizations of New York City were represented.

The Workers' Unity House is a vacation centre, located at Forest Park, Pennsylvania, on the shores of a lake, and the enterprise is owned and operated by International Ladies' Garment Workers' Union. It consists of a large house surrounded by twelve cottages, and here the members of the union are given vacation opportunities with every comfort and convenience at low cost. In addition educational advantages are provided.

Locomotive Engineers' Health Service.—One of the concluding features of the article is the outline given of the health department of the Brotherhood of Locomotive Engineers established under the direction of its insurance and health organizations. This department gives its membership a health protection service by means of periodic urinary analysis in addition to giving advice on health questions by a competent medical adviser. It is stated that because of the sedentary nature of an engineer's work the Brotherhood's insurance department found that a large number of their death claims arose from preventable diseases which could be corrected by proper medical attention.

In addition to the Homes and Sanitariums solely owned and controlled under trade union auspices, there are a considerable number of such institutions which derive a large proportion of their support from labour organizations.

NOTES ON VOCATIONAL TRAINING AND APPRENTICESHIP

A Mechanical Drawing Course

The following description of a mechanical drawing course prepared by Mr. C. H. Montrose, of the Windsor-Walkerville Technical School, appeared in the *Windsor Star* of May 26. It will be of interest to mechanical drawing students and teachers throughout Canada.

In the technical schools mechanical drawing refers to the drawing of lines by the use of instruments to illustrate some work of engineering. It has been defined as the universal language of the industrial world, a graphical language by which the designer enables the artisan to construct a piece of work without verbal instruction. The writer of this language, the draftsman, must be skilled in both reading and writing this language, while the artisan must be able at least to understand or read it.

The work of the draftsman is divided into groups. First, there are the designers, who have by far the most difficult work to do. This is confined to a relatively few highly trained and long experienced men possessing scientific mathematical and engineering training, together with a specialized experience gathered in the particular class of mechanism to which the designing relates. Second, there is the work of the juniors who take instruction from the chiefs and elaborate the smaller details and complete the drawings.

The character of the drawings used include the general drawings or those which show the mechanism complete and the detailed drawings which illustrate portions isolated from their connections and related parts. The detailed drawings contain all the information necessary

for their construction whether it be in the pattern shop, forging shop, machine shop or in the field.

Drafting may be divided into two general groups, mechanical and architectural, but the work of the draftsman is highly specialized even in these two groups. In the mechanical group the demand is for experts in some one branch such as conveying machinery, hydraulic machines, electric machinery, automotive equipment and equipment for industrial plants. In the architectural branch the field for specialists is equally as large. These are structural steel, reinforced concrete, steel sash, architectural stone and many other related classes of work such as plumbing, heating and ventilating, electrical, elevators and escalators.

Unlike art drawing, a mechanical drawing requires no natural intuition although some may show a natural adaptability to it. Training is the essential qualification coupled with a keen observation. The draftsman is limited to outline alone in his drawing and must give exact and positive information regarding every detail of the machine or structure existing in his imagination. Thus, drawing to him is more than pictorial representation, it is a complete graphical language, by whose aid he may describe every operation necessary. His practical knowledge of shop work, such as pattern-making, forging, welding and machine shop practice will enable him to do this intelligibly and expertly.

The draftsman's drawing does not show an object as it would appear to the eye, consequently his drawing can be read and understood only by one trained in the language. Thus as the foundation upon which all designing is based, mechanical drawing becomes one of the fundamental courses in a technical school. It is not a subject to be learned by a comparatively few draftsmen who will be professional "writers" of the language, but should be understood by all connected with or interested in technical industries and the training its study gives in quick accurate observation and the power of reading description from lines is of great value.

The drawing course, covering four years, was laid out primarily to be of help to those boys entering the trades but many of our graduates have found the training broad enough to enable them to accept positions as draftsmen. Graduates are employed as mechanical draftsmen with the following companies; Motor Products, Ford Motor Co., Detroit; Michigan Valve Co., Bull Dog Electric Co., Otis Elevator Co., Detroit Lubricator, Burroughs Adding Machine Co., Kelvinator, Locke Pattern Works. Graduates are employed as

architectural draftsmen with: Albert J. Lothian, Architects; Standard Cut Stone Co., Trussed Concrete Steel Co., Jacques and Allaster.

No drawing of purely an exercise nature is offered in the teaching of drawing in the school. During the first year all students take the same work. A series of graduated problems is worked out to give training in the use of instruments, scale reading and elementary projection. Use of fractions and decimals are required in these problems and the correlated work of the various shops is introduced.

Students are allowed to specialize after the first year in either mechanical or architectural drawing, along with some related practical work.

Progress in Printing Education

In an article appearing in a recent issue of the *Typothetæ Bulletin*, Mr. Fred J. Hartman, director of the department of education of the United Typothetæ of America, describes the progress of printing education. Less than a quarter of a century ago, he says leading men of the printing industry honestly believed that not much could be expected from schools towards the solution of the training problem of that industry. Less than ten months ago that same group, almost to the man, recommended the action that established a permanent endowment fund of \$225,000 at the Carnegie Institute of Technology in the interest of printing instruction in North America. What caused this radical change of front? The answer is a story of an industry, basically educational, finding its place in the educational sun. Like most worth-while movements in education, printing education had its beginning outside of the organized system. The employer, recognizing his time-honoured responsibility to the apprentice, launched a plan of training that involved real pioneering, at a large expenditure of time, money and effort. A comprehensive program was worked out, reaching from the apprentice to the executive, that has been scarcely duplicated by any other industry. The employee, through an organized effort within his own ranks, requires each apprentice to take a compulsory course of instruction by correspondence, while actually working at the job. The manufacturer of printing equipment called in the educational and research specialist and has made a real contribution to educational advancement. The printing trade journal has always been a powerful exponent for a better trained apprentice, craftsman and executive. Just recently the printing house craftsmen move-

ment, made up largely of the shop executives, came along with its slogan, "Share Your Knowledge," and is developing an unique campaign of education that will have a far-reaching effect. In other words, the entire printing industry is alert and actively promoting training in and for the industry.

When the industry began its training program about twenty years ago, schools of printing were almost unknown. There were two schools, one in Boston, and another in Indianapolis, both private enterprises and in no way related to organized education. In 1912 it is claimed there were fifty-seven school printing plants in America. To-day a conservative estimate placed the number at twenty-five hundred, nearly all of them a part of the organized educational system of the country. In the elementary school, printing is a manual training subject, in the junior high school it is a pre-vocational subject, in the technical high school and trade school it is a vocational subject, in the academic high school it is a cultural subject, in the normal school it is a teacher-training subject,

in the college and university it is an engineering and art subject. It is estimated there were no fewer than 150,000 pupils enrolled in printing classes in the United States last year, or about one to every 165 of the school-going population. There are possibly three thousand teachers devoting their whole time to printing instruction. The investment of printing equipment in the schools of printing in the country is probably close to twenty millions of dollars.

Printing education to-day is not taking any less interest in its training problem, but is gradually putting the full weight of its influence and helpfulness back of organized education. The printing teacher, originally a skilled craftsman only, through special training and experience in teaching, is rapidly rising up to the level of the professional pedagogue. Printing teachers all over the country are organizing into state associations and affiliating with the larger educational associations such as the American Vocational Association.

Unemployment Insurance in Germany

The German Department of Unemployment Insurance and Labour Exchanges recently published its first quarterly report of receipts and expenditures. The provisions of the act which established this department were outlined in the *LABOUR GAZETTE*, October, 1927, page 1059. The Unemployment Insurance Act, promulgated on July 16, 1927, came into force October 1, and the report refers to the last three months of 1927. The average number of workers contributing was 15,810,000, and the average number of persons in receipt of unemployment benefit or employed on relief work was 780,000. The total number of insured persons was thus 16,590,000.

Of the 780,000 persons in receipt of benefit, 580,000 received ordinary insurance benefits, 150,000 received emergency allowances, and 50,000 were employed on relief work. Persons in receipt of insurance benefit or emergency allowance also receive family allowances in respect of persons dependent on them. The average number of dependent persons was 770,000. The average amount of benefit received (per worker) was 76.81 marks.

The receipts for the quarter amounted to 196,000,000 marks, of which 190,000,000 was derived from the contributions of insured persons and their employers, being equivalent to an average monthly payment of 4.02 marks per insured person.

The expenditure for the quarter amounted to 146,000,000 marks, of which 122,000,000 went in unemployment benefit, 7,000,000 was devoted to measures calculated to prevent or reduce unemployment, and 17,000,000 was taken up by the cost of administration, including unemployment exchanges. The emergency relief provided for by the Act and contributed by the State and local authorities amounted to 33,000,000 marks.

The total assets of the twenty-two district offices, through which the Act is administered, on December 31, 1927, amounted to 173,000,000 marks, of which 125,000,000 went to make up the National Reserve Fund.

The Attorney General of the Province of Alberta has instructed the provincial police that a better observance of the law in respect to Sunday work is to be required in future. He pointed out that under the extreme weather conditions that have prevailed at critical periods of the past two years considerable leniency in regard to the Sunday law has been exercised, because a certain amount of Sunday work was unavoidable. This is not, however, to be taken as establishing a precedent, and the law still stands. An effort is now being made to appeal to the interest and good judgment of the general public in the direction of better observance of the day of rest.

COMMITTEE'S REPORT TO PARLIAMENT ON IMMIGRATION INTO CANADA

THE House of Commons Select Standing Committee on Agriculture and Colonization presented a report to the House on June 6, on the Immigration Act and regulations thereunder, and on the general subject of immigration. In order to remove existing misapprehensions regarding the admission of intending settlers the committee give a brief summary of the rules now governing immigration, particularly that from the United Kingdom. It is pointed out that emigrants from the United Kingdom stand in a specially favourable position as compared with emigrants from continental countries, not only with regard to general passage rates, but particularly with respect to the greatly reduced rates given to agricultural and domestic workers from the United Kingdom. In this connection the report describes the 3,000-Family Scheme, under which the British Government advances cash to emigrating families for stock and equipment, up to a maximum of \$1,500, the Dominion assisting by way of selection, settlement and supervision free of charge; and the British-Dominion-Provincial Land Settlement Scheme, under which the provincial government provides the farm, and the British and Canadian governments contribute as in the 3,000-family scheme. The latter scheme has been adopted by two provinces and negotiations with a third are now being carried on. Mention is made of the arrangements for the training and placement in farm homes of selected boys, who are brought out free of charge and placed on training farms in Canada at the expense of the three governments acting jointly; and of the land settlement plan under which the British Government advances loans to boys who have acquired the necessary experience in farm work. As illustrating the special efforts put forward to encourage British immigration, it is shown that the Canadian Department of Immigration spends in this work \$16.67 for each British immigrant as compared with an average cost of 11 cents per head for immigrants from the continental countries.

The committee generally approves of the new system of medical inspection of intending immigrants before their departure from the country of their origin. They recommend however that medical examinations of prospective emigrants, especially those belonging to rural districts, should be made by local British doctors paid and supervised by the Canadian medical authorities. It is recommended that the existing arrangements for encouraging the immigration of juveniles and

domestics should be continued, and that assisted passages should be extended to the families of immigrants already in Canada. The committee proposes that a conference between the British and Dominion Governments and the steamship companies should be held for the purpose of securing a reduction in ocean rates to about £10 for each immigrant. The committee also recommend that measures be taken to ascertain whether the railways will restore the homeseekers' rates in effect prior to the war, making such rates effective eastbound as well as westbound.

The committee further recommend, subject to the completion of satisfactory arrangements of the provinces, that assistance equal to that given by the British government to British emigrant boys be extended by the government of Canada to the Canadian youth who are trained in agriculture.

The following recommendation is made in regard to "employment permits":—"that letters of assurance of employment shall state the names, addresses, occupations and nationality of the persons to be admitted and that an annual return be made by the Minister of Immigration to Parliament within thirty days of its meeting, giving particulars of all such letters, showing the names of persons so admitted, their addresses, occupation and nationality, the names and addresses of the persons who made application for each such admission and of any other person who endorsed or made favourable representation in support of such application."

The committee expresses doubt as to the practice of giving the railway companies special authority to recruit immigrants.

The report concludes with a recommendation to the government to make "an intensive study of the possibilities of increasing industrial and agricultural development in Canada with a view to attracting capital and providing wider and increased opportunities for employment not only for our own people, but for our prospective immigrants."

The motion to adopt the report was debated in the House of Commons on June 7, and was agreed to on division, the report being concurred in.

Canadian airmen have set up a world record in their own special line of aerial survey. Some 200,000 square miles of unexplored territory have been mapped in five years, which is equivalent to circling the world eight times with a mile-wide strip photographed.

REPORT OF CANADIAN COUNCIL OF CHILD WELFARE ON JUVENILE IMMIGRATION

THE Canadian Council on Child Welfare has recently published under the title, "Several Years After," an analysis of the histories of a selected group of juvenile immigrants brought to Canada in 1910 and in 1920 by British emigration societies. The study is confined to a group of 400 children arriving in Canada at a given time. It is stated that "owing to the nature of the problem, the inadequacy of information and the attitude of certain of the larger Oversea Juvenile Emigration agencies, it has been impossible to make this study as complete, or intensive, as it was hoped that it would be. It has afforded a discerning glimpse, rather than an intensive examination, or survey, of a cross-section of this movement."

Findings.—Among the twenty-four findings or conclusions of the report are the following:

For children who are physically and mentally sound, industrious and ambitious, and have developed normal moral stamina and self-control, life in Canada offers greater opportunities than in Great Britain at the present time, but for those not so equipped, even with all the safeguards provided, migration and settlement in this country is a hazardous undertaking.

The best work that has been done in this field is that being carried on by the smaller units operating in a limited area, with a superintendent thoroughly familiar and sympathetic with Canadian conditions and attitudes, or working with and through a Canadian committee.

The largest units engaged in the work have been responsible, to a great extent, for the criticism directed against this form of immigration, the number of runaways, misplacements, early disappearances and deportations conspicuous among the wards of the larger agencies.

There has been an undoubted addition to Canadian social problems through this form of migration; this addition cannot be expressed by any fixed percentage, and while not typical of the whole movement, has occurred in a greater proportion than the Oversea Juvenile Emigration Societies suggest.

The majority of the boys are more inclined to and adapted for industrial than agricultural work, and ultimately secure positions in the cities and towns.

Rarely has there been any demand for children for legal adoption, even when very young children were being brought to Canada.

The demand is primarily for children, who will "help," "chore" or "work about the place," and in the past many young children were exploited, while those, a little older, were frequently over-worked.

For the most part, little effort has been made to fit the individual children to their foster homes. The emphasis has been rather on finding a child for the home than a home for the child.

Generally speaking the Oversea Juvenile Emigration agencies do not allow an adequate measure of control of Canadian work to the Canadian branches; on the part of some agencies there is discernible a spirit of antagonism and antipathy towards any measure of Canadian control in the matter of policy in the Canadian end of this work.

There is also discernible in some cases a disregard of Canadian administration and of Canadian standards and opinions in the child welfare field.

Recommendations.—The main recommendations contained in the report were as follows:

1. More adequate safeguards should be provided for the selection of juvenile immigrants overseas.

2. More adequate safeguards should be provided for the handling of the children in Canada.

3. Steps should be taken to develop better contact and understanding between Old Country and Canadian interests.

4. The movement should be frankly recognized as one of supplying agricultural and household help in Canada and should be limited to children suitable for that purpose.

5. The legal status as to the guardianship of the children in Canada should be determined.

6. The migration of the better type of British young people should be developed as a hopeful and constructive solution of Canada's need for increased population.

The Bureau of Statistics and Information of the State of New York reports that 145 workers died from industrial accidents during April. This number included five women and three children. Infection following accidents caused seventeen deaths during the month. Some of these accidents were serious in themselves, such as fracture, but most of them were minor injuries, such as cuts or bruises. Failure to take care of them properly allowed infection to set in, resulting in the worker's death.

TRUSTS AND TRADE ASSOCIATIONS IN GREAT BRITAIN

A CHAPTER on "Trusts and Trade Associations" in the recent British publication "Britain's Industrial Future"⁽¹⁾ is important as indicating changing attitudes in Great Britain toward the question of government control or regulation of industry. The general subjects treated are indicated in the following headings of its five sections: The Condition of British Industry, The Organization of Business, Industrial Relations, National Development, National Finance.

The following summary is given of the chapter on Trusts and Trade Associations, which forms part of the section on the Organization of Business:—

"1. *The Problem of Monopoly.*—The instinctive public distrust of monopolies is well founded, because it is competition which has passed on to the consuming public, in the form of low prices, the results of industrial and economic progress. It is, however, useless to-day to attempt to restore the old conditions of competition, which often involved waste of effort and prevented full advantage being taken of large-scale production. In modern conditions some degree of monopoly is, in an increasing number of industries, inevitable, and even quite often desirable in the interests of efficiency. The progression from purely private Individualistic enterprises to the Public Concern is a gradual one. We must try to find room for large-scale semi-monopolistic private concerns. A monopoly, held in check by its vulnerability against concerted action by consumers, may serve the public well and offer many of the advantages of free competition simul-

taneously with the economies of concentration. But publicity is the necessary condition for the right use by the consumer of his ultimate weapons.

"2. We recommend, therefore, that large Public Companies controlling more than 50 per cent of a product within Great Britain should be registered as a Public Corporation and should be subjected to specially stringent provisions of publicity.

- (i) It should be subject to inspection by the Board of Trade, with power to the latter to report.
- (ii) In the event of abuses coming to light, the procedure of investigation and control recommended by the Committee on Trusts should be followed, including the establishment of a Trust Tribunal.

"3. *International Cartels.*—International Cartels should not be indiscriminately attacked. But they are capable of developing into dangerous monopolies, and should be closely watched. The best remedy against the abuse of such agreements is, as in the case of National Agreements, full publicity.

"4. *Trade Associations.*—Where a trade Association comprises more than 50 per cent of a trade or industry it should, generally speaking, be incorporated and be subjected to special rules as to publicity and the preparation of statistics. On the other hand, since cases may arise where a small minority of any industry may legitimately be required to conform to the rules which the majority have imposed on themselves, we recommend that, in special cases and subject to special safeguards, an Incorporated Trade Association should be allowed to apply for the Association rules to be enforced throughout the industry."

(1) "Britain's Industrial Future, being the Report of the Liberal Industrial Inquiry," published by Ernest Benn, Limited, London, England, 1928, 2s. 6d. net. A brief summary of this report was given in the LABOUR GAZETTE, March, 1928, page 276.

"FACTORS IN INDUSTRIAL EFFICIENCY"

Reports on a Survey of Industries by British Committee on Industry and Trade

THE Committee on Industry and Trade appointed by the Labour Government of Great Britain in 1924 to inquire into and report upon the conditions and prospects of British industry and commerce recently published the second part of their report, entitled "Further Factors in Industrial and Commercial Efficiency," of which the first part appeared early in 1927. This committee also

issued, in 1926, a "Survey of Industrial Relations," which was summarized in the LABOUR GAZETTE, June, 1926, page 532.

Factors in Industrial Efficiency

Part I of the report on "Factors in Industrial and Commercial Efficiency" published in 1927, opens with a chapter on the structure of industry, beginning with an account of com-

binations among manufacturers and commercial organizations. The history of this movement in Great Britain is given, with reference to similar conditions in France, Germany and the United States, and to international combinations. This chapter contains also a brief account of the history and present standing of the co-operative movement in Great Britain, and of joint stock companies.

The next subject dealt with is industrial training and recruitment. This chapter was outlined in the *LABOUR GAZETTE*, April, 1927, page 412. "Standardization" is the subject of the next chapter, an account being given of the standard units of measurement of governmental and voluntary standards now in existence, with mention of the position of industrial standardization in the Dominion and in other countries, including the simplification movement in the United States. Another chapter describes the assistance given by the state to industrial research work since the establishment of the Department of Scientific and Industrial Research in 1916, and reviews the work of the research associations and other existing agencies for this purpose. The British Institute of Industrial Art contributes a memorandum on the present position of British industries in respect of industrial art. Special post-war difficulties are discussed in another chapter and Part I concludes with a collection of material on the profits of industry and trade, national savings and charges upon industry, the latter heading comprising local rates, social charges (i.e. for health and unemployment insurances and workmen's compensation), and railway transport.

"New Factors"

The new volume describing "New Factors in Industrial Efficiency" completes the series of general memoranda contained in Part I, the subjects dealt with including industrial output, costs of production and distribution, over capitalization in industry, transport facilities, industrial fluctuations, and public trading enterprise. The volume also includes an introduction by the committee which covers the contents of the parts of the report which are to appear in the future, consisting of special surveys of particular industries.

The first subject discussed by the committee is industrial output and power, with special reference to the preliminary results of the Third Census of Production, taken in 1924, most of which have now been published. The committee point out that the increase in the average volume (as distinct from money value) of net output per head between 1907 (the date of the only previous complete cen-

sus) and 1924 was relatively slight, in spite of an increase of about 75 per cent in the power capacity at the disposal of industry in the interval. Some of the possible reasons for this disappointing result are discussed.

The slow increase in productivity per head of the population is found to contrast unfavourably with the marked increase in the United States during the past twenty years. The low figure is partly accounted for by the inclusion of the coal mining industry in the British estimate of production per head.

The next chapter deals with the cost of production. Taking first the comparison of total costs in the pre-war and post-war year, the committee find a very wide range of divergence, both as between different industries and within the same industry; but it is possible to infer that the average rise of industrial costs in the great exporting trades between 1913 and 1925 has been in the neighbourhood of 80 to 90 per cent. Looking at the differences between examples from different industries, it is found that the total costs, as compared with 1913 (=100), range from 120 (heavy oil engines) and 133 (blasting explosives) to 275 (Egyptian cotton spinning). Of the groups of trades, the textile group, with an average of 225, shows much the highest rise; while shipbuilding (147), iron and steel (162), general engineering (166), and chemicals (174), show the lowest rates of increase.

The committee next analyze the figures relating to wages costs. They note first the widely different percentages of total cost of production which are represented by wages of labour employed (directly or indirectly) on production in different industries, and in different undertakings belonging to the same industrial group. The figures indicate that, in the cost accounts of the great exporting trades as a whole, the average proportion borne to total cost by the wages of labour employed directly or indirectly on production is in the neighbourhood of 30 to 40 per cent (not including the element of wages contained in other items of cost, such as materials). The highest percentage found for any important industry in 1925 was that for coal mining (70.7). Among the lowest percentages were coke (about 9) and basic pig iron (10), the predominant reason in these cases being the high proportion of cost due to raw materials.

The committee then inquire into the movement of labour costs as between 1913 and 1925, both absolutely and in relation to the movement of total costs. They find that, on the average, the wages cost of production in the instances examined has increased in the interval by about 90 per cent. In the group comprising the coal, iron and steel, ship-

building, and general engineering trades the increase has been somewhat less (between 80 and 85 per cent); while the textile and clothing groups show increases between 90 and 115 per cent, and the chemical group (including dyes, explosives, and soap) comes highest with an increase of 129 per cent.

The committee in discussing the increase in the "real" cost of labour finds a partial explanation in the reduction in the length of the working week which occurred between 1913 and 1924. This reduction in hours of labour averaged about 10 per cent, and "generally speaking it seems clear that it has not been fully offset by increased productivity per hour." The cost of salaries per unit of output was found to have doubled or trebled its amount during the same period.

As regards costs of distribution, the figures given by the committee suggest that, subject to wide deviations in individual commodities and trades, about a third of the retail price of commodities goes to the wholesale and retail distributors, and the remainder to the producers and transport agencies.

On the subject of the general effects of over-capitalization on costs and prices, and generally on the successful conduct of industrial enterprise, the committee reach the conclusion that "the evils so widely attributed to over-capitalization are very real and serious; though not of the kind commonly supposed." They proceed to discuss what, in their opinion, are the actual effects of over-capitalization. In a chapter dealing with industrial fluctuations, the committee remark that the course of the economic history of the last 100 years has been largely dominated by periodic wave movements, or "trade cycles," and, while taking due account of the part played in such cycles by monetary causes, they show that psychological causes occupy a very important place. They urge the immense importance of taking all practicable steps to diminish the causes of "irrational aberrations of judgment," by providing the most complete and accurate information bearing on the trend and prospects of productive activity.

Labour Conditions in Canadian Government Merchant Marine

The Minister of Railways and Canals, in reply to a question in the House of Commons on May 28, as to working conditions in the Canadian Government Merchant Marine, gave the following information:—

The rates of pay for British mercantile marine steamers, similar in type and tonnage to the ships of the Canadian national steamships, were taken as a guide, but increases were added thereto when fixing the wage scales of the Canadian national steamships.

Officers whose services are satisfactory are assured of continuous employment, except when steamers are laid up. Officers are given leave, which is mutually arranged and taken either wholly or in parts, to suit the convenience of the company and ship.

Sailors are paid off at the end of each voyage, and if they do not care to remain in port until the ship's next date of departure, they are given the privilege of joining another ship, if one is available.

The ship's articles contain a victualling scale similar to that of the British Board of Trade, but in practice the officers and crew are victualled on a better scale, which has given general satisfaction.

A few complaints have been received from some members of the crews sailing from Vancouver, but after investigation it was found

that such complaints had no foundation and were the result of some petty grievance of the men with the officers. No complaints of any kind have been received from members of the crews sailing from Atlantic coast ports.

The welfare activities of the organizations comprised in the Montreal Council of Social Agencies during the year 1927 are detailed in the annual report of the Council, recently received in the Department. A review of the work of this body appeared in the *LABOUR GAZETTE* for May, 1925, pages 464-466. For the purpose of co-ordinating various social efforts, the existing organizations are amalgamated in a Financial Federation. The chief objects of the Montreal Council of Social Agencies are to promote co-operation in meeting problems of common interest, to develop plans for social betterment, and to create an intelligent public opinion as to social problems. The campaign fund, collected annually by the Financial Federation, amounted to \$514,767.29 in 1927, and this sum was apportioned among the 31 agencies forming the main organization.

LEAGUE OF NATIONS INTERNATIONAL LABOUR ORGANIZATION

Eleventh Session of the International Labour Conference

THE Eleventh Session of the International Labour Conference opened in Geneva on May 30 and continued into June. The Conference was still in session as the present issue was going to press. It is hoped to deal fully in the next issue with the proceedings of the Conference in a special article.

Governing Body of the International Labour Office

The 39th Session of the Governing Body of the International Labour Office was devoted mainly to the consideration of two important questions: first, the procedure for the revision of conventions in general and the special proposal of the British Government for revision of the Hours Convention, and, secondly, the budget of the Organization for 1929.

As regards the general question of the revision of Conventions, the discussion turned mainly on the desirability or otherwise of limiting the scope of any possible amendments to conventions. The Governing Body eventually arrived at decisions which would enable it, after consulting the governments of the states members, to define the precise points to be considered by the conference. The British proposal with regard to the amendment of the Hours Convention was briefly considered, but, on the suggestion of the British Government representative, any decision on it was postponed to the next session of the Governing Body.

The budget of the Organization for 1929 was fixed, after thorough examination, at 8,657,280 francs; deducting the estimated receipts from sales of publications, the amount to be contributed by the fifty or more states members is 8,487,280 francs. This figure represents an increase on the amount for the current year, mainly due to the holding of two conferences in 1929, to automatic increases under various headings, and to increase of staff occasioned by the growth of the work of the office, particularly in respect of ratification of conventions and of translation. In considering the estimates, the Governing Body and its finance committee were guided by the principle laid down some time ago that it was their duty "to give to the Office, as a living organism, the means required for its natural development, without imposing on the States a burden incompatible with the obligation to economize which rests upon them."

Report on Wages and Hours of Labour in Coal Mines

The International Labour Office has completed its enquiry into wages and hours of work in coal mines. The report embodies in a volume of some 300 pages the first complete attempt ever made to compare, on an international basis, the remuneration and hours of labour of miners.

The inquiry was undertaken as the result of a resolution of the seventh session (1925) of the International Labour Conference. It was conducted throughout under the supervision of a special committee of the Governing Body of the Office, consisting of two representatives of each group—governments, employers and workers. The task was one of obvious difficulty, having regard to the great variety of methods employed in different countries to calculate the length of the underground workers' working day, and also to the divergent conceptions of what constitutes wages. The scientific services of the Office, however, have succeeded in reducing the different interpretations to a common denomination, and arriving at statistics which are properly comparable.

The report contains complete information, for the chief coal-producing countries of Europe and for the year 1925, as to the average hours of labour, the total earnings of coal miners, the total number of shifts worked and lost, the average number of workers employed, and finally the total and average output of coal, and, on the basis of this extensive material, calculates and compares the real wages of miners in the various countries and their earnings per ton of coal produced. Supplementary information is given in appendices for non-European countries, and for the years 1926 and 1927, which, for reasons of method, could not be included in the comparative study.

Improvement of International Labour Statistics

Tribute is paid to the statistical work of the International Labour Office in Part II of the "Survey of Industries" recently issued by the Committee on Industry and Trade set up by the British (Labour) Government in 1924. (This report is reviewed on page 631).

In a passage dealing with international statistical information, the report says:—

"The statistics produced by the Ministry of Labour have already been, and will continue to be, influenced by the exchanges of views and the decisions of the three International Con-

ferences of Labour Statisticians convened by the International Labour Office in October 1923, April 1925, and October 1926. In the main these Conferences recommend methods of collection, treatment and publication similar to those already in use in this country, but where methods different from the British method were recommended, changes are being and will be made in British methods to bring them into line with the agreed international standard whenever that can be done without impairing the domestic utility of British labour statistics.

"The International Labour Office has done much to make easy of access, so far as possible in a comparable form, the principal labour statistics of the leading industrial countries. Its publications provide valuable surveys of international labour statistics which were not formerly available, and its periodical issues of overseas labour information enable developments in regard to labour matters abroad to be conveniently followed. In addition, the recommendations of the three international Statistical Conferences appear to have had valuable results in stimulating other countries to

improve and extend the collection and publication of social statistics."

Referring to the International List of Causes of Death, the report states that:—

"The Department of the Registrar General for England and Wales has been in touch with the International Labour Office regarding the establishment of an improved industrial classification for international purposes."

Occupation and Health

Two further instalments of the Encyclopaedia of Hygiene, pathology and Social Welfare entitled "Occupation and Health", published by the International Labour Office, have just been issued, dealing with the point of view of labour, industry and trade. They cover the following subjects: Electricity (Industrial Hazards Caused By); Flax and Linen Industry; Phosphoretted Hydrogen; Goggles; Hemp Manufacture; Odours; Arsenobenzol; Artificial Flowers; Artists; Liftmen; Stone Industry; Sulphate of Soda; Sulphuretted Hydrogen; Nitrogen; Aminophenols; Anisidines; Anthraquinone; Antimonjuretted Hydrogen and Apoptropine.

Wages and Hours of Labour in Pennsylvania

The Department of Labour and Industry of Pennsylvania recently published a special bulletin on "Union Scale of Wages and Hours of Labour, 1926," containing numerous tables and charts. All trades taken collectively as of May 15, 1926, show an average hourly wage rate of \$1.002. This is a 3.4 per cent higher rate than in 1925, a 5.5 per cent increase over 1924, 13 per cent above the 1923 rate, 17.3 per cent more than in 1922, and 11.6 per cent higher than the average rate in 1921. With the exception of the building trades there are only 14 instances where rates for individual trades exceed the \$1.002 average.

An analysis of the hours of labour reveals that out of 1,131 rates examined, 893, or 79 per cent, specify 8 hours or less as the maximum working day; 183, or 16.2 per cent, permit 9 hours or more than 8 per day; and in only 55 instances, or 4.8 per cent, was the maximum fixed at 10 or more than 9 hours per day. Not a single agreement permitted work in excess of 10 hours per day. The 44-hour week is not so generally observed as the 8-hour day. A Saturday half-holiday in effect all the year was observed in only 37.7 per cent of the schedules. In many cases, however, a Saturday half-holiday is provided during the summer months.

The report expresses the opinion that "any radical changes from the existing general wage levels seem very remote. In the light of the recent favourable consideration given the 5-day, 40-hour week it will be interesting to learn whether the revision of the union agreements in 1927 will not be based primarily upon hours of labour rather than upon wage rates."

A ballot of the miners in Nottinghamshire, England, was taken on May 6 for the purpose of ascertaining which of two unions they wished to represent them in trade union negotiations in the future. The contending unions were the Notts Miners' Industrial Union (the Spencer Union), which was recognized and supported by the employers, and, on the other hand, the Notts Miners' Association, the older union. The vote of the men was as follows: For the Notts Miners' Federation, 32,277; for the Notts Industrial Union, 2,533. The Notts owners having declared that the miners were free to join whichever union they preferred, the General Council of the Trades Union Congress, it is stated, will now ask for the formal recognition by the owners of the Notts Miners' Association.

EMPLOYMENT AND UNEMPLOYMENT IN CANADA DURING APRIL

THE following information as to the employment situation in Canada is based upon reports from four sources:—

(1) The Dominion Bureau of Statistics receives reports each month from most of the larger employers of labour throughout Canada in all industries except agriculture, fishing, hunting and highly specialized business, the returns representing firms employing fifteen workers or more. The number of firms so reporting in April was 6,504. An employment index number is maintained, based on the number of workers employed by such firms in January, 1920, as 100;

(2) The Department of Labour receives reports from local trade unions throughout Canada, showing the number of their members

who were unemployed in the period under review. The number of unions reporting for April was 1,642. It should be understood that the report on the number of unemployed workers refers only to organized labour, no figures being available as to the number of unorganized workers who were without employment;

(3) The Department of Labour receives reports from the 64 offices of the Employment Service of Canada showing the number of applications for work, the existing vacancies and the number of workpeople placed in positions;

(4) The Dominion Bureau of Statistics receives each month detailed statistics from 63 cities throughout Canada, showing the value of permits granted during the period for various classes of building construction.

Employment Situation at the Beginning of May, 1928, as Reported by the Employers making Returns to the Dominion Bureau of Statistics

The Dominion Bureau of Statistics tabulated reports from 6,504 firms who reported a decidedly upward movement in employment on May 1; the payrolls of these employers were increased by 36,070 persons to 883,047 on the date under review, when the index, reflecting the gain of over 4 per cent, rose to 105.5, as compared with 101.1 on April, and with 100.6, 94.3, 90.8, 91.8, 91.4, 83.3 and 84.1 on May 1, 1927, 1926, 1925, 1924, 1923, 1922 and 1921, respectively. There was therefore, an increase in employment of practically 5 per cent as compared with the same date last year. The accompanying chart shows the favourable situation as compared with 1927 and earlier years of the record.

Manufacturing, construction and transportation recorded the most pronounced improvement, but large gains were also noted in mining, trade, services and communications. On the other hand, there was seasonal curtailment in logging.

Employment by Economic Areas

Heightened activity was reported in all provinces, but Quebec and Ontario registered the largest increases.

Maritime Provinces.—Additions to staffs were indicated in the Maritime Provinces, where 577 firms reported 67,386 employees, or 2,146 more than in their last return. This gain exceeds that indicated on May 1 last year, when the index was slightly lower. Manufacturing (especially in fish-preserving plants), mining and construction showed the

greatest advances on the date under review, while transportation and logging were seasonally slacker.

Quebec.—General improvement was recorded in Quebec, according to 1,410 employers with 243,273 workers, as against 234,137 in the preceding month. Large increases were made in manufacturing, transportation and construction and maintenance, and there were smaller gains in services, trade, mining, communications and logging, those in the last-named being due to river drives. Employment was in greater volume than on the corresponding date a year ago, although the increase then was larger.

Ontario.—The expansion in Ontario on May 1, 1928, was the largest reported on that date since the record was begun in 1920; 13,746 persons were added to the working forces of the 2,972 co-operating firms, who had 375,200 employees. Manufacturing, construction and transportation registered the most pronounced gains, but the movement was also upward in mining, communications and some other industries, while logging was seasonally slacker. The situation was decidedly better than on May 1 in any other year since 1920.

Prairie Provinces.—Manufacturing, transportation, trade, communications, services and construction showed heightened activity, the advances in the last-named being most marked. Statements were tabulated from 846 employers, whose staffs rose from 109,992 on April 1, to 117,395 on the date under review. This expansion was greater than on May 1 of any other year of the record.

British Columbia.—The improvement in British Columbia was more pronounced than in the spring of 1927, when the index was lower. An aggregate payroll of 79,793 workers was indicated by the 699 firms furnishing data, who had 76,154 in the preceding month. Manufacturing, logging, transportation and construction were decidedly busier, the greatest advances taking place in the last-named. Coal mining, on the other hand, was slacker.

Table I gives index numbers by economic areas.

Employment by Cities

The eight cities for which separate returns are tabulated showed considerably increased activity Montreal and Toronto firms adding the largest numbers to their staffs.

Toronto.—Manufacturing, transportation and construction reported important increases in personnel in Toronto, according to data furnished by 847 employers, whose payrolls aggregated 109,777 persons as compared with 107,426 at the beginning of April. This expansion resulted in a higher level of employment than in the spring of any other year since 1922, when data for this city were first compiled.

Ottawa.—Lumber mills and construction registered the bulk of the improvement in Ottawa, where the advances considerably exceeded those noted on May 1 of previous years of the record. Statistics were tabulated from 137 firms employing 12,079 persons, compared with 10,620 in the preceding month. The index was at the maximum in the record for this city.

EMPLOYMENT IN CANADA AS REPORTED BY EMPLOYERS

NOTE.—The curve is based on the number of employees at work on the first day of the month, as indicated by the firms reporting, in comparison with the number of employees they reported in January, 1920, as 100.

Montreal.—Transportation, construction and manufacturing recorded the greatest advances in Montreal, where 761 employers added 4,606 workers to their payrolls, bringing them to 120,280 at the beginning of May. Somewhat smaller increases were indicated on the corresponding date last year, when the index stood at 100.6, as compared with 104.5 on May 1, 1928.

Quebec.—Statements were tabulated from 102 firms with 10,534 employees, as against 10,101 on April 1; most of the improvement took place in transportation. The gain involved more workers than that recorded on May 1, 1927, when the index was lower.

Hamilton.—A combined working force of 30,908 persons was reported by the 210 co-operating employers, who had 30,296 on April 1. Manufacturers were busier, as was construction. Employment was in greater volume than in the corresponding month of 1927, when the expansion indicated was on a smaller scale.

Windsor and the Other Border Cities.—Considerable improvement was shown in the Border Cities, chiefly in automobile factories, but also in construction. Returns were tabulated from 132 firms with 15,842 workers, compared with 14,614 in the preceding month.

Employment was more active than in any other month of the record.

Winnipeg.—Construction, manufacturing and trade reported the most noteworthy expansion in Winnipeg; 301 employers in that city added 1,182 persons to their staffs, bringing them to 29,737 on May 1. The situation was much more favourable than on the corresponding

date last year, when somewhat smaller gains were indicated.

Vancouver.—Construction, transportation and manufacturing registered the most pronounced increases in Vancouver, where 258 firms employed an aggregate working force of 26,851 persons, compared with 25,878 on April. The index was higher than at the

NOTE.—Number employed by the reporting firms in January, 1920=100 in every case. The "Relative Weight" in Table I, II, III and IV shows the proportion of employees in the indicated area or industry to the total number of all employees reported in Canada on the date under review.

beginning of May a year ago, when the trend was also upward.

Index numbers by cities are given in Table II.

Manufacturing

Employment in manufactures showed an important gain at the beginning of May;

4,020 establishments reported 502,031 workers, compared with 491,158 in the preceding month. The largest advances were in iron and steel works and in lumber mills, where they were of a seasonal character, but pronounced expansion also took place in the fish-packing, pulp and paper, rubber, tobacco, distilled and

¹The "Relative Weight" column shows the proportion that the number of employees in the indicated industry is of the total number of employees reported in all industries by firms making returns on the date under review.

malt liquor, building material, electric current, electrical apparatus, mineral product and some other groups. Boot and shoe, musical instrument and vegetable food works, however, were slacker. Employment was in greater volume than on May 1 in any other year since 1920; the situation was, in fact, more favourable than in any other month since that year.

Animal Products, Edible.—Continued and larger increases in employment were noted in fish-packing plants and dairies, the improvement being more extensive than on May 1 in earlier years of the record, in all of which the index was lower. Statements were tabulated from 233 firms in this group, employing 17,136 workers, or 1,734 more than at the beginning of April. The expansion took place chiefly in the Maritime Provinces, but the trend was also upward in Ontario, the Prairie Provinces and British Columbia.

Leather and Products.—Employment in boot and shoe and other leather factories showed a seasonally downward movement, according to 194 manufacturers with 17,479 employees, as compared with 18,463 in the preceding month. The largest declines were in Quebec. The reduction involved more workers than that noted on May 1, 1927, but the index number then was lower.

Lumber and Products.—Seasonal activity in lumber mills caused a pronounced advance in this group, practically all divisions showing some improvement. Data were received from 724 employers of 48,982 persons, as against 45,809 in the preceding month. The increases were distributed over the country, those in Quebec and Ontario being most noteworthy. Although greater additions to staffs had been registered on May 1, 1927, the index then was the same as on the date under review.

Musical Instruments.—Employment in musical instrument works showed a decrease, 144 operatives being released by the 42 co-operating manufacturers; they had 2,882 employees on the date under review, when the index was lower than in the corresponding period last year. Most of the loss took place in Quebec.

Plant Products, Edible.—There was a small decline in employment in edible plant product factories, chiefly in those producing biscuits and confectionery. This reduction contrasts with a small increase on May 1, 1927, but the index number then was fractionally lower than at the beginning of May this year. Statements were compiled from 315 employers, whose payrolls aggregated 25,876 persons, as compared with 26,038 at the beginning of April. There were minor contractions in all provinces except British Columbia.

Pulp and Paper Products.—There was continued improvement in the pulp and paper industries, in which employment was in greater volume than in the spring of any other year of the record. Much of the gain took place in pulp and paper mills, but printing and publishing paper product plants were also busier. The working forces of the 475 co-operating establishments aggregated 61,135 employees, as against 60,088 in their last report. Heightened activity was shown in all except the Prairie Provinces, though the advance in Quebec was most pronounced.

Rubber Products.—Further and larger additions to staffs were noted in rubber factories on May 1, 1928, slightly exceeding the gains indicated on the same date in 1927, when the index was ten points lower. Returns were tabulated from 37 manufacturers employing 15,420 workers or 352 more than at the commencement of April. Most of the increase was in Ontario.

Textile Products.—There was slight improvement in this group at the beginning of May, according to statistics from 524 manufacturers having 76,741 persons on their payrolls, as compared with 76,565 on April 1. Employment was brisker in cotton, woollen and knitting mills, but headwear and garment and personal furnishing factories released employees. Ontario and British Columbia reported the bulk of the gain.

Tobacco, Distilled and Malt Liquors.—Data were received from 134 plants in this group employing 14,595 persons, or 610 more than in the preceding month. This increase, which exceeded that recorded on May 1, 1927, took place chiefly in Quebec. Employment was at a considerably higher level than on the corresponding date in 1927 and earlier years for which data are available.

Chemicals and Allied Products.—Employment in chemicals and allied products showed a moderate increase in Quebec and Ontario, according to information from 119 manufacturers, whose staffs included 7,388 workers, as against 7,277 in April. The index was several points higher than on May 1 a year ago, when the trend was also favourable.

Clay, Glass and Stone Products.—Building material factories in all provinces, except Ontario indicated seasonal improvement; the general gain was more marked than at the beginning of May last year, when the index number was over nine points lower. The 125 co-operating firms reported 10,880 employees, as against 10,418 in the preceding month.

Electric Current.—Further and more pronounced additions to staffs were recorded on May 1 in electric current plants, in which

employment was in greater volume than in the spring of any other year of the record. Statements were received from 89 companies employing 13,199 workers, an increase of 261 over their April 1 forces.

Electrical Apparatus.—The trend of employment in this group continued to be upward, 240 persons being added to the payrolls of the 46 reporting establishments which had 11,349 employees. The improvement was largely confined to Ontario. Curtailment had been registered on May 1, 1927, when the index number, as on the corresponding date in earlier years of the record, was much lower.

Iron and Steel Products.—The rolling mill, general plant machinery, structural iron and steel, foundry and other divisions of this group reported moderate increases in activity, and there were pronounced gains in automobile factories. Returns were tabulated from 670 manufacturers with 144,988 operatives, as compared with 141,608 in the preceding month. The improvement indicated on the corresponding date last year was less pronounced, and the situation was not so favourable. All provinces shared in the upward movement, but Ontario registered the greatest advances.

Non-Ferrous Metal Products.—Non-ferrous metal products showed an increase in employment, the working forces of the 115 co-operating firms rising from 17,457 at the beginning of April to 17,650 on May 1. There were advances in all provinces except British Columbia. Additions to staff on a similar scale were reported in this group in the same month in 1927, but the index number then was lower. Employment on the date under review was, in fact, brisker than in any other month for which statistics have been compiled.

Mineral Products.—Continued gains were made in the mineral products group, the increases being more pronounced than on May 1 last year, when the index number, as in all other months of the record, was lower than on the date under review. Reports were received from 79 manufacturers, whose payrolls included 10,779 persons, as compared with 10,399 in the preceding month. The greatest improvement was in Ontario.

Logging

In spite of large increases in Quebec on account of river drives, there was on the whole a decline in logging, according to 243 firms employing 18,300 men, or 2,162 less than in April. Smaller losses were registered at the beginning of May, 1927, when the index was rather higher.

Mining

Coal.—Employment in coal mining showed a reduction, which, however, was not so pronounced as in the corresponding month last year. The index then was slightly lower than on May 1, 1928. Data were received from 87 operators with 26,396 employees, as compared with 26,572 at the beginning of April. The decrease took place in the Western coal fields, the tendency in the Maritime Provinces being favourable.

Metallic Ores.—There was a further slight improvement in metallic ore mines, chiefly in Quebec and British Columbia. An aggregate working force of 13,609 persons was employed by the 64 co-operating firms, who had 13,559 in their last report. More noteworthy gains were indicated at the beginning of May a year ago, but employment this spring, is better than in any other period of the record.

Non-Metallic Minerals (Other than Coal).—Employment in this group, so far during 1928, has shown uninterrupted gains, resulting in a more favourable situation than in any other month since the series was commenced in 1920. Seventy-one employers enlarged their payrolls by 1,133 workers to 7,569 at the beginning of May. Quarries and other divisions reported heightened activity. The greatest gains were in Ontario, but the movement was generally upward.

Communications

Further increases were noted in telegraph and telephone operation, 664 persons having been added to the forces of the 188 co-operating companies and branches, which had 25,493 in their employ. Conditions were better than in the spring of any other year of the record.

Transportation

Street Railways and Cartage.—Continued and more pronounced improvement was shown in local transportation at the beginning of May, when the 125 firms from whom information was received, reported 21,236 employees, or 758 more than in the preceding month. The index was higher than on the corresponding date in 1927 and in earlier years. Quebec and Ontario registered most of the improvement.

Steam Railways.—Steam railway operation afforded more employment in Ontario and the Western Provinces, but more extensive curtailment was shown in the Maritime Provinces and Quebec. Statements were received from 101 employers in this division, whose payrolls declined from 76,997 persons on April 1 to 76,793 at the beginning of May. Con-

siderable increases had been noted on May 1, 1927, when the index was fractionally higher.

Shipping and Stevedoring.—A combined staff of 13,922 men, as compared with 11,727 in the preceding month, was reported by the 60 firms furnishing statistics in the water transportation group. This gain was smaller than that noted on the same date last year, when the index was slightly higher. Large reductions in the Maritime Provinces were offset by increases in Quebec and Ontario.

Construction and Maintenance

Building.—Employment in building construction continued to expand largely, the seasonal improvement being more extensive than in any other month of the record; the index, however, stood at 164.0, as compared with 164.5 on May 1, 1927. The working forces of the 523 co-operating contractors aggregated 34,595 persons as compared with 29,369 at the beginning of April. The tendency was favourable in all provinces, but the greatest gains were in Quebec and Ontario.

Highway.—Activity on roads and highways advanced very considerably, 5,987 men being added to the working forces of the 149 employers making returns, who had 11,963 on May 1. All provinces registered noteworthy increases, of which the largest were in Ontario and the Prairie Provinces. The additions to staffs indicated on the same date last year were on a very much smaller scale and employment was in less volume.

Railway.—Forty-two companies and divisional superintendents in this group employed 43,674 workers, as against 33,022 in the last report. All provinces shared in the upward

movement, which, however, was most marked in the Prairie Provinces and Ontario. Expansion involving practically the same number of men was noted at the beginning of May a year ago, when the index number stood at 126.6, as compared with 139.3 on the date under review. The latter was higher than on May 1 in any other year since the record was commenced in 1920.

Services

Hotels, laundries and other divisions of the service group reported heightened activity, according to statements from 182 establishments employing 16,867 persons, as against 16,489 in their last report. The situation was decidedly better than on May 1 of 1927 and of earlier years of the record. Quebec and the Prairie Provinces registered the greatest gains.

Trade

Continued additions to personnel were shown in trade, in which 649 establishments enlarged their forces by 696 employees to 70,599 on the date under review. The index was higher than on May 1 in any other year since the series was commenced, and was also higher than in any month of the years 1920 to 1926. Improvement was noted in both retail and wholesale trade, the largest gains being in the Prairie Provinces.

The accompanying tables give index numbers of employment by economic areas, leading cities, and industries. The columns headed "relative weight", show the proportion that the number of employees reported in the indicated area or industry, is of the total number of employees reported in Canada by the firms making returns on May 1, 1928.

Unemployment in Trade Unions in Canada at the Close of April, 1928

Unemployment as used in the following report has reference to involuntary idleness due to economic causes. Persons who are occupied in employment other than their own trades, or who are idle through illness, are not considered as unemployed. Unions which are involved in industrial disputes are excluded from these tabulations. As the number of unions making returns varies from month to month, with consequent variation in the membership upon which the percentage of unemployment is based, it should be understood that such figures have reference only to the organizations reporting.

The local trade union situation at the end of April was somewhat more favourable than that indicated at the close of the preceding month, as was shown by the reports tabulated from 1,642 labour organizations with a mem-

bership aggregating 185,318 persons. Of these, 9,573 or a percentage of 5.2 were unemployed on April 30, in contrast with percentages of 6.5 in March, 1928, and 6.0 in April, last year. The improvement shown in comparison with March was rather generally distributed throughout the various provinces, with the exception of Alberta, where inactivity, especially among coal miners, caused an unemployment increase of 1.3 per cent. Of the gains in employment in the remaining provinces, the most noteworthy was that of 3.5 per cent recorded in Nova Scotia, followed by 3.3 per cent in Saskatchewan and 2.3 per cent in Manitoba. In comparison with the returns for April, 1927, Quebec, owing to greater activity in the garment establishments of the province, indicated an advance in employment of 3.1 per cent, while the changes in the other provinces were

slight, New Brunswick, Manitoba, Saskatchewan, Alberta and British Columbia unions in addition showing increases in the amount of work afforded, and Nova Scotia and Ontario unions small reductions.

A separate tabulation is compiled each month showing the situation as affecting trade unionists in the largest city in each province with the exception of Prince Edward Island. The percentage of unemployed members reported by Edmonton unions during April was the smallest recorded by any of the cities covered in this tabulation, and was an indication of much better conditions than had prevailed in that city during the preceding month. In Halifax and Vancouver, also, the improvement over March was noteworthy, while moderate increases in activity were

the close of April standing 1.3 per cent below that recorded at the end of March. The unemployment level, as shown by the curve, on April 30 was also lower than that traced during the same month in 1927.

From unions in the manufacturing industries 439 reports were tabulated, including a membership of 52,167 persons, 4.5 per cent of whom were without work at the close of April, as compared with percentages of 6.1 in March, 1928, and 9.9 in April, 1927. The most decided improvement over March was shown by iron and steel workers, while the printing, pulp and paper, woodworking, and glass trades also absorbed a greater number of workers. Garment and textile workers and hat and cap makers, on the other hand, were less fully engaged. In comparison with the April, 1927,

PERCENTAGE OF UNEMPLOYMENT AS REPORTED BY TRADES UNIONS

shown by unions in Toronto and Winnipeg. In Montreal the change was so small as to be almost negligible, and the declines in available employment in St. John and Regina were but nominal. When comparison is made with the returns of April, 1927, Montreal unions showed the most noticeable advance in work afforded, while Halifax, Winnipeg, Edmonton, and Vancouver contributed varying gains in employment, though of lesser magnitude than was reported from Montreal. On the contrary Regina, Toronto, and St. John unions registered contractions in activity, the change in Regina being over 2 per cent, and in the latter two cities fractional percentages only.

The accompanying chart illustrates the trend of unemployment among local trade unions by months from January, 1922, to date. The course pursued by the curve during April was a continuation of the favourable trend indicated during the previous month, the level at

situation more favourable conditions prevailed during the month under review for iron and steel, garment, textile, leather workers, glass workers, printing tradesmen, and paper makers. Cigar makers, wood workers, and hat and cap makers, however, were not so actively employed.

The mining group, as a whole, as indicated by returns tabulated from 41 unions with a combined membership of 17,368 persons, registered little variation during April from the March situation, the unemployment percentage on April 30 standing at 10.6 in contrast with 10.4 per cent at the end of March. The Nova Scotia and Alberta changes in coal mining, however, were noteworthy, the increase in activity registered in Nova Scotia partially offsetting the reductions in employment for Alberta miners. From British Columbia coal miners no change in the situation was reported. In addition to the unemployment re-

TABLE I—PERCENTAGES OF UNEMPLOYMENT IN TRADE UNIONS IN CANADA BY GROUPS OF INDUSTRIES

corded among coal miners during April, considerable short time prevailed. Curtailment in operations for coal miners during the month under review is shown when comparison is made with the conditions existing in April last year, Nova Scotia, Alberta and British Columbia unions all sharing to some extent in the reductions in work available. Asbestos miners in Quebec reported all their members at work during April this year.

Building operations at the close of April continued to show marked seasonal improvement, this being evident from the returns received from 187 local unions covering a membership of 21,010 persons. Of these, 2,864 or a percentage of 13.6 were idle on April 30, compared with 19.1 per cent in March. With the exception of steam shovel and dredge men, and tile layers, lathers and roofers, all tradesmen registered additional employment, when compared with March, the most noticeable increases occurring among bricklayers, masons and plasterers, carpenters and joiners, and bridge and structural iron workers. Conditions in the building group were slightly less favourable than in April a year ago, when

11.9 per cent of the tradesmen were unemployed. In this comparison bridge and structural iron workers and granite and stone cutters reported moderate gains in employment, while among the remaining tradesmen the change was adverse.

Among transportation workers the 668 reporting unions in April, with a membership of 63,105 persons, showed slight improvement in employment conditions over March, the percentage of unemployment on April 30 standing at 3.2, as compared with 4.0 per cent of unemployed members at the close of March. Navigation workers, steam and street electric railway employees, and teamsters and chauffeurs all shared in the greater activity recorded. The situation in the transportation group, as a whole, was, however, less favourable than in April last year when 2.8 per cent of the members were idle, due, for the most part, to slackness in the navigation division this year.

Longshore workers whose reports are tabulated separately, registered an almost 3 per cent increase in employment during April over March, and slightly more than 1 per cent when compared with April, 1927. Reports for April this year were received from 14 unions of longshore workers with 7,203 members, 1,093 of whom, or a percentage of 15.2, were out of work.

The unemployment percentage indicated by the reports tabulated from 140 unions of governmental employees, including a membership of 13,145 persons, was small during April, namely, .6 per cent, as compared with nominal percentages of idleness in both the previous month and the corresponding month last year. Federal employees were reported fully engaged in all three months used here for comparison, while among civic employees the changes were not outstanding.

Reports received from 110 local unions with 5,072 members in the miscellaneous group of trades indicated an unemployment percentage of 5.9 at the end of April, as against 7.0 per cent in March. Work for stationary engineers and firemen, barbers and hotel and restaurant employees was in greater volume than in March while among theatre and stage employees and office workers employment declined slightly. In comparison with the April, 1927, returns, when 5.5 per cent of the members were idle, considerable improvement by theatre and stage employees and a nominal percentage increase in activity by hotel and restaurant employees were registered while the declines among barbers and stationary engineers and firemen were small.

Among unions in the fishing industry no idleness was reported in April, compared with

TABLE II.—PERCENTAGES OF UNEMPLOYMENT IN TRADE UNIONS BY PROVINCES

Month	N.S. and Pr. Edw. Island	New Brunswick	Quebec	Ontario	Manitoba	Saskatchewan	Alberta	British Columbia	Canada

a "fully engaged" situation in March, 1928, and a small percentage of unemployment in April last year. The logging industry registered 3.1 per cent of inactivity during April, the same percentage as was reported at the close of March, 1928, and in contrast with no unemployment in April, 1927.

Employment Office Reports for April, 1928

The volume of business transacted by the offices of the Employment Service of Canada during the month of April, 1928, when compared with the preceding month, showed a substantial increase of almost 59 per cent in the daily average of placements effected during the period, while a gain of nearly 17 per cent was shown by comparison with April, 1927. The favourable increase over last year was for the most part due to increased placements in farming, though construction and maintenance also showed a noticeable gain. Additional workers were, however, particularly in demand in the Western provinces during April for completion of threshing operations, which were curtailed last fall owing to the inclement weather. Lesser gains were registered in manufacturing, mining and trade. All other groups showed declines, the largest of which occurred in logging, where conditions were somewhat less active than usual at this season of the year.

The accompanying chart shows the trend of employment since January, 1926, as represented by the ratio of vacancies offered and of placements effected for each 100 applications for work registered at the offices of the Service throughout Canada, computations being made semi-monthly. It will be seen that the curve of vacancies and of placements in relation to applications rose steadily throughout the month, each attaining a level two points higher than that reached at the close of April a year ago. The ratio of vacancies to each 100 applications was 80.8 during the first half and 85.4 during the second half of April in contrast with the ratios of 77.5 and 83.4 during the corresponding periods of 1927. The ratios of placements to each 100 applications during the periods under review were 73.4 and 77.5, as compared with 69.6 and 75.5 respectively during the corresponding month of 1927.

The average number of applications for employment received daily by the offices of the Service throughout Canada was 1,923 during the first half of April, as compared with 1,453 during the preceding period, and with 1,495 daily during the first half of April, 1927. Applications for work during the latter half of the month numbered 1,918 daily, in con-

trast with 1,929, daily during the latter half of April a year ago.

Table II on page 645 summarizes the returns by provinces for April of each year from 1919 to 1925, inclusive, and for each month from January, 1926, to date, while table I on page 644 indicates the percentages of unemployment registered in the various groups of industries for the same months.

The average number of vacancies reported by employers to the Service daily was 1,554 during the first half, and 1,638 during the latter half of the month under review, as compared with a daily average of 1,159 and 1,609 vacancies during the month of April, 1927. Vacancies offered to the Service during the latter half of March, 1928, averaged 1,077 daily.

The average number of placements made daily by the offices of the Service during the first half of April, 1928, was 1,412, of which 974 were in regular employment and 438 in work of one week's duration or less, as compared with the total average of placements during the preceding period of 1,000 daily, and with 1,041 daily during the first half of April a year ago. During the latter half of the month under review placements averaged 1,487 daily (1,024 regular and 463 casual), as compared with an average of 1,456 daily during the corresponding period of 1927.

During the month of April, 1928, the offices of the Service referred 34,834 persons to vacancies, and effected a total of 33,444 placements. Of these the placements in regular employment were 23,056, of which 19,009 were for men and 4,047 for women, while the placements in casual work totalled 10,388. The number of vacancies reported by employers was 25,818 for men and 11,011 for women, a total of 36,829, while applications for work numbered 44,152, of which 32,819 were from men and 11,333 from women.

The following table gives the placements effected to date by the offices of the Employment Service of Canada:—

Year	Placements		
	Regular	Casual	Totals
1919 (10 months).....	268,001	37,904	305,905
1920.....	366,547	79,265	445,812
1921.....	280,518	75,238	355,756
1922.....	297,827	95,695	393,522
1923.....	347,165	115,387	462,552
1924.....	247,425	118,707	366,132
1925.....	306,804	106,021	412,825
1926.....	300,226	109,929	410,155
1927.....	302,723	112,046	414,769
1928 (4 months).....	63,876	34,947	98,823

NOVA SCOTIA

Orders listed at employment offices in Nova Scotia during April showed an increase of over 23 per cent when compared with the preceding month, but a decline of 14 per cent from the corresponding period a year ago. Placements were over 21 per cent higher than in March, but 8 per cent below April last year. Increased placements over April 1927 were shown in manufacturing, but this gain was more than offset by a decline in the services group. Minor changes only were reported in other groups with the exception of trade which remained unchanged. Industrial divisions in which most of the placements were effected

a gain of less than one per cent over April, 1927. Very little change from a year ago was shown in the different industrial divisions, minor gains in some being offset by small losses in others. Placements in construction and maintenance numbered 51 and in services 507, of which 370 were of household workers. During the month 122 men and 101 women were placed in regular employment.

QUEBEC

There was an increase of nearly 47 per cent in the number of orders received by Quebec employment offices during April when compared with the preceding month, but a decline

POSITIONS OFFERED AND PLACEMENTS EFFECTED FOR EACH ONE HUNDRED APPLICATIONS FOR EMPLOYMENT

Applications ————— Vacancies - - - - - Placements o-o-o-o-o

were: manufacturing, 107; trade, 73; and services, 426, of which 343 were household workers. Regular employment was found for 114 men and 67 women during the month.

NEW BRUNSWICK

Opportunities for employment, as indicated by orders received at employment offices in the Province of New Brunswick during April, showed an increase of more than 15 per cent over March, but were nearly 12 per cent less favourable than in April last year. Placements increased almost 14 per cent in comparison with the preceding month, but showed

of over 35 per cent in comparison with the corresponding month last year. Placements also increased almost 24 per cent over March, 1928, but were over 39 per cent below April a year ago. Decreased placements compared with April, 1927, were reported in all groups except transportation, which remained unchanged, the largest declines occurring in logging and construction and maintenance. Placements by industrial divisions included: manufacturing, 103; logging, 246; construction and maintenance, 463; and services, 498, including 319 household workers. Regular employment for 969 men and 399 women was secured during the month.

ONTARIO

Employment opportunities, as indicated by orders listed at employment offices in Ontario during April, were nearly 15 per cent more numerous than in March, 1928, but 2 per cent less than in April, 1927. Placements increased over 12 per cent in comparison with the preceding month, but declined slightly over 2 per cent when compared with the corresponding month a year ago. Manufacturing, mining, construction and maintenance, and trade showed increased placements over last year, but these gains were more than offset by losses shown in logging, farming, communication, transportation, and services. Industrial groups in which most of the placements were effected were: manufacturing, 1,825; logging, 322; farming, 927; mining, 118; transportation, 392; construction and maintenance, 2,404; trade, 424; and services, 4,130, of which 2,475 were of household workers. During the month 5,277 men and 1,358 women were placed in regular employment.

MANITOBA

During the month of April positions offered through employment offices in Manitoba were over 41 per cent higher than in March, 1928, and 12 per cent more than in April last year. There were gains in placements of 38 per cent and 15 per cent, respectively, when comparisons were made with the preceding month and with the corresponding month of 1927. Placements in construction and maintenance, particularly in the railway division of this group, were considerably higher than those recorded a year ago. Minor gains were also shown in manufacturing, farming, transportation, and trade, while services and logging reported declines. Divisions in which employment was found for more than one hundred workers included: farming, 1,513; construction and maintenance, 989; trade, 172; and services, 1,878, which included 1,458 household workers. Regular employment was found for 2,519 men and 646 women during the month.

SASKATCHEWAN

Employment offices in Saskatchewan were notified of over 49 per cent more vacancies during April than in the preceding month, and over 21 per cent more than during the corresponding month a year ago. The number of placements effected during April was nearly 57 per cent higher than in March and almost 22 per cent in excess of April, 1927. All industrial divisions except communication participated in the increase of placements over April last year, the highest gains being shown in farming and services. Groups in which the majority of placements were effected were:

manufacturing, 99; farming, 2,840; transportation, 99; construction and maintenance, 384; trade, 103; and services, 1,182, of which 788 were of household workers. There were 3,255 men and 684 women placed in regular employment during the month.

ALBERTA

The demand for workers as indicated by orders listed at employment offices in Alberta during April was over 93 per cent higher than in March, 1928, and nearly 58 per cent in excess of April, 1927. Placements also increased nearly 83 per cent in comparison with March this year and more than 45 per cent over the corresponding month a year ago. All groups recorded increased placements over those reported during April last year. Farming, however, was the chief contributing factor, as over 74 per cent of the total gains was shown in that division alone, where threshing operations which were not completed last fall created an active demand for workers during the month under review. Placements by industrial groups included: manufacturing, 322; logging, 97; farming, 4,107; mining, 98; construction and maintenance, 646; trade, 140; and services, 996, of which 701 were household workers. During the month 4,963 men and 464 women were placed in regular employment.

BRITISH COLUMBIA

During April orders received at employment offices in the Province of British Columbia showed an increase of nearly 32 per cent in comparison with March, 1928, and 35 per cent compared with April, 1927. Placements likewise showed gains of 38 per cent and 43 per cent, respectively, under each comparison. Noteworthy gains in placements over the corresponding month last year were made in farming and in construction and maintenance, where highway and building construction called for a large share of the additional workers placed. Gains of a lesser degree were shown in all other groups except logging and transportation, wherein minor reductions occurred. The majority of placements recorded during the month were made in the following groups: manufacturing, 388; logging, 250; farming, 663; mining, 156; transportation, 145; construction and maintenance, 1,410; trade, 140; and service, 945, which included 550 household workers. Placements in regular employment numbered 1,790 of men and 328 of women.

Movement of Labour

During the month of April, 1928, the offices of the Employment Service of Canada, effected 23,056 placements in regular employment, of which 15,798 were of persons for whom the

employment found was outside the immediate locality of the offices at which they were registered. Of the latter, 3,254 were granted the Employment Service reduced transportation rate, 2,404 going to points within the same province as the despatching office and 850 to other provinces. This reduced transportation rate, which is 2.7 cents per mile with a minimum fare of \$4, is granted by the railway companies to bona fide applicants at the Employment Service who may desire to travel to distant employment for which no workers are available locally.

The offices in Quebec issued 22 certificates for reduced transportation, 12 to Quebec points and 10 to stations outside the province. Provincially the Quebec City office transferred 9 construction labourers and one camp cook and the Montreal office 2 saw mill labourers to employment within their respective zones. The transfers outside the province were all of bushmen going from Hull to Sudbury and vicinity.

Of the 96 persons who benefited by the reduced rate from Ontario offices, 93 went to employment within the province and 3 to other provinces. Included in the provincial movement were one millwright, one fireman, 3 lumber pilers, one railroad construction labourer and one cook despatched from Pembroke to Sudbury, while from the same centre 5 bricklayers were sent to North Bay and one cook and 2 cookees to Sault Ste. Marie; from North Bay 14 carpenters, one pipe fitter and 2 labourers travelled to Timmins, one cook to Sudbury, and 2 farm labourers to Cobalt. To points within their respective zones Fort William despatched 8 construction labourers and 2 bushmen, Port Arthur 21 bushmen and one machinist, and Timmins 2 mine muckers and one machine runner. The Sudbury office issued certificates to 6 carpenters and 2 bushmen for Timmins and to 7 bushmen, 2 cookees, 2 labourers and one cook for stations within its own zone. Timmins in addition received one tinsmith from Toronto, one gardener from London and one millwright from Hamilton. Port Arthur issued the 3 certificates for points in other provinces; two were for railroad construction labourers, one proceeding to each of the Hull and Winnipeg zones and the third was for a farm labourer for Regina.

Transportation certificates issued by Manitoba office during April totalled 1,484, of which 1,165 were for persons going to provincial districts and 319 to other provinces. The movement of labour within the Province all originated in Winnipeg, 376 farm hands and 35 farm domestics going to employment in various agricultural parts, 615 railroad construction labourers, 6 teamsters, 2 wood cutters, one fireman, 5 steel sharpeners, 2 engin-

eers, 6 cooks, 2 labourers, 3 section men, one carpenter, one lumber piler, 31 rock men and one blacksmith travelling to Winnipeg zone centres, 48 teamsters, 2 cookees, one construction labourer, 2 generals, 2 cooks, one hotel clerk and 3 female hotel workers to Brandon and surrounding districts and 8 carpenters, 3 bushmen and 8 hotel and household workers to stations within the Dauphin zone. The Winnipeg offices effected 290 of the transfers to other provinces, 168 of which were of farm hands and 11 of farm domestics for the Saskatchewan rural districts and 12 of which were of farm labourers for Alberta situations. To Port Arthur and vicinity Winnipeg transferred 29 bushmen, 6 millwrights, 3 farm labourers, one timber foreman, 2 general labourers, 2 carpenters and one construction labourer; to Timmins one saw mill labourer and to Montreal one cooper. From Winnipeg, also, 18 labourers were carried at the reduced rate to Yorkton; 2 blacksmiths, one machinist's helper, one boilermaker and one construction labourer to Saskatoon; 3 female hotel workers and one auto mechanic to Regina; 3 hotel workers to Estevan; one iron moulder to Calgary; and 13 teamsters, 2 cooks, one blacksmith and one railway construction foreman to Edmonton. The Brandon office issued certificates to 6 farm labourers for the Medicine Hat zone; to one stableman for Weyburn; and to one hotel porter for Estevan. The Dauphin office despatched 11 farm hands, 7 general labourers, and 3 railroad construction labourers to points in the Moose Jaw zone.

Persons securing reduced transportation certificates from offices in Saskatchewan were 355 in number 346 of whom went to points within the Province and 9 to outside districts. Of the former, 293 were farm hands and 4 were farm domestics for rural localities within the province, travelling mainly from Saskatoon and Moose Jaw. From Saskatoon 2 bushmen and one dishwasher were sent to Prince Albert; one housekeeper to North Battleford; one drayman to Yorkton; and 6 housekeepers, 1 blacksmith, 1 hotel porter and 1 waitress to points within the same zone. From Moose Jaw one gas engineer and one cook were transported to Swift Current; one housekeeper to Saskatoon; and 2 cooks, one domestic, and one mechanic to points within the Moose Jaw zone. From Regina one blacksmith, one auto mechanic, one hotel cook and one domestic received certificates of transportation to Moose Jaw; 2 gas engineers to Saskatoon; one cabinet maker and one labourer to Prince Albert; and 2 grader men, one housekeeper, and one hotel porter to Swift Current. The balance of the movement provincially was from Prince Albert, and included 9 bushmen, 6 saw mill labourers, and

one waitress for points within the same zone. Of the interprovincial transfers, 6 were of farm hands for Alberta points, 4 of whom were shipped from Saskatoon and 2 from Regina and the remaining 3 were of household workers, travelling from Regina to positions in the Winnipeg zone.

Alberta offices granted 634 certificates of reduced transportation, 601 of which were provincial and 33 interprovincial. Among the transfers provincially were included 243 farm hands and 5 farm household workers proceeding from Edmonton and 128 farm hands and 11 farm domestics from Calgary to farming sections within the Province. From Edmonton one construction labourer was despatched to Drumheller; 4 bushmen to Calgary; one mill setter to Lethbridge; and 32 carpenters, 5 miners, 23 mine labourers, 15 mill hands, 25 bushmen, 10 construction workers, 10 teamsters, 6 cookees, 4 housekeepers, 11 labourers, 12 bricklayers, 4 engineers, 3 lathers, 2 painters, 2 firemen, one stonemason, one waitress, one plasterer, one packer, one gardener, one hotel porter, one janitor, 6 cooks, and one flunkey to points within the Edmonton zone. The Calgary office issued certificates to one fireman and one lumber mill flunkey for Lethbridge; 15 carpenters and 9 construction labourers for Edmonton; one waitress and one maid for Drumheller; and one hotel housekeeper and one restaurant employee for work within its own zone. The movement outside the Province was all of farm hands for Saskatchewan points, who received their certificates of transportation at Edmonton.

Reduced rate certificates were granted by British Columbia offices during April to 663 workers, 187 of whom went to stations within the Province and 476 to points in other provinces. The majority of the provincial transfers were from Vancouver, 6 carpenters, 6 farm labourers, 9 bushmen, 32 railroad construction

labourers, 4 painters, one blacksmith, one saw fitter, 2 flunkeys, one engineer, one planer man, one carpenter, 3 cooks and one dishwasher travelling to positions within the Kamloops zone; 3 carpenters, one saw filer and one cook to Vernon; 5 farm labourers, one fireman, 2 engineers, 2 miners, one cook, one carpenter and 2 household workers to Penticton; 2 cooks, 2 engineers and one flunkey to Prince George; 8 miners and one engineer to Revelstoke; 4 carpenters, one planer man, one mill superintendent and one lead burner to Nelson; and 19 miners, 3 flunkeys, 2 farm labourers and 2 machine runners to Vancouver zone centres. From Prince George 2 railroad construction labourers went to Kamloops and 28 bushmen, one miner and one mining engineer to points within the same zone. From Prince Rupert one housekeeper was dispatched to Prince George and 5 miners and 2 bushmen to employment within the Prince Rupert zone. The remaining transfers to provincial points included 6 bushmen, 2 miners, one labourer, and 3 farm hands travelling from Nelson to points within its own zone and one labourer from New Westminster to Revelstoke. The interprovincial movement was largely of farm labour, 351 farm hands and 18 farm domestics going to Alberta rural districts, 86 farm hands and 14 farm domestics to Saskatchewan agricultural areas, and 6 farm hands to points in Manitoba. The certificates for these workers were, for the most part, issued by the Vancouver and New Westminster offices. In addition one moulder was transferred from Vancouver to employment in Calgary.

Of the 3,254 persons who benefited by the Employment Service reduced rate, 1,880 were carried by the Canadian National Railways, 1,337 by the Canadian Pacific Railway, 21 by the Temiskaming and Northern Ontario Railway, and 16 by the Pacific Great Eastern Railway.

Building Permits Issued in Canada During April, 1928

The Dominion Bureau of Statistics tabulated returns from 63 cities which granted building permits valued at \$18,527,846 during April, as compared with \$14,916,247 in the preceding month and \$17,312,470 in the corresponding month last year. There was therefore, an increase of \$3,611,599 or 24.2 per cent in the first comparison, and of \$1,215,376 or 7.0 per cent in the second. The aggregate for the elapsed months of this year—\$51,480,102—exceeds that for any other since the record was begun in 1920, while building costs continue lower than in any of the last eight years, except 1927.

Some 50 cities furnished detailed statistics, showing that they had issued nearly 1,600 permits for dwellings valued at over \$8,000,000 and for some 3,500 other buildings estimated to cost almost \$10,000,000. In March, authority was given for the erection of some 1,100 dwellings and 2,200 other buildings, valued at approximately \$5,100,000 and \$9,600,000, respectively.

New Brunswick, Ontario, Manitoba, Saskatchewan, Alberta and British Columbia recorded increases in the value of the building permits issued during April as compared with March, the greatest gains, of \$1,889,077 or 31.3

per cent, and \$1,647,224 or 317.1 per cent, taking place in Ontario and Alberta respectively. Nova Scotia and Quebec registered declines of 92.9 per cent and 11.2 per cent, respectively.

As compared with April, 1927, New Brunswick, Ontario, Manitoba, Saskatchewan, Alberta and British Columbia reported increases in the value of the building authorized. Alberta again indicated a pronounced advance, of \$1,612,852, or 291.3 per cent. Of the remaining provinces, Quebec recorded the greatest loss, of \$2,395,966 or 44.2 per cent, due to the exceptionally high total in April last year in Quebec City.

Of the larger cities, Toronto, Winnipeg and Vancouver registered increases in the building authorized during April as compared with the preceding month and with April, 1927; in Montreal, on the other hand, there were losses in both comparisons. Of the smaller centres, New Glasgow, Sydney, Fredericton, Moncton, Saint John, Shawinigan Falls, Westmount, Belleville, Brantford, Fort William, Galt, Kingston, Ottawa, Peterborough, St. Catharines, Sault St. Marie, York Township, Riverside, Woodstock, Brandon, St. Boniface, Regina, Calgary, Edmonton, Lethbridge, Kamloops, Point Grey, North Vancouver and Victoria reported increases in the value of the permits issued, as compared with March, 1928, and April, 1927.

Cumulative Record for First Four Months, 1928.—The following table gives the value of the building authorized by 63 cities during April and in the first four months of each year since 1920, as well as index numbers for the latter, based upon the total for 1920 as 100. The average index numbers of wholesale prices of building materials in the first four months of the same years are also given (1913=100).

Year	Value of permits issued		Indexes of value of permits issued first four months (1920=100)	Average indexes of wholesale prices of building materials in first four months (1913=100)
	In April	In first four months

*Total—35 cities	14,820,381	12,038,601	13,623,361

The aggregate for the first four months of this year was 21.6 per cent greater than in

1927, the previous high level of the record, while the average index number of wholesale prices of building materials continued to be lower than in any other year since 1920 except 1927.

The other table gives the value of the building permits issued by 63 cities during April and March, 1928, and April, 1927. The 35 cities for which records are available since 1910 are marked with asterisks.

EMPLOYMENT AND UNEMPLOYMENT IN OTHER COUNTRIES

DETAILED reports and tables showing the employment conditions in Great Britain and Northern Ireland are given in the *British Ministry of Labour Gazette* from month to month, a monthly summary of this information also being published. This summary is reproduced below, showing the employment situation during April. The following report on employment conditions in the United States is based on the information contained in the *Monthly Labour Review*, published by the United States Department of Labour, each issue containing statistics showing the trend of employment throughout the country during the second month prior to the date of publication. The statement contained in the May issue relates to the situation existing in March, 1928. In addition, the United States employment situation is also indicated by unemployment percentages based on statistics compiled each month by the American Federation of Labour, the source of these statistics being returns obtained from the trade union locals in 23 representative cities. The following information, taken from the May issue of the *American Federationist*, the official publication of the organization, gives the percentages of unemployment for the month of March, 1928.

Great Britain

Employment during April was subject to considerable fluctuation, particularly after the Easter holidays and towards the end of the month. At the end of April it was not quite so good, on the whole, as at the end of March. The seasonal improvement in the building trade, in public works contracting, and in the brick and tile, and tailoring industries continued; and there was also some improvement in the tinplate industry in railway carriage and wagon building, in paper manufacture, and in the food and drink industries. There was, however, a decline in coal mining, in ship-building and ship-repairing, in the iron and steel and glass industries, in boot and shoe manufacture, and in most of the textile industries, as well as in the canal, river, dock and harbour service.

Among workpeople covered by the Unemployment Insurance Acts (aged 16 to 64 in-

clusive and numbering approximately 11,800,000), and working in practically every industry except agriculture and private domestic service, the percentage unemployed at 23rd April, 1928 (including those temporarily stopped as well as those wholly unemployed) was 9.6, as compared with 9.6 at 26th March, 1928, and 9.4 at 25th April, 1927. For males alone the percentage at 23rd April, 1928, was 11.0, as compared with 11.0 at 26th March, 1928; for females the corresponding figures were 5.7 and 5.7. The percentage wholly unemployed fell from 7.7 at 26th March, 1928, to 7.6 at 23rd April, 1928. The total number of persons (insured and uninsured) registered at Employment Exchanges in Great Britain and Northern Ireland at 30th April, 1928, was approximately 1,171,000, of whom 942,000 were men and 160,000 were women, the remainder being boys and girls; at 2nd April, 1928, it was 1,071,000, of whom 865,000 were men and 147,000 were women; and at 25th April, 1927, it was 1,075,000, of whom 867,000 were men and 144,000 were women.

United States

According to the May issue of the *Monthly Labour Review* employment in manufacturing industries increased 0.7 per cent in March, 1928, as compared with February, 1928, and pay-roll totals increased 1.3 per cent. It was stated that the trend of employment in March has been upward in five of the last six years, but that the increase in March, 1928, is greater than in either 1927 or 1926. With these increases the volume of employment in March, 1928, stood at a higher level than at any time since October, 1927, while pay-roll totals were greater than at any time since June, 1927, with the single exception of October, 1927, when they were at the same level as in March, 1928.

The Bureau of Labour Statistics weighted index of employment for March, 1928, is 86.1, as compared with 85.5 for February, 1928; 84.2 for January, 1928; and 91.4 for March, 1927. The weighted index of pay-roll totals for March, 1928, is 91.2 as compared with 90.0 for February, 1928; 85.8 for January, 1928; and 97.7 for March, 1927. The monthly average for 1923 equals 100.

Employment and pay-roll totals in March, 1928, were 5·8 per cent and 6·7 per cent lower in the two items, respectively, than in March, 1927.

The data for March, 1928, were based on reports from 10,880 representative establishments in 54 of the chief manufacturing industries of the United States. These establishments in March had 3,023,122 employees, whose combined earnings in one week were: \$82,616,721.

Employment in February and March.—Thirty-four of the fifty-four separate industries had more employees in March than in February, and 36 industries reported increased pay-roll totals, the majority of the increases being of a seasonal character. The fertilizer industry indicated the greatest increase in employment during March with a gain of 39 per cent, while employees in the following industries had increased from 3·1 per cent to 4·9 per cent each: Agricultural implements, cast-iron pipe, stamped ware, automobiles, ice cream, glass and brick. Nearly all of these industries reported corresponding increases in pay-roll totals, and the following industries, with smaller increases in employment, also reported substantially increased pay-rolls: Sugar refining, foundries and machine shops, machine tools, and sawmills. The iron and steel industry had gained about 2 per cent both in employment and in pay-roll totals.

The notable decreases in March were in the woollen goods, book and job printing, chewing tobacco, rubber boots, and ship-building industries.

The chemical group as a whole indicated the greatest gains in March, due to the peak season increases in the fertilizer industry; the stone-clay-glass group's largest increases were due to seasonal prospects in building construction, as were a large share of the gains in the iron and steel and the lumber groups. The vehicle group owed its advance largely to the spurt in the automobile factories.

The Pacific and East North Central geographic divisions reported the greatest improvement in employment in March, although all but two divisions showed this improvement in lesser degrees. The New England and East South Central divisions each reported a falling off in employment.

Employment in March 1927 and 1928.—A comparison of employment and pay-roll totals in March 1928 and March 1927 is made in a section of the chapter on the trend of employment. The level of employment in manufacturing industries in March, 1928, was 5·8 per cent lower than in March, 1927, and pay-roll totals were 6·7 per cent lower.

Comparing conditions in March, 1928, and March, 1927, the food group alone of the 12 groups of industries shows gains both in employment and in pay-roll totals, although the vehicle group indicates a small gain in the second item. The group of miscellaneous industries shows very large decreases—15·3 per cent and 17·3 per cent—and the iron and steel, stone-clay-glass, metal other than iron and steel, lumber, leather, and chemical groups all show large decreases—ranging from 4·7 per cent to 9·8 per cent—in the two items.

The notable increases in employment in separate industries over this 12-month period were in the fertilizer, agricultural implement, automobile, rubber tire, slaughtering and meat packing, and flour industries.

The pronounced decreases in employment between March, 1927, and March, 1928, were in the ship-building, petroleum refining, piano, cast-iron pipe, brick, stove, steam-fitting, foundry and machine shop, cement, steam railroad car building and repairing, and woollen goods industries.

The East North Central geographic division again showed an increase in employment over the twelve-month period, but the New England, Middle Atlantic and West South Central divisions each had dropped 8 per cent or over of their employees, while the remaining five divisions showed smaller decreases.

Unemployment percentage.—Unemployment statistics collected by the American Federation of Labour and appearing each month in the *American Federationist*, the official publication of the organization, indicate that employment in the United States has increased materially since last fall. These statistics show the percentage of unemployed union members in twenty-three representative cities. The method of computation as described in the March issue of the *American Federationist* is as follows:

“The local unions in the 23 cities under review report monthly their membership and the number of unemployed members at the first of the month or the nearest possible date. From these reports the percentage of unemployed members is calculated for identical unions in the current and the previous month. Thus for every month there are two percentage figures—that is for identical unions in December and January—and for identical unions in January and February and so on. The final figure for January, then, is calculated by taking the simple arithmetical average of the two January percentages. It may be noted that the reports cover all trades which are organized, factory workers as well as teachers and building trade workers.”

By the above method is computed the percentage of unemployed union members out of the total membership of the local unions reporting.

According to the May issue of the *American Federationist* the most recent unemployed

percentages during the various months, in the 23 cities works out as follows:—

PERCENTAGE OF UNEMPLOYED MEMBERS			
Oct. to Dec., 1927	Jan., 1928	Feb., 1928	March, 1928
14	18	18	18

PRICES, RETAIL AND WHOLESALE, IN CANADA, MAY, 1928

Cost of Living, Prices of Staple Articles and Index Numbers

THE movement in prices during the month was slight. Both the weekly family budget in terms of retail prices and the Dominion Bureau of Statistics index number of wholesale prices were, however, slightly lower.

In retail prices the cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average prices in some sixty cities was \$10.80 at the beginning of May, as compared with \$10.87 for April; \$10.76 for May, 1927; \$11.29 for May, 1926; \$10.48 for May, 1925; \$9.89 for May, 1924; \$10.36 for May, 1923; \$10.22 for May, 1922; \$12.25 for May, 1921; \$16.65 for May, 1920; \$12.66 for May, 1918; and \$7.43 for May, 1914. The most important change was a seasonal decline in the price of eggs, while less important declines occurred in the prices of milk, butter, potatoes and veal. Slight increases occurred in the prices of beef, mutton, fresh and salt pork, lard, cheese, flour, beans and evaporated apples. Including the cost of fuel and rent with that of foods the total budget averaged \$21.04 at the beginning of May, as compared with \$21.11 for April; \$20.95 for May, 1927; \$21.54 for May, 1926; \$20.72 for May, 1925; \$20.24 for May, 1924; \$20.90 for May, 1923; \$20.57 for May, 1922; \$22.84 for May, 1921; \$26.44 for May, 1920; \$26.92 for July, 1920 (the peak); \$20.09 for May, 1918; and \$14.21 for May, 1914. Fuel and rent showed little change.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon the average prices of 236 commodities in 1913 as 100, and weighted according to the commercial importance of the commodities, declined slightly to 152.9, as compared with 153.2 for April; 151.9 for May, 1927; 156.8 for May, 1926; 158.8 for May, 1925; 150.6 for May, 1924; 155.2 for May, 1923; 153.9 for May, 1922; 170.5 for May, 1921; 256.7 for May, 1920 (the peak); 201.4 for May, 1919; and 194.6 for May, 1918. Thirty-four prices quotations were lower, fifty-

four were higher and one hundred and forty-eight were unchanged.

In the grouping according to chief component materials two of the eight main groups were lower, five were higher and one was unchanged. The Vegetables and their Products group declined, higher levels for grains, flour, oat products, foreign fruits, apples, coffee, hay and straw being more than offset by lower prices for potatoes sugar, millfeed, tea, rosin and turpentine. A substantial decline in the price of potatoes exerted the greatest influence on the downward movement of the general index number. The Animals and their Products group was also lower, lower prices for milk, butter, furs and sheep more than offsetting advances in the prices of cattle, hogs, meats, eggs and leather. The groups which advanced were: the Fibres, Textiles and Textile Products group, due to higher prices for cotton and wool; the Wood, Wood Products and Paper group, due to higher prices for some lines of lumber; the Non-Ferrous Metals group, because of higher prices for silver, copper, tin and spelter; the Iron and its Products group and the Chemicals and Allied Products group due to changes of a minor character. The Non-Metallic Minerals group was unchanged.

In the grouping according to purpose consumers' goods declined, while producers' goods were somewhat higher. In the former group higher prices for flour, fruits, coffee, meats and eggs were more than offset by lower prices for milk, butter, potatoes, tea and sugar. In the latter group building and construction materials advanced, mainly because of higher prices for painters' materials and some lines of lumber. Materials for the textile and clothing industries, for the leather industry, for the metal working industries, for the meat packing industries, for the milling and other industries, as well as miscellaneous producers' materials, advanced. Materials for the fur industry were lower.

In the grouping according to origin raw or partly manufactured goods advanced, higher levels for grains, cattle, hogs, beef, eggs, cotton, wool and jute more than offsetting lower levels for potatoes, milk, tea, rosin, and furs. Fully or chiefly manufactured goods were lower, advances in the prices of flour, oat products, smoked meats, shellac, leather and non-ferrous metals being more than offset by declines in butter, refined sugar, turpentine and steel sheets. Domestic farm products were slightly lower, while articles of marine origin, articles of forest origin and articles of mineral origin were somewhat higher.

EXPLANATORY NOTE AS TO WHOLESALE PRICES

The index number calculated by the Dominion Bureau of Statistics is based upon the prices of 236 commodities, price levels in 1913 being taken as the base, that is equal to 100, the figures being weighted according to the commercial and industrial importance of each article included. The index number has been calculated by years back to 1890, being unweighted, however, for the period of 1890 to 1913 and has been calculated by months from 1919 to date for all groupings and from 1913 to date for the principal grouping. Summary tables of the Bureau's index number may be found in the supplement to the LABOUR GAZETTE for January, 1925, January, 1926, and in greater detail in the Report on "Prices and Price Indexes 1913-24," issued by the Bureau. A description of the methods used in the construction of the index number appears in the LABOUR GAZETTE for June, 1923.

The accompanying table gives the index numbers of the Dominion Bureau of Statistics by the principal groups in the three methods of classification and with those of the classification according to purpose or use in detail for the current month and for certain preceding dates.

EXPLANATORY NOTES AS TO RETAIL PRICES

The table of retail prices and rentals shows the prices at the beginning of May of seventy-one staple foodstuffs, groceries, coal, wood and coal oil and the rent of six-roomed houses in some sixty cities throughout Canada. All prices are for delivered goods. The exact quality, for which the quotation is given is set forth in the case of each commodity, and every effort has been made to ensure that the quotations in each case refer to the same class of commodity in order that the statistics may be available for purposes of comparison from month to month, from city to city, etc. The prices of foods and groceries in each city, except milk and bread, are the averages of quotations reported to the Department and to the Dominion Bureau of Statistics by a number of representative butchers and grocers in each. The prices of fuel and the rates for rent are reported by the correspondents of the LABOUR GAZETTE.

Statistics similar to these were published each month from 1910 to 1920, the figures during this period being secured at the middle of each month by the correspondents of the LABOUR GAZETTE resident in each locality from dealers doing a considerable business with workingmen's households. From 1910 to 1915 the table contained a list of only the twenty-nine foods

included in the family budget, with laundry starch, coal, wood, coal oil and rent. In 1915 when monthly publication of the budget in the LABOUR GAZETTE was begun, it was decided to extend the list of foods to 40, and in 1920 the list of foods and groceries was still further extended to include over 100 items.

Beginning with October, 1922, a number of commodities were dropped from the list, and in the case of a number of articles the average prices of the grades most sold have been given, owing to the impossibility of securing prices for uniform grades for the various cities from month to month.

Oleomargarine was dropped in March, 1924, the provision for its manufacture and sale since 1917, notwithstanding the Dairy Act, expired at the end of February, 1924.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts extensively occupied by workingmen. The first class is of houses in good condition, favourably located in such districts with good modern conveniences. The second class is of houses in fair condition less desirably located, but still fairly central, without modern conveniences.

The weekly budget of a family of five, calculated in terms of the average prices in the cities for which reports are received, includes twenty-nine staple foods, laundry starch, coal, wood, coal oil, and rent, these being the items for which statistics have been obtained each month and published in the LABOUR GAZETTE since January, 1910. The quantities of each commodity included are modifications of those employed in similar calculations by various authorities. For some articles comparatively large quantities are included owing to the absence of other important items of the same class. For instance, the only fruits are evaporated apples and prunes, and the only fresh vegetable is potatoes. But as market conditions affecting these usually affect the prices of other fruits and vegetables somewhat similarly, the relative proportions of expenditure on the various classes of foods tends to be maintained. At times when the price of an article heavily weighted for this purpose rises, or falls (abnormally) the increase (or decrease) in food prices so indicated is exaggerated, and this should be taken into account in using the budget as an indicator of changes in the cost of living. In fuel and lighting the quantities are estimated on a similar principle, anthracite coal being used chiefly east of Manitoba, and soft coal and wood in the western provinces, while no allowance is made for the quantities required in the various localities owing to climatic conditions, nor for the differences in the heating value of the various fuels. It was estimated, when the budget was first published in 1912 in the report on wholesale prices in Canada for 1911, that these calculations represented from sixty to eighty per cent of the expenditure of an ordinary family, according to the total income. For the average family of five the expenditure on these items of food, fuel, light and rent would be perhaps two-thirds or about sixty-five per cent of the total income.

While the budget serves to show the increase or decrease from time to time in the cost of the items included, it does not purport to show the minimum cost of food and fuel supplies for an average family in the Dominion or in any one province. The quantities of meats, dairy

a. Vinegar sold extensively in bottles at higher prices than in bulk. c. Calculated price per cord from price quoted. d. Higher price for petroleum coke. f. Petroleum coke. g. Natural gas used extensively. h. Lignite. i. Poplar, etc. j. In British Columbia coal oil is sold to a great extent in tins costing 5c. to 15c. per gallon more than the figures published (in bulk).

(Continued from page 656)

Index Number of Changes in the Cost of Living

products, cereals, etc., included were adopted as affording a liberal supply for the healthy family of a man at hard physical work. On the other hand an average family with an income sufficient to do so would buy less meat, etc., but more fruit, fresh and canned vegetables, etc., so that comparative expenditure would be little changed.

In March, 1921, the Department published in the LABOUR GAZETTE a table of percentages of changes in the cost of living since 1913 as a tentative cost of living index number, using the figures of the above mentioned budget for

INDEX NUMBERS OF WHOLESALE PRICES (WEIGHTED) CALCULATED BY THE DOMINION BUREAU OF STATISTICS (Average Prices 1913=100)

the calculation for food, fuel and rent, with preliminary figures for clothing and sundries added and this table has been brought down to date at intervals since. The calculation of a comprehensive cost of living index number covering all items of workingmen's family expenditure in progress since 1918 had been sufficiently advanced to enable the publication of preliminary figures by groups in a supplement to the LABOUR GAZETTE, January, 1926, on Prices in Canada and in Other Countries, page 9. This table gave figures for June and December each year from 1914 to 1926, inclusive. Figures have since been given for March and September each year since 1917 and the accompanying table gives figures for December each year from 1914 to 1917, quarterly from 1918 to 1926, and monthly since January, 1927. As stated in the above-mentioned supplement, the figures in the food group in the family budget are still used to show the changes in food prices but in the other groups the percentage changes in the prices of each article have been weighted according to workingmen's average family consumption, and in the fuel and light groups, gas and electricity have been included.

Cost of Electric Current and Gas for Householders

With rates in 1913 as 100, index numbers of electric light rates were 1900, 141.4; 1905, 135.6; 1910, 118.1; 1911, 113.4; 1912, 109.1; 1913, 100.0; 1914, 96.5; 1915, 90.8; 1916, 87.6; 1917, 87.2; 1918, 85.8; 1919, 85.8; 1920, 84.2; 1921, 84.9; 1922, 82.7; 1923, 79.5; 1924, 79.2; 1925, 85.6; 1926, 75.6.

The above figures were arrived at by converting to the base of 1913 as 100, an index number of electric current costs from 1900 to 1913 constructed for the Board of Inquiry into the cost of living in Canada, 1914-15 (Report, Vol. 2, page 318) and bringing the figures down to 1926. The figures are unweighted. The Dominion Bureau of Statistics has recently issued an index number of electric current rates for household consumption as follows: 1923, 73.8; 1924, 72.2; 1925, 69.9; 1926, 68.7. This index number is weighted according to consumption in each city. When the above index number, 1900-1926, is weighted according to population in each city covered for the years 1923, 1924, 1925 and 1926, the figures are substantially the same as those recently issued by the Bureau.

The following are index numbers of rates for manufactured and natural gas for the years 1913 to 1926 issued by the Dominion Bureau of Statistics (revised, Prices and Price

Indexes, 1913-1926): Manufactured gas, 1913, 100; 1914, 98.3; 1915, 98.1; 1916, 96.3; 1917, 100.7; 1918, 107.4; 1919, 111.1; 1920, 125.4; 1921, 143.6; 1922, 140.6; 1923, 135.7; 1924, 134.6; 1925, 131.6; 1926, 131.1. Natural gas,

CHANGES IN THE COST OF LIVING IN CANADA FROM 1913 TO 1927*

*The figures for "all items" were calculated by giving the following weights to each group: Food 35%; Fuel 8%; Rent 18%; Clothing 18%; Sundries 20%.

1913, 100; 1914, 109.6; 1915, 112.8; 1916, 112.8; 1917, 113.6; 1918, 114.2; 1919, 116.2; 1920, 123.8; 1921, 143.0; 1922, 163.1; 1923, 162.9; 1924, 162.6; 1925, 178.7; 1926, 172.2. For the years 1900 to 1913 two index numbers of gas costs calculated for the Cost of Living Inquiry in 1914-1915, have been averaged and converted to the base of 1913 as 100, as follows: 1900, 125.8; 1901, 125.8; 1902, 125.8; 1903, 125.2; 1904, 123.9; 1905, 120.1; 1906, 107.5; 1907, 108.8; 1908, 106.9; 1909, 105.7; 1910, 103.8; 1911, 99.4; 1912, 100.6; 1913, 100.0.

Retail Prices

The advance in beef prices continued, sirloin steak being up from an average of 33.7 cents per pound in April to 33.9 cents in May; round steak from 28.2 cents per pound in April to 28.4 cents in May; rib roast from 26.2 cents per pound in April to 26.4 cents in May; and shoulder roast from 20 cents per pound in April to 20.1 cents in May. Somewhat higher prices were reported from most localities. Veal was slightly lower at an average of 21.6 cents per pound, as compared with 21.8 cents in April. Mutton advanced from 29.2 cents per pound in April to 30 cents in May. Both fresh and salt pork advanced, the former from an average of 24.9 cents per pound to 25.2 cents, and the latter from 25 cents per pound to 25.4 cents. Bacon was slightly lower at an average price of 39.5 cents per pound. In fresh fish cod steak and halibut averaged slightly lower. Salt herrings and salt cod advanced somewhat. Lard was slightly higher, averaging 21.7 cents per pound.

Eggs showed a substantial seasonal decline, fresh being down from an average of 40.2 cents per dozen in April to 35.8 cents in May, and cooking from an average of 35 cents per dozen in April to 31.6 cents in May. Lower prices were reported from practically all localities. Milk was down from an average price of 12.2 cents per quart in April to 12 cents in May. Lower prices were reported from New Glasgow, Three Rivers, Sherbrooke, St. Hyacinthe, Montreal, Hull, Ottawa, Toronto, Port Arthur, Fort William, Winnipeg and Lethbridge. Butter was slightly lower, dairy averaging 42.2 cents per pound, in May as compared with 42.4 cents in April, and creamery averaging 46.7 cents per pound in May, as compared with 47.4 cents in April. Cheese advanced slightly, averaging 32.9 cents per pound. Bread was unchanged at an average price of 7.7 cents per pound. Soda biscuits were slightly lower, averaging 18.1 cents per pound, while flour was somewhat higher at 5.2 cents per pound.

Rolled oats and tapioca were steady. Canned vegetables showed little change. Beans rose from an average of 8.3 cents per pound in April to 8.7 cents in May. Onions were substantially higher, averaging 8.1 cents per pound in May, as compared with 6.7 cents in April. The increase was general. Potatoes averaged \$1.74 per ninety pounds in May, as compared with \$1.78 in April. Evaporated apples were up from an average of 20.8 cents per pound in April to 21.1 cents in May. Granulated sugar was unchanged at an average price of 8.1 cents per pound. Coffee was slightly lower, averaging 60.4 cents per pound. Anthracite coal was down from an average price of \$16.41 per ton in April to \$16.21 in May. Lower prices were reported from Moncton, Sherbrooke, St. Hyacinthe, St. John's, Montreal, Sherbrooke, Orillia, St. Catharines, Brantford, Galt, Guelph, Kitchener, London and St. Thomas. Coke averaged \$12.93 per ton in May, as compared with \$13.03 in April. Hardwood was slightly higher, averaging \$12.18 per cord. Coal oil was unchanged at an average price of 31.1 cents per gallon. An increase in rent was reported from Quebec and St. Hyacinthe.

Wholesale Prices

The following is a summary of a statement on wholesale prices changes during the month issued by the Dominion Bureau of Statistics.

Grain prices were at slightly higher levels in May than in the preceding month. No. 1 Manitoba northern cash wheat, Fort William and Port Arthur basis, averaged \$1.57 per bushel, as compared with \$1.56½ in April. The high price for the month was \$1.64, reached at the beginning and the low \$1.48 reached at the end. Higher estimates of the winter wheat crop in the United States and more favourable weather both here and abroad were said to be the factors causing the decline from the higher price at the beginning of the month. Western barley declined from 93 cents per bushel to 91½ cents. Western oats advanced from 72 cents per bushel to 74½ cents and Ontario oats from 70 cents per bushel to 72½ cents. Flax seed advanced from \$1.94 per bushel to \$2.00½. American corn was slightly lower at \$1.11½ per bushel. Flour prices advanced in sympathy with the movement in wheat, the price at Toronto being \$8.48½ per barrel, as compared with \$8.42½ in April. Oatmeal advanced from \$4.40 per ninety-eight pound sack to \$4.57-\$4.90, and rolled oats from \$3.90 per ninety-pound sack to \$4.15. Shorts declined from \$42.25 per ton to \$41.65. Raw sugar at New York rose from \$2.68½ per cwt. to \$2.75, while granulated sugar at Montreal fell from \$6.08 per

cwt. to \$5.89. Potatoes were substantially lower, Quebec grades at Montreal being down from \$1.28 per ninety-pound bag to 91½ cents; Ontario grades at Toronto from \$1.82½ per bag to \$1.28½; Manitoba grades at Winnipeg from 75 cents per bushel to 74½ cents; and New Brunswick grades at St. John from \$3.75 per barrel to \$3.25. Linseed oil advanced from 88 cents per gallon to 90 cents. Coffee was slightly higher at 28½ cents per pound. Hay and straw advanced, the former from \$14.50 per ton to \$15, and the latter from \$9.50 per ton to \$10.39. Turpentine was 5 cents per gallon lower at 95 cents. Choice steers at Toronto advanced from \$10.12½ per hundred pounds to \$10.22½ and western cattle at Winnipeg from \$9.93 per hundred pounds to \$10.01. Hogs at Toronto rose from \$9.70 per hundred pounds to \$10.58, while sheep were somewhat lower, the price declining from \$8.50 per hundred pounds to \$8.20. Beef, dressed hind-quarter, at Toronto advanced from \$18.38 per hundred pounds to \$19.50. The price of milk to producers at Toronto fell from \$2.20 per eight gallon can to \$1.95, and the wholesale price from 37 cents per gallon to 32 cents. At Montreal the price to producers declined

from 29 cents per gallon to 21 cents. Finest creamery butter at Montreal was down from 41 cents per pound to 36 cents and prints at Toronto from 43 cents per pound to 39½ cents. Fresh eggs at Montreal were slightly higher at 38-40 cents per dozen. Raw cotton at New York was up from an average of 20.6 cents per pound in April to 21.6 cents in May. The high price for the month was 22.3 cents per pound at the beginning and the low 21.1 cents toward the end. The decline toward the end of May was said to be due to the more favourable crop prospects. Raw wool continued to advance, the price being up from 33-34 cents per pound to 34-36 cents. Prices of some lines of lumber were somewhat higher, hemlock advancing from \$32 per M. feet to \$34, and spruce from \$35 per M. feet to \$37. In non-ferrous metals copper advanced from \$15.82 per cwt. to \$16.05; copper sheets from 22 cents per pound to 22½ cents; copper wire from 18½ cents per pound to 18¾ cents; spelter from \$7.21 per hundred pounds to \$7.40; tin from 54¾ cents per pound to 55 cents; and silver from 57¼ cents per ounce to 60 cents. Lead was slightly lower at \$5.80 per cwt.

PRICES IN GREAT BRITAIN AND OTHER COUNTRIES

THE following notes give the latest information available as to movements of prices in Great Britain and other countries. The index numbers of retail prices are from official sources unless otherwise stated. The authorities for the wholesale prices index numbers are named in all cases.

Great Britain

WHOLESALE PRICES.—The Board of Trade index number, on the base 1913=100, was 142.9 for April, an advance of 1.5 per cent over March. Foods advanced 4.4 per cent, showing increases in all groups; industrial materials advanced 0.1 per cent with advances in cotton and other textiles and slight declines in iron and steel, other metal and minerals and miscellaneous commodities.

The *Statist* index number (in continuation of Sauerbeck's figures) on the base 1867-77=100, was 125.6 for April as against 123.6 for March, an advance of 1.6 per cent. Food-stuffs increased 1.8 per cent, with a considerable increase in vegetable foods due to higher prices for potatoes, oats, flour, wheat and barley, while animal foods and sugar, tea and coffee showed only slight variations. Industrial materials advanced 1.5 per cent, with advances in all groups, most marked in the

textile group owing to higher prices for cotton, jute, silk and hemp.

The *Times* index number, on the base 1913=100, was 145.9 at the end of April, an advance of 1.5 per cent over March. The rise in prices was fairly general, the only groups which declined being iron and steel and textiles other than cotton. Metals and minerals, other than iron and steel, advanced 5 per cent owing to a new import tax on petroleum. In the foods group, cereals advanced 3.7 per cent with higher prices for wheat and flour.

COST OF LIVING.—The index number of the Ministry of Labour, on the base July, 1914=100, was 164 at May 1, showing no change from the previous month. The index number for food declined one point owing to reductions in prices of milk, butter and sugar, although potatoes and meat were dearer. Clothing advanced slightly owing to increases in prices of boots. Fuel and light also showed an increase and other groups were unchanged.

Belgium

WHOLESALE PRICES.—The index number of the Ministry of Industry, Labour and Social Affairs, on the base April, 1914=100, was 848 for March, showing no change from Febru-

ary. Seven groups showed increases, nine reductions and five were unchanged.

COST OF LIVING.—The official index number of the cost of living for a middle class family of moderate income, on the base 1921=100 was 205·88 for April, as compared with 204·91 for March. All groups advanced slightly with the exception of rent and lodging which showed a small reduction.

Denmark

WHOLESALE PRICES.—The index number of the Department of Statistics, on the base 1913=100, advanced one point to 154 in April. The variations in all groups were slight; vegetable foods and fodder, hides, leather and footwear and chemicals advanced, while animal foods, fuel and oil, textiles and clothing declined, and fertilizers, metals and metal products, lime, cement, bricks, glass, wood and paper were unchanged.

France

WHOLESALE PRICES.—The index number of *Statistique Générale*, on the base July, 1914=100, was 636 for April, showing no change from March. Foods declined 0·8 per cent owing to a sharp decline in animal foods, partly counteracted by advances in vegetable and other foods. Industrial materials advanced 0·6 per cent owing to an advance of 2·1 per cent in textiles; the other groups were practically unchanged.

Germany

WHOLESALE PRICES.—The index number of the Federal Statistical Office, on the base 1913=100, was 139·5 for April, an advance of 0·7 per cent over the March level. The rise was general and included all groups. Agricultural products advanced 1·7 per cent, provisions 1·9 per cent, industrial raw materials and semi-manufactured goods 0·2 per cent and manufactured goods 0·2 per cent.

COST OF LIVING.—The official index number of the cost of living, on the base 1913-14=100, was 150·7 for April, an advance of 0·1 per cent. The food group was unchanged. Rent and heat and light declined, while clothing and sundries advanced slightly.

Italy

WHOLESALE PRICES.—The index number of the Milan Chamber of Commerce, on the base 1913=100, was 492·72 for April, as compared with 490·69 in the previous month. Both foods and industrial materials advanced. Vegetable foods advanced and animal foods declined. Textiles, metals and minerals, veg-

etable products and miscellaneous materials advanced, chemical products declined and materials for construction were unchanged.

United States

WHOLESALE PRICES.—The index number of the Bureau of Labour Statistics, on the base 1926=100, was 97·4 for April, an increase of 1·5 per cent over March. Farm products advanced 4 per cent owing to increases in prices of grains, hogs, lambs, poultry and cotton. Foods increased 1·5 per cent, building materials 1·6 per cent, and hides and leather 2·2 per cent. Miscellaneous commodities declined 2·2 per cent, while the other groups showed little or no change.

The *Annalist* index number, on the base 1913=100, was 151·5 for May, an advance of 2·4 per cent over April. Miscellaneous products declined, metals were unchanged and every other group showed advances, the most marked being in farm products, which advanced 3·6 per cent.

Bradstreet's index number (showing the cost of a list of 106 commodities) was \$13.1913 at June 1, a decline of 1·8 per cent from the previous month. There were advances in provisions, fruits, miscellaneous products (chiefly rubber) building materials, chemicals and coal and decline in hides and leather, breadstuffs, live stock, textiles, metals, naval stores and oils.

Dun's index number, showing the cost *per capita* of a year's supply of commodities was \$195.691 at June 1, a decline of 1·7 per cent from May 1, owing chiefly to a decline of 7 per cent in breadstuffs.

COST OF LIVING.—The index number of the National Industrial Conference Board, on the base July, 1914=100, was 160·8 for April, a decline of 0·1 per cent from March. Food advanced slightly, but shelter, clothing and fuel and light declined. There was no change in the sundries group.

A free scholarship covering five years' tuition in chemical or civil engineering (general engineering) in L'Ecole Polytechnique of the University of Montreal is offered, subject to competitive examination, to apprentices and other employees enrolled on the permanent staff of the Canadian Pacific Railway, and under 21 years of age, and to minor sons of employees. A similar free scholarship covering four years' tuition in L'Ecole des Hautes Etudes Commerciales de Montreal is also offered by the company. Competitors for the scholarship should speak and understand French since all tuition, except modern languages, is conducted in that language.

FAIR WAGES CONDITIONS IN DOMINION GOVERNMENT CONTRACTS

THE Department has received information regarding contracts recently executed by the Government of Canada, which included among their provisions the fair wages conditions sanctioned by Order in Council for the protection of the labour to be employed. The contracts (Group "A") awarded in connection with the works of construction contained the following fair wages clause:—

1. All mechanics, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed for the character or class of work in which they are respectively engaged, and if there be no current rates in such district, then fair and reasonable rates, and shall work such hours as are customary in the trade, in the district where the work is carried on, or if there be no custom of the trade as respects hours in the district, then fair and reasonable hours, unless for the protection of life and property, or for other cause shown to the satisfaction of the Minister of Labour, longer hours of service are required. The Minister of Labour may at any time and from time to time determine for the purpose of this contract, what are the current or fair and reasonable rates of wages and the current or fair and reasonable hours, and may from time to time rescind, revoke, amend, or vary any such decision, provided that his determination and any amendment or variation shall not be operative prior to the period of three months immediately preceding the date thereof.

Two of the contracts above mentioned were awarded for interior fittings (Group "B") containing the general fair wages clause and other conditions for the protection of the labour employed, as sanctioned by the Fair Wages Order in Council which reads as follows:—

All workmen, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed, and if there be no current rate in such district, then a fair and reasonable rate, and shall work such hours as those fixed by the custom of the trade as respects hours in the district where the work is carried on, or if there be no custom of the trade as respects hours in the district then fair and reasonable hours, except for the protection of life and property, or on due cause shown to the satisfaction of the Minister of Labour. In the event of a dispute arising as to what is the current or a fair and reasonable rate of wages or what are the current hours fixed by the custom of the trade or fair and reasonable hours it shall be determined by the Minister of Labour, whose decision shall be final; payment may also be withheld of any moneys which would otherwise be payable to the contractor until the Minister of Labour's decision has been complied with.

By the term "current wages" and the term "hours of labour fixed by the custom of the trade" in the foregoing are meant respectively the standard rates of wages and hours of labour either recognized by signed agreements between employers and workmen in the district from which the labour required is necessarily drawn or actually prevailing, although not necessarily recognized by signed agreements.

A statement was also received as to supplies ordered by the Post Office Department subject to the regulations for the suppressing of the sweating system and the securing of fair wages, etc.

The general labour conditions sanctioned by the Fair Wages Order in Council are as follows:—

Where there are special circumstances which in the judgment of the Minister of Labour make it expedient that he should do so, he may, in the manner and subject to the provisions hereinabove set forth, decide what are the current or fair and reasonable rates of wages for overtime, and what is the proper classification of any work for the purposes of wages and hours. Immediately upon receipt of notice of any decision of the Minister of Labour hereunder the contractor shall adjust the wages and hours and classification of work so as to give effect to such decision. In case the contractor shall fail so to do, or to pay to any employee or employees for any services performed or for any hours of labour, wages according to the rates fixed therefor by the Minister of Labour, the Minister of Labour may authorize and direct the Minister to pay any such wages at the rates so fixed and to deduct the amount thereof from any moneys owing by the Government to the contractor and any such payment shall for all purposes as between the contractor and the Government be deemed and taken to be payment to the contractor, and the contractor shall be bound in every particular by any such authority, direction and payment as aforesaid. The powers of the Minister of Labour hereunder shall not be exercised as to any employee or employees where it is established to his satisfaction that an agreement in writing exists and is in effect between the contractor and the class of employees to which such employee or employees belong or the authorized representatives of such class of employees fixing rates of wages, overtime conditions and hours of labour.

2. The contractor shall post and keep posted in a conspicuous place on the premises where the contract is being executed, occupied or frequented by the workmen, the Fair Wages Clause or Schedule inserted in his contract for the protection of the workmen employed, also any decision of the Minister of Labour under the preceding paragraph.

3. The contractor shall keep proper books and records showing the names, trades, and addresses of all workmen in his employ and the wages paid to and time worked by such workmen, and the books or documents containing such record shall be open for inspection by the Fair Wage Officers of the Government at any time it may be expedient to the Minister of Labour to have the same inspected.

4. The contractor shall not be entitled to payment of any money which would otherwise be payable under the terms of the contract in respect of work and labour performed in the execution of the contract unless and until he shall have filed with the Minister in support of his claim for payment a statement attested by statutory declaration, showing (1) the rates of wages and hours of labour of the various classes of workmen employed in the execution of the contract; (2) whether any wages in respect of the said work and labour remain in arrears; (3) that all the labour conditions of the contract have been duly complied with; nor, in the event of notice from the Minister of Labour of claims for wages, until the same are adjusted. The contractor shall also from time to time furnish the Minister such further detailed information and evidence as the Minister may deem necessary in order to satisfy him that the conditions herein contained to secure the payment of fair wages have been complied with, and that the workmen so employed as aforesaid upon the portion of the work in respect of which payment is demanded have been paid in full.

5. In the event of default being made in payment of any money owing in respect of wages of any workmen employed on the said work and if a claim therefor is filed in the office of the Minister and proof thereof satisfactory to the Minister is furnished, the said Minister may pay such claim out of the moneys at any time payable by His Majesty under said contract and the amounts so paid shall be deemed payments to the contractor.

6. These conditions shall extend and apply to moneys payable for the use or hire of horses or teams, and the persons entitled to payments for the use or hire of horses or teams shall have the like rights in respect of moneys so owing them as if such moneys were payable to them in respect of wages.

7. With a view to the avoidance of any abuses which might arise from the sub-letting of contracts it shall be understood that sub-letting, other than such as may be customary in the trades concerned, is prohibited, unless the approval of the Minister is obtained; sub-contractors shall be bound in all cases to conform to the conditions of the main contract, and the main contractor shall be held responsible for strict adherence to all contract conditions on the part of sub-contractor; the contract shall not, nor shall any portion thereof be transferred without the written permission of the Minister; no portion of the work to be performed shall be done at the homes of the workmen.

8. All workmen employed upon the work comprehended in and to be executed pursuant to the said contract shall be residents of Canada, unless the Minister is of opinion that Canadian Labour is not available or that other special circumstances exist which render it contrary to the public interest to enforce this provision.

DEPARTMENT OF PUBLIC WORKS

Contracts in Group "A" (Construction, etc.)

Construction of an extension of the outer 435 feet of the eastern face of the Canadian

National Railway wharf, and construction of a freight shed, at Charlottetown, P.E.I. Name of contractors, "Standard Construction Company, Limited," Halifax, N.S. Date of contract, May 1, 1928. Amount of contract, unit prices, approximate expenditure, \$135,979.90.

Docking, cleaning, painting and repairing of dredge "P.W.D. No. 303" (Frühling). Name of contractors, "Burrard Dry Dock Company, Limited," North Vancouver, B.C. Date of contract, May 14, 1928. Amount of contract, \$10,750.

Contracts in Group "B" (Interior Fittings)

Supply and installation of six electric freight elevators and doors in the Old Examining Warehouse at Montreal, P.Q. Name of contractors, Darling Brothers, Limited, Montreal, P.Q. Date of contract, May 10, 1928. Amount of contract, \$26,700.

Installation of interior fittings in Postal Station "B," Quebec, P.Q. Name of contractors, "The Canadian Office and School Furniture Company, Limited," Preston, Ont. Date of contract, May 14, 1928. Amount of contract, \$1,035.

DEPARTMENT OF RAILWAYS AND CANALS

Contract in Group "A" (Construction, etc.)

Construction of an eight-yard dipper dredge for service at the Hudson Bay Terminus of the Hudson Bay Railway. Name of contractors, "Canadian Vickers Limited," Montreal, P.Q. Date of contract, May 3, 1928. Amount of contract, \$360,650.

POST OFFICE DEPARTMENT

Following is a statement of payments made in May, 1928, for supplies ordered by the Post Office Department under contracts which are subject to the Fair Wages policy:—

Nature of Orders	Amount of orders	
	\$	cts.
Making metal dating stamps and type, also other hand stamps and brass crown seals.....	780	00
Making and repairing rubber stamps, daters, etc.	918	86

Stamping pads, ink, etc.....	436	00
Bag fittings.....	3,799	43
Scales.....	78	75
Rural mail boxes.....	24,258	87

FAIR WAGES ON PROVINCIAL PUBLIC WORKS IN MANITOBA

IN compliance with the provisions of section 10 of chapter 69, Consolidated Amendments, 1924, being "An Act to Establish and Protect the Wages of Workmen Employed on Public Works," the Minister of Public Works of Manitoba has approved new schedules of rates of wages and maximum number of working hours in connection with the execution of public works, the schedules to be in effect from May 1, 1928, to April 30, 1929. The first schedule relates to the city of Winnipeg and a radius of thirty miles around it, and the

second to the rest of the province. The only changes made in the rates, etc., for 1928-1929 are an extension of the rates for stonemasons so as to cover those working outside Winnipeg at an hourly rate of \$1.35; increases in the rates to journeymen stonecutters from \$1 to \$1.10; for plasterers, \$1.25 to \$1.35; and for outside linemen from 89 to 92½ cents. The balance of the rates in the fair wage schedule are the same as in the previous year. Last year's schedule was printed in the **LABOUR GAZETTE** for July, 1927.

	Winnipeg		Manitoba	
	Rate per Hour	Hours per Week	Rate per Hour	Hours per Week

RECENT INDUSTRIAL AGREEMENTS AND SCHEDULES OF WAGES

A SUMMARY is given below of the more important industrial agreements and schedules of wages and working conditions that have recently been received by the Department. Such agreements are summarized each month in the *LABOUR GAZETTE*. In the majority of cases the agreements are signed by both the employers and the employees. Verbal agreements, which are also included in the records, are schedules of rates of wages and hours of labour and other conditions of employment agreed upon between the parties concerned, and in effect though not signed. In addition to these, important schedules of wages are summarized, including civic schedules. In the case of each agreement or schedule, the rates of wages for principal classes of labour are given, with other information of general interest.

Manufacturing: Iron, Steel and Products

MONTREAL, QUEBEC.—CERTAIN EMPLOYERS AND THE INTERNATIONAL ASSOCIATION OF BRIDGE, STRUCTURAL AND ORNAMENTAL IRONWORKERS, LOCAL NO. 418 (ORNAMENTAL IRON SHOPMEN, FINISHERS AND HELPERS).

Agreement in effect from June 1, 1928, to April 30, 1929.

Hours: Outside erection work, 8 per day, 4 on Saturdays; shop work, 9 hours, 4½ on Saturdays.

Overtime: Time and one-half until midnight. When a night gang is employed they shall work 7½ hours and be paid for 8 hours. All work over 7½ hours, time and one-half; double time for all work on Sundays and legal holidays.

Wages: Outside finishers, 80 cents per hour, outside helpers, 55 cents; shopmen finishers, 75

cents and 65 cents, apprentices of 2 years' experience and helpers, 50 cents.

Only union members to be employed as mechanics or helpers.

One apprentice or helper allowed for each journeyman on outside work.

For out of town work, railroad fare to be paid and travelling time up to 8 hours per day.

No employee to be discriminated against for his union activities and representatives of union to be allowed to visit shops.

Union members do not bind themselves to work on any job where labour trouble exists.

Manufacturing: Printing and Publishing

HAMILTON, ONTARIO.—HAMILTON PUBLISHERS' ASSOCIATION AND THE HAMILTON TYPOGRAPHICAL UNION, No. 129.

The agreement which was summarized in the *LABOUR GAZETTE* for April, 1927, has been renewed to be in effect from January 1, 1928 to December 31, 1929 with the following provisos:

One week's vacation with pay to be granted all regular journeymen and apprentices each summer and union to try to prevent cost of production being increased during the holiday period.

A Christmas bonus of one week's wages to be granted to all regular journeymen and apprentices.

Number of apprentices limited to one for each six journeymen.

Construction: Buildings and Structures

QUEBEC, QUEBEC.—A CERTAIN CONTRACTOR AND THE BUILDING TRADES COUNCIL OF NATIONAL AND CATHOLIC UNIONS.

Agreement in effect from March 30, 1928, until completion of contract for building of church and presbytery.

Only union members to be employed, with local men to be given preference, but if neces-

sary to employ other competent workmen, they will be admitted to the union if eligible.

No strike or lockout to occur in case of a dispute until all means of conciliation have been tried and until each side has offered to submit the dispute to arbitration. In case of suspension or discharge of a worker, reasons to be given to the union and the matter may be submitted to arbitration.

Hours: The hours which are customarily accepted by each individual union to be in force.

Overtime: Time and one-half until midnight and double time from midnight to 7 a.m. No work on Sundays, other Church holidays of obligation, St. Jean Baptiste day or Labour day.

The business agent of the union to be able to consult with Contractor and settle matters pertaining to this agreement.

The wages to be according to the following schedule of wages which was signed by 10 employers and verbally accepted by 15 others, to be in force until May 1, 1929.

Schedule of wages of the Building Trades Council of National and Catholic Unions for the year 1928-1929; bricklayers, 90 cents per hour, apprentices, 40 cents; plasterers 85 cents, apprentices 40 cents; masons 85 cents, apprentices 40 cents; carpenters and joiners 55 cents, painters 47 cents; sheet metal workers (roofers) 50 to 60 cents; plumbers and electricians, 45 cents; labourers, 40 cents; mortar makers, 50 cents; cement polishers, terrazzo polishers, tile and mosaic layers, 70 cents; metal lathe and reinforced concrete workers, 45 cents; stationary engineers, 50 to 55 cents.

Overtime: after regular hours until midnight time and one-half; from midnight till 7 a.m., and work on St. Jean Baptiste Day and Labour Day, double time. No work on Sundays or church holidays.

HALIFAX, N.S.—THE CONSTRUCTIVE MECHANICAL TRADES EXCHANGE INCORPORATED AND THE UNITED BROTHERHOOD OF CARPENTERS AND JOINERS, LOCAL No. 83.

Agreement in effect from May 1, 1928 to April 30, 1929, and from year to year until notice of change is given by either party 60 days previous to April 30, of any year.

Hours: 8 per day, 4 on Saturdays.

Overtime: time and one-half until 10 p.m., after 10 p.m. and all work on Sundays and certain holidays, double time.

Wages: 66 cents per hour.

GANANOQUE, ONTARIO.—TWO FIRMS AND THE PAVING CUTTERS UNION OF UNITED STATES AND CANADA, LOCAL No. 65.

Agreement to be in effect from January 1, 1928 to December 31, 1928.

This agreement is the same as that summarized in the LABOUR GAZETTE for June, 1926, except that hours of work are fixed at eight per day and 4 on Saturdays.

TORONTO, ONTARIO AND CERTAIN OTHER CITIES—THREE EMPLOYERS AND THE INTERNATIONAL UNION OF ELEVATOR CONSTRUCTORS.

This agreement, which was summarized in the LABOUR GAZETTE for December, 1927, has been extended to include work in other cities where locals of the union have been organized or have

jurisdiction, including at present Montreal, Ottawa and Vancouver as well as Toronto.

Wages rate for elevator constructor mechanics to be the average wage rate of the five highest of the following seven principal building trades; bricklayers, plasterers, carpenters, electricians, sheet metal workers, plumbers and steamfitters and iron workers; the wage rate for helpers to be 70 per cent of the mechanics' rate. Wages of apprentices not specified for various cities.

HAMILTON, ONTARIO.—CONTRACTORS' ASSOCIATION OF HAMILTON AND THE UNITED BROTHERHOOD OF CARPENTERS AND JOINERS OF AMERICA, HAMILTON DISTRICT COUNCIL.

Agreement in effect from March 1, 1928 to February 28, 1929.

Wages: 90 cents per hour.

In the event of disputes or grievances which cannot be settled by the contracting firm and the business agent of the union, or in the event of violation of agreement the matter to be referred to a conciliation board, to be composed of three members of each party. No strike or lock-out until an international officer of the union and the chairman of the contractor's association has investigated the matter and rendered a decision.

The other clauses to this agreement are the same as those in the previous agreement which was summarized in the LABOUR GAZETTE for July, 1927.

FORT WILLIAM AND PORT ARTHUR, ONTARIO.—CERTAIN EMPLOYERS AND THE BRICKLAYERS, MASONS AND PLASTERERS' INTERNATIONAL UNION, LOCAL No. 25.

Verbal agreement in effect from May 1, 1928 to April 30, 1929; three months' notice of change must be given.

Wages: \$1.25 per hour. If men brought in by any contractor from other places where rate is higher, the higher rates to prevail with all men on the job. For out of town work where members cannot get home daily, \$1.40 per hour.

Hours: 8 per day, 4 on Saturdays.

Overtime, and work on Sundays and holidays, double time.

The steward to examine all scaffolding and to see that safety measures are enforced.

VANCOUVER, B.C.—CERTAIN CONTRACTORS AND THE UNITED BROTHERHOOD OF CARPENTERS AND JOINERS (FLOORLAYERS) LOCAL No. 1875.

Agreement in effect from May 1, 1928 to April 30, 1929 and thereafter unless notice of change is given 30 days prior to expiry date.

This agreement was drawn up in settlement of a strike reported on page 579.

Hours: 8 per day with 5 day week to commence on June 1, 1928; no work on Saturday without permission of the union.

Overtime: Time and one-half for first four hours; after first four hours and work on Saturdays, Sundays and holidays, double time. Any man working overtime shall first get permission from the business agent or shop steward. In case of extra shifts more than four consecutive shifts shall constitute a night shift and shall be paid at the rate of time and one-half; less than

four consecutive shifts shall be paid at the usual overtime rates.

Wages: floorlayers and scrapers \$1.12½ per hour, finishers \$1.10 per hour.

Apprentices: Wages 45 cents per hour to start and pay raise every three months proportionally for three years when they shall receive journeymen's wages. No shop to employ more than one apprentice to every ten journeymen. Apprentices to be taught all branches of floorlaying except finishing. No apprentice to be allowed to work unless he can speak English.

Only union members or those willing to join union to be employed. No union member to work for any employer who is not a signatory to this agreement. No sub-contracting or piece-work allowed.

For work outside city, transportation, room and board to be paid and travelling time up to 8 hours per day.

Carpenters taken on during rush season must be union men and shall be paid carpenters' wages while laying backing and fir; otherwise floorlayers' wages.

Transportation and Public Utilities: Electric Railways

CORNWALL, ONTARIO.—THE CORNWALL STREET RAILWAY COMPANY AND THE AMALGAMATED ASSOCIATION OF STREET AND ELECTRIC RAILWAY EMPLOYEES OF AMERICA, LOCAL No. 946.

Agreement in effect from April 1, 1928, to April 1, 1929, and from year to year unless notice of change is given 30 days prior to April 1 in any year.

The agreement which was in force in 1927 and was summarized in the LABOUR GAZETTE for August, 1927, has been amended to provide for an increase in wages for all classes of work of 4 cents per hour.

Transportation and Public Utilities: Water Transportation

AMHERSTBURG, ONTARIO.—DREDGE OWNERS AND THE INTERNATIONAL LONGSHOREMEN'S ASSOCIATION, LOCAL No. 504-1 (INTERNATIONAL SURFACE AND DRILL BOAT WORKERS ASSOCIATION).

Standard international agreement, accepted by local dredge owners in effect from April 1, 1926, to March 31, 1929, and thereafter from year to year unless notice of change is given by either party by January 1, 1929, in which case a conference will be held and any matters not decided by this conference, to be submitted to a joint arbitration committee.

Only union members or those willing to become such to be employed.

In case of a dispute which cannot be settled by representatives of each side, a board of arbitration to be appointed consisting of a member from either side and a third selected by these two, the decision of this board to be binding.

No deduction from monthly pay of foreman for holidays, but if required to work on these days, an extra day's pay will be given.

For out of town work, transportation to be paid.

No man shall be considered a driller unless he has had one season's experience as a driller's helper.

Foreman of each drill boat to hire his own crew but must not select members of his family.

Hours: 8 per day.

Overtime: time and one-half; all work on Sundays or legal holidays, double time.

Wages: day foreman, \$273 per month (30 days); night foreman, \$257.25 per month (30 days); licensed engineer (who shall be employed where required by law), \$7.80 per day; blaster, \$7.80 per day; driller, \$7.75; fireman, \$7; driller's helper, \$6.50.

Service: Recreational

TORONTO, ONTARIO.—THREE LARGE THEATRES AND THE AMERICAN FEDERATION OF MUSICIANS, LOCAL No. 149, THE TORONTO MUSICAL PROTECTIVE ASSOCIATION.

Agreement in effect from September 5, 1927, to August 30, 1929.

There shall be two regular sessions per day, at 2.15 to 5 p.m. and 8.15 to 11 p.m. (with option of variation of 5 or 10 minutes either way) and one supper session of vaudeville, not exceeding one and one-half hours. Men to receive \$65 per week; leader, \$100 per week.

Additional shows of vaudeville, not exceeding one and one-half hours each, men \$4, leader \$6 for each additional show. One half-hour intermission to be taken at regular sessions during the feature picture. On regular three shows a day, and subject to the variation referred to above, overtime to be paid after 5 p.m. and 11 p.m. at the rate of 75 cents per half hour or fraction thereof for men, leader \$1 per half hour or fraction thereof. Overtime to be computed at the end of each day.

In addition to the orchestra, there shall be two organists at \$50 each per week. The work to be equally divided between the two organists.

Above prices are based on a minimum number of 6 men for stock companies playing dramas, 8 men for burlesque houses and 9 men for all other theatres. Members of orchestra to be engaged by leader or contractor. One free rehearsal of two hours per week; extra rehearsals \$3 for two hours, extra time on all rehearsals \$1 per half or fraction thereof. Dress, stage or company rehearsals, not exceeding 3 hours, same as regular show. Sunday rehearsals and midnight performances, double pay. Any member of orchestra playing behind scenes, or assisting in act, \$1 extra each performance. Members of orchestra featured in solos, duos, trios, quartettes \$2 for each performance. Extra men engaged by the week to be paid \$3 per week over the scale. Any member or members of regular orchestra displaced by travelling musicians to receive full salary.

TORONTO, ONTARIO.—TORONTO THEATRE OWNERS' AND MANAGERS' ASSOCIATION AND THE AMERICAN FEDERATION OF MUSICIANS, LOCAL No. 149, THE TORONTO MUSICAL PROTECTIVE ASSOCIATION.

This agreement concerns theatres other than the large downtown theatres and operating nights only.

Agreement in effect from September 5, 1927, to September 5, 1929.

Only union members to be employed and under the following conditions:

To play pictures, or pictures and vaudeville, six nights per week, sessions not over three hours. Where the seating capacity of the theatre is 750 or less, side-men to receive \$24 per week, leader \$37 per week. Where the seating capacity is 750 to 1,000, side-men to receive \$25 per week, leader \$40 per week. Where the seating capacity is 1,000 to 1,250, side-men to receive \$28 per week, leader \$45. Where the seating capacity is over 1,250, side-men to receive \$28 per week, leader \$48 per week.

The above prices are based on a minimum of two musicians in houses seating 400 to 750, three musicians where seating capacity is 750 to 1,000 and four musicians for over 1,000, except in summer season (not exceeding ten weeks), when the minimum number may be reduced to one in each theatre.

Members of orchestra to be engaged by the leader.

Prices to include one rehearsal not exceeding one hour per week or two rehearsals for change of picture. Rehearsals over one hour, 50 cents per half hour or fraction thereof. If rehearsals called prior to 6 p.m. they must be paid for at the regular rate of \$3 per man for each rehearsal of two hours or less. Where there is no orchestra, pianist shall receive leader's salary. Midnight performances, for the House: men, \$5, leader \$8; for other parties, men \$7, leader \$10; afternoons, men \$5, leader \$8; when orchestra is featured on the stage, men to receive \$2 extra per session.

TORONTO, ONTARIO.—MOVING PICTURE THEATRES AND THE INTERNATIONAL ALLIANCE OF THEATRICAL STAGE EMPLOYEES AND MOVING PICTURE MACHINE OPERATORS, LOCAL NO. 173.

Agreement in effect from September 1, 1927, to August 31, 1929.

Ontario Labour Educational Association

The Ontario Labour Educational Association held its annual convention at Kitchener during May, when resolutions were adopted as follows:—

Request to the Ontario Government that mothers with one child be entitled to mothers' allowances; that the Dominion Government investigate the steel workers' strike in Toronto; that the control of the salaries of employees in the postal service be transferred from the Civil Service Commission to the Federal Government; that a minimum wage of \$15 a week be set for boys of 16 and 18 years of age; that training in first aid be provided in all grades from senior third up in the schools; that the Dominion Government continue the annual grant toward technical education; that the Provincial Government

This agreement is similar to that summarized in the LABOUR GAZETTE for October, 1926, with the following changes:

Theatres having a seating capacity of 500 or under and giving a continuous performance with two shifts daily, payable at the rate of \$45 per week per man.

Theatres with seating capacity of over 1,400 with two shifts, payable at rate of \$55 per week per man.

All special performances where no admissions are charged shall be paid at the rate of \$1.25 per hour from the time they are called, with a minimum charge of \$5. After 11 p.m. the charge shall be \$2 per hour.

Service: Personal

HAMILTON, ONTARIO.—SCHEDULE OF HOURS, WORKING CONDITIONS, PRICES AND WAGES FOR JOURNEYMEN BARBERS INTERNATIONAL UNION OF AMERICA, LOCAL NO. 131.

To be in effect from May 1, 1928, to April 30, 1929.

Wages: Weekly guarantee of \$22 and 60 per cent over \$30. Spare time and relief work, 70 per cent with minimum guarantee of \$4 per day for week days, if starting before 5 p.m. and \$7 for Saturdays. If commencing work at 5 p.m. or after, 70 per cent straight.

Hours: from 8 a.m. to 7.30 p.m. with one hour for dinner and three-quarters of an hour for supper; barber shops to close every night at 7.30 p.m. excepting Saturdays when they may remain open till 10 p.m. No work on legal holidays. Every journeymen to be allowed one-half day off every week from 12 o'clock noon with full pay for time off.

Schedule of prices is also given.

investigate the accidents in technical schools; that the Workmen's Compensation Board be empowered to compensate students injured in the classes of these schools; and that the sale of beer by the glass in authorized places in Ontario be permitted.

The convention also endorsed the committee's recommendations in support of (1) old age pensions; (2) the Trades and Labour Congress of Canada's stand toward immigration; (3) opposition to dual labour organizations.

The election of officers resulted as follows: President, Rod Plant, Ottawa; vice-president, Larry O'Connell, Toronto; secretary-treasurer, Jos. T. Marks, Toronto. The next convention will be held in St. Thomas.

RECENT LEGAL DECISIONS AFFECTING LABOUR

Municipal Employee Hired by Year May be Dismissed Without Notice.

A municipal council in Manitoba, by a by-law enacted in January, 1926, engaged a secretary-treasurer at a salary of \$2,400 a year, payable on the last day of each month, or until his successor should be appointed. On February 3, 1927, the council passed another by-law, providing for the appointment of another officer, thereby dismissing the first. The dismissed employee sued the municipality to recover \$200 salary claimed to be due to him for the month of February, 1927. The sum of \$41.67 was paid into court by the municipal council to cover services actually rendered by the plaintiff in February. The plaintiff's claim was allowed by the County Court on the ground that the municipality could only dispense with the services of the employee by giving him three months' notice under the Municipal Act, or by repealing the by-law appointing him. Section 326 of the Act provides that "any such officer (i.e. appointed by the council), and any servant or employee heretofore or hereafter appointed, may be removed or dismissed at any time by resolution of the council, upon one month's notice or upon payment of one month's salary where such officer, servant or employee is hired by the month, and upon three months' notice or payment of three months' salary where such hiring is by the year."

On appeal by the municipality, the Manitoba Court of Appeal reversed the judgment of the County Court, on the ground that under the by-law appointing him the plaintiff's employment was for the year 1926, or until his successor was appointed, and that by a by-law passed on February 3, 1927, a successor was duly appointed. The hiring being for a definite period the plaintiff was only entitled to be paid for that period. The appeal was therefore allowed and judgment entered for the plaintiff for \$41.67, the amount paid into court by the defendant on account of salary. Four judges agreed in this judgment, but the Chief Justice dissented.

Compensation Denied when Unnecessary Risk is Taken

Three cattlemen employed on board a steamer which left Halifax, Nova Scotia, on January 29, 1927, went on the upper deck dur-

ing a storm and were washed overboard by waves which were sweeping the deck. The vessel was immediately stopped and circled round the scene of the accident, but the men were not found. The widow of one of the men, resident in Northern Ireland, brought action against the owners of the steamship under the Workmen's Compensation Act. The County Court held that the employee in visiting the upper deck had subjected himself to an unnecessary risk which did not fall within the scope of his employment, and decided against the applicant's claim. This decision was affirmed later by the Court of Appeal at Belfast.

—(*Northern Ireland—Poots versus Leyland and Company, Limited*)

Employer is Responsible for Enforcement of Safety Rules

A young man employed on construction work in the Province of Quebec was killed by a flying piece of rock following a blast of dynamite. The victim, with five companions, had been drilling holes and filling them with dynamite. While waiting for the explosion they took refuge on a barge which could be moved about. The father of the deceased workman sought compensation in the Superior Court at Beauharnois on the ground that he had been supported by wages of the deceased. The employing company contended that the fatality was due to the negligence of the employees, as they had been warned to go to a position of safety when a blast was about to explode, but had remained in a dangerous place contrary to instructions. The Court found that no one having authority was in charge of the gang.

Mr. Justice Bond, in giving judgment, said: "It has frequently been held that it is not sufficient for an employer to issue general instructions to his employees; he must take the necessary steps to see that those instructions are carried out. As it appears to the court there was serious negligence on the part of the defendant in failing to take the necessary steps to protect the lives of its employees and to avoid accidents of this nature, in failing to provide a capable foreman for this gang, and in leaving to the discretion of these labourers the task of determining how far the barge should be removed in order to ensure safety from flying debris resulting from the explosion of dynamite. There was further negligence in not providing adequate shelter for these employees

*Dominion Law Reports, 1928, 2, page 657.

from such an obvious risk. . . . I have no hesitation in arriving at the conclusion that the death of the plaintiff's son is attributable to the fault and negligence of the defendant company in failing to take the necessary steps to protect the lives of its employees engaged in an occupation obviously presenting serious risks."

After discussing the expectations of the father in regard to future pecuniary benefit from his son, His Lordship fixed the amount of damages at \$600 and condemned the company to pay this amount.

Eight Hour Day Law as Protection to Employers

The British Columbia Supreme Court in a decision given by Mr. Justice D. A. McDonald early in May dismissed the claim of a workman in the lumber industry for \$1,177, alleged to be the balance of wages due in respect of work performed during hours of work in excess of the limit of eight hours per day, as fixed by the Hours of Work Act, 1923. The claimant stated that he had entered into an agreement with his employer to work over the legal limit. In dismissing the claim the court held that the agreement was illegal, the act being applicable equally to employers and workmen.

Future Earnings of Undischarged Bankrupt May Not be Claimed by Creditor

An agent who had been employed by the United Typewriter Company to sell their product on a salary and commission basis, became insolvent and the trustee of the estate moved for a court order directing the employing company to pay to him, for the benefit of the creditors, the sum of \$3,500 yearly in monthly instalments out of the earnings of the debtor. An order to this effect was granted at Toronto by the Assistant Master. On appeal by the debtor and his employer the Ontario Supreme Court reversed this order, Mr. Justice Fisher giving the following reasons for judgment:

"I have examined all the cases referred to by the Master and I find that these decisions fall short of deciding that future personal earnings belong to a trustee as after-acquired property. The test, I think, is: Could the undischarged bankrupt, at the time the trustee launched this motion, have sued his employer for personal earnings to become due

in the future? If not, how can his trustee? If by a contract entered into between the undischarged bankrupt and his employer a certain sum for future personal earnings was actually due and payable, the case would be different. It seems to me that before a trustee can intervene and claim as 'after acquired property,' there must be property, real or personal, actually in existence and not something that may or may not come into being". . . .

"If the bankrupt had actually earned a certain sum of money, either a salary or a commission, and that money was actually owing and was in the possession of the bankrupt's employer, or had been paid to the bankrupt, or to some person for him, then the right of the trustee to intervene and to recover would be limited to so much as was not required for the bankrupt and his family. There is no jurisdiction in the courts outside of bankruptcy to appoint a receiver of the future earnings of a judgment debtor by way of equitable execution. Orders for payment out of future personal earnings of a bankrupt should be made sparingly, as there is always the danger of depriving a wage earner of the means of livelihood for himself and family, and an employer might not care to be bothered with court orders issued from time to time, and discharge the employee. Circumstances might also arise, in cases where an order was made and a certain sum fixed by the court, for the maintenance of the wage earner and his family, that would, owing to sickness or other unforeseen reasons, necessitate applications to the court from time to time to change the amount allowed for maintenance and these applications and orders would undoubtedly create confusion and annoyance to an employer. I doubt if the Bankruptcy Act was ever intended to expect a trustee to harass wage earning undischarged bankrupts for the benefit of creditors, excepting only in such cases where it was made clear that the wage earner should be made to pay something to his creditors out of his earnings. . . .

"The conclusion I have come to is that future personal earnings of undischarged bankrupt are not 'after acquired property' and do not pass to the trustee within the meaning of section 25 (a) of the Bankruptcy Act, 1919, Canada, chapter 36, as amended by 1923 Canada, chapter 31, section 21, but that if the personal earnings of an undischarged bankrupt are ascertained and owing, and in the actual possession of the debtor's employer, or of the debtor, or someone for him, the trustee would have a right to acquire for the

creditors only such portion thereof as in the opinion of the court as was found not necessary to be retained by the debtor for the support of himself and the members of his family dependent upon him.

"The appeal is allowed, and as I am of opinion the debtor could well afford to pay

something to his creditors, there will be no costs; trustee entitled to his costs out of the estate."

—(*Ontario Re Rung, ex parte Trustee*)*

THE LABOUR GAZETTE

PREPARED AND EDITED IN

THE DEPARTMENT OF LABOUR, OTTAWA, CANADA

VOLUME 28]

JULY, 1928

[NUMBER 7

NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

Monthly Summary

INDUSTRIAL employment in Canada at the beginning of June showed a further pronounced gain, resulting in a more favourable situation than in any other recorded month. This statement is based on returns tabulated by the Dominion Bureau of Statistics from 6,533 firms, each employing a minimum of 15 persons, the firms being representative of all industries except agriculture, fishing, hunting and highly specialized business. These firms had 943,344 employees on June 1, as compared with 884,262 on May 1. The index of employment (with January, 1920, as the base equal to 100) stood at 112.4 on June 1, as compared with 105.5 on May 1, 1928, and with 105.9, 101.0, 94.5, 95.2, 97.3, 89.2 and 86.6, on June 1, 1927, 1926, 1925, 1924, 1923, 1922 and 1921 respectively. Reports received from the offices of the Employment Service of Canada indicated substantial increases in the volume of business transacted in May as compared with the preceding month and with May last year. At the beginning of June, 1928, the unemployment percentage reported by local trade unions was 3.7, compared with 5.2 per cent of unemployed members both at the beginning of May, 1928, and at the beginning of June, 1927. The percentage for June this year was based on the reports which were received by the Department of Labour from 1,697 labour organizations, covering a total membership of 182,383 persons.

The average cost of a weekly family budget of twenty-nine staple foods was \$10.73 at the beginning of June, as compared with \$10.80 for May; \$10.86 for June, 1927; \$11.06 for June, 1926; \$10.44 for June, 1925; \$9.86 for June, 1924; \$10.23 for June, 1923; \$10.18 for June, 1922; \$11.16 for June, 1921; \$16.92 for June, 1920 (the peak); \$12.79 for June, 1918; and \$7.49 for June, 1914. In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon prices in 1913 as 100, was again lower at 150.2 for June, as compared with 152.9 for May; 153.5 for June, 1927; 155.6 for June, 1926; 158.6

for June, 1925; 152.3 for June, 1924; 155.5 for June, 1923; 152.7 for June, 1922; 164.5 for June 1921; 255.1 for June, 1920; 201.7 for June, 1919; and 196.0 for June, 1918.

The time loss due to industrial disputes in June, 1928, was less than during May, 1928, but greater than during June, 1927. Twenty-one disputes were in existence at some time or other during the month, involving 2,901 workpeople, and resulting in a time loss of 24,480 working days. Corresponding figures for May, 1928, were: twenty disputes, 3,078 workpeople and 35,024 working days; and for June, 1927, twenty disputes, 2,881 workpeople and 15,060 working days.

Industrial Disputes Investigation Act, 1907

During the month of June the Department received reports from two boards of conciliation and investigation in connection respectively with the dispute between the Calgary General Contractors' Association and its carpenters, and with the dispute between the Canadian Pacific Railway Company and certain of its employees at Galt Mines. One new application was received, and a Board was appointed during the month. A full account of the recent proceedings under the Act appears on page 690.

Eleventh International Labour Conference

This issue contains an account of the proceedings of the Eleventh Session of the International Labour Conference, which was held at Geneva on May 30-June 16. Canada was represented at the conference by a strong delegation which included the Hon. Peter Heenan, Minister of Labour, and Dr. W. A. Riddell, representing the Canadian Government; Mr. Tom Moore, president of the Trades and Labour Congress of Canada, representing labour, and Mr. H. H. Champ, representing Canadian employees, each of the delegates being supported by expert technical advisers. The Canadian Minister of Labour acted as chairman of the Selection Committee, the body which arranged

the business of the conference from day to day.

The eleventh session was marked by the adoption of the 26th Draft Convention and the 30th Recommendation of the International Conference, the new decisions relating to the creation, maintenance and application of minimum wage-fixing machinery in badly organized or lowly paid trades. The conference also adopted Draft Questionnaires on the subject of the prevention of industrial accidents, and it will be the duty of the International Labour Office at Geneva to analyze the replies received from the member states, and to prepare reports and concrete proposals for submission to the next session of the conference, with a view to the adoption in 1929 of a draft convention on the subject of industrial safety.

The Conference instructed the Governing Body of the Organization to take up anew the whole question of the revision of conventions and present a report on the problem at the next conference, this question having arisen particularly out of the recent proposal of the British Government with regard to revision of the Hours Convention. Resolutions on a variety of questions were adopted, including the effects of rationalization, housing conditions, disablement, production in general, and reform of the calendar.

Trades and Labour Congress Convention Call

The 44th Annual Convention of the Trades and Labour Congress of Canada will be held at Toronto on September 10 and following days. The Convention Call issued from the headquarters of the Congress at Ottawa states that matters of vital importance to the workers will be reported on by the Executive Council to the convention, chief among which will be: the adoption by all the provinces of the Old Age Pensions Act; improvement in the workmen's compensation laws; re-enactment of the Technical Education Act, 1919; amendments to the Immigration Act; the eight-hour working day; curtailment of the veto power of the Senate; amendments to the British North America Act; unemployment and unemployment insurance; a national fuel policy; Militia Act amendments; labour representation on tariff board; and elimination of sales tax.

Delegates are informed that all resolutions or amendments to the constitution for consideration by the convention must be forwarded in time to reach the office of the Congress not later than August 22, twenty days prior to the opening of the convention, in accordance with section 4, of article IV,

of the constitution. Delegates credentials must reach the office of the secretary-treasurer at least ten days before the convention opens.

Quebec Workmen's Compensation Commission

Under the provisions of the Workmen's Compensation Commission Act of the Province of Quebec (LABOUR GAZETTE, May, 1928, page 461), the Lieutenant Governor-in-Council has named the members of the Commission as follows: Messrs. Robert Taschereau, K.C., of Montreal, chairman; Simon Lapointe, K.C., of Quebec, and O. E. Sharpe, of Quebec. Mr. O. G. Molleur, of Montreal, is named secretary of the Commission.

In addition to the actual Board of Commissioners an advisory body also has been chosen by the Provincial Government as follows: Messrs. A. Mathieu, of Montreal, representing the international unions; T. McArthur of Montreal, representing the national unions, and T. Poulin and G. Brosseau, of Quebec, representing the Catholic unions.

The new Workmen's Compensation Act will become effective on September 1, 1928.

Alberta Women's Bureau Act in effect

The Women's Bureau Act, passed at the recent session of the Alberta legislature, took effect on July 1 (LABOUR GAZETTE, June, 1928, page 583). The Bureau is designed to co-ordinate the activities of women's organizations in improving the social and educational conditions of women in the province. It will collect and tabulate information and statistics relating to women, probably including such subjects as wages, hours, working conditions, legislation, health and accident problems, the extent of the contributions made by women to the support of their families, etc.

Farmers and compensation in British Columbia

The Workmen's Compensation Board of British Columbia met representatives of the Farmers' Institutes of the Province early in June, in order to consider proposals for a reduction in the present assessments levied on farmers who have voluntarily come under the Act. The Act at first excluded farm labourers from its benefits, but this exemption was abolished under an amendment passed by the legislature in 1922. It is stated that only about 60 farmers are now under the Act, while the number of persons included in the farming class of the province is given as approximately 50,000. The farmers' institutes

considered that the present assessment rate of 4 per cent is too high, and they asked that it should be reduced by one-half. According to press reports the Board could not accept this proposal, the fees now charged barely covering the amounts paid out last year in compensation. Some reduction in the rates of assessment might be possible, it was thought, if a large number of farmers should elect to come under the provisions of the Act, and thus increase the amount of the fund for the payment of compensation for this class.

University school of industrial hygiene

On another page of this issue Dr. Frank G. Pedley describes the work carried on since 1927 by the Industrial Hygiene Division of the Department of Public Health of McGill University, Montreal. Special industrial courses of training are now given by the university to doctors and nurses. Cases of occupational disease are studied and treated at the industrial clinic, the employers being advised as to proper methods of prevention in future. The industrial clinic offers very valuable services to employers and workers, including preliminary and periodical inspections of employees, visiting nurses, and other benefits which are described in detail by Dr. Pedley.

Industrial safety work in Canada

Mr. H. R. Thompson, secretary of the Nova Scotia Accident Prevention Association, made a report at the recent ninth annual meeting of the Association on the present standing of industrial safety work in the Dominion. This report is summarized in *Nova Scotia Industrial Safety News* as follows:—During the year the secretary visited all the provinces and had an opportunity of getting first hand information with respect to accident prevention activities throughout the Dominion. The only provinces in Canada where safety work is carried on in an organized way through the formation of employers' associations organized for this express purpose, are Ontario, New Brunswick and Nova Scotia. In Ontario the Associations obtain their funds from the Workmen's Compensation Board and in New Brunswick the lumbering class has organized as a safety association but the funds are contributed by its active members. The Workmen's Compensation Board of British Columbia is co-operating with the provincial boiler and factories inspectors and has been making an effort to reduce the number of industrial accidents. Statistics are compiled and circular letters distributed to employers illustrating that certain types of work can be done in a

safer manner. Some of the trade associations in that province employ full time safety inspectors to supervise their operations with the hope of reducing the number and severity of accidents. Organized industrial safety work in Alberta, Manitoba, Saskatchewan and Quebec is of a negligible nature and ways and means of extending and intensifying it are now being considered. In reviewing the trend of safety in other provinces it is interesting to note that fatalities and accidents caused by mechanical hazards are being reduced whereas there appears to be, if anything, an increase in minor accidents. In commenting on this situation the chairman of the Ontario Compensation Board recently offered his opinion that the reduction of mechanical hazards indicated that industry is realizing the necessity for mechanical safeguards, but that an extension of educational work along safety lines was needed.

Results obtained by "team work" in industry

The paper by President Tagge, of the Canada Cement Company, on another page of this issue, will be read with interest in view of some recent discouraging statements as to the results so far obtained by the organized safety movement (LABOUR GAZETTE, June 1927, page 593). The remarkable record of the Canada Cement Company in completely eliminating lost time accidents from some of its plants for prolonged periods has been already noted (April 1927, page 347, January 1927, page 70, etc.). Mr. Tagge records that the company secured a reduction of 75 per cent in the number of industrial accidents at five of its plants during eight years. This result was obtained after it had been discovered that safety organization and safety education were necessary to supplement the provision of mechanical safeguards. The president describes the various methods used by the company for engaging the active co-operation of its employees. It is found that a habit of co-operation is acquired which affects the whole atmosphere of the industry. Mr. Tagge suggests that if the team work that has been shown in safety work could be directed by wise leadership into other lines "it might produce results equally marvellous."

Study of the efficiency of Canadian labour

Professor H. Michell, of McMaster University, Toronto, continues in the June issue of *Industrial Canada* his series of studies of various aspects of Canadian industry. Earlier articles in the series have been noted in the LABOUR GAZETTE

(November, 1927, page 1147; September, 1927, page 927). The latest study attempts to measure the efficiency of Canadian labour at successive periods. Three factors account for the increase that has occurred in labour "productivity" in recent years: (1) the perfecting of mechanical aids; (2) the better education of the modern workman as compared with his predecessors; and (3) improved working conditions, which have served to invigorate the workman, reducing accidents and lessening the amount of spoiled work.

Professor Michell bases his calculations on the statements of yearly production values contained in successive decennial censuses, these figures being adjusted by means of price index numbers. He summarizes his conclusions as follows:—

(1) From 1890 to 1900 the value of production per worker increased 15.5 per cent, or an annual average increase of 1.55 per cent.

(2) From 1900 to 1910 the value of production per worker increased 58.5 per cent, or an annual average increase of 5.85 per cent.

(3) From 1910 to 1920 the value of production per worker increased 7.3 per cent, or an annual average increase of 0.73 per cent.

(4) From 1920 to 1926 the value of production per worker increased 52.8 per cent or an average annual increase of 8.8 per cent.

Professor Michell points out however, that much work remains to be done before labour productivity can be accurately measured. He suggests that future investigations should follow the lines laid down by Dr. Woodlief Thomas, of the Federal Reserve Board of Washington, in connection with similar investigations in the United States, as follows:—

"(1) A more detailed analysis of physical volume of production per worker, thus escaping from the less accurate method of corrected values which we have been obliged to follow here.

"(2) A clear exposition of the relation of increase of production and decrease of working hours. Upon this problem, by no means a simple one, practically nothing has been done in Canada.

"(3) A study of the relation of power installation, especially electrical, to output of manufactures. This should be, at least, possible and will, doubtless, prove valuable.

"(4) A detailed study of output per industry. This is perfectly feasible and should prove highly illuminating. It should also be quite possible to do the same for agriculture and railways."

Increased productivity and decline of employment

In the *Labour Bulletin* (published monthly by the Illinois Department of Labour) Professor Paul H. Douglas, of the University of Chicago, discusses the

appreciable decline that has occurred in the numbers employed in factories, railways and mines in the United States during the past nine years. This decline in employment has been accompanied by a great increase in productivity of manufacturing and transportation during the same period. The increases in production in some branches of manufacturing since 1919 have been very great, amounting to 72 per cent for the automobile industry, 62 per cent for non-ferrous metals, and about 100 per cent in the cement, brick and glass industries. The total increase in mining productivity was 38 per cent. All this increased production, Professor Douglas states, was accomplished with fewer workers than in 1919.

Basing his estimates on the figures given in the United States Census of Manufactures for 1919 and following years, he finds that with 11 per cent fewer manual workers employed, the manufacturing industries in the United States produced, in 1927, 26 per cent more goods. Similar declines in the numbers employed occurred in mining and transportation. Moreover, the farming population declined between 1920 to 1926 by 3,700,000 persons, and about 1,400,000 of this number were thrown into city life to seek industrial employment. Altogether, it is calculated that 4,100,000 persons have disappeared from the industries which employed them nine years ago.

Professor Douglas asks what has become of the workers thus displaced from their occupations, pointing out that this is one of the most important industrial questions of the day. By way of a tentative solution of the problem he suggests that the "lost" employees have become partly absorbed in the following ways:—

(1) The increase in the numbers employed in garages, filling stations, etc.

(2) The increase in the numbers employed in building construction over 1919.

(3) A possible increase in retail and wholesale trade employment.

(4) The rise in real earnings since 1919 has perhaps led to a decline in the number of persons in each family who feel obliged to work.

"But even after making the most generous allowances for each of these factors, however, it seems apparent that they cannot account for the total number of missing workers."

Employment standards for women in industry

The Women's Bureau of the United States Department of Labour has adopted a number of standard conditions which it is hoped may be made to govern the employment of women throughout the country. These conditions are enumerated by Miss Mary Anderson, director of the Bureau, in an article recently contributed to the *Personnel Journal*, published by the Personnel Research Federation, New York. Miss Anderson states that one in every five wage earners in the United States is a woman, and about two million are married women. The following standards were originally drawn up by a committee composed of employers, labour representatives and government experts during the war, and experience over the period since the war has proved them to be effective in promoting health and contentment and in eliminating fatigue and worry:

1. Equal pay for equal work, regardless of sex or race.
2. An eight-hour day; a half-holiday on Saturday; one day's rest in seven.
3. At least 30 minutes for a meal.
4. Ten minutes' rest in the middle of each half-day without lengthening the day.
5. No employment between midnight and 6 a.m.
6. Clean work places, with special attention to floors to prevent slipping.
7. Enough light but no glare.
8. Adequate ventilation. Provision against heat, humidity, dust, fumes.
9. Guarded machinery. Protection from fire and other hazards.
10. A chair for each woman, built on posture lines, adjusted to both worker and job. Neither constant sitting nor constant standing.
11. Sanitary and accessible drinking water; individual cups or sanitary fountains.
12. Sanitary and accessible washing facilities; hot and cold water, soap, individual towels.
13. Sanitary toilets, one to every fifteen women.
14. Dressing rooms for change of clothing. Rest rooms for rest periods.
15. Separate lunch rooms, with hot food where possible.
16. No prohibition of women's employment in any industry except those proved to be more injurious to women than to men.
17. No home work.

The bureau also recommends a personnel department in every plant, having responsibility for the selection, assignment, transfer

or withdrawal of workers and for the establishment of proper working conditions, with a competent woman in charge of all matters affecting women employees.

Five-day week for garment workers at New York

Beginning on Monday, June 4, about 20,000 workers of the International Ladies Garment Workers' Union in New York City entered on an arrangement whereby they were to work a five-day week of forty hours. It was stated that no loss in wages would be entailed by the change, and work was to go on as usual in the shops adopting the new arrangement, while energetic efforts were promised to bring into line some of the smaller shops not yet represented in the decision. The *New York World* says:—"It is not an innovation in New York—the capmakers have had the five-day week for some time—but may be used as a precedent in new arrangements proposed for workers upon men's clothing. In general industry throughout the country there is a considerable and growing number of five-day shops. The five-day week is hastened in New York by the fact that most of the members of the Ladies Garment Workers' Union are of the Jewish religion and wish to observe Saturday as the Sabbath."

The annual convention of the Federation of Catholic Workers of Canada will be held in Quebec city commencing September 9, the sessions being held in St. Peter's hall, St. Sauveur.

The Union of Saskatchewan Municipalities at its convention held at Moose Jaw in June passed a resolution approving the principle of unemployment insurance.

During June the Ontario Compensation Board received a total of 6,806 reports on accidents including 37 fatalities. In the same month, awards totalled \$536,962.47, of which \$101,783.98 was for medical aid.

The Canadian Society of Technical Agriculturists has been incorporated under the Companies' Act, having its headquarters at Ottawa, its purpose being to organize and unite all workers in scientific and technical agriculture, to encourage agricultural research and co-ordinate the work of existing societies. It will also serve as a means of ensuring the employment of technical men for technical positions.

GENERAL REVIEW OF THE INDUSTRIAL SITUATION

Employment

THE employment situation at the end of June was reported by the local superintendents of the Employment Service of Canada to be as follows:—

Farm prospects in the Province of Nova Scotia were stated to be encouraging with growth proceeding satisfactorily. The fishing industry reported that good catches were being made. Summer logging operations, chiefly involving the cutting and peeling of pulp wood, were proceeding normally with some workers being referred to vacancies that were arising. The building and construction industry appeared to be quite active, particularly so in the case of Halifax where several large structures were building. Manufacturing, including the iron and steel group, showed a rather fair measure of activity. Coal mining production, which had increased in recent weeks, was reported as in good volume for the summer months. Transportation was stated to be brisk, while trade was said to be improving. The usual summer slackness in the demands for women domestic workers was recorded.

As in Nova Scotia crop prospects in New Brunswick were good, with good growing weather obtaining. Numerous calls for pulp cutters and peelers were being received at the different employment offices as considerable of this type of work was progressing. Manufacturing industries in the different centres continued normal production. Construction, both building and highway, was showing a satisfactory volume of activity throughout the province. Trade was reported as very good, while transportation was likewise good. The usual quota of women domestic workers were being placed.

The number of farm workers being placed by the Quebec employment offices was quite substantial. With the curtailment of river driving in the logging industry throughout this province, the number of workers being placed in the lumbering industry had reached a very low point. In the manufacturing industries of the province the previous satisfactory level of production was being maintained, with some increases in the pace and no decreases of any moment: Montreal, Quebec, Hull, and Three Rivers were all reported as showing a favourable position in this line of activity. The general situation in the building and construction industry was stated to be very satisfactory, with orders for tradesmen of practically all classes being regularly received. Transportation and trade were both reported as being

very good. With a keen demand for women domestic workers, the offices reported some difficulty in filling vacancies of this nature.

With the advent of the haying season in the Province of Ontario numerous orders for farm workers were anticipated in the immediate future. Most of the skilled tradesmen in the building and construction group were reported as employed and this industry generally was showing very satisfactory activity. Although few additional workers were being engaged in the different factories throughout this province, the level of production in the manufacturing industry showed no recession. The usual situation was in evidence in the metal mines in the northern section of the province, namely, that while few new workers were being engaged, activity proceeded unabated. The demands for workers in the different branches of the lumbering industry were quite satisfactory, and numerous applicants were being referred, although one or two centres reported some difficulty in securing applicants to accept such employment in the summer season. The women's domestic sections of the offices continued to report a substantial number of orders as being received and the usual difficulties in the matter of securing a sufficient number of competent cooks-general.

With crop conditions in the Province of Manitoba reported as ideal, especially in the matter of the progress made by grains to date, the demand for farm workers was on the increase, and some difficulty in securing a sufficient number of suitable and satisfactory applicants was reported. Building construction, particularly in Winnipeg, showed a good level of activity throughout the province: building permits issued in the City of Winnipeg to June 30 totalled \$6,150,000. In addition to the building section, the other sections of the construction industry showed substantial works underway, especially in the railway construction and highway construction divisions. Heavier demands for and placements of women domestic workers were reported by the different offices, particularly Winnipeg, and it is probable that these demands will steadily increase up to the time of the harvest. The metal mining field of the northern section of the province continued as an increasing factor in the Manitoba employment situation. Generally speaking, conditions throughout this province appeared to be quite satisfactory for the season.

Although the demand for farm workers in the Province of Saskatchewan was on the increase, there was no shortage of experienced

workers to cope with it. Building and construction activity throughout the province was at a rather satisfactory level, and different of the larger centres reported that tradesmen in this group were practically all employed. The demand for women domestic workers was

rather good, and there did not appear to be any noticeable shortage of competent workers to fill such vacancies as were arising. The general situation in this province appeared quite normal for the season, and employment was at a not unsatisfactory level.

MONTHLY STATISTICS REFLECTING INDUSTRIAL CONDITIONS IN CANADA

Crops prospects throughout the Province of Alberta were reported to be excellent, and although the demand for farm workers had not yet shown any striking increase such might be looked forward to in the course of a very few weeks. Building and construction were fairly active, and it would appear that most of the skilled tradesmen normally employed in these industries were engaged at their regular calling. The fact that considerable railway construction was under way was assisting the employment situation for unskilled labourers to a very noticeable extent. Owing to the fact that coal mining was not showing any substantial activity, there was practically no demand for workers. Edmonton reported that there was an increased demand for logging workers. The demand for women domestics showed a slight increase with no great difficulty in securing substantially enough applicants to meet it. Local labour throughout the Province of Alberta appeared to be rather well employed.

The logging and lumbering industries in the Province of British Columbia appeared to be showing improvement, and one of the outstanding features of the situation was that Cranbrook reported that there were no unemployed workers in the logging industry in that section of the province. Considerable building and construction was being carried on throughout the province, and some centres reported that practically all of the building tradesmen in this industry were still employed, though Vancouver stated that some were idle. Manufacturing industries showed fair activity. Vancouver reported the usual shortage of women domestic workers. Taking the Coast Province as a whole, there seemed to be a more satisfactory employment situation obtaining, and although unplaced applicants were still sufficient to meet practically all demands that might arise, their number did not seem to be unusually large for the end of June.

The Dominion Bureau of
EMPLOYEES' Statistics tabulated returns
REPORTS on employment from 6,533
firms with 943,344 employees

on June 1, as compared with 884,262 on May 1. This increase of 6.7 per cent brought the index to 112.4, or nearly three points above the previous high level in the last eight years, recorded on September 1, 1927. In the preceding month, the index number stood at 105.5 and on June 1, 1927, 1926, 1925, 1924, 1923, 1922 and 1921, it was 105.9, 101.0, 94.5, 95.2, 97.3, 89.2 and 86.6, respectively.

Expansion was noted in all of the five economic areas, the increases being greatest in Quebec and Ontario. In the Maritime

Provinces, manufacturing and construction registered heightened activity, while logging, coal mining and transportation were seasonally slacker. In Quebec, construction, manufacturing and transportation recorded pronounced increases in personnel, and smaller gains were shown in logging, mining, services and trade. In Ontario, manufacturing, particularly of iron and steel and lumber products, construction and transportation registered the greatest expansion, but gains were also noted in mining, trade, logging and services. In the Prairie Provinces, construction, especially railroad construction, transportation, manufacturing and services reported marked improvement. In British Columbia, construction and manufacturing recorded the largest advances, but logging and other groups also showed heightened activity.

The trend of employment was favourable in seven of the eight cities for which separate tabulations are made; Montreal, Quebec, Toronto, Hamilton, Windsor and the Other Border Cities, Winnipeg and Vancouver showed considerable gains, while moderate declines were noted in Ottawa. In Montreal, transportation, construction and manufacturing reported the greatest increases, but trade was also busier. In Quebec, the gains were reported chiefly in construction. In Toronto, manufacturing, particularly of iron and steel products, was much brisker, and improvement was also shown in construction, trade and transportation. In Ottawa, construction recorded heightened activity, but manufacturing was quiet. In Hamilton, most of the expansion took place in manufacturing, notably in iron and steel plants, but other industries were also busier. In Windsor and the Other Border Cities, further marked increases were registered in automobile factories, while other industries showed only small changes. In Winnipeg, general improvement was recorded in trade, communications and manufacturing. Manufacturing and construction reported the bulk of the gain in Vancouver, where transportation was rather slacker.

An analysis of the returns by industries shows that there were important increases in manufacturing, particularly in iron and steel and lumber plants, but also in fish-preserving, pulp and paper, vegetable food, building material, rubber, electric current, electrical apparatus, mineral products and some other industries. On the other hand, boot and shoe and textile factories were seasonally dull. Logging, mining (other than of coal), transportation, communications, construction and maintenance, services and trade also registered

considerable improvement, that in construction and transportation being especially noteworthy.

An article elsewhere in this issue gives in some detail the employment situation as at the beginning of June 1928.

TRADE UNION REPORTS

Reports which were tabulated at the close of May, covering a total of 1,697 local trade unions with a total membership of 182,383 persons indicated that 6,657 of the members were out of work on the last day of the month, that is, a percentage of 3.7 as compared with 5.2 per cent of unemployment both at the end of April this year and at the close of May, 1927. A higher level of employment than in April was indicated in all provinces during May, but the changes were not particularly pronounced in any one province, ranging from 2.5 per cent improvement in Alberta to .3 per cent in both New Brunswick and British Columbia. When a comparison is made with the May, 1927, returns, Saskatchewan unions show a moderate decline in employment, while in the other provinces the situation is more favourable.

A report in greater detail of unemployment among local trade unions at the close of May will be found elsewhere in this issue.

EMPLOYMENT OFFICE REPORTS

During the month of May, 1928, the offices of the Employment Service of Canada made 43,680 references of persons to employment and effected a total of 42,237 placements. Of these, the placements in regular employment were 26,162, of which 21,859 were of men and 4,303 of women. Placements in casual work numbered 16,075. Employers notified the Service of 45,742 opportunities for employment, 32,140 being for men and 13,602 for women. Applicants for work totalled 52,089, of whom 38,396 were men and 13,693 were women. Substantial gains were recorded in the volume of business transacted during May, both when a comparison was made with the preceding month and with the corresponding period last year, the records for April, 1928, showing 36,829 vacancies offered, 44,152 applications made and 33,444 placements effected, while in May, 1927, there were recorded 35,604 vacancies, 44,052 applications for work and 32,249 placements in regular and casual employment. A report in detail of the work of the offices for the month of May, 1928, will be found elsewhere in this issue.

Production and Trade

INDUSTRIAL PRODUCTION IN CANADA

Some figures indicating the recent movements of trade and industry are given in the table on page 685. Industrial activity in Canada was at a new high level during May, according to an index prepared for the *Monthly Review of Business Statistics* published by the Dominion Bureau of Statistics. Much of the material for this section is derived from this monthly publication to which readers are referred for fuller information on current business statistics.

The output of newsprint was the largest on record, and the iron and steel industry operated at a high percentage of capacity. The output of motor cars and trucks was greater than in any other month, and the imports of raw rubber and petroleum indicated that the tire factories and oil refineries were actively engaged. Even after seasonal adjustment, the building industry was awarded a greater volume of new business than in any month of the present year, the total for May exceeding all previous records. Mining operations were more active in May, all divisions showing gains over the preceding month.

External trade was heavy, the exports showing an important gain. Carloadings, after adjustment for seasonal tendencies, were practically maintained, as compared with the preceding month. Active speculation was reflected in the index of trading on the Montreal stock exchange. Bank debits, after seasonal adjustment, were the greatest on record, reflecting a heavy physical volume of business as well as active speculative operations. The advance of the index of industrial employment during the last three months, even after seasonal adjustment, confirms the general conclusion in regard to business conditions.

The index of industrial employment in Canada during the last three months it is stated, plainly shows the generally prosperous conditions of the present time. During the second quarter of the year, a considerable increase in employment is quite normal, but even after seasonal adjustment, the gain in the last three months was especially marked. The adjusted index for June 1, was 110.5, compared with 108.6 on May 1, and 107.6 on April 1, indicating a decided expansion in industrial operations. Most of the principal divisions of Canadian enterprise experienced greater activity than in the preceding month and the corresponding months of 1926 and 1927. Logging and sawmilling appear to be an exception in that operations were on a smaller scale than in preceding years.

EXTERNAL TRADE A summary of Canadian trade prepared by the Department of National Revenue shows that in May, 1928, the merchandise entered for consumption amounted to \$113,582,238, as compared with \$78,490,470 in April, 1928, and \$94,412,439 in May, 1927. The chief imports in May, 1928, were: Iron and its products, \$35,367,182, and fibres, textiles and textile products, \$15,388,626.

The domestic merchandise exported amounted to \$118,021,324, as compared with \$58,975,315 in April, and \$108,782,591 in May, 1927. The chief exports in May, 1928, were: Agricultural and vegetable products, mainly foods, \$56,256,785; wood, wood products and paper, \$24,334,365 and animals and animal products, \$10,712,229.

In the two months ending May, 1928, exports of domestic merchandise totalled \$176,996,639, and imports to \$192,072,708.

BUILDING PERMITS AND CONTRACTS AWARDED According to a report prepared by the Dominion Bureau of Statistics the value of the building permits issued in sixty-three cities in Canada during the month of May, 1928, amounted to \$27,497,189, as compared with \$18,527,846 in the preceding month, and with \$20,138,657 in May, 1927. The total for May exceeded that for the same month in any other year since this record was begun in 1920.

The *MacLean Building Review* estimates the total value of the construction contracts awarded in Canada in June, 1928, at \$59,926,100. Of this amount \$18,589,200 was for residential building; \$17,871,100 for engineering work; \$16,201,500 for business buildings, and \$7,264,300 for industrial work. The apportionment by provinces during June, 1928, was as follows:—Ontario, \$32,836,600; Quebec, \$10,983,100; Prairie Provinces, \$10,293,500; British Columbia, \$3,565,300 and the Maritime Provinces, \$2,247,600.

The June contracts reached the second highest total ever recorded for any month, \$59,926,100, except May, 1928, which was \$70,684,100. The June total exceeds that for the same month of 1927, by 14.7, and the total for the year to date \$256,257,300 is greater than that for the corresponding period of last year by 33.9 per cent.

For the first half year the contracts awarded total, by divisions, shows: Ontario, \$98,654,900 or 38.5 per cent; Quebec, \$79,655,900, or 31.1 per cent; Prairie Provinces, \$33,219,900, or 12.9 per cent; Maritime Provinces, \$25,010,800, or 9.8 per cent, and British Columbia, \$19,-

715,800, of 7.7 per cent. By classification: Business buildings, \$91,713,300, or 35.8 per cent; Engineering work, \$53,722,500, or 21 per cent; residential work, \$72,531,000 or 28.3 per cent, and industrial work, \$38,290,500 or 14.9 per cent.

The contemplated new construction in Canada during June, 1928, according to the same *Review*, totalled \$76,972,300, \$21,426,900 of this amount being for residential buildings; \$37,133,200 for business buildings; \$9,634,400 for industrial buildings, and \$8,777,800 for engineering, including bridges, dams and wharves, sewers, water mains, roads, streets and general engineering.

Strikes and Lockouts

The time loss due to industrial disputes in June, 1928, was less than during May, 1928, but greater than during June, 1927. There were in existence during the month twenty-one disputes, involving 2,901 workpeople, and resulting in a time loss of 24,480 working days, as compared with twenty disputes involving 3,078 workpeople and resulting in a time loss of 35,024 working days during May. In June, 1927, there were on record twenty disputes, involving 2,881 workpeople and resulting in a time loss of 15,060 working days. Four of the strikes and lockouts commencing prior to June terminated during the month as did six of the disputes which commenced during June. At the end of the month, therefore, there were on record eleven strikes and lockouts affecting 1,973 workpeople, not including those strikes and lockouts in which employment conditions were reported to be no longer affected but which had not been formally called off.

Prices

The cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average retail prices in some sixty cities was \$10.73 at the beginning of June, as compared with \$10.80 for May; \$10.86 for June, 1927; \$11.06 for June, 1926; \$10.44 for June, 1925; \$9.86 for June, 1924; \$10.23 for June, 1923; \$10.18 for June, 1922; \$11.16 for June, 1921; \$16.92 for June, 1920 (the peak); \$12.79 for June, 1918; and \$7.49 for June, 1914. The most important declines were in butter and potatoes, with smaller decreases in the prices of milk, cheese and granulated sugar. Prices of beef, mutton, pork, bacon, lard, eggs, flour, rolled oats, beans and evaporated apples advanced somewhat. Including the cost of fuel and rent with that of foods the total budget averaged \$20.97 at the beginning of June, as compared with \$21.04 for May; \$21.04 for June, 1927;

\$21.31 for June, 1926; \$20.67 for June, 1925; \$20.22 for June, 1924; \$20.72 for June, 1923; \$20.58 for June, 1922; \$21.74 for June, 1921; \$26.81 for June, 1920; \$20.36 for June, 1918; and \$14.27 for June, 1914. Fuel and rent were unchanged.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics was again lower at 150.2 for June, as compared with 152.9 for May; 153.5 for June, 1927; 155.6 for June, 1926; 158.6 for June, 1925; 152.3 for June, 1924; 155.5 for June, 1923; 152.7 for June, 1922; 164.5 for June, 1921; 255.1 for June, 1920; 201.7 for June, 1919; and 196.0 for June, 1918. In the grouping according to chief component materials three of the eight main groups declined, three advanced, while two were unchanged. The Vegetables and their Products group was sub-

stantially lower, due mainly to lower prices for grains, flour, oat products, potatoes, sugar, tea, hay, straw and vegetable oils. The Iron and its Products group and the Chemicals and Allied Products group were also lower, the former due mainly to slightly lower prices for steel bars and steel sheets, and the latter mainly because of a decline in the price of alcohol. The groups which advanced were: the Animals and their Products group, chiefly because of higher prices for cattle, hogs, beef, smoked meats, lard, boots and shoes; the Non-Ferrous Metals group, due to higher prices for copper, lead and spelter, which more than offset lower prices for silver, tin and solder; and the Non-Metallic Minerals group, due to an advance in the price of anthracite coal. The Fibres, Textiles and Textile Products group and the wood and wood Products group were unchanged.

" Civil Service Review " for Federal Employees

The Civil Service Federation of Canada recently issued the first number of the *Civil Service Review*, a quarterly magazine devoted to the interests of federal employees. The new magazine will enable civil servants throughout Canada, to keep themselves informed on the problems of the government service, and it is hoped that it will be the means of developing a spirit of co-operation and understanding among the 40,000 employees of the federal government. The Federation was established in 1909, and comprises about eighteen affiliated Civil Service Associations with branches throughout the Dominion, including the Civil Service Association of Ottawa, the Dominion Customs and Excise Officers' Association and other large organizations. The Prime Minister, the Right Hon. W. L. Mackenzie King, in a message to the *Review*, refers to his long connection with the federal Civil Service and pays a tribute to its high standards of loyalty and efficiency. He anticipates that the new quarterly will help to develop much literary talent among government officials, and that it will soon obtain a recognized place among the standard periodicals of the Dominion.

Among other contributions to the first issue the following may be mentioned: Civil Service Councils, by C. R. MacIntosh, M.P.; Ottawa—your Capital and Mine, by E. W. Harrold; The Proposed Deep Waterway, by V. C. Phelan; The Merit System in Canada, by William Foran; the Superannuation Sys-

tem, by A. C. Campbell; The Civil Service in Parliament, by Charles Lynch; At the Sign of the Wooden Leg, by Silas Wegg; Some Modern Aspects of Forest Conservation, by H. J. Bury; Leaders in a Great National Service, by V. L. Lawson; Dominion Customs and Excise Officers' Association, by T. H. Burns; Dominion Public Works Federation, by F. Jacques. and the Halcyon Club, by Miss B. K. Dibblee, etc.

The price of the *Civil Service Review* is 15 cents per copy. Regular rates of subscription will be announced later.

The Ontario Workmen's Compensation Board received reports of 276 fatalities in industry during the first half of 1928. This is higher than the number reported during the previous six months, when there were 243 fatalities. Mr. R. B. Morley, general manager of the Industrial Accident Prevention Associations, of Ontario stated that 5,157 fatalities have been reported to the Board in thirteen years, or an average of almost four hundred for each year. The average cost of a death under compensation is about \$3,600 for all cases, and where dependents are left the figures are much higher. The total awards for the first half of 1928 amounted to \$3,515,124.17 including \$577,349.66 for medical aid. Total awards for the last half of 1927 were \$3,093,157.02 of which \$539,865.30 was for medical aid.

PROCEEDINGS UNDER THE INDUSTRIAL DISPUTES INVESTIGATION ACT FOR THE MONTH OF JUNE, 1928

DURING the month of June the Department received reports from two Boards of Conciliation and Investigation established to deal with disputes between (1) The Calgary General Contractors Association and the Calgary Local Union of the United Brotherhood of Carpenters and Joiners, and (2) The Canadian Pacific Railway Company and certain of its employees at Galt Mines, as represented by Local Unit No. 6, Mine Workers Union of Canada. The text of these reports is given below.

Application Received

An application for the establishment of a Board of Conciliation and Investigation was received during the month from certain employees of the Ottawa Electric Company, being members of Local Union No. 586, International Brotherhood of Electrical Workers. Twenty-five employees were stated to be directly affected by the dispute, which related to the demands of the employees for wage increases and adjustments of working conditions, as well as the dismissal of ten employees on June 1st. A Conciliation Board was established, the personnel being as follows: His Honour Judge J. T. Mulcahy, Pembroke, chairman, appointed on the joint recommendation of the other two members; Mr. A. E. Fripp, K.C., and Mr. H. J. McNulty, both of Ottawa, nominees of the company and employees respectively.

Other Proceedings Under the Act

Reference was made in last month's issue of the *LABOUR GAZETTE* to an application made by certain employees, as represented by Wayne Local Unit, No. 16, Mine Workers Union of Canada, of the Rosedeer Coal Company; Jewel Collieries; Sovereign Coal Company; Excelsior Coal Company; Ideal Coal Company, all of Wayne, Alberta. During the month a Board was established in this case, with the following personnel: Mr. Wm. G. Carpenter, Calgary, chairman, appointed on the joint recommendation of the other members of the Board, Messrs. George H. Eaton, of Calgary, and Norman Macdonald, of Wayne, nominees of the employing companies and employees respectively.

In the case of the application referred to in last month's issue of the *LABOUR GAZETTE* which was received from certain employees of the Winnipeg Electric Company, members of the Gas Workers Unit of the One Big Union, Mr. M. S. Campbell, Chief Conciliation Officer of the Department, proceeded to Winnipeg to interview the parties concerned. Through his efforts negotiations between the Committee of the Gas Workers Unit and officials of the company resulted in a satisfactory adjustment of the difficulty, which arose as a result of the dismissal of an employee.

Reference was made in the March issue of the *LABOUR GAZETTE* to an application received from the shop employees of the Quebec Power Company being members of the International Association of Machinists, International Brotherhood of Blacksmiths and Drop Forgers and Helpers of America, International Brotherhood of Boilermakers and Iron Ship Builders and Helpers of America, and Brotherhood of Railway Carmen of America. The dispute related to general working conditions and increases in wages. Through the efforts of Mr. M. S. Campbell, Chief Conciliation Officer, a new working agreement was arrived at which resulted in the reduction of the number of working hours per week from 53½ to 49½ without change in rate per hour.

An application was reported in last month's issue of the *LABOUR GAZETTE* as having been received from the Montreal District Council of the United Brotherhood of Carpenters and Joiners of America to deal with a dispute between said organization and the General Contractor Section of the Montreal Builders' Exchange, Inc. The industry concerned not coming within the direct scope of the Industrial Disputes Investigation Act for adjustment, a Board could be constituted only with the joint consent of the parties to the dispute under Section 64 of the Act. The employers declined to join with the employees in submitting the dispute to a Board of Conciliation and Investigation and a Board could not be therefore established.

Report of Board in dispute between the Calgary General Contractors' Association and the Calgary Local Union of the United Brotherhood of Carpenters and Joiners

A report was received from the Board established to deal with a dispute between the Calgary General Contractors Association and the Calgary Local Union of the United Brotherhood of Carpenters and Joiners. The dispute arose as a result of the demand of the employees for an increase in wages. As mentioned in the article on Strikes and Lockouts in this issue, the men had been on strike since May 1st. Through the efforts of the Conciliation Officers of the Department, Messrs. M. S. Campbell and F. E. Harrison, on May 28th the parties to the dispute agreed to refer the matter to a Conciliation Board, the men to resume work forthwith, both parties agreeing to accept the report of the Board. The Board was composed as follows: The Honourable Mr. Justice A. H. Clarke, Calgary, chairman, appointed on the joint recommendation of the other two members of the board, namely, Messrs. James H. Garden and Robert Hewitt, both of Calgary, nominated by the employer and employees respectively. The report of the Board was signed by The Honourable Mr. Justice A. H. Clarke, chairman, and Mr. James H. Garden, the employer's nominee. Mr. Robert Hewitt, the employees' nominee, submitted a minority report. Word has reached the Department that in accordance with the report of the Board a three-year agreement has been entered into between the parties to the dispute. The text of the Board's findings and the minority report is given below. The agreement is summarized in the regular article on Industrial Agreements, on another page of this issue.

Report of Board

In the matter of the Industrial Disputes Investigation Act, 1907, and of a dispute between The Calgary General Contractors Association, employer, and Calgary Local Union of the United Brotherhood of Carpenters and Joiners, employees.

To the Honourable the Minister of Labour,
Ottawa.

The Board of Conciliation and Investigation established under the provisions of the said Act, to whom the said dispute was referred, comprising Mr. James H. Garden and Mr. Robert Hewitt, both of Calgary, appointed on the recommendation of the employers and the employees respectively, and the Honourable Mr. Justice A. H. Clarke, appointed as third member and Chairman of the Board, on the recommendation of the other members of the Board, beg to report as follows:

All the members of the Board were present at every meeting thereof.

The Board held its first meeting for organization on the first day of June 1928, which was attended by a representative of each party to the dispute and, being assured that no settlement could be brought about, the Board appointed the fifth of June, 1928, to enquire into the dispute and all matters affecting its merits and right settlement thereof, and on the last mentioned date the Board was attended by Mr. E. E. Fielder and Mr. J. G. Bennett, representing the employers, and Mr. Fred J. White, M.L.A., Mr. John S. Davidson and Mr. Thomas F. Wilson, representing the employees. It was agreed by both parties that the only matter in dispute to be considered by the Board was the minimum rate per hour for Journeymen Carpenters for the period commencing on the first of May, 1928, and ending on the thirtieth of April, 1931.

After hearing the evidence adduced and what was alleged on both sides, and it appearing that for the year ending on the thirtieth of April, 1928, the minimum rate of one dollar per hour had been established by agreement between the parties and the cause of the present dispute being that the employees consider that such rate is insufficient to afford a fair living allowance and the Board having taken into consideration the cost of living; the rate of wages paid to Journeymen Carpenters and others engaged in the building trades at the present time and for some years past at Calgary and other places, particularly in Western Canada; the climatic conditions affecting the period of employment in each year; the gross earnings at the said rate of one dollar per hour and at the rates paid in previous years; the competition with those engaged in the building trades in other cities and other matters bearing upon the question.

The Board does not feel justified in recommending an increase over the said rate of one dollar per hour and recommends that such rate be established as the minimum rate of wages for the said period of three years commencing on the first of May, 1928.

It is understood that the rate of one dollar per hour does not apply to carpenters employed in mills, the scale of wages in their case to be the same as prevailed during 1927.

Respectfully submitted,

(Sgd.) A. H. CLARKE,

Chairman of Board.

(Sgd.) JAMES H. GARDEN,

Member of Board.

CALGARY, 7th June, 1928.

Minority Report.

The undersigned member of the Board appointed under The Industrial Disputes Investigation Act begs to submit the following minority report, as dissenting from the majority findings:

First, the majority of the Board appears to base its decision upon the failure of the Carpenters to produce evidence to show that there has been any change either in living costs or wages of Carpenters in other Canadian cities since May 1st, 1927, when the existing rate was established, that would warrant any increase in rates of wages at the present time.

In the opinion of the undersigned evidence adduced showed conclusively that, even admitting that a fair and just wage on 1st May, 1927, would be a fair and just wage on 1st May, 1928, at no time past or present have the Carpenters of Calgary received a wage that would provide the average family with a proper living standard.

The evidence was conflicting as to the yearly earnings of a Calgary Carpenter, taking into consideration time lost owing to climatic conditions, but the average earnings as estimated even by the Contractors' representative did not come within reach of the scientifically estimated cost of supporting the average family as estimated by competent statisticians.

It is, therefore, the opinion of the undersigned Member of the Board that the request of the Carpenters for this present increase, which is only a portion of what they have long been justly entitled to should have been granted and that, if spread out in small increases at stated intervals over a three year period, would have had no ill effect upon the industry.

Respectfully submitted,

(Sgd.) ROBT. HEWITT,

Member of the Board.

CALGARY, ALBERTA, 7th June, 1928.

Report of Board in dispute between the Canadian Pacific Railway Company and its employees at Galt Mines

The findings of the Board of Conciliation and Investigation established to deal with a dispute between the Canadian Pacific Railway Company and certain of its employees at Galt Mines, as represented by Local Unit No. 6, Mine Workers Union of Canada, was received on June 29th. The Board was composed as follows: Mr. H. M. E. Evans, of Edmonton, chairman, appointed on the joint recommendation of the other two members of the Board, namely, Messrs. A. L. Smith, K.C., of Calgary, and Donald McNab, of Lethbridge, nominated by the company and employees respectively. The dispute concerned the proposed renewal of the agreement. The report of the Board was unanimous and was accompanied by an approved agreement reached between the parties to the dispute. The text of the report and of the agreement follows.

Report of Board

In the matter of the Industrial Disputes Investigation Act, 1907, and a dispute between The Canadian Pacific Railway Company, and certain of its employees of the Galt Mines.

Lethbridge, Alberta, June 22, 1928.

The Honourable the Minister of Labour,
Department of Labour,
Ottawa, Ontario.

SIR,—We, the undersigned, the members of the Board of Conciliation and Investigation,

appointed in the above matter, beg to make the following unanimous report:

As the result of three days of public hearing of representations by the parties, and of evidence in support thereof, followed by two days of negotiation and conciliation, we are glad to say that the attached agreement has been approved by the parties, the representatives of the employer and the representatives of the employees, and this agreement constitutes our recommendation for the settlement of matters in dispute.

The agreement is made between the employees of the Galt Mines of Lethbridge, Alberta, represented by the Mine Workers Union of Lethbridge, and the Canadian Pacific Railway Company Galt Mines.

As to the adjustment of day wage rates the agreement grants an increase of twenty cents a day to all classes both inside and outside the mine with an additional allowance, because of special circumstances surrounding their employment, of fifteen cents a day to timbermen's helpers, and of five cents a day to the classes which previously received \$4 per day, making the new daily rate of these two latter classes respectively \$4.60 and \$4.25. Certain classes of boys, who formerly received an annual increase of forty cents per day, are now to receive an annual increase of fifty cents per day.

As to contract rates the only change from the previous agreement is that the allowance

for thin coal is increased from three and one-quarter cents to four cents per ton per inch.

As to the application for a minimum wage rate for contract miners no reference is made in the attached agreement to this matter, and we are not prepared to make any recommendation with regard to it. The employees, in their application, and in evidence, asked special allowances for a variety of conditions, which they claimed to be abnormal in addition to the one abnormality of thin coal, which is taken care of as above. The company in its reply maintained that these were not exceptional conditions, but had always existed, and were taken into account in the fixing of the contract rates. As between these two submissions the point could only be determined accurately by expert examination of the mine conducted over a sufficient period of time. Short of such an examination, which was obviously beyond the scope of this Board, especially as an agreement has been reached between the representatives of the parties, we can only emphasize the importance of care in securing "a fair turn" to all contract miners.

As to the general clauses in the agreement common ground was found between the parties as will appear in the draft agreement attached.

Respectfully submitted,
 (Sgd.) H. M. E. EVANS.
 (Sgd.) A. L. SMITH.
 (Sgd.) DONALD McNAB.

TEXT OF AGREEMENT

AGREEMENT made this _____ day of _____ 1928, between: *The employees of the Galt Mines, Lethbridge, Alberta, represented by the Mine Workers' Union of Lethbridge, hereinafter referred to as the "Union," of the First Part, and The Canadian Pacific Railway Company, Galt Mines, Lethbridge, Alberta, hereinafter referred to as the "Company," of the Second Part.*

It is mutually understood and agreed as follows:—

TERM OF AGREEMENT

The following rates and conditions shall govern the parties hereto from the date hereof to March 31st, 1930, and the said parties shall meet in conference thirty (30) days prior to the expiration of this agreement to discuss a renewal thereof.

MANAGEMENT OF MINE

The right to hire and discharge, the management of the mine, and the direction of the working forces shall be solely within the jurisdiction of the Company, and the Union shall not abridge this right. However, the Company agrees not to discharge employees or refuse work to applicants on account of or because of their affiliation with the Union.

EMPLOYEES' UNION

With the exception of those hereinafter specified as not being within the jurisdiction of

the Union all employees in and around the mines who are eligible to do so shall join the Union and agree to sign the check-off. From among such members, who shall also be employees in good standing of the Company, there shall be selected by the Union the proper decision of such executive and committee to meet and deal with the Company on matters arising under this agreement, and the decision of such executive or committee arrived at with the Company shall be final and binding upon the employees, and shall become part of this agreement from the date hereof until the termination of the agreement.

Provided that in the cases hereinafter specified, either party or both may apply for the appointment of an independent chairman in any case of dispute wherein they are unable to agree, and the decision of such chairman shall be final and binding, and become part of the said agreement until the termination thereof.

Due notice shall be given the Company of the names of the employees selected as executive and committee men.

DEDUCTIONS—OR CHECK-OFF

The Company agrees to make deductions on definite orders in the form hereinafter specified from all employees coming under the jurisdiction of the Union, not exceeding the sum of \$1.50 per employee per pay, and to pay the same over to the Secretary of the Union or such other person as he may designate.

FORM OF ORDER

.....19...
 To C.P.R. Galt Mines,
 Lethbridge.

I authorize and empower you to deduct and pay to the Secretary of the Mine Workers' Union of Lethbridge, or such other person as that official may designate, from my earnings from pay to pay the sum of \$1.50 or such less amount as may be designated by the said Secretary or other person designated by him.
 (Signed).....

Witness:

SETTLEMENT OF DISPUTES

In case any disputes or grievances arise under this agreement, the parties shall endeavour to settle the matter as hereinafter provided, but before any grievances or disputes shall be submitted to the employees' committee, the person or persons affected shall endeavour by personal application to the mine manager, overman, or foreman in charge of the work where the dispute arises, to settle the matter, and in the event of their agreeing, the decision shall be final.

If they do not agree, the dispute shall be referred to the employee's committee and the management, who shall endeavour to settle the matter, and if they agree their decision shall be final.

If they do not agree, they shall endeavour to select an independent Chairman, and failing, shall ask the Minister of Labour to appoint such Chairman, whose decision shall be final and binding upon both parties.

In the meantime, and in all cases while disputes are being investigated and settled, all employees, except as hereinafter specified shall continue to work until a final decision has been reached.

Where an employee or employees has or have been discharged and a dispute arises in connection therewith, he or they shall not remain at work while his or their case is being investigated and settled. If the claim be made within five (5) days where an employee alleges that he has been unjustly discharged, the case shall be dealt with by the procedure in this clause, and if it is proven that he has been unjustly dealt with, he shall be reinstated. If a claim is made for compensation for time lost, in cases where reinstatement has followed, it shall be left to the joint committee as provided for in this clause to decide what amount, if any, is to be paid.

Any breach of this agreement by either of the parties hereto shall not void the said agreement, which shall continue in full force and effect.

DUTIES OF PIT COMMITTEE

The Pit Committee shall be a committee of three (3) selected by the employees from among their own members, except one member may be a checkweighman or an officer of the Union, either of whom must previously have been selected as such from amongst the employees of the Company. Due notice of such selection, properly certified in writing, shall be given to the Company.

The duties of the Pit Committee shall be confined to the settlement of disputes between the Pit Boss or Foreman and any employee working in or around the mine, arising out of this agreement, and all agreements made in connection therewith, the Pit Boss or Foreman and man or men having failed to agree.

The Pit Committee, in discharge of its duties, shall, under no circumstances, go around the mine, for any cause whatever, unless called by the Pit Boss or Foreman, or by a Miner or Dayman who may have a grievance which he has first tried to and cannot settle with the Boss.

Members of the Pit Committee employed as Daymen shall not leave their places of duty during working hours except by permission of the Pit Boss or Foreman, or in cases involving the stoppage of the mine.

NEW WORK

Whenever any new work arises, a price for which has not been provided for in this agreement, on the request of the Company or the employees a joint committee of six (6) of whom three (3) shall represent the Company, and three (3) represent the employees, shall meet within fourteen (14) days after the request for a new price shall have been made. If they agree, their decision shall be final and binding upon both parties. If they fail to agree, they shall endeavour to select an Independent Chairman, and failing, shall ask the Minister of Labour to appoint such chairman. The decision of the said chairman shall be final and binding on both parties.

Whenever any new system is inaugurated or radical change in the present system is made, where there is a contract price fixed thereon, the Company or the employees may ask for a price to be fixed on the work as "New Work" as for example, a change from "Longwall" to "Pillar and Stall" or vice versa, shall be considered New Work.

Meantime, if the work is continued until such price has been arranged, all men shall be paid on the Day Wage Scale.

EMPLOYEES NOT UNDER JURISDICTION OF UNION

All employees connected with the management of the mine are not to be under the jurisdiction of the Union or be members thereof, and these shall include the following:

Mine Manager or Superintendent, Overman or Assistant Overman, Pit Bosses, Fire Bosses, Boss Driver and Turnkeepers, Stable Boss, Master Mechanic, Electrician, Weighman, Head Carpenter, Head Blaksmith, Tipple Foreman, Night Watchman, Coke Oven Foreman, Outside Foreman, and all other Foremen, Timekeepers, Coal Inspectors, Head Lampmen, and all Railroad Employees.

CONSTRUCTION AND EXTENSIVE REPAIRS

All men working on improvements and extensive repairs are not included in the jurisdiction of the Union.

The erection of head frames, tipples, breakers, washers, buildings, coke ovens, scales, machinery, railroad tracks and switches, etc., necessary for the completion of a plant, all being in the nature of construction work and extensive repairs or rebuilding of the same class of work, are to be considered as improvements and extensive repairs, and the employees thereon are to be excluded as above when employed on such work only.

PENALTY FOR ABSENCE FROM WORK

When any employee absents himself from his work for a period of two (2) days, unless through sickness or by first having properly arranged with the Pit Boss or Foreman and obtained his consent, he may be discharged. All employees whose absence would cause any stoppage of work must, before absenting themselves, properly arrange with or notify the Pit Boss or Foreman for or of their absence, otherwise they may be discharged. Any employee who habitually, to the extent of five (5) days per month, absents himself from work may be discharged.

CHECKWEIGHMEN AND CHECKMEASURERS

The Company will carry out the provisions of the Mines Act for Alberta covering the employment of Checkweighmen and Checkmeasurers and will deduct from the wages of all contract miners such amounts as may be designated from time to time, and will pay same to the Checkweighmen and Checkmeasurers.

PREFERENCE OF EMPLOYMENT

In case an employee is thrown out of employment, unless discharged, or unless he has left of his own accord, he shall be given preference over new men.

Any Checkweighman who at the time of his appointment as such was an employee shall come within the provisions of this clause if he ceases to be the Checkweighman and again seeks employment with the Company.

ABNORMAL CONDITIONS

An abnormal condition shall be considered as a condition where the seam is faulty or thins out to a point less than 48 inches in

thickness. If the seam is under 48 inches in thickness, 4 cents per ton extra for each inch will be paid.

MINERS TAKEN TO DO COMPANY WORK

The Company shall pay the sum of \$5.20 per day for all miners taken from contract work to do company work.

DELIVERY OF MATERIAL

Material will be delivered by the Company in accordance with the provisions of the Mines Act for Alberta.

DOCTOR AND HOSPITAL ARRANGEMENTS

The matter of doctor and hospital arrangements shall be governed by the provisions of the Workmen's Compensation Act for Alberta.

HOLIDAYS

The following days only shall be observed as holidays: New Year's Day, Good Friday, May first, Victoria Day, Dominion Day, Labour Day, Thanksgiving Day, Christmas Day and the day following.

FUNERALS

In the event of an instantaneous death by an accident in the mine or outside the mine, the miners underground and all other employees may suspend work in the seam where the accident occurred on the day of the accident, but shall resume work on the following day and continue to work till the day of the funeral, when it is optional with them whether they shall work or not.

The officials of the Union may give notice of such accident to all employees in and around the mine, and for this purpose shall have the use of the Company's telephone facilities.

EMPLOYEES TO CARE FOR MINE

In case of suspension of mining either at the expiration of this agreement or otherwise, the engineers, firemen, pumpmen and such other employees as the Company shall consider necessary for the care and protection of the property shall not suspend work, but shall, when mining is suspended, fully protect all the Company's property under their care and operate fans and pumps, and lower and hoist such men and supplies as may be required to protect the Company's property, and any and all coal required to keep up steam at the Company's plant; but it is understood and agreed that the Company will not ask them to hoist any coal for sale on the market.

SINGLE SHIFT

The single shift system in rooms and pillars shall be adhered to as far as practicable.

WET PLACES

A working place in the mine where water drops from the roof in quantities sufficient to wet a man's clothing, or where standing water is over six inches deep, shall be considered a "wet place".

RETIREMENT

Where any employee has drawn his time before the regular payday, he thereby severs his connection with the Company, and any alleged grievance he may have ceases to be a question for consideration under this agreement. The words "drawn before the regular

payday" is satisfied by the application of the employee for, and his receipt of, his time check before the regular payday.

PAYDAY

All wages earned by any person or persons employed in or about a mine shall be paid in accordance with the Mines Act of Alberta. Any employee desiring to leave the service of the Company, on his request shall be paid all moneys due him within two (2) days after his stoppage of work.

MARKET RESTRICTIONS.

The Union shall not in any way restrict or interfere with the marketing of coal to any person, firm or corporation.

TURN OF CARS.

The Company shall, as far as possible, supply each and every miner with an equal turn of cars.

CONTRACT NOT TO BE VOIDED BY MINERS' CONSTITUTION OR RULES.

This contract is not to be set aside because of any rule of the Union or any provision in its constitution.

OVERTIME.

All overtime shall be paid at the scale rate per hour.

POWDER.

Where explosive supplies are being sold to the miners they shall be furnished at cost price, which shall include handling, transportation and insurance.

The Company agrees to submit its invoice prices to the local pit committee if any dispute arises over the cost of such supplies.

LOCAL CONDITIONS.

Dockage.—A loader will be fined 25 cents for each offence for sending out dirty coal, and after the third offence he may be discharged. When fined his number will be placed on the dock-board. The placing of his number on the dock-board will be considered as due warning.

Inside Day Wages.—To be computed from the time the first workman in the shift leaves the surface to the time the first workman in the shift returns to the surface.

Wash house \$1 per month.

Electric lamps, 1 per cent of gross earnings.

Coal, \$2.67 per ton.

Employees to deliver their own coal.

Boys in the last three classes mentioned above shall receive an increase in the daily wage of 50 cents for each completed year's employment with the Company until they reach the rate of pay for men in their particular classification, or until they reach the age of twenty-one years.

All day wages not specified above and existing previous to the date hereof, subject to an increase of 20 cents per day.

CONTRACT RATES.

All coal to be paid for on screened coal basis, one ton being considered 2,000 pounds.

Pick Mining.—Mining and loading of coal, furnishing explosives, handling cars, unloading timber, handling all rock and other waste, setting all timber, including laying track beyond switch, taking up track in retreating, 95 cents per ton. Crib in pillars and stumps when ordered, 65 cents per crib. Lifting bottom in squeezed pillars and stumps, when ordered, to be paid for on the basis of 56 cents per lineal yard for one foot in thickness. When ordered to retimber roads in squeezed pillars or stumps, timber to be paid for at 52 cents per set for round timber and 24½ cents for squared timber, and top brushing, either gobbled or loaded in cars as ordered, to be paid for on the basis of 56 cents per lineal yard for one foot in thickness.

RUNNERS

Machine Mining.—Undercutting rooms and pillars 21 cents per ton; narrow work (8 feet wide or under, except room cross-cuts) 28½ cents per ton; room cross-cuts five feet wide or less 46 cents per lineal yard and 21 cents per ton. Cutting across pillars at face of rooms, any width, 21 cents per ton. Cutting through faults, entry width and height, 30 cents per lineal foot. Unweighed coal, entry width and height, 28½ cents per lineal foot. Entries to be cut to give a minimum height of five feet two inches between top of permanent rails and bottom of cross-bars. Widening out room necks, \$1.36; 2½ cents per ton extra where loaders are paid 12 cents per ton for water.

SCRAPERS

Undercutting rooms and pillars, 17 cents per ton; narrow work (8 feet wide or under, except room cross-cuts) 22½ cents per ton; room cross-cuts, 34 cents per lineal yard and 17 cents per ton. Cutting across pillars at face of rooms, any width, 17 cents per ton. Cutting through faults, entry width and height, 22 cents per lineal foot. Unweighed coal, entry width and height, 22½ cents per lineal foot. Widening out room necks, \$1.02. 2½ cents per ton extra where loaders are paid 12 cents per ton for water.

LOADERS

In Rooms.—Shooting and loading coal, unloading timber, furnishing explosives, taking down top slate, and gobbing all rock and other waste, or loading in cars, if ordered, laying track, timbering and preparing place for cutting, and handling cars from and to entry, 75 cents per ton. Booms 4 inches by 6 inches, 24½ cents each; booms 3 inches by 5 inches, 17 cents each.

Bone coal in any portion of the seam, except top or bottom, which exceeds the total thickness of four inches, shall be paid for at the rate of 58 cents per lineal yard. Room cross-cuts, pick work, \$2.12 per lineal yard and 75 cents per ton, including timbering as directed; machine mined from four to six feet wide, \$1.23 per lineal yard and 75 cents per ton, including timbering as directed. Lifting bottom in squeezed rooms, when ordered, on the basis of 56 cents per lineal yard for each

foot in depth; top brushing, either gobbled or loaded in cars, as directed, to be paid for on the basis of 50 cents per lineal yard for each foot in thickness: timbering 24½ cents per set for squared timber and 52 cents per set for round timber. A set of timber consists of a cross-bar and two props. Resetting props, when ordered, and centre propping roads, 6½ cents per prop. Room necks, \$5.45 each. Water in rooms, where necessary to remove same from the face by pump or water tanks, on the basis of \$2.60 for each half month. Dynamite free in wet shot holes.

In Narrow Work (8 feet wide or under, except in room cross-cuts): Shooting and loading coal, furnishing explosives, unloading timber and handling cars, taking down top slate to entry height and loading up all rock and other waste, laying temporary track and preparing place for cutting, \$1.03 per ton.

Laying permanent track in entries, 3 cents per foot of track. Bone coal in any portion which exceeds the total thickness of four inches, shall be paid for at the rate of 53 cents per lineal yard. Timber in entries, entry cross-cuts and room necks, squared timbers, 24½ cents per set, round timbers 52 cents per set, to include lagging where necessary. Taking off corners for curves, where ordered, \$1.85 each. Brushing bottom in entries, entry width, on the basis of 96 cents per lineal yard for one foot in depth. Brushing top in entries to "little coal," entry width, 92 cents per lineal yard. Cutting through faults, entry width and height, \$1.55 per lineal foot. Unweighed coal, entry width and height, \$1.03 per lineal foot. Wet places in entries, 12 cents per ton extra. Dynamite free in wet places and wet shot holes. Water in entries, where necessary to remove same from the face by pump or water tanks, on the basis of \$2.60 for each half month or 26 cents per tank when tank is loaded by miners. This does not apply where

12 cents per ton extra is paid in wet places. Resetting props, when directed, 6½ cents per prop. A set of timbers consists of a cross-bar and two props. Bridge sticks 6 inches by 6 inches or round timber, 52 cents per set.

All other conditions underground to remain as existing previous to the date hereof.

In witness whereof the parties hereto have hereunto set their hands at Lethbridge, Alberta, this _____ day of _____, 1928.

ALBERTA LABOUR DISPUTES ACT

A CONTROVERSY arose between the Calgary Master Painters' Association and the Brotherhood of Painters, Decorators and Paperhangers of America, Local 583, Calgary, the question at issue being similar to that involved in the dispute between the Calgary General Contractors and the local Carpenters' Union (LABOUR GAZETTE, June, 1928, page 578). The carpenters' dispute was referred to a Board of Conciliation and Investigation under the Industrial Disputes Investigation Act,

1907, whose report is given on page 691 of this issue. The dispute, in the painting industry was referred to a Board under the Labour Disputes Act, 1926, of Alberta. The Board was composed of Messrs. Manley J. Edwards (employers' representative); Tom B. Riley (workers' representative); with Dr. W. G. Carpenter as chairman. The report of this Board was given in the *Alberta Gazette*, June, 1928, as follows:—

Report of Board in Dispute between the Calgary Master Painters' Association and Brotherhood of Painters, Decorators and Paperhangers of America, Local No. 583, Calgary, Alta.

The Board appointed on the 8th day of May, pursuant to The Labour Disputes Act, 1926, held its first meeting with representatives of the Union and the Association, on the 12th day of May, when the whole dispute

between these organizations was thoroughly canvassed in an informal manner, with the view to arranging a mutually satisfactory agreement between the parties.

It was brought out at this meeting that the only difference between the parties was that of rate of wages.

The agreement between the parties covering this point, which expired on March 31st of this year, provided for a minimum rate of 75 cents per hour. The Brotherhood asked for a new agreement in which the rate be fixed at \$1 per hour for the ensuing year.

No satisfactory agreement could be effected at the first sitting of the Board, and therefore the representatives of both parties to the dispute were urgently recommended and advised to call a special meeting of the respective organizations, in order that counter propositions submitted might be further discussed, and, if possible, accepted.

The Board next sat on May 15th. As the proposals presented were not acceptable to either party, the Board proceeded to hear evidence on the point at issue, and continued with the hearing on May 17th and on May 19th.

The Board was particularly impressed with the spirit of friendliness and of fair play exhibited by both parties, and desires to express its appreciation of the admirable manner in which the representatives and witnesses endeavoured to assist in the finding of an amicable settlement.

It was generally conceded that the rate of wages paid to journeymen in the painters' trade was lower than that paid to members of the other building trades in Calgary, and that the wages paid to members of this particular craft were lower than those paid to similar craftsmen in the larger centres of Western Canada.

It was also conceded that the foregoing situation was occasioned to a large extent by the numerical weakness and lack of organization of both parties, whose memberships were relatively small compared with the total number of firms and journeymen engaged in the same business or craft.

There are peculiar circumstances associated with the painters' craft that make it difficult to stabilize. While the craft calls for a high degree of skill for special phases of its work, there is a large amount of it that may be acceptably done by comparatively unskilled workmen. The skilled craftsman suffers from this competition, which frequently undercuts the wage to which he is really entitled. The competition and the intensive advertising of ready-mixed paints, which, it is alleged, may be easily applied by anyone, materially affects the business of the Master Painters, and reduces the quantity of work which would

come to the journeyman. In Calgary there is a serious competition amongst Master Painters from those who do not recognize the Master Painters' Association, do not feel bound by any of the rules of the Association, are not committed to employ Union members at agreed upon rates of wages, who have, in many cases, no large investments or overhead costs to consider, as a result of all of which they frequently underbid their fellows who are trying to do business honourably on a co-operative basis, with good workmen, in the best interests of the public. There is nothing to prevent unknown individuals calling themselves painters, bidding for jobs at rates not possible to those carrying legitimate businesses. They may work long hours, use poor materials, and, after a brief period, go out of business and dodge responsibility for what they have done. It is quite clear that there is a large indefinite competition amongst painters which makes it difficult for a skilled mechanic in this craft to receive the same rate of wage that is paid commonly to the carpenter, or the bricklayer, or the plasterer.

From the year 1921 to the year 1927, neither the Masters' nor the Journeymens' organizations had been active, with the result that during this interval there was no recognized wage schedule.

In March, 1927, the members of the Brotherhood became more active, and the Masters' Association was re-organized. A wage schedule was adopted, providing for a minimum wage of 75 cents per hour. At the present time approximately one-third of the painters and decorators in Calgary are members of the Local Brotherhood, and a similar proportion of the contractors are members of their Association.

The Board feels that if both organizations can and do increase their membership and strength in the future as they have done during the past year, they will be able to correct to a large degree the unfavourable conditions which exist in the business and the craft.

The Board recommends:

- (1) That for the year beginning April 1, 1928, and ending March 31, 1929, the minimum wage be fixed at the rate of 87½ cents per hour, or, *as an alternative*, a two-year schedule be provided, granting a minimum wage from April 1, 1928, to March 31, 1929, at the rate of 85 cents per hour, and for the year beginning April 1, 1929, and ending March 31, 1930, a minimum wage at the rate of 95 cents per hour.

(2) That with the view to stabilizing the industry, both organizations actively endeavour to increase their memberships, so that they may overcome and control those external factors which at present militate against the successful

operation of the business of the Masters and the advancement of the craft.
 Board of Conciliation and Investigation.

 Calgary, Alta., June 8, 1928.

STRIKES AND LOCKOUTS IN CANADA DURING JUNE, 1928

THE number of strikes and lockouts in existence in Canada during June was twenty-one as compared with twenty the preceding month. The time loss for the month was greater than during June, 1927, being 24,480 working days as compared with 15,060 working days during the same month last year.

Date	Number of disputes	Number of employees involved	Time loss in working days
*June, 1928.....	21	2,901	24,480
*May, 1928.....	20	3,078	35,024
June, 1927.....	20	2,881	15,060

*Preliminary figures.

The record of the Department includes lockouts as well as strikes, but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees at its commencement and lasting at least one working day. Disputes of less than one day's duration, and disputes involving less than six employees, are included in the published record only when ten day's or more time loss is caused, but a separate record of such disputes is maintained in the Department, and the figures are given in the annual review.

The figures printed are inclusive of all disputes which come to the knowledge of the Department, and the methods taken to secure information practically preclude probability of omissions of a serious nature. Information as to a dispute involving a small number of employees, or for a short period of time, is frequently not received until some time after its commencement.

Twelve disputes, involving 916 workpeople, were carried over from May, and nine disputes commenced during June. Four of the disputes commencing prior to June terminated during the month as did six of the disputes commencing during June. At the end of June, therefore, there were on record eleven strikes and lockouts, as follows: Fur workers, Toronto, Ont.; two disputes involving embroidery workers at Toronto, Ont.; ladies' clothing factory workers, Toronto, Ont.; plumbers, Kingston, Ont.; sheet metal workers, etc., Kingston, Ont.; structural iron workers, Toronto, Ont.; teamsters, Edmonton, Alberta; rubber factory workers, Montreal, P.Q.; clothing factory workers, Montreal, P.Q.; and carpenters, Winnipeg, Man.

The record does not include minor disputes such as are described in a previous paragraph, nor does it include disputes as to which information has been received indicating that employment conditions are no longer affected, but which the unions concerned have not yet declared terminated. Information is available as to seven such disputes, namely: ladies' clothing factory workers, Toronto, Ont., June 30, 1926; electrotypers at Toronto, Ont., December 20, 1926; plumbers at Windsor, Ont., April 5, 1927; bakers, Montreal, May 1, 1927; stonecutters, Montreal, June 10, 1927; sheet metal workers, Montreal, P.Q., September 1, 1927; coal miners at River Hebert, N.S., February 1, 1928, and printing compositors, pressmen and bookbinders at Hamilton, Ont., June 1, 1928; the latter being added to the list in June.

The dispute involving blacksmiths, etc., at Saskatoon, Sask., since May 17, 1927, carried in the above list for some months, is recorded as lapsed during June; and the two disputes involving men's clothing factory workers in Montreal, commencing November 8, 1927, and December 23, 1927, respectively, also carried in this list for some time, were called off by the union concerned on June 4, 1928.

Of the disputes which commenced during the month two were for increases in wages, one for shorter hours, one against changes in hours, one against changes in working conditions, one against reduction in wages and changes in working conditions, one for increase in wages and changes in working conditions, one against the non-fulfillment of the report of a Board of Conciliation, and one was a sympathetic dispute. Of the strikes and lockouts which terminated during June one was in favour of workers, three were partially successful, three were in favour of the employer, one resulted in a compromise and the result of the two others was recorded as indefinite.

The following paragraphs give particulars in regard to certain disputes, in addition to the information given in the tabular statement.

COAL MINERS, CANMORE, ALBERTA.—As noted in the June issue of the *LABOUR GAZETTE*, through the efforts of the conciliation officers of the Department this dispute, which began on March 20 against the discharge of employees charged with allowing explosives to go out of the mine with the coal, was settled early in June, the discharged employees being reinstated. This settlement provided for an agreement on substantially the same lines as the previous agreement, with an added provision for a Board of Conciliation and Investigation under the Industrial Disputes Investigation Act, 1907, to deal with disputes which might arise. The agreement in force since 1925 had expired during the strike, and in renewing it increases in wages for certain classes were provided for. The terms of the agreement are in general similar to those in the agreement between the miners at Lethbridge and the operators of the Galt Mines, the Canadian Pacific Railway, in the chapter in this issue on proceedings under the Industrial Disputes Investigation Act, 1907.

FUR WORKERS, TORONTO, ONT.—In connection with this strike, commencing on April 10, 1928, against alleged violation of agreement, it was reported that an establishment operated by the same firm at Windsor had been picketed.

ASBESTOS AND INSULATION WORKERS, TORONTO, ONT.—In connection with this dispute, which began on February 6 for an increase in wages from 85 cents per hour to \$1, most of the firms involved had settled with the union within a short time at 95 cents per hour, one firm only refusing to grant the demands of the workers. By the first of June all the employees of this firm had secured work elsewhere and the strike was called off, the firm being put on the unfair list of the union.

PLUMBERS AND SYMPATHETIC STRIKE OF BUILDING TRADES, KINGSTON, ONT.—In connection with the strike of plumbers on April 2, negotiations for a settlement took place about June 25, the strikers offering to return at 97½ cents per hour with \$1 per hour on September 1, but this was refused by the employers. During the strike the master plumbers are reported to have performed the work themselves, but after the above, negotiations were going on to bring in plumbers from other localities. It was also reported that many of the strikers had left the city to secure work elsewhere. Sheet metal workers also were understood to be still on strike.

PAINTERS, TORONTO, ONT.—This dispute began on May 1 for recognition of the union and for increases in wages from 75 cents per

hour to 80 cents. By the middle of June the employer concerned became bankrupt and the strike therefore was terminated.

STRUCTURAL IRON WORKERS, MONTREAL AND TORONTO.—As reported in the previous issue of the *LABOUR GAZETTE* this dispute, involving structural iron workers who went on strike on May 11 for an increase in wages and recognition of the union, the union concerned called off the dispute in Montreal early in June. The workers involved in Toronto, however, still continued on strike throughout June, but settled with several of the employers concerned, a minimum union rate of 90 cents per hour being agreed to for twelve months. The greater number of the strikers secured work with these employers, there being about fifty only on strike and unemployed by the end of the month.

TEAMSTERS, WINNIPEG, MAN.—This dispute, involving teamsters employed by a cartage company at Winnipeg, commenced on April 26, 1928, because two employees had been dismissed for activity in connection with securing members for the One Big Union. Early in June the dispute was called off by the union, the employer having replaced the strikers.

TEAMSTERS, EDMONTON, ALBERTA.—As stated in the June issue of the *LABOUR GAZETTE* two of the firms affected by the cessation of work on May 25 had signed an agreement with the union. On June 5 a third firm also signed an agreement. The principal firm involved, however, replaced the strikers within a few days and claimed that conditions were no longer affected, paying, however, the rate agreed to by the union, namely \$4.50 per day of nine hours, but it was not paying time and one-half rates after six o'clock. As this firm refused to reinstate the strikers, there were still twenty-five workers involved at the end of the month.

RUBBER FACTORY WORKERS, MONTREAL, P.Q.—Employees in a rubber factory in Montreal, who had been on strike in April but had returned to work when the dispute was referred to a Board of Conciliation and Investigation under the Industrial Disputes Investigation Act, 1907, (*LABOUR GAZETTE*, June, 1928, page 573) ceased work on June 28 alleging that the employer had not carried out the terms of the award of the Board though it had agreed to do so. The employing firm, on the other hand, contended that it had carried out these terms to the letter. At the end of the month the dispute was untermiated.

HAT FACTORY WORKERS, WINNIPEG, MAN.—Employees in a hat manufacturing company in Winnipeg ceased work on June 14 for a reduc-

tion in hours from 48 per week to 44, reinstatement of an employee discharged for union activity, and recognition of the right to organize. On June 25 the strikers were reported to have returned to work under the same conditions as before the strike, the employee being reinstated.

KNITTING FACTORY WORKERS, TORONTO, ONT.—A number of employees in a knitting factory in Toronto ceased work about June 15 for one-half day owing to a readjustment in working conditions which the strikers alleged required more work. The employer contended that the result would be an increase in earnings. After one-half day the employees returned to work.

CLOTHING FACTORY WORKERS, MONTREAL, P.Q.—Clothing workers in a number of establishments in Montreal ceased work on June 22, 1928, to enforce the terms of a union agreement, protesting against a reduction in wages, the employment of non-unionists, and the discharge of employees. At the end of the month the dispute was still unterminated.

PRINTING TRADES, HAMILTON, ONT.—Employees in a job printing establishment in Hamilton ceased work on June 1 against a notice of the employer that in future work would be five days per week, nine hours per day, instead of 8 hours per day and 44 hours per week as before. Later the notice was

STRIKES AND LOCKOUTS IN CANADA DURING JUNE, 1928

Industry, occupation and locality	Number of employees involved	Time loss in working days	Remarks
(a) Strikes and Lockouts Occurring Prior to June, 1928.			
MINING—			
<i>Non-ferrous smelting and quarrying—</i>			
Coal miners, Canmore, Alta...	270	810	Commenced March 20, 1928, against discharge of workers. Terminated June 5, 1928, in favour of workers.
MANUFACTURING—			
<i>Fur and Leather—</i>			
Fur workers, Toronto, Ont....	20	364	Commenced April 10, 1928; against violation of agreement. Untermiated.
<i>Clothing (including knitted goods)—</i>			
Embroidery workers, Toronto, Ont.....	5	130	Commenced April 24, 1928; against discharge of worker. Untermiated.
Embroidery workers, Toronto, Ont.....	11	286	Commenced May 7, 1928; against discharge of workers. Untermiated.
Ladies' clothing factory workers, Toronto, Ont.....	19	494	Commenced May 17, 1928; against changes in working conditions. Untermiated.
CONSTRUCTION—			
<i>Buildings and Structures—</i>			
Asbestos and insulation workers, Toronto, Ont.....			Commenced February 6, 1928, for increase in wages. Terminated June 1, 1928; partially successful.
Plumbers, Kingston, Ont.....	38	988	Commenced April 2, 1928; for increase in wages. Untermiated.
Sheet metal workers, carpenters and masons, Kingston, Ont.....	17	442	Commenced April 17, 1928; sympathy with striking plumbers. Untermiated.
Painters, Toronto, Ont.....	2	24	Commenced May 1, 1928; for increase in wages. Terminated June 15, 1928. Indefinite.
Structural iron workers, Montreal, Que. and Toronto, Ont.	450	6,500	Commenced May 11, 1928; for increase in wages and recognition of union. Untermiated.
TRANSPORTATION—			
<i>Local—</i>			
Teamsters, Winnipeg, Man....	49	147	Commenced April 26, 1928; against discharge of workers. Terminated June 5, 1928; in favour of employer.
Teamsters, Edmonton, Alta...	35	700	Commenced May 25, 1928; for increase in wages. Untermiated.

STRIKES AND LOCKOUTS IN CANADA DURING JUNE, 1928—*Concluded*

Industry, occupation and locality	Number of employees involved	Time loss in working days	Remarks
(b) Strikes and Lockouts Occurring During June, 1928.			
MANUFACTURING—			
<i>Rubber Products—</i>			
Rubber factory workers, Montreal, Que.....	800	2,400	Commenced June 28, 1928; against the non-fulfillment of the report of the Board of Conciliation. Unterminated.
<i>Clothing (including knitted goods)—</i>			
Hat factory workers, Winnipeg, Man.....	18	162	Commenced June 14, 1928; for shorter hours. Terminated June 25, 1928; in favour of employer.
Knitting factory workers, Toronto, Ont.....	25	13	Commenced June 15, 1928; against changes in working conditions. Terminated June 15, 1928; in favour of employer.
Clothing factory workers, Montreal, Que.....	250	2,000	Commenced June 22, 1928; against reduction in wages and changes in working conditions. Unterminated.
<i>Printing and Publishing—</i>			
Printing trades, Hamilton, Ont.....	20	500	Alleged lockout, commenced June 1, 1928; against changes in hours. Work resumed June 11, 1928; partially successful.
CONSTRUCTION—			
<i>Buildings and Structures—</i>			
Electrical workers, Saskatoon, Sask.....	25	200	Commenced June 1, 1928; for increase in wages and changes in working conditions. Terminated June 11, 1928; workers partially successful.
Building trades, Toronto, Ont	57	500	Commenced June 7, 1928; sympathy with striking iron workers. Terminated June 18, 1928. Indefinite.
Stonecutters, Winnipeg, Man...	40	320	Commenced June 4, 1928; for increase in wages. Terminated June 12, 1928. Compromise.
Carpenters, Winnipeg, Man....	750	7,500	Commenced June 20, 1928; for increase in wages. Unterminated.

changed to provide for five days, forty-three and one-quarter hours per week. The employees considered this a lockout as the doors of the establishment were locked when they did not appear for work at the earlier hour set out in the notice. On June 11 work was resumed on the basis of five days per week, employees to receive time and one-half for all time after 44 hours. The employer undertook to take back one-half the employees immediately and the remainder within a month. The unions concerned, representing compositors, pressmen and bookbinders, stated that this arrangement is to be regarded as merely temporary. The dispute is therefore recorded in the list of disputes by which employment conditions are no longer affected but which the organizations concerned have not declared off.

ELECTRICAL WORKERS, SASKATOON, SASK.
Employees of five firms ceased work on June 1 to secure an increase in wages to 95 cents per hour for journeymen and a corresponding increase for helpers. The employees reported wages for journeymen ranged from 50

cents to 80 cents per hour, 9 hours per day, 49 hours per week. The employers stated the range was from 70 cents to 85 cents per hour except for helpers. Conciliation Officers of the Department brought the parties together and an agreement was signed bringing the rate for journeymen to 70 cents and 85 cents per hour with a scale for apprentices. The agreement is summarized on another page, in the article entitled "Recent Industrial Agreements and Schedules of Wages".

STONECUTTERS, WINNIPEG, MAN.—Their demand for an increase in wages from \$1.10 per hour to \$1.25 being refused, stonecutters employed by four firms ceased work on June 4. On June 12, following negotiations between the parties, a settlement was reached providing for \$1.20 per hour until the end of 1928 and \$1.25 per hour during 1929.

CERTAIN BUILDING TRADES, TORONTO, ONT.—As stated in the *LABOUR GAZETTE* for June, hoisting engineers and bricklayers ceased work on June 6 in sympathy with structural iron workers on a building where non-union struc-

tural iron workers were employed during a strike. The structural iron workers having been partially replaced and some having returned to work, hoisting engineers and bricklayers resumed work and the sympathetic strike was declared off on June 18.

CARPENTERS, WINNIPEG, MAN.—Negotiations as to the wage rate since April 1 having been unsuccessful, union carpenters ceased work on June 21. The number involved was variously reported between 700 and 900, and

it was reported that it included some non-union carpenters. The union desired an increase from \$1.00 per hour to \$1.05 immediately, and \$1.15 on January 1, 1929. The employers offered \$1.05 on January 1, 1929. At the end of the month the dispute had not been terminated. On July 4 it was reported that the strike had been called off, a bonus of five cents per hour in addition to the \$1.00 rate to be paid until January 1, 1929, when an hourly rate of \$1.10 would become effective.

STRIKES AND LOCKOUTS IN GREAT BRITAIN AND OTHER COUNTRIES

THE latest available information as to strikes and lockouts in various countries is given in the *LABOUR GAZETTE* from month to month, bringing down to date that given in the issue for February, 1928, in the review of Strikes and Lockouts in Canada and Other Countries, 1927. The latter review included a table summarizing the principal statistics as to strikes and lockouts since 1918 in the several countries for which such figures were available. Many countries publish these statistics only once each year, the figures being issued in some cases after an interval of as much as two years, so that for such countries the latest figures are not for relatively recent dates.

Great Britain

The number of trade disputes beginning in May was 23, while 20 were still in progress from the previous month, making a total of 43 disputes in progress during the month, involving directly and indirectly about 21,500 workpeople, and resulting in a time loss of 114,000 working days. Of the 23 disputes beginning in May, 5 arose out of proposed reductions in wages, 7 on other wages questions, 5 on questions respecting the employment of particular classes or persons and 5 on other questions. Settlements were reached in 28 disputes, 4 in favour of workpeople, 12 in favour of employers, 12 ended in compromise and in 2 other cases, work was resumed pending negotiations.

Disputes in the Textile Industry.—Following a strike at one cotton weaving mill at Nelson for the reinstatement of a dismissed weaver, the employers' association declared a general lockout of cotton weavers at that place involving some 16,000 workers on May 30. Coloured-goods manufacturers, however, had not closed down their mills on June 22.

At Oldham, a similar dispute took place when a number of card-room operatives went on strike on June 6, also against the dismissal of a worker. They were later joined by the spinners, after an attempt had been made to replace the striking card-room operatives by non-unionists. This caused the closing down of the mill. Another dispute concerned about 3,000 time workers in the dyeing and finishing branches of the industry in both Lancashire and Yorkshire. These workers went on strike June 16, for an increase in wages. In all three disputes, no settlements had been reached by the end of June, although negotiations were in progress.

Austria

In the year 1927, there were 210 disputes affecting 516 establishments and 34,334 workers and resulting in a time loss of 685,708 working days. Of these disputes, 189 were strikes, of which 143 were due to wages questions. The greatest time loss occurred in the metal industry and the second greatest in the clothing industry. Of the total number of strikes, 24.9 per cent were completely successful, 61.9 partially successful and 13.2 were unsuccessful.

Belgium

During April, 20 disputes began and 12 were still in progress from the previous month, making 32 disputes, involving 11,022 workers and resulting in a time loss of 165,075 working days.

A strike involving about 12,000 dock workers at Antwerp began on June 16. The demand was for an increase in wages and no settlement was reported.

Australia

During the fourth quarter of 1927, the number of disputes was 92, involving 396 establishments and directly involving 37,612

workers. The total time loss by all workers involved was 223,623 working days and the estimated loss in wages £207,032.

A strike of sea cooks which began about May 15 seriously affected shipping and threw thousands of marine workers out of employment during the first part of June, but was settled on June 14 when the strikers agreed to return to work on employers' terms.

South Africa

A strike of 25,000 native workers at the Lichtenburg diamond diggings was reported to have begun on June 18. The strike was against a reduction in wages from \$4.50 to \$3 per week. It was reported on June 22 that the majority of the strikers were returning to work.

British India

During June, no settlement was reported in the case of the strikes in the Bombay spinning mills and in certain railway workshops, which were mentioned in the LABOUR GAZETTE for June.

Japan

A strike involving 50,000 seamen on 1,300 tramp steamers was reported on June 5, fol-

lowing the failure of negotiations for an agreement providing for a minimum wage. Through mediators, a settlement was reached on June 9 providing for a standard scale of minimum wages.

United States

Preliminary figures for April give the number of disputes beginning in the month as 47, involving 139,638 workers, while the number in effect at the end of the month was 70, involving 208,464 workers. The time loss during the month was 4,993,233 working days.

Bituminous Coal Miners' Dispute.—There was no material change in the situation in Pennsylvania, Ohio and West Virginia where work has been suspended in union mines since April 1, 1927. Another appeal for assistance for miners was sent out by the American Federation of Labour, asking members of all trade unions to contribute one day's pay. The great majority of the mines in Illinois, Indiana, Iowa and the Southwest which closed down on April 1, 1928, owing to failure to renew the Jacksonville agreement were again in operation under those terms by May 1, with the exception of these mines where production was curtailed owing to poor market conditions.

PLAN TO MAKE ARBITRATION AWARDS ENFORCEABLE IN U.S.A.

THE American Bar Association, at the annual meeting to be held at Seattle, Washington, on July 25-27, will consider a report from its committee on commerce, recommending the adoption of the principle that where an agreement has been voluntarily entered into by employers and workers to provide for the arbitration of industrial disputes, the award of the arbitrator should be enforceable at law. This principle is embodied in a draft bill, which, if adopted by the association, will be submitted to the United States Congress with a view to its enactment.

The report of the association's Committee on Commerce refers to a law of the United States Congress which was adopted in 1925 to encourage resort to arbitration as a means of settling disputes growing out of commercial contracts. The accepted law in all but a few States of the Republic had previously been that agreements to arbitrate differences without recourse to the courts were revocable at the pleasure of either of the parties. The Federal law of 1925 embodied a different principle. It did not compel individuals or corporations to settle all their contract dis-

putes by arbitration, but it obliged such persons, if they included in contracts agreements for the arbitration of disputes, to carry out their agreements. It conferred, moreover, upon Federal courts power to enforce such agreements and arbitration awards made in conformity with the provisions of the contracts.

In 1926 the Bar Association's Committee on Commerce suggested that the principles of the United States arbitration law might be extended into the field of industrial relations. If the parties voluntarily agreed to arbitrate when a contract was made, the committee contended, there was no impairment of their freedom of contract. Furthermore, the enactment of such a statute, the committee believed, would furnish a great inducement to collective bargaining between capital and labour.

Conference at New York

The Bar Association's committee held conferences on the subject with a committee appointed by the American Federation of Labour, composed of Messrs. Matthew Woll, John P. Frey and Victor A. Olander. As a

result of these discussions it was decided to hold public hearings in New York City in order that an opportunity might be given to employers' organizations and others interested to express their views. Invitations to attend these hearings were sent to the following organizations: United States Chamber of Commerce; National Industrial Council; National Association of Manufacturers; National Industrial Conference Board, Inc.; United Typothetae of America; American Newspaper Publishers' Association; American Association for Labour Legislation; National Civic Federation; National Metal Trades Association; Boot & Shoe Manufacturers' Association; Cloak Manufacturers' Association of America; American Cloak and Suit Association; National Erectors' Association; Building Trades Employers' Association of New York; Motion Picture Producers and Distributors of America; American Photo-Engravers' Association; Lithographers' National Association; American Foundrymen's Association; Railroad Employees' Department, American Federation of Labour; Building Trades Department, American Federation of Labour; Metal Trades Department, American Federation of Labour; Amalgamated Clothing Workers of America; Stable Money Association; New York Clothing Manufacturers' Exchange, Inc.

The hearings were duly held on February 16-18 under the direction of the Committee on Commerce. Mr. Silas H. Strawn, president of the American Bar Association, was also present at the sittings. The average attendance was over 175 persons and the evidence given attracted considerable attention in the press. The stenographic record of the testimony taken covers 441 pages. The following witnesses appeared: Gilbert H. Montague, Chairman of the Committee on Uniform State Laws of the New York State Bar Association, and expert in the field of law dealing with anti-trust laws; Merwin K. Hart, attorney; Raymond V. Ingersoll, impartial arbitrator in the Women's Garment Industry, New York; William Green, president, American Federation of Labour; P. W. Martin; W. Jett Lauck, former secretary of the National War Labour Board; Charles L. Bernheimer, speaking for business men; David Drechsler, attorney for New York Clothing Manufacturers; Royal S. Meeker, former United States Commissioner of Labour Statistics; Leifur Magnusson, correspondent of the International Labour Office, Geneva; James A. Emery, counsel for National Association of Manufacturers; Jacob Billikopf, impartial arbitrator in the New York Clothing Industry; William Z. Foster, secretary, Trades Union Educational League.

Statements were also received in writing from a number of others.

Principle Approved

The hearings of the Bar Association's committee dealt with the proposal which had been introduced by the Commerce Committee at the last annual meeting of the Bar Association in favour of the adoption of legislation by the United States Congress to provide means for the settlement of industrial disputes which are within the purview of federal jurisdiction by binding arbitration. It was made clear that compulsory arbitration was not in mind but that the plan dealt only with voluntary agreements. If, however, the parties voluntarily agreed to arbitration of industrial disputes there was obviously no impairment of their freedom of contract. What was proposed was that contracts, if made, were to be considered binding and enforceable. The method of procedure proposed by the Bar Association Committee provided for the creation of an unpaid, federal industrial council to look into strikes or lock-outs, threatened or actual, with a view to making recommendations to be voluntarily adopted by the parties. Such a statute would be along the lines of the Railway Labour Board of 1926 (LABOUR GAZETTE, May, 1926, page 423).

At the hearings in New York all of the witnesses, with the exception of Mr. W. Z. Foster, who appeared on behalf of the radical or left wing of Labour, voiced their acquiescence in the principle that, where groups of men voluntarily entered into contracts providing for arbitration of industrial disputes, there is no reason in public policy why these agreements should not be made enforceable at law and that, providing the agreements are made without coercion, fraud or duress, the awards should be made binding on the parties. The Commerce committee in its report on the recent hearings observed that "No men know better than lawyers that honourable men need no law or courts to enforce their contracts; yet whenever the stress of economic conditions puts one of the parties in the position of facing great loss, it is the law which stands in the way of the breach and holds the party to his contract. Millions of dollars of property pass on the exchanges on slips of paper, mere memoranda of obligations, and rarely do these transactions reach the courts; but the knowledge that they are legally binding furnishes the foundation for such transactions.

Attached to the report of the American Bar Association is an appendix containing the text of a proposed Federal Act to sanction agree-

ments between employers and workers for the arbitration of disputes occurring in industries engaged in inter-State or foreign countries; also to provide machinery for the appointment of arbitration boards and to permit of the filing of awards with U.S. District courts and conferring jurisdiction upon the latter to force awards.

Authority is given in the Bill for the appointment as well of an unpaid Federal Industrial Council to look into strikes or lockouts, threatened or actual, with a view to making recommendations to be voluntarily adopted by the parties. This procedure would be somewhat along the lines of the U.S. Railway Labour Board Act of 1926.

INDUSTRIAL CONFERENCES IN GREAT BRITAIN, AUSTRALIA AND NEW ZEALAND

Great Britain

THE General Council of the Trades Union Congress at a special meeting on June 26, by a vote of 15 to 6 defeated a motion to withdraw from the conference on industrial peace in Great Britain which commenced in January between organized labour as represented by the executive leaders of the Trades Union Congress and a group of industrialists, headed by Lord Mond. The various steps leading up to this conference, and the decisions to date have been reviewed in the issues of the *LABOUR GAZETTE* for December, 1927, pages 1309-10; January, 1928, page 4; March, 1928, pages 278-9; May, 1928, pages 444-5.

According to press reports, the motion to terminate the conference was on the ground that it had reached the limit of usefulness, but the decisive majority against such action means that the conference will continue. The General Council by a vote of 13 to 4 also adopted the report of the Industrial Committee of Labour which had been meeting with a sub-committee of the employers' group. This report provides for the establishment of a National Industrial Council, consisting of representatives of the employers nominated by the Federation of employers' organizations, and members of the General Council of the Trades Union Congress, representing organized labour in Great Britain. One of the chief functions of the proposed National Industrial Council would be to establish conciliation boards to investigate any trade disputes referred to them before a lockout or strike is declared, the machinery being entirely voluntary. The scheme will now be referred to a general conference of employers.

Speaking recently of the objects and work of the industrial conference, Lord Mond was reported to have stated, in part, as follows: "It is absolutely necessary to establish in this country and throughout the Empire such relations between capital and labour as will eliminate as far as is humanly possible those

strikes, conflicts and frictions which have so long hampered the progress of our industrial machine." He further declared that the discussion had "proceeded so far in the spirit of mutual understanding, mutual desire to appreciate each other's difficulties and points of view, mutual desire to be helpful to a degree which has far exceeded the most sanguine expectations, and promise some really useful results."

Australia

Early in the year, the Right Hon. Stanley M. Bruce, Prime Minister of Australia, announced that the Government had decided to convene an industrial peace conference, and addressed requests to the representative organizations of employers and employees in the Commonwealth to nominate delegates. The conference was to be attended by 36 delegates—10 from the Australasian Council of Trade Unions and the Trades Hall Councils of all States; 4 from the Australian Workers' Union; 8 from the employers' organizations; 2 from financial circles; 4 from the National Council of Women; and the remaining 8 from agricultural organizations.

The suggested subjects of the conference included: (1) The present economic position of the primary and secondary industries, with particular reference to their liability to compete in overseas countries; (2) The increase of production on a sound economic and special basis; (3) The present distribution of the proceeds of industry between those taking part in production, and methods of removing any unfairness found to exist; (4) The control and management of industry and the question of giving workers a share therein; (5) Methods by which greater security of employment can be guaranteed to all classes of workers.

While the various organizations of employers approved the proposed conference the attitude of the labour organizations was not so promising. The Australian Workers' Union declined to participate, and the Australasian

Council of Trade Unions informed the Prime Minister that it could accept the invitation to the conference only conditionally on the absolute withdrawal of the Bill to amend The Commonwealth Conciliation and Arbitration Act. In consequence of the final refusal of Australasian Council of Trade Unions to appoint delegates to the proposed conference the Prime Minister informed the House of Representatives on April 27, 1928, that the project had been abandoned for the present.

Conciliation and Arbitration Act.—The Conciliation and Arbitration Act Amendment Bill was adopted by the House of Representatives on June 11. According to a press report no vital changes were in the Bill by the House, although labour members endeavoured to modify the penal clauses. The amending Bill, as introduced, provided, in brief, as follows: (1) Prevention of over-lapping between federal and state tribunals (where Commonwealth and State awards deal with the same subject, the Federal award shall rule); (2) Correlation of awards with existing economic conditions; (3) Development of the system of voluntary arbitration as distinguished from compulsory arbitration; (4) Further application of the principle of conciliation; strengthening the responsibility of organizations for the conduct of their officers and members, and for the general observance of awards (the Bill amends the penalty provision for strikes and lockouts, which imposed £1,000 in all cases, by making the fine £1,000 for an organization or employer and £50 for any other person. Also, the liability of the organization is reduced to £100 if it expels or removes from office the officers or members who have exposed it to the penalty); (5) Establishing the principle of secret ballot in order to give members of organizations control over their officers and the affairs of the organization (any ten members may demand such a ballot upon any question, and if not wishing to disclose their identity, can apply for a secret ballot to the Registrar of the Court for direction of same.); (6) Prohibition of violence, intimidation, abusive language, blacklisting, or any form of boycott in an attempt to prevent any person from offering or accepting employment in the accordance with the terms of a Court award.

The Commonwealth Court of Conciliation and Arbitration was established by the Commonwealth Conciliation and Arbitration Act of 1904 for the prevention and settlement of industrial disputes extending beyond the limits of any one State. It consists of a president,

who is a justice of the High Court, and such deputy-presidents as may be appointed by the Governor General from among justices of the High Court, or judges of the Supreme Court of a State. The Court may appoint assessors, one representing each party to a dispute, for advisory purposes. In addition to the machinery outlined above, many of the laws provide for the setting up of conciliation committees or for the calling together of compulsory conferences of employers and employees with a view to securing agreement in cases of dispute. Only if such attempts fail is recourse made to compulsory arbitration. Where the machinery of conciliation results in agreement being reached, provision is generally made for registration of the agreement, in which case its provisions have the same force as an award of the Court. Generally persons or organizations subject to awards of a Court are forbidden to undertake a strike or lockout under penalty of a fine.

New Zealand

The industrial conference, convened by the Right Hon. J. G. Coates, Prime Minister of New Zealand, on March 27, 1928, concluded its deliberations on May 18. An account of the objects of the conference, together with an analysis of the New Zealand system of conciliation and arbitration as applied to industrial disputes, appeared in the LABOUR GAZETTE March 1928, pages 279 and 280).

This conference was attended by 25 representatives each for employers and employees, as well as by departmental representatives. It met for the purpose of investigating and revising the industrial legislation of the Dominion, the recent proposals of the Government to amend the Industrial Conciliation and Arbitration Act forming the chief subject under discussion.

The Government of New Zealand introduced a Bill on October 20, 1927, amending the Act so as to exempt the farming and dairy industries from its operation. This would have had the effect of depriving shearers and other pastoral workers of the benefits of future awards. The proposed amendment met with strong opposition, and the Government decided to hold over the bill until Parliament had again dealt with the subject. Several amendments were made in the proposed measure, the result being that no award relating to farming or to the manufacture of butter, cheese, etc., could be made before September 1, 1928, and also that existing awards were to be maintained.

Meanwhile, the industrial conference debated the entire situation. A special sub-

committee was appointed to investigate the matter and report back to the conference. This sub-committee reported that, after full consideration of the Industrial Conciliation and Arbitration Act, its effect upon industry and suggested amendments, it was unable to make a unanimous recommendation. The vital point of difference was the question of the optional or compulsory reference of disputes to the Arbitration Court or other tri-

bunal for settlement. According to a press dispatch the representatives of the employers advocated the optional system, while the employees' representatives wished to maintain the existing system of compulsory reference.

The industrial conference, accordingly, arrived at no conclusion regarding the vital issue of arbitration.

CANADIAN GOVERNMENT ANNUITIES

Second Address delivered over the Canadian National Railway Radio System by Mr. E. G. Blackadar, Superintendent of Canadian Government Annuities.

A FEW weeks ago a short talk was given over this radio station, explaining generally the Canadian Government Annuity System.* I shall now give you some more particular information regarding one of the most popular plans of annuity.

If you are a young man or woman, a Deferred Annuity on the 10-year Guaranteed Plan will give you a safe, steady and dependable income when you desire to retire from active employment or business. Perhaps you will ask, "What are the chances of my living to age 65?" Statistics show that out of 100 average Canadians starting out in life at age twenty-five, 56 will be alive at age 65. Out of these, only 10 will be well-to-do, or living on their earnings. The other 46 are dependent upon relatives, charitable institutions, etc. Therefore, it is important that you should begin now to make provision, so that when your earning days are over, you will not be one of these 46 who are depending on others for support.

Under the 10-year Guaranteed Deferred Plan the annuity usually begins at 50, 55, 60, or 65, when age usually lessens your earning capacity. From then on the annuity is paid in quarterly or monthly instalments for the balance of your life. The guarantee feature provides that if you should die after drawing the annuity payments for only a few years, the unpaid instalments will be continued to your estate. Of course, if you live longer than the number of years guaranteed, the annuity payments are continued for life, even if you should live to 100 years of age.

Perhaps you may say, "What happens to my money if I should die before the date fixed for the annuity to begin?" In this event every dollar you had paid in, with 4 per cent compound interest added thereto would be refunded to your estate.

If you were to purchase an annuity under this plan to begin at say 60, and through force of circumstances it was necessary for you to commence drawing the annuity at an earlier age, your contract could be converted into an Immediate Annuity for the amount which had been purchased at the time of your request. This feature is really a Disability Clause and allows a person who desires to retire from his employment, or becomes disabled and thereby prevented from continuing in his occupation, to secure the income from his annuity as a means of support for the balance of his life.

An Annuity on the 10-year Guaranteed Deferred Plan may be purchased by making premium payments annually, semi-annually, quarterly, monthly, or even weekly. No extra charge is added for the privilege of making monthly or weekly premium payments. A pass-book is provided in which receipt of the payments is acknowledged and the payments may be conveniently paid in at any Postal Money Order Office in Canada, or may be remitted direct to the Annuities Branch of the Department of Labour at Ottawa.

Another desirable feature of this plan of annuity is that you are not bound to make the premium payments as specified in the contract. You may pay in what amounts you can save from time to time, and when your contract matures you will receive a proportionate annuity based upon the payments you have made. For instance, if a young man were to take out on annuity requiring a monthly premium payment of \$2, and he was able to pay in \$4 per month, when his contract matured, he would receive double the amount of annuity originally applied for. If he were only able to pay in at the rate of \$1 per month, when his annuity began he would receive exactly one-half of the amount of annuity applied for.

* The first address was given in the LABOUR GAZETTE, May, 1928, page 469.

A further desirable feature of this splendid means of saving provided by the Government is that if a person should become unemployed, ill, or for any other reason is unable to make his premium payments regularly, he will not forfeit what he has already paid in. He may resume his payments when he is ready to do so. He has the privilege of paying up the back payments and receiving exactly the amount of annuity applied for, or he may allow the back payments to remain unpaid and draw a proportionate amount of annuity. This protects a working man from loss of his savings if through unemployment, etc., he is unable to save regularly. In other words, the payments made for the purchase of an annuity on the 10-year Guaranteed Deferred Plan are accumulated, 4 per cent compound interest is added thereto by the Government, and when you reach the age fixed for the annuity to begin you receive the amount of annuity which your payments and interest have purchased.

I believe it will be difficult for persons not familiar with the Government Annuity System to grasp the full details of the plan I am describing, but I want you at least to remember that under no circumstances can a loss of savings occur if purchase is made of a Government Annuity on the 10-year Guaranteed Plan.

The following simple figures may be used to illustrate the advantages of the Guaranteed Deferred Annuity Plan:

If a man aged 20 will make a regular systematic saving under the Government Annuity System of only 97 cents per week, at age of 65 the Government will commence to pay him an annuity of \$600 per year or \$50 per month as long as he lives and for 10 years in any event. This amount is equivalent to the income from an investment of \$12,000 at 5 per cent. If he should die just before his annuity began, the amount of \$6,287.25 would be returned to his estate in a lump sum. If this young man were to wait until he attained the age of 65 before purchasing, the same amount of annuity would require the payment of \$6,216 in a lump sum.

In other words if a young man will take advantage of the Government Annuities System while he is still young by purchasing an annuity on the plan outlined he may provide for his future independence at a very low cost. He will derive full benefit for every dollar paid in and may purchase the amount of annuity desired at a much lower cost than if he endeavours to accumulate the amount of cash required to purchase an Immediate Annuity when his earning days are over.

These radio talks are only one of the means being used by the Department of Labour to bring to the attention of the Canadian people the advantages of the Canadian Government Annuities System, and I am pleased to say that the number of persons purchasing annuities has steadily increased from year to year. The fact that the number of applications received during the fiscal year ending March 31 last showed an increase of 144 per cent over the preceding year is an evidence of the increased amount of interest being shown.

This legislation has been commented on most favourably, an eminent Canadian financier stating that in his opinion the benefits offered, for the rates charged, are exceedingly liberal, and that he did not know of any institution which could possibly afford to offer terms so advantageous. He also said that if the general working population of Canada were able to realize the favourable basis on which annuities could be secured from the Government, there would be very few among the thrifty and thoughtful who would not take advantage thereof.

The plan of annuity which I have described in detail is only one of the many plans available. This plain is more particularly suited to younger persons. There are other plans of annuity which will meet the requirements of older persons who either have retired or desire to retire and have a moderate amount of money to invest, securing for themselves a dependable income for the balance of their lives.

A booklet giving full information in regard to the various plans of annuity may be obtained free of charge by calling at your nearest post office or by writing to the Annuities Branch, Department of Labour at Ottawa, or by telephoning Queen 3000 local 563.

Government Annuity offices have also been opened in Montreal and Quebec where complete information may be obtained locally. The Montreal office is located at 1254 Bishop Street, Montreal, Telephone—Uptown 2311.

Mr. Wilfrid Clouthier is the Government Annuities Representative for the City of Quebec. His telephone is No. 2—Local 3692.

New regulations have been established by the Alberta Bureau of Labour under the provincial Factories Act, 1926, to govern the operations of drilling for oil, so as to ensure safe conditions for the workmen. Among other requirements, oil companies must provide cellar exits from the derrick floor, and platforms on the floors.

ESTIMATED NUMBER OF POSSIBLE OLD AGE PENSIONERS IN CANADA

THE Social Service Council of Canada has recently published a preliminary report on Old Age Pensions prepared by its Industrial Life Committee. The various phases of this question, both in Canada and other countries, have been extensively reviewed in recent issues of the LABOUR GAZETTE in connection with the enactment of the Old Age Pensions Act (Revised Statutes of Canada, 1927, chapter 156). The report presents full material on old age pensions in convenient form. It makes an interesting estimate of the extent of destitution among elderly people in Canada, and of the approximate cost of Federal-provincial scheme if its operation were extended throughout the Dominion. It is pointed out that there are no existing official statistics upon which to base an exact statement. In making an estimate, the Committee took as a basis the age distribution reported in the 1921 census. Among the persons in Canada reported to be 70 years of age or more, it was assumed that the distribution of property and income would be similar to that prevailing in the State of Massachusetts, where a careful inquiry into the subject has re-

cently been made. In regard to the use of the Massachusetts statistics as an approximate parallel, the report states that "because of the care and thoroughness with which this investigation was carried out, and because it is thought that the economic and social conditions of Massachusetts offer a fairly close parallel to those of certain parts of Canada, the Massachusetts results have been used very extensively in making these tentative estimates for the Canadian calculations. If this method should be adversely criticized, the absence of Canadian data and the impossibility of procuring them within the available time must serve as an excuse."

According to the Massachusetts investigation, 39.9 per cent of the population of that State 70 years of age and over and not in receipt of aid from public or private organized charity had individual incomes of less than \$300, and 43.6 per cent had incomes of less than \$400. These figures indicate that a considerable number of the Massachusetts population would be eligible for old age pensions so far as the income requirements are concerned.

ESTIMATED COST OF PROVIDING PENSION ON THE PROPOSED SCALE FOR PERSONS OVER 70 YEARS OF AGE IN THE NINE CANADIAN PROVINCES. In determining eligibility, the pensioner's own property and incomes have been taken into account, but not those of their children.

Province	Prince Edward Island	Nova Scotia	New Brunswick	Quebec	Ontario	Manitoba	Saskatchewan	Alberta	British Columbia
Number of persons aged 70 or over in 1921	5,338	24,757	14,943	63,949	102,286	10,295	8,822	6,884	9,663
Estimated number of persons aged 70 or over in 1928 (a)	5,338	24,757	14,943	73,541	118,000	11,839	10,145	7,916	11,112
Number of pensioners (b)	1,867	8,658	5,226	25,717	41,260	4,140	3,548	2,768	3,886
Cost of pensions to the Provincial Government (at \$115 per pensioner)	\$214,705	\$995,670	\$600,990	\$2,957,455	\$4,729,525	\$476,100	\$408,020	\$318,320	\$446,800
Estimated population (1926)	87,000	540,000	407,000	2,562,000	3,146,000	639,000	821,000	608,000	568,000
Provincial Contribution per head of population (approximate)	\$2 47	\$1 84	\$1 47	\$1 16	\$1 50	\$0 75	\$0 50	\$0 53	\$0 79
Approximate percentage which must be added to ordinary expenses of province to cover provincial contribution towards pension	29	17	15	13	9	5	3	3	2

(a) Ontario estimate made with life tables; Maritime Provinces regarded as stationary; in other provinces it was assumed that the population, aged 70 or over, increased 15 per cent.

(b) The number eligible to receive pension was estimated (from Massachusetts data) at 34.97 per cent of the total, aged 70 or over.

Pension Approximation for Canada

Based on the Massachusetts investigation, the report contains a rough approximation of the probable results of the adoption of the Old Age Pensions Act in each province. The result is detailed in the accompanying table. It is assumed that the scheme is uniform in both countries; that no pensions are granted to those already receiving charity; that the Massachusetts property and income distribution holds true in all the Canadian provinces; and that in allotting pensions no account is taken of the ability of the children to make contributions towards the support of their parents. "Though very rough, these estimates are perhaps as good as possible in view of the paucity of material at hand. It is not contended that the basis of calculation is justified for every province; for instance, it is quite possible that the proportion

of pensioners in Prince Edward Island and Alberta would be lower than in Massachusetts."

The committee estimates the total pension expenditure (including expenses of administration) at rather more than \$21,000,000* for the 97,000 (calculated) pensioners in the Dominion.

The report notes that it has been generally found that such social expenditures tend to increase with time, the following reasons being given for such increase: (1) The growth of population; (2) the increasing longevity due largely to improvements in medicine and sanitation; (3) the demand for larger pensions payable to more people and beginning at an earlier age.

* The estimates of the Parliamentary Committee as published in the *LABOUR GAZETTE* for July, 1925, page 670, place this figure at \$23,000,000.

REPORT OF FEDERAL COMMISSION ON FISHERIES IN THE MARITIME PROVINCES

THE report of the federal commission to investigate conditions in the fishing industry in the Maritime Provinces was published recently. The appointment of this commission and the names of the members, were noted in the *LABOUR GAZETTE*, October, 1927, page 1030 August, 1927, page 829. The report is voluminous, 823 witnesses having been heard in the course of the commission's sessions. Mr. Justice A. K. MacLean, the chairman, has a special report on trawlers in the industry, many fishermen having complained of the destructive effect of these vessels on their occupation. The commission lays stress on the necessity for fuller scientific investigation before final regulations can be adopted for the various branches of the fishing industry.

The report states that the Canadian Atlantic fishing grounds are probably the most extensive in the world. The area of the fishing banks, is approximately 70,000 square miles. They have yielded annually on the average, for 30 years past, more than eleven hundred million pounds of cod alone. This is undoubtedly the greatest cod and haddock fishery in the world. Steam-trawlers and fishing vessels from Nova Scotia, Newfoundland, the United States, France, Spain and Portugal frequent these grounds. The average yearly value of the catch in the Maritime Provinces from 1921 to 1926 was over sixteen million dollars a year. In 1926 the total value of the catch was twenty million dollars. The total number of persons engaged in the fishing industry in the Mari-

time Provinces and Quebec was over 40,000 in 1927.

The season of 1927 was marked by over-production. The salt fish trade in 1926 had been unremunerative, and in 1927 many shore fishermen turned their attention to the fresh fish trade; large shippers of fish from Nova Scotia experienced unexpected competition in the Western United States from United States producers, and there was an unusual period of fine weather. All of these causes resulted in over-production and a falling in prices.

The various branches of the industry are dealt with separately in the report.

Lobsters.—In 1927 there was a total production of 31,198,500 pounds of lobsters with a value to the fishermen of \$3,888,136. There has been a great decline in the quantity of lobsters caught in recent years. The commissioners find that the great decline in the lobster catch has been caused by illegal fishing, the taking of lobsters about to spawn, and the catching of small lobsters. They make recommendations for dealing with these causes of decline, and suggest an improvement in the sanitary conditions in the canneries.

Oysters.—Production decreased from 65,000 barrels in 1882 to 20,000 barrels in 1926. It is recommended that a survey of Maritime Province waters be made to ascertain the causes of depletion, to devise means for re-establishing depleted areas, to determine best means of cultivation, and formulate plans for instructor

of fishermen and dealers. The Commissioners recommend that a small experimental station should be established in Prince Edward Island for the scientific study of the oyster industry, and suggest that size limits be enforced, that a standard barrel be required, that all barrels be branded with the name and address of the shipper, the grade of oysters and the name of the locality in which they were grown; that oysters be inspected at point of shipment and all shipments be accompanied by a certificate of quality.

Smelts.—The Maritime Provinces and Quebec produce more than three-quarters of all the smelts produced in the world and the Miramichi is responsible for one-third of the Canadian production. It is said to be the greatest smelt fishery in the world. The report recommends that dealers and producers should co-operate and establish more orderly methods of marketing to secure a higher level of prices.

Fresh Fish.—Prior to 1908, the markets of Central Canada were supplied from New England. In that year the Department embarked on the policy of paying one-third of the express charges on less-than-car-load-lot shipments from Atlantic ports. By 1918 the quantity of fresh fish so shipped had increased 300 per cent. About 90,000,000 pounds of fresh fish are annually marketed from the Maritime Provinces. Tables are given showing the spread in prices between the fishermen and the consumer. The commission recommends against the contribution for advertising at present, but indicates that when the product of rapid freezing plants is available, the Department might properly assist in advertising.

Dried Salt Fish.—The report deals with the dried fish industry in Gaspé and Lunenburg as typical of the dried fish industry of the Maritimes.

The commission recommends consideration of a proposed central fish drying plant at Lunenburg. It is unable to recommend a bounty on the production of dried fish, but is in favour of a system of grading and inspection of dried fish; that groups of men occasionally be sent to the principal producing and consuming countries to study the industry and report to the producers.

Herring.—The report states that the herring fishing of Charlotte County is the most remarkable in the world and produces from fifty to eighty million pounds a year. Herring may here be taken the year round. The exports of pickled herring have been decreasing, but an improvement in quality would doubtless mean an increase in sales.

More rigid inspection and aggressive instructional methods would, it is stated, do much to remedy the decline in this fishery. Rapid frozen fresh herring will likely find further foreign and domestic markets.

Mackerel.—It is recommended that competent instructors be sent to leading fishing districts to inform fishermen as to the best methods of curing, and that investigations into best methods of canning and curing be undertaken.

Canning.—It is recommended that the Department carry on extensive investigations into the most improved methods of canning fish products, but that the Department of Trade and Commerce continue to give assistance through its Trade Commissioners in exploring the possibilities of foreign markets.

The report contains a number of recommendations in regard to by-products, including fish meal, oil, pearl essence and dogfish.

Workmen's Compensation.—The commission was unable to recommend, as suggested, that the federal government should assume any liability for the payment of premiums on Workmen's Compensation for the Lunenburg fleet.

Other Recommendations.—An improvement in the steamship service subsidized by the federal government is suggested.

It is recommended that the Department of Fisheries draw up directions as to the conditions under which fish should be handled in all stages; that these directions be communicated to the industry and the municipal authorities; that all fish plants be subjected to rigorous inspection; that the municipal authorities should enforce regulations for the inspection of retail fish shops.

It is recommended that some form of education should be devised under the Department on the lines of what has been done for agricultural education. These courses are described.

The commission advocates co-operative methods among fishermen, and recommends that the Department assist by providing an organizer for this work. It suggests that some plan might be devised to make loans for the purchase of boats and equipment.

The commission recommends the creation of a separate Department of Fisheries for the consideration of the government.

The commission recommends the establishment of a Fisheries Intelligence Branch, as well as a Director of Fisheries for the Atlantic Division.

The commission suggests a revision of salaries for inspectors and overseers, as well as increased automobile allowances.

Trawlers.—In regard to the use of trawlers the chairman recommends that the government of Canada should take steps to secure an international conference of representatives of those countries that take part in fishing in the North Atlantic, with a view to an international regulation governing the operation of trawlers. He suggests that trawlers should be lettered and numbered in a conspicuous way.

The chairman points out that the trawlers produced 40,000,000 pounds of fish in 1926-27

and bought 36,000,000 from shore fishermen, 72 per cent of the total production of shore fishermen. The trawlers marketed 45,000,000 of fish in Western Canada and the United States. The chairman is not convinced that shore fishermen alone can hold these markets.

One great difficulty has been the severe and unrestrained competition between shippers from Nova Scotia. The wholesalers in Montreal appear willing to pay a price for fish at the coast which will be remunerative to fishermen and shippers, but by cutting prices below the cost of them shippers have injured themselves and the fishermen. There should be some measure of co-operation between the shippers to prevent undue price cutting.

MINIMUM WAGES FOR FEMALE EMPLOYEES IN QUEBEC

Orders governing the Textile Trade in Montreal and District and in rest of Province

THE Minimum Wage Commission of the Province of Quebec, on June 27, issued Orders Nos. 5 and 6, governing female employees in the textile trades in the City and Island and a radius of ten miles around and beyond the Island, and in the remainder of the province, respectively. The trades covered by the orders include weaving, knitting, spinning and allied processes. Orders Nos. 1 and 2, governing employment in the laundry industry, were published in the LABOUR GAZETTE, December, 1926, page 1195, and March, 1927 page 271, and the text of Orders Nos. 3 and 4 governing female employees in printing, bookbinding, lithographing and envelope making establishments in the Province was given in the issues for November, 1927, page 1174, and January, 1928, page 30. The Act provides at section 7, that orders of the Women's Minimum Wages commission become effective 60 days after their publication in the *Quebec Official Gazette*, the commission having authority, however, to extend such delay if circumstances so require. Orders Nos. 3 and 4 will therefore, in the normal course, come into force at the beginning of September, 1928.

Orders Numbers 5 and 6

Governing female employees in the textile trades which includes weaving, knitting, spinning and allied processes (1) in the City and Island of Montreal and a radius of ten miles around and beyond the Island; and (2) in the remainder of the Province of Quebec.

1. *Minimum:* No wage shall be less per week for the regular recognized working period of the establishment than is set forth in the following table:

—	Montreal and District	Rest of Province
	\$	\$
<i>Experienced workers having over 24 months' experience at the trade.....</i>	12 00	10 00
<i>Apprentices—</i>		
1st six months.....	7 00	6 00
2nd six months.....	8 00	7 00
3rd six months.....	9 00	8 00
4th six months.....	10 00	9 00

2. *Maximum of Inexperienced Workers:* The number of inexperienced workers having less than twenty-four months of apprenticeship shall not exceed one-half of the total female working force.

3. *Overtime:* Any female employee doing work in excess of the regular recognized working period of the establishment shall be paid for same at not less than the regular rates, but in all cases according to the prevailing custom of the trade.

4. *Piecework:* The wages paid to each time-worker and to each pieceworker during the first six months' employment in the industry shall conform to this Order. In the case of pieceworkers of more than six months' experience, it is sufficient if at least 80 per cent receive wages conformable to this Order.

5. *Averaging Piecework Rates:* The wage rates may be averaged for any pieceworker, provided that the average is maintained at each payment. Wages received before this Order became effective, or more than three months before the date of the payment concerned, shall not be considered in any such calculation.

6. *Lost Time*: Any female employee losing time during the regular recognized working period of the establishment will be paid proportionately for the actual number of hours worked.

7. *Deductions for Absence*: No deduction below the minimum wage line for absence shall exceed the value of the time lost, reckoned proportionately to the regular recognized working period of the establishment.

8. *Waiting*: Any employee required to wait on the premises shall be paid for the time thus spent.

9. *Permits*: The Board may issue permits for lower wages on behalf of aged or handicapped workers. It may also grant permits of variation or suspension of any of these regulations in case of exceptional conditions.

Employers and employees are invited to consult the Board regarding any problems which this Order may concern.

10. *Penalties*: Any violation of this Order is punishable by fine. (See Section 12 of the Act).

11. *Posting*: Each establishment shall keep a copy of this Order posted in a conspicuous place.

12. This Order is subject to annual revision by the Board.

13. This Order shall come into force and be effective on September 1, 1928.

(Signed) GUS FRANCO,
Chairman.

" C. J. GRIFFIN.

" E. RICHARD.

Montreal, June 27, 1928.

REPORT OF THE COMMISSIONER OF LABOUR FOR ALBERTA FOR 1927

THE report of the Bureau of Labour of Alberta for the period January 1, 1927, to March 31, 1928, recently received in the Department indicates the extent of the work entailed in the administration of The Factories Act, The Minimum Wage Act, The Steam Boilers Act, and The Theatres Act. In addition, the work of the Alberta Government Employment Offices, also supervised by the Commissioner of Labour, is described.

Trades and Industries.—Returns received from 1,528 firms covered 33,094 male employees over eighteen years of age, 651 males under eighteen, 4,236 females over eighteen, 232 females under eighteen, and 575 apprentices. The total payroll for wages and salaries was \$50,166,735.12 of which sum \$44,281,394.81 was paid to wage earners. There was a marked

increase in the numbers employed during the last six months of the year over those employed for the first six months. As in previous years, the returns, when considered by individual industries, show great fluctuations, and it is pointed out that for the unskilled work in the various industries men interchange from one to the other, thereby maintaining a better general balance.

Of the total number of employees in the province, 6,356 worked 44 hours per week; 19,846 worked 48 hours per week; 1,911 worked 54 hours per week; 3,055 worked 60 hours per week.

The accompanying tables, based on returns from 1,528 firms, indicate the classification of employees by wage groups and weekly wage rates:

EMPLOYEES IN INDUSTRIES IN ALBERTA BY WAGE GROUPS

PAY-ROLLS

Officers, Superintendents and Managers.....	\$ 5,885,340 31
Clerks, Stenographers, Bookkeepers, etc.....	6,503,599 73
Wage-earners (including piece-workers, salesmen, etc.).....	37,777,795 08
Total.....	\$50,166,735 12

CLASSIFIED WEEKLY WAGE RATES (WAGE-EARNERS ONLY)

45.00 to 49.99.....	1,200	4	4
50.00 and over.....	1,826	5	2
Totals.....	33,094	651	4,236	232	575

Inspections.—Inspections under the provisions of The Factories Act and The Minimum Wage Act were performed by using the services of all inspectors appointed under the Bureau of Labour. During the period January 1, 1927, to March 31, 1928, Boiler Inspectors, at the time of their regular inspection visit to outlying points, inspected 133 factories. Included in these were creameries, cheese factories, machine shops, flour mills and power plants. Under the provisions of The Factories Act 4,127 inspections were made of 3,425 factories, shops, hotels, offices and office buildings, in which were employed 21,063 males and 6,336 females. Recommendations relative to safety, sanitation, hours and wages and the employment of children to the number of 482 were made, all of which were fully carried out by employers. All places within the scope of the Act received one inspection visit during the year, subsequent visits being for the purpose of checking up on recommendations, on complaint, or where there is a varying element of risk. There were 654 inspections of 537 elevators, in connection with which 346 safety recommendations were made. Of the elevators inspected 140 were passenger, 381 freight and 16 Humphrey.

The total number of theatre inspections under the Theatres Act was 258 with 64 recom-

mendations regarding fire precaution. Projection room inspections numbered 162 while the number of projectors inspected was 188. In this class of work there were 65 recommendations as to fire precaution and 12 projection rooms were condemned. The number of certificates issued totalled 532.

The chief inspector of boilers in his report of the administration of the Boilers' Act tabulates the number and class of boilers and other pressure vessels inspected together with the number and class of engineers' certificates issued. For the fifteen months period the number of inspections totalled 4,211, and the number of certificates issued was 2,979. Six pressure vessels were condemned while the condition of 181 was rated as "poor". A summary of a number of boiler accidents was also given. Twenty prosecutions were found to be necessary for alleged violation of the Act, and seventeen police convictions were secured under its provisions.

Minimum Wage for Women.—Under the provisions of the Minimum Wage Act, 2,918 inspections were made of 2,507 businesses in which were employed 6,479 experienced females and 461 learners; 163 orders for adjustments of wages were made; 52 for adjustment of hours; and 12 for adjustment of staff so that not more than 25 per cent would be in receipt of apprentice wages.

There was an increase in the total number of females employed under all Orders, the total increase under all orders being 612.

Inspectors found a number of females in receipt of wages less than the minimum rate and a number who were working longer hours than the maximum fixed by the board. All wages and hours were adjusted by employers when the infractions were brought to their attention by the inspectors. One Court case was taken against a beauty parlour in Calgary. This was dismissed by the magistrate on the ground that it was a college in which students received training and not a place of business within the meaning of the Act. An appeal was taken to the Appellate Court, which sustained the decision of the magistrate.

A number of permits were issued for overtime to be worked to take care of emergencies that had arisen. In all cases we were advised regarding the number of hours worked and the amount paid for same.

The number of employees under each of the six orders were as follows:—

—	Experi- enced	Appren- tices
Order No. 1—		
Manufacturing.....	974	148
Order No. 2—		
Laundries, dyeing and cleaning.....	281	51
Order No. 3—		
Hotels and restaurants.....	894	26
Order No. 4—		
Personal service.....	211	21
Order No. 5—		
Office occupation.....	2,701	128
Order No. 6—		
Retail establishments.....	1,418	87
Total.....	6,479	461

Government Employment Offices.—The report of the director of Alberta Government Employment Offices indicated that industry generally throughout the Province showed a marked improvement over the previous year, this condition being reflected in the work of the employment offices by increased requests from employers for workmen.

Of the 75,769 vacancies filled, 66,429 were for males and 9,340 for females. While there was an increase in the number of vacancies filled for females, many more could have been placed on farms and in domestic employment in the cities, states the report, had they been available.

During the period January 1st, 1927, to March 31st, 1928, there were 551 more vacancies for females on farms than applicants, and 35 more vacancies than applicants for domestic work in the cities. Of the male placements, 44,021 were sent to farms, 2,069 to

building construction, 130 to clerical work, 1,315 to domestic and personal occupations, 1,924 to general labouring, 5,841 to lumber camps, 511 to manufacturing industries, 8 to professional and personal occupations, 2,700 for railroad construction and operation, 1,185 for mining, 1,280 to miscellaneous occupations, and 5,445 for casual employment.

Of the female placements, 2,058 were sent to farms, 3,472 as domestics, 39 to clerical positions, 5 to manufacturing, 7 to miscellaneous occupations, and 3,759 to casual employment. The operating costs were maintained at the low level of the previous year, but with the increase in work performed the average cost for each vacancy filled was reduced from 64½ cents to 62½ cents, notwithstanding the fact that the 15 months under review includes two low placement periods.

It was stated that the continued and extended use made of the offices by employers and workmen indicates an appreciation of the service given. The percentage of vacancies received that were filled and applicants who were found employment shows how closely requirements were met. The year, of the 68,480 vacancies received in the male section 97 per cent were filled, and of the 71,396 male applicants 89.6 per cent were found positions. Of the 11,242 vacancies received in the female section, 83 per cent were filled, and of the 10,879 female applicants 83.6 per cent were found positions.

The Brinton-Peterboro Carpet Company, Limited, of Peterboro, Ontario, in connection with a recent extension in their plant, have announced a new arrangement under which the employees will have the privilege of purchasing stock in the company. Hitherto, the stock was all privately held, but under the new plan each employee may make purchase of a minimum of two shares, totaling one hundred dollars, having a year to pay for the amount of his subscription. At the end of June about \$10,000 had been subscribed with indications of a still larger sum. The employees are stated to find it a good investment, the present dividend being \$3 a share, declared quarterly. Officials of the firm believe that with a continuance of present business conditions, this dividend may be appreciably increased.

On the night of July 13 the entire plant closed and continued so until July 23, thereby disposing of the holiday problem. The only exception to this closing arrangement was in the case of a few looms working on special orders.

WORKMEN'S COMPENSATION IN ALBERTA AND BRITISH COLUMBIA IN 1927

Alberta

THE tenth annual report of the Workmen's Compensation Board of the Province of Alberta, recently received in the Department, indicates that for the year ending December 31, 1927, there was a total of 10,149 accidents reported, of which number 59 were fatalities, 129 involved permanent disability, and 9,961 were of a temporary nature. The financial and other tables show that the transactions of the Board were heavier than in any previous year, the total claims reported, the compensation and medical service payments, and the receipts from assessment and medical aid all showing record figures. Compensation was paid for temporary disabilities totalling \$371,787; \$415,422 was transferred to the pension fund to cover awards in the case of permanent disabilities and fatal accidents, and \$106,770 was set up as a liability to cover pending claims.

A net increase of \$175,840 is shown in the disaster reserve, which brings the amount standing to the credit of this account as at December 31, 1927, to \$261,193. These are moneys set aside by the Board for the purpose of meeting any contingency caused by disaster.

Assessments levied during 1927, together with those outstanding at December 31, 1926, totalled \$1,053,456; of this amount \$995,586 was collected \$42,840 was cancelled (owing to over-estimate of pay rolls or cessation of operations), leaving a balance of \$15,030 unpaid at December, 31, 1927. Receipts on account of medical aid totalled \$242,941, while payments for medical services amounted to \$161,537.

During the year there was transferred from the accident fund to the pension fund \$415,442, which, together with interest earned by the fund, less the amount paid to pensioners, left a balance to the credit of this fund at December 31, 1927, of \$1,838,439, out of which 201 widows and 397 children of deceased workmen, as well as 244 workmen who met with permanent disabilities are receiving monthly payments.

The investments of the Board on December 31, 1927, totalled \$2,409,011 (cost) and yield an average rate of 5.26 per cent. Administration expense (excluding that made

on account of mine rescue) was \$75,476, or 5.8 per cent on cash receipts, a reduction of 1.04 per cent as compared with the year 1926.

The sum of \$2,080 was refunded to the Board by the federal Department of Soldiers' Civil Re-establishment on account of compensation and medical aid payments made to workmen to whom The Workmen's Compensation Act (Accident Fund) applies.

Of the total of 59 fatalities during the year 30 occurred in the coal mining group in which also there were 35 cases of permanent disability out of a total of 129 in all industries during the year. Temporary disabilities were more widely distributed through the various industries.

The following table shows the number of accidents during the year in groups according to cause:

CAUSES OF ACCIDENTS REPORTED DURING THE YEAR 1927

Cause	Fatal	Permanent Disability	Temporary Disability	Total
Burns and scalds.....	1	2	242	245
Burst bottles and broken glass.....			103	103
Electrical shock and burns.....			16	16
Explosions.....	5	2	29	34
Falling timber and poles.....	2	2	361	365
Falling and tripping.....	9	7	1,387	1,403
Falling rock, coal and clay.....	12	4	708	724
Flying and falling objects.....		15	1,608	1,623
Heavy lifting, loading wagons and trucks.....			418	418
Infection from handling meats and materials.....	1	2	192	195
Inhalation of gas fumes.....			46	46
Machinery, tools and equipment.....	8	68	1,571	1,647
Injured by horse, and in runaways.....	1	2	196	199
Protruding nails and spikes.....		1	341	342
Cranking automobiles.....			72	72
Struck by automobiles and trucks.....		1	49	50
Splashing of mixtures.....			37	37
Run over, struck by, or caught between cars.....	6	5	431	442
Derailment of mine cars.....	1	1	69	71
Slivers and splinters.....		3	211	214
Crushed.....	1	12	355	368
Striking against objects.....	1	2	352	355
Frost bites.....		1	93	94
Drowned.....	7			7
Miners' phthisis.....	2			2
Miscellaneous.....	2	1	1,074	1,077
Totals.....	59	129	9,961	10,149

The average time loss caused by accidents during the year was 73.06 days in permanent and 24.09 in temporary disability cases. The

average age of the injured workmen was 34.77 years, and the average weekly wage was \$22.88.

The number of employees within the scope of the Act on December 31, 1927, was 4,795.

The actual rates of assessment for \$100 of pay-roll for the year in the coal mining industry was \$3.75, this assessment including a rate of 50 cents for mine rescue service. Other industries with a comparatively high rate of assessment were: Lumbering and logging, \$3.50; saw mills and shingle mills, \$4; manufacture of wooden boxes, \$3.50; natural or artificial gas, and natural ice operations, \$3; road making and street paving (with blasting), \$4; steel building construction less than four stories, \$4; fishing, \$3; aeroplane flying, \$10.

The payrolls and numbers of workmen employed during 1927 are given in the accompanying table:

PAYROLLS AND NUMBERS EMPLOYED
IN VARIOUS INDUSTRIES IN
ALBERTA IN 1927

Industry	Payrolls	Number employed
	\$ cts.	
In and about coal mines.....	13,010,451 53	9,145
Employees of Workmen.....	27,999 70	36
Stripping pits.....	581,690 63	378
Lumbering, planing mills, furniture, etc.....	3,593,805 82	5,929
Gravel pits, glass, cement, oil, ice, paints and chemicals.....	3,351,770 75	2,707
Garages, rolling mills, foundries, machine shops, farm implements.....	3,555,825 45	2,672
Grain elevators, flour milling, liquors, abattoirs, soap, etc.....	6,174,859 04	4,239
Warehousing, cartage, food products, wearing apparel, laundries, printing, leather goods, retail stores, etc.....	13,930,916 10	10,461
Building and construction, irrigation, fishing, water transportation, window cleaning, etc.....	5,750,445 59	6,603
Railway express companies.....	405,758 56	284
Municipalities.....	5,254,368 50	4,205
Canadian Pacific Railway.....	4,298,923 23	3,095
Canadian National Railway.....	2,881,167 69	2,200

School boards.....	846,095 59	750
Railways.....	352,609 05	291
Employment by Dominion Government.....	500,000 00	500
Employment by Provincial Government.....	2,472,215 51	2,700
Totals.....	68,543,673 90	56,589

British Columbia

The eleventh annual report of the Workmen's Compensation Board of British Columbia details the operations under the Act during 1927. Tabulated summaries include the record of all the finalled claims according to the class or sub-class of the industry; a complete analysis of finalled temporary disability claims with reference to the industry concerned, the wage loss involved, the average length of disability, sex, conjugal state, nationality and average age of the workmen. The causes of accidents with the average cost of compensation are also shown. The tables also include an analysis of permanent partial disability and of total temporary disability accidents.

Extent of Protection to Workmen

The Act now protects approximately 175,000 workmen in respect of industrial accidents. During the eleven years that the Act has been in effect 249,547 accidents have been reported under it, and 2,419 of that number proved fatal; 5,709 workmen were left permanently incapacitated either totally or partially during the same period.

At the end of 1927 there were on the pension-list: widows, 580; children (under 16), 972;

dependent mothers, 110; dependent fathers, 42; other dependants, 28; and permanently disabled workmen, 1,106, making a total of 2,838 receiving regular allowances. By adding to these figures the number of workmen temporarily disabled at any given time, and also their dependants, it will be seen that upwards of 10,000 people in the Province are relying in whole or in part at all times on the compensation payable under the Statute.

An audit of the pay-rolls of all employers operating within the scope of the Act discloses a steady and healthy development in industry from year to year. The adjusted pay-rolls for 1921 totalled \$129,518,375; for 1922, \$130,592,502; for 1923, \$153,548,944; for 1924, \$155,410,227; for 1925, \$164,216,219; and for 1926, \$172,597,260. The audit of all 1927 pay-rolls will not be completed for several months, but there is every indication that they will exceed \$175,000,000.

The number of employing firms engaged in industry showed a corresponding increase: 6,393 were actively in business at the end of 1921; 6,524 in 1922; 6,524 in 1923; 6,838 in 1924; 7,197 in 1925; 7,613 in 1926; and 8,243 on December 31st, 1927. Of those operating in 1927, no less than 1,563 were

employing labour for the first time; 180 former employers resumed operations. During 1927, 147 employers had their workmen covered by special application. After deducting the number of operators discontinuing business during 1927 there was a net increase for the year of 630 in the number actively operating.

That the provisions of the Act requiring employers to record their operations with the Board are being generally complied with is evidenced by the fact that out of 30,066 accidents reported last year it was found that only 18 occurred to workmen whose employers were not registered at the time of accident.

Accidents and Claims

Although there was an increase in the number of workmen protected under the Act during the past year, there was a slight decrease in the number of accidents reported, there being 30,365 in 1926, as compared with 30,066 in 1927. Fatal accidents reported in 1927 were 219, as compared with 198 in 1926; 213 in 1925; 236 in 1924; and 268 in 1923. The figures for non-fatal accidents are as follows: 29,847 in 1927; 30,167 in 1926; 27,563 in 1925; 25,566 in 1924; and 24,184 in 1923. In addition, there were annually about 3,000 minor injuries in which first-aid men rendered the necessary service. No medical attention or time-loss compensation was expended in those cases. The accidents for 1927 averaged 2,505 per month, or over 100 for each working-day in the year. Of a total of 30,066 accidents reported, 12,058 of them resulted in three days' time-loss or less. Only medical and surgical treatment was paid for in those cases. In 15,906 others both time-loss compensation and medical treatment were paid.

The industry of lumbering in its various branches accounted for 42 per cent of all accidents; the construction class, 9 per cent; general manufacturing, 8 per cent; coal-mining, 7 per cent; metal-mining, 6 per cent; navigation and stevedoring, 5 per cent; railroading, 5 per cent; and all other classes, 18 per cent. The fatal accidents were distributed as follows: Lumbering, 48 per cent; railroading, 14 per cent; coal-mining, 8 per cent; construction, 6 per cent; metal-mining, 6 per cent; and all other classes, 16 per cent.

That workmen rely on the compensation provided under the Act to carry them across periods of lay-off due to accident is evidenced from the fact that last year 692 of the 30,066 injured, or less than 4.3 per cent, were shown to be in receipt of any other kind of benefits.

Seventy per cent of those who met with accidents gave their allegiance as British or Canadian, and 51 per cent of all those injured were married.

Accident Prevention and First Aid

The report asserts that statistical information covering industrial accidents in the province for the past eleven years "is conclusive evidence that machinery accidents can be reduced by safety devices." However, emphasis is also placed on the human factor in industry, it being stated that "statistical data prove also that beyond a certain point accident prevention through safety devices alone is impossible." The development of a "safety conscience" in the individual is regarded as the real solution for the major portion of the accident problem. It is pointed out that if a workman is careful of his own hands, head, feet and eyes, and has a "safety conscience," he is rarely a danger to others who work with him. The report advises that the dangers of the particular task to which a workman is assigned should be fully explained to him, and then that there should be a "follow-up" of the new employee at his work to disclose whether or not the hazards of the job are appreciated by him, and if he has a proper attitude toward safety generally. Safety work, backed to the fullest extent by the management and the foreman, is regarded as being particularly effective.

With reference to first aid, the report stated that nearly all employers realize the necessity of having readily accessible at all times a first-aid service adequate to their requirements. It is also observed that there are not now so many workmen as there formerly were who permit cuts and scratches to become infected.

Fire Fighters Desire Three-Platoon System

The Ontario Fire Fighters' Association held their annual convention at Toronto in June. It was decided to approach the provincial government with a view to securing for firemen in cities of more than 100,000 population the three-platoon system, or the equivalent of an eight-hour working day.

W. L. Green, Brantford, was elected first vice-president, with J. A. McEwen, Fort William, in second vice-president's chair.

For the tenth successive time, David H. Lamb, Toronto, was elected secretary-treasurer by acclamation.

CO-OPERATION IN CANADA IN 1927

THE Co-operative Union of Canada held its annual congress at Lloydminster, Saskatchewan, during the last week in June. A feature of the proceedings was the hearing of the report of the United Board or National Executive of the Union, which recorded great increases in the volume of sales and surplus during the past twelve months. The report (which is given in full in the *Canadian Co-operator*, July, 1928) notes that "although the movement in Canada is small, it is wide-spread and fairly representative of people engaged in our important industries, the index of whose purchasing power is provided by our consumers' Co-operative Societies. The aggregate sales of the reporting consumers' Societies for the year 1927 were \$4,481,574.72, an increase over the total of the previous year of \$1,123,412.61, or by 33.45 per cent. Adding thereto the distributive turnover, \$2,312,218, of United Grain Growers, Limited, which is primarily, and for the much greater part a marketing institution the total reported sales of merchandise in the organized movement for 1927 were \$6,793,792.72. The share capital of the reporting consumers' Societies is \$488,297.70, an increase of \$53,475.20. The net trading surplus (commonly called "profit") realized by the reporting consumers' Societies was \$283,777.22, compared with \$230,534.74, an increase of \$53,242.48. Had the same been available for distribution in proportion to share capital investment as in capitalist undertakings, instead of the greater part being returned to consumers in proportion to their purchases, it would have shown a return of 58.12 per cent, compared with 53.02 per cent, for 1926 and 44.55 per cent for 1925.

"Sixteen Societies, compared with fourteen in the previous year, paid purchase dividends ranging from 3 per cent to 11 per cent, but one large Society which paid 3 per cent omitted to report the aggregate amount, the total distributed by the fifteen others amounting to \$227,733.65, the total for the previous year being \$165,062.07, the same Society not quoting the amount distributed. The aggregate membership of the twenty-four consumers' Societies was 8,914, an increase of 1,110, but including that of the marketing Society, 35,000, the total for the organized movement is 43,914.

"It is worthy of note that since the Union was inaugurated nineteen years ago there has been a fundamental change in the type of the Societies in affiliation with it. Six Societies which reported the results of their trading operations for 1909 were all composed of workingmen. In the year under review sixteen were rural and six urban Societies, one Society is composed of farmers and fishermen and two cater to a considerable extent to the needs of both farmers and workingmen. Other farmers' societies established in communities of any considerable size no doubt also do a substantial business with townspeople.

Centralized Distribution

The report contains the following note on the "sinister trend in distribution": During the past three or four years in succession, your Board in its report has remarked on the rapid advance made in the centralization of distributive merchandizing in Canada, under the control and for the profit of a few financial groups. This sinister trend has continued, and notably during the present year. Not only are capitalistic chain store corporations extending their domination over distribution in every direction, but one private and family corporation, which was already the most important distributor, has extended its operations throughout the country, purchasing in one transaction no less than twenty-one department stores in as many cities and towns of Ontario and Quebec. Independent wholesalers and retailers are grouping to meet such highly organized competition. Manufacturers will be forced to amalgamate, as, indeed, they, too, are steadily doing, to meet conditions created by a greatly reduced number of their customers, and the consequent growing power of these huge distributive concerns to dictate policies and prices to producers. It seems only a question of time when the quality, nature and prices of the necessaries and conveniences of life will be determined by a few groups of financiers unless the consumers can be awakened to a sense of their peril, and induced, on an extensive scale, to avoid the same by the organization of consumers' retail and wholesale, and eventually productive Societies.

British Co-operative Congress

At the recent 60 annual Congress of delegates from Co-operative Societies in the United Kingdom, held at West Hartlepool, the president, Mr. A. Whitehead, advocated a determined effort to reduce the number of uneconomic, undeveloped and unprogressive societies by a series of bold amalgamations effected within definite periods of five years, and suggested as a first step, the appointment of a special committee to survey the movement and ascertain the facts. The Congress subsequently adopted a resolution recommending that a committee with this object should be set up.

A report of a committee of enquiry into municipal trading set up by the Co-operative Union in 1927 was considered and accepted. This report recommended that, "in relation

to the distributive trades the policy of development by co-operative societies offers the most practical and satisfactory way of extending collectivist principles in meeting the needs of the community," and urged co-operative societies to extend their distributive trade and to sell as near cost as possible. The recommendations of the committee are to be communicated to the Labour Party with a view to their discussion and the securing of an understanding with that Party.

A resolution was passed authorizing the Union to request the Co-operative Wholesale Society to undertake retail trade in areas where present facilities are not sufficient. Other resolutions dealt with extensions of the educational work of the movement, and the representation of societies at the Congress.

Profit Sharing in Great Britain in 1927

The British *Ministry of Labour Gazette* in its issue for June, gives the results obtained from inquiries recently made by the Department as to the operation, in 1927, of schemes of profit-sharing and labour co-partnership known to have been in existence in that year. The figures relate only to definite schemes under which employees participate in profits on some pre-arranged basis; schemes consisting in the giving of bonuses or gratuities at the direction of the employer, without any specified basis, and schemes providing for bonuses which depend only on output, sales, etc., and not on profits, are excluded from these statistics. The total number of undertakings of all kinds known to have been practising profit-sharing at the end of 1927, in Great Britain and Northern Ireland, was 440.

The most prevalent type of scheme is the simple arrangement under which a cash bonus is paid to employees, the amount of the bonus representing a specified proportion of the net profits or of the profit remaining after a fixed minimum rate of interest or dividend has been paid on capital; in some cases the bonus is a sum which automatically rises or falls with the rate of dividend on the capital. In the gas companies' schemes the bonus usually takes the form of a percentage on wages varying inversely with the price charged for gas, which itself usually regulates the rate of dividend payable on capital; but in a number of the more recent gas companies' schemes the bonus varies directly with the rate of dividend on capital, or is a fixed percentage of the amount paid in such dividends.

Schemes which encourage employees to acquire shares or other capital in the undertakings with which they are connected, and in this and in other ways to obtain some share in the control of the business, are frequently referred to under the description of "co-partnership." Among the 297 existing schemes included in the statistics there are 125 which provide for some form of shareholding by employees, while of the 277 defunct schemes, 45 provided such arrangements.

The average amount of bonus paid in 1927 was a little below the level of the previous year. As in 1926, in about one-quarter of the total number of schemes for which returns were received, no bonus was available owing to insufficient profits having been made. Indeed, in each of the past seven years a considerable proportion—ranging from one-fifth to one-third—of all the schemes covered have failed to yield a bonus. In 1927, and also in 1926, the highest amount of bonus was paid in the small group averaging £26 per head in 1927 and nearly £24 in 1926. A high rate of bonus was paid by firms engaged in merchanting and dealing, and the next highest rate by undertakings engaged in paper manufacture, printing, bookbinding, etc.; for the few agricultural schemes the bonuses paid were almost negligible.

Co-operative Societies

At the end of 1927, 150 co-operative societies were known to the Department to have in operation definite profit-sharing systems. About 28,000 workpeople are employed by the

150 societies mentioned above, and over 26,000 of these workpeople participated, or were entitled to participate, in the schemes. Thus, in contrast with many schemes in ordinary businesses, profit-sharing when practised by co-operative societies applies in nearly all cases to virtually the whole of the workers employed.

The schemes adopted by the majority of productive societies provide for a specified proportion of the profits to be set aside for the workers, but in a number of cases the employees receive a bonus on wages at a rate which varies with the rate of dividend declared in the customers' purchases. A large proportion of the schemes in the productive societies are of the co-partnership type; of the 49 schemes, 9 provide that the employees' bonuses are to be wholly retained for invest-

ment in the society's share capital, while 26 schemes provide for the whole bonus to be so retained until the employee has to his credit a stated amount of capital. In the case of four other societies some part of the bonus is similarly retained for investment; and in three cases, the whole or part of the bonus is used for provident, etc., purposes; thus in the case of only 7 of these 49 societies is the bonus paid out wholly in cash.

The co-partnership type of scheme is practically non-existent in the retail distributive societies, bonuses being almost invariably paid out in cash. These bonuses, when averaged, show a steady increase throughout the period 1923-1927, and are in marked contrast with the results of the agricultural societies, the average for which fell steadily throughout this period.

ASSOCIATION OF GOVERNMENTAL LABOUR OFFICIALS OF THE UNITED STATES AND CANADA

THE fifteenth annual convention of the Association of Governmental Labour Officials of the United States and Canada was held at New Orleans, Louisiana, on May 21-24, 1928. Among other resolutions the convention decided to urge upon the American Engineering Standards Association the necessity for a complete building code. It was suggested that such a code might be prepared in instalments; first, a code covering structural steel construction; second, a brick building code; third, a carpentry building code; fourth, a demolition code; and so on through the list of codes by piece-meal until such time as it is possible to bring them together under a general construction code.

The convention proposed that a fuller classification of female employees should be made in the United States census of occupations. The preamble to this resolution stated that the census of occupations of 1920 shows that at that time women constituted one-fifth of all persons gainfully employed; that the gainfully employed women constituted one-fifth of all females 10 years of age and over; that one in eleven of all women married and living with husbands were gainfully employed, while there is reason to believe that women now form a greater proportion of all workers than in 1920; that two-fifths of the working women are or have been married; that the surroundings of the women of this generation are a large determinant in the healthy development of the next generation and that therefore it is of the utmost importance that scientific studies be made of the effects of

the conditions of their employment upon their family life and the welfare of their children; and that it is impossible to study, from the census of occupations, the occupational distribution of mothers or the extent to which they are employed, since the present classification includes widowed or divorced women with single women.

It was suggested that the following separate sex classifications should be made in the census of manufactures of 1929:—(1) Males and females 16 years of age and over. (2) Males and females under 16 years of age; and also that the following separate classification be made in the census of occupations of 1930:—(1) Married women living with husband; (2) Women widowed, divorced or otherwise separated; (3) Single women; (4) Women whose status is not reported.

The attention of State legislatures and of organizations concerned was called to the fact that the next census will offer an opportunity to secure the following types of information: First, the extent to which mothers of children under 14 are employed and the number and the ages of such children; and second, the employment status and the occupations of the husbands of occupied women.

The following officers were elected to serve during the ensuing year:

President, Dr. Andrew F. McBride, commissioner, Department of Labour, Trenton, New Jersey.

1st vice-president, Maud Swett, field director, of Bureau of Woman and Child

Labour, Industrial Commission, Milwaukee, Wis.

2nd vice-president, James H. H. Ballantyne, Deputy Minister, Department of Labour, Toronto, Ontario, Canada.

3rd vice-president, W. A. Rooksbery, commissioner, Bureau of Labour and Statistics, Little Rock, Arkansas.

4th vice-president, E. Leroy Sweetser, commissioner, Department of Labour and Industries, Boston, Mass.

5th vice-president, Dr. Eugene B. Patton, director, Bureau of Statistics and Information, Department of Labour, New York.

The convention will meet in 1929 in Toronto, Ontario, probably in May or June.

INDUSTRIAL HYGIENE AT MCGILL UNIVERSITY

Contributed by Frank G. Pedley, M.D., of the Industrial Clinic, McGill University, Montreal

AS a part of the Department of Public Health and Preventive Medicine of McGill University a Division of Industrial Hygiene was created in 1927. This was done in recognition of the fact that adult health had to a large extent been neglected in the public health program and that if this neglect were to be corrected industry offered the logical approach to the adult population.

The program of the Division of Industrial Hygiene is as follows:—(1) Teaching in the medical faculty, school of graduate nurses, and school of social work; (2) Operation of the industrial clinic at the Montreal General Hospital; (3) Supervision of several local industrial medical services; (4) Research.

1. Teaching in the Medical Faculty in 1928 consisted of six lectures to the third year students. In the School of Graduate Nurses a course of 12 lectures was given to a group of public health nurses. In the School of Social Work three lectures were given. In addition to these lectures field visits were arranged to various plants in Montreal and an extension course to physicians interested in Industrial Hygiene was offered. Eighteen physicians enrolled in this course, 24 lectures were given and a number of visits were made to manufacturing concerns.

2. The industrial clinic at the Montreal General Hospital was established in October, 1927, for the purpose of investigating and treating cases of occupational diseases. Each case of occupational disease is used as an approach to the industrial concern from which it comes, and advice is given when requested as to the best means of preventing further cases.

3. The prevention of occupational disease is of course a small part of the programme of industrial hygiene. Chemical poisoning is actually a very minor cause of industrial ill health. Industrial workers suffer for the most part from the same diseases as other people and, unfortunately, for the prevention of these diseases of adult life there are no sharply

defined methods such as we have for some of the infectious diseases. It is believed that the principle weapon we have to combat the mortality from diseases of later life is that of periodic examination. The ideal situation is, of course, for each individual to submit himself to an examination by a competent physician once a year or possibly once every two years. In this way errors in living and early organic defects may be discovered and often corrected. However, although the dental profession has been quite successful in spreading such a doctrine with respect to the teeth, the medical profession has not achieved equal success in convincing the public of the advisability of periodic examinations. Furthermore the average industrial worker is not in a position to pay for an adequate examination; his modest budget does not include any extras at all. For these reasons the principal field for the performance of any considerable number of periodic examinations is industry.

The industrial clinic offers to any industry at cost a medical service to carry on any or all of the following activities:

1. Examination of all new employees prior to employment.
2. Treatment of industrial accidents.
3. Diagnosis and first aid treatment of disabilities at the plant dispensary.
4. Periodic examinations of the permanent employees.
5. Visiting nurse service to sick absentees.
6. Plant inspection and education.

The activities outlined above are all carried on at the plant. Such a service is at once of benefit to employer and employee. Health is naturally of mutual advantage since it ensures increased production to the one and increased wages to the other. A number of these medical services are now in operation in Montreal.

4. Research problems have not yet been undertaken. There are several industries which are peculiarly Canadian, and it is hoped that these will be studied from the standpoint of their effect on health in the near future.

GETTING RESULTS IN ACCIDENT PREVENTION

*Paper by Mr. A. C. Tagge, President, Canada Cement Co. Limited, Montreal, read before the Safety Convention at Hamilton, Ontario, May, 1928**

WHEN I first had to do with the operation of a cement plant some twenty-seven or twenty-eight years ago, we heard very little about safety. To be sure, we guarded our machinery as well as we could, or as much as we thought it was practicable to do; we put up warning signs at dangerous places; we cautioned new employees about dangerous practices, and any operations that we found to be particularly hazardous. But that was about all we did, and we did not realize that much more could be done. We had always had accidents. We expected that we would always have them. We looked upon them as more or less inevitable. Employers did not, at that time, generally recognize any responsibility for accidents occurring in their work unless those accidents were brought about by some defect in their machinery or equipment, or by the fault of some other employee. The workman was supposed to take chances on the ordinary hazards of his occupation; and if he met with an accident in the course of it, he was expected to bear the loss due to that accident. Of course, it is true that many employers—perhaps most employers—did not live strictly up to what they considered their legal rights in this matter, but were in the habit of paying medical and hospital charges, and usually half pay for time lost. This was done, however, as a matter of compassion, or of policy, and not because of any recognized obligation. In the case of a fatal accident, or a serious permanent disability, the case was usually looked into with reference to its legal aspect. If circumstances were such that it seemed that the courts would be likely to assess damages against the employer, he endeavoured to get a settlement on the best basis possible. If, on the other hand, his skirts seemed to be clear, he might let the case take its course, in the courts, or possibly make a compassionate settlement.

Workmen's Compensation

This was about the state of affairs in the cement industry, and I should imagine in a good many other industries, some fifteen or twenty years ago, when a new element appeared in the situation. We began to hear the claim made that the employer should bear the cost, or the loss, or at least a part of the loss

due to an accident, regardless of whether he was at fault or not. It was argued that, in hiring a man, we had no right to expect that he would always function 100 per cent perfect; that we must expect him sometimes to do careless things, and sometimes to do foolish things, and to have accidents on that account; and that knowing these things we should share part of the responsibility and bear a part of the cost. Naturally this doctrine was not received with favour by employers generally; but it made headway in public opinion and found expression in the enactment of Workmen's Compensation laws. There was a good deal of opposition to these at first and there is still a good deal of difference of opinion as to details in regard to them, but the principle upon which they were founded is now generally recognized, and they are in force practically all over this continent.

Necessity for Accident Prevention

At this time, the cement industry in general had a pretty bad accident record—(we should consider it very bad now) and even under the old system; the cost of accidents was a considerable expense. It was realized at once by the leaders of the industry that, with the coming into effect of Workmen's Compensation laws, the cost to the industry was going to be greatly increased, in fact, it might become a very serious burden. It was recognized that something must be done to decrease the number of accidents. In 1911, the Portland Cement Association, which comprised within its membership practically all the manufacturers of Portland cement on the continent, appointed a special committee to consider this matter and see if some means could not be devised whereby the number and cost of accidents could be reduced. The report of this committee led to the appointment of a permanent committee of the association known as the Committee on Accident Prevention and Insurance; and upon this committee was put the task of reducing the number of accidents. The committee soon realized that, if it was to attack this problem intelligently and with any hope of an effective solution, it needed more information than was then available, and an accident report form was gotten up very similar to the kind that is now in general use. This was sent out to the member companies with the request that, for every accident, one of these reports be sent in. This was not received with favour at first by all the com-

*A report of this convention, held under the auspices of the Industrial Accident Prevention Associations of Ontario, was given in the last issue of the LABOUR GAZETTE, page 609.

panies, but a very large proportion sent in their reports, and I may say to-day that they are practically all sending in reports, because they have come to realize that it is for the common good. The committee also engaged the services of experts from an inspection bureau to inspect the plants and to make recommendations as to what could be done to improve them from the standpoint of accident hazard. It was then the general belief that the two main items in any accident prevention program were safeguards and the doing away with what we considered dangerous practices, and it was toward these that the efforts of the committee were directed. After a time, the association appointed its own Accident Prevention Bureau, with a paid manager and staff, and this Bureau carried on in very much the same way that the independent experts had done before and with the same ideas.

The Foundation of Safety Work

It was found, however, that after several years of this work, there were just about as many accidents as ever, and the work did not seem to be getting anywhere. The reports, of which a large number had by this time come in, were tabulated and analysed. The first analysis that was made of them was with reference to causes of accidents in the industry, and it was found, to the surprise of the committee, that only 22 per cent of all the accidents that were shown by those reports could be attributed to lack of mechanical safeguards, and that the majority of the others were due to lack of care. Now that does not surprise us to-day, but at that time, only eleven or twelve years ago, it was a new one to our committee, and squarely put before us the fact that our main work was not safeguards and prevention of what we called unsafe practices, but was to train the workers to be more careful. We now know that the recognition of this fact was a great step in advance, in fact, the foundation upon which successful accident work was to be built; but it was not so recognized at that time. It was looked upon merely as a rather discouraging fact. We knew that men were careless, even where their own safety was concerned—always had been, probably always would be—and there did not seem to be very much hope of making them otherwise. Fortunately, however, there were a few who had vision, who were optimists, and who believed that something could be done in the way of educating workers in habits of safety, and these men went to work to test out their belief.

It was pioneer work; there was very little to guide them and they were sometimes discouraged, but they made progress sufficient

to convince themselves and gradually to convince others. We all know now the devices and schemes they used to get men interested in safety, and to keep them interested,—safety committees, inter-departmental competitions, inter-plant competitions, bulletin boards, plant publications, no-accident months, and a host of others. We know also that these things have produced results, and that there is now no longer any question but that these men were on the right track.

Experience at Port Colborne

Now I am not going to give you a lot of facts and figures, but I have two or three facts taken from our own industry which I should like to give you. I am afraid they will be an old story to many of you, but they are striking figures, and I will risk giving them. The first one—we will start not far away—down at Port Colborne we have a cement plant. Up to seven or eight years ago, the accident record of that plant was bad, and it was getting worse. We were feeling about for some way to improve the situation, but we did not know just what to do. All our old methods had failed. About that time, that was in 1921, Mr. Jacobson, then manager of the Accident Prevention Bureau of the Cement Association, came along with a proposition that we try to put across a "No-accident month" at that plant. We had never had a month free from accident there—as a matter of fact I don't think we had ever had a month free from accident at any of our plants. It seemed a pretty hard thing to do, but we didn't know what else to do, and as this offered some hope we decided to try it. A campaign was organized, plant committees were appointed, they had meetings, and they had the usual preliminaries to a campaign. They started it off; they worked nobly; but they missed it. They had an accident that month. They had the next month, too, and the next month and the next; but they were making improvement sufficient to encourage them to go ahead. Early the next year, they got one month free from accident; and encouraged by this, they went ahead and got four more months free from accident that year. That was in 1922. That made five months in 1922; in 1923 they again got five months; in 1924 they got nine months free from accidents; and in 1925 they boldly started out to get a whole year free from accident. That was an unprecedented thing. I think there were very few, besides the enthusiasts at that plant, who believed it could be done but they were encouraged to go ahead and try it, and, gentlemen, they

made it! *A whole year free from accident!* Just think of it! Only four years before, they had been unable to get a single month free from accident. I may say, too, in passing that to the employees of that plant belong, I believe, the distinction and honour of being the very first to propose such a bold thing as a whole year free from industrial accident.

Other Plants

Now that is one of the results, but it applies to just one plant. I am going to give you some figures now for five plants to show you what the average plant can do. I have taken the figures from five of our plants, not because those are the best ones, but simply because we have continuous operating and accident records for those plants, covering the period from 1920 to 1927. In 1920, the accident frequency at those plants—the number of accidents per one hundred thousand man hours—was 17.92. In 1927, it was 4.45; a reduction of almost exactly 75 per cent in eight years. Now, some of you gentlemen may think those figures are high. I am not giving them as the very best in industry. We do not claim that. The cement industry has been looked upon as rather hazardous. I am giving them to you simply to show the gains that have been made by these methods of accident prevention.

Safety Trophies

A third fact is of interest. In 1922, the Portland Cement Association, in order to stimulate accident prevention activities and competition, offered a safety trophy to be awarded each year to the plant in the industry which had the best safety record for that year; that record being based upon the smallest number of days lost per one hundred thousand man hours work. The first year of the competition, 1923, the trophy was won by a plant down in Texas, with a record of 3.6 days lost per one hundred thousand man hours. Next year, a plant in Indiana got it, with a record of 1.5 days lost per one hundred thousand man hours. You see they cut the other fellow's record in two; and moreover, there were six plants that year that had a better record than the winner the previous year. That was in 1924. In 1925, two plants were through without any accidents, one of them being the plant at Port Colborne. In 1926, again two plants went through without any accidents. In 1927, there were ten of them. Ten plants in the Cement Association that went through the whole year without a single

lost time accident. Now that is a marvelous record, when you consider that only a few years before we had not been able to get a "No accident month."

Co-operation

Now these, together with a multitude of other similar facts, seem to me to show conclusively that industrial accidents can be reduced to almost nil. When we think of what it would mean if we could eliminate all industrial accidents, or even 75 per cent of them, I am sure that no one can be indifferent to this work. The foreman, or the superintendent, or the manager, or the common labourer,—anyone that, by his efforts, contributes to this work must feel a satisfaction in it that is beyond the power of money to pay for.

But we do not need to be humanitarians or philanthropists to be enthusiastic about safety work. From the purely selfish standpoint of dollars and cents, it pays its own way. I believe that, in every case, where intelligent, systematic safety work has been carried on the direct saving in accident cost is much more than sufficient to pay the cost of the work that has brought about this result. I told you that, at five of our plants, there had been a reduction of 75 per cent in accidents from 1920 to 1927. I want to tell you also that the reduction in cost of accidents at those plants for that same period, that is, the amount of compensation paid to the injured man plus medical charges, was 87.4 per cent. That looks as though it paid, doesn't it? It certainly does pay in dollars and cents.

This work pays from the humanitarian standpoint, it pays from the dollars and cents standpoint, but there are other things to its credit. As safety work progresses, we find that a plant becomes cleaner and more orderly; the workmen take more interest in their work, and in each other; there is a reduced labour turnover; and there grows up in the organization a spirit of co-operation and loyalty that is of immense value. Gentlemen, these are some of the results of safety work. There are others you will think of yourselves, and there are a lot of them that I think none of us have ever yet dreamed of.

What is it about this safety work that produces such marvelous results? I am not rash enough to attempt any complete answer to that question; but there is one element in it that I can see very plainly, and that is, our old, much-talked of and hoped-for ideal, "Co-Operation." This safety work requires the highest type of co-operation. We have got to have co-operation between employer and employee. You cannot expect the employee to

do it all. The employer has got to do his share. He has got to show his interest. He has got to be an enthusiast for safety work, if he expects his men to be enthusiastic for it. Then, among the men themselves, there has got to be the highest type of co-operation. Take these safety campaigns, these "No Accident Month" campaigns we had. It is not the average that counts; the slackness of one man cannot be covered up by the good work of the rest of them. Every fellow has got to make a perfect score. If one man fails, he spoils the record of the whole lot. What is the result? The result is this: That every man is looking out, not only for himself, but for his neighbour also, and there gradually develops a spirit of interest in his neighbour which shows itself in many other ways—in athletics, club activities, in social affairs—all of which tend to weld the organization together into one homogeneous co-operating whole. Is that worth anything? You gentlemen engaged in industrial work know what such things are worth.

I want to give you one more item about those five plants, and that is that there has been not only a reduction of the number of accidents and a reduction in the cost of accidents, but there has been a large increase in the labour efficiency. In the period from 1920

to 1927, at those five plants, there has been an increase in labour efficiency, as measured by production per man hour of labour, of 86 per cent. Now look at that, gentlemen. A 75 per cent decrease in accidents, 87·4 per cent decrease in cost of accidents, 86 per cent increase in production per man hour of labour. Is there any connection between those figures? I leave it to you, as intelligent men, to answer that question.

There are some things we can think about and dream about. I sometimes wonder whether, in this accident prevention work, we have not stumbled across a bigger thing than any of us realize; whether the team work that has been shown in this work could not be directed by wise leadership into other lines and whether it would not produce results equally marvelous. Suppose we could get the co-operation that has been shown in this work directed into political or social affairs, what it would do! Gentlemen, it may be a dream, but I believe there are tremendous possibilities in this work greater than any of us have realized. We started it merely to prevent accidents. We have done a great deal more, and we are just beginning to find out what it can do. I am sure that any man engaged in it may well be proud to have had a part in it.

MINING ACCIDENTS IN ONTARIO IN 1927

ACCORDING to a bulletin issued recently by the Ontario Department of Mines, 247 accidents at the mines, metallurgical works, quarries, clay, sand, and gravel pits regulated by the Mining Act, 1927, were reported to the Department during 1927 and up to January 15, 1928. Thirty-three of these accidents resulted in the death of thirty-three men. This is an increase over the previous year of one man killed. The report, however, shows a rate of 2·1 fatal accidents per thousand men employed, which is a lower rate than any preceding year since 1918. There were 153 non-fatal accidents per thousand men employed, which shows a decrease of eight from 1926. The rate of accidents followed by infection decreased from 11 per cent in 1926 to 8·3 per cent in 1927

The distribution of the accidents during 1927 was as follows:

Distribution	Fatal	Non-fatal	Total
Mines, underground.....	19	1,554	1,573
Mines, surface.....	4	471	475
Metallurgical works.....	3	130	133
Quarries.....	3	228	231
Clay, sand, and gravel pits.....	4	61	65
Total.....	33	2,444	2,477

Fatal Accidents.—A classification of the fatalities according to industry shows that of the 33 fatal accidents, 12 were charged to gold mines and mills; 6 to nickel mines and metallurgical works; 4 to quarries; 3 each to lead mines, silver mines and refineries, clay, sand and gravel pits; 1 each to graphite mines and feldspar mines.

An analysis of the fatalities at mines indicated that during 1927 26 per cent of the accidents were attributed to fall of ground, the remaining causes being as follows: surface, 21·7 per cent; shaft accidents, 21·3 per cent; run of ore or rock, 17·4 per cent; miscellaneous underground, 8·69 per cent; explosives, 4·3 per cent.

Workmen's Compensation Rates.—The assessment per \$100 of payroll made by the Workmen's Compensation Board is based on the actual cost of the accidents occurring in each class during the previous year, and thereby shows the accident hazard of each class. This accident hazard is indicated in the accompanying table of compensation rates for the years 1924 to 1927 inclusive.

COMPENSATION RATES IN ONTARIO MINING INDUSTRY, 1924 TO 1927

Schedule	1924	1925	1926	1927
	Adjusted	Adjusted	Adjusted	Provisional
	\$ cts.	\$ cts.	\$ cts.	\$ cts.
Silver mining.....	2 40	3 00	3 00	3 00
Treatment of ores, with heat, in a silver-mining industry.....	1 20	1 50	1 50	1 50
Treatment of ores, without heat, in a silver-mining industry.....	0 60	0 75	0 75	0 75
Gold mining.....	4 00	3 00	4 00	4 00
Treatment of ores, with heat, in a gold-mining industry.....	2 00	1 50	1 50	1 50
Treatment of ores, without heat, in a gold-mining industry.....	0 90	0 75	1 00	1 00
Nickel or nickel-copper mining.....	4 00	4 00	4 00	4 00
Treatment of ores, with heat, in a nickel or nickel-copper mining industry.....	2 00	2 00	2 00	2 00
Treatment of ores, without heat, in a nickel or nickel-copper mining industry.....	0 90	0 90	0 90	0 90
Mining N.O.S.....	2 40	4 00	4 00	4 00
Treatment of ores or minerals, with heat, in an industry in this group.....	1 20	2 00	2 00	2 00
Treatment of ores or minerals, without heat, in an industry in this group.....	0 60	0 90	0 90	0 90
Iron smelting, as a business.....	2 00	1 50	2 00	2 00
Treatment of ores or minerals, with heat, n.o.s., as a business.....	2 50	1 50	1 50	1 50
Treatment of ores or minerals, without heat, n.o.s., as a business.....	0 60	0 50	0 50	0 50
Refining of nickel, as a business.....	2 50	2 00	2 00	2 00
Sand, shale, clay, or gravel pits.....	3 50	3 50	4 50	4 50
Quarries, as a business; stone crushing.....	5 00	5 00	5 00	5 00

Non-fatal Accidents.—Of the total of 2,444 non-fatal accidents in 1927, 2,025 occurred at mines, the allocation of the remainder being as follows: metallurgical works, 130; quarries, 228; clay, sand and gravel pits, 61; fatal and non-fatal accidents with cage, skip or bucket totalled 29.

The causes of the 2,025 non-fatal accidents at mines are shown in the accompanying table:

CAUSES OF NON-FATAL ACCIDENTS AT MINES IN ONTARIO DURING 1927

Cause	Surface	Under-ground	Total
Rock or ore while working at face or chute.....		427	427
Fall of persons.....	81	171	252
Falling objects.....	69	121	190
Fall of rock or ore from face, wall, or back.....		133	133
Tramming.....	13	164	177
Hand tools.....	67	60	127
Nails or splinters.....	40	66	106
Flying objects, sledging, etc.	20	70	90
Crushed between two objects	40	73	113
Strain while lifting.....	26	53	79
Grinding machines.....		88	88
Running into or striking against objects.....	8	36	44
Machinery.....	49	5	54
Cage, skip, or bucket.....	2	32	34
Fall down shaft, winze, raise, or stope.....		27	27
Explosives.....	3	20	23
Burns.....	11		11
Electricity.....	8		8
Poisoning from cyanide, mercury, etc.....	8		8
Explosion of carbide.....	8		8
Unclassified.....	18	8	26
Total.....	471	1,554	2,025

During 1927 there were 15,311 persons employed in mines, metallurgical works, quarries, gravel, sand and clay pits—an increase of 2,311 over 1926.

The records show that infection followed in 203 cases out of a total of 2,444 non-fatal accidents in 1927.

Included in the bulletin is a detailed report of the collapse of the workings at the Worthington Mine on October 4, 1927, when the mine powerhouse and 400 feet of the tracks of the Canadian Pacific Railway from Sudbury to Sault Ste. Marie were carried down.

The safety work of various companies is also dealt with in the report, which notes that there were a number of prosecutions for infractions of the Mining Act.

During the month of June, 1928, there were 1,231 accidents reported to the Manitoba Workmen's Compensation Board, including three fatalities.

By an order issued under the authority of the Public Service Act (Alberta) the administration of the Coal Miners' Wages Security Act (chapter 46 of the Statutes of Alberta, 1928) was assigned to the president of the Executive Council. The provisions of the new Act were outlined in the last issue of the LABOUR GAZETTE (page 582).

A statement of the reasons advanced by the employees of a prominent manufacturing company in the United States for requesting loans from the company's credit union shows that nearly one-third of the loans were for the purchase of coal. Reasons relating to the maintenance of health accounted for 20 per cent of the loans; 12 per cent was grouped under the heading of purchase and maintenance of homes; and 9 per cent was to meet household expenses. Comparatively few loans were made for the purchase of so-called luxuries.

NOTES ON LABOUR UNION ACTIVITIES

Brotherhood of Railway Clerks

THE thirteenth regular and the fifth triennial convention of the Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees, was held in Columbus, Ohio, from May 14 to 24. Among those who addressed the delegates were the Hon. James J. Davis, Secretary of the United States Department of Labour, and Congressman George Huddleston of Alabama.

Reinstatement in A. F. of L.—There was a large number of important resolutions which were allocated to various committees for action thereon. However one subject, brought directly to the floor of the convention, was that of re-affiliation with the American Federation of Labour. The Brotherhood of Railway Clerks had remained suspended since January 26, 1926, for refusing to comply with the instructions of the executive council of the American Federation of Labour to disassociate from membership all drivers and chauffeurs, jurisdiction over these employees having been granted by the Federation to the International Brotherhood of teamsters and chauffeurs. An understanding was reached between the two Brotherhoods and the American Railway Express Company, and as a result the American Federation of Labour, considering that such an understanding constituted a settlement of the jurisdictional dispute, advised the Brotherhood of Railway Clerks that it was automatically re-instated. However, to make the situation absolutely clear, the invitation of the A. F. of L. for re-affiliation was brought before the convention. The executive council of the A. F. of L., through President Green, had given definite assurance in its invitation that the Brotherhood would not be called upon to disassociate from its membership any employees of the American Railway Express Company in the vehicle service as a condition of reinstatement. President Green's letter was read to the convention, which then accepted this formal invitation to re-affiliate unconditionally.

Revision of Death Benefits.—Another question before the convention was that of increasing the revenue of the Death Benefit Department. The delegates were unanimous as to the necessity for additional revenue, but there were many differences of opinion as to what the additional amount ought to be, how the money was to be raised, and what ought

to be done to put the death benefit on a sound basis. The plan adopted by the convention contains the following provisions:

(1) The continuance of outstanding certificates on exactly the same basis as issued, accumulating in value until they reach a maximum value of \$1,500 after fifteen or more years of continuous membership;

(2) Certificates issued on and after October 1, 1928, to members under 50 years of age will accumulate on the same basis as present certificates until they reach a maximum value of \$500 at the end of six years continuous membership;

(3) The plan provides for benefits of from \$100 to \$400 for members 50 years of age and over, who are at present excluded from the Death Benefit Department;

(4) The allotment for the Death Benefit Department from the *per capita* tax of the grand lodge was increased from sixty cents per member per quarter to ninety cents per member per quarter, the seventy-five cents from initiation fees being also still allotted to the fund.

Proposed Railway Federation.—The formation of a federation of all railroad labour organizations in the United States and Canada was the objective of a resolution on which there was considerable discussion. It proposed that the organizations which enter the federation should do so under their present composition, the purpose being to encourage closer co-operation between the railroad labour organizations. The committee on resolutions recommended concurrence upon the basis that, if and when by convention action three or more standard railroad labour organizations initiate, ratify or accept the plan for a general federation, the Brotherhood of Railway Clerks would participate. It was also recommended that the grand lodge officers exert every effort to further such a federation. The committee's recommendations were adopted.

Labour and Labour Statistics.—The report of the committee on labour and labour statistics, whose report was adopted, recommended that all the available resources of the Brotherhood, except death benefit funds, be utilized toward protection and promotion of the organization's welfare in the following matters: (1) extinction of company unions; (2) re-establishment of militant Brotherhood organizations on company union properties;

(3) support of research and statistics bureau; (4) railroad valuation; (5) old age pensions for members; (6) enforcement of the provisions of the Railway Labour Act, 1926.

Other Resolutions.—Among the other main resolutions adopted by the convention were those following: (1) urging the establishment of a superannuation scheme for employees of more than ten years service to which both employees and employers would subscribe; (2) urging the grand lodge to make every effort to secure the 44-hour week; (3) urging the appointment of a committee to study the advisability of instituting a sick and accident insurance department in connection with the Death Benefit Department; (4) favouring state and federal legislation of motor trucks and busses, which "would eliminate the present unfair competition with the railroads"; (5) establishing two scholarships at Brookwood

Labour College; (6) commending the work of the American Association for Old Age Security in promoting old age pension legislation and instructing the executive officers of the Brotherhood to lend to the association full moral and financial support in this work.

Election of Officers.—The election of George M. Harrison as grand president was by acclamation. F. H. Hall was the unanimous choice of the Canadian delegates as one of the vice-grand presidents, while Phil E. Ziegler was also unopposed for the office of editor of the *Railway Clerk*. The filling of the other vice-grand president posts resulted in spirited contests, the following officers being finally elected: H. F. Baldwin, J. H. Sylvester, C. R. Briceland, Robert Morgan, A. J. Dunn. George S. Levi was elected secretary-treasurer. Denver was chosen as the next convention city.

Convention of District 26, United Mine Workers of America

The annual convention of District 26, United Mine Workers of America was held in Halifax, Nova Scotia, on June 18-23, the sessions being held in the Nova Scotia Technical College. For the first time in the history of U.M.W. conventions in Nova Scotia an international officer was present—Vice-President Philip Murray being in attendance and delivering an address. The opening days of the convention were marked by strenuous opposition to the action of the district executive board in expelling two members of the organization who were accused of accepting office in a dual union. According to the secretary of District 26, "the attack was led by certain members who had been identified with

a move to form a branch of the Mine Workers' Union of Canada, but who were in reality following the dictates of the 'Save the Union' convention held in Pittsburg, Pa., in April, 1928, which had for its purpose the setting up of an organization dual to the United Mine Workers." The convention endorsed the action of the executive board in expelling the two men in question.

A number of resolutions were presented and adopted, among which were those dealing with legislation affecting the Coal Mines Regulation Act, Workmen's Compensation Act, Old Age Pensions Act, as well as matters affecting working conditions at the various collieries.

Ontario Provincial Council of Carpenters

The Provincial Council of Carpenters of Ontario met in annual convention in Ottawa on June 28-30, with 31 delegates present, representing 22 local unions. Among those who welcomed the delegates to the capital were Mayor Ellis and Messrs. H. H. Ward, Deputy Minister of Labour; P. M. Draper, Secretary of the Trades and Labour Congress of Canada; and Robert Carson, President of the Trades and Labour Council of Ottawa.

Addressing the convention, George Lakey, second general vice-president of the United Brotherhood of Carpenters and Joiners of America, informed the delegates that conditions in Canada were much better than in the States where there were about 25 per cent of their membership unemployed. The

vice-president spoke of the opening of the Home for Aged Members at Lakeland, Florida, which would take place on October 1 next. The rotunda of the Home had been furnished by the Chicago District Council at a cost of \$50,000, while the dining hall, with a seating capacity of 1,000, was equipped by the New York District Council.

Among the resolutions adopted were the following: (1) Instructing the incoming executive to collect all data possible on accidents, particularly those where carpenters were involved during the past year, so as to ascertain if possible the cause, and to adopt preventive measures, the information when compiled to be published in the *Monthly Bulletin*; (2) Endorsing the Old Age Pension Act and in-

structing the executive to bring this matter to the attention of the Trades and Labour Congress of Canada at its next session and urging local unions and members to continue the agitation for the adoption of this measure by the Provincial Government of Ontario; (3) Urging all local unions and district councils throughout the Province to lend every encouragement and assistance to the education of the members and employers to a five-day week of forty hours; (4) Seeking an amendment to the Fair Wage Regulations so that the prevailing wage rates and hours of labour shall be properly enforced on all public work paid for or subsidized by the Government; (5) Calling upon the Ontario Government to investigate the number and nature of accidents occurring among technical school pupils and that the scope of the Workmen's Compensation Act be extended to cover such cases; (7) Endorsing the stand taken by the Trades and Labour Congress of Canada at the Montreal convention in regard to peaceful picketing, and urging the Congress to do all in its power to have legislation passed on this subject.

Other resolutions passed dealt with matters pertaining to the work of the Organization, such as: Publishing of craft problems in booklet form; Raising of the strike pay from six to twelve dollars per week; affiliation of all local unions with the Canadian Labour Research Bureau.

The finances of the council were reported to be satisfactory.

It was decided to send four delegates to the general convention of the Brotherhood meeting in the City of Lakeland, Florida, and the delegation elected were: T. Jackson, Toronto; C. R. Nichols, Ottawa; Bert McSween, Niagara Falls, and Tom Brooks, Windsor.

The election of officers resulted as follows: President, Fred Hawes, Hamilton (re-elected for third term); Vice-presidents and members of the executive, John Cottam, Toronto; C. R. Nichols, Ottawa; Jack Fisher, Kingston; Secretary-Treasurer, T. Jackson, Toronto (re-elected for the fifteenth term).

Guelph was chosen as the convention city for 1929.

CANADIAN MANUFACTURERS' ASSOCIATION

THE 57th annual general meeting of the Canadian Manufacturers' Association was held on board the steamship St. Lawrence, of the Canada Steamship Lines, during a four-day trip on the River St. Lawrence between Montreal and the head of the Saguenay River, commencing on June 4. Members from every province attended, practically all branches of industry in Canada being represented at the convention.

The president, Mr. W. S. Fallis, of the Sherwin-Williams Company of Canada, Limited, Montreal, presided over the proceedings. In the course of his address he referred to the representative character of the organization: "Our organization extends from the Atlantic to the Pacific, having members in all nine provinces and offices and staffs at Amherst, Quebec, Montreal, Toronto, Hamilton, Ottawa, Winnipeg, Edmonton, Vancouver and Victoria. The association represents and safeguards the industrial system of Canada, the extent of which is indicated by the latest manufacturing statistics.

Manufacturing establishments.	\$	22,708
Capital invested.		3,981,569,590
Number of employees.		581,527
Annual salaries and wages.		653,850,933
Annual value of products.		3,247,803,438

"Employees and their families who are directly dependent on the wages paid by Canadian factories constitute nearly a quarter of the population of Canada. The capital invested represents the savings of thousands of people."

Economic Trends Today

President Fallis discussed the existing economic situation in Canada and throughout the world. Greater stability was noted throughout the world, resulting in a marked increase in international financial and trade operations. In regard to Canada he mentioned in particular the extraordinary extension in mining in the northern parts of all provinces from Quebec to British Columbia, and the new developments of water power throughout Canada, providing much employment, and creating a demand for the products of other industries.

Some new trends of manufacturing industries were mentioned by the president, including the development of mass production, which results in a steady improvement in standards of living and comfort. "People have more wants to-day. Few are interested in the simple life of few desires. The majority want better houses, better clothes, better

food, more travelling and more entertainment. The human appetite for these things has never before reached such a pitch as at present on this continent, and particularly in the United States. Partly in an effort to meet this situation, instalment buying was created and has grown to its present proportions. Correlated with and accessory to this is the system of credits by which sellers try to judge customers. Although changes have been always part of the business world, there are periods when changes are so concentrated that they have the effect of revolutions in the political world. We are passing through such a period now."

Many amalgamations of manufacturing companies took place during the past year. In the field of distribution even more marked changes have occurred. "Department stores, chain stores, buying and selling pools are producing profound and far-reaching results and manufacturers are forced to give close attention to their changing relationships with distributors. Where formerly manufacturing plants reckoned on their production going into wholesale and storage warehouses to be distributed to retailers, now they have to plan for more hand to mouth buying, as their products move more directly into the hands of consumers. To some extent, this has the advantage of stabilizing production and equalizing rush and slack periods. The concentration of purchasing powers in the hands of great distributing agencies, if used without

reasonable consideration, will injure manufacturing by enforcing sacrifices in quality and durability to get prices down to buyers' demands.

Industrial Relations

In regard to industrial relations the president stated that in Canada both employer and employee have a common interest in the welfare of individual plants and industries. "Each recognizes the necessary function of the other," he said, "they realize that industry cannot operate successfully without friendly co-operation. Canadian employees are industrious and skilful and, consequently, earn good wages; therefore they can provide for their families, secure the benefits of education, and, in many cases, accumulate enough capital to buy shares in the companies for which they work."

Officers for 1928-9

The officers for 1928-29 were elected as follows: President, L. W. Simms, T. S. Simms & Company, Limited, Saint John, N.B.; 1st Vice-President, R. J. Hutchings, Great West Saddlery Company, Limited, Calgary, Alta.; Elmer Davis, A. Davis & Son, Limited, Kingston, Ont.; Thomas Roden, Roden Brothers, Limited, Toronto, Ont.

Mr. L. L. Anthes, of Toronto, was appointed chairman of the Industrial Relations Committee.

Report of the Industrial Relations Committee

The Industrial Relations Committee reported as follows on the events of the past year.

International Labour Organization

The Tenth Session of the International Labour Conference was held in Geneva from the 25th day of May to the 20th of June, 1927. The employers of Canada were represented by Mr. W. C. Coulter, a past Chairman of the Committee, with Mr. H. W. Macdonnell, Secretary of the Committee, as adviser. The principal items on the agenda were:—

1. Sickness insurance.
2. Freedom of association.
3. Minimum wage fixing machinery in trades in which organization of employers and workers is defective, and wages are exceptionally low.

(1) *Sickness Insurance*.—The question which was most discussed with regard to sickness

insurance was whether it should be voluntary or compulsory. The workers' group as a whole and a large majority of the Governments were definitely in favour of the compulsory principle. A few of the Governments, however, and almost all the employers, considered that it should be left open to each country to choose between voluntary and compulsory insurance. Finally, however, the compulsory principle was adopted, and two draft conventions were passed, one concerning sickness insurance for workers in industry and commerce, and domestic servants,—the other concerning agricultural workers.

There was also adopted unanimously a draft recommendation concerning the general principles of sickness insurance. In connection with these, it is interesting to note that the principle of contribution by the workmen, as well as the employers, is definitely laid down.

(2) *Freedom of Association*.—This subject was included in the agenda at the instance of Labour, with the idea of securing some draft

convention of the Conference condemning the system which is now in vogue in Italy, where workmen are not allowed to organize in trade unions.

The attitude taken by the employers and by most of the Governments was that they had no objection to the principle being laid down of the right of workmen to combine for the protection of their own legitimate interests, but along with that principle, there should go the principle of the right of any workman so wishing "not to combine," in other words, to stay out of a trade union.

When the workers saw that a majority of the Conference would insist upon the second principle being laid down, along with the first, they refused to have any convention whatever on the subject, so that the whole matter was dropped, much to the disgust of the workers, who declared that the Governments of the great industrial countries, in particular England, Germany and Italy were passing through a reactionary phase, and were in no state of mind to do justice to the workers.

(3) *Minimum Wage Fixing Machinery.*—All that was attempted in connection with this subject was to draft a questionnaire to be sent out to the various countries, on the basis of the replies to which a draft convention might be passed at the next Conference.

It is to be noted that all that is contemplated is minimum wage fixing machinery in trades where organization of employers and workers is defective and where wages are exceptionally low. The Government groups and the workers' groups were unanimously in favour of proceeding to draft a questionnaire. Of the employers' representatives, on the other hand, the majority were opposed to anything whatever being done in the matter. An outstanding exception was the British employers' delegate, who supported the proposal to draft a questionnaire. His reason for so doing was largely that, as minimum wage fixing machinery already exists to a considerable extent in England, it would be a good thing if competing Continental countries had the same restrictions. Your representative also voted in favour of the draft questionnaire, having in mind (1) that it would be to the advantage of Canada that the low wages in various competing foreign countries should be raised; (2) that we already have in Canada minimum wage legislation as regards female workers and (3) that as regards male workers, they themselves are opposed to minimum wage legislation.

In the result, as was certain from the outset, the draft questionnaire was passed, and the prospect is that a draft convention of some sort will be adopted by the Conference next year.

Workmen's Compensation

(a) *Alberta.*—The Alberta Legislature a year ago appointed a Special Joint Committee to investigate workmen's compensation in all its phases. Steps were taken by the Secretary of the Alberta Branch to consult the entire Alberta membership and the views thus ascertained were presented to the Joint Committee by the Prairie Division Secretary and the Secretary of your Committee at a series of meetings held last December in Edmonton.

The demands made by Alberta labour included:—

1. An increase in the scale of compensation from 62½ to 75 per cent.
2. An increase in the wage basis of compensation from \$2,000 to \$2,500.
3. An increase in benefits to widows from \$35 to \$50 per month.
4. Increase in weekly minimum from \$10 to \$15.
5. Allowance of compensation for industrial ailments as well as accidents.

The counter proposals made by the employers included the following:—

1. That the scale of compensation be reduced from 62½ to 60 per cent.
2. That the weekly minimum be reduced from \$10 to \$6.50.
3. That compensation and medical aid in any one case should not exceed \$10,000.
4. That the total compensation in death cases should not exceed 60 per cent of the average earnings.

In the result a unanimous report was made by the Special Joint Committee to which effect was given by an amending bill, as follows:

1. The scale of compensation was increased from 62½ to 66⅔ per cent.
2. An absolute waiting period of three days was established.
3. Provision was made for spending up to \$20,000 a year from the accident fund on rehabilitation.

It will be noted that the labour demands for an increase in the wages base, the weekly minimum, and benefits to widows were reflected while the increase made in the scale of compensation was to 66⅔ instead of 75 per cent.

Another point of interest is that the Government has given an undertaking that the Act will not be again amended during the life of the present Legislature.

Your Committee is of the opinion that the result is as good as could be expected in the circumstances.

(b) *Quebec*.—A new Workmen's Compensation Act passed by the Quebec Legislature in 1926 on the basis of a report made by a Royal Commission after three years investigation, was found to be unworkable on account of the insurance rates quoted by the private insurance companies being so high as to handicap Quebec in competition with other Provinces.

In these circumstances the insurance companies proposed certain changes in the Act which would enable them to quote more reasonable rates and on the basis of such suggestions the Government at the last session, introduced and the Legislature passed a new Compensation Act, which has every prospect of being a decided success.

The Act differs from the legislation in force in Ontario and five of the other provinces in that it has no compulsory state insurance feature. While employers are required to insure, they are allowed to do so with private insurance companies or to become self-insurers in which case they must file a surety bond or make a deposit. In another respect, however, the Act resembles the compulsory state insurance acts, in that claims are to be adjudicated upon, not by the ordinary civil courts, but by a Claims Commission specially appointed for the purpose.

Other outstanding features of the Act are as follows:

1. The scale of compensation is $66\frac{2}{3}$ per cent of average earnings.

2. The following maximum payments are fixed:

(a) Permanent total incapacity \$10,000.

(b) Benefits to dependents. \$6,000.

(c) Permanent partial incapacity \$5,000.

3. The waiting period is to be 7 days in all cases except where the accident lasts six weeks or more in which case there is no waiting period.

4. Compensation to widows is 30 per cent of the average earnings plus 10 per cent for each additional child under 16,—the total, however, to widow and children not to exceed 60 per cent of the average earnings nor to exceed \$6,000.

5. Compensation for permanent partial incapacity is to be $66\frac{2}{3}$ per cent of the average

wages for a period fixed on the basis of four weeks for each 1 per cent of incapacity, the degree of incapacity for various injuries being set out in a schedule to the Act, e.g., 55 per cent for loss of right arm at the shoulder, 75 per cent for loss of leg at the hip, etc. etc.

The general result is, in the opinion of your Committee, to be regarded as satisfactory. Not the least satisfactory feature, incidentally, is the fact that Quebec has adhered to a different system from the compulsory state insurance system which is in force in the other provinces. In other words, your Committee feels that there is an advantage in having the two systems in operation side by side so that the working of the two may be compared, and each may keep the other up to the mark.

(c) *Manitoba*.—An amending bill introduced by a labour member increasing the compensation scale from $66\frac{2}{3}$ to 75 per cent and the allowance to widows from \$30 to \$50 per month as well as cancelling entirely the three day waiting period encountered strong opposition and was defeated on second reading. It was calculated that the changes proposed would have added from \$250,000 to \$350,000 per annum to the cost of workmen's compensation, necessitating an increase of from $33\frac{1}{3}$ to 50 per cent in the present premium rates. There is reason to believe that a joint committee consisting of members of the Legislature and representatives of employers and employees will be set up to investigate workmen's compensation in all its phases, as was done in 1924.

(d) *Saskatchewan*.—Saskatchewan has so far refrained from adopting the compulsory state insurance system which is in force in six of the other provinces. Organized labour has recently, however, asked for an act modelled on the Ontario Act. Representatives of the manufacturers intimated to the Government that they approved of the principle of such legislation, reserving the right to make representations later as to the details. A commission of five has been appointed by the Government to investigate during the recess and report to the Government.

The outstanding drawback of the present situation is that injured workmen can recover up to \$2,500 under the Workmen's Compensation Act and then sue for more at common law, which makes it extremely difficult for employers to secure satisfactory insurance.

(e) *Ontario*.—Various amendments of the Ontario Compensation Act were requested during the past session by organized labour, all in the direction of substantial increases

in the scale of benefits. On being approached the Government intimated that, if any of the demands were seriously considered, the employers would be given an opportunity of making representations. In the result no legislation of the kind asked for was introduced.

Minimum Wage Legislation

(a) *Manitoba*.—A bill bringing under the Minimum Wage Act all boys under 18 was strongly opposed not only by the employers, but by boys welfare organizations (the latter on the ground that the charge would result in employers not employing boys under 18) and was ultimately defeated on second reading.

(b) *Ontario*.—Some two years ago it was proposed to amend the Ontario Minimum Wage Act so as to make it apply to boys under 18. In opposing this, the Association pointed out among other things that no demand or necessity had been shown for the amendment. In these circumstances it was decided to direct an investigation to be made into employment conditions in respect to boys. This is still in progress.

Old Age Pensions

It will be recalled that Parliament last year passed an Old Age Pensions Act providing for pensions of \$20 per month to British subjects 70 years old or more with an annual income of less than \$365, the pension to be reduced, however, by the amount of the income of the pensioner in excess of \$125. The cost, it was provided, was to be paid half by the Dominion and half by any province which passed the necessary complementary legislation. Such legislation has now been passed by three provinces, viz., British Columbia, Saskatchewan and Manitoba. Certain pressure was brought to bear also in Ontario and Alberta but no legislation ensued. Your Committee directed an enquiry to be made as to the views of the membership of the Association, but it has not been possible up to the present to secure any clear expression of opinion. The present prospect is that Ontario and Alberta will pass Old Age Pension Acts next year.

Unemployment Insurance

In April last the Association was requested to send representatives to give evidence before the Parliamentary Committee on Industrial and International Relations on the subject of unemployment insurance. Your Committee

felt that as the Association had never considered this question "practical politics," and thus had never made a pronouncement upon it, it was impossible to present any definite view. It was decided, however, to send Mr. W. C. Coulter, a past Chairman of the Committee, and the Secretary of the Committee, to explain in the first place that the Association had no policy on the question, but also to point out that there were certain conditions peculiar to Canada in respect to such a question which would have to be taken into consideration in approaching it. These conditions may be summarized as follows:—

(1) *The proximity of Canada to the United States*.—If there were imposed on Canadian industry a burden which American industry refused to assume, Canadian industry would be handicapped in competing with American industry in the Canadian market with the result that the amount of unemployment in Canada would be increased, which is hardly the result aimed at.

(2) *Canada is still predominantly agricultural*.—Canada is still predominantly agricultural and it is all important that more people should be induced to go on the land. If unemployment insurance is added to workmen's compensation and other social legislation, there will be danger of increasing instead of checking the tendency of the people to drift from the country to the town.

(3) *General employment conditions are much more fluid in Canada than in other countries*.—The fact that unemployment insurance is found necessary in a country with static labour conditions as in England, does not prove the necessity of wisdom of introducing such legislation in a new country like Canada where employment conditions are fluid and there is more or less constant expansion of industry. It is a substantial asset to a new country that workmen who lose one job should seek another rather than remain idle and draw unemployment insurance.

(4) *Unemployment insurance must be considered in conjunction with immigration policy*.—Another condition peculiar to Canada, as compared with a country like England is that, instead of being overcrowded, this country has too few people and is seeking to attract new comers. The question of unemployment insurance should be considered in conjunction with the question of immigration.

Your Committee is of the opinion that unemployment insurance is really not a practical question in Canada at the present time.

British Trades Union Bill

Your Committee watched with interest the passage of the Trades Union Bill through the British House of Commons last year. It will be recalled that the Bill was introduced as a result of the general strike in May, 1926. As finally passed the Act embodies the following four main principles:

- (a) That a general strike is illegal and that no man may be penalized for refusing to take part.
- (b) That intimidation is illegal and that no man may be forced by threats to abstain from work against his will.
- (c) That no man shall be compelled to subscribe to trade union political funds against his will.
- (d) That civil servants must not belong to trade associations with political objects.

Industrial Medical Service

Your Committee has given considerable attention during the past year to the part played by infection in increasing the cost of workmen's compensation. The staggering fact emerges that fully one-sixth of the money paid in compensation of accidents goes to pay for cases of infection. This becomes still more striking when one realizes that experience has shown 95 per cent of these cases to be preventable. In other words, infection is nearly always due to plain neglect. Experience shows that, if neglected, from 50 to 90 per cent of open cuts and wounds become infected and thereby lead to loss of time and money as well as suffering. With adequate and properly supervised first aid facilities, infection can be reduced to about one-half of 1 per cent. Thus the Medical Department of a large grinding wheel company in the United States found that out of 2,300 reported accidents there were only eight cases of infection (.34 per cent), and every one of the eight men concerned had either waited twenty-four hours before getting treatment or had interfered with his dressing.

A number of Canadian companies have in the last few years been paying special attention to this question with results that, according to our information, have been most satisfactory. Your committee arranged with the Ontario Department of Health for an article on the subject to be contributed to *Industrial Canada*.

Your Committee is of the opinion that this question should receive far more attention than has, as a rule, been paid it in the past.

Apprenticeship Legislation

A Government Bill was introduced this year in the Ontario Legislature providing for the compulsory assessment of employers in the building industry in order to establish an apprenticeship training scheme. This legislation was asked for by the employers in the building industry, as a means of meeting the serious situation which confronted them due to the fact that in recent years the supply of British artisans has been almost entirely cut off while there are practically no Canadians coming forward to fill up the gaps. Furthermore, the situation could not, it was alleged, be dealt with by the employers themselves, for the reason that if an employer went to the expense of training apprentices he had no guarantee that he would have the benefit of their services when trained.

These considerations, when explained by representatives of the building industry, seemed to your Committee to justify the trying of this experiment in the building industry.

There was included, however, in the Bill a provision for bringing within its scope industries other than the building industry, generally speaking with, but if the Minister considered it advisable, without, the consent of the employers. To this provision your Committee decided to take objection and representations were made to the Government that conditions in the manufacturing industry were entirely different from conditions in the building industry. In the manufacturing industry there was for the most part (1) steadiness of employment throughout the year; (2) long service with the same employer; (3) sick benefit and other schemes which created a tie between employer and employee. It was precisely the absence of these conditions in the building industry that had led to the demand for this legislation.

In these circumstances, it was submitted by your Committee that the proposed experiment should be tried out in the building industry, where a serious condition which employers and employees were agreed in thinking that this legislation might remedy, but that until it had proved itself, it should not be extended to other industries where conditions were so different and wherein there was no demand for it either from employers or employees.

In the result the Bill was passed without being modified in the manner proposed by your Committee. There is, of course, no immediate prospect of the Act being applied to any industry except the building industry. Your Committee will naturally watch the result of this experiment with great interest.

Eight Hour Day

It will be recalled that the Eight Hour Day Draft Convention passed at Washington in 1919 has not yet been ratified by any of the great industrial countries of Europe.

It will also be recalled that there was held two years ago in London, a conference of representatives of England, France, Germany, Italy and Belgium to consider the possibility of agreement on the exact meaning of various ambiguous terms of the Convention. It was announced, following this meeting, that substantial agreement had been reached upon practically all the points in dispute; and it was considered likely that the five countries in question would proceed without delay to ratify the Convention.

This expectation, however, has not been fulfilled. The only one of the five countries to ratify has been Belgium. So far as England is concerned, it is interesting to note that recently in Parliament the Government spokesman, in replying to a Labour attack on the Government for failure to ratify, pointed out among other things, that certain large sections of British Labour, for example the railway men, were opposed to the ratification of the Convention in its present form, and declared that in the Government's view, ratification was impossible unless and until the Convention was materially modified.

The fact that such a situation still exists nine years after the passing of the Hours Convention is, your Committee feels, a striking confirmation of the view taken by Mr. S. R. Parsons, a past president of the Association, who was the employers' representative at the 1919 Washington Conference, namely, that while eight hour day conditions might be, and indeed were, proper and desirable in certain industries, the question was not one which could be dealt with by compulsory legislation on an international basis.

Calendar Reform

A League of Nations Committee on Calendar Reform has asked the Association for an expression on the question of adopting a calendar of thirteen months of twenty-eight days each instead of the present system of twelve months of unequal length. The great disadvantage of the present system, particularly for business purposes, is that the months are unequal and are not multiples of the universal week. Under the proposed system of thirteen months of twenty-eight days each with an international holiday for the 365th day, the advantages would include the following:

- (a) All months would be equal and would have exactly the same number of Sundays and week days.
- (b) The day of the week would always indicate the month date, which conversely would indicate its week-day-name.
- (c) Each week day would recur on its four fixed monthly dates.
- (d) Every month end would coincide with week end.
- (e) Months of equal length and the same total week-day values would give great statistical advantages by truly measuring current fluctuations in government, business, scientific, etc., affairs at the end of every month.

The thirteen month scheme has been endorsed by the governments of some twenty-one of the principal countries of the world. It has also been endorsed by outstanding business men such as Mr. Robert Dollar, Mr. E. W. Beatty and Mr. Edson White, President of Armour and Company.

Your Committee, after careful consideration begs to recommend that the Association should express itself as in favour of the proposed change.

The Portland Cement Association published recently the annual statistical and analytical number of their *Accident Prevention Magazine*, which contains full records of the effective work of the Association in recent years in the field of industrial safety. It is illustrated by numerous charts, diagrams, tables, and views of the company's various plants with some of their leading officials. Mill and quarry accidents in the cement industry during 1927 show the largest annual reduction both in percentage and in the actual number of accidents since the record was begun. The reduction in fatalities was spread over the various divisions of mill work, but there was a slight increase in the transportation divisions. An account of the Association's accident prevention work is given on another page of this issue. The Portland Cement Association trophy was unveiled on June 16 at the Point Anne plant of the Canada Cement Company, this plant having operated for the year 1927 without a lost time accident. The trophy stands more than seven feet high. It bears the words "Safety Follows Wisdom", and at the base is the following inscription: "Portland Cement Association Safety Trophy awarded Canada Cement Company Limited, Plant No. 5, Belleville, Ontario, for a perfect safety record in 1927."

LEAGUE OF NATIONS INTERNATIONAL LABOUR ORGANIZATION

Eleventh Session of the International Labour Conference

THE Eleventh Session of the International Labour Conference (League of Nations), constituted under the provisions of the Treaties of Peace, was held at Geneva, Switzerland, from May 30 to June 16, 1928.

The objects for which the International Labour Organization was formed are set out in Part XIII of the Treaties of Peace and are, briefly, to promote the improvement of industrial conditions by legislative action and international agreement.

Ten previous sessions of the International Labour Conference have been held as follows: Washington, D.C., 1919 (LABOUR GAZETTE, December, 1919); Genoa, Italy, 1920 (LABOUR GAZETTE, October, 1920); Geneva, Switzerland, 1921 (LABOUR GAZETTE, January, 1922); Geneva, Switzerland, 1922 (LABOUR GAZETTE, December, 1922); Geneva, Switzerland, 1923 (LABOUR GAZETTE, December, 1923); Geneva, Switzerland, 1924 (LABOUR GAZETTE, August, 1924); Geneva, Switzerland, 1925 (LABOUR GAZETTE, July, 1925); Geneva, Switzerland, 1926 (8th and 9th sessions) (LABOUR GAZETTE, July, 1926); Geneva, Switzerland, 1926 (LABOUR GAZETTE, July, 1926); Geneva, Switzerland, 1927 (LABOUR GAZETTE, July, 1927).

It will be observed that only one Session of the Conference had been held annually, until 1926, when the Eighth Session was followed immediately by the Ninth. The Treaty of Peace requires that "the meetings of the general conference of representatives of the members shall be held from time to time as occasion may require, and at least once in every year."

Each member state is entitled, under the terms of the Treaties of Peace, to send four delegates to the International Labour Conference, two of whom must be Government delegates and the two others are to be delegates representing, respectively, the employers and the workpeople of the country, chosen in agreement with the industrial organizations, if such organizations exist, which are most representative of employers or workpeople, as the case may be, in the respective countries. Each delegate may be accompanied by advisers not exceeding two in number for each item of the agenda.

The decisions of the Conference may take the form of either a Recommendation or a Draft Convention. A two-thirds majority of the votes cast by the delegates is required for the adoption of any Recommendation or

Draft Convention by the Conference. The Recommendations and Draft Conventions are afterwards transmitted through the Secretariat of the League of Nations to the different countries represented on the International Labour Organization for acceptance or otherwise. Each country is obliged under the Treaties, within the period of one year at most from the closing of the Conference, or if it is impossible owing to exceptional circumstances to do so within one year, then at the earliest practicable moment and in no case later than eighteen months from the closing of the Conference, to bring the respective Recommendations or Draft Conventions "before the authority or authorities within whose competence the matter lies for the enactment of legislation or other action."

Decisions of the Conference

The Agenda of the Eleventh Session of the Conference comprised two main items, namely: (1) Minimum Wage-Fixing Machinery, and (2) Prevention of Industrial Accidents, including accidents due to coupling on railways. The first of these two subjects was under consideration by the Conference last year and was presented on the present occasion for final action. The second subject, namely, the prevention of industrial accidents, was presented for general consideration with a view to the formulation of proposals which might be finally dealt with at the session of the Conference which is to be held next year.

The decisions of the Eleventh Conference may be summarized as follows:—

Minimum Wage Fixing Machinery.—By 76 votes to 21 the Conference adopted a Draft Convention concerning the creation or maintenance of minimum wage fixing machinery in trades, particularly home working trades, to be determined by each state.

By 81 votes to 18 the Conference adopted a Recommendation embodying general guiding principles for the application of such machinery.

Prevention of Industrial Accidents.—By unanimous votes the Conference decided to place on the agenda of the 1929 Session:

The General Prevention of Industrial Accidents; and

The Protection against Accidents of Workers Employed in Loading or Unloading Ships.

The Hon. Peter Heenan, Minister of Labour, Senior Canadian Government representative at the Eleventh International Labour Conference, Geneva, 1928.

By 94 votes to 5 the Conference adopted a draft Questionnaire relating to the prevention of industrial accidents in general, to pave the way for next year's discussion.

By a unanimous vote the Conference adopted a draft Questionnaire concerning the protection against accidents of workers employed in loading or unloading ships. By a unanimous vote, the Conference decided that the opinion of the Joint Maritime Commission should be obtained on the maritime aspects of any proposed Draft Convention on this subject, and should be communicated to Governments.

By a unanimous vote, the Conference adopted a resolution in favour of the appointment of a Joint Committee of Governments, em-

Standing Orders.—The Conference adopted unanimously several amendments to its Standing Orders relating to substitute delegates, etc., and also a number of amendments to the "standing clauses" of Draft Conventions relating to registration of ratifications, date of application, etc. The Governing Body was requested further to consider the question of revision of Conventions.

Resolutions.—The Conference adopted, in most cases unanimously, resolutions in favour of enquiries into the causes which impede production, industrial relations, the effects of rationalisation on conditions of employment, housing conditions, dangers to motor-vehicle drivers, risks attending one-man driving of

International Labour Office Building, Geneva, Switzerland.

ployers and workers to study the question of coupling accidents on railways, with special reference to the use of automatic couplings.

By a unanimous vote, the Conference adopted a resolution outlining the steps which should be taken to assist the "Safety First" movement.

By a unanimous vote, the Conference recommended that the International Labour Office should be authorized to continue its comparative study of national safety legislation.

Application of Conventions.—The Conference adopted unanimously the conclusions of the Committee appointed to examine the annual reports of Governments on the measures taken to give effect to Conventions ratified by them.

locomotives, collective bargaining in agriculture, re-education and re-employment of disabled persons, and conditions of work in the textile industry. Resolutions were also adopted with regard to voluntary associations for the support of the Organization, freedom of association, calendar reform, the observance of Article 405 of the Peace Treaty, and the establishment of national labour departments. Resolutions relating to official languages were referred to the Governing Body.

Election of the Governing Body.—The elections for the Governing Body for the next three years were held on the basis of Article 393 of the Peace Treaty as it stands, the amendment adopted in 1922 not yet having received the requisite number of ratifications to make it operative.

Countries Represented

Of the fifty-five countries which are members of the International Labour Organization, forty-six sent delegates to the Eleventh Session, a number which has been exceeded on only one occasion, namely, in 1925. In all but eleven cases these delegations were "complete" in that they consisted of representatives of organized employers and workers as well as of Governments. In ten cases the delegations consisted only of government members. In addition one state, namely, Norway, was represented by Government delegates and an Employers' delegate. A list of the countries represented follows:—

Argentine	Italy
Austria	Japan
Australia	Latvia
Belgium	Luxemburg
Bolivia	Netherlands
Bulgaria	Nicaragua
Brazil	Norway
British Empire	Panama
Canada	Paraguay
Chile	Peru
China	Poland
Czechoslovakia	Portugal
Colombia	Rumania
Cuba	Salvador
Denmark	Serb-Croat-Slovene
Estonia	Kingdom
Finland	Siam
France	South Africa
Germany	Spain
Greece	Sweden
Guatemala	Switzerland
Hungary	Uruguay
India	Venezuela
Irish Free State	

The total number of delegates in attendance at the Conference was 148, including 81 Government delegates, 34 Employers' delegates and 33 Workers' delegates. There were also 190 technical advisers present, including 82 Government advisers, 52 Employers' advisers and 56 Workers' advisers. Thus, in all, 338 persons were officially accredited to participate in the work of the Conference.

The Canadian delegation in attendance at the Conference was as follows:—

Government Delegates.—The Honourable Peter Heenan, Minister of Labour of Canada; and Dr. W. A. Riddell, Canadian Advisory Officer, League of Nations, Geneva, Switzerland.

Technical Advisers to Government Delegates.—Mr. T. J. Coughlin, Ottawa, Canada; Mr. G. Filion, Montreal, P.Q.; Mrs. B. A. Rogers, M.L.A., Winnipeg, Man.; and Mr. H. B. McKinnon, Kenora, Ont.

Employers' Delegate.—Mr. H. H. Champ, vice-president, Steel Company of Canada, Ltd., Hamilton, Ont.

Technical Adviser to Employers' Delegate.—Mr. E. Blake Robertson, Ottawa representative, Canadian Manufacturers' Association, Ottawa, Ont.

Workers' Delegate.—Mr. Tom Moore, president, Trades and Labour Congress of Canada, Ottawa, Ont.

Technical Adviser to Workers' Delegate.—Mr. Robert J. Tallon, vice-president, Trades and Labour Congress of Canada, Montreal, P.Q.

Officers of the Conference

The following were elected as officers of the Conference:—

President.—Mr. Saavedra Lamas, ex-Minister of Justice and of Public Instruction of the Argentine Republic.

Vice-Presidents.—Mr. MacWhite (Irish Free State) from the Government group; Mr. Vogel (Germany) from the Employers' group; Mr. Tom Moore (Canada) from the Workers' group.

Honourable Peter Heenan, Minister of Labour of Canada, was elected chairman of the Selection Committee of the Conference.

Appointment of Committees

Committees were appointed by the Conference as follows:—

Selection Committee.—Twenty-four members: 12 from the Government group, 6 from the Employers' group and 6 from the Workers' group.

Standing Orders Committee.—Thirty members: 10 from each group.

Committee on Minimum Wages.—Forty-eight members: 16 from each group.

General Committee on Accidents Prevention.—Forty-eight members: 16 from each group.

Committee on Protection Against Accidents of Workers Employed in Loading and Unloading Ships.—Twenty-four members: 8 from each group.

Committee on the Technical Aspects of the Problem of Automatic Coupling on Railways.—Twenty-one members: 7 from each group.

Committee on Article 408 of the Treaty of Versailles.—Eighteen members: 6 from each group.

Election of Governing Body of the International Labour Office

During the sessions of the Conference an election was held for the appointment of the Governing Body of the International Labour Office, which, under the requirements of

Article 393 of the Treaty of Versailles, is chosen every three years. The membership of this Body comprises twelve Government representatives (of whom eight are entitled to be chosen, under the provisions of the Treaty, from the member states which are of the "chief industrial importance", and four by the Government delegates to the Conference), six persons elected by the Employers' delegates to the Conference and six persons elected by the Workers' delegates to the Conference. It was decided by the Council of the League of Nations in 1922 that the eight countries, members of the International Labour Organization, which are of "chief industrial importance" are as follows in the alphabetical order of the names in the French language: Germany, Belgium, Canada, France, Great Britain, India, Italy and Japan. The Governments of these countries, including Canada, retain accordingly their membership in the Governing Body. Four other Governments were chosen for membership in the Governing Body by the Government group in attendance at the Conference as follows: Spain, Sweden, Argentine and Poland. The following were chosen to represent the Employers' and Workers' groups respectively:—

Employers' Group.—Mr. Gemmill (South Africa); Mr. Hodac (Czechoslovakia); Mr. Lambert-Ribot (France); Mr. Olivetti (Italy); Mr. Vogel (Germany); Mr. Forbes Watson (British Empire).

Workers' Group.—Mr. Tom Moore (Canada); Mr. Poulton (British Empire); Mr. Mertens (Belgium); Mr. Jouhaux (France); Mr. Müller (Germany); Mr. Thorberg (Sweden).

Credentials

Three reports were submitted in behalf of the Credentials Committee. The first report, which was adopted, gave the number of delegates, etc., as already stated.

Four protests had been received relating, respectively, to the Portuguese, Czechoslovak and Italian workers' delegates and the Estonian employers' delegate. The Committee proposed to disregard the protest against the credentials of the Portuguese delegate, which was not signed, and was based on insufficient evidence.

The second report, which was also adopted, unanimously proposed the acceptance of the credentials of the Czechoslovak workers' delegate, who had been appointed by the Government in accordance with an agreement approved by the Conference in 1927.

MGR. NOLENS (Government, Netherlands) expressed the view that the nomination of

non-Government delegates should be made with the consent not of the most representative organization, but of the most representative organizations.

Mr. JOUHAUX (Workers, France) considered that in virtue of the judgment of the Permanent Court of International Justice the agreement must be made with the most representative organization, and not with the most representative organizations.

The Chairman of the Credentials Committee (Mr. MANNIO) stated that the Committee was not opposed to the possibility of agreement being reached in the case of several organizations.

The third report dealt with the protest against the credentials of the Italian workers' delegate and his advisers. The majority of the Committee proposed to accept the credentials. The Conference decided to postpone the discussion of this report until the following sitting, the Italian workers' delegate being absent. A protest was submitted, on behalf of the International Federation of Trade Unions, by Mr. Mertens and Mr. Jouhaux, against the appointment of Mr. Rossoni as Workers' delegate for Italy and against the appointment of his advisers. The protest was based on the ground that no change had occurred in the position of the workers in Italy since last year, and that freedom of association as laid down in Part XIII of the Treaty of Versailles was not granted to Italian workers.

The majority of the Credentials Committee reported that, having taken note of the protest and of a declaration of the Italian Government delegate, they were of opinion that the appointment had been made in accordance with the Treaty. They added that this was the seventh time such a protest had come before the Conference, and that the dispute should be considered as settled, in view of the fact that the Conference had always by a considerable majority taken the same decision.

In a minority report, Mr. Jouhaux (Workers, France) maintained that in Italy freedom of association did not exist either in law or in practice. The so-called trade unionism of the Fascist regime, he contended, was nothing but the instrument of the Government, that was to say, the Fascist Party, which controlled it continually and absolutely.

After a lively discussion, during which the minority report was upheld by Mr. Jouhaux and Mr. Poulton (Workers, British Empire), and the opposite case was presented by Mr. de Michelis (Government, Italy) and Mr. Rossoni himself, the Conference decided by 100 votes to 30 to accept the credentials of Mr. Rossoni and his advisers.

Address of Chairman of the Governing Body

Mr. Arthur Fontaine (Government delegate, France), Chairman of the Governing Body of the International Labour Conference, presided at the opening of the Conference. In the course of an address which he delivered in calling the Conference to order and welcoming those in attendance, Mr. Fontaine commented with satisfaction on the fact that 300 ratifications of Conventions of the International Labour Conference have been registered with the League of Nations as compared with 230 when the Conference assembled last year. One country, namely, Luxemburg, has ratified all of the 25 Conventions which have been adopted to date by the International Labour Conference. Referring to the subject of minimum wages, Mr. Fontaine observed that, according to the decision reached last year, the subject to be discussed on the present occasion was the institution of methods of fixing minimum wages, leaving it to the Governments themselves to decide to what industries these methods would be applied. Referring to the second item of the Agenda, namely, Accident Prevention, Mr. Fontaine observed that the Conference had already adopted proposals relative to Workmen's Compensation for Accidents. Prevention, however, was better than cure and a study of the means of insuring the safety of workers was a natural supplement to the Convention of Workmen's Compensation for Accidents.

The President's Address

Mr. Saavedra Lamas acknowledged the honour which had been done him in his election as president of the Conference as a compliment to his own country, the Argentine Republic. "We have sometimes," he said, "been prevented by political conditions, by the federal form of our states, or by the vicissitudes of our economic development, from fulfilling, if not the literal, at any rate the moral obligations which we have undertaken. But the whole development of our social life, and the very nature of our society, are such as to make us increasingly anxious to take a full part in the work of the International Labour Organization.

"With the Eleventh Session of the Conference we arrive almost at the end of the first decade of the existence of the Organization. During that period you have year by year conferred great benefits on organized labour. You have never ceased to promote social progress, and you have succeeded sometimes by binding Conventions and sometimes by Recommendations put forward as suggestions, in introducing into industrial life a deeper

sense of justice and a greater respect for its principles.

"Never before in the history of humanity has the work of promoting its well-being been carried on in a more sustained and systematic manner. The work of this Conference is sound because it is based on a firm foundation of research. The enquiries and studies of the International Labour Office are the fruit of positive and impartial study. They cannot fail to promote a love of truth and a desire to obtain accurate knowledge. They make an unprecedented contribution to the culture both of the workers and of the employers. The information which the office supplies is carefully checked and verified, and gives an exact idea of conditions in various parts of the world, and it is this which gives it its value.

"But the superior qualities of your organization do not reside merely in your technical work. They are evident from the very constitution of this Conference, and the unique possibilities which it offers to all parties in it. To see Workers', Employers' and Government representatives discussing in complete freedom, maintaining fearlessly their respective points of view, and deliberating on a footing of equality, with the guarantee that methods of voting will accurately represent the situations which arise, is an entirely new and unprecedented sight. The periodical meeting of all these elements quite naturally leads to mutual comprehension which in its turn induces conciliation and collaboration to an extent which the most advanced economists would never have imagined. The work accomplished is consequently well balanced and progressive, and is not based exclusively on any one point of view. Such work facilitates general evolution, for it is the impulse of extreme ideas which assures the triumph of the moderate, where generosity is tempered by the industrial possibilities which cannot be exceeded without danger to the interest of the workers themselves.

"Ladies and Gentlemen, the Labour Charter of the Treaty of Versailles which inspires and guides you is one of the finest documents in history. We find in it a magnificent expression of the brotherhood of man and of the highest ideals which the human mind could conceive after the long horrors of the war. The voice which proclaimed universal peace and justice was that of stricken humanity and her words express the noblest of conceptions. When you have translated them into law and practice, you will have cured modern society of its great unrest and suffering. It may be said that the task must necessarily be slow and continuous, that in all your projects, as in those of the League of Nations, there is too

much idealism, and the world is not yet ripe for such reform. You may reply that even if all this represented simply hope for the distant future and implied a disregard for theoretical logic, the logic of experience has nevertheless already justified it. There are certain tasks which require to be begun, so to speak, at the end, and it is indeed in this manner that all great achievements have originated. It is always in the pursuit of an idea which for the moment cannot be realized that we find inspiration for the practical achievements of the future.

"Nothing in the world is superior to human labour. No international assembly is of greater importance than this, composed as it is of the representatives of millions of workers, of employers and of Governments. It is in this conviction that I declare open the Eleventh Session of the International Labour Conference."

The Director's Report

The Annual Report of the Director of the International Labour Office was presented and was under discussion at successive sessions of the Conference. A summary of the Report appears on another page of this issue. Part I of the Report gave a review of the various activities of the International Labour Organization, the first section dealing with the work of the Organization—its internal development and its external relations—and the second section consisting of an analysis of the results produced, with a summary of the annual reports presented to the International Labour Office by various countries on the measures which had been taken by them to give effect to the different Conventions.

Many delegates took part in the discussion of the Director's Report. The points that were raised by the speakers are indicated in the Director's reply, which is outlined below.

The Director's Reply

The Director (Mr. Albert Thomas) replying on the many points raised during the discussion, referred first to ratifications. It had been said that he devoted too much attention to the figures of ratification, and that what was more important was the real progress in each country. He entirely agreed. But the Conference was created to draw up Conventions, and the activities of the International Labour Office were developed in order to obtain ratifications. Ratification was therefore the central problem. He was somewhat disappointed by the discussion. He had pointed to the increase of ratifications, and though not enthusiastic, he had been more satisfied than he was last year. He was told

that the progress was not rapid enough. Again he agreed, but he would remind the critics of all that was involved in one ratification by one country—all the efforts, insistence, journeys, negotiations, and appeals which were required.

He was glad to note the support from the Employers' Group for the demand for further ratifications. He noted also that some of the old objections to ratification were no longer advanced. The constitutional objection no longer created any obstacle; several federal States were endeavouring to ratify, in spite of difficulties. As for the economic objection, this had now assumed a more positive form. The Organization was being urged not to leave out of account the economic aspect of each problem when it was drafting a Convention. He could assure Mr. Tehourtchine that it was not the Office which had avoided economic issues. As a matter of fact, the Office had been told by Mr. Olivetti and others that it must not go too quickly. Sometimes, however, when they tried to establish social reforms, economic difficulties were too readily invoked, and were represented as being insurmountable. There therefore appeared to be some difference of opinion on this subject, and he feared the effect of these differences on the collaboration of the International Labour Organization with the Economic Organization of the League. At the same time, he could not recall a case in which economic arguments had been adduced by any Government as a reason for non-ratification.

Then there was the question of enforcement of Conventions. Here, progress was being made, slowly but surely, with the assistance of the Committee of Experts on Reports under Article 408.

The Hours Convention.—With reference to the Hours Convention—"the touchstone of our whole activity"—the speaker recalled the decision of the Governing Body that he should prepare, in respect of all the Washington Conventions, the decennial reports required by the Conventions. There had been in the Conference a recrudescence of the debates in the Governing Body on the British proposal for the revision of the Hours Convention. Mr. Wolfe, British Government delegate, had made a short statement to which he gave an official tone, and which might be considered as a statement on behalf of the British Government. First of all, the British Government stated that at the very moment when it made its proposal for revision, it remained faithful to the principles of the Washington Convention, and would not ask any alteration of those principles. The matter had often been discussed in Committees and in the Governing Body, but it did not appear

either to the Workers' Group or to the majority of the Government Group that this was a statement which could be considered as satisfactory. It was always possible to discuss principles if the point to which one can go is not defined.

The second point of the British delegate's statement was that the British Government desired application and ratification of the Convention in the light of the resolutions of the London Conference. "Contrary perhaps to Mr. Jouhaux's impression, I say that this is a step in advance; it represents progress. If we could say that the British Government is ready to ratify if the interpretations arrived at in London are inserted in the text of the Convention, that is, if the Convention is modified according to the London interpretation, then, although I cannot guarantee that the British Government is sure of securing the adhesion of the Governing Body and of the workers to this point of view, I can say that there would at least be a possibility of discussion, and it would remove a great deal of uneasiness. . . . The guarantee that the workers desire in such a matter was not given to them. Here we are at the very heart of the problem. Mr. Wolfe referred to it when he said that it is easier to suspect than to have confidence. That is true. It is a question of confidence; a question of confidence between the various forces represented on the Governing Body. How can confidence be gained? How can we restore confidence if we begin the process of adapting the provisions of the Convention? A solution of the question will perhaps be found in the months to come. I who have always been confident, who have always declared my certainty of securing ratification, can I not appeal to the British Government, and ask it, since it was responsible for setting up this Organization, and since it has often assisted us, can I not appeal to it to aid us once more in this difficult situation, and give us speedily the word which will enable us to proceed soon towards international ratification? It is a question of confidence."

Other Questions.—Dealing with other points raised during the debate, the speaker appealed for the outstanding ratification of the amendment to Article 393 of the Treaty, relating to the constitution of the Governing Body and also for the sending of complete delegations to the Conference. He undertook to do his best within the limits of the budget to include nationals of various countries on the staff of the Office, and to develop the Correspondents' Offices in different countries. Consideration would be given to the invitations to the Director to visit the Far East. The

problem was one of finance. The Governing Body had given the Office a little more money this year, and he hoped the delegates would ask their Governments to make sufficient funds available for the development of the Organization in the directions desired by the various speakers.

Minimum Wages

It will be recalled that, in accordance with the double-discussion procedure, the question of minimum wage-fixing machinery was submitted to general discussion last year, and that the Conference adopted the text of the Questionnaire which was subsequently forwarded to the different Governments. On the basis of the replies received, the International Labour Office drew up and communicated to the Governments a report containing provisions which might be used as the basis for the final discussion to take place this year.

The Office also submitted for the consideration of the Conference a preliminary draft convention relating to the establishment or maintenance of minimum wage-fixing machinery in certain industries, and a draft recommendation relating to the machinery suitable for these industries.

The draft convention takes account not only of the great differences which exist in the practice of various countries as regards the industries for which minimum-wage machinery has been provided, but also of the variety of forms under which this machinery at present exists. It does not therefore attempt to lay down a uniform field of application or a particular form of machinery. Leaving it to each country to work out these two questions for itself in taking into account its own special needs, it limits itself to laying down the fundamental principle of the establishment and the maintenance of the machinery, as well as of certain general principles which seem essential for its proper application; whatever form it may take. It provides, moreover, for the periodic communication of certain information obtained from the results of the application of the machinery, with a view to establishing mutual control of the application of the convention.

The draft recommendation completes the proposed draft convention by reminding Governments of certain methods of application which have been almost universally adopted and which, judging from experience, appear to facilitate the working of minimum wage-fixing machinery. These practical suggestions should be of particular interest to those countries which do not at present possess minimum wage-fixing machinery, but may be led to establish it in the near future.

Accident Prevention

The discussion on the subject of Accident Prevention was based upon a report which had been prepared in advance by the International Labour Office, describing the legislation and practice of the different countries as regards the prevention of industrial accidents, and containing proposals for a questionnaire. The discussion showed that the delegates from all countries, whether representing Governments, employers or workers, were unanimous in the opinion that no stone should be left unturned to prevent accidents to industrial workers, on business grounds as well as for humanitarian reasons. It was generally agreed that, while much had been done in recent years to reduce the toll of accidents by public and private action, much still remained to be done. There was, however, a certain difference of opinion as to the lines which future action should take, or, more precisely, as to the form and direction of any proposals which might be formulated by the Conference for future action.

Several representatives of Governments took the view that, while legislative measures must continue to keep abreast of the developments of industrial methods and equipment, the paramount need of the moment was for the encouragement of voluntary effort to prevent that considerable proportion of accidents which was attributable to "the human factor" rather than to machinery. Those who held this opinion suggested that the Conference should confine itself to adopting resolutions, which could be done at this Session, instead of taking preliminary steps with a view to adopting a Convention or formal Recommendation at next year's Session.

Other delegates, notably the workers' representatives, while not disparaging the value of voluntary effort, contended that it could not produce full results unless it was founded on a sound basis of legislation and regulation. They urged, therefore, that the Conference should aim at the adoption of a Convention embodying minimum standards of public safety requirements.

All speakers agreed that accident prevention was a field in which co-operation between employers and workers was essential.

Mr. Tom Moore

Mr. Tom Moore (Workers, Canada) spoke as follows on industrial accident prevention in Canada:—

"I think I can very truthfully say that all sections of the community in Canada recognize the humanitarian standpoint of accident prevention, but we might go a little further and deal with the real incentive which, perhaps, governs the action of the respective groups. I would venture to summarize their

motives somewhat as follows. The workers consider it good personal protection; the employers recognize it as entirely good business, while the Governments always find it particularly good politics to participate in the work. By these joint efforts great progress has been made but there are still far too many industrial accidents occurring in the country from which I come.

"Emphasis was placed this morning on the extent to which the human element contributes towards industrial accidents, being indeed the major factor. I think our country probably compares favourably with others with regard to the small percentage of accidents which can be attributed to the absence of guards on machinery, and so on. In considering the contribution of the human element I think we should go a stage further, and try to find out what causes the human element to contribute to the accidents. We find—and I think statistics in other countries corroborate it—that a very great contributing factor is the exceedingly long hours which are demanded from workers in monotonous and mass-production employment. We find that the prevalence of accidents increases as the hours of work are extended, showing that mental fatigue caused by mass-production and unnecessarily long hours are a major contributing factor in industrial accidents. The second very important factor in a new country like Canada is the tendency to place untrained workers in charge of machinery which may endanger the lives of other workers, such as hoisting machinery, building scaffolding, etc. Men without proper knowledge of how to handle such machinery are allowed to do so and innumerable accidents are thereby occasioned.

"Whilst voluntary educative work is very essential, as was said this morning, to create the proper atmosphere, I wish to corroborate what Mr. Bevin has said on the necessity of a legislative basis for work of this nature. Unless we have a legislative basis you will find an unwilling minority opposed to the carrying out of safeguards which the more advanced have already adopted. We find, as has previously been stated, that legislation such as that for workmen's compensation which creates a charge on industry, especially where you have the state collective funds, as we have in the Dominion of Canada, has been a very large influence in awakening the conscience of many employers to the necessity of preventing accidents from the point of view of the financial cost alone. They have been very largely active in getting the Compensation Boards to create departments for the study of the prevention of industrial accidents, and to some extent are extending that work to the prevention of industrial diseases.

"In conclusion—I wish to be brief—I wish to make a slight reference to the question of railroad couplings. It seems rather strange to one coming from the western hemisphere to find that this question is still one which has to be discussed. In the Dominion of Canada the first automatic railroad couplings were adopted some 35 years ago. Considering the stage of industrial development, the type of mind administering industry, and the Government at that period, you can well understand that it took some considerable time to bring them into universal use, and it was not until 17 years later—18 years ago—that the automatic coupling was universally adopted throughout the Dominion of Canada and the United States of America. While these couplings reduce the accident hazard, we find there is room for further improvement in this regard because there are the steamhose and the airhose couplings to be considered. The idea now is to have something which will automatically connect all three together. I venture to say, in conclusion, there is no railroad manager in the Dominion of Canada, and no worker employed on the railroads who comes into contact with this class of work who would listen for one moment to any suggestion for modifying the use of automatic couplings, much less for abolishing them altogether and returning to the link and chain couplings which were used in the past.

Hindrances to Production

Mr. Champ (Employers, Canada) moved the following resolution:—

Whereas enquiries undertaken in certain countries in particular industries and on the national scale have made valuable contribution to the improvement of production and of working conditions, thereby enhancing the prosperity of employers and employed alike; and

Whereas increased production is prevented by such causes as: Accidents; Inadequate attention to ill-health and physical defects; Irregularity and instability of employment; Mutual fears and suspicions, and barren conflicts which might be avoided by better understanding between employers and employed; and Whereas such causes, by affecting production, finally reduce the volume of wages which employed and the community might otherwise enjoy;

Therefore be it resolved:

That, in the common interest of employers and employed, this Conference requests the Governing Body to consider the advisability of instructing the International Labour Office to collect reliable and detailed data regarding methods adopted to decrease or eliminate the various causes of decreased production herein enumerated, referring however to other organizations of the League of Nations or to the International Institute of Scientific Management such portions of the subject as may be considered to come under their competence.

At the same time, Mr. Champ submitted the following resolution:—

Whereas it is contended that a policy of active collaboration between employers and employed, such as exists in certain countries, has resulted both in an improvement in the level of real wages and working conditions and also in greater and more economical production; and

Whereas the economies resulting from such collaboration can also be made available for the benefit alike of the employers, employed and the community as a whole;

Therefore be it resolved:

That this Conference requests the Governing Body to consider the advisability of instructing the International Labour Office to follow with due attention the progress of the spirit of collaboration between employers and employed, and to report on the subject from time to time.

In moving these resolutions, Mr. Champ said:—

"You will note, Mr. President, that I have placed accidents first among the causes of waste in industry. As a concrete example to show, why I have done so, I may say that it is computed that in the United States in 1919, the actual time lost as the result of 2,977,000 non-fatal accidents amounted to 50,000,000 working days. Loss of future earning power as a result of complete or partial disability arising out of 115,000 of these same accidents was estimated at 100,000,000 working days; and loss of earning power resulting from 23,000 fatal accidents, at 138,000,000 working days. In other words, a total loss of 296,000,000 working days resulted from accidents which occurred in the year 1919. Since that date efforts towards accident prevention have greatly decreased such loss. The very close consideration which has been given to accidents at this Conference will certainly give a great impetus to the movement directed towards their prevention. The literature distributed here by the United States and by the various states belonging to the Conference is certain to have beneficial results. Not only on sentimental and humanitarian grounds, but likewise on purely economic grounds, the decrease of accidents is a subject of paramount national importance, demanding the close attention of all countries. This year's effort in Geneva will assist, in all countries, the Safety Leagues and other kindred organizations working towards a decrease in the appalling list of accidents. Since I left Canada the Annual Meeting of one Safety League was held in the city in which I live. Over 1,000 delegates were present at their own expense, travelling great distances, in some cases many hundreds of miles, in order to be present at a meeting where methods for prevention of accidents were to be discussed. I mention this, Mr. President, to show that Canada, while a young and sparsely populated country, is alive to the importance of this subject, and the report which I will make upon my return indicating

the large amount of time devoted to the subject at this Conference will spur our organizations on to even more vigorous action in the future.

"Second among causes of 'waste' I have placed ill-health. Various investigations place the annual loss of time due to ill-health at from 6 to 9 days per head. In Canada and the United States many employers have adopted various schemes of medical supervision and nursing services; generally speaking, such efforts have had beneficial results, and the collection and dissemination of information regarding such experiments should be helpful from an international standpoint.

"Irregularity and instability of employment is one of the most difficult problems with which to deal. The causes vary in different countries. Climatic conditions have an important bearing upon the matter. Possibly little can be done in this field internationally, but it is a subject which in each country is worthy of careful study from the standpoint of the country's particular conditions and needs.

"Last but not least, Mr. President, I come to the clause of my resolution which cites amongst causes preventing increased production mutual fears and suspicions, and barren conflicts which might be avoided by better understanding between employers and employed. From various issues of *Industrial and Labour Information* I have gathered for the years 1925, 1926 and 1927 some statistics regarding working days lost in various countries owing to industrial disputes. The figures are:

	Working Days
France, 1925..	2,046,563
India, 1926..	2,019,970
Sweden, 1926..	1,711,200
Australia, 1926..	1,415,300
Czechoslovakia, 1927..	1,395,024
Great Britain, 1927..	1,175,000

As to who was in the right and who was in the wrong, or as to the proper division of responsibility between workers and employers for these industrial disputes, I, Mr. President, have of course no knowledge and no opinion. But, Mr. President, we must all agree that time so lost was in the past, and in the future will be a cause preventing increased production. In Canada during the year 1927 there were 165,288 working days lost through industrial disputes; the time so lost would have been very much greater were it not for the fact that year by year a better understanding is taking place between employers and employed.

"From a lifetime's experience in the iron and steel industry, and from a close observation of other industries in the country from which I come I am convinced that the causes mentioned are there the principal reasons causing waste in industry. To me it therefore appears desirable that there should be collected and disseminated all data having a bearing upon the decrease or elimination of the causes with which I have thus briefly dealt. I know of no organizations better fitted to do this work than those mentioned in my resolution and I therefore have great pleasure in moving:—

That in the common interest of employers and employed, this Conference requests the Governing Body to consider the advisability of instructing the International Labour Office to collect reliable and detailed data regarding methods adopted to decrease or eliminate the various causes of decreased production herein enumerated, referring, however, to other organizations of the League of Nations, or to the International Institute of Scientific Management such portions of the subject as may be considered to come under their competency."

"Mr. President, Ladies and Gentlemen, for the reasons given earlier in the day, slight changes have been made in my Resolution as originally presented. It now reads:—

Whereas it is contended that a policy of active collaboration between employers and employed, such as exists in certain countries, has resulted both in an improvement in the level of real wages and working conditions, and also in greater and more economical production; and

Whereas the economies resulting from such collaboration can also be made available for the benefit alike of the employers, employed and the community as a whole;

Therefore be it resolved:

That this Conference requests the Governing Body to consider the advisability of instructing the International Labour Office to follow with due attention the progress of the spirit of collaboration between employers and employed and to report on the subject from time to time.

"You will note, Mr. President, that the keynote of my Resolution is collaboration between employers and workers. Since the resolution in slightly different form was published in the *Provisional Record* a large number of Delegates have spoken to me on the matter. Practically all have agreed that in Canada and the United States collaboration has been effective. A considerable number, however, have contended that such collaboration is not possible in Europe. My knowledge of European conditions is insufficient to enable me to judge of the correctness of the contention. I do know, however, that some years ago in Canada when collaboration was in its infancy there, some Canadians took the stand that it was impracticable and they have since come to see that they are wrong. You

are all familiar with the scriptural text 'The house that is divided against itself cannot stand.' You are also familiar with the proverb, 'In unity there is strength.' To me it appears that unity is collaboration and that strife between an employer and his workmen is the case of a house divided against itself. Before proceeding further, I wish to say that personally I am a strong believer in collaboration.

"Many schemes fall under the general classification of collaboration. In Canada only one of those with which I intend to deal is enforced by legislation; that one is 'Workmen's Compensation'. Under that law each employer pays into a fund a certain percentage of his payroll, and out of such fund the workman draws a percentage of his salary while absent from work on account of accidental injuries. In twelve years (1915-1926) the Steel Company of Canada, of which I am Vice-President, has paid out in this way \$1,184,529—that is the equivalent of nearly thirty million French francs. Who will contend that a worker is not more satisfied from knowing that his earnings do not cease if he is unfortunate enough to meet with accidental injury?

"Of the voluntary efforts at collaboration I will mention first Group Insurance. Under that scheme an employer effects life insurance upon all his workmen. Some grade the amount according to length of service, some according to yearly wages, while some have the same amount of insurance for each workman. Some employers pay the entire cost. In some companies the cost is divided between the employer and the workmen. In all schemes participation is voluntary upon the part of the workman. Who will say that a workman so insured is not more contented and satisfied from knowing that in the event of his death a policy is payable to his heirs?

"Another method of collaboration is 'Housing Schemes' under which system houses are built by the employer and sold on a monthly payment system to the workmen. We find that workmen who own their home or who are on the way to owning their home are less likely to change employment, and a decrease of labour turnover is desirable from all standpoints.

"In Canada various medical and nursing schemes have been introduced, sometimes limited to the workman, and sometimes covering the workman and his family. All such schemes have resulted in a better feeling between the workmen and employers.

"Old-age pension schemes of various kinds have been introduced by many employers. In my own company pensions have been or

are being paid to about 90 employees, and under our pension plan employees do not contribute anything to the fund.

"Possibly one of the most effective methods of collaboration has been profit-sharing by the sale of stock on monthly payments to the workman. The workman thus becomes in part worker and in part employer. His total income is dependent upon the company's profit.

"Last but not least I mention 'Shop Councils' to deal with grievances and other matters of importance to worker and employer alike. The system of Shop Councils is rapidly extending in Canada.

"In these brief remarks I have touched only some of the main efforts at collaboration. There are many others of possible equal importance. In Canada most efforts at collaboration have been beneficial to the employer, the workman and the community as a whole.

"It is not possible to attribute improved production results in a given factory to any one cause. I should like, however, to quote as an example, certain figures from the records of a Canadian company which has been operated under a management in which collaboration has been definitely encouraged as a matter of sound business. This company has in force practically all of the schemes I have mentioned and also some others.

"In six years, production per man per day was increased by 50 per cent.

"In six years, costs per unit were reduced by 47.7 per cent.

"In six years, labour turnover was reduced by 22 per cent per month.

"In three years, the frequency and severity of accidents were reduced by 50 per cent and 45 per cent respectively; and the number of days lost through accidents was reduced by one-third.

"In the first year of its operation of a health programme introduced by the Joint Committee, the number of days lost through sickness was reduced by over 9 per cent.

"In three years the number of grievances dropped 90 per cent.

"The results obtained by the company cited are surely enough, Mr. President, to justify us in giving serious consideration to collaboration, and I consequently move the adoption of my Resolution.

"If as a result of to-day's consideration of this subject by this International Labour Conference a better feeling is engendered between employer and workman, and if eventually the seed which I have attempted to sow should bear fruit, then I shall feel that the distance I have travelled to say these few words has not been travelled in vain."

Mr. TALLON (Workers, Canada).—With regard to the Resolution itself, a resolution of this kind coming from the employers might possibly be looked upon with suspicion, but I can assure you that that is not the feeling of the workers in the Dominion of Canada. As a matter of fact suggestions of this character have come from the Worker's Group in this Conference in times past, and experiments have been carried on generally throughout Canada and the United States. Speaking as a trade unionist who has had considerable experience of movements of this character, I want to say that we in Canada have advanced beyond the terms of the resolution. We have advanced to the extent of working co-operatively with the employers on a program of union management, and co-operation. We have advanced beyond the field of individual collaboration, of welfare plans, and of individual profit sharing schemes. We have arrived at a position in which our organized workers, with all the freedom of action which prevails with such organization, are actively co-operating with managements, particularly—to take a case in point—in the Canadian National Railways, to the end that we may improve working conditions on the railways, minimize waste of materials and of labour, and give better service to the public. I maintain that to carry out the spirit of the Resolution in a logical manner, it is necessary for the workers to be organized, and to be organized thoroughly, just as they are organized to participate in the work of this Conference.

Fundamentally, there must be organization, and logically there must be organization, to carry out the spirit of the Resolution that is before you.

We have been devoting a very considerable amount of our time here to questions of general accident prevention and other questions that our committees have been engaged in, and I am firmly of the conviction that such discussions, to be really effective, should take place on the job where accidents occur. This can be done to the best effect, in my estimation, by such co-operation as I have mentioned. These things are features of our co-operative movement, together with matters of all general interest that affect both parties. This co-operative movement is separate and apart from our wage negotiations. Our negotiations are under general rules. These features are kept carefully separate, so that the co-operative movements themselves should be as non-controversial as it is possible for them to be.

The benefits to be derived from union management co-operation rather than by

individual collaboration are that many of the evils of the latter are removed, such as individual partiality, individual egotism, possibility of discrimination. Before any suggestions are made in our co-operative gatherings, they are carefully revised and discussed, and debates held upon them by men absolutely and thoroughly familiar with the industry, and for that reason are well worth while when they are made subject matter for the meetings. When that time comes suggestions are placed on the minutes of the official proceedings which are sent to the higher officials of the management and to the chief officials of the Organizations, so that they cannot be submerged owing to prejudice that might exist on the part of lesser officials. As I can say, briefly, we are very well satisfied with the progress that has been made in that direction. It has been found that, by such free and frank discussions, we have been very successful in stabilizing our industry. We have secured more work for the shops participating, we have brought about greater harmony between the men and the management, and have made the work more agreeable for all connected with it. We have established in our industry that team work which has resulted in great good to the community and the employer in each concern, that team work which was so necessary to place production on a sound and economical basis without waste or undue fatigue. As we develop the intelligence of our workmen, and they become acquainted with the intricate details of the problems of management, they become better workmen, and, by the same line of reasoning, they become better equipped to deal with the problem of the equitable distribution of commodities after they are produced, so that, for the reasons enunciated, and in accord with our experience, I am very pleased to support the resolution as offered by the Employers' Delegate of Canada.

The Hon. Peter Heenan

The Hon. Peter Heenan, Minister of Labour, also took part in the debate on Mr. Champ's Resolution, speaking as follows:—

"It is quite evident to me that the atmosphere of Geneva has a good effect when I find the Canadian Employers' Representative advocating collaboration, and the Canadian workers' representative in agreement with the Resolution. There can be no doubt that great losses have resulted through mutual fears and suspicions, and conflicts arising out of the absence of machinery for consultation and adjustment. Improvement in the level of real wages, and of working conditions, is more likely to be

achieved under an industrial program of collaboration between employers and workers than under a system where antagonism, suspicion and fear prevail. The surrounding of the worker with security against life's major risks is one of the most important tasks in the world to-day. But full security, coupled with the highest wages ever paid, will not necessarily bring social justice or human happiness. Security, however, is the first plank in any sound industrial relations platform. The progress of social legislation must be based squarely upon economic prosperity, a nation or an industry cannot divide that which it has not got. Prosperity, therefore, is a first essential of better conditions. Prosperity will come more quickly through collaboration than through conflict. This is a principle I have advocated in Canada for many years, and, as Minister of Labour, I am glad to see the Representatives of the Canadian employers and workers in agreement on this subject."

Mr. Khaitan (Employers, India) moved as an amendment to the first resolution the inclusion among the causes which impeded production "the misuse and excessive use of alcohol by the workers," and the addition of a paragraph in favour of an inquiry into this question, with a view to the possibility of a Convention or Recommendation on the subject. After some discussion the amendment was withdrawn and the two resolutions were adopted.

Reports Under Article 408

The Committee appointed to examine the summary of annual reports submitted by Governments under Article 408 of the Peace Treaty on the measures taken to give effect to Conventions to which they are parties arrived at the following conclusions:—

(1) The Conventions are international treaties. Under the general rules of international public law and the provisions of the Labour Parts of the Treaties of Peace, the States which ratify are under obligation to apply without restriction and throughout their

territory the provisions of the Conventions, subject to the provisions of Article 421 of the Treaty of Versailles and the corresponding Articles of the other Treaties of Peace.

(2) It follows from this obligation that the national legislation of States which ratify Conventions must be brought into harmony with the provisions of those Conventions and must be applied.

(3) In so far as the Conventions do not contain any contrary provisions, the obligation referred to above takes effect at the moment when the declaration of ratification becomes legally operative (Article 406).

(4) The examination of the reports shows, however, that up to the present these principles have not yet become fully operative. Without wishing to give a precise form to these observations, the Committee considers that these cases cannot be passed over in silence. It may be that these cases are the consequence of special circumstances: some States may have wished to show by their ratification their confidence in and their support of the International Labour Organization; and it may also be that the intention to follow up the ratification by the necessary measures of application has not been carried out in consequence of unforeseen changes in the situation.

However this may be, experience shows that if this state of things should be further extended it would give rise to various dangers and would be harmful both to the reputation of the International Labour Organization and to the development of international law.

The Committee also expressed the opinion that any study of the problem of the application of Conventions should not be confined to examining whether the provisions of the Conventions and of national legislation were in harmony, but should also go into the question of the effective application of Conventions, as it was already possible to do on the basis of the reports of some Governments.

After discussion the report was adopted unanimously.

Text of the Draft Convention concerning the creation of minimum wage fixing machinery

The General Conference of the International Labour organization of the League of Nations, having been convened at Geneva by the Governing Body of the International Labour Office, and having met in its Eleventh Session on 30 May, 1928, and having decided upon the adoption of certain proposals with regard to minimum wage fixing machinery, which is the first item in the Agenda of the

Session, and having determined that these proposals shall take the form of a draft international convention, adopts, this..... day of June of the year one thousand nine hundred and twenty eight, the following Draft Convention for ratification by the Members of the International Labour Organization, in accordance with the provisions of Part XIII of the Treaty of Versailles and of the

corresponding Parts of the other Treaties of Peace:

Article 1.—Each Member of the International Labour Organization which ratifies this Convention undertakes to create or maintain machinery whereby minimum rates of wages can be fixed for workers employed in certain of the trades or parts of trades (and in particular in home working trades) in which no arrangements exist for the effective regulation of wages by collective agreement or otherwise and wages are exceptionally low.

For the purpose of this Convention the term "trades" includes manufacture and commerce.

Article 2.—Each Member which ratifies this Convention shall be free to decide, after consultation with the organizations, if any, of workers and employers in the trade or part of trade concerned, in which trades or parts of trades, and in particular in which home working trades or parts of such trades, the minimum wage fixing machinery referred to in Article 1 shall be applied.

Article 3.—Each Member which ratifies this Convention shall be free to decide the nature and form of the minimum wage fixing machinery, and the methods to be followed in its operation:

Provided that

(1) Before the machinery is applied in a trade or part of a trade, representatives of the employers and workers concerned, including representatives of their respective organizations if any, shall be consulted as well as any other persons, being specially qualified for the purpose by their trade or functions, whom the competent authority deems it expedient to consult;

2. The employers and workers concerned shall be associated in the operation of the machinery, in such manner and to such extent, but in any case in equal numbers and on equal terms, as may be determined by national laws or regulations.

(3) Minimum rates of wages which have been fixed shall be binding on the employers and workers concerned so as not to be subject to abatement by them by individual agreement, nor, except with the general or particular authorization of the competent authority, by collective agreement.

Article 4.—Each Member which ratifies this Convention shall take the necessary measures, by way of a system of supervision and sanctions, to ensure that the employers and workers concerned are informed of the minimum rate of wages in force and that wages are not paid at less than these rates in cases where they are applicable.

A worker to whom the minimum rates are applicable and who has been paid wages at less than these rates shall be entitled to recover, by judicial or other legalized proceedings, the amount by which he has been underpaid, subject to such limitation of time as may be determined by national laws or regulations.

Article 5.—Each Member which ratifies this Convention shall communicate annually to the International Labour Office a general statement giving a list of the trades or parts of trades in which the minimum wage fixing machinery has been applied, indicating the methods as well as the results of the application of the machinery and, in summary form, the approximate numbers of workers covered, the minimum rates of wages fixed, and the more important of the other conditions, if any, established relevant to the minimum rates.

Article 6.—The formal ratification of this Convention under the conditions set forth in Part XIII of the Treaty of Versailles and in the corresponding Parts of the other Treaties of Peace shall be communicated to the Secretary-General of the League of Nations for registration.

Article 7.—This Convention shall be binding only upon those Members whose ratifications have been registered with the Secretariat.

It shall come into force twelve months after the date on which the ratifications of two Members of the International Labour Organization have been registered with the Secretary-General.

Thereafter, this Convention shall come into force for any Member twelve months after the date on which its ratification has been registered.

Article 8.—As soon as the ratifications of two Members of the International Labour Organization have been registered with the Secretariat, the Secretary-General of the League of Nations shall so notify all the Members of the International Labour Organization. He shall likewise notify them of the registration of ratifications which may be communicated subsequently by other Members of the Organization.

Article 9.—A Member which has ratified this Convention may denounce it after the expiration of ten years from the date on which the Convention first comes into force, by an act communicated to the Secretary-General of the League of Nations for registration. Such denunciation shall not take effect until one year after the date on which it is registered with the Secretariat.

Each Member which has ratified this Convention and which does not, within the year following the expiration of the period of ten years mentioned in the preceding paragraph, exercise the right of denunciation provided for in this Article, will be bound for another period of five years and, thereafter, may denounce this Convention at the expiration of each period of five years under the terms provided for in this Article.

Text of the Recommendation concerning the application of minimum wage fixing machinery, submitted by the Drafting Committee

The General Conference of the International Labour Organization of the League of Nations, having been convened at Geneva by the Governing Body of the International Labour Office, and having met in its Eleventh Session on 30 May, 1928, and having decided upon the adoption of certain proposals with regard to minimum wage fixing machinery, which is the first item of the Agenda of the Session, and having determined that these proposals should take the form of a recommendation, adopts, this.....day of June of the year one thousand nine hundred and twenty-eight, the following Recommendation, to be submitted to the Members of the International Labour Organization for consideration with a view to effect being given to it by national legislation or otherwise, in accordance with the provisions of Part XIII of the Treaty of Versailles and of the corresponding Parts of the other Treaties of Peace:

A.

The General Conference of the International Labour Organization:

Having adopted a Draft Convention concerning the creation of minimum wage fixing machinery, and

Desiring to supplement this Draft Convention by putting on record for the guidance of the Members certain general principles which, as present practice and experience show, produce the most satisfactory results;

Recommends that each Member should take the following principles and rules into consideration:—

I. (1) In order to ensure that each Member ratifying the Convention is in possession of the information necessary for a decision upon the application of minimum wage fixing machinery, the wages actually paid and the arrangements, if any, for the regulation of wages should be ascertained in respect of any trade or part of trade to which employers or workers therein request the application of

Article 10.—At least once in ten years, the Governing Body of the International Labour Office shall present to the General Conference a report on the working of this Convention and shall consider the desirability of placing on the Agenda of the Conference the question of its revision or modification.

Article 11.—The French and English texts of this Convention shall both be authentic.

the machinery and furnish information which shows *prima facie* that no arrangements exist for the effective regulation of wages and that wages are exceptionally low.

(2) Without prejudice to the discretion left to the Members by the Draft Convention to decide in which trades or parts of trades in their respective countries it is expedient to apply minimum wage fixing machinery, special regard might usefully be had to trades or parts of trades in which women are ordinarily employed.

II. (1) The minimum wage fixing machinery, whatever form it may take (for instance, trade boards for individual trades, general boards for groups of trades, compulsory arbitration tribunals) should operate by way of investigation into the relevant conditions in the trade or part of trade concerned and consultation with the interests primarily and principally affected, that is to say, the employers and workers in the trade or part of trade, whose views on all matters relating to the fixing of the minimum rates of wages should in any case be solicited and be given full and equal consideration.

(2) (a) To secure greater authority for the rates that may be fixed, it should be the general policy that the employers and workers concerned, through representatives equal in number or having equal voting strength, should jointly take a direct part in the deliberations and decisions of the wage fixing body; in any case, where representation is accorded to one side, the other side should be represented on the same footing. The wage fixing body should also include one or more independent persons whose votes can ensure effective decisions being reached in the event of the votes of the employers' and workers' representatives being equally divided. Such independent persons should as far as possible, be selected in agreement with or after consultation with the employers' and workers' representatives on the wage fixing body.

(b) In order to ensure that the employers' and workers' representatives shall be persons having the confidence of those whose interests they respectively represent, the employers and workers concerned should be given a voice as far as is practicable in the circumstances in the selection of their representatives, and if any organizations of the employers and workers exist these should in any case be invited to submit names of persons recommended by them for appointment on the wage fixing body.

(c) The independent person or persons mentioned in paragraph (a) should be selected from among men or women recognized as possessing the necessary qualifications for their duties and as being dissociated from any interest in the trade or part of trade concerned which might be calculated to put their impartiality in question.

(d) Wherever a considerable proportion of women are employed, provisions should be made as far as possible for the inclusion of women among the workers' representatives and one or more women among the independent person mentioned in paragraph (a).

III. For the purpose of determining the minimum rates of wages to be fixed, the wage fixing body should in any case take account of the necessity of enabling the workers concerned to maintain a suitable standard of living. For this purpose regard should primarily be had to the rates of wages being paid for similar work in trades where the workers are adequately organized and have concluded effective collective agreements, or, if no such standard of reference is available in the circumstances, to the general level of wages prevailing in the country or in the particular locality.

Provisions should be made for the review of the minimum rates of wages fixed by the wage fixing bodies when this is desired by the workers or employers who are members of such bodies.

IV.—For effectively protecting the wages of the workers concerned and safeguarding the employers affected against the possibility of unfair competition, the measures to be taken to ensure that wages are not paid at less than the minimum rates which have been fixed should include:

(a) arrangements for informing the employers and workers of the rates in force;

(b) official supervision of the rates actually being paid; and

(c) penalties for infringements of the rates in force and measures for preventing such infringements.

(1) In order that the workers, who are less likely than the employers to have their own means of acquainting themselves with the wage fixing body's decisions, may be kept informed of the minimum rates at which they are to be paid, employers might be required to display full statements of the rates in force in readily accessible positions on the premises where the workers are employed, or in the case of home workers on the premises where the work is given out or returned on completion of wages paid.

(2) A sufficient staff of inspectors should be employed, with powers analogous to those proposed for factory inspectors in the Recommendation concerning the general principles for the organization of systems of inspection adopted by the General Conference in 1923, to make investigations among the employers and workers concerned with a view to ascertaining whether the minimum rates in force are in fact being paid and taking such steps as may be authorized to deal with infringements of the rates.

As a means of enabling the inspectors adequately to carry out these duties, employers might be required to keep complete and authentic records of the wages paid by them, or in the case of home workers to keep a list of the workers with their addresses and provide them with wage books or other similar record containing such particulars as are necessary to ascertain if the wages actually paid correspond to the rates in force.

(3) In cases where the workers are not in general in a position individually to enforce, by judicial or other legalized proceedings, their rights to recover wages due at the minimum rates in force, such other measures should be provided as may be considered effective for preventing infringements of the rates.

B.

The General Conference of the International Labour Organization thinks it right to call the attention of Governments to the principle affirmed by Article 427 of the Peace Treaty that men and women should receive equal remuneration for work of equal value.

Draft Questionnaire relating to the Prevention of Industrial Accidents to be submitted to State Members in view of Discussion in 1929

PART I.

1. Do you consider that the International Labour Conference should adopt a Recommendation embodying the general principle that it is the duty not only of employers and workers, but also of Governments and the general public to use their best endeavours and every means in their power to help to prevent industrial accidents?

2. Do you consider that a Recommendation concerning the prevention of industrial accidents should also deal with all practical measures required for putting into operation the principle indicated in the preceding question?

Do you consider, for example, that the Recommendation should emphasize in the first place the need of organizing constant and systematic research both for elucidating the cause of industrial accidents and for discovering the best methods of preventing them, to be undertaken primarily by official State institutions and assimilate public institutions, with the help of the interested parties or by technical institutions set up by the different branches of industry?

Do you consider that the Recommendation should invite the States Members of the International Labour Organization, with a view to the subsequent preparation of a Draft Convention on the subject, to establish and develop industrial accident statistics for their respective countries, keeping in touch as far as possible with the International Labour Office, with a view to fixing uniform bases as far as possible for the comparative study of the statistics of the different countries?

Have you any suggestions to make as regards the method of arriving at the desired result?

In particular, do you consider that the efforts made should deal first of all with particular branches of industry, and if so, which?

What other matters do you consider should be taken into account in scientific research into the prevention of industrial accidents?

Do you consider that scientific research with the object of preventing accidents should be concerned not only with the material conditions in the various establishments, but also with the human factor?

3. Do you consider that the Recommendation should contain a clause emphasizing the great importance of co-operation between all the parties interested in the prevention of industrial accidents, including employers and workers, and inviting the States Members to do all in their power to develop and encourage such co-operation?

4. Do you consider that the Recommendation should contain provisions to the effect that the responsibility for taking protective measures and in particular for the equipment and upkeep of workplace rests with the employers?

5. Do you consider that the Recommendation should also draw the attention of the workers to the fact that by their conduct in the workplace they can and should contribute to a large extent to the success of the protective measures taken, and that it is accordingly the duty of the workers' organizations to co-operate in the education of their members in order to safeguard them against industrial accidents?

6. Do you consider that, in order to amplify the principle indicated in Question 3 above—i.e. the need of ensuring co-operation between all the interested parties—the Recommendation might usefully invite the States Members to take the following measures:

(a) To encourage instruction in the problems of the prevention of accidents, including first aid hygiene in elementary schools and continuation schools, with a view to educating the whole population.

(b) To see that pupils in technical schools and polytechnics receive adequate instruction in methods of accident prevention, and to draw their attention to its importance from the economic and moral standpoints, so that when they come subsequently to hold posts in industry they may pay special attention to obviating such accidents.

(c) To maintain the interest of pupils in the prevention of accidents after they have entered industry, by means of lectures, cinema films, and visits to undertakings, and to encourage the development of safety museums and practical instruction to be given therein.

(d) To develop, by scientific research and practical application in this sphere, the contribution to accident prevention which may be made by methods of vocational guidance and selection.

7. Do you consider that the Recommendation should refer to the great importance of organizing immediate first aid or medical treatment in industrial plants and workplaces?

PART II.

1. Do you consider that the Recommendation should embody the principle that the law should prescribe regulations for ensuring a minimum standard of safety?

2. Should provision be made, for example, on the following lines as regards employers:

(a) that the employer is bound to equip and manage his undertaking in such a way that the workers will be sufficiently protected, taking account of the nature of the undertaking and the state of technical progress?

(b) that plans for the construction or alteration of industrial undertakings are to be submitted before the work is put into execution for examination by the factory inspectorate or other competent authority in the matter, in order that it may be ascertained whether the plans are such as to satisfy the requirements for the prevention of accidents?

(c) (1) That the bodies responsible for supervising the application of the laws and regulations on the protection of the workers against accidents should be competent to prescribe in each case the steps to be taken by the employer to fulfil his obligations, subject to the right of appeal to an authority specially instituted for this purpose.

(2) If so, should the responsible body be empowered in cases of imminent danger to require the immediate execution of the orders, notwithstanding the right of appeal?

(3) If the answer to part (1) is in the negative, what system do you recommend for ensuring the application of the laws and regulations?

(d) That industrial accident insurance institutions in countries where there is a system of insurance against industrial accidents administered by or under the direction of the State should be

(1) empowered, or

(2) required

to take into account, when fixing premiums,

the measures taken in the various undertakings, for the protection of the workers.

What further importance do you ascribe to accident insurance of workmen's compensation in the matter of accident prevention, and in what way, in your opinion, could accident insurance institutions of insurance companies contribute effectively to the common effort?

3. Do you consider that legal provisions should be adopted to associate the workers with the work of accident prevention and to regulate the part which they should take?

(a) If so, on what points do you consider that legal provisions should be made, and what proposals on these points would you make?

(b) Do you consider, in particular that legal provisions should

(1) contain regulations defining the duty of the workers to comply with the laws and regulations on accident prevention?

(2) provide for the participation of the workers in drawing up and supervising the observation of the provisions?

(c) If the answer to questions (b) (2) is in the affirmative, in what forms (possibly varying according to the particular circumstances of each industry and the size of undertakings, etc.) do you consider that such participation could be effected?

PART III

2 (a) Are you in favour of a Draft Convention or Recommendation to make it compulsory for the sender to indicate the weight on heavy packages transported by ships?

2 (b) If so, at what maximum should the weight be fixed above which the weight should be marked on packages?

Draft Questionnaire regarding Accidents in Loading and Unloading Ships

Do you consider that the Conference should adopt a Draft Convention concerning the protection against accidents of workers employed, on board or ashore, in loading or unloading ships?

If so, to what risks of their employment should the Draft Convention primarily refer? Do you consider that the Draft Convention should cover, for example, the following:—

The question of approaches, roads, lighting, working spaces, safe landing places; competence of persons employed in the control of gear, hoisting and other apparatus; fencing of dangerous places; inspection and testing of all gear, whether fixed or loose gear; safe means of access shore to ship, ship to shore, to holds or other places of working, ship to other ships or barges; height of coamings; safe means of

transport from quay to ship where the ship is not alongside the quay; means of protection for the workers when handling or working in proximity to explosive, inflammable, corrosive or other dangerous or dusty cargo; means of escape from lower holds when working bulk cargo such as coal, etc.; and other matters relating to the general protection of dock workers against accidents;

Adequate methods of inspection and improvement; keeping of registers, etc.;

Provision for the responsibility of the competent authorities for the enforcement of laws based on the Convention;

Provision of first aid; ambulances; setting up of Safety First Committees, and collaboration between workers, employers and public authorities as regards safety?

Resolutions

Proposed International Safety Consultation

Whereas the results obtained by legal regulation and State inspection in the industrial countries with the longest experience of accident prevention show that, while those methods are capable of being, and should be, improved and developed, they are insufficient by themselves to prevent a large number of accidents which are due to such causes as (1) unsafe practices and arrangements; (2) fatigue; (3) want of reasonable care on the part of individual workers; (4) lack of appreciation by new, and especially young, workers of the dangers to which they are or may be exposed, and failure on the part of the management to arrange for adequate instruction of such workers:

The Conference has unanimously adopted the following resolutions and urges that they should be given most earnest consideration by Governments in consultation with employers' and workers' organizations in the chief accident producing industries with a view to their early application.

1. The Conference is of opinion that the time has come to attempt to reach a higher standard of safety by the development of new methods, and believes that the greatest advance can be made on the lines of the movement which has received the name of the "Safety First" movement, and which implies in its application to industry (i) the recognition of accident prevention as an essential part of the organization of the works: (ii) common interest and endeavour on the part of employers and workers in the individual works in seeking to promote a higher standard of safety.

2. While the new methods to be adopted will vary in different industries and in different countries, it is essential (a) that the management, officials and foremen in the individual works should foster throughout the works a due appreciation of the necessity of avoiding accidents, and make it recognized in the works that safety is regarded as a consideration of the highest importance; (b) that all possible steps should be taken to interest the workers in the work of accident prevention.

3. The safety organization in a works should include, among other methods, arrangements for a works investigation of every accident occurring in the works; and the consideration of the methods to be adopted for preventing a recurrence: the systematic supervision of the works, machinery and plant for the purpose of ensuring safety, and in particular of seeing that all safeguards and other safety appliances

are maintained in proper order and position: the explanation to new, and especially young workers, of the possible dangers of the work or the machinery or plant connected with their work; the organization of first aid and ambulance arrangements, and the encouragement of suggestions from the persons employed for rendering work safer.

4. Common interest and endeavour on the part of the employers' and workers' organizations in each country, and co-operation with the State, are equally important. Methods which have been found successful include (a) conferences of employers' and workers' representatives in particular industries and the Government inspectors; (b) establishment of standing district or national, or both district and national, committees for the purpose of reviewing periodically the progress made and considering what further improvements can be adopted.

5. International consultation and exchange of experience between the responsible Government Departments in the highly industrialized countries, as also between the organizations of the employers, between the organizations of the workers, and between the research and other bodies and institutions concerned with the promotion of safety in those countries should be developed. Such international co-operation would be facilitated if it were found possible for the industrialized countries to agree, in respect of any of the chief accident producing industries, upon a uniform basis for the compilation of accident statistics.

6. The Conference suggests that as a means of following up the results of the present Conference, stimulating the adoption of safety first methods, and promoting international consultation in the manner suggested in the last preceding Resolution, meetings of representatives from the highly industrialized countries should be arranged from time to time in collaboration with the International Labour Office, to exchange information and consult and to review the progress made.

Collection of Safety Information

The Eleventh Session of the International Labour Conference requests the Governing Body of the International Labour Office to consider what steps can be taken.

(1) to complete the documentary information in the possession of the International Labour Office on the subject of national legislation on industrial safety in the different industries and on all compulsory provisions

laid down on this matter by central and local authorities;

(2) to prepare comparative tables based on the above-mentioned information.

Resolution to refer to Joint Maritime Commission any proposed Draft Convention concerning protection against accidents of Workers employed in loading or unloading of ships

When the International Labour Office, after the replies of the Governments have been received to the Questionnaire, shall have prepared the Draft Convention. . . this Draft shall be sent to the Joint Maritime Commission, which shall give its opinion on the maritime aspects which some of the proposed clauses may possess. The opinion of the Joint Maritime Commission shall be communicated to all the Governments before the opening of the Session of the Conference which will be called on to decide on the Draft Convention.

Rationalization

On the motion of Mr. JOUHAUX (Workers, France) and Mr. SERRARENS (Workers, Netherlands), the Conference adopted by 101 votes to 0 the following resolution:

The International Labour Conference notes with satisfaction the recent statement of the Consultative Economic Committee of the League of Nations to the following effect:

The Consultative Committee has been happy to note how fruitful has been the collaboration between this organization (the Economic Organization) and the International Labour Office, and hopes that this collaboration will be continued for the considerable work which still remains to be done.

In this spirit, the Conference invites the Office to continue, in liaison with the Economic Organization of the League of Nations, its studies and research concerning the effect of rationalization and international industrial agreements upon the conditions of labour and, in particular, upon:

(1) The wages of the workers and their purchasing power;

(2) Hours of work;

(3) Employment and dismissal and transfer of workers from one undertaking to another, including changes of domicile and the learning of a new trade which may accompany it; and

(4) Conditions of hygiene and safety under which the work is carried on in rationalized undertakings;

And invites the Office to report upon the studies which it has undertaken and the conclusions which emerge from them.

Housing Conditions

The following resolution was adopted unanimously, on the motion of Mr. CHAMAN LALL (Workers, India), supported by Mr. YONEKUBO (Workers, Japan).

In view of the unsatisfactory nature of the housing and general living-in conditions of the workers in many countries, the Conference requests the Governing Body to undertake an investigation of the question of industrial housing and the general living-in conditions of the workers with a view to placing the question on the agenda of an early Session of the Conference.

Dangers to Motor Vehicle Drivers

The Conference unanimously adopted the following resolution moved by Mr. Mertens (Workers, Belgium):

Whereas motor transport has considerably increased in all countries; and

Whereas certain dangers are involved in the work of motor-vehicle drivers and of other workers in the motor transport industry, and it is important to ascertain the extent of these dangers;

The Conference requests the Governing Body of the International Labour Office to consider under what conditions an investigation could be made of this matter by the International Labour Office, and to decide in what form the results of the investigation could be published.

One-Man Driving of Locomotives

After a protest by Mr. DE TOLNAY (Employers, Hungary) on the ground that the subject was outside the competence of the Organization, the Conference adopted by 59 votes to 23 the following resolution, also proposed by Mr. MERTENS:

Whereas alarm has been felt among the bodies of workers concerned at the dangers which may be caused to workers on the railways and to the safety of railway traffic through one-man driving of locomotives and self-propelled vehicles used on railways; and

Whereas it would be desirable for the International Labour Organization to have the real position made clear;

The Conference requests the Governing Body of the International Labour Office to consider under what conditions an enquiry could be undertaken on the matter by the International Labour Office, and to decide in what form the results of the enquiry could be published.

Collective Bargaining in Agriculture

On the motion of Mr. MÜLLER (Workers, Germany) the following resolution was adopted:

Whereas the Labour Part of the Treaties of Peace provides not only for the protection of industrial workers, but also for the protection of agricultural workers, and whereas the International Court of Justice has confirmed this intention of the Treaties; and

Whereas social legislation on behalf of agricultural workers appears in many countries to lag behind social legislation on behalf of industrial and other workers; and

Whereas no differences in processes of production can justify such an inferiority of rights for agricultural workers; and

Whereas, until an improved social legislation for agricultural workers can be enacted, collective bargaining may be employed as a preparatory means for regulating labour conditions in a manner conforming to modern principles of the social protection of workers;

The Conference requests the International Labour Office to undertake an enquiry into existing systems of collective bargaining in agriculture, to form the basis of a discussion at an early Session of the Conference, and with a view to the rapid acceleration in as many countries as possible of this means of improving the conditions of agricultural labour.

The Disabled

The following resolution was adopted on the motion of Mr. Serrarens (Workers, Netherlands):—

Whereas many disabled persons can only engage in a gainful occupation in so far as they have the benefit of some special protection, the number of disabled or infirm persons is considerable, and their employment raises important and complicated problems of protection and remuneration for which solutions must be sought in relation to the interests of the general body of workers; and

Whereas interesting experiments have been made or are at present being carried out by social welfare services or societies and by social insurance institutions for the occupational re-education and the reintegration of persons disabled in the war or through industrial accidents, tubercular persons and other infirm persons; and

Whereas in most countries no general plan for the occupational reintegration of disabled persons has been established, and the methods employed and the results obtained have not so far been the subject of any systematic international study;

The Conference invites the Governing Body to have an international study undertaken by the International Labour Office of the work done and the results obtained in the various countries for the occupational adaptation and the employment of disabled persons, as well as for their protection on the labour market.

Conditions in the Textile Industry

After a brief discussion, the Conference adopted by 54 votes to 21 the following resolution proposed by Mr. Yonekubo (Workers, Japan):—

Considering the economic difficulties which are manifesting themselves in various sections of the textile industry throughout the world; and

Considering that in finding a solution of these difficulties it is necessary to have the fullest possible information, in order to demonstrate the importance of existing legislation and other social measures for the protection of the workpeople engaged in this industry; and

Considering the advisability of determining the exact labour situation in an industry wherein women constitute the majority of the workers, more especially in order to facilitate the ratification and universal application of the International Labour Convention concerning the protection of women and children;

The Conference requests the Governing Body to consider the possibility of undertaking an investigation as early as possible into the conditions of work of men, women and children employed, including wages, hours of work, hygienic conditions, and other conditions affecting their employment, in the textile industries of the various countries of the world.

Private Associations and the Organization

The Conference adopted by 56 votes to 18 the following resolution submitted by Mr. Acevedo (Government, Argentina):—

The Conference, having noted with satisfaction that private associations have been set up in various countries to make known the work of the International Labour Organization and to forward the ratification of the Conventions adopted by the Conference, expresses the hope that the members of the delegations will collaborate in the development of these institutions in those countries where they exist or in the creation of similar institutions in those countries where they are not yet in existence.

The Conference rejected by 47 votes to 32 an amendment proposed by Mr. Oersted (Employers, Denmark) for the deletion of the

words: "And to forward the ratification of the Conventions adopted by the Conference." The amendment was advocated on the grounds that delegates were asked to assist in promoting the ratification of Conventions against which they might actually have voted, and that, if the competent authorities decided not to ratify, support for action directed against that decision would be interference in the internal affairs of the State.

Freedom of Association

By 69 votes to 17, the following resolution, also moved by Mr. Acevedo, was adopted:—

Whereas the International Labour Office, even before the question of freedom of association had been placed in the agenda of a Conference, had regularly, on instructions from the Governing Body, kept in touch with the situation and collected the documents, and these studies, continued for several years, had not been inefficacious; and

Whereas the difficulties encountered by the Tenth Session of the International Labour Conference can be regarded only as a further reason for defining the concept of freedom of

association and describing its various aspects, and it is important in this manner to avoid any new difficulties in future;

The Conference requests the Governing Body to have the monographs which have already been prepared by the Office regularly kept up to date, to continue to collect all the facts or expressions of opinion which will enable it to follow the evolution of ideas, and finally to consider in what form it might be possible with a chance of success to place the question upon the agenda of an early Session of the Conference.

Official Languages

Arising out of a proposal made jointly by Mr. Jouhaux and Mr. Mertens, that German should be an official language in the Governing Body and at the Conference, and for the purposes of all the publications of the International Labour Office, suggestions were made for amendments to include Spanish, Italian, Portuguese and Dutch among the official languages. It was decided by 73 votes to 6 to refer the whole question to the Governing Body for consideration and report.

Annual Report of the Director of the International Labour Office

The annual report of Mr. Albert Thomas, the Director of the International Labour Office, was presented to the eleventh session of the Conference. It deals with the work of the Organization during the calendar year 1927. It is divided into two parts, Part I reviewing the general activity of the Organization during the year, while Part II contains the summary of the annual reports submitted by the Governments, in accordance with Article 408 of the Treaty, on the measures taken by them to give effect to Conventions to which they are parties.

After Eight Years

The Director sums up the lessons of the experience of the first eight years of the existence of the Organization. It "appears to have established its right to exist in a world which it seeks to help to reorganize on the basis of principle of justice. It has no need to abandon any of its prerogatives or any of its functions; its activities are no longer disputed. Whatever divergences of opinion may exist among its States Members, they all co-operate unreservedly and with equal devotion in its work. * * *

"It is, in fact, a real cause for gratification" the Director continues, "to note how the authority of the Office is growing from year

to year and confidence in its work is being continually maintained. Secretaries of employers' organizations are repeatedly applying to the Office for detailed information on conditions of work in competing countries, and employers in these latter countries reply through the intermediary of the Office—trade-unions, too, apply for information, and occasionally for advice, to help them over their difficulties, or, when there is no Convention on which legal action can be taken, appeal for the Office's moral support in their relations with Governments, and the Governments accept the Office's prudent and tactful intervention with sympathy and goodwill—the Director, rather as head of the Office than on personal grounds, is asked to preside over joint advisory committees or to act as umpire in arbitration proceedings between Governments and private companies—surely all these facts are ample evidence of the moral credit which the Office has gradually won in the course of the last few years.

"This result is surely due to the unceasing effort which the Office has made, in spite of criticism, to maintain and enlarge the sympathy shown towards it in its early days, and also to a very considerable extent to its scientific work. The Office is fully aware of the many gaps and deficiencies in its work of 'international information'. It has con-

ducted so many enquiries and researches in all sorts of directions that it could not help but realize the incompleteness and uncertainty of some of its scientific work. Nevertheless, it may be said that the position which the Organization has now acquired is very largely due to the Office's constant endeavours to be unswervingly objective and impartial. Great as this moral authority may be, however, it has no value and will have no permanence unless it helps the Office to discharge its essential function, i.e., to build up a body of international labour legislation. In this direction progress is being made, though perhaps not at the same pace as in the earlier days."

After a period of comparative slackness Mr. Thomas notes signs of renewed interest on the part of member States in ratifying past Conventions. But however that may be the usefulness of these Conventions is not fully indicated by the number of ratifications. "Year by year," he says, "it becomes more true that even unratified Conventions exercise considerable influence on national legislation. It is significant that at each Session of the Conference Government, employers' and workers' delegates from 30 or 40 countries should compare their own legislation, institutions and experience. Every chapter of the second section of this Report bears witness to the fruitfulness of this co-operation. Although it will no doubt take many years to build up by ratifications a single code or a uniform international system, it is noteworthy that the different States are gradually coming to base their national laws on common principles."

"Another result, less visible perhaps but not less certain, of the work of the Conference and the Office is that it provides a rallying point for the various forces for social progress throughout the world, which need to be brought into mutual contact, and so opens up to them further opportunities for making themselves felt.

"A unity of outlook and an identity of purpose in the matter of social reform are being created which undoubtedly constitute one of the surest benefits of the operations of the International Labour Organization. It is to be anticipated, moreover, that if it continues to work along these lines, the Organization will make steady advance towards its goal—to improve the living and working conditions of the workers in accordance with the principles of the Peace Treaty."

Arrangement of the Report

Part I of the report is divided into two sections, section I dealing with the general

working of the Organization, including questions of organization, international information, and relations; while section II reviews the results so far obtained. The second section opens with a short review of the economic situation in 1927, including some notes on the progress of industrial organization and rationalization, followed by tables indicating the progress made in the ratification of conventions and in the application of recommendations. The section concludes with a sketch of the standing of the various countries in regard to (1) Working conditions, including hours of work, holidays, health, etc.; (2) Social insurance; (3) Wages; (4) Possibilities of employment; (5) Protection of special classes of workers; (6) Living conditions; and (7) the workers' general rights.

Organization

A full account is given in the first part of the composition and general constitution of the Organization, this section dealing with the legal question raised in the past; and describing the work of the Governing Body and its various committees; the form of the Office at Geneva; the financial arrangements of the Organization and its relations with the League of Nations. The Director admits that there is some risk that the generous desires of the nations may be buried under a mass of legal abstractions and formalities, and points out that this danger can only be averted by vigilance. He makes a plea for more order, more method, and more clarity of idea in the international institutions as a whole, and concludes by asking "Has not the time now come for a 'town planning' scheme, for defining the respective positions of each institution and its future possibilities, and for laying out the general lines of the new city on definite principles and in the light of a critical examination of the work being done by the various existing institutions?"

Information

The report next outlines the existing arrangements for disseminating information in regard to the subjects within the sphere of the work of the International Labour Organization. A repository of information is maintained at Geneva, consisting of a library service of documents, moving picture films and collection of pictures. Collective agreements are recorded; and the Office has in course of preparation an international dictionary of labour law. The Office also maintains a great statistical service which is rendering invaluable service in international investigations.

The various publications of the Office are enumerated, including the weekly *Industrial and Labour Information*, the monthly *International Labour Review*, the Legislative Series (texts of labour laws), Studies and Reports (on various subjects); "Industrial Safety Survey", the Monthly Record of Migration, etc., in addition to numerous special publications. On this voluminous literary work the Director states that the Office is becoming more and more certain of the value of what it is doing. When it finds its large publications on social insurance, migration or industrial hygiene or safety being used as handbooks or works of reference in public administrative departments or in the research sections of employers' or workers' organizations, it is convinced of the real practical value and day-to-day utility of its work. There is a close relation between the Office's researches and studies and the advance which is being made in the different subjects of social reform.

Relations

Under this head the Director describes the relations which have grown up between the Organization and the universities, the churches, charitable organizations, workmen's and employers' organizations. It is stated that in its relations both with industrial organizations and with the other associations referred to, the Office has secured valuable results; that on all sides collaboration between it and these outside bodies is being established on a more permanent and definite basis; and that this collaboration is no longer furnished merely by responsible heads or secretaries but is the outcome of the united will of all the members of the different bodies concerned. But it is doubtful whether any combined action is even partially possible, unless it be directed to a common object. And it is just the value of the International Labour Organization that it furnishes such an object.

Results

The second section of the Report describes the results that were obtained during 1927 from the activities of the Organization. Progress was impeded to some extent by depression in economic conditions but during the year a new stage was passed in the economic recovery of the world, the way being thus cleared for further progress in social reform. Tables are given showing the progress made during the year in each of the Draft Conventions and Recommendations. The follow-

ing table gives these results in condensed form:—

	1 April 1927	15 March 1928
Ratifications communicated..	229	263
Ratifications authorized.....	25	34
Ratifications recommended...	147	180

The number of ratifications consequently increased by 34 between 1 April, 1927, and 15 March, 1928. During the slightly longer period from April, 1926, to April, 1927, there were 35 ratifications. Regular and steady progress is thus being made.

The Director points out that in some cases the quality of ratifications is of more importance than their quantity. One unconditional ratification of the Hours Convention is of greater significance than the ratification of two or three Conventions of far less importance from the point of view of international competition or of working class standards.

Referring to the failure of certain countries to carry out and apply conventions they have ratified, the Director points out that without ratification the work of the Organization would be extremely incomplete if not entirely futile. The ratification of a Convention by a country in which the provisions of the Convention are already, generally speaking, applied is calculated to remove the hesitation of a number of other countries and to assist the Office considerably in its efforts to persuade the States to ratify.

Mr. Thomas regards with some apprehension the recent device of conditional ratifications whereby certain countries have made ratification of a Convention conditional upon its ratification by certain other countries, a practice which if it became general "might jeopardize the effectiveness of the International Labour Organization as a whole."

The report analyses the situation existing in the various countries in regard to the following subjects which have been covered by Draft Conventions and Recommendations: working conditions; social insurance; wages; possibilities of employment; protection of special classes of workers; workers' living conditions, and general rights.

EMPLOYMENT AND UNEMPLOYMENT IN CANADA DURING MAY

THE following information as to the employment situation in Canada is based upon reports from four sources:—

(1) The Dominion Bureau of Statistics receives reports each month from most of the larger employers of labour throughout Canada in all industries except agriculture, fishing, hunting and highly specialized business, the returns representing firms employing fifteen workers or more. The number of firms so reporting in April was 6,533. An employment index number is maintained, based on the number of workers employed by such firms in January, 1920, as 100:

(2) The Department of Labour receives reports from local trade unions throughout Canada, showing the number of their members

who were unemployed in the period under review. The number of unions reporting for April was 1,697. It should be understood that the report on the number of unemployed workers refers only to organized labour, no figures being available as to the number of unorganized workers who were without employment;

(3) The Department of Labour receives reports from the 64 offices of the Employment Service of Canada showing the number of applications for work, the existing vacancies and the number of workpeople placed in positions;

(4) The Dominion Bureau of Statistics receives each month detailed statistics from 63 cities throughout Canada, showing the value of permits granted during the period for various classes of building construction.

Employment Situation at the Beginning of June, 1928, as Reported by the Employers Making Returns to the Dominion Bureau of Statistics

Employment at the beginning of June showed a further pronounced gain, resulting in a more favourable situation than in any other month of the record. Statements were tabulated by the Dominion Bureau of Statistics from 6,533 firms with 943,344 employees, as compared with 884,262 on May 1; this increase of 59,082 persons, or 6.7 per cent, brought the index number to 112.4, or nearly three points above the previous high level in the last eight years, recorded on September 1, 1927. In the preceding month, the index stood at 105.5 and on June 1, 1927, 1926, 1925, 1924, 1923, 1922 and 1921, it was 105.9, 101.0, 94.5, 95.2, 97.3, 89.2 and 86.6, respectively. The increase on the date under review involved more workers than that indicated in any other month of the record.

Unusually large advances were registered in manufacturing, construction and transportation, while logging, trade, services, mining and communications also showed important increases.

Employment by Economic Areas

Expansion was noted in all of the five economic areas, firms in Quebec and Ontario employing the greatest number of extra workers.

Maritime Provinces.—Further improvement was noted in the Maritime Provinces, according to statistics received from 563 employers with a combined working force of 70,937 persons, as compared with 66,838 in the

preceding month. This gain was much larger than that reported on June 1 last year, when the index was several points lower. Manufacturing (particularly of lumber and fish products), and construction registered heightened activity, while logging, coal mining and transportation were seasonably slacker.

Quebec.—Construction, manufacturing and transportation recorded pronounced increases in personnel, and smaller gains were shown in logging, mining, services and trade; the gain in logging was due to river-drives. Employment was in considerably greater volume than on the same date in any of the last seven years, the index being over three points higher than on June 1, 1927, when important advances had also been indicated. Statements were tabulated from 1,416 firms employing 261,222 workers, or 18,497 more than in their last report.

Ontario.—The situation in Ontario was better than in any other month of the years since 1920, the index standing at 108.5, as compared with 101.5 at the beginning of June, 1927, when the trend was also upward. The payrolls of the 3,001 co-operating establishments aggregated 395,343 persons; on May 1, they had 376,864 employees. Manufacturing (particularly of iron and steel and lumber products), construction and transportation registered the greatest expansion, but gains were also noted in mining, trade, logging and services.

Prairie Provinces.—Construction, especially railroad construction, transportation, manufacturing and services reported the most marked improvement in the Prairie Provinces, where the 850 firms whose statistics were tabulated employed 132,646 persons, as against 118,210 in the preceding month. Much smaller increases were indicated on June 1, 1927, and the index then was many points lower; the additions to staffs on the date under review were greater than in any other month of the record, bringing the index to the highest point yet reached.

Employment by Cities

The trend of employment was decidedly upward in seven of the eight cities for which separate compilations are made; Montreal, Quebec, Toronto, Hamilton, Windsor and the Other Border Cities, Winnipeg and Vancouver showed considerable gains, while moderate declines were noted in Ottawa.

Montreal.—Improvement on a larger scale than in any other period of the record, was noted in Montreal, where the 760 co-operating firms employed 127,773 persons, an increase of

EMPLOYMENT IN CANADA AS REPORTED BY EMPLOYERS

NOTE.—The curve is based on the number of employees at work on the first day of the month, as indicated by the firms reporting, in comparison with the number of employees they reported in January, 1920, as 100.

British Columbia.—An aggregate payroll of 83,196 workers was registered by the 703 reporting employers, who had 79,625 at the beginning of May. Employment was in greater volume than in the early summer of any of the last eight years. As in the other provinces, construction and manufacturing recorded the most noteworthy expansion on the date under review, but logging and other groups also showed heightened activity. Table I gives index numbers by economic areas.

7,902 over their staffs on May 1. Transportation, construction and manufacturing reported the greatest increases, but trade was also busier. The index was at the highest point yet reached.

Quebec.—Continued gains were registered in Quebec City, chiefly in construction. Statements were tabulated from 103 establishments having 11,002 workers, as against 10,587 in the preceding month. Considerable advances had also been indicated on June 1, 1927, when the index was lower. Employment on the date under review was in greater volume than in

the same month of any other year of the record.

Toronto.—The situation in Toronto continued better than in any other period in the six years for which statistics are available, according to returns furnished by 848 employers with 112,328 persons on their payrolls, compared with 110,093 on May 1. Manufacturing, particularly of iron and steel products, was much busier, and improvement was also shown in construction, trade and transportation. The general gain considerably exceeded that noted in June, 1927.

Ottawa.—Construction recorded heightened activity in Ottawa, but manufacturing was quiet. Employment was, however, at a higher level than at the beginning of June last year, when an advance had been made. A combined working force of 12,031 employees, or 123 less than in their last report, was indicated by the 142 co-operating firms.

Hamilton.—Additions to staffs on a larger scale than on June 1, 1927, were reported in Hamilton; 212 employers had 32,151 workers on their paylists, as compared with 31,131 at the beginning of May. Most of the expansion took place in manufacturing, notably in iron and steel plants, but other industries were also busier. Conditions were better than on the same date a year ago.

Windsor and the Other Border Cities.—Further marked improvement was registered in automobile factories in the Border Cities, while other groups showed only small changes. The 124 firms furnishing data reported 16,989 employees, or 1,302 more than in the preceding month. Employment was in greater volume than in any other period of the record.

Winnipeg.—An aggregate working force of 30,188 persons was indicated by the 292 employers whose statistics were received, and who had 29,705 employees on May 1. This gain involved about the same number of persons as that noted at the beginning of June, 1927, but the index was then several points lower. General improvement was recorded in trade, communication and manufacturing.

Vancouver.—Manufacturing and construction reported the bulk of the gain in Vancouver, where transportation was rather slacker. Statements were tabulated from 248 employers with 27,249 workers in their employ, or 603 more than on May 1. Improvement was also indicated on June 1 of a year ago, when the situation was not so favourable.

Index numbers by cities are given in Table II.

Manufacturing

Statements were tabulated from 4,035 manufacturers employing 518,547 operatives, as compared with 501,836 in the preceding month. This increase was more extensive than that reported on the same date in any other year of the record except 1922, while employment was at its maximum for the last seven years. Lumber mills and iron and steel plants registered the greatest gains, those in the former being of a seasonal nature, while important advances were also made in fish-preserving, pulp and paper, vegetables foods, building material, rubber, electric current, electrical apparatus, mineral products and some other industries. On the other hand, boot and shoe and textile plants were seasonally slacker.

Animal Products, Edible.—There were further pronounced increases in the number employed in this group, particularly in the fish-preserving division in the Maritime Provinces and British Columbia. Statistics were tabulated from 243 firms employing 18,460 persons, as compared with 16,982 in the preceding month. This increase, which was not so extensive as that reported on June 1, 1927, nevertheless brought the index to a higher point than on the same date in any other year of the record.

Leather and Products.—Employment in this group, chiefly in tanneries, showed a falling-off exceeding that of the corresponding month last year, but the index numbers were practically the same. The working forces of the 194 co-operating employers totalled 17,139 persons, as against 17,587 in the preceding month. The largest declines were in Quebec and Ontario.

Lumber and Products.—Continued seasonal expansion was noted in lumber mills, and there were also gains in container factories, but vehicle works were slacker. Returns were compiled from 739 manufacturers in the lumber group, having 54,987 employees, compared with 49,206 at the beginning of May. All provinces shared in the upward movement on June 1, the greatest advance taking place in Ontario. Larger additions to staffs were made on the same date last year, when the index was rather higher.

Musical Instruments.—For the first time in 1928, there was a favourable movement in employment in musical instrument factories, 40 of which enlarged their payrolls from 2,688 persons at the beginning of May to 2,907 on

June 1. This improvement exceeded that indicated on the same date last summer, but employment then was on a higher level. Most of the advance took place in Quebec.

Plant Products, Edible.—Unusually large increases were noted in this group at the beginning of June, when 1,302 persons were added to the forces of the 318 co-operating

manufacturers, who had 27,210 employees. Sugar and syrup, fruit and vegetable canning, biscuit and confectionery establishments reported most of the improvement, which occurred mainly in Quebec and Ontario. The increase registered on June 1, 1927, was considerably smaller, and the situation then was not quite so favourable.

NOTE: Number employed by the reporting firms in Jan. 1920=100 in every case. The "Relative weight" in Tables 1, 2, 3 and 4 shows the proportion of employees in the indicated area or industry to the total number of all employees reported in Canada on the date under review.

Pulp and Paper Products.—Further important additions to staffs were registered in this group, chiefly in pulp and paper mills, but also in paper product factories and in printing and publishing. This increase brought the index number to a higher point than in any other month of the record. An

aggregate payroll of 62,409 workers was reported by the 474 establishments whose statistics were compiled, which had employed 60,939 in the preceding month. A considerable proportion of the advance took place in Quebec.

TABLE IV.—INDEX NUMBERS OF EMPLOYMENT IN CANADA BY INDUSTRIES (JAN. 1920=100)

Industries	Relative Weight	June 1 1928	May 1 1928	June 1 1927	June 1 1926	June 1 1925	June 1 1924

¹The "Relative Weight" column shows the proportion that the number of employees in the indicated industry is of the total number of employees reported in all industries by firms making returns on the date under review.

Rubber Products.—Thirty-seven rubber factories recorded a combined working force of 15,769 persons, or 349 more than in their last return. Most of the gain was in Ontario. Employment was in greater volume than at the beginning of June a year ago, when an increase on practically the same scale was noted. The index was, in fact, higher than in any other month since the series was instituted.

Textile Products.—There was a seasonal reduction in activity in textiles on the date under review, chiefly in clothing factories in Ontario. Data were received from 518 firms employing 76,187 persons, as against 76,690 in the preceding month. This contraction involved a rather larger number of workers than that indicated on June 1, 1927, when the index was practically the same.

Tobacco, Distilled and Malt Liquors.—Activity in this group showed a slight falling-off, according to 131 employers, whose staffs declined from 14,506 in the preceding month, to 14,343 on the date under review. Quebec and Ontario shared in this decrease, which contrasted with the increase shown on the corresponding date last year. The index number then, however, was about 12 points lower.

Chemicals and Allied Products.—Statements were tabulated from 114 plants in this division, with 7,355 persons on their payrolls, as against 7,252 in the preceding month. The index number was higher than in any month of the years since 1920.

Clay, Glass and Stone Products.—Further and more marked improvement was shown in building material plants, 128 of which reported an aggregate working force of 11,623 persons, or 726 more than on May 1. The index was at its maximum for the record of nine years. Quebec, Ontario and the Prairie Provinces reported the bulk of the increase, in which all branches of the industry shared.

Electric Current.—A further advance on a larger scale than in previous years was shown in electric current plants; the index was higher than in any other month since the series was commenced. The 92 co-operating companies increased their staffs by 817 workers to 14,024 at the beginning of June. Quebec and Ontario recorded the greatest gain, while the tendency in British Columbia was downward.

Electrical Apparatus.—Heightened activity was shown in electrical appliance factories, 47

of which enlarged their payrolls by 542 employees to 11,914 on the date under review. This increase brought employment to a higher level than in any other period of the record; curtailment had been indicated in this industry on the corresponding date in most years of the record. Ontario firms registered practically all the advance.

Iron and Steel Products.—For the fifth consecutive month there was an important increase in iron and steel works; land vehicle, shipbuilding, general plant machinery and other industries reported considerable improvement, resulting in a higher index than in any other month since 1920. Returns were tabulated from 673 manufacturers employing 149,600 persons, compared with 145,314 on May 1. Additions to staffs were noted, particularly in Ontario, but also in all provinces except the Maritimes. The tendency on June 1, 1927, was unfavourable, and the index then was practically ten points lower.

Non-ferrous Metal Products.—Smelters and refineries and manufacturers of lead, tin, zinc and copper products reported heightened activity, according to 108 firms employing 17,735 persons, compared with 17,468 at the beginning of May. This increase, which took place chiefly in British Columbia, exceeded that recorded at the beginning of June of a year ago, when the index number was between six and seven points lower.

Mineral Products.—Continued seasonal advances were noted generally in this group, in which they were of practically the same size as those indicated on June 1, 1927, when the index number was many points lower. An aggregate payroll of 11,055 persons was employed by the 77 co-operating firms, who had 10,754 in the preceding month.

Miscellaneous Manufacturing Industries.—The production of roofing materials and various other articles listed under this heading showed an increase, 147 workers having been added to the forces of the 69 manufacturers whose returns were tabulated and who employed 4,217 at the beginning of May.

Logging

Employment in logging camps, chiefly owing to river driving operations in Quebec showed an advance, which was on a larger scale than on the same date in the preceding year. The index number then, however, was very slightly higher. Returns were received from 236 firms employing 20,125 persons, or 1,823 more than on May 1.

Mining

Coal Mining.—Employment in both eastern and western coal fields was seasonally slacker, the index being practically the same as on June 1, 1927. Statements were compiled from 90 operators with 25,601 employees, or 794 less than at the beginning of May.

Metallic Ores.—Considerable improvement was shown in metallic ore mines in Ontario and the Prairie Provinces; 66 employers enlarged their staffs from 13,617 workers on May 1 to 13,978 at the beginning of June. The index was higher than in any other month since the series was commenced. Slightly larger gains had been noted on June 1 a year ago.

Non-Metallic Minerals (other than coal).—According to data received from 71 firms in this group, they employed 8,472 persons, or 891 more than in the preceding month. This increase, which exceeded that indicated in any other period of the record, brought the index number to its peak for the last nine years. Quebec and Ontario reported the greatest advance, but the tendency was generally upward.

Transportation

Street Railways and Cartage.—A further increase in employment was registered in local transportation on June 1, when 123 companies added 1,076 employees to their staffs, bringing them to 22,259 on the date under review. This gain was considerably larger than that noted on the corresponding date in 1927, when the index was some nine points lower. Improvement was shown in Quebec, Ontario and the Prairie Provinces.

Steam Railways.—Continued and greater expansion was noted in steam railway operation at the beginning of June, when 104 co-operating employers enlarged their staffs from 78,177 in the preceding month to 82,816 in the month under review. Ontario and the Prairie Provinces reported most of the increase, which was larger than on June 1 in any other year of the record. The index was also at its maximum for this date in the years since 1920.

Shipping and Stevedoring.—There were pronounced seasonal losses in employment in the Maritime Provinces, while in Quebec and Ontario the trend was decidedly upward. Statistics were received from 64 firms with 16,643 employees, as compared with 13,951 in the preceding month. Smaller gains were

noted on June 1, 1927, and the index then was lower.

Communications

Continued improvement was indicated on telephones and telegraphs; 187 companies enlarged their staffs from 25,481 persons on May 1 to 25,886 in the period under review. Employment was more active than on June 1 in earlier years in the history of this series.

Construction and Maintenance

Building.—The volume of employment afforded in building was greater than in the early summer of any other year of the record, which goes back to 1920. The additions to forces involved a greater number of persons than those previously registered since the series was commenced. An aggregate staff of 39,597 was reported by the 519 contractors furnishing statistics, who had 34,174 employees on May 1. Activity increased in all provinces, but the largest gains were in Quebec.

Highway.—The 163 highway and road contractors furnishing returns had 21,878 persons in their employ, or 9,831 more than at the beginning of May. This improvement, in which all provinces shared, was more pronounced than on June 1 in any other year since 1920, and the level of employment was unusually high for the early summer.

Railway.—Continued advances were registered by the track departments of the railways, the expansion being larger than on the same date in 1927, while the index was higher than in any other month since the series was instituted. The working forces of the 45 employers totalled 57,366 persons, as against 43,757 in the preceding month. The most noteworthy increases were in the Prairie Provinces, but there was marked improvement in all provinces except British Columbia.

Services

Hotels and restaurants showed their customary seasonal increase, while only small changes took place in other branches of this group. Statements were compiled from 182 firms employing 17,930 workers, as compared with 16,982 on May 1. The index was higher than on June 1 in any other year of the record.

Trade

Improvement was indicated in both retail and wholesale trade; 648 establishments reported 72,246 employees, or 1,285 more than

in their last return. This gain was slightly larger than that noted on June 1 in any other year since 1920, in all of which the level of employment was lower.

Tables I, II, III and IV give index numbers of employment by economic areas, leading cities and industries.

The columns headed "relative weight" show the proportion that the number of employees reported in the indicated area or industry is of the total number of employees reported in Canada on the date under review.

Unemployment in Trade Unions in Canada at the Close of May, 1928

The term unemployment as used in the following report has reference to involuntary idleness due to economic causes. Persons who are engaged in work other than their own trades, or who are idle through illness, are not considered as unemployed. Unions which are involved in industrial disputes are excluded from our tabulations. As the number of unions making returns varies from month to month with consequent variation in the membership upon which the percentage of unemployment is based, it should be understood that such figures have reference only to the organizations reporting.

April this year—Saskatchewan alone reported an increase in idleness and this was slight, while of the gains in employment in the other provinces the most notable was that of 4.0 per cent registered in Quebec.

A separate record is compiled each month of unemployment existing in the largest city of each province with the exception of Prince Edward Island. Of these Regina, with 6.3 per cent of unemployment at the close of May, reported the largest percentage of any of the cities in the comparison, an increase in unemployed members of 1.4 per cent over April. Edmonton also registered a slightly

PERCENTAGE OF UNEMPLOYMENT AS REPORTED BY TRADES UNIONS

Further improvement in the trade union employment situation was apparent at the close of May, from a tabulation of reports from 1,697 labour organizations embracing a membership of 182,383 persons. Of these 6,657 were without work on the last day of May, a percentage of 3.7 contrasted with 5.2 per cent of unemployment in April. The employment gains over April did not appear to be localized in any one section of the country, but were generally distributed throughout the provinces. In comparison with the returns for May, 1927, when the unemployment percentage stood at 5.2—the same percentage as in

less favourable situation when compared with April, though the unemployment percentage was not outstanding in either month. From the remaining cities slightly greater activity was registered, the gains in employment ranging from 2.3 per cent in Winnipeg to .2 per cent in Vancouver. When comparison is made with the returns for May, 1927, Montreal unions recorded substantial improvement during the month under review followed by lesser increases in employment in Halifax, Toronto, Winnipeg, Edmonton and Vancouver unions while unions in Regina and St. John reported contractions in employment afforded.

The chart which accompanies this article illustrates the unemployment trend from January, 1922, to date. The curve during May again proceeded downward showing that employment was more plentiful than at the close of April. The trend paralleled that of May, 1926, but the level attained at the close of May this year was somewhat lower than last.

The manufacturing industries during May reported practically no change in the percentage of unemployment when compared with April, though fluctuations occurred within the various industries. The percentage for May was based on the returns tabulated from 463 unions in the manufacturing industries with 51,268 members, 4.4 per cent of whom were idle on May 31, compared with 4.5 per cent on the last day of April. In this comparison printing tradesmen, pulp workers and paper makers, wood, leather and glass workers, cigar makers, and general labourers all reported an advance in employment during May which, however, the contractions among iron and steel workers and textile and garment workers were almost sufficient to offset. Substantial improvement was manifested during May in the manufacturing industries in comparison with May, 1927, when 8.9 per cent of unemployment was recorded, the increase in activity in the garment trades of Quebec and in the iron and steel trades being largely accountable for the change.

From unions of coal miners 39 reports were received at the close of May, covering a membership of 15,489 persons, 7.0 per cent of whom were idle as compared with 10.7 per cent in April. The Alberta situation in the coal mines improved considerably during May compared with April, and Nova Scotia unions also reported augmented employment. From the British Columbia unions no unemployment was registered, compared with a nominal unemployment percentage in April. A slightly greater volume of work was afforded in the coal mines as a whole during May this year than in the same month a year ago, when 8.5 per cent of the members were reported without work, due to a higher level of employment in the Alberta mines. The change in Nova Scotia was nominal, while in British Columbia no idle members were reported in either of the months under comparison.

The building trades, with 199 unions reporting 21,180 members, showed a further and noteworthy gain in employment during May when compared with the preceding month and slight increases in available work over May last year, the unemployment percentage on May 31 this year standing at 8.2 contrasted with percentages of 13.6 and 9.3 in April

this year and May, 1927, respectively. Bridge and structural iron workers reported a considerable increase in the volume of unemployment during May when compared with April, while the situation for electrical workers remained unchanged. Apart from these all other tradesmen contributed in varying measures to the total group advancement, the improvement being particularly pronounced among bricklayers, masons and plasterers. The most noticeable increase in activity in comparison with the May returns of last year was evident, as in the previous comparison, among bricklayers, masons and plasterers, while the situation as affecting painters, decorators and paper-hangers, granite and stoncutters, plumbers and steamfitters and bridge and structural iron workers also improved. On the other hand, employment was somewhat less prevalent for carpenters and joiners, hod carriers and building labourers, tile layers, lathers and roofers and electrical workers.

The 667 unions of transportation workers from which reports were received at the close of May with a combined membership of 61,508

TABLE I.—PERCENTAGES OF UNEMPLOYMENT IN TRADE UNIONS BY PROVINCES

persons indicated that 1.8 per cent of their members were idle, compared with 3.2 per cent of unemployed members in April, the increase in employment for steam railway employees and navigation workers causing the favourable tendency in the group as a whole. Street and electric railway employees, on the other hand, reported nominal percentages of inactivity in both the months used for comparative purposes, while among teamsters and chauffeurs employment declined slightly. The situation among transportation workers was nominally better during May than in the same month of 1927, when 2.1 per cent of unemployment was registered, steam railway employees and navigation workers again being wholly responsible for the favourable change, while among teamsters and chauffeurs and street and electric railway employees there were slight contractions in activity.

Among longshore workers, whose returns are tabulated separately, 13 unions reported in May with 7,177 members, 1,395 of whom were unemployed, that is, a percentage of 19.4 compared with 15.2 per cent of unemployment in April and 17.2 per cent in May a year ago.

Reports were tabulated from 145 unions of workers engaged in governmental service during May, whose membership aggregated 13,097 persons. Of these the percentage unemployed was very small in comparison with a nominal percentage of unemployment in April and a negligible percentage in May a year ago. Civic employees were more nearly fully engaged during May than in either the previous month or May of last year, and among federal employees covered no unemployment was recorded in any of the months used for comparison.

The reports tabulated from 116 unions in the miscellaneous group of trades with 5,793 members indicated an unemployment percentage of 4.6 at the end of May, as compared with 5.9 per cent in April. Hotel and restaurant employees, barbers, and stationary engineers and firemen were better employed than in April, while theatre and stage employees reported a minor decline in activity. The situation in the group as a whole also showed some improvement over May last year, when 6.6 per cent of idleness was registered. This amelioration was due to the better conditions prevailing for theatre and stage employees, stationary engineers and firemen and barbers. Less activity, however, than a year ago was reported among hotel and restaurant employees.

Among retail shop clerks the unemployment percentage was less than one per cent in May, compared with a nominal percentage in April and no inactivity in May last year.

Fishermen reported 1.1 per cent of unemployed members during May, in contrast with no idleness in April and with a percentage of 5.9 in May last year. From lumber workers and loggers 5 reports were received during May, reporting a membership of 896 persons, 9.5 per cent of whom were out of work on May 31, compared with 3.1 per cent in April and with no unemployment in May last year.

Table I on page 772 summarizes the returns by provinces for May of each year from 1919 to 1925, inclusive, and for each month from January, 1926, to date, while table II on page 773 shows the percentages of unemployment reported in the various groups of industries for the same months.

Employment Office Report for May, 1928

The volume of business transacted in the offices of the Employment Service of Canada during the month of May, 1928, as shown by the average daily placements effected, showed increases of nearly 12 per cent and 26 per cent, respectively, when the records were compared with those of the preceding month and with those of May last year. Under the former comparison all groups showed gains except farming, while the only group to show a decline from the corresponding month a year ago was logging, and in this the decrease was nominal.

The accompanying chart shows the trend of employment since January, 1926, as represented by the ratio of vacancies offered and of placements effected for each 100 applica-

tions for work registered at the offices of the Service throughout Canada, computations being made semi-monthly. It will be noted that the curve of vacancies in relation to applications showed an upward trend during the first half of May, declining only a fraction of a point during the latter half of the month, while the curve of placements rose steadily throughout the period under review. In both instances the levels attained were about 9 points higher than those shown at the close of May, 1927. The ratio of vacancies to each 100 applications was 88.0 during the first half and 87.6 during the second half of May, in contrast with the ratios of 82.3 and 79.4 during the corresponding periods of 1927. The ratios of placements to each 100 applications

during the periods under review were 80.9 and 81.3, as compared with 74.4 and 72.0 respectively during the corresponding month of 1927.

The average number of applications for employment received daily by the offices of the Service throughout Canada was 3,000 during the first half of May, as compared with 1,918 during the preceding period, and with 1,803 during the first half of May, 1927. Applications for work during the latter half of the month numbered 1,908 daily, in contrast with 1,725 daily, during the latter half of May a year ago.

The average number of vacancies reported by employers to the Service daily was 1,848 during the first half and 1,672 during the latter half of the month under review, as compared with a daily average of 1,485 and 1,369 vacancies during the month of May, 1927. Vacancies offered to the Service during the latter half of April, 1928, averaged 1,638 daily.

The average number of placements made daily by the offices of the Service during the first half of May, 1928, was 1,698, of which 1,047 were in regular employment and 651 in work of one week's duration or less, as compared with a total average of placements during the preceding period of 1,487 daily, and with 1,342 daily during the first half of May a year ago. During the latter half of the month under review, placements averaged 1,552 daily (966 regular and 586 casual) as compared with an average of 1,243 daily, during the corresponding period of 1927.

During the month of May, 1928, the offices of the Service referred 43,680 persons to vacancies, and effected a total of 42,237 placements. Of these the placements in regular employment were 26,162, of which 21,859 were for men and 4,303 for women, while the placements in casual work totalled 16,075. The number of vacancies reported by employers was 32,140 for men and 13,602 for women, a total of 45,742, while applications for work numbered 52,089, of which 38,396 were from men and 13,693 from women.

The following table gives the placements effected to date by the offices of the Employment Service of Canada:—

Year	PLACEMENTS		
	Regular	Casual	Totals
1919 (10 months).....	268,001	37,904	305,905
1920.....	356,547	79,235	445,812
1921.....	280,518	75,238	355,756

1928 (5 months).....	90,038	51,022	141,060

NOVA SCOTIA

Opportunities for employment as indicated by orders received at employment offices in the Province of Nova Scotia during May, 1928, showed an increase of more than 37 per cent over April, and over 11 per cent in comparison with May, 1927. Placements were nearly 42 per cent in excess of those recorded during the preceding month, and 21 per cent better than in the corresponding month a year ago. All industrial groups, except mining and construction and maintenance, showed improvement in placements over May last year, and in each of these two groups the decline was small. Industrial divisions in which most of the placements were effected included: manufacturing, 176; logging, 58; transportation, 56; trade, 97; and services, 531, of which 379 were of household workers. Placements in regular employment during the month numbered 207 of men and 67 of women.

NEW BRUNSWICK

There was an increase of almost 61 per cent in the number of orders received by New Brunswick employment offices during May, when compared with the preceding month, and a gain of nearly 11 per cent in comparison with May, 1927. Placements were over 64 per cent better than during April, and 14 per cent in excess of May a year ago. The service group showed the highest gain in placements over May last year, but minor increases were recorded in manufacturing, transportation, farming, and trade. These gains were, however, partially offset by declines in logging, and construction and maintenance. Placements by industrial groups included manufacturing 45; construction and maintenance, 202; and services 761, of which 514 were of household workers. During the month regular employment was secured for 285 men and 89 women.

QUEBEC

Employment opportunities as indicated by orders listed at employment offices in Quebec during May were nearly 56 per cent better than in April, and almost 19 per cent in excess of the corresponding month last year. Placements also showed an increase of over 69 per cent in comparison with the preceding month, and nearly 22 per cent over May, 1927. Substantial gains in placements over May last year were shown in logging, farming, services, and construction and maintenance, the most noteworthy of these being in the last named group. Trade also showed improve-

ment, though in a lesser degree, while manufacturing and transportation registered declines. Industrial divisions in which employment was found for over 100 workers included: manufacturing, 198; logging, 350; farming, 111; construction and maintenance, 804; and services, 782, of which 425 were of household workers. During May 1,739 men and 575 women were placed in regular employment.

ONTARIO

During the month of May, positions offered through employment offices in Ontario showed an increase of 53 per cent over the preceding

workers. During the month 8,527 men and 1,576 women were placed in regular employment.

MANITOBA

Employment offices in Manitoba were notified of nearly 14 per cent more vacancies during May than in the preceding month, and over 36 per cent more than during the corresponding month last year. The number of placements effected during May, 1928, was over 13 per cent higher than in April, and 35 per cent in excess of May, 1927. The most noteworthy gain in employment over May a

POSITIONS OFFERED AND PLACEMENTS EFFECTED FOR EACH ONE HUNDRED APPLICATIONS FOR EMPLOYMENT

Applications ————— Vacancies - - - - - Placements o-o-o-o-o

month and 23 per cent over May a year ago. Placements also showed an increase of nearly 58 per cent over April, and of almost 28 per cent over May, 1927. Noteworthy gains in placements over the corresponding month last year were registered in manufacturing, transportation, construction and maintenance, services and trade, lesser gains being reported in farming and mining, while communication showed little change. Logging was the only group to show a decline. Placements by industrial divisions were as follows: manufacturing, 2,243; logging, 1,077; farming, 976; mining, 167; transportation, 642; construction and maintenance, 4,580; trade, 767; and services, 6,199, of which 3,137 were of household

workers. Regular employment was year ago occurred in services, particularly in the household division, where an increase of 65 per cent was shown. Placements in construction and maintenance were also much higher than those of 1927, greater activity in railway construction being shown. Trade and mining likewise showed gains, though in a lesser degree. Manufacturing, logging and farming registered declines, while transportation remained practically unchanged. Placements by industrial groups were: manufacturing, 150; logging, 68; farming, 735; construction and maintenance, 759; trade, 218; and services, 3,356, of which 2,556 were of household workers. Regular employment was

secured for 1,528 men and 702 women during the month.

SASKATCHEWAN

The demand for workers, as indicated by orders listed at offices in Saskatchewan during May, increased over 4 per cent when compared with the preceding month, and nearly 23 per cent in comparison with the corresponding period last year. Placements were 8 per cent higher than in April, and 21 per cent in excess of May, 1927. All industrial groups, except farming and trade, registered increased placements over May last year, the most noteworthy being in services and in construction and maintenance, particularly in the railway and highway divisions of this group. The decreased demand for farm workers was due to the fact that seeding operations were practically completed throughout the province. Groups in which the largest number of placements were effected included: manufacturing, 182; farming, 1,687; construction and maintenance, 1,248; trade, 139; and services, 1,664, of which 825 were household workers. During May, 3,062 men and 608 women were placed in regular employment.

ALBERTA

During May, orders received at employment offices in Alberta called for nearly 14 per cent fewer workers than in April, but nearly 51 per cent more than in May last year. There was a decrease of nearly 6 per cent in placements when compared with the preceding month, but a gain of over 47 per cent in comparison with the corresponding month a year ago. All industries reported gains in placements over May, 1927, that in farming being the most pronounced, unfavourable weather conditions earlier in the season having long delayed the usual spring operations, while increased acreage placed under cultivation in many sections of the province created an additional demand for farm workers. Services also showed a noteworthy gain in positions filled. The majority of placements recorded during the month occurred in the following industrial groups: manufacturing, 464; farming, 3,194; construction and maintenance, 803; and services, 1,277, of which 678 were of household workers. Regular employment was secured for 4,215 men and 389 women during the month.

BRITISH COLUMBIA

Orders listed at employment offices in British Columbia during May were over 20 per cent higher than in April, and nearly 42 per cent in excess of May, 1927. Placements were

over 8 per cent above those recorded the preceding month, and almost 46 per cent in excess of May last year. Placements effected during the month under review were higher than in May, 1927, in all industrial groups except logging and transportation, and in these the reductions were small. Placements by industrial divisions were: manufacturing, 662; logging, 366; farming, 446; mining, 200; transportation, 140; construction and maintenance, 1,300; trade, 176; and services, 1,134, of which 525 were household workers. During the month 2,296 men and 297 women were placed in regular employment.

Movement of Labour

During the month of May, 1928, the offices of the Employment Service of Canada made 26,162 placements in regular employment, 15,292 of which were of persons for whom the employment found was outside the immediate locality of the offices at which they were registered. Of the latter, 2,038 were granted the Employment Service reduced transportation rate, 1,496 going to points within the same province as the despatching office and 542 to other provinces. The reduced transportation rate, which is 2.7 cents per mile with a minimum fare of \$4, is granted by the railway companies to *bona fide* applicants at the Employment Service who may desire to travel to distant employment for which no workers are available locally.

Transfers from the offices in Quebec during May involved an issue of special transportation rate certificates totalling 155. Of these 95 were provincial, 57 of which were granted by the Montreal office to 26 sawmill labourers, 28 bushmen and 3 bricklayers travelling to points within its own zone, and 38 by the Quebec City office to 37 bushmen and 1 camp cook going to employment within the Quebec zone. The 60 transfers outside the province were all of bushmen who were despatched from Hull to North Bay and vicinity.

The movement of labour both within and from the Province of Ontario at the reduced rate during May included the transfer of 153 persons, 147 of whom travelled to various provincial centers and the remaining 11 to points in other provinces. To provincial situations the Pembroke office transferred 4 rod men, 2 chain men, 2 axemen, 1 cook and 1 civil engineer for survey work around Fort William, 3 pilers, 5 mill hands, 1 bolter and 5 picket men to Sault Ste. Marie, 7 bushmen to Sudbury and 1 mill hand to Cobalt; from Toronto 1 orderly was despatched to Timmins, 1 mechanic to North Bay and 1 wood machinist to Chatham; from Sudbury 5 bushmen,

4 building labourers and 1 mill hand were sent to points within the zone and 8 miners to Fort William; from North Bay 7 painters and 5 carpenters were carried at the reduced rate to Timmins, and 3 bushmen to Cobalt; and from Cobalt 6 prospectors went to Sudbury, and 4 prospectors and 2 miners to Port Arthur. Timmins received 2 engineers from Hamilton, and 1 stationary engineer from St. Catharines, and Cobalt 10 mill hands from Ottawa. The Port Arthur office issued certificates to 38 bushmen, 2 prospectors, 1 hoist engineer, 1 millwright, 2 mining labourers and 1 cook for points within the locality covered by that office, while the Fort William office granted certificates to 5 mining labourers, 3 building construction labourers and 1 cookee for points within the same zone. Of those travelling outside the province 2 were moulders, 1 a wood pattern maker, and 1 a gardener going from Toronto to Montreal, and 2 were bridge builders travelling from Pembroke to employment in Three Rivers. In addition 2 mining prospectors were despatched from Cobalt, and 3 miners from Sudbury to Winnipeg.

The number of workers who received reduced rate certificates from Manitoba offices numbered 736 and of these 433 were destined to provincial centres and 303 to outside districts. The majority of those who journeyed to positions within the province were transferred by the Winnipeg office, and included 204 railroad construction labourers, 36 building construction labourers, 5 bushmen, 2 teamsters, 3 cookees, 6 labourers, 2 carpenters, 1 plumber, and 1 construction cook going to points within the Winnipeg zone; 21 construction labourers, 4 teamsters, 2 carpenters, 1 scraper holder, 1 milk salesman, 2 hospital workers, 4 female hotel workers, 1 café cook, 1 café waitress and 1 blacksmith to Brandon zone points; 2 sawmill labourers, 1 edgerman, 1 musician, 2 bushmen, 1 cook and 1 female hotel worker to Dauphin; and 99 farm hands and 25 farm household workers to various provincial farming localities. In addition, Dauphin despatched 2 railroad construction labourers and 1 rockman within its own zone. Of the inter-provincial transfers 297 were from Winnipeg, 67 railroad construction axemen, 17 railroad construction labourers, 2 pulp cutters, 6 labourers and 1 cook being conveyed to Prince Albert and surrounding regions; 20 teamsters, 5 carpenters, 8 railroad construction workers and 1 cookee to Yorkton; 7 teamsters, 4 farm hands, 2 machine runners, 2 dumpmen, 1 labourer, 1 timekeeper, 1 blacksmith and 1 cook to Edmonton; 11 dumpmen and 1 timekeeper to Swift Current; 4 labourers and 1 female hotel worker to Regina; 2 cooks and 1 construction labourer to Saskatoon; and 1

blacksmith, 1 road grader and 1 pumpman to Weyburn. To agricultural districts in the Province of Saskatchewan, Winnipeg transferred 69 farm hands and 3 farm domestics, while to Port Arthur and vicinity were sent 14 mine workers, 6 pulp workers, 4 cooks, 3 blacksmiths, 7 bushmen, 6 drillers, 2 millwrights, 1 steam shovel men, 2 carpenters, 2 farm hands, 1 cookee, 1 camp clerk, 1 house general, and 1 female hotel worker; to Montreal 1 cooper; and to North Battleford 4 carpenters. The balance of the movement outside the province was from Dauphin, 2 railway construction labourers, 1 general labourer and 1 farm hand travelling to Moose Jaw, 1 farm hand to Yorkton and 1 kitchen girl to Prince Albert.

Certificates of reduced transportation were granted by Saskatchewan offices to 253 persons, 243 of whom were despatched to points within the province, and 10 to outside points. Provincially the Saskatoon office transferred 24 bushmen, 19 railroad construction labourers, 1 blacksmith and 1 cook to Prince Albert and surrounding districts; 18 farm hands to the North Battleford zone; 1 elevator carpenter to Yorkton; and 61 farm hands, 4 cooks, 1 housekeeper, 1 cookee and 1 labourer to employment within the Saskatoon zone. The movement from Regina included 9 farm hands, 7 teamsters and 1 housekeeper travelling to Moose Jaw; 2 teamsters, 2 farm hands and 1 housekeeper to Weyburn; 4 farm hands to Swift Current, 2 farm hands and 1 camp cook to Yorkton; 1 labourer to Prince Albert; and 7 farm hands to the rural districts near Regina. From Prince Albert 32 railroad construction axemen, 12 sawmill labourers, 2 bushmen and 1 blacksmith were despatched to various points within the same zone, and 1 farm hand and 1 labourer to Regina. The balance of the provincial certificates were issued by the Moose Jaw office to 19 farm hands, 4 teamsters and 1 cook for centres within its own zone, and to 1 farm hand for the Swift Current zone. Regina granted 6 of the certificates for points in other provinces to 1 bushman for Dauphin, 1 farm hand for Winnipeg, 1 electric welder for Calgary, 1 farm hand for Edmonton, 1 labourer for Sudbury, and 1 fruit farm hand for Toronto. In addition, 2 railroad construction teamsters were transferred at the reduced rate from Saskatoon to Edmonton, 1 tinsmith from Moose Jaw to Dauphin, and 1 fruit farm hand from Yorkton to Toronto.

From Alberta offices 430 persons took advantage of the reduced transportation rate, 412 going to sections within the province and 18 to other provinces. The Edmonton office effected the majority of the transfers provin-

cially, being responsible for the movement of 142 farm workers, 6 farm domestics, 36 mill hands, 32 carpenters, 17 miners, 10 cribbers, 22 bush workers, 4 mine labourers, 13 teamsters, 4 engineers, 2 axemen, 2 construction labourers, 4 plasterers, 2 firemen, 1 electrician, 10 labourers, 1 rock driller, 1 edgerman, 1 oil driller, 1 painter, 1 elevator foreman, 4 cookees, 3 camp cooks, 4 cooks, 3 waitresses, 1 hotel porter, 1 hotel dish washer, 1 chambermaid and 3 flunkeys for employment within the territory covered by that office. Edmonton also despatched 2 carpenters and 2 farm hands to the Calgary zone, 1 steam shovel engineer and 1 farm hand to Drumheller, and 1 farm hand to the Lethbridge zone. From Calgary 39 farm hands, 2 farm domestics, 1 waitress and 1 housekeeper were carried at the special rate to Drumheller; 7 farm hands, 1 housekeeper and 3 hotel workers to Edmonton; 2 farm hands to Medicine Hat; 1 flunkey and 1 farm hand to Lethbridge; and 15 farm hands to districts within the Calgary zone. Of those travelling outside the province, the Edmonton office was instrumental in transporting 7 farm hands, 1 farm domestic, 1 well driller and 1 hotel housekeeper to Saskatoon and surrounding regions, and 2 farm hands to North Battleford, while from Calgary 1 farm housekeeper was conveyed to Vancouver, 2 female hotel cooks and 1 porter to Revelstoke and 2 restaurant cooks to Cranbrook.

By the offices in the Province of British Columbia 306 transfers involving the special transportation rate were effected during May, 166 of which were of persons for provincial employment and 140 for work in other provinces. From the Vancouver offices 14 carpenters, 11 railroad construction labourers, 7 tie makers, 5 miners, 2 flunkeys, 1 skidder, 1 engineer, 2 hospital orderlies, 1 planer man, 1 painter, 1 bush foreman and 2 farm hands were granted certificates to Kamloops; 6

miners, 3 saw mill labourers, 1 engineer, 2 cooks, 1 flunkey and 1 farm hand to Prince George; 10 miners, 2 muckers, 1 handyman and 1 shingle mill foreman to Revelstoke; 4 tie makers, 2 engineers, 1 machine miner and 4 farm hands to Penticton; 1 cook and 1 farm hand to Kelowna; 1 powder man and 1 construction foreman to Vernon; 1 electric lineman to Nelson; and 10 miners, 6 muckers, 3 mining construction carpenters, 1 mining construction foreman, 3 cooks, 1 flunkey, 1 engineer and 2 farm hands to Vancouver zone centres. From Nelson 2 miners travelled to Vancouver and 8 bush workers, 4 general labourers, and 1 farm hand to points within the Nelson zone. Penticton received a farm hand from New Westminster and the New Westminster zone 1 lumber mill foreman from Revelstoke. To points within their respective zones Prince George transferred 4 bush workers, 2 cookees, 1 miner, 1 blacksmith and 1 teamster, and Prince Rupert 17 miners, 3 cooks and 1 flunkey. Interprovincially 130 of the transfers were of farm workers, Alberta receiving 110 of them, as well as 3 farm household workers, Saskatchewan, 15, and Manitoba, 2. The majority of these received their certificates of transportation at the Vancouver office. In addition, Vancouver issued certificates to 1 machinist, 1 structural iron worker, 1 cook, and 3 general house workers for Calgary; to 1 general house worker for Edmonton; and to 2 cooks, one going to each of the Saskatoon and Weyburn zones; while Victoria transferred 1 housekeeper to Medicine Hat.

Of the 2,036 persons who took advantage of the Employment Service reduced transportation rate, 1,325 were transported by the Canadian National Railways, 671 by the Canadian Pacific Railway, 20 by the Temiskaming and Northern Ontario Railway, and 22 by the Pacific Great Eastern Railway.

Building Permits Issued in Canada During May, 1928

The value of the building permits issued by 63 cities during May, 1928, was higher by 48.4 per cent than in April, 1928, and by 36.5 per cent than in May 1927, according to statements tabulated by the Dominion Bureau of Statistics; these showed that the authorizations amounted to \$27,497,189 as compared with \$18,527,846 in the preceding month and with \$20,138,657 in May, 1927. The total for May exceeded that for the same month in any other year since this record was begun in 1920, while building costs continued lower than in any of the last nine years except 1927.

Some 50 cities furnished detailed statistics, showing that they had issued over 2,100 permits for dwellings valued at approximately \$11,400,000 and for some 4,600 other buildings estimated to cost nearly \$11,800,000. In April, authority was given for the erection of some 1,600 dwellings and 3,500 other buildings, valued at approximately \$8,000,000 and \$10,000,000, respectively.

Nova Scotia, New Brunswick, Quebec, Ontario, Manitoba and Saskatchewan reported increases in the value of the permits issued as compared with April, 1928, the largest gain

of \$5,263,713 or 66.5 per cent, being registered in Ontario. Of the declines in the remaining provinces, that of \$868,224 or 34.0 per cent in British Columbia was most pronounced.

As compared with May, 1927, New Brunswick, Quebec, Ontario, Manitoba and Alberta recorded increases, that of \$4,890,976 or 59.0 per cent in Ontario being largest. The other provinces recorded declines, of which that of \$738,815 or 30.5 per cent, in British Columbia was most noteworthy.

Of the larger cities, Montreal, Toronto and Winnipeg reported higher totals of building permits issued than in either April, 1928, or May, 1927, while Vancouver showed decreases in both comparisons. Of the other centres, Fredericton, Saint John, Quebec, Shawinigan Falls, Sherbrooke, Three Rivers, Chatham, Fort William, Galt, Guelph, Kitchener, Niagara Falls, Owen Sound, Port Arthur, Stratford, St. Thomas, Sarnia, Sault Ste. Marie, Walkerville, Woodstock, Brandon, Saskatoon, Medicine Hat and South Vancouver reported increases in the value of the building authorized as compared with both the preceding month and the corresponding month last year.

Cumulative Record for First Five Months, 1928.—The following table gives the value of the building authorized by 63 cities during May and in the first five months of each year since 1920, as well as index numbers for the latter, based upon the total for 1920 as 100. The average index numbers of wholesale prices of building materials in the first five months of the same years are also given (1913=100).

Year	Value of permits issued		Indexes of value of permits issued first five months (1920=100)	Average indexes of wholesale prices of building materials in first five months (1913=100)
	In May	In first five months		
	\$	\$

1927, the previous high level of the record, while the average index numbers of wholesale prices of building materials continued to be lower than in any other year since 1920, except 1927.

The accompanying table gives the value of the building permits issued by 63 cities during May and April, 1928, and May, 1927. The 35 cities for which records are available since 1910 are marked with asterisks.

EMPLOYMENT AND UNEMPLOYMENT IN OTHER COUNTRIES

DETAILED reports and tables showing the employment conditions in Great Britain and Northern Ireland are given in the *British Ministry of Labour Gazette* from month to month, a monthly summary of this information being also published. This summary is reproduced below showing the employment situation during May. The following report on employment conditions in the United States is based on the information contained in the *Monthly Labour Review*, published by the United States Department of Labour, each issue containing statistics showing the trend of employment throughout the country during the second month prior to the date of publication. The statement contained in the June issue relates to the situation existing in April, 1928. The employment situation in the United States is further indicated by unemployment percentages based on statistics compiled each month by the American Federation of Labour, the source of these statistics being returns obtained from the trade union locals in 23 representative cities. Summary figures for the month of April, taken from the June issue of the *American Federationist*, the official publication of the organization, are reproduced below.

Great Britain

Employment during May showed a slight decline, on the whole, as compared with the preceding month.

There were increases in the numbers of workpeople unemployed in the tinplate, shipbuilding, pottery, boot and shoe, wool textile, linen, and jute industries, and in dock, river, canal, harbour, etc., service. In the coal-mining industry there was a considerable increase in the numbers temporarily stopped from the service of their employers, together with a slight increase in the numbers wholly unemployed. On the other hand the seasonal improvement continued in the building, public works contracting, brick, tile, and cement, and tailoring industries. There was also some improvement in the iron and steel industries, in the glass trades, in textile bleaching, printing and dyeing, and in certain of the food manufacturing industries.

Among workpeople covered by the Unemployment Insurance Acts (aged 16 to 64 inclusive and numbering approximately 11,800,000), and working in practically every industry except agriculture and private domestic service, the percentage unemployed at 21st May, 1928 (including those temporarily stopped as well as those wholly unemployed) was 9·9, as compared with 9·6 at 23rd April, 1928, and 8·7 at 23rd May, 1927. For males alone the percentage at 21st May, 1928, was 11·4, as compared with 11·0 at 23rd April, 1928; for females the corresponding figures were 5·9 and 5·7. The percentage wholly unemployed at 21st May, 1928, was 7·6, the same percentage as at 23rd April, 1928. The total number of persons (insured and uninsured) registered at Employment Exchanges in Great Britain and Northern Ireland at 21st May, 1928, was approximately 1,143,000, of whom 918,000 were men and 165,000 were women, the remainder being boys and girls; at 23rd April, 1928, it was 1,094,000, of whom 874,000 were men and 151,000 were women; and at 23rd May, 1927, it was 1,008,000, of whom 811,000 were men and 139,000 were women.

United States

According to the June issue of the *Monthly Labour Review* employment in the manufacturing industries decreased 0·5 per cent in April, 1928, as compared with March, 1928, and payroll totals decreased 1·4 per cent.

A decrease in employment in April, as compared with March, has become customary, the trend having been downward in each of the last five years. However, the decrease in April, 1928, was considerably less than in three of the four years preceding. Payroll totals, as a rule, show a greater drop in April than does employment owing to the custom, prevailing in many localities, of closing plants for one or more days at Easter time.

The Bureau of Labour Statistics' weighted index of employment for April, 1928, is 85·7 as compared with 86·1 for March, 1928, 85·5 for February, 1928, and 90·6 for April, 1927; the weighted index of payroll totals for April, 1928, is 89·9 as compared with 91·2 for March,

1928, 90.0 for February, 1928, and 96.6 for April, 1927. The monthly average for 1923 equals 100.

Employment and payroll totals in April, 1928, were 5.4 per cent and 6.9 per cent lower in the two items, respectively, than in April, 1927.

The data for April, 1928, were based on returns made by 10,788 establishments in 54 of the chief manufacturing industries of the United States. These establishments in April had 3,005,964 employees whose combined earnings in one week were \$81,116,831.

Employment in March and April.—Twenty-four of the 54 separate industries had more employees in April than in March, and 21 industries reported increased payroll totals, the seasonal trend being especially well defined in these increases as well as in the decreases of other industries. The outstanding increases in employment were: 7.9 per cent in ice cream; 5.1 per cent in brick; about 3 per cent each in cement, rubber boots and sugar; approximately 2.5 per cent each machine tools, stoves, saw-mills, millwork, stamped ware, carriages and wagons, and automobiles; and approximately 1.5 per cent each in cast iron pipe, fertilizers, glass, brass, pianos and shipbuilding. The foundry and machine shop products and the steam car industries each reported 1 per cent more employees in April than in March.

The iron and steel industry showed a decrease in employment of 0.1 per cent and petroleum refining a decrease of 1.6 per cent. Slaughtering and meat packing, as usual in April, reached its minimum employment level for the year with a decrease of 3.9 per cent, and flour reported a decrease of 3.4 per cent. All textile industries, except millinery, showed a marked decline—for example, men's clothing over 7 per cent; cotton, 2.5 per cent; silk, 4.7 per cent; and woollen goods, over 2 per cent. Confectionery, hardware, furniture, leather, boots and shoes, paper boxes, book and job printing, chewing tobacco, cigars, electric car repairing, and rubber tires were other industries reporting notable declines in employment.

One-half of the twelve groups of industries showed increased forces in April, the stone-clay-glass group leading with an increase of 2.4 per cent, followed by the iron and steel, other metal products, lumber, and vehicle groups, and groups of miscellaneous industries. In the remaining six groups the leather group reported the greatest decrease in employment and the chemical group the smallest decrease.

The Pacific and Mountain geographic divisions made very satisfactory gains in employ-

ment in April over March, and the East North Central and the East South Central divisions each gained 0.3 per cent; the remaining five divisions each showed fewer employees, especially the New England, Middle Atlantic, and South Atlantic divisions.

Employment in April, 1927 and 1928.—The level of employment in Manufacturing industries in April, 1928, was 5.4 per cent lower than in April, 1927, and payroll totals were 6.9 per cent lower. According to reports made to the Bureau the observance of Easter holidays was more marked in 1928 than has been customary, and accounts, at least in part, for the larger decrease in payroll totals.

Decreased employment over this twelve month period appeared in each of the 12 groups of industries, the group of miscellaneous industries leading with a falling off of over 14 per cent, followed by the stone-clay-glass group (8.9 per cent), iron and steel (6.8 per cent), and textiles (5.2 per cent). The groups least affected by declines in employment were vehicles and food, each of which fell off only one-half of 1 per cent.

The notable increases in employment in separate industries over this interval were in the agricultural implement, automobile, and fertilizer industries, while the pronounced decreases were in the shipbuilding, petroleum refining, brick, cement, piano, cast iron pipe, and steam fittings industries.

The East North Central division alone of the nine geographic divisions had more employees in April, 1928, than in April, 1927. Of the remaining divisions the New England, Middle Atlantic, and West South Central divisions show losses in employment of from 8.7 to 7.2 per cent each.

Unemployment percentage.—Unemployment statistics collected by the American Federation of Labour and appearing each month in the *American Federationist*, the official publication of the organization, indicate the percentage of unemployed union members in twenty-three representative cities of the United States. The method of compilation as described in the March issue of the *American Federationist* is as follows:

"The local unions in the 23 cities under review report monthly their membership and the number of unemployed members at the first of the month or the nearest possible date. From these reports the percentage of unemployed members is calculated for identical unions in the current and the previous month. Thus for every month there are two percentage figures—that is for identical unions in December and January—and for

identical unions in January and February and so on. The final figure for January, then, is calculated by taking the simple arithmetical average of the two January percentages. It may be noted that the reports cover all trades which are organized, factory workers as well as teachers and building trade workers."

By the above method is computed the percentage of unemployed trade unionists out

of the total membership of the local unions reporting. According to the June issue of the *American Federationist*, the most recent unemployed percentages during the various months in the 23 cities works out as follows: October to December, 1927, 14 per cent; January, 1928, 18 per cent; February, 1928, 18 per cent; March, 1928, 18 per cent; April, 1928, 16 per cent.

RECENT INDUSTRIAL AGREEMENTS AND SCHEDULES OF WAGES

A SUMMARY is given below of the more important industrial agreements and schedules of wages and working conditions that have recently been received by the Department. Such agreements are summarized each month in the *LABOUR GAZETTE*. In the majority of cases the agreements are signed by both the employers and the employees. Verbal agreements, which are also included in the records, are schedules of rates of wages and hours of labour and other conditions of employment agreed upon between the parties concerned, and in effect though not signed. In addition to these, important schedules of wages are summarized, including civic schedules. In the case of each agreement or schedule, the rates of wages for principal classes of labour are given, with other information of general interest.

Manufacturing: Printing and Publishing

TORONTO, ONT.—TORONTO DAILY NEWSPAPER PUBLISHERS AND THE TORONTO TYPOGRAPHICAL UNION No. 91.

Agreement to be in effect from April 1, 1928 to March 31, 1931.

This agreement is similar to the one previously in force which was summarized in the *LABOUR GAZETTE* for January, 1926, but includes the following changes:

A member called back after completion of a day's or night's work to be guaranteed \$3.50, night men brought back for extra work on Sundays or holidays to receive double rates.

Only journeymen members or apprentices in their last year to be eligible as learners on machines.

Minimum wages per week: from April 1, 1928, to March 31, 1929, on evening newspapers \$45.50, morning newspapers, \$48.00; from April 1, 1929 to March 31, 1930, evening newspapers, \$46.50, morning newspapers \$49.00; from April 1, 1930, to March 31, 1931, evening newspapers \$47.50, morning newspapers \$50.50.

Day men on morning newspapers to work four hours on holidays, work to be completed by 12 noon, for which they shall receive a regular day's pay. For time beyond four hours or holidays and Sunday work, double time.

Each office shall be entitled to have one apprentice for each ten journeymen or majority fraction thereof regularly employed but never

more than six apprentices in any one office. In addition each office may have two boys, not apprentices, who may operate proof-presses, but no other work that is part of the trade.

Apprentices in the fifth year to be instructed on all typesetting and typecasting devices in use in the office.

Wage Scale for apprentices per week: from \$16.00 for first six months of third year to \$32.00 for second six months of fifth year.

GUELPH, ONTARIO.—GUELPH MERCURY AND INTERNATIONAL TYPOGRAPHICAL UNION No. 391.

Agreement to be in effect from May 1, 1928 to April 30, 1930. Notice of proposed new agreement to be given 30 days previous to expiration of this one.

This agreement is the same as that previously in force and summarized in the *LABOUR GAZETTE* for July, 1926, with the following additional clause:

Each member of the composing room staff shall be granted one week's holidays in each year with full pay; said holidays to be mutually agreed between the employer and employee.

GUELPH, ONTARIO.—EMPLOYING JOB AND COMMERCIAL PRINTERS AND PUBLISHERS AND THE INTERNATIONAL TYPOGRAPHICAL UNION No. 391.

Agreement in effect from April 1, 1928, to August 30, 1930. Notice of proposed new agreement to be given 30 days' prior to expiration of this agreement.

A standing committee of two from each party to be appointed to settle wages and other questions under this agreement. If this committee cannot agree, a board of arbitration to be appointed, consisting of the representative of each party and one arbitrator chosen by them, the decision of such board to be binding.

Union members not to be required to execute struck work which in their opinion is received from or destined for unfair employing printers and publications.

The union label to be furnished by the union and used.

Foremen to have right to employ and discharge men for certain specified reasons only.

It is recommended that in offices where employees, through disability or old age, are unable to work as efficiently as before, such persons be placed on a superannuation list and receive wages as may be agreed upon, subject to approval of the union.

Apprentices limited to one to every four journeymen or fraction thereof; not more than three in any department.

Apprentices to serve five years. The work to be done and taught in each year of apprenticeship is specified, and apprentices must also complete the International Typographical course of lessons in printing before being considered journeymen.

Scale of wages for apprentices: from one-third of journeymen's scale in third year to three-quarters of journeymen's scale in last six months of fifth year.

Hours: 44 per week for day work, 42 hours for night work.

Overtime: Time and one-half for first three hours and double time afterwards; double time for all work on Sundays and holidays.

Wages: from April 1, 1928 to September 1, 1929, hand compositors and machine operators, \$39 per week and from September 1, 1929 to August 31, 1930, \$32. Foremen to be paid at least \$2 above minimum scale.

LONDON, ONTARIO.—STEREOTYPERS AND ELECTROTYPERS UNION No. 115

Schedule of wages and working conditions verbally accepted, to be in effect from January 1, 1928 to December 31, 1929.

Hours: 44 per week for day work, 42 for night work.

Wages: Day foreman \$41 per week, night foreman \$39; journeymen \$37 per week; a bonus of \$26 to be given each regular employee twice a year.

Overtime: for each call back \$1 shall be paid and also time and one-half for all overtime.

REGINA, SASK.—CERTAIN EMPLOYERS AND INTERNATIONAL BROTHERHOOD OF BOOKBINDERS, LOCAL No. 205.

Agreement to be in effect from May 1, 1928, to April 30, 1930.

Hours: 44 per week.

Overtime: Time and one-half for first three hours, double time thereafter; Sundays and holidays, double time.

In case of reduction of staff the persons last employed to be laid off first and then reemployed in the reverse order before other help is employed.

In case of a dispute, matter to be referred to an arbitration committee consisting of one from each party and a third selected by these two, the decision of such committee to be binding.

No girl to be allowed to do any of journeyman's work.

Men's wage scale: Journeymen, 95 cents per hour from May 1, 1928 to April 30, 1929 and 98 cents from May 1, 1929 to April 30, 1930.

Apprentices: From \$10 per week for first six months to \$34 per week for eighth six months.

One apprentice allowed for every four journeymen or major fraction thereof. No apprentice to be allowed to change from one employer to another without consent of both parties.

Women's wage scale: From \$10 per week for first six months to \$18 for fourth six months and not less than \$20 thereafter.

REGINA, SASK.—CERTAIN NEWSPAPER AND JOB PRINTING OFFICES AND INTERNATIONAL TYPOGRAPHICAL UNION, No. 657.

Agreement in effect from May 1, 1928 to April 30, 1929.

Only union members are to be employed.

Any dispute with regard to the terms of the agreement to be referred to a Board of Arbitration consisting of two members from each party and a fifth selected by them, the decision of such board to be binding.

Employees shall not be required to execute struck work which is received from or destined for unfair employers.

Newspapers

Minimum wages of stonemen, admen, make-upmen, proofreaders, bankmen, foremen, machine operators, machinists and copy preparers, 98 cents per hour for 48 hour week; night work \$3 per week over day scale and 45 hour week.

One apprentice allowed for every seven journeymen regularly employed, but no office to have more than three apprentices.

Apprentices must be at least 16 years of age and serve five years. No boy under 18 to be employed at night work.

The grade and class of work to be taught each year is specified.

Wages of apprentices: from \$13 per week at start to \$29.65 after 4½ years. For night work \$3 above day work and overtime at same ratio to regular time as for journeymen.

Apprentices must take the International Typographical course in printing.

In addition to apprentices, offices may have one journeyman learner to every seven machines.

The term of apprenticeship for beginners in linotype, intertype and monotype machines is 13 weeks, wages from \$23.50 to start to \$32.75 per week for last five weeks.

Hours: 8 per day for day work; 7½ for night work.

Overtime: Time and one-half for first three hours, double time thereafter and also for work on Sundays (except such work as is part of regular jig). Work on holidays, time and one-half except for morning newspapers where a night's work shall be 5½ hours and a full day's pay granted.

No notice required of discharge or of leaving employment.

A journeyman called back to work to receive \$1 extra in addition to overtime pay.

Job Offices

Wages for journeymen same rate as for newspaper offices, but 44 hour week for day work and 42 hours for night work.

One apprentice to every 5 journeymen. Other regulations regarding apprentices are the same as for newspaper offices with exception of wages which range from \$12 per week to start to \$27.50 for last six months of 5-year apprenticeship. Beginners on linotype, intertype and monotype machines: wages from \$21.55 for first three weeks to \$30 for last five weeks of 13 week apprenticeship.

Hours: 8 per day, 4 on Saturdays for day work; night work 7 hours six nights per week.

Overtime: time and one-half for first three

hours; double time thereafter, holidays, time and one-half; Sundays, double time.

No notice required of discharge or of leaving employment.

A journeyman called back to work to receive \$1 extra in addition to overtime pay.

REGINA, SASK.—NEWSPAPER PROPRIETORS AND INTERNATIONAL PRINTING PRESSMEN AND ASSISTANTS, UNION No. 75.

Agreement in effect from May 1, 1928 to April 30, 1930.

This agreement is similar to the one previously in force and summarized in the *LABOUR GAZETTE* for July, 1925 with the following exceptions:

Wages of journeymen, \$47.04 per week for day work and \$50.04 for night work.

All publications (other than daily newspapers) shall be paid for at not less than one day's pay to each member of crew required for the production of same, should time for printing exceed five hours, the overtime rate to be used.

REGINA, SASK.—JOB OFFICES AND INTERNATIONAL PRINTING PRESSMEN AND ASSISTANTS UNION, No. 75.

Agreement in effect from May 1, 1928 to April 31, 1930.

This agreement is similar to the one previously in force and summarized in the *LABOUR GAZETTE* for July, 1925, with a new wage scale as follows and a further increase of one cent per hour from May 1, 1929 to April 30, 1930.

New wage scale: Foreman in charge of one or two cylinder presses \$45.60 per week, foreman in charge of three or more cylinder presses \$48.50, foreman in charge of one cylinder and three platen presses \$45.60, journeyman pressman operating two cylinder presses \$42.70, foreman in charge of offset presses, \$48.50, journeyman offset pressman \$44.65, offset assistant \$35, cylinder assistant \$31.75, automatic feed operators on offset, cylinder and Kelly presses \$33, cylinder feeders working in combination shop and working part time on platens \$25.50, foreman in charge of one to four platen presses \$41.75, foreman in charge of five or more platen presses \$46.60, journeymen platen pressmen \$40.

Construction: Buildings and Structures

TORONTO, ONT.—THREE EMPLOYERS AND THE INTERNATIONAL ASSOCIATION OF HEAT AND FROST INSULATORS AND ASBESTOS WORKERS, LOCAL No. 20.

Agreement signed at the conclusion of a strike mentioned on page 700 to be in effect from February 28, to December 31, 1928. If it is desired by either party to renew the agreement with or without change, notice must be given 90 days prior to expiration.

Hours: 8 per day, 4 on Saturdays.

Overtime: Time and one-half to 10 p.m.; after 10 p.m. and all work on Saturday afternoons, Sundays and certain holidays double time.

No strikes or lockouts except general ones ordered by Building Trades Employers Association or by the Building Trades Council. Any dispute about this agreement to be referred

to a disinterested umpire, whose decision shall be binding.

Employers agree not to sublet any of their work and union members agree not to subcontract or make estimates on any work.

Only union members to be employed.

Wages: Mechanics, 85 cents per hour to July 1, 1928, and 95 cents thereafter.

Not more than one improver to each mechanic to be employed in a shop, and no improver to do work except with a mechanic.

Improvers not eligible for mechanics examination until after four years at the trade. Wages for improvers: first year 45 cents, second year 55 cents and third year 65 cents per hour.

Transportation and board to be paid for work out of city with travelling time at night at rate of single time unless a berth is provided.

TORONTO, ONTARIO.—TORONTO SOCIETY OF DOMESTIC, SANITARY AND HEATING ENGINEERS, TORONTO ASSOCIATION MASTER PLUMBERS AND STEAMFITTERS AND THE UNITED ASSOCIATION OF PLUMBERS AND STEAMFITTERS, LOCAL No. 46.

Agreement signed at the conclusion of a strike reported in the *LABOUR GAZETTE* for September, 1927, to be in effect from August 29, 1927 to April 30, 1929, and from year to year unless one month's notice of change is given by either party prior to expiration date.

Hours: 8 per day, 4 on Saturdays.

Wages: \$1 per hour to April 30, 1928, \$1.12½ thereafter.

Overtime: Except necessary repairs to prevent damage and finishing up a repair job on regular working days which shall be done at regular time, all overtime including work on Sundays and holidays, double time.

For out of town work, fare and board to be paid, and where no local of the union exists, working time may be extended to 10 hours per day at single time.

Only union members to be employed when available and union members only to work for employers parties to this agreement when work is available.

Apprentices to serve five years and the number to be limited so that only 14 plumbers and 10 steamfitters will be through each year. Only one improver (fifth year apprentice) to every five journeymen on job. Wages of improvers from May 1, 1928, 75 cents per hour.

A joint conference board consisting of four members from each party to meet regularly to settle grievances.

No strike or lockout to take place before matter is referred to the General Office of the United Association of Plumbers and Steamfitters and approved by them.

HAMILTON, ONTARIO.—HAMILTON MASTER PLUMBERS AND THE UNITED ASSOCIATION OF PLUMBERS AND STEAMFITTERS, LOCAL No. 67.

Agreement in effect from May 1, 1928, to April 30, 1929.

This agreement is the same as the one previously in force and summarized in the *LABOUR GAZETTE* for July, 1927, with the following exceptions:

Wages: \$1 per hour.

One apprentice allowed for every five journeymen plumbers or steamfitters.

HAMILTON, ONTARIO.—HAMILTON LOCAL DISTRICT No. 4 INTERNATIONAL CUT-STONE CONTRACTORS, THE QUARREYMEN'S ASSOCIATION INCORPORATED AND THE HAMILTON LOCAL OF THE JOURNEYMEN STONE CUTTERS' ASSOCIATION.

Agreement in effect from May 1, 1927, to May 1, 1928, and from year to year unless two months notice of change is given by either party two months prior to expiration of the agreement.

Only union members to be employed if available.

Wages: \$1.12½ per hour; journeymen carvers to receive at least \$1 per day more than stone cutters.

Hours: 8 per day, 4 on Saturdays.

Overtime: Time and one-half for first two hours; double time thereafter.

Each party to select an arbitration committee of three, the joint committee to settle all grievances, but if unsuccessful, they may elect another disinterested party, whose decision shall be binding.

One apprentice allowed for every five journeymen but not more than three in one shop, apprentices to serve four years; wages to be mutually agreed upon.

BRANTFORD, ONTARIO.—GENERAL CONTRACTORS AND THE BRANTFORD JOINT COMMITTEE OF CARPENTERS.

Agreement in effect from May 1, 1928, to April 30, 1929, and thereafter unless 30 days notice is given by either party.

Hours: 8 per day, 4 on Saturdays.

Wages: 80 cents per hour.

Overtime and work on Saturday afternoon; time and one-half.

Union members only to be employed.

Disputes to be settled by a board of conciliation, consisting of two members of each party and a fifth chosen by them.

ST. CATHARINES, ONTARIO.—THE BUILDERS EXCHANGE, MASTER CARPENTERS AND THE UNITED BROTHERHOOD OF CARPENTERS AND JOINERS LOCAL No. 38.

Agreement in effect from May 1, 1928, to April 30, 1929, and thereafter unless notice of change be given by either party four months prior to expiration date.

Hours: 8 per day, 4 on Saturdays.

Wages: 90 cents per hour; foreman 5 cents per hour additional.

Overtime: To 9 p.m. and Saturday afternoons, time and one-half. Other overtime and Sundays and holidays, double time.

Union men only to be employed when available.

One apprentice allowed for every five journeymen.

Men employed in contractors' shops may be allowed to work one hour per day overtime on machines at straight time if necessary.

No union member to work after regular working hours for any person while employed by a recognized contractor.

Men working on scaffolds 50 feet in height to be paid 5 cents over the rate and 5 cents additional for every 20 feet higher.

Any grievance to be submitted to a committee composed of two members of each party.

ST. CATHARINES, ONTARIO.—MASTER PLUMBERS AND THE UNITED ASSOCIATION OF PLUMBERS AND STEAMFITTERS, LOCAL No. 244.

Agreement in effect from June 1, 1928, to June 1, 1929, and from year to year unless notice of change is given by either party three months prior to expiration date.

Hours: 8 per day, 4 on Saturdays. These hours apply to master plumbers as well as journeymen.

Wages: 95 cents per hour.

Overtime: Overtime until midnight and Saturday afternoons time and one-half; after midnight and Sundays and holidays, double time.

Only union members or those eligible and willing to become such to be employed.

One apprentice allowed to every three journeymen.

Each steamfitter will be allowed one helper only, either an apprentice or a labourer, any additional labourers employed may not handle the tools of the trade.

Apprentices to serve five years (three as helpers and two as juniors).

WINNIPEG, MANITOBA.—MASTER PLUMBERS' ASSOCIATION AND PLUMBERS AND STEAMFITTERS UNION, LOCAL No. 254.

Agreement in effect from May 1, 1928 to December 31, 1930 and from year to year unless notice of change is given one month prior to expiration date.

This agreement is similar to the one previously in force and summarized in the LABOUR GAZETTE for July, 1926, with the following changes in wages:

From May 1, to December 31, 1928, 1.12½ per hour; from January 1 to December 31, 1929, \$1.20 per hour; from January 1 to December 31, 1930, \$1.25 per hour.

Wages of apprentices: First year \$12 per week; second year \$15 third year \$18, fourth year \$21 and fifth year \$24.

SASKATOON, SASKATCHEWAN.—ELECTRICAL CONTRACTORS' ASSOCIATION AND THE UNION OF ELECTRICAL WORKERS.

Agreement signed on conclusion of the strike and following conciliation by the Chief Conciliation Officer of the Department of Labour of Canada reported on page 702.

Agreement to be in effect from June 15, 1928 to May 1, 1929 and from year to year unless notice of change is given 60 days prior to expiration of agreement.

No man to be discriminated against because of union membership; non-union workers may be employed.

Hours: 9 per day; 5 on Saturdays, but straight time to be paid for work on Saturday afternoons.

Overtime and work on Sundays and holidays, time and one-half.

Apprentices to serve four years and pass the required examinations; not more than one fourth-year apprentice to every four journeymen.

Wages: Journeymen 70 to 85 cents per hour; apprentices; from \$6 to \$8 per week for first year to \$20 to \$25 for fourth year.

A permanent joint conference board to settle differences regarding the agreement and set apprentices' examinations.

CALGARY, ALBERTA.—CONTRACTORS AND THE UNITED BROTHERHOOD OF CARPENTERS AND JOINERS, LOCAL No. 1779.

Agreement signed on conclusion of strike reported in the *LABOUR GAZETTE* for June, 1928, and following the award of the Board under the Industrial Disputes Investigation Act, 1907, reported on page 692.

Agreement in effect from May 1, 1928 to April 30, 1931; negotiations for new agreement to take place in January, 1931.

Hours: 8 per day, 4 on Saturdays. Night shift 7 hours with 8 hours pay.

Wages: \$1 per hour.

Overtime: Until midnight and Saturdays until 5 p.m. time and one-half. Thereafter and work on Sundays and holidays, double time.

Union members not to work for any but those who have signed the agreement.

Any dispute to be referred to a joint committee, whose decision shall be binding.

Transportation and Public Utilities: Electricity and Gas

MONTREAL, QUEBEC.—MONTREAL LIGHT, HEAT AND POWER, CONSOLIDATED AND THEIR EMPLOYEES, MEMBERS OF THE CANADIAN ELECTRICAL UNION OF LINEMEN AND HELPERS, LOCAL No. 1.

Agreement in effect from July 30, 1927, to June 30, 1929, and for one year thereafter, unless notice is given by May 31, 1929 of desire to cancel agreement.

This agreement is the same as the one previously in force and summarized in the *LABOUR GAZETTE* for August, 1926 with the exception of a new wage scale. The wages in effect from July 1, 1928 to June 30, 1929 are as follows:

Wages per hour, overhead division; linemen, first class 65 cents; linemen, second class, 60 cents; groundman 50½ cents; truck drivers, 51½ cents, labourers, 35 cents. Underground division; combination cable splicer and linemen, 75 cents; cable splicers 67 cents; cable splicers' helpers, 53½ cents; cablemen, first class, 65 cents; second class, 55 cents; third class, 50½ cents; truck drivers, 51½ cents; labourers, 35 cents.

FAIR WAGES IN DOMINION GOVERNMENT CONTRACTS

THE Department has received information regarding contracts recently executed by the Government of Canada, which included among their provisions the fair wages conditions sanctioned by Order in Council for the protection of the labour to be employed. The contracts (Group "A") awarded in connection with the works of construction, etc., contained the following fair wages clause:—

1. All mechanics, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed for the character or class of work in which they are respectively engaged, and if there be no current rates in such district, then fair and reasonable rates, and shall work such hours as are customary in the trade, in the district where the work is carried on, or if there be no custom of the trade as respects hours in the district, then fair and reasonable hours, unless for the protection of life and property, or for other cause shown to the satisfaction of the Minister of Labour, longer hours of service are required. The Minister of Labour may at any time and from time to time determine for the purpose of this contract, what are the current or fair and reasonable rates of wages and the current or fair and reasonable hours, and may from time to time rescind, revoke, amend, or vary any such decision, provided that his determination and any amendment or variation shall not be operative prior to the period of three months immediately preceding the date thereof.

Three of the contracts above mentioned contained schedules of rates and hours based on the current standards of the district in these respects. The schedules are given below.

The general labour conditions sanctioned by the Fair Wages Order in Council are as follows:—

Where there are special circumstances which in the judgment of the Minister of Labour make it expedient that he should do so, he may, in the manner and subject to the provisions hereinabove set forth, decide what are the current or fair and reasonable rates of wages for overtime, and what is the proper classification of any work for the purposes of wages and hours. Immediately upon receipt of notice of any decision of the Minister of Labour hereunder the contractor shall adjust the wages and hours and classification of work so as to give effect to such decision. In case the contractor shall fail so to do, or to pay to any employee or employees for any services performed or for any hours of labour, wages according to the rates fixed therefor by the Minister of Labour, the Minister of Labour may authorize and direct the Minister to pay any such wages at the rates so fixed and to deduct the amount thereof from any moneys owing by the Government to the contractor and any such payment shall for all purposes as between the contractor and the Government be deemed and taken to be payment to the contractor, and the contractor shall be bound in every particular by any such authority, direction and payment as aforesaid. The

powers of the Minister of Labour hereunder shall not be exercised as to any employee or employees where it is established to his satisfaction that an agreement in writing exists and is in effect between the contractor and the class of employees to which such employee or employees belong or the authorized representatives of such class of employees fixing rates of wages, overtime conditions and hours of labour.

2. The contractor shall post and keep posted in a conspicuous place on the premises where the contract is being executed, occupied or frequented by the workmen, the Fair Wages Clause or Schedule inserted in his contract for the protection of the workmen employed, also any decision of the Minister of Labour under the preceding paragraph.

3. The contractor shall keep proper books and records showing the names, trades, and addresses of all workmen in his employ and the wages paid to and time worked by such workmen, and the books or documents containing such record shall be open for inspection by the Fair Wage Officers of the Government at any time it may be expedient to the Minister of Labour to have the same inspected.

4. The contractor shall not be entitled to payment of any money which would otherwise be payable under the terms of the contract in respect of work and labour performed in the execution of the contract unless and until he shall have filed with the Minister in support of his claim for payment a statement attested by statutory declaration, showing (1) the rates of wages and hours of labour of the various classes of workmen employed in the execution of the contract; (2) whether any wages in respect of the said work and labour remain in arrears; (3) that all the labour conditions of the contract have been duly complied with; nor, in the event of notice from the Minister of Labour of claims for wages, until the same are adjusted. The contractor shall also from time to time furnish the Minister such further detailed information and evidence as the Minister may deem necessary in order to satisfy him that the conditions herein contained to secure the payment of fair wages have been complied with, and that the workmen so employed as aforesaid upon the portion of the work in respect of which payment is demanded have been paid in full.

5. In the event of default being made in payment of any money owing in respect of wages of any workmen employed on the said work and if a claim therefor is filed in the office of the Minister and proof thereof satisfactory to the Minister is furnished, the said Minister may pay such claim out of the moneys at any time payable by His Majesty under said contract and the amounts so paid shall be deemed payments to the contractor.

6. These conditions shall extend and apply to moneys payable for the use or hire of horses or teams, and the persons entitled to payments for the use or hire of horses or teams shall have the like rights in respect of moneys so owing them as if such moneys were payable to them in respect of wages.

7. With a view to the avoidance of any abuses which might arise from the sub-letting of contracts it shall be understood that sub-letting, other than such as may be customary in the

trades concerned, is prohibited, unless the approval of the Minister is obtained; sub-contractors shall be bound in all cases to conform to the conditions of the main contract, and the main contractor shall be held responsible for strict adherence to all contract conditions on the part of sub-contractor; the contract shall not, nor shall any portion thereof be transferred without the written permission of the Minister; no portion of the work to be performed shall be done at the homes of the workmen.

8. All workmen employed upon the work comprehended in and to be executed pursuant to the said contract shall be residents of Canada, unless the Minister is of opinion that Canadian Labour is not available or that other special circumstances exist which render it contrary to the public interest to enforce this provision.

DEPARTMENT OF PUBLIC WORKS

Contracts in Group "A" (Construction, etc.)

Construction of the assembly wharf at Port Alberni, B.C. Name of contractors, "Victoria Pile Driving Company, Limited", Victoria, B.C. Date of contract, May 31, 1928. Amount of contract, unit prices, approximate expenditure, \$77,140.72.

Construction of an airplane hangar at Rimouski, P.Q. Name of contractor, Zenon Ouellette, Rimouski, P.Q. Date of contract, June 15, 1928. Amount of contract, \$2,870.

Reconstruction of repairs of the outer portion of the south breakwater at Miminegash Harbour, P.E.I. Names of contractors, Everett McLeod and Duncan MacKenzie, French River, P.E.I. Date of contract, June 18, 1928. Amount of contract, unit prices, approximate expenditure, \$7,170.

Deepening existing slip and extension to the existing slip at the west side of the inner harbour at Rondeau, Kent County, Ont. Name of contractors "Canadian Dredging Company, Limited, Midland, Ont. Date of contract, June 21, 1928. Amount of contract, class "A", \$5 per cubic yard (place measure-

ment); class "B" \$0.33 per cubic yard (place measurement), approximate expenditure, \$38,650.

Opening inside passage from Mills Point to Miramichi Bay at Hardwicke, N.B. (Hebert's Point). Name of contractors "Miramichi Dredging Company, Limited, Newcastle, N.B. Date of contract, June 1, 1928. Amount of contract, class "B" \$0.79½ per cubic scow measurement yard, approximate expenditure, \$14,310.

Deepening channel through the bar at Porter's Beach and removal of two shoals, one at Beacon (Stoney Patch) and the other at Perth Beach, at Guysborough, N.S. Name of contractors, "Beacon Dredging Company, Limited", Halifax, N.S. Date of contract, June 7, 1928. Amount of contract, class "A" \$7 per cubic yard, place measurement; class "B" \$0.92½ per cubic yard, scow measurement, approximate expenditure, \$29,800.

Enlarging turning basin and outer end of Government Wharf at Blind River, Ont. Names of contractors, Alexander B. McLean, Roderick A. McLean and John McLean, Sault Ste. Marie, Ont. Date of contract, June 11, 1928. Amount of contract, class "B", \$0.68 per cubic yard, place measurement, approximate expenditure, \$10,200.

Deepening basin, berths and channel at Lunenburg Foundry Company's Wharf at Lunenburg, N.S. Name of contractors, "Beacon Dredging Company, Limited", Halifax, N.S. Date of contract, June 14, 1928. Amount of contract, class "A" \$6 per cubic yard (place measurement); class "B" \$0.50 per cubic yard (scow measurement), approximate expenditure, \$33,100.

Montreal Tramways Pension Fund

The annual report of the Montreal Tramways Mutual Benefit Association for the past year shows that a total of \$26,163, nearly \$7,000 more than during the previous year, was paid to the members in old age pensions. The number of members on the roll at May 1, 1927, was 45. To this number 12 were added during the year, ended April 30, 1928, and seven were taken off through death, thus leaving a membership of 50 at the end of the year under review. Members on pension receive \$10.50 a week during life, and are covered, free of charge, by an insurance of \$1,000 which is payable to their beneficiaries at death. To the members on permanent

disability pension \$15,469.50 was paid during the 12 months ended April 30, 1928; the corresponding amount for the previous year was \$6,426. Members on permanent disability pension receive \$10.50 a week during the whole period of their total permanent disability, and in addition, are covered, free of charge, with an insurance of \$1,000 payable at death to their beneficiaries. The number of members on this pension at May 1, 1927, was 26. Ten members were added during the course of the year, and through death five were taken off, leaving at April 30, 1928, a total of 31.

PRICES, RETAIL AND WHOLESALE, IN CANADA, JUNE, 1928

Cost of Living, Prices of Staple Articles and Index Numbers

THE movement in prices during the month was slightly downward, both the weekly family budget in terms of retail prices and the Dominion Bureau of Statistics index number of wholesale prices being slightly lower.

In retail prices the cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average prices in some sixty cities was \$10.73 at the beginning of June, as compared with \$10.80 for May; \$10.86 for June, 1927; \$11.06 for June, 1926; \$10.44 for June, 1925; \$9.86 for June, 1924; \$10.23 for June, 1923; \$10.18 for June, 1922; \$11.16 for June, 1921; \$16.92 for June, 1920 (the peak); \$12.79 for June, 1918; and \$7.49, for June, 1914. The most important declines occurred in the prices of butter and potatoes, while slightly lower prices were recorded in milk, cheese and granulated sugar. The prices of beef, veal, mutton, fresh and salt pork, bacon, eggs, beans and evaporated apples were slightly higher. Including the cost of fuel and rent with that of foods the total budget averaged \$20.97 at the beginning of June, as compared with \$21.04 for May; \$21.04 for June, 1927; \$21.31 for June, 1926; \$20.67 for June, 1925; \$20.22 for June, 1924; \$20.72 for June, 1923; \$20.58 for June, 1922; \$21.74 for June, 1921; \$26.81 for June, 1920; \$20.36 for June, 1918; and \$14.27 for June, 1914. Fuel and rent were unchanged.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon the average prices of 236 commodities in 1913 as 100, and weighted according to the commercial importance of the commodities, was again lower at 150.2 for June, as compared with 152.9 for May; 153.5 for June, 1927; 155.6 for June, 1926; 158.6 for June, 1925; 152.3 for June, 1924; 155.5 for June, 1923; 152.7 for June, 1922; 164.5 for June, 1921; 255.1 for June, 1920; 201.7 for June, 1919; and 196.0 for June, 1918. Forty-three prices quotations declined, thirty-eight advanced and one hundred and fifty-five were unchanged.

In the grouping according to chief component material three of the eight main groups declined, three advanced and two were unchanged. The Vegetables and their Products group was substantially lower, due mainly to declines in the prices of grains, flour, oat products, potatoes, sugar, tea, hay, straw and vegetable oils. The Iron and its Product group and the Chemicals and Allied Products group were also somewhat lower, the former due mainly to declines in the prices of steel bars

and steel sheets, and the latter mainly because of a decline in the price of alcohol. The groups which advanced were: the Animals and their Products group, chiefly because of higher prices for cattle, hogs, beef, smoked meats, lard, boots, shoes, and butter; the Non-Ferrous Metals group, due to higher prices for copper, lead and spelter, which more than offset declines in the prices of silver, tin and solder; and the Non-Metallic Minerals group, due to an advance in the price of anthracite coal. The Fibres Textiles and Textile Products group and the Wood, Wood Products and Paper group were unchanged.

In the grouping according to purpose consumers' goods advanced, while producers' goods declined. In the former group fruits, meats, lard, boots, shoes and coal advanced, while flour, oat products, sugar, potatoes and cheese declined. In producers' goods material for the fur industry and for the meat packing industries advanced, while materials for the leather industry, for the milling and other industries, for the textile and clothing industries, for the metal working industries, as well as miscellaneous producers' materials, were lower.

In the grouping according to origin both raw or partly manufactured goods and fully or chiefly manufactured goods declined, the former due to lower prices for grains, potatoes, raw sugar, tea, hides, hay, straw, jute, silk, silver and tin, which more than offset advances in the prices of live stock, beef, citrus fruits, rubber, coal, copper, lead and zinc; and the latter due to declines in the prices of flour, oat products, vegetable oils, refined sugar, alcohol, cheese and solder, which more than offset higher prices for smoked meats, lard, boots, shoes and cotton fabrics. Domestic farm products and articles of marine origin advanced, articles of mineral origin declined slightly, while articles of forest origin were unchanged.

EXPLANATORY NOTE AS TO WHOLESALE PRICES

The index number calculated by the Dominion Bureau of Statistics is based upon the prices of 236 commodities, price levels in 1913 being taken as the base, that is equal to 100, the figures being weighted according to the commercial and industrial importance of each article included. The index number has been calculated by years back to 1890, being unweighted, however, for the period of 1890 to 1913 and has been calculated by months from 1919 to date for all groupings and from 1913 to date for the principal grouping. Summary tables of the Bureau's index number may be found in the supplement to the

LABOUR GAZETTE for January, 1925, January, 1926, and in greater detail in the Report on "Prices and Price Indexes 1913-24," issued by the Bureau. A description of the methods used in the construction of the index number appears in the LABOUR GAZETTE for June, 1923.

The accompanying table gives the index numbers of the Dominion Bureau of Statistics by the principal groups in the three methods of classification and with those of the classification according to purpose or use in detail for the current month and for certain preceding dates.

EXPLANATORY NOTES AS TO RETAIL PRICES

The table of retail prices and rentals shows the prices at the beginning of June of seventy-one staple foodstuffs, groceries, coal, wood and coal oil and the rent of six-roomed houses in some sixty cities throughout Canada. All prices are for delivered goods. The exact quality, for which the quotation is given is set forth in the case of each commodity, and every effort has been made to ensure that the quotations in each case refer to the same class of commodity in order that the statistics may be available for purposes of comparison from month to month, from city to city, etc. The prices of foods and groceries in each city, except milk and bread, are the averages of quotations reported to the Department and to the Dominion Bureau of Statistics by a number of representative butchers and grocers in each. The prices of fuel and the rates for rent are reported by the correspondents of the LABOUR GAZETTE.

Statistics similar to these were published each month from 1910 to 1920, the figures during this period being secured at the middle of each month by the correspondents of the LABOUR GAZETTE resident in each locality from dealers doing a considerable business with workingmen's households. From 1910 to 1915 the table contained a list of only the twenty-nine foods included in the family budget, with laundry starch, coal, wood, coal oil and rent. In 1915 when monthly publication of the budget in the LABOUR GAZETTE was begun, it was decided to extend the list of foods to 40, and in 1920 the list of foods and groceries was still further extended to include over 100 items.

Beginning with October, 1922, a number of commodities were dropped from the list, and in the case of a number of articles the average prices of the grades most sold have been given, owing to the impossibility of securing prices for uniform grades for the various cities from month to month.

Oleomargarine was dropped in March, 1924, the provision for its manufacture and sale since 1917, notwithstanding the Dairy Act, expired at the end of February, 1924.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts extensively occupied by workingmen. The first class is of houses in good condition, favourably located in such districts with good modern conveniences. The second class is of houses in fair condition less desirably located, but still fairly central, without modern conveniences.

The weekly budget of a family of five, calculated in terms of the average prices in the cities for which reports are received, includes twenty-nine staple foods, laundry starch, coal, wood, coal oil, and rent, these being the items for which statistics have been obtained each month and published in the LABOUR GAZETTE since Jan-

uary, 1910. The quantities of each commodity included are modifications of those employed in similar calculations by various authorities. For some articles comparatively large quantities are included owing to the absence of other important items of the same class. For instance, the only fruits are evaporated apples and prunes, and the only fresh vegetable is potatoes. But as market conditions affecting these usually affect the prices of other fruits and vegetables somewhat similarly, the relative proportions of expenditure on the various classes of foods tends to be maintained. At times when the price of an article heavily weighted for this purpose rises, or falls (abnormally) the increase (or decrease) in food prices so indicated is exaggerated, and this should be taken into account in using the budget as an indicator of changes in the cost of living. In fuel and lighting the quantities are estimated on a similar principle, anthracite coal being used chiefly east of Manitoba, and soft coal and wood in the western provinces, while no allowance is made for the quantities required in the various localities owing to climatic conditions, nor for the differences in the heating value of the various fuels. It was estimated, when the budget was first published in 1912 in the report on wholesale prices in Canada for 1911, that these calculations represented from sixty to eighty per cent of the expenditure of an ordinary family, according to the total income. For the average family of five the expenditure on these items of food, fuel, light and rent would be perhaps two-thirds or about sixty-five per cent of the total income.

While the budget serves to show the increase or decrease from time to time in the cost of the items included, it does not purport to show the minimum cost of food and fuel supplies for an average family in the Dominion or in any one province. The quantities of meats, dairy products, cereals, etc., included were adopted as affording a liberal supply for the healthy family of a man at hard physical work. On the other hand an average family with an income sufficient to do so would buy less meat, etc., but more fruit, fresh and canned vegetables, etc., so that comparative expenditure would be little changed.

Index Number of Changes in the Cost of Living

In March, 1921, the Department published in the LABOUR GAZETTE a table of percentages of changes in the cost of living since 1913 as a tentative cost of living index number, using the figures of the above mentioned budget for the calculation for food, fuel and rent, with preliminary figures for clothing and sundries added and this table has been brought down to date at intervals since. The calculation of a comprehensive cost of living index number covering all items of workingmen's family expenditure in progress since 1918 had been sufficiently advanced to enable the publication of preliminary figures by groups in a supplement to the LABOUR GAZETTE, January, 1926, on Prices in Canada and in Other Countries, page 9. This table gave figures for June and December each year from 1914 to 1926,

*The budget is intended to show the changes in the cost of the items included, not to show the minimum cost for an average family. See text.

†December only. ‡Kind most sold. §For electric light see text.

**An allowance for the cost of clothing and sundries would increase the figures by about 50 per cent. See text.

inclusive. Figures have since been given for March and September each year since 1917 and the accompanying table gives figures for December each year from 1914 to 1917, quarterly from 1918 to 1926, and monthly since January, 1927. As stated in the above-men-

tioned supplement, the figures in the food group in the family budget are still used to show the changes in food prices but in the other groups the percentage changes in the prices of each article have been weighted according to workingmen's average family consumption, and in the fuel and light groups, gas and electricity have been included.

Cost of Electric Current and Gas for Householders

With rates in 1913 as 100, index numbers of electric light rates were 1900, 141.4; 1905, 135.6; 1910, 118.1; 1911, 113.4; 1912, 109.1; 1913, 100.0; 1914, 96.5; 1915, 90.8; 1916, 87.6; 1917, 87.2; 1918, 85.8; 1919, 85.8 1920, 84.2; 1921, 84.9; 1922, 82.7; 1923, 79.5; 1924, 79.2; 1925, 85.6; 1926, 75.6.

The above figures were arrived at by converting to the base of 1913 as 100, an index number of electric current costs from 1900 to 1913 constructed for the Board of Inquiry into the cost of living in Canada, 1914-15 (Report, Vol. 2, page 318) and bringing the figures down to 1926. The figures are unweighted. The Dominion Bureau of Statistics has recently issued an index number of electric current rates for household consumption as follows: 1923, 73.8; 1924, 72.2; 1925, 69.9; 1926, 68.7. This index number is weighted according to consumption in each city. When the above index number, 1900-1926, is weighted according to population in each city covered for the years 1923, 1924, 1925 and 1926, the figures are substantially the same as those recently issued by the Bureau.

The following are index numbers of rates for manufactured and natural gas for the years 1913 to 1926 issued by the Dominion Bureau of Statistics (revised, Prices and Price Indexes, 1913-1926): Manufactured gas, 1913, 100; 1914, 98.3; 1915, 98.1; 1916, 96.3; 1917, 100.7; 1918, 107.4; 1919, 111.1; 1920, 125.4; 1921, 143.6; 1922, 140.6; 1923, 135.7; 1924, 134.6; 1925, 131.6; 1926, 131.1. Natural gas, 1913, 100; 1914, 109.6; 1915, 112.8; 1916, 112.8; 1917, 113.6; 1918, 114.2; 1919, 116.2; 1920, 123.8; 1921, 143.0; 1922, 163.1; 1923, 162.9; 1924, 162.6; 1925, 178.7; 1926, 172.2. For the years 1900 to 1913 two index numbers of gas costs calculated for the Cost of Living Inquiry in 1914-1915, have been averaged and converted to the base of 1913 as 100, as follows: 1900, 125.8; 1901, 125.8; 1902, 125.8; 1903, 125.2; 1904, 123.9; 1905, 120.1; 1906, 107.5; 1907, 108.8; 1908, 106.9; 1909, 105.7; 1910, 103.8; 1911, 99.4; 1912, 100.6; 1913, 100.0.

Retail Prices

Beef prices again averaged higher, sirloin steak being up from an average price of 33.9 cents per pound in May to 34.9 cents in June; round steak from 28.4 cents per pound in May to 29.1 cents in June; rib roast from 26.4 cents per pound in May to 26.9 cents in June; and shoulder roast from 20.1 cents per pound in May to 20.6 in June. Increases occurred

in most localities. Veal and mutton were also higher, the former at an average of 21.8 cents per pound and the latter at 30.3 cents per pound. Fresh pork was generally higher, being

*The figures for "all items" were calculated by giving the following weights to each group: Food 35%; Fuel 8%; Rent 18%; Clothing 18%; Sundries 20%.

up in the average from 25.2 cents per pound in May to 26.3 cents in June. Salt pork also advanced, being up in the average from 25.4 cents per pound to 25.9 cents. Breakfast bacon advanced in the average $\frac{1}{2}$ cent per pound to 35.7 cents. In fresh fish cod steak and halibut were slightly lower, while white fish advanced. Finnan haddie was up from an average of 20.3 cents per pound in May to 20.7 cents in June. Lard was slightly higher, averaging 21.8 cents per pound.

Eggs showed a slight advance, fresh being up from 35.8 cents per dozen in May to 36 cents in June, and cooking from 31.6 cents per dozen in May to 32.3 cents in June. In the Maritime provinces and Quebec prices continued to decline, but these decreases were more than offset by advances in Ontario and the western provinces. Milk was down from an average price of 12 cents per quart in May to 11.8 cents in June, lower prices being reported from Quebec, Sorel, Brockville, Kingston, Oshawa, Brantford, Sudbury, Cobalt, Sault Ste. Marie and Calgary. Butter prices were generally lower, dairy averaging 39.9 cents per pound in June, as compared with 42.2 cents in May, and creamery averaging 43.8 cents per pound in June, as compared with 46.7 cents in May. Cheese was slightly lower at an average price of 32.6 cents per pound. Bread was unchanged at an average of 7.7 cents per pound. Soda biscuits were slightly higher, averaging 18.3 cents per pound. Flour rose from 5.2 cents per pound in May to 5.3 cents in June. Rolled oats, rice and tapioca were steady. Canned vegetables showed little change. Beans advanced slightly, averaging 8.9 cents per pound. Onions rose from an average of 8.1 cents per pound in May to 8.9 cents in June. Potatoes declined from an average of \$1.74 per ninety pounds in May to \$1.55 in June. Prices in the western provinces showed little change but declines in Ontario and the eastern provinces were general. Evaporated apples rose from an average of 21.1 cents per pound in May to 21.5 cents in June. Raspberry jam was down from an average of 77.1 cents per four pound tin in May to 75.5 cents in June. Canned peaches were slightly lower at 26.9 cents per tin. Granulated sugar was slightly lower in most localities, the average price being 8 cents per pound. Coffee and tea showed little change. Anthracite coal was slightly lower at an average price of \$16.15 per ton, as compared with \$16.21 in May. Lower prices were reported from Brockville, Oshawa, Niagara Falls, Stratford and Owen Sound. Bituminous coal was unchanged at an average price of

\$10.13 per ton. Wood prices showed little change. No changes were reported in rent.

Wholesale Prices

The following is a summary of a statement on wholesale prices changes during the month issued by the Dominion Bureau of Statistics.

Grain prices moved to lower levels during June. Wheat was substantially lower, No. 1 Manitoba northern cash wheat, Fort William and Port Arthur basis, averaging \$1.42 $\frac{1}{2}$ per bushel, as compared with \$1.57 in May. The high price for the month was \$1.52 reached on the 2nd and the low \$1.36 reached on the 18th. The favourable crop outlook in both Canada and the United States and the improved outlook from abroad were said to be the factors tending toward lower prices. Coarse grains followed the movement in wheat, western barley being down from 91 $\frac{1}{2}$ cents per bushel to 89 $\frac{1}{4}$ cents; oats from 74 $\frac{3}{4}$ cents per bushel to 64 $\frac{3}{4}$ cents; flax from \$2 per bushel to \$1.97; and Ontario Barley from 94 $\frac{1}{2}$ cents per bushel to 93 cents. Flour reflected the downward movement in wheat, the price at Toronto being down from \$8.48 per barrel to \$8.06. Rolled oats declined from \$4.15 per ninety pound bag to \$3.95 and oatmeal from \$4.57-\$4.90 per ninety-eight pound bag to \$4.44. Shorts declined from \$41.65 per ton to \$37.65. Raw sugar at New York was down from \$2.75 per cwt. to \$2.56 and granulated at Montreal from \$5.89 per cwt. to \$5.79 $\frac{1}{2}$. Oranges at Montreal advanced from \$6-\$7 per case to \$6.50-\$8.50, and at Toronto from \$5-\$5.50 per case to \$7. Evaporated apples and prunes were also higher, the former advancing from 19 cents per pound to 20 cents and the latter from 9-10 cents per pound to 9 $\frac{1}{2}$ -11 cents. Potato prices were generally lower, Quebec grades at Montreal being down from 91 $\frac{1}{2}$ cents per bag to 74 cents; Ontario grades at Toronto from \$1.28 $\frac{1}{2}$ per bag to \$1.07 $\frac{1}{2}$; Manitoba grades at Winnipeg from 74 $\frac{1}{2}$ cents per bushel to 65 $\frac{3}{4}$ cents; and New Brunswick grades at St. John from \$3.25 per barrel to \$2.25. Tea at Toronto was slightly lower at 46 $\frac{1}{2}$ cents per pound. Ceylon rubber at New York rose from 18 $\frac{3}{4}$ cents per pound to 19 $\frac{1}{2}$ cents. Hay at Toronto fell from \$15 per ton to \$14.50-\$15, and straw from \$10.39 per ton to \$9.89. Linseed oil was 2 cents per gallon lower at 88 cents. Western cattle at Winnipeg were up from \$10 per hundred pounds to \$10.75. Choice steers at Toronto averaged \$11.90 per hundred pounds, as compared with \$10.58 in May. Choice sheep were down from \$8.20 per hundred pounds to \$6.80. Dressed beef at Toronto advanced from 19 $\frac{1}{2}$ cents per pound to 21 $\frac{1}{2}$ cents. Bacon was up from 26 $\frac{1}{2}$

cents per pound to 30 cents. Mess pork rose from \$34.50 per barrel to \$35.50. Beef hides declined from 22-23 cents per pound to 20-21 cents and calf skins from 27-28 cents per pound to 26-27 cents. Butter at Montreal advanced 1 cent per pound to 37 cents, while cheese declined from 27 cents per pound to 25 cents. Lard rose from 15 cents per pound to 16 cents. Raw cotton at New York showed little change, averaging 21.6 cents per pound in June, as compared with 21.57 cents in May. During the first part of the month prices declined but toward the end, due it was said to unfavourable weather and to reports of the spread of the boll weevil, prices advanced, reaching 23.1

cents per pound on the 30th. Japanese silk fell from \$5.15 per pound in May to \$4.55 in June. Men's wool hosiery advanced from \$4.75 per dozen pairs to \$4.90. In non-ferrous metals copper wire bars advanced from 14½ cents per pound to 14¾ cents and copper wire from 18½ cents per pound to 19¼ cents. Lead was also higher at \$5.90 per cwt, as compared with \$5.80 in May. Tin declined from 55 cents per pound to 52¼ cents and solder from 32 cents per pound to 31 cents. Silver declined slightly, averaging 59½ cents per ounce. Anthracite coal at Toronto advanced from \$13.02 per ton to \$13.27. Wood alcohol fell from 87 cents per gallon to 65 cents.

PRICES IN GREAT BRITAIN AND OTHER COUNTRIES

THE following notes and the accompanying tables give the latest information available as to movements of prices in Great Britain and other countries. The index numbers of retail prices are from official sources unless otherwise stated. The authorities for the wholesale prices index numbers are named in all cases.

Great Britain

WHOLESALE PRICES.—The Board of Trade index number, on the base 1913=100, was 143.6 for May, an advance of 0.5 per cent over the previous month. The food index rose 0.4 per cent with rises in cereals and meat and fish, and a decline in other foods. Industrial materials rose 0.5 per cent; metals showed very little change, cotton rose 2.4 per cent, other textiles advanced and miscellaneous commodities declined.

The *Statist* index number (in continuation of Sauerbeck's figures) on the base 1867-77=100, was 126.2 at the end of May, an advance of 0.5 per cent over April. Foods rose 3 per cent owing to higher prices for potatoes, English oats and wheat, beef and mutton, tea and coffee were also higher. Industrial materials declined 1.3 per cent with a decline of 3.3 per cent in sundries, an advance of 0.1 per cent in minerals and no change in textiles.

COST OF LIVING.—The index number of the Ministry of Labour, on the base July, 1914=100, was 165 at June 1, compared with 164 at May 1. Food rose 1.3 per cent owing to increases in the price of potatoes, meat and bacon, although butter and milk declined slightly. Fuel and light declined from 170 to 165-170 and other groups were unchanged.

Austria

WHOLESALE PRICES.—The index number of the Federal Statistical Office (on the base, prices in gold, first half of 1914=100) was 133 for June as compared with 131 for May. The index numbers for food rose from 124 to 127 and for industrial material fell from 146 to 144.

COST OF LIVING.—The index number on the base, prices in gold July, 1914=100, was 109 for June as compared with 107 for the three previous months.

Belgium

WHOLESALE PRICES.—The index number of the Ministry of Industry, Labour and Social Affairs, on the base April, 1914=100, was 847 for April, as compared with 848 in March. Five groups showed increases, the most marked being building materials which rose 2 per cent; seven groups declined and five were unchanged.

COST OF LIVING.—The official index number of the cost of living of a middle class family of moderate income, on the base 1921=100 was 203.44 for May as compared with 205.88 in the previous month. All groups declined with the exception of rent and lodging which advanced slightly.

Germany

WHOLESALE PRICES.—The index number of the Federal Statistical Office, on the base 1913=100, was 141.2 for May, an advance of 1.2 per cent over April. Agricultural products advanced 1.8 per cent, colonial products 2.4 per cent, industrial raw materials and semi-manufactured goods 1.1 per cent and manufactured goods 0.5 per cent.

(a) Quarter beginning in specified month. (b) Average for year. (c) Figure for previous month. (d) Following month. (e) Middle of month. (f) First of month. (g) End of month. (h) Monthly average. (i) For 1920 and 1921, 76 quotations are included, and from January, 1922, 100 quotations. (j) Gold prices hereafter on the base 100. (m) Revised figures for 1926. (n) New series. (o) New index number, base 1913=100 with 72 series of price quotations. (p) Index number discontinued at the end of 1927. (q) New official index number.

(Continued from page 803)

COST OF LIVING.—The official index number, on the base 1913-14=100, was 150.6 for May, a decline of 0.1 per cent. Food declined 0.1 per cent and heat and light 0.7 per cent, clothing advanced 0.2 per cent, sundries 0.4 per cent and rent was unchanged.

Italy

WHOLESALE PRICES.—The index number of the Milan Chamber of Commerce, on the base 1913=100, was 495.98 for May, as compared with 492.72 in the previous month. Vegetable foods advanced and animal foods declined. Industrial materials as a whole advanced slightly with advances in textiles, metals and minerals, various vegetable products and declines in chemical products, construction materials and miscellaneous industrial materials.

Australia

WHOLESALE PRICES.—The Melbourne wholesale price index number, on the base 1911=1000, was 1830 for March, as compared with 1829 for February. Jute, leather, etc., groceries, meat and building materials advanced; metals and coal, agricultural produce, etc., and dairy produce declined and chemicals were unchanged.

United States

WHOLESALE PRICES.—The index number of the Bureau of Labour Statistics, on the base

1926=100, was 98.6 for May, an advance of 1.2 per cent over the previous month. Farm products advanced 2 per cent. Foods increased owing to high prices for meats; fuel and lighting advanced 1.2 per cent and building materials one per cent. Price indexes of the other groups of commodities showed only slight variations.

The *Annalist* index number, on the base 1913=100, was 149.4 for June, a decline of 1.4 per cent from May. Declines were noted in farm products, food products, textile products and chemicals and advances in fuels, metals and building materials.

Bradstreet's index number (showing the cost of a list of 106 commodities) was \$13.1418 at July 1, a decline of 0.4 per cent from the previous month. Breadstuffs, live stock, fruits, metals, oils, chemicals and miscellaneous products declined, while provisions, textiles and naval stores advanced and hides and leather, building materials and coal and coke were unchanged.

COST OF LIVING.—The index number of the National Industrial Conference Board, on the base July, 1914=100, was 161.5 for May, an advance of 0.4 per cent due to an advance in the retail prices of foods, partly counteracted by a decline in coal.

The index number of the Massachusetts Special Commission on the Necessaries of Life was 159.6 for May, an advance of 0.7 per cent, the greatest advance being in food which was due to higher prices for meats, eggs, lard and other foods; the index numbers for clothing and sundries also advanced.

Mineral Industry of Canada in 1927

An increase of 17.85 million dollars in the capital employed in Canada's mineral industry in 1927 over the total for 1926 is shown in the preliminary report on the industry, prepared in the Mining, Metallurgical and Chemical Branch of the Dominion Bureau of Statistics. A preliminary report for 1927 was published in the *LABOUR GAZETTE*, April, 1928, pages 389 to 392. The present is a revised preliminary report.

There were 10,256 metal mines, metallurgical works, coal mines, oil and gas wells, other non-metallic mines and quarries, cement plants, lime kilns, brick and tile plants and sand and gravel pits in operation during the year. Capital employed, as represented by cost of properties, plant and liquid assets, amounted to \$706,602,942; employees numbered 82,530; salaries and wages totalled \$103,-

432,019; and the net value of sales from these various mining and metallurgical industries was \$248,385,031; or 4.6 per cent more than in 1926.

In the metal mining industry capital employed in 1,553 plants totalled \$332,820,985. Metal mining and non-ferrous metallurgical industries gave work to an average of 25,985 people throughout the year, and provided \$40,400,790 in salaries and wages. Shipments of bullion, ores, concentrates and residues from Canadian mines in 1927 were valued at \$75,204,350 after deducting freight and treatment charges. Sales from non-ferrous metallurgical plants in Canada, less the estimated cost of ores treated, realized \$45,479,578.

Employing on the average 31,754 people and paying \$41,147,075 in salaries and wages, the 5,524 plants in the fuels group represented a

capital investment in money, lands, and plant of \$223,539,033 of which 65 per cent was employed in coal mining. Sales of coal, natural gas and crude oil during the year returned \$67,388,065 to the operators, an increase of more than 3 per cent over 1926.

Capital employed in the 165 other non-metal mining industries amounted to \$53,978,632; salaried employees and wage-earners numbered 5,989 people and payments in salaries and wages totalled \$6,624,902. Sales from the

mines of this group realized \$17,426,546, an increase of 0.9 million dollars over the total for the preceding year. Clay products industries and plants producing other structural materials such as cement, lime, sand and gravel and stone, numbering 3,014 and representing a capital investment of \$96,264,292, gave work to 18,802 people and paid out \$15,259,252 in salaries and wages. The products of this group sold for \$42,886,492, an increase of 2.9 million dollars over the total for 1926.

RECENT LEGAL DECISIONS AFFECTING LABOUR

Construction of Compensation Act must be Benevolent to Workman

TWO workmen were employed by a store-keeper in Nova Scotia to look after horses and equipment, and to deliver goods to customers. One of the men received serious injuries to his eye from coming into contact with an iron hook which had been carelessly hung near the stable by his fellow employee. The injured man brought action against the employer for damages under the Workmen's Compensation Act.

Part I of the Act applies to workmen and employers in the business of "teaming." However, section 5 gives power to the Board to make regulations excluding from the scope of Part I of the Act any industry in which there are not more than a stated number of employees. This minimum number had been fixed by the Board at five, and as in the present case there were only two employees, it followed that the injured man was excluded from any benefits under Part I.

The Act however is in two parts, and the first section of Part II provides that "subject to section 90 (excluding farm labourers and domestics) sections 87 and 89 shall apply only to industries to which Part I does not apply." Sections 87-89 provide *inter alia* that workmen excluded from Part I shall have the protection of the Fatal Injuries Act in case of injury through negligence of a fellow employee. The defendant pointed out that section 5 of the Act enables the Board to bring, within the scope of Part I, any industry which it may at one time have excluded, and argued that in this sense Part I still applied to the claimant, who should in consequence be excluded from Part II. This contention was dismissed by Mr. Justice Carroll, in the Nova Scotia Supreme Court, in the following words:—

"It is contended that this whole Act must be construed if at all possible so as not to alter the common law and it is contended

that the statute does not contain that 'distinct and positive legislative enactment' necessary to alter this clearly established principle of law. But I think that Acts such as this should not be construed strictly as against workmen. The whole scheme of the Act is primarily for the benefit and protection of workmen in industries, and I think it was the clear intention of the legislature to afford protection to workmen in industries whether within the scope or operation of Part I, or excluded from its scope by regulation of the board, otherwise why make the special exception of farm labourers, etc., in section 90?

"In *Gibbs versus G. W. R. Company* (1884), 12 Queen's Bench Division, 208, Brett, Master of the Rolls, in construing a section of the Employers' Liability Act, 1880 (imp.), chapter 42, used this language (pp. 211-2:— This Act of Parliament having been passed for the benefit of workmen, I think it is the duty of the Court not to construe it strictly as against workmen, but in furtherance of the benefit which it was intended by Parliament should be given to them, and therefore as largely as reason enables one to construe it in their favour and for the furtherance of the object of the Act."

"I think too, that the words 'apply,' 'application,' 'scope,' and 'operation,' as used in the Act were intended to convey practically the same meaning and that in a true construction of the whole Act the same meaning should be given them."—*Clarke v. Wentworth Stores Limited (Nova Scotia)*, [1928] 2 D.L.R., 796.

Lumber Camp Cook is not a Domestic Servant

Another case* arising out of the Male Minimum Wage Act of British Columbia was heard in the provincial Court of Appeal re-

* Previous cases were noted in the LABOUR GAZETTE, June, 1928, p. 677; March, 1928, page 335; February, 1928, page 233, etc.

cently when Chief Justice Macdonald ruled that a cook in a lumber camp was not a "domestic servant," as held by the County court judge who tried the case, but was rather an employee in the lumbering industry, and therefore came under the regulations made by the Board of Adjustment under the Act. The employing company submitted that there was a "tacit understanding" that the actual hours worked should constitute a day, no account being taken of the hours, during which the employee was subject to call. On this point the Chief Justice said:—

"It may be competent to employers and employees to make agreements excepting certain hours out of the day thus reducing the hours to be paid for below those which otherwise would be included between the time of beginning work in the morning and that of quitting in the evening. But in the absence of such an agreement all hours must be included, as the court held in *Compton versus Allen* (1927), 39 B.C.R. 70. The respondent argued that such an agreement tacitly existed here, but he has failed to prove it, while on the other hand, the appellant makes it quite clear that there was no such agreement, and that he was always at the call of the respondent."

In regard to the contention that a camp cook was a domestic servant, and as such not subject to the Act another judge of the Appeal Court (Mr. Justice Macdonald) said:

"Whether or not a person is a domestic servant may vary with the facts of each particular case. If employed in the private dwelling house of the manager living at or near the works he would form part of his family household and be properly classed as a domestic servant. It is different when, as here, he is attached to the industry. The general boarding house appertains to the business carried on. It is an essential part of it, not merely ancillary to the main operation.

"The cook goes into the logging camp to assist in the general work in a certain capacity. It is to my mind foreign to the generally accepted meaning of the word 'domestic servants' to apply it to the plaintiff. The words 'domestic servant' connotes 'work as servants for the personal comfort, convenience or luxury of the master, his family and his guests and who for this purpose becomes part of the master's residential or quasi-residential establishment,' (e.g., as in a club). None of those elements are present in the case at bar. I would allow the appeal."

—*Field v. International Timber Company* (British Columbia) [1928] 3 D.L.R., 18.

Woodmen's Lien for Wages Act Applies to Workman Under Contract

The question of the application of the Woodmen's Lien for Wages Act of British Columbia arose in the case of a man who agreed with the owner of lumber to haul poles out of the bush, the remuneration to be based on the number of feet hauled, and who failed to obtain payment for the work performed in execution of the agreement. An action being brought by the workman in the County Court, the judge found that the workman had done all the work himself, except a negligible portion done by his young son, and denied the defendant's plea that the workman was a contractor earning profits and not wages. "Clearly in my opinion the case at bar is one where the plaintiff has in effect earned 'wages' as the fruit of his own toil, earned by the sweat of his brow, and not earned as the profits of the toil of others employed by him."

The judgment cited various English Truck Act cases in which this distinction had been drawn, and referred also to a Pennsylvania judgment in which "wages of labourers" which the statute was designed to protect were defined to be the earnings of the labourer by his own personal toil, as distinguished from the profits which a contractor derives from the labour of others. "The cases illustrate the line of distinction between the two kinds of gains or rewards. It is the difference between the sale of a man's own labour and a sale of another man's labour at something more than the contractor pays for it. What is received for another's labour over and above what is paid for it is called 'profit' and such profit has been held not to be within the protection of the statute. . . . Had the legislature," the judge proceeded, "intended to narrow a labourer's claim to one of mere wages it would have been natural to expect the legislature to use such a short and simple form of statement of claim of lien for the guidance of workmen, who very often use these forms without the assistance of a solicitor and attend to the filing of their liens themselves. . . . I am quite clearly of the opinion that the plaintiff comes within the protection of the Act, and that he is entitled to enforce his rights to a woodmen's lien under the Act. There will be judgment therefore in favour of the plaintiff against the defendants for the full amount of the plaintiff's claim and costs and judgment declaring his right to enforce a woodman's lien."

—*Schmidt v. Stucky and Pearse* (British Columbia) [1928] 2 D.L.R., 928.

Title of Doctor Illegal for Drugless Practitioner

The case of *Rex versus Pocock* mentioned in the LABOUR GAZETTE, December, 1927, page 1370, was the subject of an appeal by the defendant in the Ontario Supreme Court, which dismissed the appeal. The case concerned the use by the defendant, who was a practitioner of osteopathy, of the title "doctor".

—*R. v. Pocock (Ontario) [1928], 2 D.L.R., 937.*

Death Benefits Allowed when Injuries Cause Suicide

The Court of Appeals of the State of New York recently affirmed the decision of a lower court allowing death benefits under the Workmen's Compensation Act in the case of a workman who received injuries in the course of his employment which caused insanity resulting in suicide. It was found that the decedent's injuries caused him to "develop and suffer from a psychosis," which caused him to commit suicide, "his death being naturally and unavoidably the result of the injuries which he sustained," and that it "resulted from an uncontrollable impulse, and without conscious volition, to produce death."

The Court of Appeals in giving judgment pointed out that the Act should be construed liberally. "Death benefits," it is said, "are allowed if the injury results naturally and unavoidably in disease and the disease causes death. This is so if the injury causes insanity from gangrenous poisoning or otherwise and the insanity directly causes suicide—in other words, if the suicide is not the result of discouragement, of melancholy, of other sane conditions, but of brain derangement. If that is the cause an award may be made. Death is then the proximate and direct result of the accident within the meaning of the statute."

—*Delinousha versus National Biscuit Company (New York).*

Teachers May not Organize in State of Washington

The State Courts of Washington have given a decision which practically denies to school teachers the right to organize for the betterment of their conditions of work. The teachers' movement began last fall, when the

Seattle High School Teachers' League appealed to the District School Board for a general increase in salaries, which, as estimated at the time, would represent an increase in the school budget of approximately a million dollars. The Seattle School Board having refused to grant the increase, the Teachers' League announced that a large majority of its members had been taken into the Seattle High School Teachers' Union, No. 200, affiliated with the American Federation of Labour. Members of the School Board then intimated that they would have no dealings with teachers through union officials. Later they declared that in the new contracts for teachers for the next year they would insert a clause in which the applicant for a teaching position would be required to declare that he or she was not affiliated with a teachers' labour union, and would make no such affiliation during the period of the contract.

Labour leaders at once asserted that this clause was in violation of the constitutional rights of the employed. Attorneys employed by the Central Labour Council of Seattle obtained an order from a Superior Court Judge restraining the School Board from issuing the contracts and sought to have the order made permanent. On this basis the case went into the courts on its merits. The court ruled that the vocation of teaching in the public schools of Seattle was of a public character, being under control of the state and its governmental agency, the Board of Directors, and that it was proper for the Board to prescribe the conditions under which those whom it selects may teach in the schools. The case was immediately appealed to the State Supreme Court, which sustained the ruling of the lower court. It was suggested that the case should be taken to the Federal Court, but in the meantime the School Board sent out its contracts containing the anti-union clause, the charter of the union was surrendered, and all the teachers decided to accept the new contract. Messages were received from William Green, President of the American Federation of Labour, advising the teachers to follow their best judgment. A like message was received from Mrs Florence Curtis Hanson, President of the American Federation of Teachers. Assurance was given by the School Board that there would be no retributive action on the part of the board toward any teacher who had engaged in the movement for unionization.

**Compensation not Barred by Employee's
Negligence in New York State**

An employee in New York State, who was burned to death in the cab of an open-air electric crane as a result of having two pails of live coals in the cab to keep him warm while at work on a cold night, has been held by the Court of Appeals of New York, in reversing the decision of the Appellate Division, to have met with a compensable accident. The employee sat in a cab which was four or five feet in size. It contained a switchboard, three controllers and a stool. One

night—the coldest night of the year—a fellow workman discovered the cab in flames and before he could reach it, the employee burned to death. Two twelve-quart pails containing live coals were found in the cab. The Court of Appeals expressed the opinion that it was a natural thing for a workman exposed to the discomfort of severe cold to try to keep himself warm and that, while the method adopted in this instance created a dangerous situation and the act of the employee may have been negligent, it was certainly not an abandonment of his employment.

THE LABOUR GAZETTE

PREPARED AND EDITED IN
THE DEPARTMENT OF LABOUR, OTTAWA, CANADA

VOLUME 28]

AUGUST, 1928

[NUMBER 8

NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

Monthly Summary

EMPLOYMENT in industry in Canada at the beginning of July showed a further pronounced increase, according to a statement by the Dominion Bureau of Statistics, which tabulated returns from 6,599 firms (each employing a minimum of 15 persons) in all industries except agriculture, fishing, hunting and highly specialized business. The staffs of these firms aggregated 976,078 workers, or 32,111 more than the number employed by them on June 1. This advance was larger than that noted on July 1 in any other year of the record. The index number (with January, 1920=100) rose from 112.4 in the preceding month to 116.3 in the month under review, as compared with 108.4, 103.7, 96.8, 95.9, 99.5, 91.1 and 87.5 at the beginning of July in 1927, 1926, 1925, 1924, 1923, 1922 and 1921, respectively.

Reports received by the Department of Labour from the offices of the Employment Service of Canada indicated a small decline in the volume of business transacted in June as compared with May, but on the other hand they showed a gain over the figures for June, 1927. At the beginning of July, 1928, the percentage of unemployment reported by local trade unions was 3.2 compared with 3.7 per cent at the beginning of June and with 3.2 per cent at the beginning of July, 1927. The percentage for July was based on reports tabulated by the Department of Labour from 1,608 local trade unions with a combined membership of 178,578 persons.

The average cost of a weekly family budget of twenty-nine staple foods was \$10.80 at the beginning of July, as compared with \$10.73 for June; \$10.92 for July, 1927; \$11.07 for July, 1926; \$10.49 for July, 1925; \$9.91 for July, 1924; \$10.17 for July, 1923; \$10.27 for July, 1922; \$10.96 for July, 1921; \$16.84 for July, 1920; \$13 for July, 1918; and \$7.42 for July, 1914. In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon prices in 1913 as 100, was again somewhat lower at 149.6 for July, as compared with 150.2 for June; 152.0 for July,

1927; 155.9 for July, 1926; 158.1 for July, 1925; 153.9 for July, 1924; 153.5 for July, 1923; 154.1 for July, 1922; 163.7 for July, 1921; 256.3 for July, 1920; 256.7 for May, 1920 (the peak); 202.8 for July, 1919; and 199.5 for July, 1918.

The time loss due to industrial disputes in July, 1928, was slightly less than during June, 1928, but almost double that during July, 1927. Eighteen disputes were in existence at some time or other during the month, involving 2,449 workpeople, and resulting in a time loss of 23,793 working days. Corresponding figures for June, 1928, were twenty-one disputes, 5,150 workpeople and 25,000 working days; and for July, 1927, fifteen disputes, 3,317 workpeople and 12,585 working days.

Industrial Disputes Investigation Act, 1907

During July the Department received reports from two Boards of Conciliation and Investigation in connection with disputes between certain coal companies in Wayne, Alberta, and their employees; and between the Quebec Railway, Light, Heat and Power Company, Limited, and certain of their employees. Two new applications for Boards were received during the month. A full account of the recent proceedings under the Act, including the full texts of the reports appears on page 827.

Old Age Pension Commission in Nova Scotia

The Hon. E. N. Rhodes, premier of Nova Scotia, announced in July that a provincial commission would be appointed shortly to consider the practicability of establishing a system of old age pensions, giving effect to the Old Age Pensions Act enacted by the Parliament of Canada in 1927.

The progress of the pension legislation in various provinces was outlined in the *LABOUR GAZETTE*, May, 1928, page 438. The federal act has now been adopted by the provinces of British Columbia, Manitoba and Saskatchewan and by the Yukon Territory. In Ontario

an inquiry is now being made into the conditions existing in the province in regard to provision for aged persons, and a similar investigation is to be completed in Alberta before the next meeting of the provincial legislature.

The text of the Old Age Pensions Act, 1927 (Revised Statutes of Canada, 1927, Chapter 156) was given in the LABOUR GAZETTE, April, 1927, page 375. The Act provides for the establishment of a system of pensions for persons 70 years of age and upwards whose income from other sources is less than \$365 per year, the maximum rate of pension being \$20 per month, this rate being lowered in proportion to the amount of private income. The cost of pensions payments is borne equally by the Dominion Government and by the governments of those provinces which have entered into the old age pension system by legislation enacted expressly to give effect to the federal act.

Canada Year Book for 1928

The Dominion Bureau of Statistics has just published the 1928 edition of the Canada Year Book. This invaluable work of reference, which is described as the most important publication of the General Statistics Branch, is a compendium of official data on the physiography, history, institutions, population, production, industry, trade, transportation, finance, labour, administration, and general social and economic conditions and life of the Dominion. The successive Year Books have kept pace with the gradual development of the Bureau's work; and the approach to completion now reached in the basic organization of national statistics is shown in the completeness of the new volume.

Among the new features incorporated in the present edition of the Year Book are the following: A special article on the climate of Canada, contributed by Sir Frederic Stupart, director of the Meteorological Service of Canada; a summary of the results of the census of the Prairie Provinces, taken in 1926; improved statistics of immigration, including the languages, nationalities and birth places of immigrants; preliminary results of the census of manufactures for 1926 as well as detailed analyses of these statistics for 1925; an extended discussion of Canadian trade; a summary of the first authoritative statement on the tourist trade of Canada; material on the traffic and the financial position of the Canadian National Railways; a special article on Canadian legislation respecting Combination in Restraint of Trade, by the Registrar of the Combines Investigation Act; an important

study of the wages statistics collected at the Census of 1921; the results of a new study of the national wealth of Canada as in 1925. The appendix contains figures of immigration and of trade for the fiscal year ended March 31, 1928.

The volume, which is illustrated by many more maps and diagrams than in previous years, also includes an index with some 4,000 page-references, and an eight-page statistical summary of the progress of Canada since 1871. Section VIII, dealing with "Labour and Wages," and section IX, dealing with "Prices," will be used as an authoritative source of information in regard to labour and industry in Canada. The labour section deals with the occupations of the people; the Federal and Provincial Departments of Labour; organized labour; industrial accidents and workmen's compensation; strikes and lockouts; employment and unemployment; child labour; the co-operative movement, legislation, etc. The wage section gives index numbers of rates of wages for various classes of labour in Canada from 1901-1927, with additional tables for special industries including railways, mines, for recent years; it includes also the wage statistics of the census of 1921, to which reference has already been made; with information as to wages in selected occupations and groups of industries, etc.

The Year Book is obtainable from the King's Printer, Ottawa, at the price of \$2.

Organization in Industry and Commerce in Canada

The Department of Labour has just issued the Seventh Report on Organization in Industry, Commerce and the Professions for the year 1928. This volume shows the extent to which organization has developed among industrial and commercial concerns in the Dominion. It contains also much information in regard to associations whose members are engaged in professional, technical and scientific pursuits. The organizations described in the report are divided into the following groups: Manufacturing; Building and Construction; Mining; Transportation and Communication; Printing and Publishing; Laundering, Cleaning, Repairing; Personal Service and Amusement; General Manufacturers and Employers; Financial; Agriculture; Dairying; Horse, Live Stock, Sheep Breeders, etc.; Wholesale Merchants; Retail Merchants; Real Estate Dealers; Professional; Technical and Scientific; Insurance; Funeral Service.

The first eight divisions contain the names of 394 main and branch associations, 45,744 members of which are persons or firms who

are identified with industries in which many workers are employed. Some of the employers included in these groups have agreements with the corresponding organizations of work people covering the conditions of employment in their respective establishments. In the remaining eleven groups the employment of labour is in some cases only incidental, and with the exception of the retail merchants' section there is no corresponding body of organized employees.

While in the main the associations whose names appear in the report are purely Canadian, a number are connected with organizations whose headquarters are in the United States. The organizations named in the report number 691 main organizations and 716 branch associations, making in all 1,407 associations, which is 1,048 less than the number recorded in 1927. The decrease is accounted for by the elimination of the co-operative societies' group, which in 1927 contained the names of 1,155 associations, and for which the department is preparing a separate report, which will appear shortly. The total combined membership of the 1,407 organizations whose names appear in the present report is 888,820. Some of these names are those of companies, but in the main they represent individuals.

Settlement schemes in various provinces

The "3,000 Families Scheme," which resulted from an agreement made in 1924 between the Imperial authorities and the Dominion Government under the provisions of the Empire Settlement Act, should have come to an end on June 30, 1927, but as the total number of families settled under this scheme was not quite 2,500 at that date, the Dominion Government, in response to a request made by the British Government, agreed that it should remain open for another year, in order that the full number of families originally contemplated might be provided for. The British Government is, therefore, continuing its contribution at the rate of £300 per family.

The provinces of New Brunswick and Nova Scotia recently completed agreements with the British Government to provide for the settlement on farms of 500 new immigrant families in each of these provinces within a period of six years. Mr. Amery, Secretary for the Dominions, referred to this point in a recent speech in the British House of Commons on the Empire Settlement Bill, as a definite arrangement between the provinces and the mother country.

In Nova Scotia a Farm Settlement Act was passed this year, by which special assistance

is being provided to applicants who have been resident in Nova Scotia for a period of ten years or more. The maximum loan for land is \$4,000 and for stock and equipment \$1,500. Special provisions of the Act also cover the settlement of British and Scandinavian families.

In New Brunswick the land for the 500 families is to be provided by the province, and resold to the settler at actual cost.

The province of Manitoba still has a similar scheme dealing with 200 families under consideration.

In all these cases the contribution for British immigrants is to be made from British funds on the same terms as in the case of the "3,000 Families Scheme," i.e. an advance of \$1,500 per family for stock and equipment will be made.

Purpose of minimum wage administration

The true purpose of minimum wage administration is stated by the chairman of the Ontario Minimum Wage Board, Dr. W. J. Macmillan, in an article contributed to the *American Economic Review*, June, 1928. This purpose is to correct unwholesome variations in prevailing wage standards. Other benefits are claimed for minimum wages, and criticisms are made by opponents who have in mind only the secondary or indirect effects of this legislation. There is no room for disagreement in regard to the main object of minimum wage laws which is to put an end to the payment of wages that are unsocially low, and represent, in Dr. Macmillan's words, "pathological conditions in business." It is not the purpose of a Minimum Wage Board, he says, to effect any general increase in wages. "It is satisfied to heal the condition which both the public and the trades recognize as unhealthful."

Dr. Macmillan states that there are three kinds of aberrations from prevailing standards of wages: "First, there is the 'shyster' employer. He wants to sell his products to the workers in other plants, while these other plants can sell little or none to his workers. He wants other industries to support his, as other members of the families to which his workers belong carry the burden of their homes. He is a parasite in the industrial organism, and should be compelled to play fair with his neighbours and competitors. Second, there is the indifferent employer. He is generally without much capital or business experience. His venture is often shortlived and ends in disaster. His most desperate efforts are directed towards lowering wage-cost, without assessing the relation between

wages and production. There is a constant succession of these employers, for as one goes down another leaps into his place. One happy effect of minimum wage administration often is to improve this man's management of his business, so that he has a better chance to succeed. Third, there are the wages which are inadvertently low. Especially in the large establishments, individuals and groups of workers are overlooked. Some foreman or accountant is negligent, or the piece-rates for some operation are set unduly low, or some other blind spot occurs, and the wages drop below the intended level. In such cases the management is frequently grateful to have these things pointed out."

Dr. Macmillan advises caution in raising of minimum wage levels to the point of losing public sympathy and antagonizing the trades. There appears to be ample scope for the Board's activity within the limit drawn by the writer, the variations in the individual wage sheets being very wide. This divergence is usually concealed by the fact that most of the statistical information respecting wages which reaches the public has been summarized in tables of averages and percentages. The Ontario chairman states that only those who scrutinize the pay-rolls of individual plants know how unexplainably they differ: "I have before me, as I write the returns from two factories, doing exactly the same work. Each employs six women. The highest wage in one of these is much less than the lowest in the other. It is significant to note that the firm paying the higher wages is the more prosperous of the two."

Saskatchewan Workmen's Compensation Commission

The Commission on Workmen's Compensation appointed by the government of Saskatchewan early this year (LABOUR GAZETTE, April, 1928, page 344) concluded in July the hearing of evidence and legal arguments. Many of the witnesses recommended the adoption of a "state-fund" system as provided in Ontario, Manitoba and other provinces, certain employers' organizations as well as labour representatives being in favour of such legislation. Representatives of the railway running trades asked that any system of compensation the province might finally adopt should preserve to injured workmen or their dependants the right to common law action for the recovery of compensation.

The commission's task is to inquire into the adequacy of the existing provincial act; whether it is capable of being amended so as to remove any existing injustice or causes of

complaint; whether a system of compulsory employers' liability insurance or the system known as state insurance, might be adopted instead of the present system; and what should be regarded as an equitable scale of compensation to injured employees and their dependants.

The report of the commission will be outlined in a future issue of the LABOUR GAZETTE.

Effect of mechanization of industry on employment

The last issue of the LABOUR GAZETTE contained a note (page 682) which referred to statements by Professor P. H. Douglas, of the University of Chicago, as to the displacement of labour caused by improved industrial processes, and as to the partial absorption of the surplus working forces by new occupations. The same theme is treated more fully by President Magnus W. Alexander, of the National Industrial Conference Board, in his report at the 12th annual meeting held recently at New York. President Alexander believes that the relative decline of personnel needed in the production of goods, impressive as it may be from the standpoint of increasing efficiency, is small as compared with the constant expansion of employment in other fields which results from increasing national wealth and income.

He inquires what has become of the 29 workers in manufacturing, who are no longer required to produce an equal amount of output as was produced in 1914 with 100 men. The answer in part is that, although productive output per wage earner between 1914 and 1925 had increased 35 per cent in volume, the total manufacturing volume of production in the same period increased more than 65 per cent, and necessitated a very large net increase in the required labour force.

Suggesting some of the new fields that have opened up for employment in recent years, Mr. Alexander states that estimates recently made by the United States Bureau of Foreign and Domestic Commerce indicate that the number of persons engaged in servicing and distribution of automobiles in the last eight years increased by about 750,000; that the newborn radio trade, exclusive of manufacturing operations, absorbed at least an additional 125,000; motion picture theatres and services, exclusive of production, another 125,000; and hotels and restaurants upwards of 500,000 to possibly 1,000,000 additional men and women. Insurance agents during the same period increased by about 100,000, and another 100,000 was added to those employed

in servicing electric refrigeration, light and power and oil heating plants. Barbers and hairdressers increased by about 170,000. In other words, from one and one-half to over two and one-third million persons have been absorbed in service and distribution in these seven branches of trade and service alone, not counting many former employees who have gone into business for themselves during that period. While these are fractional data, I believe they alone are inadequate to indicate a net increase of employment quite sufficient to take up the slack created by any curtailment of employment due to mechanization during the same period.

President Alexander concludes with a reference to the more complex industrial conditions that have resulted from the constantly rising standard of living during the past few years. "The growing complexity of our methods of living and the greater demand for comforts, luxuries and for personal services is continuously creating a great variety of employment, especially in non-industrial occupations. . . . Higher standards of living, however, imply more than merely the greater consumption of material goods. The consequences of the mechanization of industry have resulted in deeply essential and far-reaching changes in our social structure as well. The increased earning power of the workers in mechanized industry has provided them with the means to enjoy the better things in life, to acquire more education, to devote more time to social activities and generally to widen their cultural horizon; and the shorter hours of work, which also have been made possible by mass production, have yielded the leisure time in which to do these things. The marked increase in the attendance at schools of higher learning, previously cited as one manifestation of rising standards of living, is evidence of this trend in our national life. Business and industry demand an increasing number of highly trained workers of sound general education, as well as men and women possessing highly specialized scientific knowledge."

Mr. Alexander refers incidentally to four widely divergent estimates of unemployment in the United States, as showing the futility of attempting any estimate in view of the absence of trustworthy records. "There are the estimates of the United States Secretary of Labour of 1,874,050 unemployed; that of the Labour Bureau, Inc., of more than 4,000,000 unemployed; that of the Junior United States Senator from New York State of 5,796,920 unemployed; and that of the Senior United States Senator from Minnesota of more than 8,000,000 unemployed. In each

case, the estimate is based on the reported shrinkage in employment in certain fields between a given year in the post-war period and the beginning of 1928; this shrinkage, however, is measurable only in some branches of economic activity for which governmental or generally accepted private reports are available from payroll data."

United States Senate to investigate unemployment

A resolution was passed by the United States Senate on May 19 directing the Senate Committee on Education and Labour to investigate the causes of unemployment.

The Committee is to inquire into the possibility of relieving unemployment by the following means: (a) the continuous collection and interpretation of adequate statistics of employment and unemployment; (b) the organization and extension of systems of public employment agencies, Federal and State; (c) the establishment of systems of unemployment insurance or other unemployment reserve funds, Federal, State, or private; (d) curtailed production, consolidation, and economic reconstruction; (e) the planning of public works with regard to stabilization of employment; and (f) the feasibility of co-operation between Federal, State, and private agencies with reference to (a), (b), (c), and (e).

The resolution further instructs the Committee to ascertain the results of previous investigations into the problem of unemployment and to examine existing systems for its prevention and relief, both in the United States and in other countries. The Committee is to report its findings to the Senate before February 15, 1929.

Unemployment insurance in men's clothing industry in Chicago

The LABOUR GAZETTE, July, 1923 (page 705), contained a note on an agreement just then concluded between the Amalgamated Clothing Workers of America and the Chicago Clothing Manufacturers' Association, establishing a system of unemployment insurance. This agreement has been renewed for a further period of three years, and will continue in effect until May 1, 1931, unless the terms are changed in the meantime by consent of the employers' association and the union in joint conference. It provides for an increase in the employers' contribution to the unemployment insurance fund while leaving the percentage contributed by the employees at the former figure. In the earlier agreement the employers and employees each contributed an amount equal to

the same amount.

1½ per cent of the actual weekly pay roll, but by the present agreement the employers' contribution is doubled, so that they will now contribute three per cent. By this arrangement the burden of the responsibility for unemployment among the workers is placed more directly upon the employers. The increased contribution by the employers will bring the amount of the yearly contributions to the fund to about \$1,000,000, as compared with approximately \$700,000 during the past year. This increase will make it possible eventually to increase the benefits paid to unemployed members, and to build up a larger reserve.

A similar arrangement also for a three-year term, has been made in Amalgamated Clothing Workers and the Rochester Clothiers' Exchange (New York State).*

Germany and the Washington hours convention

The new German Government formed by Mr. Hermann Müller submitted a declaration of general policy to the Reichstag on July 3, 1928. The statement contained the following announcement on the subject of the intentions of the Government as regards the regulation of hours of work, with particular reference to the Washington Hours convention:

"The Federal Government proposes to ratify the Washington Hours Convention, and will make every effort in international discussions to do away with the uncertainty which at present exists as regards the revision of the Convention, and to remove the obstacles in the way of general ratification. The Government will introduce in the Reichstag forthwith the Labour Protection Bill adopted by the Reichsrath, together with the supplementary Bill relating to labour in mines. The provisions of these bills relating to hours of work are based on the principle of the eight-hour day, but care has been taken to avoid economic impossibilities as well as social injustice. The provisions are in harmony with the terms of the Washington Convention."

"The Federal Government proposes to ratify the Washington Hours Convention, and will make every effort in international discussions to do away with the uncertainty which at present exists as regards the revision of the Convention, and to remove the obstacles in the way of general ratification. The Government will introduce in the Reichstag forthwith the Labour Protection Bill adopted by the Reichsrath, together with the supplementary Bill relating to labour in mines. The provisions of these bills relating to hours of work are based on the principle of the eight-hour day, but care has been taken to avoid economic impossibilities as well as social injustice. The provisions are in harmony with the terms of the Washington Convention."

Relation of accident and production rates

The American Engineering Council recently published a report containing the results of an investigation undertaken for the purpose of determining whether or not modern methods of accident prevention have been successful. It is pointed out that the safety movement was organized at about the same time that the first workmen's compensa-

tion acts became effective, that is, about sixteen years ago. A general downward trend in the accident rates is noted during the intervening period, but on the other hand there has been an increase in the number and severity of industrial accidents during the last few years. This increase is examined in its relation to the recent remarkable increase in the rate of industrial production. In an introduction to the report, written by Mr. A. W. Whitney, it is stated that "apparently the increased seriousness of accidents during the last few years has been the direct result of the increased intensity of industrial activity during that period. Increased activity requires the employment of new, inexperienced men, and the shifting of old men to new jobs."

Production per "man-hour" has increased much more rapidly than accidents per "man-hour." There have been fewer accidents in terms of things produced—at the same time many more things are produced, so that after all there are more accidents. If industrial well-being is to be measured in terms of goods produced, then this condition is satisfactory, but if it is measured in terms of working conditions, the situation is found to be "unfavourable and even alarming."

In spite however of recent increases in the accident rates, there is no doubt in the minds of the investigator that accidents can be controlled by means of safety organization. The experience of certain large corporations in the United States is considered to prove this conclusion. "The United States Steel Corporation in thirteen years has decreased its accidents 86 per cent; the Union Pacific Railroad has a safety record for shop employees that is over five times as favourable as the average of the other large railroad systems of the United States; the Clark Thread Company has a record of nearly 10,000,000 man-hours without an accident; one of the plants of the DuPont Company with sixty-five employees has a record of eleven years with only one accident and that a relatively minor one."

Plan to relieve depression in soft coal industry

The Consolidation Coal Company, of which John D. Rockefeller, Junior, is the principal stockholder, recently decided to close ten of its mines, four being in Pennsylvania and six in West Virginia, for the purpose of ending the disorder in the soft coal industry which had followed the recent conditions of over-production, price-cutting, and wage-cutting. The chairman of the company pointed out that while these changes will release 2,500 men, or about one-fifth of

*Monthly Labour Review, July, 1928.

the former staff, they will bring better conditions of work to the remaining four-fifths, who in future will work full time. The company intends, it is stated, to take care of all married men and their families, and it is anticipated that the single men will easily find other employment at this season of the year. Similar action is said to be under consideration to relieve the situation resulting from over-competition in the textile industry in the eastern states. On the other hand the *Journal of Commerce* (New York), discussing the ultimate value of these efforts, says: "Judging the future by the past there is every reason to believe that mine closures in one part of the bituminous area offer a direct incentive to expanded operation by producers elsewhere. That is why no industrial company or group of companies can ever unaided provide a solution for the evils that afflict the coal industry. Nothing short of a national policy, assisted, if not executed, by public authority, will prove comprehensive enough to meet the requirements of the situation."

Jubilee of the "Statist"

The *Statist*, the well-known economic and financial weekly review published in London commemorated its 50th Anniversary in June by the publication of a Jubilee Number of 220 pages surveying social and economic progress all over the world during the past half-century. A very notable list of authorities contribute special articles to the Number, including Lord Melchett who writes on "The Growth of the Modern Industrial Organization"; Sir Josiah Stamp on "The Present Economic Position of Great Britain"; Sir Lynden Macassey on "Relations Between Capital and Labour"; Rt. Hon. Philip Snowden, M.P., on "National Revenue and Expenditure"; Prof. Gilbert Murray on "The Development of the League of Nations"; Mr. R. G. Hawtrey on "Financial and Industrial Crises"; Rt. Hon. Sidney Webb, M.P., on "The Growth of Collectivism"; Lord Inchcape on "Trade and Population"; the High Commissioners for Australia, Canada, India and South Africa upon the economic position of their respective countries; Dr. Julius Klein on "50 Years' Economic Progress in the United States"; Mr. Lucien March on "The Position of France"; Dr. Arthur Salomonsohn on "Germany's Economic Prospects"; and many others of equal eminence. The number contains a remarkable selection of congratulatory messages to the *Statist* and a series of interesting illustrations of past and present aspects of city life. The price is 1s. 3d., post free, from the publishers, 51 Cannon Street, London, E.C. 4.

Movement to make agreements enforceable at law

The jubilee number of the *Statist*, noted elsewhere on this page, contains a retrospect of the relations between capital and labour during the past fifty years, by Sir Lynden

Macassey, a prominent authority on labour affairs in Great Britain. In order to give effect to recent efforts to secure co-operation between the two parties, the writer strongly recommends that agreements should be made legally binding. "We keep urging employers and trade unions to agree, yet we keep unrepealed upon the Statute Book the provisions of the Trade Union Act, 1871, which provides that no agreement between employers' organizations and labour organizations shall be enforceable at law. As part of this post-war reconstruction, Norway, Sweden, Denmark, Germany, and France have in different ways made all such agreements enforceable, and, as I have ascertained by careful inquiry, with the most beneficial results to industrial stability. In the United States of America an important committee has recently commenced to inquire into the matter. And in other important respects those European countries have improved upon our pre-war type of industrial organizations."

The American committee to which Sir Lynden Macassey refers is a committee of the American Bar Association whose report recommending Federal legislation to make arbitration agreements legally binding was outlined in the last issue of the LABOUR GAZETTE, page 704.

The coroner's jury which investigated the circumstances of the death of a workman who fell from the Don River viaduct of the Canadian Pacific Railway near Toronto on June 14, recommended that "on all work of this nature, protection should be afforded the workmen and others below, in the form of a net suspended below the structure."

According to the latest returns, nearly 45 per cent of the population of Saskatchewan was born within the province itself and of the 820,738 persons listed, 624,548 are of British origin, according to a provincial report. Native-born Canadians comprise 525 372; those from the British Isles 98,041, and from other British possessions 1,060. Of the foreign-born citizens, numbering 196,190 or nearly 24 per cent, Russia is the largest contributor with 27,227. Austrians are second with 11,594 and Ukrainians third with 10,607. There are 8,284 Galicians, 7,356 Germans, 9,240 Norwegians, 7 282 Swedes and 2,066 Danes

GENERAL REVIEW OF THE INDUSTRIAL SITUATION

THE employment situation at the end of July was reported by the superintendents of the Employment Service of Canada to be as follows:—

The hay crop in the Province of Nova Scotia was being harvested, and several additional farm workers were being placed for the purpose. Other crops were progressing satisfactorily, and good yields were anticipated. Fishing was reported as being good. Activity in the pulp woods continued, with many crews cutting and peeling pulp wood, and some placements were being made. Manufacturing activity was reported as rather satisfactory for the time of year. The coal mining industry showed quite satisfactory production, and some of the mines were working full time. As has been the case for some months, the building and construction industries in Halifax continued to show very considerable activity, but at other points activity of this sort was not very brisk, with the exception of the construction of the large paper mill near Liverpool. Transportation was stated to be heavy, while trade was showing some improvement. There was an increased demand for women domestic workers, and Halifax reported a shortage of applicants for such work.

As in Nova Scotia, haying was under way in the Province of New Brunswick, with some demand for farm workers as a result; crop prospects generally were reported as favourable. The catches of the fishing industry in this Province were stated to be only fair. In the logging industry the chief activity was in the pulpwood section, which showed quite considerable activity, with a number of men being referred and placed. Manufacturing industries showed normal activity. Highway construction was employing a substantial number of workers, while building construction, particularly in St. John where practically all skilled workers were busy, showed a good deal of activity. Transportation was active and trade was fairly brisk. The demand for women domestic workers continued, but there did not appear to be any noticeable shortage of applicants.

The farming industry in the Province of Quebec showed substantial activity, the Montreal employment office reporting a record number of placements in it. Orders of considerable size for logging workers were being received and filled. Except for papermaking, which was operating below capacity, and the boot and shoe and metal trades at Montreal, the manufacturing industries throughout this Province showed at least normal activity. Building and construction showed no falling off in activity, and a substantial volume of

work was in hand. Retail trade was reported to be in quite prosperous condition. The number of orders being received for domestic workers showed no decrease, nor did the shortage of applicants indicate any change in the number of workers seeking this class of work.

With hay harvesting having become practically general in the Province of Ontario, there was a heavy demand for farm workers and some offices reported a shortage of applicants. The building group showed continued activity, and a large volume of employment was being afforded in this industry. Manufacturing industries, generally speaking, continued normal production, and while additional workers were not being taken on generally, the level of employment being maintained was of quite a satisfactory character. Although occasional orders for bushmen were being received, the logging industry was not showing a very great deal of activity. The normal situation obtained in the mining industry, namely, the mines continued to operate satisfactorily, but additional workers were not being sought in any number. The employment situation, in so far as women workers were concerned, still showed a shortage of experienced cooks-general.

With crop prospects in the Province of Manitoba being exceedingly good, demands for farm workers registered at the employment offices showed a decided increase throughout the Province, and Winnipeg reported that the better class of applicants were scarce. Construction activity, particularly in the city of Winnipeg, was at a rather high level in comparison with preceding years. The general employment situation, while rather satisfactory, was not such as to require any considerable number of additional workers, and therefore orders in other than agriculture and construction were not very numerous. In the women's section, while the number of orders for domestic workers being received was not yet unusually large, an increase in the number sought was anticipated.

Farm orders registered at the Saskatchewan employment offices were not very numerous, and no shortage of suitable applicants was yet in evidence. However, with crop prospects exceptionally bright, an unusual increase in the demand for workers was anticipated in the course of a very few weeks. Building and construction throughout the Province were fairly active, and some demands for workers were being registered. While the number of workers being sought in miscellaneous industries was not large, the general employment situation appeared to be decidedly satis-

factory. In the women's division there was a keen demand for farm domestics, with a shortage of applicants.

As in the Provinces of Manitoba and Saskatchewan, the crop prospects in Alberta

were very decidedly promising. Although the harvest was not expected to begin for several days, the demand for farm workers was on the increase and no surplus of applicants was in evidence. Building construction activity

was in a very satisfactory volume, improvements being recorded. From Edmonton it was reported that, although there was no demand for men, the logging industry showed a satisfactory condition. Although at the date of this report the coal mining industry was quite dull, a re-opening of some of the mines in the course of a few weeks was anticipated. In the women's division domestic workers registering showed the usual shortage.

The demand for logging workers in the Province of British Columbia was good, and several centres reported a shortage of applicants. Building and construction activity was very encouraging, and while additional workers were not being engaged in any considerable volume, there did not appear to be any substantial surplus seeking employment of this nature. Mining industries, particularly metal mining, showed very good activity, although here again additional workers were not being engaged in any numbers. Manufacturing industries showed normal activity. With comparatively few women registering for domestic work, the demand for their services continued brisk. Employment conditions, generally speaking, were decidedly satisfactory in the Coast Province, and unemployment appeared to be at a minimum.

There were further pronounced increases in employment at the beginning of July, according to statements tabulated by the Dominion Bureau of Statistics from 6,599 firms employing 976,078 workers, or 32,111 more than on June 1. This advance, which was rather larger than on July 1 in any other year of the record, brought the index number, (with January, 1920, as the base=100) to 116.3, as compared with 112.4 in the preceding month, and with 108.4, 103.7, 96.8, 95.9, 99.5, 91.1 and 87.5 at the beginning of July in 1927, 1926, 1925, 1924, 1923, 1922 and 1921, respectively. Thus the situation continued decidedly better than in any other month of the years since 1920.

The trend was favourable in all provinces, the most noteworthy expansion taking place in the prairie provinces, Quebec, and Ontario. In the Maritime Provinces, construction recorded the greatest improvement, but there were also gains in logging, services and some other groups, while coal mining and water transportation were slacker. In Quebec, construction, manufacturing, trade and services reported the largest addition to staffs, but logging and transportation registered declines. In Ontario, considerable gains were shown in manufacturing, construction, transportation, mining and trade, while logging was seasonally quiet. In the Prairie Provinces, the most noteworthy advances were in construction,

manufacturing, transportation, services, trade and mining. In British Columbia, manufacturing, particularly fruit, vegetable and fish canning, construction, services and mining recorded marked gains, but logging afforded less employment.

The eight cities for which separate tabulations are made reported heightened activity, the gains in Windsor and the Other Border Cities, Toronto and Ottawa being most extensive. In Montreal, employment continued to advance, particularly in the construction, trade and service groups, while manufacturing was seasonally dull. In Quebec city, manufacturers, construction and transportation registered practically all the gain. In Toronto, manufacturing notably in food and printing establishments, transportation and trade reported increased activity. In Ottawa, most of the expansion took place in manufacturing but construction was also brisker. In Hamilton, construction and trade were busier, while manufacturing showed practically no change. In Windsor and the other border cities, further improvement was noted, mainly in automobile plants. In Winnipeg, manufacturing, transportation and trade registered advances that brought employment to its maximum in this record. In Vancouver, the greatest gains were in manufacturing, but communications, trade and some other industries also reported advances.

There was an unusually large increase in manufacturing, particularly in food canneries, lumber, pulp and paper, rubber, building material, electric current, mineral product, boot and shoe, non-ferrous metal and electrical apparatus factories, while seasonal curtailment was shown in textile and iron and steel plants. Outside the manufacturing industries, there were especially pronounced gains in construction, and also important advances in trade, transportation, services, communications and mining, except of coal, logging was seasonally slacker.

An article elsewhere in this issue gives in some detail the employment situation as at the beginning of July, 1928.

The local trade union situation at the close of June was slightly better than that recorded at the end of the preceding month, as was shown by reports tabulated from 1,608 labour organizations with 178,578 members. If these 5,800 were unemployed on the last day of June, a percentage of 3.2 compared with 3.7 per cent of unemployed members in May. No change, however, was reported over June of last year, when the percentage of idleness also stood at 3.2; though the unemployment levels in the various provinces differed to

TRADE UNION REPORTS

some extent. Quebec and British Columbia unions alone registered declines in activity at the end of June when compared with May, but these reductions were slight, while of the increases in employment in the other provinces Nova Scotia registered the most substantial. In comparing with the returns for June last year, Quebec and British Columbia again reported a slightly adverse situation during the month under review, while in Saskatchewan the same percentage of idleness was registered in both months used for comparison, and in the remaining provinces a somewhat greater volume of employment was afforded.

A more detailed outline of unemployment among local trade unions at the close of June appears on another page of this issue.

EMPLOYMENT OFFICE REPORTS

Reports from the offices of the Employment Service of Canada for the month of June, 1928, showed 35,028 references of persons to positions and a total of 33,869 placements. Of these the placements in regular employment were 22,616, of which 18,412 were of men and 4,204 of women, while the placements in casual work were 11,253. Vacancies offered by employers to the Service numbered 36,273, of these 25,231 were for men and 11,042 for women. Applications for employment were registered from 31,248 men and 11,586 women, a total of 42,834. A decrease was shown in the volume of business transacted, when the above figures were compared with those of the preceding month, but a gain was shown when a comparison was made with the records of June last year, the reports for May, 1928, showing 45,742 vacancies offered, 52,089 applications made and 42,237 placements effected, while in June, 1927, there were recorded 33,540 vacancies, 42,462 applications for work and 31,266 placements in regular and casual employment. A report in detail of the work of the offices for the month of June, 1928, and for the quarterly period April to June, may be found elsewhere in this issue.

Production and Trade

**INDUSTRIAL
PRODUCTION
IN CANADA**

Some figures indicating the recent movements of trade and industry are given in the table on page 823. Industrial activity in Canada was at a higher level during the first six months of the present year than in any period of like duration, according to an index prepared for the *Monthly Review of Business Statistics* published by the Dominion Bureau of Statistics. Much of the material for this section is derived from this monthly publication, to which readers are referred for fuller information on current business statistics.

The general nature of the expansion is shown by the gain in each of the chief factors entering into the construction of the index. The monthly average of the mining index was 7 per cent greater in the half-year under consideration than in the same period of 1927. The manufacturing index showed an increase of five per cent, the increase output of steel, motor cars and oil contributing to this result. The production of newsprint, with the introduction of new equipment, continued to expand during the first five months of the year, showing a moderate decline in June as the result of over-production and lower prices. Revenue carloadings were $5\frac{1}{2}$ per cent greater, the movement of one of the largest grain crops in history helping to swell the totals in the western division, where the loadings of all classes were 610,000 cars compared with 506,000 cars in the first six months of 1927. A slight gain only was shown in merchandise exports, while the imports increased 10.5 per cent. The index of industrial employment averaged $5\frac{1}{2}$ per cent greater during the half year, the index standing at 116.3 on July 1 last, compared with 108.4 on the same date last year. No better index could be afforded of the greater activity in industrial and commercial enterprise prevailing at the present time.

EXTERNAL TRADE

A summary of Canadian trade prepared by the Department of National Revenue shows that in June, 1928, the merchandise entered for consumption amounted to \$110,703,773, as compared with \$113,582,238 in May, 1928, and with \$101,018,386 in June, 1927. The chief imports in June, 1928, were: Iron and its products, \$32,871,085, and fibres, textiles and textile products, \$16,169,569.

The domestic merchandise exported amounted \$107,121,091, as compared with \$118,021,324 in May, 1928, and \$105,678,453 in June, 1927. The chief exports in June, 1928, were: Agricultural and vegetable products, mainly foods, \$43,320,768, and wood, wood products and paper, \$24,985,286.

In the three months ending June, 1928, exports of domestic merchandise totalled \$284,117,730, and imports to \$302,776,481.

BUILDING PERMITS AND CONTRACTS AWARDED

According to a report prepared by the Dominion Bureau of Statistics the value of the building permits issued in sixty-three cities in Canada during the month of June, 1928, amounted to \$22,628,907, as compared with \$27,497,189 in the preceding month, and with \$18,363,239 in June, 1927.

The *MacLean Building Review* estimates the total value of the construction contracts awarded in Canada in July, 1928, at \$38,359,600. Of this amount \$13,583,700 was for business buildings; \$13,035,200 for residential buildings; \$6,765,600 for public works and utilities; and \$4,975,100 for industrial projects. The apportionment by provinces of the contracts awarded during July, 1928, was as follows: Ontario, \$13,761,900; Quebec, \$13,172,800; Prairie Provinces, \$8,543,500; British Columbia, \$2,097,400 and the Maritime Provinces, \$784,000.

The cumulative total of contracts actually let for the first seven months, now 21.6 per cent ahead of the same period of 1927, shows that 35.7 per cent of all work is in the business building classification, totalling \$105,297,000. Residential building accounts for \$85,566,200, or 29.1 per cent; Public Works and utilities, \$60,488,100 or 20.5 per cent, and Industrial, \$43,265,600, or 14.7 per cent. By divisions, Ontario now stands at \$112,416,800 or 38.1 per cent; Quebec, \$92,828,700 or 31.5 per cent; Prairie Provinces, \$41,763,400 or 14.2 per cent; Maritimes, \$25,794,800, or 8.8 per cent, and British Columbia, \$21,813,200, or 7.4 per cent.

The contemplated new construction in Canada in July, 1928, according to the same *Review*, totalled \$45,088,300, \$14,868,400 of this amount being for residential buildings; \$16,822,600 for business buildings; \$5,718,100 for industrial projects, and \$7,679,200 for engineering, including bridges, dams and wharves, sewers, water mains, roads, streets and general engineering.

Strikes and Lockouts

The time loss due to industrial disputes in July, 1928, was slightly less than during June, 1928, but almost double that during July, 1927. There were in existence during the month eighteen disputes, involving 2,449 workpeople, and resulting in a time loss of 23,793 working days, as compared with twenty-two disputes, involving 3,150 workpeople and resulting in a time loss of 25,000 working days in June. In July, 1927, there were on record fifteen disputes, involving 3,317 workpeople, and resulting in a time loss of 12,585 working days. Eight of the strikes and lockouts commencing prior to July terminated during the month as did four of the disputes which commenced during July. At the end of the month, therefore, there were on record six strikes and lockouts affecting 107 workpeople, not including those strikes and lockouts in

which employment conditions were reported to be no longer affected but which had not been formally called off.

Prices

The cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average retail prices in some sixty cities was \$10.80 at the beginning of July, as compared with \$10.73 for June; \$10.92 for July, 1927; \$11.07 for July, 1926; \$10.49 for July, 1925; \$9.91 for July, 1924; \$10.17 for July, 1923; \$10.27 for July, 1922; \$10.96 for July, 1921; \$16.84 for July, 1920; \$13 for July, 1918; and \$7.42 for July, 1914. The prices of beef, veal, fresh and salt pork, bacon, lard, eggs, bread, beans, evaporated apples and prunes were somewhat higher, while the prices of milk, butter, rolled oats, yellow sugar and potatoes were slightly lower. Including the cost of fuel and rent with that of foods the total budget averaged \$21.01 at the beginning of July, as compared with \$20.97 for June; \$21.11 for July, 1927; \$21.30 for July, 1926; \$20.70 for July, 1925; \$20.30 for July, 1924; \$20.65 for July, 1923; \$20.67 for July, 1922; \$21.53 for July, 1921; \$26.92 for July, 1920 (the peak); \$20.66 for July, 1918; and \$14.17 for July, 1914. Fuel and rent showed little change.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics was again slightly lower at 149.6 for July, as compared with 150.2 for June; 152.0 for July, 1927; 155.9 for July, 1926; 158.1 for July, 1925; 153.9 for July, 1924; 153.5 for July, 1923; 154.1 for July, 1922; 163.7 for July, 1921; 256.3 for July, 1920; 256.7 for May, 1920 (the peak); 202.8 for July, 1919; and 199.5 for July, 1918. In the grouping according to chief component materials three of the eight main groups declined, two advanced and three were unchanged. The groups which declined were: the Vegetables and their Products group, due chiefly to lower prices for grains, flour and other milled products, potatoes, sugar and tea; the Non-Ferrous Metals group due mainly to lower prices for tin, lead and silver, and the Iron and its Products group. The Animals and their Products group and the Fibres, Textile and Textile Products group both advanced, the former due to higher prices for cattle, hogs, beef, pork products, butter, cheese and eggs, and the latter due to higher prices for cotton, wool, jute and hessian, which more manila rope. The Wood, Wood Products and Paper group, the Non-Metallic Minerals group, and the Chemicals and Allied Products group were unchanged.

PROCEEDINGS UNDER THE INDUSTRIAL DISPUTES INVESTIGATION ACT, DURING THE MONTH OF JULY, 1928

During the month of July the Department received reports from two Boards of Conciliation and Investigation established to deal with disputes between (1) The Rosedeer Coal Company, Jewell Collieries, Sovereign Coal Company, Excelsior Coal Company and the Ideal Coal Company and their employees as represented by Wayne Local Unit No. 16, Mine Workers Union of Canada, and (2) The Quebec Railway, Light, Heat and Power Company, Limited, and certain of its employees being clerks, freight handlers, yardmasters and telephone operators, members of the Canadian Brotherhood of Railroad Employees.

Applications Received

During July three applications for the establishment of Boards of Conciliation and Investigation were received as follows:—

(1) From certain employees of the Canadian National Transfer Company being clerks, foremen, automobile mechanics, blacksmiths (farriers), saddlers, chauffeurs, chauffeurs' helpers, teamsters, stablemen and watchmen, members of the Canadian Brotherhood of Railroad Employees.

(2) From certain employees of the Winnipeg Electric Company, being members of the Winnipeg Electric Trackmen's Unit, One Big Union.

(3) From certain employees of J. R. Booth, Limited, Ottawa, Ontario, being members of Local No. 73, International Brotherhood of Pulp, Sulphite and Paper Mill Workers.

Report of Board in Dispute Between Certain Coal Companies in Wayne, Alberta, and Their Employees

A report was received during July from the board established to inquire into certain matters in dispute between the Rosedeer Coal Company, Jewell Collieries, Sovereign Coal Company, Excelsior Coal Company and the Ideal Coal Company, and certain of their employees as represented by Wayne Local Unit No. 16, Mine Workers Union of Canada. The board was composed as follows:—Mr. Wm. G. Carpenter, of Calgary, chairman, appointed on the joint recommendation of the other members of the board; Messrs. George H. Eaton, of Calgary, and Norman Macdonald, of Wayne, nominees of the employing companies and employees, respectively. The report of the board was unanimous and contained recommendations as to settlement of the dispute.

Report of Board

In the matter of the Industrial Disputes Investigation Act, 1907; and of a dispute between Rosedeer Coal Co., Jewell Collieries, Sovereign Coal Co., Excelsior Coal Co., and the Ideal Coal Co., all of Wayne, Alberta (Employers), and the employees of the above-named coal companies, as represented by Wayne Local Unit No. 16, Mine Workers Union of Canada (Employees).

To the Hon. PETER HEENAN,
Minister of Labour,
Ottawa, Canada.

CALGARY, July 14, 1928.

SIR,—We, the undersigned members of the Board of Conciliation and Investigation set up under the provisions of the Industrial Disputes Investigation Act, having, before entering upon the functions of our office, taken the oath of office required by the Act and having taken upon ourselves the burden of the investigation, have the honour to report as follows:

The employees were represented by Mr. L. A. Tupper for the Rosedeer Coal Co., Mr. C. C. Cook for Jewel Collieries, Mr. A. G. MacAuley for the Sovereign Coal Co., and Mr. John Blair for the Excelsior Coal Co., and Mr. Thomas McGuckie for the Ideal Coal Co. The employees were represented by Messrs. H. Simpson, A. Levers, E. Rogers of the Rosedeer Coal Co., and J. Falini; Messrs. R. Timms and P. Ponich of the Jewel Collieries; Messrs. G. Worman and A. Lang of the Sovereign Coal Co.; Messrs. M. Sprela and M. Petalik of the Excelsior Coal Co.; Messrs. F. Taylor, A. Williamson and F. Ludwig of the Ideal Coal Co. Mr. Frank Wheatley, President, Mine Workers' Union of Canada, was present at all the sessions of the Board with the parties to the dispute.

On June 25, 1928, the full Board met the operators in Calgary, and endeavoured to ascertain the facts concerning the matters in dispute, including the history or background of the situation generally. This conference was conducted in an informal way and no other persons were present.

On June 27, at Wayne, the procedure was duplicated through an informal meeting with the representatives of the mines concerned, composed of employees from the respective mines. In addition, however, was present at this sitting, Mr. Frank Wheatley, President of the Mine Workers Union of Canada, District No. 1. The representatives of the employees numbered thirteen, all of whom, with one exception, had been active employees of one or other of the mines concerned for a period of three years or over.

At the conclusion of the second session, by which time each side had been given the broadest possible opportunity for expressing its views and stating its case, it was evident that a wide difference of opinion existed, which gave the Board a fair grasp of the problem as a whole. The investigation, examination and weighing of evidence subsequently conducted and submitted offered so many illuminating facts that instead of elaborating upon the details of investigation, modifications, changes and alterations as they occurred, it would better serve the purpose to present, in summary form, the developed conclusion of the situation as a whole gathered from the proceedings complete.

The application for the establishment of a Board sets forth as the cause of dispute:

1. Failure to renew an agreement.
2. Claims and demands upon the employers:

(a) Increase in inside the mine day wage rates from \$5.40 to \$5.57 in the case of miners, timbermen and tracklayers.

(b) The rate of \$5.25 per day for drivers.

(c) A minimum day rate of \$5 for labourers working inside the mine.

(d) That the present day wage rates be renewed to outside day workers with a minimum daily wage rate to unclassified labourers of \$4.50.

(e) That the former contract mine rates be renewed with the addition of \$1.25 per cut for cleaning up machine cuttings in rooms and .95 per cut for cleaning up machine cuttings in all narrow work.

(f) The right of employees to collectively make a working agreement through the Wayne Local Unit No. 16 of the United Mine Workers of Canada.

(g) The right to rent or build a hall in Wayne for the purpose of holding meetings to conduct the business of the union.

In reply to this application the operators in paragraphs five and six, particularly, of their letter submit that:—

“That the employers are prepared to discuss with their respective employees the terms of an agreement for their mines in the Wayne field, and are prepared to harmonize their contract and day wage rates with those in other mines in the same general locality, with a view to establishing a fair and equitable basis of remuneration to its employees and of competitive equality to the employers.

“That the employers decline to carry on such negotiations except with the committees of their employees at their own mines.”

It will be noted that, while the demands of the employees, as set out in the application for the Board, are specifically stated, paragraph five of the operators' reply is significant in that it mentions their willingness to “harmonize their contract and day wage rates with those in other mines in the same general locality, with a view to establishing a fair and equitable basis of remuneration to its employees and of competitive equality to the employers.” The agreement of the Midland Coal Company of Drumheller with its employees containing its wage scale was submitted as an answer to the demands of the miners. This answer contained more than the detailed demands in that it proposed a complete revision of the whole wage question, involving a change in the system of payment from that on a run of the mine to that on a screen coal basis.

With respect to contract mine rates covering coal taken from rooms, entries and pillars, the customs for some years past in the Wayne field has been to base these rates on the short ton of 2,000 pounds of run of the mine or, as it is commonly called, “mine run.” On the other hand, for some years past, it has been the practice in other mines in the same general locality with which the Wayne operators are in competition, to base their mining rates for coal taken from rooms, entries and pillars on what is called the screened coal basis. This is the general practice followed in the Drumheller field, six or seven miles away, with which the Wayne field is in direct competition. By this system of payment, the miners are rewarded by weight for all coal that passes over a stationary bar screen of certain dimensions. An important and complicated factor in the problem before the Board developed because of this difference in contract rates

existing in the two competitive fields and by virtue of the terms set forth in section 23 of the Act, required the lengthy consideration that it subsequently received.

The situation was further complicated because the representatives of both sides had their local and peculiar difficulties to surmount and explain as applied to their respective mines. On top of this, suspicion and unbelief to a very remarkable degree existed on one side with respect to the other, and it very soon became apparent that the attitude of the Board would have to be of an extremely conciliatory nature to induce conciliation, compromise or even an absolutely true statement of facts before any progress whatever could be expected.

Bearing in mind these facts, you will observe that the miners' case, condensed, consisted of four points:—

- (1) Failure of the operators to renew an agreement.
- (2) Day wage and contract rates adjustment.
- (3) Recognition of a local unit of the Mine Workers' Union of Canada.
- (4) The right to rent or build a hall for the purpose of holding meetings to conduct the business of their union.

The operators, on the other hand, in their reply claim:—

- (1) That they were ready to renew an agreement with their respective employees, but not through the office of the Mine Workers' Union of Canada.
- (2) That they were willing to harmonize their rates, day and contract, with those paid in other immediately adjoining competitive fields which automatically involved a change of the method of payment with regard to contract rates which would introduce the screened coal method of payment and abolish the mine run method.
- (3) That they would not recognize as a party to their agreement a local unit of the Mine Workers' Union of Canada.
- (4) That the right to rent or build a hall in Wayne was not a vital issue in the making of contracts because they had no objection to such meetings of their men provided these were not the source of disruptive influences from the outside.

Failure to Renew an Agreement.—The agreement referred to is one dated September 24, 1925, to cover the period to March 31, 1928, made between the Wayne Mine Workers' Union of Canada and the Wayne Coal

Operators' Association. There was considerable obscurity covering the significance of the names used as shown to be parties to this agreement. It was apparent to the Board that the name Wayne Mine Workers' Union of Canada, as used in the agreement, was not the Mine Workers' Union of Canada or any local unit of this body as it is constituted at this time. The Wayne Coal Operators, at the present time, have not an association as such, although at the time of the making of the agreement referred to, it is apparent that the operators collectively on one side negotiated with a committee of employeess from the respective mines as the Wayne Mine Workers' Union of Canada.

The attempt of the employees to have the agreement renewed was in the form of two registered letters signed by the Chairman and Secretary of a District Scale Committee composed of representatives from the Wayne and Drumheller locals of the Mine Workers' Union of Canada. These letters were ignored by the operators and not acknowledged. No further attempt was made by either side to bring about the renewal of this agreement or to make any other agreement for which in the opinion of the Board each party is equally responsible.

Day Wage and Contract Rates Adjustment.

—The companies in presenting the Midland Scale wages as their answer to the demands of their employees contended that the Midland Coal Co. in Drumheller was a fair example of the type of competition that they were compelled to meet. This company had recently completed a renewal of agreement with the United Mine Workers' Union of America representing its employees which will govern the rates of pay for a period of three years. This agreement is subject to a termination on the first day of April of any year at the request of either party by giving notice at least thirty days prior to this date. To put themselves in a position of equality with respect to rates for labourers and to stabilize conditions for a period of three years, that would enable them to secure business in the open market in competition with the Midland Coal Company, the Wayne Operators urged the acceptance of this agreement. This scale was claimed to be one of the highest, if not the highest scale of rates paid at any of the mines in Western Canada, especially in the Province of Alberta.

Intense resentment during the earlier sittings of the Board was manifested on the part of the employees against the screen coal basis of payment. The men were alarmed and fearful of the effect of this change on

their earning power, and were unmistakably opposed to its introduction. On being given assurance by the operators that the new system was not designed in any way to reduce the wages of the men, a careful, critical and extended examination and comparison was made between the two systems.

The proposed change involved a difference in the system of payment to the contract miner. It tended to check the careless miner or loader from producing an excessive amount of slack, resulting in the production of a larger percentage of the larger sized coal. Coal screened for larger size brings more money per ton to the Companies; therefore the operators looked upon the increase in larger coal as desirable. The miners, on the other hand, contended that the change would not produce a larger percentage of large coal and would result in a decrease in wages. The Board experienced a trying, monotonous, and difficult situation in endeavouring to evaluate the new system in terms of the old through a vast series of calculations made from various viewpoints.

In order to make the calculations of the quantities and percentage of coal being mined at Wayne under one and one-half inches in size, it was necessary to secure from the operators a statement of their experience in this respect covering a period of one year, which was 16 per cent or 320 pounds per ton. It also became necessary to secure representative figures from each of the mines indicating the past experience of a representative number of men working on the mine run basis in both rooms and entries.

Considerable difficulty was experienced in arriving at a mutually satisfactory basis from which to make the necessary calculations. It then became necessary to translate these experience figures into their equation on the proposed scale, from which, considering all factors that entered into the general scale, there was shown to be but a few cents difference per ton in either case, namely, 4.5 cents per ton in the case of entries and 2.97 cents in the case of rooms, or an approximate average of 4 cents per ton.

This difference was against the miner under the new system but it did not take into account the possibility and probability of an average reduction among all the miners of the quantity of slack that would pass through a one and one-half inch screen, to less than 16 per cent or 320 pounds per ton. If this were accomplished by careful mining, thus putting a premium upon good work, a man might earn more under the new basis than under the old. With a great deal of reluctance, however, and still with evidences of suspicion, the miners

indicated their willingness to accept the Midland Scale plus the 4 cents per ton which made up the difference as shown by the calculations.

In the course of arriving at these figures, agreements were reached on many minor points involving adjustment of wages and clarifying definitions under the old agreement and which, at the time, was anticipated would be incorporated in the new agreement to be drawn before the Board.

As for the day wages of outside and inside men, the "Midland Scale" generally involved an increase over the rate in the old agreement, in practically all cases. This met the main demands of the men in their application but went further with the view to harmonizing the scale among all the classifications in and around the mine.

Recognition.—This question was given a preliminary survey on the first sitting of the Board jointly with Miners and Operators. On the one hand, the Operators showed that before the old agreement had been in force three months a strike of some three weeks' duration had occurred, generally conceded to have been caused by outside interference and influence, in which the I.W.W. participated. The men admitted how unfortunate the occurrence was, and yet indicated that they themselves had been the means of terminating it. This strike took place without notice of any kind, and lasted three weeks in the midst of the busiest season of the year. It was alleged by one of the operators, and not contradicted by the men, that, at the conclusion of this strike, a committee of three men, purporting to represent all the men at his mine, asked that the check off be abolished at his mine, to which he agreed and which became effective at all the other mines. The Operators claimed that, since the three weeks' strike, there had been more peace and quietness—smoother running and less loss of time—than ever before. The men contended that abuses had crept in, rates were autocratically reduced, men were discriminated against more than could have been possible had they been effectively organized. These statements were warmly contested.

In the midst of this discussion the Board experienced the first evidence of conciliation in that both sides mutually agreed to the setting up of a plan to effectually settle future disputes. This settlement scheme presupposed a union of some type which would constitute one of the parties to the working agreement it was anticipated would result from the efforts of the Board. By reference to pages

3, 4 and 5 of the old agreement, dated 24th September, 1925, the plan for settlement of disputes was changed to make provision for a Board of Reference as the third step in the settlement of a dispute in which there would be

"Three men to be elected by the employees working in the mine affected by the dispute, such representatives to be active employees of the Wayne mines. Operators to elect from among themselves three men actively engaged in the management of the Wayne mines."

Following this understanding it soon became apparent that no further progress could be made in the matter of recognition of the Union. It was, therefore, agreed to examine the other phases of the dispute with the hope of discovering factors which would be sufficiently mutually desired to enable a compromise to be reached on the question of the Union.

A Union Meeting Place. This was so intimately associated with the previous discussion that no progress could be made until the matter of the Union had been settled. It was pointed out by the Operators that, after the strike referred to above, during which a representative of a foreign organization participated, it was decided, in order to prevent such reoccurrences, to withhold the use of any building under their control for similar or any other Union purposes.

With many minor adjustments having been assented to by both sides, and with the feelings of both parties materially better, the situation finally resolved itself as follows:

(a) The men (composed of committee first mentioned) were prepared to accept the new scale of wages, and therefore the screened coal basis similar in general to Midland agreement provided that 4 cents per ton were added to the contract rates for entries and rooms.

(b) Complete and full recognition of the Mine Workers' Union of Canada.

(c) Satisfactory arrangements concerning the use of a building for purpose of holding meetings.

After adjournment from 6.30 p.m. to 9.30 p.m., during which the operators gave consideration to the problem at this status, they read their answer as follows:

"In the light of the opinions expressed this afternoon, it would appear that any compromise would be accepted with reluctance, if at all, and it is the operators' desire that any contract made should be entered into wholeheartedly by both parties, therefore the oper-

ators have agreed to concede to the men's demands with regard to rates, making room coal 82 cents and entry coal \$1.03 per ton. We are strongly of the opinion that this system will result in a lower percentage of slack, despite the opinion of some of the men to the contrary."

"With regard to the Union, in view of the experience of the past, we have nothing further to add than has been expressed by the representatives of the employers to-day." This disposed of all the details in the proposed agreement but left open the designation of the parties, the men still contending for the name of the Mine Workers' Union of Canada as a party to the agreement.

A three hours discussion ensued, participated in by all members of the Board striving for conciliation. The spokesmen for the men made sound, stirring and patriotic appeals for the "Canadian" Union. The operators grimly replied that the name was worthy, but they could not recognize the stability of the organization nor its ability to carry out an agreement. Both parties made eloquent pleas and progress was undoubtedly being made until exception was made to a remark of the President of the Mine Workers' Union of Canada, which caused the spokesman for the operators to reply that when no concession whatever would be made on this point the negotiations must end and all agreements arrived at during the sittings of the Board withdrawn as a result of which any future negotiations must be entered into without prejudice.

The Board pressed for a statement from the operators as to the extreme limit it would be possible to have them go in this matter. In reply they stated that they would not sign or enter into an agreement with the Mine Workers' Union of Canada as such but that they were not adverse to any affiliation their employees might have with this organization. They would offer no objection to their employees being members of this Union. They would agree to handing the check off dues to any one of their employees in the respective mines, which dues might be disposed of in any way the men desired. They would seek to arrange for a suitable hall for meeting purposes so long as such meetings were legitimately confined to the use of the Mine Workers' Union of Canada. This impressed the men and a compromise seemed imminent. At this point the President of the Mine Workers' Union still pressed for recognition of his Union in the terms of the agreements.

The Board then asked if either party had anything to suggest or offer that had the

slightest or remotest hope of an ultimate agreement. The reply was emphatically negative.

Before final adjournment the Board pressed upon the parties the significance of their failure to agree. It was stressed that agreement must be eventually made and the parties were pleaded with not to break off negotiations with so much accomplished in the way of get-together and with one point standing out in such prominence as an insuperable barrier. The Board proposed to the operators that they make a short term agreement with the Union to test its ability to carry out the terms of the agreement. Failing in this the final suggestion made by the Board was to the effect that agreements be made between the separate mines and its employees affiliating with the Union of their choice without official recognition by the operators. This suggestion was made with the view to having the men prove the bona fides of their contention that Union was in the best interests of all parties, after which there would be no difficulty in securing official recognition in subsequent agreements.

The Chairman then announced that if any idea occurred that offered a solution, the Board, at the request of either party, would reconvene at ten o'clock the following morning, it having been agreed by the operators that they would allow the former negotiations to stand.

No further possibility of agreement appeared to the Board which concluded its sittings at eleven o'clock the following morning.

Recommendations.—

1. That the conclusions mutually arrived at during the investigation be the basis of the new agreement.

2. That the parties to each agreement be a local union at each mine and the management of the mine and that dues be checked off and turned over to the respective secretaries of the local unions.

3. That the duration of the agreements be for one year with the view to giving either party the opportunity of considering their respective attitudes towards the recognition of the Mine Workers' Union of Canada.

4. That, in the drafting of agreements, provision be made for the settlement of disputes that cannot be disposed of by the local committee and the management, by instituting a Board of Reference, such Board to consist of three men selected by the employees of the mine affected by the dispute, such representatives to be active employees of the Wayne mines and three men selected by the operators from among themselves such to be actively engaged in the management of Wayne Mines.

5. That it is the opinion of the Board that the men should have a strong union organization, which would be recognized by the operators. This Union should protect the interests of the men and help to stabilize the industry of which they are a part.

6. That the operators withdraw their objection to the men securing a suitable meeting place for the purpose of conducting the legitimate business of their Union.

All of which is respectively submitted.

Report of Board in Dispute Between the Quebec Railway, Light, Heat and Power Company, Limited, and Certain of Its Employees

The Minister received on July 28 the findings of the Board of Conciliation and investigation established to deal with a dispute between the Quebec Railway, Light, Heat and Power Company, Limited, and certain of its employees being clerks, freight handlers, yardmasters and telephone operators, members of the Canadian Brotherhood of Railroad Employees. Twenty-four employees were stated to be directly affected by the dispute, which related to (1) the alleged dismissal of three employees on account of membership in a labour union, and (2) the request of the employees for an agreement covering wages and working conditions. The personnel of the

board was as follows: Mr. Orville S. Tynedale, K.C., of Quebec, chairman, appointed on the joint recommendation of the other board members; Messrs. Paul Taschereau, of Quebec, and Norman S. Dowd, of Ottawa, Ontario, the employer's and employees' nominees, respectively. The report of the board was signed by all three members, the employees' nominee dissenting, however, on the conclusion reached with respect to the dismissal of three employees, and the company's nominee dissenting on the recommendation made concerning the execution of an agreement and schedule. The text of the report follows.

Report of Board

Re Industrial Disputes Investigation Act, 1907, and re differences between the Quebec Railway, Light, Heat and Power Company, Limited, and certain of its employees, being clerks, freight handlers, yardmasters and telephone operators, members of the Canadian Brotherhood of Railroad Employees.

The Honourable the Minister of Labour,
Ottawa, Ont.

SIR,—

Pursuant to the appointments made and the instructions received with respect to the above noted subject, the Board has met on several occasions, and the undersigned have the honour to report as follows:—

The Board was appointed upon the application of the Brotherhood, which described the nature and cause of the dispute and the demands made as follows:—

“Dismissal of three employees, viz: Marguerite Lebel, Joseph Sirois and A. Lemieux, on account of membership in a labour union. Request by the employees for an agreement governing wages and working conditions as per attached exhibit.”

The first session of the Board was held in Quebec on June 13, 1928. The proceedings at that session may be summarized as follows:—

Mr. McLean, the secretary of the Brotherhood, submitted the three following points:

(a) The Brotherhood's right to be recognized by the company;

(b) The right to have the agreement annexed to the application and covering rules and rates paid to certain classes of employees executed; and

(c) The right of the three dismissed employees to be reinstated without loss of seniority.

Mr. McLean then proceeded to give an outline of what occurred before and what led up to the dismissal of the employees. In June, 1927, the three employees, whose names were specially mentioned in the application, and others, applied for membership in and were accepted by the Canadian Brotherhood of Railroad Employees. In August, 1927, an application on behalf of the associated employees was made to the company for a conference in order to discuss rates of pay and working conditions generally. The application was granted in so far as certain of the employees were concerned, but the three employees in question and others occupying posts

considered by the company to be of a more or less confidential character were excluded.

On August 25, Mr. Boucher, describing himself as “Secretary, Joint Committee,” wrote to Mr. J. A. Cote, superintendent of the company, enclosing copy of a letter upon which appeared five typographed reproductions of signatures, requesting the superintendent to fix a date for a conference with the committee, composed apparently of those whose names were affixed to the letter. The covering letter of Mr. Boucher pointed out that the clerical forces and shed employees had to the extent of 99 per cent joined the ranks of the Brotherhood, and that the Federate Committee had chosen him, Boucher, as their secretary, to deal with matters concerning future relationship with the company regarding working conditions and wages.

On November 2, 1927, a conference was held between the representatives of the company and the trainmen's organizations, but the clerical employees were excluded. Mr. Boucher, the secretary of the latter, wrote to Mr. Tanguay, the general manager of the company, on November 2, 1927, pointing out that the clerks of the Quebec Railway, Montmorency Division, had been refused the right to meet the company as a body and asked for an appointment in the future. To this letter a reply was sent by the Superintendent, Mr. J. A. Côté, on the same date, expressing surprise at the receipt of the letter just referred to and informing Boucher that the delegates of that particular group would not be allowed to attend the meeting arranged with the trainmen's organizations. A further letter was sent the next day by the general manager to Mr. Boucher, pointing out, in reply to the letter of November 2, that no injustice had been intended and that if any one had a grievance he should take the matter up individually with the superintendent.

On or about December 22, a proposed agreement in the form of the one attached to the application was submitted to the company, but no action was taken thereon, so far at least as the employees' organization was concerned, but several clerical employees were granted increases individually in January, 1928.

(The correspondence above referred to has been produced as Exhibit P. 2.)

On or about April 20, 1928, Miss Lebel, Joseph Sirois and Andre Lemieux were all three dismissed because they refused to obey the instructions given by the superintendent to relinquish their membership in the Cana-

dian Brotherhood of Railroad Employees. It seems to be admitted by both parties that the employees in question had previously been warned that if they did not so relinquish their membership they would be dismissed.

The company was represented by its general manager, Joseph Eugene Tanguay, and J. A. Côté, its superintendent. The company's contentions were as follows:—

The company refuses to admit the right of employees holding confidential or semi-confidential positions to belong to the same union as the other classes of employees of the company, and indeed, to belong to any union at all. It was suggested that some or all of the three employees in question had imparted information obtained by them in their capacity of employees, but the company frankly admitted that this was not the ground for dismissal, which was solely the refusal of the three employees in question to give up their membership in the Brotherhood as they had been instructed to do.

So far as the agreement covering wages and other working conditions is concerned, the parties had an informal discussion during the luncheon adjournment, and agreed to meet again with a view to arriving at some common ground, so that the sole points remaining for decision by the Board appeared to be the following:—

1. Was the company justified in dismissing the employees for the reasons stated?
2. If not, should a recommendation be made that the three employees in question be reinstated?

The Board, of course, endeavoured to bring about a compromise on these two points, but the company's attitude was apparently very firm and its general manager stated most definitely that they would not tolerate membership in any union on the part of their confidential or semi-confidential employees, and under no circumstances would the three employees be reinstated.

The following Exhibits were produced by the applicant:—

P. 1 Orders in Council P.C. 1743 and P.C. 80, dated respectively July 11, 1918, and May 1, 1919.

P. 2 Copies of correspondence above referred to.

P. 3 Pamphlet entitled "A Message of Liberalism" incorporating resolutions adopted at the convention of the Liberal Party held in Ottawa on the 5th, 6th and 7th of August, 1919.

P. 4 Clipping from the newspaper "Western Producer" reproducing text of resolutions passed at a Conservative Convention in October, 1927.

P. 5 Bulletin No. 5 of the Department of Labour issued as a supplement to the "Labour Gazette," February, 1922, entitled "Canada and the International Labour Conference."

P. 6 Copy of Agreement between shop employees and the Quebec Railway, Light and Power Company.

P. 7 Booklet issued by the King's Printer, 1919, containing the report of the National Industrial Conference held at Ottawa, September 15 to 20, 1919.

P. 8 Schedule of rules governing working conditions as between the Canadian National Railways Central Region and the clerks and other classes of employees therein described.

P. 9 Copy of Constitution and By-laws of the Canadian Brotherhood of Railroad Employees.

In addition to these Exhibits, Mr. McLean submitted a written brief setting forth the Brotherhood's contentions.

The meeting above referred to took place a few days after the first Session, but as no agreement was reached, another Session of the Board was held in Quebec on the 29th June. The proceedings at this second Session were, in brief, as follows:—

Mr. Tanguay was first called upon and asked to explain the result of the meeting. He said that he had met the Committee about a week previously with Mr. Côté, and had told the Committee:

1. That the company could not reinstate the three employees in question, but might consider the re-engagement of two of them, namely Miss Lebel and Sirois, if an opening should occur in the future. He would not undertake to re-engage Lemieux because his services had not been satisfactory. The refusal to reinstate was based, first on the ground that he considered the company was justified in dismissing them for having persisted in remaining members of the Brotherhood after they had been warned to relinquish their membership on pain of dismissal, and secondly on the ground that it would be unfair to the substitutes who had been engaged.

2. So far as the schedule of agreement was concerned, Mr. Tanguay told the Committee that he was not prepared to agree to such a schedule until the company had replaced certain of the employees who were unsatisfactory and incompetent. Furthermore it was in-

tended to transfer some of the employees in question to the head office, and lastly he did not consider a schedule was necessary for such a small group of employees.

In answer to the Board, Mr. Tanguay stated that the total number of employees in Montmorency Division was from 200 to 250, of whom approximately 30 were engaged in clerical work. Mr. Tanguay produced as Exhibit R. 1 a list of all the clerical employees of the Montmorency Division.

Mr. Tanguay again reiterated his contention that the three employees who were dismissed occupied confidential positions, and accordingly, in any event, should not be allowed to belong to any union. He stated that Miss Lebel, besides being a telephone operator, was a stenographer and assistant-secretary replacing Miss Lane at times. Referring again to the meeting of the Committee, Mr. Tanguay stated that the Committee (Messrs. Boucher and Trudel) admitted having told Mr. Côté, the Superintendent, that they and the other employees had been satisfied with the increases in salary granted in January, 1928. Mr. Tanguay then told them that if anything was unsatisfactory and if they desired any change to speak to Mr. Côté, and if they got no satisfaction from Mr. Côté to refer to Mr. Tanguay himself.

During this part of the Session, Mr. Mosher, the President of the Brotherhood, and Mr. Bolduc, a local representative, were present; but in view of Mr. Tanguay's report of what took place when the Committee met him and Mr. Côté, it was decided to hear Messrs. Boucher and Trudel. The Board accordingly adjourned to the afternoon when Messrs. Boucher and Trudel were present. Mr. Tanguay then repeated his statement as to what had occurred at the meeting, and Mr. Boucher was called upon to give his version. He stated that Mr. Tanguay's report was in substance correct, but that he (Boucher) had not intended to say that all the employees were satisfied with the increase given in January, but rather that they were surprised and pleased because the increases were greater than they had expected. He added that if the Committee had been received in the first place, namely last summer or last fall, the trouble which has arisen might have been avoided.

In answer to the Board he said that the employees had not spoken to the company's officials before joining the Brotherhood but on the other hand they had not been aware until January or February, 1928, that the company did not want the clerical employees to join. At this point the Board requested

Mr. Boucher to explain the grounds of complaint against present conditions, which he enumerated as follows:

1. The hours of work for ticket agents are too long;

2. Even with the increase given in January, 1928, the salaries of most of the employees are still inadequate;

3. In the shed there is work for five men, and frequently four men have to do the work without extra remuneration;

4. There is no day of rest given to ticket agents or express clerks, and they receive no extra pay for Sunday work;

5. The employees are not informed in time as to whether or not they are to be given their freedom on legal holidays, sometimes receiving word only the previous evening;

6. No investigation is held before an employee is dismissed for alleged cause, Mr. Boucher suggested that an employee charged with neglect, misconduct or any other ground for dismissal should be entitled to have a representative of the Employees' Committee assist him in making his case before the representative of the company.

7. The conditions of work, salaries, etc., should be set forth in an agreement.

Upon all these grounds Mr. Trudel, the other representative of the Committee, agreed. Mr. Tanguay called upon to reply to these various grounds of complaint stated as follows:

1. This point was only brought to Mr. Tanguay's attention a few days ago and he stated that some changes could be arranged.

2. The employees are paid as well as the Company can afford and perhaps better than the financial situation of the Company justifies.

3. Mr. Tanguay never heard any complaint in this connection and would ask Mr. Côté to answer.

4. This point Mr. Tanguay considered to be a matter of discussion and perhaps some arrangement would be arrived at. Mr. Mosher intervening, stated that it was the general practice in all railways to give ticket agents at least one day's rest out of seven and that if owing to special conditions such day's rest could not be given the employee concerned received extra pay for what would otherwise have been his day of rest.

5. Mr. Tanguay promised that this would be attended to and he also stated that it was the Company's policy to give to every employee working on a monthly basis, and who had been in the Company's employ a year or more, two weeks' holidays with pay.

6. Mr. Tanguay did not consider any such arrangement necessary as he thought a personal interview between the employees in question and the Superintendent or Manager should be sufficient. In this connection Mr. Mosher drew the attention of the Board to Article 4 of the Schedule of the C.N.R. Central Region produced as P. 8.

Owing to Mr. Côté's absence it was arranged that he should submit in writing a statement of what took place at the Meeting of the Committee and any other points which he cared to put forward.

Mr. Mosher submitted to the Board that the reinstatement of the three employees in question was considered by the Brotherhood of vital importance as a question of principle.

The Board then called upon Mr. Tanguay to say how far he would be prepared to go towards an agreement. His position was explained by him, as follows:

1. The Company would be willing to deal with an Employees' Committee for the adjustment of such points as might arise, but it is not at present prepared to put the results of any adjustment which might be arrived at in the form of an agreement.

2. The Company does not object in principle to its clerical employees joining a union or Brotherhood, provided that this right be restricted to those who do not occupy positions of trust or confidence.

Under date of July 12, the Superintendent, Mr. Côté, submitted a written statement, reading as follows:—

"Further to my letter of the 9th inst., in connection with our Quebec Ticket and Freight Clerks' case, now before the Board of Conciliation, I respectfully submit the following facts in answer to two of Mr. Boucher's complaints against present conditions.

"1st. To his claim that the hours of work for ticket Agents are too long, I wish to state that the 9 hour day prevails for them as well as in all departments of the Montmorency Division, except the general offices, and that Ticket Offices are open as follows:—

"Week Days, except Saturdays

5.15 A.M. to 7.45 P.M. 1 Agent on duty
4.00 P.M. to 6.17 P.M. 2 Agents on duty
Total hours 16.47 or 8.23 each.

"Saturdays

5.15 A.M. to 11.00 P.M. 1 Agent on duty
4.00 P.M. to 6.17 P.M. 2 Agents on duty

Total hours 20, One Agent on hand during 9 hours and the other during 11 hours,—latter being paid 2 hours extra.

"Sundays

5.45 A.M. to 11.00 P.M. 1 Agent on duty at the time

Total hours 17.15, each man is paid 9 hours.

"2nd. As to the claim that 'there is work in the shed for 5 men, and that frequently 4 men have to do the work, without extra remuneration.' I wish to report as follows:—

"Up to December, 1926, there were 4 men employed in the freight shed, but owing to increase in traffic, and as our way freight train was then leaving Quebec at 1.00 p.m., we engaged an extra man, but since this Spring merchandise received at the shed up to 3.00 p.m. is only forwarded the next day, so that employees have the whole day for loading in cars, instead of up to 11.30 a.m., as in the past. We still carry a crew of 5 men, but occasionally one of the employees, who is also a brakeman, is called out as a spare for train service, and that leaves 4 men in the shed, but even with that, they each have two or three hours during the day, with scarcely any work, and their complaint in this case, is far from being justified, and an investigation in this case, would confirm our contention.

"As to what took place at the meeting of the Employees' Committee, in the General Manager's office, I have nothing further to add to Mr. J. E. Tanguay's report to the Board."

It was suggested by the member of the Board appointed on the recommendation of the Brotherhood, Rev. Norman S. Dowd, that it might be advisable, with a view to reaching a compromise, to communicate with the Board of Directors of the Company. The Chairman of the Board explained the situation verbally to the President of the Company and was advised by the latter that he approved of the stand taken by the General Manager, more particularly with respect to membership in the Brotherhood, or in any Union of the confidential employees of the Company.

At the suggestion of the Chairman, Mr. Côté was requested to submit in writing a description of the duties of the three employees concerned. In compliance with this request, Mr. Côté submitted the following:—

"Complying with your request, I wish to state, that the three employees who were dismissed, viz:—Miss LeBel, Messrs. J. Sirois and A. Lemieux, occupied the following positions:—

"Miss LeBel was employed as a Telephone Operator, and besides her duties as such, she was also very often called upon to type

letters for me, and make copies of earning reports, etc., from the Audit Office, whenever the regular Stenographer was absent through illness or holidays.

"Both Sirois and Lemieux were employed in the Auditor's Office, and as such were called upon to verify tickets sold by Ticket Agents, also to help the Auditor when preparing for an audition of these Ticket Agents, they had access to the books in the Auditor's Office, and their positions were considered as confidential ones."

It was consequently decided to hold a final Session of the Board for deliberation, which took place at Montreal on the 25th July, 1928.

After reviewing the whole situation, the following conclusions were arrived at:—

1. Dismissal of the three employees:—

The Member of the Board appointed on the recommendation of the Employees considered that, in view of the dual capacity in which Miss LeBel was employed, she could properly be excluded from any agreement which might be executed between the Company and the representatives of the employees as such with regard to wages and other conditions of work. The other two Members of the Board were of the opinion that the Company, in view of the confidential nature of Miss LeBel's employment, was entitled to dismiss her on account of her refusal to relinquish membership in the Union after having been warned that such refusal would result in her discharge. In view, however, of the length of her service with the Company it was recommended that the General Manager give effect as soon as possible to his declaration before the Board that Miss LeBel would be re-engaged if a suitable opening occurred.

The foregoing applies equally to Joseph Sirois and to A. Lemieux, save with respect to the latter that no recommendation as to re-engagement is made, because the General Manager stated that his services were unsatisfactory and that he would have been dismissed in any event.

2. Execution of an agreement and schedule:

The Member of the Board appointed on the recommendation of the Company did not consider it advisable to recommend the execution of such an agreement, because,—

(1) Such an agreement would cover only a small group of the clerical employees of the Company while the majority of such employees belonging to the head office would be excluded;

(2) Because the number of employees covered, if the confidential employees were excluded, would be so small as to make such an agreement unnecessary.

(3) It would involve the necessity on the part of the Company of dealing with an additional labour organization.

In these circumstances, while admitting the theoretical right of employees to belong to a Union, the Member referred to considered it would be unfair to ask the Company to deal with the several distinct labour organizations.

The other two Members of the Board recommend that the Company should meet the Committee of the employees in question with a view to negotiating an agreement covering wages and other working conditions, subject to the exclusion of employees considered as occupying confidential positions.

The whole respectfully submitted.

MONTREAL, July 25, 1928.

(Sgd.) O. S. TYNDALE,
Chairman.

(Sgd.) PAUL TASCHEREAU,
Member.

(Sgd.) NORMAN S. DOWD,
Member.

A five-day week during the next six months has been established by the Macfadden Publications of New York, applying to its five hundred employees in the general offices of the corporation. The plan took effect April 21 and will run continuously up to October 21, 1928. This extra time for recreational activities will release the employees for the enjoyment of a full Saturday-Sunday week-end, and is expected that it will be reflected in increased efficiency throughout the entire year.

The Macfadden Publications are one of the pioneers in adopting this plan. The five-day week is at present attracting the attention of business men, economists and labour authorities as a solution to the unemployment problem. Mr. Ford recently wrote in this connection:—"If we should come to a five-day week in this country, the result would be very beneficial to industry and commerce. In the first place, the people who enjoyed a five-day week would consume more goods. Leisure time is a period of consumption and of the use of the various utilities which are not employed when the community is at work. People who have more leisure must have more clothes. They must have a greater variety of food. They must have more transportation facilities. They, naturally, must have more service of various kinds."

CANADIAN RAILWAY BOARD OF ADJUSTMENT No. 1

Summary of Recent Proceedings

NINE new decisions, and an interpretation of an earlier decision, were recently given by the Canadian Railway Board of Adjustment No. 1. This Board was established by a voluntary agreement concluded in 1918 between the various railway companies and certain of the railway labour organizations, its original purpose being to secure uninterrupted service on the railways during the continuance of the war. The Board consists of six representatives of labour, one for each of the following railway brotherhoods: the Brotherhood of Locomotive Engineers, the Brotherhood of Locomotive Firemen and Enginemen, the Order of Railway Conductors, the Brotherhood of Railroad Trainmen, the Order of Telegraphers, and the Brotherhood of Maintenance of Way Employees and Railway Shop Labourers. Earlier decisions were outlined in the *LABOUR GAZETTE*, April, 1928, and in previous issues. The third report of the proceedings of the Board covering the decisions rendered from October 1, 1923, to September 30, 1927, was issued as a supplement to the issue of November, 1927.

Supplement to Case No. 273.—Temiskaming and Northern Ontario Railway Commission and Brotherhood of Locomotive Engineers, Order of Railway Conductors, and Brotherhood of Railroad Trainmen.

This case was reported in the *LABOUR GAZETTE*, August, 1926, page 759. It concerned the interpretation of certain articles in the Engineers' and Trainmen's schedules. At the first hearing the Board recommended further conferences between the parties, and conferences were held accordingly. The parties however failed to agree as to what constituted a "stop to set out or pick up a car or cars" and "switching en route." The Board ruled that either stops or switches, but not both, may be counted at the same station. "At a station where one or more cars are set off on, or lifted from one or more sidings, without switching out other cars in order to place or lift these cars, the service counts as a stop without any count for switches."

Case No. 322.—Temiskaming and Northern Ontario Railway Commission and Brotherhood of Railroad Trainmen.

A regularly assigned way-freight crew was available for duty, the line being clear, but it was not used. The employees contended

that they were entitled to the guarantee provided in Article H, providing that "regularly assigned way-freight, wreck, work, or construction trainmen who are ready for service the entire month, and who do not lay off of their own accord, will be guaranteed not less than 100 miles or eight hours for each calendar working day exclusive of overtime. . . . If through Act of Providence it is impossible to perform regular service, guarantee does not apply." The Railway contended that as the run was cancelled in consequence of a severe snow-storm the proviso contained in Article H as to an Act of Providence, applied in this case. The Board sustained the claim of the employees.

Case No. 323.—Temiskaming and Northern Ontario Railway Commission and Brotherhood of Railroad Trainmen.

This case, like the last, was concerned with the application of the guarantee rule in assigned service (Article H). A third brakeman was used for three days each week in a turn-around way-freight service of 27 miles each way, the railway paying this man only for the days on which he was used. The employees claimed that he was entitled to the guarantee. The Railway contended that the third man was not regularly assigned to the crew and that Article H did not apply to his case, and therefore that it should not be required to pay for days when the third brakeman was not used.

The Board did not sustain the claim of the employees.

Case No. 324.—Canadian National Railways (western region) and Order of Railway Conductors.

A conductor was dismissed from service on a charge of having misappropriated the company's funds. Some weeks later the conductors' general committee asked that the accused man should be confronted with his accusers in conformity with Rule 42, Article 5 of the Conductors' schedule, which reads in part as follows.—"When a charge is laid against a conductor, said conductor may have the privilege, if desired, of meeting party or parties making the charge face to face, in the presence of an officer of the Company."

The Railway contended that an investigation had been held in the regular manner in presence of the accused and a representative of the conductors' organization, who had made no request that the parties making the charge

should be brought in. The Board's decision was as follows:—"The rule requires that employees charged with an offence involving discipline or dismissal may, if they desire, meet the party or parties making the charge at the investigation of the charge, or at the hearing of an appeal in the matter, if appeal proceedings are taken as provided for in the rule."

Case No. 325.—Canadian National Railways (western region) and Order of Railway Conductors and Brotherhood of Railroad Trainmen.

A controversy arose as to the payment of back-time to the crew on a passenger run in British Columbia. The crew came on duty 15 minutes before the departure time of the train, and they were paid for 10 minutes of this time, during which they were in the habit of bringing the train off a siding to the station. This arrangement was in effect for some years, and no question of payment for the extra five minutes was raised until January, 1927, when the Company agreed to retroactive payment for one year. The employees admitted that they were being paid at the present time for the full 15 minutes, and that the Company had agreed to pay back time for a period of 12 months, but they contended that back time should be paid for the entire time that the assignment was on, and for which the crews had not been paid. The Company contended that, notwithstanding that their officers in British Columbia had allowed payment for the full 15 minutes, yet this payment was not in accordance with the schedules, which provide (Conductors' Schedule, Article 1, Clause C) that conductors required to be on duty 15 minutes or less prior to the time a train is ordered to start, "shall not be paid initial terminal detention for the first 15 minutes after the time required to report for duty."

The request of the employees for payment of back time for the entire period of the assignment was not sustained by the Board.

Case No. 327.—Canadian National Railways (western region) and Brotherhood of Railroad Trainmen.

A conductor submitted a claim for payment for the time for which he was held out of service owing to his alleged responsibility for a 45 minutes' delay to a passenger extra. On that occasion he was running a freight extra on a special trip, and delayed the passenger extra, on which the Assistant Superintendent was travelling. On arriving at his destination, followed by the passenger

extra, the Assistant Superintendent informed him that he was held out of service for investigation as he had not used good judgment in causing delay to a passenger train. The investigation could not be held for two days, the conductor having gone away, but the conductor was allowed to resume duty, no discipline being administered. The employees contended that he lost two round trips on his car by being taken out of service by the Assistant Superintendent, and claimed that he should be paid for the miles lost.

The Board sustained the employees' claim as to the payment for one round trip, but as he had lost the second trip through being absent, the claim for payment for that trip was denied.

Case No. 328.—Canadian National Railways (western region) and Brotherhood of Railroad Trainmen.

Clause G, Article 1 of the Trainmen's schedule provides that "when second brakeman is used on account of train having eight cars or more he will go through to passenger terminal, except when train is reduced to less than eight cars, he may be returned in service from meeting point on first passenger train."

In this case a second brakeman was used for a passenger train with eight cars, but when one car was taken off he was let off the train and returned to the starting point by a freight train. The trainman contended that he should have gone through to the meeting point with the first passenger train and been taken back by passenger train, and he claimed for through freight rate to the meeting point referred to, and for "dead heading" home by passenger train. The Company contended that Clause G was framed to ensure that an extra brakeman, no longer required, should be returned promptly to his home. The Board declared that the intent of the rule in question was to serve the best interests of both parties. In this case it was found that, it being Sunday, no passenger train was running towards the home point, and the man was therefore returned with the least possible delay, that is, by freight. It was decided that the Company's action was justified.

Case No. 329.—Canadian National Railways (central region) and Brotherhood of Maintenance of Way Employees.

The work of a section gang in Mount Royal Tunnel was interrupted by frequent trains and the working hours were therefore changed from day to night time, 10 p.m. to 7 a.m., with one hour for meals. The employees claimed that the differential rate as between day and

night rates of two cents per hour for section-men and 5 cents per hour for section foremen, as approved by the Board's decision in Case No. 250 LABOUR GAZETTE, August, 1925, page 766), should be continued in the present case. The Company contended that the arrangement sanctioned by Case No. 250 was prior to the negotiations of January, 1927, when additional payment was not claimed by the men's committee. The Company therefore maintained that the agreement permitted the assignment of night shifts at *pro rata* rates.

The Board decided that there was no rule in the agreement providing for a differential between night and day work.

Case No. 330.—Canadian National Railways (Atlantic region) and Brotherhood of Maintenance of Way Employees.

The position of a third section man had been awarded to the claimant in this case. After his appointment he did not report for duty, and three weeks later the position became non-existent on a reduction of forces. Later, when a temporary vacancy occurred, another workman was taken on as extra-section man. When the claimant heard that a junior man was taken on he applied for the

position, but was refused. He claimed that as senior in service he should have had the position.

The Board sustained the claim of the employee.

Case No. 331.—Canadian National Railways (Atlantic region) and Brotherhood of Maintenance of Way Employees.

A section man was laid off when track forces were reduced and he applied for a position held by a junior employee, which was given to him after an interval of about three months. He claimed payment for the time he was held out of service. The Company contended that the claimant had not applied for the position when it became vacant, and that he had not been regarded as a permanent man. However they had given him the position when it was found that the maintenance of way organization considered he was entitled to it.

The claim of the employee was sustained by the Board to the extent of authorizing payment for 50 per cent of the time the employee was kept out of the position, less any remuneration earned up to the time he was given the position.

STRIKES AND LOCKOUTS IN CANADA DURING JULY, 1928

THE number of strikes and lockouts in existence in Canada during July was eighteen as compared with twenty-two the previous month. The time loss for the month was greater than during July, 1927, being 23,793 working days as compared with 12,585 working days during the same month last year.

Date	Number of disputes	Number of employees involved	Time loss in working days
*July, 1928.....	18	2,449	23,793
*June, 1928.....	22	3,150	25,000
July, 1927.....	15	3,317	12,585

*Preliminary figures.

The record of the Department includes lockouts as well as strikes, but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees at its commencement and lasting at least one working day. Disputes of less than one day's duration, and disputes involving less than six employees, are included in the published record only when ten days' or more time loss is caused, but a separate record of such disputes is maintained in the Department, and the figures are given in the annual review.

The figures printed are inclusive of all disputes which come to the knowledge of the Department, and the methods taken to secure information practically preclude probability of omissions of a serious nature. Information as to a dispute involving a small number of employees, or for a short period of time, is frequently not received until some time after its commencement.

Eleven disputes, involving 2,154 workpeople, were carried over from June, and seven disputes commenced during July. Eight of the disputes commencing prior to July terminated during the month as did four of the disputes commencing during July. At the end of July, therefore, there were on record six strikes and lockouts, as follows: Fur workers, Toronto, Ont.; plumbers, Kingston, Ont.; sheet metal workers, Kingston, Ont.; hat factory workers, Montreal, P.Q.; ladies' clothing factory workers, Toronto, Ont.; and shingle sawyers, Vancouver, B.C.

The record does not include minor disputes such as are described in a previous paragraph, nor does it include disputes as to which information has been received indicating that employment conditions are no longer affected, but which the unions concerned have not yet declared terminated. Information is available as to eight such disputes, namely: ladies' clothing factory workers, Toronto, June 30, 1926; electrotypers at Toronto, Ont., December 20, 1926; plumbers at Windsor, Ont., April 5, 1927; bakers, Montreal, May 1, 1927; stonecutters, Montreal, June 10, 1927; sheet metal workers, Montreal, P.Q., September 1, 1927; coal miners, River Hebert, N.S., February 1, 1928, and Printing compositors, pressmen and bookbinders at Hamilton, Ont., June 1, 1928.

During July information was received as to two minor disputes (causing less than ten days time loss). One of these, a dispute of teamsters in Vancouver, B.C., occurred in June, but the information was not received in the Department in time for inclusion in the July issue of the LABOUR GAZETTE. The workers concerned in this dispute ceased work on June 25, 1928, to secure higher wages and changes in working conditions, and work was resumed the same day. The union reports that prior to the strike wages were 35 cents per hour, ten hours per day, and that after the dispute wages were increased to 50 cents per hour for trucks with a capacity of over one ton and 43 cents per hour for trucks under one ton capacity, hours to be nine per day. A second dispute in this category involved workers in a hosiery factory at Guelph, Ont., who ceased work on July 19, 1928, against a

change in piece rates which they understood would reduce their earnings, returning to work after one-half hour when the system had been explained, the employer claiming that earnings would not be reduced.

Of the disputes which commenced during the month two were for increases in wages, two for recognition of union and increases in wages, one against reduction in wages, one against the employment of particular persons, and one for employment of union members only. Of the strikes and lockouts which terminated during July five were in favour of the workers, four in favour of the employers and three were partially successful.

The following paragraphs give particulars in regard to certain disputes, in addition to the information given in the tabular statement.

STRIKES AND LOCKOUTS IN CANADA DURING JULY, 1928

Industry, occupation and locality	Number of employees involved	Time loss in working days	Remarks
(a) Strikes and Lockouts Occurring Prior to July, 1928.			
LOGGING—			
Pulpwood cutters, Cochrane, Ont., and vicinity.....	850	8,500	Commenced June 28, 1928, for increase in wages. Terminated July 21, 1928, in favour of workers.
MANUFACTURING—			
<i>Rubber Products—</i>			
Rubber factory workers, Montreal, P.Q.....	900	9,900	Commenced June 29, 1928, against alleged non-fulfilment of the report of the Board of Conciliation. Terminated July 16, 1928; in favour of employer.
<i>Fur & Leather Products—</i>			
Fur workers, Toronto, Ont....	8	175	Commenced April 10, 1928, against violation of agreement. Unterminated.
<i>Clothing, (including knitted goods)—</i>			
Embroidery workers, Toronto, Ont.....	5	25	Commenced April 24, 1928; against discharge of worker. Terminated July 7, 1928; in favour of employer.
Embroidery workers, Toronto, Ont.....	11	55	Commenced May 7, 1928; against discharge of workers. Terminated July 7, 1928; in favour of employer.
Ladies' clothing factory workers, Toronto, Ont.....	19	0	Commenced May 17, 1928; against changes in working conditions. Terminated July 3, 1928; in favour of workers.
Men's clothing factory workers, Montreal, P.Q.....			Commenced June 15, 1928, against reduction in wages and changes in working conditions. Terminated June 22, 1928; in favour of workers.
CONSTRUCTION—			
<i>Buildings and Structures—</i>			
Plumbers, Kingston, Ont.....	21	525	Commenced April 2, 1928, for increase in wages. Unterminated.
Sheet metal workers and other trades, Kingston, Ont.....	15	375	Commenced April 17, 1928; sympathy with striking plumbers. Unterminated.
Structural iron workers, Toronto, Ont.....	50	850	Commenced May 11, 1928; for increase in wages and recognition of union. Lapsed July 23, 1928; partially successful.

STRIKES AND LOCKOUTS IN CANADA DURING JULY, 1928—*Concluded*

Industry, occupation and locality	Number of employees involved	Time loss in working days	Remarks
CONSTRUCTION— <i>Con.</i> Carpenters, Winnipeg, Man....	750	1,500	Commenced June 20, 1928; for increase in wages. Terminated July 5, 1928. Compromise.
TRANSPORTATION— <i>Local</i> — Teamsters, Edmonton, Alta...	25	250	Commenced May 25, 1928; for increase in wages. Lapsed by July 31, 1928; partially successful.
(b) Strikes and Lockouts Occuring During July, 1928.			
MANUFACTURING— <i>Clothing (including knitted goods)</i> — Men's clothing factory workers, Toronto, Ont.....	80	160	Commenced July 13, 1928; against employment of an expelled member of the union. Terminated July 16, 1928; in favour of workers.
Hat factory workers, Montreal, P.Q.....	15	30	Commenced July 16, 1928; for recognition of union and increase in wages. Terminated July 18, 1928; in favour of workers.
Hat factory workers, Montreal, P.Q.....	10	120	Commenced July 18, 1928; for recognition of union and increase in wages. Undermined.
Ladies' clothing factory workers, Toronto, Ont.....	5	10	Alleged lockout, commenced July 30, 1928; against reduction in wages. Undermined.
<i>Saw and planing mill products</i> — Shingle sawyers, Vancouver, B.C.....	50	1,250	Commenced July 3, 1928; for increase in wages. Undermined.
<i>Other metal products</i> — Automobile factory body assembler, Ford City, Ont..	100	50	Commenced July 13, 1928; for increase in wages. Terminated same day in favour of employer.
CONSTRUCTION— <i>Buildings and Structures</i> — Plasterers' helpers, Calgary, Alta.....	35	18	Commenced July 16, 1928; for employment of union members only. Terminated July 16, 1928; in favour of workers.

PULPWOOD CUTTERS, COCHRANE, ONT., AND VICINITY.—Employees of a number of firms ceased work about June 28 to secure an increase in wages from \$4-\$4.25 per cord to \$4.50 per cord. On July 10 some of the employers negotiated a settlement with the representatives of the employees, agreeing to pay \$4.50 per cord. Work was resumed in a number of camps by July 12 and thereafter from time to time the strikers returned to work, so that by July 21 it was considered the dispute was practically terminated.

RUBBER FACTORY WORKERS, MONTREAL, P.Q.—As reported in the LABOUR GAZETTE for July, employees had ceased work on June 28 alleging that the employer had not carried out the terms of the award of a Board of Conciliation and Investigation under the Industrial Disputes Investigation Act, 1907, the employing firm contending that it had carried out

these terms to the letter. By July 16 the strikers had returned to work under the same conditions as prior to the dispute.

FUR WORKERS, TORONTO, ONT.—In this dispute, commencing on April 10, against an alleged violation of agreement, the number on strike at the end of July was reported as six as compared with eight at the end of June and twenty at the beginning of the dispute, the others having secured work elsewhere. The pickets at the store in Windsor operated by the employer concerned are reported to have been withdrawn.

EMBROIDERY WORKERS, TORONTO, ONT.—Two disputes, one commencing on April 24 and the other commencing on May 7, caused by the discharge of workers, were called off by the union concerned on July 7, the employees returning to work without securing their demands.

LADIES' CLOTHING FACTORY WORKERS, TORONTO, ONT.—The employees in the establishment concerned in this dispute ceased work on May 17 when the employer introduced into the factory a contractor for whom the employees on designated machines refused to work, not recognizing him as their employer. By July 3 the employer agreed to operate a union shop and work was resumed.

MEN'S CLOTHING FACTORY WORKERS, MONTREAL, P.Q.—This strike to enforce the terms of the union agreement (work ceasing on June 15 not June 22 as reported in the July issue of the *LABOUR GAZETTE*) terminated on June 22, the employer agreeing to abide by the terms of the agreement.

PLUMBERS AND SHEET METAL WORKERS, KINGSTON, ONT.—The strike of plumbers which commenced on April 2 to secure increased wages was unterminated at the end of July. The sheet metal workers on strike since April 17, working chiefly for the same firms as the plumbers, have not settled their dispute. The strike of other building trades on April 17 in sympathy with the plumbers was called off by the Building Trades Council on July 17, but workmen were not to work on jobs where non-union plumbers and sheet metal workers were employed.

STRUCTURAL IRON WORKERS, TORONTO, ONT.—This dispute, commencing May 11 in Montreal and May 15 in Toronto, to secure an increase in wages and recognition of union, terminating in Montreal early in June, lapsed in Toronto on July 23, some of the employers concerned having reached a settlement with the union in June, large numbers of strikers securing work with these.

CARPENTERS, WINNIPEG, MAN.—As reported in the *LABOUR GAZETTE* for July this strike, commencing on July 21, was called off on July 4, a bonus of five cents per hour in addition to the rate of \$1 per hour to be paid until January 1, 1929, when the hourly rate is to be increased to \$1.10.

TEAMSTERS, EDMONTON, ALTA.—As reported in the *LABOUR GAZETTE* for July, a number of the employers affected by this dispute had signed agreements with the union. One of the principal firms involved, however, failed to do so, having replaced the strikers. During July the employees still on strike secured work elsewhere and the strike was considered as lapsed by the end of the month.

MEN'S CLOTHING FACTORY WORKERS, TORONTO, ONT.—Employees ceased work on July 13 to secure the discharge of a worker who

had been expelled from the union, the agreement with the employer requiring that none but union members should be employed. As the agreement also provided that disputes of this nature were to be referred to a Joint Board of Arbitration, the strikers returned to work on July 16, pending the finding of such a Board. The Board decided that the employee in question should be discharged but also that the union should be fined for striking in violation of the agreement, the fine to be paid to charitable institutions.

HAT FACTORY WORKERS, MONTREAL, P.Q.—Employees of one firm ceased work on July 16 to secure recognition of their union and an increase in wages, their demands being granted on July 18. Another firm's employees ceased work on July 18 for the same reasons and this dispute was unterminated at the end of the month.

LADIES' CLOTHING FACTORY WORKERS, TORONTO, ONT.—A cessation of work occurred on July 30 involving five employees in a dispute as to changes in wages and working conditions. The employer, it is reported, made changes in the system in use which the employees alleged would reduce their piece rate earnings while the employer claimed it would result in increased earnings. Two employees who refused to work under the new system were discharged. The union officers interviewed the management which refused to negotiate with them and the union then called its members out on strike, the employer claiming that only two responded. The union claims that five employees were involved in the dispute. At the end of the month the dispute was still unterminated.

SHINGLE SAWYERS, VANCOUVER, B.C.—Employees ceased work on July 3 to secure an increase in wages of two cents per M. At the end of the month the dispute was unterminated, but it was reported that the strikers had been replaced by Chinese workers.

AUTOMOBILE FACTORY BODY ASSEMBLERS, FORD CITY, ONT.—Employees are reported to have ceased work for one-half day to secure an increase in wages, returning to work the following day. It is understood that the men were on piece rates with a bonus and that they wished to secure minimum time rates of 70 cents per hour for certain classes and 60 cents per hour for others.

PLASTERERS' HELPERS, CALGARY, ALTA.—Employees ceased work on June 16 for the employment of union members only. Work was resumed after four hours, the employees concerned having joined the union.

STRIKES AND LOCKOUTS IN GREAT BRITAIN AND OTHER COUNTRIES

THE latest available information as to strikes and lockouts in various countries is given in the *LABOUR GAZETTE* from month to month, bringing down to date that given in the issue for February, 1928, in the review of Strikes and Lockouts in Canada and Other Countries, 1927. The latter review included a table summarizing the principal statistics as to strikes and lockouts since 1918 in the several countries for which such figures were available. Many countries publish these statistics only once each year, the figures being issued in some cases after an interval of as much as two years, so that for such countries the latest figures are not for relatively recent dates.

Great Britain

During June, the number of disputes which began was 20, while 13 disputes which began previously were still in progress, making a total of 33 disputes in progress during June, involving about 23,700 workpeople and resulting in a time loss of 452,000 working days. Of the 20 disputes beginning in June, ten arose out of wages questions, six out of questions respecting the employment of particular classes or persons, and four on other questions. Settlements were reached in 20 disputes, of which two were in favour of workpeople, eleven in favour of employers, seven ended in compromise and in two other cases, work was resumed pending negotiations.

Disputes in the Textile Industry.—The lockout of all employees of the cotton weaving mills at Nelson which began on May 30 and involved over 16,000 workers was terminated on July 12. This lockout followed a strike at one mill for the reinstatement of a weaver dismissed for his refusal to pay a fine for alleged bad work. The agreement reached on July 12 provided that this particular weaver be given work at another mill and that the whole question of fining and the question of the right of the union to strike for the reinstatement of an individual be referred to a joint committee of the employers' and the workers' associations.

At one spinning mill at Oldham, card-room operatives went on strike on June 6 and were later joined by other employees of the mill, for the reinstatement of a worker dismissed for under-production. The demand of the workers was withdrawn, however, and work was resumed on June 22.

At another spinning mill, also at Oldham, employees went on strike on July 18, because they refused to work with one of their number

whose membership in the union, they alleged, had lapsed and who refused to rejoin as a new member. Although this strike involved only about 200 workers, a serious disturbance was threatened when the employers' association decided to close down all their mills, employing about half a million workers, unless this strike were called off. This lockout, however, was averted when the employee in question rejoined the union and the strike at Oldham was called off on August 1.

The strike involving 3,000 time-workers in the dyeing and finishing branches of the industry who went on strike on June 16 for increases in wages of adult workers, pending substitution of piece rates, was settled on July 3, when the workers accepted a modified increase in wages of adult workers and a reduction in the wages of juvenile workers.

Belgium

During May, 18 disputes began which, with 19 beginning before May, make a total of 37 disputes in progress during the month, involving 12,852 workers and resulting in a time loss of 233,197 working days.

The strike of some 12,000 dock workers at Antwerp which began on June 16 for an increase in wages, was terminated on July 10, when the strikers agreed to the proposal of the Governor of the Province to return to work under old conditions with the understanding that a commission, of which he would be the head, would decide the basis of a provisional agreement and determine the rates of wages.

Finland

During the year 1927, there were 79 industrial disputes involving 221 establishments and 13,368 workers, and resulting in a time loss of 1,528,182 working days, as compared with 72 disputes, 10,230 workers and a time loss of 386,255 working days in the year 1926. Of the 79 disputes, 44 concerned wages and 14 industrial agreements. The results of the disputes were: 14 in favour of workers, 30 in favour of employers, 33 ended in compromise and in two cases the results were not known.

Poland

In the year 1927, the number of strikes which began was 602, involving 3,755 establishments and 231,799 strikers and causing a time loss of 2,429,070 working days, as compared with 590 strikes, 145,493 strikers and a time

loss of 1,422,540 working days in the year 1926. Of the industries concerned, over half the total time loss occurred in the textile industry. Out of the 602 strikes, 492 were disputes over wages and 447 ended with complete or partial success for the strikers.

New Zealand

For the first quarter of 1928, the number of disputes was 11, involving 13 firms and 2,008 workers. The time loss was 10,289 working days and the approximate loss in wages \$9,532.

United States

During the year 1927, the number of disputes which began was 734, involving 349,434 employees, as compared with 780 disputes and 329,592 employees in 1926. Of these disputes, 194 were in building trades, 129 in the clothing industry, 80 in the textile industry and 60 in coal mining, the other disputes being in various other industries. The number of disputes terminating in the year was 639, of which 169 ended in favour of employers, 235 in favour of employees and 129 in compromise. In 29 other cases work was resumed pending arbitration and in 77 disputes the results were not reported.

The number of disputes beginning in May, 1928, was 59, while 83 were in effect at the end of the month, involving 136,072 workers. The number of working days lost was 3,642,740.

Bituminous Coal Miners' Dispute.—This dispute, which began April 1, 1927, was brought nearer a settlement, when on July 18, the Policy Committee of the United Mine Workers of America reached a decision to abandon the demand of the terms of the Jacksonville agreement providing for the 1920 wage scale with a minimum of \$7.50 per day for skilled miners, and to permit the different districts to negotiate separate agreements. The maintenance of the 1920 wage scale was the object of the dispute, so that it is expected that separate agreements will soon be concluded and work resumed in many of the mines which are still closed. However, owing to lack of demand for coal, it is reported that no attempt on the part of operators will be made to open a certain proportion of the mines, at least for some time.

Textile Workers, New Bedford, Mass.—The strike of 28,000 textile workers which began on April 16, against a ten per cent reduction in wages, continued during July. There were several disturbances, and a number of pickets given jail sentences on the charge of rioting. Both employers and strikers refused, on

August 3, to submit the dispute to arbitration by the State Board of Conciliation and Arbitration, but it was reported that an investigation of the strike would be conducted by this Board.

Industrial Relations in the Netherlands

In January, 1928, the Netherlands Federation of Employers addressed a letter to representative workers' organizations, inviting them to a conference for the discussion of the possibilities of collaboration in industry. The organizations approached included the Socialist, the Catholic, the Protestant and the Free Trade Unions. The invitation was accepted, and the first meeting of the conference was held on February 10.

The trade union delegates approved the principle of collaboration as laid down by the employers. They asked that the employers should recognize the unions as the official representatives of organized labour, and that they should agree to the settlement between employers' and workers' organizations of conditions of work in the different branches of industry.

The employers' delegates replied that their invitation to the conference was proof that they regarded the trade unions as officially representing organized labour, but that the actual arranging of conditions of work did not fall within the scope of their organization.

This question apart, the conference agreed that there were a number of matters on which an understanding and a measure of collaboration could be reached. It was decided to ask the executives of the various organizations to authorize a further meeting in the near future, and to arrange for the drafting of a limited program for subsequent discussion.

Mr. Frank L. Milner, K.C., of Amherst, has been appointed chairman of the Workmen's Compensation Board of Nova Scotia, to succeed Mr. Vincent J. Paton, K.C., who held this position since 1916.

The Ontario Command of the Canadian Legion at its annual convention held at Kingston on August 8 adopted a resolution asking the provincial government to amend the Mothers' Allowance Act so as to provide an allowance to a mother with one child, on condition that the mother is considered unemployable and is without other means of maintaining her child.

INTERIM REPORT OF JOINT INDUSTRIAL CONFERENCE IN GREAT BRITAIN

AN interim joint report, submitted by a joint committee, was adopted on July 4, with one dissentient, by the Conference on Industrial Reorganization and Industrial Relations in Great Britain. The progress of this conference was noted in the last issue of the *LABOUR GAZETTE* (page 706) and in previous issues. The conference is composed of a representative group of employers associated with Lord Melchett (Sir Alfred Mond), and the General Council of the Trades Union Congress. Mr. Ben Turner, chairman of the General Council of the T.U.C. presided over the meeting on July 4, supported by Lord Melchett. The following outline of the report is based on a summary given in the current issue of the *Ministry of Labour Gazette*.

Gold Reserve and Industry.—The Report refers to a memorandum on this subject, which was prepared as a matter of urgency, and sent to the Chancellor of the Exchequer on 12th April. The memorandum closed with the following resolutions:—

“We consider (a) that under the special conditions in which the gold standard operates at the present time, we are not convinced that it is either practicable or desirable that the credit policy of the country should be determined more or less automatically by gold movements, as in pre-war days; (b) that it is highly undesirable that the Bank of England should be so tied down by the provisions of a gold reserve law as to be unable fully and freely to co-operate in the plans adopted by this country and the rest of Europe at Genoa, 1922, for international co-operation in economizing the use of gold, regulating its distribution, and preventing undue fluctuations in its value in terms of wealth; (c) that it is therefore essential to hold a full inquiry into the best form of credit policy for this country before decisive steps are taken by the Government.”

Union Recognition.—The Report recognizes the Trades Union Congress, representing as it does the affiliated Trade Unions, as the most effective organization and as the only body which possesses the authority to discuss and negotiate on all questions relating to the entire field of industrial reorganization and industrial relations. It also recognizes that industry in this country in the last generation has benefited by the progressive increase in the volume of negotiations which have taken place between employers and representatives of Trade Unions, and by the enormous growth of joint machinery for such negotiations in varying forms, namely, Industrial Councils,

Conciliation Boards, Conferences, etc. It is now the usual practice of employers to negotiate on all questions of working conditions, including wages, hours, and other matters relating to the trade or industry, with the executives and officials of the appropriate affiliated Unions or of other *bona-fide* Trade Unions as already defined.

The Report proceeds: “This practice and method of procedure has in our experience proved to be so beneficial that in our view it should be encouraged and extended.

“It is therefore considered that it is definitely in the interests of all concerned in industry that full recognition should be given to affiliated Unions or other *bona fide* Trade Unions as already defined, as the appropriate and established machinery for the discussion and negotiation of all questions of working conditions, including wages and hours, and other matters of common interest in the trade or industry concerned.

“We further consider that negotiations between employers and workmen are facilitated by workmen being members of an affiliated Union or other *bona-fide* Trade Union as already defined, and also by employers likewise being organized.”

Victimization.—The Report urges that everything possible should be done to avoid any causes of friction. One such cause of friction is what is generally described as victimization. The Report proceeds: “It is most undesirable that any workman should be dismissed or otherwise penalized on account of his membership of a Union, on account of his official position in a Union, or on account of any legitimate Trade Union activities, or activities recognized at present or in the future by the parties concerned or allowed by agreement between the parties.

“We are further of opinion that, where a *prima-facie* case is established that a workman has been dismissed or otherwise penalized for his membership of a Trade Union or for activities as previously defined, some appeal machinery should be provided for the investigation and review of such a case. At such an appeal the parties should be entitled to be represented by the Trade Union or employers' organization, respectively.”

National Industrial Council.—“It is agreed that it is desirable, for the continuous improvement of industrial reorganization and industrial relations, that a National Industrial Council should be formed; and it is recommended that the necessary steps for its formation should be taken immediately.

"It is recommended that the composition of the National Industrial Council should be as follows:—

"(a) The representatives of the workers should be the members of the General Council of the Trades Union Congress.

"(b) An equal number of representatives of the employers should be nominated by the Federation of British Industries and the National Confederation of Employers' Associations.

"It is agreed that the three main functions of the National Industrial Council should be—

(i) To hold regular meetings once a quarter for general consultation on the widest questions concerning industry and industrial progress.

(ii) To establish a Standing Joint Committee for the appointment of Joint Conciliation Boards, as set out in detail in the agreed Resolution on the prevention of disputes (quoted below).

(iii) To establish and direct machinery for continuous investigation into industrial problems."

The Joint Committee lay down from the outset that (i) nothing should be done to interfere with the beneficial work which is being carried on by the existing joint machinery; (ii) that wherever possible the existing joint machinery should be improved or strengthened; and (iii) that the application of the element of compulsion would be unacceptable and undesirable.

The Report accordingly makes the following recommendations:—

"(i) A Standing Committee of the National Industrial Council, nominated as to half its members by the General Council representatives of the National Industrial Council and as to half by the National Confederation of Employers' Associations representatives of the National Industrial Council, should be set up to act as the elective and executive authority for the provision of Joint Conciliation Boards for industrial disputes.

"(ii) The Joint Standing Committee should lay down the detailed nature of the Joint Conciliation Boards, their procedure and functions; but in doing this they should be guided by the following considerations:—

(a) When a dispute has failed to be settled within an industry, on the application of either party the Joint Standing Committee would make available a Joint Conciliation Board to investigate and report upon the matters tending towards a dispute. In order to facilitate investigation it is desirable that both parties should arrange that, on an application made to the Joint Standing Committee, no

stoppage of work or alteration in conditions should take place pending the report of the Joint Conciliation Board.

(b) The Report of the Joint Conciliation Boards should be reported to the parties and to the Joint Standing Committee before publication.

(c) The personnel of the Joint Conciliation Boards should not be permanent. The Joint Standing Committee should appoint in each particular case referred to a Joint Conciliation Board the most suitable representatives to deal with the particular industry or matter tending towards dispute.

(d) The Joint Standing Committee should have authority to reject application for reference to the Joint Conciliation Board, if, in their opinion, the dispute was not of such a nature as should be referred.

(e) The Joint Standing Committee should also fix a time limit for the stages of reference, hearing, and report to a Joint Conciliation Board, so that the matters in dispute should be reviewed promptly, and reported upon without undue delay."

Rationalization.—The Report endorses the definition of "rationalization" adopted by the World Economic Conference at Geneva in May, 1927 (LABOUR GAZETTE, July, 1927, page 769), viz.: "the methods of technique and of organization designed to secure the minimum waste of either effort or material. It includes the scientific organization of labour, standardization both of material and of products, simplification of processes, and improvement in the system of transport and marketing."

The Report welcomes the tendency towards rationalization "in so far as it leads to improvements in the efficiency of industrial production, services, and distribution, and to the raising of the standard of living of the people."
