

I shatl probably be charged with exagForum for February, "if I say that the recent aristocratic developuneut in the Uuited States, with its truly medieral in equality between the classes, is in no small measure due to this recrudescence of the
feudal idea among us, which is a gain, in a feudal idea among us, which is again, in a
measure, due to the romantic fiction that our youth of both sexes consume. It is the feudal sentiment of good Sir Walter Scott and his successors which makes our
daughters despise the democracy which daughters despise the democracy which their fathers founded, and dream of baro-
nial castles, parks and coroncts aud a marnial castles, parks and coroncts and a mar-
riage with a British peer as the coal riage with a British peer as the goal of their ambitions. It is the same feudal sen timent which makes their mothers share
and encourge their aspirations, and equip and encourge their aspirations, and equip
them, in Paris, with all the ethereal ammu nition required for the Euglish campaign. Half the novels they read glorify these things, and it would be a wonder if the perpetual glorification did not produce its effect. For the idea that literature of amusement is a neutral agency that affects you neither for good nor for ill is a pernic ious fallacy.
"What you read, especially in youth, will euter into your mental substauce, and will and must increase or impair your
efficieucy. Much you will outgrow, no doubt; but there always remains a deposit in the mind which you will never outgrow. It is, therefore, of the utmost im-
portance that that which you read should tend to put you en rapport with the present industrial age, in which, whether you like it or not, you have to live, rather than with a renote feudalism, whose ideals were essentially barbaric, and certainly cruder aud less humane than ours. It is your comprehension of the problems in your own existeuce and in that of your unheroic neighbors-which the romancers contemptuously call the prose of life-which makes you a uséful and influential citizen while preoccupation with what is wrong
fully conceived to be its poctry produces wrecks and failures. It is. because the romantic novel tends to unfit you for this prose of life that I condemn it; and it is because the realistic novel opens your eyes to its beauty, its power and its deeper significance that I commend it.'
$\mathbf{M}^{\text {Ary }}$ Hoalth which we will all do well to read and ponder, over. Probably half of the misery of this world is duc to the blunders made in rearing children. We all have been, or all must be at a certain period in our lives, little children; and this is always the formative period of our lives.
"The civilized man brings to his baby a whip; he doubtless could not say for what Teason, but the lesson is one in cruelty. With this whip he is taught to strike the With this whip he is taught to strike the
cat, the dog, his brothers, and even his cat, the dog, his brothers, and even his
parents. The person who is struck preparents. The person who is struck pre-
teuds to cry, and everyone else laughs, and teuds to cry, and everyone else laughs, and
so he is taught to take pleasure in the sufso he is taught to take pleasure in the suf-
fering of others; for he has no comprehension of the fact that the manifestations of pain are ouly a preteuse.
"If uo whip is at hand, he is perhaps taught to pound with his fists, to strike with open palm or to pull hair, stimulated to increase these demonstrations by the encouraging laughter of lookers-on. It is 'so cute' in the baby; but by and by, when in a fit of angry disobedience he strikes mama iu the face, he is surprised to be struck by her in return, aud no doubt wonders at
her injustice, as well he may. In the her injustice, as well he may. In the
spirit of retaliatiou, which is a spirit of cruelty, children are taught to strike the chair or door against which they have fallen, and to say, 'Naughty chair, to hurt baby!'
"The child does not distinguish, by its reason, between revenging himself upon an inanimate object and upon a person; so it is not surprising, when he is hurt by some one, accidentally or not, that he flies at the person in a fury, and puts regard to the chair. Cruelty to anish is ften tauth by the acts of older is often taught by the acts of older people. The father kicks the cat or dog, and when remonstrated with, replies augrily, 'Let it keep out of my way, then.' And the child imbibes the idea that duml) creatures have no rights which creatures who can swear
and scold are bound to respect, and, instiand scold are bound to respect, and, instigated by the former lessons of taking pleasure in the sufferings of others, amuses himself by tying tiu cans to the dog's tail or swinging the cat by hers. A refinement of cruelty is often taught children by the
unkind remarks of older persons coucerning those who are unfortunate iu birth or surroundings.
"Ruskin says that there are only two faults that are of real consequence-idleness and cruelty. Are not the high-born
$\mathbf{A}_{\text {tactics }}^{\text {FTER months of evasive and dilatory }}$ Emperor of China peace negotiations, the rupted series of victories by the Japanese armies and the threatened overthrow of his dynasty, has finally sent to Japan a commissioner clothed with full power to nake a treaty of peace. That commisioner is Li Hung Chang. In the hour of his extremity, the Emperor of Ching re
stored to full royal favor the statesman he degraded in rank after the first defeats of the Chinese armies, and scut him on a mission of the greatest importance to the empire-to sccure peace on the best terms possible. By merit alone Li Hung Chang arose from an humble family through all the various stages of literary and official life to the position of prime minister. He is

acknowledged the greatest statesman of the Orient. "I have met on this journey," said General Grant, homeward bound on his tour around the world, "four great menBismarck, Beaconsfield, Gambetta and Li Hung Chang. I am uot sure, all things considered, but that Li is the greatest of the four.'

It is reported that Japan will demand of China the independence of Corea, the ces China the independence of Corea, the ces-
sion of the island of Formosa to Japan, sion of the island of Formosa to Japan,
the temporary occupation by Japanese garrisons of the great forts of Port Arthur and Wei Hai Wei, and a war indemnity of $\$ 250,000,000$. Large English and Russian fleets of war-vcssels are now in eastern
waters, ready for action, if England and Russia conclide to interfere in namiug the terms of peace between Japan and Chiua.

## $\mathrm{T}^{\mathrm{n}}$

He American Bimetallic is the uame of and political party formed by a fow conference recently held in Washington The statcment of the single issue on which the new party will organize is iu part as follows:
"We declare ourselves to be unalterably opposed to the single gold standard, aud demand the immediate return to the con stitutional standard of gold and silver by the restoration, by this government inde pendently of any foreign power, of the unrestricted coinage of both silver anc gold into standard money, at the ratio of sixteen to one, and upon terms of exact equality, the silver coin to be a full legal tender cqually with gold for all debts and dues, public and private.
"We hold, that the power to control and regulate a papcr currency is inseparable from the power to coin moucy; and hence, that all currency intended to circulate as money should be issued, and its volume controlled, by the government only, and should be legal tender.
"We are unalterably opposed to the issue by the United States of interest-bearing bouds in time of peace, and demand the payment of all coin obligations of the United States, as provided by existing
option of the government, and not at the option of the creditor."
Present indication
Present indications are that this so-called bimetallic party will attract to itself from other parties but few silver monometallists and no true limetallists.
$G^{\text {Eneral }}$ Booth, the leader of the Sal extended tour throughout thy made an extended tour throughout the United States and Canada, since his return to England has contributed an article to the New York World, giving his impressions of "Darkest America." The social conditions in this country are not essentially different from those of England. We arc he thinks, "gliding beautifully on an incline." As a people, we are fond of dreaming, and instead of going forward we are really going downward with a fearful speed. He fails to find among us, too, any very widespread desire to improve our condition.
"I have been disappointed in the Amer ican people; $\dot{I}$ expected to find them extremely wise politically. I do not think I ever saw so much humbug. There is so much clap-trap; so much appealing to prejudices; so little souud reasoning and calm decision in matters affecting public safety.
"They do not believe in grace; they do ant grace, and grace is no good for backing. Ther want the backing of the Republican party, of the Democratic party, or Mr. Cleveland, or somebody else. It your ballot, of which you are so proud that is to be your undoing, unless you wake up to what the situation is.
"The millionaire is on top now, and the great crowd is struggling beneath in misery. They see the millionaires having overy comfort, while it is as much as they can do to make a living, and the poor house at the end when all is done. The next revolution will not be by force. It will be by your ballot-box, which the breechless multitude has just begur to learn how to use. One day they are going to turn things upside down. They are the many; the millionaires will then be underueath, the breechless multitude on top.
"The plan for Darkest America," say General Booth, "would be to start little communities-little villages of thirty or forty houses together. Each man would have six or eight acres of the ground surrounding the village, and besides that, would have a common for his cow. There would be hovels for his pigs and chickens, and there would be carts come around so often to take the produce to the markct.
"This little farming community would not find life away from the cities such a barren thing. They would have their proper recreations-the bands and the would not get rich, they would make fair living, and a sure one. The colonists simply would have the use of the land free as long as they choose to work it Money to build their little cottages, their sheds and sties for cattle and pigs would be advanced to them out of their owu wages, so that if a man ran away he would run away from his owu mouey, and the scheme would be so much the xichor by his going away ;"

Sheep. Within three years-from 1895-the value of sheep on American farms decreased almost $\$ 19,500,000$. The estimates made by the Department of Agriculture are as follows:
Numbe
Value, each

From January 1, 1894 to January 1, 1895, the decrease in value was forty cents a head-a total of $\$ 22,500,000$.

## Crimson

 Last August the writer clover. clover to test its hardiness in the latitude of central Ohio. Conditions during January and the first part of Feb-ruary made the test a severe one. A sudruary made the test a severe one. A sud-
den freezc followiug a rain left the level surface soil of heavy clay frozen solid with a sheet of ice over it, which was soon cov-
ered by a few inches of snow. In the severe weather that followed the temperature fell to nearly twenty degrees below But few of the plants appear to have been injured. Winter wheat could not have crimson clover secms to be almost as hardy as winter wheat.

The World's
Beerbohin's London List
of March 1st estimates
world for 1894 at $2,506,400,000$ bushels, a larger quantity than ever credited to any previous year. Revicwing the increasing crops of recent years, it says: "Here we find
full and sufficient causc for low prices; namely, excess of production. It may be
assumed that, as in the four years from 1887 to 1890 inclusive, the average annual production was 2,232 million bushels, the
average consumption of the world did not
exceed 2,240 million bushels, and seeexceed 2,240 million bushels, and see-
ing that the ordinary consumption for human food increases at the rate of about
eight milliou bushels per annum, it would eight milliou bushels per annum, it would
follow that for the next four years, from 1891 to 1894 inclusive, the average annual
consumption would be 2,304 million bushels, which it will be seen is far below the quantity grown, thus leaving a very
large amount of surplus wheat to be used large a mount of surplus wheat to
for cattle food and other purposes."

Broom
On account of droughts last Corn. corn was short and there was a sharp advance in prices. The high prices attracted attention to this crop, and many farmers are now planning to raise it for the first time. Unless these novices
have soil well adapted to broom-corn, and make its management a subject of careful study, they will find it a losing venture. For a profitable crop the necessary soil is a warm, fertile loam or prairie, clean and free from weeds. Failure will almost cer-
tainly follow planting on heavy clay soils or land that is weedy. Again, experienced growers will be tempted by the high prices to enlarge their acreage, and if the season is favorable, will produce enough to supply the demand. This is not intended to discourage any one from efforts to diversify his farm crops, but only as a word of caution to those who are expecting to plant the crop for the first time.

How Much A sharpadvance in wheat
How Much prices followed the pubWheat? lication of the government estimate that the wheat in farmers
hands on Marcll 1st was $75,000,000$ bushels, an amount far belot any similar estimate in previous years. On the other hand, a reliable trade journal, the Cincinnati Price Current, after a careful review of the sitlation, makes an estimate considerably larger. It says: "One hundred and fifteen
million bushels is a reasonable quantity to recognize as farmers' stocks, which with $25,000,000$ of other warehouse supplies, and $79,000,000$ of regular visible, makes a total of $219,000,000$ bushels for March 1st, of which about $40,000,000$ should be counted as un-
marketable or unavailable, leaving 179,marketable or unavailable, leaving 179,-
000,000 for distribution the ensuing four 000,000 for distribution the ensuing four
months-of which it is calculated 124,000,000 will be needed for ordinary con000,000 will be needed for ordinary con-
sumption and seeding, and $5,000,000$ for sumption and seeding, and $5,000,000$ for
fecding, leaving $50,000,000$ a vailable for exfecding, leaving $50,000,000$ available for ex-
portation and surplus in excess of the unmarketable quantity."

## Farm

Insurance companies find that
farm loans are a good investment. From the annual report of a
following: large company we take the following: 1894, amountal interest that fell due ir 1891, amounting to $\$ 2,953,969$, only $\$ 200,151$ remained unpaid December 31st, and this due until the latter part of the year, has since bcen largely reduced. The entire amount of interest due and unpaid December 31, 1894 (including the $\$ 200,151$ ), amounted to but $\$ 253,058$, or less than 5 (4.5) per cent of the interest ( $\$ 5,628,340$ )
that fell due in 1893 and 1894 . Even this small a mount is in no danger of loss, however, as it is amply secured by the property mortgaged. The interest accrued but not yet due on mortgage loans amounted to $\$ 784,325$. The total real estate acquired under foreclosure and now owned after an experience of orer thirty-six years, during which time more than $\$ 115,000,000$ were invested in mortgage loans, amounts to but $\$ 431,228$, an increase of only $\$ 132,372$ during quired by foreclosure in 1894 were but three farms, involving only $\$ 9,781$.

The situation From Putnam county,
Mr. G. W. Hastings in Florida. writes as follows: "The last few warm days have struck dismay into the hearts of even the most optimistic
orange growers in Florida. A very general orange growers in Florida. A very general
feeling among this class is that in four fifths or more of the orange groves the orange industry must begin at the roots,
even of large bearing trees. Nany are sawing off the trees at the ground, where they will insert the scions on sour stumps, or in case of sweet stumps, rear sweet
seedlings. It is argued that from the sweet stumps of seedling trees a bearing grove can be made in three or four years,
and that the groves so grown will be mines of wealth for many years to come.
"In the meantime, investigations are very active in seeking out the forage crops that will give the best results. The cow-pea,
the swdet potato, cassava, the several millets, sorghum, certain varieties of corn and other plants, or varieties of these several forage plants, that are equal to
northern red clover for forage and for soil renovation in the South, will have the attention of the southern farmer; and the
kitchen garden will have a prominence that kitchen garden will have a prom
has never before been attained.
"The freeze of 1886 developed winte gardening and the strawberry industries, Which have proved more profitable than
orange growing or cotton raising. The freezes of 18945 will no doubt develop general farming and stock raising, by different methods. Cattle and hog raising by the old methods of running at large and making depredations on the gardens and groves of those engaged in fruit and vegetable growing hare not proved profit able, because it has not encouraged the improvement of stock, and from want of food in such winters as the past, thousands of cattle have starved to death, and their bones are bleaching where death has overtaken them.
"There will come out of this calamity a new Florida-more general cultivation of the soil, less dependence on special crops, better stock, and the replacement of the razor-back hog with the Poland China, or some other breed that will pay to feed, living at home and less out of tin cans The orange market will not be glutted for jears to come, but Florida will again supply the country with the orange that in qu
else."

## NOTES ON RURAL AFFAIRS

Ground Rock The absurdity of an
as Fertilizer. the possibility of its finding advocates and adherents. In some cases it seems that the more absurd and counter to all good sense a propositiou is, the more readily people . will take to it. Just at present we find article after article iu the agricultural papers discussing the question of using stone-meal, or fincly ground rock, as a fertilizer. The whole discussion might be dismissed with a few words, as being "much ado about nothing." But in order to let my friends see clearly in this matter, I will just say that of course the only kind of plant-foods that we can expect to find in ground rock are the mineral ones. Nobody will be bold enough to claim that rock contains even a trace o nitrogen. This, the costliest of all plantfoods, then, is entirely absent. Phosphoric acid, as phosphate of lime, as well as potash, do exist in most rocks. No doubt about that. But they are so tightly locked up in chemical combinations with other minerals that it requires the slow natura decomposition of decades, or centuries plant-roots. The mere mechanical separa tion of the particles by grinding will not do this.

Minerals in Why should I apply
the soil. ground rock, whew that both soil and subsoil are already filled with disintegrated rock-rock, moreover, which has already been subject to that necessary slow chem urface soil may have its stock of mineral in an available form so closely drawn upon and used up that we cannot put unch eliance on it for a good crop any morc but the supply iu the subsoil is usually hinder us from drawing upon this hidden hinder
wealth.

The most of our ordinary
farm crops are surface feed-
Clover
the Key. ing. Such crops may suffer from lack of food, while the subsoil below them is plentifully provided. To utilize this food, we need decp-feeding plants, and among them none call be more useful to quality of the clover plant to forage in the subsoil and bring the mineral plant-foods up to the surface, is just what makes the lover crop so valuable to us, and gives us the explanation why we can improve Terry tells us that his farm, which was poor and unproductive when he took hold of it many years ago, is now so rich that Mr. Mapes, the famous fertilizer man, on the former's request to ship just such fertilizer as would be likely to give hest esults on that particular farm, replied that it would be folly to apply any comnercial manure, the soil heing alrcary fully sup has with crerything needful. Mr. Terry failed to see the least benefit from thei use, simply because the land is sich eunough already. In the meantime, Mr. Terry has already. In the meantime, Mr. Terry has
raised large crops of wheat, potatoes, and
of course clover, year after year. Th arm, in short, may be considered as good
as now, all this improvement has been achieved without the purchase of ertilizers iu any form. The only manur that has been used was that made on th from, and all this manure has been made fom hay, straw and perhaps grain grown having ever been purchased. On th whole, it is a remarkable record. But
what Mr. Terry has done, and the only hing he has done, to achieve this re markable result (and what anybody els can do under similar conditions), is to set lot of chover-plants to -Work to drav nitrogen from the inexhanstible supply o he atmosphere, and to gather potash and phosphoric acid from the disintegrated hese the subsoll, and thus to store all hort, plant-foods in the surface soil. In bring to the surface soil, and accumulat the fertility underlying and surrounding is farm, from depths or forms where out f the reach of ordinary farm money crops The task accomplished was simply a loca transfer of fertility. The proceeding is eminently a sensible one. It is simple safe, inexpensive. Its only price is skilul management. It is just as sensibie the idea of carting ground rock to the fields in order to supply them with the stolen fertility is not

Seed-potato I can have some patience Agents. wharity for, the tree agents they hare to tell some outragenu tories, and make their victims pay ou rageous prices, I feel that they have mission on carth, and for this missio perhaps the recording allgel may forge to put all their big lies down against then on his record of misdeeds. Their victim besides, do not deserve a better fate. A ympathy would simply be wasted on them. Of the two classes of people, think the victims are the worse. They let their farms be without fruit , premises rithout vines some berries, grapes and tree fruits. The agent coines along and makes the deser blossom as the rose. It would be impos elling the big to accomplish this withou four times the amount for his goods that they are worth. The lies are lies of absolute necessity, and at any rate the good that may result from them in the end may justify the means.

But I hate the swindling seed-potato agents. They are absolutely without a redeeming feature. Their case is one without mitigating circumstance, and for what they make innocent farmers suffe here, they should be properly punisher either in this world or in the world come. It is now about the time that these sharks go about plying their nefarious rade. They go to the farmer whom they know to do without a good farm paper and consequently ignorant of the late improvements in potato varieties. They
find no difficulty in getting him to listen attentively to their tales of the wonderfu yields and the other dreat qualities of new potato of which they will graciousl furuish seed, as an accommodation more than anything else, but at a good price. In one vicinity last year a stranger did a thriving business, selling to farmers a great many bushels of the "Columbian" potato, under all sorts of claims, at $\$ 1.2$ this foll. the great new potato which late sort (it did not even ripen up fully and too poor generally to usc (except for stock) or to scll. The victimized farmer. not only paid a price for their seed which should have secured them a really good variety of latest introduction, but they quence prices of reduced yield good potatoes as there are, but they took the wrong course to get their seed. Ten to one, too, when the next swindler comes along with some wonderful new potato, hey will he ready again to take the bait, hook and all. Better spend fifty cents or a dollar for a good agricultural paper, and keep informed about what is going on in And abore all, be trife slow to trust a traner, esperially if he comes to soll Jou new roriotr of potatoes at two or thre imes current market rates for good table times cur

THE FARM AND FIRESIDE

## (A) fir fillum.

## bOSSING THE WEATHER.

Anumber of jears ago a prominent farm writer excited comment by the declaration that farmer should "boss" the weather on his own farm. The given dominion by the Creator, and the power only needed to be exercised. There was a strong uote of exaggeration running through it all, and yet like most exaggerated statements it contained some truth. Of course, the gentleman did not mean that he could plan his work so that excessive rainfall did small damage, and droughts would be equally impotent. Since making flood and drought very harmful at times ou flood and drought very harmful at times ou
his well-tilled farm, just as others of us do, but there is something in the idea that the ill effects of excessive and deficient rainfall may be mitigated by intelligent management.

Drought in midsummer has become nearly a certaiuty, aud we do well to prepare for it as far as possible. In ordinary soils, woth sandy and clayey, oue efficient means of coinbatting drought is the filling of the soil with decayed reg-
etation. It enables the soil to hold moisetation. It enables the soil to hold mois-
ture during the season. Most soils are ture during the season. Most soils are
greatly deficient in humus, and the amount of it is annually reduced by a poor system of farming. We have given
much attention to fertilizing, taking into much attention to fertilizing, taking into
account the actual mineral plant-food account the actual mineral plant-food
given the land, but the stock of vegetable matter in the soil is fully as important as the a mount of available nitrogen, phosphoric acid and potash. In fact, if the former be present, the latter can usually be gotten by disintegration of the soil as menting material in the soil.

But we call attention only to the mechanical influence of decayed vegetation
in soils. It increases the water content of in soils. It increases the water content of greater amount of water in suspension. In order to fight drought with some success we plow under clover, rye, peas, etc., but must bear in mind that these aid us in
this respect only when well decayed and incorporated with the soil. A heavy growth of rye, for instauce, plowed under in May or June for corn, is an injury is the season be very droughty, It cuts off the supply of capillary water from beneath, and also makes the top soil too porous. oughly mixed with the soil, helps to keep it moist.

It is a well-determined fact that underdrainage aids land in resisting drought. Some seem to thiuk such a claim unreasonable, but it is not. An excess of water
in the soil is always harmful. The water which assists plants to grow is that held in suspension by the particles of soil. If land lacks drainage, either natural or artificial, the excess of water causes the particles of soil to compact, filling the spaces that should be occupied in part by a film of water around each particle of soil. When drought comes, and the excess of water escapes, the soil is left so compact that little moisture rises from the subsoil, and the air ueeded by plants cannot enter freely. Drainage, allowing no excess of water to accumulate in a wet season, keeps
the soil iu better mechanical condition, so the soil iu better mechanical condition, so that the amount of moisture it can hold in
suspension, like a sponge, is materially suspension, like a sponge, is materially
increased. Good drainage and plenty of increased. Good drainage and plenty of
decayed organic matter are aids in combatting drought.

The early plowing of sod land is an important factor in fighting drought. Too little attention has been given to this point. I am aware that in the case of some crops late plowing seems best, and
is doubtless so in good growing seasons. is doubtless so in good growing seasons. Corn feeds best on decaying vegetation,
and if a sod with a heavy green growth be and if a sod with a heavy green growth be affords just the proper condition for rapid germination and growth of corn. But if the one aim be to ward off the ill effects of drought, earlier plowing would be advisable, as then the organic matter iu the soil thoroughly mixed with the soil, would increase its power to hold moisture for
nse during the drought. I am not arguing
for the early breaking of the sod for coru, hut stating the fact that such early breaking is an aid in resisting drought. If the season be moist, the late plowing might be better.

So much has been written of the value of thorough preparation of a seed-bed that one hesitates to say more, but this is one chief means of preparing to withstand dry weather. The thorough work before planting directly affects the power of the soil to provide moisture for the plant 1. It makes the greatest possible distribution of the organic matter through the soil. This is important. 2. It destroys the big air spaces in the top soil that rob soil in perf of water. 3. It puts the top water from the subsoil. 4. It prometes greater grow th of the plant roots, so that gres hre ber that the soil. We puderstand that water in other reasons for a good seed-bed, but I other reasons for a good seed-bed, but
mention only those directly mention only those directly bearing on the question of drought. If drought is explected, and we set out to combat it, we first remove surplus water, then fill the soil with organic matter, then have the organic matter well decomposed, and make as nearly perfect a seed-bed as pos sible.
light yields come to unost men in droughty years, but it is possible to mitigate the effects of drought in some degree by doing all we can to iucrease the amount of moisture our soils will hold in suspension, and by preserving it with surface and level culture of the crop.

PEACH ORCHARD AND SMALL FRUITS COMBINED.
Where one desires to combine the culture of the peach, the dwarf pear, orange quince or other trees of comparativel sow growth, with the small or bush fruits, it can be done on trial on as small a piece of land as about one third of an acre. The rees and plants can be set as follows: Set 36 peach-trees 24 feet apart each way. Between these, in the rows from north to south, there may be set 5 orange quince, 15 dwarf pear, 5 May cherry and 5 plum trees. Between the first and second rows of peach-trees there may be set 600 straw-berry-plants, in rows 4 feet apart, and I foot apart in the row. Between the secoud and third and third and fourth and fourth and fifth rows of peach-trees make the rows for the 40 gooseberry-plants, the 80 currant, the 120 red raspberry, and 120 black ones, 6 feet apart, and set the plants 3 feet apart in the rows. Between the fifth and sixth rows of trees make the rows 8 feet apart, and set the blackberry-plants

Every stirring of the ground permits the
escape of moisture. Cultivation escape of moisture. Cultivation can be classed only as a necessary evil. If crusts did not form and promote the rapid evaporation of water, and if weeds did not grow and pump its water out of the soil cultivation would do more harm than good. We cultivate to keep a mulch on the surface of the ground, and to prevent weeds from growing. If a soil have a sufficient supply of organic matter in it to keep it loose, any cultivation for other reasons than the two just given would be worse than useless. Consequently, having a field prepared as well as possible, we fight drought by giving only level and shallow tillage.

I am aware that those farming land that needs underdrainage can see no virtue in level cultivation, and for them level cultivation would not be best; and with soil greatly deficient in humus, some deep till age early in the season seems to be neces sary. But wheu land is well drained, and has a heavy sod turned over for every plowed crop, level and shallow culture are possible, and greatly aid in keeping the moisture in the earth from escaping. Root-pruning is a severe operation on plants, and the escape of moisture resulting from the deep plowing is of ten sufficient to cut yields from ten to thirty per cent. We cannot "boss" the weather:
also 3 feet apart in the rows. If desired, the hardy grapes can be trained on tall stakes and substituted for any or all of the trees named, except the peach. This plan, with some slight modifications perhaps, is onfidently recommended.
W. M. K.

Near Washington, D. O.
CULTIVATION AND FERTILIZATION OF SORGHUM.
We never give our best land to soighum. If we can find a piece of strong land that is too wet for any other crop, but still dry enough for cultivation, right there is where we locate our sorghum, crop.
Farther north sorghum, being what might Fartuer north sorghum, being what migh be termed a semi-tropical plant, warmes land to be had. White, pipe-clay or buck shot lands are pre-eminently adapted to sorghum; dark or black soils making a dark-colored syrup.
The Best Fertilizer for Sorghum. Potash is by all odds the element that exerts the most marked effect upon both the yield of sorghum and the production of sugar. On poor soils, nitrogen also is
necessary. Of the potash salts, kainite necessary. Of the potash salts, kainite
may be given the preference and applied may be given the preference and applie
at the rate of 400 pounds per acre. It is especially necessary on soils that are naturally deficient in this important light soils. Where pitrogenous fertilizers
are needed, stable manure will be found
to answer every purpose. Where to answer every purpose. Where close planting is desired, two and one half feet to one stalk in a place, eight inches apar in drill.
Cultiva Cultivation is about the same as for corn It takes less work for sorghum than fo Mississippi.

## PICKED POINTERS.

Below is a table from an English work which should interest every farmer in the land. It gives in pounds the fertilizers in
a ton of dung and a ton of urine of ou principal domestic animals.
A ton of fresh dung
Horses
Cattle
Sheep
Swine
Comb.
NITROGEN. PH. ACID. POTASE
$\left.\begin{array}{l|l}\text { Comb. am'ts } \\ \text { in dung }\end{array}\right\} \begin{aligned} & 11.0 \\ & 12.0 \\ & 37.6\end{aligned}$

7.0
2.0
3.0
5.2
17.2

Thus it will be seen there is over twice as much potash in a ton of urine as there in a ton of dung. This pointer ought to be sufficient to induce everyone to save and utilize the urine. What proportion do
it? To know why sheep manure is more valuable know why sheep manure is mor sary to compare the items of the table.

## ()ntr firm. <br> CHATS WITH INQUIRERS. <br> Gsota reader asks me why so valuable a vegetable as sea-kale is not more commonly known and growu in this country. I think there is a good reason for

 it. In the first place, I do not beliere thatour clinnate agrees with it as that of its native country-Old England-does. If it
does, I do not know why I thus farr have heen unable to make it thrive in ins garden. care of theml ; but they never made a very thrifty growth, and finally they died without having given me a single mess even for testing the faryor. Thave anidea, however, leople will not take kindly to sea-kale, be it ever so good, and even if it would suc-
ceed here. is the length of time required to give a crop. When we have to wait for the
sea-kate several seasons-ahout as long as sea-kale several seasons-almut as long as
for asparagus after setting the plants-and have to go to a great deal more trouble to
secure it; we will rather put our reliance in asparagus. But do not tell uee that sea-kale (Crambe maritima) is not mentioned in the
seed catalogues. I am sure thexe are quite seed catalogues. I am sure there are quite a number of our leading seedsmen who offer plants of this regetable for sale. From the ever, it might be inferred that he grows sea-kate surcessfully. If so, I and , many gladly learn how the vegetable does with him, and how le handles it.

Potato .Varieties.-A Texas reader wants me to name the variety of Irish pota-
toes, and of onions, that will give him the best yields on his rich, black upland with well-drained clay subsoil. How unsafe it is to recommend varieties of potatoes and of other regetables and fruits promiscuFreeman potato. One man, in my hearing in Rochester, recently, pronounced it the best potato he ever grew, while another
denounced it as a humbug. The truth is that the Freernan may be very satisfactory in yield (it is always so in quality and must be a sore disappointment in the hands of people who grow the low-average will never do to rely on variety alone to give us good crops of potatoes. Tee must know how to handle them. This, of course,
includes planting the variety that is best suited to climate, soil and the particular methods of the individual grower. The
latter's duty is to find out by trial-perhaps by inquiry at his nearest successful neigh-bor's-which that most suitable variety is. Beauty, a round potato of peculiar terracotta color) is largely grown for an early
sort. Here, on rich, black upland, I would plant the old Early Ohio for an early sort, the least for home use and a discriminating market. The Early Rose and Beauty of Texas frieud's soil. We like the White star about as well as any other late sort tity above everything else, we would plant Rural New-Yorker No. 2; but this is too coarse to suit ine. The new, and as yet
very high-priced Carman No. 1 seems to be very high-priced Carman No. seems to be
also an immense yielder, and its quality is very good. These remarks will also an-
swer the questions of Mrs. M. R. W., Virginia.
the Prizetaker, and no other. Probably it will he found, also, just the variety that
will do best for the iuquirer. He should try it , ly all means.

Growing Sweet Potato Plaxits.-When one has nice, sonnd seed potatcos ou hand, in raising plants. The ditficulty with the inexperienced is usually in the keeping of
the seed. Of course, you want a good, warm hotbed. When it is all going nicely,
put a layer of sand-say two or three iuches deep-upon the warm manure, and then upon this a laver of the potatoes
pretty closely together, but so that they will not touch; then cover them with more
sand, and put on the sashes. Do not use any water. Keep the led dry until the spronts appear above ground and grow
rapidly, when water applications will be
in order. When the slips are of the right
size, say threc inches high, they are ready
for pulling and setting out. By the tin size, say threc setsing out. By the timike
for pulling and set
thes are that, it will prolably be June, and just time for setting the plants. Be sure,
all who take an interest in sweet potatoes to try the "Yineless." There can be no more doubt that it is a good thing, and the
"comiug" sweet potato. These remarks will answer the inquiries of

## Washington county, Kansas

Hfatine Ilotbeds.-Our Illinois reaaler, M. S., is not the only one ever having trouble with his hothed manure. Even
under the managemeut of the more expeunder the managemeut of the more expe-
rienced the mannre frequently refuses to ome to a heat. If we take it out of a steaming pile and throw it together in the
hotbed pit. it often never warms np again, and tender seeds sown in such a hotbed may remain dormant until warmer
weather calls them into life. To make surc of a lively heat in the manure, we wan fresl horse manure from well-fed and
lard-worked animals. The litter in it is all right if not excessive in quantity, and if what there is is soaked with the liquid voidings of the horses. A portion of dry leaves, used as bedding in the stables, may he added to the manure, and will improve
the lasting qualities of the heating material. It should not be over ane third in bulk of the whole, however. If all this material is well shaken, up so that it is loose, and then piled up in a big heap, it
will soon come to a heat, and it is then rendy to be shaken, in even layers, into the hotbed. The drier it is, the tighter packing it will need. If rather moist, the mere patting down with the back of a fork
or shovel will be all that is necessary, while rather dry stuff can be tramped in with the feet. Should the manure refuse heat up in spite of all efforts, the addition of a quantity of bran (dry wheat or rye
bran) will seldom fail to bring it to terms Spent hops fresh from the brewery make a good substitnte for horse manure, where
this is wanted merely for giving botton heat. I usually mix it with manure, about half and half.
Early Melons.-A Michigan reade wants to raise some melons foran near mar-
ket. Ie is well satisfied that a gain of ket. He is well satisfied that a gain of a rop would malke a great difference in the value of the crop. The questiou is wha variety to select for this purpose and how to push it in the most effective way. I do not know of another variety that can comNor is there any other that is of better once will buy theun again in preference to any other. But the melon is very small On the other hand, it makes up in numbers what it lacks in size, especially as it can be planted much more closely than ordinary melons. Four feet each way is
sufficient space for the hills. To forward the crop as much as possible, start plants
on inverted sods or in strawberry-boxes under glass, sowing the seed abont the last week in April, so that the plants may
be set out in open ground when danger be set out in open ground when danger
from frost is over. I alwass set the berry boxes right with the plants; ther soon decay in the ground, and they do not interfere with the growth of the roots, alyy way
Then I put a pint or more of tolacco-dus and bone-mieal, mixed in equal parts, all around the plants of each hill, and thus not only keep the bugs a aray, but also give are good fertilizers. It need hardly be well manured. Put sull the rich and post that you can plow under. The crop
will surely pay for it.

starting a chestinut grove.
The quickest way, undoubtedly, to star chestnut grove of impproved varieties,
especially of the Paragon, is to graft scions of chestnut timl)er will give ns a good fonndation. If the trees are cut down, proper distances. Mr. Engle, of Peunsylvania, has such a grove now in bearing.
J. S. Woorlward, in Racral Now-Yorker, gives an interesting account of his experieuce in this line: "Last year," he
says, "I grafted a lot more, and'among others I cut ofi quite large trees and cleft-
grafted them the same as I would-the
apple. On others I inserted scions in tha
side of the trunks, and these have madle a
gond growth. If the scions are cut in roper season and kept perfectly dormant, the grafting is done. Of course, the scions cannot be inserted on the side of the trunk until the bark will start easily, as in this strle of grafting the scion is cut slanting from one side to a point, and inserted
under the bark similar to a bud in buctding, but haring the end sticking out a couple of buds. $\Lambda$ successfnl method of grafting is to cut off a limb or the main rink, about an iuch or so in diameter and insert scions cut the same shape as those last mentioned, under the bark, waxing the whole end of the stub. Two but one is plenty to let grow. In using this method, the bark must lee loose. But don't shove the scion down so far that little of the cut surface does not extend hove the end of the stub, for if you do, no mion cau take place abore the cut surface f grafting the chestupt, In all system of grafting the chestnut, I have found it to
pay to nse waxed cloth, and firmly bind the limb nntil growth takes place to such an extent that the band is liable to strangle
the roung growth. I notice that a good the roung growth. I notice that a good good union of stock and scion. I hav sionally one does not seem to be perfectly
joined, the majority have made a good puzzle one to find the place of grafting. in no case has it been at the collar. Next
spring I intend to cut off and top-work a good inany trees which I have, that are
from four to six inches in diameter of

 and over the words bef "Don't answer mo can't bear much yet, and he smiled a nig ing smile as he said, "But I had a heavenly dream. Do you believe in dreams, Enid?"She had seated herself near him, and said: "It was kind of you to send me those beautiful, fragrant flowers this morning. Permit me to plense,"
No one but herself ever that interview. She must be true, even if she should
"Enid," he said softly with one of his rare
smiles, "I have dared to hope; was it presumption?" "Must I speak ont the whole truth, Captain Ran
dolph?"' While Enid was gentle ness itself to those she capable of saying ved immly. She strug witbout giving him the least encouragement.
"Enid, do you love any "Is that just like your honorable self, Captain Randolph, to ask me such
a question?" "Pardon me, he said rising, and walking up
and down the floor. "Tell me the truth, Enid, an truth."
There was a dead silence, lasting so long, it seemed to them both.
"I am youug, and not versed in set phrases," she repeated softly, "but I must say that I feel highly honored. To do you justice, however, I shall have to tell you that I do not
return your love. It may be just a passin return your love. It may be just a passing fancy, and you will meet so many gifted,
noble women to choose from, that you will be glad I did not answer you as you wish me, glad I did
"Never! How dare you tell me so-I who have prided myself on knowing how and
when to judge-to tell me I do not know? Oh, I feared I would forget myself! Forgive me!" And he threw himself down in a chair, in perfect abandonment, covering his face with his hands.
There was a long silence. He then said in a low voice, "She does not love me. Why go." $\qquad$ "If-if ouly you could have loved me-but was a self-deceived fool. Good-by, Enid." A few moments of silence ensued. The open window of a voice full of melody singing "Good-by to Summer." It was Lucy the colored housemaid, who had caught the air and words from her young mistress-jus nature's untrained bird-like caroling that
Captain Randolph heard as he said good-by Captain Randolph hea
to his hopes, his love. to bis hopes, his love.

## Chapter Vil.

Soon the clouds will scatter,
Blue fvill soon come back:
Bweetest flowers will blossom
In the tempest's track.'
Colonel Gibson and Frank were indefat igable in their efforts to amuse and brighten the remainder of the Howe family's stay, getting up picnics in the woods and riding parties.
The
he colonel felt as if he was somehow responsible for Enid's grave looks every now
and then. Though she fought bravely to repress her feelings, and was usually gay in company, but having a sort of fatherly and brotherly feeling for Frank and the colonel, she dropped her mask before them, and they got an insight into her thoughts. Then, too, the favorite beaux seemed to have suddenly taken fight, and Enid was dumb as to any
cause. Captain Raudolph was off to the West, where he had some valuable silver-mines that rence Hunt's lawe practice was yery and Lat
quite sure Enid was very much pleased with one of them, and she certainly seemed happ nature perhaps he had entirels mistaten ber feelings. Yet it was mysterious-their leavin so suddenly.
The weather was not propitious about this timae, being stormy, with sudden showers, so the ladies stayed indoors and amused themselves. This just suited Enid's state of mind, and she made good use of it by pleading lctters to write, and a desire to be left alone

## looked like a

and blossoms. "Oh, Miss Enid, what a pretty room! Who
would ever have dreamed that Brompton would ever have dreamed that Brompton
could look as it does? Don't you know, we could look as it does? Don't you know, we
children used to think this was a haunted children used to think this was a haunted
house, and to dream of spending a night here -why, I would as soon have tbought of sleeping amidst the wolves, for I was sure I would be devoured. It used to look so grand and gloomy, and it was said the family was
afraid to ever come back, on account of the afraid to ever come back, on account of the
great-grandmother's ghost, or sometbing quite as ridiculous

When she saw Enid's embarrassment an blushes, she apologized, saying:
"I did not know, Cecil, that their preference for my society had been a matter of gossip. They enjoyed being with us all. I being older than most of you, they sought my societs more; and then, too, they knew you and Bess were engaged."
"Everybody else but you, then, could see
they were both deeply, tragically in love with you. Why, they deeply, tragically in love with being indifferent, although they are greatly made over. It is said that Estella Ray is very
much in love with Lawrence Hunt much in love with Lawrence Hunt, but that does not return it." people to say such a thing and how unmaidenly she must be if it is true, to show her feelings.
should certainly. try hide it."
And as Enid said this, her face was suffused with blushes.
"Most of his fricuds in New Orleans think she would just suit him. He wants a clever woman of the world. She is ver beautiful and wealthy he don't fancy her," said Cecil.
gaged to Miss Ray. think he is too honorable a man to be very attentive to a lady without having some idea of marriage. mean enough attention to cause the world to couple their nam said Enid.
sbc could not quite bea to think of him as the this she despised herself "Well, darling you have kept Cecil long enough and I want her," said Bes sie, bursting into the
room. "Why, Enid, you room. "Why, Enid, you "Dromptonghost. "Did you ever!" said
Cecil. "We have been Cecil. "We have been talking about it, sure enough, haven't we, Euid Euid looked up bright-
$y$, and replied as gaily as ly, and replied as gaily as
she could; but deep down in her heart she had seen a ghost-her old glad self.
family at Brompton. Bessie was even more nimated and spirited than usual, and was up nd ready at auy hour to go Frank. She and Cecil Howard were inseparable, and Cecil spent most of her time at Brompton. As she was also engaged to a young physician, a
Dr. Stephens, who was now in New York studying a specialty, it was a bond of sym pathy betiveen the two giris; and then Cec new so well when she was an intrudershe was never detrop.
The lovely spring days were shortening, and
Thever trop. Mrs. Howe began to talk of starting back to New York, but the others would say, "Oh, not yet, mother; it will be time enough a month or two later.
Bessie and Cecil shared the same chamber, and both girls, unaccustomed to being waited upon, were glad enough to send Lucy away, and talk over their dear, delightful secrets. were surprised to see Enid come in, saying she had knocked three times without re ceiving an answer. She had taken the comb from her hair, and shaken down her brown with a filmy veil
"I came in," she said, "because I could not hair for me, for you giris to brush out my Lucy has gone down to Mammy's house." "Oh, my dear Miss Enid, let me, please? always brush father's until I put him to sleep."
"Well, I expect it is well enough to let you do it, for I know you and Bessie would talk all night; I'll put a stop to a part of it," she said, laughing.
"It seems a shame to go to bed," said Bessie, who was sitting on the window-ledge, half out, and ingaling the fragrance of the delicious and inhal
blossoms.
"Come over into my room, Cecil," said Enid, "and leave Bess to her tender imaginations Sheis happy enough ; come cheer me up." "All right," said Cecil.
Enid had chosen the room that had been ber Uncle Don's. It had his bookcase and bought white muslin curtains, added a rug or wo, and with her love of neatness and pretty, dainty things, had made the room very pretty The furniture, while old style, was handsome, nost of it rosewood and mahogany. She kept vases filled with magnolia blossoms, Camellia pictures, growing them in shells. Her room
brush my hair out, while I listen to the ghos ghosts," said Enid, smiling.
"This was all the talk of the negroes. They used to say they could see the beautiful young lady, who died of a broken heart,
looking out the window on moonlight night for her lover. He left her, promising to re turn, but never did, and she grieved herself to death about it. Did you ever hear your mother
spcak of any such tradition in the family?" spcak of any such tradition in the family?"
"No. In fact, father would never let a servant mention such a thing as ghost to us children, but still mama would of their superstition about hoodooism." "Iיll get Mammy Rhody to tell us what she "for eration, and I believe you are the fourth Wouldn't it be funny to get up some ex
citement? But really, I'm such an arrant citement? But really, I'm such an arrant
little coward, and so is Bess, that I'd better little coward, and so is Bess, that Id better
put off talking about it until to-morrow, hadn't I?"
"I think so, dear," said Enid, "if you are nervous about staying here alone. We were at frst, and would not let Mr. Charles stay
a way at night; but we have gotten over our fears entirely. By the way, Cecil, aren't you coming to New York this fall to make us a visit? Bess is looking forward to it, I know, and we all want you."
"I am just wild to come. I've never been there; in fact, I've never been anywhere except to New Orleans.
"Mama promised to take us to New Orleans to the Mardi gras, and I think she would have gone if I had insisted upon it," said Enid. "Do you know what everybody thinks, Miss "About what, Cecil?" asked Enid, a sligh "Whor in her volce.
"Why, about you and Lawrence Hunt Everybody thought he was in love with you,
and they say you have refused he and Capand they say you
tain Randolph both
"What makes thein think so?"
Yet while she asked this question, how well she remembered every step of their acquainand that while Lawrence Hunt was with her every need of her heart and mind was satisfied; the certainty that if he left her he would come again soon; and now, how they had drifted apart. There was none like him-
none! Her thoughts had wandered away from the question asked, and when Cecil' reply came she was hardly prepared for it.
"Why, Miss Enid, you didn't care for either of them, did you?"

Would she ever be the same? The whole aspect of lifo was changed to her since she had left her pleasant, kindly home nearly bosorbed mitho. She was usually too much laims on her sympathy, her quiet counsels

dose; sugar-coated, easily swallowed once, used, always in favor. They positively cure sick hea

seemed as if she not only had time, but th desire of late to get acquaiuted with herself. Mammy Rhody could not be reconciled to the talk of leaviug Brompton, of giving up her darling Miss' Pauline, until Bessie coufilled her secret that she was coming back to the at Norfolk with Frank. "And, of course, ecause I will not be married anywhere else hiy, Mamms, do you think I would be mar red and not have joul at the wedding?
"Bress fo' lovely soul, chile; at all."
ter see it. I'se ready ter die when I sees sum ob our fokes libin' back at Brompton. Deu de niggers can't say, 'Dar is de haunted house,
Frank Gibson and his father spent most of their time at Brompton now. The girls did not seem to think it ansthing out of the was
in the colonel. They had learned to love him in the colonel. They had learned to love him so much, and enjoyed his genial company,
and it was their pleadings to stay that often Bessie's and Frank's to go
Bessie's and Frank's future was discussed opeuly and in the family norr. Frank earmarried before their return to let him take Bessie to their summer home on the beach. But Mrs. Howe would not consent at all; she must take her back to New York, get her trousseau, and let her be separated from hi
It was finally arranged that Mrs. Hóre and family should return to New York, stay there come and spend a ferr weoks with then Then (at Bessie's earnest request) they would return to Bromplou in November, and bessie orange blossoms of old Brompton's growing. made up their minds to leave Brompton with their mother to come back had not, been given them. It was too lovely now, they soms, as far and wide as the earth about them They this land, fraught with true joy of living in elder, but known only to memories to the the brightest spot on earth.
"New York will certainly seem tame in
comparison to Brompton," said Bessie, which would have called forth a voller of derision and laughter from some of Gotham's fail. maidens. And Jack made his mother shed tears by declariug he would not go back, and he was williug to stay with Mr. Charles, and and Frank. She laughiugly told the colonel he was trying to defraud her of ber children's months which iutervened between Mr. Howe's death and the autumn of that eventful year! The happiness of being back at home in
Nork wastialls destrosed gloom that at once settled oyer Mrs. Howe again. There hung her husband's portrait every turn and move reminded her of the old sore and wouud. She lost her appetite, and dear, glad life of the last few months had not poesed.
But Enid determined to get her away to a shoppiug and extra work that fell again on Enid's shoulders was the rery best thing for attend to-dressmakers, house overlooked,
stocks and bonds to see after, servauts to look up, and really, life was no dream now. Her
trip South had made a woman of her in more
ways than one. She never could be a hearted, free, happy school-girl again; she ically untll she was a superb-looking young
woman, and she saw that she attracted attention.
It was thought best by the family physician to get a summer cottage near the sea-shore, Jack and Mrs. Howe both had lung trouble, south every winter. They made a flying visit to New York, and searcely considered it home, new quarters.
Mrs. Howe seemed to have taken cold coming home, and Bessie wrote to Frank,
telling how alarmed they felt, and in less than ten days after they got comfortably fixed,
who should drive up but the gallant Colonel and Bessie gave him-and he claimed a liss from the stately Enid-ought to have satisfied
any vain man. iana before the last of May, I didn't want
you to come, and really, Pauline, you look mans pounds lighter; you must go back."
The rose flush came faintls The rose flush came faintly for the firs
time, and there was a glad light in her eye.

CLADYS MEERS' VENTURE.

(O)Gladys, bave you heard of the news about Oakley Swain?" called the cheery rolce of Jessie
Payne, as she paused at the Payne, as she paused at the
gate before the low, rambling White house, half hidden be-
hind a venerable Virginia creeper. -
"Is that you, Jessie? Come in, won't jou?" "No, thank you, I haven't a minute to spa "Yes," returued Gladys. "You are the third t. Doesn't it seem as if good luck is bound to
t. follow him?"
"Well, I don't know about the good luck; he earned it all, you know."
"Oh, yes, of course; but he bad to have the chance, and there is where the luck comes in. To think of a boy actually earning bis entire

## (1) Iu difutsichota.

The old days, the TRUMPS. The old days, the school days,
How we remember them! How we remember them! The master pacing to aud fro,
The yellow benches in a row, The blackboard all about the walls, Their very memory recalls The perching hickory limb That hung above the desk in view of everyone, and we all knew That clubs were trumps.
The wooing-time, the coning-time, And lips were red and cheeks aglow With tints like suushine o'er the snow, Glad eyes as bright as morning dew, And when she smiled and looked at you 'Twas love's sweet summer-time; And days, like apple blossoms, fell
Unheeded, for we knew full well Unheeded, for we knew full well That hearts were trumps.

## The busy life, the happy life,

 When we have sought a nest,and forth unto the market square And forth unto the market square
Each day we cry our chosen ware, Euch day we cry our chosen ware,
While by us in a maze is whirled While by us in a maze is whirled
The bustling, hurrying, working world The bustling, hurrying, work
In fortune's furious quest. In fortune's furious quest.
Strong hearts, brave souls, oh, need you then To seek and win the prizes when Diamonds are trumaps?
The trying hour, the dying hour, The hour of penitence! Strong souls each day by death-winds whirled Into that nameless after-world; and waft me o'er the dead men's m And waft me o'er the dead men's sea
Into the silent thence? Into the silent thence? The tolling bell, the mournin Then spades are trumps. دFaurice

WTHE LATEST FASHIONS. closeathand Sunday so orgets the sacrifices made during the forty days and forty nights of fasting and prayer, and the Lenten season with its sewing circles, little charities, reading classes, and quiet visits to the play will soon be a thing of the past-only a memory. Easter falling so late in the season this year gives us every reason to expect fine weather and blue skies for the airing of the many new creations in millinery, wraps and gowns that have been in preparation for some time. And if indications mean anything, this season will show a marked return to the old-fashioned idea that one must blossom out in new gowns and hats, to match the color of the early spring flowers.
For many years this custom has beeu foregone by the people who could afford gorgeous array, allowing it to be carried on by those of lessel means. Easter Sunday this season will undoubtedly slow Fifth avenue crowded with women clotlied in the best, newest and prettiest that can be

Fig, 3.-Black Crepon Dress
found, while the people in the less fashionable districts will do their part to remind oue that the day of airing new spring bonnets and gowns is once more with us. Fashions are in the transition stage again, agitation by doubts and fears as to the next movement of that fickle dame, Madame La Mode.

Iress and style hare become so import:nnt a feature in the fashionable woman's lile that the subject must lose none of its sarily given up to the study of what is ner and most fetching in effect. If she possess enough natural grace and style, the study of how to dress will not monopolize so much of her time, for her gowns will be a success, because they are worn by her. But if grace and style are cultivated, her selections must be made with a great a mount of thought and care.

Fig. 1.--Street Dress.
The general styles in dress bid fair to remain about as they have been, showing full, stiffened skirts, waists made full and much trimmed, witlo sleeres quite as expansive as ever, especially in thin materials. One frequently sees as inany as three different kinds of material in one
sleeve, which only shows how great are sleere, which only shows how great are
the liberties taken with this overdone portion of the fashionable gown.
Tailor gowns of tweed are made with short coats, or with a plaited waist like the Norfolk jacket. In some are seen tightfitting coats, with vests of silk or in oriental'effect.
The new serges are light in weight and cherper in price than ever before. The most stylish and newest wool dress materials are rough in finish, loosely woven and charmingly mixed with two or three colorings. The silk being thrown upon the surface in dots, loops and dashes of bright colors.
The loosely woveu goods require a silk lining to make them look up-to-date, and this must be a contrasting color that will show through the meshes. Gowns of black grenadine made over a colored silk lining aresometimes trimmed in every seam with
a tiny ruffle of grenadine and silk set in. Some of the skirts of the new spring gowns are exaggerated iu width, and are made with a seam directly in front, and this and the seams on each side are trimmed with iuch-wide bands of lace insertion over a color, or with jetted bauds. Black aud white striped silk skirts, with waists of the same over which is worn a black velvet Bolero jacket elaborately trimmed with jet, is a costume shown as one of the newest aud most taking.
Revers have lost none of their popularity, but 'have assumed a new shape by being draped instead of standing out in stiff points, and in some points, and in some
of the gowns they of the gowns triey
are made in triplets, each being of differeach being of different materials, but of course must harmo-
nize well with the gown.
Fig. 1 shows a style always in good taste,
and will be worn for and will be worn for
the street in early the street in early sping. The entire three shades of brown material checked in skirt, with a band of brown cloth braided in yellow for a foot trimming. The Norfolk jacket, with three plaits both back and front, has a rolling collar, belt and gauntlet cuffs to match the trimming on the skirt. Belts are once again belts, which allows the skirt to come up over the band instead of going under, as they have been doing of late. The
coming season will see a reign of belts and sashes, especially with the thin washable dress.
A dainty and effective Easter gown is shown in Fig. 2, the skirt of which is rough silk bengaline in a light shade of heliotrope trimmed with black passementerie dotted with sequins. The blouse waist is of black satin closely sprinkled with jet sequins, over which is worn a black velvet Eton jacket, with turn-over revers faced with heliotrope bengaline. The full
dions, are trimmed with yellow Valenciennes lace, and are worn with bright colored and black dresses.
Shirt-waists continue to multiply in oth black and white.
Flowers will be seen on everything this uext season-eren placed on the waists of heary materials.

these desirable gowns, and still be different paper for the filled cap, black glazed paper from everybody else. For spring the for the gentlemen's hats, and stiff white crepon skirt will be the fashionable one to wear with odd, fancy waists.
Fig. 3 shows a full skirt of black crepon, with a blouse of the same trimmed with triple revcrs, the center one being of black and white striped satin duchess, while the npper and lower ones are of the cropon. The full sleeves of striped satin show a pretty draped effect at the elbow.

In millinery the little Dutch bonnet, with is wide bows of ribbon or lace and flowers each side just back of the ears, seems to the favorite. The most of them are made in jet effects, with bunches of bright owers, or very tiny ostrich tips which are jetted. Whatever the bonnet may be, it

## A PRETTY BEDROOM AT SMALL COST.

Select some soft, pretty color, which should harmonize with the-furnishings of the room-old rose and light blue, pink white. Any blue and white, yellow and very pretty, and easily carried out in the trimmings. Let the ombination solected peep out in the toilet articles, both the china and fancy articles and in any drapery you may use
I will describe a room which a fond mother prepared with skilful fingers, as a surprise for her young daughter upon her return from boarding-school; the limats of her purse not admitting of a large outlay. The prevailing tint of the room was old blue. The floor was covered with matting into which the color was woven. Almost everything else in the room was spotless white. The little bed in the corner had tent-like draperies of dotted swiss, with a ruffle. The windows had sash curtains of the same shirr material. Opposite the door stood a dainty toilet-table, with white over blue for the draperies. The roomy wash stand also wore a similar dress. Against stood loy the fireplace, while one oldfashioned rocker and several small chairs and a footstool completed the furnishing, with the exception of sereral dainty pictures in white frames, which adorned the walls.
For the toilet-table and wash-stand, you can purchase for ninety cents each, two deal kitchen tables. For the wash-stand, saw otf the extending ledge at each end, making it an inch or two shorter; screw two eyes into the front, and one at each end close to the back. Make the valance in three divisions; to the piece for the front sew rings to ruu on a wire which hooks the the cyes, so it can be slipped aside, thus making the space underneath avail-
able for the foot-tub and water-can; the
$\square$ under they have beingof late Thelas uarrow from front to back.
The new jet trimmings are made so dainty and light on uet gronnds that they are very pretty ou the new summer silks. Spangled black satin ribbon is used for bretelles, collar and belt on some of the Fin spring dresses with a charming effect. Fine white muslin collars and cuffs such
two end valances run on a draw-string and tie to the eyes. Over the top fasten a piece of enameled cloth, and over that a iuen scari embroidered in blue. A very ice set of blue-and-white crockery can be bought for three dollars. If preferred, a cabiuet-maker could make a back for the wash-stand, with shelves for a mug, etc., ike in the illustration, which can easily be enameled white with sonie of the pre-

## pared cnamel paints that chiscd in twenty-cent cans.

The toilet-table was arranged iu a similar manner, with a movable valance which hides a shelf underneath for the use o shoes, boxes, etc. The mirror, in this case was draped with the swiss, but any pretty fancy mirror would be more durable, though costing more. The toilet-tablo illus trated is a beautiful model, and can be easily made at home. The valauce is of plain blue. Any soft, inexpensive matepreferred for draperies, silkoliue woods is preferred for draperies, silkoliue, which
sells for ten cents a yard, is very soft and pretty; besides, it has just smooth enough a surface to refuse dust, which is quite an adrantage. It comes in combiuations of almost any color. The drawer of the toiletalmost any color. illustrated is covered, as you see, with white canvas worked with blue cotton in cross-stitch, finished with a ruche of the material, or braid the same color and tied to the brass handles with cord and tassels to correspond.
The bed is of iron, enameled witl white enamel paint; gold can be added here and there, if desired. When you have decided where the bed is to stand, if a drapery is desired, fasten to the wall by means of a bracket an enameled broomstick, and throw your drapery over this, catching it back with a bow of blue, or of the material at each side of the bed.
Should there be no closet in the ronm with the aid of a good with little outlay In one corner have the carpenter festen In the wall two boards furnished with clothes-hooks, meeting in the corner; rest on these a triangular board for the top, and another like it rest securely on the base-boards, forming a board for the closet. Instead of doors, hang across the front, by means of rings sliding on wire or a curtain-pole, two curtains of heavy drapery material."
An old-fashioned case of drawers will be found quite useful-indeed, necessary, as
there is no bureau. Enamel with white, there is no bureau. Enamel with white,
insert brass knobs, and cover the top with a pretty scarf, upon which dainty pictures and boxes can be placed.
The bookcase consists of four smooth boards secured to upright side boards. Use the top for bric-a-brac, and drape the front with curtains.
A roomy old rocker padded with a comfort and neatly covered with cretonne or jute, with a box-couch to correspond, are
indeed real luxuries. If the room is small, do not attempt the latter articles,
dainty. Do not make it too heavy. One and a half or two pounds of cotton is sulficient. To make the daisies, get one ounce of white and one fourth of an ounce of yellow worsted and a ball of white cotton yarn. When ready to tie the comfort, cut white and yellow worsted in pieces one and one half inches long; take twenty-five pieces of white and place five yellow pieces on them, tie them to the comfort with the cotton yarn, then spread out worsted or zephyr and fuzz it up with a darning-needle, keeping the yellow in the center, and when well fuzzed up, take the scissors and trim off a little to make it smoooth. The daisies can be made of yellow, with brown centers, or asters in three shades of pink are very pretty.
Very dainty etchings can now be purclased at the art-stores for twenty-five cents, and framed in white molding for fifty cents. A few of these on the walls add much to the cheerfulness of the room. A very novel as well as useful stand or table is composed of three tiers shaped ike cresceuts. They are sometimes found at furniture-stores or manufactories in plain, uustained pine, or they can be made by a carpenter. Stain the shelves, or cover neatly with plush or silk, and tack a bag of the material to the curve of the crescents, for holding fancy work.
A great deal of taste may be displayed in the furnishing of any part of a house, but a bedroom can be made both pretty and cozy with the least outlay of money.
M. E. Smite.

FLOWERS-THEIR INFLUENCE AND CULTURE At this season, when all nature is springing into life, our thoughts instinctively turn to the beautiful. The heart of many a woman and many a child has been dwarfed and warped by unpleasant surroundings, and I desire to make a strong plea for fowers about the home.
Many a dooryard that might be made a beautiful spot, and become a joy not only to the owners, but to every passer-by as well, is left barren and desolate, or overgrown. with weeds, becomes the final resting-place of all kinds of rubbish. Is it any wonder that the women in such households take but little pleasure in life, and that the children reared among such surroundings lack much of that courteous manner that is always pleasing, and that they have but little love for such a home? Some woman may- say she would like to cultivate fowers, but cannot do so from lack of conveniences. She may be perectly honest in her convictions, but wo

Toilet-table
but use asmall rocker, and make a window- | know the truthfulness of the old adage, box, with the seat cushinned; the box will "Where there's a will there's a way." So be found useful for many things. A bamboo footstool and a screen of the same are inexpensive.
Drape the mantel and ornament it with rases, pictures, etc:
fort pale blue lined with cream color and caught with daisies is very pretty and

Where there's a will there's a way."
ith this one:
"When a woman says she will, she will, And you may depend on't;
And says she won't, she won't, And there's the end on't.
so, if one really and truly desires to have the dooryard in good condition, and to ave a few flowers, it can in some way be
though the flowers be in large boxes or iu barrels cut in two and set on blocks to protect them from the familiarity of the stock, which on some farms are allowed as free access to the dooryard as the family or put the flowers in boxes nailed to th window-ledge. Have a few, somewhere and somehow, and by and by their influ ence is bound to be felt.
If the "men-folks" call it all nonsense and seem to have a fixed determination
can attend to a few nasturtiums or swee peas, or both, for they arc of such easy culture. Indeed, I believe the former would bear a few blossoms if nothing more was ever done to them than to plant the seeds; but like all other plants, they respoud readily to care. Sweet-peas are as easily grown as garden peas, require about the same care, and should be sown as early as they are. They must have some sort of a support, and while brush answers

not to help in any way, nor to put the yard in better order, don't be discouraged, but quietly go ahead and do the best you can anyway, and when the flowers bloom, do during the entire season. The table dall. seem to notice them, but the flowers wil have their effect, just the same. Flower are potent, though silent educators and refiners, and those surrounded by them canuot and those surrounded by them brightness and beauty. If the family brightness and beauty. If the family come regularly to a neatly laid table, on instinch is a bouquet of flowers, they will instinctively be more polite and gentle The beauty and fragrance of the dainty blossoms steal unconsciously into their lives, influencing their characters and making them more manly and womanly. Then, when the contrast between the bright flower-beds and the rough, weedy yard makes itself apparent, it. will be an easy matter to have the yard mowed. And so, little by little, these "earthly angels," these "stars that in earth's firmament do higher thoughts and ambitions within our hearts, although we may never realize their source. And surely, although it may be very slowly, a better, purer home at mosphere will be developed, whichXwil become more apparent as the years go by become more apparent as the years go by
I know full well that on many farms I know full well that on many farms
there is in the early spring but little time for "extras," as I know by many years" experience. However, $I$ do not think that woman lives who is so busy but that sh

11 right, the best thing is meshed
In order to keep up a succession of bloom cither of these flowers, all blossoms must be picked as soon as they wither, for if they once begin to bear seed, they quit blooming; but the more blossoms cut, the more they form, and both my nasturtiums and sweet-peas hatre been as full of blossoms when the frost took them late in October as they were the latter part of June. There is no flower grown that is better for table or house decoration than these two, and later I will suggest some ways of using nasturtiums that are both practical and attractive.
Then there are so many perennial fowers and shrubs that are such a boon to the busy woman. Send for some of the seed catalogues advertised in this paper, and make selection of half a dozen or more varicties that will live and bloom for years, and finally become a part of the home and live in the memory of the children all through their after life.
But do not make the mistake that so many do of cultivating flowers purely for show, and putting them all off in the front vard. Have a part of them near the kitchen door, where, you can see them every time you raise your eyes from your work. Have them hy the well, and not far from the wood-pile. Let them be where you will enjoy their beauty and fragrance every time you slip out of the kitchen door, and where the men will see them as they come and go. C. S. E.

money for two noree.
Mrs. F. Shmer, Capon Bridge, W. Va.

## ~NOTICE

We have sent out so many thousands of these cut-paper patterns that it seems as though
every lady reader and many of her neighbors bave ordered them. Since the pattems every lady reader and many of her neighbors have ordered them. Since the patterns are so descriptious of each pattern here, and instead show a greater variety; then we send a full description with each pattern, so that any lady can cut out a stylish garment and sew it
togcther with a certainty that she will get a splendid fit. If there are any of our lady readers who have not tested the patterns, we ask that they give them one trial. Every pattern war-

"Patient waiting for christ." Shine forth, eternal morning!
Glad das of peace, draw nigh! Hasten thy radiant dawning, Athrart our darke ned sky! Oh, may earth's day of groaniug
And bondage soon be o'er, The sons of men cease mourning Give joy for time of weeping.
Light for this day of glooin;
Awake the saints now sleeping
o more let night and sorrow
Oh, haste the glad to-morrow,
Our hearts are rown weary
With watching, waiting long;
The night of tine is is reary,
Come, teach us the new song!
Oh, hasten, Lord, come quickly,
Thy bauner be unfurled;
Come thou and reign supremely
Throughout thy ransoned world

Ta peculiar disease. H.sT is a most peculiar disease, dorfous sabbaticus., It has ly discussed: "Morbus sabhat disease pecnliar to chnrch members. The attack comes on suddenly every Sunday; no symptoms are felt on Saturday night; the patient sleeps well and wakes feeling well; eats a hearty breakfast; bnt about
church-time the attack comes on, and coninues until services are over for the morning. Then the patient feels easy, and eats
a hearty dinner. In the afternoon he feels much better, and is able to take a walk, talk about polities, and read the Sunday papers; he eats a hearty supper, but about chnrch-time he has another attack and well, wakes up Monday morning refreshed and able to go to work, and does not have any symptoms.
lowing Sunday.
The peculiar features are as follows: ttacks members of the church. 2. It never makes its appearance except on the Sabbath. 3. The symptoms vary, but it never
interferes with the sleep or appetite. 4. It never lasts more than twent-f-four honrs. 5. It generally attacks the head of the
family. 6. No physician is ever called. 7 . It always proves fatal in the ond-to the
soul. 8. No remedr is known for it except prayer. 9. Religion is the only antidote. 10. It is hecoming fearfully prevalent." The Mid-Continent.

[^0]It happened not long ago to a friend of mine, who had been very short-sighted all her life, to have her eyes "measured" for
glasses, which have given her a new sense of the wonderful world she lives in. The first time she went to church after the new glasses had revealed to her the manner o place the world was, she felt embarrassed at seeing so much and so clearly. Walking through the aisle to her pew, she beheld for the first time, thongh she had heard him preach for years, the clear-cut, keen and benevolent face of her pastor. She
saw the choir, too, a fine-looking set of young people, and observed with pleasnre the thonghtfnl faces of the elders and deacons.
The new glasses had introduced her to a new world, simply by revealing to her
what had always been there. No change had been wrought in the world, and her environment remained what it had long tion had been granted, and she could almost say, "Whereas I was blind, now I see!"
Something like this happens when one who has never realized the loving kindness of God suddenly awakens to a sense of it. The spirit's vision was dim. En
lightenment being granted, there came a new comprehension of God's meanings, new insight, a new and wonderfnl charm
about all that surrounded the life. The groping step was changed to wing-like fleetness. The blind saw. But God's dear love had been there all the while.-Chris tion Leader.

## respectable sins.

Beware of respectable sins. Not that ans sin, howerer garishly arrayed or socially dignified, is in itself respectable, bnt that some sins are so countenanced by certain Mrs. Browning spoke truly when, with epigrammatic force she said, "The devil is host derilish when respectable, becanse respectabilits throws nnwary souls off respectabilit, throws nnwary souls of
their guard, and begniles them by begetting the thought that their objections to certain profitable or delightfnl courses o conduct are based, not on Scripture ration
ally interpreted, but on squeamish or mor bid conscionsness. Hence, for example, when young men see social honors paid to rich financiers, whose orerflowing coffer were filled by means of transactions which involved lying, deception and specnlative dishonest practices are not so bad as they are tanght to beliere. So when members
of churches indulge in some questionable or perhaps even nngodly practices, they throw the cloak of their respectability over
deeds which are in themselves injurious deeds which are in themselves injurious
both to the moral and spiritnal life. Thus
they enable the devil to do his most devilthey enable the devil to do his most deril-
ish work of luring young and feeble souls
into the pit of destrnction. How needful, int the pit of destrnction. How needful
then, is the preantion, "Be ware of respec
table sins."-Canadian CMurchman.

there is sufficient Probably Balky.-E. B. EL., Dow City,
Iowa. Your horse, Í admit, acts very strangelowa. Your horse, I admit, acts very strangehorsace is bould permit. still, I think his strange actions are a
scheme to avoid work. At any rate, there are
s.ine Habitnal Abortion.-E.A., Raymond, Cal. If your mare has aborted three years in sue-
cession, each time at the same period of estation, there is very little prospect that
she will ever earry her colt to full develop-
ment. You can do nothing to prevent abora marc.
Warts on Teats of Cows.-C. W. H
 with scissors. and touch (cauterize) the wound
with lunar caustic; but often the wound,
although small, is ;ust as troublesome to milking as the wart itself.
Quarter-cracks.-W. G., Marlborougi on Hudson, N. Y. What you, call cracks, ol
quarter-cracks according to your descrintion,
nay be something worse; that is, quitters or may be something worse; that is, quitters or
fistules leading to the lateral cartlages of the
hoof. The cause, very likely, consists in bevcre corking. It will be best and cheapest,
becanse saving time, to have the anlmal
treated by acompetent veterinarian. Bitter Milk.-J. B. C., Wilmette, Mlinois.
Bitter mailk is either due to bitter or spoiled food, such as spoiled and frozen root crops,
cabbage and turnip leaves, etc., diseased and frozen potatoes, even brewing grains or dis-
tillery slops, spoiled oil-cake, pea-straw, etc.,
or else the milk has becone infected after milkiug. The cow herself is not at fault.
Ascertain the cause and remove the same. Lice on a Colf.-G. H., Stuart, N you man a line along the crest and back from
ment in
poll to tail, while parting the hair. The ointpoll to tail, while parting the hair. The oint-
ment is best applied with a finger, but only a
little-not morct an a couple of drams-should be used. At the same time feed well, plenty
of oats, and groom quite often and thoroughly A lame Colt.-Th. W., Wheaton, Indiana
you surely cannot erpet me to make a diagnosis of and to prescribe for, the lameness
of your colt upo the simple statement that the same has heen lame in one fore leg for
one and one half ycars, or since it was six
months old. Still, it is not very material, montbs old. Still, it is not very material,
becanse a lameness of so long standing is
very likely incurable, no matter where the

Did Not Die' of Rabies.-E. M., Darien,
Ga. Your dog did not die of rahies, but either in consequence of his injuries or wounds, or
by being poisoned with carbolic acid. If the
dog supposed to be mad did not show any symptoms, the diagnosis, probably, was erro-
neons; and if the same did not die within a
Teek after biting your dog and horse, the
surely was not affected with that disease. Nitrate of silver is a good enough
caustic where the wounds are complaratively
small. I cannot afford to answer inquiries by mail without pay. I soon would not be able
to do anyt.bing else. Probably Measles.-H. H., Euphemia, O
If your hogs have had access to human ex
crements, the same, very likely, are measly that is, harbor large numbers of symptons
(Cymsticercus cellingse) the larve. of the
human taperorm (Txenia solinus). If they
have not had access to hnoman excremeut,
the of both diseases very closely correspond to
your description. Do not expet au imme-
diate answrer by mail for a two-cent stamp.
You must. You must, either send the customary fee
one dollar, or else consult a veterinarian, if
you want immediate advice. Galactorrhea.-F. H. C., Portsmouth, New
Hampshire. What you complain of, galac-
torrhea, or a flowing off of the mill out of the torrea, or a fowing off of the milk out of the
teats of your cow, is something that is not
casily remedied. Try frequent milling, so as $5=5+5=5$ to the openings in the teats, for instance, a
decoction of oak hark, a solution of tannic
acid or aolution of alum. It has also been
tried to stop the flow of the milk by slipping tried to stop the fow of the milk by slipping
a rubber ring over the end of the teat, but this
has not proveu very successful, and has caused Sick Pigs.-S. N. W., Erie, Ind. That your hard, as if tbeir head is stopped up, is abonor-
mal. Further than this, you state that the indiate that some morbid changes exist in
the reciratory passages, and nothing more.
Therefore, it is lmpossibic to decide whether

## NOVELTIES.

eedsuren and plant dealers are sending out their usual attractive
spring catalogues. Each dealer is offering some specialties o
novelties. These usually ar toscribed by such ingeniously worded deicriptions that the unwary are almost led to suppose that they are compelled to have
the novelties if they wish to compete in pro luction with others.
No doubt but some of these uovelties may prove worthy, but if they are an have, it will be only a slight improvement, for nature's rariations at any one stage
are very small. It has taken hundreds of years to bring the potato to its present stage of development. This is also true of cabbage, corln, radishes, beans, apples, careful, painstaking experimenters harc beell at work seekiug variation and inf have to-day can be ouly a slight improveinent on the best of what we had last year.
It is only after repeated and extensive trial over a considerable territory that the merits of a variety can be determiued. In f this testing, nine tenths, and in many cases ninety-nine one hundredths, of the nov-- elties are discarded because not as val have I have observed that the growers who of plant almost exclusively of standard varieties and invest very sparingly in novelties f) the men who largely invest money and the mon who largely invest money and
f labor in novelties are the ones doomed to (alsor in novelties are the ones doomed to 9 to be guided by the comparative merits of to $\begin{aligned} & \text { rarieties than by the descriptions usually } \\ & \text { given. A long list of testimonials recom- }\end{aligned}$ mending a varicty do not signify anyf) thing. The question always should be, Who says it? Has he made the necessary
comparisons, aud is he qualified by training and wide observation to make them? Is he thoroughly acquainted with the couditions by which these muchlanded specimens or results werc produced?
I do not wish to be understood as opposing the introduction of novelties, for 3 throigh them all advancement must come, lint the purchaser has at least a right to
llemand that the introducer have them thoroughly tested before stating that they e of superior merit.
Our experiment stations are ready and willing to do the necessary testing, and whilst they cannot always tell whether a
variety will become a standard, they will variety will become a standard, they will
at least save those who study their reports rom investiug in utterly worthless varieties.
As
As the term "standard varieties" is so often used by agricultural writers, some
nnay inquire what are standard varieties? As generally understood, it means those varieties that will over a wide territory, with arerage conditions, produce the best
average results. The Crescent strawberry, average results. The Crescent strawberry,
Leamiug corn and Baldwin apple have Leamiug corn and Baldwin apple have met these requirements, and are there class
classed as standards. There is in each of fruits, vegetables and grains a number of standards especially adapted to certain $n-10$ conscieutiously tries to add to their number, but what shall we say of the man who induces the public to invest money, labor and time in the no
lropped as soon as tested?
There are many who have at some time been willing to plant or test novelties, but
at the very ontset they were met by such lisgusting disappointments that they ever afterward vote all new things as frauds, and all who contiuue testing them as
ranks. Thus the indiscriminate introduction of novelties does much to disrourage testing, and a variety of actual merit is much longer in establishing that it is a standard than it would otherwise be.
Montgomery county, Ohio.

## SOWING CORN.

Any one having a very stumpy piece of y sowiug corn save a great deal of labor acres in last year, and it was nearly as good in this country was not very good anyWhere, but our piece of sowed corn was
about as good as that planted. We plowed the ground the best we could, sowed the times, and theu let it

What is more ornamental in the home
than a nice collection of house-plants? The than a nice collection or h ise-plants? The home without fowers to lighten the gloom cheerless winter days, is about as in complete as the hoine without any books or papers to furnish the fors with intel lectual food. Flowers possess the peculiar trait of transmitting their own delicacy of them. The boy or girl who cultivates a love for flowers is not likely to acquire many vices. So, too, the man who de-
lights in the rare beauty and delicate fragrance of fiowe is not likely to prove a rogue or a scoundrel. The manuers, habits and characters found in a neighbor hood destitute of flowers are rudc and flowers as found cultivated in every home. Let one family begin the cultivation of choice and rare plants, distribute slips and cuttings antong , characters and dispositions is certain to follow.

In traveling about in rural districts, we have noticed the prevailing tastes in favor of flowers in oue place and the utter ab, withont such tastes in another, hom surroundings and moral dispositions differed widely. Some may say the flowers are due to the difference of the people, rather than that the differences of the people are due to the flowers. This is probably true in many instances, but we have other evidences of the refining influence of flowers. Who has not read of the criminal whose rerormation flower? Whose heart is not touched by the sight of the flower his mother most cherished? What false lover has not felt a pang of conscience at the sight of the
flower given him by a confiding maiden at parting
It has long been an established fact that parks and gardens were essential factors to the health of populous cities, and those cities which are the best provided in this respect are found to be the most healthful, other things being equal. In this respect as in many.others, there is room for develshould have its parks and gardens, and every house shonld have its collection which-its miniature window gardens, in studied by old and young.

What gift is most appropriate to a sick friend? What can compare with a freshly gathered bouquet of delicately tinted flowers, sweet and fragrant, the very em lem of life, health and happiness? Many a dark day and yet so emblematical of love and tender devotion that it is a peculiar nature indeed that is not touched thereby

While not making any preteutions. a florists or any attempt at fancy collections it is scarcely necessary to add that here we all delight in flowers. Even little two year-old Frances delighted to run among the flower-beds during the summer months, grecting this plant with "pretty," and that plant witl" "lovely," stopping to admire, but seldom to molest. Our tulipbed was a brilliant sight of gorgeous and passers-by gazed with evident delight or stopped to praise the collection, and ye
it rcquires only a few hours' care in twelre it rcquires only a few hours' care in twalve
months. The beds of sweet-williams, minnias, sweet-peas, asters, petunias gladiolus, etc., were each a source of joy to us, while visitors were extravagant in
their praises. And now our small collection of choice chrysanthemums are alike
enjoyed by us and those who view them enjoyed by us and those who view them
from the highway. A part of them served to decorate a neighboring church on the tints and modest grandeur won many new friends to the already long popular flower

I frequently find myself indulging in the wish that every family might possess a
home of its own and that these homes might be surrounded by all the lovely
flowering plants and shrubs adapted to the flowering plants and shrubs adapted to the locality, where youth and old age migh
live in happiness and contentment, not
endangered by the strife and turnnoil of endangered by the strife and turmoil of
the a varicious.
JOHN L. SHAWVER.

spakers and singers the world over use
them.

THE BABV'S DIET.
The indiscriminate diet allowed children by their mothers is a most prolific cause of stomach and bowel complaint. For in-
stance, in the most of families, children not over two years of age, or as soon as they are able, are allowed to sit at the table and indulge in all the kinds of food that may be thereon-hot rolls, hot buttered cakes, sausage, fish, ham, cucumbers, new potatoes and all other vegetables, pastry of all kinds, preserves, cheese, sweetnieats noung child to eat which is fit for a very pared for it to is anless especilly pre pared for it. It a marvelif the digestive orgat will make a runting, pout-riddon that will
Mothers would man if persisted in.
Mothers would save themselves much
care and suffering, perhaps heartache, if care and suffering, perhaps heartache, if they would have a little more care about
what they let their little ones eat. There what they let their littlo ones eat. There the years of two and five, and mostly in bowel complaints. A professional man of over forty years' standing said to me the other day that there is much more sickness among the very young now than there was a third of a century ago, and he is of the opinion that the mothers are to blame, primarily because they are so careeating interferes with healthy digegular eating interferes with healthy digestion in grown person, yet mothers let their children "pieee" at all hours of the day, and eat quantities of candy and fruit between times, and then say that it is the will or in. Providence has enough to bear without shoving off on it the burdens of our
-
JAPAN NOT SO VERY LITTLE

Possibly it is because Japan is a pet of the American public that she is so frequently spoken of as "little Japan. among the nations of ther in area or popnlation. The area of Japan, 147,655 square miles, is larger by 27,000 square miles than hat of the United Kingdom. Furthernore, there are $41,000,000$ people who are subject to the mikado, against $38,000,000$ in the United Kingdom, taking latest censns
results in both cases. Japan's population is larger than Italy's by fully $10,000,000$, While her area is $37,000,000 \mathrm{miles}$ greater.
No one speaks of Italy as "little Italy," No one speaks of Italy as "little Italy,"
although she is not so populous as Japan. Japau has nearly ten times the area and almost twenty times the population of
Denmark. Japan is not a "little" country ave ampared with such unwieldy masses as the Chinese empire or such giant as the United States. That she is big enough to hold her own, and more, she has evinced in battle, to the amazement of her great antagonist. - Boston Tran

## NOT NEW.

Advertising is not an outcome of modern necessity, but is a very ancient practice. The British Mnseum possesses a collection of old Greek advertisements printed on leaden plates. The Egyptians were great advertisers. Papyrus leaves over three Thebes, describing runaway slaves and offering a reward for their capture; and at Pompeii aucient ad vertisements have been deciphered on the walls.

## RAILROAD COLLISIONS.

Last year there were 404 rear-end collis ions iu this country, 311 head collisions, and 89 at crossings.

And don't be imposed upon by buying a remedy that requires you to do so, as it is nothing stimulant, and in most all cases, the cffect of the stimultant, bo it opium, morphine, or other
opiates, leaves a far worse habit contracted. Ash your chrogist about BACO-CURO,
It is purely vegetable. You do not have to stop using tobacco with BACO-CURO. It
vill notify you nhen to stop and your desire for tobecco will case frue from nicotine as the day before you took your first chew or smoke. An iron-clad written

FARM AND FIRESIDE,
SPRINGFIELD, OHIO.

Below we give alist of seventeen goorl :nd useful books, suited for every member of the family. Many are by famous authors, known wherever the English lanas Bertha M. Clay, Miss M. E. Braddon, Charles Dickens and others. There are sermons by the great Talmage books by the inspired Spurgeon and Drummond, stories of adventure and travel for boys and girls, chimes and jingles for the children, and numerous other books on
various subjeets.

## 5 BOOKS COUNT, AS ONE PREMIUM.

No. 61. Dr. Jekyll and Mr. Hyde. By R.
L. Stevenson. This true in literature as iu
other walks of life. that in other walks of life; that occasionally success
seens to he attilined in a single bound.
While the name of Robert Louis Stevenson seems to he attinned in a single bound.
While the name of Robert Louis Stevenson
eould lardly be said to be literally "to fame "unknown" previous to the publication of
"Dr. Jekyyll and Mr. Hyde," yet contrasting the immense success of the book contrasting to that of
his former works, it may be said to be almost hrue Ther action, the strangeness, the style of
true
writing, all combine to make up a book so writing, all combine to make up a book so
fascinating that critiesm of its possibilities or impossibilities are unthought of in the ab-
sorhing interest of he story, and later, when
released from released from the thraldom of the writer's
genius, one is still lost in admiration of an
author who ean eoutrol the thoughts and feelings of his readers, and by his magic pen
almost imbue with life the creations of his No. 58. The Merry Men. By R. L. Steven-
son. Another interesting book that will further endear the author's memory to those
whom his works have enabled to pass many a pleasant hour. No. 85. Anecdotes of the Rebellion is of some incident connected is a true story
of the late war.
Everyone will be slad to Everyone will be ylad to own this! book. By
telling these stories, a speaker can keep an
aldienee in laughter.or tears at will. It gives andienee in laughter or tears at will. It gives
aneedotes of Foragers, Raiders, scouts, Stories of the Generals, Lincoln's jokes, ete., ete. No. 57. How the Widow Bedott Popped
the Question to Elder Sniffles. This bool is
funny-eveu funnier than the title is plles. The Elaer was an olde-time Baptist
preacher, and a widower. Now, the Widow had often ridiculed the Baptists, but the way
she changed her tune after she had "sot" her she changed her tune after she had "sot"her
heart on ther a caution, as well as
comical. The Elder thought the Widow was rich, and so accepted her proposal. The reade
will have many a hearty laugh at their expense, and likely repeat, "Olid fools are the
biggest fools of all." No. 56. The Courtship of Widow Bedott
and Mr. Crane. If there is any truth in the old saying, "Laugh and grow fat," then the
Widow Bedott books will help to make lots of He frequently called at the Widow's house so she tried to eucourage him and get her, courage up to the point of proposing. She
succeeded, but he asked the Widow for the
hand of her daughter Malissy Wldow saw her predicament, aud how the
hid
did storm! If you want a hearty laugh, try the Widow Bedott books
No. 59. The Courting of Dinah Shadd. By
Rudyard Kipling. It would be like "painting
the lily," or "rild the lily," or "gilding refined gold," to attempt To praise Mr. Kiplings' Works. His "Plain
Tales From the Hills, "The Phautom Rick-
shaw," in fact, all his stories are so frest orivinal, so new, that to see the nane of of Rod
yard Kipling appended to a story sends a thrill of delightful anticipation through one; and
in this case the anticipation cannot fail in being surpassed by the realization. The in-
terest is kept up from the beginning to the close, and we feel the better for the half hour's
cllinge from the prosaic, dull, every-day life to the scenes with which, Mr. Kipling has hife to
rounded us by his matchless skill. Below we offer two popular books writ-
ten by Charles Dickens, one of the sreate novelists who ever lived. The of the greats abound in wit, humor, pathos, masterly delineation
of character, vivid descriptions of places and
incidents. They are intensely interesting incidents. They are intensely interesting to
ehildren as wellasgrown persons. No. 96. The Haunted Mran. By Dickens.
An interesting love story into which are
gathered some gathered some of the truest and noblest to the bright thoughts of the wonderful-author.
No..9. The Batte of Life. A love story,
by Dickens. This is one of his best.
No. 60. A Bird of Passage. By Beatrice
Harraden, zuthor of "Ships That Pass in the Amit, whieh had a wonderful sale through
America and England. Few ladies have
Written more popoular stories than Harraden. "A Bird of Passage" is original and
interesting.

A GREAT BARGAIN we will send you, by mail, any 5 of the above books, and is a special low price for a short time. Fireside one year, on receipt of 35 cents, which

FIVE BOOKS FREE.-Any 5 of the above looks will be sent, by mail, to any one who will get two yearly sulscribers to Farm amd Fireside at 35 cents cach. In this casc each sulseriber will get amy 5 books, and the club raiser will get 5 books for" ding the two subscribers.

No. 71. John Ploughman's Pictures. By
the late Rev. Chas, H. Spurgeon, the great London preacher and evangelist. Trisis is one age. The author states in the preface tha tits
object is to smite evil, and especially the monster evil of drink, and it is safe to say that the
 his power for good, have acomplished more
than any similar publication. This book cal
be read by every member of the family over be read by every member or the family over
and over with increasing pleasure and pront,
and every mother who has a son that must face the temptations of the terrible curse of drink should have a copy. Illustrated.-
No. 99. The Idle Thoughts of an Idle
Fellow. By Jerome K. Jerome. For that common but extremely unpleasant complain1,
"the blues," this book is a pleasant and effec"Euglish Mark Twain," and is certainly one of the best living writers of pure, wholesome
fun. There is not a dull line in the book. Every paragraph is scintillating with flashes
of brilliant wit. Who has not, at some time
or allother had "the blue ", ar beel" "har or another, had "the blues,", or beeu "hard
up?" What has not been in "love?" For a
royal treat, read the author's thoughts ou these and, numerous other subjects. The
"thoughts" which fill a book may be "idle," as
the author terms them, but they certainly the author terms them,
ominate from a busy brain
HECTURES OF HENRY DRUMMOND. Prof. Henry Drummond is without doubt
the most popular writer of the age. It is With much pride that we are enabled to offer three of his most popular works. If you read and ou are almost ce For simplicity, truthruiness, gentle, yet mighty
force in statement, and loving loyalty to God, they are unequaled by anything ever written on the sub-
ject. They will be angels of mercy to every home that gives them a welcome place on the reading No. 64. The Greatest Thing in the World.
By Henry Drummond. This book is oll love as taught by Christ and the disciples; and if
any one doubts that love is the greatest thing any one woubts and iove they want to he made
in the world,
stronger intheir love for all things, they must
get this book, by all means.
No. 63. Changed Life. By Henry Drum-
mond. If you want a practical solution of the eardinal problem of Christian experience read this book on "Changed Life." You wil No. 62. Peace Be With You. By Henry
Drummondis This book might be ealled a
short treatise on Rest, Joy, Peace, Faith and short treatise on Rest, Joy, Peace, Fith and
Light. It is so simple, yet so grand and so clear,
that you lay the hook down feeling that a new that you lay the hook down feeling that a new
SERMONS BY T. DE WITT THLMAGE. No. 74. Talmage on Palestine. A book con-
taining a series of sermons, by the Rev. T. De Witt Talmage, about his, reeent and noted
travels through Palestine, telling what he saw and learned there. They make sueh delight
ful reading, and so instructive and entertain ing, that the book is immensely popular. On
the days he delivered these sermons in his church in Brooklive, which seated 4, 500 people,
thousands were turned away from the doors thousands were turned away from the door,
for want of standing-room inside the church.
Toдread the book makes one thrill through Todread the
No. 90. On Her Wedding Norn. By Bertha been but few characters to whom the sympa-
thies of the reader goes out with more tenderness than Huldah Vane the heroinc. This is will be read with the same intensity of feeling, with mingled joy and sadness as the
characters in the book have cause for tears or
langhter. It is a love story that must appeal to cvery reader.
No. 92. Old Mother Hubbard, and 138
Other Nursery Rhymes and Jingles generations these rhymes have delighted the ehildren. The comical pictures, the fairy stories and short verses are a never-ending
source of delight. Over seventy illustrations

## *N:

$\mathrm{W}^{\mathrm{E}}$ will all welcome the coming of a severe one not only throughout almost every part of our country, but throughout the whole northern half of the world. England has not had so much cold weather in a long period of years. The
suffering in the large cities among the poorer people especially has been enormous. It is a very painful thought to think that hundreds and thousands perish from hunger and cold during these winter months in the larger centers of population; and it seems all the more pitiable when we recall the fact that there are so unany acres of land lying either idle or
which are but poorly cultivated. These might be made to produce food sufficient for every individual. Of course, it is partly the fault of the people themselves, but
circumstances have not a little to do with circumstances have not a little to do with people's lives. There are certain classes of
people who prefer to take their chances of people who prefer to take their chances of
starving in a large city rather than to go to the country, with assurances that they will have plenty with which to feed and warm themselves.

Last year considerable comment was made upon a plan which was proposed by Mr. H. S. Pingree, the very efficieut mayor of Detroit, Michigan. He saw within the city limits and the environs, several hun-
dred acres of laud which were not being utilized for any purpose whatever; his proposition was that the owners of these use of the land to the poor people-to those in absolute need-to be cultivated in potatoes and vegetables. The year's report has just been published. About four hundred and thirty acres were accepted by the comand thirty acres were accepted was plowed,
mittee for the city. The land was marrowed and staked off into parcels of oue quarter to one half of an acre each, and allotted to people who were found worthy -usually to people who were not from
year to year depeudent upon charity, but
to those who, though industrious, were unfortunate in uot being able to fiud work. Most oi them were men of families, of course. Ground was allotted to about thirty widows whose sons were large enough to cultivate the land.

The expense of the city in buying the seed aud preparing the land and making all the preparations was not more than $\$ 3,600$, while the venture netted to the cul-
tivators food to the value of from twelve tivators food to the value of from twelve to fourteen thousand dollars. These figures show what a splendid venture the investment proved to be. A very essential point in this way of helping the poor is the fact that it does not take away their selfrespect. People feel that they are earning the potatoes, cabbage, beans and corn we have a splendid object-lesson which other cities will do well to profit by. It is also an object-lesson to people in the country in the way of bringing about country in the way of bringing about in the cities aud the land uncultivated in in the cities aud the land uncultivated in
the country. If we can once bring these two elements together, and get them prop erly adjusted, the suffering in cities will教
$I^{N}$ the Forum for April, Edward Atkiu 1 sou discusses the battle of the standards and the fall of prices. "There is not," he says, "a single important product of indus-
try in agriculture, manufacturing, transportation or commerce in which there has not been a reduction in the cost of prodnction or distribution which will not more than account for any reduction in the price which has occurred between 1873 and 1892 It is admitted that during the panic 1803 which was caused wholly by the attack upon the unit of value by the advocates of free silver coinage, and by the fear of their possible success, prices were forced down below cost by the paralysis of trade and
industry which ensued." industry which ensued."

In the compilation of the table given, official sources. The prices have been computed and compared on a gold basis on table gives the following

Av. prices of all commodities
Average of all wages...
Purchasing power of wages
Gold price of silver bullion.
"The table shows how the depreciated currency of the war impaired the purchasing power of labor, notably in the power of wages had lost more than one third from 1860. It shows next how long and slow the struggle was to attain th safe standard of the gold unit in 1879, and since then how continuous has been the
beneficial influence of low prices, small profits, lessening rates of interest and profits, lessening rates of interest and These favorable conditions continued from January 1,1879 , until the financial panic in April, 1893, put a temporary stop to prog ress, causing abject want to exist of constantly increasing abundance.
"Since 1840, wages have doubled, hours having been reduced from fourtecn to ten per day, and are now earned under better while pholesome conditions of work reduced.
"Sauerbeck's tables are quoted more than any others by the advocates of the bimetallic treaty of legal tender, under which it is proposed to give to the creditors of the United States an option to pay us for ou grain, provisions, copper, steel, oil and manufactures in silver, while depriving ourselves of the choice or power of demanding gold. This policy is sustained on the authority of Sauerbeck's tables and upon the ground that there has been a 'fatal fall' in prices since 1873 , which is attributed to the disuse of silver as money of full legal tender, to which partial disuse of silver the term of 'demonetization' has been misapplied. Upon an examina tion of Sauerbeck's table it will appea that there was a fall of prices in 1849 to point as low within a fraction as the average of 1890 and 1891 ; then a rise; next a fall, and then a rise in 1864 to a point nearly as high as in 1873; then a fall, and then the final great speculative rise and financial dcbauch in 1873, when English credit and goods began to be spread over the world in a way which has but lately culminated in the disastrous losses iu Australia and in South America. It will be observed that there were greater fluctuations and variations in the course of prices, and almost as great a fall at one period between 1846 and 1872, when the Latin Union was in existence and silver was coined in France freely at the ratio of fifteen and a half of silver to one of gold, as there have been since silver was deprived of its full function of legal tender.
"Since 1873, there have been less fluctuations than before, rather an orclerly 1 c duction in most prices, varying slightly with the difference in seasons in each year, but corresponding closely with reduction in cost. This beneficial fall has been accompanied by a corresponding or correlative rise in wages, greater in the United States than in any European state. Since 1873, under the influence of peace and the stability of the gold unit of value, this

## 1860.

beneficent fall in prices has also bcen accompanied by a vast development of international commerce."
 Chinese statesmeng, and the only man in the Orieut up to the beginning of the war between China and Japan who could in any way be ranked among the great statesmen of the world. After he was stripped of a great many of his honors he was recalled and all his titles restored. The emperor sent him as a peace envoy, with
full power to treat with Japan. Unfortunately, just after his arrival at the place of
appointment, a youug Japanese, Koyama Rokunseki, attempted to assassinate him. For a few days it was thought that Li Hung Chang, who is now an aged man, could uot live, but he has rallied, and may recover.

There were universal expressions of regret at this unfortunatc event. Japan scemed to feel keenly the disgraceful act of one of her countrymen. Although any truce looking toward the suppression of hostilities had not been agreed upon, the emperor of Japan at ouce telegraphed to emperor of Japan at ouce telegraphed to
his representative to grant a suspension of hostilities extending to April 20th, pending ostilities extending to April 20th, pending settlement of the differences between the two countries. The young assassin has been seutenced to penal servitude for life. Japan has done what she could to atone for the act of one of her unworthy sons. The world is looking forward with eager expectation to the outcome of the present peace conference.
$T^{10}$ Chicago Tribune Dr representing "Lexow Tribune Dr. Depew said: civil service reform are mingled in one colossal subject, so to speak. The revelations of the Lexow committee showed that civil service reform is absolutely the only salvation for our great cities-the only manner iu which they can be protected from the oppression of thugs of every kind, from police justices to crand jury men. Where in juy part gryexcept in this free republic, the world, except in this free repablic, would such things as the conmittee revealed have olution in Paris, and even in St. Petersburg. olution in Paris, and even in St.Petersburg.
Remember this: The despotism of liberty is more infamous than that of autocracy, for the dread of assassination ever menaces the tyrant king, while nothing short of political revolution can prevail against the, tyrannies of this glorious country. Organzed brigandage, with all the details of capture, rausom and torture, has prevailed, and has only been checked by popular indignation. Corruption-not to as good a degree, perhaps-holds other cities in slavery, and civil service reform, ripidly enforced, can alone right this rigantic enforce, can alone right this gigantic
At the recent electiou, Chicago cast a majority vote for a civil service law, and made a long stride toward municipal reform.

HeERE is now hope that the great lottery - schemes which have been the cause of so much harm throughout the country are forever prohibited. The anti-lottery law, which passed the House over a year ago, and was put through the Senatc at the last moment by Senator Hoar, is expected to result in the total suppression of the lottery traffic. Few, if any, realize the great power of the old Louisiana lottery. Although there has been national and state legislation on the subject, this octopus has thus far evaded all restrictions and carried oll an euormous business through the mails and express companies. The new law makes it illegal for express companies to handle lottery business. It gives the postmaster-general power to refuse to
deliver letters of auy kind to any one who is shown by satisfactory evidence to be is shown by satisfactory evidence to be disobeying the law are heavy, including a fiue or imprisonment, or both.

ferellt things advertised in several papers. British Agriculture. The agricultural deBritain is becoming more and more seere. All the agricultural associations are now engaged in careful search for the caunes and serious discussion of possible remedies.

Wheat Feeding. An estimate compiled mers, stock feeders and grain dealers, corering theentire country, places the amount of wheat fed to live stock in the Uniter States from July 1, 1894, to April 1, 1895, at $33,000,000$ bushels.

Flax. "Flax for Seed and Fiber" is the title of Farmers' Bulletin No. 27, published by the United States Department of Agriculture. This hablication gives the best known methods of cul-
tivating flax for seed and fiber iu the Unating flax for seed and fiber iu the
United States, and is recommended to United States, and is re
inquirers on that subject.
"Sweet Potatoes: Culture and Uses," is ulletin No, 26 which is Bulletin No. 26, which is published for
free distribution by the United States free distribution by the United States
Department of Agriculture, Waslington, D. C. The subject is treated concisely, but comprehensively. The information given in this bulletin has been obtained largely from the principal growers of this crop, and their methods of propagating the
plants aud cultivating, harvesting and storing the crop are fully explained.

Congressional
From an investiSeed Dealers. $\begin{aligned} & \text { gation made by } \\ & \text { Secretary Morton }\end{aligned}$ it appears that some congressmen sell the quotas of seed allowed them for free distribution among their constituents, and Department of Agriculture bought part of one member's quota for a fraction of its ralue. The exposure of these transactions will greatly assist the secretary in his efforts to have the free-seed distribution
system abolished.

Crimson Clover.
A Wisconsin subscri-
ber reports that a patch of crimson clover which he sowed last fall endured the winter and now looks was expected from that latitude. He inquires about sowing it in the spring. It is
usually sown in the summer or fall as a usually sown in the sunmmer or fall as a
catch crop between regular farm crops, and catch crop between regular farm crops, and
iments with spring sowing should be
made. If it is considered desirable to omit a regular farm crop for a season and grow crimson clorer as a renorator and soilimprover, there is no reason why it should not be sown in the spring. Sow it alone oats, at the rate of twelve to fifteen pounds oats, at the
to the acre.

Horticulture. Among the horticultural more enthusiasm than does the Western New York Horticultural Societs. The recently published report of its fortieth annual meetiug contains instructive papers on the best modes of raising fruits, their cultivation, preservation and marketing, renovating old orchards, fertilizing soils, destroying insect and fungous enemies, destroying insect and fungous enemies, John Hall, Rochester, N. Y., is secretary of John Hall,
the societs
sueen manuring. To secure an adequa:t
supply of nanure is rarely possible and the best is a very costly process. But a crop and then turned soil as much fertilizing matter as eigh ten tons of manure, and the pross may often of manure, and the process may year. For instance, if the land is plowed year. For instance, if the land is plowed
in October and sown to rye, the rye may in October and sown to rye, the yorned under in May or June, and corn may be planted. This will be in full grow the early in August, when it inay also be turned under, furnishing ten or twelve tous more of valuable matter."

The principle herein explained is cor ect. In most cases, when the farm is called poor, because the land does not produce paying crops, it is only the sursupplies when has been deprived of it subsoil possesses still a wealth of all the substances needed to will The unost natural thing to good crops The most natural thing to do in such
case is to "work the subsoil," and by case is to "work the subsoil," and by
growing deep-feeding crops, such as rye, clover, etc., bring the plant-foods from the subsoil to the surface, and thus in reach of our ordinary crops. I have explained this more in detail in the last number when speaking of the new fad of manuring with ground rock.

## Value of Different For us here a

 Manure Crops. ordinars , unde tances, clover is the thing. It is one of the crops in the regular rotation, aud we do not lose the use of the land for a season. do not lose the use of the land hay, and theWe get the first crop for hay, second grawth, the same season, for

Magnified scale Above. the subsoil and brings up minerals, at the same time accumulating nitrogen from the atmosphere. But this method of improving the soil may be too slow in some cases; the soil may be too far exhausted to give us eveu a gond crop of clover. Then we must resort to rye, or if we cau begin earlier in the season, perhaps to buckwheat, as a starting-point. The buckwheat growth is to be plowed under in September or October, and the land at once put to rye, this in its turn to be plowed under in the spring. Mr. Henderson recommended corn as a manure crop to follow after the
rye. Perhaps corn makes as much bulk as anything we corn makes as much boes no draw nitrogen from the uncombined nitrogen supply of the atmosphere, howerer, I have an idea that I should prefer after the rye-a leguminous crop which does.

Fortunately, we have a number of quick growing anuual crops among them that are good for this purpose, especially and besides others, the southern cow-pea and the Japanese soy (or soja) bean. Either of them will give us a large amount of
green stuff to plow under, even on thin soil and as far north as my locality. Rye may again be planted in the fall, and the land seeded to clover in spring. As a soilimprover, I would prefer the mammoth to the ordinary red clover, although the latter is preferable for hay. The land should now be in shape for the regular crop rotation, with clover as one of the links. In this method of improvement we use the land for at least a whole year to the production of manure crops, removiug nothing whatever from it during that time. And set this will often be found a much cheaper and safer course than trying
grow protirable c
urbhased uanures.
Plowing Under The corresponden
Heavy Growths. mentioned at th
beginning of thi article tells me that common field-peas grow so tall aud rank on his land that he does not know how to manage to plow them out of sight. Cow-peas and soy beans are likely to give just as heavy a growth and just as tangled a mass of foliage as common field-peas, but there should he no difficulty to plow them under and out of sight. We can cut and mash these heavy growths down with a disk harrow going ahead of the plow, per chould take pains to tur the hould take pains to run the roller in the The old method of plowing under such heavy crops, as giveu in "How the Farm Pays," is as follows: "In turning unde o tall a crop as rye or corn, the plow hould be run across the rows, and a heary chain looped from the plow-beam, just head of the standard, to the land-side end f the inner whiffle-treo. This loop drags in the furrow, so as to catch the falling corn or rye and pull it down and into the furrow so that the soil covers it. To manure by the harrow of the green ground should be rolled after the plowing, and then harrowed with the smoothing or brush harrow, or worked with the Acme arrow. The best way, in many cases, is cut the green crop and leare it on the ground to rot, and plow under in the fall

It seems to me, however, that land cannot be hopelessly poor when common field-peas produce such a tangled mass of rines. Surely a judicious system of crop ping, with clover evcry third year, would alone suffice to not only keep the land in good productive capacity, but to make beth year yeat. It unay mannee crops along by light applications of dissolved rock and muriate of potash, or of other cheap foruss of the mineral plant foods. A hundred pounds or so of ear per acre will in many cases give very atisfactory results.
Crimson clover I have mentioned and vetches. neither crimson clo promising manure crops, although both may have great value iu many instances. I tried the vetches last year on a poor clay soil, but they did not thrire, the plants remaining small and sickly. I also sowerl some crimson clover in August and Sep-
tember on clay loam, but only few plants tember on clay loam, but only few plants
made their appearance, and these also made their appearance, and these also remained small, puny things. Possiny more successful trial I shall not be very enthusiastic about crimsou clover for my use.

Purchased Manures When I wish to for the Garden. of land to getitin shape for gardening purposes, the methods mentioned, namely, growing manure crops, are far too slow to suit me. I feel that I have co choice in the matter, but am obliged to use large quantities of bulky manures. It is always best to start with we cannot always do that. On soil already rich, manure usually gives the best results and the greatest returns and profits. Wheu and the greatest returns and profits. Wheu the soil is poor to begin with, however, we have to pile ou the mauure all the more freely, trusting that we will get our pay for it in time. We hardly ever make miss, either. Whatever the cost of manure, we must have it and use large quantities of it, or spoil our chances for a satisfactory outcome from the very start. When we can buy our stable manure at fifty cents a load as big as a good, stout horse can draw on level and good roads, we get it cheap enough; but I would not hesitate to pay one dollar for such a load if I could not get it for less and ueeded it to supply my garden land with lacking humus and plant-foods. With a chance to dispose of garden crops at fairly good prices, the free use of manures pays well. This does uo exclude the advisability of using com inercial fertilizers at the same time, or bone-dust, and perhaps potash compounds the sale, of securing a better balance in its constituents, or for its better preservatiou when it has to be kept and composted.

FICAL UTILITY OF WIND.BREAKS. OR modifying the temperature, lessening evaporation and the
force of high winds, especially force of high winds, especially
in prairie sections and where the ax of the lumberman has not spared a single tree to shelter us now, wind-breaks on nearly every farm are almost indispensable.
Half a century ago, peaches and tender fruits were common products in southern and other northern states, while now a crop, or even healthy trees, in the same localities is the exception instead of the rule. All realize that the climate is less uniform. More extremes of heat and cold prevail, and droughts, cyclones and blizzards are very much mor
In the prairie regions where the states have aided by judicious legislation the planting of timber belts, the extremes of heat and cold have been greatly modified,
and destructive droughts, such as formerly occurred in Kansas and Nebraska and the prairie states east of them, have, by reason of the rapid increase in the number of
trees planted, become much less common than formerly.
Smeaton, in'his "Philosophical Transactious," gives the following figures as to on one square foot: The force (weight) of the wind blowing at the rate of thirty miles an hour is 4.429 pounds; at forty miles an hour, 7.873 pounds; and at one
hundred miles an hour, a hurricane, or hundred miles an hour, a hurricane, or
with a force of 49.200 pounds per square foot, sufficient to carry trees and buildings
before it. The necessity, therefore, of before it. The necessity, therefore, of or where the lands have been cleared for tillage is obviously the only practical method of lessening the frequency and accompanying terrors of the cyclone, and creatiug more favorable climatic condifarmiug.
Without the protection of wind-breaks, the snow that falls upon the treeless land is swept forward by the picrcing winds and deposited in deep drifts in ravines,
where it is not needed, and its great value as a soil and plant protector is lost. With the force of the storm broken by numerous
and properly locatcd wind-breaks, the and properly locatcd wind-breaks, the
snow would be deposited somewhat evenly over the land, and being a poor conductor of heat, the snow would melt slowly, and much' of the alternate freezing, so common on the uncovered soil, would be prevented. More than this, the soil, by not being so deeply frozen, would thaw out quickly and absorb much of the rain and summer crops. Without such protection south of the fortieth parallel of latitude, the rain falling upon the slightly thawed surface would carry with it to the lowest places the rich surface mold so
Not only are wind-breaks necessary on the prairies of the Northwest, but many orange growers in Florida realize the fact
that timber belts there would have very that timber belts there would have very ing the freezes which occurred December 28 th and February 8th, when the mercury sank as low as tweuty degrees above zero state
In Florida, the pecau-tree could be utilized to good advantage in the windtrees would attain a hcight of thirty to forty feet, and when fully grown about eighty feet. With a lake front, or a good west side of an orange grove or a trucking patch, frosts would seldom damage either the tropical fruits or vegetables. The orignal pine-trees might be left for the outside row, and next to it one row of pecan-trees could be set twenty-four feet apart in the row, and then another row inside of this of evergreens of sturdy, compact growth,
like the red cedar, or, as a beekceper inight desire, the pyracantha, which with its honey-laden flowers would possess an added value, could be used. A step-like
wind-break of this kind would not only be useful and profitable, but ornamental. It is estimated that a hedge six feet in height will afford protectinn to plants a or wind-break of trees will, for every foot in height, protect an equal number of rods
cal farm matters in the valley of the Ohio,
says that a timber belt two rods in widh says that a timber belt two rods in widh
will so protect a wheat-field that the yicld will be greater than if the space occupied by the trees had also been secded. A tim-
ber belt of the black or yellow locust, of ber belt of the black or yellow locust, of
one sixteenth of an acre, would be worth at the expiration of ten years from the time of planting from $\$ 60$ to $\$ 75$, or about 400 per acre.
The great benefit of wind-breaks as a protection to stoek from cold winds and pastured the protection that would be afforded to all tender fruits; the saving of feed and fuel in winter are but a few of the many advantages that would accrue to armers if each one had one or more tim ber belts at the most exposed places on
their farms, to say nothing of the added their farms, to say nothing of the added comfort and attractiveness of the farm home, which would follow were orna-
mental wind-breaks so placed as to thoroughly protect it.
Such blizzards as those which swooped down from the Northwest during the past winter, and gathered within their chilling embrace half the continent and blighted the green-foliaged trees, shrubs and ripened fruits of the land of flowers, can the good work is begun now.
Near Washington, D. C.

## GROWING CORN FOR PROFIT

Corn is the great American cereal. We produce about three times as many bushels of corn as wheat in the United States. At
first blush one might suppose that the seventy odd millions of acres we annually plant in corn are planted for profit, that all grow corn for the profit to be gotten This is a mistake. Much of the corn is grown on land that no reasonable man would expect profit from, and by methods that cannot in reason be expected to
accomplish much. Corn is planted in fields unfitted for corn production, because the owners of the fields want feed for stock; want a maintenance ration for work-horses, a fattening ration for hogs that supply the family with meat, and some nubbins for the cows, that is a necessity from their standpoint, regardless of condition of the fields. As the corn is not converted into a cash article, no figuring is done, but there is a hazy idea that there is no profit in it at all, and a distinct idea that the acres must be
planted. Do I overstate the case? I think planted. Do I overstate the case? I think
not. The result is that our national avernot. The result is that our national aver
age yield of corn per acre is pulled down to tweuty odd bushels, and consequently we know that millions of acres yield less than twenty bushels per acre.

It is evident that too many acres are required to grow the eorn needed on farm that are not especially adapted to corn, bu that need grain for stock necessarily kept on the farm. Many millions of acres are thus employed. Very often the first attention, the best effort, is given the cash crop, neglected because it brings in no cash directly, no figuring on cost per bushcl is done, and no pride is taken in the crop. If it pays to grow the feed used by our stock, it should be made to pay as well as possible; if it does not pay to grow the feed, then should the stock be sold or feed should be bought. There are but two
ways for it: It pays, or it does not pay. If it does not, then do we grow poorer by keeping at it. But if the fault lies in the failure to give the corn crop a fair chance to change. What is a fair chance for corn?

First́, a good sod, properly plowed. Corn thrives on decaying vegetable matter. It is a gross feeder and loves heat. Fer-
menting grass and roots furnish food to its liking and the needed heat. Hence, a sod makes a good seed-bed for corn. What is proper plowing? Here good farmers differ, and partially because it is
matter of soils. But if land be deficient in organic matter, shallow plowing of a sod is preferable, for two reasons. First. it warms up the surface soil better because nearer the air and heat that produces fermentation. Second, it can be reached by the disk harrow or other implements in preparing seed-bed, and so torn to pieces and incorporated with the soil that it is more effective as plant-food, keeps the soil in better mechanical condition, and increases the store of moisture the soil can hold in readiness for droughts. An the corn-plant, and if a soil be deficient in
this respeet, as it usually is in fields that give these small yields, the vegetable from it as fast as possible, and that is from it as fast as possible, and that is
when it is accessible to air, heat and when it is accessible to air, heat and
moisture. I inclinc to not over six inches depth of plowing for corn, and know very successful growers who get their best crops off sod turned only five inches. After the soil has been filled with organic matter, one can plow deeper, and thus increase the ability of the soil to withstand drought.

Some growers will not accept the statement that half the culture of a corn crop should be given before the corn is planted of the plaut should be prepared beforchand, and this is accomplished by tearing the sod to pieces in a most thorough
manner. If the land has been properly inanner. If the land has been properly is in the bottom of the furrow, five or six inches under the surface. It will decay rapidly. We are after the millions of roots that form the sod. With disk or springtooth harrow they should be torn to pieces and every clod of earth pulverized. There should be four inches of soil on the surto the young corn-plant. The tramping the horses and the preparation of the seedbed firms the earth and grass at the bottom of the furrow, so that soil water from beneath can rise. The grass readily ferbeneath can rise. The grass readily fer-corn-plant has a chance to do its best, has the heat fermentation gives, has food, has the needed air that passes in when organic
matter is present in the soil, and has moisture from beneath. Of course, it takes a little more time to prepare a seed-bed in his way, but with improved implements the work is done rapidly, and after tillage

Nothing has been said of manure. It is a pretty well-accepted fact that the manure a pretty well-accepted fact that the manure ceding year. It should be made to grow clover, or to thicken up the timothy on
the thinner land. By converting the the thinner land. By converting the manure into timothy or clover roots and
top, we double its manurial value to the corn, get double the amount of plant-food we otherwise would have. If the amount of manure is limited, as it must be on the bushels of corn per acre, one cannot afford to draw it out directly before the plow and turn it under. It goes into the bottom of the furrow in lumps, and cannot Me broken up and mixed with the soil. Much of its value is lost, at least to that y know of no better way than to draw and spread manure after harvest directly upon the sod land that will be broken up the next spring.
There is seed-corn that will grow i everything is favorable, if the soil is all
right, the moisture just right and the heat right, the moisture just right and the heat
abundant. Then there is seed-corn so hardy and full of vitality that it will withstand lots of hardship, and will make a grood stand under very unfavorable concorn like fire-curing. If the excess of moisture has been driven out in the fall, cold weather can hardly injure it. Curing by fire is not essential, of course, and ficient, but careful drying in the air is suf means be thoroughly cured in the fall. "The best stand of corn I ever had," says one, "was from seed taken from an open crib." This is often the case. It may be
all right. A house may not burn down, but insurance is a good thing. Corn may be dry enough, or a winter mild enough, to permit one to get a splendid stand, but corn is surer to germinate in a bad spring. It is too late to help the matter now, but it will pay to test the seed intended for always has good seed.

Plant shallow early in the season, and deeper as the season grows later. It is my planting of corn is the surest. If the soil has been thoroughly prepared, the chief objects of future cultivation are to keep weeds from starting, and to keep the
surface of the soil stirred so as to prevent the escape of moisture. If proper preparation of the ground and good cultivation aration of the ground and good cultivation
were given, we could grow our usual crop f corn on many millions less acres than

VARIETIES OF SORGHUM
For the past twenty-five years we have becn raising sorghum, and during that time have tested every now variety that
we could get, with the exceptiou of a few varieties tested by our neighbors, that were so decidedly inferior that we didn' want to tinker with them. For the north ern states the Amber and other early maturing varieties will continue to be the main reliance for something sweet. For al those who live far enough south for the later, larger, taller, heavier and far better varicties, as Early Orange, Gooseneck, and even Red Top, the Amber will be thrown in the shade. In localities that are not subjected to heavy wiuds, the Gooseneck is a good variety, being of good quality and greater productiveness than any othe variety of our acquaintance. For the western or "windy" states, and the great
southwest, the Red Top would probably be the best, on account of its tendency to stand up like a tree. For the central and southern states, and, in short, all portions of the country where it will succeed, the Early Orange is for most all purposes so decidedly the best that the other varieties simply "ain't in it" at all. Its quality is strictly first-class in every respect; as to quality, it is beaten by but few. Of all th different varicties that have been introduced in this section the past twenty-five years, under the somewhat high-sounding titles of "Honeycomb," "Honeydrop," "Goldendrop," "Goldenrod," etc., we have found but four-namely, Early Amber Early Orange, Red Top and Gooseneck that were worthy of continued cultivation It is a case of the "survival of the fittest;"
the others have been here; they are gone, and the place that knew them, know them no more
Mississippi.
G. H. Turner.

## THE CHOICEST HAY

The choicest hay for horses is a mixture of timothy and alsike clover. Alsike is
the easiest of all clovers to cure. It is free from the down, or fuzz, found on the stalk and leaves of red clover, and does uot be come dusty when cured, even if rained on after it is mowed.

## from field and garden.

Best Early Potatoes.-J. r. P., of Montgomery county, New
York, wants uie to name the six earliest potatoes, first in the order of their quality, second
in that of earliness, third in that of yield. So far as quality is concerned, I thiuk I would un-
hesitatingly put Freeman first. Indeed, this feature is the strong point of this variety, and the chief reason why I would not do without it in my garden, but I
could hardly recommend it to everybody for general plantiug as an early market sort. Besides, it is more a midseason
thatn strictly an early sort. Next in quality I would place the Early Ohio, quality I would place the Early Ohio,
auil about equal to it the Polaris (or Puritan of Heuderson), then Beauty of Hebron, Early Rose, Early Sunrise. to earliness, Early Ohio must be placed first, then Queen (of the Hebron type), thien Early Maine and perhaps Sunrise (of the Rose type), and finally Carly Rose, Beauty of Hebron and Polaris. In yield, potatoes usually stand in the reverse order of their earliness, but there are
exceptions; for instauce, if I have a rich piece of loam, even if a little stiff, I would plant the Early Ohio in the expectation of raising as large a crop of potatoes as of any garclen potato, and in rich garden soil I garden potato, and in rich garden solive hundred bushels per acre. But don't plant it on ordinary farm land, eveu if fairly good, and expect as large a crop as if you
plant Hebron or Rose, or especially any of plant Hebron or Rose, or especialy any of
our later big-yielding standard sorts, like Rural New-Yorker No. 2, or Star, etc.
Early Rose (or any of its various strains, Early Rose (or any of its rarious strains,
and perhaps seedlings), Beauty of Hebron and Polaris are probably the rarieties among the early potatoes to plant for quantity.
Few Varieties Enough.-I might have named many other varieties. New ones have been and are constantly being intro-
duced. There are occasionally aunong them some of great inerit, and a few have become favorites iu certain localities. It
is almost impossible to keep track of all these new introductions. All I can say is that the sorts named are satisfactory to me, and will we to the general planter who
selects the sort from among them which fits his particular purpose and soil. For Sixy are by far too many for me. I plant only two early potatoes for my own use, ones I plant for trial only. For late ones, would plant White Star to the exclusion of all others, if I did not happen to have a mixed lot of sclected seedlings of mhile strong-growing plants, good yielders and generally satisfactory to me, I plant only because they are of my
own origination, and not because I cousider them ahead of anything and everything else. I do not expect to erer
introduce a uew potato. By far too many arc being introduced all the time which have no striking merit above our older standard sorts. And yet should I ever
succeed in fiudlug "a better potato than was introduced before," I shall not hesitate to bring it out. As for my chances of the first prize in a lottery
Best Sweet Corn and Squashes.-The same reader also asks me to name the six
best varieties of corn (presumably sweet corn), the six best and hardiest grapes, and the three best squashes. Why so many
varieties of sweet corn, except for trial or ariety? For all practical purposes three will be all that are required. I use the many sorts have been introduced during the past four or five years as earlier and yet plant the Cory as my chief dependence for the earliest supply. For the medium, 1 use Black Mexican. It is by far the
richest aud sweetest of all. To people, howerer, who objcet to the dark color of this when going pretty well toward ripen-
ing, I would recommend Moore's Early (or Larly Concord). For a late variety and
main crop, the old Stowell's Evergreen is yet good enough for me. If you want
more variety, use Shoe Peg (or Country Fentleman) and Manmoth (Mammoth Ningar, all of which are very late. For
litn planting, or plantiug in a locality with chort seasons, Moore's Early would
we as suitadic as anything I know of.
choice between the Bush Scalloped (white ellow) and summer Crookneck. asualy plant the latter, but others may prefer the former. It is a matter about
which one cannot dispute. As a winter variety the old Hubbard still stands at the head, and the only sort which I would plant about as willingly as this is th Marblehead.
Best and Hardiest Grapes.-In earli ess and hardiness the Green Mountain (Winchell) easily ranks first. For the geueral crop in most sections of this state we want the old and reliable Concord, and
surely the Niagara. These are hardy and good, but too late for the coldest portions of the state. I have seen that the Delaware although it is less hardy and quite subjec to leaf-blight with us, does remarkably where the Coucord would seldom get ripe This only shows that particular local the prions are sometimes just right fo not for that of another. Another good black grape is the Worden. It is very cau hardly the it cord, and sometimes we In some seasons it has that older favorite In some seasons it has seemed to be a little
earlier, but the difference is not much at best. One of the very best grapes, to $m y$ taste, is the Brighton, a red sort. It
may not be as hardy as the Coucord, but it stands our wiuters here quite well, and when planted near other rarieties which will furnish to its imperfect blossoms th needed pollen, it also is immensely pro ductive of very large and very handsome clusters. Indeed, the clusters it bears are among the rery largest in the whole vineyard of ninety to one hundred varieties on trial, a large proportion of the
clusters coming close up to a pound in weight. This grape is of exceptionally good quality when first ripe, but it soon loses in this respect, and it is useless to tro

## Plank Marker.

to keep it for any length of time. If you wou should plant Diana, Vergennes, and especially the old Isabella. But all these are rery late grapes, and not suited to
localities where the seasons are hardly long enough for the Concord.
Tree Tonatoes.-A reader in Oklahoma G. N. D.) inquires about the tree tomatoes for his climate. I gladly say a few words about them for the edification of the seaeral reader. Every little while some offers a tree tomato. I have
seedsman seedsman offers a tree tomato. I have growing, stoeky sorts, but while this
habit of growth makes them interesting, I cannot concede to them much practica value. They are dwarfs in growth, bea rather small in size, without giving us the adrantage of greater earliness. Undoubtedly the best of this class, and the only one which might be grown for general good and reasonably carly fruit, and when the plant is supported by a stake, or in a similar way, it will hold to an upright to lodge when the branches begin to load up with tomatoes. The Mansfield tree growth, not a tree tomato. It is fank and spread on the ground just like any other sort; but like them, it may be trained to a pole or stake and trimmed to a single stem, thus makiug a "tree"
tomato. For main crop, try the Match ess, or the Stone, or the Nickel Plate, or any of a nuinber of others that might be named.
good strain of Flat Dutch for main crop. These varieties are reliable everywhere. t. Greiner.

## A PLANK MARKEn.

For planters of small gardens, I will describe a home-made tool which I find very serviceable in planting small seeds, such as radish, onion, etc. Take a plank six or
ight inches wide and one foot Hollow out the side that is inteuded to drag on the ground, and nail a small, sharp stick to it, which is intended to pen a small furrow for the seeds. Attach a handle about five feet long to the top
edge of the board, and pull it straight ahead over freshly plowed ground, and you will have a nice smooth ridge, with a
small furrow on top to receive the seeds. to cover the seeds, remove the sulage again.
L. L. Roberts.

Orchard and Small Fruits.

## 

## CRIMSON CLOVER.

mson clover-or, as it is metimes called, scarlet eginning to claim more or in attention from farmer
the northern states. That will thrive to advantalcannot be doubted. Whether it will prove satisfactory in this latitude is another question, but I believe if the autumn minate the seeds and keep the plants thriving until well established, it may be Ohio and other states of equal latitude.

I sowed five acres last season, at five different times, but owing to the prevail ing dry weather, much of it failed to get shower, grow nicely for a few weeks, and then wither and die. A few places wher the soil was more moist it continued to grow until the severe winter's cold cease growing, though it remained perfectly green until the first heavy snow canie. I was somewhat solicitous concern-
ing it during the severe weather when the ing it during the severe weather when the degrees below zero, but as the snows disappeared, the clover-plants were to be seen as nice and green as in November. While some places an inch or more by the action of the frost, the plants of the crimson and yet it is in soil that would be more easily acted upon in this way.

Had I not been disappointed in getting my seed at the time it was desired, result might have been different. Had it been sown the last of June and received the
benefits of the week's rain we had in harbenefits of the week's rain we had in har-
vest, it would no doubt have become well enough established to have withstood the dry, weather of July and August. I am not
at ali discouraged in the matter, and shall sow again the coming season. My friend J. E. Wing, of Champaign county, has grown it two years on his bottom lands,
and is greatly pleased with the results.

It is not expected to replace the medium clover, but to fill a field distinctly its own.
If it can be sown in the corn-fields and potato-fields at the last cultivation, make a fair growth during the late summer and fall months, and make an early stait in the spring, so as to afford a crop of green lated nitrogen, then it has fulfilled a good mission, and deserves a place in the list o profitable crops.

## THE GRANGE AS A HELPER.

It must be admitted that farmers and their families do not hare the advantages of those living in the large towns and
cities. This should not be so, and if the teachings of the Grange were fully carried out, it would not be. The farmer should have all the advantages within the reach point of fact, he is entitled to even more social and educational advantages, to counterbalance the comparative isolation incident to farm life.
civilization." What our casure of our sidered as luxuries have become every-day necessities for our comfort. As a rule, we do live better, dress, better, expend more money for things our fathers would have
done without. The times seem to require that we should have more leisure time for mental improvement, social recreation,
music and other accomplishments. After all, is not this as it should be?

## FROM CORRESPTS

From Massachusetts.-"Abandoned" farms than a few years ago. In the old Baystate nearly or quite all have been bought up and
occupied, elther for cultivation or for summer residences by New England people. Those
who have a taste and skill for farming are Who have a laste and skill for farming are

pcars, etc., grow well in this county. The
small fruits, such as plums, strawberries,
raspberries and grapes of all kinds, secin to

almost any evening in early summer-time. The great trouble with our people is that more profitable ln the long run than cotton. Cottou is the watchword. How much cotton are you going to plant? If the cotton craze
ever gets out of the minds of the people of this section they will soon grow rich. For th
most part we bave small farms. This render
$\qquad$
$\qquad$ road. No child has to go more than two mile to school, and the people are rapidly taking
advantage of modern methods in education a in other things. Land is cheap here, and great inducements are offered for settlers.
Front Virginin.-I am a native of Pennsyl
vania, and have lived in Virginia for seven
years. I know whereof I speak when I say that for healthfulness, climate and location this country cannot be excelled by any east o
the Rocky mountains. The land, naturally easily be improved. The land will produce corn per acre; 20 to 40 bushels of wheat; 30 t 60 and 80 bushels of oats; and 1 to 5 tons of hay I have seen these yields, as I helped to do the
farming. Dairying is a very profitable indus try here. Fruit growing is a paying business. Taxes are low and land is cheap. Winters are mild and short. I am not is land agent, but resident here, and I want to see this country
filled up with industrious farmers. Western and northern people are coming already, and
we now have a colony of good farmers, but

## here is room f

From Nebraska.-Wayne county is one of the best countles in northeastern Nebras We were affected some by the dronght,
not so much as the western part of the st We have prospects of a good crop this season
We never had a failure of crops in Wayn county since I can remenber. Corn, wheat an oats are our main crops. Tame grass does no
do as well as in other parts, but we have plenty of wild grass, and the stock does better on that than tame grass. Good, well-im proved farms bring from $\$ 28$ to $\$ 35$ per acre Wayne is our county-seat, and has a popula-
tion of about 2,500 . It has good waterworks and good streets, six churches, four banks, and stores of all kinds. Wayne county is a
place for a person with small means. known some to rum in debt for everything to
start farming with, but that is not a good plan Wayne, Neb.
From Alabama.-Mentone is on the wes brow of Lookout mountain, on the A. G. S
railroad, forty miles from Chattanooga. Th oil here, while not naturally rich, is quite good as any of the plateau lands
dantly of almost everything that is produced in the temperate regions. The free range for is good. We are well supplied with springs of limate is very healthful, and especially so for people with weak lungs. Our land titles are rderly and not given to lawlessness. We have a number of northern people already, and
more are locating here. Lands are cheap here. Mentone, Ala.
From Washington.-Elberton, situated the confluence of the Palouse river and Silver
creek, is a beautiful little town of about 300 inhabitants. This is the finest small grain country on the coast. Corn does not grow
well. All kinds of vegetables grow to perection. As far as i have been able to test it Elberton, Washingto

THE POULTRY YARD.

BONE WITH CRUSHED SHELL. r will be remembered by the ras started N vember 1st, to test the value of green bone as a food for laying hens. The experiment
was started with four divisions, and two pens in each division, one of old hens and one of pullets, ten to each pen; first division receiving green ground bone, crushed oyster-shell and gravel;
second division receiving green ground bone and gravel; third division receiving crushed oyster-shell and gravel; fourth division receiving gravel only, Table showing weekly results from No
vember 1st to January 24th, inclusive: $\xlongequal{\text { vember 1st to January 2tth, inclusive. }}$

Eggs were worth two cents each on the avcrage during the trial.
First division received 14 pounds raw ground bone, 2 pounds oyster-shells and all the gravcl they wanted.
Second division received 14 pounds raw
ground bone and all the gravel wanted.
Third division received 6 pounds oystershells and gravel.
Fourth division received nothing but Counting bone at thrce cents per pound and shiells at two cents, the hens with either those of shell or nothing.
There was enough difference in those fed shell to more than pay for the shell, but leaves a narrow margin when fed with bone. While those fed bone more than
doubled on those fed nothiug, or we could have afforded to pay twenty cents per pound for the raw ground bove. But this is not all; the hens receiving bone have a
much better plumage, and are standing the winter much better. We hope to draw mauy valuable conclusions from this experiment when it is finished.
It might not be out of place to mention that these hens have not been out of their $7 \times 8$-feet pens for about a month; yard $6 \times 16$ feet, giving all exactly the same chance to exercise.-Agricultural Student.

A Lack of lime.
While corn is a food that has its mission in winter, it will do more harm than good
when continued steadily on into spring. Wheat may be classed with corn. These grains are good because they are concen-
trated, and enable the hens to eat enough trated, and enable the hens to eat enough
from which to derive their warmth, but though they contain a proportion of nitroren, they are very deficient in the mineral clements. There is less than a pound of lime in one thousand pounds of wheat, and if a hell is compelled to subsist on furnish eggs, which are not only covered
with a shell of lime, but also contain within themselves the substances that are in themselves the substances that

Value of clover hay for poultry.
It is only recently that clover hay las
becn found to be the cheapest and best winter food for laying hens, and that by its use the great difficulty of procuring green food is overcoine. In fact, the essen-
tial want of hens in winter is uot so mucl that of green food as of bulky food of nitrogenous character. For unany year the writers and breeders have madc a spec for poultry, the only variation being that at certain times some of it was to be whole grain and at other times soft food was to the effects of a long-contiuncd diet of grain was as injurious to fowls as to cattle, and that the concentrated grain food gare the best results when diluted (if wc may bulky material, which uot only promoted digestion, but also largcly assisted in sup plying the clemeuts necessary for the albumen of the eggs, which was lacking in the carbouaceous food of the grains.
Another important advantage in the feeding of clover hay is that it abounds in mineral matter, thus providing lime in soluble condition for the shells, and in supplying the bony structure for the chicks in the eggs. The phosphates, salt, soda magnesia, iron and nitrogen are easicst obtained from the grasses, but in less proportion than from brau, or some product of the preparation of graiu. Yet it is less concentrated and more soluble, while the To attempt to feed clover, however, without grain as an assistant would be going to the other extreule; and hence, the best results can only be obtained from a mixed or balanced ration, by which the laying
hens are supplied with food abounding in hens are supplied with food abounding in
all the elements essential to the production of eggs, as well as to supply the hens with animal heat and to repair waste of
oyster-can fountain for chicks.

I is perhaps unnecessary to state, the invltatiou difficult to say, as there was notbing very pic turesque to see or startling to encounter. But lady friends went with us. We had two day dignified way as "the ladies' coach" and "the dignified way as "the ladies' coach" and "the
smoker," respectively. Both were weil filed, though not overcrowded.
On nur return run, we-in the ladies' car-
were somewhat startled, when the enginee stopped for water, hy the entrance of stranger, who seated himseif next the door
facing the rest of us. His clothing was ragged and soiled with mud, bis hair disheveled, bis beard unkempt, and his manner nervous and
restlcss. Witb more naturalness than politeness, we stared at him, and be returned tb saze, witb interest.
After tbe train
After tbe train star
to go to tbe "smoker."
"Sit down!" commanded the intruder in a voice "as thougb horn to rule tbe storm," and pistol at our astonished member's head.
pistol at our astonished member's head.
Down went the member with the aiacrity horn of self-preservation. Another Faber commander. With a rapid motion the pisto overed the man of curlosity
"Sit down!" the stranger shouted.
He sat. Of course, our interest became unanimously centered on our new-comer. This, instead of pleasing, had qulte the con-
trary effect, and our self-invlted guest became even more nervous under our fixed and steady yaze. There was a sort of musoular or mechan ical sympathy between his eye and the barre otiner peered at the precise spot, and "the our orator had flatteringly designated us ous directions. Some went down, others up dignified enough to he actively engaged in dodging.
How long this was kept up is a matter of conjecture, but in tbe writer's opinion it was
several ages, and be is not sure to this good fren tor Presently the member nearest our visitor
eceived the command, "Take your head down!"
She screamed-as all iadies will, you knowup, and she sat in a heap on the fioor between scats. The command came with lightning hike repetition to each member,always emphafrown of his pistol-harrei. Head after head
went down, and the seating-room on the floor between the seats was deemed a luxury. There was pienty of room in the aisle, hut no one
offered to occupy it. offered to occupy
honrs as we sat thus amid banangthened into apple parings and the refuse titbits from our lunch-baskets, each knowing if he peered
above the seat in front of him, the ful eye and the same murderous weapon But all things have an end, and we were des tined to be saved, for tbe monotony of the sit Fisb," we called himever afterward-an editor coming from "the smoker." Fish weighed
two hundred and fifty pounds. He entered, whistling a soft ditty of his own composing. At once the self-lnvited guest thrust his eye
and pistoi upon him, repeatlng the command
The whistling ceased. We heard a fearfui bumping and thumplng, iutermlngled wi
yells for help, and some of our bravest hret ren ran to the rescue. Fish had selzed the pistol and the intrider had seized Fish. Tbey
struggled, tbey fell, and-horrors!-Flsh was hut hls legs were in the air.
After a struggle we overpowered the intruder, and cutting a part of tbe bell-cord,
tied him band and foot. We then secured found-it had no cylinder: Our intruder was
folion frothing at tbe mouth and struggling witb bis
cords when the conductor came back to our coach with two officers of the law in search of
an cscaped iunatic.-The lllustrated American.

"STAY EAST, YOUNG MAN."
The enchantment which was lent by dis-
tance to the view of the western states and tance to the view of the western states and western Canada has been dispelled of late, tbere are opportunities for the energetic
youth of our country in what have beell termed tbe "old provinces." Fashion will
always have its followers-many of these was quite the fashion for young men to go fortable livings in the East. The young man who goes West because he wisbes to enlarge
his views, and perhaps prefers western life his views, and perhaps prefers western life
is quite within his right. But tbe young man is quite within his right.
who goes West because money East, generally ends by becoming
poorer the farther west he goes. It may be generally taken for a pretty sure thing that iuently successful in business, would not be busilless can be made to pay: Farmers who are out at the elbows would probably be out
at the elbows at any other business. The young inan who is hesitating between two
choices--to go West or stay East-had better stay East, unless he has money enough to go he may appreciate the advantages of the East_-Woodstock. N. B., Dispatch.

HOW THE PHONOGRAPH WAS DISCOVERED. "I discovered the principle by the merest into the mouthpiece of a telephone, when the oint into my finger. That set me to think ing. If I could record the actions of the point,
and send the point over the same surface afterward, I saw no reason why the thing would not talk. I tried the experiment first on a strip of telegraph-paper, and found that words, 'Halloo, halloo!' into the mouthpiece ran the paper back over the steel point, and determined to make a machine that would work accurately, and gave my assistant ered. They laughed at me. That's the whole pricking of a finger."

the best husband.
No man, in my opinion, can be the best husband until he is the minister of his family. As the home is the first cburch, so the hus-
band is the first minister. He is the high priest of that home; his wife, the high If religion means an abiding faith in an Al mighty power above us, and a true love of God, who is love, together with love in the should have its place, a large place, in every home, and the husband should be the one to encourage, by example and sensible teach-
ing, its continued presence there. If he would have the happiest famlly about him, he will teacb-not preach, understand-the
doctrines of religion and morality. The father who would have his child, when that child becomes a man, continue in his career in the child amid Christian surroundings. As a rule those men who are most, sincere in their religious bellef were imbued with religion in childhood.
here inot bring myself to the belief that daye is euough of religion in our homes toeething, crowding, pushing city. Amid the ush, the pace that kills, religion is forgotten. The husband and father has no time for it; he
can't even find house-room for it. As only can't even find house-room for it. As onlo in his office or place of business, where, theu do the great mass of men keep their religion pay a handsome pew rent for keeping it there
and go take a look at it once every Sunday rom eleven to twelve.
I fear that especially among well-to-do families, in the homes of prosperity, religion is almost entirely neglected; at least, the sub real feeling, except in hushed tones. And ye do not wish to paint the situation in darker
colors than it really is. I do not say all husbands and fathers neglect religion. If there are great numbers of homes in this city iu many households in which the family lives together in the spirit of Christ's teachings; and when such is the case, it is usually becaus religion, and agreeing in that, agree in al matters, and are the happier. In these homes usband and wife love God and pray and sorrow and joy together.-Rev. Dr. C. H. Park-

## TOUCHY PEOPLE.

There are people-yes, many people-alway ooking out for slights. They cannot carry o finding that some offense is designed. They are as touchy as hair-triggers. If they meet pied with business, they attribute his abstrac tion in some mode personal to themselves,
and take umbrage accordingly. They lay on others the fruit of their irritability. Indiges tion makes them see impertinence in everyon with whom they come in contact. Innocent persons, who never dreamed of giving offense,
are astonished to find some unhappy word or are astonished to find some unhappy word or ult. To say the least, the habitis unpleasant view of our fellow-beings, and not suppos open and dircet
After all, too, life takes its hues, in a grea we are from the color of our own mind. If us kindly; if, on the contrary, we are susus. Let a person get a reputation of being "touchy," and everybody is under restraint, offense are vastly increased.-Health.
dID CHINESE DISCOVER AMERICA? The claims of Columbus to be regarded as he discoverer of the New World have been disputed by several people. The'Norwegiaus assert that Eric the Red landed in America
five centuries before Columbus set sail in his caravel, and the French say that Jean Cousin discovered the Amazon river four years befor But the latest development of the dispute is ca! So says an American, and the following There can be for this assertion: There can be no manner of doubt that there
s very close relationship between the Indian lialects and the Chinese language; the resen blance between a large number of words is very striking, and they are all.
structure, which is monosyllabic.
tructure, which is monosyllabic.
On the other hand, a kind of physical iden On the other hand, a kind of physians and the Chinese belong to the same Mongol race. The Quadra-et-Vancouver for the first time, he was nable to distiuguish them from Chinese, and ial empire
Mr. Masters quotes, in support of his contention, a fragment of the Yuen-kin-lui-han,
great Chinese encyclopedia, which runs into more than 200 volumes.
This fragment relates that in a certain yea Buddhist priest arrived in the village of King Chau, on his return from a voyage in the

Fusang was situated to the east of China, fusang-trees which grew there; these trees grew to the height of bamboos, and the first fruit resembled a pear, and its color was light red. people knew how to write, and they used paper made of the bark of the fusang. The cattle in Fusang had enormous horns;
vehicles were drawn by horses, oxen and reindeer. The people made a kind of cheese from milk. Red pears grew there, and if not gath year round, and not fall off as elsewhere grapes also grew there in abundance. gold and silver had no commercial value Now, which country can this be but Mexico?
It is the only country where we fiud the tree described in the Chinese encyclopedia; it is a according to writers of the middle ages, gold and silver had no commercial value!
No doubt the five holy men from Ki-Pin reached Mexico via Corea, Japan, the Kourile
Islands, Alaska, Oregon and California.
Those who have lived in China, and have studied the customs, says Mr. Masters, notice
a striking analogy bctween the laws, religion
and customs of that country and those o Chinese laborers who have been employe
in the construction of Mexican railways, an in the construction of Mexican railways, and
have traveled in Central America, say they
have found on some of the rocks numerous heiroglyphics which are mercly distorte
Chinese characters.
The similarity of the Mexican calendar with
that believe that communication had been estab-
lished between Mexico and Asia long before
the time of Columbus. Professor Davidson and other learned Amer
icans have furnished data which leave ver
little room for doubt as to the accuracy of

## TO TEACH THE VALUE OF MONEY

So many parents who are very careful as to their children's mental, moral and phys ical training, never give a thought to their financial training; when we see so many living beyond their means, and note the evil results that smrely follow, it behooves all parents to awaken to the fact that it is a part of their duty to teach thcir children the value of money and how to spend it wisely. Those who have never handled money have litvalue, aud do not realize the care that must be used in spending it. After a child reaches a proper age, it should have money of
its own to purchase its its own to purchase its nccessaries: yet while
Fig. 3.-Silk and Lace Capf
The variety is made in capes by the trimmings, and each lady's taste must be the guide in the matte

Orer this is a cape of not thoughtlessly spent. piece-lace cutin large edge with sequin braid, and dotted all over with sequins. A full ruche of with violets, formis the with
The capes range in price from eight to twenty-five dollars, and being smiall affairs, it seems a big in vestment of money. The higher-priced ones are corered with braiding and jet. being of bright blues, yellow, red and even white, covered with jet.
For ordinary wear, good cloth can be obtained aud a beautiful garment made at home for less than six
dollars. In hats, the newest thing is the tall-crowned walk-
ing-hat, trimmed iu velvet aud wings. Another is a crowned large ed, high turn-up of fancy braid, trimmed on the sides with wings, tall wired ends of black satin ribbon, and black silk poppies with yellow centers.
A pretty lace and jet bonnet trimmed profusely with violets, largeloops of velve ribbon and a jet aigrette, is suitable for

full knife-plaiting of black silk, pinked on for some service rendered. It is an easy the edge. The nerk is finished with a full matter to spend other people's money, but

Fig. 3 is an under-cape of changeable silk | if | personal exertion, and is to us the equir- |
| :--- | :--- | -a plain circle to the turn of the shoulders, alent of a certain amount of labor expended, edged with a full knife-plaiting of the silk it then assumes a new value, and usually is

young to begin to help a little about the house, and to receive a certain remuneration for its work. As it grows and its ability to help increases, its knowledge as how best to use money will also increase, and it should be paid proportionately; until when it has arrived at years of discretion, its earnings will be enougli to supply all its actual needs, and a small surplus beside for pleasure or recreation.
Many a parent urges as an excuse for not doing this, that they cannot afford it. That doing this, that they cannot afford it. That
it takes all they cau make to meet usual it takes all they cau make to meet usual
expenses without creating new ones, not seeming to think that clothing and many other things must be supplied anyway, and that it will cost no more for the son or daughter to purchase them, guided by a parent's judgment, than if the parent buy them; while the child's self-respects will be cultivated, to say nothing of the profitable fiuancial lessons they are teaching that will go with them all through life.
Many parents complain that their children take little interest in home affairs, and if a task is required of them, do it so carelessly as to be of little help. Investigacarelessly usully discloses the fact that in such homes there is much work required and homes there is much work required, and but little recreation allowed, while nothing is done to foster an interest in home
affairs. Things all belong to father aud affairs. Things all belong to father aud mother, not to the family. But let a change be instituted, and if the home be in the country, let the children be given a pig, a lamb or a calf for their own especial property ; or let the poultry pass into their care and they be allowed a certain per cent of the proceeds; or have a bit of ground to cultivate, the crop to be theirs, and they will at once manifest an iuterest in home and work that will be most pleasing to their parents, and conducive of much good to the children. It will be found by the of the family are much more than usual and the child should be given sufficient credit for its aid.

Nany a child or youth is always wanting to buy something, and seems in imminent danger of growing up to be a perfect spendthrift; but if they have their own money to speud, they soon learn the proper use of it, and so spend it judiciously, rather than carelessly, as was the case when it was some one else's money.
There are few, if any, families in which it would not be profitable in a financial way to pay the children for doing the long, hard jobs usually required of them, for they will then take so much inore interest in their work and do it so much more quickly thom the nore careful expenditure of their earnings; and if they be iutrusted with some money-making interest as well, their
efforts will result in such an incrcased income as will more than supply the wages they are to receive for their other work,
beside leaving them a profit for the extra labor they bestow upon the interest assigned to their care. Seeing is believing.". So if there are
any skeptical oves annong our readers, if any skeptical oves annong our readers, if
the will give it a thorough trial, they will be convinced of the truth of these
statements, beside giving their children statements, beside giving their children a
fuancial training that will be of service to fiuancial trainigh their lives.
them all througha Sensibaugh Everts.
Clara

Remarkable Experience of Rov. W. J. Chapin, o
Chatham-His Interiesting Story of His Prostra-
tion and Restoration to Helth
From the State Journal, Springfield, Ill.)
In the pretty little village of Chatham, Sangamon county, there lives a Baptist divine. His clear eye, keen mental faculties and magnificent physique all bear witness to a life well and nobly spent. This pioneer in God's eternal vineyard is Rev. aro crowded with noble deeds in the Christian ministry.
To a State Joumal represen tative who had occasion to ask him something of his in a peculiarly interesting strain.
"In my earlier years I was almost a perfect stranger to any kind of medicine or tonic. As is too often the case, however, I overestimated my physical resourecs. The crisis came about 18 years ago. I was
preaching the gospel at the time, and became suddenly so ill that I was compelled to stop before iny sermon was tinished. It was a bad case of nervous prostration, and for a time my friends and family werc greatly exercised over my condition. It is hard to describe my feelings so that others (atul have a conception of them. I felt ab :swlutely worthless, physically and merstally. I had so lost control of my nuscles that my fingers would involuutarily release their grip upon a pen, and my hand would turn over with absolutely no volition on my part.
"About two years ago, to intensify mat ters, I was seized with a severe atlack $n$ la grippe. I recovered only partially from it and had frequent returns of that inde scribable feeling which accompanies and follows that strange malady. I looked in vain for something to bring relief and finally I read an account of Dr. Williams Pink Pills for Pale People. They gave me additional strength from the start and toned up my system from a condition of almost absolute prostration so that I was able again to resume nuy duties as a min ister. My improvement was marvelons Loami, and in addition to the exactin character in addition the exacting character of this work itself, I ride ten o
fifteen miles on the way there and luack." Mrs. Chapin, a kindly faced elderly lad said: "They did him so much good that decided to test their efficacy on misself. I have been troubled for years with what our physician, Dr. Hewitt, calls rheumati paralysis, but since taking the Pink Pills I have been stronger, and the pain in my right arm and hand is less acute. We keep the pills in the house nearly all the time, and they do me a great deal of good in the way of toning up my system and strengthening me. The pills are used by a good many others in this vicinity, and everyone speaks well of them."

These pills are sold only in boxes bearing the firm's trade mark and wrapper, at 50 cents a box, or six boxes for $\$ 2.50$, and are never sold in bulk. They may be had of all druggists, or direct by mail from Dr. Williams' Medicine Co, Schenectady | Dr. Y. |

## LITTLE HELPS

I have found big helps in getting work done on time. If you have a day's sewng to do, roll your machine to the in the morning; or when sou do not have a fire, put it by a window where be sun shines warm When rou are he sun shat you will find the you are eady to sew, you will find the inachin uns so much easier
Another help is, when cutting a ham ut it all up at once and pack it down in a jar, fat and lean mixed. The meat does not get strong, and the bone is better to cook when the meat is all cut off at one time. In this way you avoid getting your hauds dirty in cutting it down at every meal. In summer it is a good plan to fry it all down at one time; then it takes very little fire to warm over the meat
Pork is better fried very slowly for one hour, and if thick, for two hours, and then only be a light brow

A nice thing to use dirty dishesing very lets is a wisp lets is a wisp, especially is you do not have a dish-washer. A good way to warin a bed for company, in a room where you camnot have a fire, is to stand the ironing-board behind the stove in the afternoon, and then put it in the bed an hour before retiring, and your friends will sleep comfortably.
I. S. Latta.

## WALL ORNAMENT.

Obtain from a picture-framer a piece of circular cardboard left from the mats used in mounting pictures. Paint in brown or blaek water-color the head of a pussy or puppy. Frame the circle with firm, white hemp rope, secured around the cardboard in rings, and end with a bow. The end of the rope can be fringed and tied to form tassels. This makes quite a pretty orn ment for the wall or door.

## CROUP REMEDY

(1) ux edtumshold.

THis is the month when the careful housewife is anxiously inquiring as to the best method of protecting the winter clothing, also blankets and shawls, from the raid of that little pest, the moth. Before wooleus are stored away for the suminer, they should be thoroughly
dusted, or washed if necessary, then hung upon a liue in the sun for three or four hours. This will very effectudlly destroy any larve of moths that may be iu them. It will simplify matters next fall if the garments are carefully sorted this spring. Those to be worn again should be neatly mended, aud the socks and stockings ought to be carefully darned.
Those which must be made over before being of service would better be ripped, washed and smoothly pressed, thus ren-
about a pint, add a little more sugar if
necessary, and water if the juice is quite necessary, and water if the juice is quite
thick, a dessert-spoonful of butter, and thickeu with a tablespoonful of flour rubbed smooth in cold water. Season with nutmeg if you wisll. When fresh fruit is used, and there is no juice, take about one cupful of sugar, one cupful of water, two tablespoonfuls of vinegar, and then proceed as in above recipe.
This pudding is just as good warmed orer as fresh. Pour a little water over the top, place in a buttered•tiu with a little water, aud put in the oven for fifteen miuutes. $\qquad$

about thein, and then studied about them
until he became a fine geologist.
When we were budding school-girls, just emerging into the "higher branches," leaving the good old spelling-book, readers and our small geographies behind, don't you remember that we used to listen with an almost intolerant spirit to the older members of the houseliold, who, versed in ore of field and wood, and signs of weather iscoursed upon their favorite themes, knowledge which we rated far beneath o But after all, isn't such knowledge of finite value to country people in general? Now that spring is here, let us see what
Now of her open book we can take for our own. Isn't it of some interest to note the first croaking of the frogs, the flight of the wild geese, the first note of the robin and blue-
bird? Then there are the pussy willows. bird? Then there are the pussy willows. Where do they grow, aud when Then there are the wild flowers, which peep at jou from every field and nook. How many of them do you know as old friends, who are
so stanch in their friendship that they never fail to gire you a sweet welcome? A little preparatiou will soou enable one to name and recognize the simple parts of a fower, the calyx and corolla, the stamens and pistils, authers and stigma. This bit of knowledge so easily gained will add much interest to the flower family, or families, rather, for there are many of them. Bees are very fond of the honey found iu the violets, but because of the little crook at the base of the cup (or corolla) they canit, so what do the wise little hings do but tap the flower from the base utside, aud thus plunder the seemingly safely stored sweet, carrying it away industriously, even though it was obtained Why not the back door.
Why not make a little note-book this spring of your observations?

OUT OF FASHION.

|"rout of fashion. "I like to read the "Pilgrim's Progress." It is associated
with my mother, whom the Shining with my mother, whom the Shining Ones, years ago, couducted into the
city as they did Christian and Hopecity as they did Christian and Hopeful. She used to read it to us Sun-
day afternoons, or have us read it to her. We found more delight and profit in it than childreu can find now in their "Daisy Stories," their "Lucie Stories," It entered into our lives, it colored our It entered into our lives, it colored our
plays, it taught us theology, it made us plays, it taught us thenlogy, it made us ideals and our heroes. And besides, we
found afterward that our taste for good books, our love for pure, racy, idiomatic English was formed on those Sunday after-
noons with her who is now with Christiana noons with her who is now with Christiana
and Mercy, whom she taught us to love. I say I am out of fashion, for I do not see Bunyan on the stands and tables by the side of the Chautauquan books and Harthe Century. Aud when I make allusions to it in the prayer-meeting, I can sympawho spoke in an unknown tongue, with who spoke in an unknown tongue, with I once gave a copy to each member of a
Sunday-school class of young ladies, and had the satisfaction of seeing the pretty face of one assume an indescribable expression of disgust, as she whispered her con-
tempt in a tone which cannot be put on tempt in a tone which cann
I afterward bought copies enough to give one as a Christinas present to each meniber of the Sabbath-school of which I was superintendent. I have had no reason to suppose that the gift gave any great pleasure, seed beside all waters, and keep giving copies of the dear book away.-N. Y. Evangelist.
the everlasting harmony.
If thou art living a righteous and useful life, doing thy duty orderly and cheerfully where God has put thee, the thou in thy everlasting harinony and melody which is in heaven; the everlasting harmony and melody by which God made the world and
all that therein is-and behold it was very all that therein is-and behold it was very
good-in the day when the morning stars sang together, and all the sons of God shouted for joy over the new-created earth, which God had made to be a pattern of his own perfection.-Charles King.sley.

[^2]Wear it. It is your privilege. It has the
quality of mercy; it is twice blessed. It yuality of mercy; it is twice blessed. It
Ulesses its possessor, and all who come under its benigu influeuce; it is a daily boon to him who wears it, and a constant. Iren, women, youth and children seek the friendship of the sunny-faced. All doors are open to those who smile. All social is an open sesame to heart and home. By it is an open sesame to heartand hispelled, sorburdens are lightened, cares dispelled, sor-
rows banished and hope made to reign rows banished and hope made to reign
triumphant, where fear and despondency held high carnival.
Get the glow and radiance fromi such nearness to the throne as God permits to his own. Bring from a holy and divine communion a face luminous with light, and let it glow and shine on all around. A little child on the street of a great city, wishing to cross at a point where the surging throng and the passing vehicles made
the feat dangerous to the strong, and especially to the weak, paused, hesitated, and then asked a sunny-faced gentleman to carry her across. It was the sunny face inakes no mistakes.

## sharing jovs.

It is a truth not sufficiently reflected on or put into practice, that we may everyIt is our privilege and duty not only to enter into others' sorrow, but others' happiness. We are to rejoice with them that rejoice, as well as weep with them that Weep. If we do the latter ouly, and not
the former, our soul will be too heavily the former, our soul will be too heavily
weighted. We are entitled to this compensation. Sympathy should not be restricted to a sharing of the woes of our neighbors. When we see them in bliss it is our place to give hearty thanks. The doxology should rise to our lips a great many times a day, not only for our own manifold mercies, but also for the blessings rightly attuned to praise, the happy family circle we look in upon, the successful circle we look in upon, the successul
stroke of legitimate business that we hear about, the prosperous career of a worthy man of which we read, will call forth our halleluiahs, and be a very positive acces-
sion to our own good cheer. This is a lawsion to our own good cheer. This is a law-
ful part of true Christian deliglit. We should cultivate it more.-Zion's Herald.

## WHO WILL APPLY?

We don't know how much the following advertisement has been circulated, buit since the employment is of such a noble grade, and thinking that some of our readers may be benefited by applying for the position, we give place to it in our columns:
"Wanted, in one hundred thousand households, a willing, sunshiny daughter, Who will not fret when asked to wipe the dishes, or sigh when requested to take calre
of the baby; a daughter whose chief delight is to smooth away a mother's wrinkles, and who is quite as willing to lighten her father's cares as his pocket; a girl who thinks her brother quite as fine a fellow as some other girl's brother. Constant love,
liigh esteem, and a more honored place in the home guaranteed. Employment assured to all qualified applicants. Address Mother, Home Office."

## QUEER SAYINGS.

America is not the only country where a "Poor Richard's Almanac" has appeared, judging by the following Chinese sayings: When they wish to describe a person
who preteuds to be very brave and makes a great parade in order to show his courage, they say that "he is cutting off a hen's head with a battle-ax." A coward who boasts of his courage they cal a "paper tiger." They he is not, to a fox that tries tolook as noble and strong as a tiger. If a person is ignorant of books, they will say, "Turn him upside down, but not a drop of ink will come out of him."
Within the past few months we have received over five hundred letters containing money,
vithout the names or post-office addresses of without the names or post-office addresses of
the writers. We have also received many letters abusing us for not filling their orders, and upon investigation it was found that no
names or post-ffice addresses had been signed names or post-office addresses had been signea to the orders.
We are anx
We are anxious to know who sent us the sumicient addresses, and if those who cause for complaint will write us a plain, genfacts, we will gladly make an investigation and rectify the error.

 aiogues of ali nortbern seedsmen.Seed of Horse-bean.-E. R., Ohio.
REply by Josepif:-As stated on an earliex occasion, seed of borse and other English
beans may be had of $J$. M. Thorburn \& Co.,

Mixing Ashes and Stable Manure.-J REPLY BY JOSEPH:-I do not mix ashes and stable mannre, but prcfer to apply both sep-
arately, piowing the mannre under and then putting the ashes on top ber Coal A shes-Celery.-L. E. L. Lot, W. Va.
REPLY BY JosErM:-COai ashes bave no par-
tieular value as a fertilizer. Sometimes toyy
tome bandy as a mulch, or to loosen a stiff soll. For celery, I use White Plume for
earlyand Giant Pascai for late. "Ceiery for
Profth" gives ali nceded directions for" growing the crop
Fertilize tady, N. Y.. Writes: "Could I Expect Schanec-
good crop of onions on land that has not been
manured manured for several years, by applying ferti-
IIzer at the rate of 2,500 pounds to the acre?
REPLY BY JOSEPH:-If the land is very rich wise it would not be safe to depend on concenCable Reader. REPLY BY Joseph:- Gre cahoge-maggot-a
small, white worm or gru-is especially fond
of cauliflowers, aud often ruins whole crops. By using to
young plant, or by spraying freqnently with
trong solutions of muriate of potash or of kainite.
in check.
Lettice in Greenhouse Rotting.-E. B.,
Harrison Oity, Pa. REPLY BY JoSEPH:-Water on the mornings possible, apply the water to the soil only, not
to the plant-tops. I use fower-pots half sunk plants, and at proper intervals, between theme with water, letting it
soak into the ground, and repeat as often as
seems needed. Ashes an Pa., unleached, "(l) What is the manuriai value
of ashes per bushel?
(2) Is 'edole corn? (3) Is an applization of hard-wood ashes ROD For potatoes?
REPY:-(1) The valne of ashes
depends on their strength. Usually, fresh
wood ponnd for fertilizer, or say twenty cents per
hushel. (2) The "odorless' fertilizer is a basic
siag, and contains about 20 per cent phosphoric acid inia falrly available form. it is good for
any place where a phosphate or snperphos-
phate may be needed. on corn it will nsually
give good results, and it may on potatoes. (3) We land is a littie acid. otherwise we have
to guard against the tendency of ashes (and ail
alkalies) to produce scab.

VERSE FROM THE OLD ENGLISH READER.

But then how llttle do we need In this the art of living lies,

IHE OBJECTS FOUND AT POMPEII. AVE just had a private view of the silver objects lately found at Pompeii,
which are now in the museum here, ut not yet publicly exhibited, being kept in a case in one of the deposit onged to the same table-service. Th most interesting object is a small figure in silver of Jupiter, which, together with its tiny square pedestal, is not more than a high-backed throne, is most delicately chiseled, and in spite of corrosion, the resembles that of the Olympian Jove position of the socket it must have been raised on high, and probably held round. The mantle is folded over the ross the knees. falls in graceful drapery across the knees. The right hand rests or
the right linee and holds the lightnings Of.the sandaled feet, the right rests on the
pedestal, while the left is slightly raised, issing. The whole was most likely now missing. The whole was most likely an
ornanient of some central piece belongiug the service. There are four deep silve
ine-cups on slender pedestals, perfectly plain, and generally as bright as if th her cupboard. - Also, several small plates bearing a pattern of foliage, flowers, swan and panthers in a running design. small silver sieve would seem to indicate
that wine was warmed with some herbs or other ingredients and poured through
into the cups, as it is of just the fittin ize. There is also a little silver bottle
size with narrow neck, and holes in the bottom and larger spoons, egg-cups of differen
sizes and quite plain, and a flat, round bronze dish, which has been lined with silver, now almost all destroyed and the remaining objects of this interesting service of silver plate. There are nc initials
smith
possessed it. The objects have not yet
been studied or explained by the savants of the museum, nor can I tcll you to what period they are supposed to belong.

$\mathbf{I}^{\mathrm{N}}$
passiug upon the income tax case the Unted States Supreme Conrt decided That the act of 1891 is invalid so far as it
attempts to impose a tax upon the rent or income of real estate withont apportionment.
That it is invalid so far as it attempts to levy a tax upon the income derived from it is iu effect a tax upon states, and impairs their power to borrow money
Upon all other points submitted in the case, including the constitutionality of the law in general, the eight justices who heard the arguments were equally divided, and therefore uuable to make a decision.

The decision, or rather indecision, of the Supreme Court unfortunately leaves in operation an income tax system even more unfair and odious than the one adopted by Congress. Incomes from investments in bonds and real estate will be exempt. The very class the socialists wanted to strike is now out of reach. The blow will fall npon the merchant, the nanufacturer and the producer. For this, however, Congress, and not the Supreme
Court, is to blame. The blundering bungCourt, is to blame. The blundering bung-
lers who made and passed the act are lers who made and passed the act are
responsible. There is a constitutional way responsible. There is a constitutional way
for the federal government to tax incomes from real estate, bnt they deliberately avoided it. If the act is not completely overthrown in the conrse of litigation now
pending, it will in all probability be repealed by the next Congress.

The following extracts are from the opinion of Justice Field:

- mark is marked by discriminating features which affect the whole law. It discriminates between those who receive an
incone of $\$ 4,000$ and those who do not. It income of $\$ 4,000$ and those who do not. It
thus vitiates, in my judgment, by this arbitrary discrimination, the whole legislation. The legislation, in the discrion-
ination it makes, is class legislation. Whenever a distinction is made in the burdens a law imposes, or in the benefits it confers ou any citizens by reason of their birth, wealth or religion, it is class
legislation and leads iuevitably to oppreslegislation and leads iuevitably to oppres-
sion and abuses and to general uurest and disturbance in society.
"Under wise and constitntional legislation every citizen shonld contribute his propertion, however small the sum, to the support of the government, and it is no kindness to urge any of our citizens to escape from that obligation. If he contributes the smallest mite of his earnings to that purpose, he will have a greater regard for the government and more selfrespect for hinself, feeling that though he is poor in fact, he is not a pauper of his governincnt. Aud it is to be hoped that, whatever woes and embarrassinents may. betide our people, they may never lose betide our people, they may never lose qualities preserved, they will ultimately quainies preserved, they will ultim
triumph over all reverses of fortune.
"If the provisions of the Constitution can is the course of usurpation to end? The present assanlt upon capital is but the beginning. It will be the stepping-stone to others, large and more sweeping, till the poor against the rich; a war constantly growing in intensity a a war constantly growing in intensity and bitterness. I inating taxation and nnllifies the uni formity taxation and nnlifies the uniformity mandate of the Constitution, as said by one who has been all his life a
student of our institutions, 'it will mark the hour when the sure decadence of our present government will commence.'
"I am of opinion the whole law of 1894 should be declared void and without any binding force-that part which relates to the tax on the rents, profits or income froun real estate, that in so much as constitntes the direct tax because not imposed by the rale of apportionment according to the representation of the states, as prescribed by the Constitution, and that part which imposes a tax upon the bonds and securities of the several states, upon bonds and securities of their municipalities, as being beyond the power of Congress to impose, and the law so far as it imposes duties, imposts and excises as void in not providing for the uniformity required by the Constitution in such cases.

14E foreseeing liave for some time recog nized that the greatest menace to ou free institutions lay in our great centers of population. During the past eighteen months a wave of reform has been push ing itself forward throughout the whole country. We have in previons number called the attention of our readers to the splendid resnlts of Dr. Parkhurst's work in New York City, and have referred to the reforms stimnlated in San Francisco New Orleans and Philadelphia.

## -

After long years of municipal corruption hicago seems to have deterinined t cleanse her Augean stables. Reform and civil service were the watchwords of the April election. George B. Swift, Republican reform candidate, was elected by a majority of over forty thousaud, and the civil service measure was carried by a majority of over forty-five thousand.

Few probably realize how much this re form movement in Chicago is due to the work of the distinguished English jour nalist, W. T. Stead, of the Review of Reviews Following up his suggestion, the Civic

Federation was organized, and to this or ganization is due largely the great major ities at this last election. If the people only knew it, they are sovereign and their will is law; but organization and concen tration of endeavor is absolutely necessary to carry forward the people's wishes

Lefe minois democracy is in a state question. Extremists have been working actively to get the party conmmitted to silver morfometallism. Others have been trying to. "head off" the stampede, and have called on President Cleveland for help, and he responded by writing a letter Although failing to define sound mouey and safe currency, this letter is clear and forceful against the illusions and evils of a debased currency. It reads in part as follows:

What is now needed more than anything else is a plain and simple presentation of the argument in favor of sound money. In other words, it is time for the American people to reason together as nembers of a great nation which can promise them a continuance of protectiou unsuspety only so long as its solvency is unsuspected, its honor unsullied, and the Tliese things are all exchanged for the illusious of a debased currency and the groundless hope of advantages to be gained by a disregard of our financial credit and commercial standiug among the nations of the world.
"In these restless days the farmer is tempted by the assurance that though our currency may be debased, redundant and uncertain, such a sitnation will iunprove the price of his products. Let us remind him that he must bny as well as sell; that his dreams of plenty are shaded by the certainty that if the price of things he has to sell is nominally euhanced, the cost of the things he must buy will not remain stationary; that the best prices which neap money proclaims are nusubstantial real and palpable, he must necessarily be left far behind in the race for their enjoyment.
"It ought not to be difficult to convince "isinge-earner that it there were benefits arising from a degeuerated currency, they would reach him least of all and last of all. In an unhealthy stimnlation of prices an increased rost of all the needs of his home must long be his portion, while he is at thc same time vexed with vanishing isions of increased wages and an easier Iot. The pages of history and experience are full of this lesson.
"If reckless discontent and wild experiment should sweep our currency from its safe suppori, the most defenseless of all who suffer in that time of distress and of national discredit will be the poor, as they eckon the loss in their scanty support, and the laborer and the working-man, as he sces the money he has received for his toil sluink and shrivel in his hand when he tenders it for the necessaries to supply his humble home.
"Disgnise it as we may, the line of battle is drawn between the forces of safe curency and those of silver monometallism. will not believe that if our people are afforded an intelligent opportunity for sober second thonght they will sanction schemes that, however cloaked, mean disaster and confusion; nor that they will consent, by undermining the foundation of a safe currency, to endanger the beneficent character and purposes of their government.'

## T

HE great war in the Orient is at an end, or practically over. The conditious of the treaty liave been signed, and ouly wait the ratification by the imperial anthority. While the conditions in detail are not known, it is safc to say that Japan has dealt fairly with her opponent. Chiua will cede Formosa to Japan, and probably pay an indemnity of from one hundred to one hundred and fifty million dollars; Corea will be recognized as an independent state, and the points on the mainland of the contiuent already taken by Japan will be held as surety.

It is also intimated that China and Japan have formed a defensive and offensive alliance. If this is one of the terms of the treaty, it will make the yellow race forcver predominate in the Orient. There are hose who believe that this is not encour aging for the rest of the world; but if China assumes the new civilization, we have really as little to fear as if she continues her conservative policy of stagnation. The English-speaking race predominates, and its mission is to the world. Whatever has made Japan a great nation in these few years, she has taken frou the Anglo-Siaxon races. These two great countries will never outrun their leaders. By opening up China, new impetus will be given to the world movement of the nineteenth century civilization.

The national bulletin furnishes to all classes interested in agriculture-producer, consumer and dealer-accurate and impar-
tial information as to actual weather and crop conditions from week to week throughout the season. Mark W. Harrington, chief of Weather Bureau, Washington, D. C., will, as far as the limited edition will allow, furnish copies of the national bulletin to postmasters or others who may be willing to give the bulletin public.

## Return of <br> Clews' Finencral Review

Prosperity. of April 13th says.
Prosperits. "All the commercial The upward tendency in the prices of merchandise becomes more marked, which means not only a sustained increase in the demand for goods, but also a growth of confidence among the traling comununity.
We have witnessed this week a pronounced We have witnessed this week a pronounced Coal has also been marked up'and also silver, thus showing the tendency of products to seek a higher valuation. It is an evidence that the couutry is waking no from its long-existing condition of pessimism, and that the brighter side is becoming visible to those engaged in business undertakings. The outlook for the crops
generally has materially improved of late.
"What this comntry particnlarly wants this sear, however, is a good yield of corn, and not excessive ones in either wheat or
cotton. The two latter crops can be too large to be of benefit, while the former cannot be, as it is a product that never deteri-
orates with age, and makes the most solicl orates with age, and makes the most solid1
and health ful food for both man and beast. and health ful food for both man and beast.
In it we have little competition with other nations, and no fear of any. It is therefore entitled to be considered the king of
crops in this country, and has dethroned cotton, which used to be so considered."

## Beef and <br> "It seems clear," says <br> Cattle Prices. Bradstreet's, "that the

cattle and ureat, so noticeable lately, is due to shortage in supply. The low prices that prevailed the past three years made it un-
profitable for farmers and ranchmen to carry large numbers. The drought last year and high prices of feed necessitated
unusually close marketing. Hard times also caused free selling. The result is being realized. The prospective supply in the West is 25 to 40 per cent short of last year, and will remain so for at least two
years, as it requires from two to three Sears to fully develop a prime steer. That there is a marked shortage is apparent in a reduction in receipts of cattle at Chicago,
St. Louis, Kansas City and Owahn since St. Louis, Kansas City and Omaha since January 1st of 275,000 as compared with
last year, and 315,000 from the first three mouths in 1893. The decrease is estimated beef. The slaughtering at the points named since January 1st is equal to $91 / 2$ per cent, and receipts to 14 per cent.
"The question is one of supply 5 and deone hundred pounds higher than last year but are 25 cents lower than the top this year, and $\$ 1$ higher than the low point this
year. Dressed beef is $21 / 2$ cents higher year. Dressed beef is $21 / 2$ cents higher
than last year on the average. Butchers' that last year on the average. Butchers'
cattle are inquired for so freely, owing to catce high price of prime steers, that the supply is too small to go around. Prices are the highest since 1885 . If cattle were in the country they wonld be marketed, as
recent prices have never failed to bring them out. There are no indications of any combination

## Spray for <br> Secretary Morton said

 Coding-Moth. the United States with foreign countries has always been profitable. The demand for apples grown in theUnited States has always been in excess of the snpply. The United Kingdom of months ending September, 1594, paid the orchards of the United States $\$ 2,500,000$. The greatest enemy to our export apple is the 'colling-moth.' But the entire crops
can he made wormless if the orchardists of the United States will use the following recipe:
to Use Paris green at the rate of one pound ient poison for the cepacity of the tank
used, and make it into a thin pailut with a
small quantity of water, and add powdered or quick lime equal to the weight of poison1
nised, minixing thoroughly. The lime takes up the free arsenic, and removes the danger of scalding. Strain the mixture into the spray-tank, taking care to pulverize and wash all the poison through the strainer. During the operation of spraying, see that the liquid is agitated with sufficient frequency to prevent the settling of the poison.
"The prime essential in spraying is to hreak up the liquid into a fine mist, so as to coat every leaf and part of the plant as This should not require more than from This shoukd not requine more than from
three to seren gallous for a comparatively three to seven
"Let the first spraying follow within week after the falling of the blossoms. of either apple or pear, and follow this with a second treatment just before the fruit thrus down on the stem, or when it is
from one fourth to one half an inch in diameter. The tirst spraying reaches the eggs laid by the moth in the flower end oi the fruit, shortly after the falling of the blossoms, and the second the later eggs laid by belated moths. Do not spray trees when in bloom, and if a washing rain immediately
application.
"Knapsack sprayers suitable for applyiug the insecticide can now be obtained at reasonable pr

## NOTES ON RURAL AFFAIRS.

Timely Word That spraying with About Spraying. germ-kiling mixiture cides) will help ns to get the better of mauy of our most common and most destructive plant diseases slould not be doubted any longer, provided, however, that it is doue iu the right way; namely, in proper season and thoroughly enongh. Unfortunately, the work is often done imperfectly, either too late, or with badly prepared mixtures, or insufficient quantities, that iu more than half the cases the people who use the spraying mixtures fail to see the expected and hoped-for results. Then we hear the wail that "spraying does not pay." Sometimes the season is against us, too. Then, again, there are some of these plant diseases, like the celery-blight and the early-potato blight, which we may not yet liave learned to treat in the right way.

The inost pronounced
The Early Spray. The inost pronounced ever been able to secure were oll my
grapes. Where I have omitted the prograpes. Where I have omitted the pro-
tective treatment, the viues have usually fallen an easy prey to anthracnose and other vine diseases. Whenever I have sprayed the dormant wood in April with a simple solution of sulphate (either iron or copper) so thoroughly that the vines were paratively free from disease. If the treat ment is continued year after year, the mildews and rots will be gradually driven out of the vineyard. I find that there is a cumulative effect of this treatment, and the longer we continue to spray in this manner, the surer we are of seeing our grapes free from disease attacks. As a urther precaution, we may make late sprayings with the Bordeaux mixture, but
I find that the spray on the still leafless I find that the spray on the still leafless
wood is by far the most important. At wood is by far the most important. At
that time we can use the strong sulphate noweakened by the addition of lime, without which latter it canuot he applied to the oliage. If sou omit this first spraying and it is the simplest and most convenient of all to make), you should not complain when the results are not as striking as you had expected. These remarks apply not only to grapes, but to fruit-trees, and thiuk also to the various kind:
\% :
The later If you have let the time Sprayings. slip by for making the hant wood, all you con do then is to use mixtures promptly that, though weakened by lime additious or otherwise, are safe to put on the leaves. Thus far we do not so-called Bordeaux mixture. Bnt if you value your fruit, especially apples, be sure onapply it jnst as soon as the leaves make heir first appearance and beforc the blosoms expand. In fact, you cannot be too quick about it. There is now not minch
surface to go over, and you can well afford surface to go over, and you can well affro
to do thorough work in spraying. Put the to do thorongh work in spraying. Put the
stuff right on so as to be sure to coat erery
portion of tree or bush over with the
fungus-killing mixture. At the same time rou should not omit putting Paris green into the application. Our apple and pear trees here are badly infested with the budworm just about this time, and other leafeaters will sonn make their appearance, and if uot headed off in good season they may do considerable minischief. 1think I to one hundred gallons of water. This is stronger than generally recommended, but I wish to make sure work of it and not be foliage in consequence of the poor quality of the poison. The next spraying should be done immediately after the blossoming seasou. Never spray while the bloom is on, for fear of poisoning bees and perhaps other insects which are necessary to trans-
fer the pollen from one blossom to another, and from oue tree to another, and thus make the trees set fruit. This spray right after blooming is the one where the admix tire of Paris green is of the greatest importance. In poisoning the codling-worm fellow with poisonous mixtures only at the time that it tries to effect an entrance into the fruit. This it does when the apples are just "set."

Preparing A Michigan subscriberasks
Bordeaux ne whether I strain the
Mixture. to say that we must make our spraying mixtures in the right way, or we might as well keep our hands off the whole business. If the mixture is not properly made, we will ouly reap a crop of
disappointment, and afterward join in the wail that spraying does not pay. In the first place, it is always safest to prepare the mixtures freshly for every application. You might make a stock solutiou of copper already slaked. But the bluestone solution is easily made, and if you will only keep the copper salt suspended in the water, say in a basket or bag, so that the saturated solution of it can sink dowu and chance to work on the crystals and take up more of the solid substance, the whole will readily dissolve in very short order. Then in another ressel slake the fresh lime. Be sure that it is newly burnt lime, not old, stale stuff. Use enough of lime to be sure
that the excess of sulphuric acid iu the bluestone will not burn the foliage. Better an excess of lime than of the acid. On the other haud, if you use too much lime, the mixture may clog the spray nozzle.

The test with a solution of yellow prus siate of iron (ferrocyanide) in water is the nearest drug-store, and dissolve a little of it in raiu-water in a little vial. When you pour a few drops of this into the Bor brownish stain, there is lime enough in it. You may add a trifle more lime in order to be on the safe side, but a very little of it will do. Mauy persons do not like to fuss with such tests, and with chemicals in gen eral with the real nature of which they are not familiar.

A Simple For these people, and for all
who use the Bordeanx mix Formula. ture only on a very small scale, there is a simple and easily remem bered formula which answers every practical purpose. It is as follows: One pound of copper sulphate, one pound of lime, ten gallons of water. Dissolve the copper, slake the lime, and make the mixture in the same way, as for larger quantities, without using the ferrocyanide test. Just pour the milk or cream of lime into the all the time. If the lime is fresh, this formula puovides for pleuty of it, and the whole is just about of proper strength. Of conrse, there will be some stony or gritty sediment in theold clog the nozzle badly while spraying. I always try to retain a much as possible of this sediment when pour the lime into the copper solution. But even this precaution does uot save us ture There of straining the wing this job Just smspend a bag made of a piece of old fertilizer-sack or of similar coarse cloth over or into the barrel that you wish to fill with the mixture, and pour it in aud going I the simple strainer. of the spraying business in a nutshell.
T. Greiner

## (1)w finm.

Teties of the sweet potato a nomenclature of the sweet
potato is miserable and altogether unreliable. One variety is often known by many different names.
The Nansemond, a yellow potato of medium size, and very smooth, is the is rather firm and dry; there are many other varieties decidedly superior to it in North as the Jersey Sweet, and is largely grown in New Jersey, Maryland and Virgrown in New Jersey, Maryland and
ginia. In the South it is known as the Misssissippi Yellow, or Mississippi Yellow
Yam. Tlie leaf is small and entire, some Yam. The leaf is small and entire, some
being heart-shaped and some slightly shouldered; the foliage is slight and light green iu color.
In the South every forked-leaf, yellow
potato is knowu as the Yellow Yam. This potato is knowu as the Yellow Yam. This
class, though generally small yielders, possesses superior eating qualities, and the are five or six varieties, some being dry - and sweet and othcrs soft and sweet. The variety of this class which possesses the
highest eating qualities has a rather long root of medium size, and veined; its skin is a little rough and a rich yellow; the flesh is a rich yellow with streaks of
orange. In quality it is decidedly above any other sweet potato. Its soft, juicy furgotten. The Yam is partial in its growth, requiring a sandy clay loam of good fertility.
The Queen is the favorite in the Souththe home of the swect potato-and is Some varieties may possess better eating qualities, some may be a little earlier or a little more productive, and others may be more attractive in appearance, but no other oue variety conibines so many goon
qualities. It is early, prolific, of excellent quality, a fine keeper and shipper, a good quality, a fine keeper and shipper, a good
selling potato, and suited to any soil. Trnckers like it because it yields well, keeps well, and grows well in any soil;
marketmen and grocerymen like it bemarketmen and grocerymen like it be-
cause it will bear rough handling and also please customers; wholesale men and cominission merchants like it because it ships well. Any sweet potato will stand
shipment better if put on cars direct from shipment
the cellar.
The Strasburg, most probably a sport from the Bermuda, is the favorite for early use on the Nashville market. It is a variety not widely known. It belongs to a class of sweet potatoes which are indi-
vidual in their habits of growth. Roots of this class germinate quickly and produce this class germinate quicky and produce
many slips, are large, short, surface usnally midged deeply, and of inferior quality. This class, however, are early and productive, and every grower of sweet potatoes
shonld have a few for early use. The Red shonld have a few for early use. The Red
Jersey, abont the same as the Bermuda and Peabody in every respect, and the
Early Colden belong to this class. The Early Golden belong to this class. The
Strasburg and. Early Golden so much resemble that they should be called one
and the same. Every distinction should and the same. Every distinction should
have a difference. This class is also suited to any soil.
The Nigger Choker (I call it this because it is the name by which it is most widely known) is varionsly known as Orleaus Red, Louisiana Red, Shaker Red, Red Yam,
Black Yam, Mexican Yam, and perhaps by Black Yam, Mexican Yam, and perhaps by
other names. The name Nigger Choker is other names. The name Nigger Choker is
also sometimes given to the Bermuda, aud the name Red Yam is also given to auother variety which has a pale red skin and a deep yellow flesh. The Nigger Choker, as here listed, has a purple vine, the potato is
long and irregular in shape, skin aniline, long and irregular in slape, skin aniline,
flesh snow-white, and is dry, mealy and sweet. It takes the name Yam perhaps
from its divided leaf. The leaf is not divided as is that of the Yam; its center lobe is long, and the two small lobes at its base on either side miglit be called shoulders to this main lobe. This variety is grown from Kentucky to the Gulf, and possesses individual characteristics. It is slow to germinate, and is therefore a good variety for late spring. While its range of
adaptability to different soils is large, the variety decidedly has its prefereuee. It does uot love a poor soil, which is immadoes uot love a poor soil,
terial with many varieties.
The Shanghai, or California, is similar to the Queen in habits of growth and general appearance. Its keeping and eating qual-
ities are good, and it decidedly stands at

| the head of the list as a producer. I will |
| :--- |
| remark lere that the soil and size of the | $\left|\begin{array}{l}\text { root has much to do with the quality of } \\ \text { roo } \\ \text { any variety of the swcet potato. It is an }\end{array}\right|$ any variety of the swcet

excellent variety for stock.
The Bunch (or Vineless) Yain is a variety of late introduction, and the biggest no velty among sweet potatoes. It belongs to the Yam family, as its name indicates. It is also partial to certain soils, yields about like other Yams, and is only moderate in quality. Being upriglt in growth, with very short vines, it can be cultivated
like the Irish potato. Remember, though, farmers, that it will not keep down the grass and weeds as other varieties. The
Bunch Yam stands drought well; its vines Bunch Yamstands drought well; its vines
can be easily mowed for hay, and its keeping qualities are good. Considering the uovelty of the variety and some good qualities it lias, agriculturists shonld give it a trial.
The varieties of the sweet potato are marked and many, though there are not nearly so many varieties as names. The Louisiana state experiment station, at
Baton Rouge, gives thirty-six different Barietics. Mauy of these have marked difference. Climate and soil have mucll to do with varieties. A careful commuch to do with varieties. A careful com-
parison and discrimination would greatly parison and discrimination would differ from
reduce the number. Varieties difer reduce the numbcr. Varieties differ from
each other in slape, size and color of the lcaves aud roots, color and nature of vine and foliage, eating and keeping qualities of the roots, and prodnctivcuess and habits of growing. The average farmer makes his discrimination in the shape and color of leaves and roots and the eating qualities of the potatoes. I have presented above snch varieties as I thonght would be of general interest. It is hard to discuss such a subject without being tedious. I shall therefore ask the amateur to excnse me. -The sweet potato yields from 100 to 400 bushels per aćre ordinarily, depending upon the soil, climate, eultivation and the variety, and is best suited to a good sandy clay loam. This is perhaps the favorite vegetable of the South, being grown in every fanily garden, whether he be rich or poor, white or black. Though widely
grown in southern states, there are few grown in southern states, there are few
southerners who know anything of the different varieties of the sweet potato Nearly every section of the United States will grow most of the above varieties, the hardiest and earliest of them, to say the least, and it is strange the sweet potato is not more widely grown, and that varieties are not better known both North and South.

## HOW SHALI WE START IN SHEEP AGAIN?

There are evidences, other than the great reduction in numbers, that a reaction is coming in the sheep business. No one
thiaks there is a question as to the revival of interest in business and the sheep in dustry along with better times. The expe rience of the last two years has knocked a
good deal of sentiment out of wool good deal of sentiment out of wool The sh-especially political wool grower the heads and hearts of the people of the United States. Very few of those who have sold their flocks intend to stay out of the business. Many of them sold under a protest, aud intended to buy in again as soon as they thonght it wonld pay to raise
It is plainly seen that wool will not hold first place in the new era that we are first place in the new era that we are
entering upon. The mutton is of first importance, and wool is to be, can be and must be a strong second in the future
sheep husbandry of the United States sheep husbandry of the United States. We
shall call this future sheep industry the shall call this future sheep industry the
mntton era, uot because less wool will be raised, but because the mutton prodnct will protect the wool, and give permanence as well as prosperity to sheep raising.
This opinion is shared by the friends of sheep from every quarter, and is the experience of sheep raisers everywhere. Australia is figuring on mutton to save them as it has New Zealand. The same is true of South America and South Africa.
It is but natural that our sheepmen shonld do as they did aforetime-look to the Merino sheep as the nost useful sheep to raise. It is true, the Merino, of all breeds of sheep, suffered most by the dis-
turbances that came to the sheep industry. There is a sort of notion existing that the Merino has been knocked out; that some other kind of a sheep must be resorted to if prosperity and stability is to be experienced in this country again. In
this they seem to forget the knowledge this they seem to forget the knowledge
they have of the Merino, its lardiness, they have of the Merino, its hardiness,
hard-workiug qualities and its vigor uuder
rials and difficulties. It is well to rememof the Merino has been tested thoroughly, and has not found one to rise up and condemn it during the last few years. This was not so when, years ago, it was kept for Young, thrifty, well-fatted Merino mutton passes critical iuspection now with the best in the laud. Its size is a popular one with butchers and consumers the world over. In this particular it outrivals the larger breeds, and requires the early killing of them to meet the best market.
Again, right here the British breeds are possessed of an advantage. They get the standard size and fatness at an age that is most economical and profitable to the
grower. In this the mutton Merino far grower. In this the mutton Merino fal
snrpasses the type used during the wool era of our sheep industry. Of this we will have more to say later oll.
What sort of a sheep will meet the needs conditions that now raisers under the new raisers? As some types of the Merino, as said above, lack soine essential qualities to neet the wants of the times, I shall outline my views by quoting what is said in the American Farmer of the Suffolk sheep, which has recently been introdnced into this country. In this I do not wish to be understood as depreciating other breeds, but use this to show what may be a reli able standard for all breeds to work to, and to it they must com
obtained. I quote:
SOME GOOD POINTS IN A SUFFOLK SHEEP.
"The Snffolk is a very prolific breed, as is shown by the following: Registered focks of this breed report, since 1887, the
following number of lainbs to each one hundred ewes: 1887, 131.63; 1888, 133.67; $1889,134.50 ; 1890,133.14 ; 1891,132.60 ; 1892$ 125.22. The Iowa Suffolk Sheep Company in 1893, 174.2, aud 1894, 166.04 per cent of lambs.

WEIGHTS OF SUIFOLK SHEEP
"In ordinary farm condition, lambs, 50 to 100 pounds; yearlings, 100 to 200 pounds; and two-year-olds, 175 to 250 pounds. Rams are usually heavier than ewes. Have
lambs now four months old weighing 115 lambs now four months old weighing 115
to 120 ponnds. We have two-year-old ewes, at present writing, weighing 230 ewes, at present writing,
pounds, and rams 275 ponnds.
"Breeds of sheep with records of early maturity and fecundity that entitle them to public favor with mutton-lamb raisers should look well to their, honors while the
Suffolks are able to show such wonderful Suffolks are able to show such wonderful

Under such conditions as now exist, and that may, for aught we now know, conimportance to start into sheep with all the advantages of breeds tliat are possible. The true battle of the breeds is on, and must be decided by results in the pastures and at the stock-yards. "Behold, old things have passed away and all things have, or may,-become new." The question has to be met and solved wisely, or all will be a
failure.
R. M. BeLL.

## FARM.HANDS.

Of late years there has been such a steady flow of laboring men trom country to town aud city, that it has now become a difficult task to secure efficient and trustworthy help on the farm. Formerly, farmers neighbor's sou who was already wel trained in farm work. He was taken into the home of the farmer and treated as one
of the family. He took an interest in seeing the work done properly, and took an equal pride in large crops and fine looking stock.

But a change has taken place. Available farmers' sons are seldow to be found, and if found at all, do not prove to be of the disposition formerly common. They must to house the latter and stall-room and feed for the former. They claiut all holidays and frequently demaud Saturday afternoons besides. They prefer to spend the evenings loafing at the village stores rather than with the farmer's family. The loss of sleep causes them to be dull, stupid and heedless the following day. They
take no interest in their work, care nothtake no interest in their work, care noth-
ing for stock or crops, and must be watched ing for stock or crops, and must be watched done, the chief object with such hands being to draw their wages.

Before starting on a farm for myself, I
worked among the neighboring farmers
for a time, and always did the work as
nearly right as I could, and it made no difference whether any one was in sight or uot, I continued on with the work. Such was the rule among those who desired to If two or more of us were working together, we sometimes vied with each other as tor which could do the most, and frequently cach sought to have his work performed in best shaje. But it seems now that the steady young men have found employ ment elscwhere, and ouly the inferior ones remain, thongh farm wages have not declined as have the prices of farm products; indeod, they rather appear to be ucts; indeco, thay rather appear to be
somewhat advanced. Seventy-five cents and board was formerly considered fair wages, but it is now scarcely possible to
secure any help for less than a dollar. Sixteen to eighteen dollars per month, with board and washing, wonld formerly secure the best of liands. Now the poo ones want twenty dollars, board, washing mending, horse and buggy kept or furnished.

It is really odd to sec how heedless some hands are. I remember once sending ont a hand to plant some squash and pumpkin seeds. He was given about three quarts of secd, and spent the entire forenoon in
the field, but reported the work finislied when he camc in to dinner. Not a single plant made its appearancc. The seed was
uot at fault, for I had planted some myself uot at fault, for $I$ had planted some myself with good results, so I concluded the
youug man fed the seeds to the logs, and took a nap in some shady spot until the dinner-bell aroused him from his dreams of arduous toil.

Auother hand was once left to build some fence, while I was away. Slortly after dimer my wife looked out to see how the fence was progressing, bnt looked in vain, as she supposed, for the man, thongh she saw his coat langing over the fence. Sevcral times during the afternoon, as she
was about her work, slie glanced toward was about her work, sle glanced toward
the ficld to see, if possible, what had become of the hand. His coat renained hanging over the fence, but evideutly he had gone to some other part of the farm. Finally the bell was rung for supper, and the coat straightened up, ready for a good, aint meal. We supposed he hap to rest, aud nothing short of the supper-bell could have revived him. This man was an excellent hand, however; when I could work with him.

One liand has continued to assist me during the busy season for the last seven or eight ycars. He demands the best wages, and can always be depended upon odo his work well. He is somewhat slow,
but his work does not have to be doue over again. I usually engage him a year in advance, in order to be sure of his
services. He is as honest as the day islong, not given to bad language or bad habits, and well knows how to do all kinds of farm work. But onc wonld hunt several days to find another equally reliable.

There is still a place for the faithful farm-hand, but the farmers of to-day are disposed to do their own work, by the aid who will proper manner. JoHN L. SHAWVER

THATS WITH INQUIRERS． me of Planting Potatoes．－I Hampshire，whether the tenth of June is early enough for
planting White Elephant pota－ toes．It is not easy to give
answer．Indeed，I feel fre to confess that $I$ am at present quite at sea concerning the best time to plant late potatoes．With early varieties，
think we will not miss it if we plant think we will not miss it if we plant
as early as the season will permit．What we want，and must do，is to get the crop
fully developed by the time that the usual summer drought，with its blight accom－ paniment，makes its appearance．I have
never grown potatoes in a place where I did never grown potatoes in a place where I did
not consider it perfectly safe and pref－ erable to plant the early potatues early． As to late potatoes，I carefully consider all the climatic couditions and other environ－ ments．Where the summers are short and
the potato crop needs the whole season for growth（as shown by the plants remaining green and growing until frost kills them）， twould plaut early，say a week ahead o the regular corn－planting season．This
would be safe，also；in all localities where nothing is known as yet of the leaf－spot disease or early blight，and little is feared of the dry weather in midseason．Where we have to reckop with the two draw－
backs mentioned，however，I would plant the late varieties as late as might be con－ sidered safe．The White Elephant，if I remember rightly（I have uot grown it for
quite a number of years），is a decidedly late sort．In my locality we could plant it the last week in June，and be sure to have
it cone to maturity（or to early gricf it come to maturity（or to early gricf
on account of the blight）．In localities with shorter seasons than ours（we can the first week in Juue would be as late as I would wish to plant this variety，and the White Star and other sorts of the same sea－ keep in fair growing condition during the hot，dry seasou（they are more apt to do that wheu planted late thau when planted
early），and the tuhers just ready to swell out wheu the late summer rains set in again，we will have our potatoes green and
growing until frost comes．Theu we are sure of a good crop．But on the whole you see，it is according to circumstances． spondeut asks what variety of sweet－（orn gives the greatest yield of corn and fodder，
and how much difference there is between it and the regular field corn．The chief difference is that if we have a ready demand for green corn at seveuty－five cents to one dollar a hundred ears，we can make a
good yielding variety like Stowell＇s Ever－ green pay us muich better if we raise the ears for sale and the stalks for fodder，thau
if we grow ordinary field corn for its ordi－ nary purposes．I invariably raise a good parcel of Stoweil＇s Evergreen every year，
and tind both the ears and the stalks use－ ful and profitable．The nubbins are left on，and are cut up and fed out with the producing food．But if 1 wanted the greatest amount of fodder，irrespective of the amount that might be realized by the would plant one or the other of the tall readers may remember the southern white readers may remember the southern white
corn，Blount＇s Prolific，which was so much written and talked about some teu or
twelve years ago．The amount of stalk twelve years ago．The amount of stalk
that this will produce is simply immense； and it sets any amount of nubbins，to
Manuring the Garden．－I have often
called attention to the great value of poul－ try manure as a gardeu fertilizer． reader at Pittshurgh，Pa．，says his garden， about forty by one hundred feet，has for
three years been manured moderately with lien and house manure and some wood ashes．Now he has the droppiligs of one
huudred hens，well mixed with soft－coal asloes and leares．I do not thiuk I would look much further for unauures，under
such circumstauces．Stiff soils may need the loosening effect of heavy applications of coarse materials which supply fiber and hulk－decayiug vegetable matter．On gar－
den soilI I have never found anything giv－
ing more generally satisfactory results ing more generally satisfactory results
Ham poultry droppings．The manure from Han poultry droppings．The manure from
wine liundred fowls，if well kept，should be thore than sufficient to makee even a poor
spot of ground of the size nientioned im－ spot of ground of the size nientioned im－
mensely productive．I have ofteu made
heary applications，and often laughed a
the idea that the idea that one hundred fowls furmish this a pretty weak application）．But when it comes to putting this quantity ou one tenth of an acre，there can be uo questiou to force the most luxurious growth of any crop we might plant．Of course，such a dressing would not be safe to apply in lumps or chunks．It must be thoroughly inixed with the soil，and if not，some of direct contact may get burued．There are a few crops for which a manuring of this kind may be far too strong，among then especially tomatoes and some bush beans．
These plants will make an immense amount of foliage under this treatment， but may set very little fruit．In consider－ ation of the luxuriant growth of leaf and stalk，we mnst always give our crops on
land thus manured plenty of space．Let－ tuce and cabbage and many other veg． etahles thus forced into quick growth are friend fears brittle aud succulent．Our manure in such doses might＂produce＂ worms on cabbages and turnips，and the black hug on squashes．I find that plants which make a strong and vigorous growth when favored by plenty of plant－foods and good weather，will often withstand and out－ grow the attacks of the various worms and bugs，while the
plants succumb．
Transplanting Beets．－＂Can beets be transplanted the same as onions？＂This is a question propounded by H．B．，Illinois． way to get some very early beets for table the hotbed or greenliouse，a few weeks be－ fore you can cxpect to have the ground in order for planting，and then set them out at the proper season in open ground．The
rows may be a foot apart，and the plants set about four iuches apart in the row． In raising mangels and sugar－beets for
stock，I also resort to transplanting when Stock，I also resort to transplanting when
I find vacancies in the rows．To fill themn out，I take plants that are still small，and
select a time when the soil is a little moist select a time when the soil is a little moist and otherwise in good order for setting
plants．Usually，I twist off a part of the tops of the plants just before they are planted．
Retail Prices of Yegetables．－The general scale of prices for our vegetable The gardener，it seenis to me，is entitled to all that he can get out of his husiness．I do not believe in cutting prices any more than is absolutely necessary to effiect a sale and in many cases I would rather keep a
lot of stuff on hand unsold，to be given to lot of stuff on hand unsold，to be given to
domestic animals，than to sell it at an un－ profitable price，and thereby demoralize the market for the present and perhaps the future．A reader wants me to tell him the usual prices of green regetables by the Prices are all the time changing．They may be high in one market，while the samc kind of produce goes begging in an－ other not many miles away．Then，one day prices may be good，and extremely ket，I can never tell them at what figures they should hold their products．They will soon find out，after they get to market，
what things sell for．My instructious are lo try to get the best prices that the mar－ ket affords，but not to sell any good prod－
uct below a certain figure，especially when the products are of a kind that can he held and the prospects are for hetter success in selling at another time．＂Get all you can＂

Orehard and Small Fruits．

## ARSENICAL POISONS FOR THE CURRANT． WORM．

A correspondent in Massach usetts write turing to recommend＇the use of Paris and thinks hellebore a safer remedy．And it is true that many persons are too care speak slightingly of the poisonous qualities of such substances，we should insist ou greater care in their use，but in order to
use them to the leest advantage we shouli understaud their nature ${ }^{2}$ more perfectly． The mixtures of Paris green that are used
on the foliage of plants inust be very weak， or they will destroy the leares．
In my experience，white hellebore，when
of good quality and used according to
directions，has always been a satisfactory
remedy for the currant－worm，but in many locatious it is difficult to get it of good quality；and ou this account sque growers of currants have resorted to weak mixtures of Londou purple and Paris green，which give them excellent results，
and in no way endanger the consumers of the fruit．If the berries were sprayed just before ripening with a mixture pound Paris green to 100 gallons of water and eaten at once on becoming dry，no in－ jury would result to the consumer，for one sould have to eat several hundred pounds f currants so treated at oue time in order o get a poisonous dose
In practice，however，the poison is washed off the fruit by rains，or blown of by the wind before being gathered；very
little of it，anyway，adheres to the frnit．If the worms appear and the Paris green is applied very early，as is generally the case， ruit will be washed by rain many times before it is ripe．If they appear after the cop is gathered，the poison can certainly do no harm．The only time when there could be any dauger from using these poisons is just as the crop is ripening．In uch cases the crop should be gathered be－ fore applying the poison；or if applied From much experience in using both arsenic poisous and hellebore to preveut the work of currant－worms，I am led to believe that there is as much dauger from ellebore as from arsenic poisoning in such cases；and then there is uo danger from the use of eitleer one，if ordinary intelligeuce is used．I think，when we have studied this matter more carcfully，we will find that as in the case of using Paris greeu for the cab－ bage－worm，there is very little danger rom its use for currants．In some exper－ rado mperiment station，he found that when Paris green is dusted from a bag in the proportion of one ounce of the poison o one hundred ounces of flour，and just nough applied to each head to make a light show of dust on the leaves，whic was sufficient to kill the worms，that a per oll would have to eat twenty－eight head of cabbage，outside leaves and all，at one meal in order to consume a poisonous dose
of arsenic．This makes oue＇s fear of poi－ oning from such a source seem very ridiculous．

INQUIRIES ANSWERED
Perfect－flowering Strawberries．－M．B． ．，Hillsboro couinty，N．H．I think you will find that Beder Wood，Captain Jack and Parker Earle are three of the best perfect－ lawering strawberries．

## Planting <br> spruce．－J．U．M

 Williamswee，too deep nor hardly too rich for Norway pruce．If the land is poor or hard where yon ish to plant，and you can afford the expense， the depth of three feet，and if mnch sand is found，to replace it with rotten sod．Norway an only do its best where its roots are in rich， moist soil．Grafting Roses．－M．E．B．，Cumberland， d．Roses are grafted in much the same not generally split，since the wood has large pith that makes it too weak to stand this whip，so instead，each is cut slamting，as together and bonnd and waxed．You will probably have your better success by budding

Grafting Grapes．－K．O．，Kantner，Pa Grapes shonld be grafted early in the spring before the sap starts，even before the frost is uns：freely，the scions are liable to be drowned out．If the scions are cut and kept from starting until after the vines are in leaf，and
then the grafting is done，it is oftenl success－ ful．The unlon shonld bc below the surface of the ground and covered with earth after being waxed．The clefl－graft is the form used，but instead of making the cleft with a knife，it gencrally mecessary to make it with a fine sam，
on account of the crooked grain of the wood． Plum Culture．－A．M1．B．，Viking，Wis．
The plums you liave will be greatly benefited
by having the sod broken np around them．
They by having the sod broken up around them．
They should then be heavily manured with any good manure；stable manure is espec－ ially yood，since it also acts as a mulch．The land should be kept constantly loose and mellow．If treated in this way，Jou will be
surprised at the results．The trees will with－ fand tbe dronght best when thus All dead wood should be removed，and the that beslde doing this yon had better get a few of the improved native sorts，such as De Soto，Forest Garden and Wolf，whlch are a
great inmprovement over the wild kinds and
are just as hardy．

## Plunh－blight

## by bom

## FIVE CROPS OF POTATOES FROM ONE

Fe years ago I purchased a sec tiou of public school land uear cultivated twentry, Texas, and oats, potatoes, beans, peas and garden truck, for a spring erop Our fall crop is generally put in about permitting. But as L engaged in the hay little before the time when I would have put in my fall crop, I allowed ground. The tops died dowu, and the tubers remained in the rows until the early fall rains set in, when they spronted frost came late in November, the tops died down again, and the tubers remained dormant in the rows as before until spring, when they came forth again, aud grew and
made a crop of early potatoes. The tops died down again, and in September made their appearance again above ground, and gave a fall crop, and so continucd until I
rented the place, after the potatoes had made the fifth crop from the origina
planting. The last crop had a large per centage of tubers as large as a heu's egg and larger.
We never have potatoes to freeze in the ground here, if left from fall till spring knowu since Texas was a part of Mexico. However, we anticipate a good
as the result of the cold winter

Ezra A. Jo
LARGE STRAWBERRIES.
Mr. E. C. Davis, Massachusetts, grew ten strawberries which weighed one pound and growu from any variety on authenti

record. They were grown from the Tin brell variety, and secured the prize of one Reid's nuiseries, Bridgeport, Ohio, who introduced this valuable new berry

## THAYER'S BERRY BULLETIN.

Frequent cultivation stimulates an early vigorous growth. The roots strike deep
into the mellow soil, and the ordinary drought is harmless.
Remove the winter mulch from strawberries. Cultivate betweeu the rows. Stir
the ground around each plant, replace the mulch, and large berries and lots of them may be expected.
Cultivated berries are less liable to injury y frost or drought
ash. An application of deficient in potsupply this want, and is especially uable for light, sandy soils
In pruning the raspberry and blackberry cut off the long, slender laterals, formiug an even, well-rounded bush. Re
small, weak canes from the hill.
Severe pruning of laterals will uot only improve size and quality of fruit, but greatly iucrease the yield.
If any plants newly set
If any plants newly set fail to live, put Thers in their places at once
This is especially
This is especially necessary in the bush fruits which are to remain several years. Currant and gooseberry bushes are often injured by the borer. The egg is laid about June 1st. When hatcherl, the young borer works its way into the cane and remains
uutil the following spriug, eating out the pith and causing death of cane.
As soon as the leaves start, the affected cut out and burned at once. । Picking, packing and marketing are important factors in selling berries. until fully ripe, aud pick fin the rine table.

For market, pick every day before to
ripe.
Never allow stems, leaves, dirt or imper fect berries in the box.
Always have a uniform quality, and the box well filled.
If you would have a good market, offer only good berries, give good measure and always deal honestly' with your customers. Remember, it costs no more to raise good berries: it costs no more to pick and diver good berries. Freight and express good berries always go first and bring highest prices.

EXTRACTS FROM CORRESPONDENCE.
From Colorado.-Farming nuder irrigation for eighteen years proves to me that it is a
rand success. Immense crops of hay, grain and potatocs are raised here, and the cultiva-
tion of fruit. Is a paying business. I believe there is no state better adapted to dairyin han Colorado.

From South Carolina.-The • Piedmont mate and pure water. Society is excellent nd churches and schools abound. Cotton and
11 the cereals are raised here. Hay and other forage crops receive a good deal of attention. arming. There are several large cotton fac tories in this section, and our people find
ready sale for all the products of the farm and garden. I will add that most all kinds of fruits and vegetables can be grown here. Good
substantial home-seekers from the North and substantial home-seekers from the North and
West are inost cordially welcomed.

From oregon.-Camas Valley is one of the best places in southetn Oregon. The winters
are warm and showery; the summers are cool are warm and showery; the summers are cool
and pleasant, with a cool breeze from the All kinds of vegetables and all kinds of small grain do well here. This place, like all otheis,
has some drawbacks. Our market is poor at the present time, but before a great while the
Roseburg and Coosbay railroad will be completed, and that will give us a better market
for what we have to sell. There is still some for what we have to sell. There is still soue
government land here that would make good Crimas ralley, Oregon.
Comes.

From Nebraska.-Hitchcock county is crossed from west to east by the Republican rolling prairie. The soil is a black, sandy is The bottom land along the creeks is covered hay. The divides are covered with buffalo-
grass that grows about four inches high, and makes excellent pasture. Land is worth from $\$ 3$ to $\$ 25$ per acre, and will raise good crops
when we have plenty of rainfall. It has been too dry here to produce a crop for the last two
years, aud it will be hard for the farmers to put out a crop th
Culbertson, Neb.
From Missourr.-Clinton county is the gar-
deu spot of Missouri. We have a population of over 16,000 . This county is adapted to var peaches, pears, plums, cherries and strawbe ries, and sweet and Irish potatoes. Wages for
farm-hands are $\$ 18$ to $\$ 20$ per month. Water is cod and plentiful. Land ranges in price, ac
cording to improvements, from $\$ 25$ to $\$ 60$ pe acre. This is a fine countrỳ, and any one wh We have a fine climate, and many other Whings to be th
of enterprise
practical farmers, more fruit and poultry raisers to come to this country. Our school are good.
month.
Girayson, Mo.
From Washington.-Goldendale is one of he oldest towns in the state. Its growth is slow and steady. Where I live, twenty mile fruit countries in existence. We are 1,000 feet bove the Columbia river, which is immecanous 200 to 300 feet deep, affords places for the cold air to flow in, keeping our day and night temperature more even. To the north,
the Columbia Hills, 3,000 to 4,000 feet high, shelter us. The soil is light and friable, bein very easily worked. The most remarkable moisture so extraordinarily well that there is no difference in the size of fruit from irrigated and non-irrigated trees, where the latter are properly cultivated. The largest apple at the slope" in this county, although it was sent by shippiug point, and also the residence of the credit. Plums, prunes, apricots, peaches, apples, pears, grapes and small fruits all do remarkably well; so do all kinds of vegetables. Our large wheat farms are being divided Goldendale, Wash.
 Texas three years, and by using northern
methods he raised thirty bushels of good corn per acre, while his neighbors raised only
ten bushels of nubbins per acre, yet would not acknowledge his methods superior to
theirs. During my residence in Texas, fo uearly eleven years, I have known many
Texas-born farmers to raise forty bushels of Texas-born farmers to raise forty bushels of
corn per acre, sixty bushels of oats, and onc bale of cotton. I must admit, however, that
Texas has a class of ten-bushels-of-nubbin farmers, but it is made up of men from nearly every state in the Union. They do most of
their farming on the bank of the creek with a fishing-pole, or in the woods with a
gun. A. H. says, "In a nutshell, I can take a common Texas cow (buy her from one of the thin milk at time of purchase, and by the same methods I give Texas land, I can bring
her, to five gallons of milk per day. Thensel days she will be back to one half gallon per day. It takes too much time to milk five carried on the same as the cow business. Let
northern men come here with their energy and methods, and this will be the best country paradise if in the hands of a progressive race." Now, every well-lnformed person knows the
average Texas cow is a beef produccr, and we Who live in Texas know that some longyield of milk, but it is certainly not true that gallons of millk per day. If they could, yo would not find our Texas farmers (old settler.
and new) Investing their moncy in Jersey cat tle, as they are. We have farmers in Texas who
make their land yield them one hundred dollars per acre in early vegetables and fruits. A great many of these men are from the
North, but the majority are either Texans or from other southern states. Texas, in spite o of berries, peaches, pears, vegetables, melons, beeves and hogs annually. The farmers of this county (nine tenths southern) are organ
ized for the purpose of securing special rate from the railroads for the transfer of
produce, and in order that, during melon and
vegetable season they may be posted, and no Texas needs good men fron the North, Eas
and West, for she is a unimproved territory. But, friends from thi
North, don't come to. Texas with the idea in
your head that every Texan is wholly de

## THE POULTRY YARD.

better buy bones than grain.
NsTEAD of buying bran, shorts or other
grain food, the farmer who keeps a grain food, the farmer who keeps
large number of fowls should seek to buy the bones (fresh bones) from butchers, and should have a bonecutter to reduce these to a suitable condition for feeding.
Meat or bone, at three cents per pound, is far cheaper than any kind of grain. The
bones supply the albumen, lime and grit, wones supply the albumen, lime and grit,
and also lessen the liability of making the hens too fat. The droppings will be twice
as valuable as before. If fresh bones cannot be obtained, theu desiccated fish, which is cooked and the oil pressed out of it, or ground meat and bone, or steamed
meat may be used. These articles seldom meat may be used. These articles seldom pound of meat and bone, or fish, may be allowed to sixteen hens ouce a day, or one ounce to each hen.
Grain is cheaper, apparently, but lean forming matter as more lime, as well as a fair proportion of carbonaceous matter, and lean meat should always be used. Neat being three times for producing eggs wheat much cheaper; and, in fact, as meat makes the heus lay, upon, it is really the cheapest of all foods. The food must conform to the dematerial. If a hen was a grain a day, she could
eat enough of it to provide the lime for the egg, aud she would soon be too fat to tay egg, aud
A fair comparison between grain and meat will show that meat is really cheaper thau grain, because it increases egg production. It also contaius less waste. A hare of it to the storage of fat, which is not desirable, while lean meat is almost entirely nitrogenous. When farmers feed more meat and less graiu, they will have duction profits from poultry. cutter also essens the co green-bone ones and meat can be cut fiue and fed without the necessity of cooking the meat. The farmer expensive if it makes the hens lay. The duces no eggs.
It is not to be inferred, however, that one must begin to cook and prepare feasts vinced that by feeding their hens on foods that will give all the advantages of table scraps, without so many of the attendant
disadvantages, they can be eucouraged to disadvantages, they can be eucouraged to place the industry on the same plane with
dairying. Less capital is required, and a smaller area of land is necessary for are all the year round in the daily receipts of eggs. But to make such a busiuess pay, the farmer nust abandou the belief
that a heu can subsist and give a profit on corm. He must also accept the fact that There is too much work (hard work), watering, repairing, dressing and ship wing to market, for a woman to do, unaided.

By observing the sitting hen one cau learn what to do with anl incubator.
Persons who place eggs under a hen do ot go to the poultry-house every two or three hours and pull the hen off her nes in order to examine the eggs, yet they will open the egg-drawer of the incubator and expose the eggs to the cool air and to constant changes of temperature, several times during the day. When the eggs are pipped under a hen, sle will not leave her lest, for fear of exposing the nevly hatched chicks to cold air, yet during th he very period when they are comin he very period when they are coming
out), the incubator is opened to satisfy the cut), the incubator is opened to satisfy the requests, and as the chicks are then more requests, and as the chicks are then more or less wet, the evaporation of the noistur causes thenn to be chilled, from which the never fully recover, while the chicks in
the eggs that are pipped, beiug weale the eggs that are pipped, beiug weake than the others, are subjected to a change of temperature of twenty degrees or more
and die in the shells. Although many incubator manufacturers place great importance on plenty of moisture, it is at all. A hen will bring off a full brood o the top of the hay in the barn-loft, and yet not a drop of moisture will have reached the eggs. In our own experimeuts we have secured strong chicks, yet no mois HALL

## THE SPECIAL-PURPOSE FOWL

Feed may be given liberally without filling the egg-basket. The effects of the ood depend upou its kind. The profit epends more upon the kiud than upon the quantity. At certaiu seasons of the year nature provides wild birds with
great variety of food. They have the privilege of selection. Some birds live onich lay the greatest number of bird those which subsist on seeds and plauts, as vell as upon insects.
One fact which should not be overlonked by the poultry-keeper is that no birds in in winter, excepting a few varieties that frequent the arctic regions. Even the
wild turkey, which raises a large brood, verforms that duty in a brief broo perme, and, then ceases from egg production. The same may be said of a jungle fowl, from which it is claimed that the
domestic kinds descended, although it favored with a mild climate, being native of India. Domestication changed
the conditions of reproduction, so far as climate, food and advautages are con cerned, but
disregarded.
The birds known by us as Leglorns, Brahmas, Plymouth Rocks, etc., are
really monstrosities eompared with their ancestors. Although man caunot himself nake a living creature, yet nothing is alterations and changes to suit his convenience. He divides the cattle into beef, places fine wool on the back of one sheep aud covers the frame of another with aud covers the frame of another with
choice meat. He makes the horse of
and activity in every muscle. His handiwork with birds is even mor marked, as is shown in pigeons and ou many breeds of domestic forvs. Nature bives him full power to improve, opposing by introducing hybrids. No breed pos sesses all the desirable characteristics, yet each breed arcels in some particula respect. Determine for what purpose you desire poultry, aud then endeavor to select the breed whis

## MAKE THE TURKEYS PAY

Turk receive but very little attention from farmers after they have passed the critical stage. This is a mistake; to get the most money out of a turkey it should be weight. It is the weight that tells iu turkey, aud the difference of three or four pounds is quite an item. Iu fâct, where there is a large flock, the difference of a pound weight in each amounts to quite a sum. Turkeys secure a good portion of their feed at this season, owing to there being plenty of insects and worms, to say nothing of grass, seeds, ctc.; but if giveu a nod reed of a mixture of oats, corn an roost at night, they will give good results roost at night, they will give good results
in growth. About two weeks before marin growth. About two weeks before mar-
lieting the turkeys, they should be fed all the corn, moruing and night, that they will eat, and a mixed food should be furnished as well. The better plan is to the size and frame upon which to place the meat at the proper time. At times insect food in the fields is scarce, and in that case a mess of chopped meat, once or twice a
week, will be of advantage. A cross of Bronze with the common kinds quite an advantage in growth and weight A little milk iu a shallow vessel, say a saucer, is beueficial at all times; and when milk to thicken, our chicks and turkeys milk to thicken, our clicks and turkey may as well fare upou "Dutch cheese." For the this term, we would say it is
stand then clabbered milk, scalded sufficiently the curd to separate from the whey, when it is strained through a coarse cloth. This dry curd cau be mixed with the egg or with
oatmeal, or fed alone. In either case it makes au excellent and nutritious article of diet. In case this is not at hand, oat meal can be mixed with the boiled egg, or dampened with milk or water, and fed alone. In case milk is used, only enough should be mixed at once to keep sweet, as it will sour very quickly. When the
chicks are two or three weeks old, wheat screeuiugs and cracked cor'u may con titnte their eveuiug uneal

## MINY'S VOYHGE.

衰by Greta bryar.
ieve i'll take Miuy with me this oyage, wife
It was earl
It was early in the morning nd Captain and Mrs. Starbuck When the kitchen together. vere getting well of the whoop-ing-cough they used to wake up of mornings with a half-starved
feeling. Doctor Rice said it was good symptom, and told their mother to let them have anything they wanted. So they got into the hahit of making
what ordiuarily would have been their one'clock dinner, their first meal of the day, and It onl oned the relished
duty, and the domestics grumbled ahout it hut Mrs. Starhuck herself always helped about hreakfast. She was dowin-stairs hy the time hushand was at home, he was never many steps behínd her. This morning he was late, and Mrs. Starbuck was wondering what had
become of bim, when he approached her with become of him, when he approached her with
this greeting. Coming so mnexpectedly, it nettled her.
"I believe you think more of Miny this minute, Captain Starhuck, thau you do of your own children," she ex
the sound of her words.
"Supposing I should turn about aud accuse of me, because you won't get ready and go of me, because you won,t get ready and go
down to St. Domiugo this trip?" he asked, half playfully
"Captain Starbuck!"
This exclamation disclosed more than Mrs. hushand nuderstood it so.
"Yes, wife," he continued, "I'm going down
to St. Domingo, the first port the Starhuck twins, senior, ever set sail for in a craft of their own, and the last one, too, as you might say," he added, turuing toward the window. mistake, that last trip of his.
Mrs. Starbuck was loath to call up that reminiscence. It was liable to overcome the
captain, and make him lose control of bimself altogether. She didn't want the Starbuck twins, junior, to see their father under the influence of the memory.
"I'd like nothing better than to go to sea With you all may life," she assured him, crossing over to where he stood, "only I don't want why I keep them away from their Grandfather Allen's.! I dou't want them around the
shipping." "And they"re crazy to go," returned the captain, remembering the incident which had in-
fluenced him to come down-stairs and tell his fluenced him to co
wife what be had.
"Miny'll be company for you," suggésted would have a horror for her, too." heen working iu an altogether different
groove, and it was not until his wife slowed her resentment in the way she sometimes did, when the relation between his hrother's
child and his children were placed side by child and his children were placed side by
side, that he really comprehended all this project involved, either for himself or for
Miny.

His wife that he did not want his boys to
seafarlng men, and after the West India con-
tract had run cut, he believed he would quit the sea altogether, and stay at home and loot out for the twins. A statement that would have persuaded
almost anything.
But the plan was borne in upon him the
more he considered the onc the boys had afoot. And how fortunate one hoys had have` ohserved the evening before that the twins had a new idea of some sort. As they could get just double the result ont of any
idea, their father being a twin himself knew idea, their father being a twin himself knew
how, pretty well, to "twig" their movements, how, pretty
as he said.
It was when he was standing all ready to cose the door behind him that morning and go down-stairs, that he heard Harold ask Hor-
ace a question that concerned Miny, and he stopped to llsten to the answer. Then he went hack into the room and sat down, and heard what else they said. The twins had becn stirriug about in their room when he heard Mary Ann leave h
did not seem to notice it.
did not seems to notice it.
The captain soon found out that the day before they had sent Miny down to Doctor Rice to borrop Lyman Rlce's book of instruction on boys' gamest Lyman was sick with the meakles. That twins didn't care about the
book. What they wanted was that Miny, bebook. What they wanted was that Miny, be-
sides fetching the hook, should fetch the sides fetching the hook, should fetch the
measles, so when she began to show symptoms of the disease, they could go down to their Grand father Allen's-it was so exciting down there. And they could run about the wharves as much as they liked then.
"It's nothing wrong," said Harold, trying to
persuade his brother to think as he did. For Horace was not sure that they had acted just right in the inatter.
"Mama doesn't want us to have things same as other youug folks do. We were most
grown up 'fore we even had whooping-cough. grown up 'fore we even had whooping-cough.
And for all we changed our dinner to breakAnd for all we changed our dinner to break-
fast, we haven't been sent to grandpa's to break us of the habit."
"It sounds wrong," returned Horace, his thought being for Miny, iustead of for their
"Measles won't kill anyhody" assured hi brother. "And how'd we ever get to Grandpa Allen's, ifowe didn't contrive some way of our own. We want to go down while Nate Cowdry's there, too. And he's going home in a little while, you know. ${ }^{\text {" }}$,
How soon'll Miny
"How soon'l
asked Horace.
"Lemme see," considered the overwise Harold; "to-day's Tuesday, next Tuesday'll b where 'bout a week from next Thursday, "How can you tell?" Horace asked.
"'Cause it takes nine dars anked.
you catch to begin to make you sick. Grand ma Allen said so,
"I shouldn't want Miny to he very sick," persisted Horace, who at the beginning demurred over making a cat's-paw of their girl cousin. Like their mother, she wa
ready to do anything she was asked.
"She's got the measles now, anyway," ar gued Harold, and the only thing to do is to let her have 'em. The minute her symptoms begiu, mama'll send for Dr. Rice, and he'll say, 'Let the boys go down to their grandfather's,
Healthiest place in the world, down there by Healthiest place in the world, down.
the oceau,' so we want to he ready.
It was a clever scheme, but the captain went put into action.
"A love for the sea is horn in every Starlooking out of the window after his wife wen about getting hreakfast. "Maybe the hoys'll get over it, thongh, if they never know what it is that makes them so uneasy. But it's hankering for the sea, and nothing else, that set them out upon this. Si and I used to he
up to the same tricks. Do anything to get where there's a craft. And then the swish of the water begins to coax you, and youi can no more get away from that enticing sound than
you can leave the tahle when you're you can leave the tahle when you're hungry.
It'll keep at it till you're off tossing ahout on it, and lured into all sorts of danger, same's poor Si was. Parents ought to watch their childreu, and when these inclinations begin show it wherc to go, same's they put up wires for electricity to travel through. If that wasn't done, the current'd be running helter skelter, same's most folks are-no object in life anywhere. Poor little Mine," he ex-
claimed, as all three-Miny, Harold aud Horclaimed, as all three-Miny, Harold aud Hor-
ace-came running dowu-stairs one afte another.
"Breakfast's ready, Captain Starbuck, "Wary A un somewhat rudely interrupted. "Won't it be nice when papa's home to hreakfast every morning?" asked Mr. Star more trips." Aud that opened the way to more trips." Aud that opened the
tell about the trip he was all ready for. "Mine go off to sea, and we stay at home!" cried Harold. "Can't, even go to Grandpa Allen's; that's mean." But he did not say nough to hetray or implicate himself
He wantcd to know what would happeu i she was taken sick on the voyage.
"Oh, the mate's wife'll take care of her," said their father. "Her little girl was just getting over the measles last trip; but Sallie
didn't have any trouble, "nor Miny won't,

The twins looked at each bther
"Besides," added the captain,
"Besides," added the capt
"So you do," affimed his, wife, who always.
"so you do," affimed his wife, who always
But Miny was not ill on the voyage, either yoing or coming. She aud Sallie Lane, the first mate's daughter, werc good comradcs.
They used to go on deck when the weather was fine, and they staid in their state-rooms by themselves much of the time. Miny told Sallie about her father, and it made her fee
very sorry, both for Miny and for her uncle. very sorry, both for Miny and for her uncle.
"And is an insurrection a bad thiug?" Sallie vould ask.
"Oh, terrible!" replied Miny, "just terrible
"ou don't know, Sallie."
"No," Sallic
being not only two ar threc conscious $n$ beng not only two or threc years Miny'
junior, but that she was a mate's, and not jumor, but that she was a mates, and not "And your' father had just begun
"Yes;" it always hrought a sigh, but Miny would go all over the narrative again, She told it to Sallie several times before they reached St. Domingo.
Sallie would say, trying to comprehend hor such a thing were possible.
"Right before his eyes," Miny told her
"You sec, it was this way""You sec, it was this way"-she knew it so by
heart. "My father and my uncle always went to sea together. They were twins, same a Harold and Horace. Papa used to be mate same as your papa is; but after mama died-"
"Did your mama die when you were a little baby?" Sallie interrupted her to ask, the first time she heard Miny's story.
Miny like months old. I was born'at sea." she, too, iuherited the Starbuck tendency for she, sea.
"And then you were your uncle's little girl?" Sallie added,
her own mind.
"Oh, yes! 'cause he's just like papa, you any luck apart; sailors, you know, alway talk about luck, but I don't suppose th
believe iu it." And Sallic always said she believe iu it." And Sallic always said she did
not suppose they did, either. "Uncle Simon not suppose they did, either. "Uncle Simon mate; but papa would rather have a vessel of his own-anybody would, you know," to
which Sallie acquiesced, as she did to all Miny told her about her sto
"It cost a good deal of moncy to buy the For he and papa always had just the same anount of money; they never would make it "My!" excl
narrative was Miny. This part of the she was much younger, and more immature, allowing for the discrepancy in ages, than hend and carried them through the streets? Oh,
what wicked people! Where did they carry your papa?" she asked.
"We don't know."
And when they reached this point, they other's waists, would walk about the stateoom, or go up on deck and find their papas for Miny
a father.

- Miny's story had to do with the insurrection which took place in Port au Prince several
years ago, when the incensed blacks in their years ago, when the incensed blacks in their
maddened frenzy offered harm to every white man who came in their way. Miny's father wass during the dreadful uprising, for property was destroyed at a fearful sacrifice-property and life.
You may know how Captain Starhuck avoided all reference to the time or locality, when he had not told his wife where he was going until he made up his mind to take
Miny with him. But she, consistent little woman that she was, fell in with the idea the moment she believed Miny enuld afford her hushand any pleasu
They couldn't have had more pleasant all said, which, was ahout three years after her father sailed for that/port. The sailors laid it to the girls being aboard
The commerce of the world seemed repre itself appeared as beautiful to the young girls from their lookout as it did to the Frenchmen struggle for it. They found everythiug a orderly as they had left it in their own quiet
little town. A child could go about the streets of Port a a Prince without risk, and Miny and Sallie were trusted to go with the second
matc, who knew his way anywhere in the matc, who
West Indies.
They were cautioned about keeping close together, and so the girls did, every step of
the way. But while they werc looking and remarking upon the architectural excellence of the palace of statc, they lost sight of the and seeing everything, that they forgot the importance of looking him up at on
Miny always declared that they did not
move from the spot where their companion stood with them, but he knew that the girls went around the corner of the palace. He
followed them, but they were nowhere in
sight, and where or how they disappeared he "Never mind," satid Sallie, when they had winted what seemod an age to their frightened hearts, "there's

## "Where?" cried Miny.

"Right across the strect in that store
"So 'tis," said Miny, both girls running
nickly over. "Oh, Uucle Simon," began Miny, before she was fairly inside, "we're lost, Sallie and I,
and in Port au Prince, too. Take us back to ds it out "Ycs," begged Sallie, "please do, Captain "talbuck; mama'll be so frightened when the
mate goes back without us."
"Wh if you sould sec her?" he asked.
There were several men about, aud they looked at one another inquisitively. ressels over here as there were on the other ide. I think Port an Prince is a pretty place after all, don't you?"
"I bclieve I shall after this," he admitted, getting ready to go
if we did get lost, Captain vessel over here if we did get lost, Captain Starbuck," Sallie
remarked; as they went out the door, "real glad," not, couscious that the great joy she felt welling up in her heart was due to the instead of perhaps meeting a fate approaching the terrible one Miny had in mind as they walked slowly along, all three unduly quiet. "If I leave you here you can run along the
wharf until you come to the Water Witch," said their companion, as they turned down to the water.
"Please don't, Captain Starbuck, please-"
Sallie screamed aloud just then. For there in front of them was Captain Starbuck coming to mect them, and there beside them
was Captain Starbuck seeing them aboard the vessel.
"Silas
"Silas!" called the one comiug
ith the girls.
It was an exciting moment. Miny was agitated hy the fear that she had growu and drew closer to the uncle nearest her They walked along. She never knew how,
until they came to the Water Witch. She doesn't remember that anybody spoke, bu Sallic says that such chcers as greeted thei approach were never anywhere before heard.
They went down into the captain's stateThey went down into the captain's state-
room, and the two 'uncles sat down opposite cach other. Miny understood them when they said Si and Sim. But everybody was talking, and the couversation
like the jargon of words only. "If you'll helieve me," she told the twins, "ter she got home, "it never entered my head and whispered, "That's your father."

## how a piano is tuned.

bang!"
You bave heard tbese sounds hefore, thougl tbey look a little uufamiliar wben reproduced
on paper. They represent the performance of a piano-tuner from an outside and tympanic standpoint. They are the tangible and dis putting in tune an iustrument whicb, alas, of their lives in putting out of tune.
This husiness of tuning pianos, which cer the manner in whicb the operator pries up first one string and then another, sounding
mean while a confused jargon of notes, until from a fifth, is not, however, as difficult and from a fifth, is not, howerserious as it at first appears.
few simple tools; namely, a tunlng-fork (usually'a C förk), a long, hammer-like key and a wedge, or nute. The accuracy of the result of long practice.
Even the most unpracticed ear can readily distinguish sound from uoise; sound is pro
duced by regular vibrations, while noise is a mixture of sounds thrown together without
reference to any law. High notes have a large number of vibrations per secoud, while low
notes have a small number. The highest $A$ is calculated to have while the lowest A has only $271 / 2$. method of tuning which includes but two in tervals-the octave and the fifth. The ordiuprigbts have three strings, to each note,
except in the lower octave. The pitch of one of these strings is tuned in the relation of remaining strings are theu tuned in unison with tbe first string. As the strings approach unisoln, a number of strong and rapid beats or
pulsations are perceptible to the ear; as they until finally they are no louger to he heard Then the unison is perfect.
The ear in tuning is guided by progression then from smooth waves to one continuou sound. Unisons and octaves are always tuned
perfect; that is, the beats must entirely disappear. In the fifths, when perfectly tuned there will be neither wave nor beat.
It generally talce
tbe business, and a good workman will make from $\$ 18$ to $\$ 35$ a weel. A few women bav been employed as tuners, with great success.-

## THE MERCENARY CHINESE

Ch'ien, ch'ien, ch'ien-money, money, money
is the real Chinese god. At home or abroad, the Mongols are a race of shopkeepers. Buy ing, bartering, exchauging and selling is the
order of their every-day life. Ch'ien is the one subject that their hearts coinmon people, at least, does one rise above ambition than that of money-getting. They and gamblers. They gamble iu trade, and take ehances on every imaginable thing. Talk you may not distract his mind from his one olject in life, the pursuit of ch'ien.
that cost?" are questions continually in the mouths of the Chinese, no matter where they are. A missionary recently from China tells a
characteristic story of the average Mougol's curiosity.
"In Hong-Kong," says be, "I was one day in company with our senior pastor in the native
streets, looking at some of the shows thing in the booth. In a moment one of cur cougre gation touched my arm, saying, "Teacher, how lisb) shoes, the word was quickly passed around that they were dear, because tbey had Lippincott's.

## THE PROFESSION OF WIFE.

Of the three distinctively natural womanly wife, that of wife bas been comparatively neglected of late years. On the otber hand, the dignity of sciences. The periodical liter ature of to-day teems with special advice and instruction to those holding these profession Now it is submitted that women have be-
come mothers and housekeepers altogetber too much. Youug children must be properly cared for, and homes must be made and kep be a complete mother and housekeeper is not the end and aiun of every woman's existence, ven thouglishe is married and has childre ing out their idea have submerged mind and hody, helieving such sacrifice laudable and cessary
But in doing so they have ignored and nearly lost sight of a profession of equal dignity and
mportance. Nay, of primary and paramoun mportance and dignity, since tbe "womal" and the "wife" may exist without either of the other professions, while the others cannot
exist without these. And the most perfect pecimen of mother and housekeeper is ery weak-minded and miserable specime nless she has first realized the full comp
The first year or two of married life
been heretofore thought sufficient time for woman to give to her hushand as companion, omrade, friend-in short, spectally to he elf more of wife. After that she sinks her disposition and temperament, into being mother and housewife. However finel equipped the woman may be mentally and physically for social and intellectual compan ionsbip, and for a life in which such powers sacrifice of the best part of her nature and part she consents to it witlo a good grace Slowly but surely the husband is rele showly but surery the solitary cigar, then to is club and his special friends, for entertainment and solace But his home is a marvel of order and neatness, his clothing is in perfect order, and his dinners are marvelously served re more can the man wants His His wif a devoted mother and a notable house keeper. What can a man ask more than tbis

## A WORD TO THE SLEEPLESS

Dr. J. E. Huxley, of Maidstone, England, for sleeple has it apon the natural rand the clothes like a kitten, or put the head under tbe wing likea hen. He says: "This nsomnia seems to be now a universal afflicwork the brain, and then go to bed in an excited condition. No one seems to have hit pon the naturaral and the People take chloral and the like at their peril, It is all. Wrong, for you cannot control the ose required for the exact circumstances But try nature's plan instead: Lower the
supply of oxygen to the blood, produce supply of oxygen to the blood, produce quicker, the brain loses its stimulant and sleep follows. When you find yourself 'in' the bed-clothes and breathe and rebreathe only the respired air. Thus you may reduce
the stimulating oxyen and fall asleep. There is no danger. When asleep you ar sure to disturb tbe covering and get as much fresh air as you require, or when once
drowsiness has been produced, it is easy to go on sleeping, though the air be fresh. What
do the cat and dog do when they prepare t leep? They turn around generally thr times, and lastly bury their noses in som
hollow in their hair and 'off' they go. The are in no danger, although it might look as embed their noses."-From the Medical Press

## THE MONROE DOCTRINE

It was stated at the commencement of the ast session that a great effort was then making in Spain and Portugal to improve the conthat it appeared to be conducted with extraordinary moderation. It need scarcely be differeut from what was then anticipated. of vents in that quarter of the globe, with which we have so much intercourse, and from which
we derive our origin, we have always been nxious and interested spectators. The cit zens of the United States cherish sentimen happiness of tbeir fellow-men on that side of the Atlantic. In the wars of the European have never taken any part, nor does it comport with our policy so to do. It is only when hat we resent insuries or make preparatio or our defense. With the movements in this emisphere we are, of necessity, more imm diately:connected, and hy causes which must be obvious to all enlightened and impartial powers is essentially different in this respect
from that of America. This difference pro-

ceeds from that which exists iu their respee
tive governments. And to the defense of our so much blood and treasure and matured by the wisdom of their most enlightened citizens, and under wbich we have enjoyed unexa.
pled felicity, this whole nation is devoted. We owe it, therefore, to candor and to the
amicable relations existing between the United States and existing between lia that we should consider any attempt on their this hemispbere as dangerous to our peace and safety. With the existing colonies or dependencies of any European power we hav with the governments who have declared their independence, and maintained it, and Whose independence we have, on great con edged, we could not view any interposition trolling, in any other manner, their destiny by any European power, in any other light
than as the manifestation of an unfriendly disposition toward the United States.-Fr
President Monroe's Message, December 22, 1823 .

## EAT APPLES

The Practitioner says apples have many good medicinal qualities. Chemically they ar
composed of vegetable fiber, albumen, sugar, gum, chlorophyl, malic acid, gallic acid, lime analysts say that the apple contains a larger percentage of pbosphorus than any othe
fruit or vegetable. The phosphorus is admi fruit or vegetable. The phosphorus is admi
rably adapted to renewing the essentia nervous matter of the brain and the spinal
cord. It is, perbaps, for the same reason, rudely understood, that old Scandinavian traditions represent the apple as the food of
the gods, who, when they felt themselves to be growing feeble aud infirm, resorted to this body.
The acids, of the apple are of singular use for men of sedentary habits, whose livers are eliminate from the body noxious matters. whicb, if retained, would make the hrai heavy and dull, or bring about jaundice o
skin eruptions and other allied trouble Some such experience must have led to the custom of taking apple sauce with roast pork
rich goose, and otber like dishes. The malic acid of ripe apples, either raw or cooked, wil gendered by eating too much meat It is also a fact that such fruit
apple, the pear and the plum, when tb ripe and without sugar, diminish acidity in tbe stomach ratber than provoke it. Tbei into alkaline carbonates by the chemical

ream Chocolate Caramels.Mix in a graniteware sancepan half a pint of sugar, half a pint of molasses, half a pint of thick
cream, one generous tablespoonful of butter and fonr onnces of chocolate. Place on the fire and stir until the mixture boils. Cook until a few drops of it will harden if dropped into ice-water; then pour into well-buttered pans, having the mixture about three inches deep. When
neally cold, mark into squarcs. It will take nearly cold, mark into squarcs. It will take almost an hour to boil this in a graniteware
pan, but not half so long if conked in an pan, but not half so long if cooked in an
iron frying-pan. Stir frequently while boiling. The caramels must be put in a very cold place to harden.
Brown Bread.-Boil three medium-sized potatoes in three pints of water until thoroughly cooked. Pour the water over one half pint of wheat flour and one half cupit; while the mixture is scalding hot, stir in one pint of com-meal, and then cool to the temperature of new milk; now add one cupful of yeast, or one yeast cake that has been well soaked in a cupful of warm
water, stir well, and add enough Graham water, stir well, and add enough Graham
and fine flour (equal proportions) to make a stiff batter; let rise about six loours in a warm place, and when light, add enough more Graham and fine flour in about equal proportions so that fou can knead the bread into loaves. Do not forget to put in a little salt before you knead; and if one,
likes bread very sweet, more sugar can he likes bread very sweet, more sugar can he
added, also. Sift in one teaspoonful of soda with the flour as the bread is ready to mix, and do not mix very hard with flour Let loaves rise until abont double their Father thinks it is alınost equal to the
will fill the bill, for a change, I think, In the first place, procure five cents worth of carbonate of ammonia, kcep in
a tight can montil ready for use; that amount is enough for two recipes. One cupful of crean, sweet, quite thick, one cupful of sweet milk, in which dissolve one half the ammonia, potnded fine, two cupfuls of sugar, one tablespoonful of lemon extract. Mix stiff with flour, roll thin, cut in squares, prick several times with a fork to prevent blistering, and bake in a quick oven. They raise very light, and make a nice cluange, we think. Some people might object to the ammonia and think it not as healthy as soda and cream f tartar; but I am sure it has nerer hurt any of our family or friends, and I cannot see how this recipe conld injure any one if
used once in awhile as a change from conkies all the time
Hasfr.-Chop the meat fine; if you liave a cupful, put in two eggs and season to your taste, and chop the eggs in the meat; then grease the pic-tin, set in the oren jnst long enough to cook the eggs. This is no boarding-house hash, and there is no patent on it.

MRS. ANEA R. WOLF

## Califormia.

## HOME TOPICS

Spring Soup.-To make two quarts of soup, cut up enough vegetables-onions, potatoes, spinach, asparagus and lettuceof butt purt. Put a hall leacupful hot put into a saucepan, and when it is intil they begin to brown a little; then add a quart of boiling water, and season or an hour, then strain it boil sowly colander, rubbing it all through. Add enough boiling water to make the requisite quantity of soup; return it to the fire, and add a tablespoonful of browned four; | wet with a little cold water, as soon as it

show her how to make it nicely, and as soon as she is tall enough she will make her own bed with as much care. Let her have her own little dish-pans and-teatowels to wash her doll's tea-dishes, showing her how to do it in the best way, and when she is a few years older she will surprise you by the deft way she ean do real work of that kind. A little maid at our house, not quite seven years old, can make her own little bed, and tidy her room as well as any one, and is very proud of it, too. Nothing pleases this same little
other help in the kitchen, as often happens in the country home.
I do not advocate making drudges of childrein or keeping them always at work. Far from it. But I do say that they are far happier, besides being better fitted for after life, if they are early taught to work and given some little tasks for which they are made responsible.

Maida McL.

## STAMP-PLATES.

These mique articles are quite the rage at present. The decoration is made of canceled stamps, neatly cut and pasted, and the whole varnished with fine white tirely of two-ent stamps, the ribbon tirely of two-rent stamps, the ribbon cor responding in color. The national plate is decorated with one-cent and two-cent stamps, alternated, thus giving the colors. The border is composed of the heads; the wreath, of the lettering from around the heads. The Hag stripes are composed of the stripes marked "Two Cents," from the bottom of the stamp, and the bow of the same, while the stars are represented by six l's from penny stamps. The long ornaments are from the Columbian stanps inarked two cents. Lincoln is framed Blue and red ribbon complete this plate, which can be used either as a mante ornament or card-receiver. The plates are of opaqne glass with openwork borders, wiped off with a damp cloth to clean them but must not be put in water to soak any time.
M. E. Smith.

## DRESSES FOR LITTLE GIRLS.

These charming gowns for the little glrls are adaptable to all materials. Combined with lace, velvet or silk as trimining, the effect is very good.
Blouse cffects will be used on girls' dresses as well as for their mamas, and need a close-fitting underlining to keep) them in shape. Soft goods are best fol this style-challis, cotton crape, India silk and soft wools. Wiry goods are best made in more severe styles.

## TOOTHACHE REMEDY.

If tooth is hollow, fill cavity with pine tar, or kecp filled with wax made of pinetar and resin. It is a sure and speedy cure. For burns or scalds, if applied immediately and kept on till healed over, it is a relief.
corn-bread that the good old grandmother used to bake in the days of brick ovens and fireplaces.
Biscurrs.-We have tried a new plan for biscuit, and like it very much.

1 cupful of sweet milk
1 tablesponnful of butter, melted,
1 teaspoonful of soda,
2 teaspoonfuls of cream of tartar,
$1 / 2$ teaspoonful of salt.
Enough flour to make them as stiff as can be easily stirred with a spoon, or so
that the dough will drop off the spoon in that the dough will drop off the spoon in
chnnks, and not run in strings; then drop chmnks, and not run in strings; then drop a spoonful of dough in each gem-tin and
hake in a quick oren. They bake so quickly, brown so nicely, and seem better in every way, we think.
Lemoni Crackers.-Sometimes one gets tired of the regulation sugar cookies,
ginger cookies, and longs for something new; something different. This recipe lue busy about something, not having their
ginger cookies, and longs for something children need; and the children, who mus
boils up once. Serve with inch squares of toasted bread dusted with salt.
Sorrel. - Yery few cooks in this country
make any use of the sorrel which grows so abundantly in most country places. It is an excellent addition to regetable soups and makes a most appetizing salad when used alone or added to other -vegetable salads. Pick the large, tender leaves from the stems, and serve with mayomaise or any other salad dressing.
Let the Children 'Work--Many mother never allows her ehildren to try to help about the house work, because they cannot do the work as well as slie can, or because she does not want to take the trouble to teach them the right way of doing things. In consequence of this she is overworked herself and is always tor

maiden more than to don her housemaid's cap, and with her own little broom sweep down the front stairs, and then with her own dust-cloth carefully wipe the bantransformed into men in the great hereisters. No dust is left in the corners, after.

A HOUSEKEEPER'S NOTES. What Do We Read?-Going into a home presided orer by a Christian mother of considerable culture and refinement, one whom I knew to be ambitious for the fu-
ture welfare of her sons and daughters, I ture welfare of her sons and daughters, I family reading-table, copies of a strongly sensational story-paper. Knowing by the label on it that she was a subscriber and receiving it regularly, it set me to thinking seriously on the subject of what we read.
It has been said that we are influenced more by the books, we read than by the company we keep, and observation has caused me to consider this a truestatement; then how careful we should be as to the literature that finds its way into our homes.
We read for instruction and amusement, and that which amuses should also elevate. We all-unconscionsly thongh it nay bestrive to reach an ideal life, and this ideal is formed largely by impressions that come to us through quiet channels, and one of the greatest, if not most important, of these is our reading. Then how careful we
should be not to allow in our house, books should be not to allow in our house, books
or papers that portray chararters that we or papers that portray chararters that we
would not allow in our home in real flesh and blood.
In many instances where children in good homes have gone astray, it is not so much because of natural depravity, but hecause of wrong impressions and ideals of life begotten by improper reading, that has breathed its sulute poison week after
week, and year after year; so-called lovestories, holding up to our cliildren and youth pictures of life exciting and unreal, if not positively immoral; giving then wrong ideas of life and of living, and of the noblest, grandest passion implanted by
divine origin in our hearts, and making divine origin in our hearts, and making
them dissatisfied with life, home and friends. Let us see to it, then, that these publications that are filled with exciting, trashy and sensational stories find no place in our homes, but are banished as women who are their heroes and heroines. "But," say some, "these papers you denounce contain some good, after all."
True, there is some good used in order to
them the true and beautiful; that which will arouse their enthusiasm, and inake them ambitions to emulate the good qual ities of these noble men and womanly women whose lives are held up as all example worthy to be followed.
With earnest and careful home instruction aided and strengthened by the quiet though mighty influence of good book and papers, then may we expect a moral and spiritual development in our children of which we may well be proud, aud which will augur well for the future of our homes and home life.

## NEWSPAPER-HOLDER

An Effective Cough Medicine.-We have been having a serious time at our honse with bad colds, all thuee of the children being nearly sick, and conghing almost as hard as when they had whoopingcough. At night, on retiring, they were given a compress-a folded flannel cloth wrung from slightly warm 'water and placed over the lungs, with a dry cioth over it to kcep the clothing dry. For daytime, I put two tablespoonfuls of flaxseed in a quart of water, and let it boil fiftern minutes, strained it, and added the juice of the lemons and sugar to taste, and let

It can easily be laundered when soiled Hang with gold satin ribbons.
A full-sized working pattern can be furnished for filteen cents by addressing, care of this office, $\qquad$ L. L. C.

The illustration we give is a new design in doilies: Many who cannot embroider can easily do these plain lace stitches. The entire pattern is worked in white. For the butionhole-work arounde the rabesques, use filo; for the filling, use spool silk. The linen under the figures must be out away whell it is finished Finish the edge with hrier-stitch and then fringe it. This is not so difficult as it seems. Cut the doily a little larger than you wish, and when it is all fringed it will be some what irregular; then trim into somew
shape.

Louise L. Christie.

## OLD, YET NEW.

"There is nothing new under the un," has come down to us from the ages, and yet if one takes note of the wonderful bags and baskets that have been evolved from the fertile brain of the fancy-work devotee, and the various uses to which they are put, they certainly admit that some things do really seem to be new.
Perlaps the cocoanut button-bag may be "as old as the hills" to "uns," but it was new to me when "I'd write it up" for the benefit of id wer "greenies" like myself. The other "greenies" like inyself. 'The button-bag was made of half of a cocoanut and old gold silk. Two holes had heen bored in the bottom of the cocoanut-shell; out of the
silk a bag had been inade, having a casing run in the hem at the top, through which a ribbon had been
inserted. By means of this riblon inserted. By means of this ribhon
draw-string the bag could be opened draw-string the bag could be opened
and closed ad libitum. By means of another ribbon fasteued to the bottonn of the hag, and drawn through the holes in the half shell,
the bag was fastened semrely within the cocomint. Long loops and ends of the ribbon hauging below added to the effect.

THE REASONS WHY
Scott's Emulsion of Cod-liver Oil and Hypophosphites is so useful in all wasting diseases, such as Consumption, Anæmia, Scrofula, Rheumatism, Bronchitis, and Marasmus and Rickets in children, is because it furnishes to the depleted blood the fattening and enriching properties of the oil, and to the bones and nervous system the phosphorescent and vitalizing properties of the Hypophosphites, which together nourish the body arrest the progress of the disease, and commence a process of repair that finally means restored health and vigor. Don't be persuaded to accept ta subbstitute!

## RECIPE FOR HARD SOAP

The day for making home-made soan draweth apace. Somebody said there ar two ways of making bread, our way and the wrong way. Perhaps it is the same
way with making soap. At least this is way with making soap. At least this
on way, and an easy way for making hat soap:
Put into a kettle five gallons of cold rain water, add two boxes of coucentrated lye two pounds of sal-soda and five ponnds o

 Let it cool; when hardened, en.
into blocks.
M. D.s.

FOR BABY'S COLD.
Very frequently children especially babies who have been xempt from colds during the roubled with them during the hilly, damp days of spring and early summer. An excelleu remedy for this is to administer
the vapor from steamiug camomile. Procure the flowers of camomile and steep them for Second tnrn- $\mathrm{K} 2,0, \mathrm{n}, \mathrm{n}, \mathrm{k} 2, \mathrm{o}, \mathrm{k} 1, \mathrm{o}$, wide-mouthed bottle and hold under the ( 0 and $n$ ) five times, $n, k 4,0, k, 0$ child's nose. Babies can he effectually

Third turn-Repeat the same as the third arn in the first ro

how to tie shoestrings.
"Stop a minute. My shoe-string is nmtied."
"Oh, dear! What a nnisance! Your shoes are alwars mutying, and there's onr car oming."
Result, fuss and bad temper. Though a shoe-string is a rery easy thing to tie, not one person out of a hundred knows how to do it. We all know how to tie a bow and of what a bow consists-two loops and a knot in the middle. Now suppose, before yon tighteu your bow, and while you still hare a loop in each hand, you take the loop iu your right and pass it through the knot in the middle. Now go jour nsual way and give both loops a good hard thg to tighten them, and there you are! No more nntied shoe-strings. No more lost cars. When yon waut to minfasten it, take one of the tag ends in yonr hand, give a good pull, and the thing is doue, or rather good pun, and the thing is doue, or rrites one of Good Housekeeping's correspondents

## HOW TO USE TRACING. PAPER.

Tracing npon linen is easily done by the use of copying, or tracing paper, which can be had of any stationer. Place the paper npou the linen, iuky side dowu, and
lay the design yon wish to copy on top, lay the design yon wish to copy on top,
secure it firmly, so it will not move, with pins or tacks stuck along the edges, then with a stiletto knitting-needle, or

## WATCHING FOR THE MORNING <br> And the shadows grows deep, <br> And the weary eyelids <br> 'Mid these hours of sadness, <br> With their solemn warning,

"Watching for the morning."
Though the shadows gather,
And the night grows deep,
And the weary eyellds
 With its solemn warning, Comes the song of gladness-
"Watching for the morning,
Watching, watching, watching Lord, how long, how long?
Wheu shall break the shadows? When hurst forth the song? When hurst forth the song
Haste, $O$ blessed dayhreak!
With thy bright adorning
Let the joyous lay wake"Morning, lo, the morning!"

A SPECIFIC AGAINST THE bLUES
 be offered the public of the efficacy claimed for a quack that beset mankind, a fortune wonld surely await the patentee. But of several recipes given by persons of different sorts and conditions, it may be possible to choose one to snit one's own case.
"I take a walk," said one young woman, vigorons of mind and body. "If the trouble comes from indigestion, as it mile tramp to put your internal organs to rights."
The reply of a Boston maiden may be deemed characteristic: "I sit down to the hardest mathematical problem I can find." "I go into one of the alcoves of the read-ing-room," said another, the possessor of that Boston patent of nobility, a share in
the Athenæum, "with the new magazines or a pile of local histories."
"I suppose the saintly-minded wonld say that the best plan is to go to see some one young woman of feeble constitution, but orilliant mental endowment. "I only add this misery to mine, and the sum total is suicidal. I just think, 'It isn't illness and it isn't death; nothing else matters.' Or I try to bring inyself to the admirable frame of mind that Dolly Madison attained at eighty: 'My dear, when yon have reached iny age, you will learn that nothing " natters
"I sweep my room," said an energetic little housewife, "usually to the indignathe same task."
Perhaps the best suggestion of all came from the tired little bookkeeper. "I try
to do something for somebody else." For, as the Salvation Army sister phrased it, "If you make other people 'appy, yon've a other way.
But whether cansed by a dcrangement of the liver, by some one walking over our withont known canse, it is safe to insist that the blues should be struggled against. There is a certain critical period in the life life, wery or woman at or near middle life, when he or she becomes morally the ambition of yonth is stilled in its "wild pnlsation," and that the vague sense of the future holding a beautiful something is seen to be only a mirage.-Harper's Bazar.

[^6]tion communicated to him, it is with the divine intention that it shonld be passed on to the ncxt man. I inust not say (rod
las given me this and I am going to keep it wholly to mysclf. I cannot. In all God's revelations I hear the great command, "(io ye to all the world, and preach the gospel to every creature." It was meant for the next man, the next parish, nntil all the world has he
ished on me
ished on me.
Now, the only man who can exponnd his wn book is the Savior. He what is in Moses and the Prophets and Psalins concerning himself. He expounded
to them Moses and the Prophets and Psalins, right up to his own self.
w, I waut him to talk with me in that
His ascension is lis nearness to me; he is now more on earth becausc he is only in heaven. It is a curions relation, bnt there is nothing paradoxical in it. He
went up that he might come down. What I want, therefore, is to have my own Bible -my own little personal Bible as it wereand to sit a long time alone and say to Jesns, "Now, what does this mean?" And he will toll me. We can have finc time together, great merriments and jollitic and the sonnd of trumpets and shawins.
Then the Bible becomes a new book; he
expounds it to me when we are alone; no noise of the market-place, no roar of the bitter north wind, but a great calm and nspeakable peace.-Dr. Joseph Parker. A stont, pleasant-faced woman got into Harrow train at Baker-street station, fol
lowed by a man with gray hair and closely ropped gray innstache, and a dyspeptic expression.
They sat on the sunny side of the carriage. The man relapsed into a gloomy silence; the woman looked around the "Carriage and tried to be cheerful.
"Cold, isn't it?" she observed.
"Rather cold."
"Where?"
"Here."
"Well, I snppose you can stand it." she was nsed to it. A fter a bit shess a "Whe was "What pretty Howers!"
"What?" growled the man.
"I said what pretty flowers"
"At the house we passed."
Well, what of it?"
Five minutes later she said
"Isn't that a nice baby?"
"What?"
"Isn't that a nice baby?"
"Where?"
"Therc," pointing to a beautiful little boy on the opposite side of the carriage. "Looks like a little fool It was Sunday. A peal of bells could be eard while the train stopped at a station. "That's nice minsic," said the woman.
"What?"
"That's nice music
"Which?"
"Why, those chimes."
"Do you whe cow-bell

## ILLUSTRATED BY OVER 1,000 PICTURES.

"Beauties and Wonders of Land and Sea" is one mighty aggregation of interesting facts in natural history. Explorers have ransacked the whole known world, and scholars followed up every possible clue in order to discover and explain them. It is full of personal encounters and daring exploits made in the cause of education. The book is not the work of one day or one man, but of many men for many years. It covers a field reaching from the Arctic to the Antarctic, as wide as the surface of the earth, as deep as the sea, and as high as the sky. It might be called a history or biography of Old Earth's beauties and wonders told in pleasing language and profusely illustrated. The value of such a abook in the home and school-room cannot be overestimated.

## One of the Most Entertaining and Instructive Books of the Century.

This picture is taken from "Beauties and Wonders of Land and Sea."

## A Mammoth Book

## Rarest Knowledge.

This book is so exhaustive in its information that the same amount of knowledge could not easily be gathered together outside of a large library, and then only after many long aud tedious months of reading in order to sift the good from the chaff.

For example, glauce quickly over the chapters devoted to insects. You will be astouished to see how nuch needed knowledge is stored away there. As you turn, your attention will be caught by page titles suggesting much that is of great interest and value; as,

The Marvelous Construction of Insects.
Their Phenomenal Strength.
Their Curious Transformations.
Enemies of Agriculture. The Terrors to Horses and Cattle

Flies Which Kill Men.
Miners in the Vegetable World.
Creatures that Light the Forests. Color-producing Insects. The Wonderful Intelligence of Ants.

Bewildering Changes of Caterpillars.
Remarkable Colors of Butterflies.
How Caterpillars Produce Silk. The Beehive Moth's Characteristics. Insects that are Objects of Worship.

Insects Sought After for Food.
All About Bees and Their Hives.
The Social Distinctions in an Ant-hill. How Oak-balls are Produced. And many others.

Remember that the above is only a quick glance over a small part of the book, devoted to insects. Then follows reptiles, fishes, birds, etc., etc., which are even more interesting and iustructive.

BEAUTIES AND WONDERS of Land and Sea is an exhaustive work

 such a book, loaded with a storeliouse of knowledge, and illustrated by over 1,000
pictures true to life, cau be had for almost notling.

NATURAL HISTORY is one of the most interesting subjects for reading old it is unexcelled. This should and study, while as an educator for both young and
 animals mind and soul of man which gives him this snperiority over the lower use his mind thercore, it is but natural that man should deem it a privilege and a duty to use his mind and sonl in learning the les
tions stored away in the marvels of creation.

This is our own book. We own the copyright, and manufacture it in our own publishing-house. Already we have filled thousands of orders, and are mailing them out in great quantities every day. It contains more pictures and more descriptions than a similar work published in Boston and sold for $\$ 4.50$; therefore, it WOULD BE CHEAP AT $\$ 2.00$. But we do not sell you the book-we give it away in order to boom circulation.

## renicrandion

 ing broadcast beneath trees beantifully decorated with foliage, her carpets of green velvet. We may sometimes feel discoutented with our lot, but it is never at this time of year. The very air is redolent with the flavor of apple-blossoms. No artist can improve on the picturesque landscapes
which we may look out upon at any time, which we may look out upon at any time,
tinted as they are by that old artist-king, the sun.
How much, after all, there is in this world to cheer, comfort and briglten onr lives! From now nutil the chill of winter's blast comes again, the poorest
man in the country is rich, if he will be. He can breathe the pure air aud bask in the warn sunlightt; he can have enongh of the
fullness of the earth to satisfy his wauts, fullness of the earth to satisfy his wants,
and that is more than most people in the city can have.

It is anticipating a little, but it will bea quoting, auyway. James Writcomb Rile says, in one of his poems, something that has beeu a great comfort to many
Then let us, one and all, be contented with
our lot;
The June is here this morning, and the sun The June is here
Oh! let us fill our hearts up with the glory of the day,
And banish ev
Aud bauish ev'ry doubt and care and sorrow far away!
guide, such fine circu
satisfied;
the world is
Fer the world is full of roses, and the roses
full of dew,
the dew is full of heavenly love that drips fer me and you.

Let us look on the bright side and catch
every smile as the flower catches the rays every smile as the fower catches the rays
of sunlight. Oh that every laugh might prove contagious until we all shake our
sides together! Our growling and grumbling is nearly always ont of place. It is
not only needless, but Mere is absolutely no excuse for it. We ought to be ashamed of onrselves-and we are.

We arc all the time saying, or thinking, if we just had something that we haven't got, we wonld be perfectly happy. If we just made a little more moncy, we would save some; if we just had an extra snit of clothes, we would keep it nice. Don't yon believe it! There is a very rich man
in Chicago. He said that the first year in Chicago. He said that the first year
he went to that city he only earned $\$ 600$ and he had a wife and two children to support. He saved $\$ 100$ out of the $\$ 600$. "If," he continued, "the young man who only inakes three or five dollars a week does not save a part of his wages, then he would not save anything if he earned twenty dollars a week." Stick to your work, and go about it cheerfully. A good temper acts on our nature and the nature of those abont us like oil on the axle of
our buggy. We will never get a hot box if we are always sweet-tempered.

Then the world will look so much brighter; yes, it will be brighter. Another thing, let as stick to the farm. Off there in the city it is not all smooth sailing City life sometimes appears as attractive as a mirage in the desert; it proves almost as often as sad a delusion. The young men in the city are to be pitied, most of them. Pinched faces, flimsy mnscles, poor digestion, disappointment on every hand, this is the lot of a large majority of the young men who leave the good, dear old homestead to seek a fortune in the city-a fortune that is as hard to get into your hands as the end of the rainbow.

We love the country. God made it, but men liave bnilt the cities. These are our busy days. We must be up with the lark, and putin every hour, but as we work we are favored by the breezes, we breathe the trees, while the sunlight streans all abont us, putting new life into everything it tonches-that sunlight which is like God's snile.

1 He following table of prices, wages and 1 purchasing power of wages in the United States is republislued from a previ ous number for the special purpose of showing the effect of a dcpreciated currency on the earnings of labor
$\qquad$
Av. prices of all commodities Average of all wages............. Purchasing power of wages Gold price of silver bullion Paper money...

| 1845. | 1850. |
| :---: | :---: |
| 102.8 | 102.3 |
| 86.8 | 92.7 |
| 85.4 | 90.6 |
| 95.3 | 97.3 |
| 100 | 100 |

In this talle the computations and comparisons are made on the unit of 100 in 1860 The prices and wages given for 1865,1870 aud 1875 are in depreciated and fluctuating paper; for all other years, in specie.

From 1860, the average price of 223 articles changed from the nnit of 100 in specie to 216.8 in paper depreciated from par to 49.5. From 1860 to 1865, wages changed ciated over one half. The in paper depre in wages did not equal the nominal in
crease in prices; therefore, there was an actnal decrease in the real earnings of labor. As shown in the table, the purchasing power of wages declined from the unit of 100 in 1860 to 66 in 1865. Although there was a nominal increase in wages of 43.1 per cent, there was an actual decreasc in their purchasing power of 34 per cent.

Prices of commoditics are adjusted quickly, almost instantaneonsly, to correspond with the depreciation of the currency; the wages of labor are adjusted slowly, to the great impairment of their purchasing power. As the currency depreciates, the prices of commodities nomnally rise rapidly to the full limit of what hey would be with paper at par, but the noulual rise in wages is so much slower that their purchasing power is impaired for a long period of time.

By 1870, wages had more than recovered their purchasing power, compared with 1860, and steadily increased ouward througl 1890. A careful examination of the table will show that the rise in the purchasing power of wages from 1870 was dne partly to the appreciation of the currency shown by the figures given on paper money; also that from 1880 to 1890 , the rise in the purchasing power of wages was due largely to the actual decline in the average prices of commoditics. From 1860 to 1890, wages, in specie, increased from the unit of 100 to 158.9; and the purchasing power of wages the real earnings of labor, increased from 100 to 172.1, the highest point recorded.

From its bearing on one of the most important questions of the time, it is interesting to note the comparison between wages and silver. From the unit of 100 in 1860, wages increased to 158.9 in 1890, payable in gold or in paper, or silver, at par with gold. From 100 in 1860, the gold price of silver bullion fell to 77.4 in 1890. Therefore, in 1890, with wages at 158.9 and silver 77.4, a day's labor exchanged for more than twice the amount of silver bullion that it exchanged for in 1860. Or, conversely, an ounce of silver bullion purchased less than half the quantity of labor in 1890 that it purchased iu 1860. Considering that money is exchanged for labor more than for any other one thing, the relation between the silver question and labor questions stands the day is a labor question. Will the his

tory of 1860-1865 in depreciated currency and reduced earnings of labor be repeated?

Undoubtedly, the decline in the value of silver has given the cotton planters and wheat growers, and all other employers of labor in the silver standard countries, great advantage over their competitors in great alarm for the future among the of facturess in Europe. Note the cottonmills springing up in India, China and Japan. The real reason of this advantage
is not generally well understood. the depreciation of the value of the rency used in the silver standard coun of the world, labor there becanue che and cheaper.

The following from a recent work ol money question clearly explains the s tion: "The decline in silver is most in ious to the United States: ** * Ber our principal exports are wheat, cotton. which have to be sold in competition India and other conntries whose curr is silver, and where wages and the pric is silver, and where wages and the pric commodities used by laborers remain stantially as they have been for many y Cotton and wheat are sold in Englar gold prices for pounds sterling, and thu world's price is determined. For e ponnd sterling which a planter in I receives for cotton or wheat sent to. land, he can now employ twice as n native laborers as he could a few years for then voages remain the same in sitver namely, one quarter of a silver rup day $[6$ cents $]$."

The decline in the value of silver bu gives the employer of labor increased fits in products exported, but it impair purchasing power of the employee's wages when applied to goods imported from gold standard countries. This condition presents a strong argument for such money ase of silver in Europe and the United States as will raise its bullion value. One way of equalizing conditions between gold standard and silver standard conntries is by reducing the wages of labor in the former. This can be done more readily, if done indirectly by lowering the money standard.

Hence, some employers of labor, mannfacturers in Enrope especiallẏ, and planters in the United States, are now zealously advocating not true binctallism, but silver monometallism, with the specific object in view of reducing the labor cost of their products. The change to the silver standard would inevitably cut the real wages of labor in half, the nominal wages remaining the same, but paid in a depreciated currency. The nominal prices of commodities would alinost instantaneously double, but wages would be readjusted to correspond with prices ouly after a long struggle.

There are conclusive reasons for the full asc of both silver and gold by all the nations of the world. But there are no true reasons for the resumption of free silver coinage by any one of the leading commercial nations alone, or even by all together nuder international agreement, on any terms that will impair, even temporarily, the purchatsing power of vages. Many beneficial changes might be made, and onght tems of the world. But no change should be made in the monetary systen of any nation that will reatace the earmings of labor. Upon them depends the well-beiug of

Mr. Jomn Murray, the London pubhisher, in a late article on "Some Authors I Have Known," takes occasiou to
rcmark "that whatever yonng anthors may think, a publisher cannot make the success of a book," and concludes with some interesting reminiscences. He says that "Charles Darwin was convinced that his 'Monograph on Earthworms' wonld be a faine, whereas, it reached a fifth edition in three months."

FARM AND FIRESIDE Issued 1stand 15th OF EACH MONTH BY

## TERMS OF SCBECRIPTION

Crimson Ice and snow corering the clover. ground continuously for
week, with extreme cold weather the latter part of winter, made a severe test of the hardiness of crimson
clover. Iu many instances this test was clover. Iu many instances this test was
more than it could endure. But under the same ronditions, red clover and consider able wintror wheat were also killed. From reports received and observations uade by
the waiter, the couclusion reached is that crimson clover is about as hardy as red ciover. Many fields and experimental patches of crimson clover in uorthernstates passed through the winter safely. On well-drained or rolling ground crimson jured by a temperature of twenty degrees jured by a
below zero.
"Alfalfa; How and Where to Grow It." Charles W. Irish, chief of irrigation in quiry, Department of Agriculture, Waslıington, D. C. It is published for free
distributiou, and can be obtained on application Jany experiments with alfalfa in the East hare not succeeded because unsuitable soil was selected. Mr. Irish have underneath their surface a sufficient water supply for the support of the plant at distauces varying from six feet to thirtyfire, and even at a greater distance than that below the surface. It has uot been
known to thrive where the water was nearer the surface than six fect. The kind of laud mpon which it will grow the best is
an opeu, porous soil, with $n 0$ hardpan an opeu, porous soil, with no hardpan
existing down to the underground water supply. Daup clays, or clays coutaining gravel and sand are rery favorable to its
growth. It will uot do well on bottom growth. It will uot do well on bottom
lands which are subject to overflow. It is best, if the lands are aloug a stream, to
select what is called the secoud bottoms for sowing. The only chance for failure after selecting the proper land for it will be in getting a "start."

Cheap Secretary Morton gives the following description of Outif. paratus:
"Spraying to control various insert pests particularly those of the orcharl and gar peusire a basis that it is recognized by
every progressive farmer as a necessar,
feature of the year's operations, and in the case of the apple, pear aud pluiu crops, the
omission of such treatment means serious
loss. The consequent demand for spraying apparatus has been met by all the leading apparatus has been met by all the leading
pump manufacturcrs of this couutry, and pump manufacturcrs of this couutry, and
ready-fitted apparatus, consisting of pump, spray tank or barrel, and nozzle with hose are on the market in numerous styles, and at prices ranging from $\$ 20$ upward. The cost of a sprayiug outfit for orchard work may, however, be considerably reduced by purchasing merely the pump and fixtures and mouuting them at home on a strong barrel. An apparatus of this sort, representiug a style that has proven very satisfactory in practical experience, is illustrated in the accompanying figure. It is merely a strong puunp, with an air-chamber to give a stcady pipes. One of these enters the barrel and pipes. One of these enters the barrel and
keeps the water agitated and the poisou thoroughly intermixed, aud the other and longer one is the spraying-hose aud terminates in the nozzle. The spraying-hose should be about twenty feet loug, and may be fastened to a light pole, preferably of bamboo, to assist in directing the spray.
The uozzle should be capable of breaking

the water up into a fine mist spray, so as to Wret the plant completely with the least possible expenditure of liquid. The two most satisfactory nozzles are those of the Nixon aud the Vermorel type. A suitable pump with nozzle and hose, may be obtained of any puup manufacturer or hardware dealer at a cost of from $\$ 13$ to $\$ 15$. If oue
with brass fittings be secured, it will also erve for the application of fungicides. The outfit outliued above may be mounted on a cart or wagon, the additional elevatiou secured in this way facilitating the sprayng of trees; or for more extended operations, the pump may be mouuted oll a large water-tank."

Kansas Accompanying a copy Agriculture. of the ninth biennial tate board of agriculture, covering the years $1893-94$, is the following letter from Secretary F. D. Coburn, Topeka, Kansas: "The biennial period to which this report elates has been, for Kansas, one of less than usual prosperity. This has been due not alone to the two u favorable crop seasons that in succession have beeu cornmon to so many portions of the Union, but also to the geueral depression existent in busi; ness throughout the world. Yet, in spite
ne of so many extraordinarily adverse condiions, Kausas, as a whole, has not failed iu the production of tremendous quautities of the great staples, which conduce to com-
fort and prosperity at home and command fort and prosperity at home and command gold in the markets of the world. This is
shown in detail by counties, giving the rarious products and their values.
"A state evolved within a third of a century from a wilderness, that in the two most unpropitious years of her history, as o both agriculture aud financial condirics and luxuries of life to the extent of $\$ 236,000,000$, has small occasiou to feel demoustrated once and for all, the tremendous resources of her soil and people.
"Shortage of crops in various portions of the state the past two years, from lack of seasonable rainfall, has caused the question of irrigation and the extent of the available water supply and its possibilities to be much studied, many having gone individual enterprise, aud with results thus far eminently satisfactory and eucouraging. The ascertainmeut and utilization catchmeut, conservatiou and use of the storm waters, heretofore so largely wasted;
the deeper, nore thorough breaking up of compacted, impervious subsoils; a better
understanding of crops best adapted to the different sections, along with a more thor ough system of agriculture (which are now subjects of profound study), promise an
increased and coustantly increasing prosperity. Instead of vast ranges, sparse set tlements, slipshod ranch farming, wheat kings and cattle barons, this will mean in tensive farming-a com monwealth of smal homes, modest competence, and commu nities contented because comfortable.
"The conditions which have prevailed, whaterer their effects elsewhere, are to result in a revised agriculture and a new prosperity. Some of the ways and means toward these are suggested in the talismanic words, 'irrigation,' 'subsoiling, 'alfalfa' aud 'sorghum.'

The first has so far progressed as to demonstrate the assurance of crops annu ally, regardless of seasouable rainfall, by fructifying with the extensive under ground water supply (independent of streauns) a rery cousiderable percentage of our most fertile lands in the western portions of the state. The pumping of these waters will, in large measure, be inexpen sively done, by harnessing to the work the with sunshine, give the ideal healthfnl climate for all breathing thiugs, and the choicest growths of grain, fruit and flower "By means of subsoiling, there will be stored in the soil, for use when most needed, much of the usually sufficient rainfall wouderful plant alfalfa is prowing not only one of the most reliably productive, useful
and profitable field crops kuown, but especially adapted to the soil conditions prevail ing in those sections of the state where
some of the better known staple crops are not always reliably productive. A like description applies to the sorghums, and particularly some of the uon-saccharine varietics known as Kafir-corn Milo maize and Jerusalem corn, which. nnder even severely adverse conditions, give prodigious fields of superior forage and wholesome, nutri tious graiu for the live stock that, iu its new, environment, must necessarily become highly developed, and likewise be so much of a factor in the state's materia ad rancement.

But a sinall edition of this report is printed, and those desiring a copy should

## NOTES ON RURAL AFFAIRS.

The Potato Agent. A correspondent liv has been "tree agent," "book agent," "po tato agent" and ageut for Farsi and Fire side, takes exceptions to my remark about the potato ageuts (Farsi and Fire Slde of April 1st), but I aun sure he can do so ouly because he has entirely misunder stood my meaning. I stated that I hate the swindling potato agents; namely, those who palm off any lot of potatoes they can ge hold of, to unsuspecting farmers, as a new and valuable sort, asking a big price for an article they know to be worthless. I was moved to make the remarks complained about by an occurrence in an adjoining county. The particular agent, who came a stranger to make the farmers happy with his new and wonderful potato, was wel aware of its inferiority, and the regula potato huyers and shippers of the town where this happened, offered and paid him $\$ 20$ to quit canvassing the vicinity. They did not want farmers to bring them that kind of potato in the fall in large lots. as they would have to suffer thereby as wel as the farmers. The agent took the inoney and then sold a great many bushels after ward. I told and again tell of it to mak farmers cautious.
**
I am by 110 meaus set
The Good Agent. against putato agents as a class. The efforts of those who ar working on the improvement of varieties or methods, or on the distribution of im-
proved varieties and knowledge of proved varieties and knowledge of improved metliods, are commendable in
the highest degree. They are the agents who try to make two blades of grass or two potatoes grow where but oue grew before. All houor to these men! Our complaining frieud, I take it, as "potato Fireside," belongs to that class. In nieasure, I claim the honor of being a potato agent myself. At least, I have been word aud agents of distimendation I have
aidled the distrihution of improved vari-
eties right along. My friend and mysel eties right along. My frieud
are co-laborers in a good cause.

## Testing

The incident has other New Things. lessons for our readers, plant an untried thing extensively on the advice of a friend, much less than on the advice of a friend, much less than new potato on a large scale, you may be sure I try it on a sinall one first. I believe in haring the best. It pays to keep well informed about the newly in troduced potainformed about the newly in trodacles and fruits. But each grower must try for himself whether a new thing is adapted to his particular soil and surroundings. M plan is to plant a peck or half a peck of the new sorts which from the descriptions and recommendations seem to be promis ing. If the new kind is not better tha our older ones, I do not plant it again. If it proves to be of especial merit, I have seed enough grown from my first purchase to give me a good start. But don't buy a tenbushel lot of a new kind, no matter how highly recommended by the seller, at two or three times current market rates, from an entire stranger
$\begin{aligned} & \\ & \text { Propagation of } \begin{array}{l}\text { The correspondent } \\ \text { already meutioned }\end{array} \\ & \text { New Varieties. } \\ & \text { says he puts single }\end{aligned}$ New Varieties. says he puts single eyes of high-priced new potatoes into a box to sprout theu. I can see no adrantage want to get the largest uumber of sprouts. I now simply cut the tubers in two pieces, the flat way, and place them, cutside down in the bench soil of the creenhouse or a hotbed, say two inches below the surface. The sprouts are "drawn" (pulled up) when about an inch high, and potted off. I do this promptly, to be sure that the sprout will not subsist on the seed tuber longer than necessary. The sprout when potted than necessary. The spront when potted
in very rich soil can stand on its own feet in very rich soil can stand on its own feet the seed tuber for the production of more prouts.

I do not know whether this is the best method to accomplish the desired result or not. I don't know a better one. If any of one, or a better method of growing any other crop than we have been generally followiug heretofore, you may be sure I am as anxious as anybody to know of it, and to let others know of it. It is my life work to find ways and means of making fortable and more profitable. The chief aim of my writings and publications is to let my readers profit by the knowledge of the latest short cuts to success. Upon the efforts of others exerted in the same direc-
tion I look with the ntmost friendliness, and without a trace of jealousy or envy.

## The Tramp When a liumau being

 Nuisance. for a bite, he or she is pretty sure to get it. I don't have the heart to drise a hungry person from my principle has always been that it is better to feed ten who do not deserve it than let one go hungry from your door who may be iu real distress. But that is as far as I would go with tramps. I do not give them mouey. The chances are that the money neare spent for beer or whisky in the food is saloon. Feeding those most convenient method of getting rid of them. It is also a sure way of continuing the tramp feed sends half a seems that the ons for food. But what can one do? Keep a good and savage-looking dog as watcili at the front gate? Perhaps that might do, and yet I dislike to keep a dog just for such a purpose. Besides, a poor dog is a bigger nuisance on any place than all the tramps hat are liable to come, and a good dog is a scarce auimal. Dogs are great eaters, too If the house stands at some distance from the nearest neighbor, and especially protector at times, it may well be considred wise and jutitiable to keep a good dog on guard. To put a stop to the trampiug of ragabonds, no better means seens to be within reach than the interference of the municipal authorities. Nake the wander ing fraternity break stones on the highway or otherwise serve as road-builders. tramp nuisance and give us hetter hig ways besides.
## (1) Ix furnx.

TUSING THE PENCIL. re manufacturer or merchant who is successful in this age of lator. He knows what he is doing. Farmers often say that they do not need to keep any books to know how they stand, as they
can tell at the end of the yeai whether they have more money or less money than twelve months previous. It is true that they can come nearer telling their true financial conditiou than one engaged satisfactory merely to know just where one stands without knowing what it is All is lumped together, and he starts into All is lumped together, and he starts into another year without exact facts about
the various branches of his business. I know by close observatiou that some farmers continue to produce crops that
leave them poorer, because they do not figure closely.

It is not now my aim to make a plea for farm bookkecping in the style of ten urged, but to suggest that prudence and plain com mon sense dictate that we use the pencil more and know what our products cost us but we should go after every fact we may need in the management of our farms. Let an idle horse is kept merely because the market for horses is dull. Does the owner know just how much poorer he will be in that horse, provided the price of horses does not change? Would a live merchant keep anything in his store that was a diate rise in price was nearly certain? No he would get it off his liands. He would know what the expense of holding it was, and make the price accordingly.

Can one not determine what it costs him to keep a horse a year? There is the marketable grain and hay it consumes, the
value of the pasture, the interest on the market value of the animal, the annual deterioration in value and the risk of indeternin Dot say these definitely enougl to be made a basis for action. What will these things amount to under the conditions prevailing on the farm that is carrying that idle horse? By just so many of keeping it. Something else may make the loss good, and accounts balance at the end of the year. But why not save the loss
and have that much money to spend in a better way than upon an unprofitable investment?

Let us take another illustration: A thin field has a very poor stand of grass, and it is the habit in such cases to break it for corn, and then seed it to wheat and timothy or clover. Will not the pencil show that the corn, and the wheat atex corn will not pay decent wages to the owner for
his labor, and that the chances for a good his labor, and that the chances for a good
stand of grass two years hence are poor? If a close calculation shows that the owner will probably be actually poorer as a result of taking off these two crops, and if the
prospect for a stand of grass in the end is not good, why follow the plan? Use the pencil, and trust to it. Better improve the soil by a manurial crop or a summer fallow at small expense-the pencil will tel just what it will be-and help insure a are wanted, not loose guesswork.

If accounts were kept with separate until some of the fields would be differ ently managed, or else abandoned. I believe ever'y field should have an account made to tell just what it is contributing to the farm income. There is nothing impracticable about this. I kuow fields that are an encumbrance to their owners. The product does not pay taxes after the cost of production is deducted from receipts. A what the facts arc. One advantage of the use of the pencil in this case is that one is stirred to more effort to get profit out of the that good, hard cash is sunk in a certain line, he is led to change the coudition of things

In all farm calculations, one difficulty
that preseuts itself to many is the valuation that should be put upon the labor of the farmer and his team. Farmers are often heard to say, "Oh, if I valued my own time, there would be no profit at all from the farm." It is not business to look at the matter from this standpoint. We cannot afford to try to figure out a profit from the farm on any false basis. We are rom the farm on any false basis. We are
after facts. Every farmer should deterafter facts. Every farmer should deter a year, and what is his aunual expense for eeping up his farm machinery. To this sum must be added an amount that one is willing to accept as an equivalent for his own time and labor under the circumstances; that is, in view of his surroundngs, being his own master, having cheap living and all farm luxuries at small cost. This suin must be large enough to repay him, to satisfy him that his time is reasonably well employed. When all this is determined, he can tell about what he should estimate the value per day of the labor of himself and horses, charging more against crops that make a fixed number of horses a necessity, and less against crops that are cultivated when teams would otherwise be idle.

With such an estimate for a basis, one an begin to learn where money from fields is being made and where lost. What revelation to some if closer figuring were done! It would lead some of us to rop some crops, to use different rotations, hunt up the little things that can be made to pay, and to put everything on a
business basis. Men say that we must go business basis. Men say that we must go
ahead, whether the farm pays or not. That depends. The farm may pay if it only gives us profitable employment. If it does not, then it is only a matter of time until it must go, anyway. The fact is that there is probably some profitable crop ou every farm. The pencil should be used to stop as from putting time and labor where it can only lose us mouey. Does any one say all this is impracticable? rue business basis for farming.

David.

## ALFALFA, OR LUCERNE

While looking about for profitable crop o grow instead of the time-honored wheat crop, let us not neglect to test alfalfa, or, as it is sometimes called, lucerne. It has long been recognized as one of the most valuable of soiling crops in many localities, and would do equally well in many others if only given the opportunity. Being a leguminous plant, it possesses the property of appropriating nitrogen from the atmosphere and storing it away for the enrichment of the soil, either through feeding the crop or by plowing it under. In localities where it thrives it excels clover in this respect; for, besides the
property of entrapping plant-food from the air, it has an exceptionally long tap-root, which penetrates deep down
into the subsoil, reaching plant-food aud into the subsoil, reaching plant-food aud
moisture beyond the reach of any other plant. I have seen roots even in central Ohio which were eight to ten feet in
length, and a Kansas farmer says that he has followed them, in diggiug well, twenty-eight feet. It is generally claimed the roots will penetrate to permanent moisture, so that it would depend upon the nature of the subsoil as to the depth they would go

Besides being valuable as a fertilizer, it is a very rank grower, and may be cut three or four times in a single season. of a gentleman in Florida who kept his cow the year around on the alfalfa cut from an eighth of an acre. A Kansas farmer kept four horses, nine cows and thirty sheep an entire summer on six acres.
All kinds of stock eat it greedily, not only in its green state, but when cured for
hay. They will even leave grain to cat the hay, if put up in good shape. Recent experiments made at the New York exper iment station show that in a series of tests,
cows fed on rations which included alfalfa cows fed on rations which included alfalfa produced milk, cream and butter at less cost thau when fed on other rations at les cost, even than when fed on corn silage. One field on the station farm, sown to al falfa in 1893, yielded last year, in four cuttings, at the rate of 33,800 pounds to the lighter than the last two cuttings were cause of the severe drought.

Another advantage is in the fact that it is a perennial, and when once established in Spain that are said to have been in alfalfa for over two hundred years. It was cultivated by the Egyptiaus, Greeks and Romans, and was later introduced into Europe. From Spain it was introduced into South America, thence into Mexico and California, and through this round about way, now seeking favor at the hand of farmers in the central and eastern states.

It seems best adapted to warm, sandy soils, but has succeeded fairly well on clay soils where the subsoil is porous. Th farm of the New York experiment station

The soil should be thoroughly prepared and the seed, which is some larger than medium clover seed, and in shape resem bling a bean, should be sown at the rate of
fifteen to twenty pounds to the acre. It fifteen to twenty pounds to the acre. It
should be sown early in the spring; the earlier the better, so that the soil is in good condition. Some prefer to sow it alone others to sow a sinall quantity of oats, to established.

I sowed, or rather, attempted to sow, small plot in April, 1893, but owing to defect in the seeding attaclimeut of a new drill, which I was using for the first time, only succeeded in sowing a very smal quantity of the seed, and having sown oats at the same time, did not
wishing it to go without a grass crop, me dium clover was then sown, but in a few places scattering stalks of alfalfa came up They were occasionally noticed during the season, but did not appear to give promise cut. Dry weather set in, and the young cut. Dry weather set in, and the young
clover made little growth; but the alfalfa grew as if it meant business, and by the first of August, some thirty-five days after first cutting, it was over twenty inches in height, and beginning to bloom. It was
then cut, and by the last of the month then cut, and by the last of the month,
though we had not a drop of rain, it was again about twenty inches high and bloom ing. The fourth cutting was on the sev enth or eighth of October. All through the dry weather it grew nicely, in compar ing it.

The cows ate it as if they had neve known anything half so good, and thinking it worth another effort, I sowed a strip in young orchard, the first week in April first getting the soil as mellow as possible putting on commercial fertilizer at the rat of three humdred pounds to the acre (it had received stable manure at the rate of twelve loads to the acre in 1893, 1894 and 1895) and sowing the alfalfa at the rate of sixteen quarts to the acre. Though it has had but one very light shower since, it has come hope to secure a good stand.

Joun L. SHAwver.
Shady Nool Farm.

## PICKED POINTERS.

"All things come to him that waits," and the sheepman did not have to wait longand mutton prices to be restored. Indeed it has been a long time siuce a good fat mutton would bring what it will to-day in many parts of the country. Most farmers are curious creatures. When the price of any product depreciates, they go out of it production as a bunch of sheep over a
stone wall, only to crawl back into it again at a snail's pace when it revives. One can go out of any line of business in a
moment; but in any department of live stock husbaudry it requires years to rebuild.

If any one has still an idea that the sheep business has "gone to the dogs," let him go out and try to purchase a flock, and such
idea would be quickly dispelled. The steadfast friends of the sheep have thei innings now, and it came very uncxpect
edly. Most farm products have their ups and downs as regards prices, and he is wise who adheres to that line which he has learned how to do well and is prepared to pursue. Wheat and cotton may be pos-
sible exceptions. No man ever stuck faithfully to one line ten years who did not wisely. Change is pernicious.

The new way of growing lambs in winThere is little doubt now that it ground come general in course of time, and spring growing be left to farmers in the South where the climate is suitable for it. It is where the climate is suitable for it. It is lambs have been bringing very large prices. It was expected that the hard times would hrink values some; but they were sold the past winter for $\$ 6$ to $\$ 12$. Even at the lowest price, there is more money in the business than in the old way. When a lamb at eight weeks of age will bring $\$ 6$, he inust be blind who cannot see a large profit. But they have brought far more April, they were quoted in Boston at $\$ 7$ to \$9. They had been $\$ 10$ to $\$ 12$.

An Ohio grower, who is in this lamb
business for the first time, speaking of it business or the first time, speaking of it
in a private letter and remarking about
prices, says: "For my part, I like the prices, says: "For my part, I like the
warm stables, and think they pay, anyway. lame, too, to have no wool in the way at heat is not required, as some suppose. The
stables are made tight, and are arranged
interually in a certain manner. The sheep are shorn when put up for winter. It re-
quires nore attention to keep the animals quires nore attention to keep the animals
cool enough than warm; this is done by ventilators. Ne wly dropped lainbs cannot know many growers, but not one would Those who think of adopting this method are reminded that now is the time to select
and prepare the ewes, to fix the stables
before haying, and to arrange for clover hay and either roots or ensilage.

It is strange that more northerners do
not see and avail themselves of slieep
opportunities in the South. It is the best
clinnate for sheep husbandry in North
Anerica. There are about eight million
sheep in the South now which have grown
np literally without any particular care.
They are native and lardy -can be bought
for \$1.50. Cotton has ceased to pay for
growing. Many planters would borrow
sheep to double in four years, if they could,
as they have not money to buy. A north-
ern man to loan them money to buy with,
and see that they had pure-bred males to
breed up with, in four years would have
double the number of sheep, and they
would be worth nearly twice as much per
head, on account of their better breeding.
Any lively young or middle-aged man
might go South, buy or rent a cheap plan-
tation, grow hothouse lambs and ship them
North, slaughtered and dressed, and leave
northerngrown lambs far in the rear, so
far as profit is concerned.
Galen Wilson.

## VITALITY OF WEED SEED

Ten years or more ago, when the vitality
of seeds was being discussed in FARM and Fureside, I gave my experience with the I said that in 1851 I took possession of a: farm that was badly covered with the jim-
son-weed, and that I had commenced an exterininating warfare, and felt confident that there had not a single seed ripened mined to follow their destruction with the same vigilance, and report my success.
I found that some seasons were better adapted to their growth than others. I feel the farm during that time. If one escaped
my vigilance until the ball had formed, it wy vigilance until the ball had formed, it
was taken to the fire and burned. Some seasons they were abundant, and others
very scarce. Finally, in 1892 I pulled. my last one, and not one has made its appearseventh year, master of the situation.
There is one thing proved-jimson seed
will retain its vitality in the will retain its vitality in the ground forty
years.

FROM GARDEN AND FIELD.

Chllmeders Movex Crois.-Chil-
dren are often on the watch for ome crop they can grow for sumall plot of ground, and thus earu a tittle pocket-money: to spend some time, and take a great deal of pains with a crop when they see a
little money in it, even if this crop would hardly pay, or be thonght worthy of much attention, for grown people. A writer (lady) in Rurat Neur-Yorker points to and with good reason. It is an easy crop po grow, and the children cure it. There is a ready market pick and cure it. There is a ready market
for it, and it brings a fair price. A fivecent packet of seed (Broad-leaved) will give a number of hundred plants.
Plants inay be started early under glass, in Hats or on the greenhouse bencb, and
then transplanted to open ground in any good soil, the rows to be about eighteen nehes apart, and the plants a foot apart in the rows. I have always resorted to the
simpler way of starting my seedlings in open ground. When sowing onion, clery and similar seeds in the well-prepared garden land, I also sow a little row of sage. It is hard $y$; it grows as easily as cabbage. In planted to the permanent bed, and they will yield their several crops year after year

The writer aforementioned gives the following hints about gathering the crop:
"One may pursuc either of two plans; the first, which is the easier, is as follows: Just before the flowers open, cut the sage,
Jeaving an inch or so of the stem. This leaving an inch or so of the stem. This cutting may be done two or three times,
the growth the plaut makes depending on the amount of rain during the seasou. If cut at this time, the stalks will not be hard. The second way is to cut the leaves only.
Do this just before the flower stalks develop. The fiower stalks should be cut off as fast as they appear, so that the whole strength of the plant may go into the leaves. It takes eight pounds of green sage to malse
one pound of dry. The sage should be one pound of dry. The sage should be shade; or still better, hang it by the kitchen stove, where it will dry quickly.
To save the flavor perfectly, the dried sage To save the flavor perfectly, the dried sage ter the quality of the sage, the better the pricr it can command. Do not set out are the leaves are clean before drying. Cure them as quickly as possible.
I hope many of my young friends of the Faras and Fireside family will try to way. It may come handy for Christmas.

Rhubarb.-Another cron which the children can handle with profit is rhubarls. It once planted, and will only need some manure and a little digging around the plants from time to time. Of course, the
richer the soil and the more thorough the richer the soil and the more thorough the
digging about the plants, the fatter the stalks and the more of them. Rhubarb is about the earliest pie material that the sea-
son affords, and it comes handy for sauce when other fresh sance materials arc in scant supply. There is quite a demand for it in spring and early summer, not only by people in cities and villages who do not
own tillable land, but strange to say, often also by owners, of rural homes, who might be expected to raise their own rhu-
barl, lout who don't. Any boy or girl will have no difficulty in raising quite a lot of plants as a start, and by a little inquiring among the neighbors, to sell all the stalks at five cents a hunch that can be spared.

The Root-magaot.-It would not be easy o estimate the damage done anuually to cabbage, cauliflower, ouiou and other crops
by the root-maggot. In some years I have lost more than tifty per cent of iny cab-
bages and cauliflowers, and whole sowings of radishes are often entirely rnined by
the pest. Among my onions, cases of atthe pest. Among my onions, cases of at
tack by the ollion-maggot have been comparatively rare. In recent sears I have
resorted to rather heavy applications of muriate of potash, and in the case of cab bages and cauliflowers, to frequent spray
ing with solutions of the same substance The spray (from the knapsack pump) is
directed upon the plants until the liqnid runs down the stem to the ground. I be-
licre it kills egog as well as worms whick it touches. At any rate, since I hare been nsing this derice I have lost ouly an occasional plant, and I fear the cabbage-nnaggot sioual plant, and I fear the cabbage-naaggot
no more. Whether niy constant use of muriate of potash, mitrate of soda and muriate of potash, mitrate of soda and
other chemicals as manure is in any way other chemicals as manure is in any way
responsible for my comparative immunity responsible for my comparative immunity
from nuaggots and some other injurious insects, I am unable to say. It is not unlikely. The free use of lime has often been recommended for these root-maggots, and
that it is effective, in some measure, hardly that it is effective, in some measme, hardly
admits of donbt. I feel sure that the easiest and most effective way of applyin it is also in liquid spray. We should us fiesh lime, stake it, and add water enongh to make a solution, not a milk or cream of lime. We want lime-water that can be easily applied with a spray-nozzle, and will uot leave a regular coat of whitewash all peatedly and lavishys, I think we will have no tronble from the maggot. We waut to get rid even of the eggs.

The bisulphid of carbon treatment now strongly recoumended for the same pest by the experiment station at Ithaca, is of Cornell University, it will give hin full information about the pest and the remedies for it. If a small quantity of bisulphid of carbon can be put right to the root of the plant, it will surely kill all the maggots on that plant. Heretofore, $\mathrm{if}_{\mathrm{f}}$ we wauted to apply it we had to punch a hole in the ground, near the plant, with a little stick, and then pour a quantity of the bad smelling liquid into the hole. Now, Mr. McGowen, who has also devised a most excellent nozzle for spraying orchard trees, has put on the market a very serviceable
injector. It is a large syringe, so arranged that each working of the pistou throws on only a spoonful of the liquid. When freshly chiarged, the injector holds enough to treat
five luundred plants. It has a long point, five hundred plants. It has a long point
which is thrust into the soil near the plant which is thrust into the soil near the plant; the piston is then given one turn out and
in, and the plant has received its treatment.

Every extensive grower of cabbages and cauliflowers should investigate this, what promises to be a cheap and certain cure for bisulphid of carion can be had for fen cents a pound. Unfortunately, our drnggists charge excessive rates when one buy drawback to its use in the home garden. That the stuff is highly inflammable and should never be handled in a room where there is an open light or fire, should be often repeated. Whether experiments have been frade with this same substance as a remedy for squash and possibly other
borers, I am not aware. Surely, this is a promising field of investigation. The squash-borer is often very destructive, and it would be worth while to discover a simthat my free applications of tobacco dust about the plants have kept this pest in check, as it has also helped to clear out flea beetles and root-maggots.

Bones as Fertilizer.--I have several inquiries concerning the use of bones as manure. One man (in Oregon) says he cann
get pleuty of old bones on the prairie, and wants to put them on his asparagus bed hut does not know how to dissolve them. bone. Reasonably fresh bones contain about four per cent of nitrogen, besides
their phosphoric acid. This nitrogen, if made a vailable by fine grinding or other wise, would help asparagus and garden crops considerably. The weather-worn bones found on the prairie are probably destitute of nitrogen. They are phosphate ot hey will come quite handy to supply phosphoric acid, especially in growing graius or as one of the ingredients of a mixed feradded in any of the forms at hand. The old bones of the prairie will ose little or nothing by burning, which is one of the means by which we can get them disintegrated and in shape for application to the soil. If you can start a nice lig fire of wood or rub-
bish, and then throw on the old bones, you will get a residue consisting of wood ashe and bone ashes, this mixture being an excellent manure for all sorts of crops,
and effectiveness for fruit crops. But there is no nitrogen iu these ashes. If the land needs nitrogen, you can supply it by growing clover, or by applying cotton-seed meal
or dried blood, or stable manure, or by composting the ashes with dried and weathered muck. I frequently nse nitrate of soda (sometimes sulphate of ammonia), but freight from the sea-shore would make this material too expensive for use far inland.

It would be wastefnl, perhaps, to burn comparatively fresh bones. The four pounds of nitrogen contained in one hundred pounds of bolles are worth fifty ceuts or more, if in proper shape for the use of plants. Probably the best way of treating these bones is to break them up as fine as practicable with an ax or hatchet, and then put them in alternate layers with fresh wood ashes, in barrels or tanks, the whole mass to be kept moist until the potash in he ashes has had time to act on the bones and rot them so that they can be easily masher or crmmbled to pieces. The acid
treatment can hardly he recommended to the average farmer, unless he has an unusually good chance to get large quantities of fresh bones at a low figure.

Buggy Peas and Beans.-A number of readers inquire about bugs in peas and beans and how to keep them ont. One of he inquirers wonders how they getinside as there is no external mark where the insect made its entrance. The female bug
lays its eggs on the outside of the pods when they just begin to form. The yonng insects work through the pod and into the tender little bean or pea, "pulling the hole in after them," so to speak, for the hole is so small it closes up again by the growth of the pod or seed. When the vines are in bloom, you can watch the old weevils at
their work. I have sometimes been able to fight the pest successfully by frequent spraying with buhach suspended in water, a tablespoonful to the gallon.

Sal-soda for Vegetation.-A Michigan reader, E. A. G., inquires about sal-soda, hurt plants, if the sorp had been inade from sal-soda. This substance is an impure form of carbonate of soda, and quite cheap. some genius has arisen, lately, who is tryng to make us believe that soda is as good as potash, and can take the place of it in plant nutrition. I have repeatedly spoken of and contradicted this absurd doctrine But if soda does not do much good, it wil neither do much harm, and nobody need
fear ill results from the application of soap-suds to the ground around shrubs and trees, even if the soap nsed in mak ing the suds was made with soda instead of potash. Whether it would pay to bother much with this kind of suds is a question I would not be ready to answer in the affimative. The inquirer has killed a choice apple-tree by excessive applicaputting a busha a ben manure around each tree, and he is not willing to take ant more lessons of this kind at such a cost But if a person is capable of throwing pow erful fertilizers around trees ly the bushel ful in a place, he is greatly in need of some sutere lessons. Use reason in all things, and in putting fertilizers around trees or shrubs, do not throw or heap them up against the body of the tree, but spread them evenly and thiuly over the entire surface that the roots are supposed to
cover, and this is ordifarily much more cover, and this is ordinarily muc
than that corered by the branches.

## Orehard and Small Fruits.

The new growth of grapes should also be shortened from time to time by pinching back.
A well-cultivated blackberry-bush will usually set more fruit than it can mature.
The quality and size of berry may be The quality and size of berry may be
wieatly improved, without reducing quan tity, by trimming off one third or one fourth of the fruit stems.
This is also true of the plum, grape and many other fruits.
New strawberry beds should not be aloff all buds and blossoms.
The unaturity of seed is very exhausting and if allowed to grow will greatly reduce vigor of new plants. For this reason never be used.
The best preventive of clisease among berry-plants is clean cultivation and severe pruning

The worm on currant and gooseberry bushes will appear on the lower leares
soon after the fruit forms. The remedy soon after the fruit forms. The remed
for this pest is so simple, there is no exens for this pest is so simp
Onc ounce of white hellebore dissolved in two gallons of water, applied with sprinkler or hrush-broom, when worm first appear, will exterminate them. Two or possibly three applications may be ned the same manner.
The space between rows of berry-plants the first year, may he planted to potatoes or other low-growing garden crops. Straw berries should have all the ground.

## age of trees to plan

The age at which trees should be hough mist be governed by circumstances and by variety. There is a general tendenc. to buy trees too old rather than too young be econony to buy young stock. Some of the frecr-growing apples and pears are large enough when two years old if grown from buds; but these fruits are usually sct at three years from the bud or graft Dwarf pears may be set at two or thre years, preferably, I think, the former age Quinces are set at two and three years Peaches arc always set at one year from the bud.-Prof. L. H. Bailcy, in Balletin 69

| :---: | Fron Tennessee.-This is a unique place,

and has a remarkable history. In the year
1890 two meu of this part of the country, who believed in temperance as the best foundation for any town, conceived the idea of startiug a
town upon that basis. Their first move was to interest men of meaus in the North aud East, who shared their views as to temperance,
in the project. They especially impressed upon them the thought that here was all
opportunity to show their faith hy their opportunity to show their faith hy their not necessary to its prosperity, but a positive hindrance. Full of enthusing themselves, in others. Prominent mon of means in Ohio, Illinois, New York and Maryland were induced Land Co. was formed, and bought up a large tract of land in Roane county, beautifully situated in a bend of the Emory river, upon a
platean over 700 feet above sea-level, and surrounded by mouutaius 1,500 to 2,000 feet high.
The air is pure, fresh, dry monntain air; the The air is pure, fresh, dry mountain air; the
soil porous, and the Emory river furnishes an abundant supply of sweet, soft water. The limestone. Altogether, it is an ideal spot for a town. The Cinciunati Southern and the
Southern railways pass through the place, while the Teunessee Central is to pass near it Coal \& Iron Co. has completed a road to Brushy thousand acres of coal lands, which it will
work with its convicts. After the East Tenna large number of people iu the northern and eastern states to attend the openiug sale of were paid which exceeded the highest hopes of its originators. Part of the tract was laid
out and its lots sold at moderate prices to induce laborers and mechanics ond sethe there, especial reference to the colored people. Each
deed given contained a provision forever prohlbiting the manufacture, sale or storing of intoxicating liquors to he used as a heverage
Mauy beautiful homes were at once erected, some of them costing many thousands of
dollars, while there is a general appearance of thrift and comfort ahout the whole place, which indicates the intelligence and character
of its iuhabitants. Churches were soon erected Unive Methodists, M. E. South, Baptists, palians, Presbyterians and Congregationalists Able preachers were secured by the different he great educational institution of the place It the American Temperance University
of only two years has already over 300 students
of both sexes. They come from seventern
states, aud are an earnest, substantial set of states, aud are an earnest, substantial set of
young people. The university is blessed with an able and devoted faculty. It ouly lacks fuuds in order to make it a great and increas-
ing power in the educationai world. A large part of its success is due to its chancellor, the Rev, Dr. J. B. Spence, a veteran in such work
Much credit must also be given to the able and consecrated body of teachers he has gath ered around him
shown toward the children of members of th
G. A. R., and to young people of small mean who really desire to get an

Machine Co. The panic of 1893 was very disthe people have shown real grit in holding ou, and you cau hardly meet a Harriman man or
woman who does not speak hopefully of its future. It is bound to be a "railroad center" in the course of a few years. So soon as the
state gets its Brushy mountain mines into full working order-which is a matter of a few
weeks now-good steam coal can be set down
here at seventy-five cents per ton. This will
encourage manufacturers to establish themselves here. Manufactories will bring people,
and so the place will grow. Established onl five years ago, Harriman has a population of
from 3,000 to 4,000 . The intelligence aud moral from 3,000 to 4,000 . The intelligence aud mora
character of the people are far above the aver age. The churches have their young people's B. Y. P. U's., etc., while there is a Y. M. C. A., with free reading-room, and W. C. T. U., capacity of 800 to 1,000 . Being the best publi hall of the town, and at the same time uude are prefty wcll shut out, and so one great source of demoralization is avoided. The is 80 miles north of Chattanooga, 50 miles west of Knoxville, 258 miles sonth of Cincinnati the Ciuciunath Southern is very fine; good
road-bed, fast schedule. The Queen \& Crcscent route is fast making a name for itself
for confort and regularity. The better Harri-
uan becones ruan becomes kuown, the more will it attract
persons seeking a good climate in which to
reside, either temporarily or permanenty in a place where they will bring up their boy
tional facilities, and he free from the tional facilities, and he free from the allure
ments of the saloon and bar-room.
Hariman,

From Texas.-Wallis is situated at the crossing of the Gulf, Colorado \& Santa Fe and the Arausas Pass.railroads, 8 milcs uortu of Gall
veston and 40 miles west of Houston. Wallis veston and 40 miles west of Houston. Wallis
offers great inducements to several business enterprises-a good newspaper, a farm inple factory, and many other factories could find good openings here. The rich prairie that
surrounds Wallis offers a rich return to thos wishiug to engage in farming. Those wishiug to engage in fruit and vegetable growing will fiud here a climate and soil that will yield a
bountiful return. Poultry is a paying busines here; the climate is so mild that chicken rais ing cau be carried on all winter. Farmers auc stock raisers will hid an the natural advantages. Corn yields from 35 to 60 hushels per
acre; oats, from 50 to 100 ; cotton, $3 / 4$ to $11 / 2$ bales; swcel potatoes, 200 to 400 hushels, and Tris potatoes, 150 to 250 bushels per acre. Millet, and all kinds of vegetables can be grown, two crops a year. We are not subject to drought or hot winds. Plenty of good water is obtained schools, and thepth state. Good land can be bought at from $\$ 8$ to
$\$ 15$ per acre, a small payment dowu, balanc

## THE POULTRY YARD

THe most essential substance for promoting egg production is
nitrogen. This is best fod to
the hens in the shape of lean meat. If meat could be sup-
plied daily in the proportion of such au increase in the production of eggs as to really lessen the cost of feeding. That
is, there would be sufficient eggs secured, over and above the number that would be only pay for the meat, but to increase the
profits. And this gain would easily come two extra eggs a week from each heln paymay be used.
A poultryman who sold eggs to his
ueighbors, some of whom kept hens, gave ueighbors, some of whom kept heus, gave
as his secret the feeding of neeat. His hens seldom incliued and they would lay as many eggs during severe winter he sold eggs at fifty cents a dozen, owing to their scarcity, and paid fif-
teen cents per pound for meat, which was also high; but his profit was large. He would have had no eggs at all but for the Animal feed is necessary for fowls, if seasons of the year. It is a mistake to make grain the principal food for laying market fowls, but the laying hen demands something more. The egg itself is animal from grain, yet the hen is required, in order to be profitable, to produce an egg
each day, or as uear that as possible, and her work must not be interrupted from lack
of the necessary uutriments. Meat fills a want that cannot be supplied from any
other source, when the hen is laying regularly. Bone and meat are now staple poultry foods. $\underset{\text { PROFIT FROM AN ACRE. }}{ }$ While one hundred hens are not too many for one acre of land, better propor-
tionate results will be secured with fifty hens. If the farmer finds that fifty hens
pay on one acre, he can use other acres in the same manner. Few farmers have ever really tried to make poultry pay. Gener-
ally, if hens have paid at all on the farm they deserve all the credit. There are no
fabulous profits in poultry, nor is the capital required much less than for other
stock, but the losses are sooner recuperated, and better prices are obtained. There is another advantage which is important:
The returns from the sales of poultry and eggs are constant. There is no waiting being governed and regulated ners" or speculators. There is always a
retail demand which the farmer himself can regulate and supply. The most careful experiments have flock should give a profit of one dollar per
year. Some of the hens will pay nearly all. The cost and the profit are regulated by circumstances, as is the case with all
industries. All risks must he encoun-
tered, including losses from disease and mismanagement ; but with all the allowof one dollar per year in eggs aud chicks.
There is no more labor required in There is no more labor required in
managing a flock of fifty hens thau in
mauaging a cow, or in plowing, seeding, cultivating and harvesting a oue-acre crop,
and the larger the crop the smaller the cost proportionately for each hen or bushel

## By weeding ont the unprotitable stock, a

 ligher standard will result. In the obserearned. The good hens: become pets, and pride in their individual excellence on the part of the owner results. The young producers, instead of from eggs takeu indiscriminately from the egg-basket. No armer who will carefully cull out the drones need depend on others to producebreeds for him. Pure breeds should be used, however, and especially pure-bred nales. Even with the choicest stock, the natter of selection should not be orerlooked. There are drones and illers in
aristocratic flocks as well as in flocks of low degree. There is room for improve ment in every direction. The object is to mpress upon poultrymen and farmers the importance of a close serutiny of the stock, aud to teach the fact that a profitable flock can be made up of what may look like unpromising material.

## SOUR MILK

We are asked if somr milk is injurious to chicks, and a reader suggests that he has raised chickens for twenty-five years and has always had good results. He alludes, milk, however. His pullets, hatched in April, have layed in August. Sour milk, ondition, and may be usert. The rlaim we made was that it should not be used for hicks, as it is liable to cause bowel disease, erventation. The difficulty is that but erulentation. The difficulty is that but ew will heat the milk, or remove it until
it becomes entirely unfit for any use. Sour milk, fresh milk or buttermilk is excellen heus iu winter. Regarding the early aying of the pullets (four months old), they were probably Leghorns, but they will be more serviceable if not beginning quite so

## CORRESPONDENCE.

Poultry Fur Profir.-One of the most 1 m -
portant points in raising poultry for profit is to take pains in breedlug. You can get a
munch finer stock by breeding from a pair than by a flock. If you want poultry for eggs, you want lively, spry fowls; to get these you should breed a pullet and a stag. If your pul
let has a long, slim body, is spry, and has a tail that runs in a straight line with her back, yon should use a male with a tail that 1 s more like the hen, as they would mature earlier. I should nen. You will get a larger fowl from rooster and hen than from a pullet and stag, their largest rooster, regardless of shape and constitution, and then complain because they
do not pay their way. The more active a forvl the better her laying qualities, and I think it
pays much better to keep hens for laying than pays much better to keep hens for laying that
for market. I have kept a large number of
different kinds of poultry, but I like the Pit different kinds of poultry, but I like the Pit
Games much the best. I have two hens which
I got Jarch 1, 1891, and they have laid 385 eggs I got March 1, 189t, and they have laid 385 eggs,
and wanted to set twice during that time. I have nothing but the Games now, aud I have
made two dollars a head from the flock the made two dollars a head from the flock the
first year. Did yon ever hear any one say they did not like them who had ever kept them? I
never did. A great deal depends on the feed never did. A great deal depends on the feed pay if not taken care of. As eggs are always plenty of eggs is as follows: First, I would
gather the leaves in the fall, euough to cover the floor of the poultry-house two or three
differcut times, at least a foot deep, and dlvlde diffcrent times, at least a foot deep, and dlvlde
the flock as much as possible. For the morn-
ing feed I would give about half a mess of Wheat, thrown in annongst the leaves, then
water them in about half an hour. At noon $I$
$\qquad$ would glve them all the corn, scattered ln the
leaves, that they would eat. If the foor ls

## A BOY'S BATTLE. <br> 

## Chapter I. <br> a Accident

Ting the fam-bell began to ring, calltog the hands
to their dinner. With the tirst note from the irou clapper' Andrew Pearson
dropped the hook dropped the hook he had been reading and sprang to his feet. It was Saturday noon;
on Saturdays the hands were alon Saturdays the hands were al-
lowed to leave the field at noon, if they chose to do so, without jeopardizing their chances of being employed again on Monday. If they preferred it, they were at
liberty to work on as usual, the full day's time. Being paict aeeording to the amount of cotton they brought to the gin, the loss from the half holiday was their own. They always chose the holiday; not one of them, those employed the yearalike, but hung his hasket under the shed at Saturday noon, there to remain until Monday norning,
"ts off"" see Uncle Jack before he boy fashion, thendrew, dashing, and with every dog on the plaec at. his heels. "He might be going to town if he hasn't forgot his promise. Most of the hands do go
to town Saturdays." "And come back drunk, if they dodge the poliee and the lockup,"
satid Mr. Pearson, who had eome out by another door fust in time to hear his son's words.
Andrew's eyes flashed.
"Uncle Jack doesn't get drunk," "Miss Jinny' (that's his wife) forty years ago he wouldn"t and be never has. I call that a rare gnod promise-keeper. And 1 m glad he go 'possum-hunting with him the very first good day he was out of the cotton-field, Last Saturday it rained; I think we'll go to-day.' "You ain't goin' off on no 'possharp voice from the kitchen, where Mrs. Pearson was frying turn-over pies for dinner. "I ain't here with your arms shot off, or maybe your head, even. You ean just maake up your miud to leave
that gun be. You ain't goin' traipsin' around the farm with
"Oh, mother, don't say that!" said Andrew "I shoot any time with father, and I'm not the least afraid of the gun."
"Which ain't any sign it won't go off and land you where you'll be mighty willin' to own your mammy knows some things."
Mrs. Pearson was one of those women whose boast it was, that having spoken her mind, she never changed it. Andrew knew it was ittle boasting, hut it was very promptly ipped in the hud.
You make me out such a baby, mother," he protested, his lips quivering. "I'm not afraid Didn't I ride to town alone at midnight to bring the doctor to Uucle Jack the time he was so badoff? And I swam Stone river on the hay mare and hrought Mrs. Davis and her bahy to the bank that time they took the wrong ford. And I-"
"Yes, yes; you're the peartest fifteen-year-old ever was seeu, r'll he bound. Yon might merey you didn't. But if old Jack's the occasion of the hurry, I'll be hound you're ready to canter. As for swinmin' Stone river, it was a mighty darin' thing to do, and if I'd
a-heen asked, you wouldn't a-done it, that's
all." Andrew turned away with a sigh. When his mother spoke in that tone there was no appealing from her decision. And she had decided that he was not to go 'possumhunting with Uncle Jack.
There was nothiug to do but run down to the cabin-that stood with several others in a grove of wild locusts at the top of some few hundred yards to the left of the "big gate" that opened upon the glisteniug white turu-plke-and see the old man unchain the dogs and trudge off to the sweet, autumn-crowned
woods alone.
"And it is such a good day," said Andrew, as he went down the path. "The woods will
be full of 'possum, and wild grapes and persimmons. Afraid of a gun! I'd as soon be a glrl and be done with it, if I must never leave off wearing dresses, anyhow."
It was a disappointment. He listened a mounds, for the deep, mellow haying of the that would be almost frantic to be off whenever Unele Jaek should step to the cabin door with his gun upon his shoulder
> until dark, and judglng by the past, there
would be a fat, stumpy-tail 'possum dangling from the hunter's shoulder, while his hat would be filled with mealy, ripe persimmons, and every pocket hulging with wild grapes. Perhaps there would he a coon to keep the 'possum company. It was too bad. For one
moment he was half tempted to run away moment he was half tempted
and go anylow. But the next
> and go anyhow. But the next-
"Shucks!" he said, "Unc' Jack wouldn't
begiu to let me."
done tuk inter his head ter roost. Go long
dar, Miss Jinny, en gib yo' ole man his bite o corn-bread en fat meat, en don't be keepin' de isttle marster waitin'.
"Good mind ter let you go widout a hite," said Aunt Jenny, as she trudged off to the cabin and her interrupted duties. "Makin" me leab things ter burn up en go racin' after you beea'se you ain' got no mo' sense en ter
go qua'llin' back at a man what's druuk. Has go qua'llin' back at a man what's druuk. Has

As he drew nearer the cabin he noticed that the dogs were silent; the cabin door stood bacon met him upon the threshold.
The room was deserted; a wooden tray of corn-meal dough upon the hearth near the smoking hoe told him that Aunt Jenny, old Jack's wife, had been called out just at the moment when ahout to slap her hoe-cake upon the hoe.
Some hroad, long strips of bacon were had been raked upon the hearth. had been raked upon the hearth. Upon the muddy, blackish foaza sputtering and spitting among the hot embers. A lean, black foxhoinnd, which Andrew recognized as Lil, possibly because of the one white spot over her left eye, was nosing as close to the
burning bacon as she dared approach. A yellow cat had her nose in the bread-tray npon one side, and a speckled pullet was picking at the unusual feast upon the other. Andrew stopped but a moment to exclaim against the rogues, "You, Lil, come out of there! Scat! Shoo! you petty thieves you." the dog's feet, and the clicking, harsh sound of the pullet's claws upon the bare fioor, as the invaders scampered out by way of a back door, Andrew heard the voice of Aunt Jenny in angry protest, and glancing in the direction whence it came, he saw the old negro and his wife coming slowly across the vacant field in the rear of the cabin.
Jenny "Y'got a mite o' sense," said Aunt Jenny. "You's de higges' gump dat walks de earth, I reckin; go traipsin' off after a mau what's too drunk ter know what he's sayin" anyhow."
"Ef," said Uncle Jack, and the grin upon his he hab de reasonment ter talk, he sholy hal got de reasonment ter hold his tongue. Dat nigger ain' hornded yit, Miss Jinny, what kin call ole Jaek a thief. Ez fur dis here Yeller Pete, I'll let de daylight enter dat y eller gent'man sum $o$ ' dese days, you hear $m c$."
"Shet yo' mouf!" exclaimed Aunt Jenny, sharply. "All de hands at de gin-house done hear you say dat alraidy. You better shet yo' mouf en keep it shet till you fin' out it
ain' no pra'r-book, ef it do op'n en shet." ain' no pra'r-book, ef it do op'n en shet."
"Let up, Miss Jinny, let up," said Uncle Jack, who had caught sight of Andrew coming out to meet him. 'You's done said
more'n 'nough ter let de ole man know he ain' got no sense. En dat ehile sholy come ter go after dat fat 'possum we been layin' off
ter h'ist out o' dat persimamon-tree, whar he
"Heish chile, heish," said Uncle Jack, laughing; "dis gun ain' had no load in hit since las' suramer, not since I shot dat fine Eh, eh !
His good humor only exasperated his wife the more.
"En dat's all de sense you got, anyhow," she declared. "Not ter know a rabbit from gray eat. You ain' fitten ter be let go off by o'se'f, you sholy ain't.'
Uncle Jack was a good-natured old fellow, if a trifle reckless when angered. He hore the deproaches of his wife, wom he alway addressed as "Miss Jinny," with wonderful lavery and in freedom too long for him not avery and in freedom too long for him not colding there was a genuine affection, and heart that held his happiness and safety first always.
This afternoon he bore Aunt Jenny's temper with unusual meekness, perhaps because he already recognized the folly of which he had been guilty. True, the old gun was not loaded; but it had frightened poor, half-drunken Pete quite as effectually as thongh it had been full charged.
Uncle Jack's last view of him had been to see him tlying past his own house with a the yell that brought his wife, Big Lize, to the been too frightened to stop. All Big Lize saw as Pete making for the cedar woods, and Uncle Jack
Aunt Jenny.
Pete, known about the plantation as Yellow ete, was a small, willowy mulatto of a crafty and resentful disposition, though brave hat "Yeller Pete gwine ter git eben wid you ef it takes de balance ob de year," was a ef it take
pretty fai
position.
"What did he do, Uncle Jack?" said A ndrew, as he followed the negro to the cahin, where
Aunt Jenny had resumed her task of pre Aunt Jenny had resumed her task of preparing the hasty noonday "snack.
"Do?" said Uncle Jack.
"Yes; what did Yellow Pete do to you?"
"Yes, to you.
"Yes, to you. What did he do that made "Mad? I ain
"Mad? I ain' mad, honey; hit wuz dest a in a minute. I ain' gwine git wat all ober "But what did $I$ ain', sholy, sholy." his "But what did he do?" said Andrew, his

## Yes; what did he do to you?"

Ter who, me?"
"Did who hit who?" demanded old Jack, ith a show of temper. "Did he hit me? Naw, honey, dat he didn't; dat he didn't. Dey gent'mah if he'd a-laid de weight oh his finger m dis nigger. He jest p'intedly gib de ole I don't want ter hurt somebody, hut I reckin I'll hah ter do some keep out oh my way. I 'spect I'd a-killed him dis time ef dar wuz any load in de gun. When a man ur ter keep his guns 'roun' too handy, Dey might go off too quick."
He was only indulging in a little bousting. In his customary good humor he would no more have harmed the boy he would have harmed the boy at his side-the him as he was of his own father. And the boast was meant ouly for the boy's ears; neither of them notieed the large, tall negro man rossing the lot but a short disance from the point where they stood, and in easy earshot of their
voiees. This negro was "Blind Sam," a field-haud from a neighhoring plantation, a bad fellow, who had stirred up many quarrels own rigbt eye in a broll of his own hrewing. lot, he looked baek at Jack with his one bright eye, and slowly shook his head.
"Make mighty free wid dat ar tongue $o$ ' his," said he, and passed onl, leaving Uncle Jack to finish his story.
Andrew turned his head just in time to see Sam's disfigured faee disappear down the path that led cabins.
"Pabins. had been drinkin' some" said Uncle Jack. "I ought ter a-come long in de house, lack Miss Jinny tol' me, en let him talk, e he'd a mind ter, ter de fence-post. Hit's mighty casy ter see what you ought ter do after de do am done; remember dat, son. You see, Pete come up here to ax 'bout his hoe hat he say some-un tuk offind horse-apple tree whar he hung it 'mongst de limbs. He excused me ain't showiu' de proper respec t.er a ole man, ter be exeusin' ob hima o takiu' a measly ole hoe. En den I invite him ter make hiss'ef mo' sca'ce en what he am, else I'd sho' sick de dogs ou him. At

what I say. I know you ain't no coward, son." The commendation was sweetest music to
the boy whose idea of greatest manhood was the boy whose idea of greatest nanhood was
courage, and who had all a boy's love for that
which pertained to the heroie and tasted of adventure. But he had not learned to rnake nice distinctions; as set he recognized but
one kind of bravery, and that was a physical courrage. And he urats brave, after his own
ideas. But he was destined to learn that the grandest and most dazzling example of
physical bravery which ever has been recorded is as nothing compared with the
winning of a moral victorr-resisting a wrong, Winning of a moral victors-resisting a wrong,
daring to do that which is right, for no other reason than that it is right. And an ignorant
old negro was to be his teacher. Thus are the Mld negro was to be his teacher. Thus are the
humblest sometimes chosen to carry God's great messages.
In regard to Mrs. Pearson's relenting, how-
ever, Uncle Jack was mistaken. His fother had lifted a voice for him, but it a a a ailed
nothing. "Ain't you a little strict with him, mother?"
said Mr. Pearson, when Audrew had disappeared down the path to Uncie Jack's house, and ""or rat breath of frest air."
dor inn't you a little strict rith him? He is a "Ain't you a little strict with him? He is a

"Why, Mars," said the farmer, "the boy will
"Hing ot be worth the raising if we are to teach must take his chances to a certain. A extent, and as for me, I'm opposcd to mine stumbling
and dodging around in petticoats until he is twenty-one." farmer spoke in that tone 3 Irs. earson lad no more to say:
"Ride the bay mare, son, and start home an hour by now at the latest," said Mr. Pearson,
as Andrew went off to get ready for his ride. A few hours later he was riding homeward along the white, suushiny pike, with the
riffe lying across the saddie before him, and his thing across the saddle before him, and far away in the woods with Cucle Jack, upon the hunt he had been forČncle Jack, upon
bidden to enjoy.
The mare was entering a little stretch of for more than a mile which the turnpike ran the long, gaunt shadows stretched farther and farther across the white pike; the shadow or tue cedars that rose tall and rugged and
ragged on either side the road. In those very woods somewhere Uncle Jack was trailiug a possum, perhaps.
Andrew, rode more slowly; the bay was rather old, easily winded, and a bit stiff in the joints. She offered nio resistance when
Andrew threw her, with a sudden jerk upon he lines, almost upon her hannches.
He had heard a slight rustling movement foliage of a grape-rine that had twisted itself into the branches of a stalwart cedar near the roadside. Without a thonght of fear he pulled
the inare aside and rode into the dense,
He drew up again, neart the tree in which he had heard the noise, waited a moment,
listened; there it was again. Something was in the grape-vine-a eoon, of course, stealing
the wild grapes at the risk of his own furry the
hide. With a little, low, noiseless laugh, thinking how he would surprise Uncle Jack with a
coonskin, after all, Andrew raised the rifle, took aim, and fired.
There was a startled, broken cry, such as no anter, and the next moment a heavy, dark object craslied through the vines and fell to Frightened, stricken with horror, Andrew sat spellbound for a single moment. The
next he turned, put whip to the mare, aud went galloping down the white turnpike, pale as death, quivering in every uerve, and
always with that terrible object before his eyes, the sound of crackiug branches and "Who? Whe his ears. word his white lips could form. He had shot some one among the grape-vines. Who

## varieties of rice.

The rarieties of rice enltivated nowadays are so numerous it is utterly impossible to
specify them. In India alone there are several hundred varieties, the chassifying of which is further eomplicated by their having
different names in different localities. The prevalent custom has been to classify them accurding to the seasons in whieh they are
sown. In Madagascar, again, a variety known as
"rajaiantsky"" has also the same properties.
rue The famous carolina rice, muca thought of in the United states, is nothiug more or less
than this same "rajafatsky" variety, altered by carefuls seed selection aud improved cultivarieties of rice are grown from Carolina sed. Another curious point about this so-called "upland" rice is that it can be grown under
exactly the same conditions as the swamp rice end give exactly the results-that is to say,
apland rice planted in a swamp will produce
und upland rice planted in a swamp will produce
as good a crop as if planted on a dry ridge; and the same can be said of swamp rice when planted on a dry ridgc. This is no theory, but
actual fact, as any one who knows ansthing about rice cultivation can prove. The "aus,"
as its name iunplics, is an early crop, and is a quick grower, some varieties ripening in two India is limited, being very much smaller than any of the others. The extra dry varieties are
not considered quite so rourishing as the swamp, or wet rice, nor so palatable.
The rice consumed most extensively in
ouensland at the present day is that trown Queensland at the present day, is that known
as "Japan" rice, a short, plump, bright yellow as "Japan" rice, a short, plump, bright yellow grain; and rice growers are adrised to grow
this, and this only, for the present. For the grown, the principal features of the mave beenty
of them being a thin, long grain, whiell has been practically unsalaboe, to the great discouragement of the growers. Farmers must
study the public tastc for rice for the preent;
at all events till the industry has developed, by which tine the public will have been
educated to appreciate some of the fincr varieties of Indian rice, when a change of variety
will be found proftable. In the meantime
whe de
the demand for this short, plump, pearly rice
exists, and varieties, be they from Japan or
Iudia, haviug this characteristic should only
be cultivated, in view of whicl fact the Department of Agricniture has ordered a qna
tity of this Japan variety for distribntion.

ing arm in a crowd, and she does not take up ing arm in a crowd, and she does not take up
so much room in a railway-earriage, or d warf so nuluch room in a railway-earriage, or dwarf
her partners in the ball-room. There never et was a little woman who could not comously as a tall one, and no amount of height ever prodnced more dignity than a small ourse by comparison that everything is, of or thus, and so it is only when judged by the taudard of some exceptionally tall sister that a short woman will permit herself to be so described. She will always indignantly disclaim a brevity of inches under any circumstances, though no woman ever set objected to the epithet
of affection.

## bells.

Once in Switzerland I stopped at the little village of Burglen. right on the very spot heve his story with all my heart and to bespirit of it in the world, just as I would keep the spirit of Santa Claus for the children, in pite of all that is said against it. Welle every morning and evening, right by my window, rang the "matin" and "vesper" bells, calling he villagers to their simple service; and they came-many with tools in their hands, to leave them at the door-barefooted, to enter and kneel in prajer before going to their daily labor. The bell is called the "Angelus" in that country, and if you once heard it as 1 have, sou would love and eherish all its associations. Let me tell you one little story of the curfew. In an English village a bride stoole the furze, but becoming frightened, tried to nd her way back, and took the wrong path; coming with the dalkess the girl becime terrified with visions of robbers and dangers in every form, when suddenly, through the dismal gloom came the sound of the dear old curiew, sweet and low. Guided by it to her When she died she bequeathed not ouly a chime of bells to the church of her little vil-
lage, but money to keep up the custom always lage, but money to keep up the custom alw.
of ringing the curferw.-Home and Country.

## the dakota hot springs.

The Hot Springs of Arkansas have long been deservedly popular, for the reason that there has been no other place that has filled the re-
quirements of both a health and a pleasure Hot Springs of south Dakota have, in recent vecause of their delightful sitwation and great curative qualities, are becoming more popular very day. Situated as this resort is, in the famous Black Hills, in the midst of beautiful mountain seenery, possessing that peculiar heaith giving withere wats that are pronounced by experts equal if not superior to those of

## OPPORTUNITY FOR WOMEN.

Do you know that raising flower seed for
market can be made a very paying business, if one puts sufficient work and eare into it? In almost every part of our land there are fairs held, where the best in the line of floricultnre
receives liberal premium. First of all, set receives liberal premium. First of all, set eompetition; then-well, for instance, ralse sweet-pea, pansy, aster and phlox seed for the
home market. Go to a dealer in flower seed home market. Go to a dealer in fower seed trial.
"Mighty ends from small beginnings," know. Improve your strains year after year ada to your varieties; pnt only good seed on and by and by you will have built for your-
self a bnsiness and lave been earing someself a bnsiness and
I have been the.
of a few men whose sweet-pea enterprises have become public. One gentleman raised three tons of the seed last year, and sold it at
a. good profit. The fame of a ministerial sweet-pea garden in Massachusetts has spread house in the world. It is said that a seedhas lately bought seed of this same gentleman, who undertook the cuinght of monetary reward, but for outdoor exercise. He gives
all his profits to the cause of missions. all his profits to the cause of missions.
Now, it has always seemed to me that flor-
icnlture is pre-eminently woman's work, and icnlture is pre-eminently woman's work, and
I reeommend it to girls as a source of profit as well as pleasure.-American Agrieulturist.

## origin of various things.

We have peach from Persia, in which country it is actually held to be a poison. In onr climate it has lost, by transplantation, mnch
of its original coarseness, and has become one of onr choicest frnits.

## Crusades.

Rabbits were held in sueh bigh estimation that they were brought to the table as a very in Spain that they were snspected of mining the honses of Tarragona, so as to cause some oyst them to fall.
a "dainty dish," and the poet Antonions has celebrated them in his verses. After the death of this poet, however, oysters were no more thought of, and it was not until the beginning of the sixteenth century that they were again
bronght to notice. Parmesan eheese appeared in the more northern part of Enrope for of Charles VII. of Franee. This prince, it wonld appear, in an expedition Plaeenza, when the magistrates offered him some of these cheeses, the enormons size of which so greatly astouished him, that ou
curiosity he sent a nnmber of them to the Queen and to the Duke of Bonrbon. These royal persons, venturing to taste them, found
them so excellent that from that time the them so excellent that from that time the
Parmesan eheese has ranked among the finest that ean grace a royal table.
Sweetmeats were much nsed to bribe persons of quality, or jndges to whom a request was to be made. This enstom at last rose to
sueh a piteh that Louis IX. of France issued proelamation forbidding all jndges to take the Handsome snbsequently curtailed this quantity
one day.

## EVOLUTION OF TABLE MANNERS

How did table manners arise? Where do they come from? Like Topsy and other
human institutions, they "just growed." And human institutions, they "just growed." And
it-is surprising how slow of development has been the sentiment of cleanliness and neatness, which was the principal cause of the in serving food and in eating.
In good old palæolithic tim
beings were always within twenty-four hours of starvation, man ate only with his fingers. He hunted for his food in the woods or by the
sea-shore, and he picked the bones clean. Two table artieles are fonnd anong uncivilized peoples-the knife and the spoon. The knife
was originally a weapon of attack or defense; it was used for entiting and carving flesb, but its conlv
Tbe origin of the spoon is uneertain. It cate, for it is fonnd among people that bave never eome into eontact with civilization.
The necessity of having some implement for dipping water seems to have led first to the coroanut-shell, and later on to tbe spoon.

NERVE FOOD: SUMMER SGHOOL Hishill
$\frac{\text { DON'T TOSS THE BABY. }}{\text { The common praetice of }}$ The common praetice of tossing a baby in
the air to amuse it is a dangerons one, for the slightest spring of the child as it leaves the hand is enough to dash it to the floor. Although the eases where accidents have oc-
corred from this eanse are "not alarmingly frequeut, they are serions enough to command the matter, gives several instances she has
known where children have been ininred in this way. A gay young father snatcbed up
his baby boy one morning and tossed him to the ceiling. Twice the little fellow went fly-
ing throngh the air and came down safely. The third time the excited child gave a spring
of delight as his father's hands released him, father's shoulder, fell head downward to the
floor. When the poor ehild came out of the
unconscions state, in which he lay for honrs,

Another baby tossed into the air received a
fatal wound in the top of the head from the
pointed ornament of a ehandelier, and an-

bapy, and saved her from falling on the
dround, it strained the mnseles and sinews so
that the girls arm was shrunken and practi-
cally nseless to her all her life. A celebrated

## SEWING HINTS.

If one is troubled by the buttonholes in child ren's clothing tearing ont, when making a garment put a strip of the goods where the buttonholes come, making two or four extra thicknesses, theu work with a little coarser thread than usual, putting the stitches in closely, and there will be no further trouble.
If the buttons come off or tear out, put in frou four to six extra thicknesses of the material where each button is to be sewed , and use good linen thread, filling the veither come off nor tear ant.
Make a list of odd jobs of mending, or other little things not requiring innmediate ther little things notrequir ing "piate atention that can be used as pick-up and does not wish to sit with idle hands, and does not wish to sit with idle hands,
hy referring to the list one knows at once by referring to the list one knows at once
what to do without taking their thonghts from their caller.

Some one has said that "The world affects us according to the mood we are in." What about our moods? Are they uot largely controlled by the will? If so, aod we give our wills the task, coula we not always live in such a "mood" that the rord would seem to us a pretty good place? Not only this, but if in the right
mood we could make it a better place on account of our having been in it. It is certainly worth thinking about.

after folding it in shape, put two poekets of the silk. Put sachet-powder between
the cotton and the silk. Lace it up at the corners with baby ribbon.

## TOILETS.

The two gowns we illustrate are easily made from any plain waist and skirt pattern; noting the trimming.

The cloth walking-costume is trimmed with white cloth and black velvet, with a crush collar of the velvet.
The house gown has elbow sleeves, and the top of the bodice of silk like the skirt, with the bodiee and trimming of black velvet.
Neck trimmings of illusion or net are always becoming to ladies turniug on to inaturity, aud are a very necessary accessory to dressing becomingly.

CONVENIENCES FOR THE SICK.ROOM.
After the danger is over, and an invalid on the highroad to recovery, a nurse's ingenuity is ofteu taxed to the uttermost
to provide conveniences to suit the caprices to provide conveniences to suit the caprices
of her patient, especially if that patient is inclined to be whimsical, and the convalescence of long duratiou.
The few following artieles will be very acceptable to either the rich or poor, and may be "fancy-fiuished," or of the very simplest and plainest materials aud workmanship, as the eo

House Gown.
After the patient was beyond the era of
"spoon rittles" and slop, and could take meals sittiag up in bed, dou't you remember what times you used to have in secur-
ing a comfortable position for him, either
with chairs turned upside down at his waek, or a lot of pillows piled up?
Well, take two boards, about fifteen inches wide and two or three feet long, (according to the length of the patient's back), and bevel an cnd of eaeh so that they Connect at the top (A)
with a hinge of some sort, that the angle of the boards may be varied to suit the will
of the patient. A wide of the patient. A wide strip of leather tacked
securely over the top will answer the pur pose as well as boughten lius. If the pose as well as bonghten hinges. If the latter are used, there should be two of them at least; and have arms that extend down
onto the board well, as the upper edges are onto the board well, as the upper edges are
cut down quite thin, you know, and the cut down quite thin, you know, and the boards must be fastened together very seeurely at the top, as they may have to support considerable weight. The board at the back ( $1 . B$ ) does not need to be as wide its whole length as the one the patient rests against. It can be eut away or tapered to five or six inehes in width at the bottom ( $B$ ), and this will lessen the weight and make it easier to handle. It can be left unadornerl, or painted, or padded and covered, as the fancy of the wner dictates.
patient's and and between the rest and the degree in a sitting posture that he wishes as the angle of the boards may be varied innumerably.
When not in use, the rest can be folded together and slipped under the bed or

Highest of all in Leavening Power.-Latest U. S. Gov't Report

## Royal Baking Powder Sowithi mube

His father had been making mortar to be used in plastcring. Oue day his auntie saw him out at the sand-pile with a little can of water. She watched him dip up the sand and fill that wonderful new pocket, and then up came the can of water "pour in, too.
"Johnny, what are you doing?"
"Makin' mortar, auntie, like papa do." "Well, but he does not make it in his pockets!"
"Oh, I didn't fink o' that! I had to fill my potict wif sometins."
I will mention some other articles iu a future letter, as six months' illness gave plenty of time to invent eonveniences for both nurse and patient; but the fear of too lengthy article will prevent my describing any more at this time.

## WITH THE HOUSEKEEPER.

To Use Fat Meat.-Cut in very thin slices and put in the bottom of a stew, kettle with a pint of water. Let it boil ter or fifteen minutes, and add enough po-
and small onions for the dinner, a pint or more of the liquor in which the meat was tatoes are dome whe onions and po slice as mulhe. When serving it, only The next m at meal cold morning for breakfast, slice the ond and put on to warm in a frying pan. Sprinkle on it as much sugar as one would use if it were salt. Turn and sprinkle the other side, and turu again, as the sugar causes it to brown beautifully, as well as giviug it a most delightful flavor Remove to a hot platter, and to the fryings in the pan add a tablespoonful of flour with the back of the spoon smooth this in the hot fat until free from lumps; then add a pint of sweet milk, stir until it boils, add salt and pepper, let cook two miuutes, and serve hot in a gravy-boat.
Cut slices of salt pork rather thin, put in the frying-pan with about a quart of cold water. When it reaches the boiling-point turn, boil one minute, then take up and turn out the water. The parboiling ren ders the meat fresh and sweet and far inore palatable. Before returuing it to the pan to fry, roll it in flour, corn-meal or very fine bread crumbs, theu fry, or better still, dip first in well-beaten egg, then in the nour, corn-meal or bread crumbs, and fry a rieh golden brown, and serve with a gravy made as just directed.
little Helpful Hint.-If, on dishing some articles of food, it is found that some of the contents have cooked fast to the bottom of the vessel, rendering the washulg of it a difficult task, as soon as the contents are removed, put a pint or more of boiling water in it, cover closely, and steam, and by the time one is ready to wash it, it will be so softened as to be readily and easily done. C. S. E.

AAS WE MAKE THEM
FTER all, are not our lives much as we unake them? When in college a farorite
theme for debate in theme for debate in our liter-
ary societies was, "Do circumstances make the man, or man the circumstances?" There is much to be said on both sides, it is true, but can we not, as mothers, do much toward fashioning our own circumstances?
Our surroundings inay be far from what we would desire, or our lives on the surface may partake much more of the monotonous or even drudgery than we would wish. And yet may the inuer truer leing not be moderately tranquil after all? And should effort that it should be so? We all know how very easy it is for us "just tired to death," and we are wont to blame ourselves for ar seeming lack of self-control. Bu the wear and tear of motherhood is so constant, so exiausting, that unless we can obtain help from
sources outside of ourselves, will at times become well nigh discouraged. I have seeu the statement somewhere that "impatience proceeds from weakness," aud I beliere in many instances this is Fitful, uncontrolled action in dicates "a screw loose some-
where." Impatience is a "loose screw," caused by overwork. There is no rattling or rumbling plete in all its parts.
"The deep, full river flows quietly in spite of the obstructions in its channel bottoms; it is the shal-
low stream which frets and tosses low stream which frets and tosses
The strong, healthy mind, with a body in correspondingly as good condition, is euabled to move right on, apparently taking no note of the obstructions that lie in its course. Much has been said of late about the prevalence of insanity among farmers' wives, and the reason assigued for it is the loneliness, the endless monotony of their

It is a well-known fact that a horse can travel over a hilly road more easily than one perfectly level, because different muscles are brought into play
Women require recreation. If the same powers are called into action day after day, week in and week out, they will not be able to withstand the tension that is put upon them.
Variety is not only the spice of life, but it is an essential to liealth. Church work, intellectual pursuits, society demandsmeet the demand for greater variety of interests, and drive from the mind the rust disuse of the powers. How ften is the weary body rested, while the spirit is being refreshed at a prayer-ureeting.
"The mother who scolds and finds fault with everything is really scolding and finding fault with herself." She is not cogni-

 zant of the fact that a little recreation on lier part would render the atmospherearound of au entirely different nature. The around of au entirely different nature. The
fretfulness and irritability would disappear as if by magic. Mothers everywhere are overworked and have cause for impatience, but is there not a partial remody some-
where? Is it right to allow the homemaker to be entirely swallowed up in the housekeeper? They two must go liand in hand in creating the holy atmosphere of
home. We can overdo the housekeeping home. We can overdo the housekeeping
element of this union; not so the homemaking.
Our love for the children, the desire for their best good, the determination to keep in touch with their active, inquisitive na-
tures, should orerbalance our dislike for a little out-of-placedness and "clean dirt," which is necessary to the perfect development of children. It is a great mistakc,
however, for mothers to pick up and put away the toys when the children have

washiug the hair is no longer to be feared as a tedious operation. In form and size it resembles a nickel-silver hair-brush, into which hot water can be poured through an
aperture in the handle, fastening with a screw stopper, four conical teeth or knobs representing the bristle side of the brush. After rougll-drying the hair with a towel, these tceth are passed through the liair, and afterward the smontli side is used, which not only dries, butimparts a beautiwith greater facility, while it does not injure the hair like hot irons. As a toilet requisite it is indispensable; for invalids boon, and for those in health it would be considered a luxury.

Take a bowl and break into it one egg, one half cupful of lard, oue half cupful of sour cream and three tablespoontuls of sugar, mix; now take a lump of your bread dough-when it is ready for making into loaves-the size of one loaf, ponr the mixture upou it, and mix thoroughly with your hand until it is perfectly smooth, to abent twice the thickuess toll out to abont twice the thickuess of a pie-
crust and line your pie-plates with it; crust and line your pie-plates with it;
when you have as many plates as you want, roll them into sheets about an inch thick and put into pans; let it rise while
you prepare the filling, as follows: Fill you prepare the filling, as with fruit. Grapes-one layer, not too close-are nice, or apples, pared, cored
and sliced and laid upou it in one layer, are good, but peaches sliced upon it are best. Now pour over the contents of the pies-kuchcn-one egg for each two

early instructed to do this for themselves.
By a little judicions tact they By a little judicious tact they may be
made to enjoy this fcature as much as the play.
The children also slould be taught to perform certain definite duties, thus saving the mother many steps. We cannot expect our children to be thoughtfil for our comfort when old, if we have never aught them to work during their child hood. Ella Bartlett Simmons.

THE PRINCESS HAIR DRYER AND BURNISHER.
This admiralle iuvention will be found uvaluable by ladies whose lair, being ong, have difficulty in getting it quickly dried after washing, and who may therefore suffer from neuralgia. By using the "Princess hair-dryer" this is aroided, and ACUTE DYSPEPSIA.
STMPATHETIC HEART DISEASE OFTEN ATTEND
IT-THE MODERN TREATMENT CONSISTS (From the Republican, Cedar Rapids, Iowa.) Mrs. V. Curley, who has resided in Clarence, Iowa, for the past twenty-two years tells an interesting story of what she con-
siders rescuc from premature dcath. Her narrative is as follows:
"For ten years prior to 1894, I was a con stant sufferer from acute stomach trouble I had all the manifold symptoms of acute dyspepsia, and at times other troubles were what it was to enjoy a meal. No matte how careful I might be as to the quality, quantity and preparation of my food, dístress always followed eating. I was despon dent and blue. Almost to the point of in sanity at times, and would have been glad to die. Often and often I could not sleep. and again I was obliged to call a doctor in the night to relicve suddeu attacks of suffocation which would come on withou a moment's warning.
"My troubles increased as time wore on and I spent large suuns in doctor bills, be ing compelled to have medical attendants almost constantly. During 1892 and 1893 , it was impossible for me to retain food, and to a skeleton. A consultation of physicians was unable to determine just what did ail me. The doctors gave us as thei ulceration of the coats of the stomach and ulceration of the coats of the stomach and
lield out no hope of recovery. One doctor said, 'All I call do to relieve your suffering is by the use of opium.'
is by the use of opium. Symantha Smith, of Gliddin, Iowa, told me about the case of Mrs. Thurston, of
Oxford Junction, Iowa. This lady said she had been afflicted much the same as had. She had consulted local physicians without relief, and had gone to Davenpor for treatment. Giring up all hope of re-
covery, she was persuaded by a triend to take Dr. Willians' Pink Pills. The result was almost magical.
"I was led to try them from her experience, and before many months I felt better than I had for a dozen years. I am now almost error from trouble, and if througl som error of diet I feel badly, this splendi remedy sets me right again. I have re gaincd my strength and am once more in without distress. I have no doubt that I owe my recovery to Dr. Williams' Pink Pills. I only wish that I had heard of them yearsago, thereby saving inyself teu year's of suffering and much money. Dr. Williams' Pink Pills coutain all the elements necessary to give new life and richness to the blood and restore sliattered nerves. They are for sale by all druggists, or may be had by mail from Dr. Williams Medicine Company, Schenectady, $N$

## Mothers

have never found a preparation so well adapted to the needs of thin, delicate children, as Scott's Emulsion of Cod-liver Oil, with Hypophosphites.

Children almost universally like the taste of it, which makes its administration easy, and it supplies their blood with the food properties that overcome wasting tendencies.

Scott's Emulsion enriches the blood, promotes the making of healthy flesh, and aids in a healthy formation of the bones.

Don't be persuaded to accept a substitute.

so we can verify their order we will be glad so we can verify their orcter, we will be glac
to look them up and fill them immediately.
(O)世 Sunday gftemoon.

Be not too bold, nor yet too meek Be not too quick to disagree,

Thy secret grief, folber, forbear To others tell-with little care And pity but thy lack of sense. All enry from thy heart expel,
Bid ears of thine with haste rebel Bid ears of thine with haste rebel To humor's whim bend not a slare, But onward, upward, just and brave,

And God shall do for you the res

## GOOD FELLOWSHIP

Ian old, old story which is obsolete dote of a little baby princess who wa lost in a park, and fell in with a tin peasant maid, with whom she made and was found by her distracted governess sitting with her arms around her new sitting with her arms around her new
acquaintauce, pouring confidential discloacquaintauce, pouring conf
sures into the plebeian ears.
sures into the plebeian ears.
It. is certainly now an infrequent thing to find such simplicity between our own American children of difierent socialranks Among little girls especially, there is a
spirit of criticism and a mature shrewdspirit of criticism and a mature shrewd-
ness as to the status of their playmates. The miniature women guard themselves from intimacies with the schoolmates they consider their social inferiors, and as, before other more abstract considerations can obtain lodgment in their sinall equality, it is not surprising to see babies in years anxious to display their wealth in rich apparel; which increases their vanity encourage such an unnatural and injurious idea as that there are real barriers and distinctions between the children of the rich and of the poor, when they all meet to gether at school and Sunday-school and the public parks, and should enjoy each other's society upon the plane of healthful good fellowship! Don't let us rear our
dear, honest-hearted little ones to be patronizing and airy, to think themselves of more account than their poorer acquaintances. Let us enconrage them to be frank, simple and kindly to all alike, and to take for their standard that instinctive preference for goodness and beauty of yonthful minds, before it is orerlaid by false teaching.-Florence Hull, in New Yor

## A GENUINE CHRISTIAN

Those who cannot believe that the Chithink of the following. "A convert named Mr. Hiung had a brother-in-law of considerable influence at Pekin, who offered him a lucratire post in which he could earn increase. When the offer came he brought the letter to Dr. Griffith John, who said to him, "Yon are in the wilderness with Christ; the devil is offering you wealth
and position, the two things the Chinese covet. What are you going to do about it?" Mr. Hiung replied, "I have made up my
mind to decline the offer. Matthew left the customs to follow Christ. The devil wants me to leave Christ and follow the customs; that will never do." His wife good he could do with the money. He found it more difficult to resist his wife's said he, "the story of Eden better now." Missionary Herald.

USELESS KNOWLEDGE, OR WORSE.
Knowledge in itself has no val Knowledge in itself has no value often harmful. Yet there are those who pride themselves on the possession of mere knowledge, regardless of its practica spend a considcrable portion of their time in searching after knowledge that they son to suppose could be of any practical value to anybody. And, besides this, there are mauy, old and young, who have knowledge that they had better not have Knowledge must be select knowledge, to
be worth having or worth seeking. This is peculiarly trine of theological knowledge The questions that most puzzle religiou: seckers are concerning matters that are without practical value to the seekers. There is much in the realm of religious thought that must remain unknown to us The desire for knowledge merely as an quisition has beell stigmatized as the sin of curiosity. - Sunday-school Times

## TAKE TIME FOR THE BIBLE

As we drift along the swift, relentless current of time toward the end of life; as dars and weeks and months and years folloy flect other in breathless haste, and we reflect now and then for a moment that a has passed irrevocably, what are the caree has passed irevocably, what are the inter command our attention? What do we read and leare nnread? What time do we give to the Bible? No other book, let us us for that which lies before us; for the nnknown anxieties and sorrows which are sooner or later the portion of most men and women; for the gradual approach o death; for the period, be it long or short, of waiting and preparation for the throne and face of the eternal judge. Looking back from the world, how shall we desire t? How shall we grudge the to guide to have wasted on any-be they thoughts or books or teachers-which only belong to things of time?-Canon Liddon.

## GOD'S WAY Is BEST.

When the florist wants a plant to bloom he puts it into a small yessel. The roots soon fill the pot, and when they can go no further, the energies of the plant are di into bloom. I sometimes think that is the way the Lord has to deal with haps there is no person who has experienced the inconveniences and himitations great longing for wealth. He wishes he had been boing for wealth. He wishes he was not, for he surely would have put his mouey to a good nse. But perhaps that is just where you were mistaken. God knew that porerty was better for you than rice you are now giring, which would not have been given had you possessed riches. joyment; or been absorbed in managing your estate. So the great gardener lias put you into a very small pot, so to speak, and
by the rery limitations of your lot forced yon iuto nsefuluess

## TRUE TEST.

Love to God must show itself by lore to ur neighbor. If we try to lire on one table of the decalogue, or on one part of
the Lord's Praycr, we become like a boat the hand be outstretched in supplication toward God, it must also be opened in
benefaction toward men. There is great danger of partiality in our choice of God's commandments. Many a mau practically says: "This commandment harmonizes That one does not; therefore, I will neglect t. This one is in line with my social relations; that one is not; I will obey the one and neglect the other. This one is one is not; therefore, I shall neglect it." Such an attitude as this is unworthy of a

## SUGGESTION

The flowers around the pulpit last Sunday were beantiful and gave the pastor
good token of his welcome home. But suppose now you gladden him with some
new books for his library. There never
was a tine when so many books were pubwas a time when so many books were pub
lished which will helpa minister to bring
forth "things new and old" in his pulp work. He hungers for some of these volmes, but he lacks the money needed for
their pnrchase. A few dollars invested for heir pnrchase. A few dollars invested tor

## WAS GOULD INSANE? FINANCIAL WORRY AND PHYSICAL EXERTIO NOT THE GREATEST DESTROYER OF MIMAS LIFE. FOR HUMANITY'S SAKE, AFTER THIRTY-SI YEARS OF NERYE-CREEPING SLAYERY,

Caldifell, N. J., May 10, 1895. (Special.) Since one of our prominent citizens who has suffered so terribly from tobacco tr mens has made known his frightful expe ience in behalf of humanity, the ladie ere are making tobacco-nsing liusbands ives miserable with their entreaties to once quit tobacco.
The witten statement of S. J. Gould is uterviewed to-night he said
menced using tobanco at thirteen; I an how forty-nine; so, for thirty-six years hewed, smoked, suuffed and rubbed snuff In the morning 1 chewed before $I$ put my pants on, and for a long time I used two ounces of chewing and eight ouuces smoking a day. Sometimes I had a chew in both cheeks and a pipe in my mouth a once. Ten Jears ago I quit drinking again, but could not. My nerves craved aicotine and I fed them till my skin turne tobacco-bromn, cold, sticky perspiratio oozed from my skin, and trickled down my back at the least exertion or excite ment. My nerve vigor and my life was being slowly sapped. I made up my mind that $I$ had to quit tobacco or die. On Octo ber 1st I stopped, and for three days I suf ered the tortures of the damned. On the hird day I got so bad that my partner ac have quit tobacco.' 'For God's sake, man,' he said, offering me his tobaceo-box, 'tak chew ; you will go wild,' and I was wild obacco was forced into me and I wa ken houre dazed. I saw double and in knew how to chew and smoke, which I did Il day until toward night, when my sys em got tobncco-soaked again. The mex orning I looked and felt as though I had ween through a long spell of sickness. gave up in clespair, as I thought that I could not cure myself. Now, for suffering humanity, f'll tell what saved my life. Prov prayers evidently answered my good wife
our paper an article which read: 'Don'
"What and smoke warning in thes
words! Just what I was doing. It told bout a guaranteed cure for the tobacco abit, called No-To-Bac. I sent to Drug ist Hasler for a box. Without a grain of dith 1 spit out my tobacco cud, and put to stampor apon whic asstanped No-1o-Bac. I know it sonnd ablets the first day, seven the next, five he third day, and all the nerve-creeping eeling, restlessness and mental depressio was gone. It was too good to be true. It go. I used one box. It cost me $\$ 1$, an is worth a thousand. I gained ten pounds in weight and lost all desire for to bacco from the first day. I sleep and eat vell, and I have been benefited in mor rays than I can tell. No, the cure rvas no exception in my case. I know of ten peo-年-To-Bae from Hasler, wa they have een cured. Now that I realize what Fo-To-Bac has done for me and others, I wonderful remedy, the Sterling Remedy ronderful remedy, the Sterling Remedy Company of New York and Chicago, say: We don't claim to cure every case. That's Fraud's talk, a lie; but we do guarantee three boxes to cure the tobacco habit, and
in case of failure we are perfectly willing to refund money.' I would not give a public indorsement if $I$ were not certain of its reliability. I know it is backed by men worth a million. No-To-Bac has been God-send to me, and I firmly believe fully tried, aud there are thousands of to bacco slaves who ought to know how eas it is to get free. There's happiness in No o-Bac for the prematurely old men, hink as I did that they are old and wor ut, when tobacco is the thing
stroys their vitality and manhood,"
che public should be wa
gainst the purchase of any of the against the purchase of any of the many imitations on the market, as the success of counterfeiters and imitators. The genuine No-To-Bac is sold muder a guarantee to cure, by all drnggists, and every tablet
has the word No-To-Bac plainly stamped has the word No-To-Bac plainly stamped

## VETERINARY.

* $\%$ Condueted by Dr. H. U. Detmers. $23 *$
Professor of Vèterinary Surgury in Ohio State

Garget.-C. W. H., West Newton, Ohio, IIKinots on the Head.-J. T. K., Hazel Dell, when you say that three of your pigs lave
"knots, on their heads, between the eyes and
ears. Maybe you nean so-culled skin horns.

## A Lame Hors.-C.

 The mere statement of of, Waterville, Kansas that your horsefell, was lame lmanedlately, and has beent lam slne, does not convey any idea as to the seat
and the nature of the lanneness. Consequent an, I cannot comply with your request. Any
part of a horse's leg may be injured by a fall. A Dead steer.-L. H. S., Farmersville, Mo
The few symptoins you give-lnappetence, re-
naining away from the herd, thirst and bloat iug-and the statement that the steer was sick
fonr weeks, do not enable me to form an opinion as to the cause of death, or the nature
of the disease. You mlght lave ascertained both if you had made a post-mortem examina-
tion. MIorbid changes, very likely, would liave
been found in the digestlve organs, aud naybe ben found in
A. Big Wart.-J. D. B., New Lexington, Pa,
writes: "I have a stecr with a wat on the
lower side of the fiank. What ean I do to
remove it, as it is a great hindrance to the sale lower side of the fiank, What ean I do to
remove it, as it is areat hindrance to the sale
of him? The wart weighs about threc or foul
punds." ANSWER:-The removal of such a wart will
recquire a surgical operation. Get a veterina-neck- pou do not say so-it may be removed
by an elastic ligature applied as close to the
skin ess possible. WormsinH are ascarldes, you may succeed iu removing
them if you miv with the food of your hogs. Two drams is
the dose for a good-sized shoat. If, however
the the worms you complain of are Echinoryy
chi (Echinorhynchus gigas, which are fre
quent in young pigs, and pass their larva quent in young pigs, and pass their larva
stage in the larva of the Maybug (Melolontha
majais, you will have dificulty, no matter
what what you may do.
Sickikiogs.-F. W. B., Gratio, Wis. Your
descriptlon conveys the impression that Your
two shoats, very likely, suffer from lung-
worm worms (Strongylus paradoxus). If so, nothing
can be done. If one should die, examine the lungs, and open the finer bronchial tubes
with pointed sclssors, and if worms constitute
the cause of the trouble, the same will
 been, deposited. Wet places and stagnant
pools of water are the most dangerous Prolapsis of the Uterus.-A. G. S., Viola,
Mich. If your oow has suffered this year
from prolapsus of the uterus immediately frter calving, there is, of course, some danger
afthat the same thing may happen next tinc,
hut it is not at all certain that it will. If you hut it is not at all certain that it will. If you
conclue to bred the cow agaiu, it will be
advisable to let her have, duriug the last three
monthe before months before calving all the voluntary
cxercise she is williug to take and circum-
stances whill permitit. If she then, inmmediately
after calving, is closely watched, and if necessary, a truss is put on, or if she is kept nnder
the infuence of narcotics, very likely nothing
will happen Sheep-rot.-S. C. S., Bell, Ohio, writes:
"Please inform me what is the best treatment
for socalled mot ANSWER:-If you mean by "rot" the disease
of sheep caused by the presence of fuke-worms (1) sistornum hepatlcum) In the gall-ducts of the
liver of sheep, there is ne remy sheep,
especially older sheep, affected with that dlsespecially older sheep, atfected with that diss
ease will pull throngh, if the same, at thls
season of the yeare are yet vigorous and in a
good condltlon, while all those that show
gho good condllin, while all those that show
cachectic symptonis will die, The prevention
consists in keeping the sheep away, durins the summert from all low and an swampy places,
stagnant water-holes, etc., because it is these
places where the worm brood is picked up. Colic.-J. A. H.. Rochester, Kan. Your
horse, it seems, had a protracted attack of
colic. The best prevention consists in removing the cause, where that can be done, and
when the cause can be ascertained. If the
cause consists in the presence of an aneurism in the anterior mesenteric artery, nothing be-
yond strlct regularity in feeding, and exerelse
can be done. If an attack is on, a physic may can be done. If an attack in on, a physic may
be given, injections into the rectunc nay be
nade, but whether they will do much good is questlonable. To write a treatise on the treat-
ment of all possible case of colic would lead
too far. It is always hest in such cases to consult a veterinarian, who can examine the an-
imal, possibly ascertain the cause or causes,
and adapt bis treatmeut to the individual
case Sone Sort of Itch.- II. J. C., Saw yer, Kan.
You say your cow has "some sort of itch., It
hnay be mange, but all that cau be learned
from your communication is that she Is from your communication is that she is
from yected with a rather severe skin disease,
afgainst which numerous applications have been made in vain. It contans nothing upon
which a differential diagnosis can be based.
The trouble, it seems, has been that you have The trouble, it seems, has been that you have
washed and dosed the cow, but have neglected
to clean and to disinfect the stable, and have not destroyed the infected bedding. Wash
your cow, first vith sap and warm water, and
then with a five-per-cent solution of creoline
(Pearson's), and this done turn her out to (Pearson's), and this done, turn her out to
pasture, and don't talke her into the stable
until the latter has been most thoroughly
cleaned and disinfected Repeat the creoline
wash turee times, once every tive or six days.

Remains Poor in Flesli.- Y. L., Carrollton
III. No wonder your five-year-old horse Yil. No wonder your five-yearold horse
remains poor ln ficsu, if you feed the same
three tines th day, twelve good ears of corn Whree hmes a day, twelve good ears of corn.
Whenever horse is fed more food than the
same can digest, hos inprovement is possible.
Let your horse Let your horse have the benefit of a good everything will turn out all right.. Such ${ }^{\text {han }}$ horse, of course, must not be worked to death Probably Poisoned.-T, L., Redfleld,
Kan. Your hogs, which, as you say, had bech confined all winter by being kept in an pen,
and were thenl let out inton wecd-patch, prol-
ably got hold of a shanll narcotic polson Hogs, as a rule, do not tackic polsonous weed poisoned themselves with ymson-wced
(Datura stramonnum), but they nay le more
careless in reard to other poisolous pants
especially if this instinct has become dulled
by long and continuous confinement. If the by long and continuous confinement, If the
cause death has bocn anything else, the
dying would not very likely have ceased a soon as the hogs were taken to their old pens,
and removed from thit wed-patch. A care
nul ful examination of the contents of the stom
aches of the dead hogs would have been o A Diseased Eye.-S. J. L., Endicott, Neb.
The nature of the eye disease of your mare does not appear from your descripption. The
white spot you mention may be in the crys talline lens, and be cataract; and as far as yonr an opaque spot, or e even a scar on the cornea.
only one thing seens to be certain, that is, an
nflammation, or at least a severe irtitation nianmation, or at least a severe irritation
of the conjunctiva. This you may mitigate
by applying, three tines a day an eyitigat by applying,
composed of acetate of morpline, two grains,
and distilled water, one ounce. It is best applied by means of a so-called dropper, whic
can be had in any drug-store. one or two
drops at a time is enough. It of thon wive only remove the irritation, and will not hate
any effect upon the morbid clanges existing
in the interior of the eyeball. Afraid of Parturicut Paralysis.-R. W. D., Glenarm, In. If you apprehend dange
from parturient paralysis, sometimes called milk-fever, and yonr cow is ant excellent
milker and in a very good condition as to
flesh, it will be advisable first to lion Ight diet until two wecks after calving; sec-
and, to see to it that she calves in it clean and dry, place; and third, you may inject into the
uterus, inmediately after she has clenned or passed the afterbirth when she has calved, a
quart or more of a milk-warua solution of corrosive sublimate in water, one of the forme
to 2,ooo the latter, or about seven grains of
he sublimate to a quart of watcr. If, how
and the sublimate to a quart of watcr, If, how-
ever, when speaking ot milk-fevcr, yournean
garget, the prevention as well as the remedy would consist in frequent milking-frequch

Vertimo.-A. M. S., Riceville, Tenn, writes:
"I have a horse, four years old this spring,
hat when at work becones diwy ant till that when at work becomes dizzy and falls
down after a little staggering. The attack can
be noticed, and he will stager thirty or forty feet before falling; lays two or threc minutes,
and gets up and goes on all right. He liad two attacks in one afternoon at the plow, tknow
little of his history, thougl I think ho has
had such attacks before. I can see nothing
Wrong with him. He is thin in fiesh, and
think never was fat; in fact, I hear that he Wrong with him. for is thin in fexh, and
think never was fat; in fact I hear that he
las been half starved all his days. I have fed has beenh half starved all his days. I have fed
him well, but he has had lannpas all winter.
His coat is sleek, hide loose, and as far as I can ANSWER:-Vertigo Hust be considered as an
incurable affection. You can probably prevent
your horse from falling down if you throw your horsc from falling down if you throw
something over his head, or blindfold the
same, as soon as you sce añ attack coming on. Probably Attends to tle Milking Mer
self.-E. H., Randolph, N, Y., writes: years old. She had a calf the middlc of MIarch
and after three or four weeks side commence going by for three or four milkings, that she
would give from a pint to a quart, and then would give a big mess of milk one, milking.
She kept doing ihat way all the time.
bought her a year ago, and she dirl the same
way Way last summer. She has a good appetie,
fed good bay, bran and meal mixed, and tur-
nips once a day, eats well, but when turned loose to ono outdoors, will go to the wall of the
barn and try to eat the mortar." ANswer:- Miay be that your. cow has devel-
ANed the bad habit of occasionally attending to the nilking herself; that is, snclis ler own
teats. If not, she probably, allows another cow to suck her. Watch her, and hase with
sclf is the guilty one, put a leather hater with
a good, broad nose-band full of sharp-pointed naws on her head and if you mind that another
cow is the culprit, pat the prikly halter on
that one's head, Further explanation will
not be necescary.
Diseased Hogs.-A. S., Tunnelton, W. Va.,
writes: "The hogs in this locality have been affected with a disease unknown by any far-
mert. Thave two Poland Clinina pigs, about eight
months old, that were taken about the first of last February. Symptoms first noticed: re-
fused to get up, and to eat, hind legs swollen,
and the muscles rigid and contracted, and walking on their pastcrin-joints. Then they
appear to get better for a short time. When
ne appears to get better the worse. I havc examined them carefully at
times, and daave noticed a redness and a
cougestion of the anus. Their appetite is capricious. Sine days they have a good
appetite, while other days they refuse to eat.
Thelr bowels are regular They They, have been fed on good, healthy food consisting of corn, corn-meal and sweet milk,
no sour swill of any lind. Their lameuess is confined to their hind legs, and they seem to
Walk with great difficulty whin they get up.
My nelghbors' hogs wave been affected in mueh the same way, while some of theni have
died. Ihave not examined any after death
hut should I have an opportunity, I wili examine, and report the same.".
Asweli,-If any of your hogs should dic,
by all means make a post-mortem examination, and, if possible, have portions of some of
the muscles of the hind quarters examined by a microscopist fanmiar with histology and
pathological anatomy, because such an exam-
ination will probably reveal the nature of the morbid process, and perhaps the cause. It is
barely possible that something is wrong with
the food that is, the corn and corv-1neal. If
the latter then

We Will Send by Mail, "Pictures of All Countries," A Book of Nearly

# 300 LARGE PICTURES <br> FREE 

To any one who will get two yearly subscribers to Farm and Fireside at 40 cents each. In this case each subscriber will get the book, and the club raiser will also get the book.
"Pictures of All Countries" is a new illustrated book containing nearly 300 beautiful, full-page pictures of Famous Places, Cities, Sights and Peoples. The original cost of the engravings was at least $\$ 30,000.00$. They were intended to illustrate a fine work, to be sold at Sixty Dollars. A description of each picture is given. We have published these illustrations in one large volume, and now offer them to our subscribers for almost nothing.

A World of Beautiful Pictures.

This book contains nearly 300 fiue engravings, produced at a cost of about $\$ 30,000.00$. They were intended to illustrate a fine work, to be sold at sixty dollars. There are pictures of

Cities,
Cities,
Cathedral
Churches,
Palaces,
Courts and Gardens,
Capitols and
Public Buildings, Street Scenes, Bridges,

Harbors,
Caves,
Tombs,
Battle-fields,
Volcanoes,
Mountains and
Ocean Scenery.

Through the long winters its bewitching pages will furnish many an hour of pleasure and profit.
For probably the first time you will see an accurate picture of the Head-hunting Dyaks, the tattooed warriors of North Borneo; the
luxurious interior of a Sultan's Harem, with its interesting bevy of Oriental beauties; the perilous -search for sea-fowls' eggs on the dizay cliffs of the Faroe Isles; the ill-starred fate of the gallant polar sea; the storied Plains of polar sea; the storied Pharathon, where Darius hordes of Persians fell; the tangled vines and tropic shores of the Orinoco's winding curves; the frigid waste of the Patagonian coast; the ruined shafts of Xerxes' throne; the ponderous fortifications of
Pekin, the capital city of the CelesPekin, the capital city of the Celes-
tial Empire; a colossal statue of tial Empire; a colossal statue of
Buddha, and a host of other pictures equally interesting and fascinating.

The above is one of the illustrations in "Pictures of All Countries."

## Take a Trip_

 Around the clobeBy securing this wonderful book. Among the nations you would visit by going through the book would be

Canada
Mexico,
Africa,
England,
France,
Spain,
Portugal,
Germany,
Denmark, Syria,

Iceland,
Gree Austria Russia, Siberia,

Holland,
Belgium,
Turkey

```
Persia,
Arabia,
India,
India,
Japan,
Australia,
Switzerland, United States,
South America,
```

And others, including islands of the sea.
(@) (-)

You Can Make this Delightfal Trip Between Sapper and Bedtime.

As you turn its pages you will imagine sourself traveling from scene to scene, passing from clime to clime, from the New to the Old World, visiting strange people in cities and country, viewing cathedrals, palaces and capitals, and other magnificent buildings, climbing snow-capped mountain and smoking volcanoes, exploring famous caves and ruins, walking over historical fields of strife,
journeying by land and sea from sumny Italy to the Holy Land, on through India, China and Japan, till you have passed around the globe.

## PRICES TO FIT LEAN POCKET-BOOKS.

IT SHOULD BE IN EVERY HOME, STORE, OFFICE AND SCHOOL-ROOM.

##  <br> Premium No. 11

## HANDSOME MAPS

The handsome Maps of all the States and Terrltories in the Union are large, full page, with a number of double-page maps to represent Countries on the Face of the Earth are Shown. Rivers and Lalkes are Accuratcly Located. All the Large Clties of the World, the Important Towns and Most of the Villages of the United States are given on the Maps. It gives a Classified List of All Nations, wlth forms of Government, Geographical Location, Size and Populatíon.
Its Special Features Relating to Each State Are:
Population for the Past 50 Years. A Condensed History. Number of Mles of Railroad.
Pecullarities of Soil and Climate, together with the Chief Productions, Prineipal Industries the Chief Productions, Prinelpal Industies ests. I
tions.
The People's Atlas of the World Containsa vast amount of historical, physical, educational, political and statistical matters it may be found with a moment's search. This department comprises a
GENERAL DESCRIPTION OF THE WORLD, Giving its physical features-form, density, temperature, motion, the seasons, cliinatic
conditions, winds and currents; distribution
of land and of land and water races of people and their
religions; a historical chapter on polar exploreligions; a historical chapter on polar explo-
rations; also the most complete list of nations ever published, glving their geographical location, area, population and forms of govTHE PEOPLE'S ATLAS is superior to any
school yeography published. Every school
boy and yirl and every college student should boy and girl and every college student should
have one. Its larger, better and more numerhave one. tos lagger, ithtits trifling cost, render
ous maps,
it an invaluable aid ln the study of geography. Parents should not fail to provide their chilpotent and comprehenslve educational aid,
supplementing and assisting the work of the sefool.

Thousands in Value for Almost Nothing

Impossible, do you say? Cousider for a moment the great amount of labor and money expended in the preparation of this Great Atlas. It required years to gather the
material. Over $\$ 25,000.00$ were expended for the engraving of maps, illustrations, for editorial labor, for type-setting aud elcetro-plates, etc., before a single Atlas was priñted. material. Over $\$ 25,000.00$ were expended for the engraving of maps, illustrations, for editorial labor, for type-setting aud elcctro-plates, etc. before a single Atlas was priñted. The most improved rotary presses are used in printing it; one press alone cost $\$ 20,000$. If we had only printed a few thousand of these Atlases, they would cost $\$ 5.00$ to $\$ 10.00$ editions at one time, we are enabled to offer the most wonderful and most valuable premium ever given with a yearly subscription. All this is due to the wonderful improvements in printing and paper-making machinery.

Regular Price of the People's Atlas, and Farm and Fireside One Year, 60 Cents.

## FOR HUNGER IN THE HEAD, TRY THIS:

$\mathbf{S}^{\text {TRANGE, isn't } \mathrm{it} \text {, how such a little thing }}$ as our financial condition affects our temper and disposition. We really have
been more disagreeable during the past two years than at any other period during our years than at any other period during ou
lives, probably. At least this applies to lives, probably. At least this applies to those of us who are younger; and it has all been due to what the papers call
"fiuancial stringeucy of the times."

Now that the times are better, the people we meet have a more genial countenance, mor somehow, they shake hands a little different menbers of the family as if they really were interested and wanted to know. We go about our work, too, whistling, and sometimes singing suatehes of old songs which we have not sung during these two years.

Some of us haven't stopped to think just why we do this, but the fact is, times are growing better, and we know it. As Riley says, there is a sort of "feel" in the air which makes us all aware of the fact that we are going to get better prices for what we raise, and that we are going to get bet ter wages for our work; that we are going oo be able to buy some things which we need very much and which we haven't bought because we did not know when this stringency was going to let up. Some of us will probably pay our subscription two or three years in advauce to the differ eut papers which we take, or subscrive for half a dozeu new ones.

A number of large factories have in creased wages ten per cent, and voluntarily too. Railroads have increased their eam
ings until they are within ten to fifteen ings until they are within ten to fifteen per cent of what they were in 1892; and " 189 was the best year the United $S$
bad, from a financial staudpoiut.

The government has not yet gotten over the stringency. The administration dou't seem to be able to make expenses; but that is the fanlt of the administration, and not of the country.

Wheat reached an advance of thirty cents on the bushel in Kansas City a few days ago. Now, we hope that sort of thing will for all the wheat the country can a bushel

1 de editor of the National Medical Re1 biew says this in praise of the dude: his collar is not melted with the leat of many summers; neither are his shoes covmauy summers; neither are with the sands of time. His linen is
ered not stained with the drippings of a tobaccopress; neither are his teeth covered with the green algre of antiquity. His face is not the sign of a poor barber; neither are his fingers plowed with the deep fissures of the bichlorid. The dude is surgically clean. Tubercle bacilli slip from his polished footwear, and the Kebs-Lœeffler cannot find a resting-place beneath his nails."

1 fier report of the director of the mint - for 1894 contains a table giving the f money in the principal countrios of the

| MoNetary SYSTEMS | $\underset{\substack{\text { POPULA- } \\ \text { TION }}}{\text { and }}$ | $\underset{\substack{\text { STOCK } \\ \text { GOTD }}}{\text { of }}$ |

| Gold and silver countries. | 266,400,000 | 1,854,500,000 |
| Silver countries..... | 885,200,000 | 500,500,000 |
|  | 1,263,000,000 | 83,965,900,000 |

world. From it has been compiled the ac companying table showing the distribution of money among the groups of gold, gold and
countries.

The free silver countries contain two thirds the population of the world, and hold nearly one half the stock of silver. The total stocks of gold aud silver (at coiuage ratio) are nearly equal. In silver coun tries the purchasing power of silver coin as compared with gold varies with the commercial ratio; at the present time, an ounce of gold will exchange for as much of anything as thirty-one or thirty-two ounces of silver. In gold, and gold and silver, countries the silver coin of each is held at par with gold by the credit of the government; silver coin at the ratio of $151 / 2$ to 1 , or 16 to 1, exchanges for as much as gold. The United States silver dollar is one half bullion, value aud one half credit, and passes current at a parity with gold; the Mexicau silver dollar passes at its bullion value, aud exchauges for half as much as the United States silver dollar.

As a basis for many arguments on the money question, it is assumed that when Germany in 1871, the United States in 1873 and France in 1874, suspended the unlinted coinage of silver, it was demonetizedWithurawn from use as money-and one half the metallie money base of the world
was taken away, with the effect of reducing the nominal value of all property one half This assumption is absolutely false. All arguments based onl it lead to false conclu sions. The world is bimetallic. Silver is free to flow to the free silver coinage countries. In the silver countries silver is primary money"-"money of ultimate re-demption"-beyond question. The coined silver of the gold, and gold and silver, countries is to-day not only a medium of ex change, but legal-tender money, and "money of ultimate redemption" to the extent of its bullion value.

> T nited States Consul-General JerNited states Consul-Gleneral Jer-
nigan, at Shanghai, says that while China's foreign commerce is increasing largely, her imports of domestic goods from Anerica fell from 66 million yards in 1892 to 27 milliou yards in 1893; and in the case of England from 497 million yards in 1892 to 365 million yards in 1893. Mr. Jer nigan makes an interesting point on the competition between gold-paid labor and silver-paid labor in the following extracts from his report.

"In 1873 the mills of the Orient and Occident were competing on relatively equal terins and receiving equal returns. Now in 1894, each mill employs the same amoun of labor as it did in 1873, but the owner of

| STOCK OF SILVER |  |  |  |

| Full legal <br> tender | Limited <br> tender | Total | UNCoVERED <br> PAPER |
| $\$ 186,000,000$ | $\$ 325,900,000$ | $\$ 511,900,000$ | $\$ 446,200,000$ |
| $1,366,800,000$ | $246,000,000$ | $1,592,800,000$ | $1,001,700,000$ |
| $1,903,000,000$ | $48,000,000$ | $1,951,000,000$ | $1,123,000,000$ |
| $\$ 3,435,800,000$ | $\$ 619,900,000$ | $\$ 1,055,700,000$ | $\$ 2,570,900,000$ |

the mill in the United States pays for labor in gold at the old [higher] rates, while the owner in Japan pays for labor in silver at the old rate also. Not only does this principle of the difference in the value of the currency in which labor is paid in the East and the West apply to wages, but it applies to whatever is essential to the success of agriculture and manufacturing enterprise
"Silver is used by one half the world and gold by the other half, and while wages in one half are paid in a depreciated currency and in the other half by an appreciated currency, rivalry between the respective products of the labor of each is encouraged with the advantage in the outset to the products of the laborer paid in depreciated eurrency, and especially when the latter cau supply his daily wants with such a currency, and which he is willing to receive, and remains contented with."

In the May 15 th number was shown the effects of a depreciated currency on the earnings of labor. Beyond all question the experience of the United States during the war period, and of every other country in the world, teaches that the purchasing power of wages-the real earnings of labor

- is reduced by a depreciating currency. The money question at bottom is a labo question. Upon the earnings of labor depends the welfare of a vast majority of maukind.

Attention was called also to the fact that the decline in the price of silver had given the cotton planters and wheat growers of India a great advantage over American farmers. In Tndia a depreciating currency, wages remaining the same nominally, has been constantly reducing the labor cost of prodncing wheat and cotton, the two principal staple exports of our own country. And the wheat grown in other countries on a silver, or depreciated paper, basis compctes severely with the American product.

It is assumed that this country can meet this unequal competition in wheat, cotton and manufactured goods by going down to the silver basis-debasing its currency one half-and thereby reducing indirectly the labor cost of production one half. Is this assumption true or false?

The extension of railways in Russia and Siberia has recently opened up vast areas of wheat land. A few months ago a congress of Russian millers was held at St. gress of Russian millers was held at St.
Petersburg under the auspices of the Russian government. At this meeting plans were perfected for the formation of a millers' association and for fostering the export trade of flour from Russia to Engand, Asia, and the countries bordering on the Black and Mediterranean seas. The director of the department of railways ffered reductions and immur.ties to the association. The minister of finance is considering plans for the extension of credits on flour by the government bank. In short, Russia is now actively doing all that can be done to get the best markets for her enlarging surplus of wheat, rye and ther cereals For forty years Russia has been using an inconvertible and depreciated paper currency.

At present the liveliest competitor of the United States in the world's wheat market is Argentine. Her wheat product increased from 16,000,000 bushels in 1889 to $100,000,000$ bushels in 1894. From 1885 to 1894 the price declined from $\$ 1.50$ to thirty-eight cents a bushel. Cheap laud and American harvesting machinery had something to do with it, but the main stimulus to production was cheap labor. The South Amercan planter can now lay wheat down at the seaboard at forty cents a bushel in gold and make a big profit. Argentine uses a deprccicted paper currency worth now about thirty-six cents on the dollar.

Therefore, should it attempt to make an equalizing adjustment by the proposed means of lowering its money standard, the United States could not stop at the silver basis of India, China and Mexico. The depreciated currencies of Russia and Argentine inust be taken into consideration. It could not stop at a fifty-cent silver dollar. To beat the competition of Argentine's thirty-six cent paper dollar, it should not stop above a thirty or a twenty-five cent dollar in irredeematle paper.

Should it be attempted with the least prospect of accomplishnent, months before a law could possibly be placed on the statute-books of the United States Mexicanizing its monetary system, and Mexcanizing its labor, the country would be thrown into a condition of industrial, commercial and financial disaster beside which the panic of 1593 would seem glorious prosperity.

## Farms in the

 The following gen United States. eral statisties of agri rom "The Building of a Nation." For brief review notice of this, one of the most ralnable books of statistical information ever pnblished, see page 16 of this issue."In 1880 the nuubber of farms was, in round numbers, $4,000,000$. In 1890 it was $4,565,000$, having increased during the dec which is also much less than the rate of increase of population, indicates that the accession to onr numbers dinring the past decade have been, in the main, additions to the ranks of other arocations.
"The value of farms in 1880 , including all improvements, was, in round nnmbers, $\$ 10,200,000,000$. In 1890 this item har grown to $\$ 13,276,000,000$, showing a late of increase of thirty per cent, an increase greater than that of the numg a decided advance in the average value of farms.
"Farming tools and machinery had a value in 1880 of a trifle over $\$ 100,000,000$. The same item had a valne iu 1890 of $\$ 494,000,000$, or nearly twenty-fonr per cent greater.
"Hence, the capital invested in agriculture in 1890 was not less than $\$ 13,770,000,000$ :* and this capital produced a return in that year of $\$ 2,460,000,000$, or less than eighteen per cent npon the capital.
"Since 1850, when agricultural statistics were obtained for the first time, the arerage size of farms has been diminishing, 134 in 1880 . During the last decade the average size has slightly increased, being average size has
137 acres in 1890 .
"In 1880 the extent of cultivated or "improved" land, as the census designated it, was $285,000,000$ acres. Ten ycars later this had increased to $358,000,000$ acres, or abont 560,000 square miles. In other words, in 1890 a trifle more than one fifth of the total area of the country, excluding Alaska, was under cultivation.
"The following table (A) and diagram
(B) summarizes the statistics upon (B) summarizes the statistics upon these subjeets for the past forty years."
*It is proper to include in the capital inrested in agriculture the value of farm animals-horses, mules, cattle, sheep and swine. According to the report of the sec-
retary of agriculture for 1893 , the total retary of agriculture for 1893 , the total
values of farm animals in the census years were:
$1870 . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . ., ~$

the North Carolina
experiment station
treats on seed testing, its uses and methods.
plauted. To obtain the beneficial effect of chlorin-water it should be used ouly in soils free from iron compounds and other heary metals, since chlorin combines freely with these elements."

Muriate It often has seemed to of Potash. me that light applica sh-the cheapest form of commercial potash, and the one which I generally prefer to use on $m y$ crops-acts farorably upon the prompt germination of seeds; and if onr soil needs potash anyway, we may well furnish it in this form, thns not only assisting the seeds to germinate promptly (through the agency of the chloriu), but also in feeding the joung plant with a most important element of plant-food. The amount of from 100 to 200 ponnds per acre, or say one pound to the square rod, will do no harm in any ease, and may do good in many. It is not necessary, either, to apply it in solntion If we sow it over the ground, right after planting, in the same way as we wonld planting, in the same way as we wonld
sow wheat, we can leave it to the rains and
acid in water seems to favor the quick germination of seeds which have been soaked in it for not over two hours. A longer soaking, say twenty-four hours, or life of the embryo.
"Commercial sulphuric acid, diluted with sixteen times its rolume of water, has a favorable effect upon most seeds soaked therein for ten to twelve hours. Clover and rape seeds are among those most snsceptible to injury by this acid. Phosphoric acid, diluted with fifty times its volnme of water, has a favorable action upon germinating seed, Tannic acid, diluted with 1,000 volumes of water, is farorable. Hnmic acid, diluted with 150 rolumes of water, is favorable
"Nitrate of soda, diluted to one eighth, acts favorably upon the germinating seed. Chlorid of soda in an eleven-per-cent solution seems favorable to some species of seeds, bnt is unfavorable to the cereals and others.
"Sulphate of lime (gypsum) acts favorably on seeds. Carbonate of lime seems in all cases to act favorably."
Most other acids and other corrosire chemicals have usnally an unfavorable influence upon germinating seeds, and must be used with great caution, if at all. From the foregoing it will appear that nitrate of soda, nsed in the same way and at the same rate as already mentioned for muriate of potash, cau be expected to exert a farorable influence from the rery time that rains or soil water dissolve it and carry it down to the seed or plant.

## Treating

A Pennsylvania reader Seed Potatoes. seuds me copy of a formula which some age and in many of our agricnltural papers, and of which I may have spoken before. It purports to come from a "French scientist," who soaks his cut seed for twenty-four hours in a solu tion of six pounds of saltpeter and six pounds of sulphate of ammonia in twentyfive gallons of water. The potatoes are allowed to drain a whole day, in order that the eye-buds may swell before planting From cnt seed treated in this manner and planted in the usual way, he claims to have obtained a yield of forty-two tons o potatoes, or 1,400 bushels, to th aere. Of course, this is mostly
rank nonsense.

The idea of making the seed. gorge itself with plant-food, and thus enable it to bring an ex traordinary Field, is not worthy of serious consideration. Ou the other hand, we know that the condition and state of preser
vation of the seed tubers lias marked influence non the yield. Whether the treatment here described has a tendency to produce stronger sprouts, and thus possibly increase the yield slightly, or not, I am not pre pared to say.

## Soaking seed On the whole

in Water. that it will pay the gardener, under average conditions, to give to his seeds special treatment before planting. If is not necessary to fuss with chemicals for the sake of hurrying no germination, except as we apply then, directly cept as we apply thers, directly f soda muriate of potesh, sul phate muriate of potash, sulphate
The mere soaking in clear water of seeds like turnip

In speaking of the action of chemicals upon | dews, or the soil water, to dissolve this the germination of seeds, Prof. Gerald McCarthy says:
"The generally detrimental action of corrosive chemicals upon sprouted seeds is well known. In practice, chemicals may which by their corrosive action aid the sprouting embryo to break the protective covering of the seed; second, those which being poisonous to bnrrowing grubs or worins, protect the embryo from such depredators; third, those which furmish easily assimilable nourishment for the young plantlet; fourth, those which destroy th
the seeds.
salt, aud bring it to the little seeds or roots.

Other Amoug other chemicals which exert a beneficial chemieals. action aro sulphur, sulphuric acid, pitrate of soda, sulphate of lime, carbonate of lime, tannic acid, humic acid, hydrochlorie acid, etc. The following details are from the mentioned bnlletin:
"Sulphur in small quantities has a favorable influeuce upon germinating seeds. its farorable action is probably due to its destroying the spores of molds upon the seed or in contact with it in the ground or seed-pan.
radish, beets, carrots, parsnip, etc., does hurry up germination, and for
these seeds has often been recommended. these seeds has often been recommended. But it again requires fnssing, and special
treatment, such as partial drying or mixing treatment, such as partial abying or mixplus
with dry soil or sand to absorb the surplas moisture (outside), and thus fit the seeds for convenient sowing by hand or machine and for this reason I have never looked with much favor non the practice. Sowing seeds dry is good enough for me, and good enongh for others. Give ns pure live seeds, such as we expect reputable scedsmen will furnish $n s$, and we will be a le to get them to germinate promptly e lough, by sowing in freshly stirred and t :erefore moist ground and taking paing press this moist soil fromp to the seed
press this moist soil firmly to the seed.
T. Greiner.

## Olix fiam.

## PEPPERMINT RAISING

$0_{0}^{10}$EPpermint raising has been re duced to a science, although
different people often use different methods. The man who wants to go into the peppermint business must first purchase the are are from tweuty-eight to thirty-six inches apart. Duriug the first year the miut it is cultivated eight or ten times and hoed three times duriug the season. The first year's crop is cut with a seythe, or baked by the suu, ought to yield enough mint to the acre to make twenty pounds of oil. If weather and grasspernitut farmer thas got give There is nothing that can be put on a farm that looks better growing than carefully cultivated pepperuiut during the first year.
The miut, varying in heiglt, is dark green, The miut, varying in height, is dark green,
yet not so dark but tlat it preseuts a yet not so dark but that it preseuts a
bright contrast to the black loam from which it grows.
The second year the mint is allowed to ran without cultivation, and at the end of does not grow to such a height and the foliage is not as heavy as duriug the first year. June-grass mixes with it a great year is at its best only about ten pounds of oil to the acre. The third year's, mint is allowed to run the same as the second, the peppermint farmer getting from five to seven pounds of oil to the acre.
After the third year a great many people put some other crop in for the uext year,
claiming that wheu they plaut mint again claiming that wheu they plaut mint again they will get better returns if the land has had a year's rest. The following year yew
roots are put in and another three years' roots are put in and ano land.
After the mint is cut it is allowed merely to wilt and is not cured. If cured, the mint becomes brittle, and much is lost by the leaves, in which the oil is contained, being broken off in transit.' Wilting it reduces
both the bulk and the weight. From the both the bulk and the weight. From
field it is then carried to be distilled.
A good "still" with the proper distilling apparatus, lumber aud labor of building costs about $\$ 300$. It is generally built near
the center of the miut-field, and as far from the center of the miut-field, and as far from
farm buildings as convenient, to lessen the danger of fire. The floor on which the mint is handled is about $15 \times 30$ feet, and is built 6 feet from the grouud. This part of the building is roofed, but not sided. Adjoining this is the shed in which the boiler and distilling apparatus are contained. Sunk to a level with the floor aud near the boiler are two large tanks, each $51 / 2$ feet deep, $41 / 2$ feet iu diameter at the bottom made of two-inch hard-wood plauks, and made of two-inch hard-wood place "s, and
which fits so nicely that when the "still is in operation no steam can escape, is attached to each tank. A'crane facilitates the handling of the mint.
The mint, after it has wilted, is brought to the "still" aud piled on the floor. One of the tauks is filled with it, the mint being stamped dowu after the manner of the ancient wine-press. As soon as the quau-
tity it will hold has been placed in the tank tity it will hold has been placed in the tank the lid is lowered, its weight being sufficient to keep the steann from escaping. The from is theu turned on, being coa, which enters the tank a the bottom. The oil is extracted from the mint and mixes with the steam, and is carried to the condenser, consisting of two eight-inch tin pipies about fifteen feet in length. A trough is suspended over the condenser, and is kept constantly filled with cold water. A smaller trough below, supplied with water through the holes, which are about four inches apart, the cold water drips constantly on the pipes through which the steam is passing. The oil and water then pass through the "worm," nearly one hundred feet of two and three inch pipe, on
which cold water is constantly drippiug which cold water is constantly drippiug from a third trough suspended above it,
and supplied from the first trough. By this process oil and water are nearly cool when they reach the receiver.
The most interestiug part of the work is watering-pot inere than reminds one of a soon as the oil aud water reach the
ceiver, they pass through a strainer, which removes any foreign substances that may
have been forced through the pipes. The lave been forced through the pipes. The
oil can be plainly seen floating on the oil can be plainly seen floating on the ing an established law of nature, the wate sinks and the oil remains on top, and is dipped off as fast as it accumulates. The water, entering the inlet of the spout near the bottom of the receiver, is forced by the weight of the oil through the spout, aud having done its work, is seen no more. It does not take long for all the oil to be extracted from a tankful of mint, but in the meantime the other tank has been filled By a simple device the steam is transferre from one tank to the other, and the new from one the same way nicely into each tank is an iron rim with cross-bars. When the int is put in thit ross-bars. When the int put in thes tracted, the crane is swung around and a rope runniug through a pulley is attached to the two iron rods on each side of the tauk inside, connected with the rim, windlass attached to the crane raises the rim and the tightly packed mint on it ou of the tank. The mint as it emerges re seinbles an enormous loaf of Boston browu bread. By means of the crave it is swung clear of the tank and loaded on a wagon. It is spread in the field, allowed to dry, and makes au excellent feed for stock.
As fast as the oil is dipped from the receiver it is placed in twenty-pound cans It is then stored away until the peppermint buyer makes his anuual visit.
The oil when pure is almost colorless. It has an agreeable odor, scarcely noticeable to those accustomed to it. It is very penetrating, and the cans in which it is shipped are made in the best possible manner to prevent leakage. It has a powerful ar-
omatic taste. Weeds often injure the flavor of the oil by becoming mixed with the mint in the field.
There are a great many people who raise mint who do not own a "still," and wh have their distilling doue by their neigh bors. The price paid for the work is gen erally twenty cents per pound.

Peppermint raising was introdùced iu Michigau in 1855, and in 1858 there were about 2,100 acres under cultivation and 100 distilleries, yielding 15,000 pounds of oil annually.
It seems to be the general opinion of ex perienced miut growers that peppermint should be planted as early as possible in the spring. Most of the planting is done in April in Michigau.
It is said that those who work at a "still" are always healthy and never troubled with headache or nervousness. Peppermint-oil rubbed on the head will cure sunstroke, so John Chinaman says
Distilling is nearly all done during August and September.

Douglas Mallock.

## disturbing trifles.

It is the irritating trifles that a mau finds hard to bear. Were they large things we would put a stop to them, or else summon up the fortitude to bear them. They would be worthy of consideration. But the little They come in troops, and they come with persistence.

First, there is the chronic borrower From him that would borrow of thee, turn not thou away," is the injunction that comes to your mind as he approaches. Now, one likes to do favors to those who accept them as favors. One likes to lend a helping hand in this world. But this man assumes too much. He cannot see why he should not have any implement you have the day he wants it. If you are away, he will take it without the asking. He never
returns anything when he agrees to do so and usually he breaks or strains some part of the machine. He is a nuisance, and yet who likes to refuse to loarto a neighbor in
prompt in returuing, it he was careful, it he had any consciousuess of a favor done
him-if he had any one of these, it would him-if he had any
be less aunoying.

How much of my time belongs to an agent? He comes to the field when I am busy. I treat him courteously, but do not wish to buy. Yes, but everybody says that, aud experience has taught him that it does aud experience has taught him that it does into his long story. Shall I order him off, or bear it all? Why, bear it, of course; who wants to order a man away, even if he does lack in discernment and is hardly complimeutary to your intelligence.

The nurseryman comes every spring. know nothing of him or his nursery. He bores and bores. Then he wants to give
his personal guarantee that the stock will his personal guarantee that the stock will be true to name. "His personal guarantee!" That is the straw that does the work. We tell him we cannot spare any more time, and turn on our heel. Yet wo
are irritated because he took us for a fool. A trifle? Yes, but anuoying.

A new building must be roofed. We want to know just what it will cost. "Six dollars a square for best slate," says one slater. That seems definite. We give the nontract. We measure the roof when done, or expect to pay just $\$ 90$. The bill call cap is put over the ridge-pole, and it is measured up as slate by drawing the liue over the roof, and then the cap is also charged for extra by the foot. "It is our rule," says the slater in justification. It is tract. What should we do? Why feel int tated, then pay the extra because others do It is the deceit, the' gouge, that hurts more It is the deceit, the gouge, that hurts
that the $\$ 4.50$ we paid to save trouble.
"Are you going to order any seed for "Yurself this spring?"
"Yes," I answered.
"Order five bushels for me, will you?",
Why, of course, I am glad to be of service, especially when it put me out so very
little. I inclose enough money to pay for little. I inclose enough money to pay for
both lots, and the seed comes. The neighboth lots, ard the seed comes. The neigh-
bor gets his, finds the quality not quite up to expectations, and freely says so. He forgets about the pay until you jog his memory along in the summer, and then only half relishes the reminder. He is a Irritatiug? Of course it is.

But should these trifles disturb us? No more thau the patent medicine paper that will come in our mail, or the lottery or letter. These trifles are the alloy, trifling in quantity when compared witlo the things that give pleasure. But they come wheu not looked for, and annoy us in spite of our resolves.

## MILK-COOLER

My milk-cooler is a box large euough to hold all my milk and cream caus and butter-crocks. It has a spout down one corner within one iuch of the bottom, to
allow the water to flow in, thus puttiug he cold water in the bottom of the tank. The warm water rises to the surface and passes off down the hose, which is looked up as high as you wish the water in the vat around the caus. Wheu there is less he wire che cans, lower the water passes off at the top of the vat and runs out on our garden, and is used to irrigate it. It does pumped into the vat at once, as it holds tself with the top of the hose all the time. There is no danger of overflowing or drowning the cans. Of course, there should be enough cold water pumped into the vat o keep the milk cool. I find that when my milk is at the same temperature as the water coming from the well it is about right to raise all of the cream. I used a piece of two-inch hose, and bored a two-
inch hole in the box and inserted the hose. nch hole in the box and inserted the hose. Then in order to make the hose and box
vater-tight, I bored a hole though a sticl which I drove inside of the hose where passes through the tank. I had good sweet milk and good buttermilk and fine, hard butter all summer. I shipped my depot four or five cents per pound more than we could get at the store at home. I at which time I was hailed óut and lost in
eutire crop), one pail tomatoes, one bushe of turnips, eleven cabbages, four bushels of radishes, one half peck of beans, lots of let tuce and a few onions, by irrigation from
our milk-tank. GEO. Hallock.
Nebraska.

PICKED POINTS
The Cultivator, of Boston, Maren 16th, in its New York market report, states that the "lothouse lamb sells for $\$ 12$ a carcass; hind quarters cost $\$ 4$ and fore quarters $\$ 3.25 . "$ Of course, this is for the best quality; bu why not have all that are grown the "best?" It is because some growers eithe do not kuow how, or will not put thei knowledge in practice. It is as easy to produce the best as an inferior article. The numerous hothouse lamberies in my vicinity prove the truth of the assertion. Twelve dollars is a large sum for a lamb under eight weeks of age that can be grown cheaper than in the ordinary way at grown cheaper than in the ordinary way at
six months of age, and at a time when farmers have little to do; but only a few can be made to see it

This is the season"of" the year when we may look for numerous "llides on the feuce." Many horses, cattle and sheep die feuce." Many horses, cattle and sheep die
from starvation, by accident or from the from starvation, by accident of from the effects of a hard winter. There is a little
compensation in the thought that horse aud compensation in the thought that horse aud
cattle hides have recently advanced in price cattle hides have recently advanced in price
very materially. Sheepskins are low bevery materially. Sheepskins are low be-
cause wool is. They should be tanned for cause wool is. They should be tanned for
use as rugs in the house (for which purpose they can be dyed), or for cushions on mowe and binder seats, or on lumber-wagons. To $\tan$ a sheepskin (and that of your worth less dog, too), dissolve half' a pound each o salt aud alum in a little warm water, then pour it in a tub with cold water enough to cover the skin, and let soak a day, then hang on a pole to drain, stretching it once in awhile meantime. When water ceases dripping, lay it down and rub into the flesh side the same amount of salt and alum, dry, fold together, fleslu side in, let it lay flat three days, turning each day, then
scrape with a blunt knife. When nearly scrape with a blunt knife. When nearly
dry, rub with any softstone and the hands uutil it becomes as white and pliable as buckskin

The-white poud-lily (Nymphæ odorata is one of the most beautiful and fragran flowers that grows. It is pure white and as large around as a tea-saucer. It grows iu shallow, sluggish water, or where there is no perceptille movement of it. The roots are long and fleshy and are embedded in the mud. The large, fleshy leaves lie on the water and the flowers extend above They are readily propagated in a flower garden, or ou the lawn by sinking a half barrel or cask in the earth up to the rim Mix fine, well-rotted stable manure and rich, black mud from some pond or stream, half and half, filling the receptacle two thirds full. Pour in rain-water, a little more than euough to cover, then add an inch of sand; let stand three days, theu press the roots down into the manure and mud and fill the cask full of water. This lily blooms in June, and is a great orna ment in any grounds. The 'water is replenished as it evaporates. A better lily tank could be made of brick and mortar.

Galen Wilson.

## NOTES FROM GARDEN AND FIELD.

Bans for Profit.-Leaviug the onion out of our consideration, the culture of which I am reeiving half as many inquiries ticular inquisitiveness of readers of this
paper shows that uany of them, dispaper shows that uany of them, dis-
couraged about the low prices of wheat and perhaps other staples, are looking for other crops which promise greater
remuneratiou, and that "white beans" are among the most promising in this respect. As there are uo special books or pamplhets
priuted which treat about the culture of beans for market-so far as I am aware-i is but natural, aud surely justifiable, that my readers should ply me with questious on so interesting a topic; and for this rea-
son I have cousented to give a full article ou beans, even if this is uot the first time that I speak on the subject in this place. Let me say, however, that I wish some expert bean grower would write np a little theatise, so we could tell our friends where
then find "all that is worth knowiug about the culture of the bean."

Profitable Types of Beans.-Almost all the different types of the bean cau be grown with protit. Suap-beans ofen pay open ground. Wheu planted early, on a warm piece of ground, so as to he ready they usually sell well and at payiug prices they usually sell well and at payiug price
in all our markets. Lima beans, too where soil and season are farorable to thei derelopment, are exceedingly profitable The green, shelled beans almost invariably tind ready takers aud fairly remunerative
prices. Now that we have the bush form prices. Now that we have the bush forms of this class of beans, we eau grow the
without unnch trouble where we have no poles, and the seasons are rather short.
By the way, Prof. L. H. Bailey has just issued a bnlletin (No. 87, Cornell Univerthe "Diwarf Lima Beans." People espeeially interested in the subject should tr to secure a copy. I quote the following: class, are very valuable. Their great merit is earliuess. They are from two weeks to a mouth earlier thau the tall varieties from
which they eame. Their productiveuess which they eame. Their productiveuess
has not been redueed in proportion to the reduction in size of the plants, so that I believe that it is possible, iu the North, to secure greater total yield per acre from the dwarf than from the pole varieties, seeing
that the plants require less room; they are that the plants require less room; they are
also much cheaper to grow-they require also much eheaper to grow-they require
no poles. these dwarfs are those which are derived from the Sieva type, as Henderson's aud Jacksou's."

Field-beans.-No doubt, field-beans can be made to pay much better than ordinary grain erops, but while easily grown, they know how to store, thresh and cleau them, or you will run the risk of having theu
badly spotted. But it will pay any farmer tadly spotted. But it will pay any farmer
so situated that he can use the bean as money crop, to learn the business, by prac-
tice, from the rudiments up. Any laud tice, from the rudiments up. Any laud
which, wheu properly mauured, would raise a fairerop of coru, may be considered fit for growing beans; neither will excessive manure applications be called for. I
usually prefer mineral mauures, if I use any (and I don't always for this crop). would use ashes if $I$ had them. Sometimes and as much clissolved bone. This is ap plied broadcast before planting.

## corn, beans, wheat; then lack to

like to have the ground plowed and fitted spriug. This will, give a chance for the
weeds to sprout, and to be killed by peated harrowing.
I seldom plant field-heans before June, or much later than the middle of that
month. What $I$ aim to do is to get the crop taken care of before the fall rains set
in. No iron-clad rules can be given for planting. There are various ways and
devices which mey be used. If I plant in a small way only. j simply open up furrows,
say two inches deel, with some suitable Marker or even with the hoe, scatter the
hems along iu the furrow so as to get one
bemu to every two to four inches of row,
anu cover with the feet. On a larger scale
one can use a hand-planter, a one-horse
planter, or a two-horve planter. Tools of this kind are now kept on sale lyy most seedsmen. A good two-horse planter is adver who also has a good bean-harveste quick way of planting large areas is with grain-drill, takiug three rows at once, the rows being about twenty-eight inches apart.

## \% \% *

It ueed ouls be mentioued that cultivaBion should be thorough. Perlaps the course-would do good work for a starter. At least I use it, but always plant beans, peas, etc., so thickly that I wonld just as soon as not lose a plant or two now and then. Any oue-horse cnltivator with nar-
row teeth will do, if you only use it often enough. Cultirate close up to the rows, so there will le little ueed of haud hoeing. Don't stop cultivation on account of bloom or pod-setting. Keep right on until the
crop is well adraneed. Slight lilling at the last cultication will do uo harm, and may do good in eoveriug up weeds just starting in the rows.
As to varieties, you have your choiee be-
ween the Marrow, the Medium, the Pen and the Red and White Kiduey beans. In some localities, one or the other of these is grown almost to the exclusion of all others. The Fidney beaus, I think, like richer The Red Fiduey is quite prolific, not as easily sotted iu bad weather as often particularly proftable. One must consult his neighbors, his unar-
kets, and surely, gond judgment, when selecting the variety for plautiug Be sure, also, that the seed is good, and was gathered from a crop that was free of seed required for au acre depends somewhat

Sirawberry Varieties.-W. O. H., Free Mouarch" strawherry, but am acquainted with "Mouarch," or "Monarch of the West." This is a berry of large size, globular in form, plant vigorous on good soils, but only moderately productive. The Sharpless is uniformly very large, often broadly wedge-form; light glossy red; flesh firm, hut juicy and rich

## Apple Varieties for Market.-R. S., coldendale, Wash. For home nse and trial in

 a emall way, it is a good plan to set a fewr. of an orchard for money, they should wot be planted atall. For this purpose, stick to the kinds that you know are good, such as BaldWin, Yellow Belleflower, Golden Russet and Northy frial are Anissein, sians and a rival of the Jonathan, Sutton Beauty, Longficld and Red BietigheimeLocnst Grove.-J. G., Sardinia, Ohio. The best way for you to start a locust grove is by huying one-year-old seedings, ivhich can be sand. It is rather a poor plan to try to raise a locust grove by sowiug the seed in places sprouts are not so good as seedlings, but are all right when once estahlished. If you intend to sow the seed, it should he put in some tight over it, which should be allowed to remain until cool. Treated in this way, it is much surer to
treated.

Grafting Wild Grapes-Grafting the Wild Cherry.-W. S. R., Darrowville, Ohio.
Both the fox and the frost wild grapes may be grafted, with reasonahle certainty, with our ful when done very carly, say as soon as a few inches of soil are thawed out in the spring, The earth'should then he drawn up so as to cover all but one bud of the scion. The wood
is generally quite cross-grained helow ground and the cleft-in case of cleft-grafting-is gen procedure otherwise than stated, is the same as for grafting applcs. In France, many of the successful vineyards are grafted on our wild frost grapes (V. riparia), and they would be the action of the phylaxera that destroys the roots of the French wine grape.-The culticherry or choke-cherry, but may be grafted or hudded on the small wild hird-cherry or the sand-cherry. Iou will probahly remember that the wild black cherry and choze-cherry
have their fruit in loug hunches (racemes), while the hird-cherry and sand-cherry have their fruit in umbe'-like clusters, as in the case divides the of family into two sections, and the differeut sections will not readily graft together.

-of the physical being is the result of draw ing incessantly upon the reserve capital of
nerve force. The wear, tear and strain of noodern life are concentrated upon the nervous system. The young men of our day be come sufferers from nervous debility or ex This may be the result of too much menta worry and excitement, or the result of bad practices a

OPPORTUNITIES OF CITY AND COUNTRY.

Tbeen lured to the cities by the idea that wealth and happiness were there so much more easily the hopes have been realized, while in a vast majority of instances it is found wealth does not come for the asking gled daily with poverty, hunger and cold. rue it is that wages are somewhat highe or the same class of work, but the fact that one includes boarding and lodging, and ometimes washing and mending, whit
 nother fact which should be considere the married man is that his house ren ould be in the country, with equal ac ommodations. Furthermore, he mus buy his eggs and poultry, purchase milk and butter, purchase his ham and sausage is potatoes and turuips, his cabbage an greens-his entire food supply, in many astances-while if located in the country he may have his own flock of poultry, and not only enjoy eggs and fowls in abundauce, but have a surplus to exchange for coffee, sugar, rice and tea. He may also kecp a cow, and thus know the luxury has been hauled several miles, past pump and through rivers. He has rich cream also, and choice, gilt-edge butter. Here again he may have a surplus for sale suffic ient to clothe the babies, or buy the wife new dress occasionally, and probably both He also has a garden, aud not only may he have all the vegetables in abundance, but also small fruits in their season.

Young man, pause a moment to cousider the difference between sittiug down to table spread with a profusion of dishes, all fresh, sweet and wholesome, all the prosave, perhaps, the coffee, sligar, rice, sal and pepper-this in the country-while i in the city, every article ou the table has been purchased, not with eggs and butter, which no sooner finds its way into your pocket till it must take its leave and enter the unoney-drativer of the grócer or butcher.

It is true he may not have work for teen at good wages, butif he is industrious, there are few communities in which he need be idle a dozell; days in the year scaling dowri of wages, etc., through which thousands of men are idle for months at a time, during which the childreu cry fo bread, and thin clothing refuses to keep out the cold. Did you ever hear of a farm
laborer's family starying because there was no work to be done?

It is true church and Sabbath-school are not so convenient, but they will likely be
appreciated all the more when attendance is favored. The children will probably have farther to walk to attend school, but they are in much less danger of their lives along the quiet country roads than across to wrong-doing are not nearly so great. And the fiesh air, bright sunshine and free the dust and smoke and noise of the city.

There is room in the country for many able and willing young men, who can earn good livings aad enjoy comparative inde-
pendence. The wages of farm labor have scarcely felt the decline in other fields. A good, reliable hand can command as good horses, etc., lower than in the remembrance horses, etc., lower than in the remembrance
of the majority, as he could do twenty years ago, when prices of farm produce were double what they now are. Is it not
time the tide were ceasing to flow cityward? - Are the opportunities not equally as good in the country

## 

From Washington.-There is plenty of good
government land in this county that can be government land in tbis county that can be claims with cabins and small clearings that can be bought cheap-from onc to five bundred dollars or more, according
inl a new country, tbere
abead of surveys, and select land on go in to sell, while there are others
pelled to s
costs'about ten dollars
timber, and at least $\$ 100 \mathrm{p}$
except on small patches.
much more easily cleared tome lands arc timber is fir, spruce, hemlock cedar, alder and oft maple, tbe latter two kinds mostly where and vegetables are the principal crops, and produce very large yields. Corn does not mature; the nights are too cool. There is an abuudance of the purest water
coming down from the melting
mountains. Irrigation is not needed. The average rainfall in this part of Clallam
county is about twenty-eight inches, but in the western part near the ocean it is much more. During July, August and September it asually rains hut little. The winters are very mild, and witb plenty of range, stock would
do well all winter, except wben there is beavy snow. Last winter we had about two feet, but it lasted only a couple of weeks. Back worth $\$ 10$ to $\$ 12$ per ton, baled and delivered in town; potatoes, $\$ 10$ per ton; wheat and oats, eggs, 15 cents per dozen; flour, $\$ 2.50$ to $\$ 3.25$ per barrel; bams and bacon, $12 \frac{1}{2}$ cents per pound.
The climate is very bealthful. Malaria and feverrs are very rarely heard of, and diphtheria is not known. The population of Port Angeles is about 5,000 . There are no railroads
here, except on paper, Port Angeles is the county-seat. We have two daily steamers for monthly steamer to San Francisco. 'We have no manufactories of any kind, except lumber and shingles. There are four small sawmills, and three of them make sbingles. Common umber sells at $\$ 7.50$ per thousand feet, and the We bave good schools and fine school-buildgear This is a port of entry, and more ships Sound-over 700 the past year. Many go over to British Columbia for coal. Victoria, the capital, is only sixteen miles frop Port Angcles,
across the straits of Fuca. The people raised a bonus of ten tbousand dollars to prospect for coal here. One hole was put down 800 feet in the gulch, where there must have been a rift in tbe earth from volcanic upheaval, as abandoned A new site some three miles back was selected, where, at a depth of about one hundred feet, a soft sandstone was struck, feet. The expert who is operating the drill claims the prospects favorable for coal. At
Nanimo, across the straits, they have a twelvefoot vein of very fine coal at a depth of thirteen hundred feet. The varieties of fish here seelts, and are sold very cheap-two tio nve
cents per pound. Clams of best quality are
abundant in all the bays of the sund. There
is plenty of deer, elk and bear in the mour is plenty of deer, elk and bear in the moun-
tains. There are but few insect pests, and no
venomous snakes. Everything considered, I venomous snake. Everything considered,
know of no country that offers.better induce-
ments for people of small means who are will ing to start in a new country, and put up with
the hardsbips incident thereto At present
there are more people in the city than can
find fhere are more people in the city than can
find employmenting out here witho one ought to think
of coms of support
intil they conld raise some thens nntil they could raise something themselve
and who are willing to work. This is bound to
be the finest stock country in the world, as all kinds of grass and clover yield large crops and
remain green nearly all the year round. The
thermometer seldom ever goes below 20 degrecs above zero in winter, or above 80 degrees in
summer. I have been here four years, and
have lately been over the county looking for a
good suatter's claim for
 as gold. What is most needed is sturdy
farmers, A hood many men goo out from here
ealing, and it is a paying industry if one is able to own his boat. A very good sealing
scooner can be bullt here for fifteen hun-eventy-five feet in
Port Angeles, Wash.

From Oregon.-Klamath county is situated in southeastern Oregon, in the great belt, the Cascade range. It is from 4,300 to 7,000 feet in altitude, the valleys ranging from 4,300 to 4,600 feet. The surface is diversified, valley cury rarely reaching $100^{\circ}$ in is mild, the merzero in winter. The principal productions, in the order of lmportance, are beef, hay, rye, Bueat and oats, and all kinds of vegetables. Bunch-grass grows luxuriantly on all the hills, summer and fall. Generally, they have to be ed seventy or eighty days in Winter; horses report of the United States weather observer one time during last winter was niue inches,
ind total snowfall, !forty-one inches. Game
and fish are abundant. Game consists of deer,
wolves, geese, ducks, sage-hens, some pan-
thers, wildcats and bears. The lakes are well stocked with trout weighing from three to season, Lost river-thc nainin feder of Tule, o
Rhett, lake-is literally blocked with mulet
All the small fruits All the small fruits are doing well, and in
most localities, pears, apples and plums bea
abundantly. country, still sparsely settled, and much goo
government land is still a vailable. As long a
such conditions last, deeded laud will sell fo
 worth at present from $\$ 10$ to $\$ 25)$, a cow ( $\$ 15$ ),
huild a house (lumber, $\$ 10$ per thousand), get
provisions provisions enougb for one year (flour, $\$ 15$
per one thousand ponnds; beef, $\$ 15$ for a fat
cow that will dress six hundred pounds), and Will succeed. The standard price for all grain

Lorella,

From Waskington.-Wasbington state being devcloped into onc of the greatcst farm-
ng states in the Union. Its deep soil seems to make it one of nature's gardens for the raising patry all kinds of crops, especialy wheat farmers of Puget sound and eastern Washing to the easteru markets. A full train-load for the market at Chicago, and another to St Louis. The winters are so mild on Puge winter long, building fences, plowing and
clearing. The farmer tas raised off of one acre
clat busbels of oats, or 1,500 bushels of potatoes
but you cannot raise this all over the state although large yields, such as one nerer real
izes from a single acre of ground in any of of washington. Not only does farming pay
of evaise more especially the prune, apple and plum of land and setting it out to these fruits can
realize an independent income in less tban seven years. Fruit is always in demand and
at good prices, and when the home market in of vour produce at are always markets for aliving prices. Small
fruits do well here, especially straw ber Which sell for from $\$ 2.50$ to $\$ 3$ per bushel. Hops
of the Puget sound country supply the Eng sish market at present. Any person with
smanll means and lots of grit, can settle in thi
stat can buy good land at very low prices now, o
you can take up government land by bome old pion.ere, and have the "get-up," take up a
homestead.

From Virginia,-After farming in north-
western Indiana for twenty years, I concluded western Indiana for twenty years, I concluded
to look for a more healthful climate aud south-central Virginia, Halifax county, the first of November last, and after bcing bere
seven months,' like the country very well The soil is suitable for growing all kinds of
crops. The principal ones grown here are
corn, oats, tobacco and all kinds of vegetables. Fruits of all kinds do excedingly well
Apples. peaches, pears and small fruits are
crown in abundance. Last winter is said to grown in abundance. Last winter is. said to
have been the coldest for many years; the
mercury at one time was as low as six degrees burew zero. We have a bealthful climate,
pure water and a bracing atmospherc. The
river bottons along the Canaster, Dan and
Stanton rivers are very rich and fertile. The
uplands are somewhat rolling, and well tim,
bered. The country is well supplied with bered. The country is well, supplied with
springs, brooks and creeks, which afford nec
essary milling power.
F. R. B.

From New Jersey.-There is plenty o cheap land in Salem county, New Jersey. I truck land lies between Elmer and Willow Grove, purchasable on good terms. At Wil
low Grove is a small lake, where the farmers resort in summer for picnics. This lake fur
nishes abundance of water-power for a large
flouring and saw mill, before it ernpties it
waters into the hiad, Western border of Salem county skirts the
banks of the Delaware river for miles, having
truck farms situated on light, loanay soil. The midland of the county is mosty flat, clay land. Many improved farms near the city o
Salem are owned by citizens, who, owing to
stringent times, are obliged to sell at greatly From Illinors.-Crawford is one of the best counties for raising wheat, rye, oats, corn, and
for sheep and hogs, in the state. One of our farmers raised 492 bushels of wheat from 12
acres, and many others an average of 30 to 37 bushels. Corn on the low land has yielded 90
bushels per acre; the high land, from 35 to 65
bushels. Once in awhile we raise 75 bushels per acre. We have the best of pasture land
and plenty of good watel. Well-improved
land sells near our county-seat will sell for \$100 per acre.
We have many large orchards and raisc fine from. Ohio, Kansas and Teunessee, Ou
sas people raise large fields of tobacco.

From Wyoming.-The North Platte valley is about sixty mailes long by twenty-five miles sea-level. The staple crop is hay. Alfalfa is
fast coming intofavor among stockmen for fattening purposes. One company is going to put
in three hundred acres next spring. Timothy
also does well, and the wild grasses all make a
 expects quite alenty of good land, and water
Year. We have plentrigat with, a good, healthful climate,
to ird schools, good society, etc.

## THE POULTRY YARD．

Eags keep best in a cool place． exposed to too low a temper－ ature they will freeze and crack open，but the cooler they are kept，the better．If not lower
than forty degrees，or over sixty degrees，and the eggs infertile，they need no packing material．Simply place them ou unain perfectly fresh for three months， which is a sufficient length of time to per－ mit of securing high prices．The eggs week，in order to prevent the yolks adher－ ing to the shells．On these three rules， then，depeud success in keeping eggs First，use infertile eggs；second，keep
them in a cool place；third，turn them twice a week．A single spoiled egg may damage the whole lot．Use no stale eggs as nest－eggs，for they will surely find
their way iu with the rest．Do not buy eggs from your neighbor，as he may buy have remored the males from his flock， and may unintentionally force upon you a stale egg or two that will iujure those eggs promiscuously，from all sources，to preserve for future sales，at an advance in
prices，is risky，and we know of no one prices，is risky，and we know of no one keep his own hens，and aim to have the eggs in the best possible condition，by discarding the nales，to make this branch of the poultry business a success．It can
ouly he properly done on the farm under the best possible conditions，but it opens up a paying field to those who will give it
their attention．Iu preserving eggs it will their attention．Iu preserving eggs it will same size，aud the dark eggs should be separated from those that are light，as
uniformity of size and color will add to uniformity of size and color will add to
the prices．This work should be done When they are placed on the racks．Racks may be constructed that will turn the egg easily when eggs of the size are together Once an egg becomes discolored from filth， it will never again appear clean．Fresh and fresh appearance，and preserved eggs， if they are to be sold as fresh eggs，must be abore suspicion．They will really be as
fresh as uewly laid eggs if these directions are followed，but the clean appearance of the eggs will
selliug them．

## DOMESTICATION AND NATURAL LAWS．

 To secure eggs from hens mau mustlearn from uature by observing the habit of birds in their natural condition．In many cases the joung of birds must be fed by their parents．In others the mother
assists the young to seek its food，as in the case of the wild turkey and quail．Both classes haye been domesticated．The barn－ yard fowl assists its young to seek food， which feed their joug latch bot few at a time，and work industriously to feed them can be induced to lay a large number o
eggs before beginuing to hatch a brood eggs before beginuing to hatch a brood．
The wild birds seek what animal food they need．The deurand for animal food by domestic fowls is greater，uot that there is more animal food required for the support of the young of the domestic bird，bint elements which enterinto the composition during the year．Do our hens have that
animal food？It is safe to answer to the coutrary in the majority of cases．During secure for themselves a fair supply，but in wiuter when they should have it in the greatest abundance．With grain they are
fully supplied，as it is a convenient feed， but of the very sulnstance which will，
above all others，most promote egg pro－
duction they are allowed but little．If man can make an animal or bird by selection
and adopt it to his purposes，he should be able to understand its requirements．The wild one，and demauds more food，as well
as a greater variety，but the wild bird has
the privilege of selecting its food，while the privilege of selecting its food，while
the domesticated bird is goverued entirely
by couditions of domestication，though also

It is a difficult matter to catch hens and then thoroughly dust then with insect－ powder（an efncacious remedy，however）
and a cheaper mode can be used．Fill a wash－tub nearly full of soap－snds，and add a tablespoonful of liquid carbolic acid to the suds．During the niddle of the day，when
the sun is shining，drag each fowl back－ the sun is shining，drag each fowl back－
ward by the legs through the suds，and ward by the legs through the suds，and
then let it dry．Every louse will be de－ then let it dry．Every louse will be de
stroyed．Don＇t be afraid to give them a good ducking，but do it well；even the heads go under．The large gray lice and the little red mites will be destroyed together．But first clean the poultry－ unless care is used the sulphur often does damage．If used with lard，the grease may kill the chicks．All the feathered tribe hare an abhorrence of grease iu any form． head and around the vent will protect against lice to a certain extent，but when grease is rubbed on the bodies of chicks and fowls it sometimes kills．If sulphur is used in dry weather it is harmless，but if used just before or during a wet spell，it to dust the chicks freely with Persian insect－powder，which will drive them off the bodies，but unless the quarters and
premises are thoroughly cleaned，the lice will return to the chicks．Ouly heroic treatment will prevent lice，which is to lean up，whitewash，coal－oil the roosts， and use plenty of Persian insect－powder．

## KEEPING SCRUBS

One reason for the lack of interest in pailure to mane part of the farmers，is the failure to manage the flock in a manner to
secure the largest returns possible．It is au astonishing fact that a majority of the farmers are incapable of classifyiug poul－ try．They kuow very little iu regard to the different breeds，and although they
recognize the iuportance of breed in recognize the importance of breed in auimals，yet they permit their fowls to becoune inbred，and take no care regarding the uniformity of the flock，or of the eggs and dressed carcasses derived therefrom． Did any farmer ever calculate how inuch he loses from keeping scrub fowls？If we ear ate the price of eggs for the entire year at twenty cents per dozen，and the of only one egg per month from each hen （a dozen eggs per year）will entail the loss of ten dollars．Will it not pay，then，to laying one egg more in a month？Viewed from this standpoint，the common hen is a costly luxury．We do not class grades or crosses as scrubs，but the common barn－
yard fowl，that is bred from any source，or yard fowl，that is bred from any source，or
by accideut．The pure breeds can be made by accideut．The pure breeds can be made
to perform the service characteristic of the breed selected，and when the farmer gires poultry the same attention in breeding as is devoted to larger stock，he will find that， in proportion to capital investment，poul－ the farm．

PURE bREEDS OF GEESE．
Only the common geese have the males and females differeut in plumage．All the pnre breeds have the sexes colored the
same．The Toulouse is the largest，and the China the hest layers．The Embden is the best for feathers，being pure white in color．A cross of the Toulouse gauder and
Embdeu goose makes the best for market． The gander
thicker around the neck，aud more mas－ culine in appearance．Though geese de－ llowed to have access to a pond，yet they may be pastured，or may be kept in con－ chopped），potatoes and grass，tmrips lays from twenty to forty eggs，and the gander keeps a faithful watch over her at times when she is ou the nest．When itting，it is best to disturb her as little as usually raises all her young ones．

CHEAP EXCURSIONS TO THE WEST

C．Traver，T．P．A．，Mrarine National Bank Building，Pittsburg，Pa．；F．M．Snavel．
A．， 151 \＄t．Clair strcet，Cleveland，Obio．

I have ordered six patterns from you，and am delighted with them．I shall do all

A Cross that gives qualit
The Games stand at the head of all breeds for the table．For crossing，the Pit Games however；is as large as some of the Asiatics， and has become a farorite．Cockerels fo the table may be greatly iunproved by caponizing when they are young．It increases their size and improves them in quality of flesh．The gray Dorking male will greatly improve a common flock，and serve better in that respect than the colored Dorking，on account of being superior forager．The reason why thes crosses are not made by poultrymen，to sell iu the markets，is that the majority o buyers judge hy the color of the skin and legs，and suppose that a fowl with jellow legs is superior to one with dark legs， wheu in fact the best table fowls have legs of some other color than yellow．Another drawback is that the chicks of the Game Dorking and Houdan breeds are not a plymouth Rock Plymouth Rock breeds．It does not pay to lose a number of the chicks in order to get the remainder to a market where they must compete with the more hardy birds f all iuferior cuality but with yellow legs The only was to secure a choice table fowl is to raise it yourself，or have it
raised to order；and it must be done by one who knows how to greed and feed．Fer know how superior a crenss of the above breeds is to common fowls for the table open to him who will educate his cus tomers up to a knowledge of what choice fowl is，particularly if the customers are willing to pay for the luxury．Where one has a space sufficient for a male and six be raised，especially if sitting chens can procured from some other source for incubating the eggs and brooding the chicks．

## KEEP THE BEST．

Each hen will make known her，faults and vices，ereu if her good qualities can not be discorered．When she lays an ege she makes a noise about it，and her comb looks bright and scarlet during her busy season．When she is adding nothing to her egg－basket she sings no songs，her comb shrivels and becomes pale．Each heu indicates when she is a producer．The farmer or poultryman can select the prof－ italle from those that consume food with－
out rendering an equivalent．Every flock contains a few hens that are superior to the others．The flock as such may not pay for its support，yet it may have in it one or two hens that cannot le surpassed as layers．But the few productive hens may have imposed upon them the task of supporting all the idlers，simply becaus the account is kept with the flock instead from the As the eggs gathered are from the whole unmber of hens，the idlers soon disgust their owner，who sends the
eutire flock to the market－stalls as nnprof itable

## TAELE SCRAPS

A small fock which receives the scraps from the tahle produces eggs when larger flocks are uuprofitable．The fact is plain that the smaller flock receives better feed－
ing．Table scraps are not grains． ing．Table scraps are not grains．They
contain a variety net found in the rations of a large flock．Bread，meat，potatoes and cooked regetables of several kinds as well as the sour milk，aud even cake
and pie，are included，to say nothing of and pie，are included，to say nothiug o
peas aud beans，which are the best o peas aud beans，which are the best ety not only provides the hens with the elements needed for egg production， but it prounotes digestion and prerents if it were not the waste of the table，for it requires labor to prepare it．But as the result of feeding scraps is a production of eggs，it is safe to say that if the same food labor and care could be bestowed on
thousand hens as a small flock receives， the profits would be proportionately larger This may appear like going too far with feeding methods，bnt facts prove the the ory．The small llock，fed from the table found on every farm demonstrates what
The difficnlty with a large number o fowls would be to learn the sonrces from which to procure food other than grain． To prepare a large amount of table scraps requires a building and utensils in which to cook the food．These preparations mean au outlay which the farmer is not willing to incur．The table scraps con－ sumed by the small flock would othervise be wasted or fed in some less profitable
prepared，and this costs extra labor at least．It is plain，then，that as labor is the member of a large flock，although she may las the same number of eggs erery year， can never give as large a profit
she is a member of a small flock．

## MAKING A MARKET．

The egg market is one that is never sup－ plied．There are thousands of dozens of ges shipped to market，but no matter how those that are choice．It is not necessary to send eggs off to the large cities to get grod prices，for in every town and village only strictly prime eggs，and they will pay something more than the regular price for them．The reason foul do not ret higher prices is because youl do not make known the fact that you have extra quality eggs for sale．Nor can you expect purchasers to seek you，as they may not know that you can snpply them．The proper plan is to go among those who will buy and build up a custom．Let it be known that they the stores，and there will be no difficulty in selling，nor is it necessary to go very far in some sections，as eggs are salable every－ where，and for cash，at better prices than any other products of the farm．

## CORRESPONDENCE

AN EGG RECORD．－I ain a subscriber for een best paper for the price a have ever poultry department，and find in it a great deal that is of value and interest to poultry aisers，especially new beginners like myself． pullets．Ten are Plymouth Rock aud three I have kept a strict account for the first three months of this year，with this recult：Whole nnmber of eggs layed，609；market price of lowest，twenty cents；total value of eggs， sl4．46；whole expense of feeding them，in－ profig hone，shell，etc．，was $\$ 3.96$ ，leaving a showing for beginners．Please tell Mrs．L．P． trouble now with my hens eating oats，and think sometines they would eat carpet－tacks if fed them，they have such appetites．

## A BOY'S BATTLE

y will allen droygoole.
hapter II.

Bthe time the bay mare reached'the big gate of ndrew had to some ex tent reeovered his senses.
He had shot some one; he was sure of that. He beliered that be had killed a man. Aside froul laving slain a humian being, he was doubly harassed with the knowledge of certaining if the man were really dead.
"I might, at the least, have been able to get him a drink of water,"
was his thought. "Wounded men was his thought. "Wounded men
always want water. I could have brought hinu some; there's the river ot far away."
Once tbere had come to him an idea of turning back. He had not
meant to hurt anybody, and he was tempted to go back and run the risk of the punishment he fully believed would be meted out to him should it be discovered that he had done the sbootiug. Perhaps he could get back witbout being seell; he eould
find out if the man was dead. If find out if the man was dead. If
not, he would need assistance; if he not, he wou
He shuddered, and gave the mare a cut with the whip. Go back for the world. He was afraid
slackened her spieed uutil she stood at the farm gate. He leaned fromi his seat to lift the long wooden latch, when suddenly a thought flasked througlo his brain that brough saddle.
"Oh, God!" he whispered. "What if it was Uncle Jack?'
Without another word, he wheeled the bay and sent her galloping back over the road they bad but jut
traveled. The sun had set. There were berried cedars than when he had last passed heneath their jagged boughs, but here and there in the open spaces where the woods had been partly cleared away, long, gray dashes of dayligh
whife turnpike.

It was intensely still, save for the loud,
resounding hoof-beats, that had never seemed resounding hoof-beats, that had never seemed to so ring and reverberate. The quick, metallic sound of the mare's shoes striking the hard, well-beaten limestone, heat into his ears
llke iron bammers striking an auvil. Once a nke iron bammers striking an auvil. Once a screech-owl darted from a tree upon his right
with a shrill note of alarm; hut so engrossed was he with his own forebodings that he forgot the charm given him, since be could remember, at the negro quarters, for warding off the bad luck that always hides in the screech-owl's cry-"Turu yo' pockets en yo" Wristbauds innards out, else dey'll he a death
in the family, sbo'." But Andrew had room in his brain for but oue thought:
"What if I have killed poor Uncle Jack? What if I have killed Uncle Jack?'
He was only a hoy, and totally ignorant of the law. He might he hung, for all he kuew. It was an aceident, to be surc. But how was he to prove that, siuce there had been no witnesses to the deed? No wituess? Then why need he tell, siuce nobody kuew? Nohody body could ever know-or if they could or did, they would not understand that it was an aeeident, that he did not mean to shoot him. "Nobody," said be, "but just Uncle Jack himself; be'l
would."
So confident was he that the victim was Uncle Jack that he had hegun to think of him
as dead, and therefore understanding how it as dead, and therefore understanding bow it was that he had killed him.
The next moment, just ahead of hiun be saw a figure emerge from the shadow along the
roadside into the open cleariug. In the uncertain light be was unable at first to make out Who it was; but there was something faminar and carried a gun slung across his shoulder In his left hand he held a rabbit by oue hind leg, and the brushy tail of a gray squirrel was waving from bis coat-pocket. A moment's careful inspection, and then Andrew gave a sudden shout
"Uncle Jack? Oh, Uncle Jack? Is it you? Ob, I'm so glad-so glad and tbank
He pulled the mare up and sat, half laughing, balf sobbing, while the familiar figure
limped heavily across the road and stood at his side.
"Des lis'n at dat, now, will somebody? What ails of you, son, ter.be 'lowin' I'm a daid man? I's mighty poly, ter be sho', en I ain' so
young en spry ez I useter wuz, but sholy, de
little nuarster ain
fur a daid co'pse.
Notwithstanding the light words, however Andrew deteeted the serious tone in the old man's voice. And how weary he looked, aud troubled. Something was surely wrong. "Oh, Uncle Jaek," said be, "are you burt?"
"Wbo, me?" was the reply. "Yes, you." Don't triffe with
trouble, ef de rabbit kilt in de
Sadday ebenin'. So dar it am."
He shifted the gun to the hollow of his elbow, and with his free hand drew from his pocket the still warm, limp foot of the rabbit he had shot in the old Indian burying-ground
down in a bend of Stone river. Into the down in a bend of Stone river. Into the
troubled old face sprang a gleam of hope, as
"Did he-did Yellow Pete-ever come to his senses? Did he say he knew-who did it?" he
asked over his sboulder as the mare started ,
know me"" sap ter hisse'f long 'nough , ter mos' daid, he sboly make out "eu fur a mau peart ter de han's iu de wagin dat it wuz me
what done shoot him."
"But you didn't-"
"Sholy, sholy; in co'se. Honey, 'less you gwine on dis minute, I'll
be boun' ter gib de mare a lick. I's Le boun' ter gib de mare a lick. I's
gwine ter clomb dis fence en light nat by de paf through de low groun'? Dem miggers baek dar in de wagiu, ain' in no Fo'thro'-July temper, tell you. Dat dey ain'. Enn it
wouldn't tek much ter put it inter dey haids ter gib somebody de chances ob roostin' on a cedar limb dis night. Dat's buccome I say you
better go home 'fo' dey gits here, en better go home 'fo' dey gits here, en say what you hab got ter
pa, eu ter nobody else."
mob! The hint was sufficient to send the bay mare spinning home at her heels. Andrew had ne been so frightened in his life. He knew what these mobs of ignorant hot-blooded men meant. He understood something of 'the lax law thing of made these people someAnd once fully started upon their law in the land eould check them They would surely burt some one. In all probability it would be Unele Jack, since no living soul knew
his part in the tragedy. So be told his part in the tragedy
But did nobody know? The that mad sudllop downe to him, in turnpike, that Uncle Jack knew al abont it. The more he thought of it the more be felt convineed that thi. wa's the case. His waruing to tell nobody but his father, his idea that whoever fired the shot that had struek poor Pete had doue so from a mistaken belief that the deed would couvinced to that lnce thing couvinced him that Uncle Jack, from some unseen poin
nessed the whole affair.
Morcover, he had suggested to fully concealing his own knowledge own knowledg course to pursue that could not fail to be the wisest recourse left him'ell yo' pa all that's in yo' mind.' To be sure; that was what he had intended doing at the very first. But now, with the possibility of a
Did yomor for it. I was terribly frighteued

Did you-d",
"Et me?"
"Et me?"
"Did anybody said Andrew, almost angrily, "Did anybody shoot anybo
The uegro slowly slipped the gun through is hand until the stock rested through ground, bis hand closed upon the muzzle; in the other he still held the three-footed rabbit. The fresh, undried blood upon the hind stump told that the left foot bad been lately severed from the truuk.
"Little marster," said the negro, "dey's someun burt in de woods ober yonder. Dey wuz layin' iu de cedar brake down dar on de
side todes de ribher. Dey's hurt toler'ble bad, side todes de ribher. Dey's hurt toler'ble bad, I reckin; but dey ail' daid yit. I heeard a
gun, en bein'ez I wuzn't so mighty fur off, I gun, en bein' ez I wuzn't so mighty fur off, I
tromped ober dar ter try en make out ef some pusson wuz burt, or daid, or des wounded lack you say. Eu dar in de hrake, under a
grape-vine tree, I fonnd a colored man wid a bullet in his haid. He ain' kuow nuffin e fus', tell 1 fotched some water in my bat frum de ribber en flung it in his face. Den I staid long o' him tell someo' de han's frum a place up de'pike come 'long in a wagin en tuck him in. Dey's got him now, en déy's comin' slow, so's not ter jistle of him none.
"Will he die? Will
"Will he die? Will he, Uncle Jack?" said "De signs don't say dat he will,
'duz dey say dat he won't. Wut son; en no tiune de story widout incorruption, please, sah. He'd ought not ter been shot. He please, sah. He'd ought not ter been shot. He ought ter he let live. But I reckin de one dat shoot him done think he wuz doin' Uuc' Jack a mighty big favor; but 'tain' so, son, 'taiu'"But that, wasn't the reason-
"Don't incorrupt me, son," said Jack. "Ez I wuz sayin', de one what shoot dat Yeller Pete sholy wuz aimin' ter favor me "Pete!"
Pete?"
"Hit sholy wuz, son. En ole Jack's mighty sorry fur hit. Dat ain' de right way ter do. day, but hit wuz all talk; des donc ter pleasure his oily ole mouf a bit. He didn't want Pete hurt sho 'uuff. Dat ain' right; dat ain' de way de Book say do. Now you look here, son. I fotched you dis; I kilt in de woods, iu de ole grabeyard whar I heeard tell dey useter hury de Injuns, way back. En I cut de hehin' foot off fur you, hecause I feared you might git inter trouble some time, en I heear tell de lef
behin' foot ob de rabbit gwine git you out de

## touching it. <br> "Take it, son, hit's a charm. I doue heeard

 "I don't want it," said ce boy.""I don't want it," said Andrew. "If trouble
 "Tant it that."
Wake it, son," said the negro. "Mebbe Trouble am $g$ wood, but it cau't do no harm. Take dis bere foot cf you keers anything tall bout ole Jack what helt you in his arms de day you war boruded, ell. what helt yo' pappy befo' you, en what laid yo' own gran'pa in de
coffin, 'ca'se his own folks wuz all gone ter de war. Take it."
He was stuff
He boy's pocket while he spoke. A devout Chrissuperstitions of his race. He was excitcd, frightened, Andrew thought; and the hand holding the rabbit's foot trembled so that he could scarcely find the pocket into which be was determined to deposit the treasure.
"Ole Jack knows," he continued. "He En ter-day he done furgit to fetch his cuujure bag 'long wid him, en des look et de trouble what am come-Yeller Pete shot, en de good Lord only know. who am stine ter suffer fur it. de grabeyard De bes' o' poek , how, sou, you jist git 'loug homc fas' ez dat mare kin trot. Hit ain' healfy out here dis time o' day. You run 'long bome."
Still Andrew hesitated. He wanted to know more of Pete and bis injuries. He had an idea that Unele Jack was not telling all there wa to tell. But for once Uncle Jack was in a
hurry. Far down the pike his quick ear had aught the crunching sound of wheels moving "Glowly aud heavily along the road.
"G'loug, son," hc commanded. "G'long en
tell Sist. Lize dey's fetchin' Pete home. Tell tell Sist. Lize dey's fetchin' Pete home. Tell her dat he's been burt a little. Mind you
don't tell her too mueh; she's mighty fieety When thell skeered. Des say he's some hurt en dat all you say ter Sist. Lize. You kin tell o' pa what's in yo' heart ter tell. Won't you go ou, son? I heear de wagin now." He put bis haud upon the hit and gave the mare a dexterous turn, heading her homeward. But it was difficult to get Andrew off, Frightened, undecided, and ignorant as to the
extent of the harm done to Pete, he was held o the spot by a sort of fascination that was ouly part fear, after all. Uncle Jack literall
drove him off.

## A Startling

 Admission.In New York City, for five consecutive years, the proportion of Deaths from Consumption has been three in every Twenty Persons.

Epidemics of Cholera, Yellow Fever and
other diseases of similar other diseases of similar character, so ter-
rible in their results, occasion wide spread rible in their results, occasion wide spread
alarm and receive the most careful consideration for their prevention and cure, while consumption receives scarcely a thought, yet the number of their victims sinks into
insignificance when compared with those of insignificance when compared with those of
consumption. Comparatively few people know what to do for their loved ones when they see them graduall y lose strength, lose tion, or develop a cough, with difficult
breathing, or hemorrhage. Cod liver oil was for a long time given in all such cases but the poor success attending its use
coupled with its nauseating taste has led many practitioners, as well as the public at
large, to place their main reliance in Dr. Pierce's Golden Medical Discovery. It deual not in every case but in a large percentage of cases, aud we believe that fully 98 per
cent, of all cases of consumption can, iftaken cent. of all cases of consumption can, if taken
in the early stages of the disease, be cured ask people to believe until they have investigated for themselves. A pamphlet has
been published having the names, addre been published having the names, addresses
and photographs of a large number of those and photographs of a large number of those
cured of consumption, bronchitis, lingering coughs, asthma, chronic nasal catarrh and kindred maladies which will be mailed free to those sending for it with their name and address upon a postal card, or you can have
a medical treatise, in book form of 160 pages, mailed to you, on receipt of address pages, mailed to you, on recept You can then
and six cents in stamps.
write those cured and learn their experi-

[^8]Medical Association, Buffalo, N. Y.
really knew, ând so, thonght he, "If nobody
oul earth knows, nobody can possibly tell. onl earth knows, hobody can possibly tell.
And if Uucle Jacks knows, he will never, never tell-uot to sare his own life. "Yet," said a roice in his heart, "sou would
betray him? Leave a friend like that, one Who would die for jon-you would leave him to snffer, when a word from you would reliere
him of snspicion? Tou, who call sourself a him of snspicion? lou, who call jourself a
brave boy and who expect some das to be rebrave boy and who expect some fie, you are a
garded as an hoonorable man?
coward! Do youn not know that the hor devoid of honor can develop into nothing bnt that Which is ase? Go tome and tell sour father.
Be a man, and always remember that it is
very dark road ont of which a loting father can fail to lead ant erring sou."
Yes, he would go home aud tell his father. No, he might be arrested and-hung! He was
terribly at sea. Varied impulses were tearing terribly at sea. Varied inpulses were tearing
him. One moment he would have fled, would
and have ridden the hay mare right on down that
road and out of reach of danger forever. The road and out of reach of danger forever. The
next he would have turned to meet the men next he would have turned to meet the ment
in the wagon and proclaimed himself the gnilty party.
"I'll go straight aud tell father," he ex-
claimed, as the mare stopped at the farm gate claimed, as the mare stopped at the farm gate,
"Just as soon as I can run up to Big Liza's "Just as soon as can run up to
honse and tell her they are comiug."
He rode into thé lot, dismounted, and throwing the reins over a hitching-post, withont
stopping to remove the saddle from the mare went down the path that would bring him to Pete's calin, just beyond the locust grove. The moon was rising when he reached the
house, the door of whicll stood wide open. A tall, Sellow woman stood mixing some meal
batter in a wooden tras at a tahle near the open fireplace, where a fire of hickory logs was burning. She was so tall, in the red fireline proportions. As she stooped to las the batter upon the hoe, Andrew had a perfect
riew of her face. She was a mulattress, and had straight, hlack hair and a complexion Indiau blood in her reins. It was not a bad face, however, that bent over the smoking
hoe-cake in the glaring, red firelight, but rather an emotional one, and belonged to a nature easily and strongly moved hy excite-
ment. Andrew hesitated. The corn-cake had hegun to stean. The moman reached a pan aud hegan to take from it the thin strips of streaked bacon. It seemed a pity to spoil her
poor little supper, but it must be done. Nispoor little supper, but it must be done. Mis-
fortune is not a chooser of propitious moments for lettiug its hlows fall
Andrew stepped into the room and called
softl5, half afraid of his own roice: softly, half farra

## The woman gave turned toward him.

"Lor', chile, how sou skeered me! What ails sou, ter come down here dis time o' day
Is yo' ma sick, or somefi'?" "Aunt Liza," said Andrew, with an idea of
hreaking the bad news lightly, "I was sent hreaking the bad news lightly, "I was sent
over here to tell yon that Uncle Pete is-coming home. "Land o' Goshen! I'm s'prised ter hear dat,
now, sho," she replied in her dry, mirthles now, sho," she replied in her dry, mirthless
wray, "beeu' ez dat's what he most allers does, if,", sher
here."
"."

## "I mean,",

The irou spoon rattled to the floor. .laght ter git his haid busted," she de-
clared, though she had begun to dry her hands upon her apron nervousls, preparatory to making ready for his coming. "Ought ter
git his haid busted, en see ef he'll be so raidy
ter go aft ter go off huntin' up a qua'l wid folks ez ain' troublin' him none. He'll git hisse'f kilt some o' dese days, en hit'll be good fur him."
"Oh, Aunt Liza!" said Andrew, forgetting
Uncle Jack's instructions, "don't talk that Was. He may be killed already. He has heen shot by-somebody-"
The woman secmed suddenly to have heen
transformed into a different ereature threw up her long arms and uttered a loud,
shrill ery. "Hit wuz dat ole Unc' Jack done it! He
doue it! Bliud Sam done heeard him say he gwine kill him! Stan', ont de way dar, chile ;
lemme git ont o, here." She pushed past him out into the moonlight,
with her long hair loosened about her shoulders, uttering her shrill, wailing cries, until
the inmates of the neighboring cabins came the inmates of the neighboring cabins ca
running out to learn what was the matter. "Sist. Kelline," she cried, "ole Unc' Jacls's
done kilt my ole mana Pete's daid: Oe Une
Jack done it. Blind Sam heeard him threat Jack done it. Blind Sam heeard him threat
him, en now he's daid. Whar's marster? Lemune git ter marster.", so sudden aud so vehe-
She was so nois,. so She was so noisy, so sudden aud so vehe-
ment in herdenuunciations of Uncle Jock, that
Andrew had not time to fully comprehend What she was sasing before she was gone.
He followed ber, more slowly, to the house.
Her rehemence frightened him. He was He followed her, more slowly, to the house.
Her relemenecc frightened him. He was
afraid to coufesss that he was the guilty party;
set to be silent was torture. To speak might set to be silen
mean death. mean death.
When he stod iu the door of the farm-
house, he saw his father standlng ln the cenhouse, he saw his father standlng in tha een-
ter of the large, wellhlighted hall, his, mother
near, and before them, Liza, with mplifted
hands, declaring in a loud woice that Tnele ter of the large, well-lighted hall, his mother
near, and before them, Liza, with mplifted
lands, declaring in in loud ooice that Uncle
Jack had slain her husbua.. He saw his
father step forward and catch the strong, up-
and cbildren seurrying across tbe yard in the
direction of the farm-house; and theu he heard his father's voice, positive, indignant,
tind: heara
kind:
"Just
"Just try to control sourself, Liza," he said. I promise sou that if sour husband has been
killed, the gnilts parts shall be punished. I killed, the gnilts parts sh
don't care who it may be."
The master looked around, saw the shrinking figure at the door, aud said:
"Come in here, sir, and tell all you know bout this unhappy business. Who shot Pete? And who sent jou here with the news of the In there, before all those eager faces? Iuto all that light? And with a lie in his heart? He felt as though every eye there must look
straight dowu through his lips' evasion and straight dowu through his lips' erasion and
'ead in his heart all that hls cowardly silence read in his heart all that hls cowardly silence
would conceal. No; if he went in there to spealk, he would spealk the truth, if he died for He saw his mother's ese, geutler thau he
had ever lsnowu, fixed npou him. He hesitated a moment, then stepped into the ceuter of the group.
"Father," h
pike, I-",
There was a shuffiug, uncertain step npon tep it might be was lame.
"Go on, siri," said the master. "Who shot
Uncle Pete? Who sent mou to Uncle Pete? Who sent you to Liza?"
The step came nearer, stralght to the open door, across the threshold and into the room; straight to the master, before all that sea of dark, excited faces, and stopped.
"I done hit, marster; I sent de soung mars.
ter ter tell you all Pete wnz hurt some. He ain' daid, douhten hit be since I left him, out

And Uncle Jack shifted his three-footed rahblt to his other haud as complacentis, to all appearances, as though he had not at that moment tacitly assumed the blame of Pete's death, in order to give Andrew an opportu-
sity to make his confession quietly, to his ather, hefore making the matter known to the excitahle group ahont the doors and windows.
When it was knorn that Pete was not dead, the uegroes went back to their homes, and the "Teep out of the way awhile" said he "un"Teep out of the way awhile," said he, "un-
il Liza calms down and we see how it goes With Pete. It is a very ugly business yon have gotteu yonrself into, let me tell you.
Don't go among the hands. You will be sure to get into a quarrel; and don't stop at sour own cabin to-night. There's the gin, or the baru-"
"Marster," said Uncle Jack, "I ain' got no
all ter be hidin' out same lack I wuz a fox

## The art of oruamenting POWDER

face most probably dates or embellishing the the first man and woman; and if history tells us uothing a bont Notber Exe having made
use of it, we are incliued to think that that is becanse bistory is defective, and not the art was not known in those dass.
One of the earliest kuowu forms of personal embellishment is that of painting the face this originated in a desire to instil fear into the hearts of one's enemies, rather than from frighteu men seemed to attract the women, so it gradually came ahont that warrlors painted their faces even in times of peace.
Among the Fijians the first dress of an in fant is a thick laser of oil paiut all over the body, the face being painted red, with the ex
ception of the nose, which is allowed to ception of the nose, which is allowed to
remain in its original color-that is, hlack. remain in its original color-that is, hack.
The well-to-do people divide the face into four parts, each being painted a differen color.
Time
Time brought a development of the art of improving the appearance. Glaring color
gave way to more refined cosmetics and more complicated method of using them.
It hecame the custom to use cosmetics Everybody used them-kiugs, queeus, rich women aud poor wome
Later on, when Roman civilization was a its height, the Egyptians still elaimed to hold their position as chief makers and users of cosmetics, and the Roman empresses paid
large sums for the mysteries of the kosmettarge sums for the mysteries of the kosmet
ikon which were sold hy the charlataus of the temple of Isis
In Nine vel people resorted to the process o enameliug the countenance. The face wa
first washed and thoronghly dried, then cor frist washed and thoronghly aled, then cov ered with a Whitish pas
and shiny like enamel.
The Jews made great nse of such preparations for personal adornment, as we see by the Second Book of Kiugs (ix. 30.) The prophets often speak on this subject, and threaten sought to improve the hnman face.
Although the Greek men thought more of physical strength than of artificial heanty, the women believed in red and white powders, and the poets went so far as to say that Venu herself, on one critical occasiou, did not hes

## ment. Dur

Duriug the time of the Cresars the use of osmetics increased to au alarmi
Popea, one of the wives of Nero, used to take with her a troop of 500 asses, so that she could enjor the lnsurs of a bath in asses, milk, which was supposed to have the proports of making the skin tender.
Phylis, the maid of the beautiful Soema actually wrote a treatise on the most effica ious cosmetics.
The Germanic and Frank ladies of the middle ages were noted for their dcsire to
have arms and hands of irory whiteness and neeks of a rose tiut.
The English ladies
of the twelfth ceuturs chose to appear with pale faces, to obtain
Which they had recourse to cosmetics aud to cuppiug
But the Florentine ladies excelled eren the Romans. They bad 300 methods or preparation for the simple purpose of biding wrinkles; in fact, the use of cosmetics reache such a pitch that the priests cousi
necessary to pronounce against them.
Tben the fashion changed, and everything was made white; faces were powdered, hal with each other as to which should use the
A later method of adornment was the "patch." This was first used to show up the delicacy of the complexiou, but in a very
short time it had developed to such an exten that there were at least tweuty in common nse, with suct uames as "sympathetic patch,"
"love patcll," "majestic patch," et

## SALOONS IN SWEDEN.

"I saw something of the workings of the systems in Sweden and Norway," Dr. Moxam more saloons last summer than I had seen before in my life. X examiued the 11quors care-
fully, found out what kinds were most sold, and how many glasses a man can buy. In dozen places where liquor is sold by the glass dozen places where liquor is sold by the glass
or bottle. Each is a plain room, perfectly clean, without even a picture on the wall a stool hehind the counter for the ofticial in charge. Ho is a respectable man, probably a member of the church. On the walls are to obey. If a mau asks for aqua vita, he lays down his coin-there is no credit-and pure,
undrugged spirit is poured out for him. He is not allowed to remain in the room, and if he wants another glass he is told to come back in three hours. The glass is so small that he
might take a glass every three hours in the day and not get drunk. A working-man cansat talke a uip ou his way to work, for the half-past one o'elock. The hour for closing in the winter is half-past seven, aud in summer
eight o'clock. The day before a holiday they
close at hooun, and they
working-men are paid off
dised before the ness. The man helind the counter is emplosed for his personal character. He gets
fairly
and fairly good salars, but not a cent from the hnsiness. If he deriates from the rules of the ompany, he is bunced at once. He is pro-
unoted for making as small sales as possible. The polics of the per capita consumption was 3.8 quarts; in 1892 Sweden were the wost drunley conntries in Europe; now, Norway is three times as sober as the Unitea states. It is the exact resse of dicense system, under which the licensed dealers stimulate trade as mnch as possible to get back the mones they have paid for their ree whisky than such license as we have in ween that and this is as great as the difference between day and night. The Norwegian ssstem eliminates politics entirelr. It ha been argued that it makes drunkenness repectable, but its effect has been to elerate the public spirit and array it against drunkenvorking esystem has heen recognized as has become less respectable to patronize a

## QUEEN'S HOUSE SERVANTS

Queen Victoria's household ls a large one consisting of just uuder a thousand persons, part the sum of two and a half million dol lars every year. Most of the posts are slncures, or fixtures, for life.
In the early part of Queen Victoria's reigu a mistress of the rohes may possibly have done that the apparel of the sovereign should be carefully preserced from moth and dust, newing the regal ermine, velvet and lace at stated times, and seeing that the crown jewels airing.
She could also affix her name to warrants empowering oue worthy tradesman to sell allowing others to put np the royal arms over their doors because their various wares hought by personages of illustrious degree, as cood anditiou to business advertsement as good an additiou to buslnats in etters over the shops.
Some of the posts are entirely ornamental and others hare very little duty attached to them. Probably the only additions to the
household since the time of Henry VIII. are two steam-apparatus meu.
or arge, nor any pageantry on the Thames, there are
still a bargemaster and a waterman, with salary each of $\$ 2,000$ a year.
For the past 200 years there has been no hawking in the forest of Windsor, hut the St. Albans, has ouly been suppressed within the last two years.
There are four table-deekers, whose sole duty is to las the dinnertcloth and see that the plates, dishes and cutlery are fairly set forth. There is also a wax-fitter, who sees the canMes properly disposed, and a first aud second that of the poet laureate, which is $\$ 500$ a jear This may seem shabbs payment, hut it must be confessed that mast or the poets laurear have been overpaid for the stuff supplied Then there is the "keeper of the swans,
who annnally pockets $\$ 150$ for looking after the sacred birds on the royal waters. Lastly, there is the "queen's rat-catcher," who is es is attached to Buckingham Palace. His salary, \&75, is provided outside the ciril committee of snpply, considers this vote and gravely agrees to it.

## WHAT IMMIGRATION COSTS

There is one aspect of the immigration question that appeals pnrely to bnsiness men. The people of the unrestrained horde of Europeans pouring npon our shores are, of conrse, the thus levied upou the Americau people is not to he disregarded.
According to the last census, in addition to ign the pentle supported at the public charge of the penple
as follows:
Insane.....
Total
The a rerage annual cost of a pauper, a luna ic or a prisuner in the conserrative and Iassachusetts is one hundred and fifty dollars.
The annual cost, then, of maintaining this stauding army of forei.
not less than $\$ 11,832,000$.
If to this could be added the expeuse maintaining the American-born children foreign panpers, vagabonds and crimina the figures would be eren more startling, but
unfortunately the figures on parentage are deunfortunately the figures on
fective. Commercial Bulletin-

## SURVIVAL OF,JOKES

## have of the commonest phrases iu politic

 been caught up by newspapers and kept cur triumphant appearance of the crowing rooster what was at the start a cross-roads jest.There was once an ardent politiciau in Indiana named Chapman, who had local re pute for extraordiuary ability iu imitating Jacksou, and celebrated the victories of his party by serenadiug his neighhors and crow ing lustily after election.
When the hard-cider campaitn of 1810 euded he was silent, and his political foes turned the
laugh against him. They teased him hy asking him why he did not crow, and what had Some of his rooste
Some one sent a letter to an Indiana newspaper about Chapman's ronster, aud the joke
made the rounds of the press. Withiu twelve made the rounds of the press. Withiu twelve
months the crowing rooster was on his perch in many a newspaper as the em blem of victory in election-time, and there he has remained. A similar example is tbe perpetuation in th Massachusetts governor for political legerde main. When the state was grotesquely redisopponent remarked of oue district which stretched along the coast from Boston to New Hampshir
"I call it a gerrymander," said a bystander. The idea was caught up, a Boston newspape

## d was born.

But the most remarkable instance of the longevity of a local Americau joke is the cou tinued appearance of Uncle Sam, d
decade, in cartoon, prose and verse.
The original Uncle Sam was an iuspector of during the war of 1812 . His name was Samuel Wilson, and it was his business to receive and examine harrels of pork and cases of provis.
designed for military and naval supplies.
The contractors marked the goods intende for government use with the initials "U. S.
One day a raw hand, who was assisting the inspector, asked the meaniug of the letter U.S."
"Uncle Sam Wilson," promplly replied the
nspector, with a merry twinkle in his eyes. Everyhody langhed. The joke passed from print, and then it traveled far and wide. Samuel Wilson dropped out of it, hut Uncle
Sam-remained as a personification of the senius of American destiny
His portrait a
His portrait appeared in due time, tall and lean, with long, ragged beard, whittling-knife,
starry, swallow-tailed coat and flag-striped starry, swallow-tailed coat and flag-striped
trousers; and so he has remained to this day. The corresponding conception of John Bull satire and Dean Swift's cynicism to an equally humble origin in a popular joke.-Youth's

## CHINESE WIVES COME HIGH

Miss Adele Fielde talked interestingly of the in a lecture the other day. Miss Fielde spoke first of the methods employed by her to olbtain of the people or social customs of China. She tion it was necescary to use great tact and avoid asking questions of the natives, who are
always suspicious of foreigners. By suggesting an exchange of life histories with ahout obthering similar assistance from about fifty at a correct knowledge of the long-established ings of a false religion, Miss Fielde said, were were killed at birth. Only at times when
women become somewhat scarce in proportion

## to the male population, thus making the price of a wife high, does this pernicious prac tice grow less.

 tice grow less. Fielde, "twenty years ago, the average price of a wife was $\$ 10$. Wheu I left, two years ago, it had risen to $\$ 200$,Miss Fielde spoke of
the feet, saying that tbough there were nunerous leyends about it, it was not known
definitely why the custom prevailed. "Though the custom is painful," said she, "it is, I be-
lieve, less injurious than the waist binding in his country. There are said to be very few womeu in America whose iuternal organs are Nof tight lacing.
Notwithstanding the oppression of the Chinese women, Miss Fielde deciares they posse risen in civilization because she has kept her women down," said Miss Fielde, in conclusion. "A mation

## WEDDED AT TEN YEARS

Everywhere in the East, and especially in Hindustan and Nepaul, marriages are made at a very early age. Paren
wedding of the childreu
but little girls and boys, and neither the boy nor tbe gitl has auy voice in the matter. They are simply coupled with all the ceremony an cxtravagant display that the parents on both go back to their homes, to he nursed and go back to their homes, to he nursed and petted and trained until they are old enough
to have a home of their own. Thus this little king of Nepaul, the eighth royal Goorkha hen he was ten years old to a little prince half his age, chosen for him from one of th oyal families of northern India. Nor did it ever occur to the prime minister or the priest or the astrologers, or the match-makers, tha either the hridegroom or the bride had an but the wedding was " berfectly But the wedding was "perfectly splendid. A picturesque concourse of Asiatic guests, athered in the pavilions and rotundas of the palace; and there was profuse distribution of pretty souveuirs and gifts anong them veryone received something-a nosegay of and joy, a miniature phial of attar of roses, a little silver flask of delicate perfume, a dainty carf or handkerchief spriukled with rose water, a curious fan, a fantastic toy of ivory, Water, a cur.
And then came the little king-alone, of course, for an oriental bride must not be ex-
posed to the public gaze-horne on a silver tter curtained in orange and purple satin, mhroidered with gold, and hung with mas ive hullion fringe. Seated on a great cushion f cloth of gold, piled with shawls of Cashmer luminous vision of flashing jewels, and musical murmur of tiny hells, from hi plumed helmet to his slippers.
And when he had made his royal salaam, or salutation, to the guests and departed, the the glorious fun; the nautch maidens, or dancing-girls, the musicians and jugglers, the gipsies, who are wonderful gymnasts and the mountains.-St. Nicholas.

## HOW THEY CURED HIM

He was a good horse, sound in wind and limb. His speed and appearance made hin
valuable to Mr. Andrews, the proprietor of livery-stable, who had bought him at years old, and gave promise of long service. Only oue thing subtiacted from his value to be hitched to a post or fastened by a halter. icade of ropes and bars placed hehind him. When harnessed to a wagon it was unsafe t.o troll. Yet if tied to a tree or stout post, he would undertake
neck by the

## THE CHAPERON.

I take my chaperon to the play
She thinks she's taking me, ud the gildcd youth who owns the box A proud roung man is he-
But how would his young hea But how would his young heart be hurt
If he could only know That not for his swect That not for his swect sake I go,
Nor yet to see the trifling show, But to see may chaperon flirt.
Her eses beneath her snowy hair They sparkle young as mine; There's scarce a wrinkle in her hand
So delicate and fine. So delicate and ine.
Ahen my ehaperon is seen, They come from everswhereThe dear old boys with silvery hair, With old-time grace and old-time air To greet their old-time quecn.
They bow as my young Midas her Will never learn to bow, (The dancing-masters do not reach With voices quavering just a bit, They play their old parts through, Thes talk of folk who used to woo, Of hearts that broke in 'fifty-twoNow none the worse for $i$.
And as those aged crickets chirp I watch my chaperon's face, A new and tender grace; And in her happy eyes I see

Her jouth awakening bright, With all its hope, desire, delightAs joung-as young as she

## HOME TOPICS.

Lmoxs. - As hot weather comes on, nothing is more refreshing than lemonade, le mou-ice, lemon jelly, etc. There are kinds, but I like best the oldfashioned way of extracting the juice Roll the lemon on the table with fou hand until it is soft, theu cut off the end, and with a silver spoon take all the pulp out into a dish; remove the seeds from it at onee, or they will make it bitter. Never use the peel of a lemon without first washing the lemon and wipiug it. After the lemon has been rolled, and before it is oif and used for flayoring melicions lemon jelly may be made with the Plymouth Roek gelatin by followiug the directions, and it makes a rery iuexpensive dessert One half a box of gelatin will make jelly enough for a family of six people. It is not necessary to have ice, either, as I fre quently made it last summer, in the rery
hottest weather, by setting the mold in a pail and haugiug it iu the well five or six hours.
Levon-rce,-To one quart of water add one pound of sugar; boil and skim it well. When it is eold, add the juice of three

leunous and the slieed rind of two; let it stand an hour, then strain it iuto the
freczer and stir in lighty the well-beaten freczer and stir in lightly the well-beaten whites of
Make the Home Beautiful.-Mfany people think they caunot afford to beautify their homes and make them pleasant to the eye as well as comfortable. They are waiting until thes have saved more money "What is the use of beauty, anrwar? My

But this iden isle, aud that is euongh. fluenced more than we think by our dails surroundings, and are happier, more amiable, stronger to labor or endure when our surroundings are pleasiug
The honse need not necessarily be large, with towers, bay-windows and balconies but it must be neat, aud the fences, gates, steps, etc.. in repair. If there is no porch, steps, etc.. in repair. If there is no porch, one need eost but tittle except a few hours
labor. If ueed be, the posts may be rough labor. If need be, the posts may bords. Plaut riues around it, and they will soon make it a thing of beauty with their twining greemmess. If you cannot afford blinds to the house, you eau at least afford trees, which will shield it from the glare of the summer suu. Let the dooryard be corered with soft, green turf, and have all the flowers for whieh you hare time to care Shrubs and roses do not need much care and if given the soap-suds from the weekly washing, will thrive and repay you a hun-dred-fold with their beauts aud fragrance The family dwelliug, the place where our children arc hoin and grow to manhood and womanhood, should be something more than a place in which to eatand sleep. It should lack uothing which is beautifying, refining and ennobliug that it is in our power to give. We cannot expect young lives that are unfolded in the midst of constant care, work aud worry, and with all their surroundings rude and unkempt, to grow into the fair, sweet, happy lires toward which a better enviroument would have led then.
Pareuts hare a responsibility that they cannot shirk, and it is something more than to feed, to elothe aud to send their children to sehool. Remember that if childhood does not blossom in the sunshiue of beauts and happiness, the fruit of manhood may be dwarfed and sour.

Maida Mcl.

## THE "ONLY" LEMONADE

Alinost everyone thinks ther know how to make lemonade, but only those who use this rule are right in their belief
To every quart of water use three lemons and the rind of one, takiug care to peel the rind very thin, using nothing but the yellow outside. Cut this into pieees and put with the juiee and powdered sugar iu a eorered ressel (a jug is best), using two ounces of sugar to every quart of water. Boil the water, then pour over the lemon aud sugar; corer, let it cool, add ice, and serve. The beateu white of an egg added is rery niee

## RIBBON TRIMMINGS.

Among the revivals of old-fashioned things is the making of trimmings of narrow satin ribhons. Our illustrations give a very good idea of their construction. Vers pretty effects can be produeed from two-faced ribbon. They ean be used to edge rests, or for the tops of ruffles, or for trimming baby-caps.

LATE APPLES
There are some people who are fortunate enough to have apples that will keep until rery laté in the spring. Ouce we had rery late in the spring. Ouce we until June, but these late keepers are very apt to be tough and rather tasteare rery apt to be tough and rather taste-
less, yet with a little doctoring they are rery nseful for sauce or pies. Unless very

## 18 *相

(all scarcely tell the apple from the pinepple, and by mixing in that way yon ive fine sanee that is not rery expenthis. Tender apples could not be used in spoil the as they would eook to pieces and spoil the appearance of the pineapples.
In the spring there is usually sweet
collar and belt; or if the class colors are used, of any color. This can be developed, also, in grenadine, or the skirt and sleeves of silk and the waist of mousselaine de very acceptable one for slight or unde-pickle-juice left from the pickles. Add a In Fig. 2 the dress can be of any light

little of that to the apples when you stew This is and let the quarters remaru whole the juice of a lemon iustead. Gypsy.

## TO CLEAN CARPETS.

4 ounees of borax,
Sounces of sal-soda,
2 ounces of powdered alum,
1 eake of white soap (shaved)
Boil these ingredieuts iu one half gallon oue water for half an hour. Add three and uutil cool and thiek. Rub but a small portion of the carpet at a time with a cleau brush scrape with a thin piece of board, and wub with a joth wrung out of clean and wis brings water. This brings ont the cold
makes the carpet look like new.
M. E. Smith.

## SUMMER TOILETS

In Fig. 1 we present a very suitable toilet for a graduation dress. It is made of white alpaca, which is now a farorite material. The trimming cau be of crean satin rib| The trimming cau be of creanl satin rib- | $\begin{array}{l}\text { Fine hand } \\ \text { bon for the skirt, and cream velvet for the }\end{array}$ |

color in silk, with jet garnitures. The
large elbow sleeves are supplementa large elbow sleeves are supplemented by
long gloves. The dress is absolutely plain long glores. The dress is absolutely plain, except for the jet.
The child's dress in Fig. 3 can be made of any soft, hanging material. Upon a tightfitting waist lining, the front can be arranged to fall just a little at the waist in four box-plaits, which must be run in the material before it is cut out. A fall of lace from the neck, and a roles it with rosettes completes it. The back is tight, if preferred. Kathria Xie.

## TO WASH LACE CURTAINS.

Soak over night in cold water, put on to boil in plenty of cold water, to whieh has been added a tablespoouful of ammonia and a teaspoonful of turpentine. This is the quantity for a clothes-boiler of water. Boil, wriug out, and rinse in two waters Stiffeu with a weak starch and dre on stretchers. They will be white and clean without the wear and tear of rubbing, Fine handkerchiefs are nice washedin this

As many good things are likely to. But you are safe in running
the risk if you keep a bottle of
Perry Davis ${ }^{\text { }}$ PAIN KILLER
at hand. It's a never-failing antidote for pains of all sorts.
tough, a quarter of a teaspoonful of creaur of tartar scattered over the apples in an
ordinary-sized pie vill render them quite tender, if eooked slow. For saluce, about one half teasjoonful to a quantity of apples that will make a quart of apple-sance will make them cook up like the more tender varieties.
Pineapples are usually the cheapest iu May and early June; when you can those,
just slice in about one third of apples, and just slice in about one third of apples, and

## LITTLE HELPS IN MONEY-MAKING.

 Many a woman living in some village or country town, or even in the city's edge, family income without leaving the privacy of her own homo. If she be a good cook, she can easily work up a good trade for home-made baking, even iu a town of no more than five or six hundred inhabitants. There is over one hundred per cent profit o be made by Daking bread, ever one bougs their four afty pounds at a time. If wholesale rates, there would, of course, be wholesale profit. I do not know personally as more profit. I do not know personally asto the profits of cake-baking, but an assured there is as much profit in it as in bread-baking
If one has a cow and some chickens, so that they have nilk and eggs without buying them, there is a fine profit to be made baking custard, lemon and cream pies, and in making custard, float and other delicato
desserts composed principally of milk and desserts composed principally of milk and eggs. It pays far better to sell one's milk
and eggs in such a form than in the crude state. We know there is a profit in selling such, even though the material must all be bought, else they would not be on the market; so must be if one produces the principal ingredients.
There is an immense profit made on icecream when the material is all purchased, and the woman who owns a cow and some chickens, and has a pleasant lawn or porch hat may be made attractive and inviting and is easily accessible, has quite a little fund within her reach. If she advertise
judiciously, and her cake and ice-creann are always of the best, people will soon be attracted, aud in a short time a good trade may be worked in serving iee-cream from four until ten o'clock, two or three afternoons a week. If she has room to raise berries, especially strawberries, these may be disposed of in the same way, at three or four times the profit they could be sold for in any other way, and it will also be easier candies or small, faney cakes were displayed, inany customers would purchase these also. A few loaves of bread, pies and other things could also be readily sold. Nearly everyone likes brown bread (Graham) and baked beans, yet comparatively these. The woman, then, who can bake these things and be sure of their always being good, can sell as much as she has time and strength to bake. But not every woman would want to follow these lin Did you ever know a woman who like

Any merchant will tell you it is easy to sell the things people want, so sunbounets are always a good sale. I know one church society that made and sold several hundred one spring, in a town of only avout three thousand people. One shonld thus getting it a little cheaper. Then by exercising care and ingenuity, and cutting to advantage, there will be but little waste of material; and when one gets thoroughly used to making sunbonnets they will not seen such a formidable task.
Kitchen aprons, if of good material, long and full and neatly made, always sell well. Children's aprons, of all styles and mato rials, always comınand a ready sale also, if not too expensive. Few dressmaker like to bothor with making children's cothing, so that ono woman iu almost evory eoinmunity class of sowing that she had tho time and strength to do. In this, as in everything else, tho best workers will command the bes pay. If one has taste can originality, and can inake the dresses style of each little woarer, the mothers will soon learn to appreciate it, and many busy women will be clad to get tho material glad to get the material and lcave it with such a seamstress, trusting to her taste and hou-
esty to evolve a pretty garment, and pay for it accordingly, glad to be spared the care and worry of selecting style, and so forth, if she can feel confident that the result will be satisfactory.
In every family there are outgrown do duty a that might almost as well as the first, if they we fresh-looking. Almost fresh-looking. Almost to think that it is a hard, laborious and disagreeable task to
color these things, so that they may again | so use small vessels for thein. Fill the be used, and so let it go, and thus lose much in the way of economy. Any one who has done coloring knows that it is not such a difficult process; and if good dyes are carefully used, the results are uniformly satisfactory, so that women who are willing to clean, rip apart, color and press any old garinents brought to her, would find a very acrative business easily followed process of dry-cleaning, also of cleaning or coloring kid gloves and such articles, she will find it a surce of not a little reveuue that will not interfere with household duties nor social pleasures.

Clara'Sensibaugh Everts.

## TO KEEP THE HAIR IN CURL.

 Mix twelve grains of carbonate of potash with a pint of warm, soapy water. Froth the water by beating it with the hauds, dip a brush in it and dampen the hair well, theu eurl with ordinary curlers.
## THE BEST WAY TO KEEP STRAW.

 BERRIES.Some one says, "God may have made a better fruit thau strawberries, but he never did," and so think all of us. Nothing tastes better, either, in winter, than wellkept ones. I have found the following recipe the best I ever tried: Pick, and wash your berries by draining water over them in a colander. Handle them as little as possible. Make a syrup of two pounds of sugar to one quart of water. Allow this to come to a boil; skim anything rising to the surface.

## to nake a sunbonnet? Women who lo

 (1) eew, and who never think of buying a rady-made garment, dread to begin on a sunbonnet, and there isu't one woman in money, who wouldn't buy a sunbounet ready made rather than malie it herself.Use a very broad pan to cook them in, so as to give them plenty of stove surface. When the syrup is ready, put in the berries, about two quarts at a time. As they cools. nove the pan about, but do not stir with a spoon. Use a wooden one if you wish to move

glasses about two thirds full of berries, and allow the syrup to keep on cooking, then fill up with the syrup. Allow them to stand till next morning, then seal as you would jelly. Keep in a warm, dry place.

## a seasonable relish.

Horse-radish, though a homely herb, is credited by trustworthy pharmacopoias with cqusiderable remiedial powers against vague humors of the blood. At this season it is certainly a very acceptable relish with neat, if perfectly fresh and properly grated. For those fond of the herb, a sauce of it is delicious prepared in the following manuer:
Begin by making a crean of two even tablespoonfuls of flour and two liberal tablespoonfuls of butter; stir and melt in a saucepan; add a pint and a half of milk, stir until it boils, seasou with salt, and let sir uncr it bois, minumes. When it is ready, adrl two table minutes. When it is ready, add two table-
spoonfuls of horse-radish, drained from spoonfuls of horse-radish, drained from
vinegar in which it has lain for some time, vinegar in which it has lain for some time,
and a small spoonful of cayenne. Let it and a small spoonful of cayenne. Let it
cook slowly for several minutes, and serve cook slowly for several minutes, and serve
with broiled steak or mutton chops. If too thick, thin with hot cream. M. E. S.

## CHERRY SHRUB.

Take ten pounds of sour or morello cherries, put them in a stone crock and set it in a vessel of boiling water, putting no water with the fruit. Cook steadily until the juice flows freely. Squeeze through a hick bag. Measure the liquid, and to each quart of the liquid allow two pounds of sugar and a gill of brandy. Stir until the sugar is dissolved and strain once more. When clear, bottle and seal.-Harper' Bazar.

## A BIG DROP IN SUGAR

Sears, Roebuck \& Co., better known as the
Cheapest Supply House on Earth, at 171-173 and 173 W . Adams St., Chicago, Ill., are selling
40 nd . of the very best granulated sugar for $\$ 1$, and other groceries at proportionately low
prices; they ship their goods to anyone anyWhere; they will supply you if anywhere
within one thousand miles of Chicago, selling granulated sugar 40 1 hs . for $\$ 1$, and everything accordingly. Send no money, but cut this
notice out and send to Sears, Roebuck \& Co.,
Chicago, for full particulars.

Highest of all in Leavening Power.-Latest U.S. Gov't Report

them a little to keep from boiling over, but do not stir. When they have been in the syrup for about fifteen minutes, remove the berries carefully with a perforated skimmer. Put them into tumblers or bigmouthed, small jars. As they are rich ou will not need them in largequantities,

KITCHEN KINKS.
I wouldn't use steel knives and forks, if I were you, dear little woman, you who are still slaving yourself to death, scouring them after every meal. I wouldn't do it at all, when silver ones can be purchased so cheaply, and lastso long, too. I wouldn't do it, I say. But if you will, don't you want to know a nice, easy plan for shaving brickdust down? If you have an old horse-radish-grater, that can't be used any more for that purpose, just try grating brick-dust with it and sec how nicely it works. If you haven't an old grater, you can easily make one by perforating the lid of a bak-ing-powder box, and fitting it upon the box.
For a perfectly delicious dish, mix dough exactly as you would for biscuits, roll out and cut into strips and blocks. Place in a baking-disll and cover with rich chicken or beef broth. Bake until thoroughly done, basting the pie every few minutes with the broth. Serve with gravy or broth-and, oh, iny!

The dish-rag question. Of course, you have run out of dish-rags. Everyone has, and you don't kuow what you will use next. Well, I'll tell you. Just buy a nice medium-sized sponge. You can get lovely ones for a few cents, and after using a spouge for a few weeks, you wouldn't think of using any thiug else. After washing the dishes, scald the sponge carefully and expose to the air and sun. You ought to do that witl an ordinary dish-rag, anyway, to keep it sweet and clean. For tea-towels, the uicest thing that you can get is crash. lowels that are partly worn make the mos: desirable wiping-cloths. They are so and polish the china so beautifully.

## 1 MADE A SHIRT.

More years ago than I shall name I sought to win a good wife's fame; 1 knew not how, but all the same

I made a shirt.
I cut, I stitched, with many a tear; Hollowed it out, both front and rear They wouldn't fit.
John's neck I measured, to be true; The band must fit-that much I knew I'd heard so oft. All else I drew and puckered in.
At last 'twas done. A work of art,
Complete, I hoped, in every part "Come, John," I called with quaking heart,

I must confess it bulged somewhat In places where I thought 't should not, But John, the brute, yelled out, "Great Scott Is this a tent?
And such behavior, language, well! He uttered things I'll never tellI may forget them when I dwell In higher spheres.
Oh, woman of the present day, To you's inscribed this little lay:
You little know the man you pay Your homage to.
If his "true inwardness" rou'd know, Have him your idols overthrow, Make him a shirt

-Amy Hamilton,

## FORGET-ME.NOT SOUVENIR.

ACHarming little souvenir for the school-girls who are about to leave school for their vacation (some to be separated for years,
perhaps) is a forget-me-not souvenir-cloth, where they can ask each little friend to write her name, just as their mothers used to write theirs in a memory album years ago. You make this cloth of linen, about ten inches square, with a wide hem, and hemstitched above. clear, distinct hand, with ink or pencil mark, and outline the name in pretty wash silks. It must be done very neatly; but a little girl of seven or eight years can do it
nicely. What adds very much to the nicely. What adds very much to the
souvenir-cloth is to work forget-me-nots here and there scattered about among the names. They seem so appropriate. But if you think this is too difficult for a beginner, you think this is too difficult for a beginner,
just leave that out and work the names. Place them gracefully over the cloth. Place them gracefully over the cloth. never been handled, by washing it quickly in a bowl with a lather of white soap, which
the illustration. As I say, you can leave
out the forget-me-nots and just work the out the forget-me-nots and just
names plainly. Get wash silks.

## SEWING-A MEANS OF GRACE

Among modern womanhood perhaps there is no word more frequently used than culture. Every town has its literary club. The members meet once a week, or

will keep the wash silks from fading; then iron while damp, on the wrong side. This will be something to look at aud treasure may have it to show to your own daughter some day. I remember very well one such some day. I remember very well one such
piece that my dear mother used to take out piece that my dear mother used to take out
of a treasure-box where she kept valuables, and show me where this schoolmate had worked her name, then tell me the history of her girlhood. What happy, happy days they used to have. My little uieces have
made lovely pieces, and outlined them all made lovely pieces, and outlined them all had written their names in the manner of
at least fortnightly, and read long papers on subjects as various as art, science aud history can supply. Did I say that every
tow has its club? The statement is in. adequate. It must be a small village adequate. It must be a small village
which speaks of "a club." "Clubs" is the word; an animated and numerous plurality. A gentleman who has the Bible at its, A gentleman who has the Bible at
the tip of his tongue remarked recently that he thought in these days, among women, the prophecy of Daniel is fulfilled Where he said, "Many shall run to and
and knowledge shall be increased." and knowledge shall be increased."
But after all this intellectual activity,
what remains? Accumulated informa-
ion concerning the evolution of the past into the present; precise facts concerning the material of the world; some ability to produce a slight addition to what has been ceomplished. But is this culture? At last we hear a seutence, finer and clearer than the gentle chatter. This fine seuteuce is brief. It says, "The flower of culture is character."
"Ah!" we exclaim, "all this running to We feel the the aim of forming character." resting on a definite which comes from social attrition is good to cultivate those traits which form the best personality. Let us take this word character, pass it through the prison of analysis, and see what it combines. Like light, it has seven ingredients namely, patience, generosity, humility courtesy, unselfishness, good temper, sin cerity. A woman who has those traits has a tine character. While these can be nourished in a literary club, their growth is not conin a literary club, their growth is not con-
fined there. The home and the homeliest domestic duties offer exercise for each o these fine characteristics. Take sewing.
You dear women who sew may congratalate yourselves, because in that occupa lion you are charmingly feminine, and may most sweetly maintain and increase your patience. Who but a woman who has made a garment knows all the tedious processes necessary to bring it to beautiful completion? The cutting out, laying on the pattern so as to economize goods, the basting, the sewing of the long seams, the fitting, the pressing, the delicate finishings, the buttonholes, the final touches. If a seamstress stopped to think of all the might quail; but she begins bravely, and stitch by stitch the work is accomplished. Let Napoleon brag of his highway over the Alps, aud the Hollanders receive praise for keeping out the ocean with their dykes. The seamstress is akin to them in her patient stitching
Then how generous is that good woman who does her family sewing! Not one twentieth is for herself. A vain girl does not deserve great praise for making her
or in dresses, she is not out the path to that high when she makes father a dressinggown, mother's aud sisters' dresses; when
she makes shirt-waists for the small bors and muslin garments for the entire family, terestedness. It does not take a large opportunity to practice the virtue of
generosity. One need only stay near the generosity. On
sewing-machin
Humility; "He that would be greatest arnong you, let him be servant of all. It
seems occasionally that in the literary
club, in these larger activities which women are seeking, they are in danger of
losing this pearl of all charms, this mild gem of character, humility. Who can
admire the vain, self-assertive woman? If admire the vain, self-assertive woman? If
it were only for beauty's sake and not with any consideration of the higher life, every
woman ought to learn the grace of humidity. Where, can she more thoroughly
learn it than when she is sewing? "Only quietly working with very little instrudents on fragile materials; unaking plain out." And while these low 'li thoughts
ops through the worker's mind, she uncoilsciously grows more beautiful, and lovely. She feels that "she is servant," but others
know how "greatest of all" she is in her
 a professional dressmaker, she has peer-
less opportunities for the culture of
courtesy. Indeed, all the graces of character will so crowd and claim her attention that she cannot practice them one by one.
She unit bc patient, humble and polite, generous and self-forgetting all at once.
She will have to change a dress which she
has has made as well as possible she will
 city," for she must learn to "rule her own
spirit."
Closely Closely allied to courtesy is good temper.
"Mother, will you help me mend some "Mother, will you help me mend some corn-sacks?" asked a young man where I
once visited in the country. A few minutes afterward the son and mother were
sitting on the floor patching the bags. The sitting on the floor patching the bags. The mother looked up with an heroic smile as mending an old pair of pants."

## All through her work the s.

chance to cultivate sinceamstress has stitches, stout thread, deep seamy. Honest holding stitches which fasten the whole thorough woman. "How bridge than a book !" exclaimed Thomas Carlyle, whose father was au honest bridge-
builder. How much better is good sewing han too much talking.
less, but that we esteem more the hone bread and needle. Culture the honest tained wherever mex or wo may he ohnd for the flower of culture is character courtesy, good temper and thoroughness

## GOT A BABY BOY NOW.

HAPPINESS IN A SOUTHERN MANS HOMEAT THE RAIROAD CROSSING WARN
ING TO AMERICAS MEN.
"For twenty-six years I have used to bacco in great quantities, and of late year took to cigarette-smoking," writes Mr. W E. Simpson, of Lecompte, La. "I want to go on record that tobacco has robbed me of many sears of life and a great deal of hapvines. I realize it now as I compare my feelings and my condition with that of a ear ago, when I was a tobacco-saturated cigarette fiend. Many and many a time did I try to quit smoking myself into ever sanity, but I could not put through a day without suffering extreme nervous torture, Which would increase hour by hour, till finally 5 , to save myself, as it seemed, from almost flying to pieces, I had to light the little, white pipe-stick and swallow the moke One day I read in mopper 'Don' Tobacco Spit and Smoke Your Life Away' just what I was doing; it came to me like he warning of the man who wares the red flag of danger at the railroad crossing, nd said that To-To-Bac was an absolutely uaranteed relief from tobacco slavery. id not believe it, but like a drowning man grasping at a straw, I commenced king V-To-Bac The effects were mag cal, it destroyed the nerve craving and desire for cigarettes. Two boxes, would bu believe it made me well and strong have gained mentally, physically, in rigor and manhood, aud with the brain free from the nicotine and a breath no longer befouled with tobacco smoke I am o happy to-day to write No-To-Bac did it an a year ago, so the cure is time-tested and tried, not only in my own case, but several of my friends who have also been cured.
"We have a baby boy no in. My wife and If eel that all this happiness started from the time when I first used No-To-Bac, and in evidence of our appreciation and in order that the uncmory of the happiness may o name our baby boy after the man who wrote the line 'Don't Tobacco Spit and Smoke Jour Life Away.
"No-To-Bac is popular here and all our druggists sell it. Hardly a day passes but somebody asks me about Nd-To-Bac, so I don't want you to hesitate to use these lines in any way that you think will make known to suffering humanity the happiness that there is in No-To-Bac for the many men with nicotinized brains and weakened resolutions. If they will only make up their mind to save the waste o -ital power-to say nothing of the money bacco spit."

## A REASON FOR IT

the in always sumy
But you've got to hunt the honey,
If they idled every bour
In the shine, or in the shower,
Would they ever fud a flower,
In the breeze?
Though the stormy wind is blowin
There is reapin', there is sowi
An' milk an' hones flowin'
Left and right!
But sou've got to brave the meathe
You must lengthen out your te
If you want to win the feather
In the fight.

YDO SOMETHING. ou are not here to regetate or to dream; you were born to act. Every man coming into the
world is furnished with a conlworld is furnished with a comp-
mission of service. That you are here is evidence that Work awaits you, for the great Master
sends no one into the field save to find sends no one into the field save to find
his task and to fall into line with the reapers. Service is the key to a human
life; all else is subsidiary, mere byplay. So you perform the allotted task, you shall, at set of sun, hear the "well
done" and receive the accustomed "penny." Blessed are those servants who, when the Master of the harvest calls, shall be found, sickle in hand, among the stalks of golden grain!
But, sad to tell, not all perform the tasks assigned them in the divine order;
and what is more strange, it is not always the bad who refuse to recognize the divine command and that fail to do their work. It is often the well-meaning men who
recognize the obligation and intend to discharge the duty. Simply they do not do it. They drean of doing without ever
taking the task in hand. The reasons for not doing are various; often plain, but sometimes obscure, to the individual himself, and possibly such as he would not ready. They imitate the bobolink, which persistently swings on his "brier or weed," attempts, while remaining an inveterate procrastinator. The intentions of such tuated in action. Others fail to perceive until they begin to act; the first step will make clear the second. They may never and because not thus farored they refuse to do anything. There are those who do were called to something else, if the task of some other had been assigned to them,
they would be valiaut soldiers. Still others fail because they do not like the regiment into which they were mustered. That you are there is a reason why you
should fight there. Proridence often selects our associates in service, and such of these relations is too often to get out of service. But be sure to do something, and begin to-day. Delay means failure.-Zion's Herald.

## LIVING AT OUR BEST.

Do not try to do a great thing; you may waste all your life waiting for an oppor-
tunity which may never come. But since little things are always claiming yo attention, do them as they come, from great motive, for the glory of God, to win
his smile of approval, and to do good to men. It is harder to plod on in obscurity
acting thus, than to stand on the high places of the field, within the view of all, and to do deeds of valor at which rival
armies stand still to gaze. But no such act goes without the swift recognition and the ultimate recompense of Christ.
To fulfil faithfully the duties of your
station; to use to the uttermost the gifts of your ministry; to bear chafing annoyances and trivial irritation as martyrs bore the pilory and the stake; to find the one noble put the kindest construction on unkind God even the to love with the love of wild to be fonntain ine midst of lichens and wild flowers, or now and again thirsty sheep; and to do this always, and not for the praise of man, but for the sake
of God-this makes a great life-F. B. Meyer.

## There are people-you have seen them, and I have seen them-who are never happier than when they see a fair oppor

 tunity of taking somebody's measure. It iswonderful how many opportunities they find-their now many opportunities they lawyer, and eren "their dearest friend." They are never at a loss for a place, in the in fact, where a scrap of humanity is to be seen. But the most wonderful thing about these people is that they never take their through life, a looker-on here, a drift on there, indifferent apparently to the re sponsibility which, in a great or suluall measure, God has placed before every soul, a responsibility which each one is called upon to lift, shoulder and carry. Iou may find them in every walk, in every calling of life, men who can, without a quibble, point the finger of patronizing pity at
their brother; men who take it lightly pon themselves to analyze the worth of and then judge one of God's sacredly reiled images. Horrible indeed must be the responsibility of the man who thus dares to don the mantle of Omnipotence. Our judgeslip apprenticeship must begin the key; ours is the facsimile, which, if properly inserted, will enable us justly and accurately to take our own measure.

## LOOK UP

The celebrated traveler, Baron Humboldt wrote a thrilling account of the first earthquake he ever witnessed. The earthquake was at Cumana, South America. The first produced a terrible shock in the baron, mind, upsetting all his previous notions as to the permanency of the earth. He could no permanency of the earth. H seemed so firm and solid ground that had The houses could not shelter him, foet The houses could not shelter him, for they were tumbling to the ground. He turned to the trees, but they were being thrown
down. He looked toward the sea, and it down. He looked toward the sea, and it
waters had so receded that ships were rolling on the sand. He thought of fleeing to the mountains, and looked that way, when lo! the mountains were reeling to
and fro like a drunken man. He turned his eyes toward the hearens above him and of all he could see they alone seemed calm, firm, immovable. Let Christians read and learn a lesson. Look up! "There's nothing firm but heaven." - St. Louis $A$ d

## vocate

## THE PROMISES

The Word of God is food to the spiritual part of our natures; but the promises seem like the meat that strengthens. Many Christians lose much of the enjoyment of religion becanse they do not think often enough of the promises, and rely on them in every hour of temptation, danger or dition and circumstance of a Christian's
diter career, and if we only know of them, understand and believe them, we mus fail to keep his word. The Bible, that most ronderful production, contains interesting wond raluable history, profound philosophy, and poetry grand in conception and in imitable in expression; but a Christian
sifts the promises from each and every part, and feasts on them with eager rapturou's joy.

## WHY DON'T HE

Whiley went once to camp-meeting Ahil one night, he heard a great noise in the next tent.
"What is that, mother?"
"It is a man praying, my son, and vanted to be wholly the Lord's.
"Why dou't he, then?"
Sure enough! We hear people say they ant-to be wholly the Lord's. Well, why ot? They can if they will. People do who is dormined dere is no one rholly for God who can miss the way Settle it at all hazards that and the Holy Sp

AND HOW TO MAKE IT.
(O)w dhiscllamy.
If a man be gracious to straugers, it show
he is a citizeu of the world, and that his heart
is no island cut off from the other lands, but
contineut that joins them.
There is a movement in North Adain
Mass., to make the town a city. With
population of 21,000 , it claims to be the largest
town in America, with the exception
Waterrliet, N. Y.
AN English physiciau calls atteution to
means of keeping pneunonia, colds, chill
and all the ailments that cold weather bring
on, at a distance. Deep and forced respira-
tious, he says, will keep the entire hody in
glow in the coldest weather, uo matter ho
thinly oue may he clad. He was himself half
frozen to death one night, and hegan takin
deep hreaths aud keeping the air in his lung
as long as possible. The result was that he
was thoroughly comfortable in a few minutes,
The deep respirations, he says, stimulate th
blood current by direct muscular exertion,
and cause the entire system to hecome per
raded with the rapidly generated heat.

## FOOT PHOTOGRAPHY

foot photographed as well as your hand or face-that is, if you are lucky enough to pos sess one hlessed with artistic curves and out
liues. ${ }^{\text {a }}$ A prominent society womau, on her return from Paris several months ago, exhin sweetest, daintiest little plaster cast of a foot, Wrich, she declared, was a counterpart of her She was at that moment 'having a life-sized one carved in marble, to be mounted on cerise
velvet, and several small ones, one half the size, struck off in different shades of pale
pink, blue and old rose. The extraordinary popularity of "Trilby" has helped to direct atteution to our humblest member, and now
the women of New York are experimenting to see whether they have insteps that "wate will flow uuder"-a sure sign of hlue bloor
For seven days the "Israelites," For seven days the "Israelites," a local religious sect at Detroit Which tries to imitat
closely the actions of their ancieut namesakes, end. On the serenth day they marched seveu times around the block, then halted and blew a loug hlast on a horn. Then all the people
shouted with a great shont. According to the formula, the ralls of this impromptu Jericho should have fallen down flat at this point. But they did not fall. The reason for all this was the opposition of some of the people who

ONLY SIX TONS OF PLATINUM AVAILABLE. There are only six tons of platiuum commercially in existeuce; it is indispensahle for glow electric lamps, for no other metal as good an electrical conductor can be fused iuto the
glass. Therefore, its price has increased withthreatens to go yet higher. Either a suhsti-
tute conductor will have to be discovered, or a new variety of glass made with a coefficient
of expansion nearer that of ordinary metal. There is a big honanza here for some inventor.
-Baltimare American.

## WAGES OF ENGLISH LABORERS. The latest statistics given to the public the British labor commission show that in the agricultural districts the weekly wages of laborers average $£ 3.33$, and iu many cases the hours of labor are returned at twelve per day. These lahorers live in hovels and subsist on These lahorers live in hovels and subsist on vegetables, with meat once a week. Such facts are certainly not calculated to make votes for free trade among the farmers and working-men of the United States. <br> SUSTAINED BY AN UNFALTERING TRUST. It is a well-established fact that the crop year following a heavy suow is always an abundaut oue. The good effects of the freezes will he seen in the full corn-cribs and abun- daut yield of cotton next September. It is only a proof that when our faith iu pres- idents and legislators fails, we can safely place it in Providence.-Atlanta Constitution.

The Entire Book is Handsomely Mus Artists; therefore, Gems from the Poets" is One of the Grandest Books of the Century, the Engravings Alone Costing at least $\$ 20,000.00$, being Made for a Book to Retail at $\$ 4.00$ to $\$ 10.00$.

## This Marvelous Book

Should be in Every Home. No Other Book Like It

It is of the greatest importance to all that they be surrounded with good and useful books. Prof. Henry Drummond, one of the greatest scholars of the times, says:
"To fall in love with a good book is one of the greatest events that can befall us. It is to have a new influence pouring into our life, a new teacher to inspire and refine us, a new friend to be at our side always, who, when life grows narrow and weary, will take us into a wider and calmer and higher world. No one can become the friend even of one good book without being made wiser and better."

## "GEMS FROM THE POETS" CONTAINS

POEMS Breathing of Love and the Divine, Poems of Joy and tell in Beantiful Rhyme of the Reward for Self-sacritice, for Virtue, for Honesty, for Charity, for Devotion to All that is Noble and Pure and Good, Poems that Sing the Songs of Natnre and the Heart, of Memory aud Longing, of the Home and Family, of the Woods and Fields, of the
Rivers and Lakes, of Yonth and Beanty, of the Age and Birth of the
Seasons and of Life Eternal.
PIGJUURES $\begin{aligned} & \text { of Land and Sea, of Quiet Farm-hoise and } \\ & \text { Frowning Fortress, of Deep Forests and Peace- }\end{aligned}$ ful Meadows, of Rippling rowning orrvess, of Deep Forests and ReaceSeckoning Church-steeple and Gniding Lighthonse, of Early Dawn and Glowing Sunset, of Snowy Winter Nights and Hot Snmmer Days, of Waving Harvests in Broad Yalleys, and Bare Rocks on High 'Monntain and the Old Homestead, of Cooing Birds and Blooming Flowers of Lovers Wooing, of Sweet Girls and Beantifnl Children and of Illnstrions
Poets.

| Riley, | Longfellow, | Lowell, | Holmes, |
| :--- | :--- | :--- | :--- |
| Whittier, | Tennyson, | Holland, | Burns, |
| Bryant, | Wordsworth, | Arnold, | Poe, |
| Southey, | Clodfelter, | Scott, | Saxe, |
| Emerson, | Browning, | Byron, | Pope, |
| Shakspere, | Coleridge, | Shelley, | Hood, |
| Keats, | And many others. |  |  |

## Diamonds of Thought <br> _In Settings of Gold.

As poetry is the cream of literature, and as this is the cream of poetry, this magnificent work may properly be called diamonds of thought in settings of gold. Fine 'pictures of some of the most popular poets are also given.

OLD AUNT MARY'S.

> We cross the pasture, and through the wood Where the old gray snagof the poplar stood, Where the hammering "red-heads" hopped awr Aud the buzzard "raised" in the "clearing" sky And lolled and circled as we weut by Out to old Aunt Mary's. And then in the dust of the road again; And the teams we met, and the countrymen, And the long highway, with sungive spread Asthick as butter on country bread, Ourcares behind aud our hearts ahead Out to Old Aunt Marv's.

Why, I see her now in the open door, Where the littlic gourls grew up the sides and o'er
The claploard roor! And her face-ah, me!
Wasn't it good for a boy to see-
And wasn't it good for a boy to be Wasu't it good for a boy to see-
And wasn'tit good for a boyto be
Out to Old Aunt Iary's?
 This is to tell youshe waits to-day
Ao welcome us-Aunt Mary fell
The boys morning whispering, "Tell
The boys to come!" And all is The boys to come!" And all is well
Out to Old Aun Mary's.

James Whitcomb Riley

No. 71. John Plourhman's Pietures. By London preacher and evangelist. This is one of the most original and popular books of the
age. The author states in the preface that its obect is to smite evil, and especially the mon-
ster cvil of drink, and it is safe to say that the
plain talks of John plain talks of Joohl Ploughme to say that the spurgen's quaint saying凤, his wit, his logic,
his power for good, have accomplished more than any similar puhlication. This book can and over with increasing pleasure and profit
and every mother who has face the temptations of has a son that must Illustrated. Fellow. By Jerome Thoughts of an Idle
common but No. 57. How the Widow Bedott Popped
the Question to Elder Sniffles. This book is funny-even funnier than the title im-
plics. The Elider was an oldtime Baptist preacher, and a widower. Now, the the way
had often ridiculed the Baptists, but the way
she changed her tune after she had "sot" her heart on the Elder was a caution, as well as
comical. The Elder thought the Widow was rich, and so accepted her proposal. The reader
will have many a hearty laugh at their exwill have many a hearty laugh at their ex-
pense, and likely repeat, "old fools are the pense, and likely
biggest fools of all.
No. 56. The Courtship of Widow Bedott
and Ifr. Crane. If there is any truth in the ald saying, "Laugh and grow fat," then the Widow Bedott books will help to make lots of
fat. Mr. Crane was a neighbor, and a widower.
He frequently called at the Widow's house, and she naturally thought he was courting her
so she tried to encourage him and get his courage up to the point of proposing
succeded, but he asked the Widow for the
luad hand of her daughter Malissy. Then the did storm! If you want a hearty laugh, try
the Widow Bedott books. No. 59. The Courting of Dinah Shadd. By Below we offer $t$ of Charles Dickeus, one
of the greatest novelists
Who ever live Who ever lived. These
books abo books abound in wit, delinea, pathos, mastcrly

## Whflifili Mackurb

T
The London Financicel Neus is quoted as There ean be no douht about ilver basis to-minter Staw, British trade adopt à silver basis to-110rrow, British trade would be ruined hefore the year was out. Every American industry would be protected, not only at home, lut in every other mar--
ket. Of conrse, the states would suffer to a certain extent through having to pay their obligations abroad in gold, but the loss on exchange under this head would be a mere drop in the bucket compared with the profits to he reaped from the markets of South America and Asia, to say nothing of Europe. The marvel is that the United States has not long ago seized the opportunity, and but for the belief that the way of England is necessarily the way to cominereial success and prosperity, undonb
edly it would have been done long aco."

How can the United States ruin British trade in the markets of the world? By underselling Pritish manufactured protnets. How can American nanufaeture do this? By having the labor cost of their products lowered is one way, and the way me chen the Fined the lines have in mind when he penned the hiness quoter. The proposition is simply this: If the United States Mexicanizes its monetary system by going down to the silver basis,
employers of labor, by paying their workmen in currency depreciated one half, can reduce the price of their products so that they can mindersell the Britisl. To ruin
British trade by the revolutionary change British trade by the revolutionary change
in our monetary system involves cutting in our monetary system involves cutting
down the earnings of American labor. But we need not wait for the drop to the silver basis to accomplish indirectly what can be done at once directly. If every workman in the land should walk up to his employer next Independence day and tell him he was willing to accept one half of his present wages, manufacturers could eut them from every market in Europe, Asia

#### Abstract

and America before next Christinas.

 the wagc-earners of this country willing tomake such a sacrifice now in order to give make such a sacrifice now in order to give their employers a temporary advantage over their foreign rivals? Or will they in a few months vote for a change in the monetary system that will foree the sae rifice on them?

AHERE is no doubt but that as the years onstantly growing more dincult for those born in hamble home in the gift of the people.

There are many things in the life of Walter Q. Gresham (whose death, May 28th, hrought monming to the nation) which may serve as incentives to young men. may He was boni Mareh 17, 1832, in Harrison anty, Indiana, in an humble story-and a-half farm-house not more than twenty feet wide by thirty feet long.

When he was two rears old his father was killed. The boy remained with his mother on the farm, with hat two or three years old. He then attended a siminar years old. He then attended a seminary ill the county town, accepting a position in the anditor's office, which enabled him to earn his board and lodging. After two
years he was able to go to the Indiana State University, at Bloomington, for one ycar Returning to his county-town, he obtained a deputy elerkship, passing his leisnre homs in the study of law. In 185t he was admitted to the bar. He soon gained favorable reputation as a carefnl and painstaking lawyer. In 1858 he marricd. Two years later he was elected as a member of the Indiana legislature. His subsequent record as a soldier, jurist and statesman is well known.

He arose from a humble position in life to the position of premier of the national administration proms of waś woul by was won by painstaking amis conscientions whatever he undertook with the utmost

Walter Q. Gbesham.
care. He dared confront any fate which the fortunes of war involved. His services in the field are indisputably and greatly appreciaterl. That he possessed unusual exccutive ability was shown by his efficient performance of the varied duties which devolved upon him as postmaster-general, secretary of the treasury and as a federal judge. He was a popular aspirant for the presidential nomination in 1888 . In 1892, he came out publicly for Mr. Cleveland, and was rewarded by being appointed secretary of state. It is always a danoereus
hing for a man prominent in one political his pleasure. The employer has the righ party to forsake its ranks and go over to to employ whom he pleases, if he can the opposition. Whether such a move on make a satisfactory agreement with the employed, and the laborer has the right to work for whom he pleases, and this right extends, of course, as well to the non-union as to the union. To interfere with the employer or the employee, by force or violence, be he union or nou-union, is a crime.
"It is highly important to the eitizens of this country that every person should have the right to sell his labor to whom he pleases, and that every person should have the right to employ any person with whom the right to employ any person with whom he canl make converse of this protection and right on the part of laborer and employer would
lead to anarehy, and would be subversive of all law, and would substitute the law of force for the laws of state."

From 1882 to 1895 the rolume of national,000 the national the national banking at present is in proeess of extnction. It is frequently but erroneously charged that national banks have purposely retired their note cireulation to contract the currency and make interest rates ligh. The true explanation is given in Muhleman's "Monetary Systenis of the World," as follows:
"The decrease in the volume of nationalbank circulation is largely due to the decrease in the amount of the bonded debt of the United States and to the relatively ligh premium on the existing bonds. This latter feature compels the investment of so large an amount of money to obtain the required bonds, upon whieh only 90 per rent of the par an issuad in per rent of the par an be issied in note the first in the the mold lone out in the first instance would prodnce a larger income when the tax and other expense on circulation are eonsidered. This is es pecially the case when rates for money are in excess of 6 per cent, as is illustrated by the following caleulation, based upon a 6 -per-cent rate for money, with 4 -per-eent bonds at 1163/4:

$I$ mont county, Ohio, involving a strike and trouble between union and non-union laborers, Judge Driggs, in charging the jury, said:
"It is a benefit to them and to the public that working-men should unite in their common interest and for a lawful purposc. They have labor to sell. If they stanc better prices for their labor than when lealing singly with omplopers, eause the necessities of a single employe are the him to acepl any toyee nay eomper him to accept any tern ffered. The working-men have the right o appoint offcers, who shall advise then as to the course to be taken by them in their relation with their employers. The offieers whom they appoint may advise them as to the proper course to be taken in regard to their employment, and if they choose to repose such authority in any one, he may order them, on pain of expulsion from their union, to leave peaceably the employ of their employer, because any of the terms of their employment are not satisiactory.
"But, on the other hand, every man is entitled to invest his capital, to carry on his calling, if within the law, or exercise

## Net receipts,........................ <br> Profit on circulation. <br> $\begin{array}{r}1,799.84 \\ \begin{array}{r}\$ 7,393.16 \\ 7,005.00 \\ \hline,\end{array} \\ \hline 330.16 ;\end{array}$

"If the interest rate were 7 per cent, instead of 6 per cent, the profit would only Sis. In other words, if the funds of a bank laving $\$ 116,000$ to invest were loaned out originally at 7 per cent, instead of ring used in organizing a bank under the national system, the loss would, on thi the institution would liave only $\$ 1 s$, and the additional restrietions of the National Bank Act.?

ferent things advertised in severel papers.

Wheat. The fifty-per-cent adrance in wben there was little wheat left in the farmer's' hands, so the producers reaped
but little ljenefit from it. They are now specially interested in the prices they may harvested. The prospects are farorable harvested.
for good prices.

The Cincinnati Price Current says: "Our correspondence confirms the previous indlications of serious damage to the winterwheat crop in a large portion of the area in
the central regions. In view of the interest manifest in the outlook of this portion of the crop, we have made a careful approximation for the several prominent states,
and a general estimate for all others, and reach the conclusion that the present indications are not favorable for more than
$280,000,000$ hushels of winter wheat, including the Pacific coast, or approximately $70,000,000$ bushels less than last year. With a good outlook for spring wheat, the total
will manifestly not allow anything like will manifestly not allow anything like
the usual surplus for exportation the comthe usual surplus for exportation the com-
ing year. In other words, the total crop promise may be counted as not exceeding $425,000,000$ : the marketable surplus to be carried over may not be unch in excess of
$25.000,000$, these quantities making a supply of $450,000,000$, wbile the home requireapproximately $375,000,000$ bushels."

This estimate, made by one of the most eliabie the jouves the corning crop year. During the past four years our exports averaged over
$180,000,000$ bushels annually. Foreign quotations are rising in view of the crop conditions in this country and in Argentine and Rnssia. The reports from the latter
countries, which are now our chief competitors in European markets, indicate that each will have less than the usual or
expected amount for export. expected amount for export

Hessian F1y. $\begin{aligned} & \text { An Indiana subscriber } \\ & \text { sends a specimen wheat- }\end{aligned}$ plaint killed by clusters of something around the basc of the stalks. The wheat
in his locality is turning yellow in spots, and dying. He wants to know something abmut the life bistory of the insects and means of preventing their destructive
work. The stool of wheat is badly infested
with the Hessian fly in the pupa, or "flax-
seed," state. Reports indicate that much damage has been done the winter-wheat crop by the Hessian fly.

Concerning its life history, Prof. Lugger, cntomologist of the Minnesota experiment ftation, says: The eggs of the Hessian threc. usually on the npper surface of the leaves of the young wheat-plant, soon after it appears from the ground in the autumn. Sometimes they are deposited on the stalk or on the under sidc of the
leaf. The egg is translucent, of a pale color, and has the form of a very slender grain of rye, without the groove along the side. The larva hatches in abont four days after the egg is laid, if the weather is warm, bnt in a considerably longer time if it is cool. It at once crowds down inside the
sheath to its base, just below the surface of sheath to its base, just below the surface of
the ground. Here it fixes itself, head downward, to the surface of the stalk, and does not thereafter change its prosition. It does not gnaw into the stalk, hut gradually becomes embedded in the stalk by absorbinjuries to the stalk and by absorbing for its own growth the nomrishment that should $g$ o to the leaves above, the plant is should $g$ o to the leares above, the plant is
weakened, turns yellow and withers, and when there are many larve on one stalk, it dies.
"In fire to six reeks the larva has reachid its full length of abont three twentieths of an inch, and has changed from its original changes again, turning brown, then chestnut, enlarges somewhat, and then passes into the pupa, or flaxseed, state, the form in which it most commonly is observed by farmers. It is nearly the form of a flax-
seed, but somewhat more flattened, especially at the head end. It passes the winter in this state.
"The imago, or adult fly, issues from the flaxseed state in warm weather of the early pring. It soon begins to lay eggs, and these eggs will produce a second crop, The larræ of these eggs, on hatching, pass The larræ of these eggs, on hatching, pass
down to the lnwer joints of straw abore ground. Here they grow like tbose of the other brood, change to the flaxseed state and finally issue in the adnlt fly state in perhaps, July or Angust.
"The one remedy which, in nearly all cases, will prevent the devastation of the Hessian fly is late planting. The later
the planting is in winter-wheat states, the the planting is in winter-wheat states, the
more certain it is that the eggs will be destroyed by the first sbarp frosts of autumn.

## Syphon Irrigation

Planting a strip of wheat along one side of the field early is recommeuded, so that the flies will deposit their eggs thereon, and
then the eggs can be plowed under on this then the eggs can be plowed under on this earlier wheat and be destroycd. Pasturing with sheep in the autumn, burning the ng the ground when the wheat is young, are recommended; but the only) certain remedy is the autumn frosts.

## NOTES ON RURAL AFFAIRS

Missed Op- "When it rains soup," portunities. said a man who is chronluck, "my plate is always upside down." luck, "my plate is always upside down."
But why does he not turn it up right and Batch his share of the soup? In most (not in all) cases, the fault is rather witb the man than with the plate. Opportunities
come to almost everyone of us, at one time come to almost everyone of us, at one time
or auother. But we must be ready to or auother. But we must be ready to take
hold of them. He who does this is the hold of them. He who does this is tbe
lucky one; he who lets the opportunities slip by unused is the one in "hard luck." And opportunities ouce gone by are gone by forever. One cannot run the mill with the water that has passed. Unfortunatcly, we see many of these goldell opportunities
only when it is too late. While a boy' at

Fathcrland), I had the larger cities of the to acquire a thorough education chances drawing lessons which I was compelled to take, were looked non by nue at that time as something to pass (or rather fool) away time. That they could possibly ever be of alue to ine was an idea that did not enter the artistic talent, whever had mucb of natural gift of most meinbers of niy fath r's funily to mosin members of ny fath id family, to begin with, and the little rained (through as fully dereloped and rained (through my own fault) as it migh have bcen, yet it is of untold value to me at the present day. Now I often fee keenly my lack of more thorough training especially when I see something-a useful device or an interesting plant or fruit-a trne picture of which I would like to show to the readers of my articles or books. In short, it is one of my "missed opportuni ties."

Value of
If you give to gour boy an Education. edncation, you give him vastly more than a few thousand dollars o a good farm. It is something that he can not easily lose, that cannot burn up that cannot be spent. The sherifi cannot seí it. Good schooling, coupled with good sense, is wortb a fortune in itself. When thns eqnipped, whether he lias a dollar or not, a person can soon command a competence and independence. Schooling may not be money, but it is the magic wand that can turn into gold whateverit touches. that can turn into gold whatever it touches. hess venture, once came home to mother "Mother," he said, "I have lost everything Not a dollar is left." "Well, my son," wa my mother's reply, "you have your head left." And this head soon proved that it was worth more than the $\$ 8,000$ or $\$ 10,000$
lost in business. In a few years he had recovered all his loss, and much more be sides.

Educated by The great task set beior young fellow is to Compuision. find the life work and occupation for which he is best fitted. A mistal tunities. Tbis, perbaps, not alway through a fault of their own. Many are not given the chances in life. Poverty deprives many of educational chances and advantages. But wheu well-to-do farmers subordinate everything, even the education of their children, to their desire to hoard money, when they keep the boys at farm work rather than in school, for the sake of being able to give them a farm or a fer grievons mistake, and do to their children a great wrong. This wrong is especially
flagrant if the boy is bright and ready aud willing to learn, and promises to become an especially bright, useful and prominent
member of society. Give such a boy show. It society. Give such a bome roungsters, to use a little compulsion Some may not need it. I know tbat a little urging on the part of my parents and teachers has done me a heap of good. A good deal of what I have learned I did haps, I complained of what I thonght to be excessive requirements. In some respects these complaints might have been justified. Tbirty or forty years ago German schools rather crowded the memory drill, and tried to stuff the scholars with a heap of trash Better sense now rules in these matters and in American schools the danger of hurting a boy by crowding his brain and working capacities with anything not thoroughly practical is not great. When a bright boy needs urging, urge him on Don't gire him a chance to complain in
after life that he missed his opportunities at scbool. To-day I am thankful to my parents and teachers for their incessant
urging. My education migbt have been urging. My education migbt have been partially a compelled one, but $\$ 50,000$, and me to part with it.

Irrigating Gar
Irrigation, for ordinary field crops, will pay only under con ditions that are especially favorable to irri gation. With garden and frnit crops, which represent a much greater money value, irrigation will often pay well, evel for the sake of cotting the wable expense land. The first construction of the irriga and. The first construction of the irriga nachinery plant-digging wells, putting up hundreds, perhaps thousauds of dollars, but a single crop, secured in spite of drought, will often pay tbe whole first cost. If there is any chance to get water to a market gar den or a large strawberry plantation, its utilizatiou is usually a paying inrestment. But when a stream or body of water is close by, and eren above the area to be inrigated, in short, if the precious liquid (precious in a dry spell) can be had for the tapping, it to neglect making use of it. In many cases that I kuow of it would only require opening a few furrows, or the laying of a few pipes, or the use of a few dollars' worth of hose to let the water into the gardens; and yet this is not done, because the owner does uot appreciate all his opportunities. In a recent issue of the New York wealy Tribune, somebody' tells of "yphoning practicable, and cheaper than digging ditches. The idea will be made plain by a glance at the illustration. Here natnre does its own pumping over the high bauk. does its own pumping over the high bauk.
Get the pipe once filled, and rnnning a steady stream at its lower end, and as long as the outside end is lower than the end inserted into the water supply, or rather, than the water-level, the water will be sucked up from the supply, and be steadily discharged from the lower end into the garden. Whether the home-made hose, described in these columns some years ago (description was given me by Mr. H. A. March, of Washington, aud is now copied into the new edition of my "How to Make the Garden Pay," and "Celery for Profl", not prepared to se but believe it will. Iu that case, a syphon of this kind, eren when the water must be conducted quite a number of rods, can be niade a very inexpensive affair

Value of Carbon One of onr readers in the Soil. (from Missouri) never heard charcoal mentioned as having any fertilizing properties.
"In an old field in Washington county, Tissouri, there are quite a number of old charcoal pits, burned some say tbirty and some say fifty years ago. Now, while the land all around is worn out, those old coalbeds prodnce as if they were heavily mall us that charcoal is pure carbon Now are these wonderful results prodnced in consequence of the carbon drawing on tbe atmosphere for plant-foods? The lumps of coal are lying there apparently sound, and coal are lying there apparently sound, and
would appear just as capable of acting as pronoters of plant growth as they have done for decades.'

No, there is nothing new about this action of carbon. Its chief office, as here observed, is probably that it opens up and aerates the soil. It adds life and warmth to it. In my "Practical Farm Chemistry" you will find the following references to this action of carbon: "Like other porous substances, it possesses the power of absorbing and coudensing gases. Hop growers know what a large bulk of dried bale by means of a good hop-press; but a hop-press is next to powerless when you compare it with charcoal. This substance imes its and condense in insia, thirtyfive times its bnlk of carbonic acid, and other gases proportionately. It catches plant-foods, and brings and holds them for the use of vegetation. The precions but volatile ammonia is not only held, but brought into immediate contact with oxygen, all condensed in the charconl pores, and changed in the whin hat carbon occupies a position of greatcr importance in the economy of plant growth and profitable plant feeding than is as and prontable plajority of farm writers, signed to it by a majority of farm whe that 110 or might be ine is conceded to it, or that quotable value is conceded to it, or that
it is eutirely left out in the computation of it is eutirely left out in the conmercial values of manures.

P

## PICKED POINTS.

 OF. Bailey is as good a horticulturist as therc is in thecountry. He said recently that potash is the chief fertilizer to oe applied to fruit-trees, particmlarly after they come into bearing. It may be obtained in wood ashes and muriate of potash. He thinks potash shonld be applied to the ground in orchards pounds of muriate to the acre.

And that reminds ne how I exchanged two bushels of aslies for two bushels of peaches, aud sold the latter for four dollars,
a few years ago. A peach-tree at the back a few years ago. A peach-tree at the back
end of the house-lot seldom prodnced fruit, end of the house-lot seldom prodnced fruit,
and when it did it was of a wortbless charand when it did it was of a wortbless char cured, I spread two bushels of strong ashes under it, and the next seasou it produced as above stated, and the fruit was of excellent quality. The tree had been starved. Peaches aud potash are a
well together in harness.

I am making a rather queer experiment in the liue of apple growing which promises success. As a rnle, apples bear possesses this habit, he has a food of apples one season and none the next; thus, he has profit from his orchard but half the time, and every alternate year must either purchase apples for family use or go without. chase apples for famity use or go without. is, a heavy crop of fruit so exhausts trees that it takes the second year to recuperate. My theory is that if the fruit be all re-
moved from a tree or any of its main moved frop a tree or any of its the sou after the fruit sets, that tree or branch will bear the next year. I have
proceeded far enongh in the experiment to proceeded far enongh in the experiment to have ocular evidence that the theory is
correct, for at this writiug I can show a branch of a Baldwin which was stripped of its fruit last June, and the balance bore heavily, and now this branch is fnll of fruit and the rest of the tree has uone. A Scek-uo-further tree, partly strippod two years ago, presented the same feature last sides.

If one should take one half of the young fruit off from all the brancles, when fruit is thickly set, the usual result is, about as many bushels of apples will be grown, and but this does not tend to make a biennial tree an annual bearer. The only way to accomplish this is as stated above. In the case of my Baldwin tree it would be in fruit is but a small fraction of all the tree, and as the maiu part bore heavily last season, that this lone branch wonld partake of the exhaustion and fail, with the rest of the tree, to produce this season; but this will be understood when the philosophy of tree growth is considered. It is a fact that certain roots support certain corresponding branches aud no other. Each
family of roots supports its own fainily of family of roots supports its own fainily of
branches, aud all together make the tree, branches, aud all together make the tree, household and all of them together make the uatiou.

Some may want proof of the last proposition. The root must decay before the branch or limb does. Where a considerable
branch shows signs of general decay, as branch shows signs of general decay, as season, dig down iuto the gronnd and find the corresponding root, and it will be fomnd the branch has, while all other roots and branches may be iu health ful growth. I once resided on the slope of a knoll. In
grading in front of the house, a chestnuttree and an old oak were made the boundary line of a two-foot embaukmeut. Rains had washed the soil pretty well from the
roots of these trees, and the acorns and roots of these trees, and the acorns and
chestnuts they bore were sorry little things. The gradiug was done in the spring, and the new cmbankment caure up next fall it was noticed with astonishment that the chestnut bore two qualities of nuts and the oak two qualities of acorns, those growing on branehes on the lowe
sides of the trees were small and inferior and those growing on the upper branches and those growing on the upper branches
were very large aud superior. The earth
had mulched the roots on the upper sides and kept them moist, but they could impart of the trees.
Horticulturists seem to fiud trouble iu orating the caluse of the pear-tree blight They may find it in the roots yet. I think inquiriug miuds would be pleased with
results should they try my apple experresults should they inent this season. I would suggest that they strip all the apples froun a large limb aud its branches, which starts out from the body of the trec; but it wonld look better to do this froun two quarters of the tree, on
opposite sides. This would keep the tree balancel when each two opposite quarters were loaded with fruit. The young apples are to be picked when abont the size of chestnuts. To get larger and better nuts of any kiud, mulch the gromme dry. Dead leaves keep the roots of forest trees moist.

A crippled soldier of my acquaintance has been in the poultry business ever since the close of the war. His line is the pro-
duction of eggs for the general market duction of eggs for the general narket.
His 400 hens yield him a net income His 400 hens yield himl a a considerable more than $\$ 500$. aunually of a considerable more than
One would think he should have learned One would think he should have learned bnsiness; but he uteets with new problems every season. The last one of importance
is to have chicles hatched in February and March for all-winter layers. This does not succeed, for the reason that so mauy of the very early ones commence to molt
in inidwinter. To get reliable winter in midwinter. To get reliable winter layers he will now pluck most of the feathers from his yearling hens in Jnly, so as to have them grow feathers whilc the weather is hot aud eggs are cheap. Aprin chickens
are early enougll for good winter layers provided they are well cared for through the summer.

There is hardly anything that people are so negligent of as they are of their orchards; or is there anything on the farm tha in a fruit section, where there is an apple in a fruit section, where there is an apple neighbors has any apples now, and not one of thein had any to sell last fall, excep cider apples, while we had over three hundred bushels of as nice apples as ever grew on our fifty trees. All that we did not use
or need were sold at seventy-five cents a or need were sold at seventy-five cents a bushel. We sprayed our trees last spring and uobody else did, and that is the reason. A tree that bears very early apples stand on the brink of a steep bank, and only one side of it could be sprayed. This side bore
full of fair apples, and the unsprayed side none. We sold these at a dollar a bushel and they more than paid for the spraying orchard.

It is observed that Farm and Fireside is not averse to speaking a kind word for southern agricultnre. I have been connected with au agricultural paper several years, whose circulation is almost wholly in the South. I have especially sought a large personal correspondence from that section for the purpose of learniug anything I could in relation to their farming interests. People at the North now understaud pretty well that southern faruss are about "cottoned out," to use a localism. some other chaunels of industry-must diversify their farming. Kuowing the South to be as good a sheep conutry as there is on the globe, I suggested sheep husbandry. The people have plenty of land, but no money to stock it with sheep although these animals can be purchased there at $\$ 1.50$ a head from those who must sell. I then announcerl, in that southern paper, that those who would take sheep, to lonble iu four years, might write me. have to date forty-eight applications, all from owners of plantations, whose ad
dresses I can give to any inquirers. It seems to mc that persous with little much money to loan at interest, conld safely place it in sheep in the South and double their capital in four years. Sheep will never be lower than they are now. Galen Wilsor.

## BOOK.FARMING."

No longer does the fariner sneer at the new methods advocated by the "bookprising grower is ever ready to adopt prising grower is ever ready to adopt the coluunns of a paper. He has learned
hat it is the enterprising granger who realizes a fair profit from his labor, while he himself produces just euough to live upon. He yet adheres to the maxion, "Experience is the best teacher." Only he prefers to let soune one clse do the exper Even now, I greatly doubt it the efforts of Even now, I greatly doubt it the efforts of a few unselfish growers, in behalf of the
farmers of this comutry are justly apprefarmers of this comntry are justly appre-
ciated; while three yoars back it would ciated; while three years back it would son. The farmers' institutes, held annu ally in each couuty of some states, hav done much to broaden the views of the farming class.
The farmer is just beginning to appreciate what is being done for him. The agricultural papers contaiu annually iufor mation worth ten times the subscription price-information which probably cost the author of the experiment much inconvenience and cousiderable labor and money. I do not believe that Messrs. Terry, Green, Alleu, Greiner and other writers of the agricultural press are influnced greatly by monetary considerations. They give the results of their work and the mproved methods followed, freely, beause they dcsire to assist the farmer and to bring his work to a higher plane
The United States Department of Agriculture is ready and willing to assist the farmer in many ways. Few farmers secure a copy of the annual report, a large and interesting volume, in which is giveu the results of much experimeuting and expeience. The volume may be sccured free of charge by application to the seuator or epresentative of the district, aud yet but ew take advantage of this libetal proisiou.
The editorial staffs of our papers give us their opinions and suggestions on the market prices, based on many years of an advance or decline in the market by reason of the crop prospects and the many other happenings which influeuce prices. In the columus devoted to questions and In the columus devoted to questions and may be had free of cost.
The farmer is learning that although a horse is a horse, in a broad sense, there is a great deal of difference in the breeds. He now knows that to produce the finest and largest quautity of butter he must keep the Jersey cow, while the Hereford and Shorthorn grades are the most economically and asily fattened for market. He is beginuing to realize that corn and oats cannot be snccessfully grown on poor soil, and that of the manure which should be spread on such land, from one third to one half the streugth is lost through careless aud ignorant handling. It is now generally known that the potato cannot be successfully grown on low, swanipy, wet ground These things, and more, he learns through the experience of others, published in our papers.
The future success in farming will uo be a coutest of strength. The farmer, to be
most prosperous, must acquire as much 0 river even more knowledge than is brought to bear in any other pursuit. He has unuch to learn.
To kuow the soils, their nature and requirements; the fertilizers and their relative values; the grains, their needs and the methods by which they may be successfully grown; the care and requireproble of hive stock-these and many other before the farmer may hope to be most prosperons.
There is a grand prospect before the is there more frofite. In no other pursuit investment; notalone in a money sense, but in health and happiness.

## A FEW SHEEP.

We plant between the rows, we put small apples in a barrel to fill up the chinks, and some farmers keep sheep for similar rea-
sons. An authority on sheep says that three sheep may be kept with evcry cow withont extra cost. This is a little too inuch to believe in all cases, although
under certain couditions it might be true under certain couditions it might be true. If a farmer kept ten cows in an "even" pasture, where the feed was all of one kind, then the keeping of thirty sheep, three for each cow, in the same pasturc without would be no opportunity for the sheep to glean "betwcen the rows;" but if the pas-
ture was a geueral "uiixtnre"-upland meadow, brush or sprout land, swamp and thicket-then the thirty sheep might feed
where the cows did not.

Sheep benefit any pasture. There is no hetter way to reuew an old, run-dowu pasture (if worth renewing, and not worn ont) than by means of a flock of sheep. Whether leaves may be a question according to circumstances; but it is a fact that a few sheep, say five or six, may be kept with a herd of cows, say ten, without increasing the cost; the sheep are the small apples in the barrel, the plants that grow between the rows of another crop.

And the sheep herd well with cows. The dogs are still stealing sheep, and will continue to do so while both are on tle face of the earth; but sheep with cows are safer than when by themselves. The dog nay be bold among auimals near his own size, but among aninals larger he loses some or all of his boldness, and as has been proved often, he has not dared to attack sheep in a herd of cows. It is a strange fact that at an "agricultural" fair and horse trot in New England last year, a large purse was offered for dogs and only a few dollars, a mere pittance, for sheep.

This story is vouched for: Two sheep became the constant companions of a her side contiuually. Separated from the rest of the herd one day in a corner of the pasture, a dog sprang over the wall to make his dinner of mutton. The cow had no horns, but she canght the dog against a stoue fence when she charged upon him and broke his back, aud his mutton-steal ing days were over. Every man has right to his dog, but his dog has no right to my sheep.

It may be said in passing that the hornless cow may be quite as dangerous as the
awful creature that wears horns. The farawful creature that wears horns. The far-
mers who are dehorning cattle (because mers who are dehorning cattle (because
some other farmer cuts off horns) declare some other farmer cuts off horns, declare that a cow born hornless, or a cow deprived of her horns, becoures a more docile animal, but this Polled Augus cow that killed the dog, a virago of a cow, if she did enjoy the companiouship of sheep, could and did, oftener than was necessary, drive any horned animal in the herd; lier liard head was more to be dreaded than a head with horns.

But why not kcep slieep-a few, at least -in every herd of cows to fill up the chinks? And what is better for filling stomach chinks than mutton or lamb of your own raising? Every little helps, even the wool. Among farmers generally of little income is only an accumulation few sheep may result as it did to one far-ner-his children petted the two sheep so much and became so attached to them and their lambs, that the farmer had uot the their lambs, that the farmer had uot the
heart to kill them for his own table. A cosset sheep, like a goat (I have had expecosset sheep, with a goat, and thank heaven, his race is run on the farm), if petted nuch, is a race is run on the farm), if petted mucl, is a
most destructive, auuoying, exasperating most destructive, aunoying, exasperating
animal-a veritable misauce. Teacli the animal-a veritable ninisauce. Teach the
sheep to go with the cows; if coddled too sheep to go with the cows; if coddled ton
much, they will walk iuto the house and all over it, and eat up the fly-paper and the sitting-room curtains.

## notes from garden and field.

Sslip betwopen.-"There is many a slip between cup and lip." The
fruit growers hereabouts, and over a wide territory, had a thorough taste of the truth of this old sayiug. loaded with bloom, and the prospects loaded with bloom, and the prospects
seemed most flattering. Now we will be glad if the trecs and vines escape with little injury. Fruit, we will have noneperhaps a few of the hardier varieties of
peaches. Of cherries there will be enongh peaches. Of cherries there will be enongh
to give the worms aud birds a taste, and that is all they can reasonably expect this year. They will not have their fill. Grapes
are gone. There is not a green leaf left in are gone. There is not a green leaf left in
our vineyard, and it will be weeks before a new, fruitless growth is nadc. On fifty varieties of pears-once heary with blonn
and fruit well set-not a specimen fruit is and fruit well set-not a specimen fruit is
to be fouud. Strawberries will give a part crop. This, indeed, is not easily destroyed entirely. There are always late fruit stalks which escape, simply because they are not full development, and bear a full crop, the nly worthless buttons. But when yield takes the first crop, the strength of the plaut goes into the late stalks, aud we have just as fine fruit, aud sometimes fully as much. For this reason I would rely much sooner ou a strawberry crop than on
any other fruit that is subject to injury from late frosts.

Lessons of the Frost.--Grape growers perhaps the majority) of them depend entirely on the grape crop for their living. With the grape crop destroyed, they are so shortly after seasons of depressed prices, so shortly after seasons of depresser prices,
leaves many of the growers in a sad plight. This is also the case with many other people who depeud chiefly on fruit crops as a source of their income. Fruit crops are never reliable, not even the orauge. A is orange groves have all been killed for at least the next four or five years, a ud that he must look to onions or other crops for exaggerated. Yet the situation is a serious nue, no doubt. It shows that it is not safe
to bank everything ou these uncertain to bank everything ou these uncertain rops. If the grower does not hold auother crop or crops in reserve for emergencies,
he must have enough ahead to bridge over entire failure. If he does leither, his whole business is shaky.

Substitutes for Fruit Crops.-The letter of my Florida frieud points the way problems now before the suffering freat grower. The soil is still left. If it canuot be used this year for the production of the riginally intended fruit crop, it can bc rade to yield something els. We mus live. If our grapes or small fruits refuse we can grow potatoes, or corn, or melons, r turnips, or other, crops, between the
ines. Many are forced to make the atrines. Many are forced to make the at-
tempt to grow such things, auyway, this ear. It will uot do to stand idly by
bewailing the loss. In some cases celery might be growu with profit between the rows of grapes. But don't undertake it enough. A little shade will not hurt the elery. Plow a deep, double furrow where least two thirds full with fine old manure, and mix this thoroughly with the soil, or shovel-plow. Thein level the row with strong plants five inches apart. If you can some grapes.

Disease anona Melon-plants.-I have just had another "slip between cup and
lip." A few short wceks ago my melonplants in boxes in the greenhouse awakened iu my breast great anticipations started up uicely, and grew fine and
thrifty. I thinned them to stand three iu a box (each box a four and one half inch
ube), and imagiued I would have no

calculations were made without the host.
All at ouce the plants hegan to wilt and die of root-rot, aud now there is not one left. But "hope springs eternal iu the human breast." If one crop is ruined, we loss, just as in the case of the Florida orange grower and of the grape growers in this and other states. I have planted the melons over again, also in bores, and shall set them out as soon as they make the first true leaves. Naybe the next lot will escape the trouble. At the same tiune I plant in open grouud, the soil now being quite warm. Possibly those planted in open ground will beat the box plantings all to picces, provided I keep the bugs at
bay right from the start by my usual reunedy; namely, covering with tobacco dust.

Pumpitins and Squashes among Corn I do not know whether it is especially profitable to plant pumpkins aud squashes among field and sweet corn. Whether it is or uot, however, I like to sce the vines and their great fruits lying thickly over the ground among the corn. Good Hubbard squashes come handy for the table in fall aud wiuter, or for sale, and pumplins for pies aud for the cows. The trouble in recent jears has been the prevalence of the bug. One cannot very well go orer the whole corn-field every few days to put tin and dust or bone-meal on every punip lected, the bush plant, and if the business. I am uow starting squash and pie-pumpkin plants in boxes to set out in the corn-field a few weeks later. I think i we plant them scatteringly over the field saly only in every fourth or fifth row, and twelre or fifteen, feet apart in the row, we
ran keep better watch of then. If covered once or twice thoroughly with the dusty
material, they will be out of the way of danger, and we shall have what pumpkins aud squashes we want in the fall.

SEAFLOWERS. - I au also undecided yet "hether I could get more off a piece of ground by planting sweet-corn, or even Howers. hut I corn, or by planting sunlike to see thein grow, and produce their great disks, often over a foot in diameter. Ilike to have the seed, too, to feed to my hens iu the fall, to make them shell out sleek and glossy. And if I had enough stuflower secd I would readily find use for it to feed cattle, or horses, or any other stock. So you cau find quite a little patch
of sunflowers on my place (the large black Mammoth Russian) every season. This year I have used them as a dividing line
betweeu sweet-corn and the ordinary betweeu sweet-corn and the ordinary
varieties. There can be no question, either, that a very superior quality of oil, for table and other uses, could be extracted from unflower seeds, and it is quite possible that the crop will sooner or later be grow extensively for oil-making purposes. myself would gladly use the oil as a salad oil, if I could get it, as I do not like the chance to procure poppy-oil. The crop is an easy one to grow, aud it has few cnemies, if you gather the heads promptly before the smaller birds take more than fault whare. I am not disposed to find percentage. Sunflowers grow on almost any kiud of soil. Black muck, eren if too any kiud of soil. Black muck, even if to
wet for corn, is well suited for sunflower wet for corn, is well suited for sunfower yield of stalk and seed. T. Greiver.

Orchard and Small Fruits.

## grafting the pecan

Persons who hare paid fancy prices for choice pecan-nuts for planting, hopiug thereby to propagate trees that will pro-
duce similar uuts, are doomed to bitter disappointinent. Seedlings of the peran are uo exception to the general rule that all seedlings are unreliable.
There is a pccan-tree in this county that bears large, oval uuts, finely flavored, with thin slells. These nuts have been largely plauted around Monticello, and a good age; some of them are barren, but a wajority of them produce nuts identical in shape with those of the parent tree, but
so small that they are almost worthless. Onc tree only out of the lot lears a that approximates in size and flaror those
large nuts are planted, ant least nineteen sion of type, by producing fruit inferior in ize and Havor to those planted.
If this is the case, then clearly the only way to obtain the desired qualities of size
and flavor is by grafting.-J. H. Girardeciu, and flavor is by grafting.-J. H. Girard
Florida, in Garden and Frut Grower.
CANE RUST OF RASPBERRIES (ANTHRACNOSE)
Cane rust is probably always preseut in a sinall way iu raspberry plantations, but in arerage seasons vigorous plants are able to resist the disease and mature a crop of ruit, while in very dry seasons the plauts exnot perfect the fruit, the wood for the equence, and the disease, and as a conespecially liable to suffer. A peculiar trait of this disease is that it does not seem to affect the vigor of growth of the foung canes, but injures the crop just when it is lipeuing. Experiments in combating this disease have been quite successful.
ErRIE

Raspberby Cane Affected with Cane Rost perments in the prevention of cane rust it would seem that the most rational eatment for it is as follows:
In the spring, bcfore the canes start spray them with a solution of sulphate of copper (blue vitriol) made by dissolving ne pound of it in fifteen gallous of water Later, spray the new canes with Bordeaux intervals of about two weeks, commencius as soon as the new canes are one fot Care should be taken not to get the Bordeaux uixture on the leaves of the fruit bearing canes, as they are quite liable to be burned hy

## SOUTH ATLANTIC ORCHARD AND FARM NOTES.

The agricultural tendency of the times ber of farm and orchard products.

The great profit that has accrued from the culture of hops in the East and on the Pacific coast, has set southern farmers to making inquiries as to where to get aud how to set the setio. It is probable that hops can be successfully grown in the the soil is deep and well filled with humus or vegetable mold.

A cotton-picking machine is now on exhibition at Atlanta, Ga., which practical cotton growers are couvinced will pick
cotton successfully. This is the second cotton successfully. This is the second third machine will now be built in time for the great Atlanta exposition, which will do the work still more perfectly.

A hopeful sign of the times for southern farmers is that the directors of experimeut stations are paying more attention thau
ever before to the improvement of the quality of grasses and forage plants. They recognize the fact that grazing is becoming more and more iunportant, as the world's acreage of cotton is increasing so rapidly.

The fertilizer manufacturers of Maryland have just formed a state association for the benefit of their business. The association proposes to regulate prices, equalize freights, provide for uniform contracts,
govern sales, give and take advice relative govern sales, give and take advice relative
to all matters affecting the fertilizer business. Will the farmers be the last to organize for protecting their special interests?

All along the Allegheny and Blue Ridge mountains, never-failing springs can be found at high elevatious. These ought to strawberry and raspberry patches or fields, as well as to the vegetable gardens. In this way more profit could be realized this way more profit could be realized
from one acre than from ten in ordinary from one
field crops.

The South is the real home of the sweet potato. Good crops of this indispensable product can be successfully and profitably grown from the Hudson river to the Rio Grande. As a drought-resisting crop it has no superior. The entire feasibitity of dryin neat, salable packages has been settled bejond a question of doubt. Capital could be, and will no doubt soon be largely invested in this comparatively new industry.

The owner of every farm in the South, no matter if it be but a few acres, should aim to get a living from it. This is a better way than to risk all on one crop and going
in debt to the country storekeeper for supplies at ruinously high prices. Have a good garden, raise some corn, a litter of
Iarch or April pigs, keep a cow, have March or April pigs, keep a cow, have
some poultry, and at the end of the season a small surplus will be the result, instead of a debt that cannot be easily canceled with either cotton or tobacco.

Northeastern Georgia is the true home of the peach. There is hardly a locality that that the market will be glutted has kept thousands froun planting peach orchards, although aware that the profits would be five times as great as from growing cotton or corn. The farmer who plants peaches in Georgia is the one that will distance the fime.

The Improved Dwarf Rocky Mountain cherry, which is favorably mentioned,
page 261, New York experiment station page 261, New York experiment station
bulletin No. 70 , is recommended for trial by the editor of the South Florida Hone. This cherry-tree attains a height of four
to tive feet; begins to bear the second year from planting; is free from the attacks of insects; is remarkably prolific, and gives
promise of being useful in the garden, as well as both ornamental and useful on the lawn.

RENOVATING AN ORCHARD-T
FRUIT GROWER.
As reputation goes in the county wherc he lives-or state, eveu-he is counted a
successful farmer and fruit grower. But success ful farmer and fruit grower. But
fruit is his hobby and so his specialty; and fruit is his hobby and so his specialty; and
that is why, from starting with less than one thousand dollars, he has cleared the unortgage from his farm, repaired the buildiugs and added new ones, and is to-
day aboveboard financially. His ventures day aboveboard financially. His ventures
in fruit growing form the chief factor to in fruit growing form the chief factor to
his success. The advantages of a gool local market turned quite an extensive plum gardeu to good account, but his main reliance, from the first, was his apple
orchard, which he renovated on a plan of his owu. Said my friend:
"When I came into possession of these premises, I knew I should have to put out considerable money and invest in lots of backaches before the returus were anything adequate to the outlay. But I bave thing adequate to the outlay. But
stuck to it, and for several years my apple orchard across the highway there has paid good interest ou the outlay, backaches and all."
If I have the right idea, this orchard and, in fact, the whole premises, was somewhat run dowu when you came into possessiou?"
"That was so. But the six acres of orchard have beeu my salvation, finau-
cially; although for the past five years my seventy-five plum-trees have paid fully as well."
"What method did you take to bring this orchard into such good condition?" "The first thing I did was to put in some deep, permauent drains. Undrained, it is a poor site for au orchard, and the former
owner found it so, and became discouraged. When I looked the premises over, I made up my mind that with proper management this orchard could be made the best in the county. The sequel shows that I did not misjudge the situation. I bouglit the place on that one chance. The soil is good and deep, but the formation is such that the trees stood in a water-soaked soil for half the season, unless the smmmer was a dry one. Apple-trees won't thrive
in a cold, wet soil; they can't stand wet feet. They were covered with moss, and the annual growth was but an incll or two,
while now and then a tree died out entirely
"The first work was to lay out operations by a plan. The lay of the land is peculiar. Drains are of little use, unless you have a good outlet for the surplus water after it enters the drains. It was new work to me, but I thought I saw my way clearly, and cut a drain at the lowest point lengthwise into this main one. It proved that this was the correct way, for down in the gully where the main drain terminates, there is a discharge of water most of the season.
"What did I use for a conduit for the water? For the main, three-inch tile, and two-inch for the feeders, and these latter fifteen feet apart; rather nearer, probably, than the most of people would have dug, but I have not regretted putting them so
near together, although this was the most near together, although this was the
expensive work of the undertaking.
"The next work was to pull out, root and branch, a lot of scattering trees that were out of line with the regular rows, although it hurt my feelings to do it. This gave me a chance to plow. The trees were twenty-five feet apart each way-ton
uear; I wonld rather have them thirty-five or forty feet-which made it fairly easy to get about with a span of horses. Well, hardly call it plowing, but it did not unatter for the use I put it to."
"Made a hog-pasture of it?"
vasn't all. But that twenty-five years before I bought it, and its condition would bear out the statemeut So I decided bone and potash was its reat need, and the next fall I shoveled on three hundred pounds of finely grouud bone, with twenty-five per cent potash, to the acre, after it was gone over with the
plow. I hadn't a big amount of dressing plow. I hadn't a big amount of dressing to spare from the stable, but I mauaged, with using muck in the cellar and buying some at the village, to put on about three cords to the acre, which was spread on in the fall and thoroughly harrowed over and mixed as much as possible with the soil. The ground was rough and soddy, but smooth enough for a hog-pasture.
"Wouldn't it have been better to have applied all these fertilizers before plowing, queried.
"Ordiuarily, perhaps it would; but I

If so a " Baby" Cream Separator will earn its cost for you every year. Why continue an inferior system another year at so great a loss? Dairying is now the only profitable feature of Agriculture. Properly conducted it
always pays well, and must pay you. A De Laval Separator would save you \$10. to $\$ 20$. per cow per year, and there can be no question about it.
All styles and capacites. Prices $\$ 75$. to $\$ 200$. Send for new 1895 catalogue.

ELGIN, ILL.
4 CORTLANDT ST., NEW YORK.

had another object in view, as you will see. The next spring the drains told the story, and showed the valne of draining retentive soils. The snows went off early, and the ast week in April I was enabled to use the horses quite coinfortably in larrowiug in crop of peas. These were the blackcyed Canada pea, and sown six pecks to the acre. And now you see why I harrowed in the fertilizer. It was rather
shady for them, but by the last week in shady for them, but by the last week in
July my twenty-five shoats and pigs took July my twenty-five shoats and pigs took a look at the premises. It was fun for all of us-pigs and myself. A more industrious set of grunters you never saw. Didn't they grow, though! Aud didn't they root, as well as eat green peas! We commenced furnishing cream to the butter-factory that eral, kept eight cows. What with the skim-milk and the peas, after the pigs had the run of the orchard, and what green apples fell off the trees, kept the pigs growing like weeds. Well, by the middle of September you wouldn't have mistrusted that there had ever been a pea-vine in that vicinity, anci the ground was anythiag but smooth."
"How about the trees? Did they show any perceptible gain that season?"
"Yes, they sort of pricked up their ears, like; the leaves took on a deeper green, and many of the more thrifty growing brancles on all the trees made quite an increased growth, and the general appearance of most of the trees was more of
thrift than poverty. The next year began to tell the story. The trees laughed all freely, as 1 was told, than they lad for freely, as 1 was told, than they had for
twenty years. But I wasn't done. The peas worked so well the year before, that I determined to try them again; so another crop was grown on three hundred pounds of superphosplate to the acre, and that
season I increased, by the help of a friend, both the hogs and the cows, letting the swine lave the run of the orelard the first of August. They did good service, and
trees and pigx began to trom. Most of the trees and pigx. began to moom. Most of the
grass was killed or rooted out by the end of the second season, and the ground left in quite mellow condition.
"Some might say that better results, can be attained by letting the pea crop come
nearly to maturity and plow into the soil. Also, some object to having hogs iu the orchard, on account of barking the trees, besides the inconvenience of their droppings.
points?",
"The first is uot worth a moment's consideration. The advantages iu the way I managed are more than, double than from
plowing in the green crop. Hogs turned plowing in the green crop. Hogs turned among the trees in early spring might get in
the labit of stripping the bark from the sinaller trees. I have known them to do so smaller trees. I have known them to do so
in May, when the leaves first put ont, but in May, when the leaves first put ont, but
turned iu as late as the middle of July, I have never had any tronble in that way There is some inconvenience in having so large a number of swine in the orchard especially where there are early summer
apples, as more or less fall before they are apples, as more or less fall before they are
gathered. But the advantages gathered. But the advantages, I think,
more than counterbalance the inconveniences of the plan."
"The objectiou is made that such frequent plowing of the orchard winl affert the trees by too great mutilation of the
roonts. Have you seen any ill effects fronı this cause?"
"This matter came into my calculations, among the trees, I put on a colter liarrow and mollowed up the soil without disturb ing the roots very much.
My manure-heap ran low, as usual, so
forestalled the season that winter, and gathered up a lot of hard-wood ashes enough so I scattered on in spring about
fifty buslels to the acre, and then seeded the orchard down to clover. That season thought best to keep the hogs off the
ground, and turned in iustead my herd of ground, and turned in iustead my herd of young Jersey heifers-six yeartings and
ten calves-about the first of August. The
next season, after the clover began to next season, after the clover began to head, the hogs were given the liberty of a por-
tion of the orchard again, and on the re-
mainder the clover was light prowing aver was turned under by are some advantages in the latter plan ove the hogs." "Now, the question is, have the results proved, commensurate, withe the expentise
and labor bestowed upon the orchard?" "Yes. I think I aun justified in saying that my hopes have been finlly realized. A
very marked improveunent in the trees
tonk place after the second year took place after the second year, and this
advance has gone steadily ou. The fifth
year was a good seasou, and the crop of year was a good seasou, and the crop of
winter fruit nearly paid for the outlay for
renovation, aside fionn iny own labor renovation, aside fromi my own labor. The good crops quite regularly. An important
item I should have unentioued was giving the trees a thorough trimming, cutting out was dead and superfluous branches. This

EXTRACTS FROM CORRESPONDENCE.

## THE POULTRY YARD.

## PEKIN DUCKS FOR MARKET

THE Pekin duck is an excellent young, but it has one serious fault, which is its excitability. he slightest noise may cau:: panic at midnight, any time, and with several hundred to-
gether they can alarm a whole congether they can alarm a whole com-
munity. When alarmed or excited, they rush pell-mell over each other from one
find of the house or yard to the other; nor will they cease until exhausted, unloss a lantern or other light is furnished them, when they will quiet down. When a "panic" takes place, it meaus the loss of a
large amount of fat duck ineat, which is dissipated bs the exercise, aud more fond will be required to put on the flesh again. When the panic occurs, get to the flock at once and put up lights, no matter at what hour of the night it may be.
The ducklings may be allowed in the sards as soon as they feather, and even rcry' young ones may go out on warm,
clear days. They arc sent to the market "dressed," and they must be dry-picked, all the pin-feathers being removed. In all way as broilers. No one who has ever dressed a duck will worry for a repetition feathers are on a duck until he attempts to get them off. With ducklings it is ev more dificult, owing to the large propor-
tion of pin-feathers. After ${ }^{\prime}$ a duck is suption of pin-feathers. After a duck is sup-
posed to be picked clean, it may be picked over again, apparently, half a dozen times for they will hare fuzzy appearance. The
dressing of these ducklings is the disagreedressing of these ducklings is the disagree
able portiou of the business; but if you get sour young ducks iu good condition, and in large numbers for market, you will get fair prices, and be amply rewarded.

## MINERAL MATTER IN THE FOOD.

There is no food superior to corn for cre and for supplying the earbonaceous matter of the egg ( 501 k ), and thongh a hen may lay eggs for awhile on a corn diet, she will arrive at a stage, sooner or later, when she
will become excessively fat. She cannot aroid this crisis, as she must consume a
large quantity of corn in order to secure the nitrogen necded, and in the meantime sle is taking
When the hen is supplied with an allowance of green boncs, cut clover, bran and
meat, her fond win be more nearly balauced. She requires not only conceutrated food, but that which is bulky also, the
latter serving to assist digestion, and adding for the supply of mineral matter. The lime iu clover is in a condition for digestains thirty times as much mineral matter as corn, its addition to the ration is importhat as the hen is called upou to perform a heavy service, if she produces eggs regularly, she must have her food concen-
trated to a certain exteut, for she cannot eat euough if it is too bulky

## GREEN FOOD IN SUMMER.

Any food thatwill serve to promote milk production in cows will be found excellent
as food for layiug hens, but in winter the

hens will be largely benefited with an occasional ration of meat, a pound for twenty
hens being ample. But no matter how much space the hens may hare, they will not thrive unless supplied with sharp
gravel, which serves as teeth and grinds (or cuts) their food. Hens, like cows, pre should be supplied to them in summer
but in winter this is not possible. Clore hay is the cheapest form in which food can be given. The hens will be less liatble tu
disease, will produce more eggs, and the cgrs will hatch better, thau if fed on an ex
Ausive graiu diet, while growiug or young
stock will thrive equally as well. Greeu food in summer costs nothing, and the correspondingly cheapened.
will be
The object of all ponltrymeu is to obtain eggs at the lowest cost. The cost of the food does uot indicate the real value of the food.
True economy iu feeding is to supply that True economy iu feeding is to supply that
which best answers the purpose, without which best answers the purpose, without
regard to the cost of the food, as the final results depend on both the cost and the production. But clover is cheaper than grain, not only in price and feeding value, but in the beneficial results olstained from it, list of fools will not only deprive himsclf of a valuable egg production, but add to the cost of food without corresponding gain of
profit. With clover as a part of the diet, the number of eggs will be increased.

## DEVICE FOR FLYING HENS

The illustration is intended to show the device, and not to give a design for a fence.
proper place for all hens at certain seasons of the year; but so can the cow be staked on a small plot, or coutined to the stable though it may not be best for her. She is aliven when in the pasture, bu s given plenty of room. The question is
whether the hens do not deserve as much foom as the cow, provided they pay a larger rooin as
profit.

## eggs by weight.

Until the time arrives when eggs are sold by weight, both the poultryman and the consumer will he cheated. The consumer who buys his eggs by the dozen never pays the same price. He has the adrantage to-day and loses it to-morrow. When the prices paid are based on weight the sales can be as easily made as with potatoes, which are now sold by weight when sales are made wholesale, though retai purchasers of ten pay dearly for allowing cliveries based upon bushel measures that

It may be attached to any kind of fence. Fig. 1 is a panel of a ferice, A being strands ig. posts aud the botromands fastened to strips of wood (D) of abont eighteen iuches iu length for both pieces. The lower piece is nailed to the post, as shown in Fig. 1. The upper piece extends ver iuto the yard. When a hen attempts of fly over the fence, she strikes the wire fo fasteurn back. It will cost but little of fence. Hens always alight to any kiud of fence. Hens always alight on the top of the fellce, and seldom fly over without so
doing, and with this attachment they are coung, and with this attachment
cathe they reach the top.

## LIME FOR GROWING STOCK.

A young chick requires fóod rich iu mineral matter. It grows rapidly, aud lime is an important element in the formation of bones and feathers. It slould be supplicd, not of course in its crude condition, but by using sucb foods as have it in solution. Curn-meal alone is not a snitable food, as foods it serves a purpose in supplying warmith. A varicd food, such as corn-meal (scalled or cooked), millet-seed, cracked heat, fesh milk, clover-hay leaves and alle them to grow rapidly.
ahle then to grow rapidly. well until they are about ten days or two ecks old and then cease growing, become reak in the legs and gradually droop, finally dying. This may be due to several causes. One is the great drain upon the system while the chicks are feathering. This is more unticealle amoug Leghorns and other rapid-growing breeds, as com-
pared with Brahmas, which feather slowly. This rapid production of feathers demands feeding four or five times a day, and on such foods as are rich in nitrogen and lime, such as milk, meat and bones. The chicks that feather slowly seldom droop from this cause. Another cause of loss is the large head-lice, and still another is lack of warmth during cold, damp weather, the chicks be
the hen.

## ENTY OF ROOM IS ECONOMIC

When plenty of room is given to a flock of hens, the expenses are lessened, though are allowed ou an acre of ground, and the space is so divided as to allow the hens to occupy but half au acre, while the other half is permitted to grow some kind of green and not only lay more greater varimore thrifty. The gain to the farmer will be in the insects secured, and dining the summer season he will be required to feed but little.
It is a curions fact that the "intensive" system of farming is applied to poultry
and not in other directions, when the case should be really reversed. If a whole acre of land is given up to fifty hens, they will pay as well if not better than anything else on the farm. Why should uot the instead of leaving that branch of work to women on a limited area near the dwellinghouse? It is no donbt a mistake to confine flacks of hens in small yards. By judicions management, hens in confinement
have slippery bottoms. all in which the articles are "artistically arranged," with est potatoes.

## NO TROUGHS IN SUMMER

Feeding too often is a serious mistake If the hens are in good condition for laying, they will thrive much better if compelled to come off the roost in the morning and scratch for their breakfast than if they
walk up to a feed-trough and fill thei walk up to a feed-trough and fill their seeds may be scattered in the litter after they are on the roost at night, so that they cau begiu as early in the morning as they desire. Before going to roostat night they digest all that the crop will hold before morning.

## CORRESPONDENCE

Feeding Fowls.-"What is the best food for fowls?" asks the norice in poultry keeping, to the best results for the least cost." This is not any one food, but a variety fed in such rota tion that all kinds are relished. Wheat is con sidered the most complete grain food, but needs to be supplemented by vegetables,
clover; or other green food and other grains, For cold regions corn is good, and other grains, evening ration, if parched and fed warin Potatoes, boiled, mashed, and thickened wit mill feed to a crumbling dough, make a good should not be fed oftener than twice a day Cut bone, meat, finely cut clover, and sunflowe seeds are all excellent, but nothing will keep your poultryiu good condition if you fail to grit. Clean gravel is supply of good, suarp crockery is good, as also crushed shells. Failure to supply some of these is often a cause of diseise and death among poultry. A very in-
teresting article in a late number of a leading journal shows how so-calléd cholera is often only indigestion caused by failure to obtain the needed grit. Charcoal is also a great prewithin reach of the fowis. In regard to the "how much to feed" question, I will say that need not be afraid of feeding too advisea, you only feed twice a day, and the fowls can exer living; scatter the grain lation about their yard, or sow it in the litter of their bouse, so that they must work for each grain. In If allowed the frecdom of the orchard and pasture, they will glcan a large share of their own and insect enemes, Fowls siven such a range are much healthier, and produce hardier chicks than those kept more closely confined, especially if these last are fed on rich and heating food.

Junction City, Orgg.
Artichokes for Poultry.--Please inform "J. J.," of San Francisco, Cal., to throw his raw artichokes to his fowls whole, and let them manage the rest. He may gather up the ragments-if be can ind any. That is the results. The formls will pick them all to pieces and utilize them. The artichokes nced chopping or other preparation. Lincoln, Del.

## A BOY'S BATTLE. 

 Ghapter III. in the thiciest of the fight. he scene that met the farmer at Uncle Jack's cabin When be bastened Jenny's entreaty, would bave heen a weird one indeed to one unaceustomed to southern scenes. The cabins, set here and there among the locust with light, and every don stond wide open. The ne cupants had cauglit the news of the sheriff's arrival, and some were carrying the word to Pete's house, while others wer hastening to Uncle Jack's cabin to see what would happen next. When Andrew, who had gone with his father totilie scene of trouble, saw the scene of trouble, saw
the innocint old man standing between the standing bet.ween the
sheriff and his deputles, his first impulse was to cry out and proclaim himself the one they were in search of. But when he saw one of the officers take a pair of handeuff from his pocket, and understood that neither his father's interference nor Aunt Jemny's grief could
avail to prevent the course of the law, he was more frightened thatn he had been at any time since the accident occurred. Tell? Confess? He was so far from it that he actually bit his lips, lest the con fession slip from him in spite of himself.
Such a scene as the negroes were making,
tnosomeshouting, others tho; some shouting, others crying, all of them full of
excitement and interest. "xcitement and one, a tall, strong looking hoy, standing slightly apart from the others, and nearer to the
prisoner, with his arms folded upon his breast, did not join in the wailing and lamentings, nor yet in the revilings going on
ahout him. Yet he was deeply interested; his quick, hright eye turned first upon the sheriff, then upon the prisoner. It was Mose one of the regular hands, and he was watchUncle Jack, to all appearances, was the least concerned in affairs of any one present. He did not once look at Andrew, hut stood quietly attentive while the master talked with the sheriff:
"I have employed him on my plantation since I had one," Mr. Pearson was saying, "and my father had him on his twenty years hefore I took him. If he was ever guilty of a crnel or even an unkind act, I never heard "Don't doubt all you say is the truth, cap'n," said the officer, "hut we've got a
warrant for him, an' he'll have to come with warrant for him, an' he'll have to come ini" us. Hey, there, come back from there, sir!
This was to Uncle Jack, who had ventured a step toward the open kitchen door.

At the sheriff's com
"Lor", marster," he said, "hit ain' no use to git mad. I wuz unly gwine in dar to git my "Your what?"
"My cunjure-bag, marster; ter keep de ebu off. Dey ain' nuthin' kin hurt de ole man, ef rou jes' let him fetch dat cunjure-hag 'long wid him."
"Well, we haven't time for any such foolishness to-night," said the sheriff. "You will
have to do without your cunjure-bag and have to do without your cun.
rabhit's foot this time, old man."
"Yes, sah," said Jack. "I's got de rabhit's font, en bit'll sholy hep; but de luek'll be mo hetter ef I kin fetch de eunjure-bag long, too

But the officers had no further time to lose in useless discussion; they consulted together a moment, and it was finally deeided that the prisoner should rice to town on the hors with one of the deputies.
As they made their final preparations for He had heard every word; his face, in the moonlight, had a set, white look, and all the hoyish sweetness had gone out of it. It was always a strong face, but to-night the strength embled hardness rather than character. hould look at him he felt that he would almost die. How everyhody must despise him for a coward, if they knew that he was
allowing a helpless old man to be carried of alone, at night, for a crime of which he was Again came the impulse to confess; again he tepped forward and placed his hand upon the farmer's arm.
"Father?"
"Yes, yes, son," said Mr, Pearson; "I know What youn ire going to say. One of us must.
go with bim; but it had best be me. Could

Wable to endure the sight of his distress, Andrew
father's arm.
"What is it, son? Don't bother me now. Go up to the honse and tell your mother 1 have gone to town with the officers. And tell her to keep Aunt Jenny up there with her, and to do all she can for Pete."
"Marster," said a woman's wailing voice,
Pete's daidl."
ole nigger; he kin profensy dat much. Ain
lee got a rabbit foot in his pocket. what uz kotched in de grabeyard Sadday night by Eh, eh! ole Moly Har' nebbe rabeyarl bere little disunderstandin'. Ole Jack ain' eard; dey ain' muthin' gwine hurt him, sholy, sholy."
fearless good humor, the outspoken faith, made his thing, that no harm would come to Uncle Jack. The farmer, however, felt grave douhts and forething premonitorily sugrestive in the glister of metal in the moonlight where Uncle Jack sat behind the depaty with his rossed hands pinioned hehind him. He felt glad hat Andrew did not know how the officers had seen
titt to handenff their pris-
oner.
But Andrew did not know; he did not recover from his swoon until the men were gone. Now he
was sitting alone in his mother's room, fighting his solitary battle with onscience. The scene through which he had just passed had so un-
nerved him that his last little spark of courage had eft him
To kill a man, that was had enough, and hard enough to hear; but to sit like a coward and see anhat was worse, and inThat was worse, and inHe fought hravely with he temptation tosilence, the fear of confession. One moment he would be resolved to make a. clean breast of it, hut before he tion of the evil one would tempt him again to keep ilence.
"Perhaps they'll clear Unele Jaek," said the
tempter; "they haven't tempter; "they haven't ally proof. Then nohody
will be hurt, since no eonfession can restore Pete to life again." He did not consider the stain, the suspicion that must forever attaeh to
hor wait a moment, officer, until I can get a horse to ride back with you? I must try to
get bail for him. I do not believe him guilty and none of you people (turning to the exeited erowd of hlacks) must helieve it until it has erowd of hlack
A sharp voice from the crowd at once demancled
"Ef he ain' guilty, huccome be ain' say so?" The m
venture:
"Bccanse what he may say here will appear as evidence in the trial. Here, Mose, Joe run, one of you, and saddle a horse for me, and be quick about it.
Mose stepped eagerly forward; his time for ervice had come.
"Marster," said he, "I sce de bay mare tandin' at de hitch-post wid de sadde a "Pring her, ez I come 'long down here." "Bring her around to the hig gate, quick, my boy;
day,"
"Yes, saln."
gospul troof."
aid Mose. "I spec" dat am de
It was the mare Andrew had ridden, and had left standing at the hitching-post, while be carried the news of the accident to Bi g Liza, Nobody had thought, in
Mose led ber around to the gate and hitched her with the. sherift's horses, after which he ran across the yard and slipped into Aunt
Jenny's cabin through the door on the other Jenny's cabin through the
side, unsecn by the crowd
ide, unseen by the crowd.
The plantation hands were not unfriendly to Uncle Jack, hut they were excited hy Pete's Moreover, the question put to the master was not without its effect. If Jack was innocent, why had he not denied his guilt? Only Andrew knew. Andrew, and perhaps Uncle Jack himself.
The little squad was ready to start.
"Marster," said Jack at the last moment "mayn't I git de eunjure-bag?"
"No you mayn't," said the sheriff. "Now come along with you,"
"Marster," pleaded the old man, "hit won't hurt nothin
"Well, $I$ shall hurt something," said the ness, And I wouldn't be surprised much if I hurt it tolerable had, too; see?
Andrew saw then that for the first time Uncle Jack's courage deserted him; he hesitater, sighed, gave a helpless, pleading look tears. tears.

Instantly the wail was canght up by the "Pete's daid! Pete's daid l po' Pete! po' Pete' daid!"
Andrew heard the cry, and the terrible an idea that Aunt Jenny, near whose door he an idea that Aunt Jenny, near whose door he
was standing, stuffed something into the hand of Mose; he felt, rather than heard, the low, hoarse, sorrow-hroken words which she poured into his ear.
"Put it into Jack's own hands," Andrew thought she said. "Tcll him ter kcep it by gih it ter de little marster, en tell him Aunt Jinny say dat po'. Tack wuz allers mighry
good ter him. He'll understan', sholy, sholy good ter him. He'll understan', sholy, sholy
he allers loved Unc' Jack." Andrew neither heard nor saw more. He celed, tottered, and fell forward just as a pair him, in spite of the sheriff's command to him, in spite of the sheriff's command to
"move on." But when the squad moved off, Andrew had heen carried, unconscious, to the farm-house; so that Mose was left to his own devices to deliver the charge into Unele Jaek's
hands. Finally, by artful dodging and manœuvering, a pretense of tightening saddle girths and readjusting bridle-reins, he was
able to slip the queer little parekage into the able to slip the queer little prekage into the
old inan's hand, while the sheriff was trying old man's hand, while the sheriff was trying
to fit the key of the handcuff into the loek, to fit the key of the handeuffs into the loek,
preparatory to securing his prisoner. "Hit am de cunjure-bag," was all he could say hefore the oncer was upon bim, hat he saw the furrowed old face light up as old
Jack's hand closed upon his treasure. He was himself again, fearless, good-natured, hopeful, afraid of no dauger so long as that little bagful of horsehair, squirrel teeth and the parings of his own finger nails lay upon his heart.
nebber wow it dis mawnin', lack I ought, worryment" got inter all dis here fuss en worryment," was his thought, as
away to jail hehind the deputy sheriff.
The sudden revival of hope was not lost upon the farmer. Once he called out to him to kuow how he was "getting alo
reply was characteristic of the man.
"Who, me?"
"Yes, you," said a deputy; "if you are the maybe hung to a tried for your life, and can erect a gallows for you."
you's tellin', honey," said Jaek, "Dat's des' a little tale you's tellin' des' ter gib yo' mouf a
change. Dey ain' nothin' 'tall gwine hurt dis

permission to go back to the cabin, being
uneasy about the fire. ulueasy about the fire.
"The very best thing." his mother was "aying to Jack's wife, "when a hody has done wrong, is to up and confess it, an' ask to be
forgiven. Own up like a man. Folks'll re-
 it. I say own np; it's the best easer to con-
science top side e eorth, 1 reckion,")
And before be torught what be was doing, Andrew said, "Yes, ma'aum." She turned upon him so sharply that he
almost. fell off the chair. almost fell off the chair.
"You, Andrew," said
"You, Andrew," said she. "What's that
you're sayin'?",
He put his hand to his head in He put his hand to his head in a dazed,
stupid may, and stared at her. His brain was a whirl of confused voices which calied to him in wailing accents:
"Petes' daid! Pete's daid! po' Pete!", "If he
inn't grilty whyn't he say so ?" "They'll ain't guilty, Whyn't he say so?" "They'll
inang me, they'li hang me, if I don't get my cunjure-bag." And above all thundered in
his ears the coarse jolking of the sheriff: "I'll his ears the coarse joking of the sheriff: "
hurt something; hurt it pretty bad, too."
"Wonet His mother repeated her question. His motber repeated her question. He re-
plied absently:
"I don't know, mother. Did I say some"I do
His words and manner so startled her that she came and hent over hin, her hand upon,
his throbbiug temples, a strange tenderness in her exes.
"Are you slck,
"No, mother," he replied; "I'm not slick,
but I would like to help, to do something. Isn't there somethiug I can do? It will hill me to sit still here and not try to do anything."
She seemed to see, to understand for the She seemed to see, to understand for the
tIme, that her son was no longer the haby boy he had been blindly trying to keep him.
"Yes," she said, "you may carry a pla rictuals down to Aunt Jennyy. She would n't victuais down to Aunt Jenny. She wouldn't
wait long enough to get anything, and she
hasn't had any supper. But mind you, don't go 'bout the -",
He stopped, lifted bis head, and waited "Notilin'," said she, "the plate's on
vde talle in the dinin'-room." She had been about to caution him not to
go nearthe well, a thing she had learned to wo near the well, a thing she had learmed to
do when he was a boy in his first kiitts, and had never learned to leave off doing. To-
night, however, there was that in his face night, however, there was that in his face
almonished her that be no longer wore klits. At ten o'ciock Mr. Pearson had not returned. big gate to see if there were any sigus of thim. "I ought to tell; oh, I ought to tell!" was the refrain that was ringing in his brain.
ought to tell, and $I^{\prime} m$ afraid. I'm a cowa a coward, a conardel!"
He alnost screamed the words out to
Whever misht clance to be listening, and Whoever might chance to be listening, and

looking down into his heart, to read there his suilty secret.
"I ouplet to
"Y ought to tell-and I will teli, if they truly
try topunklh Uncie Jack. I declare it." He felt hetter for even this balf confession,
and started back to the house when the great hall clock striking eleveu. His moturer was still up, anxionsly waiting the
return of thaster. In Aunt Jenny's house,
too a light was turning Sudenly the too, a light was hurning. Suddenly Andrew
stopped and peered through the half-denuded rose-bushes that studded the yard. In the
noonlight he had seen a stealthy figure creeping across the sard, in the direction of
the cottou-gin.
He thought at first it was some one going to sit up with Pete, hut in a moment thcre was
anotber aud another, and stinil more, until he had counted thirty. Something, was on foot,
something that meant danger to sone one.
His father was His father was absent, his mothcr alone in
the house. Ma an instant his natural courage was aroused. 1 will get the gun and go over to the gin and
see what this gathering means," said he. "It might he tramps, and father doesn't allow
thenl in the gina, it endangers the cotton. Tramps? Thirts of them?"
thing more serinus than tramps.
As he entered the front liall door to get the gun, Aunt Jelny ran in by the back door,
going to his, mother's room. At sight of her
all his nervous fenir roturned. He leaned against the ficing of thic door for support, "Miss Marthy? Oh, Miss: Marthy, fur de
good Lord's sake try en stop 'em! Blind Sam's done cone here en fotched some mo, men
from all the piantations round lice ; en dey, swine ter fetch Jalk out de jall en hang him.
Hit's de nob; de mob's done come fur my ole man.,"
Her wo
Her words rany in
clang of an iron hell.
"Mother," said he,

## "an stop them." "I am golng down there;

She sprang for ward and caught his arm, as
he was about to run across the hall to the door.
"No," she cried; "You stay hcre-" the door.
"I can't! I nustu't! y wom"t?"
It was the first time in his life he had
cyer given her such a reply, or dared to
contest his will agannst hers. But now he
Was struggling to free hiniself; to get away,
reagariless of her pleadings aud commands
allke.
"Do you think I don't know best?" she
insiste. "Listen at that.".
A sound iike the mufted cry of a multitnde
was borne to them through the open doors-
the cry of the mob. In an instant Andrew's the cry of the mob. In an instant Andrew's
courage deserted him. Put himself in the besond the spring branch with him.
"Iother," the ery was a shriek, "go to
them! stop them: You must stop them! Uncle Jack didn't shoot Yellow Pete; it was-""
He reeled, caught at the air, and for the He reeled, caught at the air,
second time that night faiuted.
"Stay here with him, Aunt Jenns," said Mrs. Pearson, and there was that in her manner that tord where Andrew sot hi tell me where the men are gathering, quick."
"In de laue by de sin-house, on de fur side in de shadder. But you can't go down dar by "'se'f, Miss Marthy; dey"ll-"
reply, as she threw a shawi oyer her head and went out into the darkness
As sbe stepped outside, under the shadow of
the trees, the sounds of hurrine on the hard, smooth turupike could be heard. she ran down to the big gate, reaching it at
 ".
"Yes, mother," said the farmer , John?" "Yes, mother," said the furmer
she placed her hand upou the mare's bit to she place
top her.
"Don't get down, husband, but ride on down mob forming the shadow. Tell them-
"r'll tell them they have denied him bail," he called back over his shoulder. "That will convince them the iaw lsn't to be trified with."
She followed hlm for a ilttle distance, hear She followed hlin for a ilttle distance, hear-
ing the mare's hoofs growing fainter and lig the mare's hoofs growing fainter and
fainter upon the soft, red soil when the fainter upon the soft, red soil when the
master had turned her off the plke into the
lane.
They were not a cruel set, those ignorant
They were not a cruel set, those lignorant,
impuisive men, but they were easily led, mpuisive men, but they were easily led,
easilis influenced, easily wrought upon. Toeasiy inuenced, easily wrought upon. To-
night they were following Blind Sam, the
worst of leaders, grudge against Uncle Jack.
A moment, and Mrs. Pearson no longer heard the mare's hoors in the laun; but the
master's voice could easily be distinguished master's voice could easily be distinguished, "Those men to disband.
"Those /from other plantations must qo
home at once," he declared. "And I tale home at once," he declared. "And I take
this occasion to notily Blind Sam that lie must not set foot on my plantation again. clear out!" he commanded, "all of you who own people."
He iwas promptly answered by a slout Fhether of approval or defiance the 11stene in the red lane could not tell.
"Oh," she murmured, "if he would only hink to remind them how good Uncle Jack he and Aunt Jenny have befriended. Thes lnnow it; they are only carried away hy Liza's
ravings. To-morrow they will be as quiet as ravings. To-morrow they will be as quiet as
lambs, and she the most quiet one anong habs, and she the most quiet
them all. Why doesn't he tell them
There was at this moment another shout; be seeu hastcning down the lane. Had they be seeu hastening down the lane. Hadt they
disbanded, or were they only moving on to
the jail? She turned back in the direction of the jail? She turned back in the direction of them; but near the door she stopped in the
shadow and watched what they would do. If thet should turn into the pike it meant trouble; if not-
"Oh !" she gave saw the heavy, dark, moving mass suddeni sway aud break and begin to seatter. "Thank
God," sloe said, "they are disbanding" [To be continued.]

## darkened sleeping rooms

It is claimed by some physlcians that the excluded foot rest perfectly unless all light is in going to bed at night or simply nying wown for a half hour's rest hn the mlddie of the
day, this precaution should be taken. Where a house has an eastern or southern exposure the rooms will be fillcd with light long before
it is time to get up, and unless some means he it is time to get $u$, and unless some medns be
takeu to prevent, the morning rest will be takeu to prevent, the morning rest wili be
more or less broken. Especially is thls true in the case of little children, and it is well to
accustom them from the first to sleep in the aecust
dark.
Het the absence of outside blinds, there is no so condusive to secure this pleasant twilight, shades made of the darkest green holland and tbey have a great advantage over elther
inside or outside blinds, in that they are so easlly adjusted. They supplement, but do not take the piace of, the ordinairy slades, but are
set somewhat inside, so as not to interfere set somewhat inside, so as not to interfere
with them, and are rolled up and quite out of the way when not in use. The best grades of thls goods are durable and from her own experlence the writer can rccommend them as a most desirable invest
ment. If the hedroom windows have uppe ment. If the hedroom windows have upper
panels of stained glass, in whicll so many modern houses abound, the green shades
should be set so as to cover these also, as an exceedingly unpieasant glare pours down
from them, very trylng to eyes which from them, very trylng to eyes which are
trainct to sleep in a darkness as complete as
possible-

## THE ROMANCE OF COTTON.

At the heginning of the curistiun era w
find cotton in cultivation and in use Persia, Arabia and Egypt, hut whethe indigenous to these countries, or conveyed
westward during the centuries from India, $\pi e$ know not. Thereafter the westward sprea was siow but the plant is to be taced alous the north coast of Africa to Morocco, which country it seems to have reached in the ninth century. The Moors took the plant, or seeds, to Spain, and $\pi$ was being grown on the plains of Valencia in the tenth century, and
by the thirteenth century it was, as we hav by the thirteenth century it was, as we have
said, growing in rarious parts of souther said, gro
Europe.
Yet, althongh the Indian cloths were known to the Greeks and Romans a century or two early centuries Arab traders brought to the Red sea ports Indian calicoes, which were distributed in Europe, we find cotton know in England only as materiai for caude-wick down to the seveuteenth century. At any rate, M'Culloch is our authority for believing that the first mention of cotton heing manufactured in England is in 16t1; and that the
"English cottons," of "which eariter mentlon "English cottons,", of which earite
may be found, were realls woolens.
may be found, were reatly woilens.
And now we come to a very curious thin in the romance of cotton. Columhus diss covered-or, as some sas, rediscovered-
America iu 1192; and when he reached the islands of the Caribbean sea, the natives who came off to harter with him brought, among other things, cotton yarn and thread. Vasco Diaz, in 1497 reas the Cope of Good Hop and reached the Zanzibar const. There the natives were found to be clothed in cotton, just as Columbus found the natives of Cuba to Cortez found the Mexicans. These Europeans, proceeding from the Iberian peniusuia eas clothed with a material of which they knew nothing. Cotton was king in America, as in Asia, before it began western Europe.
Not oniy that, but cotton must have been cultivated in Africa at the time wheu the mariners of Prince Heury the Navigator first made their way cautiousiy down the west hundred vears since cotton cloth was brough from the coast of Guinea and sold in London plant traveled to the Bight of Benin from the land of Prester John, or from the land of the Pharaths, or across from the Mozambigue coast, where the Arablans are supposed to preh bad sediements and trading stations in curious enough that when Africa was discovered by Europeans, the Dark Continen was actualiy producing both the fiber and the cloth for which African labor and English skill were afterward to be needed. The cotton
plantations of southern A merica were worked by the hegroes of Africa in order that the cotton-mills of Lancashire might be kept running. And yet both Africa and America made cotton cloth from the vegetable wool long before we knew of it otherwise than as a

Even in Asia, the natural habitat of the cotton-plant, the story has been curious. Thus, according to the records above named thousand years in India, and India horder upon the ancient and extensive empire of cloth-making untll the coming of the Tartars and has been cultlvated and manufactured there for only about five huudred years.-

## the quartier latin

Who has not heard of the quartier Latiu? That is the ancicut populous section on the left bank of the Scine, Where the faculties are
close huddled-though not contiguously, so as to form, as with us, a canpusis-over a tremendous area. A visit will always repay the haps, so much to catch in passing the favor of the indefinahle atmosphere of study and and its byways: not so much for the buildings theinselves, which are, he it arowed, rather disappointingly unodern, but rather to try the effect of a sensation, certainly uovei enough to the American, of the grandeur of a great truly national institution.
He will find there the schools of the five regular faculties of theology, law, medicine, letters aud sciences; be mill see hospitals,
cinics, libraries and musenms, spacions and numberless, containing collections for every "ism" under the sun; he will note with astonishment special schools, such as those
recently establislied of comparative religion and living ortentai language, and when he
has done with all this, there is the College de has done with all this, thcre is the College ac
France! Without counting the last-named body, the courses of these various schools are attended by a grand total of some eleven
thousand students. That makes, if we will thousand students. That makes, if we why

## A TRIUMPH

 the dany routine of professional lifc. Let os give it larger telling. We quote from memorylittle Nary is a charity patient. Tbe doctor (onr; has come upon her case in Alleytown. The tired monan's bahe, and she is brind with her love in her eyes, but apelesme oo. Her littlc one will never see. The physi ess, lifts the pink eyelids and adds:

## Has she been always so

Just now he hends a little closer, then draws back and contracts his brow.
we may iunagine, half to himself. "There is chance; it is much like the case in Berlin." Then in sudden resolve he says atoud: "Bring The thought of that baby hauing the hour the day. He ventured to speak to his wif about it, and he did not often mention protude. Somehow the poor man's bay was making for itself a cradle in hearts not easily

A surgical friend was witb the doctor the next day in his office. Their usual charge interested iu this feeless case. When the woman came, with her babe wrapped up iu a hawl, it was the doctor's own wlfe who took t, and at the sight of the little hlind eyes wept
octor. "Will you trust your child to me?" doctor. "Will you trust your child to me?"
Those wifely tears had won; yes, the motlie Those wifely tears had won; yes, the mother
vonld. An hour later the two women entered the room; the doctor was gently patting the little bandaged face.
questioning eyes. "I will he around iu a few
When he called, the mother's face, hent over the little cot, was scarcely more anxious than his own. It had become a heart matter with him; he would almost have given his llfe to make those eyes to see. And yet, why? The groped, their way, aloug the edge of the coverlet, were worn and chapped; the prosleasing; roofs and sheds, aud yet above, God's skies.

## e cannot tee?

## ust wait a little.

So came from day to day. His friends ittle face kept reappearing as he child. The is work kept reappearing as he went abou here in the last the day of final experiment ther and doctor's wife and a frieud or two The physician made a long and silent examthe the little child he set a bahy's plaything. "For little Mary," he said. But would she claim it? Slowly the bandages were removed. Then all
gazed, as if they would look right into the ittle eyes, blinking there in the dim hut hrupt light. Just then the child started teadied itself and putout its hands toward , The next moment it raised it that were all streaming with off, to other eye hat was fairly eating the child up, and lifting ts little arms, it cried, "Mama!" and was taken home to a sobbing hreast. No one said nucb; no one could. After all, eyes were nade for seeing, and light after darkness is

## WHO DISCOVERED FIRE?

For six thousand years, at least, man has
pondered over the phenomena of fire. The my tbological story of Prometheus has had a many interpretations as commentators. Al Promethens to be the most ancient of the Greek fire legends.
Among the Greeks, the Persians, the Pheniclegends which refer to a time when man was without the comforts of fire.
he tribes which immediately preceded the Pharaohs, and that at last, when a celebrated astronomer madc them acquainted with its Pompanion, Mola, Plutareh ncient writers mention nations which, at the use of fire; or if they did, had but recently learned it.
Here the geongist brings his science to bear, about the us
coidentarese theory of evolutiou includes the Some large, hairless apes, so the story goes, ere playing on the sea-shore with flints and me dry seaweeds, and amused down upon y strlking the pehbles together. All at once before they reatized urnade themi hairless, and this calamity ooked fond, the eating of whlch quickly

The South sea islanders tcll two differeut
stories regarding the way they came into possession of fire.
Accordiug to oue of these, a great whale was
once washed ashore during a hurricane. The monster became cutangle
tallow-trees (a species of evergreens whose
hranches easily ignite), and while gnashiug hranches easis igmo), and whle gnashiug his teeth in his impotent rage, struck off a
spark which lighted the grove and consumed both trees and wbale.
Tbe other legend is to tbe effect that a great air-dragou (probably lightning) breathed on a tallow-tree and set its branches on fire. whey also have a tradition when the dragon will return for tbe fire, and tbat no man will be able to withstand him and save tbe sacred spark except he be a person born with pink eyes, fair skin and
white hair. For this reason the hirth of au albino is always hailed with delight, and his to preserve life to its utmost limit.-St. Louis to preserver

## IN THE VERNACULAR.

There is no more discerning a class than the portsmen. The vernacular of the chase as they have invented it is oddly appropriate to its objects. Therc is a smack of the soil and a ploycd. Usually there is something quaintly appropriate to the habits of wild animals the phrases. Here is a list whicb gives very adequate sugy

-James M. Dye, in St. Louis Chronicle. HOME TOPICS.

Cheap Cuts of Beef.-Now that beef is so high, it is well to know how to prepare savory dishes from the cheaper cuts of beef. A piece from the shoulder or of good flavor if cooked as follows: Cut a slice of fat salt pork and put it into an iron pot aud let it fry, turning it unti of beef washed, trimmed of any bloody parts and skewered or tied into gond shape. Put it into the hot fat iu the pot
and turn it uutil it is seared over on all sides, but do uot stick a fork into it. Add a teacupful of boiling water, cover the pot closely aud set it where it will cook very
slowly. Let it cook in this way four hours, slowly. Let it cook in this way four hours,
turning occasionally and addiug a little
grasies, but if they will once try browned mur, they will like it much better. On can brown a pint or so of flour at a time and keep it in a glass or tin can with
tight cover,and it will ahways be ready for tight cover, and it will ahways be ready for
gravy or for thickening soups, to many of gravy or for thickening soups, to
which it is quite an improvement.
which it is quite an improvement.
Hanblig Steaks.-Twn pounds of lean beef from the round, chopped very fine. Mince one small onion and four sprigs of parsley and add to the beef, with a tablespoonful of butter, a teaspoonful of salt, a fourth of a teaspoonful of pepper, two wellbeaten eggs and half a teacopful of very fine, dry bread crumbs or cracker crumbs. Nix all well, then take it ont on a board sprinkled with fue crumbs, sprinkle more over the meat and roll it into a sheet aloout an weh thick. With a sharp knife cut the slieet into neat squares, and fry them in a little butter until a nice brown.
Hamburg steaks are nice served with touato sauce, made by sifting a pint of stewed tomatoes, seasoning with butter, pepper aud salt, and thickening with a teaspoonful of corn-starch. Have this sauce boiling hot, and ponr it over the steaks just before sending them to the table.
Rubber Cushioss.-Ainong the many and various cushions which are now seen in every mook and corner, none are more uscful of add more to the comfort of an invalid than a rubber cushion. These cushinns can be had in different sizes and shapes, and when inflated are not easily distingnishabl.3 from the ordinary stuffed cushion; but they have the advantage over those of never looking crushed or tumbled as a down or feather pillow often does, and by fielding easily to the slightest movement, they are far more restful than an ordinary cushion would be. Covers should be made for these cushions, of the same material that would he used for any others, and may be as plain or elaborate in adornand may be as plain or elaborate in as the fancy traveler, a rubber cushion will fill for a traveler, a rubber cushion will fill a place nothing else can, aud be alwars at hand to reliere a tired back or aching slonulder.
For this purpose, select a cushinu For this purpose, select a cushion abont ten by twelve inches in size, and make a

## NEEDLEWORK.

The long, summer-day vacation-time and isiting-time is the time to get done many of the pretty novelties that nake home beautiful.
Working on linen with silk or cotton is becoming more and more popular. It is teacling all of our girls the importance of careful and exquisite needlework, for no one can work in the tangling, fuzzy silks sithout acquiring a delicateuess of handling that such work brings. It uecessitates keeping the hands in good order. Many

hniling water from time to time as it cooks keep on hand a small piece of pumice-stone (i... Now season it with salt and pepper,
let it cook a little faster, turning it once or lwice that it may season nicely. When the watcr all cooks off, turn it and let it
brown a little; after which, if not ready to serve, add a little hot water and set it back where it will only kcep hot. When ready to scrve dinner, take the meat out, add a tablespoonful of browned flour, stir it
smooth, and then add milk to thin the grary to the proper consisteney, let it boil up ouce and it is done.
up ouce and it is done.
Nauy people use raw Hour iu making
keep on hand a small piece of pumice-stone nails that may spoil the silks.
There is a witchery about all embroidery, and yet there are some who hare not the time to permit ton close application to it. For these, the table-cover illustrated will done very pretty work. The stamping is and the pattern followed out in lace braid, caught down at each picot with silk. The pattern cover was done iu yellow, but in old rose or blue would be harmonious with
stamped, fifty cents; eight bolts of novelty per bolt; one dozen tor craln-apples; the grapes I sold for sug: ceins of twisted silk, tifty cents; four and buy it in quantities, fifty pounds at a time號 haif yards of fringe at twenty-five when it was very cheap. still, many times you can launder when this you can launder whenever it is soiled, and great outlay in jars.
will last for years.
For workers in linen, the frame for a photograph is a very pretty conception The flowers are worked in pink tilo in French knots, the leaves in the gray-greens and the ribbon in stem-stitch in white The circle shows where the picture is to

come. It must be worked and then lauudered before taking it to the framer, who must work it up in passe-partout, with
white binding. To launder t, wash it carefully in warin soap-suds made from good soap, rinse in clear ivater. Do not put any starch in it. While wet, spread it out on a thick flannel covered with clean muslin. Fix it perfectly straight, then place another cloth over it; iron until nearly dry, then remove the cloth and finisll it When ironed perfectly smooth, lay it something flat io get entirely dry. an framers clarge from thirty-five to serenty framers charge from thirty-five to se ventydelicate present to a friend, containing ur picture
The magazine-eover illustrated is of brown art linen, and the scheme can be carried out either iu embroidery or painting in water-colors: It will be found convenient for keeping the monthly magazine in order for binding. If one wants this particularly nice, after the linen is embroidered aud pressed, it can he taken to the bindery and mounted with leather back and edges, and lined with silk. If plain, just briug it inside the cover and lace it with the soft silk lacers, to keep it in place. A pattern can first be made to fit the inagazine it is intended for.

Louise Lona Christie.

## PUTTING UP FRUIT.

Young housekeepers make the mistake often of putting up too much fruit. In my early housekeeping days I know I often overworked in frnit-time, while we frequeutly had more fruit put up than we could possibly use.
I learned, after awhile, wisdon. The surplus of pears I traded with my neighbors
than to buy them. It costs fifty-Ene cent for a quart jar of raspberries just moder ately jammed, and you can buy it as cheap. For a small family, half a dozen of each of the fruits as they come is abundant ellies, a dozeu. Still, even with those it is best not to have too many
A lady writes to ask me about pear jelly Well, I would never waste time with that, as there is uot acidity enough in pears to make a good jelly, and there are so many better things. Rhubarb and apples together make a inuch better jelly
A nice relish for meat is spiced goose berry sauce. Of this we often put up a dozen tumblerfuls. To every five quarts of berries put four pounds of sugar, olte pint of vinegar, two tablespoonfuls each of loves, cinnamon and allspice. Tie the pices in muslin, and put on to cook in the inegar. When lot, add the sugar and berries. Cook slowly one hour; put into tumblers and seal like jelly.
Wild crab-apples make a delightful jelly it is so delicate in color. I have also used them for şweet pickles.
a goor way to do is to make out a list at the beginning of the season, and live up to it if possilhle, heginning with strawberries and cnding with tomato and pumpkiu butter.
at a friend who ate hear passed linin one day, Dut refused positively, another day, the "preserved tonnatoes,", which were the same little yellow things he enjoyed the appetite, sometimes.
Above all, let me advise the yomig housekeeper not to try to do too inul?
There is no need of learning so late int it There is no need of learning so late in lite
how "not to do things:" learn while you how "not to do things:" learn while you
are young. Health and strength are above all, and the poor Indian was right when he said, "Poor American women-too much

Twenty-fiftl to thirtieth rows-Begin with the third row and work to ninth row to tinish scallop.
Repeat from twenty-third row for the length required; then begin a corner working from ninth row.

I can imagine I hear some of the "Honsehold" sisters cxclaim, "What a queer subject to write upon!", Yet how much of subject to write npon!" Yet how mand the finmolid success and the plasure of
the home depends upou economy in the home depend
household matters.
My subject was suggested by a remark of
My subject was suggested by a remark of
a friend at whose house I spent a few dilys.

Crocheted Lace-Corner Turned.
We were old acquaintances, and she felt liberty with mo that she would not otherwisc have felt. As she was setting the table she said, "You see, we eat up all the scraps." My attention being thus drawn toward the table I noticed, besides the freshly cooked food, that there was a saucer of cold peas, one of canned corn, and still another of oatineal. There was no ineal partaken without the presence of thesc scraps.
Now, iny friend was desirons of practicing economy, but had yet to learn that many attractive dishes can be made from the remnants of meals. A person's appetite is enhanced or hindered by the appearance of the table. The "scraps" appearing meal after meal is non-appetizing.
Many dainty dishes can be made from scraps. Take, for instance, rice. It is first put upon the table boiled, and many times there is a saucerful left. Instead of putting it upou the table again, you can make a pudding for dimner, inuffins, pancakes or ritters for breakfast. There are ways of using rice too mumerous to mention. . The same idea can be carried out in other things. Cook-books give many valuable hints in these matters.
I do not think we women who live on the farm take as much pride in our tables as we ought. If we can make dainty dislics of the scraps from the table, and make the unsuspecting men believe they re eating something new, let us do it. cost of the table will not be increased, and the effect will be more pleasing.
M. F. M.

## FASHION NOTES.

Blouses have determined to stay with us for some time to come, and constant variations are brought out for evening wear.
The nicest blouses for the theater and The nicest blouses for the theater and small dimer parties are nade of lace draped over a silk waistband, and with draped silk bretclles coming from the shoulders. Xoung ladies may adopt such rather low, without collar, at the neck.

A charming way to adorn the fashionable three box-plaits on the up-to-date blouse is an applique of jet stars. Long jet fringes hanging from jet appliques on the shoulders form a graceful finish.

A charming flower ruffle can be made of loose clusters of Parma and Russian violets sewn upon a piece of riblon, with an ivory
lace jabot in front and rosettes to conceal lace jabot in front and rosettes to conceal
the fastening at the back. In this way, floral bargains from the sales can be employed with success, and moreover, justify their purchase.

Ready-made stock collars of Dresden ribbon drawn in folds around the neck and tied in a square bow at the back, catch the popular fancy.

Rarely are high heels seen in the street. The military heel for smart octasions and a low, wide hcel for walking reign supreme in the costumes of the best-dressed women

AN OFT REPEATED STORY OF TRUE PHILAN-
THROPY-WHAT CHAS. H. HACKLEY HAS

## DONE FOR WESTERN MICHIGAN.

The most beautiful spot in all this city is inseparably associated with the name of Hackley. Chas. H. Hackley has been in the lumber busiuess here continnously since 1856 , and in that time has anassed a fortune which gives him a rating among the wealthy men of the nation. But with wealth there did not come that tightening of the purse strings which is generally a marked characteristic of wealthy men.
It is no wonder then that the name of Charles H. Fackley is known at home and abroad. His munificence to Muskegon alone represents an outlay of nearly half a million. For the past twenty years he has been a constant sufferer from neuralgia and rheumatisin, also numbness of the lower limbs, so much so that it has serilower limbs, so much so
ously interfered with his pleasure in life Fors some time past his friends have noticed For some time past his friends have noticed
that he has seomed to grow young again that he has seomed to grow young again
aud to have recovered the health whicli he and to have re
liad in youth.
To a reporter for the Press Mr. Hackley cxplained the secret of this transformation "I have suffered for over 20 y cars," he said, "with pains in my lower limbs so severely that the only relief I could get at night was by putting cold water compresses on my limbs. I was bothered more at night than in the day time. The neuralgic and rhenmatic pains in my limbs, which liad been growing in intensity for years, finally be came chronic. I made three trips to the Hot Springs with only partial relief, and then fell back to my original state. I couldn't sit still and iny sufferings began to make life look very blue. Two years ago last September I noticed an account of Dr Williams' Pink Pills for Pale People and what they had done for others, and some cases so nearly resembled mine that I was interested, so I wrote to one who had given a testimonial, an eminent professor o music in Canada. The reply I received was even stronger than the printed testimonial and it gave me faith in the medicine. "I began taking the pills and found them to be all that the professor had told me they would be. It was two or three months be fore I experienced any perceptible better ment of my condition. My disease was o such long standing that I did not expect speedy recovery and was thankful even to he relicved. I progressed rapidly, however towards recovery and for the last six months have felt mysclf a perfectly well man. I have recommended the pills to many people and am only too glad to assist others to health through the medium of this wonderful medicine. I cannot say too much for what it has done for me."
Dr. Willians' Pink Pills contain all the elements necessary to give new life and richness to the blood and restore shattered nerves. They are for sale by all druggists, or may be had by mail from Dr. Williams Medicine Company, Schenectarly, N. Y. for 50 cents per box, or six boxes for $\$ 2.50$

## STRAWBERRY SPONGE-CAKE.

Take the weight of six eggs in sugar and the weight of three in flour. Separate the eggs; put the whites in a howl and the yolks in a large vessel. Adid to the yolks the sugar, which must be powdered, and beat until very light. Beat the whites to a stiff froth; add them to the yolks. Slowly sift in the flour, to which is added a teaspoonful of baking-powder. Turn into a well-greased, large, shallow pan, and bake in a quick oven ifteen or twenty minutes Have ready a filling made as follows: Put half a pint of milk in a farina-boiler to boil. Put one and one half tablespoonfuls of corn-starch, two tablespoonfuls of cold water, two tablespoonfuls of sugar and the yolks of three eggs into a vessel and with an egg-beater beat quickly until it is thoroughly mixed; then sti into the boiling milk and stir until it thickens; then turn out to cool. This should be made before the cake. When the cake is done, turn it carefully from the pan, bottom upward, and spread it while warm with the filling. Cut the cake into halres; stand over one half, thickly and regularly, large strawberries. Now fold over this the other half, thus having two layers of calke, with tilling and strawberries between. Put one cupful of powdered sugar into a bowl; beat one cupful of strawberries with an egg-beater until liquid, and strain through a sieve; add sufficient of this liquid to the sugar to moisten, spread it on top of the cake, and stand aside to barden.

(9)w diousiluld.

Ahouseleepers, the snbject for hiscussion was, "The handies onveniences were mentioned a record of them and send to the FARMA AND Firesine for the benefit of its many house niences and lalor-saving derices possible, and she who tells her neigllbor of some handy thing that will make lighter and
more pleasant the household tasks, confers more pleasant the household tasks, confers
upon her a priceless favor.
The first hady to speak, said: "I believe The first lady to speak, said: "I believe
the handiest thing in my kitchen is a the handiest thing in my kitchen is a
pound-sizc baking-powder can, with holes punched in the side about half way up, to
nse instead of a chopping-linife. In warmuse instead of a chopping-knife. In warm-
ing potatoes, I put them into the pan whole and elopp and stir with the can as they warm, and they are fine, and so little tronble. When cooking calbage, I slice it
eoarsely with a knife, then chop with the cau as it cooks. When making chopped pickles, I prefer the can to a single-bladed chopping-knife.
"The handiest thing in my kitchen," said another, "is myy saw bread-knife. We have all seen a loaf haggled and cut in chunks, but to ent it with a saw-kuife is a
poem. The slices may be as tbin as pasteboard and as smooth as marble
The next speaker was a young lady, but
beiug the elder danghter, was well beiug the elder danghter, was well versed
in honsekeeping. She said: "The handiest thing in our kitchens is only a table made from the frame of a worn-out sewing-
machine, with a pine top four feet long machine, with a pine top four feet long
and two feet wide; but if one has a large family and little room, she will understand how handy it is. A drawer is fitted in under it, and an oil-cloth proects the stove, and is equally easy to reach from either. For ironing-table, mixing-stand is almost indispensable, yet takes less room than an ordinary table, and is easily moved wheu mopping floors, etc., as the (asters that moved the machine still keep Why couldn't all kitchen
tables be fitted with casters?
A lady who had jnst completed a new house and furnislied it thronghout in the most practical way, remarked: "The han-
diest things in our kitchen are cupboards. diest things in our kitchen are cupboards.
Having needed a place for odds and ends, we bnilt a cupboard that fitted into one eorner behind a door, from floor to ceiling. In the upper shelves are lantern, kerosenenails and hammer, soap, etc. Below are rubbers and overshoes, mittens, etc. An-
other is fastencd to the wall, high enough top shelf is partitioned, one side lolding kitchen tooks, the onier, bundles of clean, white rags and cloths for cleaning lamps,
etc. Two shielves below hold vegetabledishes, tea and coffiec pots and canisters salt, pepper and all the things needed in
conking. The table beueath holds the water-pail, and all are but a step from the stove, saring many steps during the day.
I once saw a good sulstitnte for cupboards made from a double row of soap-boxes reaching from floor to eeiling, with cur-
tains of dark calico. A cupboard in the cellar, that shuts up seeurely from miee, is a good thing; and if the doors are of wire
uetting to admit air, so much the better." Among the other handy things menput under anytling cooking that is likely to burn, to prercint them from scorching
A coil of heary, smooth fence-wire, made to fit inside a large graunte kettle, on which off, and cook in them as in a double boiler was another thing mentioned, and almost every lady present expresscd a desire to
lhave one made, so that riee, oatmeal aud all such things could be cooked without stirring or fear of scorching. Two or three ladies agreed that a steamer
was the handiest thing in a kitchen. One said: "In the summer-time I put a pot of
boiling water over my little oil-stove, and with the steamer set over it green bcans in the pot; in the steame I las enougb pared potatoes and ears of
green corn for a dinner for fonr people; also a quart tin pail with a custard or corn-
or dessert. I eover the steamer closely,
and cook a whole meal witb only the fue that would otherwise cook but one article, and we all like the flavor of things that have been steamed better than when cooked in any otber way. Indeed, on is until they have steamed it. Neither will is untin they have stounch in. Neither wil they believe how mnch a large
will hold until they have tried."
"The haudiest thing in my kitchen," says Christic Irring, "is my dish-draiuer It does away with wiping at least the
plates, saucers and cups. Wash them iu plates, saucers and cups. Wash them iu
good hot water with a rery little white oap, pile them in the drainer and rinse ith elear, hot water aud let them stand until needed. The drainer sets in a large, quare meat-pan, at the end of a long table ike the one described in this artiele. It has sared its cost in many ways, and I ould not like to give it up. The dishes al ways sline, and are free from lint." A sweet little girl who was present timdly spoke up, saying, "I fink 'at 'c handist thing would be a 'ittle girl to fill'e dishes. Don't 'oo, nıama?"'
When the langhter that
When the langhter that followed this bands, who had subsided, one of the hus bands, who had called to take his wife
home, remarked that he thought that home, remarked that he thought that about the handiest thing that could be
found was a man to get wood and kindlings, fill the water-pail, make the fires and be generally useful, especially at the table. And the entire company agreed that whether they were the handiest things or not, both the children and the men were nice to have in the kitehen, and were ever welcome.

## IT REALLY DOES SEEM A PITY

"Pity 'tis, 'tis true," and no mistake, that management in their make-up. They do everything in the most difficult manner possible, thereby taking ten steps where ne would suffice.
If they have an especially hard day's work to do, instead of rising letimes, and getting an early start, they appear to court Morphens for an extra half,hour or so that particular morning. If they expect to have regetables for breakfast, they never
think to prepare them the night before. If hey desire to lave warmed-over potatoe for supper, they invariably forget to boil a sufficient quantity at noon, but will build up an extra fre in the afternonn for this especial purpose. These women always they always have, and their mothers and grandmothers have done the same before hem. Their larder is empty, their soiled lothing scattered all over the honse, and yet they must wash. They admit that it
would be better to let the clothes soak over night, but say that they do not like to ather them up on the Sabbatli s left for breakfast and nothing planned for dinner. Everything is topsy-turvy hence the washing is only fairly begn when it might have been almost completed They have not time or thought to pnt o dinner, which is eonsequently the pro-
verbial wash-day dinner-unpalatalle and unsatisfying.
It must have been a young man who had a vivid remembrance of these wash day dinners who auswered his father as follows, wheu asked if his affanced knew aught of honsekeeping
"Oh, no, she doesn't know a thing abont it, jolly! I don't believe she'll clean house onee in
months."
Why can't people learn to have everything ready for a hard day's work the
evening before? How casy it is to the clothes gathered together, sorted, and put to soak if one desires. Not only that, but the breakfast can be partially prepared "wash-day dinner" should not be the best of the week. There are so many delicions dishes that can be prepared in a very few minutes and baked in the oven, clothes are being boiled. And certainly if one "man ages"-with all the excellent washing machines and flnids which are to be had at the present time-there is no need of allowing the family wasl todrag along mutil after ing, the work can be completed and a ver appetizing dinner prepared hy anc cor Then after dinner will come the needed light work and recreation.

## Highest of all in Leavening Power.-Latest U. S. Gov't Report

# Royal Baking Powder ABSOLUTEEX PURE 

canse they appear utterly ineapable of sticking to any one thiug until it is finished. They are frequently stoppiug their work. I do not mean on aecount of neces sary interruptions, but unnecessary onesjumping from one thing to another withont rhyme or reason.
It is wonderful what a vast amount of work eau be gotteu out of the way by conscientiously taking up one thing at a time and without hurry or worry, sticking at it until it is finished, then "laying hold" of the uext thing to be done, and keeping at it until it is "non est," as the Sophinmore said. How does that little verse go that we used to speak in school many, many, many I am not gray-headed yet, however) years ago?

## One thing at. a time <br> And that done well, <br> As I have heard tell

There are some women, though, who appear to have a knack of working deftly and speedily when they once make up their minds as to what had best be done at decide iu a judicions manner which should be done first, consequeutly "they walk around themselves" many times a day. Others do not appear to discriminate be-
tween major duties and minor details. "It tween major duties and minor details. " really does seem a pity."

> Ella Bartlett Smmons:

REFOOTING AND DARNING STOCKINGS.
The other day the old stocking-bag came off from the nail and its eoutents were overhauled. All that were worth it were darned, and the others refooted.
The pattern for refooting was eut from a stocking-foot, and made all in one piece, admitting of but two seams-one at the heel and the other running from the toe to the instep. These were taken on the right side and neatly felled, thins avoiding any mupleasant sensation to the foot.
If hose is seasonably darned, the refoot ing will uot need to take place for a long time. Each girl in the family shonld be Stress on the her own hose each week Stress on the old adage, "A stitch in time she applies it. If she be giveu her own she applies it. If she be given her own
box of darniug eotton, yarns and silks, and suitable needles, it will be an encourage ment.
The Asiatic dyes in darning-silks will be found much more satisfactory than the cotton or wool, as it is much softer and makes a smoother darn, and has the advan tage of keeping its color. This darningsilk connes in all colors, and is also very nice for darning underwear.
A very good way to save work and insure the wearing quality of stockings is to run the heels before they are worn.

Mary D. Si

## OPEN YE THE GATES."

In that glorious day when the saints of God On the wings of morning rise
To their "Father"s house," that To their "Father"s house," that blest abode, The city of Paradise,
They will hear the song that the angels sing In the mansions of the blest,
As they homerrard haste, on joyful wing,
Though as pilgrims here they
Though as pilgrims here they travel on Till the night shall flee away
Of that promised happy day,
Where the jasper walls their radiance fling Nevermore shall shadows come, And the gates of pearl will open swing To welcome the wanderers home. Safe at home at last, in the city fair. By the river's flowing tide, They will "see the King in his beauty" there And the gates he will open wide.
They will swell the carols of joyful praise With their voices glad and free, and the angel choirs their notes will raise
In the song of jubilee. In the song of jubilee.

## LIQUID BREAD.

remember once secing over a public-honse door in Liverpool, "Good ale is liquid
bread." I went into the bread." I went into the
house and said, "Get me a quart of liquid bread." The landlord said, "Ah! first-rate sign, isn't it?"
"Yes," said I, "if it's true.
"Oh, it's true enough; my beer is all
right!" "Well, give me a bottle to take home." He gave me a bottle of this liquid bread. I took it to Dr. Sammelson, an analytical chemist, and I said to him
"I want you to tell me how much bread there is in this wottle."
He smelled it an!l said, "It's beer."
"No, no," said I, "it's liquid bread."
"Well," he said, "if you will come again in a week, I'll tell you all about it." He charged me three gomeas. In a week's bread. The first thing about it was there was ninety-three per cent of water.
"It's liquid, anyhow," I said; "we'll pass that. Now let us get onto the bread." "Aleohol, five per cent."
"What's alcohol?" I said.
"There's the dictionary, you cau hunt it up for yourself."
I hunted it up, and found alcohol described as a "powerful narcotic poison." Well, I thought, this is the queerest description of bread I ever read in my life.
Then he gave me a number of small perThen he gave me a number of small per-
centages of curions things, which he had put carefully down on each corner of a piece of white paper, and which amounted to about a quarter of a thimbleful of dirtylooking powder. That was the bread-two
per "And. there would not be so much as that," said Dr. Samuelson, "if it were Bass or Alsopp's. That is bad beer." there is in it?"
brewer to get the bread out of it, not to put the bread into it."
This is the simple, scientific truth with regard to beer, and the case is stronger practically no nomrishment in them at all.

## alwavs something to do.

Always something to do. No work is ever finished. The same work must be
done over and over again day by day. The weeds grow in the field, the fences fall down, the sheds decay. In the fields of spiritual toil, admonition, comfort, prayer, help, are always demanded. Nothing re-
mains or stands firm. The strong to-day mains or stands firm. The strong to-day
are the weak to-morrow. The helper calls for help in his turn. One day as much as another requires watchfulness for oursel res and helpfulness for others. There is no discharge in this war. But who would cease from toil, or ask to be excused from
the ministries of love, or to be at truce with the agencies of sin? Iu this moral struggle, moral life has its experiences and its conscionsness of being. For noble it eases the tired muscles, repairs the wasted tissue, and gives normal tone to the nerves, preparing us for renewal of the contlict. Grateful alike is this alternatiou of activity and rest. But the weariness of inaction is the paralysis of power, the hopelessness of a prison life. It is of all things the most iutolerable to a uoble spirit, which would rather fall upon the
battle-field than rest, though iu the splen-battle-field than rest, though
ilor and luxury of a palacc.

It is told of General Thomas J. Jackson who became famous as "Stonewall Jack son," that he was a foung man of high ideals. Portions of his diary, written while a student at West Point, have been pub lished, and in these he maps ont with decided lines his future life-his aims, his desires, his motives and his mottoes Taken together, and riewed in the light o his whole life, these illustrate forcibly the grand truth, which was also the most strik ing of his mottoes, "You uay be whatever you resolve to be."
Other of his maxims were these: "Sacrifice your life rather than your word." Let your principal object be discharge of duty. "Disregard public opiuion when it inter "eres with duty." He had also resolutiten out adrocating justice, sincerity, moderation, frugality, industry and silence He had rules for conduct even iu sinall details, motives for action, and these written tails, motives for action, and these
down with clearness and precision.
That this work was not an idle oue, but the determined resolutiou of a young man to bring his conduct up to the highest standard his imaginatiou could conceive, the biography of stonewall Jackson sets forth. The lessou is this: What one man has doue, other inen and women can do. Not every man and woman will grow to be famous, but every unau and woman in this world is capable of working out the ideal which he or she is capable of conceiv iug aud resolving to be.-Harper's Bazar.

## SERIOUS LOSS

The old habit of memorizing large portions of the Holy Scriptures is passing away. The loss can never be estimated New Testamets chapters in the ork, become the possessiou of many, and there is no effort in recalling them. A beloved friend told us recently that he conducted family worship for a long time while convalescent without the use of a copy of the Bible, as sickness had deprived him of the privilege of reading. He felt that he could continue much longer, as there was no sign of exhaustion in the mental supply. A devout friend in the army on the ere of battle had no time to read from his precious Bible, but refreshed himself by repeatiug Psa. xci., as he completed preparations and warched to the front.
Preachers whose words are accurately Preachers whose words are accurately
biblical have a decided advantage with biblical have a decided advantage with
those hearers who love the sound as well as the truth of Scripture phrases.-New Yorl Observer.

## MISTAKES.

In our human life mistakes are both ineritable and invaluable. Without them we could hardly keep house. So a part of ourselves are they, that we should miss hardly auything so much. They are designed to help rather than to hinder us in our mortal pilgrimage. They rouse us, they opel our eyes as nothing else will do. Our deviation from the path ofteu gives us a better appreciation of it. Our mistakes are beacons, warvings of danger and settiug us in the true course. Do not be afraid of mistakes; they have a lesson - you should not fail to learm. "A man who does not know how to learn from his mistakes," know how to learn from his mistakes,"
says Beecher, "turns the best schoolmaster out of his life." He will not allow us to go over the lesson slightly; he so rubs iu our over the lesson slightiy; he so rubs iu our
knowledge that we seldom forget it. For the present grave mistakes are grievous, nevertheless they yield the peaceable fruits of righteousness in the end, to those who
will consent to be instructed thereby.

## NOT IN THE BIBLE

Nine persons out of ten, if asked where the expression, "God tempers the wind to the shorn lamb," cau be found, will answer, in the Bible. But they will be mistaken. This is one of the three or four proverbial quotations generally beliered to be in the Bible, which are not there. It is from Lawrence Stern's famous "Sentimental Journey," in the chapter called "Maria." The other proverbs commonly credited to the Bible are, "Cleanliness is next to godliness," which is found in one of John Wesley's
sermons, and "Pour oil on the troubled sermons, and "Pour oil on the troubled
waters," which is derived from a statement in Pliny's natural history, written eighteen hundred years ago

## 200,000 MEN CURED.

Since 1891 over $200,000 \mathrm{men}$, young, old and middle-aged have used the simple, harmless, recipe which curcd me of lost vigor and weakness from errors and excesses. I send
this recipe free to any man needing it. You can prepare it yoursclf or I will furnisb it, ready for use cheaper than a druggist can. No catch penny, but a sure, simple self-cure Recipe and full directions free by addressing Mb.THOMAS BARNES, BOX 113 , Marshall, Mich

LITTLE CHARLEY FOGLEMAN USED TOBACCO
SINCE BABYHOOD, AND HIS SMOKED AND CHEWED FOR FATHE AST TWENTY YEARS-BOTH
SET FREE AT ASHE-
"Is that true?" asked the News man at Pelham's Pharmacy, as he laid down a letter iu the presence of a dozen interested cnstomers.
"Yes, it is. It was written here on one Fogleman," promptly answered the proprietor.
"You know him, don't you?"
"Certainly; he lices at No. 5 Buxton street. We all know Fogleman is a mau of his word."
"I am glad to hear it. There are so many misleading statements published nowadays that when this came in this morning's mail I came right over to ask you about it. I read the letter three times, but you read it, and you will agree with me that it is almost too good to be true." This is what the letter said:
"Office of Pelham's Pharmacy, 24 Patton avenue, Asheville, N. C., Sept. 12, 1894. Gentlemen-My little boy, now 8 years, began chewing lobacco when three years old by the advice of our family physician, in the place of stronger stimulants. Four or five weeks ago I began giving him No-To-Bac, which I bought at Pelham's Pharmacy, and to my great surprise, and, it is needless to say, my delight, No-To-Bac completely cured him. He does not seem to care for tobacco and is very much improved in health, eats heartily and has a much better color.
"Findiug such remarkable results from the use of No-To-Bac I began myself, and it cured me, after using tobacco, in all its various forms, for a period of twenty years. "I take pleasure in making this plain statement of facts for the benefit of others
(Signed) J. C'. Fogleman." "Ye strongest truthful testimonials I ever read-aud it's true, for I sold him the No-To-Bac."
"What's that?" asked Chief of Police Hawkins, whose manly form attired in the new police uniform, like Solomon in all his glory, came to the door.
"Why, No-To-Bac cures!"
"Cures? Why, I should say so. I have used it myself. It cured me.
ment "Would you object to makiug a state ment of the fact for publication?"
"Certainly not," and the Chief wrote as follows:
"Asherille, N. C., Sept. 25, 1894. Pelhan Pharmacy-I bought one box of No-To-Bac from you some time since. After using
No-To-Bac I fonnd I had lost the desire for tobacco. I was cured
"I have used tobacco-chiefly chewingfor eight (8) or ten (10) years
H. S. Haweins."

Everybody looked astonished and wondered what would next turn up.
"Suppose it don't cure?" some one asked "Then they do the right thing when asked the News man. "Every drugrist in America is authorized to sell wo-To under an absolute guarante to cure money refunded. No-To-Bac is made by the Sterling Remedy Co., general offices in Contreal and New York, and their laboratory is at Indiana Mineral Springs, Incliana, a big health resort they own; it's the place where they give Muc Baths for rhenmatism and skin diseases You ought to know the president, Mr A. L. Thoulas, of Lord \& Thomas, o Chicago." "Yes, of course I do. We ge business from them right along, and they are as good as gold. Well, give me their adrertising books, and I will make a state told ine fer aper about wat you have of good No tobacen spitting and smoking their lives away, and No-To-Bac is an easy gu,
cure, and they ought to know it."

## ILLUSTRATED BY OVER 1,000 PICTURES.

"Beauties and Wonders of Land and Sea" is one mighty aggregation of interesting facts in natural history. Explorers have ransacked the whole known world, and scholars followed up every possible clue in order to discover and explain them. It is full of personal encounters and
daring exploits made in the cause of education. The book is not the work of one day or one man, but of many men for many years.
It covers a field reaching from the Arctic to the Antarctic, as wide as the surface of the earth, as deep as the sea, and as high as
the sky. It might be called a history or biography of Old Earth's beauties and wonders told in pleasing language and
profusely illustrated. The value of such a book in the home and school-room cannot be overestimated.
One of the Most Entertaining, and Instructive Books of the Century.

This picture is taken from "Beauties and Wouders of Land and Sea."

## A Mammoth Book

## Rarest Knowledge.

This book is so exhaustive in its information that the same amount of knowledge could not easily be gathered together outside of a large library, and then only after many long and tedious months of reading in order to sift the good from the chaff:
For example, glance quickly over the chapters devoted to the various feathered tribes living in all parts of the world. You will be astonished to see how much needed knowledge is stored away there. It fully explains the marvelous construction of birds-their bills, fect, feathers and internal anatomy. It tells what they feed upon, how they build their nests, and how and where they rear their young, how long they live, how they carry on communications, ete., etc. As you turn, your attention will be caught by page titles suggesting much that is of great interest and value; as,

## Serpent-eating Birds.

Birds Which Live for 700 Years.
The Largest of All Sea:birds.
The Scavengers of the Sea.
How Birds Win Their Mates.
The Ostrich Used as a Horse.
Birds that Travel Across the Sea.
Prejudice against the Barn•owl.
Birds that Dwell on Ice.
An Eagle Carries Off a Child.
The Sacred Iris Worshiped by Egyptians.
Why Guineas Have Spotted Plumage.
The Parental Affection of the Partridge.
Remarkable Intelligence of a Gander.
And Many Other Interesting Subjects.

Remember that the above is only a quick glance orer a small part of the book, devoted to birds. Then follow's insects, reptiles, fishes, etc., etc., which are even more interesting and instructive.

[^10]This is our own book. We own the copyright, and manufacture it in our own publishing-house. Already we have filled thousands of orders, and are mailing them out in great quantities every day. It contains more pictures and more descriptions than a similar work published in Boston and sold for $\$ 4.50$; therefore, it WOULD BE CHEAP AT $\$ 2 . O O$. But we do not sell you the book-we give it away in order to boom circulation.

This Book Will Be Mailed, Postage Paid, to Any One Who Will send 50 Cents for Farm and Fireside One Year.

[^10]:    BEAUTIES AND WONDERS of Land and Sea is an exhaustive work Natural History. While it is brinful of information, the dry and technical lave been omitted. It is written in pleasing language which can easily be understood by
    all who can read, while it contains one of the most complete collections of Natural History pictures in existence. One of the greatest blessings of this age is the fact that such a book, loaded with a storehouse of knowledge, aud illustrated by over 1,000 pictures true to life, can be had for almost nothing.

    NATURAL HISTORY is one of the most interesting subjects for reading old it is uuexcelled. This should he so. Man is the highest type of God's handiwork. It is the miud and soul of man which gives him this superiority over the lower animals; therefore, it is but natural that uan should rleem it a privilege and a duty to animals; therefore, it is but natural that uan should cleem it a privilege and a duty to
    use his miud and soul iu learning the lessous taught and absorbing the inspirstions stored away in the uarvels of creatiou.

[^11]:    FREE
    One copy of this book will be sent, by mail, to any one who will get two yearly subscribers to Farm and Fireside at 50 cents each. In this case each subscriber will get a copy of this book, and the club raiser will get a book for sending the two subscribers.
