MANDS OVER TOSE

this is beneficial because it helps you actually study for slope. the slope formula is y2-y1 over x2-x1 but if you don't want to use numbers, a good way to study is to use actual words. like hands, toes, feet and mouth. so you would put in the words into the formula and your slope is mands over tose. and then you can put it in point slope form which is y-y1=slope(x-x1)
EXAMPLE
y-toes=mands/tose(x-hands)
