Souvenir Map *and* Guide for Tourists in the

BLACK HILLS

of South Dakota

Maps prepared especially for the use of Automobile Tourists

BY THE
DAKOTA ENGINEERING COMPANY
MITCHELL, SOUTH DAKOTA

THE possibility of motoring through various sections of the Black Hills for pleasure and business has long been known. The idea is new, however, of selecting good automobile routes to reach the larger cities and points of scenic interest in this region, and of platting the same as a guide to the stranger who may be easily lost amid the windings and branchings of the roads in forest, mining camp or city. The strenuous efforts of various localities and counties along these routes to improve them during the last two years has made them now such as may be travelled with pleasure.

The natural scenery on a scale majestic in size, yet of readily appreciated magnitude; the proximity of the primitive forest to the noise and rush of the mining or industrial center; the strange thoughts on realizing that here lies the richest tract one hundred miles square on earth, all serve to make the trip through the Black Hills a memorable one; even to him who has traveled far and near across ocean, desert sands or broad plains in search of nature's beauty spots.

From a personal standpoint, the renewed vigor, and quieted nerves that result from rest among such pleasant surroundings, breathing pure air, laden with the odor of the pines, bathing in or drinking mineral waters all make it a trip well worth while.

It is hoped that to the stranger to the Black Hills region this book will bring some idea of the pleasure and profit to be found amid such surroundings, and that it will be an aid to him in the proper enjoyment of the same.

CLIMATE Moderate temperature, winter and summer, abundance of sunshine and clear, dry air make the Black Hills particularly desirable from a tourist's standpoint. The altitude ranging from 3500 to 8000 feet above sea level. Absolute freedom from mosquitoes in many parts of the hills and cool, dry nights make it an ideal country for camping.

GAME In the wilder portions, bears, wild cats, wolves, silver foxes, and other large game may be found. Special provision has been made for re-stocking the Forest Reserve at frequent intervals with deer and elk which, together with legal protection for these animals from December 1st to November 1st makes them very plentiful. Plover, partridges, pheasants, grouse, ducks and geese may be easily had in season. Although many kinds of fish are found in the mountain streams, trout are the most common. The streams are restocked at frequent intervals from the Government Fishery at Spearfish with Brook, Locklaven, Speckled and Rainbow trout, so that fishing will continue to be one of the leading diversions of the pleasure seeker. From November 1st to May 1st when trout fishing is prohibited in South Dakota, the sport may be continued across the line in Wyoming where no such restriction exists.

SOUTH DAKOTA LAWS CONCERNING AUTOMOBILES Residents of other states using their cars in South Dakota will not be required to re-register their cars in South Dakota providing they have complied with all laws regarding registration of automobiles in the state from which they came, and providing such state extends a similar privilege to South Dakotans.

Automobiles must be driven in a careful and prudent manner, at a rate of speed such as not to endanger the property, life or limb of any person, provided that a rate of speed in excess of 25 miles per hour is presumptive evidence of driving at a rate of speed which is not careful and prudent, in case of injury to the person or property of another. Local authorities may limit speed to a rate of 10 miles per hour provided proper notices or warnings are placed in the public highway indicating such limitation of speed.

The raising of the hand, by anyone who is leading, driving or riding a horse or other draft animal, as a signal to stop shall cause the driver of any automobile thus signalled to, to stop his car until the danger of frightening such animal is past.

DEADWOOD Perhaps the best known city in the Northern Hills is Deadwood, the center of the industrial and mining interests of this section. Most excellent hotel and garage accommodations, its convenience to surrounding points of scenic interest, and a general spirit of genuine western hospitality toward all will continue to make it a most popular tourist center. Although high in the Hills it is connected with the plains outside by a good road of easy gradient.

RAPID CITY At the point of entrance to the Blak Hills from the east, Rapid City has become a leading industrial and railway center. Good hotel and garage accommodations make this a pleasant stopping place in the foothills. The trip westward into the Hills along Rapid Creek to Pactola by auto, or by rail to Mystic, should not be overlooked by any tourist in this territory.

SPEARFISH Spearfish is located on the northern margin of the Hills, close to the mouth of Spearfish canyon, to Sand Creek, to Higgins Gulch, Crow Peak and other fishing and hunting resorts. It has good hotel and garage accommodations, and is visited by thousands of tourists each year.

BELLE FOURCHE Twenty-eight miles north of Deadwood and close to the 100,000 acre government irrigation project is a thriving county seat town of 3000 population. It has been a noted shipping point for those interested in cattle and sheep raising in years gone by and is now becoming the principal center of business for the adjacent irrigated districts.

WHITEWOOD A thriving village at the point of entrance into the Hills which will be remembered by the tourist going by rail or auto to Deadwood, Lead, Spearfish or other points in the northern Hills.

HILL CITY This has been one of the leading towns in the heart of the Black Hills district since the early days of the Black Hills history. Numerous tin, mica and other mines and considerable rich agricultural land are found near here. About 45 miles from Deadwood, Rapid City and Hot Springs it is a convenient stopping place for tourists travelling through this territory.

THE HOMESTAKE MINE The largest gold mine in the world, employing an average of 3500 men and producing from \$5,000,000 to \$8,000,000 worth of gold bullion per year, has its principal properties and mines at Lead.

The Elliston Hoist, the largest now operated by the company, is 1850 feet deep. The 1200 H. P. hoisting engine with its hoisting rope, a $7\frac{3}{4}$ inch by $\frac{5}{8}$ inch flat laced steel cable weighing 7 pounds to the foot, lifting a load of 10 tons, not including the weight of the cable from the bottom of the mine to the surface in a few seconds, is an interesting sight. Nearby are two air compressors, one delivering air at 80 pounds pressure for the use of rock drills and other machinery; the other compressing air to 850 pounds pressure for use of compressed air haulage motors.

Across the gulch the drill sharpening shop where 3000 drills are sharpened each day, and the foundry and machine shop are points of interest. The noise of operation of the stamp mill night and day, 365 days in the year make its location easily determinable. Here 240 stamps each weighing 900 pounds and dropping at the rate of 90 times per minute crush to a powder 1000 tons of ore each 24 hours. To each ton of powdered rock is added 2400 gallons of water which wash it over the silver plated copper plates. In another building it is re-ground, and the coarsest portion or sands sent to the Cyanide Plant. Here solution is accomplished by the addition of potassium cyanide, and the gold then precipitated by the addition of zinc dust. The finer portion of the powder or the slime is piped to the Slime Plant at Deadwood, where the gold bearing powder is caught in filter presses and the gold then extracted as before.

The Homestake Pumping Plant at Hanna, 6 miles from Lead, and the Hydro-electric plant at Spearfish, 15 miles from Lead, furnish the water and power used in the Homestake properties. The Hydro-electric Plant is the largest of its kind in the Hills. The water is carried in a tunnel 5 miles long from the river in Spearfish Canyon, at a point 8 miles from Spearfish, to the reservoir on top of the ridge overlooking and directly south of the city. The three surge towers, on the pipe lines leading from the reservoir down the 700 foot drop to the power plant, may be seen for many miles.

SPEARFISH CANON There is probably no other scenic place in the Black Hills which has been given as much attention by tourists, photographers, and magazine writers as Spearfish Canyon. The Royal Gorge in Colorado, the Palisades of the Hudson and many other points of national scenic wonder may be found reproduced here on a scale perhaps less grand, but making up in beauty all that is lost in magnitude. Good automobile roads traverse long stretches of this canyon, entering it from Deadwood, and from Spearfish as platted herein. It is anticipated that in a few years the road will be made suitable for auto traffic the entire length of the canyon.

CRYSTAL CAVE Crystal Cave, in the Northern Hills, is resplendent with stalactite and stalagmite formations and is quite different in general structure from Wind Cave. During 1913 it is expected that the construction of a new road from Deadwood will make this cave accessible to automobile tourists.

SYLVAN LAKE One of the most interesting places in the Hills from a scenic point of view is located about midway between Deadwood and Hot Springs. Harney Peak, the highest point in the Hills from which can be seen four states, the hundreds of Needles, some rising as much as 500 feet in cathedral tower like grandeur, the great varied vistas, and the quiet beauty of Sylvan Lake surrounded by monstrous rock walls and pine clad heights, all bring to one the realization of the real wonder and beauty of nature. Excellent hotel accommodations at Sylvan Lake makes this region justly popular as a tourist resort.

SAND CREEK This is a typical Black Hills stream in Wyoming close to Deadwood and Spearfish. The fact that Wyoming laws allow trout fishing at all seasons of the year makes this stream the rendezvous of the fisher both summer and winter.

WIND CAVE One of the great sights of this region, in many respects excelling the famous Mammoth Cave of Kentucky, is Wind Cave. Over 200 miles of passageway and many thousands of rooms have been explored, some of these over 600 feet below the entrance. Yet, apparently neither the bottom nor the sides of this cave have been reached. The great abundance of "frost work" and "box work" in many forms make this cave unusually attractive and interesting. Guides will take parties into the Cave each day at 9:00 A. M. and 2:00 P. M. and occasionally at other times.

HEALTH RESORTS As a health resort the Southern Hills have gained a National reputation. A sanitarium for treatment of tuberculosis patients has been established by the State near Custer, 29 miles north of Hot Springs. At the latter city is the State Home for Old Soldiers, and the Government Hospital for Disabled Volunteer Soldiers and Sailors. Also numerous private sanitariums, for the treatment of various maladies, which are filled throughout the year.

HOT SPRINGS The city gets its name from the hundred springs near there which give out large quantities of water at a temperature of 98 degrees F. or warmer. The water from these and from certain cold springs have been found to contain unusual mineral elements very valuable in the treatment of rheumatism of all kinds, nervous complaints, indigestion and intestinal disorders, pulmonary affections, diseases of the urinary organs, gout and skin diseases. Particularly noticeable have been the curing of parties affected with rheumatism.

Besides the small swimming pools at the various sanitariums, two immense pools have been constructed which are centers of attraction during the summer months. These are the "Evans" and the "Mammoth Springs Plunge," both of which are enclosed in large buildings, and contain individual dressing rooms and all other possible conveniences.

One of the largest and finest equipped hotels in the state is located here.

EDGEMONT Edgemont is a busy railway division point on the C. B. & Q. Ry. It is located on the Cheyenne River southwest of the Black Hills. To those who have seen the prairies of eastern South Dakota. The Bad Land and Black Hills formations, a new type of topography is presented extending to the south and west of Edgemont.

THE BAD LANDS

East of the Black Hills, and within easy reach, is scenery, somewhat mountainous in nature, yet very different from anything in the Black Hills or in other mountainous regions. To anyone who has not travelled the "Scenic Highway through South Dakota," a two days trip eastward from Rapid City over this road is well worth while.

The tourist enters the Bad Lands near the town of Scenic, 45 miles east of Rapid City. From this point the next 50 miles is in the midst of some of the strangest and most wonderful scenery known. Broad grass covered basins are dotted with bare rounded hillocks or great irregular shaped buttes and ridges. Along the northern border of this region and much of the time within sight of the road is "The Great Wall" several hundred feet in height, appearing against the sky line to be a succession of domes, towers, pinnacles and precipitous walls and gulches. The soil varies in color through the shades of white, buff, yellow, red and green. The valleys and flat plateaus on the tops of the ridges or buttes are usually grass covered while the slopes stand out most prominent because of their sheer height and nakedness. It is a scene that cannot be properly described; strange and wonderful in the extreme. At first seemingly grotesque, then strangely beautiful, impressions are left on the mind that will never be forgotten.

Pictures and more detailed description of this region, also a complete guide of the road from Rapid City eastward will be found in our "*Map and Guide of the Scenic Highway through South Dakota.*"

No tourist should leave the Black Hills until this trip has been taken either by automobile or rail. In either case he should go as far east as the towns of Interior or Kadoka, and actually go through Cedar Pass which is five miles northeast of Interior.

Auto Roads in the Black Hills

RAPID CITY, the gateway to the Hills, lies on Rapid Creek for which it is named, midway between its source in the Western Black Hills and its mouth, where it empties into the Cheyenne river. Its location is ideal from the standpoint of natural environment embracing, as it does, the rugged backbone of the hills and a foreground of rolling prairie. In early days pioneers were quick to see the natural advantages of the location for a town and their selection proved the later choice of railroad engineers, who have made it the central point for two great systems in western South Dakota. Four distinct lines radiate from Rapid City, viz: The Omaha division of the Northwestern providing connection with Deadwood on the North and the great South and Southeast. The Pierre division running to the state capital and Chicago. The Milwaukee has its terminal here. It runs southeast through the Bad Lands, the only railroad traversing this Wonderland of Nature, and on to Chicago. The Rapid City, Black Hills & Western has its headquarters in Rapid City, and is one of the most wonderfully constructed railroads in the country. It follows Rapid Creek west to Mystic, about thirty-five miles where it connects with the Burlington system. This is called the "Scenic" route of the Hills and affords tourists one of the grandest of picturesque views to be had in the world. It is Colorado and the Grand Canyon in miniature.

Rapid River just West of Rapid City.

Located as it is in a country blessed by nature Rapid City provides more amusement to lovers of the out door life than most cities. With a climate oftentimes as equitable in January as that of Southern California and with rainfall usually confined to the spring months out of door life finds here its perfect environment. The nights, owing to the altitude of nearly thirty-two hundred feet, are always cool, there being few in the hottest of the summer months when blankets are not needed. The absence of dew makes camping a delightful pastime and there is trout fishing, for those who enjoy the gentle art of Isaac Walton, as good as the country affords anywhere. Deer are plentiful in season and game birds, including grouse, partridge, quail and duck, are plentiful enough to make it worthe the while of any follower of Nimrod.

Rapid City itself being thus favorably located is the center of business activity radiating east as far as the Missouri river and west, north and south to the boundaries of the Black Hills. It has the three requisites of a progressive and up-to-date growing city—first-class hotels, a new up-to-date theatre and a live newspaper. From the city all of the interesting points in the Hills can be reached by rail roads, or by automobiles over roads which are being constantly improved.

Good Meals

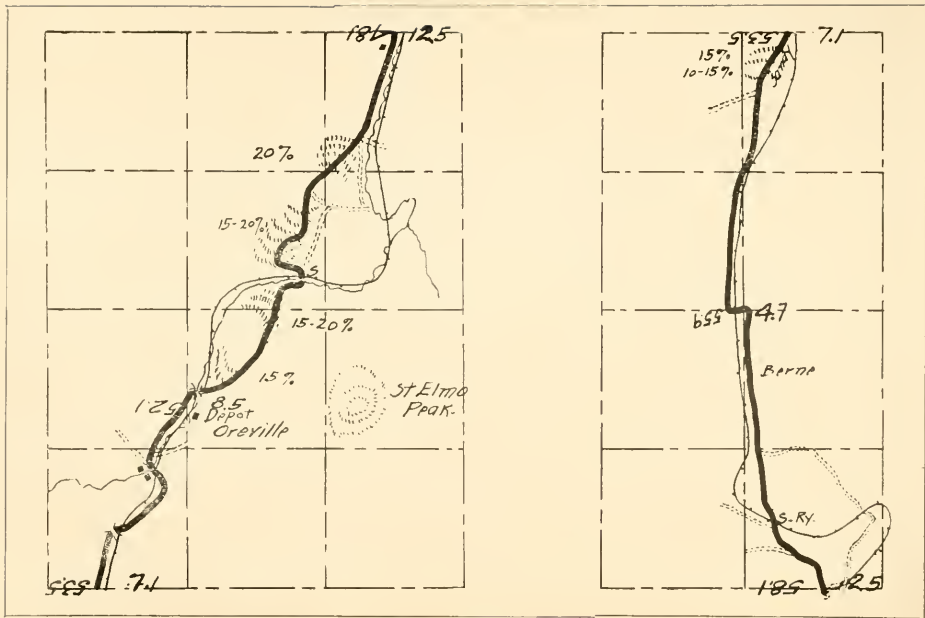

To Make You Feel at Home, Day or Night, is Our Endeavor

Hill City, South Dakota

HILL CITY is situated on the Burlington Railroad, and is right in the midst of the mining district of the Southern Black Hills, it is surrounded by fine mountain ranches, that have suffered only one crop failure in 25 years. These ranches produce 60 to 70 bushels of oats per acre that weigh from 40 to 48 lbs. to the bushel, wild and timothy hay grow abundantly, as well as potatoes, all without irrigation.

Hill City being the half way point on the Scenic Highway north and south through the Hills makes it the ideal point for a noon or night stop for automobilists, there being first-class hotels and restaurants to provide comfort and good meals for the tourists. By the opening of the season of 1913 the town will be equipped with a garage at which can be had gas, oil and minor repairs.

STURGIS BELLE FOURCHE NEWELL

KENNEFICK HOTEL

Belle Fourche, S. D.

American Plan

Rates, \$1.50 and up

THE City of Belle Fourche, the County Seat of Butte County, is located in the Belle Fourche Valley upon the Belle Fourche and Redwater rivers. The city was established in the days of Count de Mores and Theodore Roosevelt upon the western prairies and was one of the stations on the De Mores trail between the Black Hills and New England and De Mores, N. D. It bears

the distinction of being the greatest primary cattle market in the world. Its trade is drawn from the ranges of Montana and Wyoming as well as the fertile valleys of South Dakota. It is surrounded by beautiful valleys which extend to the foot of the Bear Lodge and Black Hills. From the first cattle town in the state it has grown to be one of the first cities of the state. Its citizenship is progressive and its business men are working for the best interests of the community. It has one of the best hotels in the state and its public buildings would be a credit to a much larger community. It is the gateway to the Belle Fourche and Spearfish valleys. The diversion dam of the Belle Fourche Irrigation Project is almost within the city limits. This dam diverts the water from the Belle Fourche river into the great reservoir covering over 8000 acres of land and holding over 200,000 acre feet of water. This water is held by the largest earth dam in existence,

being in height 115 feet and over 6000 feet in length and retaining sufficient water to irrigate 100,000 acres of land. This dam is one of the marvels of the age. It is worth one's time to visit the same. The Spearfish valley is older in irrigation and has an abundance of fruit. Within six miles of Belle Fourche is the largest natural water power plant in the northwest, where the power for

the great Homestake mine is generated from the waters of the Redwater river. A beautiful highway logged herein connects Belle Fourche with all the valleys and the famous trout fishing streams of South Dakota as well as the picturesque Sand Creek of Wyoming. In order to reach these streams in the most acceptable manner take the logged highways from Belle Fourche.

Denver to Deadwood

Auto Route

The increased demand of tourists for a good auto route between these scenic centers has resulted in an organized effort to build and maintain such a road by way of HOT SPRINGS, EDGEMONT and CHEYENNE.

Tourists contemplating such a trip should inquire as to this road.

Edgemont, the Town of the Deepest Wells in the United States

EDGEMONT, is situated on the Burlington Railroad, a divisional point, and the terminal of the Black Hills branch of the celebrated C. B. & Q. system.

It is the deep well town of the United States, having one well flowing 400,000 gallons of hot water every day, with a pressure of 90 pounds at a depth of 2988 feet and another well in course of construction now 2835 feet deep.

To the north of the town lie the celebrated Black Hills, the Forest Reserve, and a few miles away is the great Wind Cave, and government park, soon to be stocked with buffalo and elk.

East, south and west of the city lie great belts of rich agricultural lands now in course of development. A short distance from the town is the government Exper-

imental farm, where all kinds of seed and methods of cultivation are tried out for the benefit of settlers. Government land can be secured within a few miles of the city. The city has four churches, seventy businesses represented, one of the finest school buildings in the state, with a competent corps of teachers, a large garage, 50 by 120 feet, containing all the latest machinery for repairing autos, including the new autogenous welding machine, an immense bridge over the Cheyenne river, admitting of travel the year around.

Twenty trains leave Edgemont every day, among which are six passenger trains—four of them trans-continental, fully equipped with all conveniences for the traveling public.

The finest melons grown in any country are produced here and are in competition with the Rocky Ford product of Colorado.

The Fall River County Fair Association has its headquarters in the city, possessing one of the best race tracks in the state. Several thousand dollars will be expended upon this proposition the present year for the accommodation of exhibitors

For business locations and pleasure, Edgmont has few equals. The town is the official gateway to the Black Hills for the Denver to Deadwood auto road.
