The twenty-seventh annual report for the year extending from Oct. 1, 1912, to Sept. 30, 1913, was, in respect to physical conditions, in marked contrast to its immediate predecessor, for the school is now housed in its quarters in the new Education Building. Enrolment was the largest in the history of the school, there being 19 seniors and 32 juniors. Two important changes in the faculty occurred. Mr. William R. Eastman retired from the State Library and Library School after more than twenty years of service, and Miss Martha Thorne Wheeler, whose term of service was even longer, resigned on account of ill health. Besides the regular lectures by the faculty of the school, forty persons gave 139 lectures. Of the fifty-one students, twenty-eight had held paid library positions before coming to the school. Six members of the staff of the State Library took part of the regular courses, and five other members of the staff were regularly matriculated students. The degree of bachelor of library science was granted to nineteen graduates, and of master of library science to F. K. Walter, the vice director of the school. There were only minor changes in the general plan of the courses. Several bibliographies were prepared on request. The course in law library and legislative reference work was given for the first time, and was elected by nine students. With the rebuilding and reorganization of the State Library practice work is of real value to the library itself and presents real problems of interest to the student. During March practice work in outside libraries was carried on with satisfactory results. A successful innovation was the organization by three of the students under the direction of a library organizer, of two of the smaller public libraries in the western part of the state. The summer school, after an interval of two years,

Juniors

"Large library buildings," by Edwin H. Anderson; "Library buildings" (six lectures), by William R. Eastman; "Library legislation," by William R. Eastman; "Library conditions in the Far West," by Franklin F. Hopper; "Children's books," by Caroline M. Hewins; "Library buildings from the architect's point of view," by Edward F. Tilton; "History of education" (first of four lectures), by Louise Connolly.

Seniors in School and College library course

"School department in the public library," by Caroline M. Underhill. Seminar with Isadore G. Mudge and Marie A. Newberry, on visits to school and college libraries; visits to libraries of Hunter College, City College, New York University, and to the Morris, Wadleigh and Brooklyn Girls' High Schools.

Seniors in Advanced reference and cataloguing course

"History of bookbinding" (two lectures), by Elizabeth C. Stevens; "Bookbinding" (two process lectures), by Elizabeth C. Stevens, at her bindery in New Rochelle.

Seniors in Administration

"Library's relations with the municipality," by Franklin F. Hopper; "Rural library extension," by Marie A. Newberry; "Work of the order department," by Franklin F. Hopper. Visits to library furniture and supply places; visits to the Nurses', University, Union and Greenpoint settlements, also to Greenwich House; "Work of 'The Lighthouse' for the blind" (lecture given at The Lighthouse), by W. I. Scandlin.

The junior library visits have been scheduled as follows:

- April 8. Columbia University, Teachers' College and Avery Architectural Library.
- April 15. Brooklyn Institute and Children's Museum Libraries.
- April 22. Municipal reference branch of the New York Public Library and Bureau of Municipal Research.

April 29. City College and Hunter College Libraries.

May 7. Newark Public Library, Business branch and Barringer High School Library.

Much kindly hospitality, which has been thoroughly appreciated, has been shown the school on these visits. They have been regarded as a very valuable part of the term's work, and the quizzes have been exceedingly interesting exercises.

Three graduates and two seniors recently passed the examinations for high school librarianships, given by the Board of Education.

Four of the juniors spent two days in Essex Co., N. J., helping in the social survey of that county, the small town of Irvington being the immediate object of observation.

Eight juniors are pursuing Documents course II, under Miss Hasse's instruction, doing intensive work on the U. S. Census publications.

A part of the school's exhibit at Leipzig consists of Miss Marie A. Newberry's thesis on "The rural school library," and a bibliography, "References to material on European novelists and their work, from 1900-April, 1913," by Miss Elizabeth Baldwin, the former in printed form.

Mr. Avè-Lallemant, of the junior class, has translated the school circular into German, for use in Leipzig.

William Warner Bishop, of the Library of Congress, will be the school's commencement speaker on June 12.

APPOINTMENTS

Mrs. Engstfeld (jun., 1912), chief cataloger, Birmingham (Ala.) Public Library.

Miss Ewing (jun., 1913), librarian, Conshohocken (Pa.) Public Library.

Miss Gearhart (jun., 1914), cataloguer, documents division, New York Public Library.

Miss Latzke (jun., 1913), indexer, *New York Times Index*.

Miss Johnston (sen., 1914), assistant, Cedar Rapids (Iowa) Public Library.

Mr. Dolezal (jun., 1914), assistant, stack department, New York Public Library.

MARY W. FLUMMER, *Principal*.

SIMMONS COLLEGE LIBRARY SCHOOL

Visits were made during the month to the Brookline Public Library, and to the Social Service Library, 18 Somerset street.

The Book selection class enjoyed a lecture on Mrs. Mary Schenck Woolman, and one by Mr. H. G. Wadlin. The latter spoke of "The principles of book selections, and aids

in selecting"; he sketched also the practice of the Boston Public Library.

The final courses in Library economy for the year are Indexing and Library administration. In the last named Mr. Ward gave an hour to the subject of "Branch libraries" and Miss Hitchler to "The organization of a catalog department."

May 25-June 5 was devoted to the final examinations, and the term closed with commencement on June 10.

Mr. Belden, Mr. Bolton, Miss Donnelly and Miss Hitchler attended the A. L. A. conference at Washington.

SUMMER COURSES

The summer class will meet from July 6 to Aug. 15. The course includes instruction in cataloging, classification, library economy, and reference work, and is planned to be especially helpful to women who hold positions in the smaller libraries and who are unable to undertake longer courses of study. Instruction will be given by the director, June Richardson Donnelly, and by Harriet Rosa Peck, librarian of the Rensselaer Polytechnic Institute, Troy, N. Y.; Florence Tolman Blunt, reference librarian of the Public Library, Haverhill, Mass.; Mary Elizabeth Stafford Root, children's librarian of the Public Library, Providence, R. I.; Helen Clark, A. B., and Margaret Ridlon, S. B.

Outside lecturers will be Charles Knowles Bolton, librarian of the Boston Athenæum; Charles Francis Dorr Belden, librarian of the State Library of Massachusetts; J. Maud Campbell, secretary of the work for foreigners, Free Public Library Commission, Massachusetts, and Frances Rathbone Coe, organizer, Somerville Public Library.

Fee for the general course will be \$20, or for each individual subject \$5. A special course for children will be \$10.

CARNEGIE LIBRARY OF PITTSBURGH—TRAINING SCHOOL FOR CHILDREN'S LIBRARIANS

Twenty-one members of the junior class and three seniors are to attend the Conference of the A. L. A. Miss E. M. Smith, acting-registrar, will conduct the party, and the Hotel Gordon will be headquarters for the school. Because of the trip to Washington, the usual recess between the spring and summer terms will be postponed until the week of June 1.

Miss Caroline Hewins, librarian of the Hartford Public Library, lectured to the school on April 29 on "The work of the Hartford Library."

Mr. Janardan S. Kudalkar, director of state libraries, Baroda, India, visited the school on April 29.

During the week of April 20, Mrs. Gudrun Thorne-Thomsen gave ten lectures on literature and story telling. One lecture, upon "Educational value of literature for children," was given in the evening at Lawrenceville branch and was open to the public.

ALUMNAE NOTES

Jasmine Britton, 1911, has resigned her position in the Spokane Public Library to become superintendent of the children's department in the Los Angeles Public Library.

Ethelwyn Manning, 1910, has resigned her position in the Public Library of Burlington, Ia., to become assistant in the Public Library of Milton, Mass.

Ruth A. Weldon, 1908, was married in April to Mr. John Kelly.

WESTERN RESERVE LIBRARY SCHOOL

The notable work of the Cleveland Federation of Charity and Philanthropy in unifying the spirit of good will of 55 organizations of Cleveland engaged in charitable and philanthropic work, was presented in a most interesting manner to the students, April 21, by Mr. C. W. Williams, executive secretary of the Federation, who expressed his belief in the important help that the public library can render in any constructive movement for community welfare.

A feature of the course in "The public library and community welfare" is the survey or investigation for the Woodland branch of the Cleveland Public Library, which is now being made by the Library School students. Mrs. A. S. Hobart, the branch librarian, gave a talk, preliminary to the first visit, on the general conditions of the section of the city to be investigated; and Miss Mildred Chadsey, commissioner of housing in the Department of Public Welfare, who has had wide experience in making investigations, gave practical suggestions as to methods, etc. It is hoped that the facts obtained from the house to house visitation of the neighborhood, will be of great value in the plans for future work at the Woodland branch. Two lectures on "Public speaking" by Professor Woodward of Adelbert College are to be given before the end of May, and the concluding lecture of the course will be given by Mr. S. H. Ranck, librarian of the Grand Rapids Public Library, on June 12.

Miss Laura H. Wild, professor of Biblical

literature at Lake Erie College, spoke to the class May 5, on "Biblical and religious literature," as part of the Book selection course.

The director visited Hiram College, May 1, to talk to the young women students on "Librarianship as a vocation."

Two of the out of town trips in connection with the Library Administration course are scheduled for May, these being Lorain, Ohio, where Miss Elizabeth Steele, a graduate of the school, is librarian; and the Carnegie Library of Pittsburgh.

The return to the city of Miss Julia M. Whittlesey, former director of the school, from a winter in the South, afforded the faculty and students an opportunity to meet her "over a cup o' tea," after a talk given by Miss Whittlesey to the students.

At the A. L. A. meeting, the school will be represented by the dean and the director.

ALICE S. TYLER, *Director.*

SYRACUSE UNIVERSITY LIBRARY SCHOOL

Dr. Arthur E. Bostwick gave an address before the students and faculty of the Library School, Feb. 12, on the "Art of re-reading." The university public was invited to attend and about 150 persons availed themselves of the privilege.

Mrs. Edna Lyman Scott gave a series of five lectures on Children's work during the week of March 2. Her lectures were attended by many of the kindergartners and primary teachers connected with the public schools of the city.

Mr. William H. Watson of the New York State Education Department, who has had long experience in the library system of California, explained to the school the provisions and operation of the California county library law.

Mr. Theodore W. Koch, librarian of the University of Michigan, gave a finely illustrated lecture, April 8, on the "History of the arts of illustration."

E. E. SPERRY, *Director.*

RIVERSIDE PUBLIC LIBRARY—SUMMER SCHOOL

The summer school will be conducted this year from July 6 to Aug. 15, and the course is intended for those who have had some library experience.

Joseph F. Daniels, librarian of the Riverside Public Library, will have charge of the school and will give courses in business management of libraries and methods used in public, college and high school libraries.

Other teachers will be Lillian L. Dickson, head cataloger in the library; Helen Evans, reference librarian; Madeline Willard, in charge of the Arlington branch; Grace Hill, instructor in Simmons College Library School; Percy Hambrook, of the Pacific Library Binding Company; Helen L. Coffin, formerly library organizer in Illinois; Alice M. Butterfield, Riverside Public Library; Theodora R. Brewitt, principal of the training class of the Los Angeles Public Library, 1913-14, and Mignon Baker, librarian of the Girls' High School at Riverside.

The fee for the course is \$25, which covers all equipment except the students' note books. The bulletin giving information concerning this course, also has notes on the training class and the winter course also maintained by the library.

Reviews

BAKER, Ernest A. A guide to historical fiction. Macmillan (Routledge). \$6 n.

Librarians familiar with the two small volumes entitled "History in fiction, English," and "History in fiction, American and foreign," will scarcely recognize at first glance their close relationship to this greatly enlarged one volume edition which forms a companion volume to the new "Guide to the best fiction," published in 1913. The following statement quoted from the compiler's preface gives in brief a story of both editions.

"The original germ of what has grown into a sort of atlas of historical fiction was an appendix to 'A guide to the best fiction,' published in 1903, really forming a chronological index to such novels included in the general list as were concerned with past times. The appendix then became the nucleus of a more comprehensive guide to this kind of fiction which was published in two volumes as 'History in fiction,' 1908. Of this last the present book is to some extent a new edition; but it is also a good deal more, the work of preparing a much amplified edition of the 'Guide to the best fiction' having brought to light a great number of historical stories that had escaped notice." As in the previous edition, "the standard of selection has been the extent to which a story illustrates any given period of history," and as before "the word historical has been given a wide interpretation so as to embrace stories that in any way whatsoever portray the life of the past, even

though actual persons and actual public events have no place in them."

Not only have many new titles been added, and the volume brought to date through 1912, but the work has been thoroughly revised and the annotations rewritten and expanded. The latter aim usually to give the historical bearing of the story rather than characterization or criticism. The general arrangement remains the same as before, first by country, and chronological under country by period or events treated. Stories for children are so marked; footnotes contain annotated entries of fiction written contemporaneously with the period covered. The book is equipped with an index of authors, titles and subjects (146 pages) which easily doubles its value. On the whole the index is accurate and satisfactory, though there are minor errors which were perhaps almost unavoidable. An inconvenience arises through the method of indexing works under an author. The plan followed has been to arrange by the paging which is given first, followed by title of book. This is a disadvantage in the case of prolific authors like Henty, where if one wishes to find a certain book, he must examine the long unalphabetized list before locating it. The habitual consulter of the index will of course soon form the practice of looking up the entry under the title itself rather than under the author. It seems ungrateful to find any fault with such a wealth of material amassed at the expense of painstaking and unremitting effort, yet since the compiler had in mind the needs of teachers, students and readers of historical fiction, the book would have been more valuable to these classes of users if it had aimed at a selection rather than a complete bibliography. As it stands it is notably worth while to the bibliographer and for reference in the large library. But for individuals who consult it as a guide to reading, its broad inclusiveness will be bewildering. There are many pitfalls here for all who lean heavily on it for selective purposes. The trained children's librarian will shudder at the inclusion of the trashy works of Edward Ellis and Stratemeyer, but a public school teacher, less sophisticated in regard to children's literature, may be discovered recommending these books to her classes for supplementary reading. Of course equally poor fiction is found among the adult books, and the same difficulty in selection arises unless the reader is an expert in this field. The value of the book would be tremendously increased if in another edition the compiler

would find it practicable to star the best books in each subject or to introduce critical comment in his notes which would warn the unwary against worthless stories.

MARY E. EASTWOOD.

The treatise on Modern American library economy by Mr. Dana has reached Part 7, Branches; and the latest section no. 2 is concerned with high school branches.

The work has not been truly that of a branch library for the adult citizens of the neighborhood though invited to use the room have done so to so small an extent that their use is negligible. This section then becomes really a description of an attempt to bring directly to the notice and the service of high school pupils and teachers printed matter of a wider range of interest than text books or even "collateral" reading. This is a highly desirable aim in the development of public libraries, and wherever attempted has resulted in bringing into closer relations two great educational institutions.

In Newark the high school library has 6000 volumes as a permanent nucleus classified and managed according to the practice of the public library. To this collection are added drafts from the public library collection as need arises. Beside the bound volumes a great many pamphlets are preserved, supplemented by much multigraphed material on single sheets. There is a "duplicate" collection of the latest novels which seems to operate in a way somewhat contrary to that expected of such a room.

Books are lent for two weeks with special privileges to teachers and of renewal; reference books are lent during the hours the school is closed. Fines are regularly charged and long over-dues collected by the regular library messenger.

Six lessons on the use of the library, consisting of a lecture with prescribed study and work are given as a part of the English course; beside some direct individual instruction.

The public school authorities furnish the room; the public library the books and periodicals, repairing and rebinding them. The librarian, who must be a graduate of a college and of a library school, and have had previous experience in high school work, is selected by the public library and paid by the Board of Education; she gives all of her time to the school.

In other cities of the country more or less similar plans are already in operation; some-

times the high school and the library share equally the time and the salary of the librarian and make much closer connections between the school and the main library building; in others the school authorities maintain the library without any connection with the public library system; in some places adult citizens use the school library to an appreciable extent; in others all the activities are with children.

The reviewer feels personally that most good will come through the close coöperation between the school and public library which follows a joint agreement and sharing of costs. This naturally tends to the widening of the school horizon and laboratory processes and accustoms young people and teachers to using the public library themselves, for other than special reserve and text book material.

D. B. H.

KAISER, John Boynton. The national bibliographies of the South American republics. Preliminary list. Boston Book Co., 1913. 19 p. 8°.

Pan-American history is making rapidly in these days, and prophecy in that connection is hazardous, yet it is probably safe to assert that the recently awakened interest in South America—recent so far as our own country is concerned—has an economic basis and will steadily increase. Far-sighted librarians who are endeavoring not only to meet the new demand, but to provide for the broader requirements of the future will undoubtedly find their efforts justified. With this coming development in mind, Mr. Kaiser has laid the foundation for a reference list which shall some day cover the South American field as the New York State Library list of "Selected national bibliographies" covered the American, British and European field in 1908. Drawing mainly upon the well-known bibliographies of bibliography as well as upon recent works by Coester and Bingham, he has made a good beginning with 86 titles. For the most part these are titles of actual bibliographies or of literary surveys by South American authors, but Mr. Kaiser has wisely included the catalogs of certain libraries, chiefly national libraries, for the sake of the large proportion of South American imprints which they contain. Of the last mentioned class, that of Argentina is particularly valuable for its separate list of books by Spanish-American authors. While crediting this distinction to Argentina, it should be noted as remarkable that over half the titles in the list bear im-

prints from Santiago de Chile. Equally noticeable, but hardly surprising, is the scarcity of material covering the smaller countries like Ecuador and Venezuela.

The importance of fundamental work along this line at the present time is almost self-evident. It is to be hoped that Mr. Kaiser himself may some day be able to undertake the fuller list for which his present contribution prepares the way.

W. N. S.

SAYERS, W. C. Berwick. A short course in practical classification with special reference to the decimal and subject schemes. London: The Library Association, 1913. 48 pp.

The intricacies of an elaborate scheme for library classification are confusing to any student beginning the subject. In this "short course" which is reprinted, with corrections, from the *Library Association Record*, Mr. Sayers has outlined in ten lessons a study of the Dewey Decimal Classification and the Brown Subject Classification, with a comparison of the two systems and references and questions on the general principles of scientific classification. Unfortunately American librarians know but little of Mr. Brown's Subject Classification, but any one teaching or endeavoring to learn the Dewey system will be greatly assisted by this little book of 48 pages.

Mr. Sayers makes a concise analysis of each of the divisions of the decimal classification giving a lucid explanation of the particularly perplexing subjects in each group. This is especially true of the 300's, 500's and 600's where it is so difficult to differentiate between the pure and applied sciences. He also notes purely American aspects of this classification; for example "379, public schools, means state-supported schools (an American use differing from our use of 'public' schools, which means such schools as Eton, Harrow, etc.) English public schools would be 373".

In this course the study of the divisions for philology and literature are combined into one lesson and two lessons to the study of the history sections. Mr. Sayers follows the logical order in presenting the subject by beginning with the 100's, and taking the divisions in numerical order through the classification with the one exception just noted. Many teachers of the decimal system find it advisable to begin with the 900's and work backward. That the average student makes many mistakes with this section is true, but it is the basis of so much in other parts of the system that it seems to be the practical founda-

tion on which to begin a study of the subject.

The general principles to be observed in classifying a library are excellently stated. Rule (9) "Place a book where it will be most used" should be the motto of every classifier. Each lesson suggests readings, gives a list of books for practice work and closes with a "Test in theory," which would require considerable reading and thought.

F. L. D. GOODRICH.

RAE, Walter S. C. Public library administration. London: George Routledge & Sons, 1913. 132 p.

This little booklet is a primer of British public library administration somewhat comparable to Dana's "Library primer" and Miss Plummer's "Hints for small libraries." It is designed particularly for the use of students who are following the Library Association syllabus. The thirty-six illustrations, chiefly of furniture, fittings and library records, are helpful and the little book is a model of compression and clear statement. Its six principal divisions are Arrangement of public rooms; Special departments; Administration of departments; Lectures (which are emphasized very much more than this subject would be in an American book); Book binding and repairing; Aids to readers. There is not a word about library service or work with children. It is pocket size, bound in a sort of limp or flexible leather with round corners. It has a brief index. The author is chief librarian in Fulham, London, and is connected with the lectures and instruction in connection with the Library Association syllabus which are offered in the London School of Economics.

Librarians

Changes as follows were made at the last meeting of the library board at Milwaukee, Wis.:

Miss Margaret McIntosh was appointed to take charge of the transportation department; Miss Sybil Barney was put in charge of the book selection and Miss Lillian Carter of the catalog section. Miss Margaret Dousman was granted a six weeks' leave of absence to attend the New York Library School.

BARKER, Sarah P., has succeeded Miss Harriet Crombie as librarian of the Public Library at Nashua, N. H.

BRITTON, Jasmine, of the Spokane (Wash.) Public Library staff, has been appointed head of the juvenile department at Los Angeles, succeeding Miss Stella Beckley, resigned. Miss Britton went from the Seattle Public Library to the Pittsburgh Training School for Children's Librarians, and since her graduation has been in charge of the children's work at the Spokane library.

BROWN, Zaidie, since 1910 organizer of public libraries for the Massachusetts Free Library Commission, has been appointed to succeed Miss Victoria Ellis as librarian at Long Beach, Cal. Miss Brown is a graduate of Leland Stanford University. She studied a year in the New York State Library School and then was made an assistant. Later she taught a library course in the Simmons College Summer School. For a number of years she was library organizer for the New York State Educational Department and a member of the staff of the New York Library School, and in Brookline, Mass., she was employed as assistant librarian for four years.

CLATWORTHY, Linda M., formerly librarian at Dayton, Ohio, may again be addressed at her home in Estes Park, Col. She has been spending the winter in California upon invitation of the county library at Santa Barbara, for which a new dictionary catalog has been planned and introduced.

COE, Mrs. Frances Rathbone, for the past year and a half doing special revising on the catalog of the Somerville (Mass.) Public Library, has qualified for and been appointed to the regular permanent staff as "supervisor of circulation."

DAVIS, Elizabeth L., New York State Library School, '13-'14, will go to Mount Holyoke College Library in September as general assistant.

DEAN, Mildred, children's librarian in the Davenport (Ia.) Public Library, has resigned on account of her father's serious illness, and has gone to her home in Eau Claire, Wis.

GANNON, Viola, until recently a member of the staff of the Trenton (N. J.) Public Library, was married April 28, to Louis C. Taylor, of Washington, D. C.

GRAVES, Charles E., New York State Library School, '13, has been appointed exchange assistant at the University of Illinois Library.

HALL, Grace E., who completed the ap-

prentice course at the Public Library at Greenfield, Mass., has been appointed assistant in the loan department of the Tacoma Public Library for six months beginning April 16, 1914.

HARTMANN, Astrid, New York State Library School, '13-'14, will return to her former position in the Trondhjems Folkebibliotek, Trondhjem, Norway, at the end of the school year.

HOLMES, Florence I., B. L. S., New York State Library School, '12, has been engaged to assist temporarily in the cataloging and general work of Middlebury College Library.

HOPKINS, Julia, of the Library School of Pratt Institute, has been appointed head of the training class in the Brooklyn Public Library, a position recently created by the board of trustees. The appointment will take effect on Sept. 1. The appointment was necessary owing to the fact that Pratt Institute will not be able to train apprentices for the Brooklyn Public Library after the present school term on account of the discontinuance of the normal course in their library school. For the last few years the training class of the Brooklyn Public Library has been used by the student teachers of Pratt for practice, and this arrangement proved advantageous to both institutions. Miss Hopkins has had broad experience and training. She is a graduate of the New York State Library School at Albany, has been librarian at Bryn Mawr College, branch librarian in the Pittsburgh Public Library, head librarian of the Public Library of Madison, Wis., and afterward was an instructor in the Library School of Drexel Institute, Philadelphia, from which place she went to Pratt Institute.

HUTT, Katherine Mae, until recently librarian at Westport, Ct., was married in New York, April 15, to Frank Harper Bissell, a New York architect. After June 1 Mr. and Mrs. Bissell will be at home to their friends in Winfield St., East Norwalk, Ct.

JOHNSON, Jeanne, who was appointed acting head of the catalog department of the Tacoma Public Library on the resignation of Miss Kate Firmin, Mar. 1, 1914, has been appointed head of the department. Miss Johnson attended the Pratt Library School 1911-12.

KERR, Willis H., who is librarian of the State Normal School at Emporia, Kan., has been chosen to the presidency of Bellevue

College in Bellevue, Neb. He succeeds Rev. S. W. Stookey, who resigned several months ago. Mr. Kerr is a graduate of Bellevue and his father was head of the institution for fourteen years, leaving it about eight years ago.

KOCH, Theodore W., who is at present in Leipzig in charge of the American exhibit at the International Exposition of Book Industries and Graphic Arts, was presented to the king of Saxony on the occasion of the official opening of the exposition. The king was particularly interested in the large framed pictures of the Library of Congress and the New York Public Library and made inquiries as to American library systems.

LASSEN, Harald H., New York State Library School, '11-'12, has resigned his position as assistant librarian of the Kjöbenhavns Kommunens Folkebibliotekes to become librarian of the Biblioteket Vejle By og Amt, Vejle, Denmark.

LEWIS, Willard P., B. L. S., New York State Library School, '13, and Harriet E. Stillman, of Watertown, N. Y., were married on April 9. Mr. Lewis, who is at present librarian of the Albany Y. M. C. A., will go to Waco, Tex., on Sept. 1, as librarian of Baylor University Library.

LYTLE, Mary, formerly reference librarian at the Tacoma Public Library, has been appointed assistant librarian in charge of the reference department. Miss Lytle attended the New York State Library School 1908-9, and was formerly librarian of the Sedalia (Mo.) Public Library.

MACKENZIE, Annie, for twenty-five years a member of the Pratt Institute Library staff, has been granted a six months' leave of absence, which she will spend abroad.

MONRAD, Anna M., librarian revisor of the Yale University Library, has received from the American-Scandinavian Foundation a scholarship to study Scandinavian literature and history at Copenhagen University, and the arrangement of books at the Royal and the University Libraries in Copenhagen.

PINKERTON, Helen, assistant in the loan department of the Tacoma Public Library, has been temporarily transferred and placed in charge of the McKinley Hill Branch Library. Miss Criswell, formerly in charge of the McKinley Hill Branch of the Tacoma Public Library, has been placed temporarily

in charge of the station at Rhodes, a large department store of the city.

RICHARDSON, Louise, of South Carolina, a graduate of Pratt Institute Library School, has been appointed children's librarian at Hibbing, Minn., and began her work there May 1.

ROY, Myrtle, assistant librarian at the Free Public Library at Summit, N. J., for some time, has announced that she will resign early in June and go to her home in Nova Scotia. She will be succeeded by Miss Amelia Robie, a graduate of Pratt Institute of Brooklyn.

RYDER, Olive, librarian of the Meadville (Pa.) Free Library, has offered her resignation, to take effect July 1.

SEIP, Karen, New York State Library School, '13-'14, has received an appointment as assistant in the Bergens offentlige Bibliotek, Bergen, Norway.

SLOMANN, Vilhelm, New York State Library School, '14, has gone to the John Crerar Library, Chicago, as temporary assistant. He expects to finish his library school course *in absentia*.

SMITH, Alfhild A., New York State Library School, '13-'14, has been notified of her appointment as assistant in the Trondhjems Folkebibliotek, Trondhjem, Norway.

STILLWELL, Howard M., who has been in the service of the Princeton University Library, died in Princeton, April 26. About a month ago he was forced to give up his work temporarily in the library. Heart disease with complications was the cause of his death.

STONE, Ruth, who has been librarian at the Hepburn Library in Colton, N. Y., since its opening, has resigned.

TAFEL, Leonore A., Drexel, 1914, has been appointed assistant in the Public Library at Detroit.

TYNG, Mrs. William, has been appointed librarian of the recently organized library at Roselle, N. J.

WEST, Elizabeth, archivist in the Texas State Library, has been elected president of the Texas Librarians' Association to succeed State Librarian E. W. Winkler.

WINANS, Miss Euphemia, who since June 1, 1897, has been employed in the order division of the reference department of the New York Public Library, died on April 29, 1914.

THE LIBRARY WORLD

New England

MAINE

Farmington. Miss Belle W. Gilman, who died in Boston, April 25, left \$5,000 to the Public Library here.

NEW HAMPSHIRE

Concord. By the wills (identical in wording) of Miss Emily Conant and Miss Eliza A. Conant, of Nine Acres Corner, who died within four days of each other at the ages of 90 and 92 respectively, the sum of \$1,000 was left to the trustees of the Concord Public Library.

Manchester. It is not now expected that the interior of the new library building will be finished and ready to receive the books before midsummer. Under the direction of Miss F. Mabel Winchell, the librarian, the preliminary work of preparation for the moving has been in progress since the first of April. Much recataloging and reclassification is to be done before the books can be shelved in the new building, where the various departments for the first time will have separate rooms.

Sugar Hill. Mrs. Elizabeth Thomas Richardson is to give a new library building to the town in memory of her husband, the late Professor Charles Francis Richardson, of Dartmouth College. It will be a story and a half building with low overhanging roof. Other gifts obtained through the efforts of Miss Jerusha E. Parker, the librarian, will be devoted to the purchase of site and laying out of the grounds.

MASSACHUSETTS

Boston. East Boston people are now able to use the branch at 276 Meridian street. It is a two-story structure with high basement, and with the land cost \$100,000. Miss Ellen O. Walkeley, the custodian, and her six assistants, directed the moving of the 15,000 or more books from the old library quarters in the Austin school on Paris street. In the basement is a lecture-room, seating more than 300 people, with a separate outside entrance, as well as an entrance from the main floor. There are two entrances to the main floor, one for children and one for adults. Practically the entire main floor is devoted to the children, there being seats for 110 at large round tables. On the second floor is the

adults' reading-room, with seats for 96 at oblong tables. In addition there are the custodian's office, lunch and work rooms. The East Boston branch of the Boston Public Library is the oldest branch of any size of any public library in the United States. It was established in 1870, and for years was quartered in a building on the site of the present new Court House. Two years ago it was removed to Paris street, where it has been located until the present building was completed.

Boston. An exhibition of books and pictures to commemorate the 350th anniversary of the birth of Shakespeare has been placed in the fine arts department. The exhibition is arranged in the following groups: 1. Original and early editions of his works, comprising the four folios of 1623, 1632, 1663 and 1685 of the collected works; the first American and the first Boston editions; all the quarto editions of the plays published before that of 1700, either originals or facsimile reprints. 2. Translations in foreign languages. 3. Shakespeare's autograph signature in the library copy of North's "Plutarch" of 1603, and facsimiles of other signatures. 4. Commemorative medals. 5. Shakespeare's library classics, schoolbooks, dictionaries, etc., and early romances, novels, poems and histories, used by Shakespeare as the foundation of his dramas. 6. Early notices of Shakespeare and his work, and allusions to him, in books published before 1700. 7. English dramatists and poets; original editions of the works of Shakespeare's contemporaries published during his lifetime. 8. Novels and plays in which Shakespeare is a character, or which relate to him. 9. The birds of Shakespeare. Illustrations of some of the birds mentioned in his plays. Shakespeare's garden; pictures of flowers mentioned in his plays. 10. Portraits of Shakespeare. 11. Portraits of his contemporaries. 12. Scenes and characters in Shakespeare's plays. 13. Shakespeare's England; scenery, architecture, costumes and customs of England in Shakespeare's time.

Cambridge. The library of the Diocese of Massachusetts, now resident in the Diocesan House, is to be removed to the Episcopal Theological School, a special place having been arranged for it in the John Gordon Wright Memorial Library. There are about

5,000 books in the collection, dealing for the most part with the history of the church in Massachusetts. A special fund is provided for the care of these books.

Charlton. A bequest of \$1,000 to the town of Charlton for the support of the public library is contained in the will of the late Edward A. Lamb.

Lancaster. By the will of the late Charlotte Taylor Lane, filed in New York, \$1,000 is left to the town library.

New Bedford. The collection of pictures, pamphlets, autographs and books relating to printing, newspapers and newspaper men gathered by the late William L. Sayer, is left by his will to the city of New Bedford, for the use of the Free Public Library, upon condition that it be kept together, and that each book and pamphlet shall retain permanently Mr. Sayer's bookplate.

Orange. This town's new \$50,000 library, the gift of Mrs. Almira E. (Wheeler) Thompson, in memory of her late husband, John W. Wheeler, was dedicated April 17. The building is an adaptation of the French renaissance, with basement and one finished story, the foundations of which are of solid concrete. The front portion, which is 60x32 feet, contains fuel, storage and boiler-rooms in the basement, and adult's reading-room, delivery-room, and children's reading-room on the first floor. The rear portion, with dimensions of 54x36 feet, contains stairway with entrance from Grove street, stack-room, librarian's room, workroom, storeroom and toilet-room. A historical and relic-room is located under the stack-room, this being provided for the exhibit of the Orange Antiquarian Society. The underpinning and steps of the building are of Fitchburg granite, fine cut, and the superstructure is of brick, with Indiana limestone trimmings. The roof is covered with green slate.

CONNECTICUT

Meriden. For the third time since its erection, the Curtis Memorial Library was entered April 20. The burglars went through the desk drawers, but got nothing of value. Two other attempts have been made to rob the library. The first on Aug. 20, 1908 was successful, the persons entering the building taking all the money in the drawers. The other attempt was Oct. 13, 1910, when nothing of value was obtained.

Middle Atlantic

NEW YORK

Belfast. At a meeting held by the Hawthorne Ladies' Literary Club and friends, the announcement was made that a friend, who wishes to remain unknown for a while, will build for the town an \$8000 library if it will be satisfied with such a structure. Although the donor is not known, it is suspected that he is a wealthy Olean man who was born in this town.

Brooklyn. An exhibit of pictures made by the cutting and assembling of colored papers is now on view at Richmond Hill branch of the Queens Borough Public Library. The pictures are made by cutting out of colored paper houses, paths, clouds, etc., and superimposing these one upon the other. A knowledge of color and perspective is, of course, necessary for artistic effects. These pictures are the work of Miss Kate Frankin of Flushing. There are about twenty-six, framed and glazed.

Carmel. The Reed Memorial Library, recently completed, was turned over to the Literary Union early in May.

Fairport. Andrew Carnegie has offered a gift of \$11,000 to the village of Fairport for the erection of a new public library building on the usual conditions that the village furnish a site and guarantee to expend an amount at least 10 per cent. of the gift annually for maintenance. The Public Library has for some years felt the need of additional room and facilities, having been housed in one room in the second story of a business block. Its maintenance has been provided by the school district formed by the village of Fairport. The matter of a site will be taken up at once with the idea of accepting the gift.

Franklinville. The proposition for the town of Franklinville to raise \$660 annually for maintenance of the proposed public library was carried by a majority of 49 at the special election April 22. This will insure the building of the new library this summer at a cost of about \$7500. C. A. Blont, of Washington, D. C., a former local man and graduate of Ten Broeck academy, donates \$5000 and the Carnegie Corporation will provide the balance.

New York City. George L. Rives, formerly first vice-president, has been elected president of the board of trustees of the New York Public Library to fill the vacancy caused by the death of John L. Cadwalader.

New York City. In the recent "Exhibit of better industrial relations" held by the business men's group of the Ethical Culture Society, the New York Public Library had on display a traveling library typical of the ones placed in factories and stores throughout the city. The library also had for free distribution its 46-page pamphlet called "Facts for the public," and the many reading lists it has prepared on engineering and the industrial arts and trades.

New York City. Friends of Samuel Putnam Avery propose to strike a medal in his honor, in appreciation of his contributions to the fine arts and in commemoration of his gift of the Avery Library building to Columbia University. The medal will be struck from a design by Victor D. Brenner.

New York City. The Public Library is to be made the depository for the records made by the Modern Historic Records Association, of which Herbert L. Bridgman is president. An expedition is now being fitted out to follow in the wake of the American forces in Mexico. The purpose will be to gather data likely to be of interest to posterity. A novel feature of the plans is that the phonograph and moving pictures will be put to use, and transcripts of the sights and sounds of war will be made.

New York City. The *Evening Post* of April 30 printed a long letter, signed by Norville Wallace Sharpe of St. Louis, protesting against the proposed transfer of the Surgeon General's Library to the Library of Congress. Incorporated in the letter is the full text of the protest adopted by the St. Louis Medical Society at its meeting on April 4, and forwarded to Washington at that time.

Newark F. P. L. [Corrected entry.] Sue A. Saltsman, lbn. (Rpt.—yr. ending Oct. 31, 1913.) Accessions 644; total number of volumes in the library 9503. Circulation 32,498. New registration 369 of which 144 was in the children's department. The circulation of the books sent to the school for the year was 2061.

Norwich. Guernsey Memorial L. N. Louise Ruckteshler, lbn. (Rpt.—year ending July 1, 1913.) Accessions, 775; total number of volumes in library 11,047. Circulation 37,524. New registration 416; total registration 3228. Receipts \$3637.73.

The *Norwich Sun* of April 7 comments on a recent library poster calling attention to the need for a new library building and compar-

ing the present quarters with those of libraries in 12 other New York towns. All but one of these outrank Norwich in annual appropriation, yet only three have a greater per capita circulation. Frequently of late because of the crowded and weakened condition of its building the Guernsey Memorial Library has found it necessary to turn away valuable gifts.

Rochester. A location is now being sought for a new branch on the east side of the city, the first in that locality.

St. Johnsville. A six weeks' campaign for the benefit of the Margaret Reaney Memorial Library closed May 1. About \$2200 was realized, which will be used for books.

Sherburne. The Sherburne Public Library has received \$500, the legacy left by the late John H. O'Brian, editor of the *Sherburne News* for many years.

NEW JERSEY

Bordentown. The Bordentown Public Library has been removed from the Maitland property on Farnsworth avenue to the home of George Lieberum, on the same avenue, above Crosswicks street.

Bridgeton. The will of the late Clement W. Shoemaker, a glass manufacturer, leaves \$5000 to the Bridgeton Library.

Haddon Heights. All the trustees of the Free Library which has been under the control of Borough Council have resigned, and requested that hereafter the library be managed by the newly organized Woman's Club.

Hoboken. The children's room of the Hoboken Public Library has been moved to the upper floor of the building and is now installed in a room 45 by 50 feet, with new and appropriate furniture and with sufficient accommodation for all the work of its departments. The success of the story hour has been so great that it is necessary to make two sections, and stories are now told on alternate Saturday mornings to the young and older children. The displaying of pictures on screens is another popular feature of this department. Sets of mounted pictures, colored photographs, and prints of all kinds are used. Topics of the day are covered and many sets are used for school work. Nature study and Mexico are now the special features of display. These pictures are extensively used also in the reference department and the high school branch. The room for-

merly used as the juvenile department will be used for the accommodation of German and Italian books, of which there are now over 7000 volumes.

Jersey City. The Public Library celebrated its twenty-fifth anniversary May 13, with a program which included music and speeches. The first library was located in the basement of the Hudson County National Bank and the Provident Institution for Savings on Washington street. It opened with about 15,000 volumes on the shelves, and during the first year the use of books amounted to 300,000. Four or five delivery stations were opened during the first year. The library now has a building of its own, which is considered by many to be the finest library building in the state, containing a collection of over 150,000 books. There are eight branches, one of which is as large as most city libraries and has a circulation of over 100,000 a year. There are also three deposit stations and twenty-one delivery stations.

Morristown. The Morristown Library and Lyceum will receive a total of \$35,000 insurance for the loss on the building destroyed by fire in February.

PENNSYLVANIA

Chester. The will of Mrs. Sarah D. Mowry leaves \$300 to the Chester Free Library.

Conshohocken. The sum of \$2500 has been left in trust to the Free Library by the late J. Elwood Lee.

Philadelphia. The Passyunk branch of the Free Library of Philadelphia, Twentieth and Shunk streets, was dedicated April 21. The meeting was presided over by Henry R. Edmunds, president of the Board of Education and president of the board of trustees of the Philadelphia Free Library. Dr. John Thomson, chief librarian, was not present because of illness. John A. Ashurst, assistant librarian of the Philadelphia Free Library, explained to the audience the purposes and uses to which the building was dedicated. Clinton Rogers Woodruff, a trustee, delivered the chief address, in which he said that Philadelphia's great need now was money for a central library building, facing the Parkway. The building is the fifteenth building to be erected from the fund of \$1,500,000 given by Andrew Carnegie ten years ago, to be used in the construction of 30 buildings. It stands on ground donated by the Girard estate and

is the twenty-fifth building in the city to be devoted to library purposes.

Philadelphia. An ordinance providing for the purchase at \$9000 of the property at the northwest corner of Hunting Park and Wayne avenues for a free library site has been passed.

Reading. The trustees of the Public Library have decided to establish branches in the public school houses at the following points: Douglass and Weiser streets, Perkiomen avenue and Fifteenth street and Ninth and Spring streets.

DISTRICT OF COLUMBIA

Washington. "The Judge John M. Mitchell Memorial Law Library" has been established permanently in the Law School of the Catholic University of America, by Misses Agnes and Marion L. Mitchell of Concord, N. H., in memory of their father, the late Judge John M. Mitchell, who was the first Catholic elevated to the bench of the Superior Court of New Hampshire. By vote of the board of trustees of the university it will be kept intact always in the Law School. The trustees have also authorized the erection in the Law School of a suitable tablet commemorating the distinguished career of New Hampshire's honored son.

Washington. Postmaster Praeger has sent out to post-offices in Maryland, Virginia, West Virginia and southern Pennsylvania, 100,000 copies of a circular giving instructions how to prepare, pack and mail their produce for the Washington trade, and asking all farmers who desire to deal through the parcel post with the Washington consumers to send to the postmaster of Washington their names and addresses, with a statement of what they can furnish by parcel post. The prices at which the farmers will sell their produce by parcel post will be posted on the bulletin board of the Public Library, with the names and addresses of the farmers.

Washington. The manuscript division of the Congressional Library has lately been in receipt of papers, which date from the time of Columbus to the present and are in the handwriting of many of the people most famous in history for the last 400 years. Among them are letters from kings and queens, land grants, political effusions, and papal bulls. In a word, they are the savings of 400 years of the correspondence of Europe's noted noble family, the Argenteau. About two years ago a shabbily dressed woman, the last of the line,

appeared in the store of a dealer of old books in New York, offering old manuscripts for sale. The dealer learned that she had seven crates of similar manuscripts, and bought all for a song. Then they were examined by a man who cataloged the contents, the seven crates were auctioned and the Library of Congress got them. Gaillard Hunt, chief of the manuscript division, has not yet undertaken to examine the collection or arrange it in proper order, but enough is learned by the superficial examination given by the dealer in New York to indicate its importance. The manuscripts may run up as high as 20,000 in number. They are believed to be the most valuable and the largest collection of historical papers from one family in any country in the world.

The South

VIRGINIA

Richmond. The Rotary Club has pledged itself, if the city appropriates the \$110,000 asked for the purchase of Jeter Hall for a public library, to raise \$50,000 for a book fund.

Richmond. Earl Gregg Swem, the assistant state librarian, has recently submitted a report entitled "A list of mss. recently deposited in the State Library by the state auditor." It enumerates among the accumulated state and county papers of a century and a half nearly 700,000 pieces of value. Records of property alone are estimated "to constitute the most authentic and comprehensive source material for the economic and social history of Virginia from 1782 to the close of the war between the States." Items abound scarcely less interesting than the following: "Clark, George Rogers. 70 packages of letters, accounts, orders, captured papers, and miscellaneous documents concerning George Rogers Clark and the Illinois country, 1778-1783. 300 pieces per package."

SOUTH CAROLINA

Charleston. The new library building is practically completed, and is an up-to-date, fireproof building. The library, however, is burdened by a debt of about \$20,000, and a canvass is being made in an effort to raise the sum. A donation of \$5000 has been tendered on condition that the entire indebtedness with which the Library is burdened shall be fully paid.

Florence. The Carnegie Corporation has granted the city the sum of \$10,000 for a library building, on the usual conditions.

Marion. The Marion Public Library gave its ninth annual reception April 14. Dr. Yates Snowden, of the University of South Carolina, addressed the audience on "South Carolina as a background for fiction." The Marion Public Library was the first library in the state to be supported by taxation and to be owned by a school district. It is patronized by people all over the county.

FLORIDA

Miami. A library of 5000 volumes has been collected by the Miami Woman's Club. The club also has erected a \$14,000 library and clubhouse, on a lot in Royal Palm park, donated for the purpose by Henry M. Flagler.

KENTUCKY

Louisville. The magazine section of the *Louisville Herald* of recent date had a full page article, with illustrations, on the branch libraries for colored people in that city. A noticeable feature of the negro's reading, according to Thomas F. Blue, the colored librarian in charge of both branches, is that he reads very little fiction. "If he is earnest enough to read, he wants solid material. This is partly due to the fact that most of the reading is directed by teachers. The negro spends most of his reading time on history, biography, sociology, and books about his race."

TENNESSEE

Knoxville. A contract for a free public library for Knoxville, to be known as the Lawson McGhee Library, deeded to the city by the trustees, and to be maintained by the city, was signed April 22, by Mayor S. G. Heiskell for the city commissioners and ten of the trustees of the present Lawson McGhee Library, at a special meeting of the commission and library trustees. The contract provides that the library trustees shall build a \$50,000 library building on a suitable lot, furnish it with books and library accessories, turning over to the city the 18,000 volumes now possessed by the library, and deed the building and library to the city in fee simple perpetually. The city on its part agrees to maintain the library, appropriating for this purpose not less than \$5,000 a year. As the present levy of two cents for library purposes more than makes this amount, no trouble is expected in raising it. The library is to retain its old name, with suitable words following to show that it is a free public library. The city commissioners will report to the Lawson McGhee trustees each year, soon after Jan. 23. A friendly suit has been brought to test the legality of the transfer.

GEORGIA

Savannah. The new Carnegie Library will be built at Bull and Thirty-sixth streets on the lot next to the Hull Memorial Presbyterian Church. The \$75,000 allowed by the Carnegie Corporation will go into the building. The city will provide the furnishings, which will cost \$10,000 to \$15,000, so that the investment will represent a total of approximately \$105,000. All of the Savannah architects will be invited to submit tentative designs. The present annual appropriation for library maintenance is \$10,000, but next year it is understood it will be increased to \$12,500, or perhaps \$15,000, as the superior facilities for handling children and for reference work the new building will offer will tend to greatly increase its use and the demand for works of reference.

MISSISSIPPI

Clinton. Work has been begun on the Mississippi College Library, to cost about \$30,000. R. H. Hunt of Chattanooga, Tenn., is the architect.

ALABAMA

Birmingham. As the result of solicitation some weeks ago for money to buy technical books, the Tennessee Coal, Iron and Railroad Company has instructed Carl Milam, the librarian, to purchase books to the amount of \$1000 and charge them to the company. Mr. Milam was assisted in compiling this book list by the auditor of the Tennessee Company, the Electrical Engineering Society, the superintendent of manual training of the city schools, the city engineer, the Technical Department of the Y. M. C. A. and a list furnished by the Carnegie Library of Pittsburgh. Twenty technical magazines are also made possible by the gift. The library is likewise directing special effort to getting the foreign residents to use the library, and has added many books specially intended for the use of foreigners in learning English. Rules of registration have been simplified and borrowers' privileges extended considerably.

Birmingham. At the close, May 2, of the campaign to raise book money for the Public Library, \$20,000 had been subscribed. Some committees, unable to work on the allotted days, asked an extension of time, and the total is expected to be about \$30,000. Posters "boosting" the campaign were placed on fronts of street cars and in shop windows, slides shown in the moving picture theaters, blotters telling the plan of subscription and the intended use of the money were dis-

tributed by the Boy Scouts, the ministers addressed their congregations on the subject and sent out many letters, and the newspapers gave columns of space for publicity articles. The city was divided into districts, and a committee appointed in each district to take charge of the work. The need of the campaign grew out of the financial condition of the city, which would not permit of sufficient appropriations to do more than supply maintenance funds for the library.

Central West

MICHIGAN

Monroe. Mrs. Augusta A. Dorsch, widow of the late Dr. Edward Dorsch, has bequeathed the city of Monroe her residence on First street, to be used as a public library. The homestead is valued at about \$5,000.

OHIO

In a test case brought in Franklin county, the state supreme court upholds the law providing that fines assessed in police court shall go to law libraries. The decision will be of interest in every county in the state because of the doubt which has been general as to whether or not the law under which such funds are paid to law library associations for their maintenance was valid.

Cincinnati. The University of Cincinnati has recently issued an 8-page pamphlet on "The Municipal Reference Bureau: what it is, what it does, how it works." It defines the bureau as a "clearing house for information on city government," shows by two charts the superiority of the bureau over the old haphazard way of getting information, and gives a list of subjects on which the bureau is prepared to furnish material.

Hamilton. Plans to open branches of the Lane Free Library in Lindenwald, East Hamilton and on the West Side are now being formulated by the board of trustees of the library. In addition to these three branches a business men's reading room in the business district may also be opened.

INDIANA

Indianapolis. As the result of an appeal from almost 1,000 native-born Danes and Hollanders resident here, a large assortment of standard works in their two languages have been ordered for the Indianapolis Public Library. The Danish collection is to be selected by the librarian of the Royal Library of Denmark at Copenhagen.

ILLINOIS

Chicago. The Public Library is planning to establish a music department. There has always been a fine collection in the library of books about music, and now the actual printed notes will be added. For some years now the library has maintained a complete department of scores of the grand operas, and the extensive use made of this section convinced the authorities that the time was ripe for greatly increasing their musical equipment. The plan in its general outlines will be to install in the library the scores of the classic literature of music. The piano composers will be represented by the works of all the great men from Bach to Brahms; all the song writers, the oratorios, the works for violin, 'cello, and for these instruments with the piano. The most valuable section will be the scores of symphonies, overtures, operas and chamber music, not in pianoforte arrangement, but in full orchestral scores. Eventually a section devoted to rolls for the various instruments for the mechanical reproduction of music may be added.

Chicago. The Municipal Reference Library bulletin No. 2, prepared by Frederick Rex, the librarian, is on "Municipal dance halls." It is a summary of the efforts made in Boston, Cincinnati, Cleveland, Denver, Milwaukee and San Francisco, toward the municipal establishment and operation of open public dance halls, and was prepared for the use of the city council when it considered the question of establishing similar amusement places in Chicago.

The North West

WISCONSIN

Black River Falls. The city council has accepted the offer of \$10,000 from the Carnegie Corporation for a library.

Milwaukee. With the finishing of the new addition to the public library, work on which is rapidly proceeding, it is expected that accommodations will be increased for 225,000 more books. This enlargement is being effected in the court, behind the main structure. A children's library is contemplated for the first floor, entrance to which will be from Eighth street, and when this arrangement is ready the children's library, now on the third floor of the old building, will be transferred to the new quarters.

Ripon. A library class has been conducted in Ripon College this year under the direc-

tion of William Everett Jillson, the college librarian. The class had two recitations a week, with two hours' work in the library. Twelve women and seven men took the course.

MINNESOTA

Duluth. It is announced in the local press that the city will establish a branch library at Gary if a room can be secured in the new school building which will be built there this spring.

IOWA

Des Moines. An advertising campaign to increase patronage at the city library was launched early in May. Special effort was made to reach children whose cards have run out in the last year, and who have not shown inclination to renew them. About 800 circular letters were sent out to former patrons of the children's department. An experiment to increase patronage among residents in the branch library districts was made in the district of East High School, where a branch library was recently opened. Names were looked up in the city directory and a mailing list was compiled ready for a deluge of circular letters.

NEBRASKA

Lincoln. A bronze tablet, designed by Victor David Brenner, was unveiled in the Lincoln Public Library April 23, as the opening of Lincoln's celebration of the 350th anniversary of Shakespeare's birthday.

SOUTH DAKOTA

Armour. A new Carnegie Library is to be built here at a cost of \$7500. W. L. Steele of Sioux City, Ia., is the architect chosen.

WYOMING

Laramie. The private library of the late Dr. Agnes M. Wergeland, for many years a teacher of history and Spanish in Wyoming University, has been given to the University Library. Over a thousand books are included in the bequest, and at least another thousand had been given by her during her years of service. Included in the last lot are several volumes of scrapbooks filled with reproductions of famous paintings, post cards of European scenes, and a complete collection of her own contributions to periodical literature.

The South West

MISSOURI

Fayette. Part of the \$225,000 being raised for Central College may be used to erect a

\$50,000 library building for the college, is the announcement made at the spring meeting of the board of curators.

St. Louis. Six of the branch libraries and one public school are being used each Saturday as receiving stations in the campaign which the St. Louis *Republic* and the Consumers' League are conducting against the house fly. Children are paid 10 cents for every hundred dead flies they bring in, and the flies are then gathered up and burned.

ARKANSAS

Morrilton. A library for the use of the citizens of Morrilton has been equipped and opened by the Pathfinder Club of this city and is now in use by the general public. The building occupied is the former home of the Presbyterian congregation. The collection contains 8500 volumes.

KANSAS

Leavenworth. The six months ending with March were the busiest in the history of the library, and the slight loss of circulation noticed last year has been regained. At the present time 24 per cent. of the population is enrolled. During February the interior of the library was entirely redecorated, at a cost of \$590.

OKLAHOMA

McAlester. The new \$25,000 Carnegie building was dedicated April 16. The city's first library was opened in 1905 by a women's club in an upstairs room in a business block, members of the club taking turns in caring for the collection.

TEXAS

Announcement was made at the annual meeting of the Texas Library Association, that if 15 students in library work register between now and April 1, 1915, the University of Texas will open a summer school for them. Owing to the fact that there is no summer school in the state for such training, many wishing to take up the work left the state last year to study. This was brought to the attention of the university of the state librarians.

Dallas. The cornerstone of the Oak Cliff branch was laid April 23. The building will probably be completed about the middle of August.

Houston. The city has refused to contribute more than \$7800 a year to the support of the Carnegie Library, and in refusing the

petition called attention to the great need of funds for public improvements. The library received \$13,500 from the city last year.

San Antonio. A pretty story was printed recently in a San Antonio paper of a little girl, by the name of Johanna Chojnecki, whose mother works out by the day, who found her way into the Carnegie Library and timidly asked if little girls could get fairy stories there. Of course she was shown the children's room, and after browsing among the books awhile, went away clutching the biggest one she could find. The next day she exchanged the book for another, and as she took the second one she said, "Do people give money to help the library?" She was told they sometimes did. "Then I want to give some too," and she placed a nickel on the desk. The story, accompanied by a note from the librarian, was sent to Mr. Carnegie, and a few days later the librarian received the following reply from Mr. Carnegie's secretary:

"Mr. Carnegie is sending in your care a book endorsed to the 'little blue-eyed girl' so much interested in fairy stories from the Carnegie Library in San Antonio. Won't you kindly present the book to the little girl with Mr. Carnegie's compliments and fill her name in the space reserved?"

San Benito. The San Benito Public Library was formally opened May 2 with a book shower by the ladies of the Women's Club, which resulted in the securing of approximately 200 volumes as a working basis. Rooms for the library have been donated by a local bank until a suitable building can be erected upon the lots already provided for that purpose.

Temple. Agitation has been started for improved public library facilities, and the present Carnegie Library will probably either be remodeled or rebuilt. It was constructed 11 years ago, and the city has outgrown the building both as to size and character of construction. If the structure is rebuilt it is proposed to move it from its present location in the center of the city park to a corner of the grounds.

Pacific Coast

WASHINGTON

Aberdeen. Plans for an addition to and changes in the present Carnegie library building, calling for an expenditure of \$20,000 have been approved, and the money will be

provided by the Carnegie Corporation of New York. The present stack room will be taken into the present reading rooms for adults and children, doubling their space. The addition will provide a stack room 41x27 feet, a reference room, a room for trustees, a staff room, delivery desk and repair room. There will be a fireplace in the reading room and in the children's room. The first floor or basement will provide a lecture room, a men's smoking and reading room, a story hour room, a women's rest room, an unpacking room, furnace and fuel room.

Spokane. Plans for the new North Monroe branch have been approved by the Carnegie Corporation. The amount allowed for construction and furnishing of the building is \$17,500. The new Heath and East Side branches were opened to the public early in April.

Tacoma. The Public Library has recently installed an inter-communicating telephone system, consisting of eight desk telephones and two trunk lines giving inter-communicating service to all eight departments, and at the same time permitting outside communication on the two trunk lines. The entrance has been painted and varnished, and an individual towel rack installed near the children's room, some needed electrical fixtures added, and some necessary wooden shelving ordered. A plumbing system is to be provided that will make hot water available in the building and add a drinking fountain on the second floor. The fiscal year of the library and the "report year," which have heretofore been July to June, have been changed to the calendar year January to December which is the fiscal year of the city and of all tax supported bodies except the school district.

CALIFORNIA

East Bakersfield. The contract for the erection of the new public library has been awarded, the contract price being \$22,553.

Fairfield (Solano Co.). The supervisors have authorized the establishment of a Solano County Free Library under the supervision of State Librarian J. L. Gillis. It is estimated that \$7,000 will be expended on the library. Twenty-four counties of the state have established libraries. Contra Costa and Butte counties recently opened them.

Long Beach. The library commission, on April 14, appointed Miss Zaidee Brown, organizing agent of the Massachusetts Free Library Commission, librarian to succeed Miss

Victoria Ellis. In support of its attitude regarding Miss Ellis's resignation, the commission made public on March 28, a report made on its behalf in investigation of the library administration by Miss Mary E. Robbins, previously in charge of the winter library school of the Riverside Public Library. Miss Robbins gave a general review of the equipment and management of the library, with commendation of the collection of books and suggestion of changes in arrangement of departments, the replacement of the Browne charging system by the "Modified Newark" system, and the establishment of a "pay duplicate collection" of popular books. In regard to the relations of the library commission to the librarian, she stated that "in every well-regulated library board the librarian is never present unless invited."

Los Angeles. The removal of the Public Library in June to the much-needed new quarters in the Metropolitan building, entails additional expenses of about \$10,000, for which no provision has been made by the city council. Every possible reduction has been made by the library authorities in the operating expenses, and in order to finish the fiscal year and effect the removal without serious deficit it has also been necessary to virtually suspend book purchases until July 1. The buying of new fiction is discontinued and only books for which there is special and urgent need will be bought for the present.

Orland. The Women's Improvement Club has raised \$1,000 and bought a lot for the new Carnegie Library, for which \$8,000 has been appropriated by the Carnegie Corporation.

Willows (Glenn Co.). The county supervisors have decided to establish the Glenn County Library, a branch of the State Library, on Aug. 1. A librarian will be engaged from the State Library. The salary is \$100 a month. There will be sub-stations over the county at Butte City, Hamilton City, Orland, Norman, Germantown, Bayliss, Fairview, Newville, Princton, Glenn, Ord, and possibly other points. Willows will be the headquarters.

IDAHO

Caldwell. Caldwell's new public library—the structure, the gift of Andrew Carnegie, the institution, the culmination of several years effort on the part of the ladies of the Forward Club—was dedicated May 1. The attendance over-taxed the capacity of the building and many who desired to attend the ex-

ercises were unable to gain even standing room. A book shower was a feature of the opening. The building is a handsome red brick structure of plain but imposing architecture. The basement will be occupied as club rooms by the Forward Club. The cost of the building was \$12,500. The site was donated by the city.

UTAH

Garland. The contracts for the new Carnegie library, amounting to about \$8,000, have been awarded, and work is already begun.

Philippine Islands

Two young Filipino men in the province of Occidental Negros have started a circulating library. There are about 200 bound volumes and another 200 in paper. Of these about 120 are the beginning of a collection of Filipiniana. Spanish and English fiction are represented, as well as general subjects. The rules of the library are practically identical with those of the Philippine Library. Members are exempted from the annual fee and are enrolled upon presenting a certain number of books to the library. A small fee is charged to cover postage on books sent to other towns. Other circulating libraries already exist in Albay, Lucena, Zamboanga and Manila.

Canada

In Part IV of the report of the members of the Royal Commission on Industrial Training and Technical Education, the testimony as to public libraries is summarized. Several librarians reported a demand for technical books and trade journals, and in a number of places the demand is met by the libraries, by special lists sent out or posted in the buildings, and by traveling libraries. The president of the Ontario Library Association, in a communication, calls attention to the large amount of money sent out of Ontario each year to correspondence schools in the United States. He believes that the library, which is supported by taxation, should be more fully developed on its technical side so as to provide every ambitious man with the means and opportunity of perfecting himself in a knowledge of the theoretical side of his chosen work. A public library, he says, should have carefully selected books of reference bearing on the subjects taught in any technical school in the vicinity, and also on the industries carried on in the neighborhood. The Ontario Library Association proposes to utilize the public libraries wherever possible to carry

out these ideas, and to provide the books partly from funds of the local libraries and partly from legislative grants, realizing that technical education means much for the wealth and refinement of the Canadian people, and that it is a problem at present taxing all resources for solution. A committee of the association, which visited a number of cities in the United States while investigating the question, has drawn up a list of recommendations as a result of its investigations, and they are printed in full in the report.

Mimico. It has been decided to build a library in Mimico. Plans have been approved and sent to the Carnegie Corporation in New York for their approval. The building will cost \$6,500, which is the Carnegie grant, and it will be situated on the site that was secured about a month ago by the Library Board at the corner of Station road and Stanley crescent. The plans that were accepted will provide for a flat-roofed brick building with a basement and main floor. It will be 40 feet wide and 55 feet long with a 10-foot high basement and 13 feet 6 inches high main floor. It remains practically in the hands of the contractor whether the building will be of white or red brick.

Stouffville. By the will of the late Dr. Alexander Sangster, the sum of \$500 is left to the town, provided that within two years of testator's death they raise \$4,000 for the extension of the proposed Carnegie Library building at Stouffville.

Toronto. The raising of the minimum wage for library officials, a decrease in the number of years intervening between the minimum and maximum wages, and also an increase in the maximum wage were the chief decisions at the last meeting of the Public Library board. The initial salary was fixed at \$500, which by regular annual increases will reach \$900 in the general department and \$1,000 in the cataloging and reference department. This increase is to be made for growing efficiency, and tests will be made in each case for promotion. Miss Bletcher and Miss Johnston, both graduates of the University of Toronto, were appointed members of the staff.

Walkerville. John Edgecumbe, aged seventy-seven, librarian at Walkerville Public Library, and said to be the oldest librarian in point of years of service in Ontario, died April 11. He had been in charge of Walkerville Library since its opening ten years ago,

and for many years filled a similar position in St. Thomas. Mr. Edgcombe was born in Cornwall, England, and came to Canada at the age of fourteen.

Welland. Welland Town Council has accepted the offer of \$20,000 from the Carnegie fund for a library, and purchased a site on Muir street at a cost of \$3000.

Weston. Work has commenced for the erection of the new Carnegie library, corner Main and King streets.

Whitby. Whitby's new Carnegie Library was formally opened May 1. The library is built of red pressed brick, with trimmings of stone. The basement contains several board or committee rooms, and the interior is finished in oak. The Carnegie Corporation donated \$10,000 toward the building fund.

Foreign

GREAT BRITAIN

A list of the members of the Library Association's book production committee, with a brief statement of the notable achievements of each member touching such matters as qualify him to make an authoritative report on book production, is given in the November-December (1913) issue of *Bindery Talk*, published in California.

An appreciation of the life and work of James Duff Brown, who died at his home in Canonbury Park on February 26, is contributed by Charles Riddle to *The Library World* for March. Mr. Brown's first library experience was obtained in the Mitchell Library in Glasgow, and in 1888 he was appointed first librarian in Clerkenwell. Here he worked till his appointment to the larger and adjoining borough of Islington, whose libraries he developed into the finest system of open access libraries in England. In February, 1912, he was seized with an illness from which he never recovered. Before leaving Glasgow he published his "Biographical dictionary of musicians." Later he collaborated with the late S. S. Stratton in "British musical biography," in which Mr. Brown took the living composers and Mr. Stratton those deceased. For the Library Association he published a "Guide to the formation of a music library," and in collaboration with Alfred Moffat he published "Characteristic songs and dances of all nations." To professional literature Mr. Brown made many contributions. His "Manual of library economy," "Subject classification" (1906), and "Library classification and

cataloguing" (1912), are works of great value. He was always devising new and improved methods of work. In 1892, after attending the International Conference of Librarians at Chicago, and studying the system of open access there, he established safeguarded open access in his library at Clerkenwell and thereby revolutionized library work in England. Mr. Brown was a member of the Council of the Library Association for many years until 1912, when through an unfortunate dispute he resigned his position as vice-president. At the Bournemouth meeting the Council unanimously elected him an Honorary Fellow, an act which was keenly appreciated. Mr. Brown was an indifferent speaker, and consequently a poor debater, but an excellent writer and the possessor of a very retentive memory that made him able to give without reference information on any topic relating to music and musicians or to the libraries of the world.

Henry Edward Johnston, member of the Council of the Library Association, and librarian at Gateshead since 1888, died February 3.

The *Library Association Record* for February, contains an article by Ernest A. Baker, discussing the report of the Royal Commission on University Education in London as far as it affects the library of the University of London. The commissioners propose (1) that the Goldsmiths' Library of economic literature be removed to the London School of Economics; (2) to carry out "some further decentralization" if the central university buildings are removed to Bloomsbury; (3) to disintegrate the library altogether if the buildings remain at South Kensington. This proposal is in direct opposition to the modern library theory of centralization. It is felt that the present Central Library is by no means difficult of access, a system of free interchange would take care of the needs of distant departments, and the present location, in close proximity to several other great libraries, could hardly be bettered for research workers. During the last five years the attendance in the library has grown from 1432 to 6712, and the total number of books issued, from 7,233 to 21,280. This work will either be crippled or wholly destroyed if the recommendations of the commission are adopted. The article closes with a summary of principles urged for the future organization and administration of the university libraries, in which the principal points are centralization of collections, development of the lending and traveling library features, closer relations with

other London libraries, and the establishment of a "central depot" library on lines proposed by the Library Association.

Birmingham F. L. A. Capel Shaw (till May 31, 1912), and Walter Powell (from June 1, 1912), lbn. (51st annual rpt.—yr. ending Mar. 31, 1913.) Accessions, net gain 9578; total number of volumes in libraries 445,675. Circulation 2,217,563. Total registration 79,108. Income for 1913, £23,040 3s. 4d.; expenses £21,725.

Besides the central reference library there are twenty-three lending libraries and news rooms maintained. During the year the time allowed for reading has been extended to fourteen days in all cases, renewal privilege having also been extended to fourteen days. Borrowers' cards, hitherto available only at the library from which they were issued, may now be used at any library in the city, but only one ordinary and one non-fiction card can be used at any one library at a time. Hours of opening have been extended until now all the libraries except two are open daily from 10 a.m. to 9 p.m., and the news rooms from 9 a.m. to 10 p.m., with the exception of four which close at 9 p.m.

Bradford P. L. Butler Wood, lbn. (43d annual rpt.—yr. ending Aug. 12, 1913.) Accessions 8242; volumes withdrawn 4175; total number of volumes in libraries 172,794. Circulation 856,740. New registration 18,373.

The report states that there is pressing need of a new central building. In 1911 the question of providing "open access" to the shelves was considered, but has never been found practicable on account of lack of room. The same difficulty exists in the branches. With the exception of two branches, one of which has just moved into a new building where "open access" is found most satisfactory, the fifteen branches are housed in rented quarters quite unsuited for the work. A site has been purchased for one new branch.

Dundee. Univ. Coll. L. James A. S. Barrett, lbn. (1st rpt.—Oct., 1913.) Accessions 3509; total number of volumes, approximately 14,000. Between October and June 159 readers used 1292 books, exclusive of those used in the reading room and those borrowed from Edinburgh and London.

Glasgow. On February 5, F. T. Barrett, city librarian, resigned his position, to take effect on the appointment of his successor. Mr. Barrett was appointed in 1877, when the main library contained only a few hundred

volumes. It has grown until now it contains over 200,000 volumes. The libraries administered by the corporation now number twenty, with 440,000 volumes and a staff of about 270. "In no previous instance in the United Kingdom or abroad," says the *Glasgow News*, "has any library system experienced so great a development while under the care of its first executive officer."

Hackney. On January 17 the Clapton Branch Library was opened. This completes the system of one central library and three branches provided by a Carnegie gift of £28,000. The library is a two story building, its most striking feature being in the adult lending room on the first floor, where the shelves are arranged around a "well" overlooking the newsroom. During the first week 727 new borrowers were enrolled and 1668 books issued.

Leeds. Classes for library assistants are being held in literary history, classification, cataloging and library routine. Instruction is free to all assistants, the only condition of enrolment being regular attendance. The classes meet weekly, and instruction is given by senior members of the Leeds Public Libraries staff.

Newcastle-upon-Tyne P. L. Basil Anderson, lbn. (32d rpt.—yr. ending Mar. 31, 1913.) Accessions 2711; total number of volumes in library 170,190. Circulation 607,512. Registration 36,480.

Oxford. The Bodleian Library has received a wonderful gift of Chinese books from a former member of the university, E. T. Backhouse, some time postmaster of Merton College; and for many years a resident in China. They number some 17,000 volumes, partly printed, partly manuscript. By this gift the Bodleian is said to become the richest Chinese library in the Western world.

St. Andrews. Univ. L. J. Maitland Anderson, lbn. (Rpt.—yr. ending Sept. 30, 1913.) Accessions 2123. Circulation 6629 volumes to 341 readers, excluding books used in the library itself. There were expended £631 19s. 11d. for books and periodicals, £200 for service, £55 for equipment, and £75 each for printing and binding.

Sunderland. Arrangements have been made recently for the admission of non-residents to the uses of the Central and Branch Libraries, on payment of the nominal subscription of five shillings per annum.

Walthamstow. Measures have been instituted with the advice and approval of the district auditor whereby the whole responsibility for school library work has been transferred from the Walthamstow Library Committee to the Education Committee. This is the outcome of a test case with the L. G. B. and the Board of Education, and has been arrived at after months of discussion. The public libraries are now relieved of any responsibility for children's work, and a proper arrangement exists whereby the Education Committee takes over the books and the staff which the libraries previously maintained to this end.

GERMANY

Children's reading rooms in Germany continue to make progress. Two more were established in Berlin during the past year. At present there are such reading rooms in more than thirty German cities. In almost all cases these are supported by associations.

Berlin. The Church Peace Union, founded in February by Andrew Carnegie with a \$2,000,000 endowment, has appropriated part of the fund for the purpose of establishing a peace library in Berlin. The library will be conducted by the Church Peace League of Germany. The fund is to be used for the purchase of literature only in the German and English languages. The books will touch on every phase of international arbitration.

Frankfurt. Stadtbibliothek (Municipal Library). Dr. Friedrich Clemens Ebrard, director. (Rpt.—yr. ending Mar. 31, 1913.) Accessions 5717; total 365,529. Circulation 53,606; of these 20,821 volumes were used in the reading room by 19,000 persons, the remainder being taken for home use. Expenditures for accessions, newspapers and binding amounted to 46,000 marks.

Of the special collections of this library may be mentioned the collection of *ex libris*, book titles and vignettes, amounting to 4413 pieces; the autograph collection, 2882 pieces; the municipal coin and medal collection, 18,801 pieces.

Leipzig. On April 1 the city opened the first of its "municipal libraries" (practically "branch" public libraries, as we know them). There are other popular libraries in the city supported by private associations, but although the demand was great, lack of funds curtailed their usefulness. The main activity of the new municipal libraries will be the outside loaning of books. It is intended to provide each of the projected libraries with

about 12,000 volumes, so that the circle of readers of each will not be too great for the librarian to keep in personal touch with the needs of the public.

Mainz. Städtische Sammlungen für Wissenschaft und Kunst. (Municipal Collections of Science and Art.) Dr. Heinrich Heidenheimer, lbn. (Rpt.—yr. ending Dec. 31, 1912.) Accessions 5177. Circulation 27,295. Total number of borrowers 5238. Receipts from fines, etc., 8697 marks; expenditures 65,441 marks (including appropriation of 56,744 marks).

In many respects the normal conduct of the library was affected by the removal into a new building. This work of removal consumed almost two months, from September 16 to November 14, when the library and archives were again opened to the public. Great interest was shown during the year in the picture gallery and copper-plate collection. These were visited by 26,886 persons. The Museum of Antiquities continued its excavations and investigations of the Roman works and ruins in the vicinity of Mainz.

Schwerin. Regierungs-Bibliothek. (Government Library.) (Rpt.—yr. ending Nov. 30, 1913.) Accessions 5000 (626 purchased, remainder otherwise acquired). Circulation 10,118. Total number of borrowers 791. The number of persons making use of the reading room was 3528.

SWITZERLAND

Basel. Oeffentliche Bibliothek der Universitäts Basel. (Public Library of the University of Basel.) Dr. C. Chr. Bernoulli, chief lbn. (Rpt.—yr. ending Dec. 31, 1912.) Accessions 19,441; total 644,739. Circulation 54,778. There were 23,143 visitors to the reading room, and 1722 borrowed prints and manuscripts for use outside of the library. The total expenditures for accessions were 36,212 francs.

Geneva. Bibliothèque publique et universitaire. M. Frédéric Gardy, director. (Rpt.—1912.) Accessions 29,796 volumes and pamphlets, including serials. Fifteen thousand three hundred and fifty readers used approximately 70,000 volumes in the reading rooms, and 473 people borrowed 4343 volumes for home use. There was spent 9563 fr. 10 for new books, 6376 fr. 10 for serials, and 13,868 fr. 55 for subscriptions to periodicals.

Early in the year the basement of the library, formerly occupied by the Archæological Museum, was transformed into a book room, with room for 100,000 volumes. During the

time the books were being shifted the library, in part or whole, was closed to readers.

BELGIUM

Brussels. A. Collard, librarian of L'Observatoire Royal de Belgique, has recently completed and published a supplement to the library catalog, containing eleven hundred entries covering the accessions of books, pamphlets and maps for the years 1910-12.

AUSTRIA-HUNGARY

Vienna. Preparations are now under way to establish in Vienna a People's Musical Library, such as are found in several German cities, although in the latter country these libraries are either wholly or partly supported by the city. Austria already has two, namely in Salzburg and Brunn. The main purpose of the musical library is to place the classical and the best modern music at the disposal of even people of slight means. Special emphasis will be placed upon the educational side of the undertaking.

Vienna. The Academic Committee for School Reform, formed to gather material for an investigation of the problems of municipal education of children, is planning to establish what will be known as the Archives of Youth Culture. Here is to be collected everything in the nature of documents relating to the intellectual life of the young, manuscripts, pictures and other articles.

RUSSIA

The *Bibliotekar*, the organ of the Russian Library Association, with the new issue of 1914, promises to give more systematic reviews of new books. It will also print reports of the general meetings of the Society for Library Economy.

Perm. In the *Bibliotekar* [Librarian] for the last quarter of 1913, A. Plotnikov has a short descriptive article on "Fifty years of the Public Library of the city of Perm." The Public Library of the city of Perm, he says, was opened in 1863. In 1831 an attempt had been made to operate a public library, founded by private means, but this soon failed. Five years later another attempt was made, but a fire almost completely destroyed it in 1842. For the next twenty years nothing was done. In 1863, the chief official of the city took an active part in the library's reopening. The city, however, made such small appropriations for the library that in 1890, after twenty-seven

years of existence, the library had only 11,621 volumes, mostly periodicals, with an increase of just three readers in fifteen years. In the last twenty years the library has developed more rapidly. In 1910 the number of books was 37,188, or twice as many as in 1900, and the number of readers had grown threefold, to a total of 983. This improvement of conditions was due to the increase of allowances by the city, to improvements in the library technique and to an increase of the staff and of their salaries. The annual expenses of the library at present amount to 8000 rubles. Although called a "Public" library, the public takes no part in its management. Nevertheless the Perm library has played a considerable part in the intellectual life of the city and has served as a model for more than ten other city libraries.

Perm. The Zemstvo, or district council of Krasnayaufa, in the government of Perm, has resolved to open a net of libraries with a central district library, 12 libraries in the more populated places of the district, 29 village libraries and reading rooms, 10 Pavlenkov libraries, some subdivisions of the district libraries, school libraries and 12 traveling libraries. The plan is to be carried out in 10 years. Another district of the same government, the Yekaterinburg, had, in 1913, 46 district libraries, with 55,087 titles in 79,271 volumes. The number of readers was 18,323, the number of books given out 251,709, and the number of periodicals 17,062. This district also had 46 library reading rooms, and 61 traveling libraries with a stock of 21,338 volumes.

St. Petersburg. The Imperial Public Library of St. Petersburg at present comprises three million volumes, prints, etc., divided as follows: Cartographic division 24,000, polygraphy 89,000, philosophy and pedagogy 55,000, church historical and similar works 18,000, cabinet library 32,000, Faust room 10,000, art and technology 550,000, manuscripts 200,000, Rossicana 230,000, Oriental division 19,000, jurisprudence 125,000, Hebraica 35,000, philology and belles lettres 128,000, natural science and medicine 162,326, Russian division 907,000, history 146,000, Slavic division 907,000, theology 185,000.

Tiflis. A four-story building in Persian style for the Caucasian Museum and Public Library will be finished this year in Tiflis, Caucasus. The cost will amount to 400,000 rubles.

JAPAN

Osaka L. (9th annual rpt.—yr. ending March, 1913.) Accessions: Japanese and Chinese books 6314; foreign 341; total 6655. Total number volumes in library: Japanese and Chinese 61,638; foreign 35,489; grand total 97,127. The library was open 332 days, during which time there were 152,897 adult readers who used 462,396 books; an average of about 460 readers per diem, and of 3 books per reader. In the children's rooms for the same number of days there were 11,492 readers (of whom 9604 were boys) who used 63,060 books; a daily average of about 35 readers and 5 books per reader.

INDIA

The *Library Miscellany* of Baroda, India, records the death, on November 12, of Mr. D. G. Sukhadwala, a citizen of Bombay. Mr. Sukhadwala was much interested in the library movement in India, and a large number of reading rooms in the country are indebted to him for their existence. At the time of his death he was maturing a plan to establish in Bombay a number of reading rooms and libraries.

Bombay. The Muni Shri Mohanlalji Jain Central Library was founded in 1910 to perpetuate the memory of the late Muni Shri Mohanlalji, a Jain priest. Through the liberality of the Jains, it has a fund amounting to Rs. 70,000 and a collection of 5000 books and 700 manuscripts. In addition to the library and reading room, a Sanskrit Pathshala is also maintained. The institution is free and observes no distinction of caste, color or creed. During the three years of its existence the library has issued 17,599 books for home use.

Howrah. Mrs. Billious, the widow of a Jewish merchant of Howrah, has declared her intention of making over to the Howrah municipality her residence with about 150 bighas of land (about 120 acres) situated in the heart of the town, to be utilized as a public library. The deed of gift will take effect after her death. The property is worth five lakhs of rupees (about \$161,000).

BRAZIL

Rio de Janeiro. That the annual reports of the National Library of Brazil appear with imprint date five years later than the period they cover is probably due to the cumber-

some working of government machinery, possibly with some relation to the fact that in one form the reports appear as part of the large, scholarly series of *Annaes da Bibliotheca Nacional*. The delay is particularly unfortunate at this time because, since the period of the latest report (1908, published 1913) the library has occupied its magnificent new building, where improved service must be able to show results noticeably in advance of those we are able to quote.

Principal statistics for 1908 follow: Section 1 (books): added 5418 vols., 198 maps, 31 music scores; 44,001 readers consulted 63,722 vols. and 20,112 periodicals. Section 2 (mss.): added 21,262 pieces; 116 readers consulted 16,793 pieces. Section 3 (prints): added 2459 pieces; 84 readers consulted 13,785 pieces. Four thousand six hundred and ninety volumes were bound for the three sections. A few volumes were loaned for home use to a limited number of readers, under special authorization of the minister of justice, to whom the library administration is subordinate.

It is interesting to note that the languages of the books consulted in Section 1 ranked as follows: Portuguese, 66 per cent.; French, 27 per cent.; English, 2 per cent.; Italian 1.1 per cent., with lesser use of eleven other languages.

During the year decree No. 1825 of 1907 went into effect, extending to all parts of the country the requirement for deposit in the National Library of one copy of every work printed; a provision previously applying only to the federal capital. The result was an increase in the deposit of books from 482 in 1907 to 857 in 1908. The number of works actually registered for copyright, however, was small, being but 65 in 1907 and 71 in 1908.

Acceptance was made of an offer from the director of the Colonial Archives, Section of the National Library at Lishon to make an inventory (including, in important cases, transcripts) of documents there relating to Brazil. The first section of this work appears, with the 1908 report, in vol. 31 of the *Annaes* above referred to.

Reference is made to the furnishings of the new building. The director, Dr. da Silva, visited leading libraries in the United States and Europe in 1907, and as a result of his investigations the equipment was ordered from well-known firms in the United States.

LIBRARY WORK

Notes of developments in all branches of library activity, particularly as shown in current library literature.

General

Societies, Associations, Clubs, Conferences

LIBRARY CLUBS

A non-municipal librarians' club. Ernest A. Baker. *Lib. Assn. Rec.*, F., 1914. p. 25-27.

Editorial. An adverse opinion on the proposal to form a club for senior officers of state, university and professional libraries. The writer's arguments are: (1) That such an organization will tend to accentuate the line already drawn between municipal libraries and those belonging either to state or university, creating distinctions which injure both the profession and the public. (2) The Library Association is opposed to any class movement among librarians, and its position should be upheld. (3) The new organization could give its members no privileges they cannot enjoy under the Library Association. (4) All qualified librarians are eligible to membership in the association, and by joining and organizing a section for discussing their special problems, they can accomplish their own purpose and at the same time strengthen, instead of weaken, the national organization.

EDUCATIONAL WORK OF THE LIBRARY ASSOCIATION

The Women's Committee. *Lib. Asst.*, Ap., 1914. p. 63-64.

Editorial. The committee of women librarians and assistants has prepared a list, as complete as possible, of 628 women assistants in the British Isles. A circular letter has been sent to each woman on the list, and the replies show an astonishing ignorance of the educational work of the Library Association. About 20 now plan to join the association, and there are many requests for further information. To answer these, a conversation was held April 30 at the Islington Central Library, and similar gatherings will be held in the provinces. The committee has no desire to form a separate society for women, but is working to awaken a real enthusiasm among the women assistants for the work of the Association.

COMMITTEE MEETINGS

Committee work. William Law. *Lib. Asst.*, Ap., 1914. p. 65-73.

The constitution and functions of a library committee vary somewhat in the different

countries of the British Isles, but generally speaking the committee is appointed to supervise the administration of the library, to draw up rules and regulations, to control expenditures, and to fix salaries. Since the librarian usually acts as clerk of the committee, every ambitious assistant should understand how to conduct and prepare for a committee meeting.

In the discussion of the subject given in this article, the topic is divided into four sections: (1) Supplies necessary; (2) preparation for the meetings; (3) conduct and procedure during meetings; (4) duties after the meetings.

Under (1), various rubber stamps with names of committees and sub-committees, and numerous books for keeping the minutes, records of attendance, requisitions, orders, book lists, "agenda," donations, petty cash, etc., are considered.

Under (2), the preparation of the notice of the meeting and the business to be considered, are described in some detail. A summarized statement of accounts, with necessary explanatory notes of expenditures, must be prepared, and also a brief report of the library's work. Reviews and notices of books to be considered should be available. If contracts are to be made, the librarian must be prepared to draw up specifications for the materials required.

The third section, on the conduct of the meeting, takes up in order the usual points of business and explains the necessary procedure for each. In conclusion, directions for writing the minutes and proceedings are given. The minutes should be indexed, copy prepared for the printer if they are issued in printed form, and all correspondence dealt with at the meeting should be attended to promptly.

Education, Training, Library Schools

APPRENTICES

"Many librarians who have no assistants might secure valuable help from high school girls in a few hours' work each week," says the *Wisconsin Library Bulletin*. "The librarian can often interest a girl in library work through an announcement at high school that she wishes help certain afternoons in the week. She can teach her apprentice to charge and discharge books, register borrow-

ers, arrange the shelves, mend books, and many other details of routine work of the library that take a great deal of time, and that are comparatively simple when taught carefully. The apprentice receives the instruction and experience in return for her time, and after she has mastered the work, may be employed as a substitute or assistant with a salary. In planning for apprentice help, it is advisable to plan definite hours on certain days each week, so that the apprentice may be depended upon by the librarian, and her work may be systematic."

Scope, Usefulness, Founding

Library in Relation to Schools

INSTRUCTION IN USE OF LIBRARY

Fifty students of East High School in Des Moines, Ia., were given a demonstration lesson on the use of library facilities recently by Miss Gentiliska Winterrowd, director of the reference department of the city library. Following a general talk on the use of standard indexing systems and their application to reference work, the students were conducted about the card cases and shelves in groups, with an assistant in charge of each group. Each group was assigned a topic in connection with Mexico, from the first Spanish conquest to the events of to-day, and all were required to look up sufficient material for a comprehensive paper on its topic. Similar instruction will be provided individuals desiring it.

Library Extension Work

PHONOGRAPH CONCERTS

Here is the story of what one library is doing to develop in the people of the community a taste for good music. It is told by the librarian as follows:

"More than a year ago the library board of Virginia, Minn., bought a graphophone and 50 records. After a trial of 13 months, the plan may be called a complete success as it is as popular now as it was in the beginning. The music in the "movies" was practically supplying the musical needs of a community of more than 15,000 people. The board believed that a higher grade of music would be appreciated and that musical taste could be trained and the perfection of mechanical music presented a solution.

"The first cost was \$290, \$90 of this amount being spent for records. In choosing our limit was 50 records, not a limited fund. The collection is composed of selections from grand opera principally, although we have a

variety which gives us opportunity of saving the day from monotony.

"Each week a program of at least 14 numbers is made up. This program is duplicated many times by means of the typewriter and the audience is supplied. Two copies are sent to the newspapers and are printed in Saturday's papers. The concert hour is from 5 to 6 o'clock each Sunday afternoon and is given on the main floor of the library in the reading rooms.

"The audience averages 150, about 70 per cent. being adult. Within the year more than 7,000 people have attended the concerts. We have spent \$290 and still have the full value of our original investment. The graphophone plays an important part in the program of the four clubs which use the library club rooms. We also frequently use it during the week near the closing hour by playing one or two records and finishing with Tosti's "Good-by," sung by Melba or Alma Gluck's "Home, Sweet Home." This is a little more gracious way of saying good-night to those who linger than by blinking the lights."

LECTURES

According to the *Library Occurrent*, the course of free lectures planned by the Indiana Public Library Commission for the libraries of the state has met with hearty patronage. Thirty-five public libraries have responded and arrangements have been made for more than 100 lectures, most of which have been or will be delivered in public library assembly rooms. These lectures have helped to make the library a social and intellectual center, and in a great many instances the themes have been followed up by wider reading on the part of the patrons who have attended.

Library Development and Coöperation

STATE-WIDE SERVICE

Books in the St. Paul (Minn.) Public Library hereafter will be loaned to all citizens of Minnesota and even to those of adjoining states. Directors of the library have voted so to extend the privileges of the institution, the only city public library in the United States to do this, according to Dr. William Dawson Johnston, the librarian. Since the establishment by the United States government of the book post, by which books can be mailed at a fraction of the former rates, the library has received many requests for books and information concerning books.

In the establishment of this service the following rules are to be observed:

Books needed by citizens of St. Paul, particularly books published during the current year, will not be lent.

Books are to be borrowed whenever possible through a local library. When this is impossible, a deposit equal to the value of the book borrowed will be required.

A fee of 5 cents shall be charged for each book borrowed.

Books may be retained for one month subject to recall in case there is a local call for the book.

Books will be sent by book post.

For bibliographical research a charge of 50 cents to \$1 an hour will be made.

RURAL LIBRARIES

The rural library problem. J. McKillop. *Lib. Assn. Rec.*, F., 1914. p. 48-56.

The urban areas in England are steadily growing in number, and their inhabitants are increasing their privileges. At the same time the rural areas remain more or less stationary, almost stagnant. The only way to get rid of these features is to consolidate the local government areas, and since the provision and administration of libraries is a local government function, the writer suggests the consolidation of the libraries of a county as a first step in this direction.

The objections he anticipates are based on finance, and he believes they can be adjusted. Arguments in favor of the scheme are many. One that should be of general appeal is the economy of using to the best advantage the abilities of the few who are gifted with administrative capacity. It would also be an advantage to divide the country into ten library districts in which adequate collections for the use of advanced students could be more easily maintained than in single counties. Duplicate copies of specially recommended books for use in connection with extension courses could be more cheaply purchased for these large centers. Furthermore, with the enlarged possibilities of advancement such an arrangement would provide, there will be much greater incentive than at present for young men to enter the profession.

Regarding the demand for more libraries in the rural districts, the perpetual moan that within three years children leaving school lose the literary habits they were beginning to form, is considered sufficient proof of the need. In any system of organization either the village church, school, post office, railway station, or even the public house, can be used as a distributing center for books and in-

formation. A highly paid local librarian would be unnecessary if a suitable officer supervised the district.

There has been no general inquiry into the libraries of England since 1848, and the writer believes the time is ripe for another, believing that out of a survey of the whole situation a practicable scheme, covering the kingdom, ought to emerge.

Founding, Developing and Maintaining Interest

LIBRARY ADVERTISING

One of the conspicuous floats in the big parade during celebration week in Bakersfield, Cal., in April, was entered by the Kern County Free Library with the intention to display some of the resources and possibilities of the county library. On the float was a large map of Kern county showing the location of the 28 branch libraries, with still other places that may have branch libraries if desired. In addition to the big float, the county library made special effort during the celebration week to have visitors from all over the county come to the library and look at the books on the shelves. The library also had a special exhibit at the board of trade rooms.

PUBLICITY

The librarian of the Tacoma Public Library is receiving hearty coöperation from the local newspapers in developing a publicity policy, and has run several articles relating to local and national affairs and the material in the library on these subjects. Some of the subjects covered have been "Gardening," "Poultry," "Alaska" and "Cold storage plants."

The Chicago Public Library is running a series of short articles in its *Book Bulletin* on "How the library serves the public." The first one, on "Agencies and activities," in the January number, gives general information of the purpose of the library, the number of readers, and the number and character of the various distributing agencies, and is accompanied by a chart showing the distribution of the different branches and stations.

The second article is on "Industrial and commercial deposits" and describes the arrangement made by the library with firms which operate deposit stations for their employes.

The firm supplies adequate quarters with necessary equipment of shelving and furniture, and employs a competent librarian to issue the books drawn for home use by their employes, and to aid the latter in such refer-

ence work as their interest in correspondence school courses, and evening school courses or courses of instruction financed by the firm, may demand. For books not represented in the deposit collection, choice may be made of books in the central collection of the library, the firm providing the transportation thereof by one of their wagons (usually a daily call). The library selects and provides the books, making exchanges at frequent intervals to keep the collection up-to-date and attractive, and supplies sets of printed finding lists to enable selection of books supplemental to the local collection. An added service is that of reference research at the main library on questions of business information and kindred topics.

The March article is on "Books and reading for the blind," giving statistics for Chicago covering library resources and the location and availability of the books for home use, and a brief statement on the different kinds of type. April deals with the "Book needs of the foreign born." The library has for circulation books in seventeen different languages, numbering 62,241 volumes.

"So great is the demand at some of the branches, that the shelves set aside for foreign books are nearly always empty, volumes being borrowed as fast as they are returned. The library is preparing to add about 6,000 volumes in foreign languages during 1914, but this supply will fall far short of the demand. At the headquarters of the Woman's Trade Union League, collections are on deposit, many of the young women who frequent these quarters being wholly unable to read English. Here, as elsewhere, the books in foreign tongues have a liberal inclusion of material on citizenship, naturalization, etc., and there are volumes dealing with the history and customs of the United States. Books of this character are eagerly read. The need for the distribution of the foreign books through the branch and other deposits is shown by population maps. The most numerous are the Yiddish groups, while the largest are the Bohemian, Polish and Italian groups."

PRIZES

The trustees of the Dover (N. J.) Public Library have offered prizes to high school students for the best essays answering the question, "In what way is the Dover Public Library of service to this community?" The essay must show theoretically and practically, giving instances, what advantages are derived from this library and what the difference to

the community would be if the library were closed a year.

COÖPERATION WITH SUNDAY SCHOOLS

In a recent talk on children's reading before the Mothers' Club of Manchester, N. H., Miss F. Mabel Winchell, librarian of the Public Library spoke on the improvement which might be made in Sunday school libraries by closer coöperation with public libraries.

"In connection with the church is the Sunday school," she said, "which usually has a library, sometimes good—often I fear of questionable value. In times past the books were of the very religious type which we are apt to call the goody-goody sort. But of later years the distinction between the kind of books purchased for the Sunday school library and public library has disappeared. This matter of putting the right sort of books before children and not the wrong sort is most important. I fear that often those in charge of the purchase of Sunday school books have left it in the hands of the dealer. I have already shown how the library coöperates with the school, I believe it should coöperate with the church and the way it may be to do this is to loan books to the Sunday school library to be loaned from there as from day schools. In some places Sunday schools have done away with libraries, depending on books borrowed from the public library which they distribute as they would their own."

Government and Service

Executive, Librarian

QUALIFICATIONS FOR A LIBRARIAN

Of books and their keepers. E. L. Pearson. *N. J. Lib. Bull.*, Ap., 1914. p. 14-16.

Of the many ingenious plans invented for improving the taste of library readers, a large part are theoretical rather than practical, for it seldom happens that a reader applies openly and directly for help, and the most of such help must be given very indirectly. Much is done by the librarian in buying the books; much is done for her in the rising standard of books published. Quite as many readers to-day need to be guided down from the contemplation of Eucken and Bergson and Rabindranath Tagore to J. C. Snaith and Kate Douglas Wiggin as require to be led away from the trashy novels formerly "best sellers."

All the different kinds of librarians—college and public, and those in charge of spe-

cial and private book collections, catalogers and bibliographers, reference librarians and executives who have no time for books—may be grouped in two main classes, those for whom learning is the prime requisite, and those for whom something else is of more importance.

The first qualification of a librarian should be a love of books for themselves, and the pleasure they give, and not merely as tools to aid in the collection of facts. In the second place, "a librarian needs to know what library work is, and what it is not. In spite of much distinguished authority to the contrary, a librarian is not a kindergartner, a social welfare worker (in the usual sense), a reformer of spelling and punctuation, an agitator for world-peace, a food-faddist, nor a patron of each new 'universal' language. If libraries are to help in the advancement of learning, if they are to enrich human life and further the spread of civilization, they will be most effective while their administrators maintain a sense of proportion. There is plenty to do in the well-defined field of library work. It is broad enough, exacting enough, to need all a librarian's knowledge, and all his energy. He need not make his library a mere tributary to the social settlement, nor a competitor of the moving picture show."

Staff

QUALIFICATIONS FOR LIBRARIANS

The need of "English" in the examinations. I. Briggs. *Lib. Asst.*, F., 1914. p. 30-36.

The writer feels that a large proportion of the failures of candidates to pass the Library Association examinations is due to a weak control of English rather than a real lack of information. Furthermore the "status of the profession" (which seems to cause a great deal of worry in England) is weakened by the present frequent lack of education and address among library assistants.

The average assistant looks upon rhetoric as merely something upon which to exercise his inclinations, as a pleasant diversion for the dilettante or scholar, and fails to realize that it is essential to his progress. The possession of a gift of expression makes study easier by enabling its owner to condense and summarize easily what he reads. It also makes possible the pleasure of comparative criticism, which should be enjoyed by every person who deals with books.

What makes the L. A. examinations somewhat anomalous is the fact that they are the only professional examinations which do not

require certificates of rather advanced work in English, and which do not include English in the syllabus.

The situation at present seems to be, that the status of the work is advancing more rapidly than the status of the librarian, as is proved by the growing importance attached to the examinations. Like everything else, they need constant revision, and English should be added, either as a preliminary or as part of the general syllabus. It would help the student, add interest to every subject, and help librarianship.

The young man and library work. Wm. Stetson Merrill. *America*, Ap. 18, 1914. p. 11-12.

The first of a series of vocational articles. It is a brief, comprehensive statement of the requirements and the opportunities of library work as a career for a young man. In the list of library schools given, that of Simmons College in Boston and Western Reserve in Cleveland are omitted, while Drexel (to be discontinued after the close of the present school year) and the Amherst Summer School (discontinued in 1905), are included.

STAFF LUNCHEONS

The staff of the Somerville (Mass.) Public Library have developed a scheme of co-operative luncheons which most satisfactorily abolishes the bringing of cold luncheons from home. Some fourteen combinations of hot soups and creamed dishes, salads and simple desserts, costing on an average 15 cents, have been worked out. The library furnishes the gas and ice and for preparation of the meal not over one hour's time of a younger member of the staff whose work is of such a secondary nature that the change of occupation during one hour does not reduce her daily accomplishment; the cost of "clearing up" by the janitress is included in the 15 cent charge.

Rules for Readers

Special Privileges

DUPLICATE PAY COLLECTIONS

The South Orange (N. J.) Library during the past year supported, through its duplicate pay collection, its entire new fiction collection and this year promises to do as well. This has left the regular book fund for the purchase of non-fiction, children's books and the replacement of standard fiction. During the past year a series of lectures on books has been most successful in stimulating the interest in books other than current fiction.

Administration

Treatment of Special Material

MAPS

The Westfield (N. J.) Public Library asked the United States Geographic Survey for topographic maps of Westfield and the nearby country. These have been conspicuously placed and their presence in the library advertised through the newspapers, with comment on their value to those planning motor, walking, or bicycle tours.

THEATRICAL MATERIAL

Interest in dramatic material as developed in the study room for women in the Chicago Public Library, has suggested keeping on file there a portfolio of current comment on theatrical and dramatic subjects. These are extracted from various sources, including articles by Clayton Hamilton, Norman Haggood, Percy Hammond, Mantle Burns, James O'Donnell Bennett, Chas. H. Collins, Frederic Hatton, and material from English sources by and about Barrie, Galsworthy, Shaw and Chesterton. The current bundle in the portfolio includes the following articles: "The peril of the repertory," by Cecil Chisholm. From *T. P.'s Weekly*. "Silhouetting a scene." Maude Adams' experiment with photography in the theater. From the Boston *Transcript*. "Chesterton's first play," by Bernard Lintot. "Shaw's technical method in the Shewing-up of Blanco Posnet." From the *American Playwright*. "Revival of the Tyranny of tears," by Desmond MacCarthy in the *New Statesman*.

Classification

CLASSIFICATION

Some problems of classification. F. W. C. Pepper. *Lib. Asst.*, F., 1914. p. 24-30.

A discussion of some of the most fundamental problems in the theory of classification. Since the predominant demand is for books on a certain subject, subject classification is generally adopted, which immediately brings up the first problem—the question of sequence. Many schemes of classification have been devised, no one absolutely satisfactory, and a combination of several seems the only course to follow.

There is much difference of opinion concerning the order of the main classes, but this is of minor importance so long as relative classes are not separated. The method of subdivision in bibliographical classification differs according to the subject. First there is the division from genus to species, in general straightforward, but occasionally presenting difficulties. The next method is by

physical division, which consists of breaking up a subject into its parts. This is the method used for geographical divisions. The next form is by periods or chronological subdivision, especially useful for history. Finally comes the "form" subdivision, indicating the style of literary composition and the scope or treatment of a book as applied to a subject. Antiquities and biography stand on a different footing. Antiquities may be classed with history, and biography the writer would classify under the subjects associated with the lives recorded.

Reference

PERIODICAL INDEXES

An index to periodicals wanted. T. W. Lyster. *Lib. Assn. Rec.*, F., 1914. p. 39-47.

The need is great for an English periodical index covering, as Poole partially did, the general magazines. Scientific periodicals and transactions are usually well indexed, but bound volumes of other periodicals need much extra indexing before their contents are available for reference purposes.

The writer gives a concise history of Poole's Index, with bibliography, and a survey of the various efforts made by other publishing houses to supplement Poole. The indexes now published in America are unsatisfactory in their treatment of British periodicals. Consequently three suggestions are made for the consideration of British librarians:

1. That the libraries coöperate in making a card index.

2. That they support a good English publishing house which should index British periodicals.

3. That they support strongly one of the two best American annual indexes, if the publisher include more English periodicals, and possibly a few of the best in French, German, Italian and Spanish.

Of the two methods suggested, coöperation in work or coöperation in purchase, the writer feels that in the long run the latter would be the more enduring and that the best central agency to handle the negotiations would be the Council of the Library Association.

Shelf Department

PHOTOSTAT

The New York Public Library is making extensive use of the photostat for the reproduction of catalog cards for a shelf list. No shelf list existing of the books in the refer-

ence department, the library began preparations for one in 1910 by printing an extra card for every book cataloged. For books cataloged before 1910, author cards in the public catalog are now being reproduced by means of the photostat at the rate of not quite 2,000 a day. The sensitized card stock used is made specially for this purpose, being practically as thick as regular card stock. The cards are laid in a frame holding nine, a negative—white on black—reproduction taken therefrom, and the cards returned promptly to the public catalog. At the end of the day these sheets of nine cards are sent to the library printing office where they are cut and punched in the same way as cards printed from type.

Care of Building. Janitor Service

CLEANING BOOKS

In Manchester, N. H., where preparations for moving are in progress, one of the extra assistants is engaged in cleaning the books. In describing the method a local newspaper says, "An ingenious device is being utilized in this part of the work. A box, framed much like a dog house, is used. Its roof and sides are composed of cloth which is dampened so that, when a book is held outside [or inside?] and dusted, the dust is collected and the book returned to its place without the unpleasant feature of scattering dust through the atmosphere to the discomfort of readers and assistants and to the undoing of dusting previously done on other volumes."

Libraries on Special Subjects

ENGINEERING LIBRARIES

Value of a library in an engineering office. Louise B. Krause. *Engineering Rec.*, Ap. 25, 1914. p. 479-480.

This article is accompanied by an editorial emphasizing the value of such a library to an engineer.

The article by Miss Krause, who is librarian for H. M. Bylesby & Co., of Chicago, is most practical, and although written primarily for the engineer it contains many points that are of value to any librarian. Among the topics discussed are the methods of building up an office library, in which she states that too much emphasis cannot be placed upon the opportunities of the successful office library: namely, that all material should be shelved in one place making it of equal access to all members of the organiza-

tion. The next point urges the importance of technical periodicals and indexes. The importance of binding such periodicals instead of clipping things that are likely to be of interest is urged.

Regarding the disposal of pamphlets Miss Krause has found it more advisable to place all material on a subject on the shelves rather than to file it in different places. The vertical file, she states, is the best way to file manuscript and typewritten data which cannot be put on the shelves conveniently on account of its form, but she preserves each individual pamphlet in a binder, treating it as a book. The great business of a librarian in an engineering office is to coordinate the information of all the departments, and to that extent such a librarian is a walking guide post and a living index for that particular organization.

General Libraries State and Government

LEGISLATIVE REFERENCE BUREAUS

Legislative reference bureaus for political parties. Donald R. Richberg. *Spec. Libs.*, Mr., 1914. p. 38-42.

A statement of the differences between the legislative reference bureau of a political party and one doing state or municipal work. A party bureau has three purposes. (1) To aid in preparing the legislation proposed in the party platform; (2) to promote education of party voters, thereby solidifying party support; (3) to assist in the intelligent choice of measures to press and of methods of promoting them. The information given in this paper is based on the experiences of the bureau established by the Progressive party, of which the writer was librarian.

The direction of the work was in the hands of a committee distinguished for their interest in political principles rather than for their anxiety for public office. In selection of material the national party platform forms the basis, to which are added separate state platform topics and closely allied subjects. Much material will have to be mimeographed or printed for distribution. Bills must be collected promptly and indexed, records of votes, vetoes, etc., compiled and digests made. A political bureau must be partisan to the same honorable degree that a lawyer is supposed to be, and requests for assistance or advice concerning pending legislation require that the answer shall express, even though it

fail to carry, conviction. Concerning the need of a trained draftsman on the staff, the writer considers it better to employ special workers as occasions demand, thus securing the services of experts in varied lines.

The bureau must be prepared to issue bulletins, newspaper statements, and all sorts of leaflets for general distribution. The establishment of a national legislative bureau and coöperating state organizations is a logical means of bringing about the ultimate control of principles in party counsels. If the party bureau is operated on a human basis it will consider the conflicting influences brought to bear on the legislator and will seek to aid him in the mechanical difficulties of his work, at the same time helping to clarify the issues involved.

Legislative reference work for a political party should be financed from a party treasury filled by small contributors in order that it may be above all suspicion. Such a bureau will be able to enlist the coöperation of men and women of learning and authority.

Apart from its immediate practical uses, there is in the work of the bureau a combination of law and politics and social science that is creating a new profession, which might be termed that of social counselor, and which forms one of the large divisions into which the profession of law is separating. During the transition period between the "almost purely parasitic lawyer of to-day" and the social counselor of to-morrow, legislative reference bureaus may serve as post-graduate schools in which young lawyers may be brought in touch with the needs of their generation in the way of jurisprudence.

For Special Classes

HOSPITAL LIBRARIES

A patients' library is being founded for the City Hospital of Youngstown, O., by Mrs.

Fred M. Orr, who is gathering books and cataloging them for this purpose. A room in the hospital is available, as well as book cases, and competent supervision will be provided in order to keep the list in order. Friends of the hospital and others benevolently inclined are being asked to donate books which they do not need for their own library, or others they desire to give simply for the pleasure they will afford persons who are ill.

Typewritten lists of the books and their authors will be kept. When a patient is able to read, he will be shown the list and be permitted to choose his own reading matter. If a volume is duplicated, the extra volume will be placed in the library of the nurses' home.

The hospital is constantly caring for persons who have no friends to supply them with reading matter and it was chiefly for their benefit the patients' library was conceived. Such a library is an adjunct of several of the best equipped hospitals in the east and it is eagerly applied to by all the patients.

Literary Methods and Appliances

Library Appliances

EQUIPMENT

The private library. H. T. Bottomley. *Brickbuilder*, Ap., 1914. p. 75-80.

An interesting article discussing particularly the equipment of private libraries from the ancient Romans down to the present day. Twelve illustrations are given. Some of the points mentioned by the author are applicable to public libraries. These libraries are considered from two points of view: namely, design and comfort, to the end that the library should be a room where repose, simplicity and quiet are found, and where all the parts are beautiful.

THE LIBRARIAN'S MOTHER GOOSE

VI. LOAN DESK.

Little loan clerk, come blow your horn.

Call out your wares both night and morn.

—Renée B. Stern.

Bibliographical Notes

A bibliography of municipal government is now in preparation by William Bennett Munro, professor of municipal government in Harvard University. It will be issued by the Harvard University Press.

A handy little pocket reference book of 68 pages, revised up to 1914, is called "Five thousand facts about Canada," compiled by Frank Yeigh. It is published by the Canadian Facts Publishing Company of Toronto.

A revised edition of "The working of the Boston Public Library," by J. H. Benton, president of the board of trustees, has just been issued. In this edition the statistics have been brought up to date and the text revised.

The London Library has issued the second volume of its author catalog, compiled by C. T. Hagberg Wright and C. J. Purnell. The general plan and arrangement of the British Museum catalog has been taken as a guide, and the result is a scholarly and at the same time skilfully condensed catalog.

The Free Public Library of Newark, N. J., has recently issued a new edition of a pamphlet called "Reading for pleasure and profit." The list has grown out of actual experience in suggesting books to young people, and is a list of the books which young people of high school age have found attractive. The list is divided into eight parts to suit the varying ages of the readers, each part being subdivided again into the three classes, Fiction, Non-fiction and Poetry.

"The book of British topography," by Mr. J. P. Anderson, first published in 1880, contained a list of some 14,000 titles of books in the British Museum on the local history and topography of the United Kingdom. During the last thirty years the British Museum has acquired so many old and new books on these subjects that the new edition of the work to be published by subscription by Messrs. Graf-ton & Co., now contains 29,000 entries.

A 12-page pamphlet has been issued by the Schenectady (N. Y.) Public Library, giving a list of cheap English books suitable for the small American library. Books are chosen for examples that are not likely to be in a small collection, and very few are listed that cost over 50 cents.

A bibliography and reference library pertaining to Denmark will be published by the

Danish-American Association for free distribution among public libraries and newspapers of the United States, under a resolution passed at the annual meeting of the organization in Chicago in April. C. A. Quist, of Minneapolis, is the new president of the association.

A list of foreign periodicals of moderate cost, compiled by Miss J. Maud Campbell, director of the work with foreigners for the Massachusetts Library Commission, is published in the March-May number of the Massachusetts Club *Bulletin*.

The Minneapolis *Daily News* has several hundred copies of its issue of Aug. 5, containing full text of a proposed city charter for Minneapolis, which it would be glad to distribute to applicants upon receipt of postage.

The United States Bureau of Labor Statistics issues in monthly installments in type-written form references to recent magazine articles relating to labor in all its different phases, the titles being selected from some 800 magazines and weekly papers of this and foreign countries. This necessarily includes many periodicals not indexed in the *Readers' Guide*.

The January number of *Special Libraries* contains a tabulation of municipal ordinances and documents prepared by Frank G. Bates of Indiana University and the Indiana Bureau of Legislative Information, which is intended as a tentative statement of the present status of publication and distribution of municipal documents in cities of the United States of more than 25,000 inhabitants.

The Public Library of Multnomah county, in Portland, Ore., has recently issued a very attractive brochure descriptive of its new central building. Besides a description of the construction and appearance of the building, the program of the opening exercises on Sept. 6 is printed in full. There are full-page pictures of exterior and interior views, and many small illustrations scattered through the text illustrative of details in the carving and other decorations.

A piece of bibliographical work of considerable value and magnitude was begun recently in the Philippine Library. Sr. Manuel Artigas, curator of the Filipiniana division, is indexing all the important articles, portraits, and biographies in the bound volumes of Philippine periodicals belonging to the library. Al-

ready he has finished *La Solidaridad*, the paper that has become famous because of Rizal's connection with it; *La Ilustración Filipina*, *La España Oriental*, and two volumes of *La Oceanía Española*. The work has been rendered necessary because of the many requests for information on many topics by students of the University of the Philippines and others.

One more evidence that American library methods are being rapidly adopted in European libraries is evidenced by the recent publication of a list of Norwegian subject headings under the title of "Norske realord," modeled closely after the A. L. A. "List of subject headings." The Norwegian list is not a translation of the latter, however, for the A. L. A. list was found impossible to transfer into a language and atmosphere as different as that of Norway. The work was prepared by Victor Smith, librarian of the Grünerlokken branch, Deichmanske bibliotek, Christiania, who is a graduate of the New York State Library School in the class of 1912. Nearly two years were spent by Mr. Smith and his assistant in working out the present list from cyclopedias, library catalogs, indexes, classed bibliographies, etc., and though apparently of modest dimensions, filling only 97 pages, it is more than twice as big as the old A. L. A. list.

It is proposed to compile and publish a complete subject index to the two great French bibliographies of Quérard, "La France littéraire" and "La littérature française contemporaine" 19e siècle. These two works include the vast mass of French books published between 1700 and 1840, but are arranged only by author's names. A subject index will render available the vast stores of books on every conceivable subject, which up to now have been hidden by the want of such a clue. The eighteenth century in France was a wonderful period, full of invention, philosophy and development in every possible direction, and the literature reflects the life of the people. The work will be produced under the editorship of Mr. R. A. Peddie and Mr. Q. Waddington, and is estimated to form three volumes of about 1000 pages each. The method of indexing will be that adopted by Lorenz in the "Table des matières" of his "Catalogue générale de la librairie française." The index will be in French and the volumes will range with the set of Quérard's works. The work is to be published by Grafton & Co. of London, and the price for subscribers before publication will be £12

net. It will be impossible to carry out this work unless the names of sufficient subscribers are received beforehand. It is therefore hoped that librarians and others interested will apply for subscription forms and further particulars which can be obtained from the publishers. The three volumes will be published at intervals of some months, and it can be arranged that payment can be made for each volume as published.

Humors and Blunders

"TESS" AGAIN!

The following conversation was overheard at the charging desk in a New England library:

Elderly borrower to youngest assistant: "Is Tess in?"

Youngest assistant: "Tess who?"

E. B.: "Why, Tess!"

Y. A.: "Tess?"

E. B. (witheringly): "Yes, Tess of the vaudevilles; are you sure you understand now?"

LIBRARY CHILDREN

Library work for children has done and is doing good service. But of late years the work for children everywhere has undoubtedly fallen a little into discredit, even amongst librarians. Its mission and its methods have been questioned. Something about it has led to an overstrained view of its importance and its results. A tendency to sentimentalize has been noticeable amongst its advocates. The average man, detecting a mawkish note in the thing, is apt to turn away, regardless of the fact that there is a solid foundation beneath the buncombe.

The idea that all the good little boys and girls are reading in the libraries, and all the bad little boys and girls are outside, is suggestive of the methods of moral instruction used by the French missionaries amongst the Iroquois. Some of them carried two paintings. One represented the soul of the converted Indian, basking happily on the fleecy clouds of Paradise. The other—the bad, non-Christian Indian—was being prodded byimps into a sulphurous pit. The same method might be employed in some of the children's libraries, making use of two gems (slightly altered) from "Patience."

Gentle Jane was the sweetest creature;
She simply worshipped the library teacher,
Followed the plans that one devised
And took her reading sterilized;
Eschewed the works of Mrs. Glyn,
Was full of "uplift" brow to chin.
She never ate candy, cake nor tarts,
Nor tipped old ladies' apple carts.
She spent no coin for gum nor pickles,
Nor blew on the "movies" dimes and nickels.
When others had safely gone to bed,
Jane went to "Parsifal" instead!
And when she grew up, with a haughty air,
She married a Pittsburgh millionaire!

But mark how relentless fate swooped down
on Tom, who refused to eat out of the library
teacher's hand:

'Teasing Tom was a boy so tough,
He was "simply horrid" and "awful rough!"
He said "Skidoo!" and things like that;
He threatened Jane with a baseball bat.
He read "Huck Finn," "Tom Sawyer" too;
Kept out of the "Mothers' Helpers" crew;
He'd sneak away when the lady 'd read
From the beautiful Nibelungenlied.
Sin so black in his soul did lurk
He didn't like clay nor basket-work.
But fate o'ertook him, sure but slow,
When he went to a Cubist picture show!

TOO WELL ADVERTISED

Lady (who has come late to the library lecture, and is unable to find a seat): "Disgraceful! They ought not to be allowed to advertise them so much!"—COURTS, "Library jokes and jottings."

Communications

REVISED EDITIONS

April 29, 1914.

Editor of Library Journal:

As I examined volume 3 of *Intercollegiate Debates*, edited by E. R. Nichols, (Hinds, Noble and Eldredge, 1913) I could not restrain that eternal question—when will the publishers give us fair treatment in the matter of new or revised editions? This volume is nothing less than an abridgment of volume 2 with some new material in the appendix. It contains seven of the fourteen debates included in the second volume with no evident amplification or revision. The title-page states that it is a "revised edition," but the statement can apply only to the preface, introduction and appendices. In fact, for the text the old plates from volume 2 were apparently used without change. Even though it were a revised edition of volume 2, why should it be numbered volume 3 of the set? In order to make the book especially attractive and to coerce the buyer, an index to the three volumes is included.

Now, the purchaser of a book such as this pretends to be interested chiefly in the debates and their bibliographies. Supplementary material is of little importance. The average librarian cannot afford to, nor does he want to pay \$1.50 for a few pages containing statistics on the number of times various questions have been debated and similar information.

Probably a meek protest will have no effect on such business methods, but I believe it is wise to let the publishers know that we are at least aware that we have been buncoed and to warn prospective buyers from the same fate.

Very truly yours,
C. E. SHERMAN.

Assistant Librarian, Amherst College Library.

HILLER C. WELLMAN

President of the American Library Association, 1914-15, Librarian of the City Library Association, Springfield, Mass.

WASHINGTON gave the A. L. A. conference a warm welcome, which closely approached the 100-degree mark at Montreal in 1912, and the attendance exceeded the maximum, making 1914 the banner year, with a roster exceeding twelve hundred. The conference especially illustrated the nationalizing tendency of such organizations as the American Library Association, for it brought together representatives from all parts of the United States, besides others from several of the provinces of Canada, many of whom visited our national capital for the first time, and these representatives came into direct touch with government officials having jurisdiction over legislation and over administrative work in all the departments which have touch with libraries, as could not be done elsewhere. Dr. Putnam's address of welcome emphasized this feeling, and he renewed the suggestion often made that a conference at Washington should be a feature of regular recurrence at least every ten years. It was a surprise to most to know that in and about Washington there are no less than 137 libraries, public or semi-public, approximating six million volumes, of many of which Mr. Meyer gave lantern illustrations in his talk, reprinted in this number, in addition to the full report made in the admirable little handbook which he prepared for the Association. The arrangements for the conference were perfect, thanks both to the local library people and to Secretary Utley's executive skill, and the guides to works of art in and about Washington, for little journeys about Washington, etc., were remarkable examples of *multum in parvo*. Much of the success was due to the efforts of Mr. George F. Bowerman, of the Public Library of the District of Columbia, whose name emerged whenever any of the local arrangements were spoken of. Nine hundred were alphabeted and given con-

secutive numbers in the advance register of attendance, so that it was easy to identify members from their buttons, and, except for the extreme heat, everything went well at the Washington conference.

President Anderson, instead of attempting a general review of the library situation, devoted his presidential address to the special topic of the "Tax on ideas" through the tariff on books, in an exhaustive, well-worked, and effective argument. He cited the fact that almost no other nation of literary standing had such a tax, and showed that the present reduced duty of 15 per cent. was 50 per cent. higher than the highest tax before the Civil War. He made a strong plea that the American Library Association should make itself the mouthpiece of the public in protesting against this tax, which it could do the more effectively because libraries already have the right of free importation. The complexities and red tape required in connection with free importation would, however, be swept away if the tariff tax were altogether abolished, and this would be of very practical advantage to libraries. Authors, it may be added, are almost unanimously in favor of this change, as artists are in favor of "free art," and book publishers are, in large measure, hesitant only because the materials of book production are taxed at so high a rate as to make an offset duty of some importance. The hearty response in individual talk to President Anderson's suggestion makes it almost certain that the A. L. A. will assume leadership in this direction.

The most novel feature of the conference was the exhibit of library devices at the Public Library, for which Mr. C. Seymour Thompson, assistant librarian, made most of the practical arrangements. This was

quite different in scope, quantity and quality, from the incidental exhibits of previous conferences; and it was made of permanent value by the excellent catalog which Mr. Thompson had caused to be prepared. Few librarians have had any adequate notion of the great number of labor-saving devices prepared for library use or practicable for library application, and this exhibition opened very many keen eyes to good purpose. From the point of view of the manufacturers, the exhibition was commercial in motive, and we may frankly express the hope that librarians adopting any of these devices or making purchases from this material will emphasize the value of this exhibit, so that it may be repeated hereafter as opportunity may arise. We may add that there has been under plan at this office for some time past a composite catalog, in the nature of the Publishers' Trade List Annual, of manufacturers' productions in filing, indexing, and library supplies, which should be of special value to librarians with respect to supplies, as the composite catalog of book publishers is in respect to books.

One of the most important subjects at the meeting of the trustees' section in Washington, which was the best meeting the section has held, was the relation of libraries to civil service examinations and methods. Mr. Jennings, who has had hard experience in Seattle, reported as the general feeling of libraries that they were hindered rather than helped by civil service examinations conducted by state or municipal boards. This almost goes without saying, and yet this is not reason why libraries should be freed from co-ordination with the official boards, which in turn should take the sensible course of permitting the library, under proper safeguard, to make its own examinations and rules, subject to official approval. Without this precaution there will be an inevitable tendency to return to the old methods of patronage and "push," the horrors of which are little

known to the present generation. It is unfortunate that the laws in several states and cities require preference for local candidates. Local candidates will be preferred, naturally enough, when they are on equal terms with candidates from outside; but nothing should stand in the way of accepting the best service from whatever source it is procurable. This is especially necessary in the higher posts if the library profession is to be made a profession. There should, therefore, always be protests against the inclusion of a provision for local preference in any law, beyond a proviso that in case of equal rank the local candidate shall be preferred—which latter is most sensible and safe.

The value of the Washington conference was largely in promoting the co-ordination of the several agencies—federal, state, and others—dealing with library extension, especially in rural communities. The agricultural section held meetings unusual both for attendance and interest, and one of the facts brought out was that the Department of Agriculture has in the field more than a thousand "county agents," who, with the field agents of the Bureau of Education, are the best possible people to interest rural communities in library help. Prof. Working's address developed the fact that few of these county agents had come in touch with rural libraries, and little was known by the Department of Agriculture of the work of the state library commissions or of the book lists prepared by libraries for farming communities. The Council passed a resolution which looked towards bringing these several agencies together, and there is good reason to hope that the "hindsight" of future years will show the Washington conference to have been the starting point of a wide extension of the work in rural communities, whose possibilities have hitherto been altogether underestimated. "A long pull, a strong pull and a pull all together," may prove to be the direct outcome of the Washington conference.

THE TAX ON IDEAS*

ADDRESS BY EDWIN H. ANDERSON, *President of the American Library Association and Director of the New York Public Library*

RUSSIA and the United States are the only powers of the first class which impose a duty on books published beyond their borders. Great Britain, France, Germany, Austria, Holland, Belgium, Japan, the South African Union, Argentina, Australia and New Zealand impose no such duties. But Spain, Portugal, Italy, Brazil, and some minor countries of the two hemispheres, with Russia and our own country, pursue a less enlightened policy. With the exception of Portugal, the tariff barriers of the countries last named are erected solely or chiefly against foreign books printed in the language of the country concerned—in Spain, for example, against the importation of Spanish books, in Russia against Russian books, and in the United States against the importation of books in the English language. For a nation whose people pride themselves on being advanced and progressive, are we not in strange company?

Though our libraries have the privilege of importing foreign books free of duty, it is proper for us to consider the rights and needs of the general public. The private buyer, the general reader, has no organization to look after his interests in the matter, and no lobby to present his claims to the proper committees in Congress. Before these committees have appeared printers, bookbinders, booksellers and publishers—all with very natural selfish interests to serve—but the general public has been practically unrepresented. The libraries have appeared only now and then, when their privileges have been threatened. Has not the time come when this Association should espouse the cause of the student, the teacher, the scientific investigator, and the general reader of the world's literature? It is our business to promote the cultural process, as far as we may, through the wide dissemination of books—not Amer-

ican books alone, but books from every quarter of the globe. They have been truly called "the raw materials of every kind of science and art, and of all social improvement." Our libraries have accomplished little when they have imported only *samples* of this raw material. The samples serve the needs of only a small proportion of the reading public, especially in our great centers of population. To the greater part of the reading public these samples are merely tantalizing, and whet their appetites for what they cannot afford to buy for themselves. The interests of the libraries and of the reading public are identical. For both there should be a free market. For both, an enlightened public policy should provide that the world's books be available at as low a price and with as few hampering restrictions as possible.

There is nothing new in this contention. It is not even the first time that a humble librarian has espoused the cause of the general public on the question of the free importation of books. As long ago as 1846, Charles C. Jewett, at that time librarian of Brown University, afterward president of the first convention of librarians, held in 1853, later librarian of the Smithsonian Institution, and still later first librarian of the Boston Public Library, printed a pamphlet entitled "Facts and considerations relative to duties on books, addressed to the Library Committee of Brown University." He maintained that "imperative reasons exist for placing books among articles free from all duty." He then proceeded to give some of those reasons, as follows: "We recognize the importance of education; but students cannot be educated without books, and many of the books needed are not, and cannot be produced in this country. We recognize, too, the importance of what are commonly termed the learned professions; but the members of these professions depend mainly upon foreign books. It is nec-

*Delivered at the first general session of the American Library Association at Washington, May 25, 1914.

essary that we should have accomplished architects for the erection of our public and private edifices, and skilful engineers for conducting our works of internal improvement; but these men must get their knowledge mainly from foreign books. If they are restricted to American books, they will be continually led into errors, which would injure us in our reputation, and diminish the value of our investments.... If we prohibit or render dearer the books which these men need, we do an incalculable injury to the whole community. If to gain a revenue of thirty thousand dollars, we deprive a Fulton of the very book that would suggest to him the new application of some scientific principle, destined to change the whole face of society, and increase incalculably our wealth, is it a wise policy which we pursue?"

In the same year that Jewett printed his little pamphlet, 1846, the duty on all imported books was fixed by law at 10 per cent. ad valorem. Previous to that time the duties ranged from 4 to 5 cents a volume, or from 10 to 30 cents a pound, depending on language, date of publication, whether bound or unbound, etc. The first duty on books was levied by the tariff act of 1824. The act of 1842 increased the duties slightly, while that of 1846 simplified matters very much by levying a flat duty of 10 per cent. ad valorem, as stated above. This was amended in 1857 to allow institutions of learning to import books free of duty. With this exception the law of 1846, providing a duty of 10 per cent. ad valorem, remained in force till 1862 when the duty was increased to 20 per cent. In 1864 it was further increased to 25 per cent., where it remained, as far as books in the English language are concerned, till the act of 1913. It is important to note that the duty was first doubled and then further increased during our Civil War. It was essentially a war tax, and doubtless justified by the circumstances. But it has taken 50 years to lower the duty from the war tax level. And this was accomplished only last year, when the duty was reduced to 15 per cent. ad valorem—still 50 per cent. higher than before the war. Here, as elsewhere, vested interests have played their familiar role of postponing justice. We should be thankful

that the last Congress made a substantial reduction in book duties, but we shall not rank with the more enlightened nations of the world till such duties are entirely abolished.

The McKinley tariff act of 1890 placed books in foreign languages on the free list. This provision was retained in the Wilson act of 1894, in the Dingley act of 1897, and in the Payne-Aldrich act of 1909. It was also retained in the Underwood act of 1913, as it left the House of Representatives. But in the Senate an attempt was made to impose a duty on books in foreign languages when they were less than twenty years old and in bindings less than twenty years old. The principal libraries in this country sent protests to the Senate committee; and these, with other protests, and, by no means least in its influence, the mere expression by the President of the United States of his surprise at such an attempt, were sufficient to defeat it. So the act of 1913 retains books in foreign languages on the free list. The privilege of free importation of such books by libraries was not withdrawn by the proposed Senate amendment; but its adoption would have seriously hampered us in the acquisition of books in foreign languages. It would have put a stop to our receiving such books on approval from the American importer, and required us to make our selections for purchase almost entirely from catalogs and publishers' lists. The revenue derived from it would have been negligible. It would have protected no infant, and, as some one has said, no senile industry; for such books are not, never have been, and never will be reprinted here. The amendment had its origin in a coterie of bookbinders whose motives were wholly selfish, and it met the defeat it deserved.

Since 1890, therefore, the only duty on books imported into the United States has been imposed on books in the English language which have been printed less than twenty years; and even these may come in free of duty to public libraries and educational institutions, provided not more than two copies are imported in one invoice. Until last year the duty on English books was 25 per cent. It is now 15 per cent. ad valorem. In whose interest, or upon what grounds of public policy is this tax levied?

For the six years from 1907 to 1912, inclusive, the average annual value of dutiable book importations was about two and three-quarters millions of dollars, and the average annual gross income for the Government less than \$700,000. After deducting the cost of collecting this income, it will be seen that the net revenue derived from it is inconsiderable. Evidently it is not a tariff for revenue.

If it is a protective tariff, who is protected, and why? We get all the light we need on this question from the hearings before the Ways and Means Committee of the House of Representatives last year. For instance, the American Bible manufacturers contended that if the duty on Bibles, printed and bound by the underpaid labor of England, was reduced, the Bible-making industry in this country would be entirely destroyed. Has some of the pauper humor of Europe been smuggled into this country? The price of Bibles to a hundred million people is to be maintained in the interest of a few hundred people engaged in their manufacture! What is best for the hundred million does not count. The case is typical in its absurdity. We put a tax on the enlightenment of all the people, to serve the selfish interests of a few.

The American author and the American publisher are sufficiently protected by our copyright laws, and need no protective tariff on books. If the materials used in the manufacture of books were put on the free list, as I think they should be, the manufacturer would need no tariff on books to protect his business. It is the book manufacturers, with the printers and binders, who seem to be most interested in the retention of this tariff barrier. At the hearings before the Ways and Means Committee the manufacturer exhibits an almost self-effacing carelessness of his own interests; but his concern for his employes, whose welfare he notoriously has so much at heart, is most impressive. He will usually be found standing behind the organizations of printers and bookbinders, prodding them on. Now labor organizations are a necessary economic factor under present social conditions. But when in the interest of their members they demand that a tax be levied on the means of enlightenment of a whole

people, they are not promoting an economic policy, but a debilitating disease.

Many years ago Robert G. Ingersoll said he believed in the protection of home industries; but when the infant grew to be six feet tall, wore number twelve boots, and threatened to kick your head off if you stopped rocking the cradle, he thought the coddling should cease. Among a proud people it is not an inspiring sight to see an industry begging for, or insisting upon, an advantage in the race with its foreign competitors. Does our national resourcefulness fail in the case of the manufacturers, printers and binders of books? If so, may not this condition be partly due to excessive coddling? The over-coddled child seldom develops into a resourceful man. Is there any reason to expect it to be otherwise with an industry? The American painter scorns the protection given him by the Government against the work of his foreign competitor, and time and again has petitioned Congress to put works of art on the free list. No American writer of standing, as far as I know, has ever sought protection against his foreign competitor. If those engaged in the mechanical processes of book-making are less proud and resourceful, it is a humiliating fact which calls for explanation.

The protected book industry in this country is now a wizened infant ninety years old. It has not thriven on the tariff pap. According to a writer in *The Unpopular Review*, who seems to be well-informed on the subject, the number of books published annually in the United States is only about six per cent. of the total annual production of the world. In proportion to population, Switzerland publishes annually ten times as many books as we; the Scandinavian countries, Denmark, Sweden and Norway together, six times as many; Germany, France, the British Empire, Holland, Italy, Austria and Japan, each from three and one-half to five times as many. Even Roumania, in proportion to population, publishes over three times as many books as the United States, while Russia publishes over one and one-half times as many. The figures for Spain and Portugal are given together, and our book production is slightly below theirs. "Beneath

these," says the writer referred to, "there is no lower depth."

For the last five or six years the total annual value of the books imported into the United States, both dutiable and undutiable, was about \$6,000,000, or six cents per capita. While we tail the procession in book production in our own country, we import from the other countries of the world only a paltry six cents' worth for each of us. In the face of these facts we cannot claim high rank as readers of books. Our ambassador to the Court of St. James, himself a publisher, is reported to have said not long ago that American men spend less for books than for neckties, and American women less than for the buttons on their dresses. The tariff has signally failed to promote the publishing, the manufacture, or the sale of books. During the last thirty or forty years the number of bookstores in the United States has notoriously declined. Now it is conceded that a good bookstore, well stocked and well managed, is of great educational value to any community. We, as librarians, are sorry to see them disappear, because good booksellers are our ablest coadjutors. In the interest of general intelligence we want to see more private buying and more and better household libraries. It is of vital importance to all our citizens that the book business should thrive here. But it was not the discounts to libraries that drove the bookseller out of business; nor has the tariff on foreign books done anything to save him. What, then, is the cause of his rapid extinction?

The writer whom I cited a moment ago, gives what seems an adequate explanation. While we publish only six per cent. of the annual production of books, we publish sixty per cent. of the world's periodical literature. Bookstores are disappearing; but we have nearly a hundred thousand news stands. In short, cheap newspapers and cheap magazines are taking the place of books in this country, chiefly, our Unpopular Reviewer thinks, because the Government carries newspapers and periodicals in the mails at one cent a pound, whereas the cost of such carriage is about eight times that. In other words, the Government practically gives a tremendous sub-

vention to second class mail which is paid by the first class mail. When you post a letter, nearly half of what you pay goes to defray the cost of carrying newspapers and magazines. Why books were not included in the subvention is not explained. If it is justified in the case of newspapers and magazines, on the ground that in a democracy the Government should thus encourage the diffusion of ideas among the people, why are books considered less important for this purpose? It certainly seems that our postal laws have discriminated against books. The present administration has improved the situation, as far as the nearer zones are concerned, by the inclusion of books in the parcel post. But for the more distant zones the rate is higher than before. Whenever the postal rate on books is higher than the cost of handling, the Government is levying an unnecessary tax on ideas.

On broad grounds of public policy there should be the freest possible flow of ideas, not only among our own people, but between nations. The most civilized peoples of the world are growing closer together, because they are beginning to understand each other better. If it is necessary to have any tariff barriers at all between them, it is certainly unwise to have barriers against ideas as printed in books. A tax on knowledge and education is especially unwise in a republic, the very existence of which depends on the intelligence of its citizens. Our tariff on English books bears heaviest on those who are least able to pay it—our scholars, our teachers, our scientific investigators. Elsewhere the most enlightened governments do everything in their power to encourage such men as national assets. Here our policy actually discourages them. An enlightened policy would put books in a class by themselves and on a plane above the ordinary commodities of the world. Instead of being taxed they should be privileged, not for the encouragement of an industry but for the education of the people.

While it has taken fifty years even to reduce the tariff on English books, there is great encouragement in the fact that a beginning has been made. The late Prof. Sumner said, "If asked why they act in a

certain way in certain cases, primitive people always answer that it is because they and their ancestors always have done so. A sanction also arises from ghost fear. The ghosts of ancestors would be angry if the living should change the ancient folkways." In tariff matters we seem to be a primitive people; any suggestion of change is met with an instant prediction of dire consequences. The political mind is panicky at the prospect of change. Of a politician who was always pessimistic about any alteration in governmental policy, it was

said that if he had been present at the creation he would have thrown up his hands in holy horror and exclaimed, "Chaos will be destroyed!" We have long been familiar with the political stump speaker who loves to expatiate upon the calamities which would follow any reduction in the tariff. Yet we have survived a large number of such reductions. When the next book schedule is under consideration, we commend to our tariff and postal rate makers the motto of this Association, "The best reading, for the largest number, at the least cost."

THE PRESENT TREND*

BY CHARLES K. BOLTON, *Librarian of the Boston Athenaeum*

YOU will perhaps think me over bold to speak this evening on the present trend of the Public Library movement, for it is many years since I last drew my salary directly from the taxpayer. But this seems to be an occasion when I am to share the more human privileges of the library world.

ACCOMPLISHMENTS

To-night we may look back upon more than half a century of significant development in the Public Library as conceived and described by George Ticknor, the historian of Spanish literature. His was the master mind and warm heart that saw the benefits to be derived from a great circulating library for the people, with the popular books of the day purchased in sufficient numbers so that they could be read and discussed while they were a factor in the life of the moment. To him we owe the governing spirit of the Public Library throughout this broad land of ours, although Boston, his home city, has as yet shown no desire to honor him by a statue. These fifty years form an era of development along technical lines as well as in the testing of public responsibility, through which we have come to trust our own people as no nation ever did before. Gradually we have come to understand something about the proper housing of books, and the art of bringing their presence and value

home to the people; we have opened wide our doors to children, little children, and have extended our influence through branch buildings to every corner of a big city and into every school-house.

Through all this experimenting we have achieved much in the way of catalogs and systems of classification that appeals to peoples beyond our borders; and yet we have all along felt dimly, but with growing insistence, the call of our foreign population, and the claim of our business men to a share of our attention. But the call has come gradually into our consciousness, and has not hindered us in the perfecting of our technique.

Like the voice of the wild to the school boy the call upon us to put our systems to the supreme test of service is so insistent that it will ring in our ears for the next half century.

Already cooperation is influencing our methods. The Library of Congress has spread its catalog cards across the continent, and has made possible *gesamt* catalogs or union lists. Schemes for cooperative selection and purchase of books are taking shape. At the moment their scope seems endless, and they will expand until the machinery becomes cumbersome or until it delays results to the limit of usefulness. We have had the theory of centralization of authority as applied to transportation tried in New England to that same limit of usefulness, and, as boys say, we

*An address delivered before the American Library Association at Washington, May 27, 1914.

are now expected to pay the freight. Let us not accept the delusion that centralization and cooperation are everything and local pride, ambition and initiative nothing. They are factors to be adjusted in the production of any Utopia.

One form of cooperation, however, is suggested by the imminent danger of the loss of the current newspaper through disintegration. The mirror of our life to-day is to disappear in a generation, as the image on the glass fades with the coming of the dark. The best in our papers, whether national or local, must be preserved, if the record of our nation's life is to be handed on in any fullness and with any local color. Only by cooperative effort can this work of preservation be done, by obtaining rag paper for a special edition, or by a system of extracting certain sections of the news for copying and printing on durable paper.

Speaking now of material things, the significant thing about libraries, the thing which catches the eye of the visitor, is our splendid library architecture. We are to-day in an era of great central library buildings, beautiful to look upon, impressive as to their mission, and altogether admirable as signs of our higher life.

But I believe that the day of such buildings will wane. We invest from one to ten millions in a building which may in a generation be poorly placed for its work, behind in the best methods of heating, ventilating and fireproofing, or even out of date in the art of housing books. Monument that it is, it is not what counts most to-day in the public library movement. The living library, like the living church, is not built of marble, nor can it be left stranded by the din of business or the retreat of fashion. Beautiful buildings we should have, but not through sacrifice of salaries and service.

We are, I believe, to center our money, our ability and our treasure in branches, with a plain, serviceable structure for administration and storage. The branch will, like the chameleon, reflect its immediate surroundings. It is to throb rather than sleep. It is to be a civic center, alive from dawn to midnight, uniting, like Caracalla's baths, the interests of body and spirit, as they indeed are always united in a healthy

state. Here will be the books for the people of the vicinity, perhaps English, perhaps Yiddish, or perhaps English this year and Yiddish twenty-five years hence. Here also will be the headquarters for clubs representing both sexes, all ages, and all the languages of that famous tower of Babel. The swimming pool, the billiard room, the employment office, the kitchen for social nights, the music for public dances, they may be a part of it all, six days in the week including holidays and part of Sunday at least.

Even so the branch cannot do it all. I am convinced that the neighborhood house under the right guidance will deal intimately with the foreign born and bred as no librarian, missionary as she often is, will ever be able to do. The library and the school must face each local condition with local wisdom, not forgetting, as Miss Addams says, that things which make men alike are finer than things which keep them apart.

A teacher in a public school was holding up a picture of Mt. Vernon, the home of Washington. A little boy raised his hand to ask a question. "Teacher," said he, "in which flat did Washington live?" Here we have an ignorance of American life that is appalling. To some extent such a child must be transformed, but in the process we also are to change. Some of us are to live in flats and some foreign born will live in mansions.

What is our population? In the north end of Boston, Mrs. Amelia Davis directs a club for boys. One of these boys speaking to another said: "Mrs. Davis is a Jew because hers is a Jewish name." "No," said the other, "Amelia is an Italian name, so she must belong to my race." Being told that she belonged to neither race they discussed the matter and agreed that Mrs. Davis must be Irish. They, in the heart of Boston, had never heard of the race which founded Boston and Plymouth. In New England three-fifths of our people are foreign born and bred. Southern New England is the most densely foreign place in the United States. In Fall River eight out of every nine people one meets are not of our blood. The West has largely completed her railroads and mines, throwing back the immigrant tide to people the

East. In Los Angeles one out of every two inhabitants is foreign, while in Cleveland four out of five, and in New York five out of six are foreign born or bred.

We lay great stress on the illiteracy about us, but it is not this so much as dissimilarity of ideals that menaces our government. For that reason the human relation between librarian and reader, or between social worker and her circle, will be the vital factor. The foreign born likes good literature. He comes to our shores with a desire for the good, and he craves, if he could but express it, a standard library rather than the latest book. The latest in type and paper and illustration may attract his eye, but he will be content with literature that has stood the test of time. Even Harvard College is to have a standard collection within its great new Widener Building. How much more should every branch library in a large city be a standard library in a liberal sense.

BUSINESS METHODS

To bring his wares to the notice of the public the energetic man in a library to-day wants to adopt methods of business. How shall he do it? We see him trying all the agencies of a commercial nature, and he is likely to adopt some government methods, which, like our post-office system, look profitable, but really cost heavily to maintain.

In some states a state library serves every small town, and in others the nearest city is, or is to be, a distributing center. If the expensive book, rarely wanted, can be got to the people it matters little what center for distribution is adopted.

We are on the threshold of house-to-house delivery, and, as an experiment, it will be tried in compact well-to-do districts. We also hear much about the value of the rural free delivery of mail. They both have limited value and manifest faults: To rob the farmer of his daily or even once-a-week visit to the post-office and to permit him to live a life of isolation is a distinct loss to the social side of farm life. If the farmer will not go to the library the books had better come to him, but in serving him thus let us remember that there are disadvantages in the system.

A country parish once sent into town for

a preacher who did not use notes. One was sent. Next Sunday the parish asked for a different man. "Didn't he speak without notes?" the Bishop asked.

"Yes," was the weary reply, "but we didn't need a rural free delivery. We don't want too much even of a good thing." In all our experiments we don't want too much of a good thing.

If we believe in the inspiration which comes from the actual presence of a great library we cannot conceive of any adequate substitute through house-to-house delivery. Nor can the letter carrier in any way equal the personality of the librarian as a guide and friend.

More recently the library, as a practical tool, has made its way into the specialist's stronghold, and has dared to offer aid to the man of business. A forward step, though one beset with pitfalls, is the legislative reference library movement, through which the expert in books hopes to place before lawmakers the very widest, latest and best information on economic matters. I say beset with pitfalls, for the believer in popular government must look with some uneasiness on a permanent group of experts at the state capitol. A prominent reference librarian was asked if he and the governor did not have much influence upon legislation. He replied that between them they practically dictated new laws, and then he laughingly said, "And I dictate to the governor." Pride of power may easily in such a situation rob the excellence of the scheme of its just fruits. Democracy has reason to shun the path of bureaucracy if she reads European history with care, for the motives of mere man in a democracy are not always more unselfish than those of man in an aristocracy.

GOVERNMENT DOCUMENTS

We have made great progress in educating the public to the value of our documents. They represent scholarship of a high order, and they are of surprising interest. Can we not have abstracts issued in attractive form according to a broad classification? The mining population needs one group of extracts, the agricultural another. The shipper and the manufacturer cry for information buried in calf—or happily now—yellow buckram covers. You

remember the popularity of Uncle Sam's cook book, and of less fame the book on horses issued by the government. Many documents for immigrants cannot be had unless specifically asked for. The best farmers in Western Massachusetts are Poles. They want information which cannot be placed before them in the natural way. The labor unions forced into the law a provision that such information cannot be offered to our farmers, but must be withheld until the workers themselves ask for it.

THE TREND IN OUR PROFESSION

In a broad sense we may say that we now train for clerical and sociological work rather than for pure administrative positions, leaving it to the sifting of experience to bring leaders to the front. It is true that in some few of the library schools sifting is done before the doors are open to the professional student. It is true also that some searching is done in class to discover those of marked ability in certain lines—art, science, music, language, etc.—but I fear the study of personality in students is not sufficiently searching or ruthless.

We need librarians with a combination of sanity in business affairs, and imagination, faith and sympathy in leadership. If some cannot understand sympathetically the foreign born of our population we need to search out trained men and women who can. At Gardner, Mass., recently a meeting of immigrants was called to study the adaptation of the public library to their needs. A large number came, including leaders of the various races, but not one of the twelve trustees of the local library attended.

Especially do we need leaders who do not limit their horizon to the library field nor to the work for which they are paid. Too often we feel that every phase of a librarian's job is philanthropic, and that he owes nothing more in service to those about him. It is true that his work, like woman's in the home, is never done; but every efficient worker with a conscience is doing the world's work, be he banker or merchant or lawyer. Almost every leader in the great professions feels it his privilege and his duty to serve on directorates

and to do endless administrative work that must be done without compensation. From "Who's who in America," I have selected for study the records of twenty-five librarians of the larger cities. These notices are presumably revised by themselves, and so emphasize whatever of effort they consider of value. Here are the results: Fourteen belong to non-library societies, showing themselves broad enough to have interests that are non-professional. Seven have held offices of a civic nature, chiefly on a state library commission, one of the few positions suitable for a librarian to hold while engaged in his work. Eight have written more or less on non-library subjects, and five are well-known writers on technical library affairs. Three are engaged in remunerative avocations. The record is by no means a bad one, although it might be better. It seems to show that even the leaders as a whole confine themselves rather closely to their remunerative effort, leaving to lawyers, doctors, clergymen and merchants the great field of work that must be done without pay and without praise, to uplift the world.

In the big libraries we need library knowledge plus administrative training and a broad vision. In small libraries we need library knowledge plus the neighborly spirit. Too often the small town cannot get the right type of librarian or trustee. We are drifting therefore toward some system of control, perhaps advisory rather than authoritative, which shall combine considerable ability in supervision with intimate knowledge of local conditions. The state library commission, with its traveling agent, meets the need only in part. We ought to have more continuous oversight. For this work a district superintendent or director of libraries is proposed, his field to include from five to twenty-five libraries. The educational work in a group of small towns is managed by a superintendent of schools, and, if fear of encroachment upon the prerogatives of local trustees can be allayed, there is hope for results along similar lines in our development of rural libraries.

PENSIONS

A serious feature of all our public service to-day is the laying of emphasis on the

individual instead of upon the work of his office. The community to be served and the taxpayer himself sink into insignificance when an aged public servant is threatened with removal for incompetence. There is no escape from the evil except by pensions. When we begin to understand that from an economic point of view the pension is or may be granted to promote efficiency as much as to be humane we shall meet the expenditure more readily, and shall awaken many dormant institutions.

I wish we might have—foolish as it may sound—an official "Who's who" of librarians and assistants, a central record for every biographical detail of every worker in our profession, to which the trustee or chief librarian could turn for information. I understand that the French government follows every teacher in France step by step with such a record through his entire career. To make such a record creditable is a worthy ambition, leading to advancement.

What are we to be in the future? Are we to be scholars or philanthropists? Are we to be administrators or civic leaders? We cannot be all alike, nor should we try. But we can be positive and constructive. We can have character and we can get results. So that when the stranger from another land, or the historian of a later age, studies the record of our time the colors of the picture we leave will be distinct and clear, or even brilliant.

If we believe that all human impulse and all movements are in cycles or spirals we may hope that, whatever decrease in scholarship we may detect during the adjustment of the public library to the present needs of popular uplift, there will in good time be a reasonable reaction. Scholarship cannot be alienated from the library for long even though the library become a social center. Wherever books perpetuate the finest thought of all the ages, a library will bid men to read and to think.

THE LIBRARIES OF WASHINGTON*

BY H. H. B. MEYER, *Chief Bibliographer of the Library of Congress*

THE city of Washington is rich in library resources. The Library of Congress would lend distinction to any place, but a recent census undertaken to gather information for the "Handbook of libraries in the District of Columbia," issued by the Library of Congress in cooperation with the District of Columbia Library Association, showed 137 libraries with a total of 5,674,000 volumes and pamphlets. Of these about two-fifths, or 2,250,000, are in the Library of Congress; a little over two-fifths, or 2,352,000, are in other libraries supported directly by the government; while a little less than one-fifth, or 1,072,000, are in libraries not supported by the government. In this last group the most important are the college and university libraries, and among these the Riggs Memorial Library of Georgetown University, Rev. Henry J. Shandelle, S. J., librarian, easily takes first

rank. The library dates from the founding of the University in 1789 and is the oldest in the city. It was named in honor of the father and brother of Elisha Francis Riggs, Esq., who, in 1891, equipped the library with galleries, alcoves and the main reading room in the south pavilion of the Healy Building. In 1911 Mr. Riggs furnished an annex calculated to hold 70,000 volumes. The library contains 106,341 volumes and 62,649 pamphlets, rich in patristics, Greek and Latin classics, American Indian languages, religious writings, including alcoves of liturgical, ascetical and hagiographical works. There are some hundred volumes printed between 1472 and 1520, and a fine working collection on the fine arts.

There are a number of smaller separate collections belonging to the University. The Hirst Library, which arose from the bringing together of the libraries of several students' societies, is supported by a small annual fee from the students and in

* A talk, which was illustrated by the stereopticon, given at the opening session of the Washington conference, May 25, 1914.

it the students enjoy special privileges. The Observatory Library of about 3,500 volumes and pamphlets is a part of the equipment of the Astronomical Observatory founded in 1846. The Law School Library and Medical College Library are attached to these schools respectively in the heart of the city. Especially worthy of note is the Morgan Maryland Colonial History Library of about 3,750 volumes and pamphlets, consisting mainly of books pertaining to the history of Maryland and the District of Columbia. Its importance is enhanced by the large, perfectly constructed archive or monument vault which contains old papers, documents, and forms a depository to which Maryland and District families are invited to contribute their ancestral and other valuable papers. With it is connected a museum of historical relics synchronous with the books and documents.

The library of George Washington University goes back to 1821 and now contains about 45,740 volumes. It includes the important collection on Germanic philology brought together by Prof. Richard Heinzel of the University of Vienna, and the classic library of Prof. Curt Wachsmuth of the University of Leipzig. Apart from the main library are the Law Library, Medical Library, and the library of the National College of Pharmacy, which are located with their respective schools in various parts of the city.

The library of the Catholic University located at Brookland, one of the northern districts of the city, contains about 100,000 volumes and pamphlets. It is the center of a group of Catholic college libraries ranging in size from 3,000 to 15,000 volumes. Especially notable is the library of the Franciscan Monastery located in a building which affords an interesting specimen of monastic architecture. The library contains about 10,000 volumes and specializes in everything relating to St. Francis and the Franciscan Order.

At the Howard University for colored students there is a compact library of about 50,000 volumes, general in character, housed in a building for which Mr. Carnegie gave \$50,000 in 1910.

The government maintains two military schools in the District, both located at the

extreme south end of the city. The Army War College for the training of officers in military science had a library of 34,400 volumes which has recently been raised to the first rank by the addition of the important War Department Library of 60,000 volumes and 40,000 pamphlets, rich in books relating to the wars in which the United States has been engaged. The Engineer School for the instruction of the engineer officers of the United States Army has a library of 50,000 volumes, and 8,000 pamphlets, largely made up of civil, electrical and mechanical engineering literature.

The public library located in the Carnegie Building in Mt. Vernon Square in the heart of the city, was established by an act of Congress in 1896. It had been preceded by the Washington City Free Library in which Gen. Greely was very much interested. The establishment of the public library was largely due to the efforts of Mr. Theodore W. Noyes, editor of the *Washington Star*. The library has grown from the original 12,000 volumes received from the Washington City Free Library to 168,000 volumes and pamphlets. This development has taken place mostly since 1904 when the present librarian, Mr. George F. Bowerman, was appointed. Mr. Bowerman's services were recognized last year by a doctor's degree given him by George Washington University. It is generally acknowledged that he has made the best use of the limited resources at his command. Not having it in his power to establish regularly equipped branch libraries, he has gradually put into active operation 150 distributing stations in all parts of the city.

The government libraries are, as a rule, of a highly specialized character and some of them rank as the most complete of their kind. The library of the Surgeon-General's Office is the second largest library in the city, containing 503,327 volumes and pamphlets, and is a monument to the industry, scientific knowledge and bibliographical attainments of Dr. John Shaw Billings, who became surgeon-general in 1865, and through whose efforts the library was raised to the very first rank. It is believed to be the largest medical library in the world, surpassing the library of the Faculty of Medicine of Paris, which has generally been

considered the largest. Even in the special field of French medical dissertations it has the most complete collection in existence. It has about 250 medical incunabula, of which Mr. Felix Neumann is making a check list. The library is further famous as being the basis of the Index Catalogue so well known to all students of medicine.

The library of the Geological Survey is hardly less notable. It contains 190,000 volumes and pamphlets and 25,000 manuscripts. Its catalog would practically constitute a bibliography of geological science.

The library of the Department of Agriculture contains about 131,000 volumes and pamphlets. It is a good example of centralized administration. The bureau and office libraries, of which there are about 12, are really branches of the main library. They have their own librarians who devote themselves to the specialty of the office and frequently undertake important bibliographical work. For example, the Bureau of Plant Industry, whose librarian is Miss Eunice R. Oberly, maintains a union catalog of botanical and horticultural literature in the libraries in the District.

Of similar interest are the libraries of the Weather Bureau and the Bureau of Fisheries, each believed to be the best of its kind in the world. The Weather Bureau Library contains 32,000 volumes mainly devoted to meteorology and climatology. The library of the Bureau of Fisheries numbers 28,695 volumes, especially rich in the literature of fish culture for food.

Other department libraries worthy of mention are the State Department, Bureau of Rolls and Library, one of the oldest maintained by the government. It has about 70,000 volumes on international law, diplomacy, and description and travel in foreign countries, while its manuscripts are among the most valuable in the government archives. The Navy Department Library contains about 50,000 volumes devoted almost entirely to naval science, especially naval construction. The library of the Department of Justice is a law library of about 45,000 volumes, rich in federal and state reports, with a considerable collection of British and foreign law. The Treasury Department Library consists of about 11,000 volumes on finance.

The scientific libraries maintained by the government are in two groups—those under the jurisdiction of the Smithsonian Institution and a number of bureau libraries under independent control, each in its own department. The Smithsonian Institution is an organization whereby a number of the highest officials of the government are made responsible for the administration of a large trust for the increase and diffusion of knowledge. The trust is the result of a bequest by James Smithson, an English gentleman, who died in 1829. He left his property "to the United States of America to found at Washington under the name of the Smithsonian Institution an establishment for the increase and diffusion of knowledge among men." The Smithsonian Institution was formally established by an act of Congress in 1846 and has been one of the most widely known scientific institutions in the world. In exchange for its publications it receives the proceedings, transactions and memoirs of other learned bodies. These are regularly transferred to the Library of Congress and constitute the Smithsonian Deposit in that library. Under its jurisdiction are the National Museum, with a library of 43,700 volumes and 72,000 pamphlets. These are shelved in the main library on the ground floor of the New National Museum Building and in 31 branches in charge of the curators of the several departments of the Museum. The next most important library under the jurisdiction of the Smithsonian Institution is the library of the Bureau of American Ethnology, consisting of 19,000 volumes, 12,700 pamphlets, 1,700 manuscripts, constituting the finest collection of books in the world relating to American Indians. The Smithsonian Institution also controls the small libraries at the Astrophysical laboratory and at the National Zoological Park. For its own use it maintains in the office of the secretary what is known as the Office Collection, which is especially rich in books dealing with the administration of museums and galleries and the classification of their contents. It has besides a fine collection on aeronautics, and the Watts de Peyster collection on Napoleon.

In the other group of scientific libraries mention should be made of the library of

the Naval Observatory containing 27,000 volumes and 3,500 pamphlets on mathematics, astronomy and kindred subjects. Its collection of serials is especially fine. The library of the Bureau of Standards contains about 12,000 volumes in physics, mathematics, chemistry and technology. The library of the Coast and Geodetic Survey now numbers about 25,000 volumes. At one time it was almost twice as large but by the judicious weeding out of irrelevant and useless material it has been made a vastly better working tool. The library of the Bureau of Education numbers 145,000 volumes. It received its greatest development under Dr. W. T. Harris, who was Commissioner of Education from 1889 to 1906. During the early part of Dr. Harris's administration the library facilities of the city were not so good as they became later, and he was practically obliged to create a library of a more general character. Under Dr. Brown, who succeeded Dr. Harris as Commissioner, the new conditions were recognized and some 60,000 volumes of a general character were sent to the Library of Congress. The Patent Office Library is in two parts—a law library of about 4,000 volumes, and a scientific library of 9,648 volumes. The former is devoted to patent law while the latter, besides works in the physical sciences, includes a very complete collection of the patent reports of all foreign countries. The library of the Census Bureau, established as recently as 1899, already numbers 58,000 volumes and pamphlets, rich in statistical publications of our own states and of foreign governments. The library includes a notable collection on the science of statistics. The Public Documents Library is also of recent date. It was established in 1895 when the first superintendent of documents was appointed. From a few wagon loads of rubbish turned over to him at that time it has now grown to 147,255 volumes and pamphlets, and 16,287 maps. It is the most complete collection of United States public documents in existence and is the basis of the important Document Catalogues published at intervals by the Superintendent.

Among the small bureau libraries which should not be overlooked is the library of

the Bureau of Labor Statistics, at present located in the Commerce Building. It contains about 28,000 volumes and pamphlets both official and non-official dealing with all phases of the labor question. Its collection of trade union publications and the reports of factory and mine inspectors is particularly important. The Interstate Commerce Commission Library contains about 26,000 volumes and pamphlets, rich in railroad literature and interstate commerce documents. The Bureau of Mines, founded in 1911, already has a library of 10,000 volumes, of which 4,000 are kept at the Bureau while 6,000 are distributed among the field stations.

The Bureau of Railway Economics is not a government bureau but is maintained by the railroads of the country. It has a fine library of 25,000 books, pamphlets, etc., dealing with railways from all points of view, and about 10,000 volumes and pamphlets in addition devoted to finance, labor and other matters collateral to railway economics. The bureau has published, under the editorship of its librarian, Mr. Richard H. Johnston, a union catalog entitled "Railway economics, a collective catalogue of books in fourteen American libraries." The collection is open to all who desire to use it without restriction.

The Columbus Memorial Library of 28,300 volumes devoted to the Latin-American countries is part of the equipment of the Pan-American Union which was established in 1890 under the title International Bureau of American Republics. In 1910 the present building, for which Mr. Carnegie gave \$750,000, was dedicated, and in the same year the name of the bureau was changed to its present designation, Pan-American Union.

Washington is also notable as possessing the largest library on Freemasonry in the world. This is the library of the Supreme Council 33d degree and numbers about 100,000 volumes and pamphlets. It will shortly be moved to the new building now in course of erection at 16th and S streets, the Scottish Rite Temple.

The literature relating to the deaf and dumb is well represented at the capital. At the Columbian Institution for the Deaf is the Baker collection rich in the older pub-

lications, while in the Volta Bureau, Washington possesses an institution almost unique. It was founded in 1888 by Alexander Graham Bell, the inventor of the telephone and was the outgrowth of his extensive researches to determine the causes of deafness. The library takes its name from the fact that the Volta Prize, created by Napoleon I, was conferred upon Dr. Bell for the invention of the telephone. This prize carried a gift of 50,000 francs which Dr. Bell devoted to laboratory researches that resulted in the development of the phonograph-graphophone. From the amount received for this invention he set aside the sum of \$100,000 for the increase and diffusion of knowledge relating to the deaf. That sum formed the original endowment and has been largely added to since. In 1909 he presented the library, the Volta Bureau, and other property to the American Association to Promote the Teaching of Speech to the Deaf, and it is now owned and controlled by that association. The library includes the most complete collection of periodicals and society publications, both American and foreign, and reports of schools in existence. Of special interest to those engaged in research work are a card catalog of more than 50,000 deaf children admitted into special schools in the United States during the nineteenth century; manuscripts containing authentic information concerning 4,471 marriages of persons deaf from childhood, and the special schedules of the deaf used by the Census Office in 1900 containing detailed information about 89,271 persons returned as deaf or deaf and dumb in the twelfth census of the United States.

Collections of books for the blind are to be found at the National Library for the Blind, Miss Etta J. Giffin, director. A Vaughan press has recently been installed and the printing of books for the blind is now a part of the regular work of the library. All of the operations are conducted by blind persons engaged at regular salaries. There is a reading room for the blind at the Library of Congress in charge of Mrs. Gertrude T. Rider, and at the Soldiers' Home Library there are daily readings for the blind.

The Miller Library at Forest Glen, Md.,

while not strictly within the District of Columbia, should be mentioned in connection with Washington libraries. It was the private library of J. De Witt Miller, the original of Leon Vincent's essay, "The bibliotaph." Mr. Miller's books were literally buried in various places until finally in 1901 his friends, Mr. and Mrs. John Irving Cassidy, built a library for him at the National Park Seminary at Forest Glen, Md. There are about 22,000 volumes in the library, including many association books and autographed copies. Mr. Miller was a devoted Johnsonian, and collected everything relating to Johnson and his biographer. Since Mr. Miller's death in 1912 the library has been used by the students of the seminary, who are given a course of twenty hours per week in the use of the library and in library methods.

The Library of Congress has been described so well and so often that a detailed account of it is not called for here. It will not be amiss, however, to refer to a few important recent developments of its special collections. The Music Division, under the direction of Mr. O. G. T. Sonneck, takes rank with the finest musical libraries in the world—with the collection in the British Museum, the collection in the Royal Conservatory of Music in Brussels, and the collections at Berlin and St. Petersburg. The Map Division, under Mr. P. Lee Phillips, a fellow of the Royal Geographical Society, also ranks among the most complete in the world. It contains 390,489 sheet maps, 5,193 atlases, and 404 manuscripts. The Division of Manuscripts, with the papers of most of the Presidents and of a great many public men, is of primary interest to all students investigating the source material for the history of our country. At the present time the Prints Division, which already contains 260,000 pieces, is being developed by Dr. Rice, professor emeritus of Williams College.

Books let us into their souls and lay open to us the secrets of our own. They are the first and last, the most home-felt, the most heart-felt of all our enjoyments.—WILLIAM HAZLITT.

THE EXHIBIT OF LABOR-SAVING DEVICES

As AN attempt to bring together in about 3,800 square feet the best representatives of the most important types of labor-saving devices the recent exhibition fell far short of the completeness and the perfection which we had desired. Notwithstanding the imperfections, some of them inevitable but none the less to be regretted, a brief review of the exhibit may be of interest to some who did not see it. I wish to attempt also a brief survey of the important field which we attempted to cover, with some information concerning certain devices which for one reason or another it was either impossible or inadvisable to include in the exhibit.

A few copies of the catalog of the exhibit are still available and will be sent on request to any librarians who may wish them. (Three cents postage is required for mailing.) Although this catalog was intended primarily to serve as a guide to the exhibit, we endeavored to mention, so far as was possible in the short space which could be devoted to each firm, some of the most important features of the various devices as adapted to library purposes. We had endeavored not to include in the exhibit any devices which are not good or which are not well adapted to library purposes. The choice of the best representative of any kind of device, however, is largely a matter of personal preference, and furthermore the writer could of course not vouch for the merits of all devices exhibited. The notes in the catalog were therefore intended as a description, rather than an appraisal of the merits of the different devices and equipment. All quoted matter, except where otherwise indicated, was taken from statements made by the manufacturers.

A conspicuous feature of the display of adding machines was the absence of what is probably the best-known machine. Until a few weeks before the exhibit we had expected that this machine would be shown, but the manager of the local agency then announced that he wished to cancel the tentative agreement which had been made. Although we were sorry not to have this firm among the exhibitors, special circumstances in connection with the case made it seem desirable to adhere to the policy which

we had consistently followed, not to attempt to persuade any firms to enter the exhibit if they did not think it would be to their advantage.

We were fortunate in being able to secure a demonstration of two adding machines which are generally held to be among the best, in addition to the typewriter-adding machines. For the purposes of most libraries it seems as though the non-listing type of adding machine would be in every way as satisfactory as the listing type, and therefore better because quicker in operation. In the larger libraries, however, there is more likely to be need of preserving the records of certain calculations, and for such work the listing machine is a necessity. In many cases the combination of the typewriter and the adding machine is most useful.

Although the importance of the adding machine is fully recognized, there are many small libraries which cannot afford one of the standard machines. For this reason we endeavored, but without success, to obtain for the exhibit one or two of the inexpensive adding machines. Whether the statistical work of most libraries which cannot afford a more expensive machine is extensive enough to make an adding machine necessary is, I think, questionable, but many small libraries might do well to give a trial to some of the cheap machines, which might also prove useful for certain purposes in larger libraries to supplement the machines of higher price.

The "Golden Gem" adding machine is made by the Automatic Adding Machine Company, 148 Duane Street, New York. The price is \$10.00 for a machine of seven column capacity, or \$15.00 for a machine of nine columns. The manufacturers offer a free trial for ten days, and each machine is accompanied by a guarantee for one year. Whether calculations can be performed on this machine more quickly, more accurately or more easily than by mental calculation can be readily determined by an experimental test. The machine, which can be easily held in the hand, consists of a series of chains in columns. Figures are recorded by using a stylus to pull the chains down, the point of the stylus being inserted in the link of the chain opposite the desired figure

VIEW OF THE EXHIBIT OF LABOR-SAVING DEVICES IN THE PUBLIC LIBRARY OF THE DISTRICT OF COLUMBIA, MAY 25-29, 1914

in the proper column and drawn down to the bottom of the column. Some care must be used in operating to be sure of always registering the correct figure. As with any non-listing machine, where the figures cannot be read back, calculations should be performed twice for the sake of verification.

The American adding machine, which more closely resembles the more expensive standard machines, is manufactured by the Adding Machine Division of the American Can Company, Monroe Building, Chicago. This, a seven-column non-listing machine, sells for \$35.00. In one of the largest public libraries it has been given a trial, with results which seem to justify further consideration of it. The librarian reports that the chief objection to it was that it is rather noisy. The manufacturers offer to send the machine, express prepaid, on two weeks' trial. It is guaranteed against any imperfections for one year, and "the machine may be exchanged for a new one at any time by paying three cents per working day for the time you have had it."

Invitations to demonstrate were sent to all the best-known addressing machines, the addressograph, the Montague, the Elliott, and others, but only one accepted the invitation. The use of the addressograph is well known in the larger libraries, but it is perhaps not generally known that for \$37.50 or \$45.00 a hand-operated machine can be obtained which, the manufacturers state, is capable of doing all the work which can be done by the expensive electric machines, the speed, of course, being limited by the ability of the operator. Considering the possibility of using the addressograph for duplicating cards, it seems as though one of these hand machines might be used to good advantage in many libraries which cannot afford better.

Among the labor-saving devices which are of interest only to the larger libraries is the billing machine, represented in the exhibit by the Elliott-Fisher Company, one of the best-known manufacturers of machines of this nature. In large libraries their billing and order entry machine is capable of important service in the order department, the bookkeeping department and the supply department. The book typewriter which was shown by the same com-

pany is adapted to use in a larger number of libraries, either for making records in bound books or for loose-leaf records.

In the demonstration of several vacuum cleaners, some of very low price, two floor machines and two kinds of dustless brushes, a good opportunity was given to inspect various methods of cleaning. We were disappointed in being unable to show the vacuum system which is used in the John Crerar Library, but all of the machines and dusters shown we believed to be very satisfactory.

The demonstration of the two dictation machines afforded opportunity to judge of the value of the dictation machine method and also to form some idea of the relative merits of the two leading machines of this type, the dictaphone and the Edison dictating machine. A decision between the two, however, can be reached only after a long and careful test. Neither machine has entirely overcome all mechanical imperfections, and both have a great many good features. Choice between them is to a considerable extent a matter of personal preference. Both companies are glad to place their machines out on trial, and one can in this way determine which machine seems best adapted to his needs. Under some circumstances the dictation machine cannot be used to advantage, but for most purposes this method has been proved capable of effecting very important saving.

The manufacturers of the stenotype were unable to demonstrate this unique "short-hand machine" which "writes a word at a stroke." In construction the machine is somewhat similar to the typewriter, though smaller and lighter and with a keyboard of only 22 keys. The missing letters are supplied by combinations of two letters, both struck by the same finger at the same time. The system of stenotypy is based on the omission of all silent letters and on the simple arrangement of the keys, which makes it possible for the stenotypist to take dictation at a far greater speed than can be attained by the stenographer, and with greater accuracy. Two very great advantages are that any stenotypist can transcribe notes written by any other, and that the notes never become "cold." The machine is sold only to students who take a course in stenotypy in business schools. The general

opinion of those who have investigated the machine seems to be that the stenotype, now almost a new machine, will in time become very widely used. Any librarians who receive a stenotypist in response to a call for a stenographer will find it interesting to see what results she can produce.

Considering the extent to which manifold machines are used in libraries, it was surprising that only four companies (exclusive of the Underwood Typewriter Company with their revolving duplicator) accepted the invitation to demonstrate in the exhibit. The writerpress and the printograph have many advocates in libraries, but the most widely known machines are the multigraph and the mimeograph. These machines differ so much in nature and method of operation that the purposes for which manifolding is needed must influence the choice of one machine or the other. The multigraph can produce an unlimited number of copies after the type has been set; the mimeograph can produce at most about 1,000 copies, when a new stencil must be made. It is probably possible to find a good stencil-maker for the mimeograph more easily than one can get a good multigraph operator, and some complain that the typesetting of the multigraph is hard on the eyes. The multigraph permits the use of various styles of type on the same work, and excellent results can be thus obtained in circulars and form work; on the mimeograph such variety cannot be obtained. These, and many other points, must be considered in libraries where only one machine can be obtained; in many of the larger libraries both machines could be used to good advantage.

There is considerable difference of opinion concerning the merits of the cheaper devices for duplication in small quantities. In Schulze's "The American office," p. 46, it is stated that "in spite of their crude appearance, these little duplicators are very valuable for inter-departmental communications and for forms, when only twenty to sixty copies are required." They have been found useful in many small libraries and, for certain purposes, in some large libraries. The expected demonstration of the schapirograph, which would have made it possible to compare this machine with its very simi-

lar rival, the Beck duplicator, was not made.

Machines for folding, for opening mail, for sealing envelopes and affixing stamps may be useful in large libraries. No machines of these types were included in the exhibit except the folding machine and the sealing machine shown in connection with the multigraph, which seem well adapted for use in any libraries where such machines are needed. The same company has also the Universal folding machine, adapted for more extensive work.

Machines for opening mail are operated either by hand or by electricity. There are probably very few libraries where such machines are needed.

Concerning both the sealing and the stamp affixing machines there is some difference of opinion. It is stated by many that none of the machines now made are free from imperfections which are likely to cause serious trouble. The mailometer, however, for both sealing and stamping, is in use in one of the largest publishing houses and is reported to give very satisfactory service. It is made by the Mailometer Company, Detroit. The multipost stamp affixer, made by the Multipost Company, Rochester, N. Y., is used in at least one library and has been found an important labor-saver.

So far as I am informed, the rotary copying machine is used in only a few libraries. A demonstration of such a machine would have been interesting, but we were unable to obtain any. Two of the best-known are the Roneo, made by the Roneo Company, 117 Leonard Street, New York, and the "Y and E copier," made by the Yawman & Erbe Manufacturing Company, of Rochester. The rotary press eliminates the use of carbon paper and copy paper, and gives a facsimile copy. It has all the advantages of the old-style copying book, without the disadvantages, and in some respects it seems superior to the carbon copy method.

Toward the visible indexing devices of the Rand Company and the Index Visible Company the policy of watchful waiting is to be commended. Except for short lists of names, such as telephone lists and other short records frequently consulted, these devices are not yet well adapted to library purposes. They are being tried out in a number of libraries for lists of periodicals,

short lists of selected collections and other purposes. From talking with many librarians at the exhibit the representatives of the two companies learned much concerning the special requirements of libraries, and it seems likely that one or both companies will in time make the necessary modifications to fit their devices for more general library use.

The Universal pasting machine, made by the United States Gum Tape Company, was one of the most useful devices shown in the section of miscellaneous appliances. Some thought the price of the machine (\$10.00) too high, but considering the amount of time which can be saved by its use the machine will very soon pay for itself. It is adapted to use in all libraries, from the largest to the smallest, and will be found an important labor-saver wherever it is used.

The photostat had never before been demonstrated in an exhibition of this kind, and no previous exhibit, I believe, has included more than one photographic copying machine. The opportunity to compare the photostat and the rectigraph was therefore an important feature of the exhibit. It was unfortunate that we were unable to make the demonstration of these devices complete by including also the cameragraph. The manufacturers wished to exhibit, but found it impossible to do so. In the June issue of *LIBRARY JOURNAL*, p. 490, is a description of a new use for the photostat recently adopted by the New York Public Library in preparing a shelf list by the photographic reproduction of author cards from the catalog.

It was not found practicable to include in the display of typewriters any of the low price machines, one of the best of which is the Blickensderfer. Some of these machines are undoubtedly very serviceable in many small libraries, and in one of the largest libraries the Blickensderfer, fitted with special keyboards, is used for cataloging foreign books, which are received and cataloged two or three times a year. Whether it is better for a library of small income to purchase a low-price new machine or a rebuilt next-to-the-last model of one of the standard machines, is a question which deserves careful consideration.

An interior telephone system is a necessity for efficient work in any large or mod-

erate size library. It was not possible to obtain any such systems for the exhibit, nor have I any information concerning any systems which are entirely satisfactory. The use of the telautograph is, I believe, becoming more general in libraries, and furnishes a very satisfactory method of communicating in writing from one department to others. The famous dictograph is rapidly increasing its reputation in business houses and large manufacturing plants as a means of oral communication between departments. I do not know of any library in which it is now used, though one librarian wrote that he was considering it. It certainly seems worthy of careful consideration wherever an interior system of communication is to be installed.

The cash register, either of the "National" type or the autographic register, is another device, not strictly a labor-saver, which is being more generally used in libraries. Librarians who have installed registers are generally very well pleased with them. They have the advantage of giving the overdue public a convenient receipt for its money on occasions (usually few) when a receipt is desired. Perhaps, too, by imparting a businesslike tone to the receiving desk, they may inspire the public with confidence in the library's methods, and possibly avert the wonder which some borrowers express or imply as to the disposition which the staff make, personally, of the collected fines. But the cash register is not proof against the possibility of error in making change, nor does it help fix responsibility for errors, and many are opposed to adding it to the library equipment. The question is certainly debatable.

There are a large number of small and inexpensive appliances which are capable of greatly increasing efficiency in the daily routine. Most of these devices are easily demonstrated and are so inexpensive that it would not have paid the manufacturers to send their own representatives to show them. We therefore made arrangements with over twenty manufacturers to have such devices sent for demonstration under our direction. To a great many visitors this section was one of the most profitable parts of the entire exhibit. Especially prominent here were the pasting machine

referred to above and Mr. Hirshberg's fine computer, so simple in construction that we wonder why it was not invented years ago, and so useful that it is difficult to understand how any library can now get along without it. Its merits speak very plainly for themselves, and all who did not see the computer at the exhibit should not fail to investigate it. A description of it was printed in the catalog of the exhibit and also in *Public Libraries*, June, 1914, p. 260.

Few devices are worse than a poor pencil sharpener, and few will pay for themselves more quickly than a good sharpener. Judging from the experiences of many libraries, good sharpeners are often obtained only after costly experimenting with some which are not good. For this reason we desired to include in the exhibit as many as possible of the best. The Climax and the Dexter, made by the Automatic Pencil Sharpener Company of Chicago; the Jupiter, made in Germany and handled in this country by Favor, Ruhl & Co. of New York; and the Boston Pencil Pointer, made by the Boston Specialty Corporation of New York, may be fairly considered among the best. Efforts to obtain the latter were at first unsuccessful, and it was only after the catalog had gone to press that we learned that it would be shown by the Wm. G. Johnston Company. That there is a great difference of opinion as to what sharpener is the best is shown by the experience of one of the large libraries, where the staff at the main library discarded the Boston in favor of the Jupiter, and the staff at one of the branches are now using the discarded Boston and consider it better than the Jupiter. The Boston is now made in a new model, selling for \$2.50, which is said to be virtually the same as the older \$6.50 model.

The telephone counters made by the Veeder Manufacturing Company have been put to excellent use in at least two libraries, the Chicago Public and Columbia University, for recording circulation statistics by classes. If there are ten classes, for example, for which statistics are kept, ten of these counters are purchased and mounted on a board, each counter labelled with the name of one class. Throughout the day, when opportunity offers for arranging the book cards for the day's circulation, the

number of books in each class is recorded on the proper counter. It is thus possible at the close of each day to have the day's circulation completed merely by adding the ten totals. These counters sell for \$1.50 each, unmounted, with a discount of 25 per cent. in dozen lots, or 33 1-3 per cent. discount in lots of one hundred. Libraries which could not afford a counter for each class could simplify work to a large extent by providing counters for fiction and perhaps three or four of the most popular classes of non-fiction.

The exhibition of stacks and shelving, furniture, filing devices and general library supplies made a very interesting and profitable display. The space available for such equipment was too small to accommodate all the firms whom we should have liked to have with us, or to give all the firms as much space as they would have liked. Nevertheless, the opportunity to see the latest equipment of competing firms and to talk with representatives of the companies was a valuable opportunity.

In the lobby, at the head of the stairway the Library Bureau's wing-shape charging counter on the left and the built-to-order Globe-Wernicke desk on the right, presented a most attractive introduction to the comprehensive displays which had been arranged by these firms. Supplementing these exhibits of furniture and equipment for the filing department, the loan desk and the catalog department, was the display of Gaylor Brothers, which included practically all of their numerous appliances and supplies. Any librarians who were undecided on the merits of different stacks had the opportunity to acquire full information concerning the Sneed, the Art Metal and the Library Bureau. Each of these firms had installed small sections of stacks, of both the standard and the bracket types, with accessories such as book-supports, label-holders, and movable book-rests.

In general, the over-persuasiveness and the "barking" which are sometimes noticeable in business shows were happily absent from this exhibit. The closely grouped displays in the lobby and in some parts of the lecture hall presented a good opportunity for this evil to creep in, and we are grateful to the exhibitors for not allowing it to do so.

Their spirit of friendly competition with one another, and of co-operation in making the exhibit enjoyable and successful, was much appreciated.

It is not possible, nor would it be desirable, to attempt to mention here everything which was included in the exhibit. Brief mention should, however, be made of the attractive and useful "wing frames" displayed by the St. Louis Multiplex Display Fixture Company; of the changeable bulletins and the gummed letters, already widely known, of the Tablet and Ticket Company; of the Victor portable stereopticon; and the very interesting display of the Democrat Printing Company, especially valuable to small libraries.

In the preparation for the exhibit an effort was made—rather incidental to the exhibit itself—to collect information concerning time-saving methods employed by various libraries in the routine work. It was realized that such information could be successfully collected and made accessible to all only by a more special effort than we were able to make. Considerable information of value was received, however, and made possible a small exhibit which was placed in the librarian's office on the main floor. The great interest which several librarians showed in this small display encouraged the belief that our efforts along this line produced results of some value, and that if a more special effort could be made to collect all possible information of this kind the result would be extremely valuable.

The Museum Library of the Brooklyn Institute of Arts and Sciences sent a blue print of the magazine shelving which had been especially designed for the library. This shelving is equipped with movable partitions, which make it possible to adjust the shelving to any height or width. The report of the library for 1912 states that "the movable partition device is very simple and any wooden or metal book shelf can be easily converted into a periodical shelf. This installation combines ready access, sightliness and economy of space and money for one of the most important classes of Museum Library accessions, as not only the current number but the current volume is in constant demand."

Another very interesting and practical design for magazine shelving was shown by a photograph and blue print of a case designed by Mr. Dougherty of Pawtucket, R. I. This case is so constructed that in a space of 6 ft. x 6 ft. there is room for about two hundred titles in one complete alphabet irrespective of their sizes and shapes. The case is provided with blocks of different lengths, which are placed behind the magazines. Behind each magazine is placed a block of the necessary length to bring the magazine to the edge of the case.

The Pratt Institute Free Library sent one of the banner dummies described in a recent number of the *Bulletin of Bibliography*. One of these is hung at the end of each stack and replaces the individual dummies.

In the *Newarker* for January, 1914, was a description of an interesting method of using colored bands on the backs of books and pamphlets to aid in the proper shelving of such collections as trade catalogs, directories, and pamphlet material. It was not possible to arrange for the display of samples to illustrate this system.

The Cleveland Public Library sent a "book end block" which is used for small special exhibits of books. This block, devised by Miss Eastman, is a leaded oak block, felt-covered on the bottom to prevent scratching, and grooved in front to hold a label. With this block was sent also a book dummy, for use in catching books for which reserves have been left. The dummy is made with a veneer of slate paper on the exposed part of the dummy, which enables the titles to be erased and new titles to be put on, so that the same dummy can be very conveniently used a great many times.

Some exceedingly attractive signs were contributed by the Seattle Public Library, and a collection of sample forms used in the catalog department were sent from the Carnegie Library of Pittsburgh. These included their method of shelf-listing books of fiction and juvenile books which are duplicated in great numbers and are not accessioned; special printed subject cards for use in branch catalogs in place of analytics; and special cards for directing the attention of foreigners to books on learning English.

A number of samples were shown illustrating some very interesting time-saving

methods employed in the Princeton University Library. These included the following: Various uses in catalog work of printed forms, rubber stamps, and other cataloging methods not easily described in a few words; a method of filing advance sheets of United States government documents for frequent use by giving specific alphabetic subject headings; an inexpensive and efficient method of binding and filing pamphlets in pamphlet folders; a pamphlet box used as a shelf label and book support, and also as a sorting cabinet for pamphlets and unbound periodicals; a special binder's dummy for periodicals; a box, a foot square, for transportation of books in quantities too small to make it advisable to use a book truck; a specimen of the ten-cent rebacking done in the binding department; a number of printed forms showing the economy of the library printing press; and one of the department and seminary library catalogs, illustrating the title-a-line author finding list. This saves duplication of card catalogs in the departments and seminaries. The time cost of consulting a card catalog is estimated by Dr. Richardson at from three to seven times the cost of consulting the title - a - line, long - page printed list, apart from economies in having several copies.

The Twenty-third Street branch of the Y. M. C. A., New York City, sent some catalog cards with headings printed on a hand printing press. The librarian writes that a better press than the one now in use in the association library is the "Official" press made by Golding & Co., Franklin, Mass. This press may be obtained in a 4 ft. x 6 ft. size for about \$10.00. The printing press is used in this library when fifty or more cards are likely to be needed for an author, the author's name being printed on the card and title, call number and other details added on the typewriter. The call number also is printed instead of typewritten whenever there is a run of fifty or more cards. Two fonts of type are used, the twelve-point Gothic for the authors, to match the L. C. cards, and the twelve-point standard typewriter type for notes and call numbers to match the typewritten cards.

The East Orange Public Library makes a very successful use of the rubber stamp as a substitute for the multigraph or mimeo-

graph as a saver of printers' bills. The stamp is used in some cases for catalog card headings, and is also used with surprising success for post card notices. The stamps are very well made and are cut in typewriter type, and it would be very difficult or impossible to distinguish the results from actual typewriting. The cost of the rubber stamp for a contagious disease notice occupying practically the full surface of a post card was \$3.25. This method seems very useful for libraries which cannot afford a manifolding machine. For example, five hundred post cards containing enough matter to fill about two-thirds of the card were multigraphed outside the library for \$1.75. A rubber stamp for the same lettering would have cost only \$2.00 (plus the time required for stamping the cards) and would have been a permanent investment.

The University of Illinois Library has a very interesting method of following up periodicals not received on time. Trays, made of one-quarter inch hard pine, size 12 x 6½ x 2½ inches inside, are used, each tray holding 825 cards. Cards are divided in four sections, according to the frequency of publication—quarterly, monthly, weekly and daily. At the beginning of the period (the quarter, the month, etc.) the cards are all at the left side of the tray. As periodicals are received the cards for them are checked and moved to the right. At the end of the period all cards remaining at the left of the tray indicate overdue periodicals, which are written for. A system very similar to this is used in Germany, except that there a card with special perforations is used, permitting the use of a rod to so hold the cards in place that they are readily shifted from one side of the box to the other without removing the rod. The University of Illinois Library does not use the rod, and reports that if the trays are well filled the cards do not shift accidentally. In the same library the "indicators" manufactured by the Yawman & Erbe Manufacturing Co. are used in the book order work, a black indicator being used for rush books and a brass indicator for out-of-print books. In the case of rush books, the top of the card is divided into four divisions for the four weeks of the month. Each

card so marked is brought out for attention every Tuesday. With out-of-print books the top of the card is divided into four divisions, in which are written the names of the months. A new quotation is asked for, every four months, of different dealers.

The reference department of the St. Louis Public Library has adopted the use of bright stars upon book labels to indicate the proper shelving of the reference books. A red star indicates that the book belongs on the open shelves in the main reference room, a blue star indicates that it belongs in the art room, a green star in the applied science room, and the absence of a star indicates that it belongs in the stacks.

At the St. Louis Public Library the steel signal guides which were shown in the exhibit are used for the periodical check-list follow-up work. The periodical record includes about 1,800 titles, and 125 sets of the steel clips, numbered from 1 to 31 inclusive for the days of the month, are used in connection with the system. One of these clips is placed on the card for each magazine, indicating the date on which that magazine should be received. Each day the check list is gone over, and periodicals due on that day and not received are noted. For example, if it is the 21st of the month, the check cards are examined and 21 is watched for. A slip is placed behind each card with the sign 21 on it if the periodical has not been received. Not later than three days thereafter notices of non-receipt are sent.

A classified issue chute is used in St. Louis for sorting cards. This chute is a wooden tray 16½ in. high, 13 in. wide and 3½ in. deep, which stands upright on a solid wooden base, 2 in. in height and extending slightly beyond the base of the tray on all sides in order to make it stable. The tray is divided vertically through the center by a partition the depth of the tray. On each side of this are seven shelves, placed so as to form compartments, which are varied in size to allow more space for the more popular classes. Each compartment is labeled with a class number following the order of the statistics sheet. The chute stands on the issue desk at the right of the assistant, and as books are issued the book cards are put into the compartment which corresponds with the class number.

Thus the book cards need to be handled but once in making out a classified issue report, as they are already sorted and need only be counted.

A similar chute is used in St. Louis for alphabetizing cards, although it can be used only for arranging under the initial letter of the first word. This chute is a light wooden box, 21 in. long, 18 in. wide and 4½ in. deep. It is divided lengthwise by two partitions and crosswise by five, forming eighteen compartments of equal size (3 x 5½ x 4½). Each compartment will receive at least eighty standard size cards. Pasted in the center of the back wall of each compartment is a white label with a letter of the alphabet in black, 1 in. in length. The eighteen compartments are made to serve the twenty-six letters of the alphabet by grouping together letters which are infrequently used. As the result of an efficiency experiment made a year or so ago, it was found that the greatest efficiency in alphabetizing was gained by resting the base of the box about 6 in. above one's knees and tilting the box from the base at an angle of 135 degrees. It was found that the average time was nine minutes for 500 cards. The maximum time consumed was fourteen minutes, the minimum was five minutes.

The card sorting board used in the card section of the Library of Congress was shown in the exhibit. Specifications for making this board will be furnished by the Library of Congress on request. The board is extremely useful when a large number of cards are to be sorted. It can be used for sorting to the third letter. After the third letter it is better to handle the cards on a table.

The Copyright Office of the Library of Congress sent a very valuable collection of cards, forms and certificates used in the work of the copyright office for various purposes. This display showed in very convenient form the applications for copyright registration, the methods of indexing registrations, the cataloging of works deposited, the accounting for copyright fees, the reports on searches made, and other processes in the work of the office.

The Chicago Public Library has instituted a new system to enable borrowers to take

full advantage of the new book post. Any registered borrower, upon depositing one dollar to cover the cost of mailing books, may participate in the parcel post service. A receipt card is furnished the borrower and the various charges for postage are punched on this card, so that it will at all times show the balance to the credit of the borrower. The loan period of two weeks begins on the date of mailing, not the date of arrival. In like manner the loan period ends on the date of return mailing, and not the date of the arrival of the book at the library. Responsibility for losses or damages in transportation is borne by the borrower. Shipment of books is made only when the card accompanies the order, and no book will be mailed from the library unless the balance remaining on deposit is sufficient to cover all charges. When the balance falls below ten cents the borrower is notified of the fact. Samples of the receipt card and of the accompanying instructions will be sent by the Chicago Public Library to any who are interested.

A great deal has been written in recent years on the subject of scientific management in the commercial world, much of it possessing great value and some, written by people who have taken up "scientific management" as the latest popular fad, of little value. The introduction of scientific management as a fad in library work would be very deplorable. All serious efforts, however, which have been made to increase the efficiency of library administration are of great importance. In many libraries new devices have been discovered, or new uses for old devices, and many little time-saving short cuts have been devised. Some librarians have even conducted somewhat elaborate time studies and efficiency tests of various kinds. Reports on many things of this kind are occasionally made, by notes in the library papers, but they have not been made the subject of the special study which they deserve. The writer hopes that some time an effort may be made—more successful than the recent attempt and on a much greater scale—to ascertain all that has been done to secure a truly scientific management of libraries.

The importance of the proper use of mechanical labor-saving devices in library

work needs no argument. The result of the recent exhibit, however, will be only temporary and not as far-reaching as it should be unless it is followed by an effort among librarians of the country not only to make use in their libraries of the devices with which they happen to become acquainted, but also to make generally known any new devices or methods devised by them or coming to their knowledge in any way. Granting, as every one will, that efficiency in the administration of the library is of very great importance, hardly second to the need for efficiency at the loan desk or the reference desk, it seems evident that the need of co-operation is in no part of library work greater than in regard to the devices and the methods which so greatly influence the efficiency of administration.

C. SEYMOUR THOMPSON,
Assistant Librarian,
District of Columbia Public Library.

NATIONAL EDUCATION ASSOCIATION PROGRAM

FOLLOWING is the tentative program of the Library Department of the National Education Association, whose convention is to be held in Saint Paul, Minn., July 4 to 11, 1914:

Wednesday morning, July 8. Joint Meeting with National Council of Teachers of English.

1. Cultural possibilities of the school and college library.
2. The library's debt to culture. Mr. M. S. Dudgeon, secretary Wisconsin Library Commission, Madison.
3. The list of books for home reading of high school pupils; a symposium of experiences, led by Miss May McKittrick, assistant principal, East Technical High School, Cleveland, Ohio.

Wednesday afternoon, July 8, at the University Farm. Rural School Libraries.

1. The country child in the school library. Mrs. Josephine Corliss Preston, state superintendent of public instruction, Olympia, Washington.
2. The library in the rural school:
 - (a) The book: Report of the committee upon standard foundation library for a rural school. Miss Harriet A. Wood, supervisor of school libraries, Library Association, Portland, Oregon; and Mr. Walter Barnes, State Normal School, Glensville, West Virginia.
 - (b) The teacher: Report of the committee upon the training of the rural teacher to know and use the school library. Miss Delia G. Owitz, librarian, State Normal School, Milwaukee, Wisconsin; and Miss Mabel Carney, State Normal University, Normal, Illinois.
 - (c) The community: Report of the committee upon community service from the rural school library. Miss Elizabeth B. Wales, secretary, Missouri Library Commission, Jefferson City, Missouri; and Mr. T. N. Carver, U. S. Department of Agriculture, Washington, D. C.
3. Business: Appointment of committees.

Thursday, July 9. Joint Meeting with the Minnesota Library Association.

- 9:00 a. m., House Chamber, The Capitol.
1. The newspaper morgue, the library, and the school. Dr. W. Dawson Johnston, librarian, Public Library, St. Paul, Minnesota.
 2. Libraries and schools; educational co-operation. Willis H. Kerr, librarian, State Normal School, Emporia, Kansas.
 3. Normal school training in library methods. Miss Delia G. Ovitz, librarian, State Normal School, Milwaukee, Wisconsin.
 4. The county library and the rural problem, Mrs. P. P. Claxton, Washington, D. C.
 5. Visit the Minnesota State Capitol.
- 2:30 p. m.
1. Visit the Twin City libraries.
6:30 p. m.
Dinner for visiting librarians, by courtesy of the Minnesota Library Association.

Friday afternoon, July 10. High School Libraries.

1. A normal budget for a high school library; figures, experiences and ideals.
2. Successful books in vocational guidance.
3. High school branches of public libraries.
4. Business: Reports of committees. Election of officers.

SCHOOL LIBRARY EXHIBIT

The school library exhibit prepared by the United States Bureau of Education as a permanent traveling exhibit, and first shown at Washington in May during the conference of the American Library Association, will be shown at Saint Paul during the N. E. A. There will also be special library exhibits at the Saint Paul Public Library.

SEND YOUR NAME TO SAINT PAUL

Librarians and all interested in library work are asked to indicate their intention to attend the Saint Paul meetings. Send your name to Miss Martha Wilson, State Department of Education, Saint Paul, Minn.

LOS ANGELES PUBLIC LIBRARY IN NEW QUARTERS

ON JUNE 1 the Los Angeles (Cal.) Public Library was opened for service in its new quarters in the Metropolitan building, in the heart of the city's business district. Although an independent central library building—long needed and long desired—is still a creation for the future, the library now for the first time in its history occupies quarters especially designed for library service and adapted, so far as possible, to the best modern requirements of library administration, and its removal is therefore an event of importance in the history of libraries on the Pacific Coast. As has been previously noted in the *JOURNAL*, the new quarters consist of the three upper floors of a recently completed office building at

Fifth street and Broadway. The problem of adaptation was, therefore, similar to that faced by the Cleveland Public Library authorities last year, and these two libraries now offer interesting examples of what may be termed concentrated modern library planning under office-building conditions.

On the lowest of the three library floors—the seventh—are grouped the administrative and business activities. Here are the offices of the librarian and assistant librarian, the order, receiving, cataloging, and branch divisions, and two public departments—the children's room, in a large, well lighted corner room; and the newspaper and magazine reading room. In the latter office space for the head of department and staff is so arranged as to give full supervision, and excellent facilities for filing and routine work.

The eighth floor, devoted to the circulation and reference departments, has been admirably planned for efficiency and convenience. The circulation department, large, lighted from above by skylight, with central delivery desk, has a mezzanine floor, reached by side stairways, where are installed the various special collections, each in charge of a reference librarian. The general circulating collection is on open stacks ranged around the sides of the delivery room and freely accessible to the public; the information desk, prominently placed, directly faces the delivery desk, and during busy hours special assistants are detailed for service "on the floor," to give information, help and general oversight to the public. The reference room occupies the Broadway frontage, entrance being through the circulation department. It is large, excellently lighted, and well arranged; connected with it is a teachers' department, for reference and study. The special reference collections, as already noted, are on the mezzanine (or ninth) floor, and among these are three new departments—the departments of sociology, of industry, and of art and music. As outside access to both circulating and reference departments is had only through the main entrance of the circulation room, with turnstile and automatic gates, loss of books from these two departments should be reduced to a minimum, despite the free access given to the entire collection.

On the ninth floor also are quarters for the Pacific Library Binding Company, which has a five-year contract to do the library's work; and a lecture room for the use of the library training class. There is a well-equipped kitchen and lunchroom for the staff, and an attractive staff restroom.

Public service at the main library in its former quarters was suspended for the week of May 25-30, pending process of removal, which, including holidays, occupied eight days. The system of moving, carefully planned in advance, was similar to that employed in moving the New York Public Library, and all details were carried out with entire success. All the shelves in the new quarters were given a definite designation and the boxes were labeled to correspond before leaving the old shelves; plans were drawn locating every article in the new departments, and as it was moved each article was labeled in accordance with the plan. It was necessary to purchase new furniture and fittings for several of the departments. On June 1, the day the library opened for service, there was an attendance of 20,000 persons—not sightseers, but library users—eager to resume the interrupted service.

American Library Association

THIRTY-SIXTH ANNUAL MEETING, WASHINGTON, MAY 25-29, 1914.

THE thirty-sixth annual meeting of the American Library Association was held in Washington, D. C., May 25-29. Headquarters were in the New Willard Hotel, where most of the sectional meetings were held, although a few sections met in the New Ebbitt, across the street. The general sessions were held in Continental Hall, the beautiful home of the D. A. R. on Seventeenth street. Over 1,200 had registered by Thursday, making the record of attendance (as well as the record of temperature) surpass all previous conferences.

Though undeniably hot in Washington during much of the conference week, we are assured that all of the preceding weeks of May were delightfully cool, and that the cool weather which began on the afternoon of May 29 continued the following week, so that comfort required an extra blanket at night. Had the dates of the conference been fixed for a week earlier or a week later, not even Seattle would have been able to throw stones at the climate.

A new feature this year was the excellent exhibit of labor-saving devices, held in the Public Library of the District. About two-thirds of the second floor was given over to the exhibit, which included both labor-saving devices proper, and general library furniture and equipment. There were sixty-

three exhibitors, and the various kinds of devices shown included not only the higher priced articles, but also those less expensive. Mr. C. Seymour Thompson, who had charge of the assembling of material, has prepared an article describing the exhibit in some detail, which is printed elsewhere in the JOURNAL.

There was no official post-conference trip this year, not enough people registering in advance to guarantee the necessary arrangements. A score or so, however, did go down to Old Point Comfort either Friday or Saturday night, and after a brief stay there some of them went on up the James river to Richmond, following the itinerary suggested for the post-conference trip.

There were only four general sessions this year instead of the usual six. Three of these were held in the evening and the last one on Friday afternoon. In addition, twenty-one sectional meetings were held, and the program, coupled with the distractions offered by Washington with its 137 libraries, its public buildings, and its historic landmarks, provided occupation for every waking moment.

On Thursday evening the librarians of the District of Columbia gave a reception and dance in the ballroom of the New Willard, which, in spite of the heat, was a most delightful affair. The Washington librarians were assisted by the A. L. A. entertainment committee, which consisted of the following: Mr. Howard L. Hughes, chairman, Miss Ono Mary Imhoff, Mr. Henry N. Sanborn, Miss Pearl I. Field, Miss Caroline Webster and Mr. F. B. Spaulding. All through the week the students and alumni of the various library schools were holding luncheons and dinners, which proved to be the most satisfactory way for friends to meet. Indeed, one of the chief disadvantages of holding a conference in a large city was felt to be the difficulty people had in finding each other.

Election of officers for the coming year was held on Thursday, and the following were elected:

President—H. C. Wellman, librarian, Springfield City Library Association.

First vice-president—W. N. C. Carlton, librarian, Newberry Library, Chicago.

Second vice-president—Mary L. Titcomb, librarian, Washington County Free Library, Hagerstown, Md.

Members of executive board (for three years)—J. T. Jennings, librarian, Seattle (Wash.) Public Library, and Mary W. Plummer, director, Library School, New York Public Library.

Members of the council (for five years)—Adam Strohm, librarian, Detroit (Mich.) Pub-

lic Library; W. R. Watson, chief, division of educational extension, New York State Library, Albany; Corinne Bacon, librarian, Drexel Institute Free Library, Philadelphia; Andrew Keogh, reference librarian, Yale University; Effie L. Power, supervisor children's work, St. Louis (Mo.) Public Library.

Trustees of endowment fund (for three years)—W. W. Appleton, New York City; (for one year) M. Taylor Pyne, trustee, Princeton University.

FIRST GENERAL SESSION

Herbert Putnam, the head of the Library of Congress, opened the first general session Monday evening with a few words of greeting. He said that Washington, following its usual policy, had issued no special invitation to the A. L. A. to meet there, feeling that such an invitation would be a presumption on the part of a city which is the political home of every citizen. He heartily welcomed the members of the Association, however, and felt certain that every librarian present would find inspiration in the natural beauties of the city as well as in its libraries.

Edwin H. Anderson, director of the New York Public Library and president of the association, made the response to Dr. Putnam's welcome, and immediately afterwards launched upon his annual address, which he called "The tax on ideas," and in which he inveighed strongly against the system which has resulted in excluding from America by the tariff wall much of the best of the literary production of the rest of the world. The president's address is, as usual, reprinted elsewhere in this issue.

Following Mr. Anderson, Dr. Bostwick gave the report of the committee on library administration, which had in charge the preparation of the exhibit of labor-saving devices.

H. H. B. Meyer, chief bibliographer of the Library of Congress, had prepared a handbook of the 137 libraries of the District, telling in connection with each the main facts of its history, together with its regulations and resources. Much of this information he repeated at this meeting, illustrating his talk with stereopticon slides, thus furnishing at the outset and in the most interesting way just the information the visiting librarians needed to help them spend their time in the city to the best advantage.

SECOND GENERAL SESSION

At the second session on Tuesday evening the reports of several of the committees were distributed in printed form instead of being read. A second and very popular distribution at this meeting was made by the Seattle dele-

gation, who gave a rose to each person present, with the compliments of the Seattle Commercial Club. The financial report was read by Dr. Andrews of the John Crerar Library, and Dr. Hill read a report on the preparation and installation of the A. L. A. exhibit at Leipzig, quoting from a letter from Mr. Koch, in which the latter described his reception by the King of Saxony, and the opening of the exhibit. The sum of \$4,275 was furnished for this exhibit by 131 subscribers. In addition, the Library Bureau provided furniture to the value of \$300, and publishers of children's books made generous donations. The material for the exhibit filled 43 crates and boxes when shipped.

Mr. Legler read the following minutes on the death of Dr. Thwaites, and Mr. R. R. Bowker made the motion that the meeting, by a rising vote, accept the report:

REUBEN GOLD THWAITES

Many men achieve success by consistent application in one direction; some can do many things indifferently well; few possess that creative power which invests whatever they undertake with signal distinction. Dr. Reuben Gold Thwaites had the rare combination of qualities which enabled him to pursue many and varied interests with marked success. From boyhood to the termination of his full and busy life, whatever came to him to do, he performed with marked ability and a judgment that compelled success. Each successive experience was but the preparation for something broader to follow. As a young man working his way through college, by teaching school and performing farm labor during intervals, and later as a newspaper correspondent and editor, he sharpened those qualities of natural sagacity and judgment which were to prove so productive in the fields of usefulness and honor which later engaged his thought and labor. Succeeding Dr. Lyman C. Draper as superintendent of the Wisconsin State Historical Society, he brought his natural abilities as an administrator and organizer to the task of making generally useful a vast and important mass of historical materials accumulated by his predecessor and perforce left without orderly arrangement, just as the miscellaneous collection had been gathered. Dr. Thwaites not only added with keen scholarly instinct to this great collection so as to give it balance and completeness in its own field, but developed and stimulated the historic interests of his constituency until the society became the leading organization of its kind in the Middle West, and one of the most active and enterprising in the country. The interest thus awakened found expression in the splendid library building which eventually housed the great collection, besides offering hospitality to the library of the great University of the State.

Not only were the riches of the Historical Society rendered freely available to scholars and writers, but Dr. Thwaites gave to many of the documents of major importance the impress of his editorial capacity. The published volumes which bear his name as editor or author are unsurpassed for sound scholarship and forceful interpretation.

As a librarian, too, Dr. Thwaites achieved distinction. His election as president of the American Library Association, in 1899, was a well-merited recognition of leadership in the profession. Numerous contributions to the library press on vital subjects bear testimony of his interest and his versatility. His intimate friend and associate, Prof. F. J. Turner, of Harvard University, thus summarized his achievements at a memorial meeting of the Historical Society:

"His activities touched every aspect of the social and scholarly life of his time. He was an active member of the Free Library Commission; he was secretary of the Wisconsin History Commission that has

already published nine valuable volumes on the Civil War. He lectured on history in the university. He wrote the standard history of Wisconsin, of Madison, of the university, of his lodge, and of the Madison Literary Club. He was influential in the work of the City Hospital, the University Club, the Unitarian Church. He was a pillar of strength in the American Library Association, the American Historical Association and the Bibliographical Society of America. With all his special duties, he produced a volume of scholarship that would have filled an active life that had no other duties. His books of travel in England and on the Ohio are charming specimens of their type. His Jesuit relations comprise 73 volumes of French, Latin and Italian documents. His early western travels run to 32 volumes, and he brought out the definitive edition of the journals of Lewis and Clark. As America grows older, more and more it exhibits a tendency to turn back to the heroic age of its explorers and pioneers. In historical pageants, mural decorations, sculpture, poetry, and in all the aesthetic use of historical symbols may be seen the growing appreciation by the nation of its remote past. By these editions, which constitute the sources of the early history of Canada, the middle west, the Missouri valley, and the Pacific northwest, Dr. Thwaites made himself the editorial authority to whom the student must turn if he will study this great age of American development. In the course of a little over a quarter of a century he wrote some fifteen books, edited and published about 168 other books, and wrote more than a hundred articles and addresses."

This is but a brief and incomplete record of his public and professional service. Of his personal qualities, they can speak best—and they are many in number—who experienced his generous aid to the beginner, his kindly and valuable counsel to all who sought it, his patient consideration for all who were in trouble or distress, his friendly attitude to associates and subordinates, and his social charm in the intimacy of home and neighborly circles.

HENRY E. LEGLER,
VICTOR H. PALTSITS,
CHARLES H. GOULD,
Committee.

The first address of the evening was by Dr. J. Franklin Jameson, on "The need of a national archive building." He showed by striking examples the evils of the present situation, and he pointed to the erection of a national archive building as the only satisfactory remedy. At the present time the United States government is paying an annual rental of from \$40,000 to \$50,000 for warehouses, unsuitable at best, in which to store its public documents. For \$1,500,000 the finest archive building in the world, containing 3,000,000 cubic feet and with possibility of extension to 9,000,000 cubic feet, could be erected. Dr. Jameson said Congress, in the public buildings act of March 4, 1913, authorized the secretary of the treasury to make plans for such a building, but no money was appropriated for making plans. A clause appropriating the needed sum in the sundry civil appropriation bill is now before the House committee on appropriations. Dr. Jameson said advantage should be taken of European experience and advice, Europe having naturally had much longer and more varied experience in archive construction than America. He also dwelt upon the need of having ultimately an archival organization, for which, indeed, provision should be made before the building is finished.

Dr. Jameson's paper was discussed by Gailard Hunt, chief of the division of manuscripts of the Library of Congress, and by Victor H. Paltsits, chairman of the Public Archives Commission of the American Historical Association. Mr. Hunt felt that the European practice of separating library and archives is a weakness and is liable, at least, to provoke competition rather than co-operation. Given the archives to administer, the Library of Congress would operate library and archives together, and if one eventually swallowed the other it would be no matter. Both concerted action and individual importunity are needed to reach the men on Capitol Hill who have the power to change the present conditions and to transfer control of archives from its present scattered state into the hands of one central agency. Mr. Paltsits said it will be the business of the public archives commission to stimulate the public conscience to respect these monuments of the American people. At present court records are kept best because of the fact that courts exist in every community and because the people can see the money value of wills and title deeds.

"The library and the immigrant" was the subject of the address by John Foster Carr, director of the Immigrant Education Society and enthusiast in the work of helping the foreign-born dwellers in our land to become good American citizens. "No naturalized citizen can ever be a good American," he said, "unless he has first been a good Italian or German or Greek—that is, unless he has the reverent instinct of loyalty to the land of his birth." There is no agency better fitted than the library to give him reason for respecting and loving our land. Here in a real American environment he can find a welcome and a respect for his own land. Every attempt made by libraries to attract recent immigrants has had unexpectedly large success. Through papers and books in his own language, the library helps the immigrant to knowledge of American conditions that make his daily living easier, and raises its standard. It is helping him to learn English that will improve his working skill and wages, and reduce by one-half, as English does, his liability to serious industrial accident. This is the truth of the practice as well as of theory.

The immigrant can be reached oftentimes by the distribution, through societies and clubs, trade unions and factories, drug, stationery and grocery stores, of attractive lists of books and of circulars telling of the existence and purpose of the library. The public schools, both day and evening, are also very helpful in spreading knowledge of

library privileges. Evening entertainments including simple lectures, often illustrated by the stereopticon, addresses by men of different nationalities to those of their own speech, concerts, and exhibitions of photographs, etc., have all been useful in attracting the foreigner to the library building. As one of Mr. Carr's Italian friends summed up American characteristics, "Americans are not like us, of one blood. They are a society of people who think alike." And it is in helping the newly arrived aliens to think like Americans that the libraries have opening before them a broad field of service.

Before introducing the next speaker, Mr. Anderson took occasion to recommend to the attention of all present, with his endorsement, the new book which Mr. Carr has just published, entitled "Immigrant and library: Italian helps," containing some of Mr. Carr's addresses, and lists of books in Italian which are well adapted to library collections.

Dr. P. P. Claxton, United States commissioner of education, was the last speaker of the evening. He spoke on "Libraries for rural communities." He said the duty of the Bureau of Education was to give such information to the people of the United States as would assist in establishing better schools and in promoting education in general. In this work librarians can help, for it is now recognized that the library and school stand on equal footing as educational factors. In the cities of this country a child between the ages of six and twenty-one, spends an average of about 5000 hours in school, while in rural districts the number is reduced to 4000. This leaves the city child 104,000 waking hours, and the country child 105,000, when other influences than the schools can be at work. If in school hours the child can be given a taste for good books and can form the reading habit, he can go on all the rest of his life acquiring true culture from his books—provided he has access to the books.

One of the most important movements of the last quarter century has been the growth of the library movement. There are five times the number of libraries there were twenty-five years ago, but of the 3000 counties in the country there are still 2200 having no library of more than 5000 volumes. Ninety per cent. of the people in the open country, who have the fewest outside distractions and the most time to read, have no adequate book supply.

Dr. Claxton urged the starting of a campaign for the establishment of county libraries at the county seats, which the whole county should be taxed to support. Since it

would be too costly to put in every library all the books its patrons might desire, every state should have a library for the use of the whole state, not merely for the legislators at the capital. To promote interest in this movement for more county libraries, Dr. Claxton pledged the help of the men sent out by the Bureau of Education through the rural districts.

THIRD GENERAL SESSION

At the third session, Wednesday evening, Miss Ahern, editor of *Public Libraries*, made a motion that a committee of five be appointed by the executive board to consider the advisability of changes in the Council, the committee to report to the Council at its winter meeting. Miss Ahern feels that the Council, with its present membership of nearly a hundred, has become so large as to be unwieldy. Her suggestion is that membership in the Council be confined to the ex-presidents of the Association, the executive board, and representatives of the affiliated associations.

Mr. Anderson then introduced Mr. Arthur Hastings Grant of Elizabeth, N. J. Mr. Grant's father, Mr. S. Hastings Grant, was the secretary at the first library meeting held in this country, which met in New York in 1853, under the leadership of Chas. C. Jewett. In 1912 Mr. Grant presented to the Association what he believed to be all the letters and papers left by his father, relating to this meeting. Quite recently he accidentally discovered the notebook which had been used for an attendance register at the 1853 meeting, containing the autograph signatures of all present, and this book he had carried to Washington to give to the Association. Besides the names of those in attendance, the book contains the list of libraries represented and the hotels at which the members stayed.

Following Mr. Grant's presentation of the register, Mr. Anderson withdrew, turning over the meeting to Mr. Hiller C. Wellman as presiding officer. The first paper was by Mr. Charles Knowles Bolton of the Boston Athenaeum, who spoke on "The present trend." He said that George Ticknor sounded the keynote in 1849, when he declared his belief that the new Boston Public Library should furnish popular literature for all in sufficient duplication that all who wished might read, and that these books should be freely circulated, not kept for study purposes alone. Mr. Bolton then gave a concise review of library progress in the past half century. He believes the modern large public library building has reached the high-water mark of centralization, and from now on

more attention will be given to developing branches. Special attention should be paid to providing good literature rather than the newest books. It is significant that the new Widener Library at Harvard is to have a "standard" library. Mr. Bolton advocates county work and a house-to-house delivery, especially in crowded suburbs. In the really rural districts he thinks such delivery would tend to isolate the farmer still more. More work must be done in the business sections of cities. While legislative reference work has evident advantages, Mr. Bolton foresees a possible disadvantage in the formation of such a perpetual bureau of experts who may have an undue influence on the laws. In conclusion, the speaker considered the question whether the present system of preparation did not devote too little study to the personality of the student, and train for clerical and sociological work rather than for leadership.

Following Mr. Bolton, Miss Katharine H. Wooten read an excellent paper on "Recent library development in the South."

"The development of the modern library movement in the South has been continuous," she said, "and it is keeping pace with the great commercial progress of the South. Southern conservatism, with its aversion to paternalism, has finally accepted the free public library as a necessary educational institution, as is shown in the establishment of approximately ninety-one libraries in the twelve Southern states since 1907, representing an expenditure of more than \$1,500,000. A tribute to the vitality of the public library movement has been the winning over to its side of the older generations of educated citizens, men and women.

"The subscription libraries to which they had been accustomed to go to supplement their own collections of books were quiet, roomy places in charge of some chosen acquaintance, and it was rather hard to readjust themselves to the new order of things, which supplemented the old familiar alcoves with strange and uncanny devices; which gave, instead of the old familiar printed book list, an unfamiliar card catalog; and in place of the well known friend of former days, several businesslike young women, firm in asking incomprehensible questions.

"Since the establishment of the library school in Atlanta in 1905 ninety-two young women have been graduated, and of the seventy-five still engaged in library work, fifty-six are holding positions in Southern libraries. And so the influence of the trained librarian is spreading and it is an exception for a small Southern town to develop library in-

terest without calling into consultation the nearest experienced library worker."

Miss Wootten concluded her paper with a detailed statement of the development of the modern library movement in each of the Southern states, giving statistical data of the number of libraries, number of librarians and the amounts each has expended in library extension.

Mr. Robert W. De Forest, who was expected to speak on "The educational work of the American Federation of Arts," was unable to be present, and his place was taken by Mr. Henry W. Kent, secretary of the Metropolitan Museum of Art.

Mr. Kent emphasized the importance of exhibitions of art and the advisability of showing in them the best art available. The American Federation of Arts stands ready to aid any library in its desire to bring the best things in art to the people of its community; for the federation, taking advantage of its unusual opportunity, has assembled collections carefully selected by experts, and including, with other objects, paintings, sculpture, small bronzes and medals and craft work, and these are sent out upon application to the smaller cities and towns and there installed at a comparatively small expense to the institution borrowing them.

Miss Leila Mechlin, secretary of the federation, showed the work of the federation, with the help of the stereopticon. "It was," she said, "in response to the request of a public library in Fort Worth, Tex., that the first traveling exhibition was sent out by the American Federation of Arts. This was about five years ago. During the present year the federation has sent out no less than twenty-three exhibitions of art which have gone to 114 places, and have been seen by more than 300,000 persons. Many of them have been shown in galleries of public libraries."

Miss Mechlin told also of how the American Federation of Arts co-operates with public libraries in disseminating knowledge of art through its lectures and its publications. *Arts and Progress*, a monthly illustrated magazine, and the *American Art Annual*, a general directory of art. In conclusion, she laid emphasis upon the interrelation of the arts and upon the splendid work the libraries are doing to open vistas for the public not only along the great highway of literature, but in the great field of art. Miss Mechlin's article on the same subject in the LIBRARY JOURNAL for January may be recalled.

FOURTH GENERAL SESSION

The last general session was called Friday afternoon. A telegram from Seattle caused

some laughter, for after stating that the temperature Wednesday noon was 53 degrees and Thursday noon was 63 degrees, it invited the A. L. A. to come to a *cool* place for its conference in 1915.

It had been hoped the Postmaster General, Albert S. Burleson, would be able to address the conference on "The parcel post, and particularly the further prospect with reference to books," but he was called out of the city at one o'clock. Mr. Anderson announced, however, that in an interview between some of the A. L. A. and Mr. Burleson the preceding day, assurance had been given that the post-office department was in sympathy with the wishes of the A. L. A. and would co-operate with the Association to the extent of its power.

W. N. C. Carlton, librarian of the Newberry Library of Chicago, took for his subject "Prestige." He urged a return to classical education and training in the humanities for librarians.

Mr. Carlton deplored the loss of prestige suffered by the learned professions through modern tendencies; pointed out the necessity of establishing a prestige for the profession of librarian through a return to the classical and broad training, which formerly lent prestige to the learned professions. "We have a natural relationship with the historic professions of theology, law and teaching, but much of a once great moral and intellectual prestige has been lost," he said. "It may not be surprising, therefore, if we have failed to achieve prestige in a time when these more ancient, but allied professions have been desperately struggling to save a remnant of theirs.

"The truth is that the time spirit in a mood of cruel irony has let loose on our age to a degree and extent hitherto unknown in modern history, a succession of extremely destructive tendencies. These are a general flouting of authority in matters political, intellectual, spiritual and social; the rejection of discipline, mental and moral; an inordinate passion for the physical enjoyment of the present moment, and a stubborn belief in the utilitarian or materialistic test for all things.

"We are fond of saying that librarians and library work are an important part of the educational machinery of society and that their aims and purposes are complementary to those of the teaching profession.

"If we believe this, we, together with the other professions which represent authority, spirituality and learning, must labor for the complete re-establishment of the power and prestige of religion, law and the humanities.

And, to be effective aids, librarians should have a prestige of their own which the social mind shall instinctively recognize and respect."

Mr. Carlton pointed to Herbert Putnam, librarian of the Congressional Library, as an example of his ideal.

"It may not be unfitting," he said, "for me to express the conviction that America to-day possesses one national institution whose prestige as a seat of learning has been created and made international by the vision and agency of one man, Herbert Putnam."

Mr. Carlton urged that the course of study for librarians should be more in line with the classical education of a generation ago. It should include Greek, as the key to our most precious inheritance—freedom in all its forms; Latin, for the wide horizon it gives; philosophy, the study of how men think and reason; modern European languages, of prime importance as working tools; mathematics, the key to the temple of learning and assimilated knowledge; history, which is to time what geography is to space; and lastly, the study of literature, the chief ornament of humanity. From such a training would result a broad humanism most useful to the librarian. In this advance of standards and increase of prestige the college and university librarian should lead all the rest, instead of being, as at present, the most backward.

The session closed with readings from recent fiction by Miss Agnes Van Valkenburgh, an instructor in the Library School of the New York Public Library.

She said: "Charming essays have been written on the subject of fiction reading; many and furious have been the battles over the fitness of special books for our shelves; compilation of figures on the proportion of fiction which we circulate have been made from the more or less veracious figures found in our annual reports, but too little of our time is spent in the consideration of books themselves.

"The novel should 'hold the mirror up to nature,' but many of the recent works remind one of the stout lady before the tailor's triplicate mirror, where she sees many reflections, but all painful."

A plea was made for the fuller consideration of the book in library meetings rather than for exhaustive discussions of the machinery by which books may be circulated, and she said librarians with a comprehension and love of books might serve a very useful purpose as leaven in most communities.

"Since fiction is the largest class drawn from the public library it is fitting that some consideration should be paid to novels on the

program. Only such have been selected as people were willing to buy as well as read. Each was for some time among the 'best sellers,' and all have made much money for both author and publisher, which, in America, spells success."

The books quoted were Florence Barclay's "Through the postern gate," Porter's "The harvester," and E. H. Abbott's "The white linen nurse." After reading the extracts chosen, very little further comment was necessary. The selections spoke for themselves.

SECRETARY'S REPORT

The secretary submitted his fourth annual report on the work at the executive office and the fifth report since the establishment of headquarters in Chicago. Once more is recorded sincere appreciation of the excellent quarters so generously and gratuitously furnished to the Association by the directors of the Chicago Public Library, which have been occupied since the autumn of 1909. As heretofore, free light, free heat, and free janitor service have been supplied in addition to the use of a large and commodious room containing 2,000 square feet of space. During the past summer the walls and ceiling were cleaned and redecorated by the library.

Work at the Executive Office.—The work at headquarters has been conducted along similar lines as in previous years. Activities may be roughly grouped as follows:

(a) Editing and publishing the official *Bulletin*, issued bi-monthly, through which the membership is kept informed of the plans and work of the Association and its committees.

(b) Editing and publishing the *A. L. A. Booklist*, a monthly guide to the selection and purchase of the best of the current books.

(c) Publishing and sale of all publications of the Association.

(d) Correspondence on all phases of library work, the executive office acting, so far as it is able, as a clearing house of library information.

(e) Co-operation with the Association committees, library commissions, state library associations and library clubs and other national educational and civic associations.

(f) Promoting better library architecture by collecting and loaning plans of library buildings.

(g) Promoting general publicity of the aims and activities of the Association and library work at large.

Section (d), Correspondence, has been by far the heaviest single feature of the work, and very properly so. During the year about 21,000 letters have been mailed from the office,

1918

AMERICAN LIBRARY ASSOCIATION—CONFERENCE A

NGTON, D. C., MAY 25-29, 1914

Photograph by Frederick A. Schutz, Washington.

in addition to about 20,000 pieces of circular matter, and the publications which were sold.

Membership.—When the "Handbook" was printed last September there were 2,563 members in the Association, of whom 372 were institutional, 2,087 personal, and the balance honorary members, life fellows, or life members. Since the first of the year special efforts have been directed to library trustees in the endeavor to convince them that library membership in the national Association for the libraries in their care is desirable. This has resulted in securing thus far 45 additional institutional members. About a dozen trustees have joined the Association as a result of an appeal sent out in March. Since the first of the year 191 new personal members have been enrolled, making a total of 236 new members, institutional and personal, since the printing of the 1913 "Handbook." Judging from the past experience, from 100 to 150 will probably join before the close of the Washington conference, and from 150 to 200 persons will allow their membership to lapse. Thus the approximate number of members in the 1914 "Handbook" will probably be about 2,750. We look forward to the day when we shall have fully 3,000 members.

Publicity.—Increased efforts for publicity have been made this past year. Mr. W. H. Kerr, who is much interested in the subject, presented, at request of the president and the secretary, a report to the Council at their mid-winter meeting. The president later appointed a committee on publicity, consisting of Messrs. F. C. Hicks, W. H. Kerr and G. F. Bowerman. This committee has engaged an experienced newspaper man who has aided in preparing news material and getting it on the wires and in the press, and who will serve the Association until the close of the Washington conference. The executive board made an appropriation of \$100 for publicity work at their January meeting. The secretary has sent out several circular letters to libraries asking co-operation in securing news and in getting it in the hands of the newspapers. The publicity committee, through Dr. George F. Bowerman, secured the preparation and publication of a series of five syndicated articles on library work, written by the well-known correspondent, Frederic J. Haskin. Miss Plummer made a plea at the Council meeting in January for a campaign of publicity through magazines, and we hope some magazine articles on library work may result. In addition to these extra features the secretary has as usual sent material at various times to a selected list of newspapers and periodicals throughout the United States and Canada.

Field Work.—The field work of the secretary during the past year has included attendance and addresses at the Ohio Library Association conference at Oberlin, October 7-10; the North Carolina Library Association conference at Washington, N. C., November 5-6; the Arkansas Library Association meeting at Pine Bluff, Ark., April 2-3; lectures on the work of the Association to the University of Illinois Library School, the Library School of the Carnegie Library of Atlanta, the summer library schools of the Connecticut Library Commission, the Iowa Library Commission, the University of Wisconsin, and to the District of Columbia Library Club; and several informal talks in Chicago and vicinity.

Booklist.—The transference of the editorial work of the A. L. A. *Booklist* from Madison to the A. L. A. office in Chicago was made in the summer of 1913, and by erecting suitable partitions in the large room occupied by the Association very comfortable and convenient quarters have been provided.

Library Plans.—We need more plans of new types of library buildings. Some effort has been made by correspondence and direct personal request to secure these. The office will appreciate and can use to advantage any good plans which may be given.

Photographs.—The secretary has been making an effort to secure a photograph of every ex-president of the Association. Eleven have been secured thus far, and these have been framed and hung on the walls at headquarters. Group pictures of eight or ten conferences have also been donated, and these have also been hung. Particular mention must be made of the gift from Mr. Henry M. Utleigh of framed groups of San Francisco, 1891; Denver, 1895, and several other interesting and valuable unframed photographs of early conferences and post-conference parties.

Necrology.—The Association has lost by death twelve members since the conference of a year ago. The list includes two ex-presidents of the Association; three prominent library trustees, one of whom was a trustee of the A. L. A. Endowment fund; a pioneer in library commission and extension activities; and others who had done faithful work in their respective fields and who will long be missed from our professional circle.

The list follows: Eliphalet Wickes Blatchford, John L. Cadwalader, William George Eakins, Frank Avery Hutchins, William C. Kimball, Josephus Nelson Larned, Richard A. Lavell, Elizabeth Cheever Osborn (Mrs. Lyman P.), Joseph R. Parrott, Mary Abbie Richardson, Reuben Gold Thwaites, and William Hopkins Tillinghast.

The following persons formerly belonged to the Association, but were not members at the time of their death:

Mrs. Martha H. G. Banks, Samuel A. Binion, Marvin Davis Bisbee, Minta I. Dryden, Lucian Brainerd Gilmore, George W. Peckham, William Marshall Stevenson, and Philip R. Uhler.

GEORGE B. UTLEY, *Secretary*.

EXECUTIVE BOARD

A meeting of the Executive Board was held on the afternoon of May 25 in the New Willard Hotel. Besides President Anderson, who presided, there were present Vice-president Wellman, Messrs. Andrews, Carlton, Craver and Putnam.

The nominating committee presented its report which was adopted by the Board as constituting the official nominations. Mr. C. H. Gould, Miss Elisa M. Willard and Mr. W. T. Porter were appointed committee on resolutions. Several matters of routine business were also disposed of.

The following persons were named as official delegates to the British Library Association conference at Oxford: Dr. Herbert Putnam, Mr. R. R. Bowker, Dr. Frank P. Hill, Mr. W. H. Brett, Mr. Hiller C. Wellman, Mr. Henry E. Legler, Mr. W. N. C. Carlton, Miss M. E. Ahern, Mr. George H. Locke, Mr. J. C. M. Hanson, Mr. C. F. D. Belden and Mr. George B. Utley.

A second meeting was held May 29, at which were present President Wellman (presiding), Vice-presidents Carlton and Miss Titcomb, Miss Plummer and Messrs. Craver, Putnam, and Jennings.

The Board voted to appoint a committee to consider and report on the feasibility of preparing and holding a library exhibit at the Panama-Pacific Exposition at San Francisco in 1915, the report of the committee and further business resulting from its recommendations to be conducted through correspondence vote of the Board. Dr. Frank P. Hill was appointed chairman with power to complete the committee. Dr. Hill later named the following persons to serve with him on this committee: Miss M. E. Ahern, Mr. J. C. Dana, Mr. J. L. Gillis, and the secretary of the Association.

The chairman of the committee on code for classifiers, Mr. William Stetson Merrill, presented as a report of progress, a booklet of 124 pages, mimeographed in a limited edition, wherein were assembled more than three hundred points of procedure for future consideration by the committee. This collection of data was issued to present, in a more specific

way than has hitherto been possible, the points upon which it is desired to secure a fair consensus of opinion from classifiers and librarians.

In accordance with the vote of the Association at its meeting on May 27, it was voted that the president appoint a committee of five to consider the desirability of making any amendments to the constitution, this committee to report to the Executive Board at the next mid-winter meeting. The president appointed the following committee: Mr. N. D. C. Hodges, Miss M. E. Ahern, Miss Alice S. Tyler, Mr. G. M. Jones, and Dr. C. H. Gould.

It was voted that the question of appointing standing committees on classification and cataloging be referred to a committee appointed by the president, this committee to report to the Executive Board at the next mid-winter meeting. The president appointed as chairman of this committee, Mr. W. N. C. Carlton.

A report was received from the chairman of the committee on cost and method of cataloging, Mr. A. G. S. Josephson, which report was accepted as a report of progress.

A communication was read from Mr. Adam Strohm, librarian of the Detroit Public Library, inviting the Association on behalf of the Detroit Library Commission, the Convention and Tourist Bureau, and the Detroit Board of Commerce, to hold its 1917 conference in Detroit, Mr. Strohm stating that the library board looked forward with confidence to the completion of the new central library in that year. It was voted that a vote of appreciation for this invitation be extended to Mr. Strohm.

A resolution was received which had been adopted by the committee on work with the blind to the effect that the Board be asked to appoint a separate committee to consider literature for the mentally and morally deficient, as it was not found desirable to have this work combined with that performed by the committee on work with the blind. It was voted that this request be referred to the same committee which is to consider the desirability of standing committees on classification and cataloging.

Mr. W. N. C. Carlton presented his resignation as non-official member of the Executive Board in view of his election to the office of first vice-president, which under the circumstances was accepted.

Mr. George H. Locke, librarian of the Toronto Public Library, was elected a member of the Executive Board to fill the vacancy caused by the resignation of Mr. Carlton as a non-official member, the term to expire in 1915.

The place of meeting for the 1915 conference was next considered. Invitations were received from the chambers of commerce of New York City, Toledo, New Orleans, Baltimore, and Chattanooga. Mr. Charles S. Greene, of Oakland, personally presented the invitation from various bodies in San Francisco and vicinity, and Mr. J. T. Jennings brought with him invitations from numerous bodies in the Pacific Northwest for the Association to meet in Seattle. After a thorough discussion of these various places of meeting it was voted on motion of Dr. Putnam that it was the sense of the Executive Board that Berkeley, California, be the place of meeting for 1915, but that in reaching the above conclusion the Board desires to express cordial acknowledgment of the invitation from the city of Seattle, which in itself is extremely attractive and which, although it cannot be accepted owing to particular circumstances of the year, members of the Association will have opportunity to take advantage of in spirit and through the visits of individual members.

The date for the 1915 meeting was left to be decided after further conference with the authorities at Berkeley and vicinity, particularly with the authorities of the University of California who have generously offered the Association the use of the University buildings as meeting rooms. It was taken as the sense of the Board that the meeting would probably be held between the middle of May and the end of the first week in June.

Dr. C. W. Andrews, as chairman of the committee on affiliation of non-regional societies, presented the following report to the Council, which report was in turn referred by the Council to the Executive Board. The Executive Board voted to lay the report on the table until the next mid-winter meeting and to print the same in the Proceedings of the Washington conference. The report was as follows:

"Your committee on affiliation of non-regional societies report that they have duly considered the question submitted to them. They have been pleased to find that it is not as serious as some unconfirmed statements had led them to believe. It does not appear that any very large proportion of the members of the non-regional affiliated societies attending the annual meetings of the A. L. A. are not members of the Association. Yet there are some and the officials of these societies have recognized and indeed have suggested the fairness of such members bearing a part of the expense of the *Bulletin* and of the conference. Indeed, they have not asked for any exemption of those who are members

of the A. L. A., but the Committee are unanimous in thinking that the Association should do as much for those of its members with specialized interests who have chosen to organize as an affiliated society as it does for those who prefer to be members of a section.

"Your Committee therefore recommend the adoption of the following by-law:

Section 10. Societies having purposes allied to those of the American Library Association may be affiliated with the latter by a two-thirds vote of the members of the Council present at any regular meeting, or at any special meeting provided notice of the application of the society is included in the call of the special meeting. Such affiliated societies shall meet with the A. L. A. at least once in every three consecutive years. Provision for their meetings shall be made by the program committee, and there shall be allotted for their proceedings the same number of pages in the *Bulletin* as for a section. Their members shall be entitled to all the privileges of members of the A. L. A. in regard to hotel and travel rates.

The treasurer of each such society shall pay to the treasurer of the A. L. A. before the close of the financial year 50 cents for each member of the society who is not a member of the A. L. A. and 50 cents additional for each such member who has attended the annual conference. No such societies shall have the privileges mentioned unless affiliated, except that the program committee is authorized to provide for the first meetings of a society.

(signed) CLEMENT W. ANDREWS,
Chairman.

"P. S.—Dr. Andrews, for himself and Mr. Wyer as individuals, recommend the inclusion of Section 8a of the By-laws as part of Section 9; and also that the reference in Section 9 to Section 17 of the Constitution shall be altered to read Section 16."

Mr. Henry E. Legler was elected a member of the Publishing Board to succeed himself for a term of three years.

THE A. L. A. COUNCIL

The Council met at the New Willard Hotel, Washington, May 28, at 2:30 p.m., President Anderson presiding. A nominating committee consisting of Messrs. Legler, Hadley and Walter, nominated the following persons as members of the Council for a term of five years each, and they were unanimously elected by the Council: Thomas M. Owen, Edith Tobitt, Walter L. Brown, Edith A. Phelps, Charles F. D. Belden.

The following resolution, relative to a national archive building in Washington, referred to the Council by the Association at large, was, upon motion of Dr. E. C. Richardson, unanimously adopted:

Whereas, The records and papers of the United States government contain an inexhaustible and priceless body of information for the statesman, the administrator, the historian, and the reading public; and

Whereas, These papers are now scattered through many repositories in Washington and out of Washington, housed often at great expense for rental in unsafe and unsuitable buildings, exposed to danger from fire, and difficult of access; and

Whereas, Such conditions not only block the progress of history but are a constant drag upon the efficiency of governmental administration; and

Whereas, The only true remedy lies in the construction of a suitable National Archive Building, in which these records and papers can be arranged systematically, found with rapidity, and consulted with ease;

Resolved, That the American Library Association cordially approves the efforts which have been made toward the erection of a National Archive Building, and respectfully urges upon Congress the passage of the appropriation now under consideration in the Sundry Civil Appropriation Bill, for making plans for such a building, and the following of this initial step by such further appropriations as shall result as soon as possible in its erection.

A letter was read from Miss Linda A. Eastman stating that the Home Economics Association voted to appoint a standing committee to co-operate with a committee of the American Library Association on a compilation of an annotated reading list on home economics, this joint committee to evaluate the new literature on the subject each year and bring it up to date. The consideration of appointing such a committee from the A. L. A. was referred to the Executive Board.

On the motion of Dr. Hill, it was voted that the chair appoint a committee of three to draft suitable resolutions on the death during the past year of Frank A. Hutchins, William C. Kimball and Josephus N. Larned. The chair named as this committee Messrs. W. L. Brown, E. C. Richardson and M. S. Dudgeon. The resolutions as drafted were read before and adopted by the Association at the general session on May 29, and were as follows:

FRANK A. HUTCHINS, WILLIAM C. KIMBALL,
JOSEPHUS NELSON LARNED

Whereas, The list of library workers who have died during the past year contains the names of Frank A. Hutchins, William C. Kimball and Josephus Nelson Larned, each a leader in a different field,

Resolved, That the American Library Association, in these resolutions, expresses its deep appreciation of their work and its sincere sorrow for their death.

Frank A. Hutchins was a pioneer of aggressive extension of library service, who, with a keen appreciation of the power of good books and understanding of their universal usefulness, strove always to render the resources of the library available to many who had theretofore been considered beyond the reach of its service.

William C. Kimball, heart as well as head of the New Jersey Public Library Commission throughout the period of development, held various positions of activity or trust in the American Library Association, was modest, efficient, unremitting and unsparring in all his work, and a model and example of the possibilities of gratuitous, as distinguished from professional, service in the development of American libraries.

Josephus Nelson Larned, one of the small group which organized this Association and laid the foundation of its work, served the Association as its president in 1894, made many valuable contributions to library science. Wise in counsel, courteous and kindly in manner, author of many useful and inspiring books, the first citizen of his city, a scholarly gentleman, he honored the profession to which he gave the best years of his life.

Mr. W. H. Kerr, as chairman of a committee, presented for consideration a statement concerning the status of school librarians, and by unanimous vote it was given the endorsement of the Council.

The committee to investigate fire insurance rates to libraries reported progress through its chairman, Mr. M. S. Dudgeon. Questionnaires were sent out two months ago and are coming in slowly, and the committee hopes to make a definite report in a short time.

Dr. C. W. Andrews, chairman of the committee on affiliation of other than state, provincial or local library associations, presented a report in behalf of the committee which it was voted to refer to the Executive Board, and which is printed in the minutes of the Board meeting for May 29. He stated that at his request the secretary had made a careful analysis of the registers of the Hotel Kaaterskill, and it was found that of all the persons who were in attendance at the Kaaterskill meeting and who were not members of the Association or an affiliated society the largest number were wives or relatives of librarians, leaving only 70 library workers out of 892, or not quite eight per cent. of the total attendance, who were not members and who really ought to be. Of the non-members of the A. L. A. in attendance only 14 were members of Special Libraries Association, and nine of the American Association of Law Libraries. (The membership of the League of Library Commissions and National Association of State Libraries is largely institutional.) Therefore, the speaker thought the matter was not of as great consequence as was supposed, as a total addition of only \$35 or \$40 would have been secured if the proposed by-law had been in force. It seemed fair, however, that the affiliated associations should contribute their proportion to the expenses of a conference, and in this they all expressed willingness.

Miss Tyler expressed the feeling that affiliation was made too easy and that an outright sum each year would be only fair.

Dr. Andrews next presented the following report for the committee (Dr. Andrews and Dr. Bostwick) on a union list of serials which was received as a report of progress:

"Your Committee on a union list of serials respectfully report that they are informed by the Librarian of Congress that that Institution is making progress in its plans for a list of its own periodicals in serials, and that he hopes that these plans will prove a basis for the preparation of a union list. Of them it can be said at the present time only that they contemplate the issuance of a preliminary edition in sections, taking those classes first which appear likely to be of the most use.

"The advantages of the work being done by the Library of Congress are so obvious that the Committee are confident that the Council will agree with them in thinking that no ac-

tion looking toward other methods is necessary or desirable so long as there is such good prospects of success along the line mentioned.

"They therefore submit this as a report of progress."

Mr. Ranck presented an oral report of progress for the committee on ventilation and lighting of library buildings. The committee plans to have in print a preliminary report to be sent to all members of the Council before the January meeting.

A motion was unanimously passed that it was the sense of the Council that the Bureau of Education should include libraries and librarians in future issues of its Educational Directories.

Mr. Bowker felt that one of the important results from a meeting in Washington was not only to come in contact with government officials, but to get government officials in touch with librarians and each other. He thought appreciation should be shown the Commissioner of Education for his interest and his plan for establishing libraries in the 2200 counties without adequate library facilities, and that mention should be made that the plan is already working on a large scale in California. From a paper presented at the Agricultural Libraries Section by an official of the Department of Agriculture, it was apparent that the latter department knew almost nothing of the work being done for libraries in rural communities by the various state library commissions. The whole thing suggested the importance of bringing together, while in Washington, at least by suggestion, the various departments and agencies in the development of rural community work in a proper co-ordination. He therefore presented the following resolution, which was, upon motion, unanimously adopted:

Resolved, That the Council of the American Library Association expresses its cordial appreciation of the practical support by the Commissioner of Education of the plan for library extension in rural communities under which town or other central libraries extend their work throughout their respective counties, a plan whose value has been proven by successful pioneer work in several localities and developed through the salutary library law of California in half the counties of that state; and that it heartily favors the establishment in the 2,200 counties reported as without adequate library facilities, of county seat libraries through the co-operation of the field agents of the Bureau of Education, the county agents of the Department of Agriculture, and other representatives of the federal departments with the state library commissions and the local school authorities, and the utilization of traveling libraries and parcel post facilities for the delivery and return of book packages on rural delivery routes.

Mr. Bowker presented the following resolutions on the subject of parcel post service as applied to books, which, upon motion, were unanimously adopted:

Resolved, That the Council of the American Library Association expresses to the Postmaster-General the hearty appreciation by the Association and by all interested in the progress of the library movement of his wise and beneficent act in including books within the parcel post, one of the greatest boons in the development of the supply of books to the people, especially in rural communities; and

Resolved, That the Council expresses the hope that further facilities may be afforded as rapidly as experience and revenue justify, especially by the inclusion of all printed matter within the parcel post, by an arrangement for the collection of book parcels, by adoption of a fractional scale for quarter pounds above the initial pound, and by the ultimate establishment of a rate not exceeding the old book rate of 8 cents a pound for the further zones; and

Resolved, That the Council proffers the co-operation of the Association through its officials with the post-office department in every advance in postal progress for the welfare of the general public, especially in the carriage of books at the lowest rates and under the easiest conditions.

In behalf of the A. L. A. Publishing Board, Dr. C. W. Andrews presented a report upon the subject of the A. L. A. *Booklist*, in accordance with the request of the Council at its mid-winter meeting. The report was as follows:

REPORT ON THE A. L. A. BOOKLIST

"In accordance with the instructions of the Council, the Publishing Board have again considered the question of changing the character and form and title of the A. L. A. *Booklist*.

"As to the feasibility of obtaining subscriptions from laymen, the Board are convinced that this is impossible without so altering the character of the publication as seriously to interfere with its service to librarians. The latter require a compact note with as full information as possible, while for the reader a note must be written to enlist his interest. Again many kinds of books are now included in the list, as for example, technical books, which do not appeal to the general reader, and consequently he would be obliged to wade through a mass of titles in which he has no concern in order to find the few that would be of interest. This opinion of the Board is by no means based on theoretical considerations, but on actual experiment after sending complimentary copies for several months to a carefully selected list of men and women of bookish tastes.

"The Board recognized the disadvantages of the present title, but they have received only three suggestions in answer to their appeal. Of these they prefer 'The Booklist of the American Library Association: An Annotated guide to new books,' but they are not agreed that the improvement would be sufficient to justify the expense and inconvenience which would be caused by the changes in the cataloging and the lettering of sets."

Discussion of the report and the policy of the *Booklist* followed. The income from the Carnegie fund was mostly used for editorial

expenses; the income amounted to about \$4,500 a year, the editorial expenses to about \$4,200, the cost of printing the *Booklist* was about \$1,500 a year and the receipts from subscriptions, bulk and retail, about \$2,700. About 4600 copies of the *Booklist* are subscribed for, including retail copies at \$1.00 a year and bulk subscriptions at 40 c. a year.

Mr. Legler, chairman of the Publishing Board, said the *Booklist* was started ten years ago to carry out the particular injunction conveyed in Mr. Carnegie's gift that through the resources obtained there should be provided bibliographical tools especially for the small library, especially, by implication, those which no publishing concern would undertake as commercial possibilities. The Publishing Board, although recognizing the excellence of having a publication which would appeal to the general book-buying public, have felt that it was outside its particular province to issue a publication for that specific need, that their primary duty lay in furnishing to the libraries a guide for book purchase.

Dr. Andrews expressed the opinion that under the terms of the Carnegie donation the Board had no right to alter the character of the *Booklist* to attract outside readers if thereby is lessened its usefulness to libraries.

Mr. Dana said he was not sure that the present use of the money was not the best possible use, but that it had not been demonstrated that it was. He felt that it had not been proven that the *Booklist*, if changed somewhat in name, size and make-up, would be useful to the small library and also to the general public, and that Mr. Carnegie, as a business man, would be pleased to see that those administering the funds which he had given were good enough business men to make the publication in their charge in time self-supporting, instead of having it cost the Association about \$3,000 a year as at the present time. Mr. Dana deprecated the impression that he was an enemy of the *Booklist*, saying that he considered himself its best friend, and was, so far as he knew, the only librarian who had purchased the *Booklist* in quantities for general distribution from the library to the public. He said the very excellence of the material in the *Booklist* was the reason for his regret that it was not more widely utilized and made more generally known and available.

Mr. Bowker wondered whether a bulk price could not be offered to libraries, perhaps charging 25 c. or so a year if bought in sufficient quantities, so they could offer the *Booklist* at a very low price to their clients. He doubted if any change in form would produce an added number of subscribers.

On motion of Mr. Bowker, it was voted to lay the report concerning the *Booklist* on the table until the mid-winter meeting of the Council.

Dr. Bostwick presented the following report of the committee on the advisability of issuing a list of periodicals:

"Your Committee appointed to consider the advisability of issuing an approved list of general periodicals begs to report as follows:

"We are agreed that the compilation of such a list is advisable and possible, but we are not sure that it is well to prepare the list at once unless it is distinctly understood that it is to be tentative and subject to early revision. This is made necessary by the many radical changes in content as well as form in many of our best known periodicals. We therefore recommend that the matter be referred to the Publishing Board, with the request that a tentative list be prepared at once with the intention of revising it at an early date. We are of the opinion that the person who actually does the work should be intimately acquainted with the smaller libraries, and that there should be revision by definitely appointed collaborators, that a purely local standpoint may be avoided.

(Signed) ARTHUR E. BOSTWICK, *Chairman*,
HENRY E. LEGLER,
FRANK K. WALTER,
Committee."

The report was adopted.

On behalf of the committee on library administration Dr. Bostwick, chairman, presented the following report on the subject of statistical forms used by libraries:

"Your committee begs to call attention to the fact that the report of 1906 on statistics is made largely from the standpoint of the state commission with a view to the standardization of reports made to the state authorities. With most of the report, therefore, we have nothing to do. We feel very strongly, however, that every annual report issued hereafter should contain at least one page of statistics in such form as to admit of easy comparison. This should not interfere with the free statistical arrangement of other parts of the report. It is desired by most libraries to maintain their own forms in order that comparisons with their own past years may be easy.

"We are of opinion that the form called Form II to be found on page 150 of the 1906 report is essentially what is needed for our purposes, but we are not yet agreed on certain slight modifications which appear necessary to bring it up to date. The general form of the blank, based, as it was, on correspondence with many libraries and library commissions, is excellent.

"We therefore ask for additional time and hope to be able to make a full report in January next.

"We desire to call attention to the fact that some way must be devised of keeping this matter before the minds of librarians. The fact that the 1906 report, full as it is and embodying so many specifications, should have completely passed from the memory of so many librarians is significant. We desire to suggest the following plan in the hope that some discussion of it may help to shape our final report.

"Let this committee, in its annual report hereafter, embody a table of statistics of American libraries based on its own recommended form, and let this include only such libraries as give a page, in this form, in their annual reports. We are of the opinion that a desire to be included in this comparative table may act as an inducement to libraries to do the slight additional work necessary.

(Signed) ARTHUR E. BOSTWICK,
Chairman."

The last feature of the report was discussed at length, the sense of the Council being that as soon as possible the committee should secure promises from at least one hundred librarians to use the recommended form of statistics. The form as decided upon should be applicable not only to municipal, tax-supported libraries, but to others, reference and especially endowed libraries as well.

Mr. Roden presented resolutions of appreciation of services rendered by the Library of Congress to the libraries of the country, which had been adopted by the Catalog section, and it was voted that they be referred to the Resolutions committee, with the approval of the Council.

REPORTS OF COMMITTEES

COMMITTEE ON LIBRARY TRAINING

During the past year there has been much activity in the field of library training.

Notable during the year have been: The establishment of a new school in connection with the California State Library to meet the growing demand for trained librarians on the Pacific coast; the discontinuance, for reasons acceptable to the management, of the Drexel Institute Library School at Philadelphia; the coming of new heads to several of the schools, namely, Miss June Donnelly to the Simmons College Library School, Miss Alice S. Tyler to the Western Reserve University Library School, and Dr. E. E. Sperry to the Syracuse University Library School; the institution in connection with the Wisconsin Library School of a new course designed especially to prepare those who take it for

municipal and state legislative reference work. These changes are all noteworthy, and one of them, the discontinuance of the Drexel Institute Library School, deserves a few additional words.

It is not, of course, in place for those of us who are not connected with the management, to question the wisdom of the decision of the authorities of the Drexel Institute in discontinuing the work of the library school of that institution. But the work of the school has been so faithfully done, its leaders have been women so prominent in the library world, the influence of the school has been so marked in many ways upon the development of the profession, that it would be unjust to the school if the committee did not take this opportunity to express its profound regret at this termination of the school's activities. It is to be hoped that some other agency in Pennsylvania will see its way clear to take up the work thus laid down.

Turning now more directly to the work accomplished by the committee during the past year, it may be briefly summarized as follows:

I. The long-discussed and anticipated examination of library schools by a trained expert has been begun. It may be wise here to recount briefly the circumstances which originally led the committee to propose such an examination.

In the years 1905 and 1906 the committee submitted reports on standards of library training, in which minimum requirements were laid down. Immediately heads of important libraries, secretaries of library commissions, and other persons holding positions of responsibility, began to write and inquire: "What schools fulfill these requirements?" A second class of inquirers were prospective library school students who began to ask what schools they should attend and how far these schools met the requirements set up by the committee. As a result, the committee was called together at Brooklyn in February, 1908, chiefly to discuss the advisability of publishing a list of library schools and of other sources of training. The committee did not then feel it advisable to do so, and in the last paragraph of the A. L. A. tract on training simply referred inquirers about schools to their nearest library commission, feeling that the commissions should know the standing and character of the schools and be supplied with school literature. The wish for a list, however, still found expression. After considerable discussion, a motion was carried that the Council consider the question, and if it approved such a list it should be asked to appropriate \$500.

The Council, reaching the matter in 1910, expressed its judgment that such a list was desirable and that such an appropriation should be made; but it was not until 1913, when \$400 was appropriated, that definite action was taken. Search was made for a suitable examiner, and after two thoroughly competent people had been agreed upon who, for reasons of health or because of entry into library school work, were not able to accept the position, the committee fortunately, at the beginning of the year 1914, was able to secure Miss Mary E. Robbins.

The qualifications agreed upon at the beginning by the committee as desirable in an examiner were as follows: (1) She should be a graduate of a library school. (2) She should have had experience in actual library work. (3) She should have had, if possible, teaching experience in a library school. Miss Robbins has already entered upon her work. Three schools have already been either wholly or in part examined, and the others will be examined before the close of the year 1914. The committee will at that time be in possession of data which would justify it in submitting to the American Library Association a list of accredited schools. There is, however, still some doubt in the mind of the forward committee as to the wisdom of submitting such a list.

II. In addition to arranging the details of the examination, the committee has also during the present year begun the study of the whole subject of library training from two other points of view.

From the library schools have been obtained lists of the libraries which their graduates have entered; and to a large number of representative libraries selected from these lists, letters have been sent inviting a full and very frank statement as to the work accomplished by library school graduates when they have entered upon actual library work. Not only the reports of the heads of these libraries were sought, but also an expression of opinion from the heads of their various departments. The committee sought especially to ascertain in what respect the graduates seem perfectly well equipped for the work which they enter, and in what respects there seems to be lack of preparation.

In addition to these inquiries, a second questionnaire has been sent out to a long list of graduates of the library schools who have been selected by the heads of the schools as having done unusually good work since graduation. This requirement was added in order to make sure that no question of native ability could arise. These graduates thus se-

lected have been asked to answer these questions:

In what respects do you feel that the instruction received in the library school gave you adequate preparation for the actual kinds of work which you have been doing?

Were there any parts of the work which you have had to do for which you found the instruction given in the library school insufficient?

Have you been called upon to take up any lines of library work or of social work in connection with library work for which the school gave you no preparation whatever?

In the light of your actual experience in library work would you suggest any difference in proportion in the various kinds of instruction given in the library school? That is, would you advise emphasizing and giving more time to certain subjects; which, of course, can only be done by diminishing the time for and laying less emphasis on other subjects?

Ought the schools to lay more emphasis upon topics related to the environment of the library, such as social conditions and the like?

It is, of course, too early to submit any report upon the schools or any conclusions as to library training which may be reached by the committee as a result of this investigation. Our inquiries have not been made with any feeling that the library schools are failing to do the work which is expected of them. It has seemed to the committee possible that, working entirely independent of the schools, it might obtain some suggestions which perhaps would not otherwise reach the schools.

Other lines of work are also pressing upon the attention of the committee. In the last ten years there has been a great development of apprentice classes in the large public libraries. These classes are naturally conducted primarily with reference to the interests of the particular library involved, but as the persons trained in these classes not infrequently change their place of residence or secure appointments in some other library, it would seem desirable to have some general agreement as to the content of such an apprentice class course. The committee have in contemplation during the coming year an investigation as to the extent to which these apprentice classes are now being carried on and as to the character of the instruction covered by them.

Another topic should also be taken up in the near future. Two or three times in the last year the question has been raised in correspondence whether the summer schools are living up to the standards laid down by the committee some years ago, and whether the instruction given is satisfactory. This question, since the summer schools so largely minister to those already in the work of the smaller libraries, deserves careful inquiry, and it is hoped that it may also be reached and discussed during the coming year.

For the committee,

AZARIAH S. ROOT, *Chairman.*

COMMITTEE ON BOOKBINDING

As time goes on it becomes increasingly evident that the special collection, showing the kind of work done by library binders, meets a real need and that so far it has worked an injustice neither to binders, librarians nor the American Library Association as a whole. During the year this collection has been increased by samples submitted by seven binders, of which two came from England and one from Germany. The total number of binders having submitted samples is thirty-seven. Forty-two requests for information were received and answered by the help of these samples. This number of questions is much larger than during the preceding year, when the collection was first started, but it is still much smaller than it ought to be.

The samples prove conclusively that a large number of librarians are getting inferior bindings. It would seem the part of wisdom, therefore, for librarians to write to the committee for information and suggestions as to ways in which the work of a binder can be improved.

In addition to correspondence with libraries, the committee has been in correspondence with some binders who are anxious to do better work and who have asked the committee for criticisms and suggestions.

During the year the new edition of the Standard Dictionary has been published, bound according to the specifications of this committee. Specifications have also been submitted for binding the new edition of the International Encyclopedia, which will be printed on ordinary paper as well as on the thin paper which has been advertised so freely. It is doubtful if the publishers will follow all of these specifications unless librarians bring pressure to bear on them. It is suggested that all librarians when ordering this new edition state that they wish a set bound according to library specifications.

During the past eight years there has been a great increase in the use of reinforced bindings. When first introduced they were looked upon with suspicion by publishers, booksellers and librarians. They are still unpopular with the publishers and booksellers, and the publishers themselves have practically ceased to produce them. Nevertheless, owing to the activities of several library bookbinders, reinforced bindings are used more to-day than ever before.

A determined effort has been made by interested persons to induce librarians to use leather and especially leathers free-from-acid. This committee advocates the use of leathers free-from-acid when leather must be used, but deprecates the efforts made to induce a

greater use of leathers than already obtains. In this respect the recommendations of the committee are as follows:

1. Always use leather on books which are to receive hard usage.
 2. Never use leather on books which will be seldom used.
 3. In case of doubt give preference to cloth.
- During the year nothing has been done toward standardizing book papers. Such an investigation requires a much larger fund than is at the disposal of the committee. Therefore it must wait until the work is done either by the Bureau of Standards in Washington or by some paper chemist or manufacturer.

Respectfully submitted,

A. L. BAILEY,
ROSE G. MURRAY,
J. RITCHIE PATTERSON.

COMMITTEE ON PUBLIC DOCUMENTS

The committee on public documents, of which George S. Godard was chairman, submitted a "preliminary report," devoted mainly to suggestions to visiting delegates to study the document situation while they were in Washington.

COMMITTEE ON LIBRARY ADMINISTRATION

The committee on library administration presented a report on the first exhibit of labor-saving devices, held in the Public Library of the District. An effort was made to include only devices adapted to library use, in both high-priced and inexpensive grades, and in as great variety as possible. Sixty-three firms responded to the invitation, and about 3,800 square feet of floor space on the second floor of the library was given over to the exhibit. Charges were fixed at the lowest possible point to clear expenses, 13 cents per square foot being charged the large exhibitors, while the charge for small devices sent in care of the committee varied from one to five dollars, according to the number of devices and the space they would occupy. Mr. C. Seymour Thompson, who had charge of the installation of exhibits, has written a very comprehensive description of the exhibit, which is printed elsewhere in this issue of the JOURNAL.

COMMITTEE ON CO-OPERATION WITH THE NATIONAL EDUCATION ASSOCIATION

During the past year the chairman of the A. L. A. committee on co-operation with the National Education Association has conferred with Mr. Willis H. Kerr, president of the library department of the National Education Association, and steps have been taken for more thoroughly organizing the national move-

ment for better school libraries in normal schools, high schools, elementary and rural schools and in private secondary schools. A member of the A. L. A. committee on co-operation has been given opportunity to address school superintendents and teachers in several cities and urge not only the necessity of better school libraries, but closer co-operation with public libraries. Through correspondence, the committee has had opportunity also to aid in the establishment of high school libraries managed according to modern library methods and in the reorganization of high school libraries in various parts of the United States and occasionally in Canada. In two cities it was possible to supply data to present to boards of education to prove the advisability of public library branches in high schools.

Aid has been given to boards of education in the matter of proper qualifications for high school librarian, proper salary schedule, and in defining the duties of the high school librarian and outlining what a high school library should do for a school. Aid has also been given in showing what should be a proper high school library budget for a school with a certain number of pupils—a problem which seems to have been scarcely touched as yet in educational and library circles. There has also been drawn up an outline of the minimum equipment for a high school library based upon the data furnished by the New York High School Librarians' Association. Suggestions have been made from time to time as to the needed changes in classification in high school libraries.

On short notice, the committee succeeded in collecting from leading high school libraries photographs of school library reading rooms for the Leipzig exhibit, and for the permanent school library exhibit prepared by the Bureau of Education.

The various members of the committee are working out a list of school librarians in their different sections who should be invited to attend the N. E. A. meeting at St. Paul and of public libraries in Canada doing work with schools and likely to be interested in the N. E. A. meetings.

Through the year there has been co-operation with not only the N. E. A., but associations closely allied with it, namely, the National Council of Teachers of English and the National Vocational Guidance Association.

W. O. CARSON,
GEORGE H. LOCKE,
MARIE A. NEWBERRY,
IRENE WARREN,
HARRIET A. WOOD.

COMMITTEE ON COST AND METHOD OF CATALOGING

The committee at its meeting May 26 adopted the following letter and schedule, which will be sent to all libraries taking part in the committee's investigation. The committee (A. G. S. Josephson, chairman) also suggested that Mr. Charles Martel, chief of the catalog division of the Library of Congress, and Mr. T. Franklin Currier, head cataloger of Harvard University Library, be added to it as members.

Letter

1. The information received in response to the questionnaire sent last year to twenty libraries gave clear evidence of the existing lack of uniformity in preparing library statistics, as well as of a considerable variety of conditions and methods of work.

2. In order, therefore, to arrive at more definite results, the Committee asked the Executive Board for authority to undertake a more extended and more detailed investigation into the prevailing methods of cataloging. Having received the authority asked for, the Committee sent copies of the questionnaire used last year to thirty additional libraries, asking for similar information.

3. The Committee now asks each library that has taken part or intends to take part in this investigation to set apart one hundred books (titles, not volumes) for an actual test of the cost of cataloging under conditions normal to each library. If there has been any essential change in the organization since information was sent to this Committee in response to the questionnaire, such changes should be reported.

4. As the report is to be summarized by items, it is especially desirable that the report shall be made item by item, and libraries are requested not to combine processes.

5. The books selected should be such as would be purchased by a public or college library, having both reference and circulating collections; they should be taken from the books currently received and new to the library; neither duplicates, nor replacements, nor even new editions should be selected.

6. Pamphlets, i. e. material treated with less fullness than the books regularly placed on the shelves, incunabula, long sets of periodicals or other books requiring special expertness or considerable time, such as books requiring much analytical work, should not be selected, even though they might be very characteristic for the library. It is the intention of the Committee to make a special test for this kind of work; libraries willing to take part in this additional test should com-

municate their willingness to the Chairman of the Committee.

7. Fiction, poetry and drama should be represented by not more than ten titles. Books in foreign languages should be included in the proportion normal to each library.

8. The use of the printed cards for analytical entries prepared for and distributed by the A. L. A. Publishing Board should not be reported.

9. As an increasing number of libraries is using printed cards prepared by other libraries, and some of the libraries included in the investigation themselves are printing cards for their own use, libraries using printed cards should report on their method of handling these, both the cards prepared by other libraries and those prepared by themselves, so that the Committee may be able to judge how far this method influences the cost of cataloging.

10. Many public libraries, both large and of moderate size, possess branches; most university and some college libraries have departmental libraries; the libraries having such supplementary systems should report on the work of duplicating cards for the use in the special catalogs for branches and departments, so that the Committee may be able to judge how far the cost of cataloging is influenced hereby.

11. Full and explicit remarks and information setting forth the special problems and conditions accompanying each case are asked for.

12. In order to insure accuracy in time calculation it would be desirable that stop watches be used, but this is not essential; the method used in computing time should be reported.

13. So as to be able to study the results of the test with all the material available, the Committee desires to have the original cards and records submitted; in order to do this, the libraries taking the test would have to prepare duplicate cards and records for its own files; the time taken to prepare these duplicates should, of course, not be counted. Duplicates of cards duplicated for branch and department libraries should not be sent.

14. Libraries that find it impossible to duplicate their work in this way should send to the Committee with their reports one copy of each entry as prepared for the author catalog accompanied by a full record of all additional cards prepared for its public and official catalogs and files, including cross references made for the first time. The Com-

mittee wishes, however, to urge the importance of submitting the complete material.

15. The Committee hopes, through this test and the previous investigation, to be able to establish what might be regarded as a fair cost and a standard method of cataloging; it hopes for the hearty co-operation in its efforts of all the libraries to which this letter is sent.

16. This letter is accompanied by 125 record cards to be used in keeping the record of the processes involved in the cataloging of each of the one hundred books on which the test is made. By using these cards, all libraries will submit uniform statistics, and the cards will give the Committee a record by which processes, efficiency and standards of cataloging may be compared. Their use will also facilitate the work at the library making the test. They might be inserted in the books selected for the test, and the presence of a card in a book would suffice as instruction to each worker to use the book in question under the rules for the test.

RESOLUTIONS COMMITTEE

The committee on resolutions beg leave to recommend the adoption of the following minute, to be spread upon the records of the Association, copies to be forwarded to the several bodies and persons therein mentioned:

Resolved, That the heartiest thanks of the American Library Association be, and are hereby tendered:

To the Librarian of Congress for the gracious welcome to the National Capital extended by him to this Association at the first session of the present conference; for opening to inspection the beautiful structure under his control, and for numberless personal courtesies which have lent peculiar charm to an occasion which will always remain a notable one in the annals of the Association.

To the associates of the librarian on the staff of the Library of Congress who have ably and devotedly co-operated with their chief in showing treasures, and in explaining methods of the great institution with which they are connected; and to express our deep sense of obligation and gratitude to the Library of Congress as the National Library in fact, and in spirit, if not in name; and to testify to the immeasurable service rendered to the libraries and the library movement of this country by the labors and activities undertaken by that institution for the common good.

To the District of Columbia Library Association, for most effective aid in all plans regarding the conference, and for the delightful reception on Thursday evening, which gave great pleasure to all who could attend it.

To the members of the board of trustees of the Public Library of the District of Columbia, for devoting a large portion of their building to the purposes of the interesting and novel exhibition of labor-saving devices and library equipment, which has proved to be a feature of the conference.

To the librarian, Dr. George F. Bowerman, and his assistants, for assembling and displaying to advantage this exhibit; and to all members of the staff of the Public Library of the District of Columbia for many courtesies.

To Dr. Bowerman and his associates on the local entertainment committee whose constant and untiring attention to the interests and welfare of the visiting members of the Association have contributed to the eminent success of this thirty-sixth conference.

To other librarians of the District of Columbia, for many attentions kindly shown to the members of the Association.

To Dr. J. Franklin Jameson, Mr. John Foster Carr, Dr. P. P. Claxton, Mr. H. W. Kent, and Miss Leila Meclin, for their informing and felicitous addresses, and to the press of the city of Washington, for extended and accurate reports of the proceedings of the Association.

To the manager of the New Willard Hotel, for obliging services freely rendered in connection with the conduct of the business of the Association at headquarters.

(Signed)

C. H. GOULD,
W. T. PORTER,
ELISA M. WILLARD,
Committee.

REPORT OF THE TRUSTEES OF THE CARNEGIE AND ENDOWMENT FUNDS

The only change in the investments is the addition of one United States Steel bond, which has been added to the principal account of the Endowment Fund. The principal account has now \$8,000 in United States Steel bonds. The trustees were enabled to purchase this bond by the addition of new life memberships during 1913, but were obliged to borrow temporarily \$150 from the surplus fund, in the expectation that six more life memberships

would soon be secured. All interest on the investments has been promptly paid.

The Association has suffered a great loss in the death of Mr. William C. Kimball, who had been the president of the trustees of the Carnegie and Endowment Funds since October 1, 1909. He took a great interest in all matters relating to the investment and security of the funds, and his loss will be severely felt by the surviving trustees. It was a satisfaction and pleasure to work under his guidance.

Respectfully submitted,

W. W. APPLETON,
EDWARD W. SHELDON,

Trustees Endowment Fund, A. L. A., May 1, 1914.

C. B. RODEN, *Treasurer*.

A. L. A. PUBLISHING BOARD

FROM a comparison of the sales reports covering the last ten years, the consistent and permanent growth of the business administered by the A. L. A. Publishing Board may be noted. During this period, the annual receipts have more than tripled. With an available capital amounting to but \$4,000 annually, the gross business now amounts to from \$12,000 to \$16,000 yearly.

A. L. A. Booklist.—Under its new editorship, the *Booklist* has during the past year maintained its tradition of unbiased evaluation of current publications and well-formulated policy of serving particularly the smaller and

medium-sized libraries of the country as a guide in book selection. With the completion of vol. 10 in June of this year, the board again has under careful consideration the suggestion that the name, size and character of the *Booklist* should be changed to enlist the interest of the general public, so as to serve in purchases for private libraries as well as public collections. Difficulty in satisfactorily merging these two purposes is self-evident. At the last meeting of the Council, the subject was revived in a communication from Mr. John Cotton Dana, who has been the chief advocate of the proposed change of policy. The board was requested to invite suggestions, through the library press, for a suitable name and for other desirable changes. This was done, but the responses have been neither numerous, convincing, nor otherwise encouraging. Protests against changes have also been received.

The removal of the editorial offices from Madison to Chicago involved reorganization of the staff of collaborators. This was successfully accomplished.

It is becoming quite the custom in large and small libraries to keep the records of books read for the library by various members of the staff. If these notes are duplicated and sent to the *Booklist* they make an invaluable aid in selection and note writing. Such help is earnestly solicited, as only in this way can the *Booklist* work be what it should be, truly co-operative.

There is a very real need for the subject index to the *Booklist* to be continued. It will be recalled that a subject index to vols. 1-6 was issued, and later one for vol. 7. The sale was very far from satisfactory, the board losing on both pamphlets. The secretary is about to circularize libraries in the hope of getting sufficient response to justify the issuing of a subject index to vols. 8 to 10, inclusive.

Periodical Cards.—Recently the New York Public Library signified its desire to withdraw as one of the five co-operating libraries in the preparation of copy for the A. L. A. analytical periodical cards. The library of the University of Illinois has consented to take its place. Plans are being formulated to offer to libraries the alternative of subscribing for a complete set or a partial set limited to the more popular periodicals. During the period of eleven months covered by this report, thirteen shipments of cards have been sent out, comprising 3,597 new titles and 133 reprints. The number of cards printed was 256,850.

Publications.—Nineteen chapters of the A. L. A. "Manual of library economy" have thus far been printed as separate pamphlets. The Manual when completed will contain thirty-two chapters. In addition to those already printed, "State libraries," by Mr. Wyer, will be ready in June, and "Government documents," by the same author, is ready for printing. "Book selection," by Miss Bascom, "Catalog," by Miss Gooch, "Bibliography," by Miss Mudge, and "Library work with the blind," by Mrs. Delfino, are well advanced. Mr. Ward is to develop "High school libraries," and Miss Elliott will write of "Fixtures, furniture, fittings." "Special libraries," "Classification," "Pamphlets, clippings, maps, music, prints," "The public library and the public schools," and "Museums, lectures, art galleries and libraries" are still unassigned.

Besides printing four chapters of the Manual, several reprints have been issued. New publications planned include an A. L. A. "Index to general literature, supplement, 1900-1910," analytical cards for the fourteen volumes of "Great debates in American history," an index to kindergarten songs, a graded list of stories for reading aloud, "Cataloging for small libraries," a supplement to Kroeger's "Guide to reference books," and a pamphlet on library advertising and publicity.

Advertising.—As in previous years, the principal advertising has been done by direct circularization of libraries, as this has been found the most effective way of reaching the libraries of the country. Advertisements have, however, been continued regularly in *LIBRARY JOURNAL* and *Public Libraries*, with occasional small announcements in the *Dial*, the *Survey*, etc. Review copies of new publications are sent to about a dozen magazines and some of the prominent newspapers. It is the aim of the board to keep all the libraries of the United States and Canada informed of the publications issued by the board.

Particular efforts this year have been put forth to advertise the A. L. A. *Booklist*. In the fall a select list of the "live" libraries which do not subscribe to the *Booklist*, or are not supplied through their state library commissions, was appealed to, about 500 circulars being mailed to as many libraries accompanied with a sample copy of the *Booklist*. This resulted in about 75 new subscriptions. In January, 317 of the leading booksellers were addressed, the value of the *Booklist* to their business explained, and sample copy sent. This resulted, however, in only 20 new subscriptions.

HENRY E. LEGLER, *Chairman.*

WASHINGTON MEETING OF PUBLISHING BOARD

The Publishing Board held a meeting, May 26, in the New Willard Hotel. Those present were Chairman Legler, and Messrs Andrews, Bostwick, and Wellman.

Consideration of certain matters connected with the A. L. A. *Booklist* first received the attention of the Board. Miss Masee, the editor of the *Booklist*, appeared before the Board and joined in the discussion of certain phases of the work. The Board fully and frankly discussed the question of changing the name of the *Booklist* in compliance with the request of the Council at its mid-winter meeting that a report on the *Booklist* be submitted by the Board to the Council. Messrs. Andrews and Wellman were appointed a committee to draft a report for presentation to the Council embodying the Board's views on this subject, and presented their report at the meeting of the Council on May 28. (Their report will be found incorporated in the minutes of the Council.)

The suggestion was made that a supplement to the *Booklist* calling attention to books suitable to the smallest libraries, the number not to exceed approximately 120 titles a year, be published. It was voted that this matter be referred to the editor of the *Booklist* and the chairman of the Publishing Board with power.

Plans are under way for the publication of a book on plans of small library buildings, a pamphlet listing certain exceptions for the subject headings in a children's catalog, a new edition of Miss Hitchler's "Cataloging for small libraries," a list of all material available without cost which would be useful to small libraries, an index to kindergarten songs, a supplement to the "A. L. A. Index to general literature" and cards for "Great debates in American history."

The New York Public Library, at its own request, has been relieved from contributing copy to the analytical periodical card work and the University of Illinois Library has consented to take up the work. A vote of thanks was unanimously passed to the New York Public Library for its services extending over a period of several years.

A number of other matters of routine business were transacted.

PROFESSIONAL TRAINING SECTION

The sixth annual meeting was called to order Tuesday afternoon, May 26, by the chairman, Miss Corinne Bacon, who announced that the formal business meeting would be held immediately after the close

of the program. A nominating committee was appointed, consisting of Miss Ernestine Rose, Miss Alice S. Tyler and Mr. Edward F. Stevens. They were requested to have their report ready to present at the business meeting.

The first section of the program was devoted to a symposium on "The fate averted from libraries by library school entrance examinations." The speakers were Miss June Richardson Donnelly, Miss Josephine Adams Rathbone and Miss Mary Wright Plummer.

Miss Donnelly said that the examination was but *one* means of testing but *one* qualification of a candidate, the educational and cultural background; but that it was a convenient help to the great problem of fitting the vocation and the worker. That, in doing this, there were three elements involved.

(1) The importance of safeguarding the libraries in every way from getting assistants who were incompetent.

(2) The desirability, for the reputation and efficiency of the schools, of not admitting material which should be a clog.

(3) The even greater fundamental importance of testing the candidates as fairly and fully as possible, for their own sakes, that those unsuited to the work might be turned away before they had wasted time and money and had lost other opportunities which might have led to success, and that those who were well adapted to the work might be recognized, even when their formal academic credits might not seem, until so tested, to render them as eligible as others.

Miss Donnelly said, further, that the entrance examination might not be sufficient in itself, but that it did cut out automatically those hopelessly below par; and that, in addition, it tested the value of certificates given by educational institutions, and permitted the school to supplement its knowledge of the ability of the applicants in subjects which even college work might not have tested. A good examination should do more than test the memory of facts crammed for an occasion. It should test spelling and English, the ability to read and copy accurately from the printed page. It should show what fund of "things commonly known" the candidate owned; and should include questions planned to give the candidates an opportunity to show a grasp of the subject, to marshal their knowledge into a logical order, and to show what critical judgment they have.

Miss Donnelly said she had wondered considerably in recent years whether history, literature and languages were sufficient for ex-

amination, and whether familiarity with the natural sciences and sociological subjects was not as necessary for a library worker as the traditional subjects.

Finally, the examination should be used as a useful auxiliary to a preliminary broad education.

Following Miss Donnelly, Miss Rathbone said that the profession at large was responsible for the attraction to library work of the most fit among the on-coming generation. That among those thus attracted, it was the function of the library schools to select. Selection implied rejection, the aspect implied by the title of the symposium.

The title suggested two questions: (1) *What* was the fate to be averted? (2) *Was* it averted by the library schools?

In answer to these questions, Miss Rathbone said that the fate was, presumably, the invasion of the profession by the ignorant, the inefficient, the lazy, and all the other well-known varieties of the unfit. As to whether the fate was actually averted, she stated that to do so would mean to guard all gate-ways into the profession, which it was evident the schools could not do.

Even for the schools themselves, this fate was not averted by the entrance examinations. Every school graduated students of whose fitness there was some doubt; on the other hand, desirable material was sometimes shut out. On the whole, the examiner could tell at least as much about an unseen candidate by a skilfully planned examination as by any other means; less from the amount of definite information given than by the presentation of subjects. Judgment, power of discrimination, systematic and orderly habits of mind, originality, resourcefulness, mental alertness, could all be tested; and such an examination constituted at least as fair a test of such qualities as did the possession of an A.B. or a Ph.B.

Miss Rathbone felt that the Pratt Institute entrance examinations had done as much to guard that school, if not the profession at large, from the invasion of the unfit, as any other form of entrance requirement could do.

Miss Plummer opened her part of the discussion by showing in what three ways library school entrance examinations differed, or should differ, from the final examinations given in high schools and colleges. (1) The school or college knows its student—the library school, as a rule, examines a stranger. (2) The school or college examines on a definite course of instruction to see if the

student retains correct impressions. The library school has to discover a test of the contents of a student's mind in certain large fields of knowledge related to library work.

(3) The school or college is preparing for no definite or limited purpose, and will have no opportunity of testing its product in actual work. The library school must test its students' educational equipment for a definite work, since its product will be put to work immediately upon graduation; and its failure in respect to education will probably reflect upon the library school as being unable to give a real test.

Miss Plummer said that, for these reasons, it was not safe to accept without question the diploma of high school or college. She emphasized the point that correct answers to questions were not all that should be considered significant in an examination. Honesty, frankness, depth of information, versatility, social and educational background, maturity, sense of proportion and values, and many other qualities, as well as their opposites or negations, might be read between the lines of an examination paper.

This point was illustrated by a number of curious answers to examination questions, which were illuminating and suggestive; and which, as Miss Plummer pointed out, showed one reason why librarians have such hard work to get themselves recognized as a profession.

A protest was registered against the admission, by libraries, to an educational work, of young people who have nothing in their heads as a result of their education.

The final point was a query as to whether it would not be possible to have grades of clerical work in libraries for those young people whose lack of education, of inherited cultivation, taste, and refinement, unfit them for work with books and the public, keeping the cultural, representative side of the work for those who have the educational and cultural equipment.

The next subject on the program was "The selective function of library schools," presented by Mr. Frank K. Walter. He emphasized one of the points made by Miss Rathbone, that the prestige of the profession depended primarily on the average ability of its members, and that it was essential to fix some standard of qualification necessary for those in its ranks.

He said that one excellent professional code had been formulated but, so far, it had been quite inoperative. The points of view of library trustees were many and diversified,

and their power of establishing their own local standards was practically unlimited. The selective principle, therefore, was perhaps applied nowhere else at present so thoroughly or consistently or on so large a scale as in the library schools.

They had, through their requirements for entrance and graduation, maintained fairly approximate standards; their course of study had been definite in subjects, methods and aim. The policy had been to keep out, from the start, the doubtful and the obviously unfit. The service rendered to the profession by this restrictive policy had been pretty generally recognized by librarians and trustees. Dr. Bostwick, at the Ottawa conference in 1912, said, "I want to emphasize the value of library schools as selectors, which it seems to me is very great, transcending even, perhaps, their great value as trainers."

The confidence generally shown toward library school graduates and the low percentage of failures among the students, amply justified the selective policy, and the library schools deserved the *active* support of the profession in their attempt to select.

A few suggested methods of support were, —to encourage good students to attend and to discourage others; to report points in which students had been successful as well as those in which they had failed; to resist actively the attempts of institutional heads to place the schools on a quantitative rather than a qualitative basis on the matter of admission; to point out to boards of trustees and legislative bodies definite cases in which the careful work of the schools had been of service to the community or the state.

The principle of selection needed to be impressed more insistently on conductors of training classes, summer schools and all other agencies which professedly train, or which properly can train, only for minor positions. The assistant, no less than the department head, should be carefully selected and carefully instructed.

The A. L. A. could very perceptibly raise the standard of the whole profession by encouraging the establishment of well-planned courses of training to replace the hit-or-miss methods which are so often all the minor assistants get, and by using its influence to have admission to any grade of library service limited to the very best persons possible under local financial limitations.

Dr. Azariah S. Root was called on to discuss the topic. He said that he was glad to have such emphasis placed on the selective function of the schools; and that he wondered

if the selective function had gone far enough; or whether there should not be a raising of the educational standard. This, however, would be dependent largely upon whether the libraries were ready to pay for the advance in standard.

Dr. Root approved heartily of Miss Plummer's suggestion that there should be a distinction between the clerical worker in a library and the more highly educated and trained worker. With this distinction, libraries could take a general standard of higher wage to maintain their highly trained assistants.

The next paper on the program was by Miss Annie Carroll Moore, on "Training for the work of the children's librarian."

Miss Moore spoke of the necessity for special training for this work, and gave the outline for assistants qualifying for the children's librarian's grade in the New York Public Library, to be used as a basis for preparing a thesis on the work of a children's room.

In preparing her own paper, Miss Moore had sent out a questionnaire to her associates in work, asking what library work for children really was, what subjects should be included in a one year course of special training for a children's librarian, and what subjects should be emphasized as best adapted to meet the needs in the work. From the forty-five answers received, and a survey of existing needs in the field of work with children throughout the country, Miss Moore made the following recommendation for a one-year course:

(1) Weekly lecture and discussion on literature for children.

(2) Weekly lectures and discussions relating to the children's room itself.

(3) Supervised practice of a progressive character including, if possible, two months of actual administration of a children's room.

(4) Lectures on children's rooms and their problems in large and small libraries, taking up history of library work with children, relation of children's library to child welfare movements, etc.

(5) Field work; visits to museums, art galleries, schools, book shops, institutions connected with the welfare of children, etc.

(6) Special courses to be made elective, outside the library at a university or special school where the library student would have the liberalizing influence of contact with other students.

Miss Moore said that the need for strong workers was so urgent that she was moved to ask that practice work in large libraries be given its full measure of value by library

schools, and by the libraries themselves, and that students specializing in work with children be taught to conceive of it in terms of more responsible accomplishment during their student experience.

Following Miss Moore, the chairman called for reports on any new courses in library training offered by either libraries or library schools during the year.

Dr. Frank P. Hill told of the course to be offered this coming year, by the Brooklyn Public Library, for training children's librarians.

Miss Alice S. Tyler reported on the course given by the Western Reserve University Library School this last year on "The public library and community welfare." She said that it had so far proved its value that it would be given again next year; and that, in order to make room for it, the cataloging course had been reduced by ten lectures, with no harmful results.

Miss Plummer reported a new municipal reference course to be given this next year by the Library School of the New York Public Library. This course was made possible by the fact that the New York Municipal reference library had recently become a branch of the Public Library.

Mr. M. S. Dudgeon spoke of the administration course given last year by the Library School of the University of Wisconsin. He said that this first year the legislative reference work had been emphasized, and that practical work had been done mostly with the state departments.

This closed the program, and, immediately following, the business meeting was called to order.

Miss Tyler, chairman of the committee on the revision of the by-laws, presented the committee's report, which was voted on, section by section, and adopted with very few alterations.

The nominating committee reported the following names for election to office for the coming year: Chairman, Miss Frances Simpson, assistant director, University of Illinois Library School, Urbana, Ill.; vice-chairman, Miss Agnes Van Valkenburgh, instructor, Library School, New York Public Library; secretary, Miss Julia A. Hopkins, principal, Brooklyn Public Library Training Classes. The secretary was directed to cast a ballot for the entire ticket. On motion, the meeting adjourned.

JULIA A. HOPKINS, *Secretary,*

Professional Training Section, A. L. A.

AGRICULTURAL LIBRARIES SECTION

THE meeting of the Agricultural Libraries Section took place on Tuesday afternoon in the small ballroom of the New Willard and was presided over by the chairman of the section, Miss Claribel R. Barnett, librarian of the United States Department of Agriculture. About eighty were present—the largest attendance the section has ever had. "Some opportunities and problems of the agricultural libraries" was the general subject. The meeting was opened by the chairman, who said that the afternoon would be largely devoted to open discussion in hope that a large number would take part and so become better acquainted with each other's needs and problems. The section was established largely to give impetus, to arouse greater interest in the opportunities of usefulness presented to libraries of the agricultural colleges and experiment stations, many of which institutions do not yet give their libraries the attention and equipment they deserve. The section also hopes to be a means of carrying on certain co-operative undertakings helpful to all agricultural libraries, to help work out standard administrative policies for such libraries, to bring about closer relationship between them and the Department of Agriculture, to minimize waste of work and waste of money, and in general to increase the good results from the money available for agricultural libraries. Co-operative book-buying might be arranged, where each library would specialize on a single line with the understanding that books would be freely lent. In the field of indexing and in the evaluation of agricultural literature more could also be done.

The next paper was on the "Scope and current cost of libraries in the land grant agricultural colleges," written by Prof. William H. Powers, librarian of the South Dakota State College of Agriculture, and read by Mr. Charles R. Green, librarian of the Massachusetts Agricultural College. Prof. Powers would have the library be (1) a fairly good general library; (2) a good reference library in the college courses; and (3) as complete a working library as possible for the lines of research carried on in the college. For the annual upkeep of a library in an agricultural college of 600 students, he estimates that about \$1,800 would be needed. This would be used for books and binding only. Letters were sent to the twenty-five colleges of agriculture not directly connected with a university. From the replies sent by about a dozen of them, Prof. Powers arranged several tables of statistics.

Prof. Powers' paper suggested many interesting points for discussion and showed clearly

the possibility, through co-operation, of working out some standards of administration for the libraries of the agricultural colleges and experiment stations. The value of such a standardization was also made apparent. It would simplify many problems in the administration of these libraries. There was, however, considerable difference of opinion among those present as to the adequacy of the salaries recommended by Professor Powers.

Mrs. Landon, librarian of the Michigan Agricultural College, in commenting on what Prof. Powers had said about borrowing books and periodicals from the library of the Department of Agriculture, said that her library made frequent use of this privilege. She also suggested the desirability of a union check list of the agricultural periodicals contained in the libraries of the state agricultural colleges and experiment stations.

The next paper on the program was to have been one on "Agricultural periodicals" by Mr. Wm. M. Hepburn, librarian of Purdue University, but Mr. Hepburn was not able to be present and unfortunately his paper arrived too late to be read at the meeting.

Mr. Hepburn has made a special study of agricultural periodicals and the data which he has collected will no doubt be helpful when published, as the subject of agricultural periodicals is one which is of special interest to agricultural libraries and is, in a limited way, of considerable interest to many public libraries. The problem of which to take currently, which to keep permanently and which ones to index is a difficult one and we need all the light possible on the subject.

Mr. H. W. Wilson, of the H. W. Wilson Co., was called upon for a statement as to his plans for indexing agricultural periodicals. Mr. Wilson said he had plans for undertaking an index to agricultural periodicals although there will be some delay in carrying out the plans. A vote was recently taken among about fifty libraries to determine what special fields should be covered and while he had thought that agriculture stood first he found that there was most demand for an index to literature on social problems. It is quite likely that that will be taken first, but agriculture will come second. By the first of next year he will probably be ready to begin it and it will cover the best periodicals, those that have a general or wide circulation, and government documents and pamphlets.

Following Mr. Wilson's remarks there was much animated discussion on various points which had been touched upon in the preceding papers. The public library's interest in agricultural literature was represented by Mr. S.

H. Ranck, librarian of the Grand Rapids Public Library, and by Mr. J. F. Daniels, librarian of Riverside Public Library, California, both of which libraries have large collections of agricultural literature. Mr. Ranck called attention to the fact that there is a constantly growing interest on the part of people in the cities in every phase of agriculture and that his library is frequently asked for advice as to the best periodicals and books on various agricultural subjects. The work of the county library and its problems in getting agricultural information to the farmer in predigested form was touched upon by Mr. E. I. Antrim, a trustee of the Brumback Library of Van Wert county, Ohio. He also spoke of the need for the agricultural colleges and experiment stations to get into close touch with the various libraries of the states that they represent in order that the information obtained by these institutions and by the Department of Agriculture as a result of their investigations may be brought directly to the farmers.

Mr. Antrim was followed by Dr. E. W. Allen, assistant director of the Office of Experiment Stations, Department of Agriculture. As it is one of Dr. Allen's official duties to visit the state agricultural colleges and experiment stations, he has had an unusual opportunity to see the needs and opportunities of their libraries. It was therefore a special privilege to hear from him at this meeting. He spoke in part as follows:

"The last speaker has touched upon a very important matter, it seems to me, that is, getting the information directly to the farmers, because the farmers are becoming more and more a reading people. We have just started in this country a new line of extension work which has been referred to, and which will rapidly take on a much broader scope, and will accomplish in a measure what has been suggested, for Congress has just passed an act, known as the Smith-Lever bill, which will provide for agricultural extension in every state in the Union. Five per cent. of the federal appropriation may be used for getting out popular publications. Some of the money will also be available for library purposes. A great deal of this extension work will be carried on through county agencies, a system which has already been inaugurated in many of the states in the North and South, and has proved its usefulness.

"If we should have an agent in every county we would have some 3,000 centers in this country which might act as advisors to country libraries, because there is a great demand, as I know by correspondence which comes to me from city, town and country libraries, for

available information as to publications relating to agriculture.

"I have gone around to the agricultural colleges and stations several times. There is a great diversity in these libraries, and in many places a great lack of efficiency. I believe myself that a librarian could be of the very greatest usefulness and could conserve the time of the investigators. I have sometimes thought that the field of the librarian in the experiment stations might be broadened a little by including some connection with the editing of publications. Librarians are trained to look at books from the standpoint of a finished product, and their work has given them good judgment as to arrangement, etc. If, in connection with their other work, it would not be a difficult matter for librarians to equip themselves along this line and give a little attention to the matter of proofreading, etc., I think they could be of immense assistance to the experiment stations in the better editing of station publications and in bringing about a greater measure of uniformity.

"This brings up the problem of how to make available good material that is in some of the best agricultural periodicals and which deserves attention. Through the *Experiment Station Record* we attempt to make a systematic review of the literature bearing on experiments as far as we are able to get hold of it, and through the indexes to make that available, but we do not attempt to take up popular articles. The extension workers will, on the other hand, need somebody to go over this good popular material and to call it to their attention."

In the discussion which followed Dr. Allen's talk there was much interest manifested in his suggestion as to the better editing of station publications and the part which librarians might take in the work. As a result, a committee was appointed to undertake the work of making some definite suggestions in regard to the form of station publications to present to the Association of American Agricultural Colleges and Experiment Stations at its meeting in Washington in November. The following were appointed as members of the committee: Miss E. L. Ogden, librarian, Office of Experiment Stations, Department of Agriculture; Mr. Charles R. Green, librarian, Massachusetts Agricultural College; and Mr. Clarence S. Hean, librarian of the College of Agriculture, University of Wisconsin.

Another matter which called forth interesting discussion was the question as to whether it would be advisable for the section to attempt to prepare a small handbook on the arrangement and care of small agricultural col-

lections. It seemed to be the unanimous opinion of those present that such a handbook would be very useful, and it was voted that a committee be appointed by the chairman to consider the matter and to prepare the handbook if it was deemed feasible. As it is important that those on the committee be especially interested in the subject, the chairman made a plea for volunteers for the work. Suggestions as to the scope of the handbook are also requested.

The meeting adjourned with the appointment of the following committee to nominate a chairman for the next meeting of the section, namely, Mr. Charles R. Green, Miss Emma B. Hawks and Mr. A. B. Smith. The committee made its report at the close of the joint session of the League of Library Commissions and the Agricultural Libraries Section on Thursday morning and presented the name of Mrs. Ida A. Kidder, librarian of the Oregon Agricultural College, Corvallis. The report of the committee was unanimously accepted, and Mrs. Kidder was made chairman.

CLARIBEL R. BARNETT.

CATALOGING SECTION

The two sessions of the Cataloging Section had a single program, or, in other words, the second session was an adjourned meeting continuing the unfinished papers of the previous day. As described by the chairman, Mr. Martel, the meetings were planned to give brief descriptions of the cataloging systems of a number of the notable department and institutional libraries of Washington, with special reference to the use of printed cards, their adaptation for large and small libraries, special catalogs, etc.

The meetings culminated both by force of the obvious deductions drawn from the papers read and by force of the logic of the situation, in the adoption of a resolution expressing the feeling of appreciation of the Cataloging Section of the work of Mr. Martel, Mr. Hanson, Mr. Hastings, and the staff of the Library of Congress, in planning and producing the printed cards. It was stated that this, the first meeting in Washington, since the issue of printed cards, gave an appropriate opportunity to the generation of catalogers who are enjoying the fruits of the labors of the Library of Congress to express their appreciation.

The thirteen speakers described the catalogs of their respective libraries, and in the telling, showed the strong spirit of co-operation and mutual helpfulness existing among them, and more especially between them and the Library of Congress. Owing to the generosity

of the latter library in lending its books, these special libraries in many cases file in their catalogs Library of Congress cards for books on their specialties, which they do not themselves possess, but which are in the Library of Congress. Other lines of co-operation were brought out, such as the printing of the department cards, and the printing of the special index headings used by the department or bureau (printed in brackets) in addition to the Library of Congress headings.

The code of classification was reported on by the committee having the work in hand; the report of the committee on the cost of cataloging was read at a session of head catalogers, held after the regular meeting. A wide range of opinion was voiced varying from a belief in a very mild to an extreme form of investigation.

The officers for the ensuing year were elected as follows: Dr. Edwin Wiley, University of California Library, chairman; Miss Mary Louise Sutcliffe, Library School of the New York Public Library, secretary.

Suggestions for subjects of discussion for the next convention were asked for, and among others advanced were the code for classifiers, and that of the training of catalogers. The latter subject raised considerable comment owing to the general opinion among those present, that the subject of cataloging is being neglected by the library schools.

EDITH P. BUCKNAM, *Secretary.*

CHILDREN'S LIBRARIANS SECTION

THE Children's Librarians Section met on Wednesday morning, with Miss Agnes Cowing, children's librarian, Pratt Institute Free Library, Brooklyn, in the chair.

The work of the Children's Bureau was described by its librarian, Miss Laura A. Thompson. The Bureau was established by act of Congress in 1912, as one of the four bureaus under the Department of Labor. Its duties are defined by statute as follows: "The said Bureau shall investigate and report... on all matters pertaining to the welfare of children and child life among all classes of our people, and shall especially investigate the questions of infant mortality, the birth-rate, orphanage, juvenile courts, desertion, dangerous occupations, accidents and diseases of children, employment, legislation affecting children in the several states and territories," thus confining its work to investigation and publicity. It was provided with a staff of fifteen persons and an annual income of \$30,000, with which it has taken up the first of the subjects assigned to it; namely, infant mortality, a subject challenging the attention of

the whole civilized world. Since the decennial statistics of the United States Census Bureau leave a gap as to the number of infants who are born and die each year, the Bureau made a campaign of birth registration through a published pamphlet and a registration test, beginning its study at Johnstown, Pa., where homes were visited and records kept for a year of the child's life. The investigation, covering 1,533 cases, stirred up the authorities to better sanitary conditions.

Two important publications of the Bureau are: "Baby saving campaigns, a preliminary report of what American cities are doing to prevent infant mortality" and "Prenatal care," now in its fourth printing; to be followed by a pamphlet on the care during the first two years of life, about ready for the press.

In the field of child labor, the Bureau has prepared a review of the laws in the different states, which is soon to be published. It is also publishing a "Handbook of federal statistics of children" in four sections, the first already in print; and a compilation of the mother's pension laws in various states. It is besieged from all points with inquiries on the subjects of its investigations, which it is not the least important of its duties to answer, and which indicate the interest and value to the community of its work.

Following Miss Thompson's paper, Miss Annie Carroll Moore, supervisor of work with children, New York Public Library, spoke of the great value of the Bureau in dignifying the work for children, and of its relation to the work of children's libraries. She quoted from Horace E. Scudder's "Children in literature and art," the right of every child to a happy childhood. While deploring the danger of child exploitation, and the superficiality of present children's literature, she prophesied that co-ordination of the different movements for child welfare will help to bring about a balance.

Miss Julia C. Lathrop, chief of the Children's Bureau, defined as the aim of the library of the Bureau: To follow the movement of the world in children's literature rather than to collect children's classics. The contribution of the Bureau toward the child's right to happiness aims to give it a well body, a good home, healthy surroundings, and normal amusements. Miss Lathrop considered librarians the best aids in furthering child welfare because of their affable relation toward all the world, including parents, a more successful attitude than that of either teachers or sociologists, and she bespoke their advocacy of the literature of the Children's Bureau.

To Miss Hewins' inquiry, "What literature is the library of the Bureau accumulating?" Miss Lathrop replied, "Foreign literature on the subjects of its investigation, pamphlets, and reports." Miss Hewins suggested that the Bureau should work, not for children's libraries, but for parents and workers, that it should be an advisory library for adults. In response to inquiries about starting children's libraries she told of the first movement for a separate room for the children in Hartford and other libraries, and of the "home libraries" movement initiated in Boston, Pittsburgh, Hartford, and elsewhere, as a preliminary to the children's department in the public library.

Miss Cowing asked the possibility of co-operation in the matter of exhibits, and Miss Lathrop responded that beside having welfare exhibits, the libraries could help by gathering accurate information in each locality to enable the Bureau to keep their material constantly revised.

"Children's books," the second topic of the meeting, was ably presented by Miss Mary Ely, head of the children's department, Public Library, Dayton, Ohio. The problem of the cheap book was taken up and proved by the elimination of other sources of help to be strictly the librarian's problem at the present time. Miss Ely brought out the great sale of bargain books, the large proportion of them read compared with the reading of good books from the library, the attractive features of cheapness and excitement, and their vitiating influence. She told in detail of what she found in the largest book department in Dayton; namely, a few useful books and good editions on obscure shelves; so-called classics, "written down" till all literary value was eliminated; crudely colored, vulgar picture books; and most popular, long series of sensational stories with false standards of life, slangy expression, and poor paper and print. The book-seller, author, publisher, parent and teacher, she found, for the time being, unequal to solving this problem of the children's reading, and looked to the librarian, through exhibits, talks, lists, and less costly editions, to make good books read and desired. This paper will be reprinted in the *Publishers' Weekly* in an early issue.

Mr. Franklin K. Mathews, chief librarian of the Boy Scouts of America, talked of the Boy Scout library. He said that the movement was built on the gang spirit, the very factor which cheap authors had used to sell the "nickel novel." The leaders of the movement, in taking over the periodical *Boy Life*, used this spirit and hero-worship to build up

the paper while making it popular. He considered the book the greatest power over the boy in his 'teens, so that the pseudo "Boy Scout" literature is a menace, and the cheap book is but the "nickel novel" attractively bound. The library commission of the Boy Scout movement has secured the co-operation of publishers, authors, and book-sellers to establish the "Every Boy's Library" series along the lines of popularity by having good boys' literature reprinted in an inexpensive edition to satisfy the public demand for cheap books. The hope for good reading, in his opinion, lies with the parents, and in the co-operation of the librarian. Mr. Mathew's paper was printed in the *Publishers' Weekly* for May 30th.

Mr. Edward F. Stevens, librarian of Pratt Institute Free Library, stated that the children's librarians have united themselves to this movement and their suggestions have been used by its leaders. The Boy Scout movement takes the child where the children's room gives him up, at the age of twelve or fourteen, and carries him on, adolescent rooms, to supplement the children's rooms, being still an ideal of the future.

IRENE A. HACKETT.

COLLEGE AND REFERENCE SECTION

Following the joint meeting of the College and Reference Section with the League of Library Commissions on Wednesday afternoon, a business meeting, attended by twenty or more college librarians, was held.

At that meeting it was moved that the officers of the College and Reference Library Section make investigation as to the advisability of holding section meetings for the college librarians apart from those for reference librarians. A motion was also passed authorizing the officers of the section to consider the advisability of printing abstract papers previous to the convention meetings. After some discussion concerning officers and form of organization, it was the sense of the meeting that the present form be kept for another year at least. The following officers were elected: Chairman, Miss Sarah B. Askew of New Jersey; associate members of the executive committee, Mr. H. S. Leupp of the University of California, and Prof. A. S. Root of Oberlin.

It was a disappointment to the college librarians present that more was not offered on the program for their special needs, but with the increasing number of branches of library service it becomes increasingly difficult to provide for everyone, and the college librarians can only hope that their turn may come next year.

BRANCH LIBRARIANS ROUND TABLE

The branch librarians met in the large ballroom of the New Willard on Thursday afternoon. Dr. Bostwick read the first paper, on "Conflicts of jurisdiction in library systems." Since the development of a departmental system in any large institution is usually gradual, resulting from the increasing need by its head of aid in administration, it follows naturally that sooner or later the division into classes will result in a cross-classification, with corresponding cross-interests. For example, the time comes when the children's librarian of a branch will ask whether she is responsible to the branch librarian or to the supervisor of children's work. The same possibilities of conflict exist between the branch administration and the central departments—book order, finance, cataloging, supplies, janitor, reference, or circulation. Dr. Bostwick suggested several ways of straightening out these difficulties, the best one being, of course, intelligent and courteous co-operation under the advice and orders of the librarian.

Dr. Bostwick's paper provoked considerable discussion. Miss Krum, of Detroit, felt that all differences of opinion should be adjusted in strict privacy between branch heads and the heads of departments. Miss Whitcomb, the head of a Chicago branch, said that in their library the branch librarian selected the children's librarian, and in general each branch was made as complete a unit as possible. Mr. Legler said he felt that supervisors hamper the work. The more able they are, the more they minimize the work of the branch librarian. Too many supervisors reduce the branch librarian to a position where she has only three functions, (1) to act as reception committee, (2) to answer the telephone, and (3) to keep statistics. Committees of branch librarians in Chicago consider special questions as they come up. Mr. Jennings advocated supervision of branches and also of children's work, while Mr. Seward, of Binghamton, felt that there is so much machinery that we lose sight of the movement, and no amount of system can replace personality. Miss Moore, of the New York Public Library, felt it most important to attract good workers, and a supervisor must be able to recognize personality and bring it in. The point was brought out that in cities like Louisville, where colored branches are being established, supervisors are absolutely necessary since the workers have had no library training.

"Reference work in branches, especially in connection with social service," was the title

of a paper written by Langdon L. Ward, supervisor of branches in Boston, and read by Mr. Jennings, of Seattle. Every district should have a clearing bureau of information. In Boston, with its thirty branches, the reference work varies with the constituency of each branch. Daily events are the hardest questions to furnish material for. Many social agencies in Boston use the public library freely. Every branch must know every social agency in its vicinity, and not only supply the material asked for, but from time to time suggest other matter of interest.

Miss Florence Overton, of the New York Public Library, read a paper on "Social service work in the branch," in which she described with considerable detail the work as carried on in the Yorkville branch, of which she was until recently the branch librarian. The public library branch is becoming more and more a community center in which the personality of the branch librarian is an important factor. The center of social work must be the branch librarian, aided by an efficient staff. She represents the public to the administration and the administration to the public. Community work in the city is much harder than in a small town, and must not be done at the expense of other kinds of library work, but so far as it does not interfere with the regular work it should be encouraged. Club meetings, lectures, classes in English, all are legitimate forms of community work for the branch library to undertake.

TRUSTEES SECTION

THE meeting of the trustees' section was held in the red room of the New Willard, Friday morning. Judge W. T. Porter, of Cincinnati, presided, and the meeting was one of the most interesting of the conference.

Thomas L. Montgomery was the first speaker, his subject being the "Duty of trustees as to legislation." Mr. Montgomery said that so far as he knew the duty of a trustee in this respect was the same as that of any other citizen. He said he had been connected with the Pennsylvania legislature since the time when the application of the dog tax to library purposes was the only library legislation. In 1890, after an exciting last-minute campaign, the bill providing for a state library commission was passed on the last night of the session. This made no provision for money for the work, and for two years it was carried on by subscriptions from library trustees. The first year of the state library the appropriation was \$12,000, which has been increased from time to time to the present al-

lowance of \$30,000. Mr. Montgomery said that he had had less trouble with legislators than with educators who think libraries should be a part of the school system. He also said he thought of trustees as men of general importance in a community, rather than as having any special interest in libraries, and he thought they should take a more positive interest. Figure head trustees do more harm than good.

Mr. Montgomery was followed by Mr. R. R. Bowker, whose subject, "Should libraries be under municipal and state civil service?" he termed a conundrum, hard because it was complicated. He said he felt qualified to speak on civil service as he had been interested in the question since 1879, when he drafted the original civil service plank, afterward adopted in much modified form by the Republicans at Chicago. It was never intended to stop removals for cause, not to lock the back door, but to put suitable examinations in front. In the Brooklyn Library, of which Mr. Bowker is a trustee, he said he believed they had a model civil service and model relations between trustees and librarian. The trustees are kept fully informed of all library matters, with the result that clearer knowledge means less interference. Every stage of the apprentices' work is watched, examinations are held from time to time, and reports are made to the trustees. Salaries are graded, and increases are granted when recommended by the librarian. Some form of civil service in the library is desirable, the troubles incurred in working under it being nothing to those involved in working without it. The bogey of locality, however, should not be permitted. It will always be natural, other things being equal, to give preference to a local candidate, but when a graduate of a library school brings that school's certificate, the certificate should be considered equal to any local examination. The library being a technical institution, it is most important that all competitive tests should be conducted by library authorities from a library point of view.

Mr. J. T. Jennings, of Seattle, followed Mr. Bowker in a discussion of the same question. He believes in the principle of civil service, but thinks that any civil service system applied to libraries should be under the control of the trustees, not that of an outside state or municipal board. He questioned fifty-three large libraries of the country, and found only nine under a civil service regime. Eight of these nine promptly reported it unsatisfactory, while the ninth was non-committal. Twenty-eight of the libraries questioned are located in cities having civil service commissions, but

nineteen are exempted on the ground that personality, gumption and tact, cannot be tested by examinations. Neither the Library of Congress nor the British Museum Library is under civil service rules.

Arguments usually offered in favor of civil service are that it eliminates politics, selects the best candidates, is democratic, saves time, and protects from removal. In actual working many of these arguments do not hold. The system is far from ideal, though far better than the spoils system. Objection to civil service examinations by outside boards is based on the fact that in many cases the examination cannot furnish any adequate test, that geographical limitations imposed are absurd, and that it makes very difficult the removal of inefficient assistants. In the model charter prepared for Los Angeles the civil service experts recommend that removal power be placed in the hands of the appointing officer.

Mr. Jennings closed with the statement that the A. L. A. should go on record on this question of municipal and state civil service as it relates to libraries. If a city has two boards, library and civil service, both appointed by the same head, why should its most important task be taken away from the library board and given to the other board?

Speaking on the subject of "Should there be a pension law?" Henry E. Legler, librarian of the Public Library of Chicago, declared that such a law should be in effect in this country, similar to the method of pensioning the employes of the libraries of his city. Mr. Legler said the employes of the libraries of Chicago had been working under the pension system since 1905. An employe after twenty years' service is entitled to be pensioned, while those who are totally disabled after ten years' service also receive a pension. Annuities may be voted at the age of fifty-five, even if the length of service is not full.

He stated that when an employe is eligible to a pension he or she is examined by the pension board, consisting of two members of the library board and three employes. In the case of an employe being disabled a physical examination is made by a board of physicians, who report as to whether or not a pension should be given.

The maximum pension is \$50 and the minimum \$27.50 per month. Those employes receiving from \$600 to \$700 a year receive the lowest grade, while the rates increase up to \$50 for those receiving \$1,500 yearly or more. The employes, he stated, contribute, at their own option, 1 per cent of their salary to the pension fund yearly, while the fines secured from overdue books are also added to the fund.

He stated that last year these fines amounted to \$16,000. Mr. Legler said the pension fund now is about \$100,000 and that it draws interest of \$4,000 yearly. He said also that this amount in the fund is much larger than the pension roll. In answer to a question Mr. Legler stated that an employe withdrawing from the library service before the end of the term may get back one-half of all the money he had paid in. If an employe not a member dies, the nearest of kin gets one year's annuity.

The speaker declared that he did not see why employes of state institutions should not be pensioned as are the employes of big corporations.

Judge Porter, slated to discuss the question "Do the state liability and workmen's compensation acts apply to libraries?" asked leave to withhold his discussion and print it in the Proceedings, as action on this question is now pending in a case in Ohio, and he wished to incorporate the result into his remarks.

Dr. Frank P. Hill, in discussing the question "Should libraries be classified for the purpose of fixing a standard for salaries and vacations?" said there was no question of the need of higher salaries and longer vacations for library workers. Especially do the lower grades need increase in wages, as the initial salary now paid to newcomers is less than a living wage. If the graded service could be revised, with recommendation of more money for beginners, the libraries all over the country would be benefited. If at the same time the grading could be made more uniform, there would be less inducement to librarians to move from place to place, as increase in pay could only come from advancement in the grades. No librarian should try to take away another's assistant without consulting the chief affected, but on the other hand no librarian should try to hold back any assistant from going ahead as fast as possible.

"The relation of the library to the city government—municipal reference," was discussed by Dr. Arthur E. Bostwick, of St. Louis. The municipal reference library is not a library at all in the sense of fifteen or twenty years ago. It is, rather, a bureau of information, and should be in close relation with the public library to avoid wasteful duplication. It should be located as close as possible to the people using it, preferably in the city hall, and must be absolutely impartial and unbiased. Even in the interest of good reforms it is dangerous to take sides. It is practically the only non-partisan public institution at the present time, and must be kept so—one argument for associating it with the public library rather than any city department.

Mr. N. D. C. Hodges, librarian of the Cincinnati Public Library, spoke on the "Extension of the privilege of the city libraries to counties." Sixteen years ago, in April, 1898, the law was passed in Ohio for the extension of city library privileges to each county, and the tax levy was also extended. At once the Cincinnati trustees announced their willingness to take in any village library in the county and run it as a part of the city system. Six were taken in before the end of 1898. Now seven trustees have charge of the libraries of the whole county. Efficiency has been increased in the libraries and the administration has been satisfactory to all, the small libraries now having the benefit of the city's resources.

Miss Mary E. Ahern, editor of *Public Libraries*, was the last speaker of the morning. Her subject was "Some trustees—there are others," and she talked entertainingly of the various trustees with whom she had come in contact in various parts of the country—some of them so ignorant and short-sighted with regard to the duties and possibilities of their libraries that one wondered how their libraries ever managed to exist at all under their management; others, of open, progressive mind, pushing their librarians ahead by the force of their own personality.

JOINT MEETING OF NORMAL AND HIGH SCHOOL LIBRARIANS

THE second annual meeting was called to order by Miss Mary E. Hall, librarian of the Girls' High School, Brooklyn. The opening address on "College and normal school courses in the use of the library and in children's literature," assigned to Dr. P. P. Claxton, U. S. commissioner of education, was delivered, in his absence, by Dr. Samuel P. Capen, specialist in higher education in the Bureau of Education. The library is a laboratory, the only one every one has to keep on using after school is ended. It is absurd to expect a student to use a laboratory without instruction. That teachers have not told students how to unlock the library is extraordinary. Statistics, analyzed by Dr. Wolcott in the report of the commissioner of education for 1912, on the spread of courses in the use of the library, were given. Figures for 1913, from manuscript in the Bureau of Education, show an increase of institutions offering such courses. These courses are of two kinds: (1) Those offering instruction in the technical part of library work; (2) those giving instruction in the use of books and in children's literature. The second is the more useful. Three publications mark the advance of library courses in schools. They are the re-

port to the National Education Association in 1905 of the committee on instruction in library administration in normal schools; the report of Mr. James V. Sturgis, principal of the Geneseo State Normal School, on the training of teachers in the use of books in the National Education Association's *Proceedings* for 1910, and the report of the committee on normal school libraries in the proceedings of the same society for 1913. These reports show that the movement is growing rapidly. The results receive favorable comment, for pupils are found to be able to do their school work faster. Library lessons should be given in high schools in order that normal schools may specialize on courses for teachers.

Dr. J. D. Wolcott, librarian of the Bureau of Education, told how the library of the Bureau may serve the schools. He said he wished to extend the service of the library and welcomed suggestions for its wider use. The library has a large collection of pedagogical material, both old and new, and an attempt is made to have it as complete as possible. While it is primarily for the use of the specialists of the Bureau and for the staff, he would be glad to make it a circulating and reference library for the whole United States as well as a clearing house for statistics and information. Books are loaned freely to public, university, and normal school libraries and to responsible individuals. Since last fall package libraries have been sent to school superintendents of towns, cities and counties. These libraries contain from twenty-five to fifty books, selected either by the superintendent or by one of the staff of the Bureau, bearing on the topics to be discussed in teachers' meetings. The bibliographic service furnishes free information to every one on educational topics, library work with children, and lists of books for school libraries. Reference lists or nearly 1,000 educational topics are on file and new lists are often compiled on request. The monthly record of current publications is sent free to any one who wishes it. Among other services the Bureau indicates government publications that can be used in school work, prints cards for educational books, and gives advice about organization of school libraries.

The school library exhibit, prepared by Miss Ida M. Mendenhall, is to be maintained permanently and sent out to state and national meetings. The library hopes to undertake to collect and to organize a model school library. A chapter on library progress is a feature of the commissioner's annual report. A report of school library statistics, issued every five years, is to be issued this year.

A letter was read from Dr. Claxton, expressing his interest in library work and the conviction that "the time must soon come when every county will have at least one good central library with branches within all its villages and crossroad places, and with distributing points in all its schools. In addition to this every school should have a collection of books of its own."

Mr. Willis H. Kerr, librarian of the State Normal School, Emporia, Kan., gave a survey of the school library situation. He characterized the situation as one of surprising hopefulness. The following publications have been issued since the last meeting: Miss Ida M. Mendenhall's report of the committee on normal school libraries, now published as a separate pamphlet by the National Education Association; Miss Martha Wilson's "Books for high schools," an A. L. A. reprint, and "Books for elementary schools" published by the state Department of Education in St. Paul; Miss Mary J. Booth's "List of geographical material which may be obtained free or at small cost," an A. L. A. reprint; Miss Mary E. Hall's "List on vocational guidance through the library," an A. L. A. reprint.

A statement on library service in schools and the status of school librarians was adopted by the library section of the National Council of Teachers of English at Chicago on November 28, 1913, and by the Illinois Library Association at Chicago on December 31, 1913. It was presented to the Council of the A. L. A. at Chicago, January 2, 1914, and referred to a committee. (Printed in *LIBRARY JOURNAL*, 39: 129, Feb., 1914.)

Other points which Mr. Kerr brought out were that school librarians should be organized as a section of the A. L. A. with work outlined and pushed forward from year to year by committees. Library topics should be secured for the general programs of teachers' meetings. A yearly revision of a school library purchase list should be attempted. Facts and statistics should be collected in regard to the number of school libraries, how used, and how supported. A study should also be made of an elementary school and high school library budget.

Mr. Joseph F. Daniels, librarian of the public library at Riverside, Cal., spoke of teaching library work to normal school students in 1896, at the State Normal School, in Greeley, Colorado.

The paper entitled "Southern high schools must have state appropriations for libraries," by Mr. Louis R. Wilson, librarian of the University of North Carolina, was read by Miss Annie F. Petty. In North Carolina state and

town supported high schools have had for support only the thirty dollars provided for elementary schools. The state library commissions and state universities are helping in establishing high school libraries and in North Carolina the establishment of a high school debating league has also helped. The great need is felt for the immediate provision of a state library fund for high schools.

Mrs. Pearl Williams Kelley of the state Board of Education, at Nashville, stated the laws pertaining to school library work in Tennessee. Since 1909, school libraries have been part of the state educational scheme. The state Board of Education has been authorized to have a department of library extension which urges instruction in the use of books and in children's literature, makes exhibits and helps to correlate schools with public libraries. The remotest counties of the state have been penetrated. The greatest need in Tennessee now is for library instruction in its normal schools.

Miss Rosa M. Leeper, of the Dallas Public Library, discussed "School library work in Texas." A school library law is now being agitated as there is no provision for school libraries. Statistics show there is not one library book per child in the state.

Mr. F. K. Walter, of the New York State Library School, stated that during the past year he had tried to get teachers and superintendents to attend library institutes with the result that between thirty-five and forty per cent of those attending the institutes were teachers and school people. The courses given pupils in schools must emphasize the non-technical side of library work, teaching them to use reference books and the catalog.

Dr. Sherman Williams, chief of the school library division, state Education Department, New York, said there were 11,000 school districts in New York and that all except 43 have school libraries. In rural schools the teacher is the librarian. When any school of high school grade appoints a librarian, \$100 is given by the state. Small communities may unite with the school board and employ a librarian jointly. The commissioner of education is to make rules in regard to the qualifications of the librarian.

The nominating committee, Miss Marie A. Newberry, Mr. Willis H. Kerr, and Miss Anna Hadley recommended the following, who were unanimously elected: President, Miss Martha Wilson, St. Paul, Minn.; vice-president, Mr. Joseph F. Daniels, Riverside, Cal.; secretary, Miss Fanny D. Ball, Grand Rapids, Mich.

The following resolutions were adopted before adjournment:

1. Resolved, That we record our profound pleasure and thanks for the very great and very helpful interest and co-operation of the United States Commissioner of Education, Dr. P. P. Claxton; of Mrs. Claxton; of Dr. J. D. Wolcott, librarian of the Bureau of Education; both in this meeting, in the notable school library exhibit now a permanent part of the educational equipment of the Bureau of Education, and in the furthering of school library progress the country over.

2. Resolved, That we record our appreciation and thanks to the A. L. A. Publishing Board for its encouragement of the school library movement by the publication of several school library documents.

3. Resolved, That we record our conviction that as a part of their educational equipment and staff, all schools should avail themselves of the same highly efficient library organization and service with which the general public is served. We regard the properly equipped and administered school library as fundamental in modern educational work; it facilitates, applies, and enriches the whole process of education. We therefore endorse the statement adopted by the Council of the American Library Association at Chicago, Jan. 2, 1914.

4. Resolved, That this body make the proper petition to the Council of the American Library Association for the establishing of a School Library Section of the American Library Association.

5. Resolved, That we express to Miss Ida M. Mendenhall and Dr. John Cotton Dana our hearty appreciation of their thoughtful and indefatigable labors in the preparation of the school library exhibit of the Bureau of Education, which it is believed will prove to be a landmark in the history of American school library development.

6. Resolved, That we thank Miss Laura N. Mann, librarian of the Central High School of Washington, and the other school librarians of Washington, for their cordial welcome to us and their efforts in behalf of this meeting.

ROUND TABLE OF NORMAL SCHOOL LIBRARIANS

Miss Mary C. Richardson, of the State Normal School, Castine, Maine, led the round table which convened immediately after the close of the joint session.

Miss Gertrude Buck, of the State Normal School of Emporia, answered the question, Do teacher-librarian graduates find positions? They do find positions, but not all as teacher-librarians. At least they get the inspiration of the course and the children in their care get the benefit.

Mrs. P. P. Claxton, of Washington, D. C., who was to speak on the need of state supervision for school libraries, was unable to be present. Tennessee and Minnesota have a supervisor of school libraries in the Department of Education. There is a difference of opinion whether this work should be undertaken by the library commissions or by the Department of Education. The library commissions feel it is their work while teachers feel its force more if it is in the Department of Education. The library people do not know the work of the schools, while the school people are restricted in interests. The teacher knows the children, the librarian knows the books and both should work together.

Miss Lucy E. Fay, of the University of Tennessee, Knoxville, spoke on the topic "Is there

need of standardizing library courses in normal schools?" Only a few schools give adequate training. A committee should be appointed to urge a minimum course of general library lessons, of children's literature, and of practice lessons in the grades. There should be a course for rural school teachers and one for high school teachers.

Miss Fay was appointed chairman of a committee to make a report on recommended courses at the next meeting.

Miss Julia A. Hopkins, of the School of Library Science, Pratt Institute, discussed "Some essentials in library instruction." The normal school student should know how to use the library, should have knowledge of the co-operation with public libraries, and should be fitted to teach the pupils in his care how to use the library. Restrict reference work to a few books and train the students how to select, from a group of books, the best book on the subject. Cataloging, confined to the use of the catalog, should be given to show filing arrangements and the relation of the subjects in the catalog. The correlation of work is of great importance. Classification is not one thing, reference another, cataloging another, but all taken together throw the library open to the student. The work should fit in with the work of the school and make the teacher feel that the library will lighten her work.

The question of getting pupils to read good books was discussed. Displays of new books, lists of over-Sunday books, and picture exhibits with books nearby, were suggested.

MARY J. BOOTH, *Secretary*.

HIGH SCHOOL LIBRARIANS ROUND TABLE

Immediately after the joint session of the normal and high school librarians the round table of the latter was called to order by the chairman, Miss Anne Hadley, Gilbert High School, Winsted, Conn., with Miss M. A. Newberry acting as secretary.

The first speaker was Prof. Emerson, of the University of Vermont, who gave a most inspiring talk on "Some books of value to the high school teacher." Agreeing with an earlier statement that the library was a laboratory and the only laboratory that would be used on through life, he further stated that it was one great power that could be used to vitalize instruction in the high school. The high school pupils are in what Prof. Emerson chose to call the "cyclopedic age." Facts are their domain, therefore encyclopedias, handbooks, etc., must be in the high school library. This is especially necessary for those intending to go to college in order that they may have a

proper basis and foundation of facts through which they can interpret the newer problems. Too often, Prof. Emerson reminds us, do these people come to college without a proper knowledge of ordinary geographical and biographical facts. Then too, there must be the books which will give appreciation of the three great factors of life—literature, art, and science. Let there be literature first and foremost in which heart and soul appear, be it Shakespeare or Stevenson; art which shows a harmonious, dignified and complete relation of purpose and result, as illustrated in the Pan-American building or in the St. Gaudens statue; and science, the essence of truth, not mere technology but the narration of the great truths of scientific knowledge. If we send people out with a sense of literature, art, and scientific truth, then will the library serve as a laboratory through life.

Miss Cook of the Technical High School, Cleveland, Ohio, mentioned the following titles as being very useful: "World's commercial products," Cochrane "Modern industrial progress," Mills "Searchlights on some American industries," Wiley "Foods and their adulteration," Olsen "Pure foods, their adulteration, nutritive value and cost," Kaup "Machine shop practice," Noyes "Handwork in wood," "Cyclopedia of modern shop practice." Prof. Emerson suggested also such titles as Ashley "British industries," Cunningham "Growth of English industry and commerce," Rogers "Six centuries of work and wages."

Miss Hains of City College, Baltimore, emphasized the fact that pupils should know books other than their textbooks and recommended original sources. "The librarian," she said, "may take him to the wood, but he must catch and cook his hare before he can partake thereof."

This discussion was followed by an excellent paper on "Library methods in the high school," by Miss F. M. Hopkins, Central High School, Detroit, Mich., who said in part that the high school librarian meets the pupils at an age when they are most open to the influence of idealism, most anxious to try their wings in lines of self direction, and in the most impressionable age when a taste for cultural reading can best be formed, or on the reverse side a liking for the commonplace can find its permanent hold. Surely our duty is clear. We must not only make known to them the bibliographical aids that exist, but must also reveal to them the wealth of material to which they can turn in their leisure hours.

The meeting adjourned to meet at the luncheon for which Miss Mann had arranged.

While further discussion did not prove feasible, necessitating the omission of two topics, all felt that the meeting with others and the consequent exchange of ideas was not only a valuable but delightful close to a most helpful meeting. M. A. NEWBERRY, *Secretary*.

LEAGUE OF LIBRARY COMMISSIONS

The League of Library Commissions held three sessions, two of them being joint meetings with the College and Reference Section and the Agricultural Libraries Section, respectively. The opening session, held in the large ballroom of the New Willard, Tuesday morning, was presided over by Miss Elizabeth B. Wales, and in the absence of the secretary Mr. Robert P. Bliss, of Pennsylvania, was appointed secretary pro tem.

The first paper was read by Mr. Johnson Brigham, of Iowa, on the topic "Our responsibility to the commonwealth." Mr. Brigham's watchword for the state commissions is "co-ordination, not competition." He said: "We have relied too much upon the worthiness of our cause and too little upon organization for offensive and defense action. With the aid of the parcel post, the commission can now extend its work in ways undreamed of in earlier days, and until the humblest citizen, wherever located, can avail himself of the advantages provided by the commonwealth, the library commission should not extend its field beyond the border-line of its present activities." Mr. Brigham especially deprecated the attempt of many library commissions (while making an exception of Wisconsin with its ample appropriations) to supply the legislative reference service which the state libraries could more adequately provide.

Mr. J. R. C. Honeyman, of Regina, Saskatchewan, presented a paper on the "Possibilities of the traveling library under the new law of the province of Saskatchewan." Mr. Honeyman believes that the library system should be under the commission of education, as a part of the educational system of the province. He also urges that the commission should include one intelligent and well-educated farmer, who has been a resident for some time, and knows local conditions. In answer to the question as to whether Saskatchewan had a parcel post, Mr. Honeyman said it did not yet exist but was being discussed. A supplementary statement on traveling libraries in other parts of Canada was made by Mr. J. W. Banton, of Toronto. "Reasons why the Wyoming State University sends out traveling libraries" were given in a letter from Dr. Grace Raymond Hebard, the university librarian.

Mr. John A. Lapp, of Indiana, discussed "The legislative reference library as a separate department." He said that up to the present time there has been no constructive policy for legislative improvement, though both the state library commissions and state libraries have taken the matter up and have done good work. He agreed with Mr. Brigham, however, that both these agencies have other primary purposes from which they should not be distracted, and he felt that this work should be done by a separate bureau.

The relation of the state library to library extension was then discussed by Mr. Thomas L. Montgomery, of Pennsylvania, who enumerated the varied conditions under which the different state libraries operate, and described in some detail the situation in Pennsylvania.

Following a brief discussion of the papers, the publications committee made its report, which was in two parts. The first to be considered was on a buying and reading list for prison libraries. Need for such a list in New York state has seemed so pressing that the State Library there has undertaken on its own account to compile and issue at an early date an annotated, classified list of about 1,000 recommended titles. The committee therefore urged the league and the A. L. A. to arrange for the formal adoption of this list. Miss Elva Bascom read a report on study outlines, describing the progress of negotiations with Mr. H. W. Wilson for the preparation of such a series. Mr. Wilson, who was present, said he was ready to go ahead as soon as arrangements satisfactory to the league could be completed and a suitable editor selected. A committee was appointed to confer with Mr. Wilson before leaving Washington to try to make some definite plan.

The report of the committee on publicity for commission work was presented by Miss Baldwin, who also submitted for discussion and criticism a brief circular intended for distribution stating the general purpose of library extension work.

The report of the committee on aid to new commissions was presented by Miss Caroline F. Webster, of New York. A questionnaire was sent to each library and women's club in eleven states having no library commission. From the paucity of responses it was evident that a campaign of education would be required before the necessary legislation could be secured, and recommendations for the best way of carrying on this campaign were made.

The following officers were elected for the coming year: President, Matthew S. Dudgeon; first vice-president, Miss Caroline F.

Webster; second vice-president, Miss Mary Downey; secretary-treasurer, Miss Julia A. Robinson; publication committee, Asa Wynkoop, Miss Elva S. Bascom, Miss Sarah B. Askew.

At the second session on Wednesday afternoon, which was a joint meeting with the College and Reference Section, Mr. W. W. Bishop, of the Library of Congress, read a paper on "How the Library of Congress serves the people of the several states." This was illustrated by an exhibit of the publications of the Library of Congress, including specimens of the work by the photostat in reproducing pages of books, etc.

"The reference function of the small library" was discussed by Charles E. Rush, of St. Joseph, Mo., and was followed by a paper on "State reference work through the small library station or small club," by J. I. Wyer, Jr., of the New York State Library School. These formal papers were followed by discussion in which Miss Anna A. MacDonald, of the Pennsylvania Commission, spoke on "What the small library can do," and Mr. Carl H. Milam, of Birmingham, Ala., told "What the state can do to help the small library."

Mr. Bliss said that he noticed a tendency in some of the states to have a number of institutions undertake the work of circulating books through the state without any regard to what others were doing in the same line. In this way some confusion and duplication of effort and expense is caused. He thought it would be far wiser to have it recognized that the Free Library Commission is the proper body to which to direct requests for assistance. The commission then could get the required material from any source which is available. In this way the work could be centralized and carried on most economically and to the greatest advantage.

The third session, held Thursday morning, was a joint meeting with the agricultural libraries section. Prof. W. J. Spillman, of the Department of Agriculture, was unable to present his paper on "The county agent and his relation to rural library work," and his place was taken by Prof. W. D. Working, of the same department. This paper was followed by a discussion of "Publicity work for the county farm adviser" by Charles H. Williams, secretary of university extension at Columbia, Mo. "Present state systems of library work for rural communities" were discussed by Miss Frances M. Hobart, of Vergennes, Vt., who took up the work in the eastern states, and Miss Mary E. Ahern, who told what is being done in the Middle West. Clarence S. Hean,

librarian of the State Agricultural College of Wisconsin, presented a paper on "Possibilities of library co-operation with the farmers' institute and short course," in which he showed the need of such co-operation and made some definite suggestions as to the best means of supplying help. In closing, the chairman called on the Hon. W. A. Lloyd to tell something about the Smith-Lever bill, now before Congress, which is intended to assist in the work being done by the county agents.

AMERICAN ASSOCIATION OF LAW LIBRARIES

The ninth annual meeting of the American Association of Law Libraries opened with an informal session held at 10 a. m., Monday, May 25, in the Red Parlor of the New Ebbitt House, Washington, D. C.

After opening remarks by President Franklin O. Poole, of the Association of the Bar, New York City, the reports of the secretary, treasurer and various committees were read, accepted and ordered printed. The committees on legal bibliography, reprinting of session laws, national legislative information service, Latin-American laws, catalog subject headings, law libraries and law librarians were continued, their personnel to be subject to change at discretion of the president.

An invitation from the Library Association of the United Kingdom to attend its meetings at Oxford, in September, was read and Mr. C. F. D. Belden, state librarian of Massachusetts, was appointed delegate to represent the Association.

On motion of Mr. T. L. Cole, Washington, D. C., the president appointed a committee of three to consider the adoption by the Association of a system of symbols to indicate the pagination of books, with exact definitions of each, and other rules and definitions for use in describing books and cataloging them, such system and definitions to be reported to the Association at its next meeting.

Mr. F. D. Colson of New York State Law Library not being present, his paper on developing and improving the *Law Library Journal*, the official organ of the Association, was read by Mr. Hendrickson of St. Paul, Minn.

The second session was held Monday at 3 p. m., and consisted of a round table on the "Needs of small law libraries." Miss Claribel H. Smith, of Hampden County Law Library, Springfield, Mass., who arranged the program, presided, and the entire afternoon was given over to the consideration of the subject.

Two formal sessions were held on Tuesday, May 26, at 10 a. m. and 3 p. m., when the following addresses were made:

The functions and jurisdiction of the Court of Customs Appeals, by Hon. William L. Wemple, assistant attorney-general of the United States.

Some auxiliaries of statute revision, by Mr. Arthur F. Belitz, assistant reviser of Wisconsin.

English law libraries, by Mr. George F. Deiser of Hirst Free Law Library of Philadelphia.

Legal literature of Latin-America, by Mr. C. H. Babcock, Washington, D. C.

The monthly list of state publications, by Dr. H. J. Harris, chief of the division of documents of the Library of Congress.

The genesis of an Act of Congress, by Mr. Henry L. Bryan, editor of laws, State Department.

Bill drafting, by Mr. Middleton Beaman, in charge of legislative drafting research at Columbia University, New York.

The election of officers for 1914-15 resulted as follows: President, E. J. Lien, state librarian of Minnesota, St. Paul; first vice-president, C. Will Shaffer, State Law Library, Olympia, Wash.; second vice-president, Mrs. Maud B. Cobb, state librarian of Georgia, Atlanta; secretary, Miss Gertrude E. Woodard, Law Library, University of Michigan, Ann Arbor; treasurer, Edward H. Redstone, Social Law Library, Boston, Mass; executive committee: president, first vice-president, second vice-president, secretary, and treasurer, all ex-officio, and F. O. Poole, New York City; E. O. S. Scholefield, British Columbia Legislative Library, Victoria; Frederick W. Schenk, Law Library, Univ. of Chicago, and O. J. Field, Department of Justice, Washington, D. C.

GERTRUDE E. WOODARD, *Secretary*.

NATIONAL ASSOCIATION OF STATE LIBRARIES

The seventeenth annual meeting of the association was held at Washington, D. C., May 27-28, 1914, with an attendance of approximately fifty at each session. It was unfortunate that the rooms available for sessions were both hot and noisy, so that those present sat in discomfort and heard with difficulty, yet perhaps nowhere in Washington could one have escaped the heat of that trying week.

The first session, held in the red parlor of the New Ebbitt Hotel, Wednesday morning, the 27th, at 9:30, was opened by President Wyer, who delivered the president's address, entitled "The state library and its librarian." The report of the secretary C. B. Lester, fol-

lowed, showing progress in various state libraries during the year just closed, and supplementary remarks were made from the floor by the state librarians of Pennsylvania, Illinois, Mississippi and Connecticut. In particular, Mr. Brigham reported that the State Library of Iowa had received 2500 volumes from the State Medical Society as the nucleus of a medical department, the society to appoint therefor a trained assistant librarian.

The secretary reported for the executive committee regarding the present condition of the association. Thirty-nine libraries now belong and are demanding better meetings, better printed proceedings, and better committee work. The committee recommended that the proceedings be printed hereafter in the A. L. A. conference proceedings as was formerly done. The report was accepted. Mr. Godard explained the circumstances which had delayed the printing of the 1912 proceedings.

Dr. McIlwaine, of Virginia, for the committee on public archives, presented an elaborate report, only part of which he read. He indicated the results of a questionnaire sent out by Mr. Wyer asking for information as to methods of classification and shelving of archives, and read the replies for Alabama (by Dr. Owen), for Iowa (by Miss Ethel Virtue) and for Mississippi (by Dr. Rowland), as of special value. In Mississippi the archives are arranged chronologically, with reference to the state's history, as if they had been systematically filed from the beginning.

The session closed with an address by Henry J. Harris, chief of the division of documents of the Library of Congress, on "The Library of Congress and the state libraries." He reviewed those activities of the national library which are of especial service to the state libraries, namely: the publication of the Monthly List of State Publications, the inter-library loans, the distribution of surplus material (now at about 35,000 pieces annually) and the printed catalog cards. He reminded those present that the proof-sheets of the cards are sold at a nominal rate, and emphasized his belief that the state libraries might with advantage make wider use of this service. He called attention also to the check-list of foreign documents in the Library of Congress now in preparation by his division, the first two parts of which, covering Germany and Australia, will before long be ready. In conclusion, he expressed the hope that the Library of Congress would be of interesting helpfulness to the state libraries in the future.

The second session was held Thursday afternoon at 2:30 in the white parlor of the New Ebbitt. Miss Adelaide R. Hasse, chief of the

division of public documents of the New York Public Library, spoke on "The civic bibliography of to-morrow." Calling attention to the awakening civic consciousness of the American people and the recent establishment by universities and other institutions of training courses for civic service, she showed how this work created a demand for bibliographical material which the libraries must supply. There are two fundamental bibliographies on municipal problems: Brooks's, first published in *Municipal Affairs*, in 1897, and Munro's, now in preparation for publication by Harvard University. But the student of civic training needs much help not to be found in any bibliography; hence the librarian must widen his field. As trade follows the flag, so must bibliography follow its subject. The librarian should watch all available newspapers and keep track of civic progress in other states. Present conditions are not met by orthodox bibliographies, as is indicated by the work done in municipal research bureaus and by the recent growth of information services. There must also be a standard classification of civic terms, to overcome the difficulties now met in the wide variations in terminology in civic subjects. In conclusion Miss Hasse urged the appointment of a committee to take up the matter of a national program of civic bibliography.

John A. Lapp, director of the Indiana Bureau of Legislative and Administrative Information, reported for the committee on co-operation between legislative reference departments. This report was essentially similar to his report to the Special Libraries Association, which will be found on pages 86-88 of *Special Libraries* for June 1914.

Mr. Godard presented a resolution urging Congress to take action toward a national legislative reference bureau competent to serve both federal and state governments. Adopted.

Mrs. M. C. Spencer, state librarian of Michigan, reported, as chairman of the committee on exchange and distribution of documents, the following recommendations: (1) That state exchanges be made as widely and generously as possible, without regard to the practice of reciprocity on the part of the recipient; (2) that so far as possible this distribution be extended to other institutions; (3) that the state library be the distributing office; (4) that state library sets of documents be made as complete as possible; (5) that a committee be appointed to urge closer co-operation between the states; (6) that the Library of Congress be asked to publish a check-list of foreign laws in the private libraries of the United States; and (7) that

the association publish in its proceedings a list of those states which give away all documents under their control. It was voted to distribute to all state libraries a printed set of these recommendations.

The following officers were chosen for 1914-1915: President, J. L. Gillis, California; first vice-president, Thomas M. Owen, Alabama; second vice-president, C. F. D. Belden, Massachusetts; secretary-treasurer, C. B. Lester, Wisconsin. The appointment of the various standing committees was left to the incoming president.

SPECIAL LIBRARIES ASSOCIATION

The sixth annual convention of the Special Libraries Association was held at the New Willard Hotel on Wednesday and Thursday, May 27-28, 1914, the daytime sessions in the mezzanine parlor and the evening sessions in the Gridiron room. Notwithstanding the excessive heat in both meeting-places, the attendance at the principal sessions was large. An unfortunate feature that prevented many persons from full enjoyment of the meetings was the failure of several speakers to make themselves heard. After making due allowance for street noises, it seems evident that the meetings contained a warning of conditions to be avoided at future conventions. As, however, most of the papers have appeared in the proceedings of the association (*Special Libraries*, June, 1914), members who failed to hear any part of them will be able to read them in full. For the same reason no attempt is made here to summarize any of the papers so printed.

At the opening session, Wednesday afternoon, the general subject was "Co-operative information getting; what has been done and is being done; what may be done." The following papers were read: by John A. Lapp, of the Indiana Bureau of Legislative Information, "The Public Affairs Information Service;" by A. G. S. Josephson, Chicago, "The Index Office—its nearer purpose and its larger aim;" by G. W. Lee, Boston, "The Boston Co-operative Information Bureau in the light of three years of service;" and by R. H. Johnston, of the Bureau of Railway Economics Library, Washington, "Co-operation and the special librarian." A paper by Eugene F. McPike on "Inter-communication: national and international," suggesting an international federation for communication among investigators, collectors, etc., was not read, owing to the author's absence, but appears in the proceedings above referred to. Discussion centered chiefly about the remarks of Mr. Macfarlane, of the Philadelphia Commercial

Museum, who called attention to the importance to libraries of having on hand directories of important cities, both domestic and foreign, particularly of commercial cities.

Wednesday evening was given over to round-table discussion, held for the most part in the Gridiron room. At the round table on municipal reference libraries, Mr. Lester, leader, a report was read by Mrs. Elizabeth W. Blackall on her work in outlining guide headings for an index to the council proceedings of Eau Claire, Wisconsin. This work was a special assignment in connection with the course of study in library administration and public service added last year to the training course of the Wisconsin Free Library Commission. Eau Claire, with its 25,000 inhabitants, was chosen as a typical small city. It is hoped that out of this work a practical working basis may be evolved for the uniform indexing of documents of second, third and fourth-class cities.

The round table on training for special library service was led by Mr. Matthew S. Dudgeon, secretary of the Wisconsin Free Library Commission, who told of the method followed in Wisconsin, where persons already having some special education are trained in library science in addition. Special knowledge in a given field is pre-supposed; general knowledge will not do. Such persons are taught classification, cataloging, and reference work. They get substantially all that a library student would get in a one-year course, as well as practice in the actual work of the legislative reference library. The plan is not a short-cut into the library profession, but an attempt to take persons of special knowledge and ground them in the fundamentals of library science.

Miss Plummer spoke briefly of the plans for the municipal reference course at the New York Public Library, which will approach the task from the opposite direction: that is to say, librarians will be taken and trained to be effective in municipal reference work. She believed it would be hard to get specialists to take library courses because they generally have better opportunities in their own fields than they could obtain as librarians.

Discussion seemed to indicate that the Wisconsin method was favored for the production of high-grade special librarians, while the New York plan would supply the need of trained assistants for such librarians.

The round table on classification systems for special collections was led by G. W. Lee, of Stone & Webster, who recommended the Dewey decimal system as "at least 75 per cent good."

Mr. Dudgeon proposed that members of the association should arrange to interchange ideas within groups, according to the nature of their libraries, to the end that each group should adopt a standard expansion of the Dewey classification.

Mr. Marion asked why libraries did not more generally adopt the expansions of Dewey worked out by the International Institute of Bibliography at Brussels.

Mr. Handy told why it was necessary for him to devise a new system of classification for the Insurance Library at Boston. For the purposes of that library he had found the Dewey classification insufficient; for one thing it scattered fire protection engineering in five groups, whereas he needed to bring all that material into one group. His system could, however, be attached to the Dewey by anyone at any time. Had the Library of Congress classification of fire insurance been completed at that time he would not have been obliged to work out his own system.

On motion of Mr. Dudgeon it was

Resolved, That this round table request the executive committee of the Special Libraries Association to appoint a committee, representative of the several groups of special libraries, whose duty it shall be to report at the next meeting a scheme for making uniform classifications within each group.

Other round tables discussed: "Clippings and magazine articles in a special library," Mr. Marion, leader; "Special library publicity," Mr. Brainerd Dyer, publicity manager for the National Carbon Company, of Cleveland, Ohio, leader; and "Co-operative analytic indexing of engineering societies' proceedings," Mr. H. H. B. Meyer, of the Library of Congress, leader. At the last-mentioned round table, Messrs. Cutter, Gamble, Marion, Morton and Johnston and Miss Eleanor Frick were appointed a committee to look into the matter further.

A round table on "Collection of material for sociological libraries" was conducted in the Munsey building by Miss Ono Mary Imhoff, librarian of the International Health Commission, Washington.

The subject of the Thursday morning session was: "The place of the special library in other than academic efforts for training to greater efficiency in business, commerce, government, and industry." John Cotton Dana, in a paper entitled, "A national center for municipal information," recommended the establishment of such a center by the librarians of the country. He recommended also the establishment of a bureau of information concerning libraries and their work and the work of

related enterprises, a service which would be of assistance not only to librarians but to corporations and institutions desiring to establish libraries. These suggestions bore fruit in resolutions adopted later.

Miss Orpha Zoe Massey, librarian of the Retail Credit Company of Atlanta, Ga., read a paper describing the methods by which this corporation endeavors to hold the loyalty and develop the ability of each employe through the library. This system was also quite fully described by Miss Massey in an article in *Special Libraries* for December, 1913, which was summarized on p. 170-171 of the LIBRARY JOURNAL for February, 1914.

A paper on "The special library and public efficiency" was read by Edward A. Fitzpatrick, secretary to the committee on practical training for public service of the American Political Science Association, and will be found in the proceedings of the association.

In the spirit of the second suggestion in Mr. Dana's paper, it was voted that the executive committee publish a handbook of information regarding special libraries, to consist of the best articles describing various special libraries that have appeared in the association periodical *Special Libraries*.

The following officers were elected for the ensuing year: President, R. H. Johnston, librarian of the Bureau of Railway Economics, Washington; first vice-president, Elizabeth V. Dobbins, librarian of the American Telephone and Telegraph Company, New York; second vice-president, R. A. Campbell, librarian of the Municipal Reference branch of the New York Public Library; secretary-treasurer, Guy E. Marion, librarian of Arthur D. Little corporation, Boston.

On Thursday evening the association listened to the deferred paper by E. C. Wolf, manager of the Employment and Instruction Department of the Curtis Publishing Company, on "Collected information in print and the training of employes." This paper appears in the printed proceedings. On Mr. Wolf's motion it was

Voted: That a committee of three be appointed to investigate the business library problem in corporations, for the purpose of increasing the efficiency of employes, and to develop concrete methods to be furnished corporations which desire to establish such libraries.

On motion of Mr. Brigham it was

Voted: That a committee of three be appointed to take up the question of the publication of the handbook [entrusted by vote at the morning session to the executive committee], its action to be subject to revision by the executive committee.

Mr. Handy was continued as a committee of one on publicity.

Mr. Campbell presented a resolution calling for the appointment by the chair of a committee of five to investigate and make recommendations upon the location, support, organization and maintenance of a national bureau of information on municipal affairs. The resolution was adopted and Messrs. Dana, Lapp, Flagg, Ranck and Campbell were appointed the committee.

After other minor business had been disposed of the meeting adjourned.

Library Schools

NEW YORK STATE LIBRARY SCHOOL

THE exhibit "Making of a book" prepared and lent by Charles Scribner's Sons, was displayed in one of the school rooms, April 29-May 9. In addition to the Scribner exhibit, which illustrated by photograph and specimen the different stages of book making, a large amount of other material from the State Library was also on exhibition. This consisted of fine bindings (original and facsimile), illustrated books and mounted plates showing different kinds of illustrations and a collection of manuals and treatises on illustration and practical typography. The Library School and the State Library co-operated in the management of the exhibit. Mr. Tolman, Mr. Bischoe, Miss Woodworth and Miss Ellis attended to its installation, the students of both classes giving voluntary service as attendants and guides.

The libraries of the Hudson and Mohawk valleys in the vicinity of Albany held a library institute, under the auspices of the New York Library Association, in one of the school's lecture rooms, May 8. The meeting, which was one of the largest local library meetings ever held in the district, was attended by many of the students.

In addition to the regular summer session, which began June 3, a library institute for district school superintendents will be held during the first week of July. At this institute only those problems of book selection and library organization which directly affect small rural school libraries will be discussed. The discussions and lectures will be supplemented by an exhibit of books suitable for school libraries.

Two lectures have recently been given by specialists from the staff of the University of the State of New York. The first, on "Principles of artistic bulletin making" was given May 5 by Mr. Royal B. Farnum, special-

ist in art education for the university and author of several monographs on interior decoration; the second, on "Visual instruction," was given May 11 by Mr. A. W. Abrams, chief of the Visual Instruction Division. One of the school lecture rooms has been fitted with opaque curtains and electric light connections for the use of lecturers using lantern slides.

F. K. WALTER.

PRATT INSTITUTE SCHOOL OF LIBRARY
SCIENCE

THE third term program consisted, as usual, of two mornings a week of classroom work, about twenty-seven hours of practical work, and a half day of library visiting. In addition to the practical work in our own library, the courtesy of the technology and documents divisions of the New York Public Library and of the Girls' High School Library of Brooklyn was extended to students wishing to specialize in these directions. One student also worked one day a week in the children's department of the New York Public Library. Four students took part in the survey of Essex county that was undertaken by the Bureau of Municipal Research. One day a week was spent in this way, and the students reported on their work each week, so that the whole class had the benefit of their experience.

Visits have been made to the administrative department of the Brooklyn Public Library and to the Bedford branch, where Dr. Hill showed the plans for the new Central Building. The main building of the New York Public Library was next visited, the whole afternoon being spent there, after which the students were entertained by the Library School of the New York Public Library. A very delightful afternoon was spent in Englewood, N. J., where the architectural problem of a house made over into a library, coming, as the visit did, just after Mr. Eastman's lectures on "Library buildings," presented an interesting, concrete illustration of his lectures. Another afternoon was devoted to the Bureau of Municipal Research and the Sage Foundation Library. These visits were closely related to Miss Hopkins' lectures on "Community organization" and to the reports on the Essex county survey. Visits have also been paid to the Newark Public Library, the Children's Museum, the Brooklyn Institute Museum, Columbia University, the Society of Civil Engineers, and the publishing house of Doubleday, Page & Co. at Garden City.

Mr. W. R. Eastman, of Albany, gave his usual course of six lectures on "Library buildings" the week of April 13 to 18. Miss Plummer's illustrated course on the "History of

libraries" took place on three consecutive Tuesday afternoons, April 21, 28, and May 5. On Tuesday afternoon, May 12, Mr. Andrew Keogh, reference librarian at Yale University, lectured on the "Administration of a college library."

We were so fortunate as to secure the services of Mrs. Charles C. Gardner, of Newport, formerly Miss Mildred A. Collar, of the Library School staff, for two courses, one on maps and one on indexing.

Miss Alice M. Colt, class of 1907, librarian of the Ferguson Library at Stamford, Ct., talked to the students on the financial administration of a library, on Tuesday afternoon, June 9.

Miss Anna C. Tyler, class of 1905, of the New York Public Library, was the last lecturer of the term, giving two talks on storytelling.

The Normal Course was offered to meet what seemed to be a need—that for trained librarians who should be trained teachers. It was recognized from the first that the difficulty would lie in finding enough library school graduates wishing such training to make up the class. Library school students seldom mean to teach, though teaching is often thrust upon them unexpectedly when it is too late to prepare for it. The course obtained a *succès d'estime* from librarians, but there have not been many applicants for it. It was found this winter that to carry on the work successfully would need a much larger appropriation another year, and this expenditure the trustees did not feel that the professional support shown justified them in meeting. The course has therefore been withdrawn. Our regret in losing Miss Hopkins' service is mitigated in part by the fact that she is to remain in Brooklyn as principal of the training class of the Brooklyn Public Library, and that she will continue to be one of our staff lecturers.

JOSEPHINE ADAMS RATHBONE, *Vice-Director*.

DREXEL INSTITUTE LIBRARY SCHOOL

The spring visit this year included the following libraries: Princeton University Library, Trenton (N. J.) Public Library, Columbia University Library, New York Public Library (main building and four branches), Brooklyn Public Library and Brownsville branch, Newark (N. J.) Free Library and Business branch. Part of one afternoon was most enjoyably spent at Charles Scribner's Sons. The class also visited the library schools of Pratt Institute and the New York Public Library.

The hospitality shown by our library friends added much to the pleasure of the trip. We

were entertained at luncheon by the staff of the Trenton Public Library and by the Pratt Institute Library School; afternoon tea was served for us at the Newark Free Public Library, and the New York City Library School gave us a delightful dinner at the Port Arthur restaurant in Chinatown, followed by a walk through part of the East Side.

The trip was followed by five days' Easter vacation, after which the class did two weeks' practice work in the following libraries: Wilmington Institute Free Library, Wilmington, Del.; Carnegie Library of Pittsburgh, Pa., and the public libraries of Brooklyn, Newark, New York and Washington, D. C.

Recent visiting lecturers have been as follows:

May 4-5. Three lectures, "Government documents," by Miss Mary L. Sutliff.

May 18. "Administration of a branch library," by Mr. Leon M. Solis-Cohen.

May 21. "Library binding," by Mr. Arthur L. Bailey.

May 21-22. Two lectures, "The library budget" and "Man versus the machine," by Miss Julia A. Hopkins.

Visits have been paid to the Library Bureau, Leary Stuart & Co., the Spring Garden branch of the Free Public Library, the Curtis Publishing Co., and the Bryn Mawr College Library.

The Drexel Institute Library School Association gave a dinner at the New Ebbitt, Washington, D. C., Thursday evening, May 28. Forty-seven were present. Miss June Richardson Donnelly, former director of the school, was the guest of the association. At the end of the dinner addresses were made by Miss Bacon, Miss Donnelly, and Miss Roberts, chairman of the committee appointed to consider the interests of the school and its graduates. It was reported that while the committee and other friends had not been idle, it had been impossible to arrange for the continuance of the school, but that hope had not been abandoned. A general discussion of the school situation followed and was closed by an appeal from the president to the alumnae to stand together and do all in their power for the school and the association.

June 4 was Institute Day. President Godfrey made a short address to the seniors of all departments of the Institute. First and second honorable mention was made for scholarship in each department. The Library School honors were carried off by Miss Gretta M. Smith and Miss Clara L. Voigt.

The library class was entertained on Monday afternoon, June 8, by Miss Eliza M. Fox, who gave a lawn party at her home in Logan.

A play entitled "Drexel spirit," by Gretta M. Smith, was read by Margaret T. Parker.

The president's reception was held Tuesday evening, June 9, and the general class day at Runnymede, Wednesday afternoon, June 10.

Commencement exercises were held in the auditorium. The following 17 students were graduated:

Helen Burns, West Chester, Pa. M.A. Dickinson College 1914.

Eliza M. Fox, Logan, Pa.

Catherine M. Guilford, Lancaster, Pa.

Helen L. Johnston, Haverford, Pa.

Mary B. Latta, Chestnut Hill, Philadelphia.

Fanny M. Libby, West Roxbury, Mass. B.A. Smith College 1912.

Mary R. Lingenfelter, Williamsport, Pa.

Margaret T. Parker, Chestnut Hill, Philadelphia.

Marion M. Pierce, West Chester, Pa.

Agnes W. Schultze, Bethlehem, Pa.

Gretta M. Smith, Grinnell, Ia. A.B. Grinnell College 1911.

Evelyn Somerville, Aliceville, Ala. N.S. Univ. of Ala. 1909.

Elizabeth W. Steptoe, Taylorsville, Va.

Maud I. Stull, Canton, Pa.

Leonore A. Tafel, Baltimore, Md.

Clara L. Voigt, Columbia, S. C. A. B. Elizabeth College 1907.

Glauce M. Wilson, Baltimore, Md. Queen's University, Canada.

Miss Bacon's address during July and August will be 50 Lexington street, New Britain, Ct.

CORINNE BACON, *Director.*

LIBRARY SCHOOL OF THE NEW YORK PUBLIC LIBRARY

The only senior lecture not already reported and the closing one of the year, was given to the administration seniors on "Work for children and children's rooms," by Annie Carroll Moore, of the New York Public Library, and was rather a seminar or round-table than a lecture. The class had some practice in book selection, and visits to assigned libraries with quizzes.

Final junior lectures not reported previously have been "Library conditions in the Far West," by Franklin F. Hopper, of the New York Public Library, and "Movements in education," four lectures, by Louise Connolly, Newark Public Library.

Junior visits to the close of the year were made on May 7 to the Newark Public Library, including the Business branch and the Barringer High School; May 14, to the Russell Sage Foundation Library; May 16, White Plains High School Library and the plant of the H.

W. Wilson Co.; May 21, to Princeton University Library and the Public Library of Trenton, N. J.; June 3 to the Montague branch of the Brooklyn Public Library and the Pratt Institute Free Library and Library School; June 10, Queens Borough Public Library and Flushing branch.

The reception given to the Pratt Institute Library School on April 24, not heretofore recorded, was reciprocated on June 3, making two excellent opportunities for acquaintance among the students.

The visits to the Newark Public Library, to the Trenton Public Library and the New Jersey Commission, and to the H. W. Wilson Co.'s plant were accompanied by special hospitality which was greatly appreciated. After the White Plains visit, a large party went by trolley to Tarrytown to visit Sleepy Hollow, and on June 6 two or three instructors conducted a party to West Point.

A party tendered to the faculty by both classes took place the evening of May 15, the last social occasion of the year, with the exception of the annual dinner of the Alumni Association the evening of June 11. This last was held at the Craftsman rooms, covers being provided for eighty-six. Mr. W. W. Appleton, of the School's advisory committee; Mr. W. W. Bishop, the commencement speaker; and Director and Mrs. Anderson were guests at the dinner.

Thirty-three juniors, several seniors, the principal and five of the faculty, attended the conference in Washington, arriving the Friday before and securing several days' sight-seeing and library visiting before sessions began. The libraries visited were the Library of Congress, of the Department of Agriculture, Smithsonian Institution, Public Library, and the Office of the Superintendent of Documents. Week-end parties in Pennsylvania and Virginia followed the conference, work beginning again at the school on June 1. The school reunion took the form of a luncheon at the Hotel Gordon, which was the school headquarters, Mr. and Mrs. E. H. Anderson and Mr. George F. Bowerman being the guests. Fifty-three were present.

Commencement took place on June 12, at 11 a. m., twenty-three seniors receiving the diploma and thirty-eight the certificate. Hon. George L. Rives, president of the board of trustees, presided, and bestowed the diplomas, Director Anderson giving the certificates. Mr. William Warner Bishop, the superintendent of the reading room at the Library of Congress, delivered the commencement address, entitled "The backs of books."

MARY W. PLUMMER, *Principal.*

UNIVERSITY OF ILLINOIS LIBRARY
SCHOOL

Miss Katharine L. Sharp, founder and first director of the school, died June 1 from injuries received a few days earlier in a distressing automobile accident in the Adirondacks. Everyone connected with the School has been grief-stricken, and in the general University community her many friends among the older members of the various faculties have given many manifestations of their affection and sorrow. Miss Frances Simpson, Assistant Director, Mrs. Maude Straight Carman, and Professor Isabel Bevier, all from Urbana, attended the funeral at Dundee, Illinois. The University Senate adopted the following minute:

The members of the University Senate have learned with deep sorrow of the death of their former colleague, Katharine L. Sharp, for ten years Head Librarian, Professor of Library Economy, and Director of the Library School, and desire to place on record their appreciation of her services to this University.

As the founder of the Library School at Armour Institute, which on her appointment as librarian here became a part of this University, she made a notable contribution to the advancement of her chosen profession. Her administration of the University Library was marked by high ideals and great ability and secured for her a distinguished place among the librarians of the country.

With all her scholarly enthusiasm, she had a keen interest in the personal and social welfare of her own pupils and through her efforts for them set for all the students of the University finer and higher standards of social conduct.

A Committee of the University Library Club, including the School faculty, students, and members of the University Library staff, adopted the following resolution:

The Library Club of the University of Illinois, representing the Faculty of the Library School, the staff of the University Library, and the students at present members of the School, desires to record an expression of the deep grief which its members feel at the tidings of the death of the former Director of the School and Librarian of the University, Katharine L. Sharp.

To Miss Sharp's devotion and untiring efforts, more than to any other factor, the Library School of the University of Illinois owes not merely its present standing, but its very existence. Founded by her at Armour Institute in 1893, and transferred to the University of Illinois in 1897, the School, under her leadership, experienced a conservative and

consistent development. Not only was Miss Sharp an inspiring teacher imbued with the highest ideals of librarianship, but she strove earnestly and successfully to transmit to her students her vision of the broader scholarship and the better professional training which should characterize the librarian of the future.

Her ten years of intelligent and devoted service as librarian gave to the University an organized, efficient library and laid the foundations for its recent growth.

Although for some years Miss Sharp has not been formally connected with the University of Illinois, her unusual personality has left a deep impression upon all who came in touch with her; her students, her co-workers in the library and her colleagues in the University faculty, to each of whom the news of her tragic death comes as a distinct personal loss.

The date of the A. L. A. Conference at Washington proved to be an inconvenient one for the faculty and the staff; only Director and Mrs. Windsor, Assistant Director Simpson, Miss Hutchins, and Mr. Janvrin were able to attend.

The University Commencement exercises were held June 17, and the degree of B. L. S. was conferred on the following:

Elizabeth Hamilton Davis, A. B., Illinois Woman's College, 1909; Stella Belle Galpin, A. B., Knox College, 1911; Louise Fenimore Schwartz, A. B., Knox College, 1907; Rose Roberts Sears, A. B., Fairmount College, 1909; Sabra Elizabeth Stevens, A. B., University of Illinois, 1906.

Miss Stevens was accorded final honors, her scholarship standing being the best in her class.

P. L. WINDSOR.

Review

CARR, JOHN FOSTER. Immigrant and library; Italian helps; with lists of selected books. New York: Immigrant Education Society. 93 p. 35 c.

This little book is the latest of Mr. Carr's publications for the assistance of the aliens in our country. His "Guide to the United States," published first in Italian and later in Polish and Yiddish, and in an English translation of the Yiddish, is already well and favorably known to most libraries having a foreign element among their patrons. The present volume is the first of a series intended to help librarians and others in the selection of suitable literature in the immigrant's own tongue.

The books listed are grouped by subject, after which they are alphabetically arranged by authors, unless published anonymously. Following the author's name come the title, occasionally translated into English; the name, in Italian, of the place of publication, and the publisher's name; the date of the edition chosen; a brief bibliographical description; and the price, in Italian money. A descriptive note accompanies every entry, summing up briefly but clearly the characteristic features both of the book and of its author. If the notes are almost invariably commendatory it is only, the compiler assures us in his introduction, "because a deliberate attempt has been made to select books that are worthy of praise, the best that are available of those now in print." Editions of moderate price have been chosen, but so far as possible they are printed on good paper, and special care has been taken to include only books which are still in print. A good many elementary books are found in the list, for the benefit of readers of limited education, but the lists are not restricted to these. In addition to the books included, there is also a short annotated list of the best Italian periodicals and newspapers, with a brief introductory survey of Italian periodical literature.

Mr. Carr's addresses "The library and the immigrant" and "The librarian and the Italian" are printed in the front of the book, and the last few pages give some library rules and helps in Italian, selected or adapted from those already in use in different libraries.

The Immigrant Education Society, of which Mr. Carr is director, is planning the immediate publication of several other books. "How to become a citizen" is expected to appear this month; a "History of the United States" in August; two books on learning English are being planned, one or both to be published in the early autumn; and the present bibliography is to be followed by others in Yiddish and in Polish.

F. A. H.

Librarians

ALLISON, Gladys B., New York State Library School, 1913-1914, has been appointed assistant in the order and accession department of the library of the University of Texas. Austin.

AUSTIN, Mrs. Mary, for four years librarian of the University of Arkansas, has resigned, to engage in farming near Winslow, Ark., where she recently purchased a farm.

BACON, Corinne, has resigned her position as librarian of Drexel Institute, Philadelphia, to take charge of the Standard Catalog Series to be issued by the H. W. Wilson Co., White Plains, N. Y. She was for seven years first assistant in the New Britain, Conn., Institute Library before she attended the New York State Library School (1901-03). From 1903-10, she was on the staff of the New York State Library, teaching in the Library School, doing reference work, and for a short time working as library inspector under Mr. W. R. Eastman. From 1910-12 she worked in the Free Public Library of Newark, N. J., part of the time as head cataloger and part as reference librarian. In the fall of 1912 she became librarian of Drexel Institute, and director of its Library School, which has just been discontinued by order of the trustees.

BALDWIN, Martha, of the Tacoma Public Library, has been promoted from page to the position of "mending assistant" in the order department.

BELDING, Mrs. A., is the librarian of the Saunders Public Library in Avon, Ill., not Evansville, as was erroneously stated in the JOURNAL for January.

BOWERS, Ethel, formerly in the Lewis & Clark High School Library, of Spokane, Washington, has been appointed an assistant in the loan department of the Tacoma Public Library, beginning June 16.

BROWN, Zaidee, New York State Library School, 1901-1903, has resigned her position as agent of the Massachusetts Free Public Library Commission to become librarian of the Long Beach (Cal.) Public Library.

BUCHANAN, Henry C., formerly state librarian of New Jersey, was re-elected secretary of the State Public Library Commission at its May meeting. The chairman, Moses Taylor Pyne, of Princeton, and the vice-chairman, Dr. Everett Tomlinson, of Elizabeth, were also re-elected.

BYRNE, Paul R., New York State Library School, 1913-1914, will act as temporary assistant in the Buffalo Public Library during July and August.

CLARK, Elizabeth Voshall, Drexel, 1900, has resigned the position of librarian of the Carnegie Free Library, Connellsville, Pa., to accept the position of librarian at Drexel Institute, Philadelphia. Miss Clark served as assistant at Drexel Library for nearly two years after her graduation from the Library School.

She has held positions at the Haverford College Library, the Swarthmore College Library, the Public Library of Bloomsburg, Pennsylvania, and has been at Connellsville since September, 1909.

DEXTER, Lydia A., New York State Library School, 1891, has been in the service of the University of Illinois library as cataloger and bibliographer since the first of January.

DOANE, Stella T., Drexel, 1908, has resigned her position at Drexel Institute. Since September, 1908, she has served as assistant librarian and instructor in the Library School, doing more and more teaching as time went on. She will be sadly missed by her associates in the library and by the faculty of Drexel Institute. Drexel has been fortunate in keeping her for six years, and the good wishes not only of her associates, but of the many students whom she has taught, will follow her to whatever new work she may undertake.

ENGELL, Mrs. Jennie C., of the loan department of the Tacoma Public Library, has been granted a year's leave of absence to enter the Library School of the New York Public Library this coming fall.

FOSSLER, Miss A. K., has resigned from the staff of the Columbia University Library in New York City.

INGALLS, Florence L., New York State Library School, 1914, will go to Haverford College as assistant librarian in September.

KOBETICH, Mary, of Tacoma, has received a temporary appointment in the loan department of the Tacoma Public Library. Miss Kobetich will enter the University of Wisconsin this fall, and later will enter the Wisconsin Library School.

LOGASA, Hannah, head of the department of accounts and statistics at the Omaha (Neb.) Public Library and a member of the library staff for ten years, will become high school librarian of the University of Chicago at an annual salary of \$1,500, when she returns from a European vacation, October 1.

LOWRY, Elizabeth, New York State Library School, 1912-1914, has been appointed assistant in the University of California Library, Berkeley.

MARTIN, Mamie R., New York State Library School, 1913-1914, will go to the Gary (Ind.) Public Library in August to take charge of the high school branch.

MITCHELL, Sarah Louise, New York State Library School, 1904, who was formerly in the School of Education in the University of Chicago, was made librarian of the Ryerson Library at the Art Institute of Chicago, June 1.

MORSE, Anna Louise, librarian of the Reuben McMillan Free Library at Youngstown, O., has tendered her resignation. The library board voted to close the library June 15 for the summer, but later decided to keep open a little longer, pending the search for funds with which to maintain the institution. Miss Morse, in her statement of resignation, said the straitened circumstances under which the library had been conducted in recent years made it impossible to give reading facilities adequate to the growing needs of Youngstown. Since the Reuben McMillan Library was not to keep pace with the growth of the city, Miss Morse said she thought it better that she should resign.

NOEL, Jacqueline, Pratt, 1912-13, librarian at La Grande, Oregon, has been appointed an assistant in the reference department of the Tacoma Public Library, beginning July 6.

NORTON, Mrs. Elizabeth, of Carlisle, Ky., has been elected librarian of Transylvania University and the College of the Bible, at Lexington, Ky.

PERRINE, Helen, has been appointed librarian of the South Amboy (N. J.) Public Library.

RUNCIE, Lieut. James E., U. S. A., retired, has been appointed librarian of the United States Military Academy at West Point, in the place made vacant by the death of Dr. Edward Singleton Holden.

SHARP, Katharine, one of the most prominent women librarians of the country, died in the hospital at Saranac Lake, N. Y., June 1, as the result of an automobile accident near Lake Placid. A party of twelve from the Lake Placid Club, including, besides Miss Sharp, Melvil Dewey and Miss May Seymour, were in the car, which was mounting a long hill, when the car stopped and then began to back. For some unexplained reason the brakes were unable to hold the heavy load, and in rounding a curve the car ran off the road and turned on its side. With the exception of Miss Sharp no one was seriously injured. In attempting to leap from the car, she struck her head. Trephining was resorted to—two operations—but she never regained consciousness. After a private service at Saranac Lake, the body was taken to Dundee, Ill., for burial. Miss Sharp was born in Elgin, Ill., May 25, 1865. She was

graduated from Northwestern University in 1885. In 1892 she completed her course at the New York State Library School, and received her M.L.S. there in 1896. After teaching and acting as librarian and library organizer for several years, she took charge of the comparative library exhibit at the Chicago exposition in 1893. From 1893 to 1897 she was director of the department of library science at Armour Institute of Technology in Chicago, and from 1897 to 1907 was head librarian and director of the State Library School at the University of Illinois. Miss Sharp was a member of the Council of the A. L. A. from 1895 to 1905, and was its vice-president in 1898 and again in 1907. Since 1906 she had been a fellow of the American Library Institute. Eight years ago she retired from active library work to take an executive position at the Lake Placid Club.

SMITH, Mabel, of Oconto, Wis., has been chosen librarian for the new library at Olympia, Wash. Miss Smith is a graduate of the University of Wisconsin and of the Library School of the University of Wisconsin, and also of the Training School for Children's Librarians at Pittsburgh, Pa. She was employed in the Carnegie Library at Pittsburgh, and is at present librarian of the public library at Watertown, Wis.

WEITENKAMPF, Frank, head of the division of prints of the New York Public Library, was given the honorary degree of Doctor of Humane Letters by New York University on commencement day, June 10, 1914. Chancellor Brown, in conferring the degree upon Mr. Weitenkamp, said: "You have furthered the development of the modern library as an agency of public education in that most important field of the appreciation of beauty in the arts. By virtue of the authority vested in me, I welcome you to the degree of Doctor of Humane Letters, and confer upon you all of the privileges appertaining to that degree, in testimony whereof you are granted this diploma." Mr. Weitenkamp returned to New York, June 8, from a short study trip through European print rooms, and, incidentally, visited many museums and libraries.

WHITMAN, Jessie, librarian of the Moorhead (N. D.) Public Library, has tendered her resignation to take effect Sept. 1, 1914.

WOOD, Frances A., librarian emeritus at Vassar College, died at her home in Poughkeepsie June 17. She had been ill several weeks. Miss Wood had been associated with the faculty at Vassar College for forty-four years. She was librarian for thirty years. In 1910 she resigned and was made librarian emeritus.

THE LIBRARY WORLD

New England

MAINE

Blue Hill. The Blue Hill Library has received a bequest of \$1,000 through the will of the late William Paris Tenney, of Boston, a native of Blue Hill, and many of the Library Association hope that the sum will be made the nucleus of a building fund.

Houlton. The Houlton Public Library has been bequeathed the sum of \$5,000 by the will of the late Miss Emma Drew, who lately died in Florida. She lived for many years in Houlton. The gift was made in honor of her late brother, Mellen Drew.

NEW HAMPSHIRE

Charlestown. The Public Library has received a bequest of \$400 from Mrs. Catharine Rogers Paris, who died in Boston May 2.

Milford. Marinda A. Smith, of Milford, has bequeathed \$1,000 to the Milford Public Library, to be held in trust, the annual income to be used in maintaining the library.

Wilmot. The Wilmot Public Library has recently received from the trustees under the will of Mary Baker Eddy several of her books on Christian Science. These books are to be placed at the disposal of the reading public as soon as they have been cataloged.

MASSACHUSETTS

Amherst. Prof. John F. Genung is at work upon preliminary plans for the proposed new Amherst College Library, to take the place of the present building, which has been outgrown.

Boston. The compilation and publication of a union list of all periodicals and other serials, useful for research work, received in the fifty-four public and private libraries in Boston, is, according to newspaper accounts, the first step planned in a movement for "the adaptation of learning to the requirements of a studious city." Thomas J. Homer outlined the plan, and William C. Lane was elected chairman of a committee in immediate charge of the work, with G. W. Lee secretary. Mr. Lane has been authorized to enlarge the committee. It is estimated that the work will cost about \$10,000.

Cambridge. Eli H. Peirce, of Salt Lake City, has sold his collection of rare Utah books to Harvard University, the sum paid for it being approximately \$6,625. Mr. Peirce's library, or that part of it involved in the sale, comprises

copies of many of the early publications of the Mormon church now out of print. Some years ago the church called in a large number of these, and for that reason they are extremely scarce. In consequence, they have grown very much in value. Mr. Peirce's collection includes about 2,650 volumes.

Cambridge. The oddities of a library temporarily placed in an eating hall are thus described by Mr. W. C. Lane in his report on the temporary housing of the Harvard Library in Randall Hall:

"The serving-room along the north side of the building is occupied by the order department and the shelf department. The scullery accommodates the cataloging staff. The auditor's office becomes a small reference room, opening out from the delivery room. After some shifting of partitions, the 'student waiters' dressing-room' becomes the librarian's outer office and registrar's office; a small room, called a 'dormitory' on the old plans, is turned into the librarian's office, and another 'dormitory' is occupied by typewriters. Typewriters also are placed in the 'pastry and ice-cream room.' Below, in the kitchen, the ranges have been boarded up, though the big red soup cauldrons may still be seen, and the room gives ample space for unpacking boxes of books, collating them, putting in seals, etc., while the dumb-waiters going up to the shelf department just above are a luxury we never knew in Gore Hall. A bakery, cut off from one side of the kitchen, becomes a capital bindery. A large space in the basement, screened off by netting and formerly used for 'dry stores,' is the newspaper room. The potato room, with its brick walls and hard cement floor, newly whitened and shelved with the sliding cases from the Treasure Room in Gore Hall, makes a safe depository for our rarest and most valuable books. There are refrigerators in bewildering variety, some of which are used for storing boxes of books before they are unpacked, and in one of which we may put the books of the 'Inferno'."

Concord. A statue of Ralph Waldo Emerson, the work of Daniel Chester French, was unveiled in the Public Library May 23. Speakers at the exercises were Major Henry L. Higginson, George A. King, and Moorfield Storey.

Fairhaven. The Millicent Library has recently issued a little pamphlet entitled "Mark Twain and Fairhaven," which contains the text of an address made by Mr. Clemens at the

dedication of the town hall in 1894 and of a letter written to the library at the same time. There is also a brief historical sketch of the library, with an exterior view, and a frontispiece portrait of Mr. Clemens.

Sherborn. At a special town meeting, May 27, the town accepted the library building erected by W. H. B. Dowse as a memorial to his father, the late Rev. Dr. Edmund Dowse, for many years chaplain of Massachusetts State Senate and for more than sixty years pastor of Pilgrim Congregational Church in this town. The building is of brick, and cost upward of \$50,000. W. H. B. Dowse, Dr. George E. Poor and Aaron C. Dowse were appointed a committee to arrange for the dedication of the building.

CONNECTICUT

The Connecticut Public Library Committee, in a circular freely distributed, proposed that schools, so far as possible, observe May 15 as library day, setting aside at least part of one session for the consideration of books, reading and libraries. It also proposed that the program for this occasion should include sketches of some Connecticut authors and their books, by various pupils, a symposium of books read during the last year, and a consideration of composition books from the earliest times to the present.

East Haven. By the will of Mrs. Harriett Forbes, of East Haven, the town is beneficiary in the sum of \$1,500 as the nucleus for a fund to obtain a site for a library for the town. The will directs the selectmen to invest the sum and add to it the interest until sufficient funds are provided for the site and building. It also directs that a tablet be placed on the building as a memorial to Mrs. Forbes' husband, Albert Forbes, in whose memory she gives the library fund.

Middle Atlantic

NEW YORK

Belfast. It is now announced that the friend who recently offered \$8,000 to the women of the Hawthorne Club for a library building is Frank Bartlett, president of the National Bank of Olean, but a native of this town. In addition to this gift, Mrs. Sarah Ford Crosby has given a site to the club which is to be used for the building. Work will be started on the building soon.

Canandaigua. After occupying its quarters in the town house for many years, the Wood Library has been moved from the town house

to its new and permanent quarters in the building of the Ontario County Historical Society in North Main street.

East Hampton. Dr. Everett Herrick, late of New York City, has bequeathed to the East Hampton Public Library the income of \$25,000, to be known as the Harriet F. Herrick fund. Dr. Herrick also gave to the Maidstone Club, of East Hampton, the first mortgage he held on the club's property, providing that no intoxicating liquor be sold at the club, and that it shall not change its character as a pleasure club. If any of the conditions are violated the bequest, valued at \$7,500, is to go to the East Hampton Library.

New York City. Fifty new libraries have recently been added to the number sent out by the American Seaman's Friend Society. Each library is packed in a small case containing forty-three volumes. They are placed on deep sea ships, and are put on deck every Sunday morning by the captain, where the sailors can read them. There are 3000 of these libraries afloat at the present time in merchant ships.

New York City. At the library of Columbia University several changes have been made. The serial department has been discontinued, its work being carried on by the catalog and accession departments. After July 1 only gilding, repairing, and pamphlet binding will be done in the library bindery. The work of substituting large cards for small cards in the general catalog has been suspended until it can be provided for by a special appropriation. The official catalog has been discontinued. The School of Mines Library has been formed by combining the mines and metallurgy reading rooms. Early in June the social science reading room was moved from room 510 Kent to 606 Kent.

New York City. The section to the north of Columbia University, known as Manhattanville, will be the site of the next branch of the New York Public Library. This branch, named in honor of George Bruce, is to be erected from the proceeds of the sale of the old branch of that name, situated at 226 West Forty-second street. That was given by Miss Katherine Bruce to the New York Free Circulating Library, in 1888, as a memorial to her father, George Bruce. The new building will be located near the intersection of 126th street and Manhattan street, and, unlike the conventional type of branch buildings erected from the Carnegie Fund, will be of colonial design, with façades of brick with stone trimmings. The title to this property was acquired Dec. 9, 1913. The lot has a frontage of fifty feet on

126th street and an average depth of 104 feet. The building will have its main entrance on Manhattan street, with a service entrance on 126th street. The library will be three stories high on Manhattan street and four stories high on 126th street, as an extra floor is required for janitor's quarters. There will be an assembly room in the basement. The first floor will contain the adult circulation department and the reading and reference room. The second floor will be for children, and it will contain both circulation and reading rooms. Carrère and Hastings are the architects. It is expected that the building, with its equipment, will cost about \$90,000. Excavations are already being made.

Oyster Bay. A library containing 3000 volumes relating to Argentine sociology, commerce, industries and customs has reached the home of Theodore Roosevelt here. It is the gift of the Social Museum of Argentina, and was forwarded together with 100 museum bulletins dealing with the progress of the Roosevelt explorations in South America.

NEW JERSEY

Bayonne. Owing to its moneys being tied up in the defunct First National Bank of this city, the Bayonne Free Public Library trustees are again compelled to borrow \$5,000 for the operation of the library. Several weeks ago the trustees borrowed a similar amount for the purchase of the steel stacks being used in the new extension to the building.

Hoboken. Pupils of the manual training classes are to make the shelving for the branch libraries in the public schools in West Hoboken.

Morristown. The board of directors of the Morristown Library and Lyceum announce that its settlement with the insurance companies leaves it with about \$27,000 cash and the walls of the old building, which the companies value at \$28,000 cash and which the directors have had to accept at such value.

PENNSYLVANIA

Barrie. The Free Library board of this town has asked the town council to make application to Andrew Carnegie for a grant of \$15,000 for a library. It is said that 80 per cent. of the citizens are in favor of the project.

Doylestown. The will of the late Charles C. Cox, of Doylestown, bequeaths nearly all of his personal estate in trust to build a public library in Doylestown, to be known as "The Melinda Cox Free Library." He left about \$40,000.

Pittsburgh. Two million dollars have been added to the endowment fund of Carnegie Institute by the founder, Andrew Carnegie, was the announcement made at a special meeting of the trustees of the institute, June 4. The \$2,000,000 is to be divided equally between the library, museum and the Carnegie Institute of Technology.

MARYLAND

Frederick. The new public library was opened to the public the evening of May 22, with about 14,000 volumes on the shelves. Under the will of the late C. Burr Artz, upon the death of his daughter, Miss Victorine Artz, an aged woman of Chicago, \$100,000 will revert to this city for a library. Mr. Artz formerly lived in Frederick, and the library is to be known as the "C. Burr Artz Public Library." The trustees of the fund are Samuel G. Duvall, Jacob Rohrbach and the Rev. Henri L. G. Kieffer. The late Mrs. Margaret E. S. Hood willed a site for a library.

DISTRICT OF COLUMBIA

Washington. Feeling that the public library, with only one branch, is reaching only a small portion of the children of the city, the library is turning to the schools for help in getting in touch with the others. Any teacher may select or request the library to select one book for every child in the class, or any number of books up to fifty. The books will be sent to the school by the library and called for at the end of two months, after notification, unless it is desired to keep them longer. To help the teachers in making their selections, the library has just prepared a "Graded and annotated catalog of books." The material is arranged by subject, and an author index is included. The grading is only suggestive, and the notes are in such simple English that the children themselves can use the book and make their own selections.

The South

VIRGINIA

Richmond. Following the action of the finance committee in turning down the offer to purchase Jeter Memorial Hall, the public library question has taken a new turn by the proposal of the city council to convert the old high school building, now occupied by the school committee, into a library. By a vote of 17 to 2, the council has passed a resolution by which the old high school may become a public library building, provided the school committee can find other quarters.

GEORGIA

Atlanta. Mayor James G. Woodward has vetoed the proposed charter amendment admitting women as members of the educational, park, library and hospital boards, and his veto has been sustained by the council. The mayor's objection to the amendment was that with a membership of seventeen instead of twelve these committees would become unwieldy and would lose their usefulness.

Savannah. An order of incorporation for the Carnegie Colored Library Association of Savannah has been granted in the superior court.

Savannah. At a meeting of the Library Commission, June 2, it was decided that H. W. Witcover, of Savannah, should be the architect for the new Savannah Library, with Beverly S. King, of New York, as consulting specialist.

KENTUCKY

Danville. The new \$50,000 library and the new \$50,000 gymnasium erected on the grounds of Central University have been completed and are ready for occupancy.

MISSISSIPPI

Jackson. The new Carnegie library is nearly finished. Furniture and shelves are being put into place, and it is expected the building will be open to the public in a short time.

ALABAMA

Birmingham. A fund of \$3,000 will be raised by the Pastors' Union for a collection of books on evangelical subjects. This amount is not included in the previous donation to the general library fund, but is designed to purchase books to supplement the collection of evangelical literature now in the library and thus make it comparable to collections of other religious faiths.

Central West

MICHIGAN

Detroit. In case the statement printed in the LIBRARY JOURNAL for May in regard to the library budget may convey the wrong impression as to the final action and attitude of the city toward the library, we are glad to print the following extract from a recent letter from Mr. Strohm: "It is true that the council committee on claims and accounts reduced some of the items in the budget, but during the closing week of the final determination of the municipal budget the board of estimates acted most generously toward the Detroit Library. Not

only did none of the funds suffer any reduction at the hands of the estimators, but the chairman of the special committee on the library most unexpectedly asked for the privilege on the floor at the closing session of the estimators, and stated that in his experience no budget had ever been presented from a municipal department so comprehensive, intelligent and worthy of generous treatment as the one submitted by the Detroit Library Commission. As a result, the budget was passed without a single voice of protest. As regards the new main library, every difficulty relative to the site is practically a thing of the past. All the important properties needed for the purpose of beginning building operations have been acquired, and the scenery is all set for laying the foundation for the new building the early part of October."

Monroe. In compliance with a long expressed desire, Mrs. Augusta Dorsch, who died here May 3, left her homestead on First street to Monroe for a city library, to be known as the Dorsch Library. The property is worth about \$6,000 and is located on the public square. Her husband, Dr. Edward Dorsch, was for forty years a leading practitioner here.

OHIO

Cincinnati. A gift of \$6,000 from the Carnegie Corporation of New York, added to the \$6,000 appropriated by the city council, will allow work to be begun soon on a new branch library at Eighth street and State avenue, the *Times-Star* announces.

Cleveland. At a joint meeting of the East Cleveland library board and the East Cleveland council, early in June, the council authorized a \$50,000 bond issue for the site for the new East Cleveland Library. Andrew Carnegie has offered \$35,000 for a new library building if East Cleveland will furnish the site and maintain the building.

Cleveland. The public library board, on May 10, over the protest and vote of President John G. White, chose the site of the present city hall for the proposed \$2,000,000 library. A resolution to that effect placed the members on record as favoring the site, provided the city can make the transfer legally. The building committee of the board was instructed to meet with the group plan committee of the city council and start preliminary arrangements for the transfer of the land. It was further agreed by the board that the demand that the property revert to the city when it is no longer used for library purposes would be granted.

Findlay. The offer made by George P. Jones to give the old Jones homestead on East Sandusky street to the library board has been refused because of the expense the board would be put to in the reconstruction of the building as a library. It is valued at \$20,000. It was offered jointly to the library trustees and the Welfare League.

Hamilton. It is expected to reopen the Lane Free Library, July 4, when there will be a public dedication.

INDIANA

Carmel. The new Carnegie Library at Carmel is now completed and ready for occupancy at a cost of \$11,000. The building is of brick, with a measurement of 42 x 50 feet. The interior is finished in quartered oak, except the basement, which is in red oak. On the first floor is the library proper, with the office of the librarian to the left and rear. In the basement is an assembly room, a clubroom, furnace room and lavatories. A range has been placed in the basement for demonstrations of domestic science. The building is electric lighted and supplied with hot and cold water. T. A. Painter is president of the library board and Miss Sarah Follett is librarian. The library at this time consists of 2000 volumes.

Indianapolis. A plea for a library and civic center, to be erected in the neighborhood of Fountain square, has been made to the board of school commissioners by a committee from the South Side, headed by John P. White. Architectural plans for a building, approved by the South Side, were presented to the board. The committee was assured the matter will be given careful consideration.

Kendallville. Kendallville's new Carnegie Library, completed at a cost of \$15,000, was dedicated May 21. Louis W. Fuller, of the Tri-State Normal, of Angola, was the speaker.

ILLINOIS

Chicago. A petition, containing more than 10,000 signatures and asking for a branch library and reading-room in the Douglas district, Chicago's "new Ghetto," has been presented to the Public Library board. The district has 50,000 families and a population of 250,000. Samuel J. Stulman, secretary of the Douglas Library League, said "There are eight grammar schools and one high school in the district, but the nearest library is four miles away. Every school teacher and public officeholder in the district favors our petition, and we have every reason to expect its favorable consideration."

The North West

WISCONSIN

Racine. Racine Junction branch library was opened for inspection Memorial Day. Miss Helen Gorton, who came to Racine from Plymouth, Ind., will have temporary charge of the new library, and her assistant will be Miss Hazel Buck. At present there are about 2,000 volumes in the library.

MINNESOTA

Chisholm. The new Chisholm Public Library was opened to the public on May 15. The library is built of brick and cost \$85,000. The main floor contains circulating and reference rooms for both adults and children, as well as offices for the librarian. Two entrances on either side of the main doorway lead to the lower floor, which is occupied by the auditorium, men's game room, women's clubroom and the workroom. The furnishings of the men's room include game tables, a writing desk, reading tables, paper racks and a shuffle board. The auditorium is equipped with seats for 232 persons. There is a large stage. A victrola has been purchased, with records in English and several foreign languages. Victrola concerts will be given at frequent intervals. A moving picture booth has been installed in the auditorium, and it is hoped to have it equipped with a machine by fall so as to give exhibitions during the winter months. In the women's clubroom women's clubs and organizations of various sorts may hold their meetings or enjoy a social hour. The library will open with a collection of over 3200 volumes. Of these 75 are in Finnish, 159 in Italian, 164 in Slovenian and 122 in Servian. More than half the Italian books were a gift from the Dante Alighieri Society. Of the 2700 books now ready for circulation, 657 are fiction, 779 are for children and the remainder are in foreign languages and non-fiction. Those in foreign languages will be exchanged with neighboring range libraries, thus making a small collection meet large needs.

St. Paul. Arrangements have been made with the Western Union Telegraph Company for the delivery of books within a radius of two miles of the library, at the rate of five cents a book. Delivery in more remote sections of the city will be made through the library stations or by book post.

St. Paul. The first number of the *St. Paul Public Library Bulletin* has been issued. It contains a list of about 800 books recently added to the library, and will be distributed by the pupils of the public schools.

St. Paul. Three branch library buildings, at a total cost of \$75,000, will be given to St. Paul by the Carnegie Corporation of New York, if the city provides suitable sites and agrees to spend \$7,500 a year to maintain them. The library board already has tentatively selected the districts in which these branches should be located, as follows: First ward, Arlington hills, \$30,000; sixth ward, West Side, \$20,000; St. Anthony Park North, \$25,000. Two other branches may be made possible by the use of the bequest of the late Judge Hale. Negotiations for the branch libraries have been going on several months.

NEBRASKA

Broken Bow. At the last meeting of the city council definite action was taken regarding the establishing of a \$10,000 Carnegie library in this city, and a resolution favoring the project was unanimously adopted. If the library is secured, part of a disused street, located in the heart of the city, will be vacated and used as a site for the building. The city also pledges itself in this case to levy a tax of not less than \$1,000 a year for the maintenance of the library.

Omaha. On account of decreased patronage during the hot weather, the library board has decided to cut down expenses by shortening the hours during which the library is open to the public to make it possible for the reduced staff to care for the work without hiring temporary assistants. According to Miss Edith Tobitt, the librarian, money saved in this way is used in the purchase and repair of books.

MONTANA

Butte. The new library board, at a special meeting the latter part of May, passed several important measures. Beginning on or about June 1, patrons living in Silver Bow county will be able to get books by parcel post. The board asked the city attorney to draft a bill for an ordinance creating the position of director of the library juvenile department. Mrs. Frances Nuckolls Kelly was named assistant librarian at a salary of \$100 per month. This brings the number of assistants to seven. Beginning Sunday, May 24, the library will hereafter be open every day in the year from 9 a. m. to 9 p. m. Last year, with a stock of about 57,500 books, 150,363 books were issued. If the library had not been closed for two weeks in February, the busiest month in the year, the record for books issued would have been broken.

The South West

KANSAS

Lincoln. The new Carnegie library, completed at a cost of almost \$7,000, was formally opened to the public May 5. Mrs. Albert Orr was elected librarian for the ensuing year.

OKLAHOMA

Muskogee. The new Carnegie Library was opened early in June, although some details of moving were still unfinished. The building is of brick and white stone. The entrance leads into a rotunda, around which are grouped the children's room, adult reading and reference room, librarian's office and the workroom. The charging desk is in the rotunda. On the second floor is an auditorium, a room to be transformed later into a reference room, and a small clubroom. In the basement are rooms intended for a newspaper room and for the traveling libraries, as well as a restroom and lunchroom for employes. The woodwork is finished in silver gray that gives a soft and beautiful effect. The rooms are all tinted in soft and harmonious colors, and the lighting is one of the best features of the building. The new ceiling lights used reflect a very soft light that is excellent for reading. There are many convenient and attractive features, new filing stands where newspaper files are kept on skeleton shelves that pull out and provide a convenient table-shelf on which to rest the bound volume while looking up a reference, filing cabinets that are models of their kind, and many new devices. There are now about 7000 books on the library shelves, with room for more than 15,000.

Pacific Coast

WASHINGTON

Olympia. The cornerstone of the joint Olympia and Thurston County Library was laid May 6.

Spokane. The contract has been let on the new North Monroe branch library building.

Tacoma. The Tacoma Public Library by joint arrangement with the Tacoma Board of Education will establish a new branch library at the new Lincoln Park High School to be opened September 1. Miss Louise Smith, of the Seattle Public Library, and a graduate of the library course at the University of Washington, will be in charge of the new branch under appointment by the Board of Education and the public library jointly. The new branch will contain reference books for the high school students, collateral reading and a

circulating library for the community. It will be opened during the school hours and certain other hours to be decided upon later. The board of trustees of the Tacoma Public Library has authorized the installation of a pay duplicate collection of current fiction.

CALIFORNIA

Sacramento. After July 1, 1914, the California State Library will furnish books and information to libraries and individuals throughout the state only through the county library system, and in case of conflict in requests coming from counties having no county library system and those having such a system, first attention will be given to the latter. Of the fifty-eight counties of the state, twenty-five now have established county library systems, furnishing library facilities to all such sections of the county as have accepted taxation for county library purposes. The resolutions of the state library trustees, formulating the new policy, are given in *News Notes of California Libraries*, April, p. 399.

San Francisco. The library trustees have accepted plans for the main library building, which is to cost \$1,000,000, of which sum \$500,000 is provided by the Carnegie fund and \$500,000 from the sale of municipal bonds. George William Kelham, chief of the department of architecture of the Panama-Pacific Exposition, is the architect, chosen from a competition of six, the plans being submitted anonymously. The jury was composed of Cass Gilbert, of New York; Paul C. Cret, of Philadelphia, and James D. Phelan, of the board of trustees. Mr. Kelham's design being accepted, he will receive 6 per cent of the cost of the building, the unsuccessful competitors each receiving \$1,000. The building will be three-storied, 345 feet long and 180 feet wide, and forming part of the civic center scheme which will embrace ten blocks in the heart of the city, will be of the same height as the other buildings, 70 feet to the top of the cornice. Mr. Kelham, on acceptance of his plan, arranged to go east for a detailed study of latest developments in library architecture.

San Francisco. Of the \$250,000 given to the city by Mr. Carnegie for branch library buildings, \$50,000 is now being expended for the Richmond District branch, which will be completed in October; it will have shelf room for 15,000 volumes and an auditorium with seating capacity of 200.

The initial class of the State Library School is to receive six weeks' practical training in the San Francisco Public Library. The class is restricted to fifteen students per year.

NEVADA

Reno. The LIBRARY JOURNAL joins with the University of Nevada in its expression of regret that the new library building for the university cost only \$10,000, instead of \$100,000, as reported in the JOURNAL for May.

Canada

The "Year book of Canadian art," published by the Arts and Letters Club of Toronto, has made its appearance. It contains summary reviews of the work of Canada's leaders in literature, architecture, music, painting and sculpture, and is the first attempt to collect in one volume any such record for the Dominion. Mr. George H. Locke, chief librarian of the Public Library at Toronto, has undertaken to market the book, and the price is \$1.00, post-paid.

Montreal. A central library on Sherbrooke street, at the corner of Montcalm and Beaudry streets, and facing Lafontaine Park, on land now owned by the city, was the final decision reached June 9 by the Board of Control. The principle of branch libraries in the east, west, north and southern sections of the city was also adopted. The resolution stated that: "Whereas, it is desirable for the city to have libraries for the different sections of the city, whereas the city owns a piece of land situated at the corner of Beaudry and Sherbrooke streets; be it resolved to ask the council to authorize the board to take from the appropriation of \$500,000, voted for the erection of a library, an amount of \$250,000 for the construction of one of these libraries, and that the Board of Control be authorized to open a contest between Canadian architects for the preparation of plans for the building on Sherbrooke street, with the understanding that the plans for the other library buildings will be, as much as possible, of a similar kind, and that prizes be awarded to the three first architects in the contest, the first to receive \$1,000, the second \$800 and the third \$500, and, in addition, that a sum of \$2,000 be voted to defray the cost of preparing and getting printed the program of the contest and paying the judges for their work."

Welland. On the ground that Carnegie's money is blood money, the trades and labor council of Welland have defeated a by-law brought before the electors, covering the purchasing of a site for a Carnegie library building. The library by-law, if carried, would have insured the town of Welland getting a handsome Carnegie library and was defeated by a big majority, by reason of the labor men's activity against it.

Bibliographical Notes

The Oxford University Press is soon to issue a little book called "Some Oxford libraries," by Strickland Gibson, intended chiefly for those who wish fuller information about the older Oxford libraries than is given in the usual guide book or book of reference.

"A catalogue of books published by Martinus Nijhoff, 1853-1913," is the title of a catalog filling 197 pages. The book is divided into two parts, the second part containing the books relating to foreign lands. Its contents are arranged alphabetically by authors, and give complete bibliographical entry, including price.

"A Stevenson bibliography," by J. Herbert Slater, is the first volume of a forthcoming series which promises to be decidedly useful to collectors of books, as well as to librarians and booksellers. Instead of the old chronological arrangement, the titles are entered in alphabetical order. Each entry is followed by a bibliographical note, giving full information about the size, the publishers, the different editions that have been issued, and the present auction prices.

An "Index to United States documents relating to foreign affairs," compiled by Adelaide R. Hasse for the Carnegie Institution of Washington, is now in press. The index will fill three quarto volumes. The index covers the period between 1828 and 1861. The Folio American State Papers (Foreign Affairs), which ceased in 1828, have indexes, and an index to the annual Diplomatic Correspondence beginning in 1861 has been published by the State Department. The new index will afford reference to the entire published record of documents, papers, correspondence and, to a considerable extent, legislation and decisions upon international or diplomatic questions. In addition to the reports of Congress, the following series of documents have been indexed; the Senate Executive Journal, for diplomatic and consular appointments

and treaty ratifications; the Opinions of the Attorneys General, for decisions on questions of international controversy; the Statutes-at-Large, for acts and resolutions relating to international affairs; and the *Congressional Globe* and its predecessors for speeches and correspondence. The text of the latter, it was found, does not always correspond with the text as printed in the House and Senate documents. In the "Index to state documents" which Miss Hasse is also editing, the volume for New Jersey is now in press, work is being done on Pennsylvania, and South Carolina will be the next state taken up.

Librarians overlook a very useful tool when they fail to subscribe for the "Catalogue of copyright entries," issued by the Copyright Office of the Library of Congress. The law provides a subscription price which is intended to be only nominal. While the whole catalog, covering 6,451 pages in 1913, is to be had for \$3.00 a year, persons interested in the subject matter of but one part can secure that part separately as follows: Books and pamphlets, including lists of lectures, dramas and maps, in two volumes a year, \$1.00; Periodicals, \$0.50; Music, \$1.00; Fine arts, photographs, prints and motion pictures, \$0.50. Group I of Books is printed thrice weekly from the slugs used in printing L. C. cards, each entry being identical with the printed card except for the omission of subject headings. It is therefore of special value to libraries ordering the cards, and small libraries having two \$1.00 subscriptions could cut and paste the author entries for their card catalogs. This part contains not only the titles of all books copyrighted in the United States but also a considerable selection of foreign book titles of special interest to librarians. Copious indexes are supplied for all parts of the catalog and these are combined annually to form indexes for each of the five volumes. Subscriptions must be for the calendar year and are payable in advance to the Superintendent of Documents, Washington, D. C., by postal money order, express order, or New York draft.

TWO ESSENTIALS OF WELL-BOUND BOOKS

Editor Library Journal:

The Galerie Mazarine of the Bibliothèque Nationale in Paris is a very attractive place for bookbinders, for there may be seen one of the best collections of bindings in the world. Wandering through those rooms not long ago, the writer was once more impressed by the fact that the oldest and most interesting of the bindings were those which had raised cords. This was not a new thought, for experience with many old books has shown that the use of that method of sewing was almost invariable in them. These volumes of the 15th, 16th, and 17th centuries have remained in good condition, often in spite of hard usage. It is evident the early binders realized that the raised cord method was the best, and followed it as a matter of course.

For the benefit of those who do not know, let me explain that a "raised cord binding" is one where the "signatures," or groups of leaves of which the book is composed, are sewed to cords which are entirely outside the book. The sewing thread passes through the middle of a signature, around a cord, into the signature again and around the next cord, and so on up and down the back of the book. In this way all the strain from the sewing comes on the cords, and there is no danger that the thread will cut the backs of the pages. If the cords have considerable thickness, each encircling thread is like a little hinge, and much strength is secured. Of course, there are hundreds of books which are not worth such careful sewing, but this article is a plea for the old method in the case of books which ought to be preserved. Great emphasis is laid nowadays upon the material with which books are covered, while the fundamental part which makes them hold together is too little considered.

This brings me to the second essential of well-bound books. When they are sewed on raised cords it is necessary to use leather for the backs, as buckrams and book cloths cannot be modeled over raised cords. My experience has gone to show that there are no leathers better than the "acid-free." The tanners of those leathers are producing them without using acids and the results are very satisfactory, the skins being of exceptional softness and durability. Only a century of time can prove the justice of the claim for these leathers, but it is reasonable to suppose that where so much pains are taken the results

will be the best possible. These leathers come in Nigers, Levants, pigskins, etc.

I feel confident that by insisting upon these two points, raised cords and "acid-free" leathers, book owners and librarians will not fill their shelves with disintegrating volumes, but have books which will remain in good conditions long after this generation has passed away.

CLARA BUFFUM.

Providence, R. I.

MORE ABOUT REVISED EDITIONS

May 15, 1914.

Editor Library Journal:

A folder has arrived at the library since I mailed you the communication regarding the series known as *Intercollegiate Debates*. In this the publishers announce the contents of volumes 1-4. I find that the make-up of volume 2 (as first issued) has been changed, so that there is no conflict with the contents of volume 3. The seven debates which originally appeared in both volumes 2 and 3 are to be eliminated in the new edition of volume 2, and one additional debate is included.

There is, however, no statement concerning the earlier edition, of which it is quite evident that the new volume 2 is but an abridgment, plus a single new debate. In other words, volume 3 was found to be a brief edition of volume 2, so volume 2 is now remodeled to clear away the difficulty. The series certainly is confusing, and I believe that the protest which I expressed before still holds.

Very truly yours,

CLARENCE E. SHERMAN.

Amherst College Library.

BOOK WANTED

Editor Library Journal:

Will any librarian having on his shelves a copy of the "Journal of a trip to California, etc., in 1850-51," by E. S. Ingalls, Waukegan, Ill., 1852, communicate with me? The book is wanted for consultation, not purchase.

WILLIAM I. FLETCHER

Librarian Emeritus of Amherst College

THE new printing bill for co-ordination, efficiency, and economy in printing and supplying public documents was explained very fully at the documents round table at the Washington conference by Mr. Carter, secretary of the printing committee, under whose auspices the bill was prepared, and Mr. Carter's paper will be reprinted in an early issue. It was generally conceded that the bill was the most comprehensive and best measure of the kind which has been brought before Congress. Its provisions are too elaborate even for a brief summary here, but if passed it would result in a system of printing and distribution which would save the government vast sums of money and give better service to the public through libraries and otherwise. It is unlikely to be pressed at the present session of Congress, but it is to be hoped that at the next session it may come up for action and at that time may have the full and active support of librarians.

One of the most important subjects at the meeting of the Trustees Section in Washington, which was the best meeting the section has held, was the relation of libraries to civil service examinations and methods. Mr. Jennings, who has had hard experience in Seattle, reported as the general feeling of libraries that they were hindered rather than helped by civil service examinations conducted by state or municipal boards. This almost goes without saying, and yet this is no reason why libraries should be freed from coördination with the official boards, which in turn should take the sensible course of permitting the library, under proper safeguards, to make its own examinations and rules, subject to official approval. Without this precaution there will be an inevitable tendency to return to the old methods of patronage and "push"—the horrors of

which are little known to the present generation. It is unfortunate that the laws in several states and cities require preference for local candidates. Local candidates will be preferred, naturally enough, when they are on equal terms with candidates from outside; but nothing should stand in the way of accepting the best service from whatever source it is procurable. This is especially necessary in the higher posts if the library profession is to remain a profession. There should, therefore, always be protests against the inclusion of a provision for local preference in any law, beyond a proviso that in case of equal rank, the local candidate shall be preferred—which latter is most sensible and safe.

At the initial session of the League of Library Commissions at Washington, President Bingham, of Iowa, contrasted the real work of these commissions with the notion held by some legislators that they consisted as a rule of an over-paid woman executive and several male members who were paid only junketing expenses. This last conception could scarcely be more wrong than it is. The state library commissions have been one of the most serviceable agencies in library progress, and they have enlisted the service, absolutely gratuitous as a rule, of some of the best and busiest men of the community. Wisconsin has, of course, been notable in this respect, but in Massachusetts, Iowa, and other states the record is equally clear and the results not less satisfactory. The commissions are the chief means of co-ordinating work within the state, and they should also be the means of co-ordinating the efforts of the several federal authorities in library work. In the current endeavor to abolish unnecessary boards, in the interest of economy and efficiency, it is to be hoped that the library

commissions which are doing their own work in their own field in the best way should be spared their separate executions.

Careful attention was given at Washington to the question of the postage on books, but the scheme for a separate "library post," as distinguished from the parcel post, did not command general support. The fact is that the parcel post with some modifications, especially the reduction of the cost for the initial pound, is of the greatest service to local libraries, and there is danger that pressure for a "flat rate" which would be equally advantageous throughout the country, would militate against the present low rate within the first zone with its radius of 150 miles, which is much to the advantage of the local library in developing service to the neighboring rural community. For this reason, after consultation by the A. L. A. authorities with the post office authorities, the Council confined itself to specific recommendations rather than to any sweeping plan. It is understood that no changes will be made in any direction at the present session of Congress or by the department until the results of the present fiscal year are determined and it is known how large or how small the surplus will be. There is every disposition on the part of the postal authorities to treat the library interests not only fairly but liberally and to lend a willing ear to any recommendations from the American Library Association which are within the possibilities. It would seem that local libraries have not yet developed to the full the advantage of parcel post rates, which on rural free delivery routes permit the collection as well as the sending out of book parcels. The present methods should be utilized to the utmost, and after this, further postal progress will doubtless be had.

The emphasis of the conference was on library extension, and especially in two direc-

tions, among the immigrant population and throughout rural communities. What Mr. Carr said on the one topic and Commissioner Claxton on the other found a special response in the meetings of the Children's Librarians Section, always one of the most popular features of the meetings. Mr. Carr's address excellently complemented what Mary Antin said at the Kaaterskill meeting, and librarians know well that their most promising clientele is among the rising generation, whose fathers and mothers have come from across sea, even though far from kin to those who still call themselves Anglo-Saxons. Commissioner Claxton pledged the Bureau of Education in no uncertain terms to the treatment of the library as on a par with the school as a means of education throughout the country, and especially he advocated the development of what is known to librarians as the Hagerstown idea, of making a library at a county seat pervasive in its influence throughout the county. This is now made much more possible by the parcel post inclusion of books. California has adopted this system through half the counties in the state, but though Commissioner Claxton's idea is not as novel as he thought it, his vigorous emphasis gave it new importance. He has always a telling way of putting statistics in a new light, and pointed out that of the 109,000 waking hours of life up to the age of twenty-one, only 9,000 could be applied, and only 5,000 on the average for the city and 4,000 for the rural child are actually applied to schooling. He illustrated luminously how advantageous was the field of the library in respect to child development. He emphasized equally the fact that older people, especially of the immigrant class, could be reached by the libraries as they could not be reached by the schools, and late as was the hour at which the Tuesday evening meeting terminated, his telling address evoked applause, which showed how thoroughly and heartily his auditors appreciated his pledges of support and co-operation.

SOME RECOLLECTIONS OF THE BOSTON ATHENÆUM, 1861-1866

BY WILLIAM I. FLETCHER, *Librarian Emeritus of Amherst College*

THE reconstruction, now going on, of the Boston Athenæum, recalls very vividly some of my early experiences in its hallowed precincts, and thus reinforces Mr. Bowker's request that I write out, for the *LIBRARY JOURNAL*, some of my recollections of early days in library work. In attempting to do so I must file a caveat, for I have not a retentive memory and have never kept a diary, hence my reminiscences will be rambling and will not be reliable sources of library history.

The Athenæum building was occupied, in an unfinished condition, in 1849. Additional funds having been raised, the building was completed in 1851. It must have been in that year that I was taken by my father to see the famous "Sumner staircase" while the stairs were being put in. The building, with this special feature, was a wonder in the Boston of that day, and the seven-year-old boy, holding his father's hand, shared, to some extent, in the latter's admiration. Forty years later I also shared "the never-ending sorrow of the Proprietors" (to quote Mr. Bolton) when it was found necessary to devote to an iron stack the space—nearly one-fourth of the whole building—occupied by this beautiful staircase. During my five years' service in the Athenæum it was my daily uplift in more senses than one, and I could well understand how Charles Sumner, for whom the staircase was named (as a member of the building committee he introduced this feature), could say of the Vatican stairs by Bernini, on which these were modeled, "They were stairs of such exquisite proportions that you seemed to be borne aloft on wings."

Twice during the 'fifties did I revisit the building; once with my father again to see the Nineveh tablets, which on their arrival in Boston were set up in the vestibule of the Athenæum for a short time. Again my juvenile interest was stimulated by the keen satisfaction of my father in looking

upon these cuneiform records. A few years earlier he had lectured on "Ancient methods of writing" before the Mechanics' Institute of Burlington, Vt., where he was at that time "Printer to the University of Vermont," but had lacked the material later provided by the discoveries of Layard and Rawlinson.

My other early visit to the building was less pleasing to me, and furnished evidence that the "modern library spirit" had not yet permeated the institution. Living in the suburbs (at Winchester), it was, to my older brother and myself, the favorite way of spending a holiday to go into Boston, often walking one way to save the fare, and to stroll about town to see the sights. Wandering in this way one day we passed the Athenæum, and my brother "dared" me to go in. Not to be stumped, I opened the door and stepped timidly into the vestibule. Presently appeared a man who seemed to belong to the place, of whom I asked if boys would be allowed to come in to see the building. His frigid reply, "Not a step inside the door!" sent me packing and, I am sure, helped make me a lifelong advocate of a hospitable atmosphere in libraries, especially for the small boy! It was not many years before I found that this Cerberus of mine assumed in this case a "little brief authority" which was not really his.

In 1860 this same brother of mine entered the Athenæum service as apprentice through the intervention of our pastor, who was a friend of Mr. Poole's, and in the fall of 1861 I was received in his place when he went into the army in the Twenty-fourth Massachusetts regiment. My preparation for library work had been desultory but not wholly inadequate. My formal education was interfered with by ill-health, so that I had not quite finished a high school course and despaired of continuing study. But at this time I had picked up physically by outdoor work, and gained steadily after beginning in the library. I

had got some knowledge of books and of rather primitive library methods by serving as assistant and then as librarian for two years of the Winchester town library, which by that time had grown to about 2000 volumes. But a much wider range of literature had been opened to me through my habit, on those strolls about Boston streets to which I have already referred, of browsing in the second-hand bookstores on Cornhill. Burnham's especially was my delight, with its four stories crammed with books of "all sorts and conditions," except that there was no great display of choice and expensive works. "T. O. H. P." earned my heartfelt gratitude by allowing the repeated and prolonged incursions of such an insignificant non-purchaser.

As I was to be at once put in charge of the delivery desk, it was important for me to become familiar with the location of the books, and Mr. Poole told me to devote two days to that object, inspecting the shelves in due order. The library then had about 75,000 volumes. It was notably strong in the fine arts and in literature, including history, biography and travels. At that time science, as in other libraries, had only a small place, and the same was true of the social and political sciences. This was my first contact with library classification, and I was struck with admiration at the orderliness and simplicity of it all. What had seemed like a wilderness of books resolved itself into a system readily grasped and held in mind, and I felt very soon that I could find almost any book by its class and subdivision. The classification was what would now be regarded as crude, but it served its purpose very well. The books were arranged on the "fixed location" plan, each volume being assigned to a certain shelf and bearing the number of that shelf. The shelving was arranged on the principle set forth in Dr. N. B. Shurtleff's "Decimal system for libraries." There were, or were supposed to be, ten tiers of shelves in each alcove and ten shelves in each tier. The alcoves, of which there were, fortunately, just twenty-six, were designated by the letters of the alphabet. The shelves were all movable, being supported at each end by slats engaging in ratcheted uprights, the notches an inch apart. Dr. Shurtleff

advocated fixed shelves at graded distances apart, so arranged that the horizontal lines of shelving would be continuous from tier to tier and from alcove to alcove around the room in order that the library might present a pleasing appearance. The shelves in the Athenæum were set for the most part on that principle, but their movability was often taken advantage of in the interest of better classification. I suppose Dr. Shurtleff's ideas were carried out in the Public Library's building on Boylston street, 1858, as his influence was paramount there, all details of management being put in his hands by the board of trustees, of which he was from the first a member. His book, a handsome quarto volume published in 1858, is very interesting reading now, as showing how far "librariology" has traveled in a half-century. Certain it is that classification was sufficiently interfered with by the "fixed location" in the Athenæum. If the Public Library had also immovable shelves, the classifier's lot must have been a hard one!

If my recollection is not at fault, the books had no individual numbers. A book was in its right place if it was on the shelf to which it was assigned, one advantage being that a neat appearance could be given to the shelves by placing the books on each one so that from left to right they ran from larger to smaller. Books drawn were charged by title in a large ledger.

There was a card (or slip) catalog of an archaic type. Under the counter on its back side was a long shelf of ostensible volumes, about the size of those of the *Encyclopædia Britannica*, which were, however, only wooden boxes made in close imitation of books, with rounded backs duly lettered. You had only to pull out the appropriate "volume," lay it flat on its back on the counter, release a spring catch and throw open the cover, and presto! you had a tray of slips in alphabetical order. I regret that my recollection of the interior of this catalog is but vague. My impression is that it dated back to the early years of the library and covered the entire collection, but with a great lack of uniformity and precision of entry. After I had been two or three years in the library, Mr. Poole had these slips put into a case of drawers,

and did a good deal to improve this catalog.

At the same time there was the manuscript, in the form of slips pasted at the ends into large volumes, after the British Museum fashion, for the proposed printed catalog. This manuscript was, in 1861, supposed to be about ready for the press, but was undergoing final revision. Mr. Charles Russell Lowell, brother of James Russell, was conducting the work, assisted by two young women, one of them Miss Mary A. Bean, afterwards the well-known librarian of Brookline, Mass. When Mr. Poole became librarian of the Athenæum in 1856, he at once set to work to get out a printed catalog, and in the sketch of the library which he contributed to Guild's "Librarian's manual" in 1858 he said: "A catalogue of the library, similar in plan to that of the Mercantile Library of Boston, . . . is in preparation, and will be published during the coming year." Mr. Poole had himself made and published the Mercantile Library catalog during his three years there, and it became a model very widely followed for many years. There is no more interesting and instructive chapter in American library history than that of this Boston Athenæum catalog; of how it was held back for improvement, passed out of Mr. Poole's control, was subjected to higher and ever higher standards of thoroughness and excellence, and finally appeared, under the admirable editorship of Mr. Charles A. Cutter, who had succeeded Mr. Poole, in 1872-82, in five large volumes, a genuine marvel of fulness, accuracy, and bibliographical scholarship. The story is pretty fully told in the note appended to the last volume of the catalog; but with all its financial implications, it never has been and probably will not be. The expense, beyond what it would have cost to make and keep up a first-rate card catalog, was, from first to last, enormous, nor can it reasonably be justified on any pretense of a commensurate advantage to the library or its users. It is a monumental achievement in bibliography, and has been, as it always will be, of great use to other libraries and to individuals outside, but for the Athenæum itself it was decidedly a losing venture.

It is worthy of mention here that Mr.

Poole, becoming, in 1869, librarian of the Cincinnati Public Library, brought out in 1871 a printed catalog of that library in a large octavo volume of 644 pages, covering 30,000 volumes, as against the Athenæum's 70,000 in 1858. And this was a good enough, serviceable catalog until the growth of the library called for a new edition in 1881, and had not cost so much as to make a new edition hopeless.

It is stated in the history of the Athenæum catalog appended to the last volume that in its early days it suffered from the unintelligent work of certain inexperienced young men who were allowed to try their 'prentice hands on it, and who naturally rushed in where angels fear to tread, producing results which vexed Mr. Lowell's righteous soul when he had them to lick into shape. It might very naturally be inferred that I was one of those young men; especially so (as I flatter myself), when Mr. Cutter remarks that one of them later attained some eminence as a librarian. But even with that flattering unctio I must in all truth plead not guilty. Neither I nor my brother, who, as I have said, was my immediate predecessor, was honored with a chance at catalog-making. In our day Mr. Lowell was already at work, and the nameless young men had passed into history. I write this word of self-vindication with the greater eagerness from having perceived that these same young men are again pilloried in Mr. Bolton's beautiful volume, "The Athenæum centenary."

As I look back it seems to me that the Athenæum (and I should say the same of the Public Library, where Prof. Jewett had been in charge for three years) was pretty well administered in 1861, with the beginnings of the A. L. A. and of the LIBRARY JOURNAL fifteen years ahead. The assistant librarian was Mr. Wm. J. Adams, a most estimable man who had been a school principal in Boston until the failure of his health in certain respects made the library work better adapted to him. He wrote a beautiful hand, and the accession book, which he kept, was a marvel of neatness and accuracy. He shared with Mr. Poole the ordering and purchase of books. There was an intelligent janitor, who handled the books coming in and turned them over to

me at the delivery desk, it being my duty to collate each volume, cut the leaves if needed, and otherwise prepare them for cataloging. We used an embossing stamp for the title pages. I could do this work in the intervals between customers, as most of our patrons went to the shelves and got their own books, taking little of my time. I think Mr. Poole bore in mind the Scripture injunction, "Thou shalt not muzzle the ox that treadeth out the corn," for, though his desk overlooked mine, I felt quite at liberty to take toll from the grist which passed through my mill, and was able to snatch a good deal of desultory reading. More than once it happened that some reader returning a book would ask if I had read it, and when I said no, would speak of some special passage as particularly good, to which I would have to reply: "Oh, yes; I saw that when I collated the book." It will be seen that I was in an enviable position in those days, when I mention that nothing was more likely to interrupt my toll-taking than a spirited talk between Julia Ward Howe and Ralph Waldo Emerson, or other equally interesting people, meeting casually before the desk. But my purpose is to make this paper rather strictly librariological (consult Dana), hoping at another time to indulge in some reminiscences of the people who frequented the Athenæum at that time.

There were simple shelf-lists by which the shelves were read annually, the library being closed for that purpose and for cleaning three or four weeks in August. Most of the details of these processes have escaped my memory, but I know that we dusted the books by striking two together smartly, one in each hand, not being worried by the fact that much of the dust found its way back. I remember that I was one day making awkward work of slapping together some large quartos when Mr. Poole came along and undertook to give me a demonstration. He brought two volumes together with a good whack, but as they did not meet quite fairly they caromed on each other and slid far across the floor in either direction. I was speedily left to my own devices!

I was brought into touch with an earlier era by the occasional visits of Mr. Poole's

predecessor, Mr. Charles Folsom, whose venerable and benign appearance I distinctly recall. His sensibilities were doubtless shocked as he found two or more women employed in the library, and an increasing number resorting to it as readers; for, as is set forth in the Athenæum centenary volume, he had been a strong opponent of the feminization of libraries. When, during his administration, it was proposed to admit women to the staff and as readers, he addressed to the trustees a protest in which he objected on the ground that the structure of the building, with its narrow galleries and steep staircases, should "cause a decent female to shrink," also averring that no "modest young woman should have anything to do with the corrupter portions of the polite literature," and that the proposed innovation "would occasion frequent embarrassment to modest men."

But Mr. Folsom was, for his day, an able and efficient librarian, being highly complimented as such in Prof. Jewett's "Notices of public libraries," 1850.

My service in the Athenæum continued from 1861 to 1866, barring three months in the summer of 1864, when I became a member of the Sixth regiment, Massachusetts Volunteers, on its re-enlistment for one hundred days. After that time spent in guard duty about Washington to relieve seasoned troops that they might take the field, I returned to the library with great zest, my place having been kept for me. These five years were for me both an apprenticeship and a liberal education. Dr. Poole was everything that was kindly and stimulating, and I had no other ambition than to become, like him, energetic and resourceful, able to mark out my own path guided by the light of common sense. In this sentence I have perhaps given a hint of Mr. Poole's way of dealing with his subordinates, which was to set them at a task with a fair amount of instruction, and then leave them to show what was in them. He won the loyal affection of us all by showing a personal interest in us, and by trusting us to do our best without close supervision. A high sense of honor was a leading feature of his character, as is shown by his literary criticism, with its scorn of all insincerity and lack of candor. In this con-

nection I am drawn to introduce an anecdote quite outside all librariological interest. Mr. Poole lived at Melrose, a few miles out of Boston, and on the train going out one evening he fell in with Wendell Phillips, who was to lecture in Melrose that night. He welcomed the opportunity to set the lecturer right as to a story derogatory to Lincoln, which he had been telling in this lecture. He gave Mr. Phillips positive evidence, derived from Mr. Gooch, the local member of Congress, that there was no truth in the story; he was therefore quite taken aback when he heard it repeated in the evening with no hint of its discrediting. When Mr. Poole told of this the next morning it was characteristic of him that the thing uppermost in his mind was wonder that a man could do such a thing. It was largely by such glimpses as this of his moral instincts that he influenced us toward integrity and high-mindedness.

Of course such a man was an ardent patriot. At the outbreak of the war he joined a rifle club, and attained high rank as a sharpshooter, holding himself ready

to enter the army if the call came which such as he, with a young and growing family, should heed. His heart was with the army all the time, and he was a loyal supporter of Lincoln, when many were more than doubters.

In Mr. Lowell I had a guide to the mysteries of cataloging, and one who took a kindly personal interest in helping me to a knowledge of the bibliographical apparatus, and an understanding of the catalog rules and precedents which were then being accumulated as the work on the new catalog proceeded. These rules and precedents formed the basis of Cutter's Rules for a dictionary catalog, but in my day had not had the benefit of Mr. Cutter's marvelous gifts in codification and elucidation.

The educational value of these years was partly in the intimate contact with a large library of the best books, but perhaps more in being associated with the people who constituted the *clientèle* of the Athenæum, including so many who made the mid-nineteenth century illustrious in American literature. It was indeed a rare cultural opportunity.

A LIBRARIAN AT THE LEIPZIG EXHIBITION*

BY THEODORE W. KOCH, *Librarian, University of Michigan.*

LEIPZIG originally owed its prominence to the fairs which made it commercially one of the most important places in Europe. As the oldest and most prominent book-trade city, it was selected as the site for the first International Exposition of the Book Industry and Graphic Arts. The unity and esprit with which all those interested in the book trade worked together proved the wisdom of having selected Leipzig as the place for holding such an exposition. The unexpectedly large participation on the part of foreign governments substantiated this opinion in favor of Leipzig. Without the co-operation of men of science, the help of the German and foreign governments, and the city of Leipzig, the Exposition could not have been brought about.

To make it both pleasing to the eye, as well as instructive and inspiring, were the first requisites. Alongside the group of industrial exhibits are historical and technical

groups in which the development of special branches and the technical development of each process can be studied by means of models and machines in operation.

The Exposition is naturally cultural in nature. The promoters aim to have it give a clear picture of the international culture based on the art of writing and printing, a view of the book trade as a carrier and purveyor of the cultural ideas of mankind. The Exposition tries to show that writing and printing not only preserve, carry into the world, and distribute these ideas, but that they are closely connected with science, art and literature, with the culture and civilization of the whole human race.

What does the average man know about how a book is made and put on the market? What does the layman know of the economic importance of the book trade and its geographical and commercial connections? What does the man on the street know

* Mr. Koch's official report on the opening of the A. L. A. exhibit at Leipzig will be found on p. 591-596.

about printing or prints? How many can tell a lithograph from a zinc cut, or distinguish a copper-plate from a wood engraving? To give information on subjects of this kind, to portray some of the pertinent facts graphically, and to inform the public as to the history and present status of the book industry are the objects of the International Exposition of the Book Industry and Graphic Arts. There is much for the general visitor as well as for the specialist, be his line paper, printing, book-binding, publishing, the selling of books, some phase of the graphic arts, or librarianship. The Exposition is officially divided into the following groups:

1. Free graphic art.
2. Applied graphic art and the book arts.
3. Instruction (organization of educational institutes and schools for the book industry, photography and the graphic arts).
4. Paper manufacture.
5. Stationery and writing materials.
6. Manufacture of colors.
7. Photography.
8. The technique of reproduction.
9. Letter-cutting, type-casting and allied industries, stereotyping and electrotyping.
10. Printing processes.
11. Bookbinding.
12. Publishing, retail and commission book trade.
13. Newspaper and intelligence department, methods of advertising and canvassing.
14. Libraries, bibliography, bibliophilism and book collecting.
15. Machinery, apparatus, materials and implements for the entire printing industry.
16. Measures for the protection and benefit of artisans in these industries.

The above-mentioned groups are further subdivided into some 63 classes. Each group is arranged along historical and educational lines, so that the layman or casual visitor is given both instruction and inspiration. The development and present status of each branch of the book industry are here so presented and the technical process is brought out in such a manner that they can be generally understood. An ethnographical section is devoted to the productions of primitive peoples. Workshops in

action, models and apparatus for demonstration as well as cinematographic machines awaken the interest of specialists as well as of the public in general. The whole Exposition was planned not as a dead collection of objects but as a living organism, and information is conveyed through innumerable channels. The *utile* is mixed with the *dulce* on every hand. Even the unavoidable side-shows are brought under the influence of the "black art." The program of the moving-picture theatre on the grounds has interspersed with the ordinary scenes such instructive numbers as "How a newspaper is published," "The publication of a book in England," "The progress of a book from publisher to purchaser," "The binding of a book," "The making of a half-tone," and "Color work." The amount of time and thought that must have entered into the preparation of the Exposition as a whole can be conjectured by studying such special exhibits carefully and multiplying the work indefinitely.

The Exposition is popularly referred to as the "Bugra," a word made up of the first letters of "Buch" and "Graphik," the two subjects of prime interest in the Exposition. The best way to see the Exposition is to get a general idea of the layout of the grounds, to take a general tour of inspection at the outset. The ground which it occupies is a plot of 400,000 square metres (nearly 100 acres) a part of the site of the Battle of Leipzig (Oct. 16-19, 1813), in memory of which there was recently dedicated the huge Battle Memorial which one sees from the Exposition grounds. The Street of October 18th, leading to the Memorial, traverses these grounds, and at right angles run the Street of Industries and the Street of Nations. The interest taken in the Exposition by foreign nations is shown in the appropriations made by various governments for their national representation. France voted a half million francs for the erection of its own building, Italy 200,000 lire, Austria 200,000 kroner, Russia the equivalent of about \$65,000, and Switzerland \$10,000.

Much thought has been spent upon the laying out of the grounds. The Street of October 18th is a splendid piece of landscape work, with avenues of spruce and

INTERNATIONAL EXHIBITION OF THE BOOK INDUSTRY AND THE GRAPHIC ARTS, LEIPZIG—RUSSIAN AND ITALIAN PAVILIONS, AND VIEW FROM THE MAIN ENTRANCE

bay trees, sunken gardens and fountains, and pansy beds containing myriads of blooms faultlessly matched. Hedges seem to be made overnight, and one is amazed at the size of the trees that are planted in the ground and thrive afterwards.

As one enters the grounds by the most used gate, he finds himself in the Street of Nations. The international character of the Exposition becomes at once apparent. The first building on the right is that of Russia, with its unmistakable Muscovite architecture. Opposite is the solid looking Austrian pavilion, with its row of yellow and black flag-poles and the striking but not altogether pleasant scheme of interior decoration, which most of us would think too garish as a background for rare books or specimens of modern graphic art.

The British pavilion is one to which the American will turn as to an outpost of his own civilization. It is designed in the style of the Tudor period, the golden age of English literature, and many structural details have been accurately reproduced from existing Tudor buildings. While made largely of staff, there is a suggestion of solidity about the building that is quite British, and its interior is arranged in a manner that recalls the old college libraries of Oxford and Cambridge.

The British exhibit installed by the Board of Trade is a most creditable one. It is under the charge of a special Commissioner, who is appointed by the Exhibition Branch of the Board of Trade. This branch, which has been in existence for six years, had charge of British exhibitions at Brussels, Rome, Turin and Ghent. The British exhibit consists largely of printed books grouped by publishers, examples of printing, binding and illustrations, and a number of loan collections illustrating various branches of English literature and book production. The majority of the big publishing houses of Great Britain have contributed collections of their publications. The American visitor is pleased to note the exhibition of G. P. Putnam's Sons.

The loan exhibits are chiefly of an historical character, the most important of which is a collection of Shakespeariana. This collection illustrates the history of the printed editions of Shakespeare's works

from their first appearance during the lifetime of the poet down to the present day, the period covered being about three hundred and twenty-five years. There are reproductions of the early quartos, the first four folios, and, of course, the chief critical editions from that of Nicholas Rowe published in 1709, to those of our own time. While there has been no attempt to show the variety of languages into which the works have been translated, there are included a number of plays translated into various Asiatic tongues, like Bengali, Hindi, Marathi, Gujarati, Tamil and Urdu, all of which are loaned by the Indian office. As curiosities, there are included Braille editions of King Henry V and of the Sonnets.* The photographs of documents and of scenes connected with the life of the Bard of Avon round out the collection and furnish an admirable setting for the books. The provisional edition of the catalog, which sells for a shilling, gives promise of a final edition worthy of a place on many library shelves. Among the preliminary pages are brief papers on the "History of British publishing," by John Murray; "Printing," by Emery Walker; "History of paper-making for printing and stationery," by R. W. Sindall; and "Wood engraving and process engraving," by Robert Steele. There are interesting notes on the exhibits of books of travel and discovery, maps, illustrated and juvenile books, specimens of types, book bindings and graphic arts.

The French pavilion is a structure typifying the best Gallic traditions, and the exhibit it houses includes many interesting things sent on by the best publishers and by well known printing establishments. The Italian pavilion needs no label to declare its nationality. It is a reproduction of a Florentine palace, and its exterior is covered with frescoes and stenciled designs which attract the eye of the most casual saunterer. The ante-room is fitted up with furniture and book-cases accurately reproduced from an old Italian monas-

*The collection of miscellaneous books printed in Braille, now produced commercially by machinery, will attract the visitor's sympathetic interest. In the Austrian building can be seen specimens of the old German method of printing for the blind. There is a brief chapter on the general subject in the catalog of the section devoted to the "Child and the school," p. 202-204.

tery. Japan's contribution to the Street of Nations is a miniature wood-engraving establishment, where one can see artists from the Land of the Rising Sun carving and inking the wood blocks and pulling the prints.

In addition to the above independent pavilions, there is the Hall of Foreign Nations, where are installed the exhibits from Denmark, Norway, Sweden, the Netherlands, Switzerland and Spain. It is to be regretted that even in this joint exhibition hall there is nothing from the United States. One is tempted to ask whether this non-participation is due to "the self-sufficiency of Americans" or to a lack of national interest in the subjects of the Exposition.

The International Exhibit of Graphic Art, which takes up the major part of the "Halle der Kultur," is arranged by countries, and here one finds interesting supplements to the exhibits in the national pavilions. The inscription at the entrance to this section is striking: "Three thousand years of graphic art in the service of science." Even a hasty survey must impress the visitor with the wealth of the collection. There is something here for every lover of prints, no matter what be his favorite school, artist or medium. The librarian's eye will, of course, detect and linger over Felix Schwormstadt's picture of the dedication of the Königliche Bibliothek, Berlin.

The Hall of the Book Industry is the largest building on the grounds. It consists of two parallel wings, with a connecting corridor. In the eastern wing are the publishers' and booksellers' exhibits, grouped around three open spaces devoted to Berlin, Leipzig and Stuttgart, the three chief publishing centers of Germany. Then comes the section devoted to libraries—first the German libraries and then the A. L. A. section. The space beyond is taken up with illustrated journals, so that on the other side of the A. L. A. party wall we have as neighbors *Fliegende Blätter* and *Lustige Blätter*, the latter with a moving cartoon show. If visitors approach the A. L. A. exhibit from this side of the hall they are sure to be in a good humor, though they may find us over-serious by contrast.

The parallel wing contains exhibits relating to printing, book binding, photog-

raphy and color work. In the connecting pavilions are a series of lithographs, arranged historically, and exhibits from the private libraries of Frau Schoelle and of Emperor William. Here, too, are the musical exhibits, with halls in which free concerts are given on the newest instruments of the automatic type.

The exhibit of the Börsenverein should be of interest to many outside the ranks of booksellers. There are collections of books on the booksellers' trade, specimens of early German book catalogs, and portraits of early printers of different nationalities, among whom Franklin is represented by an engraving after Houdin's bust. The development of printing is portrayed graphically by a selection of illuminated manuscripts, incunabula and a great many specimen leaves illustrating the development of the title-page and the art of illustration. Early Italian and German wood-cuts are shown in great profusion. There are some splendid old bindings and end papers. By way of curiosities, there are a few recent books showing passages blocked out by Russian censorship.

In the "Haus der Frau" there is a special exhibit of woman's work—as writer, librarian, bookbinder, bookseller, typist, journalist, teacher, artist, photographer, and in other callings which stand in close relation to the underlying idea of the Exposition. In this building there is a small exhibit installed by a committee of which the chairman is Miss Martha Schwenke, the daughter of Dr. Paul Schwenke, of the Königliche Bibliothek, Berlin. While women have only recently entered the ranks of librarianship in Germany, statistics show that they are now quite numerous, more than 500 being employed in 100 German libraries. Women with academic training are only in a few cases going into library work. For the lower grades of the service, examinations are provided in Prussia, Alsace-Lorraine and Baden. The completion of the gymnasium course is a first requisite for this career, and this is followed by three years of special training which embraces practical as well as theoretical work. The passing of a state examination has not hitherto been required of all assistants, the attendance at the li-

brary school or practical training having frequently sufficed. It is expected that in the near future non-state libraries will only engage assistants who have received a special library diploma. There is an association of women library assistants with headquarters in Berlin, W., Genthinerstrasse 13.

As the work of library assistants cannot very well be shown graphically to the public, the committee had to content itself with showing a picture of the library school in session, specimens of library handwriting, catalogs of private libraries and of the musical library of a church, done by students, a bibliography of books relating to feminist literature of 1911, and a map showing the German libraries in which women are engaged in both public and scientific library work.

In the Austrian building a special room devoted to library science contains some seventy views of libraries, specimens of forms and catalogs and a remarkable collection of bookplates. The Imperial Library of Vienna has sent a choice lot of books illustrating the history of printing in Austria (on which see the article by Dr. I. Himmelbaur in the Austrian catalog, p. 121-137).

A few minutes should be given to a visit to the "Wandervogel," the artistic home of a society of nature lovers, who have reproduced an old German country house and fitted it up with interesting furniture, handwoven fabrics and specimens of peasant ware of various kinds. There are, of course, books and other printed ware on exhibition and sale here as everywhere. The membership of this society includes a large number of young people of both sexes who, moved by the "Wanderlust," take long tramps, sometimes of several days' duration, and live the simple life. The colors of the house are what might be called in English slang "smashing," but may be thought clashing when seen in close proximity to the grays and drabs of cement and stucco. One would like to see the house re-set after the Exposition has closed—on the edge of a forest or in surroundings sympathetic with the aims of the people who built it.

The old paper mill brought from Haynsburg and set up in the grounds is a novel

feature of the exhibit of the paper industry. Besides operating the mill, the administration has reproduced old workshops where typesetting, printing and bookbinding are done along primitive lines by workmen dressed in the style of the fifteenth century.

The librarian with seeing eyes will find throughout the Exposition many a suggestion for the better display of the books in his own library, possibly for the more artistic arrangement of some of his reading rooms. There are new ideas here in the line of exhibit cases for both books and pictures. The Germans have mastered the exhibition business and are always on the lookout for something new and practical. The various uses made of lantern slides, arranged in a wall screen or in a sloping frame and illuminated by an electric lamp, are surprising and effective. A small bit of stained glass, a mere panel here or there, a copy of an old design in rich colors, set into a larger window, give a certain richness without seriously affecting the lighting of the room.

While the exhibition halls close at 7 p.m., the grounds remain open throughout the evening, when special entertainment is provided for Leipzigers and other visitors, who turn out in crowds to hear the concerts and to enjoy the *Quartier Latin*, the separate "Student Ausstellung" and other attractions located outside the regular grounds. Every one is in gala mood, and under the influence of music and electric lights the entire place develops a new beauty. In a parklike setting of trees, winding paths and gardens filled with shrubs and gay flowers are restaurants, cafes and conditorei with varied forms of amusement. Several evenings a week a display of fireworks elicits the admiration and applause of the crowd.

During the day the Ausstellung is an exposition of the German spirit of work, giving an idea of the tremendous capabilities of these people when in serious mood. The night scene is an exposition of the German spirit of play, forming a nice balance to the scheme as a whole. Indeed, the Exposition of the Book Industry and Graphic Arts would be incomplete without it.

A great book that comes from a great thinker is a ship of thought, deep freighted with truth and with beauty too.—THEODORE PARKER.

CONFLICTS OF JURISDICTION IN LIBRARY SYSTEMS*

BY ARTHUR E. BOSTWICK, *Librarian of the St. Louis Public Library*

At bottom, a departmental system in a large institution is simply an outcome of the fact that its head requires aid in administration. At first, perhaps, he can actually do everything with his own hands; next, he requires helpers, but he can oversee them all; finally, he must have overseers, who are the only ones with whom he deals directly and for whom he naturally classifies the work and divides it among them accordingly. This is not merely a symbolical or fanciful account of such a development. There are plenty of heads of institutions, educational, commercial and industrial, who have personally seen every stage of it—who are now administering a complicated system of departments where they once did everything themselves. In particular, there are now librarians, at the head of great libraries, who began library work by performing, or at least overseeing directly, the elementary acts of which library operation may be taken to consist, and who have watched such a simple system of superintendence develop year by year into something complex.

Such a development, as I have said, is naturally based on some kind of classification. If one could sit down and, foreseeing the growth of his institution for years to come, settle upon the way in which that growth should be cared for, his classification might possibly be more logical and workable than most classifications now are. The best of them are woefully imperfect, as no one knows better than we librarians. And when division into classes proceeds *pari passu* with growth, we are necessarily bothered with that troublesome thing—cross-classification. As our institution grows, one direction of growth and a corresponding set of conditions and needs comes into the foreground after another, and our basis of classification is apt to change accordingly.

In the library, for instance, territorial expansion has frequently claimed the right of way. It has been evident that wide regions within the municipality were not reached by the library's activities; hence the establishment of branches—practically classification on a regional or territorial basis. Next, perhaps, some other need is pushed forward—say, the necessity for special care given to the children of the community. Here is a non-territorial basis for classification, founded only upon the age of the library's users. These are not classes and sub-classes, but are entirely different primary systems of classification, whose dividing lines cross and do not run parallel. A man who should sit down and try to evolve, at first hand, some sort of classification of library work, might adopt one or the other, but not both. In one case he might divide his city into districts, with district superintendents and local librarians under each; in the other, he might divide his users by ages and tastes and have a superintendent for each. In neither case would there be cross-classification, with its overlapping classes and consequent interferences of jurisdiction.

But this is not the way that things work out. The librarian finds it necessary to have his geographical subdivisions and also those based on age, and he adopts others also as they appear desirable, without much regard for the logic of classification. If he does take it into account, he feels that the troubles resulting from conflicts of jurisdiction will be more easily dealt with than those consequent upon a refusal to respond to the present demands of the work. Also—and this is an important factor—conflicts of jurisdiction, no matter how inevitable, are in the future, and the present demands of the work look vastly larger and press with insistence. Is there any wonder that he does what lies immediately before him and lets the future take care of itself?

* Read before the round table of branch librarians at the Washington conference, May 28, 1914.

Unfortunately, the future always does take care of itself very well indeed, and presents itself to demand a reckoning at the appointed time. The library, for instance, that has its branches for different regions and its children's room in each gets along well enough so long as its cross-classification of work exists only on paper. But the time comes when departmental organization must begin, and this must be based on the classification. There may be a superintendent of branches and a superintendent of children's work, or the branch librarians may report to the librarian directly, or there may be other dispositions with other duties and names. In any case, a children's room at a branch library necessarily finds itself in two departments, under two jurisdictions and under two heads. If the branch librarian and the children's superintendent are both yielding in disposition, the librarian may never have the conflict of jurisdiction brought to his attention. If either is yielding while the other is masterful, there will also be no trouble. In one case the branch librarian will run the adult end of her branch and leave the other to the children's department; in the other there will be one branch, at least, where the children's supervisor has little to say—a condition of things that may be tolerated, but is surely undesirable. But suppose that both heads are conscientious, assertive and anxious to push the work, fond of organizing administrative details and impatient of interference. Here we have the possibilities of trouble at once.

The first rumblings of the storm come usually in the form of complaints of interference, on the one side or the other. Then we have a demand from both sides for a definition of their respective rights and responsibilities. The librarian is asked, for instance, in just what respects the children's librarian shall take her orders from the branch librarian and in what from the supervisor. This is a good deal like petitioning the legislature to pass a law specifying exactly when a child shall obey his father and when the mayor of the city. The librarian who enters on this plausible path will sooner or later be lost in the jungle. He has only himself to thank. Either he or his predecessor

started the game and he must play it out to the end. We librarians are all responsible for each other's faults. Let us see how he may play it.

In the first place, his is the power. What is done in any department is done by his orders or by the orders of some one endowed by him with authority to give orders. He has given two persons authority over the same field at one point, and it is his business to straighten things out. Here are some possible ways:

1. The authority of one head may be absolutely extinguished in the field where conflict exists. Here we have legalized the state of things described above as existing with a combination of one spineless department-head and one very spiny one. It works, but at the expense of everything that tends to the efficiency of the extinguished authority, and I do not recommend it.

2. An attempt may be made, as noted above, to draw a line between the two spheres of authority and keep each in its place. This appeals to those who are fond of detail, for it can be done only by considering and ticketing details. A line, defined by some one clear principle, cannot be drawn in a field of this kind between two things both of which logically cover that field. It is logical that the children's librarian in a branch should be wholly under the authority of the branch librarian, since she is a branch employe like the others. It is just as logical that she should be wholly under the authority of the supervisor, of whose department she is a part. If we are to define the things in which she is to obey the one and the other, they must be enumerated one by one. And then other things will turn up that have not been thus enumerated, and we are in trouble again. This plan, as I have said, appeals to those who revel in regulations and specifications, but I can recommend it no more than the other.

3. One department may formally and distinctly be set above the other. Or, what is the same thing, the librarian may resolve, when a conflict arises, always to decide the matter in favor of one particular department. This means, in the

special case that we have been using as an illustration, either that the children's department shall be allowed to do nothing in a branch library without the consent of the branch librarian, or of the supervisor of branches, if there is one; or that all questions involving the administration of a branch children's room must depend ultimately on the chief of the children's department.

This may seem to be the same as the plan by which the authority of one department is absolutely done away with in the disputed sphere. It is of the same type, but not so drastic. In the other plan one has not authority to do anything; in this, one must ask permission—not the same thing by any means. This plan is practically in effect at some libraries; it would probably be regarded as equitable by most department heads—provided their own department were put ahead of the other. The trouble is that it involves an arbitrary subordination—one that does not exist in the nature of the classification. And this subordination is local and partial; it cannot hold good for the whole department. No one would think of placing the branch department, as a whole, under the children's department, or *vice versa*. And the objections, although not so strong as those to the extinguishment plan, are of the same kind. The efficiency of one department or the other is bound to suffer, and for this reason I do not consider this the best plan.

4. All department heads in conflicting spheres, may be regarded simply as advisers of the librarian and not as possessing authority in themselves to give orders. A conflict is thus reduced to contradictory advice from two sources. The librarian then pursues whatever course seems good to him. This plan has attractive features, especially to administrators of the type that like to keep a finger in every pie. There is doubtless danger in aloofness. The librarian must know what is going on, but I see no advantage in requiring him to decide questions of trivial detail at frequent intervals, as he must do under this plan; for conflicts generally begin in questions of detail and it is at the begin-

ning or even earlier, in anticipation, that they must be caught and adjusted. This plan works, but it reduces the department head to a consulting expert and burdens the librarian with detail. It does not appeal to me at all.

5. The two conflicting departments may cooperate, intelligently and courteously without sacrifice of authority or self-respect, under the advice and orders of the librarian.

This is the plan that I recommend. It is the most difficult of all, and no regulations or specifications can be formulated for carrying it out. For this reason it will never be widely in favor. A wicked and rebellious generation demands a sign and in this plan there is neither sign nor formula except that general principle of helpfulness and willingness to place the common whole above the selfish part that is at the antipodes of both wickedness and rebellion. It is a personal matter and it adds one important qualification to those already necessary in department heads—the ability to do team work. This qualification, however, is so important, quite apart from its necessity in connection with this plan, that we may consider it an advantage, rather than otherwise, that the plan puts it forward and insists upon it. On the whole I think that a library with mediocre department heads having this qualification is better manned, and will do more satisfactory work than one with a staff of supremely able experts, cranky, self-centered and all pulling different ways. The efforts of members of a body like a library staff are not to be measured arithmetically—they are what mathematicians call "vectors"—directed quantities, like force, velocity or acceleration. To know where a man will bring up one must have not only his speed, but its direction. The sum of two equal forces may be anything from zero up to their double, depending on their relative directions, and if the sum is zero, no matter how large the components may be, the result is precisely the same as if those components are small, or as if neither existed. It is this sort of thing that an eminent employer of labor had in mind when he advised, "If two of

your subordinates don't get along together, *discharge both* of them, no matter how good they are." In this man's estimation the relative value of team work evidently stands pretty high. I should not follow his advice, however, without giving everyone a fair chance. I have known the opinions of one department head about another and their ability to work together to improve greatly on acquaintance.

The part necessarily played by the librarian in this scheme may be regarded by some as an objection. I have already referred to administrators who, like the late Czar of Russia, prefer to regulate all the details of the kingdom by personal supervision. There is also the precisely opposite type, who like to make a good machine, set it going, and then let it alone. The trouble is that machines will not run of themselves. They need oversight, oiling, cleaning and repairing. The best require a minimum of all this, but all must have some of it. And such machinery as there is in this plan requires a maximum of oversight. It is, however, not the control of details but rather the watching of general methods and results. Is everything running smoothly, without "lost motion" or "backlash," and turning out a satisfactory finished product? If not, can the trouble be located? Yes; these two cogs do not work smoothly together. Let us find out which is at fault and adjust or replace it; but if our investigation is fruitless, possibly the best plan is to discard both.

I trust I have misled no one by treating here specifically of two departments. I might have substituted the names of a dozen others. All through library administration, and especially in the administration of a system of branch libraries, these possibilities of conflict occur. In branches they are generally between the branch administration and the central departments—finance, supplies, cataloging, book-orders, reference and circulation.

The handling of this whole matter depends, of course, on the librarian. He it must be who is to decide on general policies or go to his Board for a decision in cases so important that he feels their ac-

tion necessary. If the work of departments overlaps in some field where the library's policy has not yet been decided upon and defined, he has no one to blame but himself if the adjustment is difficult. And if policies are defined in advance and pains taken to inform department heads thoroughly of their existence and import, the likelihood of serious disagreement will be considerably lessened.

It must not be forgotten, also, that the success of any plan may be increased or diminished by skill, or lack of skill, in handling it.

I am confident that any of the plans about which I have spoken unfavorably above would work better under a good librarian than the best would work under a bad one. But I forget myself; we librarians are like Kentucky whiskey—some are better than others, but there are no bad ones!

OPENING OF THE A. L. A. EXHIBIT AT LEIPZIG

Dr. F. P. Hill, Chairman,

A. L. A. Leipzig Exhibit Committee.

Sir:

I have the honor to report that, pursuant to instructions and according to arrangements made by your Committee, I sailed for Germany on the Hamburg-American liner *Cincinnati*, April 18, with thirty-eight cases in the hold destined for the International Exposition of Book Industry and Graphic Arts. On arrival at Hamburg, April 29, these boxes were shipped by fast freight to Leipzig and reached the Exposition grounds May 3 and 4.

The exhibit was planned to form a section of the division of libraries in the large hall devoted to the book industries. The space allotted to the A. L. A. is of generous size, running from east to west and measuring approximately 97 x 23 feet. To the south of the A. L. A. space is a booth occupied by the Prussian state libraries, under the charge of the Royal Library of Berlin. Another adjoining booth, installed by the Library of the University of Leipzig, contains a charging desk and shows the system in use at the University Library. Nearby are a model of the Leipzig University

Library building and numerous pictures of various public and university libraries throughout Germany. Show cases contain some interesting books from these libraries, and there are special exhibits of the "Leipzig Workmen's Library" and of the "indicator" in use at the public "Bücherhalle" of Hamburg.

The A. L. A. space is divided north and south by three aisles,—a center one, three metres wide, and two side ones, each two metres in width. This divides the center exhibition space into two side booths, 7 x 4½ metres, and two center ones, 7 x 6 metres. The height of the walls dividing our space from that of our neighbors is about 2-3 metres, but several of these party walls are higher owing to the requirements of exhibitors. These walls are on an average about one metre higher than anticipated by the A. L. A. Committee, and, consequently, that much higher than the screens sent over from the United States. The latter, however, are very satisfactory for subdividing the space into smaller sections, though only a few of these screens have been put up as yet since the entire shipment of mounts has not been received up to date.

At the request of Dr. Boysen, chairman of the committee on the library section, we agreed to omit one of the party walls, 6 metres wide, so as not to obstruct the view of the three-story Lipman stack put up at considerable expense by the manufacturers, Wolf, Netter & Jacobi of Berlin and Strassburg. The Lipman stack is of bracket construction and is the one used in the new building of the Royal Library at Berlin. Visitors stop to look at the stack, which looms up rather high in the hall, and they incidentally see the A. L. A. exhibit. The shelves of this specimen stack are well filled with books from the University of Leipzig Library, and so indicate rather neatly to him who runs, the fact that he is running through the library section. In return for our waiving the right to a dividing wall, our neighbors allowed us the use of two stacks, one metre in length, one double faced (which shelves the majority of the children's books), and the other a wall case (which accommodates the miscellaneous publications sent over by various libraries).

As the freight shipment reached the exhibition hall only 48 hours before the official opening of the Exposition, scheduled for Wednesday noon, May 6, no time was to be lost in making something of a showing. As soon as a few boxes were opened a temporary arrangement of material was made so as to show to the best advantage from the center aisle down which was to pass the procession of inspectors headed by his Majesty King Frederick Augustus of Saxony, under whose patronage the International Exposition was to be held.

The trials and tribulations of those first two days need not be recounted here. Confusion reigned throughout the grounds. Hundreds of teams were coming and going, shipments were being left at the wrong halls, boxes were being searched for wildly, and a babel of strange and excited voices was heard on all sides. We were fortunate in being able to keep our collective shipment together. There being no artificial light in the hall, we were forced to rent a big acetylene lamp the night before the opening so as to finish our installation in time. Exhibits that were not ready were to be curtained off, as the King had said at the Architectural Exhibition of last year that he did not care to come up to Leipzig simply to see a lot of packing boxes,—and we had not come over from America to hide our light behind a curtain on the opening day. By pressing a number of laborers into service and getting a volunteer from the local public library, we made quite a brave showing by Wednesday noon. At a quarter to twelve your representative laid aside his three-fold part of carpenter, decorator, and chairman of the hanging committee, and with the aid of a sprinkling can made a hasty toilet and under cover of some of the above mentioned screens, got into a dress suit. Dressing in a Pullman berth is the height of luxury and ease in comparison to preparing for a reception behind a lumber pile in an exhibition hall, where a crowd of people are excitedly and momentarily expecting the arrival of their king.

At high noon your representative was standing in the center aisle, fairly properly attired, and there was a tension in the air indicating the approach of the King. There were subdued whispers of "Er kommt! Der

A CORNER OF THE A. L. A. EXHIBIT AT LEIPZIG

König kommt!" Down the aisle came a squad of police to clear the way and keep the people back at a respectful distance. Your representative was requested to stand out beyond the line a bit so as to indicate his official position in case his dress failed in this respect. Dr. Volkmann, the president of the Exposition, preceded the King and explained the nature of the various exhibits. When the royal party arrived at the A. L. A. exhibit, Dr. Volkmann presented me to His Majesty and said that I could explain the American exhibit. The King inquired about the Library of Congress and the New York Public Library, pictures of which were in evidence on the walls, and asked whether we had the same library system in America as they have in Germany. The question was a little vague, but the answer, whatever it was, seemed to satisfy the questioner. No sooner had the procession passed than I became conscious of the fact that, in replying, I had not once made use of the phrase "His Majesty." One's *esprit d'escalier* always comes out on an occasion of this sort. I apologized to one of the officials for my democratic manner in talking with the King, and was assured that I need not be concerned about it, as the King was himself very democratic in his ideas.

I was invited to the "Salamander" with which the special Student Exposition was officially opened that same afternoon. This was presided over by the King and was a gay and joyous out-door affair. There were large delegations from student organizations all over Germany, and the bright, variegated uniforms, with the little caps and clanking swords, made a sharp contrast to anything ever seen on an American college campus. The drinking of toasts was a most formal matter. The singing was very spirited, even though many lagged behind time in a truly laughable manner. Apparently "Gaudeamus igitur" is sung more slowly in some parts of Germany than in others.

At the evening reception a high official of the Exposition came to me and expressed the hope that I appreciated the honor of having been presented to the King. I assured him that I did. He then informed me that in arranging for this it was in-

tended to honor America, and I was asked to notify my fellow-countrymen of the fact.

Since the opening we have been busy with the rearrangement of the exhibit occasioned by the arrival of seven cases of Library Bureau furniture and a case of books for the Children's Room, and additional material from the Library of Congress. We are still awaiting a large number of photographs and mounts for use on the walls and screens.

The exhibit from the Library of Congress occupies the western booth, and consists of eleven large framed pictures of the building, a collection of the Library's publications since 1897 and a 90-tray catalog cabinet containing both the dictionary and systematic catalogs of the bibliographical collection in the Library of Congress. In the installation of this exhibit, as indeed in the work of the entire opening month, we were fortunate in having the assistance of Mr. Ernest Kletsch of the Library of Congress staff. On the wall is a large statistical chart showing the growth of libraries in the United States from 1875, 1885, 1896, 1903 to 1913. In the center of this booth is a model of a typical small branch library building showing the arrangement of reading rooms and delivery desk to admit of easy supervision. This is mounted on a platform 3½ feet high, draped with a large American flag loaned by the American Consulate. The model has attracted a great deal of attention and is especially instructive, as there are in nearby spaces models of Assyrian, medieval and eighteenth century libraries, the new building for the Biblioteca Nazionale Centrale, Florence, and also the reading room of the new Royal Library at Berlin, and the close proximity of these models affords the public an opportunity to contrast these different types of libraries.

The Library of Congress exhibit has attracted a great deal of favorable attention. Many visitors were already familiar with one aspect or another of it. It is famous here for the modernity of its system and the liberality and excellence of its administration. The large framed views of the building were much admired, and the reading room was compared with that of the Königliche Bibliothek, Berlin, which it re-

sembles somewhat closely. The card catalog of the section devoted to bibliography called forth a number of questions as to the L. C. classification in general, its application to special fields of knowledge, comparison with the decimal classification, comparison of the printed cards with those of the *Königliche Bibliothek*, which are distinctly inferior to the L. C. cards. The ninety-tray cabinet containing the L. C. catalogs was frequently contrasted with the German make to the advantage of the American original.

The director of the Leipzig City Library detailed an English-speaking assistant to file cards and learn about the L. C. system, with a view to introducing the card catalog system into the City Library. A philologist to whom was entrusted the reclassification of the literature section in a public library found the printed schedules of classification so satisfactory that he wanted to use the schedule for literature as soon as issued. The secretary of a series of workmen's libraries became much interested in the card system and hoped to be able to use the L. C. classification in classifying the books on their shelves. The director of an art library wanted to know to what extent the L. C. classification could be used in his own library, and upon looking over the scheme for art he thought it quite full and satisfactory. The representative of a musical journal admired very much the publications of the music division, and said that he was quite unaware of the splendid opportunities in this line in the L. C. In fact, he had not thought it possible to do such work in the United States. One medical man was interested in the possibility of using the L. C. cards for cataloging a large private library, and another physician, an American, said that until he had had the opportunity of studying the L. C. system as shown in Leipzig he had no idea of its excellence, and that upon his return to the United States he would make an early pilgrimage to Washington to learn more of the national library. Librarians of a technical high school in Munich and of a commercial high school in Nagasaki inquired as to how L. C. cards could be applied to their needs and how card catalogs could be started. Another librarian saw specimens of photostatic work done

in the L. C. and was interested in comparing them with similar copies done by a German machine.

An Austrian archivist was interested in the possibility of using a card system in cataloging archives, and said that he hoped to see the day come when there would be an international code of catalog rules and an international exchange of printed catalog cards. He thought that the *Deutsche Bücherei*, which since Jan. 1, 1913, has been receiving a copy of every new book printed in Germany, might require of every author whose book was deposited, co-operation to the extent of filling out a blank giving full name, date of birth, title and subject of book—all information helpful in cataloging. A German librarian requested a copy of the A. L. A. catalog rules in order to incorporate into his own new rules the points in regard to author entry, size, collation and other features in which the American code is more specific than the German practice.

The eastern end of the A. L. A. space is given up to the exhibit of library work with children, in which the visitors have shown a very lively interest. Reading rooms for children are hardly known in Germany, though beginning to be well known in Vienna. About two hundred juvenile books are exhibited on shelves, and those with the most attractive illustrations are spread open on exhibition ledges or on the small tables of two heights sent over by the Library Bureau. These tables, with the chairs to match, call forth the warmest admiration. Many school children look admiringly at the furniture and linger over the books as well as over the photographs of scenes in various children's libraries that cover the walls of the booth. The illustrated books are much admired and fond mothers have wanted to buy some of them to take home to their own children. Surprise has at times been expressed that we neither sell nor take orders for material exhibited here.

Children ask questions about the Indians they see pictured in Deming's "Little Indian folk." Even the one lone Indian on the back of Willson's "Romance of Canada" called forth a series of questions from one boy as to how many Indians there were in

America, whether they were very bad, and whether they were to be found in every city. He said that he had seen one in a circus. As a special mark of appreciation this lad promised to return later and show us his English school book. Every juvenile visitor agrees that a special reading room for children must, indeed, be "sehr schön."

The major part of the center booths is given up to the work of public libraries, college and university libraries and library architecture, with special exhibits on cataloging and binding. Samples are exhibited to show methods of reinforcing books in publishers' bindings, morocco and pigskin backs, the use of Keratol cloth and Holliston buckram. The Trenton winged cabinets have attracted a great deal of attention, possibly more on account of the mechanism than because of interest in the subjects illustrated. The Germans are always on the lookout for something practical, and we have frequently been asked whether we could sell one of these cabinets after the Exposition closed.

We had some experiences which may be helpful in arranging for the San Francisco exhibit.

First, as to labels. There can hardly be too many of them. To paraphrase a well-known saying about museums, an exhibition is a collection of carefully prepared labels adequately illustrated by correlated objects. The Germans placard everything. Go into a street car, and you see one sign calling attention to the law in regard to unprotected hatpin points and another informing the traveling public as to how much damages are to be paid for the breaking of the different sized panes of glass, lamp chimneys or electric light bulbs. Labels should be in several languages, including the vernacular of the country. Signs in English only may be helpful as exercises on which Germans can try their linguistic skill, but in many cases they fail to convey fully and clearly the desired information.

Thanks to our neighbors, we secured German labels for the table exhibits reading "Please do not disturb" and "Without permission nothing is to be removed, not even circulars." It was found necessary throughout the exposition to protect exhibits in this way. From the model of the Assyrian Library one of the little figures had been

removed, and from a publisher's booth a set of an architectural journal had been broken into. Volumes 5, 4 and 3 were taken in succession by some one who believed in beginning at the end, but appreciated the value of completeness. We caught one man in the act of removing a book from the children's section, but were less fortunate in the case of the person who took a fancy to Mrs. Julia Cartwright Ady's "Pilgrim's way from Winchester to Canterbury." The volume, which was the first item in an exhibit showing the history of a book from the first stage of book selection through the processes of ordering, cataloging and preparing for the shelves, was taken with item 9 of this exhibit, *i. e.*, the book pocket.

One Pittsburger who looked in on us said that as he came down the long hall lined with booths most attractively furnished with couches and curtains to the plainer part devoted to libraries, he thought that he must be coming to the American section—it was so bare in comparison. The German exhibitors certainly gave a lot of time and thought to their displays. Being not only trained to this sort of thing, but also at home, they could afford to indulge in attractive fittings which could be utilized after the close of the exhibit. A corresponding treatment of the A. L. A. space would have been almost prohibitive. If more furniture had been brought from the United States the expense would have been much greater, and if bought here it would have had to be sacrificed at the close of the exhibit.

The sound of the hammer is still heard on all sides. Some buildings like that of Russia have just been roofed in, while another pavilion has just been begun. Others are provisionally open an hour per day. Many doors are still marked "Geschlossen" or "Kein Eingang." Trees and hedges are being planted and lawns made. There are beautiful parterres of luxurious flowers down the main avenue and the landscape setting is most delightful. By the time the various A. L. A. parties arrive in midsummer the Exposition will be at its height and the unfinished look of the first month will be a thing forgotten. The richness of the exhibits in the different fields of book-making and the graphic arts will be found

surprisingly well set forth in many buildings and in exhibits from many lands. We hope that the regret of the American visitor in finding that his own government took no official part in the Exposition and that American publishers have not participated will be in part offset by the exhibit of the American Library Association. I am sure that visitors will find in the exhibit what the Committee has tried to make it,—a fair presentation of modern American library methods, modern equipment, with a suggestion of our historical background and an indication of the lines along which American libraries are developing.

Respectfully submitted,

THEODORE W. KOCH.

FREE MAGAZINES FOR LIBRARIES.

MRS. WILLIAM G. WILLCOX of 115
Davis Ave., West New Brighton, Staten

Island, N. Y., has a large number of unbound copies of the following magazines (many years complete) dating back as far as 1845, which she will be glad to donate to any reputable library which would care for them.

LIST

The Anti-Slavery Standard.

The Liberator.

The Atlantic.

Blackwood's Magazine, Edinburgh Review, Westminster Review (American editions).

People's Magazine (1 vol.).

Engineering Magazine.

Van Nostrand's Engineering Magazine.

THE OXFORD PROGRAM

A PROVISIONAL program for the thirty-seventh annual meeting of the British Library Association has been sent out. Many prominent librarians of the United States and Canada will be present and take part in the program, making it really a pan-Anglican conference. The meetings begin on the afternoon of Monday, Aug. 31, and end Friday afternoon, Sept. 4. Most of the colleges will be open to visitors in the day time, and special visits are planned to the more important buildings and to the Clarendon Press, with excursions to surrounding points.

PROGRAM

Monday, 31st August, 1914.

4 to 6 p.m.—Meetings of branch associations.

6 p.m.—Meeting of the L. A. Council.

8.30 p.m.—Lecture—"Oxford outside the guide books"; by Falconer Madan, M.A., F.S.A., Bodley's librarian.

Tuesday, 1st September, 1914.

Morning Session, 10 a.m. to 1 p.m.

1. Presidential address.
2. Paper—Modern methods of accelerating book service (illustrated by models); by G. P. Barwick, B.A., keeper of the department of printed books, British Museum. Discussion to be opened by Dr. Herbert Putnam, Librarian of Congress, U.S.A.
3. Discussion—The place of the library in a university; opened by Dr. E. C. Richardson, librarian, Princeton University; and Sir William Osler, M.D., F.R.S., regius professor of medicine, Oxford.

Afternoon Session

4. Informal illustrated lecture—History of the title-page; by S. Gibson, M.A., Bodleian Library, Oxford.
5. Visits to university and collegiate buildings, and to the Bodleian, College, and City Libraries, and the Clarendon Press.

Evening Session, 6 to 7 p. m.

6. Lecture—The library situation in Canada; by George H. Locke, librarian, Toronto Public Libraries.

8.30 to 11 p.m.

7. Reception by the mayor and corporation at the town hall.

Wednesday, 2nd September, 1914

Morning Session, 10 a.m. to 1 p.m.

8. Paper—The development of the Library Association since 1878; by Henry R. Tedder, secretary and librarian, The Athenæum, London.
9. Discussion—Modern influences antagonistic to the reading of books; opened by W. N. C. Carlton, librarian, Newberry Library, Chicago; and George T. Shaw, librarian, Liverpool Public Libraries.
10. Discussion—The legitimate field of the municipal public library; opened by J. C. Dana, librarian, Newark Public Libraries, U.S.A.; and L. Stanley Jast, librarian, Croydon Public Libraries.

Afternoon Session

11. Excursions and visits.

Evening Session, 6 to 7 p.m.

12. Lantern lecture—Recent developments in library planning (America); by Dr. Frank P. Hill, librarian, Brooklyn Public Libraries.
8-30 to 11 p.m.
13. Conversazione in the Ashmolean Museum; by invitation of the curators of the Bodleian Library; and illustrated lecture—Historical extension of the Bodleian buildings; by Falconer Madan, M.A., F.S.A., Bodley's librarian.

Thursday, 3rd September, 1914.

Morning Session, 10 a.m. to 1 p.m.

14. Paper—Library lectures; by W. E. Doubleday, librarian, Hampstead Public Libraries. Discussion to be opened by Miss M. E. Ahern, editor of *Public Libraries*, Chicago.
15. Discussion—Duties of a library committeeman or trustee; opened by R. R. Bowker, editor of the *LIBRARY JOURNAL*, New York; and Alderman Henry Plummer, chairman, Manchester Public Libraries.
16. Discussion—Principles of book selection and book rejection; opened by a delegate of the American Library Association; and T. W. Lyster, M.A., librarian, National Library of Ireland.

Afternoon Session

17. Excursions and visits.

Evening Session, 6 to 7 p.m.

18. Lantern lecture—Recent developments in library planning (United Kingdom); by J. Ballinger, M.A., librarian, National Library of Wales.
8 to 11 p.m.
19. Conference dinner.

Friday, 4th September, 1914

Morning Session, 10 a.m. to 1 p.m.

20. Lantern lecture—Newer phases of library extension; by H. E. Legler, librarian, Chicago Public Libraries.
21. Brief addresses by visiting librarians.

Afternoon Session

22. Deferred discussion and papers (if any).
23. Annual business meeting.

the office of the government printer and the office of the superintendent of documents were all represented through accredited officials. Probably also there has never been a larger gathering of librarians interested in public documents than came together at this meeting.

Three important papers had been prepared for this occasion. The first was on the "Purpose and scope of the codification of the printing laws as contained in the Printing Bill"—now before Congress—by George H. Carter, clerk of the joint committee on printing.

In his paper, which will be printed in full in an early issue of the *JOURNAL*, Mr. Carter entered quite fully into the scope of the work and power of his committee and explain how every effort had been made, so far as possible, to embody in the pending bill the several suggestions made by the Association. Where these suggestions had not been adopted, Mr. Carter stated why not, or made note for further consideration.

Not the least interesting part of this paper was the discussion brought out by questions, which were answered with the same interest and willingness as shown by the inquirer.

The second paper was upon "*The Monthly Catalogue of United States Public Documents*," by Minnie B. Hegeman of the superintendent of documents' office. As the editor of this very helpful publication, Miss Hegeman showed something of the magnitude of the work involved in collecting, collating and arranging the material, all of which was based upon each separate publication. There was no hearsay nor tradition used in its compilation. Every statement was based on first-hand information.

The third paper was upon "Thirteenth census, 1910, publications," by Mary A. Hartwell, cataloger in the office of the Superintendent of Documents.

Miss Hartwell briefly outlined the work of the Census Bureau, and enumerated, explained and distinguished between the several series of publications issued by that office.

As the invitations to make ourselves at home in the several divisions of the Library of Congress, the office of the superintendent of documents, the several departments of government, and the Public Library, had been freely accepted during the week, those gathered at the documents round table Friday morning were there for a purpose and thoroughly interested. The special efforts which had been made in our behalf by those in authority had been appreciated. As never before, this meeting proved to be our opportunity to hear and be heard.

American Library Association

WASHINGTON CONFERENCE

GOVERNMENT DOCUMENTS ROUND TABLE*

The Government Documents Round Table, held in the small ballroom of the New Willard Hotel, Friday, May 29, with George S. Godard, state librarian of Connecticut, chairman of the committee on public documents, in charge, was unquestionably one of the most interesting and helpful meetings yet held by this section. For the first time, those in authority in Congress, the Library of Congress,

*Received too late for inclusion in the report of the Washington conference, printed in the July number.

Among those who participated in the discussions were:

Alton P. Tisdell, assistant superintendent of documents, representing the superintendent of documents, General Josiah H. Brinker, who being unable to be present, had sent his best wishes for the success of the meeting and its members. Mr. Tisdell expressed his surprise and pleasure at the great interest which he found so many librarians had in public documents. "The talks I have had with you librarians," said Mr. Tisdell, "have been a revelation, enabling me to see the growth and influence in public documents. I know it will serve to increase the activities of the superintendent of documents along the line of doing for the libraries all he can."

Mr. Ranck, librarian of the Grand Rapids Public Library, inquired concerning the use of franked envelopes, which at first glance seemed threatened.

Mr. Andrews of the John Crerar Library expressed his appreciation of the action of the printing committee in proposing a bill which does so much.

Mr. Carr, of Scranton, Pa., expressed his appreciation of the great helpfulness of the *Monthly Catalogue*.

Nathan B. Williams, a special representative of the House judiciary committee, called attention to some of the special publications printed by that committee under its own authority and immediate direction, each in an edition limited to one thousand copies. He also called attention to the great lack of reliable translations of foreign laws, and the great difficulties which always accompany such legal translations. "I do not care how accurate a translator may be, he must at least have his translation revised by one who is familiar with the terminology of the subject which he attempts to translate," said Mr. Williams.

Miss Hasse of the New York Public Library made a plea for the small library and urged the creation of a graded list of depository libraries.

Mr. Bowker, editor of the LIBRARY JOURNAL, expressed his pleasure in seeing at this meeting parties to all sides of the public document question in earnest, helpful, and hopeful conference. He recalled his earlier experiences in Washington while attempting to learn from the departments what they had published, and contrasted that lack of information with the present *Monthly Catalogue of Public Documents* which is serving a very great purpose. Mr. Bowker supported Miss Hasse's plea for the smaller libraries and was inclined to advocate sending to such libraries only such documents as might be selected by competent gov-

ernment authorities, as being of service in such libraries, but always granting to the libraries the privilege of asking for other documents so far as they can be supplied.

Mr. Daniels of California called attention to the large use made of public documents in the county library work in his state, and expressed the hope that provision would be made whereby the needs of large sections would not be determined by the requirements of smaller areas bearing the same name, for, said he, "a California county covers some territory and therefore we require many duplicates in our system."

Mr. Nichols of the Library of Geological Survey, Washington, expressed his pleasure in the work accomplished by the joint committee on printing, and urged that the attention of our Congressmen and Senators should be called, through personal letters, to the desirability of its early passage. This suggestion met with hearty approval.

Mr. Thompson of the Library of Congress called attention to the large use of government and state publications by the legislative reference departments now found in so many of our states.

The meeting, after expressing the hope that the proposed bill might be enacted into law substantially as presented, adjourned by passing a vote of thanks to those who had arranged for the meeting, to those who had prepared papers and to those officials and others who, by their presence or through their representatives, had contributed to the success of this meeting.

G. S. G.

COMMITTEE ON COST AND METHOD OF CATALOGING

The July issue of the JOURNAL contained a reprint of the letter and schedule adopted by this committee, to be sent to fifty different libraries who are willing to test their cataloging methods. At the meeting of head catalogers in Washington, May 28, the discussion of the subject was opened by Mr. W. P. Cutter, who said that he had for some time carried on a time study of the work in his library, using stop watch and pedometer. He had found that, in his own case, mere walking to an ice-water cooler had cost the library during one year \$65. He had found that each member of his staff walked one hour each day, and said that if this waste could be eliminated he would be willing to recommend reducing the working day by half an hour. He suggested that the time spent in handling and moving the books should be taken into consideration by the committee, and also overhead charges.

Dr. Richardson said that walking really might be regarded as needed change of atmosphere. Real waste consists mainly in unconsidered trifles.

Mr. Windsor recommended that the question of fatigue be studied. It might be found that the higher grade of work is more fatiguing while mechanical work results in less strain.

Mr. Currier thought that the present investigation was not quite fair for libraries like that of Harvard, where half the books received could be classed among the difficult books. He also called attention to the fact that the vacations had not been taken into consideration. Rather than having a large number of libraries make a test with 100 books each, he would like to see a smaller number take a test during a whole year on a basis of total titles compared with total time devoted to cataloging.

Miss Baldwin suggested that such a test be taken later on, with five or six libraries of different types. The present test could be only preliminary. Mr. Cutter said that if a test such as the one suggested were to be taken, one investigator should make a study of the test in each library.

A member suggested that all the libraries to be investigated should be of the same size and have approximately the same number of assistants on the cataloging staff.

Miss Mann said that by using printed forms she had been able to reduce the work on a truck full of duplicates from about three days to three hours.

Mr. Hanson asked if anyone had tried to figure out how much it cost a library to change the location of a book. It cost the University of Chicago Library 25 c. to 35 c. to change call numbers on the various cards and to make the other alterations included in the change of location of a particular book. He said that much time was spent in correcting errors found during the routine of filing and other work.

Mr. Martel said that if too much emphasis was placed on the importance of mechanical devices and the saving of unnecessary steps and movements on the part of the catalogers, there was danger of losing sight of something which is much more important, namely, the time wasted by catalogers and library workers in general through useless search in reference books, bibliographies and similar aids, for information not contained in these books and which a person of experience and knowledge would know in advance was not to be found in them; that it was of fully as much importance to secure the guidance of

older and more experienced persons in the use of the book resources of the library on the part of the younger assistants as to watch how many times they took a drink of water or to keep track of the number of steps taken by them in going to and from the catalog.

It will be seen that two lines of thought crossed during this discussion: one more concerned with the mechanics of method, the other taking account chiefly of the organization of the work and the workers and the standard of the latter. The present investigation is concerned chiefly with methods, but questions of organization and standards will not be neglected; if they seem to be, it is because they do not lend themselves as easily as the others to the method of inquiry adopted by the committee at the present stage of the investigation. Suggestions in regard to the investigation, sent to the chairman or any member of the committee, will be carefully considered.

It should be borne in mind by those who see chiefly the mechanical side of the work that, no matter how carefully every part of the routine of cataloging has been watched, no matter how earnestly attempts have been made to avoid seemingly unnecessary steps and other waste of time, if the catalogers are inexperienced or ignorant and do not have the necessary knowledge of the bibliographical and other tools, the result will be either waste of time in revision by higher grade assistants, or, if even these do not possess sufficient knowledge, a poor catalog.

Those who are concerned over the standard of the workers should consider that the arrangement of the rooms, compact but spacious, and a careful study of the outward mechanics of the work will result in better working conditions—a most important factor in the organization of a cataloging staff.

AKSEL G. S. JOSEPHSON,
Chairman of the Committee.

COMMITTEE ON WORK WITH THE BLIND

The extension this year of parcel-post to books has been already utilized in several libraries to enlarge their circulation and increase their usefulness, but for ten years the readers of embossed books have been accorded a greater privilege in having their books transported from libraries and institutions by mail *free* of all charge. This favor, which was granted in 1904, has tremendously increased the circulation of books to the blind. It would seem advisable to urge that a comparatively small number of well-stocked distributing centers, with power of more than a local circu-

lation, be developed in such localities as would leave no considerable territory uncovered. The duplication of small collections of tangible literature, which are not likely to be increased, is to be discouraged.

The circulation of the six larger libraries loaning books and music scores in the United States during the past year has been 59,167 volumes, the New York City Public Library being in the lead.

The committee has not been able to correspond with a large number of libraries, but a short report from some of the more important ones is given here:

California.—The State Library at Sacramento has books for the blind in five different types, and these are sent to any blind resident of the state on application; also writing appliances and games are loaned on trial, and the addresses of firms supplying these articles are given to any inquirer. Books have been loaned since 1905, and on April 1, 1914, there were 608 borrowers, the total number of embossed books being 3,393. The library also loans the *Braille Review* and the *Outlook for the Blind* in ink-print, and various other ink-print magazines containing current articles on subjects relating to the blind.

The circulation of embossed books for 1913 was 7,366; for the year April 1, 1913-March 31, 1914, circulation, 8,064, the circulation for the first quarter of 1914, being 2,382, as compared with 1,684 for the first quarter of 1913. This increase in circulation at this time is largely due to the issuing of a new circular and finding list late in March.

The San Francisco Association for the Blind circulates the embossed books to the blind of San Francisco. Books are also loaned to the library in Sacramento, which, in turn, borrows from the Association. There are 422 volumes in this library, the greater number being in New York point and American Braille, but there are also books in Moon and Line type, and English and Spanish books in old Braille. Last year the Association voted to spend \$100 a year on embossed books. During 1913 there were about 200 volumes in circulation among thirty readers. The superintendent has recently made a catalog of the books and a duplicate in Braille.

Delaware.—Mr. Bailey, the librarian of the Wilmington Institute Free Library, writes that the books for the blind are now in charge of the Delaware Commission for the Blind, and one of the men, partially blind, delivers and collects the books for the blind throughout the city. They have now 665 volumes, and during the past year added 43 books in the Braille type.

Illinois.—The Chicago Public Library *Book Bulletin* for December, 1914, announced that free readings for the blind would be instituted in all branch libraries in the city two Saturday mornings each month, through volunteers from the Jewish women's clubs. The March number of the *Bulletin* says that the library has a collection of 1,370 volumes for the use of the blind in Chicago. Though a reading room for their accommodation is maintained in one of the branches, most of the books are circulated through the mail, and last year 2,620 volumes were sent out for home use.

Iowa.—Miss Robinson, of the committee, reports as follows: Inasmuch as the New York point system is the one taught in the Iowa College for the Blind at Vinton, and is therefore the one generally understood in Iowa, the books in that type are circulated. During 1913, 246 books were loaned and 404 readers registered; 50 titles have been added to readers registered; 50 titles have been added to the work of the traveling libraries under the Iowa Library Commission, and books are loaned to any blind person in the state upon the recommendation of a resident seeing taxpayer.

Library of Congress.—The report for 1913 of the Room for the Blind, with Mrs. Rider in charge, shows that the embossed books now number 2,245 volumes, active readers are 92 and blind readers visiting the Room for the Blind, and blind persons attending entertainments during the year numbered 1,157. The total circulation this year of books, magazines and music has been 1,703. There have been 562 books, magazines and music scores added to the library. The Room for the Blind receives copies of all books published by the American Printing House for the Blind in Louisville, so far as these are printed from the government allotment. The books and music have been classified, cataloged and properly shelved, and files for detailed information have been started to facilitate reference work on all matters pertaining to the blind. In so far as the collection in the library permits, books are circulated in states where the need of a reader is not met by a local, nearby or state library. Applicants in this case are first referred to these nearer libraries.

Massachusetts.—Throughout Massachusetts and the other New England states the majority of the books loaned to the blind are sent from the Perkins Institution for the Blind at Watertown, Mass. All inquiries at public libraries and associations are referred to this library. The Institution has its own printing plant, the Howe Memorial Press, and the library, working in connection with this, has a

ENGLISH PAVILION

HAUS DER FRAU

STREET OF NATIONS
INTERNATIONAL EXHIBITION OF THE BOOK INDUSTRY AND THE GRAPHIC ARTS, LEIPZIG

AUSTRIAN PAVILION

larger supply of books in the Line and Braille types to draw from than some of the other libraries. It is primarily a school library, but from the very first was designed to supply reading matter to the blind in any part of the United States and America. This year, 4,694 embossed books and music scores were loaned outside the school. The fact that the library makes long-time loans to six libraries and to three schools for the blind, rather than to the individuals themselves, lowers the number of books actually loaned from the library. There is also a valuable reference library of books relating to the blind in ink-print. These books cannot be circulated, but are free to all for study and reference, and requests sent in for lists of books and articles on special subjects connected with the blind will be granted. A large quantity of Braille music is published here and sold or circulated to anyone.

The public library at Lynn, Mass., has a good selection of embossed books and a number of constant, active readers, under the supervision of a librarian who is blind, Miss Jennie Bubier. This collection is supplemented by a deposit of books from the Perkins Institution library.

Michigan.—The Michigan Employment Institution for the Blind at Saginaw reports, through Mr. Shotwell, that for the year from July, 1913, to July, 1914, the legislature of Michigan granted \$1,000 to the Institution for embossed books, and for the coming year of 1914-1915 the same amount has been granted. This is being expended for Braille and New York point books, and a large quantity of Braille and New York point music has also been ordered. The books and music are loaned to any blind person in the state, and will also be sent out of the state to any former resident or pupil, or to anyone who has in any way aided the library either by money or influence. They hope soon to have a full stock of the newer books and to be able to keep it up to date, and that this will greatly increase their circulation.

Minnesota.—Miss Carey, of the committee, reports that the work of furnishing books to the blind of Minnesota in New York point, Braille and other systems is carried on by the State School for the Blind at Faribault, which is just now erecting a new library building. This library is open the year round, and this year has a list of outside readers numbering 88. The average number of books taken out monthly by these readers is 33. The number of adult blind using the library is increased each year by members of the summer school, some of whom always become permanent members of the library circle.

New York.—In the New York City Public Library the department for the blind, with Miss Goldthwaite, of this committee, in charge, fills a large place among the libraries supplying embossed books to the blind. It has 10,850 volumes of books and music scores in different types, and is most liberal in loaning these in the state and also outside, if the book required cannot be obtained from a nearby library. Last year, 23,325 volumes were circulated, an increase of 1,387 over 1912; 20,000 volumes were sent by mail, and 700 volumes added to the library. It is especially to be congratulated on having such excellent book lists; a complete catalog of books and music, printed in ink-print; also an embossed catalog in New York point of all the New York point books, and one in Braille of all the Braille books. These catalogs are for sale at a nominal price.

The New York State Library, at the time of its destruction by fire, had in the department for the blind 3,299 volumes of embossed books and music. This department, under Miss Chamberlain, has now 3,185 volumes of books and 745 pieces of music, having increased its accessions by 629 volumes. It has published 113 New York point books on the standard-sized plate, so that they can be obtained by any library. This last year 13 new books were printed. The total circulation for the past year was 6,788 books and scores of music. The books printed by the New York State Library are always most popular with all readers using that type, and fill an important place in every collection of New York point books.

Ohio.—The library work for the blind in Cleveland is done through the Society for the Blind, but no recent report has been received. In Cincinnati the Clovernook Home for Blind Women was opened last May, and since then a small building has been fitted up with a printing press and other equipment, and at this time they are just starting to print New York point books. The books in this collection are sent throughout the United States as well as into Canada. Miss Georgia Trader and her sister are in charge of this work.

Pennsylvania.—The Free Library of Philadelphia, in co-operation with the Pennsylvania Home Teaching Society, under the supervision of Mrs. Delfino, of this committee, supplies the blind with reading matter in the eastern part of Pennsylvania. In 1913 the names of 127 new borrowers were added, 18,505 volumes of embossed books being circulated among 699 persons, this library having the second largest circulation among the blind. Of the 4,472 volumes in actual use, 1,591 belong to the Free

Library of Philadelphia and 2,881 to the Pennsylvania Home Teaching Society. Co-operation with the Society for the Promotion of Church Work Among the Blind has placed the publications of that Society also at the service of readers. The Pennsylvania School for the Blind at Overbrook, though entirely a school library, helps in the circulation of books outside the school by supplying text books and loaning the German and French books at its disposal. Last year they circulated among outside readers about 800 books.

In the western part of the state embossed books are circulated from the Carnegie Library at Pittsburgh, and last year they sent out 4,145 volumes. We regret that we have no special report of that library this year.

Many of the libraries in other states, which have helped in the circulation of the embossed books, are adding but little to their stock. We would refer anyone wishing a more detailed report of the work done in the various states to an article by Mrs. Delfino in the *Outlook for the Blind*, January, 1911.

Embossed Lists.—An embossed list of the books is always much desired by all blind readers. They wish to look up and choose their own books without asking anyone to read an ink-print list to them. Such lists have been printed at the New York City Public Library, as mentioned before. These they intend to keep up to date by supplements added from time to time. The Carnegie Library in Pittsburgh, the San Francisco Association, the State Library at Indianapolis and the Cincinnati Public Library have also published embossed lists. The Free Library of Philadelphia is shortly to bring up to date by supplements the embossed lists issued in 1907. These lists of all their Braille and New York point books are loaned free of charge to all readers. At the Perkins Institution they have issued a list, printed in Braille, of the Braille music, which they circulate and have for sale. A few libraries have tried embossed card catalogs, but the process is tedious, and the use made of them did not seem to justify the time involved. One has been used in the department for the blind in the Brooklyn Public Library and in the Public Library at Lynn, Mass. We would like to draw the attention of all those working for the blind to the valuable ink-print list of all the Braille books published in the United States, a new edition of which is being brought out by Mr. Burrill at Overbrook, Pa.

Library Schools.—For some time the library schools have been interested in this side of library work and devote one or two lecture hours a year to it, and also visit nearby schools and libraries for the blind.

Object Teaching in Libraries and Museums.—In schools for the blind object teaching has been used for years, but lately libraries are adopting this method as a substitute for pictures. Instead of a long explanation of something unfamiliar, the object itself, or a model, is introduced, and the sensitive fingers soon convey to the mind of the blind a very accurate idea of how the bird or beast or airship looks.

Uniform Type.—Mr. Elwyn H. Fowler, secretary of the Uniform Type Committee of the American Association of Workers for the Blind, has prepared the following short report on the progress of the endeavor toward a uniform system of type in the books for the blind.

There are three principal systems of embossed dot characters for finger reading now extensively used. These are European Braille, the New York point and the American Braille. The wastefulness of this condition is generally recognized by the blind and their friends, and work toward the adoption of a uniform system is advancing, with good prospect of success. The 1911 convention of the American Association of Workers for the Blind encouraged the Uniform Type Committee to raise a fund of \$3,000 with which to carry on a campaign of investigation, agitation and conciliation. In March, 1912, pledges to this amount having been secured, the committee began active, systematic work. Two agents, one blind and a member of the committee, the other seeing, but also well informed on the subject, visited many schools and other centers of work for the blind in America, conducting tests designed to discover what is the best in embossed types, and at the same time endeavoring to spread such a spirit of harmony and co-operation as would lead to the adoption of a uniform system. In the spring of 1913 the agents continued their work in England and Scotland. In the short time remaining before the 1913 convention of the American Association of the Workers for the Blind, the committee found it impossible to classify and digest the results of its experiments sufficiently to make entirely definite recommendations regarding a system, and the convention, rather than adopt these in an incomplete form, wisely decided to wait until the 1915 convention, when it is expected that a system with definite assignments of meaning to characters will be recommended.

We would recommend all workers with the blind to read regularly the *Outlook for the Blind*, a quarterly magazine published in Columbus, Ohio, and also *The Blind*, a quarterly, and the *Braille Review*, a monthly, both published in London, England. In these magazines all current articles and information con-

cerning the latest books on the blind, as well as all topics of interest in regard to the blind, may be found. Possibly the *Outlook for the Blind* might be made to answer as a clearing house, giving regularly the latest information about libraries, publishing houses, home teaching societies for the blind, thereby keeping librarians constantly in touch with the details necessary in their work.

Library Organizations

NEW YORK LIBRARY ASSOCIATION

The 24th annual meeting of the New York Library Association, to be held at Ithaca, Sept. 6-13, 1914, on the invitation of Cornell University, offers some unique and welcome attractions. Never before has the association met at a university, and the opportunity for a week of college residence and dormitory life with the meetings in the college class rooms, combined with the low rates offered by the university, will surely bring together a large company of library workers.

At a reception on Monday evening, Sept. 7, the greetings of Cornell University will be extended by its president. The formal program will begin on Tuesday. It is expected that the Hon. Andrew D. White, former president of Cornell, and Dr. John H. Finley, president of the University of the State of New York, will address the general sessions. There will be a session devoted to "The problems of college libraries," which Dr. Azariah S. Root, of Oberlin College, will lead and address. At another session Mr. Royal Gilkey, Miss Van Rensselaer and others having charge of the wonderful extension and reading course work, especially in agriculture and home economics which radiates from Cornell, will describe it to the association and illustrate it with exhibits. An address on a literary or social topic will be given by Mr. Irving Bacheller and an illustrated stereopticon lecture on Russian libraries by Mme. Haffkin-Hamburger, secretary of the courses in library science given at Shaniawsky University, Moscow, Russia, and the author of a number of important books in Russian on library subjects.

The rate for room and meals will be \$2 per day. Sage College and Prudence Risley

Hall (the women's residence halls) will be used. Meals will be served in both buildings if more than 200 are in attendance, otherwise in the former only. These halls are within three and five minutes' walk of Goldwin Smith Hall, where all the meetings will be held. Rooms will be available and meals served on Sunday, the 6th, and to and including Saturday, the 12th. If any considerable number wish to stay over Sunday, the 13th, accommodations will be available. Applications for rooms may be made at any time to Mr. Thomas Tree, Sage College, Ithaca, N. Y.

There will be no special railroad rates on account of this meeting. Ithaca is reached by either the Lehigh Valley or the Lackawanna railroads.

The buildings and grounds of Cornell University and the State College of Agriculture will be open for inspection all week and guides will be furnished. The drives and walks about Ithaca will satisfy the most enthusiastic, if one may judge from the very attractive book of views of the campus and country surrounding Cornell, issued by the University; Cayuga Lake offers boating and canoeing; motor boats, carriages and motor cars will be available at minimum rates. The University golf links and tennis courts will be at the service of the association without cost, and a visit to the George Jr. Republic at Freeville is an interesting possibility for Monday or Saturday. Sometime during the week a recital will be given in the college auditorium on one of the finest pipe organs in the country, which is now being set up.

Notice is given that at the annual meeting an amendment to article 3 will be presented, providing for institutional as well as individual membership.

Following is the program as given out:

Monday, September 7.

Evening—Welcoming reception, Sage College parlors.

Tuesday, September 8.

Forenoon—First general session, Goldwin Smith B. Greetings on behalf of Cornell University, President Schurman or his representative. On behalf of Cornell University Library, Mr. George W. Harris.

President's address. Reports of committees.

Evening—Goldwin Smith B. Stereopticon lecture on Russian libraries, Mme. Haffkin-Hamburger.

Wednesday, September 9.

Forenoon—Second general session, Goldwin Smith B. Address, Dr. John Huston Finley, president of the University of the State of New York. Address, Dr. Andrew D. White, former president of Cornell University.

Thursday, September 10.

Forenoon—Round table for college libraries, Dr. Azariah S. Root, leader.

Address, "Special problems of the college librarian," Dr. Root.
 Other papers and discussion, Dr. D. F. Estes, Colgate University, Mr. J. D. Ibbotson, Hamilton College, Miss Fanny E. Marquand, University of Rochester, Miss Amy L. Reed, Vassar College.

Thursday, September 10.

Evening—Presentation of Cornell extension work. Mr. Royal Gilkey, Professor Van Rensselaer or Professor Rose, accompanied by an exhibit of publications, etc., to be on view during the entire week.

Friday, September 11.

Forenoon—Goldwin Smith B. Third general session.

Address, "The publishers' co-operative bureau," Richard B. G. Gardner, manager.

Address, Mr. Irving Bacheller.

Afternoon—Round table for public libraries.

NORTHERN NEW YORK LIBRARY CLUB

A joint meeting of the Northern New York Library Club and the State Institute was called to order at the Ogdensburg Public Library by the president of the club, Dr. S. A. Hayt, on May 19, 1914. There were thirty librarians and trustees in attendance.

The first subject under discussion was "Gifts," and Miss Hasbrouck of the Ogdensburg Library was called upon to open the discussion. Miss Phelps, of Albany, continued the talk. Miss Andrews, of Massena, opened the subject "Reference books," and Mr. Wallace of the Ogdensburg board of education spoke briefly on "School libraries."

The afternoon session was given over to the subject "Selection and purchase of books," which included a discussion of new fiction and non-fiction.

It was suggested that the next meeting be held at Thousand Island Park early in September.

KATHERINE SAYRS PERINE,
Secretary pro tem.

SOUTHERN TIER LIBRARY CLUB

Wednesday morning, May 6, 1914, Dr. George O. Williams, president of the board of trustees of the Moore Memorial Library, heartily welcomed the Southern Tier Library Club to that institution and to the village of Greene, N. Y. Response was made by J. W. Livingston, president of the Club, who thereupon took the chair. Until the close of the sessions on Thursday afternoon those present shared in a meeting which was full of events for the Chenango Valley, for participating in the program of the meeting were some of the most capable and efficient workers in the library and fields closely related thereto.

The exhibit of books helpful in work with schools, as collected and prepared and loaned by the New York Public Library School under the direction of Miss Mary W. Plummer, its principal, was brought to the attention of the Club by Mrs. Mary Summers of Greene.

Much time was given to its study and examination during the two days and many and valuable were the suggestions gathered.

Wednesday afternoon was devoted to the theme "Rural work and conditions" and in an address under the subject "What should be the outcome of the use of school and public libraries," Sherman Williams, chief of the school libraries division, State Education Department, Albany, convinced his hearers, which included the members of the Teachers' Training Class of the Greene public schools, their instructor, and the rural teachers in the district, of the need of a getting together of teachers and librarians in the educational work in which each is engaged. By lucid, forceful statements and plain pointed facts and apt illustrations from his own broad experience he proved that the teacher's knowledge of the child and the librarian's knowledge of the book and an established kindly relation with the child cannot fail to lure that child into reading, to the end that the right sort of high ideals, fine tastes and excellent habits may be inculcated. Little else matters if these three things, which cover the whole ground of education, are obtained.

"How the other half reads" was the subject to which Miss Mary L. Isbell, of Norwich, district superintendent of schools in the fifth supervisory district of Chenango county, responded. Miss Isbell re-put her topic "How can the other half read?" and from her experiences, drawn from a careful survey of the rural districts and farm conditions, Miss Isbell graphically presented new lights upon the reading of the farmer and the members of his busy household, the most diligent and thrifty of which is the farmer's wife, and when *can she find time to read?* The real problem seems to be not so much *how to get books into the homes but how to make the rural population so ardently desire to read that they will and can make and take the time to do so.* Remedies through the medium of the school libraries, which in most instances have a majority of books wholly suitable for adult readers and which in her district are supplemented by public library books, were suggested for the uncultured state of the average rural home.

Miss Jane I. Schenck, another district superintendent of Chenango county, with headquarters at Greene, spoke of the rural school libraries, the conditions which exist in her territory and presumably in most others, and then narrated instances where work had been done by the teacher-librarian which has caused the little children to feel the joy there is in books.

J. S. Childs, of Oxford, another district superintendent in Chenango county, brought this session to a close by a brief discussion of the "Book agent" who places most of the books in the rural schools without thought for the existing conditions in any one of them. Visiting librarians and friends were then invited to the home of Mrs. Summers, librarian of the Moore Memorial Library, where they were entertained at a most delightful five o'clock tea party.

The Southern Tier Library Club and the two hundred citizens of Greene, who filled the library's auditorium, agreed that Mr. J. I. Wyer, Jr's presence was a great honor to the Southern Tier. Only a vast deal of thought and considerable hard work could have presented so many and such absorbingly interesting facts as were brought out at the evening session in his address "What Americans read." The degree to which newspapers are read, the extent to which magazines are circulated and certain books assimilated and the comparative merits and demerits of these and other American reading matter, provided much food for thought and discussion. He presented truths not especially flattering to the profession; and as a result this study of what the nation reads and what the community which centers about the library should be subtly induced to read, will be more than ever among the first interests of the Southern Tier this year.

Then came the reception at which the visiting librarians were again entertained, this time by the wives of the trustees of the Moore Memorial Library. It was one more of the delightful events of the meeting, enjoyed the more because of the prevailing cordiality.

Mrs. Adelaide Bowles Maltby, librarian of the Tompkins Square branch of the New York Public Library, introduced the librarians to "Work among foreigners" on Thursday morning, May 7. She said that cold facts show New York, Massachusetts, Pennsylvania, New Jersey, Illinois, and California to have the greatest number of foreign born, and the population of New York state to be one-third foreign born. In the eight counties represented in the Southern Tier Library Club there is a total of 26,540 foreigners, one-half of whom are in Elmira and Binghamton. She asked if the librarians had made the acquaintance of these 26,540 people and knew what they read or were reading? Or did they know how the 1770 foreign illiterates in the same territory obtain amusement? She touched upon the influence of the illiterates and the foreign born upon the morals of the town; and the librarians were urged to pre-

pare for this work in advance and to promote the movement to educate these citizens-to-be.

Mrs. Maltby's illuminating paper and talk was followed by a good, plain, practical, common sense demonstration on "Books, their care and repair," by Miss Jane Crissey of the Troy Public Library. It was all this because she understood repairs must be made in a hurry most times in most libraries and she did it in the easiest and most practical way, demonstrating, too, that book repairing is both a useful and a fine art.

Thursday afternoon was given over wholly to the cheerful and entertaining theme "Books" by way of a book symposium conducted by Mrs. Kate Deane Andrew of Elmira. To know the personality of the conductor speaks more clearly than words can how entertaining the session became.

The Institute subject, "Stocking the library," was in most able and capable hands, W. F. Seward, of Binghamton, looking after the interests of Part 1,— "Selecting books," and J. W. Livingston of Marathon, taking care that Part 2,— "Buying books" was properly and economically done throughout the Southern Tier. The syllabus was spoken of as being very well prepared by the Institute Committee of the New York Library Association and also as being very complete, and it was urged that it deserved being taken home and thoroughly studied.

In "A blessed companion is a book," Mrs. Susan S. Kirby, of Bainbridge, spoke of the lover of books as being the richest and happiest of the children of men; that her ideal for us as librarians is that we may be able to give an impulse to our boys and girls for the best. Then we shall have been true to our trust and to our high calling.

Interesting reviews of interesting books by Mary I. White, of New Berlin; Mary A. Ferguson, of Homer; Lillian J. Emerson, of Oxford; Jennie Kennedy, of Dryden, and Kate Strong Peck, of Binghamton, brought this session to a termination.

The resolutions returned by its committee evidenced a pleasurable, profitable and inspirational meeting, where a goodly number of teachers, district superintendents and others interested in library affairs in addition to the library workers themselves, enjoyed the best meeting the Southern Tier librarians have been privileged to plan and carry out.

Officers for the year 1914-1915, are: President, Mrs. Mary Summers, Greene; vice-president, Mrs. Susan S. Kirby, Bainbridge; secretary, Helen Johnstone, Binghamton; treasurer, Jennie A. Kennedy, Dryden.

N. LOUISE RUCKTESHLER, *Secretary.*

NEW YORK LIBRARY CLUB

The last meeting of the New York Library Club for the year 1913-14 was held Thursday afternoon, May 14, at the Washington Irving High School, the president, Miss Mary W. Plummer, in the chair. The business was postponed until the close of the program, and Miss Plummer presented the special subject of the meeting—"Immigration; a. How it affects New York City; b. How New York City affects the immigrant."

The first speaker was Mr. Henry C. Wright, deputy commissioner of the department of charities. Mr. Wright said that one particular phase of the work had been the examination carried on the past few years by the Board of Estimate in attempting to determine how many aliens the hospitals and almshouses are caring for. In connection with this, they had found it advisable to look into the history of how the problem had been treated previously, and Mr. Wright then gave an interesting account of the various laws passed from 1824 to the present time—first by the city and later by the state—outlining the general conditions resulting. He referred to the work at Bellevue as carried on at present by the physicians and social workers, and indicated the value of such investigations. Since the health problem is one of the larger ones, the suggestion has been made that health headquarters be established by districts, thus allowing a systematic form of neighborhood work on a basis of health and sanitation.

The second speaker was Mr. Burdette C. Lewis, deputy commissioner, department of public correction. Mr. Lewis said that the problem of the immigrant has become one not of race, but of economic conditions. That the immigrant is particularly prone to crime is an exploded theory, but aside from any criminal aspect, there are many economic difficulties to be met. In many instances the immigrants should be put into industrial schools and trained in economic relations. Mr. Lewis also referred to the home relations of the parents and children and the problems arising because of the rapid development of the latter, with the result that family regard and respect is often broken down.

The club was fortunate in having as its next speaker Congressman William S. Bennet, who gave a most informing and witty address. Mr. Bennet said, in part: "When the immigrants land, they do not drift, but 98 per cent. know where they are going and what they are going to do. Politically, the foreign element is most hopeful; the immigrant has no background of politics, but determines his vote from a moral standpoint, and more and more the foreign

element will lend force to every moral appeal to the electoral. Economically, this element will contribute to progress, since foreigners possess thrift and ability to save. We are not going to break up as a country because the foreign-born are coming. As far as physical conditions of the immigrants now coming in there never has been a time when more care was given to matters of health, and the system of inspection on this side not only stops 25,000 per year here, but 100,000 from the other side."

Mr. Bennet was followed by Joseph Mayper, who spoke most interestingly of the experiences of the immigrant from the time he lands until he has been deported or placed in an asylum. "The immigrant gets off at the barge office with a slip giving the address of the place where he wants to go. A few years ago there were irresponsible people waiting to meet the immigrant, offering to take them to these addresses at a charge of \$10. The American Civic League took up the matter and organized an Immigrant Guide and Transfer Service, agreeing to give directions within a radius of twenty miles at nominal fees up to 75 cents."

Mr. Mayper then spoke of the difficulty of the foreigner in obtaining work and of the private employment agencies which until recently have been the only means available for helping the newcomer to locate. The foreigner was therefore obliged to trust to the agencies and many agencies were interested only in the fee obtained. Several instances were given of injustice resulting from these agencies, and Mr. Mayper then referred to the recent law providing for a free municipal employment office, which, under aggressive management, is doing much to improve the situation.

At the conclusion of the addresses a rising vote of thanks to the speakers was given.

President Plummer then introduced the regular business before the annual meeting. The report of the treasurer was read and accepted to be placed on file. Miss Mary E. Hall, chairman of the committee on school libraries, then reported briefly. No other reports were read but all reports are to be printed in full in the June issue of the club *Bulletin*. An election of officers for the ensuing year resulted as follows: President, Mr. Edward F. Stever; librarian, Pratt Institute Free Library; vice-president, Mr. Frederick W. Jenkins, librarian, Russell Sage Foundation; secretary, Miss Eleanor H. Frick, librarian, American Society of Civil Engineers; treasurer, Mr. Robert Smith, assistant reference librarian, Brooklyn Public library. Council: Miss Florence Over-

ton, Miss Josephine A. Rathbone, Mr. Frederick C. Hicks, Mr. H. M. Lydenberg.

Twenty-six names were presented for membership and elected.

ETHEL H. BUDINGTON, *Secretary*.

A special meeting of the New York Library Club was held at the New York Public Library, Monday, June 29, 1914, at 4 p.m., President Edward F. Stevens in the chair.

As the meeting had been called to consider the proposal of consolidation made by the Long Island Library Club, the president read the statement which he had presented to the Council on the occasion of their meeting with the special committee of the Long Island Club, delegated by that club at its last annual meeting in May.

The resolutions passed by the Council recommending consolidation were then read, and the following resolutions were thereupon unanimously adopted:

Resolved, That the New York Library Club invites the Long Island Library Club to consolidate with the New York Library Club.

Resolved, That if the Long Island Library Club accepts the invitation of the New York Library Club to consolidate, the members of the Long Island Library Club thereby become members of the New York Library Club, and the dues of all members of the Long Island Library Club be considered paid until Jan. 1, 1915.

As the consolidation, if effected, would necessitate the retirement of the present officers of the New York Library Club pending a new election, the president's intention to ask the present standing committees to hold over until consolidation with the Long Island Library Club had been consummated was approved.

Adjourned.

ELEANOR H. FRICK, *Secretary*.

LONG ISLAND LIBRARY CLUB

The annual meeting of the Long Island Library Club was held at The Arms Hotel, Far Rockaway, Wednesday, May 21, at 3:30 p.m. The annual report of the treasurer was read and approved. Before hearing the report of the committee on nominations, the president, Miss Hassler, asked Mr. Stevens to speak to the club on his plan for reorganization. Mr. Stevens said that he spoke as a member of the Long Island Library Club and also as a member of the New York Library Club. He felt the time had come when library interests would be best served by the union of these two clubs; that the different boroughs of Greater New York were becoming more closely united because of better transit facilities; that many members of the Long Island Club were active

in both clubs; that it was difficult to attend the meetings of each, and that there was a feeling that one could not be loyal to both. Mr. Stevens said the idea was to reorganize both clubs on a new basis, with new officers and new constitutions, and that he, as president-elect of the New York Library Club, would not stand for re-election.

Miss Rathbone then presented a resolution authorizing the executive committee to confer with the executive board of the New York Library Club on the question, the terms to be submitted to the Long Island Library Club for ratification.

After much discussion, in which it was suggested the scope of the proposed reorganization be enlarged to include the state associations of New York, New Jersey and Connecticut, it was "*Resolved*, That a special committee of three be appointed to consider the question of the continuance of the Long Island Library Club, and with authority to confer with the New York Library Club as to consolidation." It was also decided to call a special meeting of the club to consider the report of this committee.

The committee on nominations then reported that because of the uncertainty as to the club's future the present officers be held over for another year, or until the proposed reorganization: President, Miss Harriott E. Hassler; vice-president, Miss Julia Hopkins; secretary, Miss Eleanor Roper; treasurer, Miss Gwendolen Brown; executive committee, Miss Josephine A. Rathbone, Miss Clara W. Hunt, Miss Miriam S. Draper and Mrs. Flora de Gogorza.

The president announced the contribution of \$5 by the club towards the Leipzig exhibit, and then introduced Miss Van Valkenburgh, of the New York Public Library School. She gave a very delightful talk on "Birds," in which she said the country wasn't necessary for the study of birds; that in the city parks of New York she had seen an eagle, scarlet tanager, and many other rare specimens; that with an opera glass and a good book it was perfectly possible for any one to learn about birds. She mentioned Reed's "Bird guide east of the Rocky mountains" as especially good for the pictures, and "Birds in the city parks" as supplementing Reed with excellent description.

Mr. Frank Place, of the New York Academy of Medicine Library, followed with a paper on the delights of tramping. He made one feel the freedom, the independence, the beauty of the changing seasons, and the benefit to be derived from this antithesis of the indoor work of the library.

The program closed with a very charming paper on a "Back yard garden" by Miss Julia Wheelock, of Pratt Institute Free Library. Her beautiful description of this little bit of earthly paradise made up of all varieties of lovely growing things, of memories, and of projects to come, made one realize that inspiration and enthusiasm know no limitations, and that a city back yard can be made a thing of beauty and a joy forever. The garden has given pleasure not only to herself, but to all who see it—friends, maid, plumber, laundress, and grocer's boy—and is even proving an inspiration to some to go and do likewise.

The meeting then adjourned. Coffee was served to those members who stayed for supper and a stroll on the beach.

ELEANOR ROPER, *Secretary*.

NEW HAMPSHIRE LIBRARY ASSOCIATION

The twenty-fifth annual meeting of the New Hampshire Library Association was held at the Public Library, Rochester, June 16 and 17, and proved to be a very interesting and successful gathering.

Headquarters were at the City Hotel, where those attending the meeting assembled for dinner at 6.30 and a most enjoyable hour was spent, this new feature of the meetings being voted a success. At eight o'clock adjournment was made to the hall of the public library, where the association was welcomed to Rochester by the mayor, the Hon. F. B. Preston, who in a few words assured the members of a cordial reception. The president then introduced Miss Mary P. Farr, library organizer of the state of Maryland. Miss Farr told of the struggles which the people of that state have had and are having to procure and maintain any libraries. She pictured very clearly the earnestness, pluck, and determination which a few interested people of Maryland have shown in their desire for libraries. She related many of her experiences, and made those who heard her feel that the people of New Hampshire should show more appreciation of their advantages and work together to make the most of them.

The business session of Wednesday morning was unusually interesting. The reports of the secretary and treasurer were read and approved, following which there was a discussion on the advisability of affiliation with the A. L. A. It was not thought wise at the present time to take such a step.

The matter of dividing the state into districts for supervision and the campaign for a state organizer were heartily approved of, and the executive committee was empowered

to take whatever action it should deem necessary to accomplish these ends.

By request Mrs. Barron Shirley, the president, read a paper which was given at Woodstock, Vt., on "What people ask for." This was greatly enjoyed and heartily received. The remainder of the session was filled with informal discussions on pay collections, reserve systems, and the tenor of the present-day magazines.

After a hearty vote of thanks to the librarian, trustees, and assistants of the Rochester Public Library for the cordial hospitality received, the meeting adjourned.

The following officers were elected for 1914-15: president, Mrs. Barron Shirley, Franklin; first vice-president, Miss Mary L. Saxton, Keene; second vice-president, Miss Elsie Gaskin, Derry; secretary, Miss Caroline B. Clement, Manchester; treasurer, Miss Annabell C. Secombe, Milford.

CAROLINE B. CLEMENT, *Secretary*.

MASSACHUSETTS LIBRARY CLUB

The Massachusetts Library Club met at Worcester, May 14, 1914. Because of the meeting of the A. L. A. in Washington, May 25-30, it was thought wise to plan this one-day business meeting this spring, with the expectation of arranging a two or three days' meeting during the fall in some of the state's beautiful western hill towns.

Mr. Belden's statements for the Free Public Library Commission included an acknowledgment of the Massachusetts Library Club's good offices in actively supporting the legislation recommended by the Commission; an announcement of the regretted resignation of Miss Zaidee Brown, agent for the Commission, and the temporary appointment of Miss E. Louise Jones in her place; a report of two legislative acts of importance, one allowing greater freedom in the loan of books from public libraries, the other discontinuing the publication of the serial public documents of the state and making yearly application to the secretary of the Commonwealth compulsory upon the part of those who wish the reports of individual departments.

The treasurer's report, and the report of the finance committee with the following recommendations causing some slight changes in the wording of several articles of the constitution, were adopted: To be retained, personal membership dues at fifty cents a year as at present; to be created, sustaining memberships with dues from one to ten dollars a year, institutional memberships at five dollars a year, and life memberships at twenty dollars.

Mr. Belden reported for the committee on co-operation, that a meeting of the local secretaries who had been appointed for every district of the state, would be postponed until fall. He called to the attention of the Club the list distributed by the Massachusetts Free Public Library Commission on "Books about America for new Americans," compiled by Ida F. Farrar.

It was voted that the recommendations of the executive committee on the affiliation of local clubs, with representation on the executive committee and without fees, be referred to the incoming executive committee for further action. To the same committee it was voted to refer the question of constitutional revision. This committee is also requested to consider a subscription price for the *Massachusetts Library Club Bulletin*.

Miss Louise M. Hooper, chairman of the committee or nominations, presented the following names, and the secretary cast one ballot by which they were elected. For president, Mr. J. Randolph Coolidge, jr., trustee of the Boston Athenæum; vice-president, Miss Gertrude E. Forrest, librarian of the Milton Public Library, Mr. Orlando C. Davis, librarian of the Waltham Public Library, Mr. Charles R. Green, librarian of the Massachusetts Agricultural College, Amherst; secretary, Mr. John G. Moulton, librarian of the Public Library, Haverhill; treasurer, Mr. George L. Lewis, librarian of the Westfield Athenæum; recorder, Miss Eugenia M. Henry, librarian of the Public Library, Attleborough.

The secretary brought to the Club's attention the work of Mr. Homer, who for several years has been working on a list of the periodicals in the city of Boston and vicinity. The list has been completed through the letter A, and the compiler wishes to publish it if he can receive financial support. Further information can be obtained from Mr. Belden of the State Library, Mr. Wadlin of the Boston Public Library, or Mr. Moulton, of the Haverhill Public Library.

The business of the Club completed, the afternoon session was given to the address of the world-known authority on child study, Dr. G. Stanley Hall of Clark University.

EUGENIA M. HENRY, *Recorder*.

SOUTHERN WORCESTER LIBRARY CLUB

The Southern Worcester Library Club held its seventeenth meeting in the Ashland Public Library, May 26. Mr. William W. Bryant, trustee of the Cobb Library, Byrantonville, addressed the club on the "Duties of trustees." After the reading of a poem on the "Duties of a librarian," each librarian responded to roll-call with a few words on profitable books for children. An informal discussion on book se-

lection and buying followed. Mrs. E. M. Arnold, the president, appointed a nominating committee of three to report at the next meeting a list of officers for the ensuing year, said committee to consist of Miss Franklin, of Bellingham; Mrs. Smith, of South Hopedale; Miss Wilbur, of Hopkinton. At the close of the session the club visited the historical room.

ETHELWYN BLAKE, *Secretary*

BAY PATH LIBRARY CLUB

The annual meeting of the Bay Path Library Club was held at North Brookfield, Mass., June 4.

The program covered "Working conditions in small libraries," discussed by Mr. Robert K. Shaw, librarian, Worcester Free Public Library; Miss Winifred S. Farrell, librarian, Free Public Library, Brookfield, and Miss Mary D. Thurston, librarian, Free Public Library, Leicester. "Local advertising in small towns" was discussed by Miss Florence E. Wheeler, librarian, Free Public Library, Leominster, Miss Mabel E. Knowlton, librarian, Free Public Library, Shrewsbury, Miss Ella E. Miersch, librarian, Free Public Library, Southbridge. Miss M. Anna Tarbell, librarian, Free Public Library, Brimfield, gave a most interesting talk on "Connecting the library with community interest," covering the work done in her own town, and proving that the community interest embodies the library interest.

Miss Grace W. Wood, reference and art librarian in the Worcester Public Library, read a practical paper on the "Dramatic possibilities in country schools," followed by a list of suggestive books. Dr. Idella M. Edwards read a paper on the "Library public," giving an opportunity to see ourselves as others see us. She made a strong plea for the library to meet the public on its own intellectual level, urging less uplift for weary workers and more satisfying literature—according to the demand.

The following officers were elected for the year: president, Mrs. Clara A. Fuller, Oxford; honorary vice-president, Miss M. Anna Tarbell, Brimfield; vice-presidents, Miss Mary D. Thurston, Leicester, and Miss Nellie L. Smith, North Brookfield; secretary, Miss Florence E. Wheeler, Leominster; treasurer, Mrs. Grace M. Whittemore, Hudson.

FLORENCE E. WHEELER, *Secretary*.

CONNECTICUT LIBRARY ASSOCIATION

The spring meeting of the Connecticut Library Association was held on Friday, June 19, in the Prosser Public Library, at Bloomfield. President Charles S. Thayer presided.

Mr. Alfred N. Filley, president of the directors of the Prosser Library, welcomed the association to Bloomfield, after which Miss Anna Hadley, librarian of the Gilbert School at Winsted, gave an informal outline of her experiences at the meeting of the American Library Association at Washington. In spite of the unusual numbers in attendance and the variety of attractions for sightseers, Miss Hadley pronounced the 1914 meeting most inspiring and helpful.

Miss Hadley was followed by Dr. Galpin, professor of Romance languages in Trinity College, Hartford. In Dr. Galpin's paper the association enjoyed a rare treat. The speaker confined his criticism to the French novels of the nineteenth century. He began with the romanticists, whose writings, usually sad and world weary, often prove too gloomy for the taste of the present-day American reader. The realists came next, and based their fiction on facts of science. The century closed with the naturalists, who dwell on the seamy side of life, and to them is due the common idea that the French novel is better avoided.

At the close of the session Mr. Thayer announced the appointment of Miss Esther B. Owen as treasurer of the organization, to take the place of Miss Stedman, resigned.

The afternoon session opened with the reading and accepting of the reports of the secretary and treasurer. The place of the fall meeting was then discussed. The remainder of the afternoon was devoted to the discussion of "The library and the rural community." Mr. Charles R. Green, of Amherst Agricultural College, described the extension work done by his library. Small selections of books and pamphlets are chosen with great care and sent to public libraries asking for them. The term "agriculture" is interpreted in its broadest sense, embracing such subjects as "electricity on the farm," "home economics," etc. The library contains a large collection of pamphlets on agricultural subjects. It also does extensive work in the way of answering questions sent by mail.

"The library and the church" was the subject treated by the Rev. William F. English, of East Windsor. He felt that the church must enter into the recreations of its people in order to live. Mr. English described his library experience in some detail, and his discussion of specific books that he has used with success lent to his address a very human interest.

Miss Whitney, of the Connecticut Agricultural College, outlined the work done by the state in the way of library extension, and

Mrs. Belle Holcomb Johnson told of the activities of the Connecticut Library Commission. Mrs. Johnson stated that the country libraries are inclining to extend their borders, limiting their loans as little as possible. When a town is a center of trade, it seems fitting that the privileges of the library be extended to the hamlets that help to support its industries. Library work in the country is often helped very much by the clergy. Mrs. Johnson showed that Connecticut has fallen somewhat behind the other states in her work with schools. This condition, however, is changing for the better.

After a brief discussion, a motion was carried that a vote of thanks be extended to the hosts for their kind and hospitable entertainment.

EDITH MCH. STEELE, *Secretary.*

PENNSYLVANIA LIBRARY CLUB

The last meeting of the Pennsylvania Library Club for the year 1913-1914 was held in the auditorium of the Academy of Natural Sciences on Monday evening, May 11.

In the absence of the president (Dr. Adler), Dr. Thomson presided. After disposing of a few items of business, the treasurer's report for the year was read and accepted, after which the following ticket for the year 1914-1915 was voted on and elected: President, Thomas Lynch Montgomery; first vice-president, Frederick N. Morton; second vice-president, Anna A. MacDonald; secretary, Jean E. Graffen; treasurer, Bertha S. Wetzell.

Dr. Thomson introduced Dr. Edward J. Nolan, of the Academy of Natural Sciences, who gave an interesting and descriptive talk of the men who had made the academy what it is to-day. Dr. Witmer Stone, the ornithologist of the academy, followed Dr. Nolan, and gave some interesting facts regarding the museum of the academy, past and present. At the close of the meeting the library and museum were open for inspection, and all were glad of the opportunity offered to view its treasures.

J. E. GRAFFEN, *Secretary.*

KEYSTONE STATE LIBRARY ASSOCIATION

The fourteenth annual meeting of the Keystone State Library Association will be held at Wernersville, Pa., Oct. 15-17, with Galen Hall as the headquarters.

The program gives promise of the meeting's being the most interesting in the history of the organization. The business session will be held on the evening of Oct. 15, after which there will be an informal social and "get acquainted" session.

The sessions following on Friday and Saturday will have for their general topic "The library as an influence on the civic life of the community," and the discussions will be led by Miss Corinne Bacon, who will speak of the selection of fiction for public libraries; Miss Alice S. Tyler, director of the Western Reserve Library School, whose subject will be library extension; Dr. Samuel McChord Crothers, of Cambridge, Mass., who will discuss certain features of library work from the standpoint of one outside of the profession; Dr. Scott Nearing, of the University of Pennsylvania, whose subject will be "Some recent developments in social and economic literature," and Miss Caroline Griest, reference librarian of the Erie Public Library, whose paper will be on "The library and civic education."

The usual round-table for small libraries has been omitted, and in its place will be a roll-call of libraries, with responses on "The best suggestion of a year." Friday afternoon will be left open for recreation, relaxation, and good cheer.

The last session will close at noon on Saturday, but those who can plan to stay over until Sunday in order to enjoy the beautiful surroundings and the association with their fellow workers will find it well worth while.

MABEL N. CHAMPLIN, *Secretary*.

ILLINOIS LIBRARY ASSOCIATION

The Illinois Library Association will hold its nineteenth annual meeting at Springfield during the week of Oct. 21 to 23, or as near that time as possible. The program is being planned to be practical and helpful, especially to the smaller libraries.

CHICAGO LIBRARY CLUB

The closing meeting of the year of the Chicago Library Club was held on the evening of May 14. After dinner at Lexington Hall, the business meeting was held in the assembly hall of the Harper Memorial Library.

Two new members were admitted to membership in the club, and two tendered their resignations. Mr. Walter presented the report of the auditing committee, which was duly accepted, and Mr. Utley presented that of the nominating committee, which was also accepted, and the secretary was instructed to cast a unanimous ballot for the following names, officers for 1914-1915: President, Miss Louise B. Krause, librarian with H. M. Bylesby & Co.; first vice-president, Mr. Robert J. Usher, the John Crerar Library; second vice-president, Miss Helene A. Dickey, librarian Chicago Teachers' College; secretary, Dr.

Augustus H. Shearer, the Newberry Library; treasurer, Mrs. Jessie Booth Perry, the Chicago Public Library.

A vote of thanks was tendered to the retiring officers for the work they have accomplished during the past year. The incoming president, when called upon for a speech, gave an outline of the work and ideals she would endeavor to follow during her term of office.

Dr. Burton, in a happy little talk, then turned over Harper Memorial Library to the club for inspection, and a most delightful evening was spent in viewing the building and the treasures housed in the library.

AGNES J. PETERSEN, *Secretary*.

COLORADO STATE LIBRARY COMMISSION

The first report of the reorganized Colorado State Library Commission has been sent to Gov. Ammons of Colorado. This commission, which had been inactive for several years, was reorganized a year ago as a result of the efforts made by the Colorado Library Association to secure library commission work in Colorado.

The governor appointed five librarians to form this commission, and while no funds were available for any work, the members of the commission themselves decided to do all of the volunteer work possible.

Two meetings of the commission were held during the year. At the request of the Colorado Civil Service Commission the Library Commission co-operated with it in the preparation of examination questions for library positions under civil service in Colorado. Three sets of questions were prepared, assistance was given in conducting the examination and the papers were corrected by the commission and the secretary of the Civil Service Commission.

One questionnaire, asking for information regarding the work of all public libraries in Colorado, was prepared and sent out by the commission. Another questionnaire, in regard to the work of Colorado libraries with the public schools of the state, will soon be sent out.

The directories of the country credit the state of Colorado with but 28 public libraries, but the questionnaire of the commission shows that there are between 40 and 50 such libraries in the state.

Some work was done by the commission in library organization. The members of the library board at Golden, Colo., were given help several times by the commission, and advice was given as to the purchase of supplies and the formulation of general rules and policies. Correspondence in regard to the establishment

of new libraries was conducted in six cities and towns. A number of lists were compiled and distributed by the commissioners to various libraries in the state. Assistance in classification and cataloging was given to the Fort Morgan Public Library, Fort Morgan High School Library, State Preparatory School Library and Boulder Public Library.

At their own expense the members of the commission have visited twenty public libraries. Close co-operation has been effected between the commission and the Colorado Library Association. As a result of this co-operation, five copies of the *Occasional Leaflet* have been distributed, free of cost, to every Colorado library and two exhibits of books have been made at conventions.

The members of the Colorado Library Commission are: Chalmers Hadley, Denver Public Library, president; Charlotte A. Baker, State Agricultural College, Fort Collins, secretary; C. Henry Smith, librarian University of Colorado; Albert F. Carter, librarian State Teachers' College; and Lucy W. Baker, librarian Public Library, Colorado Springs.

TEXAS LIBRARY ASSOCIATION

The twelfth meeting of the Texas Library Association was held at Austin, April 29 to May 2. The evening session of April 30 was devoted to "School libraries," and the program consisted of three addresses: "Children's reading" by J. Carlton Bell, professor of the art of teaching in the University of Texas; "Rural school libraries" by H. T. Musselman, editor of *Texas School Magazine*, Dallas, and "High school libraries" by J. L. Henderson, visitor of schools, University of Texas. The point made was that the school library has a vital function to perform in supplying suitable reading matter to the child, but that school libraries were few in number and inferior in quality in this state and not suited to the work they should accomplish.

The second session, or the meeting Friday forenoon, consisted of round table discussions of such topics as bookbuying, periodicals, publicity, accessioning, library bookkeeping, inter-library loans, traveling libraries and a library summer school. There were many new comers in attendance and these discussions afforded an excellent opportunity for getting acquainted. At the University of Texas Library, the largest in the state, the accession book has been discarded and the order cards are used instead. The Library and Historical Commission has made progress along most of the lines of work committed to its care, but through inability to secure appropriations it has done nothing to inaugurate traveling libraries. The Commis-

sion recently appealed to the Texas Federation of Women's Clubs to lend assistance in this work, and good results are confidently expected. The need of instruction in library work at some point within the state was thoroughly discussed. At least ten persons attended library summer schools last summer, and others would have gone if the expense had not been so great. A resolution was adopted expressing the hearty concurrence of the Association in urging the introduction of instruction in library work by the University of Texas.

An address by P. L. Windsor, librarian of the University of Illinois Library, was the chief feature of the evening session Friday. Mr. Windsor took for the subject of his discussion the functions of the library and the work of the librarian in the community.

The principal address of the meeting on Saturday forenoon was a description by Dr. Herman G. James of the working of the Bureau of Municipal Research recently established in connection with the School of Government in the University of Texas.

At the business meeting on Friday afternoon, officers were elected for the ensuing year as follows: President, Miss Elizabeth H. West, State Library, Austin; vice-presidents, Miss Cornelia Notz, Carnegie Library, San Antonio, and Miss Ethel Pitcher, Carnegie Library, Tyler; secretary, John E. Goodwin, University of Texas Library, Austin; treasurer, Miss Lillian Gunter, Carnegie Library, Gainesville.

The following resolution was adopted with respect to a gift recently bestowed: "Resolved, that the Texas Library Association hereby signifies its pleasure in the patriotic and timely gift of Major George W. Littlefield to the University of Texas of the sum of \$25,000 for a Southern history fund."

CALIFORNIA LIBRARY ASSOCIATION

The 1914 handbook of the association, containing the proceedings of the annual meeting of 1913, has made its appearance. Besides the report of the meeting at Santa Barbara, with papers read, the lists of officers, committees, and members, the constitution, and a list of the society's publications, are included.

UTAH LIBRARY ASSOCIATION

The Utah Library Association held its third annual meeting in Salt Lake City, June 1-2, 1914, with sixty-five members in attendance.

Dr. E. G. Gowans, the president, opened the convention Monday morning with a cordial address of welcome. He also spoke of the importance of the public library in the small

town, saying that while the larger cities were well cared for in the way of public libraries, our smaller towns had been neglected in this important matter. He spoke at length on the welfare of the child, declaring that the tendency to regard library work as separate and distinct is a great mistake, for it is very closely connected with child welfare. Social progress depends directly on the relation that exists between any generation and the next succeeding one, and the parents of this generation have separated themselves very widely from the next in the matter of amusements and recreation. All the moral forces in every town in the state should be organized for the betterment of the child. While the public schools are so well organized that they are the center of this work, all other powers should join together to see that nothing which can be done for the uplift of the child is neglected. President Gowans then introduced Miss Mary E. Downey, who has been making a library survey of the state. She has visited every town having any library activity, and has given a general review of Utah library conditions and many suggestions as to how to meet them. She told of the progress the state is making to advance its library interests and of the readiness of the people to respond to every means of enlightenment. She spoke of the wonderful building activity everywhere manifest, in which the library has a part, and of the co-operation of various organizations, school, church and club, in advancing the library movement. There is great need of books, of training, of organization, but these things will come and the possibilities of development are unlimited.

State Superintendent A. C. Matheson closed the session with an address on "The relation of the library to the school." He spoke of the advancement that has been made in the line of education in Utah in the last few years and urged even greater improvement. Coöperation between library and school should be encouraged. The reading habit, he said, is growing among the people of Utah, but for that habit to continue its growth there must be plenty of good books for the people to read.

A trustees' session was held Monday afternoon from 2 o'clock until 4, led by Mr. S. P. Eggertsen, president of the Provo Public Library board. Mr. Alfred M. Nelson, trustee Tooele Public Library, began the discussion of "The librarian—duties and relation to the board, attendance at board and association meetings and summer school, hours, vacations,

salary." Mr. George F. Goodwin, trustee Salt Lake Public Library, opened the question of "Library expansion—branches, county, state and school district division." Mr. L. E. Eggertsen, superintendent of the Provo public schools, presented "Coöperation between library and school—turning the school library and book fund to the public library, circulation of books through grades of schools." General discussion of these topics followed by Mrs. E. Crane Watson, librarian Cedar City Public Library; Mrs. Alice Gottfredsen, librarian Manti Public Library; Prof. Howard R. Driggs, library secretary of the state Board of Education, and Miss Mary E. Downey. The session was full of enthusiasm.

In the evening a delightful banquet was attended by members and friends of the association in the beautiful gold room of the Salt Lake Commercial Club. Prof. Driggs, in happy manner, introduced, in turn, the following persons, who responded to toasts: Miss Downey gave her impressions of Utah and her people, while the audience laughed at the marvelous things she meant to relate on going east. Governor William H. Spry spoke of the necessity of libraries, advocating their establishment and maintenance in every city, town, and hamlet in the state. Books, he said, tend to serve notice on the young of the responsibilities that stand before them and the duties they are expected to perform when they grow up to manhood and womanhood. He urged state supervision of libraries, and highly praised the activity of the state library association. Joseph T. Kingsbury, president of the University of Utah, commended the library progress of the state, and suggested means of coöperation on the part of the university in providing training for the work. A. C. Matheson, state superintendent of public instruction, spoke of the general benefit of free access to books, not only to the young, but to men and women in view of establishing a reading habit for greater enlightenment. Prof. J. H. Paul gave pleasant words of encouragement to those actively engaged in promoting the library interests of the state. Supt. L. E. Eggertsen also told of the pleasure it gave him to see the library interest developing in the state, and said he expected to see great things accomplished. Miss Smith said that the rule of silence in her library could not be broken even at a banquet. Miss Sprague expressed the wish of all connected with her library to be helpful in all that meant general interest in the work of the state. Dr. Gowans spoke of the spirit of play that should always enter such festive occasions. He still

wished that the gymnasium might be practically combined with the library movement. Mrs. Lizzie T. Edwards and Mrs. Howard R. Driggs sang beautiful selections at intervals through the feast and program.

A librarians' round table was led by Miss Downey on Tuesday morning. Miss Sprague talked on "Teaching the use of a library to high school students," emphasizing the coöperation of the library supervisor in the public schools and the library staff in this work. Miss Smith presented a paper on "How to use a library as applied to college students." Miss Downey then adapted the subject to the smaller town, school and library. Mrs. Gillespie and Mr. Eggertsen continued the discussion. General discussion of problems of library administration followed, including building, the budget, arrangement of libraries, methods of increasing books and circulation, completing periodical files for reference, pay collections, care of clippings, pamphlets and periodicals, and book and magazine selection and purchase.

Tuesday afternoon's session was held at the University of Utah. Prof. Howard R. Driggs gave an address on "Stories and story telling," in which he showed the great part the story is playing in our modern life.

The business meeting followed. The association voted to affiliate with the American Library Association. Committees on legislation, publicity, library and school, membership and program were authorized. The advantage of holding meetings of the association in other places as well as in Salt Lake City was discussed. The nominating committee reported the following officers, who were elected for the ensuing year: president, S. P. Eggertsen; first vice-president, Johanna Sprague; second vice-president, Esther Nelson; secretary and treasurer, A. M. Nelson.

The meeting adjourned to attend the reception and visit the library in the new administration building of the University of Utah. The Summer Library School continued directly after the meeting of the Utah Library Association.

MARY E. DOWNEY.

Library Schools

NEW YORK STATE LIBRARY SCHOOL

The school was represented at the A. L. A. conference in Washington by three faculty members and eighteen students. Many former students were also in attendance. Those resident in the District of Columbia gave a reception to the New York State Library School

in the rooms of the Home Club on the afternoon of Tuesday, May 26. Because of the difficulty of collecting so large a number in any one place at any one time under the prevailing rooming conditions, the usual annual dinner was omitted. Everett R. Perry, librarian of the Los Angeles Public Library, was elected president, and Harriet R. Peck, librarian of the Rensselaer Polytechnic Institute, was re-elected secretary-treasurer of the association for 1914-15, at a meeting presided over by the retiring president, Bessie Sargeant Smith of the Cleveland Public Library.

Mr. Leonard W. Hatch, chief of the bureau of statistics and information of the New York State Department of Labor, spoke to the school on June 2, his subject being "Literature concerning labor." June 10, Mr. Royal B. Farnum spoke on "Books on the arts," discussing the various types of books suitable for the different classes of library patrons interested in the fine arts.

The regular school exercises closed Friday, June 26. Following the custom of the past two or three years, there was no formal commencement. Mr. Wyer gave a brief address to both classes on the 24th, outlining some of the most important things necessary to insure professional advancement.

The class of 1893 has presented two large bas reliefs (Orpheus and Eurydice and a Niké) to the school. The class of 1909 is presenting a framed portrait of Dr. Herbert Putnam, similar in size and style to the other portraits of prominent librarians which are now in the school rooms. The class of 1901, which has already presented three pictures of typical library buildings, has presented a fourth, that of the Utica Public Library, as typical of the medium sized public library.

Miss Woodworth, assisted by R. L. Walkley of the class of 1913, has collected an interesting group of pictures of libraries in which the class of 1913 were employed April 1, 1914. Thirty different positions are included, one in Denmark and the other twenty-nine in fourteen different states from Massachusetts to Washington. Fourteen of these were in public libraries, three in state libraries, seven in college libraries, one in a normal college library, one in a county library, one in a high school library, two in library commissions, and one in a Y. M. C. A. library. Only five of the thirty-five members of the class are not now in library work. Three of these left before the end of the first year, one to resume teaching, one to be married, and one on account of illness contracted before entering the school. The other two are temporarily out of library work on account of slight ill-health.

SUMMER SESSION

The summer session closed Wednesday, July 15. The work this year, as stated in the preliminary announcements, was divided into two parts of three weeks each. The work of the first part of the course was devoted to the discussion of bibliography (trade and subject), government documents and reference work. The instructors were J. I. Wyer, Jr., W. S. Biscoe, and F. K. Walter. The second part, devoted to cataloging and classification, was conducted by Miss Jean Hawkins and Miss Jennie D. Fellows. Twenty-seven were in attendance during the six weeks, 17 attending the first and 22 the second part. The list of those in attendance with the libraries from which they came, follows:

LIST OF STUDENTS

- AMBLER, EVA R., B.A., Keuka College, 1906, Keuka Park, N. Y. Librarian (elect) Keuka College, Keuka Park.
- *CLARK, GENEVIEVE, Hudson Falls, N. Y. Librarian, Hudson Falls Free Library.
- *COLEMAN, HENRIETTE, Goshen, N. Y. Librarian, Goshen Library and Historical Society.
- CUMMINGS, MARGARET C., New York, N. Y. Assistant, New York City Hunter College Library.
- DANCY, CAROLINE F., Memphis, Tenn. Assistant in charge of school work, Cossitt Library, Memphis.
- †DAWSON, LENA R., Castleton-on-Hudson, N. Y. Assistant, New York State Library, Albany.
- *EGBERT, MABEL, Wilkingsburg, Pa. Cataloger, Carnegie Free Library, Braddock, Pa.
- *FORRESTER, MABEL, McKeesport, Pa. In charge circulation department, Carnegie Free Library, Braddock, Pa.
- HALL, FLORENCE S., Fredonia, N. Y. Librarian, Darwin R. Barker Library, Fredonia.
- *HAMBURGER, MRS. L. HAEFFKIN, Moscow, Russia. Assistant, Library of the First State Douma, St. Petersburg, 1906. Organizer and lecturer, Library courses, Shaniawsky University, Moscow, 1912-date.
- HAYFORD, SAMUEL, B.A., Columbia University, 1914, Albany, N. Y. Librarian (elect) Central Y. M. C. A. Albany.
- *HEGDES, ETTIE C., East Hampton, N. Y. Librarian, East Hampton Free Library.
- †HOLLAND, ELVA P., Watervliet, N. Y. Assistant, New York State Library.
- KRAFFT, GERTRUDE, Chatham, N. Y. Librarian, Colton (N.Y.) Public Library.
- *LORING, NANO G., Owego, N. Y. Assistant librarian, Coburn Free Library, Owego.
- *MARTIN, WINONA C., Rockville Centre, N. Y. Librarian, Rockville Centre Public Library.
- MERRITT, CLARA S., Port Chester, N. Y. Substitute librarian, Port Chester and Rye (N.Y.) Public Libraries.
- POSSONS, AMY H., Coxsackie, N. Y. Assistant librarian, Heermance Memorial Library, Coxsackie.
- *SEARS, ELIZA B., Buffalo, N. Y. Librarian, Buffalo Seminary.
- *SIGGELKOW, ALICE M., Mt. Kisco, N. Y. Librarian, Mt. Kisco Public Library.
- SUTLIFE, MOLLIE, Cherry Valley, N. Y. Librarian, Cherry Valley Public Library.
- TURNBULL, ADA I., B.A., Elmira College, 1909, Duaneburg, N. Y. Assistant (elect) Schenectady Public Library.
- *TURNER, LOUISE G., Detroit, Mich. Assistant, Circulation department, Detroit Public Library.
- *VAUGHN, N. AGNES, Hudson Falls, N. Y. Librarian, High School, Hudson Falls.
- WAGNER, BEATRICE, Mohawk, N. Y. Librarian, Welver Library, Mohawk.

*First session only.

**Second session only.

†Part work only.

- WAINWRIGHT, BELINDA E., Quincy, Mass. Custodian of reading room, West Quincy.
- **WILLIAMSON, MRS. CHARLOTTE M., Raleigh, N. C. Librarian, North Carolina College of Agriculture and Mechanical Arts, West Raleigh.

ALUMNI NOTES

Durkee, Florence E., 1913-1914, is serving as temporary assistant in the Galva (Ill.) Public Library.

Furbeck, Mary E., 1915, will spend the summer cataloging at the Forbes Library, Northampton, Mass.

Hopkins, Julia A., 1895-1896, has resigned her position as instructor in charge of the normal course at the Pratt Institute School of Library Science to become principal of the training classes of the Brooklyn Public Library.

Mitchell, S. Louise, 1903-1904, left the School of Education of the University of Chicago June 1, where she has served as assistant librarian for the last five years, to become librarian of the Ryerson Library, Art Institute, Chicago.

Scranton, Henriette, 1909-1910, has resigned the librarianship of the Elwood (Ind.) Public Library to become librarian of the Lake Erie College, Painesville, O.

Wallace, Ruth, 1913-1914, will go to the Evansville (Ind.) Public Library in September to take charge of the cataloging department.

Ward, Ruth L., 1905-1906, who has been cataloging temporarily at the U. S. Bureau of Education, Washington, has been appointed librarian of one of the high schools of Newark, N. J.

F. K. WALTER.

DREXEL INSTITUTE LIBRARY SCHOOL

The following subjects for bibliographies were chosen by the class of 1914:

- Miss Fox, Conservation of natural resources.
- Miss Guilford, Wagnerian opera.
- Miss Johnston, St. Francis of Assisi.
- Miss Latta, The Celtic revival.
- Miss Libby, Municipal ownership of public utilities.
- Miss Lingenfelter, Factory and domestic employment of women.
- Miss Parker, Edinburgh, its celebrities and associations.
- Miss Pierce, Story-telling.
- Miss Schultze, Compulsory insurance.
- Miss Smith, Vocations for college women.
- Miss Somerville, Radium.
- Miss Steptoe, Prose works of S. Weir Mitchell.
- Miss Stull, The artistic home.
- Miss Tafel, Pre-Shakespearean drama.
- Miss Voigt, Popular books on botany.
- Miss Wilson, Pompeian ornamentation.

POSITIONS

Miss Mary B. Latta, 1914, has accepted a position as assistant in the Free Library of Philadelphia.

Miss Clara L. Voigt, 1914, has been appointed assistant in the New York Public Library.

Miss Helen R. Shoemaker, 1912, has resigned her position at Bryn Mawr College to become librarian of the Oak Lane branch of the Free Library of Philadelphia.

Miss Rachel Webb Haight, 1911, has resigned her position at the Oregon Agricultural College, to accept the position of reference librarian at Indiana University.

Miss Daisy B. Sabin, 1904, has accepted the position of librarian of the Morris High School, New York City.

Miss Marian Pierce, 1914, has been for several months assistant in the Carnegie Library of Pittsburgh, Pa.

Miss Margaret Forgeus, 1906, has accepted a position as librarian of Meredith College, Raleigh, N. C.

Miss Maud I. Stull, 1914, has been appointed branch assistant in the New York Public Library.

Miss Laura E. Hanson, 1897, has resigned her position in the Apprentices' Library, Philadelphia, to take the position of head cataloger in the Library of the College of Physicians and Surgeons, Philadelphia.

Miss Florence B. Custer, 1907, has been appointed librarian of the Passyunk branch of the Free Library of Philadelphia.

Miss Katherine E. Hunt, 1907, has been appointed assistant in the catalog department of the Free Public Library of Philadelphia.

Miss Olla B. Ayres, 1910, has been appointed head cataloger of the Library of Cornell University.

Miss Elizabeth L. Kessler, 1913, has resigned her position as librarian of the Public Library at Edgewater, N. J.

Miss Eliza M. Fox, 1914, has been appointed as branch assistant for the summer in the New York Public Library.

Miss Mary R. Lingenfelter, 1914, will take a position September 1 as assistant in the catalog department of the Free Library of Philadelphia.

Miss Agnes W. Schultze, 1914, has accepted a position as reference assistant in the Carnegie Library of Pittsburgh, Pa.

Miss Gretta M. Smith, 1914, has accepted a position as assistant in the Public Library of Detroit, Mich.

ANNOUNCEMENT

In view of the fact that at the end of the school year at Drexel no arrangement had been made, such as many of us hoped would be made, by any other institution, to continue the Library School, the graduate records of class rank and of positions held since graduation have been copied, and these copies placed in charge of Mr. G. B. Utley, at A. L. A. headquarters, 78 East Washington St., Chicago, Ill., and of Miss S. C. N. Bogle (Drexel, 1904), Director of Training School, Carnegie Library, Pittsburgh, Pa. The original records and the correspondence about graduates have been filed with the Registrar, Drexel Institute. Any one of these three will gladly answer queries as to ability and kind of work done, for librarians who wish to employ Drexel graduates.

Graduates who wish to change their positions should write to Miss Bogle or to Mr. Utley, who will be glad to recommend them for such positions as come to their knowledge.

I shall always be happy to do anything that I can to serve the interests of the alumnae. My address, after Sept. 15, will be care of The H. W. Wilson Co., White Plains, N. Y.

CORINNE BACON, *Ex-Director*.

PRATT INSTITUTE SCHOOL OF LIBRARY SCIENCE

The alumni supper took place June 20 in the art gallery of the library building, with an attendance of 95. The classes of 1894 and 1904 held reunions, three members of the former and eight of the latter being present. As the alumni supper is strictly a family affair, there were no outside speakers, but post-prandial talks were made by Mr. Frederic B. Pratt, Mr. Stevens, Miss Rathbone, Miss Bertha Eger, of the class of 1894; Miss Sarah B. Askew, of the class of 1904, and Miss Florence Crosier, president of the class of 1914. These were interspersed with Pratt songs, of which there has come to be quite a collection.

The class of 1914 left a beautiful silver urn as its parting gift to the school. For some years past the class gifts have taken the form of additions to our tea service, showing the place that these class-room entertainments hold in the affections of the students.

POSITIONS

Members of the class of 1914 have been placed as follows:

Miss Martha Albers is to have charge of the German collection in the Yorkville branch of the New York Public Library.

Miss Florence L. Crosier returns to the Cleveland Public Library, whence she came to us on leave of absence.

Miss Maude W. Fowler goes to the Cleveland Public Library as student children's librarian.

Miss Eleanor Gleason is to have charge of the reference department of the Hartford Public Library for the summer.

Miss Alice A. Guller is to be the librarian's assistant at Colgate University, Hamilton, N. Y.

Miss Agnes Hansen returns to the cataloging department of the Seattle Public Library.

Miss Flor-Etta Kimball is to be first assistant in the Public Library at Madison, N. J.

Miss Rosamond McIntosh is to be assistant librarian of the Public Library at North Adams, Mass.

Miss Catherine Pennington has received a temporary appointment in the library of the Department of Agriculture at Washington.

Miss Maud M. Pugsley is to work in the public documents division of the New York Public Library during the summer.

Miss Amelia H. Robie is to be first assistant in the Public Library at Summit, N. J.

Miss Elizabeth M. Sawyer returns to the Cleveland Public Library.

Miss Florence M. Scott has been made librarian of the Public Library at Meadville, Pa.

Miss Loraine A. Sullivan will be a branch assistant in the New York Public Library.

Mr. Kenneth C. Walker has been made head of the department of technology of the Public Library at New Haven, Ct.

Miss Cecilia A. Watson has been appointed children's librarian of the Reuben McMillan Free Library, Youngstown, O.

Miss Edith I. Wright is to be vacation substitute in the Public Library at East Orange, N. J.

ALUMNI NOTES

Miss Adelaide F. Evans, Pratt 1902, head cataloger of the Newark Public Library, has accepted the headship of the cataloging department of the Detroit Public Library, where she begins work September 1.

Miss Sally M. Akin, Pratt 1910, has been made librarian of the Public Library at Fredrick, Md.

Miss Jeanne Johnson, Pratt 1912, has been made head cataloger of the Public Library at Tacoma, where she has been an assistant since graduation.

Miss Myrtle I. Roy, Pratt 1912, who has been for two years first assistant in the Summit (N. J.,) Public Library, has been made librarian of the Davenport Library at Bath, N. Y., beginning work September 1.

Miss Jacqueline Noel, Pratt, 1913, has resigned the librarianship of the La Grande (Ore.) Public Library to become an assistant in the reference department of the Tacoma Public Library.

Cards have been received announcing the marriage of Miss Florence D. Forbes, class of 1911, to Mr. Samuel Douglas Killam, of Rochester, N. Y.

Miss Helen G. Alleman and Miss Virginia N. Gillham, both of the class of 1914, substituted in the New York Public Library during July and August.

JOSEPHINE ADAMS RATHBONE, *Vice-Director*.

CARNEGIE LIBRARY OF PITTSBURGH—TRAINING SCHOOL FOR CHILDREN'S LIBRARIANS

The summer term of the Training School opened June 8. The junior courses for the term are: Book selection, Miss Randall and Miss Ellis; Book binding, Mr. Bailey and Mr. Scott; Business methods, Mr. Wright; Modern public library movement in America, Miss Bogle; Story telling, Miss Whiteman; Library buildings, Mr. Craver; Order work, Mr. Hewitt; Cataloging, Miss Randall; Architectural lettering, Miss Beale; Seminar for periodical review, Miss McCurdy; Aids to library economy, Miss Mann; Branch extension and routine work, Miss Howard.

Only one senior course, "Administration of children's rooms," by Miss Bogle, will be given.

Miss Mary Wright Plummer, principal of the New York Public Library School, gave two lectures to the school on May 22. The subjects were "Poetry anthologies for children" and "Development of the public library."

During the week of the A. L. A. conference the Training School had a luncheon at the Hotel Gordon, at which forty-two students and alumnae and three members of the faculty were present.

Examinations for entrance to the Training School were held on Tuesday, June 16. A second examination to fill vacancies occurring in the entering class will be held September 1.

ALUMNAE NOTES

Mildred Subers, class of 1914, has resigned as children's librarian of the Apprentices' Library, Philadelphia, Pa., to accept the position of children's librarian in the Lehigh branch of the Philadelphia Free Library.

Jessie M. Carson, class of 1902, has been elected chairman, and Jasmine Britton, class of 1911, vice-chairman of the A. L. A. section of work with children for the coming year.

Ingrid Jarnee, class of 1913, has resigned as assistant in the Royal Library, Copenhagen, Denmark, to become assistant to the librarian of the Public Library of Copenhagen.

ALUMNAE NOTES

Margaret Louise Bateman, 1910, has been appointed children's librarian of the Manchester City Library, Manchester, N. H.

Gertrude Blanchard, 1910, has been appointed children's librarian of the Homewood branch, Carnegie Library of Pittsburgh.

Jessie M. Carson, 1902, has been elected chairman and Jasmine Britton, class of 1911, vice-chairman of the A. L. A. section of work with children for the coming year.

Phyllis E. Murray, class of 1913, was married June 18, 1914, to Elmer Presley Grierson.

SARAH C. N. BOGLE, *Director*.

LIBRARY SCHOOL OF THE NEW YORK PUBLIC LIBRARY

The School has been authorized to announce the offer of a special course in municipal reference work, to begin as soon as practicable after the summer vacations. It will be open to qualified graduates of library schools, and to librarians of experience. The latter, unless the case is exceptional, will be asked to pass a written test. An advisory committee, consisting of Robert A. Campbell, municipal reference librarian, Adelaide R. Hasse, chief of the division of documents, Dr. Charles C. Williamson, chief of the division of economics, and William B. Gamble, chief of the division of technology, will aid the school in planning and carrying out the course. A circular of announcement has been printed and one giving tentative outline of the course will follow.

The final junior lectures of the year were given by Miss C. M. Hewins on "Children's books," and Mr. Edward F. Tilton, architect, on "The library building from the architect's point of view."

Miss Caroline Underhill spoke to the seniors in the School and College library course on "School work in a public library."

Mr. F. F. Hopper spoke to the seniors in administration on "The work of the order department," and Mr. William F. Scandlin on "The work of the Lighthouse for the blind," the lecture being given at the Lighthouse.

The graduating class presented to the School, the morning of commencement, a silver cake-basket of beautiful design, marked 1914.

Both classes had for the background of the

class photograph the Bryant monument on the terrace behind the library building.

Entrance examinations for the coming year were given on June 9, thirty-nine candidates being examined at the library, and twenty-nine in other parts of the country. Forty-five passed sufficiently well to be considered, and several applicants were accepted on their college records added to especial qualifications. Forty-two applications for senior courses have been received and passed upon to date.

The faculty had the pleasure of a brief visit on June 25, from Mme. Haffkine-Hamburger, director of the summer library school at Shaniavsky University, Moscow, and regretted much that she had not arrived during term time, so as to talk to the students on Russian libraries.

APPOINTMENTS

In the New York Public Library, reference department:

For summer: Mr. Avé-Lallemant and Miss Smith (economics); Miss Baillet (genealogy); Misses Fuller and Callan (periodicals); Miss Kahan (science); Miss Miller (American history); Mr. Törnudd* (main reading room); Miss Winslow (public documents); Mr. Dolezal* (stack room).

Circulation department:

For summer: Miss Rogers* (Hudson Park); Miss Callan (Central circulation, June 15-30); Miss Kamenetzky* (Woodstock); Miss Taber (58th Street); Miss Udin (Aguilar); Miss Fleming* (67th Street); Miss Foshay* (Aguilar); Miss Osborn* (Riverside); Miss Tyler* (Tompkins Square); Miss Evans* (Interbranch loan office); Miss Kaercher* (Tompkins Square); Miss Crenshaw* (Central circulation); Miss Stone* (Central circulation); Mrs. Beall, Miss Cooper,* Miss Esselstyn* and Miss Winslow (branches not yet assigned).

In other libraries:

Miss Harrsen, jun., 1913, indexer, American Telephone Co.

Miss Holmes, 1913, librarian, Arents Library, Richmond, Va.

Mrs. Custead, 1915, librarian, Patchogue (L. I.) Public Library.

Miss Freer, jun., 1914, substitute, Kingston (N. Y.) Public Library.

Of the twenty-three students graduating this year, twelve hold positions in the New York Public Library and are likely to remain there. The others are placed as follows:

Mabel L. Abbott, first assistant, cataloging department, Minneapolis Public Library.

*These students retain their positions, whether entering for the senior year or not.

Katharine M. Christopher, librarian and chief of women's department, Automobile Club of America, New York.

Alta B. Claffin, cataloger, Western Reserve Historical Society Library, Cleveland, O.

Anna M. Hardy, librarian, East Orange (N. J.) High School Library.

Dorothy G. Hoyt, cataloger, Metropolitan Museum.

Florence D. Johnston, assistant, Cedar Rapids (Ia.) Public Library.

Ida W. Lentillon, librarian, Far Rockaway branch, Queens Borough Public Library.

Metta R. Ludey, librarian, Jarvie Library, Bloomfield, N. J.

Martha C. Pritchard, librarian, White Plains High School Library.

Further notice of appointments can doubtless be given with the next report.

MARY W. PLUMMER, *Principal*.

SIMMONS COLLEGE—DEPARTMENT OF LIBRARY SCIENCE

The last visit of the year was paid in May to the Social Service Library. After the two weeks' examination period, the classes all dispersed for a welcome vacation, leaving the field to the seniors for the final functions of class week.

The commencement exercises were held on June 10 at Harvard Church, Brookline, at 10:30, the address being given by Dr. John Finley, president of the University of the State of New York.

The degree of B.S. in the library department was conferred upon the following candidates in the four-year course:

Marian Andrews, Constance Ashenden, Martha P. Bailey, Clara Beetle, Lucy S. Bell, Edith Brown, Helen F. Carleton, Elizabeth P. Ela, Sarah M. Findley, Margaret M. Kneil, Mary A. McCarthy, Edith S. Newcomet, Lillian F. Nisbet, Mildred W. Page, Ruth H. Parker, Margaret A. Potter, Iona M. Randall, Marian L. Small, Helen P. Smith, Katherine Warren.

The following graduate students in the one-year course successfully completed the course and were, by vote of the faculty, permitted to become candidates for the degree of B.S. at the commencement following their presentation of credentials showing satisfactory professional experience:

Winnifred A. Chapman, A.B.; Alice B. Day, A.B.; Anna E. Foster, A.B.; Louise M. Hoxie, A.B.; Esther C. Johnson, A.M.; Pauline Potter, A.B.; Grace W. Thompson, A.B.; Margaret Watkins, A.B.; Helen M. Whitehouse, A.B.

The degree of B.S. was conferred also upon the following graduates of other colleges, who,

having previously completed our one-year course, this year presented evidence of satisfactory professional experience:

Margaret M. Campbell, A.B.; Gladys S. Cole, A.B.; Elisabeth D. English, A.B.; Cornelia Ellis, A.B.; Adra M. Fay, A.B.; Frances C. Gifford, A.B.; Elizabeth A. Haseltine, A.B.; H. Marie McClure, A.B.; Hope L. Potter, S.B.; Rebecca B. Rankin, A.B.; Eleanor P. Wheeler, A.B.; Alice C. Wohlhaupter, A.B.

Miss Mary E. Hyde has accepted the position of instructor in library science in the college next year. Miss Hyde is a graduate of Leland Stanford University, and was a member of the New York State Library School, 1902-3. Since 1909 she has been head cataloger of the Public Library of San Francisco. She brings therefore active experience in public library work freshly to her teaching, which will be mainly cataloging, building on Miss Hitchler's foundations. Miss Hitchler does not sever her connection with the department entirely, but will give some lectures during the second term.

POSITIONS

Constance Ashenden, 1914, will become, November 1, secretary to the librarian, Boston Athenæum.

Clara Buttle, 1914, and Lucy Bell, have been appointed assistants in the Williams College Library.

Elizabeth Ela, 1914, and Grace W. Thompson, A.B., are to join the Brooklyn Public Library staff.

Margaret Potter, 1914, will become an assistant in the Cleveland Public Library, and a member of their children's training class.

Pauline Potter, A.B., has been appointed a cataloger in the University of Oregon Library.

Marie A. Lamont has been appointed an assistant in the Simmons College Library.

Helen Luitweiler, B.S., 1913, has resigned her position in the Simmons College Library to accept one in the Somerville Public Library.

JUNE R. DONNELLY.

UNIVERSITY OF ILLINOIS LIBRARY SCHOOL

The following lectures have been delivered before the school by visiting librarians: April 2 and 3, Miss Mary E. Ahern, editor of *Public Libraries*, "The fifth kingdom and the keeper of its treasures," and "The business of being a librarian"; April 7, Miss May Masee, editor of the *A. L. A. Booklist*, on the making of the *Booklist*; April 8, Miss Harriet E. Howe, instructor in Western Reserve Library School, on special phases of her work; April 16, Mr. Charles E. Rush, libra-

rian, St. Joseph (Mo.) Public Library, "Children's books and their illustrators"; April 28, Mr. Matthew S. Dudgeon, secretary, Wisconsin Free Library Commission, "The work of the Wisconsin Commission," and "The work of the Legislative Reference Bureau"; April 24, Miss Carrie E. Scott, Indianapolis, "The work of the Indiana Library Commission."

ALUMNI NOTES

The annual alumni reunion and dinner were held in Washington, Wednesday evening, May 27. Forty-two graduates and former students were present, a larger number than usual. Informal talks were given by the director and the assistant director, and a short business session of the Alumni Association was held. Officers for the ensuing year are: Miss Anna May Price, Springfield, Illinois, president, and Miss Jennie A. Craig, Urbana, Illinois, secretary-treasurer. The one hundred and fifty dollars in the treasury is to be used next year as a loan fund for senior students.

Appointment of graduates and former students have been reported as follows:

Carrie C. Patton, B. L. S., 1911, head cataloger, University of Texas Library.

Mary Torrance, B. L. S., 1913, instructor in library methods in the summer session at La Crosse (Wisconsin) Normal School.

Sabra E. Stevens, B. L. S., 1914, instructor at the Chautauqua (New York) summer library school.

Elizabeth H. Davis, B. L. S., 1914, reference assistant, Kansas State Agricultural College, Manhattan, Kansas.

Louise Fenimore Schwartz, B. L. S., 1914, assistant in charge of the loan desk, University of Washington, Seattle.

Rose R. Sears, B. L. S., 1914, Hammond Library, Chicago Theological Seminary, Chicago, Illinois.

Sabra E. Stevens, B. L. S., 1914, general assistant, University of Illinois Library.

Katharine Lewis, 1912-14, assistant in the office of the State Legislative Reference Bureau, Springfield, Illinois.

Lucile Warnock, 1913-14, temporary assistant in charge of the loan desk, Miami University Library.

Fanny W. Hill, 1913-14, temporary assistant in charge of Classical Seminar, University of Illinois.

Mrs. Elsie E. Martin, 1913-14, librarian, public school library, Hancock, Michigan.

Alma M. Penrose, 1913-14, instructor at the Iowa Summer Library School.

Margaret S. Williams, 1913-14, reviser, University of Illinois Summer Library School.

P. L. WINDSOR, *Director.*

WESTERN RESERVE UNIVERSITY LIBRARY
SCHOOL

Commencement activities of the Library School began with the annual luncheon given by the faculty to the class of 1914 in the rooms of the school, on Monday, June 15, and concluded with the receiving of certificates at the general university commencement on Thursday, June 18. Preceding the luncheon, the Alumni Association held its annual meeting.

Examinations for entrance to the School were held June 19 and 20.

ALUMNI NOTES

Hattie Callow, 1911, assistant in the Cleveland Public Library, has been appointed the librarian of the new Quincy branch, which was opened last month.

Florence J. Slater, 1912, first assistant at the Collinwood branch of the Cleveland Public Library, has been promoted to the librarianship of the branch.

Pauline Reich, 1913, first assistant at the Carnegie West branch of the Cleveland Public Library, has resigned her position to accept a similar position in the Webster branch of the New York Public Library.

Some of the appointments of the class of 1914 are as follows:

Ruth A. Brown, assistant, Detroit Public Library.

Doris E. Burgey, summer assistant, New York Public Library.

Margaret E. Calfee, summer assistant, Brumback Library, Van Wert, O.

Hazel C. Clark, assistant, Detroit Public Library.

Corra Hendee, assistant, lending department, Carnegie Library of Pittsburgh.

Adaline Howell, bibliographer and library editor, Detroit Public Library.

Lura C. Hutchinson, branch librarian, Minneapolis Public Library.

Mary Yoder, assistant, catalog department, Dayton Public Library.

Ruth Savord, assistant, catalog department, Cleveland Public Library.

Katherin G. Marvin, summer assistant, New York Public Library.

Grace Bohmer, Victoria Bronson, Florence L. Cottrell and Mabel Miller, of the Cleveland Public Library staff, will return to the library for regular work.

Josephine McConnell, Clara L. Schafer and Alice M. Smith will enter the Cleveland Public Library training class for children's librarians in the fall.

Elizabeth B. Doren, who was a student at the School in 1904-06, and who has since been a member of the Dayton Public Library staff,

will receive her certificate with the class of 1914.

Viola B. Phillips will return to her position in the Reuben McMillan Free Library of Youngstown, from which she had a leave of absence to attend the School.

Alice S. Tyler, *Director*.

CARNEGIE LIBRARY OF ATLANTA—LIBRARY SCHOOL

The third term ended May 23, one week earlier than usual, in order that the principal and other members of the faculty could attend the meeting of the American Library Association in Washington, May 25 to 30.

On May 9 Mr. Duncan Burnet, librarian of the University of Georgia Library, lectured to the class on "Problems of administration and book buying in a university library."

Miss Stearns, of the Wisconsin Library Commission, gave three lectures at the end of the term. On Friday, May 22, she spoke on "The library militant," and on "Some phases of commission work." On the morning of May 23 Miss Stearns made an address to the graduating class on "Ideals of library service."

The graduation exercises were held in the classroom on the morning of May 23 and included the address of Miss Stearns, a short talk from Mr. Willis Everett, president of the Library Board, and the presentation of the certificates. The names of the graduates are as follows: Grace Angier, Atlanta, Ga.; Janet Carter Berkeley, Staunton, Va.; Katharine Carnes, Macon, Ga.; Lucille Cobb, Carrollton, Ga.; Kathleen Hines, Calhoun, Ga.; Margaret Jemison, Talladega, Ala.; Annie Jungermann, Columbus, Ga.; Rhea King, Atlanta, Ga.; Anna Laura Robinson, Atlanta, Ga.; Singleton Smith, Athens, Ga.; Vera Southwick, Atlanta, Ga.; Mattie Lou Worsham, Forsyth, Ga.

The appointments of the class are as follows: Miss Janet Berkeley will go to Greensboro, N. C., as assistant librarian; Miss Anna Laura Robinson, to Savannah, Ga., as cataloger in the Savannah Public Library; Miss Margaret Jemison, to be librarian in the Valdosta (Ga.) Public Library; Miss Annie Jungermann, second assistant in the Library of the University of North Carolina, Chapel Hill, N. C.; Miss Rhea King, organizer of the Wilmington (N. C.) Public Library; Miss Vera Southwick and Miss Mattie Lou Worsham will be assistants in the Carnegie Library of Atlanta; Miss Grace Angier, Miss Singleton Smith, Miss Katharine Carnes, Miss Kathleen Hines, and Miss Lucille Cobb will be assistants in the New York Public Library.

At the close of Miss Stearns' lecture on "The library militant" on the afternoon of May 23,

the Graduates Association held its annual meeting in the classroom. The following officers were elected: President, Catherine Walker, Atlanta; vice-president, Randolph Archer, Talladega, Ala.; secretary and treasurer, Isabel Stevens, Atlanta; executive board, Frances Newman and Janet Berkeley. After the election the resident alumnæ entertained the graduating class at tea.

ALUMNÆ NOTES

Pauline Benson, 1908, who has been an assistant in the Carnegie Library of Atlanta since December, 1913, has accepted the position of librarian of the Public Library, Augusta, Ga.

Frances Newman, 1912, has been traveling in Greece and Egypt for the past three months on leave of absence from the cataloging department of the Carnegie Library of Atlanta.

Miss Tommie Dora Barker, 1909, head of the reference department of the Carnegie Library of Atlanta, compiled during the spring material for the "History of education in Georgia," which was the part presented by the alumnæ of Agnes Scott College, Decatur, Ga., at the pageant given in May on the college campus. Miss Barker, herself an alumna of Agnes Scott, appeared in the pageant as the Georgia Seminary for Young Ladies, Gainesville, 1878.

Susan Lancaster, 1907, librarian of the Alabama State Normal School, Jacksonville, Ala., will act as librarian of the Marion (S. C.) Public Library during June, July and August. Louise McMaster, 1908, librarian of the Marion Library, has taken a three months' leave of absence for travel in Europe.

Delia Foreacre Sneed, *Principal*.

LIBRARY SCHOOL OF THE UNIVERSITY OF WISCONSIN

The report of the closing month of the present school year records busy weeks spent in the completion of bibliographies and with examinations in each course, varied by several picnics and school frolics. On Memorial Day Miss Turvill invited the faculty and students to a picnic at her country home, and on June 6 Mr. and Mrs. Dudgeon, Miss Bascom and Miss Humble were the hosts at another picnic at the Dudgeon summer cottage on Lake Waubesa. Ideal weather helped to make both occasions delightful, and every camera was pressed into use to help preserve lasting impressions of the jolly gatherings, which were to cease so soon for the present class. On June 4 Miss Stearns' annual "field day" exercises were held, following the visit to the Traveling Library Department.

Through the courtesy of the Democrat Printing Co. the students who desired were given an opportunity to bind a book in the company's bindery.

Closing exercises for the eighth class of the school took place Thursday evening, June 11. Twenty-nine students completed the work, and of these twenty-five already have positions. At eight o'clock the students assembled in the foyer to form a procession, led by Director M. S. Dudgeon escorting President Van Hise, of the University, and Dr. A. S. Root, librarian of Oberlin College, who was to deliver the principal address. Then followed the faculty and sixteen alumni of the school, representatives of every class among them. The faculty and alumni stood, welcoming the graduating class as they entered the lecture room. Mr. Dudgeon presided, and first introduced President Van Hise, who spoke briefly to the class, recognizing them as graduates of one of the University schools.

Then followed the address by Dr. Root on "The growing librarian," one that was most inspiring, practical and helpful. He spoke of the value of routine in developing the "growing librarian," but explained that routine could be mastered through the development of habit and system. Following Dr. Root's address, Miss Hazeltine, as preceptor, presented the class to the director, who, with brief but fitting remarks, awarded their certificates. The exercises closed with an informal reception, giving opportunity to meet Dr. Root and the members of the class. Punch was served in the foyer, and the rooms were prettily decorated with roses, peonies and daisies in profusion.

The following alumni were present to greet the new class: Miss Ryan, Miss Annabelle Smith, Mrs. Steffen, 1907; Miss Turvill, 1908; Miss Williams, 1909; Miss Strong, 1910; Miss Bergold, Miss Kosek, Miss Muir, Miss E. M. Smith, 1911; Miss Ives, Miss Leaf, Miss Potts, 1912; Miss Ely, Miss Humble, Mrs. Koelker, 1913.

Subjects for the graduating bibliographies were assigned on April 15. One hundred hours is the minimum time accepted for each, and frequently much more time has been put upon the gathering, annotating and arranging of material, and its typing for the final copy. The subjects chosen by the students, or assigned to them, are those upon which bibliographies have been requested either by departments in the University or in the Capitol. It makes the work vital when each student feels that the results will be put into use as

soon as the research can be completed and formulated. The subjects are as follows:

- A study in circulation statistics—Miss Andrews.
- State insurance—Miss Bingham.
- Switzerland—Miss Brown.
- United States possessions—Miss Burt.
- Reform of modern civil service practice—Miss Clancy.
- Literary criticism, 1900-1910—Miss Congdon.
- Single tax—Miss Coon.
- Public health—Miss Cox.
- Governmental control of water power—Miss Easton.
- Sex education and instruction—Miss Emmons.
- American art—Miss Evans.
- Moral training for children—Miss Friedel.
- Legislative and municipal reference libraries—Miss Grace.
- Central America—Miss Hanson.
- Citizenship—Miss Hedenbergh.
- Balkan states—Miss Ingram.
- India—Miss Jacobus.
- Social life and customs of the Age of the Restoration—Miss Kimball.
- Violence in labor disputes—Miss King.
- Criticism of higher education—Miss Kjellgran.
- Public service as a career, and the training for it—Miss Lewis.
- Admission tests for immigrants—Miss Love.
- Industries of the United States—Miss Lutkemeyer.
- Rural credit—Miss McGovern.
- Germany—Miss Marshall.
- Feminism in fiction—Miss Rice.
- American librarians—Miss Sharp.
- Masters of American journalism—Miss Stockett.
- Character of American journalism—Miss Wieder.

APPOINTMENTS OF CLASS OF 1914

The following students have received appointments to date:

- Gladys M. Andrews—Assistant librarian, Superior (Wis.) Public Library.
- Robina Brown—Assistant, San Diego (Cal.) Public Library.
- Mariha B. Burt—Assistant, Eau Claire (Wis.) Public Library.
- Mildred Coon—Children's librarian, Sheboygan (Wis.) Public Library.
- Fannie E. Cox—Assistant, Detroit (Mich.) Public Library.
- Esther Friedel—Assistant, children's department, Pittsburgh Carnegie Library.
- Ethel A. Hedenbergh—Assistant in charge of school collections, Sioux City (Iowa) Public Library.
- Mary B. Kimball—Assistant, Green Bay (Wis.) Public Library.
- Annie E. Kjellgren—Assistant, Rockford (Ill.) Public Library.
- Florence D. Love—Reference librarian, Decatur (Ill.) Public Library.
- Catherine H. McGovern—Reference assistant, Milwaukee (Wis.) Public Library.
- Mary Louise Marshall—Librarian, Southern Illinois Normal University, Carbondale.
- Ruth C. Rice—Librarian, High School branch, Madison (Wis.) Free Library.
- Kathryn Sharp—Assistant, Gary (Ind.) Public Library.
- Julia C. Stockett—Reviser, Wisconsin Library School; substitute reference librarian, Calgary (Canada) Public Library for the summer.
- Callie Wieder—Librarian, Stanley (Wis.) Public Library.
- Jessie W. Bingham—Librarian, Rhinelander (Wis.) Public Library.
- Verna M. Evans—Special cataloger, Illinois State Historical Society Library.
- Lottie N. Ingram—Assistant, Racine (Wis.) Public Library.
- May C. Lewis—Assistant, children's department, Brooklyn Public Library.
- Georgia Lutkemeyer—Librarian, Watertown (Wis.) Public Library.
- Agnes King—For the summer, Wisconsin Public Affairs Board for bibliographic work in connection with the University Survey. She will complete her bibliography on higher education, begun at the request of Dr. William H. Allen, in charge of the survey.

ALUMNI NOTES

Mrs. Theodore R. Brewitt, 1908, will be one of the instructors in the Riverside (Cal.) summer course for librarians.

Ellen I. True, 1908, has joined the staff of the Los Angeles (Cal.) Public Library.

Harriet Bixby, 1909, joined the staff of the Portland (Oregon) Public Library, in March.

Daisy Fansler, 1910, is assistant in the children's department, Carnegie Library of Pittsburgh.

Grace M. Stevens, 1910, has accepted a position in the Minneapolis Public Library system as a branch librarian. Miss Cora I. Lansing, of Neenah, succeeds her as librarian at Wausau, Wis.

Gertrude Cobb, 1911, has resigned her position as librarian of the Janesville (Wis.) Public Library. Mary A. Egan, 1913, will succeed her.

Lois A. Spencer, 1911, has taken charge of the Library Supply Department of the Democrat Printing Company, Madison, Wis. For the past three years she has been librarian at Menominee, Mich.

Edna S. Green, 1912, has been appointed to the librarianship of the Gray branch, and Lydia E. Kinsley, 1907, to the librarianship of the Bowen branch of the Detroit Public Library.

Grace M. Leaf, 1912, reference librarian at the Kansas State Normal School, Emporia, Kan., has been granted leave of absence to organize the library of the Wisconsin Board of Control.

Kathleen Calhoun, 1913, is now assistant librarian in the library of the University of Alberta, Edmonton, Canada.

Frances C. Dukes, 1913, was married May 4, to Mr. Forrest F. Carhart, of Sheffield, Iowa. Since graduation she has held a position in the Cincinnati Public Library.

Dorothy B. Ely, 1913, will spend the summer in Europe.

Marion E. Frederickson, 1913, will spend the summer in Europe.

Frances C. Sawyer, 1913, became librarian of the Keewatin (Minn.) Public Library in March.

ALUMNI NOTES

The Alumni Association held its annual meeting at the Washington conference on the evening of May 27. Twenty-one graduates were present. Officers for the coming year are: Julia A. Robinson, president; Grace M. Stevens, vice-president; Helen Turvill, secretary; Lois A. Spencer, treasurer. At the school dinner the following graduates were present: Mary Ray, 1908; Angie Messer,

Julia A. Robinson, Mary Watkins, Ora Williams, 1909; Lilly M. E. Borresen, Hannah M. Lawrence, Mae I. Stearns, Marjorie Strong, Blanch Unterkircher, 1910; Margaret Green, Harriet Muir, Lois Spencer, 1911; Ruth Balch, Alice Farquhar, Ruth Hayward, W. E. Jillson, Helen Pfeiffer, Elizabeth Ronan, 1912; Irene Rowe, 1913; Mrs. Blackall, 1914.

Harriet Allen, 1907, has been elected librarian of the Houghton (Mich.) Public School Library. For several years she has been librarian at Rhineland, Wis.

Mrs. Marie Minton George, 1910, announces the birth of a son, born May 20.

Mabel Smith, 1911, has been elected librarian of the Olympia (Wash.) Public Library, resigning a similar position in the Watertown (Wis.) Public Library.

Florence Fisher, 1913, assistant for the past year in the Brooklyn (N. Y.) Public Library, has been appointed children's librarian in the Eau Claire (Wis.) Public Library.

Irene Rowe, 1913, becomes librarian of the Evansville (Ind.) High School Library, resigning her position in the Brooklyn (N. Y.) Public Library. She succeeds Ruth Stetson, 1912, who has received an appointment in Deerlodge, Mont.

MARY EMOGENE HAZELTINE.

DENVER (COLO.) PUBLIC LIBRARY TRAINING CLASS

THE third training class conducted at the Denver Public Library has just finished its eight months' course of work. When this third course was announced last September there were thirty-seven applicants for entrance. All but fifteen candidates were declared ineligible because of deficient education or personal qualifications, and a competitive examination was conducted to select the eight who formed the class. The training class was given instruction five days a week, and heretofore all graduates have been employed immediately in the Denver Public Library. The course of instruction was divided as follows:

Accession—Two lessons, forty books in each lesson.

Shelf-list—Three lessons.

Shelf-list and accession—Three lessons in the combination of shelf-list and accession record as used in the Denver Public Library.

Book numbers—Two lessons.

Classification—Plan and use of the Dewey system, with modifications used in the Denver Public Library, forty lessons.

Cataloging—Seventeen lessons.

Reference—Sixteen lessons.

Bibliography—Six lessons.

Children's work—Twelve lessons.

Public documents—Four lessons.

Miscellaneous lectures—Six lessons.

During the eight months when the training class instruction was given, the members were assigned for practice work five afternoons a week. This practice work was not paid for by the library, as no charge was made for the instruction, supplies, etc., incident to the course. Miss Rena Reese, the librarian's assistant in the Denver Public Library, was in charge of the course.

UNIVERSITY OF UTAH SUMMER LIBRARY SCHOOL

The third annual session of the Utah Summer Library School continued at the University of Utah through the month of June, under the direction of Miss Mary E. Downey.

The school is designed for librarians and assistants who cannot leave their work for extended courses, but who can get leave of absence for a few weeks of study, thus gaining a broader conception of their work and a general understanding of modern methods and ideals. The staff of instructors has the reputation of commanding and obtaining good work from their students. Miss Downey gave the courses in "Reference" and "Library organization and administration," including the American Library Association, state associations, district meetings or institutes, library clubs and staff meetings, noted library workers, state commissions, evolution of the library, extension in the United States, state extension, local extension, developing a library, reorganizing a library, building and equipment, the trustee, the staff, reading of the librarian, values in library work, the maintenance fund, supplies, book selection and buying, preparing books for the shelves, care of periodicals, clippings, pictures and pamphlets, special collections, simplifying routine work, binding and mending, loan systems, work with children, schools and clubs, picture bulletins, how to use a library, reports and statistics, advertising.

Miss Sabra W. Vought instructed the students in cataloging, classification, accessioning, and shelf-listing. Each student catalogs one hundred books and classifies two hundred.

Lectures were followed by practice work, which was carefully revised. Opportunity was given also for questions and discussion of problems relating to library experience and consultation with the instructors.

Students have the use of the University of Utah and Packard Libraries for laboratory work. The librarians of these libraries cooperated in every way possible to make the

school a success. Visits were made also to the L. D. S. High School Library, Chapman branch of the Packard Library, Neighborhood House Library, and to the *Deseret News* printing office and bindery.

The work of the regular instructors has been supplemented as follows: Mr. Howard R. Driggs addressed the students on "Stories and story telling," "The art of poetry," and "The music of literature." Miss Joanna Sprague lectured on "Teaching the use of a library" and "Book binding and mending," giving practical problems at her library. Miss Esther Nelson spoke on "The reference work in college and university libraries." Strenuous class work was supplemented by several social functions, including a reception by Miss Sprague and her staff on the first visit of the class to their library. Miss Downey and Miss Vought entertained the class at their home, and there were outings at Saltair and Bingham. There were some visiting librarians, trustees, and others interested in library work who attended lectures and consulted in regard to library matters, making this feature an important part of the work. The libraries of three states and twelve towns were represented by twenty-six students.

MARY E. DOWNEY.

BROOKLYN PUBLIC LIBRARY TRAINING CLASS

The Brooklyn Public Library now offers two courses for training assistants; one to prepare candidates to enter the staff as junior assistants, the other to train them as children's librarians. The two courses will be run parallel as far as possible and much of the theoretical instruction will be given in common.

Examinations of applicants for admission to the two courses will be held at the library September 15, 1914, at 9 a. m., and the class work, planned on a basis of forty hours a week, will begin October 5.

The general course will train the candidates for positions as general assistants in the branch libraries. Candidates must be not less than eighteen and not more than thirty-five years of age and must be in good physical condition. They must have had a high school education or its equivalent, and must possess personal qualifications satisfactory to the chief librarian and to the administration committee. Those meeting the above requirements will be given two written examinations, covering literature, history, science, art, current events and general information. Those who obtain a mark of 75 per cent. or more on both papers will be admitted. Graduates of accepted colleges will be admitted without examinations.

The course of study will include library economy, bibliography, cataloging, classification, reference work, history of libraries, work with children, reading courses in fiction and non-fiction, and a weekly seminar in current topics.

The course will consist of four months of theoretical training in library science and three months of practical work in one or more branches of the library.

No tuition fee is charged, but students may be required to furnish their own text books at a probable cost of \$10.

Those who complete satisfactorily the prescribed course and who pass the final examination will be placed upon the eligible list of the third grade service from which appointments are made as vacancies occur in the library staff, but the library does not guarantee to give any student a position in the library service. The library's scheme of graded service provides for the following positions and salaries:

First grade: Branch librarian, \$840 to \$1500 per annum.

Second grade: Senior assistants, \$660 to \$780 per annum.

Third grade: Junior assistants, \$480 to \$600 per annum.

The course for training children's librarians will train the candidates for positions as children's librarians in the branch libraries. The same requirements are made as for the general course, plus one year of college work or its equivalent.

The course of study will cover a period of nine months and will consist of theoretical training in general library science as well as in work with children. Practice work in the branch children's rooms will constitute an important part of the training. It will include lectures, problems and required reading in children's literature and methods of work with children, in addition to general courses in library economy, bibliography, reference work, etc.

Every graduate will be expected to accept an appointment in the Brooklyn Public Library, except in the improbable event of there being no opening within a reasonable time after the completion of the course, in which circumstance the instructors will assist graduates to obtain positions in other libraries. The salaries of children's librarians range from \$660 to \$900 per annum.

For further information address,

MISS JULIA A. HOPKINS, *Principal*,
Brooklyn Public Library,
Fourth Avenue and Pacific Street,
Brooklyn, N. Y.

Reviews

A. L. A. MANUAL of library economy, in 32 chapters, edited by a committee of the American Library Association. Chicago:

A. L. A. Publishing Board, 1910-14.

This enterprise, which is in immediate charge of a small committee appointed by the A. L. A. Publishing Board, has been under way for about five years. Nineteen of the proposed 32 chapters have been issued in advance separate form and are available from the executive offices of the Association for ten cents each. Others are in preparation, two or three of them actually in press. The work is another instance of that co-operation which has produced so many useful bibliographic and professional publications within the ranks of the American Library Association. The authors of these monographs have in all cases furnished the manuscript without remuneration in consideration of its publication at cost through the A. L. A. Publishing Board. Free work, however, is not fast work. Authors carefully chosen for high authority may not be hurried or they will withdraw leaving no equal contributor in view.

The latest chapters not before noticed in the columns of the JOURNAL are:

- Chap. V. Proprietary and subscription libraries, by Charles Knowles Bolton.
- Chap. VI. The free public library, by Isabel Ely Lord.
- Chap. X. The library building, by W. R. Eastman.
- Chap. XIV. Library service, prepared by Emma V. Baldwin, edited by Frank P. Hill.
- Chap. XXI. Loan work, by Carl P. P. Vitz.
- Chap. XXVII. Commissions, state aid, and state agencies, by Asa Wynkoop.
- Chap. XXIX. Library work with children, by Frances Jenkins Olcott.
- Chap. XXXII. Library printing, by Frank K. Walter.

The Manual is designed to be a cross section of the best, the wisest and most approved current usage in American library work, with such accompanying historical matter as shall indicate the setting or sufficiently explain the development of different lines of work. It is intended primarily for use with library schools; apprentice and training

classes; library boards or librarians building or occupying new buildings or considering changes in method; for untrained and inexperienced library workers and for those engaged in the work of library extension. Despite this primary aim, it is not so elementary as to be without distinct interest and usefulness to any one in the profession.

The 32 chapters fall into three divisions: the first, *Types of Libraries*, includes the first eight chapters which are chiefly historical; the second, including chapters 9-26, has the caption *Organization and Administration*, and treats of the different subjects and library processes in the order in which they ensue in the founding, organization and administration of a library; the third division, including the last six chapters, is entitled *Special Forms of Work*, and includes library extension, work with schools, with children, with the blind, museums, lectures, art galleries, etc., in their relations with libraries, and a chapter on library printing.

It is the plan of the Publishing Board to bind these together into one or two volumes when the work is finished.

Mr. Bolton's chapter is a cogent bit of special pleading by one who loves and believes in a continuing large place for the proprietary library, in despite of and side by side with the militant free public library, the social *raison d'être* of which Miss Lord so ardently and so admirably sets forth. We are left with the conviction that two persons could scarcely be made unhappier than by giving Miss Lord the Boston Athenæum and Mr. Bolton a free public library of comparable size and renown.

Mr. Eastman gives in sixteen pages the quintessence of twenty years' fruitful study and application of the principles which should govern the construction primarily of small library buildings, but which are in the main pertinent to all library architecture.

Surely no two people have better right to speak of the qualifications, tenure and organization of the library staff than Miss Baldwin and Dr. Hill, who have been associated from its beginnings with a municipal library system admittedly one of the most efficient and conspicuous exemplars of this relatively new type of library endeavor. Some frank disparagement of municipal civil service in public libraries is noted, and an increasing regard to health and working condition of the staff.

Mr. Vitz's chapter is not merely a study of loan records and systems, but of all the varied, numerous and important activities which fall within the work of the circulation department of a public library. The principles and

methods of recording loans are discussed, and three charging systems—the Brown, Newark and New York State Library—are minutely described as typical systems for different kinds of libraries. But beyond this account of the mechanics of loan work, and of far greater importance, are the admirable paragraphs on the qualifications for acceptable service at the loan desk, the statements of arguments for and against open shelves and the sensible discussions of such topics as registration records, fines, length of loan period, reserves, pay duplicate collections, publicity, contagious diseases, statistics, interbranch records, etc. A carefully chosen classified bibliography is appended. This chapter is one of the best in the series.

In chapter 27, Mr. Wynkoop forcefully summarizes arguments for the existence, maintenance and adequate support of state agencies for library extension, followed by as impressive a statement as we recall having seen of the work which such agencies are doing and have done. So much have fervor, conviction and evangelical effort marked this work that it gives one a start to encounter a few wholesome paragraphs on "Limitations and possible dangers in commission work," which caution against too great uniformity in methods under conditions which vary widely in different parts of the country and which warn against doing too much in certain cases.

Miss Olcott furnishes a veritable vademecum in concise form of practical and concrete discussion of plan, methods and aims for a library work with children which shall be actuated by high ideals and which never loses sight of the children and the books as, when all is said and done, the chiefest factors in the work.

Mr. Walter's excellent chapter deals with a subject which, both in its practical and esthetic aspects, if we may judge from the vast stream of current library publications, gets far too little intelligent notice from librarians. A section treats briefly of duplicating machines, those useful substitutes for more formal printing.

The uniform excellence of the successive chapters of this manual is such as to prompt the wish that it may soon come to completion in its final volume form.

BISHOP, WILLIAM WARNER. *Practical handbook of modern library cataloging*. Baltimore: Williams & Wilkins Co., 1914. 150 p. D. \$1 net.

It was in 1901 that the Library of Congress undertook the publication and general sale of

printed catalog cards for all its books; in the years since then the use of these cards has grown so steadily that it may now be fairly said that the printed purchased card forms the basis of modern American cataloging practice. Mr. Bishop's little manual is built upon this premise and deals specifically with the operative and administrative aspect of the subject, rather than with cataloging rules and detailed technique. Indeed, the book touches very lightly upon cataloging codes, and enters not at all the labyrinthine regions of classification systems. It is essentially a practical exposition of principles and methods desirable in the organization and operation of cataloging departments in large and moderate sized libraries, where printed cards are used as extensively as possible, and where the adoption of the "unit" card for different forms of catalog duplication reduces or eliminates much variation in entry. The opening chapter traces very briefly the development of catalogs from book to card form, with comment on notable examples and indication of the modifications effected in technique by the adoption of the printed card. Mr. Bishop recognizes clearly that the supply of "ready-made" catalog cards is bound to increase until in the not distant future libraries will be able to purchase cards for practically every book of importance; "the pressure of universal need and demand is bound to produce the result sought in time."

Physical requirements of catalog departments are considered in a chapter devoted to "Rooms and equipment," giving excellent advice as to floor plans, arrangement and character of furniture, quality of card stock, and other practical details; the "Planning of the catalog" is then taken up, with recommendations regarding extent of duplication, "full" or "short" style, and the various forms of catalog—dictionary, classed and alphabeticoclassed; and under "Organization of cataloging force," there follows orderly presentation of the cataloger's duties; need of revision, assignment and specializing; catalogers' individual reports as the basis of statistics; catalogers' qualifications and salaries. The importance of good executive management is emphasized: "An improper organization of the force will compel the man who uses half a dozen languages and knows the literature of as many subjects to do the work of a typewriter or mere clerk, or on the other hand will permit a recent high school graduate to decide the subject entry for the latest physical chemistry or treatise on elliptic functions." Again, in regard to individual reports of work done, there is a needed warning: "It is mani-

festly unfair to the catalogers, as most of our libraries go, to make these reports the basis of comparison between individuals. The work is never of the same difficulty, the same duration, the same amount. No one sits at a desk day by day, hour by hour, turning out catalog cards. The very nature of the work demands a great variety of study and time on different books. . . . In any library, catalogers having special equipment may be called on—and should be—to aid in reference work. . . . The reports are decidedly valuable in recording the *sum of the work done*, in estimating the probable capacity of the office. They are seldom, even when taken for long periods, a true reflection of the cataloging ability of the various members of the force." Equally suggestive is the emphasis laid upon "book sense" as one of the necessary qualifications of the cataloger: "It is an ability to move quickly and easily among printed things with an instinctive appreciation of values. It comes to people who have lived with books from childhood but who have never regarded them as an end in themselves. A man or woman without 'book sense' is utterly out of place in a library. Some people never get it—they had best go to selling groceries or pounding typewriters."

Having outlined the organization of the cataloging department, the material with which it deals and the methods employed are treated in the same effective manner. A chapter is given to "The use of printed catalog cards," indicating procedure of selecting, ordering, and adaptation to average needs. Under "Cataloging method," references are given to the leading codes and manuals, rules and decisions are summarized, and there is concise advice on routine practice. The comment on imprint entry, on notes, both of "contents" and of "evaluation," and on series cards, is especially interesting and useful. The final chapter on "Subject headings" presents in part material embodied in the author's paper on the subject read at the A. L. A. conference of 1906. It is a lucid condensation of precept and practice in this difficult field, setting forth some of the problems and complications with indication of recommended policy. Mr. Bishop is an advocate of "one place" entry, and urges his point with logic and skill against Cutter's principle of double subject entry in the case of subject-regional titles. He is disposed also to favor a carefully worked out chronological or period arrangement at least for subjects in political and economic history. His remarks throughout are based upon wide practical experience, sound scholarship, and common-sense, and must command the interested

attention of all catalogers. Indeed the book as a whole is a welcome and useful addition to the librarian's store of working tools, and it should prove of wide practical service.

H. E. H.

ANTRIM, SAIDA BRUMBACK, and ANTRIM, ERNEST IRVING. The county library. Van Wert, O.: The Pioneer Press. 306 p. \$2 and postage.

This story of the origin and development of the Brumback Library of Van Wert, Ohio, sometimes called the "pioneer county library," is of great interest to the library world. The county library is defined as "a library owned and maintained through taxation by a county of a state and having a circulation co-extensive with the county." This account, given with full details and quotations from local and other newspapers, is not only a contribution to the solving of the problem of waste places but is also to be commended as a very practical manual of library economy adapted to rural conditions. It points the way to a process of extension that might well be undertaken by every well established library in the land.

In the year 1894, a small subscription library was founded by certain ladies in the city of Van Wert. In 1896, upon receiving aid from the city, the library was made free. In 1897, it had about 2000 volumes. Mr. John Sanford Brumback, one of the leading men of the city, having been impressed with the value and far-reaching influence of a public library, determined to give a library building to the people and, with that object, had plans prepared. In December, 1897, he died, at the age of 68, and in his will was found a statement of his desire with a request to his heirs to carry out his purpose. To this was attached the express condition that arrangements satisfactory to them be made with the city of Van Wert or, "if they desire and think best," with Van Wert county, for a proper site for the building and for the maintenance of the library.

In January, 1898, the widow and four children of Mr. Brumback addressed a note to the Ladies' Library Association, to the city authorities and to the county commissioners, offering a building, suggesting a plan of taxation and control, and giving strong reasons for preferring the maintenance and use of the library by the county, thus benefiting 30,000 people rather than 8000 in the city. They proposed a managing board of seven persons, of whom two should be named by the Brumback heirs, two by the Ladies' Association who

would then give their library to the new enterprise, and three to be appointed by the county commissioners. The offer was accepted by the county and a contract concluded accordingly. It was necessary for the legislature of Ohio to enact a county library law to legalize the transaction. Such a law was passed April 26, 1898, and applied to all counties in the state. The corner-stone of the building was laid July 18, 1899. The dedication of the building, costing \$50,000, was on January 1, 1901, and in that month the circulation of books began.

The creation of branches or library stations received immediate attention and one collection of 100 books was sent out within a month after the opening of the central library. In March four other collections of 50 books each were placed. Nine branches in all were established in 1901, three in 1902, three in 1903 and the last of sixteen in 1904. The story of each of these is told. The books were generally placed in stores, some in postoffices and doctors' offices, one in a law office, one at a telephone exchange, and one in a private house. Some stations had 50 books, others 100, one, 200 and three of the larger places, 300. After a few years of trial a uniform number of 125 was adopted, to be supplemented by additional collections for the larger stations. The time of retaining the books was at first two months and afterwards extended to three months. It was, in brief, a county system of traveling libraries.

In 1902, school teachers received the special privilege of taking four books each for school use. In 1905 collections of books were placed in many schools, and beginning with September, 1914, all rural schools of the county, in accordance with Ohio law, will have at least fifty books each, and these will be furnished by the Brumback Library.

In 1913, the library had 23,319 volumes and 14,774 borrowers, half the population of the county. It reported a circulation for that year of 90,853, of which 54,956 was from the central library, 14,124 from the sixteen stations, and 21,773 from the schools.

Following the story of the Brumback Library are chapters on the county library movement in the United States, giving the provisions of all county library laws in the various states, followed by a discussion of their character and working and an admirable statement of the advantages of the county library. There is also a tabular statement of the statistics of 57 county libraries classed according to their manner of organization and sources of support, showing 22 in California, 11 in Minnesota, 9 in Wyoming, 8 in Ohio,

3 in Oregon, and 1 each in Missouri, Illinois, Maryland and Indiana. Reference is also made to other so-called county libraries from which no data were secured.

The publication of this book containing so much information on a very interesting and vital subject can not fail to call attention to the opportunity for great enlargement of aggressive library work. Whether the territory under consideration is a county, a township, or a state, there is always the unoccupied ground which challenges the library worker and which can be entered so easily if we have the mind and the energy to take possession. After twenty-one years of trial the traveling library is no longer an experiment. Any library anywhere can use it and it is emphatically the agency by which the scattered people must be reached. Its use by the state is only a temporary expedient which can only touch the margin of the real demand.

Whether the county is always the best unit for library organization is another question. It may be the best in Ohio, it probably is in California and Wyoming, but it may not be the same in New York, Pennsylvania or Connecticut. That will depend on many conditions, such as the density of population, the presence of more than one important city or village in a given county, the physical geography of the county with consequent facility or difficulty of communication and the number of libraries already established which must be dis-established if a county system is attempted. In Massachusetts for instance each county already has as many free libraries as it has towns. It would be a difficult task now to unite them under one management and support them all by one county tax. But each one of these towns has its own outlying districts. The idea of the county library is one to be followed everywhere where there is a neighborhood without books.

It may be said, without detracting from the real value of this book, that, in the closing chapters, dealing with the general county movement, the information is not always as complete as might be desired. Indeed, the authors state that their account is far from exhaustive. For instance, to one familiar with New York conditions, it is clear that they can not be judged from the county library law of that state which is of recent date and practically quite worthless as it stands; not, for the reason given in this book that it calls for an appropriation instead of a tax, but because, under its provisions, the property of any city or town now maintaining a library must be taxed a second time if a contract for the outside districts is made. A

test was made in the case of Broome county where there was a strong demand for county service from the city library of Binghamton. The library was eager to furnish the books if assured that the county would bear the added expense. But the city, having received a Carnegie building some years before, was committed to a yearly library expenditure of \$7,500. The cost of procuring and sending books in needed measure to the towns was estimated at \$5,000 a year. If the county was to pay it, the city, containing three fourths of all the taxable property of the county, must then pay three fourths of the extra cost of lending its own books to its neighbors. To this, the county board, on which of course the city was strongly represented, would not consent. The alternative, under the law, was for the county to assume the entire support of the city library. But this would tax the country for the benefit of the city, would break up a long established control, and interfere with contracts and other interests. The city could not consent to relinquish its library charter, and so the practical obstacles to action under the county law appeared insuperable. The county proposition came too late. Had there been several important libraries in the county, as is the case in many other counties, the difficulty of adjusting all their claims and bringing all of them under a single county administration would have been greater still. A remedy might be found in so amending the law as to exempt from taxation for this purpose all property already paying a library tax, as is done in California, Nebraska and other states. California found it absolutely necessary to any county system to offer such exemption. The unwillingness to change is not altogether unreasonable and in most cases, in our older states, the extra tax would be neither nominal nor small.

But long before any general county law there were libraries in New York free to the county. In 1864, Ezra Cornell, two years before he founded Cornell University, founded the Cornell Library Association in Ithaca. It was chartered by special law as "a public library the use of which shall be free to all residents of the county of Tompkins." In 1869, the legislature also chartered the Wadsworth Library which had been established 26 years earlier by private gifts in the village of Geneseo. The charter reads that it shall be "accessible for general use to the residents of the county of Livingston, free of expense." These libraries have always been free for circulation and are active today; and the latter, in particular, has done and is doing excellent work in sending li-

braries to make delivery stations, schools and clubs. Its circulation may not be co-extensive with the county for the very good reason that other libraries have come in to supply the demand of villages which could not be satisfied with traveling libraries. But so, in California, it is expected that many counties will leave out parts of their territory from their county system, but the result is called a county library nevertheless. These two are endowed libraries, neither managed nor supported by their counties, but serving the county nevertheless.

The question of priority will often turn upon a definition. One man will say that a library which serves the county is a county library; another will insist upon county initiative and control; the book before us passes by initiative and control and puts the county tax into the definition; another might, with almost equal reason, define the county library as one founded by the county, controlled by the county and in a building provided by the county. Recognition by some definite act of the county is important, but probably we should all agree that any library whose free circulation is substantially co-extensive with the county is a county library. Service is the ultimate test.

In the list presented in the book appears the name of the Cincinnati Public Library, serving the whole of Hamilton county both in and beyond the city. This brings to mind other city counties. The city of New York includes the entire territory of five counties and three of them are still, in large part, rural counties. The New York Public Library with 42 permanent branches, each having at least 10,000 books, and sending out last year 919,000 volumes in traveling libraries alone to 934 stations, serves the three counties of New York, Bronx and Richmond and is supported as to its circulation by local tax. The Brooklyn Public Library, with 28 branches and 334 traveling library stations, is the free library of the county of Kings. The Queens Borough Public Library with 20 branches and many traveling library stations serves the county of Queens. These have no relation to the county law but they do the county work. These are all practically county libraries and there may be others.

The Ohio law is called the first county library law because it was the first general law to distinctly emphasize a county system adapted to rural conditions. That the idea was not entirely new is shown by the Indiana law of 1816 and the Wyoming law of 1886, to both of which reference is made. But it was the first law of the kind which succeeded.

It will be noted however that the Ohio law is based upon a gift of money or property or else, as amended in 1906, upon a contract with an existing library. It does not authorize a county to establish a library at its own expense. Assuming that the laws here quoted are the only ones bearing on the subject, above statements in regard to Ohio are also true of the county laws of Wyoming, Wisconsin, Minnesota, Missouri, New York and Iowa. In all of these laws the county takes a secondary place and is dependent on private benevolence or previous enterprise. Only in California, Maryland, Washington, Oregon and Nebraska have the counties the power to originate a public library. So that in this respect also the fact of priority may still be open to question. We know that in New York there is in the library law of 1892 a general clause giving the power of initiative and maintenance to any "other body authorized to levy and collect taxes" which, in the opinion of many, gave the privilege of a library to every county, although counties were not named. In New York, also, another law in 1896 says that "any municipal corporation" may act under the library law of 1892, and a county is expressly called a "municipal corporation." Similar provisions may exist in other states. There were free town libraries in Connecticut and New Hampshire long before either state had a library law and they were tax supported under another name as institutions of education. We are not always compelled to wait on the terms of the law if we have its spirit.

The facts given above show that the number of county libraries, as admitted by the compilers, is certainly greater than the 57 named in the printed list; and that the statement on page 266 that the Washington County Free Library in Maryland, to which all honor be given, is the only county library east of the Allegheny mountains is scarcely correct, though doubtless no others were reported as county libraries. In some way, with or without county law, the people of many other counties east and west have the books. Whoever may have been first we agree that the county movement has large significance in the right direction and holds before every library the possibilities of great extension. It is a satisfaction to have so complete a demonstration of its progress. W. R. E.

PEARSON, EDMUND LESTER. The secret book. Macmillan. 249 p. \$1.25.

To be sure, you don't know much about the secret book, the "*Liber Crypticus*, or Book of Satyrs, of Cassius Parmensis," when you have

finished reading Mr. Pearson's latest contribution to the joy of library living, but what do you care? You've attended the meetings of "the Club" (we wonder in passing if Mr. Pearson offers them as models for other library clubs to pattern after), and have mingled with gentlemen bearing distinguished and familiar names. You have been impressed by the quality of the information and the depth of the philosophy embodied in the papers read, and edified by the discovery of very human qualities in the make-up of their writers.

If you are on the staff of a library journal, of course you may wince a little at finding your clever characterization of a library speech analyzed and explained with unfeeling frankness. But suppose you are a reference librarian, can you fail to appreciate the struggles of Mr. Fernald in his effort to serve the lady who demanded Menelik's plays and would accept no substitute, or the man who insisted in pursuing, through all the unabridged dictionaries in the reference room his own line of original research, before he would confide his desire to know the hidden significance of John D. Rockefeller's middle initial? If you are a children's librarian, can you fail to pause and reflect, after reading Crerar's paper on "Immoral books," on the many pitfalls that beset the steps of the most conscientious librarian who may desire to guide the youthful mind along the paths of purest literature?

Whoever you are, you will appreciate Ryerson's pleasant picture, interpolated in his paper "On pirates," of one of those quiet, drowsy libraries of a generation ago, where you went to read and dream away the summer afternoons:

"So we all went to the public library. And in that we were happy—happier than we knew. It makes me pity the boys to whom the word means a cold white building, shining inside with brass railings and turnstiles, equipped with the last word in a correct 'juvenile' department, presided over by those whose sweetly scientific ministrations are efficient but irksome. This was an old and dignified structure, shaded by trees, and even possessing a bit of well-kept lawn. Ivy covered the bricks and almost came in at the windows. Here—though I may be mistaken in thinking that it had any effect on us—once lived the proprietor of many acres, the possessor of servants and horses, the owner of plate and cellars of wine, and of ships that sailed the seas. Here, in the room where ponderous volumes now cover the tables, he had his captains to dinner, and they sampled the

Madeira and sherry which these captains had fetched home with them, and drank success to privateering voyages. Probably they got very merry over it all, in the regular Pepysian fashion—I hope they did, at any rate. It helps make the encyclopedia less dry to believe it."

And before you lay aside the book and go back to your routine duties, be sure that you study the index. It will repay you. It is short, but it is sweet, and contains entries that it seems safe to say no other writer would have had the initiative to make. There is, of course, the usual trifling error which makers of indexes invariably include. It is found on page 253, where the item "Red whiskers, Sunflower looks well with" is referred back to page 6, when it should have been page 7. We feel, however, that this will probably not militate greatly against the book's sale or usefulness.

F. A. H.

Librarians

ALLISON, Gladys B., New York State Library School, '13-'14, has been appointed assistant in the order and accession department of the Library of the University of Texas, in Austin.

BATEMAN, Margaret Louise, of the class of 1909 in the Training School for Children's Librarians, Carnegie Library of Pittsburgh, has been appointed children's librarian of the City Library of Manchester, N. H., and assumed her duties in July. Miss Bateman was for two years (1912-1913) in charge of the children's work in Oak Park, Ill. She was also lecturer on children's work in the summer school of the University of Illinois in 1913. During the last winter and spring she has been doing temporary work in the children's department of the Carnegie Library of Pittsburgh, Pa.

BERRY, Ethel I., New York State Library School, '11-'12, has been promoted from a position in the Walker Branch of the Minneapolis Public Library to take charge of its factory and business library stations.

CALKINS, Ruth H., New York State Library School, '13-'14, is serving as summer assistant in the Tompkins Square branch of the New York Public Library.

CALL, Mrs. E. A., who has been in charge of the Pittsfield (Me.) Public Library for several years, has sent in her resignation, to take effect Oct. 1, when she will move to Falmouth.

COWLEY, Amy, New York State Library School, '14, has been appointed librarian of the public library at Hutchinson, Kan.

ERSKINE, Mary L., B.L.S., New York State Library School, '14, will return to her former position as librarian of Wilson College, Chambersburg, Pa.

HAMILTON, William J., New York State Library School, '12, has been appointed first assistant in the shelf department of the New York Public Library.

HERING, Hollis W., Pratt 1910, who has been an assistant in the Library of the Union Theological Seminary, has been made librarian of the Special Missionary Research Library in New York.

HOBART, Frances, has resigned her position as librarian of the Bixby Memorial Free Library, Vergennes, Vt., and will spend the summer at Columbia University, New York City.

HODGKINS, Mabel, librarian of New Hampshire College at Durham, has resigned her position.

HULBURD, Annabel A., New York State Library School, '06-'07, has been appointed to succeed Miss Edith E. Clarke as head cataloger at Syracuse University Library.

KERR, Willis H., who was elected to the presidency of Bellevue College in Bellevue, Neb., in May, has decided not to accept the position, and will continue his present work as librarian of the State Normal School at Emporia, Kan.

Kiernan, Thomas K., who had been connected with Harvard University for the last sixty years and who was known to thousands of graduates and students, died suddenly July 31, at his home in Arlington Heights, Mass., in his seventy-eighth year. As superintendent of the Harvard Library he had met every student who studied at Harvard during the last thirty-five years.

LAMB, C. Louise, New York State Library School, '13-'14, has been appointed librarian of Branch B of the Minneapolis Public Library.

LATA, Mary B., Drexel 1914, will serve as acting librarian of the Falls of Schuylkill branch of the Free Library of Philadelphia during August and September.

MCKNIGHT, Elizabeth B., who has been librarian of the Barringer High School branch of the Newark Public Library, has joined the staff of the Girls' High School Library in Brooklyn.

McMILLEN, James A., New York State Library School, '15, is spending the summer

months in the catalog department of the New York Public Library.

MACNAIR, Rebecca S., New York State Library School, '11-'12, has resigned her position as assistant librarian of the high school library at Pasadena, Cal., to become first assistant in the Kern County Library at Bakersfield, Cal.

MAYES, Olive, Pratt 1913, has been made librarian of the Alabama Girls' Technical Institute at Montevallo, Alabama.

MILLER, Edyth L., Pratt 1903, has been made bibliographer of the New International Encyclopædia.

RICE, Paul N., New York State Library School, '12, has gone to the New York Public Library as reference and information desk assistant in the public catalog room.

SHARPE, Margaret, New York State Library School, '13-'14, has been appointed assistant in Wesleyan University Library, Middletown, Connecticut.

STANLEY, HARRIET H., has been appointed librarian of the New Hampshire College of Agriculture and Mechanic Arts at Durham. The Hamilton Smith Public Library of Durham is housed with the college library under one librarianship. Miss Stanley goes to the work in August, after several weeks, June-July, at McGill University in Montreal, where she has given instruction in the summer library school.

SUTCLIFFE, Marjorie T., Simmons College Library School, 1911, has resigned her position as assistant in the Wellesley College Library to become assistant in the City Library of Manchester, N. H., and has already begun her work there.

TRUE, Dr. Frederick William, who was successively librarian, curator of mammals, executive curator and head curator of the department of biology in the United States National Museum, and for the last few years assistant secretary of the Smithsonian Institute, died in the George Washington Hospital, Washington, D. C., June 24.

WHITE, Mabel G., B.L.S., New York State Library School, '08, has resigned her position in the Mott Haven Branch of the New York Public Library to become assistant to the superintendent of public libraries of the Board of Education of the City of New York.

WILCOX, E. S., librarian of the Peoria (Ill.) Public Library for the last thirty years, received the degree of Doctor of Literature from Knox College at its commencement this year. Mr. Wilcox began his career sixty years ago as a professor in Knox College, leaving that position to practise law.

THE LIBRARY WORLD

New England

MASSACHUSETTS

Amherst. The Massachusetts Agricultural College has issued a number of "library leaflets" this year as a part of its extension service. Each leaflet has a list of ten to fifteen titles, with brief notes, a paragraph of information on how to obtain state and federal publications, and a short list of recommended periodicals. Some of the newest leaflets are "The bookkeeper's bookshelf," "Helps for the live stock farmer," "Books for tree wardens," "Selected list on rural civic improvement," and "Books for the amateur flower gardener."

Amherst Coll. L. Robert S. Fletcher, lbn. (Rpt.—yr. ending July 31, 1913.) Accessions 2900; total number of volumes 104,422. Circulation 11,077, of which 61 per cent. belonged to the student body. Income from various book funds amounted to \$7,644.78; expenditures for books were \$4,398.06, for binding \$859.72, and for periodicals \$1,397.95.

The overcrowding of the library is dwelt upon at length. Since the publication of the report, steps have been taken to secure a new building and preliminary plans are now being prepared. The establishment of a fund to provide material for research work, and the publication of the results of such research in a college series, is urged, both for the sake of improvement in quality of the library's own collection and for the added standing given to the college in the educational world.

Beverly. The sum of \$1,000 was left to the Beverly Public Library by the late Miss Sarah Warner Clark.

Boston. The Pilgrim Publicity Association of Boston is urging the establishment of a branch of the Boston Public Library in the business district of the city.

Boston P. L. Horace G. Wadlin, lbn. (62d rpt.—yr. ending Jan. 31, 1914.) Accessions 37,606; total number volumes 1,067,103, of which 253,570 are in the branches. Total circulation 1,848,973, of which 1,641,433 were for home use and 207,540 for schools and other institutions. Total registration 92,599, a gain of 3906. Receipts were \$426,381.68, and of the expenditures \$49,094.70 went for books (including \$7,452.72 for periodicals, \$2,000 for newspapers, and \$823.36 for photographs); salaries in the central library and the branches, \$232,859.89; printing department,

including salaries, \$11,342.69; and the binding department (including salaries amounting to \$29,296.04), \$36,289.67. The average cost per volume for books purchased was \$1.42, as against \$1.50 in 1912.

The library has supplied with books 28 branches and reading rooms, 139 public and parochial schools, 62 engine houses, and 36 other institutions. The new North End branch building was opened in February, 1913, and the new building for the Charlestown branch in November. Work was started on the East Boston branch (which was completed last May). New quarters have been provided for several reading rooms, and two new ones have been established.

In the catalog department 57,664 volumes, covering 37,306 titles, were cataloged, and 164,535 cards added to the catalog. In Bates Hall, the main reading room at the central building, no accurate record can be kept of the number of volumes used, but some conception may be formed from the fact that during the year 575,000 slips were used in calling for books for hall use, and 255,000 for home use. For the 9000 reference books on the open shelves in the Hall no slips are needed.

The library has gradually acquired a collection of lantern slides, principally for use in its own lecture courses, but available for lending, under proper restrictions. The total number is now 4,406, and during the year 2,662 slides have been lent to 83 borrowers. The examining committee, in its report, recommends closer co-operation between the library and the public schools, many of which are also purchasing lantern slide collections, to prevent the present possibility of duplication.

A long list of the free public lectures delivered in the lecture hall of the central building during the year is given. Geography, travel, archaeology, music, literature, art, and drama are only a few of the subjects given.

Work in the branches has shown steady growth. The knowledge of what the library offers is constantly increasing, through the co-operative work with schools and study classes, the use of books by various clubs and the university extension courses. More and more foreigners use the library, and this calls for an increase in the personal assistance necessary to be given to readers by members of the staff.

The examining committee, in its report, recommends the seizure of a strip of land in the

rear of the library to provide for an extension to the present library building. The land is assessed for about \$150,000, and a building could probably be erected for less than \$200,000. Access might be had through a passage-way from Exeter street, and the addition would add materially to the stock room besides affording a possible rearrangement and enlargement of some of the public rooms of the library. The committee also recommends an increase in book appropriations; better salaries, with a rearrangement of hours of service; consideration of pension legislation; and many changes and improvements in branch quarters.

There are in the regular service of the library 320 persons, and those required in the Sunday and evening and extra service raise the total number of persons who must be paid to 573. This number has been and will be increased during the coming year by about 25.

Cambridge. Harvard Univ. L. William C. Lane, lbn. (Rpt.—yr. ending June 30, 1913.) Accessions 39,356; total number of volumes and pamphlets 1,747,011. Circulation 100,204, including hall use and overnight use of reference books from Gore Hall and Harvard Hall. Total expended for books \$46,670.

The chief event of the year was the moving of 500,000 volumes from Gore Hall to Randall Hall and to nine other buildings, described at length in the LIBRARY JOURNAL for February, 1913. Through a large purchase the library now possesses a collection of some 7000 pamphlets on English history between 1600 and 1800, rivalling that of the British Museum. The work of substituting Library of Congress cards for the former smaller ones was completed about Nov. 1, after fourteen months. After this began the making of cards for the public catalog, of books noted only in the official catalog. In eight months about 43,000 titles were so added. The process of the merging of the libraries of the Harvard Divinity School and of Andover Theological Seminary continues, and the library of the Blue Hill Observatory appears for the first time as a constituent part of the University Library. A better organization of the staff and an improvement in rates of pay, in working hours, and in vacation privileges have been considered.

Needham. By a vote of 142 to 94 a special meeting decided to accept the offer of William Carter of Needham Heights to buy the public library building for \$12,000 and present the town \$8,000 and a more central site at the corner of Rosemark street and Highland ave-

nue, half way between the villages of Needham and Needham Heights, provided the town would appropriate an additional \$10,000 to complete the new library building.

Salem. Mr. Gardner M. Jones, librarian of the Salem Public Library, has written to the JOURNAL to correct the statement in the daily papers that the public library was burned in the late fire. The library and its branches, as well as the Essex Institute, Salem Athenæum, and the Peabody Museum are entirely uninjured. The only library loss is that of books in the hands of readers. Mr. Jones also reports to his friends that his own house is in a section of the city that escaped, but that six employees were burned out.

Springfield. The Memorial Square branch of the City Library was dedicated June 23. The branch will serve a territory having a population of about 30,000. Some 5000 books were placed in the branch before the opening, and an appropriation of \$2,000 for additional books is available, to be used as soon as the patronage shows what kind of books will be most needed. The building is of light buff brick with Indiana limestone trimmings. The basement, which will contain a large assembly hall and banquet room, has not yet been finished. The cost complete with furnishings was \$35,000, of which \$26,000 was given by Mr. Carnegie. The architect was Edward L. Tilton of New York, who has been associated with E. C. & G. C. Gardner. Miss Avis M. Morrison will be the librarian in charge.

Worcester. Clarence S. Brigham, librarian of the American Antiquarian Society, records in his report for the year ending in October, 1913, that the accessions for the year numbered 11,206. These figures include books, pamphlets, early newspapers, maps, broadsides, and manuscripts. The report consists largely of a detailed description of many of the accessions.

Worcester F. P. L. Robert K. Shaw, lbn. (54th rpt.—yr. ending Nov. 30, 1913.) Net accessions 8307; total number of volumes in library 200,934. Circulation, home and school use, 466,339. New registration 4680; total registraton 24,091. Receipts \$56,135.28; expenditures \$54,810.32, including \$10,246.95 for books, \$4095.75 for binding.

The report contains an appeal for a new building. Of the congestion in the central library it says: "Its main features, including the entire absence of method or uniformity in the arrangement of book-stacks in the circulation and children's departments, forced upon us by the exigencies of the old building; the dark and dingy corners in which books must

there be housed; the occasional crowding of a new book-case into aisles already narrow; the annoyance and discomfort increasingly felt by students who try to consult our book-stacks; the exposure of valuable books in over-heated rooms; and worst of all, the daily peril of thousands of precious volumes to fire, are a part of a too familiar tale.

"With our circulation department in the condition indicated it is not surprising that its issue of books has not kept pace with last year, the total count for the past twelve months being 243,544 as compared with 259,384 of the previous year, showing a loss of 15,840 or 6.5%. Large gains in the children's department, however, still gives us a comforting increase, in the total home and school use, of 20,728 or 4.7% over last year's 10% gain."

Three new branches were started, and were opened to the public in February of this year, the buildings being erected from a fund of \$75,000 given by the Carnegie Corporation.

RHODE ISLAND

Providence. The branch of the public library in Sprague House was threatened with extinction this summer when workers in the settlement decided to transfer their work to another section of the city. The directors of Sprague House made a proposition to the Library Association to permit the continued use of the building as a library providing the cost of maintenance would be cared for by the Providence Public Library. Because of the recent purchase of land the Library Association felt that they could not supply the necessary funds, but the city council has voted the appropriation of \$600 for the balance of the fiscal year, which ends in September. There was no opposition to the proposition and it will be taken up again at the first meeting of the council in September for the purpose of appropriating a sum sufficient to maintain the library for another year. This plan is to be followed each year as a regular yearly appropriation. During the past year more than 21,000 volumes have been issued at the branch and it is the intention to broaden the scope of the present system. The library is to be opened every day, including Sunday, and also during the evening.

CONNECTICUT

Seymour. Charles P. Wooster, at one time a resident of this town, set aside in his will, which was recently probated, the sum of \$51,000 for the establishment of a public library here.

Middle Atlantic

NEW YORK

Brooklyn. Contracts for the construction of the Red Hook branch of the Brooklyn Public Library, to be located at Visitation place and Richards street, are about ready to be signed. This branch is the last of the twenty Carnegie library buildings allotted to Brooklyn. It will be the only library in the borough equipped with an open air reading room. The building will cost about \$50,000. The main entrance will be two stories high and the rear of the building will be one story.

Brooklyn. The Eastern Parkway branch, at Eastern Parkway and Schenectady avenue, was formally opened on Tuesday afternoon, July 7, at 4 o'clock. Addresses were made by Borough President Pounds, David A. Boody, William H. Good and Edward P. Lyon. The Brownsville Children's Library, at Stone and Dumont avenues, will probably be ready for occupancy the latter part of September.

Franklinville. The Franklinville Library founded eight years ago, is to have a new building. It will be called the Blount Library in honor of a former resident who has contributed \$5,000 to the building fund. A grant of \$2,200 has been promised from the Carnegie Corporation, and \$1000 has been raised in the village. The building will be one story high, constructed of gray brick.

Ithaca. The Cornell University Library has issued volume VII of "Islandica," an annual relating to Iceland and the Fiske Icelandic collection in the university library, which is edited by George William Harris, the librarian. This latest volume contains "The story of Griselda in Iceland," printed in Icelandic, and edited with a historical introduction in English, by Halldor Hermannsson.

Ithaca. The presentation to the University Library of the Comstock Memorial Library Fund was a feature of commencement at Cornell. The fund amounts to over \$2500, raised by voluntary contributions from former students of Prof. Comstock, the famous entomologist, on the occasion of his retirement after forty-one years of active service, and will be used to buy books on entomology.

New York City. The maximum salary of high school librarians, after ten years of service, has been placed by the Board of Education of New York City at \$2,000.

New York City. The New York Society Library of 109 University Place, which was founded in 1754, has issued a pamphlet containing a historical sketch, together with lists

of shareholders, officers, and benefactors. The illustrations include pictures of the various buildings which the library has occupied, and full-page portraits of all the chairmen from Robert Kelly, who occupied the chair in 1856, down to Frederic de Peyster Foster, who has been chairman since 1907.

New York City. President Moskowitz of the Civil Service Commission has taken the initial steps to establish a civil service reference library in the offices of the commission on the fourteenth floor of the Municipal Building. The move is part of a plan to bring about a system of co-operation between the Civil Service Commission in this city and commissions in every city of importance in the Union and Canada. Letters have been sent out to the heads of civil service commissions in twenty-five cities and nine states. The out-of-town commissions are asked to send in copies of the rules and regulations governing them; copies of annual reports and other publications which shed any light on their methods of doing business. It is hoped to bring about a systematic exchange of examination papers also. One of the first things President Moskowitz expects to accomplish through the inter-city co-operating plan is the preparation of a classified list of all municipal positions into two divisions—those that are exempt from civil service examinations and those that are in the competitive class.

New York City. The latest project of the Church Peace Union, founded with a \$2,000,000 endowment by Andrew Carnegie in February, is the establishment of a peace library in this city. The appropriation for this undertaking has been made at Mr. Carnegie's suggestion, and authority given to Rev. Dr. Frederick Lynch, the secretary of the Union, to begin at once to collect all available literature on all phases of international relationships. The library is to be located for the present in the Education Building, at No. 70 Fifth avenue. Dr. Lynch announces that the Union will also begin a literature of its own, to be part, not only of the new library here, but to be supplied to clergymen throughout the country. Dr. Lynch also thinks it quite possible that extensive libraries in a number of centers throughout the country will be formed. This branch of the work is to be done under the supervision of Dr. Lynch, Edwin D. Mead, secretary of the World's Peace Foundation, and Hamilton Holt, editor of the *Independent*.

New York City. A book, entitled "The New York Public Library," written in Russian, has been published recently in Moscow. The author is Mme. L. B. Khavkina, a Russian lady,

who is a student of library work, a lecturer on that subject, and a member of bibliographical and literary societies. The chief purpose of the book is to show Russian readers not only the extent of library work in America, as represented by this library, but also the freedom with which books are offered to the readers. She points out that although the national libraries of Europe enjoy the same advantage over the American public library that the Library of Congress possesses—a compulsory gift of all copyrighted books—nevertheless the European libraries do not make their books one half as accessible as do the public libraries in this country. And the latter have to buy their books for themselves. Mme. Khavkina gives a history of the Astor and Lenox libraries, the Tilden fund, and the New York Free Circulating Library—the component parts of the present New York Public Library. She speaks of the various privileges for readers, the exhibitions of books and of pictures, the travelling libraries, lecture rooms and their use. She dwells upon the work with schools, and for children generally. The book is illustrated with sixteen views of the library buildings, and of various rooms and activities within them. A number of copies of the book are to be placed in the branches here for the use of Russian readers.

Syracuse. The Syracuse Public Library in a pamphlet issued in June gives some interesting information about itself. With a total circulation during 1913 of 362,175, the expenses of circulation were \$36,160, or a little less than ten cents a volume. Besides the main buildings, of which Ezekiel W. Mundy is librarian, there is one branch and ten stations. The library has installed a large map, made up of the topographical sheets of the U. S. Geological Survey, and covering the district surrounding Syracuse. With the co-operation of various railways, all the interurban trolley lines centering in Syracuse are shown on this map. The library has collections of books in German and Italian that are very popular, a municipal reference department, and a valuable collection of books on genealogy and local history.

NEW JERSEY

Caldwell. The matter of locating the proposed Cleveland Memorial Library offered by Andrew Carnegie to the town of Caldwell seems to be stirring up considerable feeling. When subscriptions were solicited, and contributed, throughout the country it was understood that the library was to stand on the Cleveland birthplace property, adjacent to the house where Cleveland was born. It was so stated by Dr. John H. Finley, president of the

Cleveland Association, when he asked Mr. Carnegie to renew his old offer of funds, and the latter agreed to the site. Difficulty now arises from the fact that many feel the location is too far from the center of the town, and many suggestions for a change of location have been made.

East Orange. The board of trustees of the East Orange Public Library has in contemplation an addition to the main library building at Main street and Munn avenue. Plans for the structure have been drawn by Hobart A. Walker and will be submitted to the finance committee of the city council with a request that a bond issue be authorized to defray the cost.

Hoboken. The trustees of the Free Public Library have adopted two new rules for the government of the library. All applicants for positions henceforth must be between the ages of 18 and 35, in good health, and residents of the city for at least two years prior to their application. They will also be required to pass a written examination as prescribed by the trustees, and after passing the examination must serve a probationary period of six months before receiving a permanent appointment.

Navesink. The new Public Library was opened June 11. The Navesink Library Association was organized last winter. The association leased the old Baptist church at Navesink and had the building remodeled. The library has about 680 volumes, in addition to those loaned by the state.

Newark. William H. Rademaekers, who does the binding for the Newark Free Public Library, and H. G. Buchan, the originator of the Buchan patent magazine binder, have organized the Rademaekers-Buchan Co., with offices at 123 Liberty street, New York, for the manufacture of magazine binders.

Princeton. The Princeton University has issued author finding lists of the Class of 1889 Library of American History and Politics, containing over 900 titles, and of the Class of 1875 Library of English Poetry and Drama which was established in 1895 and now contains over 2200 volumes.

PENNSYLVANIA

Chester. Frank Grant Lewis, in his report of the Crozer Theological Seminary Library for the year ending April 30, 1914, records an increased use of the library by the students, and, through the extension department, by the surrounding community. The library of the seminary and that of the American

Baptist Historical Society are administered jointly, giving increased usefulness to both at a considerable saving in expense. A card index of periodical material not indexed elsewhere has been continued and developed. Owing to insufficient help, a large number of books given to the library are still uncataloged, although the librarian sacrificed his vacation last summer to further the work of the library. The need of a larger staff is dilated upon throughout the report.

Lancaster. Announcement has been made of a donation from Dr. Frank R. Diffenderfer, of this city, of \$1,000 for a Diffenderfer alcove in the Watts de Peyster Library and 638 books to be placed in the same.

Philadelphia. Announcement that plans are under way for the erection of a free Carnegie library at Wayne and Hunting Park avenues was made at a recent meeting of the North Philadelphia Business Men's Association.

West Chester. By the will of Sarah J. Farley, who died recently, the sum of \$500 is left to the West Chester Public Library.

DELAWARE

Wilmington. The request first presented to the city council last fall by the Wilmington Institute Free Library, that the council appropriate annually \$50 for every \$1,000 given to the library, the whole not to exceed \$300,000, has been granted by a unanimous vote of the city council on July 29. This will necessitate the city appropriating an additional \$15,000 annually to the library in addition to the \$15,430 now given each year to that institution.

DISTRICT OF COLUMBIA

Washington. An item of \$25,000 has been inserted in the Legislative, Executive and Judicial Appropriation bill, to be spent by the Library of Congress in assembling, summarizing, translating, and otherwise preparing for members of Congress material bearing upon proposed legislation. The library has, of course, done a good deal of this work ever since its establishment, but the special appropriation will enable its resources to be still better utilized.

The South

SOUTH CAROLINA

Charleston. At the one hundred and sixty-sixth annual meeting of the Charleston Library Society, President Ficken, in his annual report, announced that the Carnegie Corporation would give the library \$5,000 conditioned

upon the wiping out of its indebtedness and that, hoping to see the library free from debt, Miss Mary Jane Ross had donated \$1,000. He also said that the new building on King street was awaiting formal acceptance by the architects. The society adopted an amendment to the constitution, providing that members be permitted to take out an additional book for each dollar in excess of the prescribed subscription. The membership at present numbers 707. Circulation for the year was: Fiction, 29,669; non-fiction, 6864, and periodicals, 4579. To date 37,373 volumes and 3218 pamphlets have been cataloged. Of the 1002 accessions, 62 were gifts. Government accessions were 255 volumes, 1756 pamphlets and 60 maps.

Clinton. Ground has been broken for the new science hall and library at the Presbyterian College of South Carolina.

GEORGIA

Athens. "The library and the alumni" is the title of an article on the library of the University of Georgia, written by Duncan Burnet, the librarian, and published in the April number of the university *Bulletin*. The article was specially written to inform alumni of the university of the present position of the library in university life and work, and to embody a prophecy of possibilities of service. The library is open eleven hours each day, and the average daily attendance for eight months, averaged by months, ranged from 170 to 240. The library contains about 30,000 volumes, of which not more than 15,000 are "live." Outside use of books has increased till it is now ten times what it was a decade ago. Many lists of references are prepared for the use of debaters and others, but the library is much handicapped by insufficient funds in its effort to provide up-to-date material for the use of students and professors.

Atlanta. A strong effort will be made at the next session of the General Assembly to enact a law and secure an appropriation to establish a legislative reference department at the State Library. Mrs. M. B. Cobb, the state librarian, is a member of the commission appointed last summer to investigate the matter and make recommendations.

Boston. The new \$6,000 Carnegie Library is practically completed. Much interest has been taken in this new institution by the business men of the town; but the initiative in procuring the gift from Mr. Carnegie was taken by the ladies of the Twentieth Century Club, a local organization.

KENTUCKY

Georgetown. The formal opening of the Scott County Free Public Library was held June 26. The library opened with 750 volumes, all donated by residents of the county.

Louisville. The Carnegie Corporation has refused to grant the Board of Trustees of the Louisville Free Public Library an additional \$50,000 for the erection of branch libraries in Butchertown and South Louisville. Mr. Bertram's letter said that Louisville has a population of 235,000 and has eight branch libraries and one main library. He said that he believes this to be sufficient because one library should be enough for every 25,000 of population.

Louisville. The Louisville Free Public Library has issued a very attractive 36-page booklet descriptive of the library and its branches. The frontispiece is an excellent picture of the exterior of the main building, and each page has at the top a half-tone in brown showing other views of the main building or of the different branches. Below are given statistics covering the cost and resources of the building, figures of circulation, or descriptive notes on the use of the room shown, each page being a complete unit.

Louisville. The bronze bust of Lincoln by Moses Ezekiel, which was presented to the state and has stood in the Capitol since 1910, has been transferred to the Public Library here. It was accepted, with appropriate ceremonies, June 27. On June 29, the statue of George D. Prentice, presented to the Public Library by the Louisville *Courier-Journal*, was unveiled. Mr. Prentice was the founder of the Louisville *Journal*, and the statue was placed in 1876 over the door of the *Courier-Journal* building. The removal of the offices of the newspaper to a more modern building led to the present disposition of the statue, facing the main entrance of the library.

MISSISSIPPI

West Point. The West Point Carnegie Library Association has received plans and specifications for the library building to be erected in this city. All that is now necessary is the selection of a suitable location. A donation of \$10,000 has been promised and approved by the Carnegie Library Association.

Central West

MICHIGAN

Detroit. The Detroit Public Library Handbook, first printed in 1900, has been revised by Henry M. Utley, librarian emeritus, and reissued. In addition to the record of the early

history of the library, the story of the securing in 1901 of a Carnegie grant of \$750,000 for central building and branches, and of the subsequent establishment of several branches from these and other funds, is set down. The history of the acquisition of a suitable site for a central building and of the selection of Cass Gilbert of New York as architect, is also included. At the end of the handbook are printed lists of the library commissioners since it was put under a board of commissioners in 1881, and summary tables showing the receipts and also the growth and use of the library since its establishment. A most attractive brochure containing illustrations and descriptions of all the branches was issued early in the spring.

Houghton. A movement is on foot to bring about the consolidation of the Hancock and Houghton Public Libraries by allowing free access to the books to residents of either town. People of Hancock have long been patrons of the Houghton Library, before its organization under the present arrangement. It is believed that charging a fee of \$1 a year would overcome all the technicalities which might arise through non-residents using the library, and in the end insure a much larger circulation.

OHIO

Akron. The Firestone Tire & Rubber Company have recently installed an industrial library. The best books, articles or digests of material along the special interests of employees are to be procured, and the library staff will be expected to keep in touch with employes and see that they are supplied with the up-to-date material as it comes in. A research staff will be kept busy looking through magazines, newspapers, and trade journals, and items of interest will be noted. Regular bulletins will be issued, and books will be lent for home use. Correspondence courses will be installed, and the service extended to all branches of the firm.

Cincinnati. Recent statistics of the total library circulation show that during 1913-14 the main library, together with its branches and school and home libraries, circulated 1,603,187 books, 363,784 pictures, 85,930 lantern slides, and 30,561 music rolls, making a grand total of 2,083,462. It is the first year that lantern slides and music rolls have been in circulation, and the figures show that the opportunity has been appreciated.

Cleveland. The following is a brief summary of the statistical report of the work of the Cleveland Public Library for 1913. The

report shows substantial gains in every department of the library's activities:

The total issue of books for home use was 2,668,430, as against 2,557,897 in 1912, a gain of 110,533, or 4.3 per cent. Of the total number of books in circulation, 912,236, or 34.3 per cent., were adult fiction, a comparatively small percentage. The class having the next largest circulation was juvenile fiction, of which 403,069 volumes were issued. Sociology headed the classed books with 215,824, literature coming next in circulation with 117,953. This is interesting but not remarkable, as Cleveland people evidence in many ways their practical interest in everything pertaining to social and civic welfare, and fifty-six women's clubs are registered at the Main Library. The circulation of books in foreign languages was 198,828 volumes, also not remarkable in view of the fact that only 23.6 per cent. of the population is native born of native parentage.

The number of visitors for reading and reference recorded at the Main Library and branches was 1,513,760; however, this count is incomplete, as no record of visitors to the Main Library has been kept since its removal in August to its new quarters. On account of the arrangement of the library by subjects, rather than in two main departments—reference and circulating—as heretofore, it is not practicable to keep account of readers in the scattered divisions with any accuracy. As a matter of fact, on account of the improved facilities for serious study, there were more reference visitors to the Main Library from August to September, 1913, than at any equal period in its history.

Applications for borrower's cards necessary to secure books for home use numbered 152,762 in December, a gain of 8,325 over the number in force at the same time last year.

The number of inventoried volumes in the system was 511,067, an increase of 23,669 volumes, or 4.8 per cent. Unaccessioned and inventoried volumes in the John G. White collection of folklore, and public documents, number considerably above 20,000 additional volumes. The library is also the custodian of over 28,000 volumes belonging to churches, schools and various organizations, bringing the total number of volumes shelved to about 560,000 volumes. During the year 57,049 volumes were added to the library, and 1820 ephemera.

The number of agencies for the distribution of books was 546, a gain of 76, or 16.2 per cent. over the number in any preceding year. These agencies were the Main Library, 11 large branches, 14 smaller branches, 7 high schools, 1 normal school and 9 graded school branches;

2 children's branches, the Library for the Blind, 360 classroom libraries in public, parochial, special and other schools, orphan asylums and institutions, 57 home libraries, and 35 deposit and 48 delivery stations, which circulated 130,353 books to department stores, factories, telephone stations, institutions, clubs and engine houses.

Niles. A spacious library will be one of the main features of the proposed McKinley memorial that is to be erected by the National McKinley Birthplace Memorial Association at Niles.

INDIANA

Evansville. Construction of the fourth public library in the city is complete. The newest addition to the library system will be for the exclusive use of colored people. The building will be opened by the city library board in the fall. The building is of brick and terra cotta. It fronts 56 feet on Cherry street and runs 40 feet on Church street. There is a full size basement in which are an assembly room for men, a men's meeting room and toilets. On the first floor are two reading rooms, each 17 by 30 feet, and a room for the librarian.

ILLINOIS

Abingdon. Voted to issue bonds for site for library building, but has been held up on account of the suffrage question. Mr. Mosser has given \$10,000 for the building.

Aledo. The township, which voted a tax of 1.5 mills for a library last year, has this spring elected a library board. The Carnegie Corporation has offered \$10,000 for the library building.

Atlanta. The public library has been reclassified according to the decimal classification, the work being done by Miss Florence Newell.

Auburn. The City Council appropriated \$600 for the general fund for a public library. Miss Mayme McLaughlin has been appointed librarian and will attend the library summer school at the University of Illinois.

Brookfield. The public library was dedicated June 27. Mr. George B. Utley was the chief speaker. Other speakers were Miss Anna May Price, of the Illinois Library Extension Commission, Mrs. W. A. Adams of Brookfield, and Mr. Hoig. The library was opened for circulation June 29. A good collection of juvenile books was donated to the library by the Kindergarten Extension Association.

Carmi. The City Council has appropriated \$1,000 for the support of the public library,

which has, until the present time, been supported by the Women's Club of Carmi. The library board has received offers of \$10,000 for a building from the Carnegie Corporation, and plans are being prepared by Clifford Shopbell and Company, Evansville, Ind.

Chillicothe. A two mill tax was voted for a free public library. Credit is given the Women's Club and the University Club for the success of the campaign.

Decatur. A children's room, the pleasantest in the building, was opened in the Public Library early in May, and has been largely patronized ever since.

Galena. The annual report of the public library shows that 18,000 persons used the library during the year. The rental collection of books proved very successful; \$9.73 was the amount of the first purchase, which proved so popular that the fund was increased to \$120.40 through the rental of books; 114 books were purchased, 60 of which have more than paid for themselves. "Their yesterdays" proved the most popular book.

Joliet. By the will of Freelove M. Smith the library was given 1160 volumes and a maintenance fund of \$10,000, also a number of valuable paintings, a set of sycamore library furniture, a rug and other articles of interest. Mr. Smith was one of the founders of the library and a member of the first board of directors.

Mason City. The City Council has taken over the library which has been maintained by the Women's Club for the past five years.

Urbana. The University of Illinois Library last summer purchased through Gustav Fock of Leipzig the library of Prof. Vahlen, said to be the finest collection of classical and philological books in private hands. This sale is said to be the most important since the dispersal of Mommsen's library at the famous historian's death. Prof. Vahlen's collection contained 25,000 volumes, including a number of rare manuscripts and monographs. At the same time the pedagogical library of Professor Aron was acquired by the University.

Virden. A new public library has been established and the books have been placed in the Ladies' Rest Room. Miss Evans, who has charge of the rest room, has been appointed librarian. The work of establishing the library has been done by the women's clubs, largely through the efforts of Miss Ella Ione Simons. The library consists of 500 volumes, all of which have been accessioned and classified according to the decimal classification.

Wilmington. Voted one mill tax for town-ship library, and a library board has been elected. Mrs. William Pawling has been engaged as librarian. The library contains about 1500 volumes.

The North West

MINNESOTA

Minneapolis. An unusual collection of lantern slides and pictures has just been purchased by the Public Library from E. A. Bromley. The collection consists of 1800 slides and pictures of historical points in Minnesota, old settlers, and incidents of importance in the history of Minnesota. It is the most complete collection in the state and could not be duplicated. The collection will be ready for use by the general public in the fall. Mr. Bromley has been engaged to make an index to the slides with descriptive text.

The South West

MISSOURI

St. Joseph. The *Globe-Democrat* says that Andrew Carnegie, who has already given three libraries to St. Joseph, has made an offer to donate another, larger than any of the others, in order to fill a long-felt want for a public museum. The offer is for \$100,000 conditional on the school district's allowing \$25,000 for the installation of the museum in the present main library. This is prohibited under the present laws, but an effort to raise the money by popular subscription will be made. Owners of several collections in St. Joseph, including the Harry L. George Indian collection, one of the most complete in the United States, have agreed to house their property in the new museum.

KANSAS

On April 1 the state Traveling Libraries Commission had 580 traveling libraries in circulation—the largest number sent out since the commission was organized. The 580 libraries contain 50 books each, making a total of 29,000 volumes. The only expense for one of these libraries is two dollars, which pays transportation both ways. They are loaned for six months.

Abilene. In ten years the Abilene Public Library has grown from 1000 to 5000 volumes, from a yearly issue of 8000 to 18,000 books, and from 15,000 to 36,000 yearly attendance. It has a \$12,000 Carnegie building. The city pays only for the library's running expenses exclusive of books. The book fund is raised by private effort. Miss Lida Romig is librarian.

Emporia. Ten thousand dollars is the endowment for the book fund of the Emporia City Library, left by the will of the late Captain L. M. Heritage. The library maintains a deposit collection of books at the Maynard social center and is preparing for other extensions of its usefulness. Captain Heritage also left the library \$2,000 for immediate use in purchasing books.

Eureka. A new Carnegie building has been completed, and it was expected it would be occupied about July first. Miss Clover Mahan has been elected librarian. The building cost \$8,000.

Manhattan. The Manhattan Public Library gained twelve per cent. last year in its loans to the public. Eighty-eight periodicals are received. A Saturday morning story hour for children is a feature.

Ogden. Ogden is to have a library building, made possible by \$4,000 bequeathed by the late Mrs. Mehitable C. C. Wilson, of Boston.

Olathe. The Olathe Public Library opened its new Carnegie building recently with an evening program and reception. Miss Lena Bell is the librarian.

Topeka. The Kansas State Historical Library has 90,530 volumes of books, magazines, newspapers, and bound pamphlets. In its Kansas section alone it has 4000 volumes, having approximately every book ever published in Kansas, about Kansas, or by Kansans.

Wichita. The Wichita Public Library has a very successful story-tellers' league, conducted by Miss Myrtle Gettys, a public school teacher. The librarian, Miss Kathryn A. Cossitt, is busy planning for the expansion of the library's work when the splendid new building is ready, several months later.

Winfield. The Winfield Public Library, in its Carnegie building, recently completed its first year with a "book shower" which brought 500 new books. The 3655 volumes of the library were circulated an average of five times each during the year.

TEXAS

Although provisions were made by the legislature in 1913 whereby a county might levy a tax for the installation of a farmers' county library, not a county, so far as is known, has availed itself of this opportunity. Miss Rose Leeper, librarian of the Dallas Public Library, has made the suggestion that an appropriation by the state might be an inducement for the county to levy such a tax. The state might appropriate for library uses a certain amount of the county's taxation.

Pacific Coast

WASHINGTON

Seattle P. L. Judson T. Jennings, lbn. (23d rpt.—yr. ending Dec. 31, 1913.) Accessions 28,491; total number of volumes 203,843. Circulation 951,063. Registration during the year 26,609; total 50,613, of which 12,033 were juvenile. (Borrowers re-register every two years.) Receipts were \$204,221.19; expenditures were \$210,735.79, including salaries \$82,957.05, books \$32,587.82, periodicals \$2,834.42, and binding \$10,688.14, the extraordinary expenditures being for repairs and for books for the new branch. The circulation record is a gain of 98,937 over 1912. Children's books constituted 37% of the circulation. The fiction circulated was 62% of the total, which is 2% less than last year.

Books were circulated from 495 distributing agencies—the central library, 7 branch libraries, 6 drugstore deposit stations, 24 engine houses, 443 schoolrooms, 6 playgrounds, and 8 special deposit stations.

The Queen Anne branch was completed, the opening exercises being held January 1, 1914. This branch, English scholastic Gothic in style, was built from the \$35,000 donation provided by Mr. Carnegie. The Henry L. Yesler Memorial branch library is now being built.

The library has for a number of years operated its own bindery, which in 1913 bound or rebound 20,777 volumes.

A table shows the average number of people seated and standing in the open-shelf room, counted each hour from 9:30 a.m. to 5:30 p.m. during one week in the late winter. The room will comfortably accommodate only 93 chairs and there was no time after 10:30 a.m. when these were sufficient. There were more people in the room at 3:30 p.m. than at any other time during the day, the average for the six days at that hour being 128.

An intermediate collection of books has been installed in the central children's room for children in the eighth grade and above who should be reading adult books but whose taste is yet so unformed as to need the most careful supervision. A set of Montessori apparatus

was purchased and has been on exhibition in the teachers' room and at each of the larger branch libraries. It may now be borrowed by those who are willing to assume the responsibility of transportation. 379 lessons on the use of the library have been given to 3952 children in the seventh and eighth grades by the head of the schools division and the children's librarians. A plan for classifying and cataloging pictures has been worked out and adopted, and more has been done for library publicity than ever before.

Tacoma. A new branch library will be opened this fall in the Lincoln Park High School. The branch will be administered jointly by the board of education and the library trustees. The school board will pay practically all the salary of the librarian of the high school library, will supply the room, light and heat without cost to the library board. At the same time the branch will be opened to the whole community generally, not only during school hours but probably during the evening as well.

UTAH

Murray. A new Carnegie library will be built here this summer. It will be built of pressed brick and concrete, to contain one story and basement, and will cost about \$12,000.

Foreign

GREAT BRITAIN

Arthur William Kaye Miller, keeper of printed books at the British Museum, dropped dead May 7 at the private view following the opening of the new wing of the Museum, to be known as the King Edward the Seventh's galleries. Mr. Miller, who was born in 1849, was a graduate of University College, London, where he was made a fellow in 1874. He became an assistant in the department of printed books at the Museum in 1870, and was made assistant keeper in 1896. From 1890 he had superintended the printing of the "General catalogue of printed books," and in the fall of 1912, after the death of Dr. G. K. Fortescue, he succeeded him as keeper of printed books.

THE LIBRARIAN'S MOTHER GOOSE

VIII. FINES.

*Mary, Mary, quite contrary,
How does your fine-book grow?
With nickels and dimes, and quarters sometimes
And pennies all in a row.*

—Renée B. Stern.

LIBRARY WORK

Notes of developments in all branches of library activity, particularly as shown in current library literature.

Scope, Usefulness, Founding

Library in Relation to Schools

WORK WITH SCHOOLS

Making the library earn its salt. Willis H. Kerr. *Pub. Libs.*, Ap., 1914. p. 150-153.

The library is fundamental in education, for the "right sort of library rightly used supplies a natural means of self-realization and self-adjustment supplemental to all the other school agencies and effective where all other agencies fail." The right sort of library begins where the teacher's instruction ends. The library works all the time, and doesn't get tired. If the pupil has been started right in his years of schooling, he can continue with the help of the library, on a lifelong process of education.

Don't begin by condemning the bad book, but rather by recommending a good one. In most of us the love of books is not innate. It has to be impressed upon us by a personality. It has to be caught, not taught.

Why shouldn't every state have a law, as many states do, compelling school boards to set aside each year a certain sum for library purposes? Some states also offer state aid to school districts for library purchases from an approved list. If the library shows it can make good, it will get the needed money. And in buying books, don't always buy the cheapest edition. The possession of some specially good editions, with good illustrations, will command respect for the library.

Some system of caring for the school library is necessary, but it may be kept very simple. There should be a definite charging system, and regular daily library hours. No teacher should try to work without a library.

Library Extension Work

PHONOGRAPH CONCERTS

Opera for masses through talking-machines. *Musical America*, May 2, 1914. p. 5.

This article describes the work of C. D. Johnson, librarian at the Cossitt Library in Memphis, Tenn., in educating the masses in operatic music with the help of a talking-machine. Mr. Johnson, who is a grand opera enthusiast, began to collect the records some years ago, and frequently entertained visitors by playing for them such records as he had of some one opera, connecting the selections with a brief outline of the story.

In 1909, when an opera company was to visit Memphis, Mr. Johnson gave a series of lectures on their program, illustrated with selections on a talking machine, in one of the music stores. The concerts began a week before the opera company arrived, and were continued each day during the engagement. They proved popular, and were repeated on subsequent visits of the company. Mr. Johnson then began giving similar talks before clubs and in the various schools of the city. In all about 200 talks were given.

Interest grew, and he began giving one talk each week in the library. A Victor victrola has been presented to the library, with a few records. As yet public funds cannot be used to purchase more, so Mr. Johnson supplements the library's collection of records with many from his own stock. The talks are given in the library reading room, and are also illustrated with lantern slides showing the stage settings, costumes, etc. The talks are always informal, avoiding technical language, and emphasis is laid on the fact that a considerable knowledge of grand opera and an appreciation of its beauties may be had without a study of musical technique.

Library Development and Cooperation

INTER-LIBRARY LOANS

State library effort in Illinois. *Pub. Libs.*, Ap., 1914. p. 156.

Editorial. Comment on the recent action of the State Library in Illinois in offering the institute a system of inter-library loans with libraries in all parts of the state.

Founding, Developing, and Maintaining Interest

PUBLICITY

How best to advertise a public library has not as yet become an exact science, but librarians are agreed that the library must have publicity if it is to accomplish its ultimate aim, to be of service to all the people. The Seattle Public Library, in its report for 1913, describes a number of ways used during the year to attract people to the library and to suggest how the library could be useful to them.

"Early in the year 65,000 copies of a four-page folder, describing briefly the various advantages offered by the library, were enclosed with one month's bills of the City

Light and Water departments. It was possible in this way to reach a large proportion of the families of Seattle.

"The library effectively advertised books for business men by having a display of books at the annual show of the Northwest Merchants' Association held at the armory.

"The library took part in the exhibition conducted by the Central Council of Social Agencies of the work of the principal civic and charitable organizations of the city. This was held immediately preceding the National Conference of Charities and Corrections.

"Much interest in books for mothers was aroused by lists for the home-maker distributed at a school on the care of babies conducted under the auspices of a group of Seattle's progressive women.

"A considerable number of lists were multigraphed, of which might be mentioned: 400 copies of a list on banking, mailed to the members of the Seattle chapter of the American Institute of Banking and to the principal officers of Seattle banks; 300 copies of a short list on immigration, distributed at a conference on immigration conducted by the Central Council of Social Agencies; a large number of copies of a list on poultry, distributed by a dealer in poultry supplies at the public market; 10,000 copies of a list for the home-maker, distributed in many ways during the year.

"The Schools Division has sent a bulletin each month to the principals of the grade schools for posting on their bulletin boards. These bulletins have called attention to pertinent educational literature and to library news of interest to teachers.

"Two thousand copies of a list of books suitable for gifts to children were distributed when the children's department had its annual exhibition of children's books at Christmas time.

"During the year 25 articles describing special features of the work of the library have appeared in the city newspapers.

"Twenty-four talks were given by different members of the library staff before various organizations. Part of these talks were illustrated by 75 stereopticon views descriptive of the work of the library. Among these slides is a series of twelve called 'How the library is useful to the individual from infancy to old age.' Slide (1) is a reproduction of a postal card which is sent to parents and calls their attention to books on the care of the baby. Each of the other eleven slides is a picture of a shelf of books for: (2) Little children; (3) Boys and girls; (4) High

school—college students; (5) Starting in life—choosing an occupation; (6) Business men; (7) Technical men; (8) Social workers; (9) Teachers; (10) Home-makers; (11) Life's enrichment; (12) Old age.

"For the last six months we have been sending out postals to parents whose names are listed in the birth notices in one of the daily papers, calling attention to two good books on the care and feeding of babies. From ten to fifteen postals are sent out each day, there being during the year about 4000 births in Seattle. This kind of advertising is bringing very good results.

"The city's first municipal day was held on June 5th and there was a parade of the city departments in which the library took part. The members of the Library Board walked, seven automobiles carried a representation from the staff, and two floats advertised library activities."

VACATION HELPS

This is what the public library is telling the people of Grand Rapids, Mich.: "The library can help you answer the question of where to spend your summer holiday and how much it will cost. There has been placed on the open shelves in the registration room a collection of guide books, books on camping, canoeing and resorts. Various railroads and steamship lines have sent the interesting things they issue in this connection, which may also be found in the registration room. A hotel guide also is a part of this collection. With all the helps at the library you can readily plan your vacation so as to get the most out of it for the least money."

PRIZES FOR READING

In order to stimulate interest in reading among the students of the Hobart (Okla.) schools during the summer vacation, the board of control of the Hobart Public Library has offered cash prizes to the boys and girls of the grades who display the greatest interest in reading at the library during the summer months. Prizes of \$3, \$2 and \$1 respectively are to be given to the three boys and girls of the third, fourth and fifth grades and like prizes to the three boys and girls of the sixth, seventh and eighth grades, who get the most good out of reading this summer. The librarian is to judge the entries and about the first of September will make known the winners.

WINDOW DISPLAYS

During the summer months the Passaic (N. J.) Public Library plans to display its books along business lines in various stores

along Main avenue and nearby streets, co-operating with these stores in window displays. The first exhibit was in a druggist's window. The books there shown illustrated the various sciences which combine to form the study of pharmacy: botany, chemistry, bacteriology, materia medica, and physics. A book shown in a window may be reserved at any branch of the Public Library and the librarian asks for recommendations of books along the line of the exhibits, for purchase.

The Portage (Wis.) Public Library has just made an interesting window display that has attracted much attention and favorable comment, says the *Wisconsin Library Bulletin*. A small case of three shelves especially suitable for window exhibits and several small trays were prepared by the manual training classes in the high school. In these were placed a collection of the best new and recent books, carefully selected for their worth and timely interest, and arranged according to classes and marked by appropriate labels lettered so as to be easily read from the street. Selections from the many magazines of the library were placed in attractive positions on the floor of the window, while interior views of the library and samples from the collection of mounted pictures added to the appearance of the exhibit.

Placards and legends attracted the attention of those passing by. Among them were the following: Public library exhibit. Do you know what is in the library? These are samples. The library is yours. You support it. Why not use it? Ten thousand books in the public library. Some one of them may interest you. To get a book, go to the library, give your name and address. No expense. No red tape.

Labels like the following were attached to the different classes: Lives of men. The home. For recreation. To vote more intelligently, read these. To travel without expense, read these.

COÖPERATION FROM WOMEN'S CLUBS

The committee on library extension of the Ohio Federation of Women's Clubs (Miss Mary E. Downey, chairman) during the last two years conducted a survey of library conditions in the prisons and other state and county institutions. It has sent out to the clubs of the state the following outline of work for the next two years:

First—To interest clubs to start libraries in towns having none.

Second—To work for tax maintenance for libraries now existing without it.

Third—To urge county seat towns to increase their funds and extend their service by becoming county libraries.

Fourth—In like manner to induce small towns to develop township libraries for the same purpose.

Fifth—To agitate branch library buildings for our cities. Only Cleveland, Cincinnati and Dayton yet have them.

Sixth—To secure buildings for libraries, where needed, through the generosity of Mr. Andrew Carnegie or other benefactors.

Seventh—To coöperate in making a library survey of the state.

Eighth—To urge club women who are members of library boards to attend district and state library meetings.

Ninth—To interest each club in the Ohio Federation to take club membership in the Ohio Library Association by paying the 50 cents annual fee which may be sent to Miss Blanche C. Roberts, Carnegie Library, Columbus, O.

Tenth—To see that high school students are taught how to use the public libraries in their respective towns.

Eleventh—To work for the observance of a library day in every town having a library by giving a program devoted to library subjects.

Twelfth—To continue interest in collecting books and magazines for completing files in libraries and for distribution to state institutions and country homes for the poor, children's homes, jails and other places of detention.

Thirteenth—To urge the clubs to visit and make a study of their public libraries and see if they are working at the highest point of efficiency.

CO-OPERATION FROM NEWSPAPERS

In order further to facilitate borrowing by the people of the people's books, the *Pioneer Press* of St. Paul has arranged with the city librarian to insert on the book page of the Sunday edition, each week; a list of the books added to the public library. The list has been published for several weeks, and has evidently been of use to the borrowers. It is planned to make it a regular feature of the literary page. The list will include all books of general interest added during the week, and will include the library call numbers. By checking it and presenting it at the library with his library card the borrower will find his summer's reading right at hand. If the use of the list during the season warrants it, the publication will be made a permanent feature of the paper the year round.

Libraries and the State

State Supervision

LIBRARY REFORM IN GREAT BRITAIN

Public library reform. Robert W. Parsons. *The Librarian*, Ap.-Je., 1914. p. 313-316; p. 348-351; p. 386-389.

While opinions may differ as to the final "way of salvation," there is unanimity in the conclusion that present conditions of public library service are unsatisfactory, that there is little coöperation in administration, and that limited financial resources prevent much good work from being done.

The essentials of a good library law, as given by Mr. Dana in his "Library manual," are endorsed as the statement of the ideal law. To attain the highest possible efficiency in the administration and control of public libraries, the writer urges the compulsory establishment of libraries throughout the United Kingdom, to be financed out of the national exchequer, whose officers shall rank as civil servants. Discussion of this proposal is divided into three sections.

Establishment. Assuming the necessity for the existence of public library service throughout the kingdom, it is proposed to frame an act which shall be compulsory and shall apply to all cities, towns, etc. A departmental office, to be known as the Public Libraries Office, is to be formed; and this office will be responsible for supervision of all libraries and reports, for the compilation of government blue books, etc., and for the preparation of an annual budget to be submitted to Parliament.

Alternative proposals are for an increased library tax, for the authorization of county councils to become library authorities, and for the establishment of traveling libraries for the outlying districts. It seems probable that active opposition would be made to an increase in the library tax in many districts, while the other suggestions are ineffective without funds.

Under the administration by the federal government, the country would be divided into "library areas," each area to possess a representative number of principal libraries, and each area to be further subdivided into districts. Counties might be combined so that the area and population served in each library area would be approximately the same. By this means the administrative committees of the different areas would be on an equal footing, and the grading of salaries would be facilitated. The use of motor book wagons in such a scheme would take care of remote districts.

Finance. The library tax to-day, in spite of the great increase in the work, is the same as it was in 1855—that is, not to exceed 1d on every pound except by special act. A more practical suggestion is for the preparation of an annual estimate of necessary funds, to be submitted to Parliament through the Public Libraries Office, such funds, when voted, to be provided for in the imperial taxes of the ensuing year. It was estimated, in 1912, that public libraries spent annually £1,200,000—less than the price of the armor on a single battleship. The demand is made only for a sum sufficient for the needs of libraries, for their more effective and efficient operation.

Officers. To accompany such a system of federal government for public libraries the following classification of officers is suggested: (1) Directors-in-charge, who shall preside over the chief libraries of the various library areas, and in addition shall constitute a committee to take charge of the administration of all libraries in that area and to render an annual report upon the work; (2) sub-directors, the present deputy-chief librarians, whose responsibilities will be increased following the enlargement of their chiefs' duties; (3) the other members of the staff, to be classed as chief assistants, assistants, juniors, and caretakers, etc. The chief assistants will be in charge of the smaller town libraries, which will become branches of the principal libraries under the proposed reorganization.

With such a scheme, under government control, every library could be provided with the right number and proportion of each class of assistants, and a practical system of training for assistants could be introduced, and it would be made possible to rise from the lowest to the highest grade of service.

Library Commissions

LIBRARY COMMISSION WORK

The Wisconsin Free Library Commission: what it does. *Wis. Lib. Bull.*, Ap., 1914. p. 64-68.

The Wisconsin Free Library Commission is engaged in a greater number of activities than any other of the thirty-seven library commissions in the country. It is the only one which is the administrative body in control of a legislative reference department, and the only library commission which conducts a library school.

These are the things it does:

1. It helps establish, organize, and maintain public libraries.

2. It loans books in rural communities and where there are no public libraries.

3. It provides opportunity for the education of those who cannot go to school.

4. It trains librarians for public libraries.

5. It trains men and women for special public service.

6. It helps legislators legislate.

7. It prepares and issues publications of value.

POSTAL LIBRARIES

Postal libraries. *Pub. Libs., Ap., 1914.* p. 157-158.

Editorial. The proposed postal libraries for Canada, while very possibly providing means for the distribution of books, could in no wise be called library service. The necessary connecting link between books and readers would be lacking. Similar efforts made in the United States, with the schools as distributing centers, have always failed.

LIBRARY USE OF PARCEL POST

At a special meeting of the library board in Butte, Mont., the last of May, it was voted to issue books by parcel post to residents of Silver Bow county, beginning June 1 or as soon thereafter as the necessary arrangements could be made. It was decided that those who desire to avail themselves of this privilege must comply with all provisions in regard to the holding of cards in the library. In addition they must each make a deposit of \$1. Of this sum 25 cents will go to the library for the trouble library employes are put to in mailing the books. The rest of the money will be used in postage in sending the books. The return postage will have to be paid by the patron. As soon as a parcel post patron's deposit of \$1 runs out, he will have to deposit another \$1.

Library Support. Funds

CONTROL OF LIBRARY FUNDS

Questionable methods. *Pub. Libs., Ap., 1914.* p. 156-157.

Editorial. The city council of Helena, Mont., has spent over \$10,000 of the library funds without the knowledge of the library board, leaving the library over \$1,000 in arrears. Such action is roundly condemned.

RAISING FUNDS

The Library Association of Oil City, Pa., has secured the sanitary cup concession from the management of Monarch Park, a summer resort. The small amount paid for these cups is expected to amount to considerable in the aggregate before the close of the season. All

receipts will be used in buying books for Carnegie library.

Government and Service

Appointment and Tenure

CIVIL SERVICE

Although the Denver (Colo.) Public Library went under municipal civil service a year ago, as did all municipal activities, civil service examinations will not be held for library positions until next fall. The original classification of library employes in Denver was with the general clerks employed in various city departments. The requirements, according to this original classification, simply related to general educational qualifications. As a result of the library's efforts the library was removed from this general classification and was given a separate class, which required of all employes a general education and also technical training. Although the civil service regulations, as voted for in the charter amendment, are still general, the Civil Service Commission has made provisions without violating the general civil service law which, seemingly, will not handicap the Denver Public Library in its work or in its selection of efficient candidates to do this work.

In the first place the examinations will be given first to those already holding the library positions and there will be no vacancies unless those already in the library fail to pass the civil service examination.

The questions for this examination will be on library work and will be made out by the librarian of the public library. The librarian will also correct these papers, and the Civil Service Commission has agreed that all candidates for this examination must first be passed on favorably by the Library Commission in order to qualify for the examination.

In case the library cannot fill a position in the public library from the list of local candidates, the Civil Service Commission has agreed that the library shall have the liberty of filling this position by some one outside of the city or state.

The Denver Public Library has recently classified its service and examination questions will be prepared to meet the requirements of each branch of service.

Staff

STAFF

In the report of the Harvard University Library for 1913 an account of the reorganization of the staff and of the arrangement for an improvement in salary, hours, and va-

cation privileges is recorded. The report says:

"We now divide our staff (excluding heads of departments) into five classes:

"CLASS I.—Clerical assistants, including typists, copyists, shelf-listers, recorders, shelf-mark changers, card filers, and others engaged in various ways on the records of the library under special direction.

"CLASS II.—Bibliographical assistants, engaged in the selection, classification, and description of books, and accordingly represented in the order, shelf, and catalog departments.

"CLASS III.—The administrative staff, including all who come into direct relation with the public at the delivery desk, in the reading rooms, and in the registrar's office.

"CLASS IV.—The care of the building, including, under the direction of the superintendent of the building, all janitor service (day and evening), cleaning, distribution of books, and care of the shelves.

"CLASS V.—Boys, for page and messenger service within the library.

"In general, assistants in Class II are college graduates or library school graduates, and most of them possess a good knowledge of several foreign languages; those in Class I must have at least a good high school education, and some familiarity with at least one foreign language is almost indispensable. Persons employed for special or temporary service and those who regularly give but part time to the library are not included in the classification.

"In Class II provision is made for stated increases of salary (\$60 or \$120) year by year from a minimum, depending on the previous training and education of the appointee, to a maximum determined by the character of the work performed. In this class three grades are recognized. The lowest grade has its own maximum reached after three years' service, but the more proficient and valuable members of this grade are promoted at the beginning of their fifth year to the next grade, in which they advance year by year to a new maximum. The third grade, not yet fully established, is for supervisors.

"For many years the regular working hours for the greater part of the staff were from 9 a.m. to 5.30 p.m. (omitting an hour for luncheon) six days in the week, or forty-five hours a week, but in summer the library was closed Saturday afternoons. In 1907 the weekly half-holiday was granted throughout the year, reducing the hours to 41½ a week. Some libraries prefer a shorter normal day

and think they get better results therefrom. We have not thought it well to reduce the regular day's work, but we now allow a little more leeway for outside engagements or periods of fatigue by declaring that while the customary hours remain as heretofore, 9 to 5.30 (Saturday 9-1) or 41½ hours in all, '40 completed hours of service in each week will be accepted as satisfactory.' Hours in excess of 40 hours a week may be used to offset time lost in other weeks, but not to increase the length of one's vacation. The practical effect of this arrangement will be that those who make the full time regularly (41½ hours) will be at liberty, with the consent of the department head, occasionally to take an additional day or half-day off without loss of pay, or may offset in this way short periods of illness, while those who find the present hours somewhat too long for good work may stop work earlier part of the time.

"It is particularly urged and recommended that the lunch hour be not shortened, as is done at present by a number of the staff. Those who take their luncheon in the building and do not need the full hour in the lunchroom should not fail to get *outdoors every day* (in good weather) before or after luncheon. Their own good health and the quality of the work they do for the library demand this, and in fairness to themselves and to the library it should not be neglected.'

"In Class III the hours of service remain 41½ as heretofore, corresponding to the hours when the library is open, and in Classes I and V they vary for different individuals according to the needs of the library service.

"Each assistant hands in to the head of the department weekly a note of hours under or in excess of the normal, and these records are filed by the registrar. Each month the regular monthly salary is paid irrespective of any slight irregularities in hours, but at the beginning of the summer the number of working hours over or under what is required is reckoned up, and if necessary a corresponding deduction is made from the usual month's vacation on pay. The vacation may be prolonged, however, without pay, with the consent of the head of the department."

Rules for Staff

LIBRARY CLOTHES

The library board of Cleveland, Ohio, at a recent meeting approved a plan of dress for library employes. Here is the recommended mode of dress, as recorded in one of the Cleveland papers:

Dress: Simple waists, with lining or under-

slips of sheer materials. Sleeves below the elbow always. Neck never lower than "Dutch neck." If without collar, "V" necks or other low cuts should not be worn without a guimpe or dickey. If they come appreciably below the lower collar line, collars and ruchings should always be fresh and clean. Half-worn finery never has any place as part of a working outfit. Skirts not too tight; if slit, the underskirt should be sufficiently long and appropriate. Well-made tailored suits are always suitable and serviceable. Becoming selection and the harmony of colors are necessary to tasteful dress.

Hair: Should be arranged becomingly and simply, without hair ornaments or conspicuous bows.

Cosmetics and perfumes have no connection with business attire.

Jewelry: Very little should be worn, and only such as is in keeping with a working costume, never anything showy or elaborate.

Footwear: Neat, comfortable, serviceable shoes, high or low. Conspicuous hosiery and dress slippers with French heels are in bad taste for working garb.

Hats: Should not exceed "locker space" in size.

Rules for Readers

Special Privileges

LIBRARY PAY COLLECTIONS

How to run a book-club in connection with a public library. Part II. *The Librarian*, Mr., 1914. p. 275-278.

Three months should be the maximum and two months the minimum period for which books should be issued, though they should be exchangeable as often as desired. Open access should be allowed, and fees should include use of the public library in case of non-residents.

A set of rules and regulations and also a form for a circular letter are given as models on which to work, and some suggestions in administration. First, the ownership of the book must be disguised, or at least inconspicuous; one stamp in the front cover and one in a fixed place inside the book should be enough. Charging is best done to the subscriber by name, and the recommended method is to have a folder, or folio book, for each subscriber.

Injuries, Abuses

VANDALISM

"These books are shut off from the public because certain vandals are mutilating

them." A neat sign attached to a silk cord drawn across the entrance to the art department in the Public Library at Newark, N. J., now notifies the patrons that, because of mean thieves among the readers, the public hereafter will be denied free access to this room. A visitor will no longer be permitted to select his book in this department by looking through the shelves, but an assistant will show the books, one at a time, until a selection is made, and then it must be consulted at a table over which a librarian will be in charge.

There have always been mutilations of books in the library, but the outrages have become so marked of late, especially among the valuable reference works in the art department, that the authorities have decided to follow stringent lines. As many as thirteen pages had been cut out in one section of one book which was shown recently. In another book on posters, which cost \$10, five full page illustrations were removed in one week.

It is remarkable that the thieves evidently are people of some intelligence and of a training which would seem to preclude dishonesty. Most of the books stolen are of a nature which would interest only a certain class. For instance, copies of a valuable law book have disappeared from the main library and the business branch within a few months. Not one miscreant ever has been caught and the library authorities find it difficult to believe that all the vandalism has been carried on without having been noticed by others. If the library users do not have sufficient interest in their books to protect them from these thieves other tactics will be adopted.

The moral effect of keeping out the patrons from the art department will be watched closely in the other departments before further steps are taken and it is hoped that the borrowers and patrons of the library will protect their own interest if they want their liberties continued.

SAND IN BOOKS

Attendants at the Far Rockaway branch of the Queens Borough (N. Y.) Public Library are warning subscribers against the danger of permitting books to become damaged by the sand on the ocean beach. On display in the library is a book which was ruined by sand. Sand blew between the leaves and then worked its way into the hinges of the leaves and into the binding, until the latter was broken, the leaves separated, and the entire book forced out of shape.

Administration

General. Executive

STATISTICS

Library statistics again. O. R. Howard Thomson. *Pub. Libs.*, May, 1914. p. 187-190.

An article based on an examination and comparison of the reports of several libraries. Mr. Thomson believes the most vital problem in the library of to-day is that of adequate financial support. It is not the number of books circulated or the number of dollars appropriated that is significant, but only their proportion to the number of people supposed to be served.

The last report of the Enoch Pratt Free Library of Baltimore contains a comparative table showing the resources, work, and expenditures of libraries in 30 cities having a population of over 100,000 persons, and also Springfield and Somerville, Mass. In ten of these cities 50 cents or more per capita were spent, and the rate decreased to 17 cents for Chicago, 16 cents for Baltimore, and 15 cents for Philadelphia.

Second, the cost of library service is shown to be increasing, due probably to higher purchase prices of books, to more scholarly service rendered, and to larger stocks to be cared for. The average annual per capita expenditure as given in the Pratt report is 34 cents; in the list tabulated by Dr. Bostwick in 1908 it was 29 cents. The average annual per capita circulation in the Pratt list is 2.5; in Dr. Bostwick's list 2.4.

The need of an A. L. A. handbook of library statistics, to be issued annually, is becoming daily more apparent. If libraries were grouped into classes according to their population such statistics would be made easily available for comparison. A short table is submitted as an example of how this material might be arranged in simple form. Total and per capita figures are given for number of volumes, circulation, borrowers, and expenditures, and percentages for books, magazines, and bindings, for salaries, for building charges, and for other miscellaneous items.

As there are only 229 cities in the United States of more than 25,000 population, it should not be very difficult for the A. L. A. to prepare an analytical list of their libraries. Later the list of the 372 towns with population between 10,000 and 25,000 might be treated in the same way, and possibly university and college libraries also.

Treatment of Special Material

MAPS

A model of the cabinet used by the Newark

(N. J.) Public Library for filing maps was shown at the exhibit held by the Special Libraries Association during the Washington Conference. This system, by which hundreds of large atlas-like maps are mounted and filed like so many small cards in a ready reference cabinet, has been attracting the attention of librarians throughout the United States. The cabinet, as in use in the branch, consists of two plain wooden boxes, each about three feet high and 2½ feet wide. They are placed side by side on the floor. The mountings of the maps are all of uniform size. The arrangement is according to the alphabet. In the cabinet are all kinds of maps, some showing the character and products of the earth in different sections, especially in New Jersey, but they by no means afford the only geographical data at the branch's command. Maps of more than 1000 cities in the United States and other countries are in the collection. The branch specializes, however, in maps of New Jersey, and especially Newark.

Accession

DISPOSAL OF NEWSPAPERS

Miss Zaidee Brown, the new librarian of Long Beach, Cal., has inaugurated an innovation in the disposal of such of that library's newspapers as are not kept for binding. Hereafter the outside newspapers received at the library after a few days on file will be given away to any person calling for them, preferably to persons residents or former residents of the city in which the newspaper is published. By the adoption of this plan Miss Brown believes that many families will be enabled to keep in touch with the affairs of their home state or city at no expense to themselves and no additional expense to the library. Heretofore it has been customary for the library to retain the papers until a large amount accumulated and they were then sold for waste paper or thrown away.

Cataloging

CATALOGING RULES

Condensed cataloging rules as followed in the University Library, Aberdeen. *Aberdeen Univ. Lib. Bull.*, Ap., 1914. p. 273-300.

A summary prepared for the purpose of serving as a ready reference for those who write the title slips, and here printed for the benefit of users of the *Bulletin's* lists of new accessions. The various forms of author entry are covered, with rules for cross references; the title, imprint, and collation; rules for filing, and a subject index to all the rules.

SUBJECT HEADINGS

The Newark (N. J.) Public Library has printed on five large sheets the official list of the several thousand subject headings covered in the library's vertical files. The listing of these headings will prove a great convenience to those consulting the files, and must increase the usefulness of the files.

Reference

PERSONAL GUIDANCE

A new idea in library work. "Ex-librarian." *Pub. Libs.*, May, 1914, p. 190-191.

A plea for the enlargement of that part of library work dealing directly with helping students and earnest readers. "Would it not be practicable for the larger libraries, at least, to have an assistant whose business it would be not only to aid readers during regular periods of the day, but to conduct at stated times a regular lecture-recital, with illustrations?"

Much would depend on the personality of such a helper. While there may not be a large number of assistants adapted to such work, there are undoubtedly some on the library staffs already who are particularly successful in meeting and helping readers, and a little special attention to promising library school students might develop many more.

Binding and Repair

GUTTA PERCHA BINDING REPAIRS

Librarians who have seen their books in gutta-percha bindings drop to pieces as the gutta-percha dries, and who have tried many methods of repair, will be interested in knowing that the assistant who does the binding repair work in the Manchester (N. H.) Public Library has found her solution of the problem in the use of Gaylord's flexible glue. Whether the binding will be everlasting can only be proved by time, but it lasts at least as long as the original gutta-percha, and has the added advantage that the original cover, often very beautiful, may be retained.

Books to be bound with flexible glue are treated according to the directions given in Gaylord's catalog, with the exception that one strip of book muslin is used in place of the double stitched binder. As the double stitched binder is already glued and the book muslin is not, a thin coating of the glue must be applied to the muslin before putting the book into the cover.

In treating books which have been bound with gutta-percha use glue nearly full strength, applying a second coat after the first has set. Otherwise the process is the same as with the ordinary book.

General Libraries

For Special Classes

COLLEGE LIBRARIES

Special work of college and normal school libraries. Lucy E. Fay. *Pub. Libs.*, Ap., 1914, p. 146-149.

In almost every department, college library administration differs from that of a public library, administration being determined by the people who use the library. In an institution whose clientele is composed of trained experts in every field of knowledge, together with students just entering the field, the college library becomes the laboratory of an institution which educates formally. The public library, dealing with more types and working rather for averages, educates more informally.

In a college library book selection is largely confined to the needs of the courses of instruction given in the institution, and as far as funds allow, the needs of individual professors along lines of particular investigation should be met. The selection, however, must be properly balanced. Choosing books for the students is much easier, and is governed largely by what it is believed will interest them and will form in them a library and reading habit.

Except fiction and biography, books in a college library are generally classified rather closely. The decimal classification can be modified to advantage in several classes, and it is usually better to keep together all an author's works. Many inconsistencies of classification can be eliminated by a well-made catalog which everybody should be trained to use.

Training readers to use the library is the librarian's most important work. Everything else is subordinate. No librarian would presume to instruct professors in the use of books, but a library handbook can be offered to everyone. In some colleges, courses in bibliography and reference work are required; in more, they are elective; and in most they are not offered at all. Until such instruction is universal, the college librarian will have to resort to all sorts of devices to encourage students to read widely and intelligently.

The best solution of the problem of having a student-body trained to use books will be to train the high school teachers in normal schools. The teachers, in turn, can then instruct their pupils, to the great advantage of the latter. Until these courses by competent librarians are given in all normal schools, the great mass of pupils in the secondary schools will be neglected.

UNIVERSITY LIBRARIES

The library and the graduate school. Guy

Stanton Ford. *Educ. Rev.*, My., 1914. p. 444-456.

A paper read by Mr. Ford, who is dean of the University of Minnesota, at the meeting of the Association of American Universities, Nov. 7, 1913, at Urbana, Ill.

To put the matter briefly, he says that without access to adequate library facilities, no university is a university, or in other words, no graduate school (here regarded as the main feature of a university) is a graduate school. Access and not possession is the point to be stressed. What ought to be a commonplace of graduate school policy, is that the library is the one all-important institution making possible or impossible, by its strength or weakness, real university work by students and instructors. Thus the library's policy and administration and disposition of its funds are of vital importance to all. Most librarians welcome and coöperate with the library committees representing the university's interests.

These committees should have not more than seven or nine members, and they should include a representative of the graduate school. In recommending the expenditure of funds, three things may be suggested: (1) The wisdom of putting at the disposal of the graduate school administration without conditions, as generous a sum as is possible. (2) Departments doing real graduate work have first claim where there is any margin over the reasonable needs of undergraduate classes. (3) If these two recommendations fail of approval, the establishment of a "sets fund" is advised. This fund would be used for the purchase of great sets of learned publications whenever opportunity is offered.

Graduate workers need especially the use of an adequate cataloging and classification system. The proper management of the exchange department may do much to assist in the accumulation of valuable material, and the subscription to sets of catalog cards of their collections issued by the great libraries, will be of great value in locating rare material.

If neighboring universities would coöperate more freely when building up their collections, as well as in the loan of volumes already accessioned, the library funds could be made to give much greater results.

Departmental distribution of books, except for the most needed and constantly used reference works, is regarded as a disadvantage involving unnecessary duplication. Books or sets of too great value to be duplicated or of interest to several departments may be deposited from time to time in departmental

libraries. In view of the central position of the library the interests of the university as a whole are involved at all points, and consequently all library matters should be treated from the broad point of view of the university as a whole.

For Special Classes—Children

PICTURES, USE OF, WITH CHILDREN

The Queens Borough Public Library has instituted the presentation to children of reproductions of the great paintings of the world, in order to familiarize them with the work of the great masters. The means and the manner are simple, and no straining after great effects or results has been attempted. A small collection of colored prints, representing the work of one master, has been hung in the children's room, and in connection therewith story hours have been held. Small collections of books have been shelved beside the exhibit, for use in the reading room or at home. The books collected are by no means those written for children only. They include Knackfuss, Kugler, Berenson, Lübke, Fromentin and La Farge, as well as books written in popular style, for the older people come to look and admire as well as the children. The pictures used are the Seemann prints. They are of various sizes, corresponding in proportion to the pictures they represent—none of them larger than twelve inches in height or width. They are printed in colors, and for work so inexpensive, give a good idea of the originals. They cost 25 cents each, and are framed in simple moldings at about 30 cents additional. A paper covered catalog of the prints, giving small cuts, may be had for 25 cents. It contains 200 "old masters," and a large number "from the galleries of Europe" by serial number, also an alphabetical list, by painter.

The library has five sets, containing from six to twelve pictures each: Rembrandt, Raphael, Dürer, Franz Hals and Murillo, and expects to add more. These exhibits do not seem to have led to much reading, they are more, as one librarian said, "like a presence over the children reading."

STORY-TELLING

Story-telling as a means of teaching literature. Frances Jenkins Olcott. *Pub. Libs.*, Ap., 1914. p. 141-146.

Story-telling everywhere affords delight, and in primitive man the story-telling faculty was predominant. It has helped to shape minds and events, it has stimulated the imagination, and it has preserved the accumulated wisdom and ideals of the race.

The home, the school and the public library, all have a part in the literary education of the child. The home can foster the book-reading habit, the library can aid in this and can informally influence many children, but the school alone can undertake formal correlated work for laying the foundations of literary taste. Story-telling is the best medium for this, and may be used to arouse interest in history, geography, and nature study, as well as in connection with English work.

Story-telling to lead to better reading should be part of every school curriculum, and such stories should not be used as material for school exercises. It is better for the teacher who is constantly with the children to tell the stories. She can watch the results of the story, and can supplement them with advice and suggestions of other books. If the teacher has no time for the work, the children's librarian of the public library may be able to tell stories in the school.

The more unaffected the presentation of the story the more successful will it be with the children. Preparation should be made from an original version if possible, rather than a re-written one, and the story should be read and re-read till plot and style and vocabulary have been assimilated. Desultory story-telling will never lead to a satisfactory evolution of literary taste. To gain the best results a carefully prepared year's program should be arranged for the whole school. It should be graded and the work of the grades correlated. With older children reading aloud may be substituted to advantage. In such cases the reading should stop at a critical point in the narrative.

The immediate effects of such a course are to arouse the pupil's powers of thought, broaden his vision, increase his vocabulary, and to stimulate his mind generally. This makes his work in all classes more intelligent, and enables him to get greater benefit from both school and library.

Reading and Aids

Aids to Readers

A "GOOD BOOK SHELF"

"The 'Good Book Shelf' at the Carnegie Public Library now has been in operation six weeks," according to an item in the Shelbyville (Ind.) *Democrat*. "It consists of a shelf of 25 or 30 books kept at the delivery desk from which patrons of the library can select books to take home to read or read in the reading rooms. These books are selected by the advisory committee or others who have read them or know them to be good and worthy of a more extensive reading than they

have been getting. In the six weeks the shelf has been replenished twice and of the first lot placed upon it, all have gone out once but four, and several have gone out more than once. So it seems that the 'Good Book Shelf' meets a need of the patrons of the library."

Character of Reading

RURAL READING

A survey of rural literacy. W. Dawson Johnston. *Pub. Libs.*, Ap., 1914. p. 160.

A review of the "School and economic survey of a rural township in Southern Minnesota," by Prof. Carl W. Thompson and G. P. Warber, showing that while reading is a form of recreation in 66% of the homes, only 45% of the young people "do any reading worth mentioning." Results of the inquiry are tabulated, and percentages are given for some of the periodicals most widely read.

Bibliographical Notes

An editorial announcement in *The Librarian* says that it is now practically an assured fact that "Best books of the year," based on the "Best books" department of that monthly, will be issued in an annual volume. In addition a continental "Best books" will be added. The books will be classified according to both the Dewey and the Brown systems, and an author index will be added. The size will be crown quarto, of from 350-400 pages, and the price will probably be 7/6 net. On orders received before Dec. 31 it will be 6/- net. A. J. Hawkes will be general editor of the English section, W. George Fry will have charge of the Brown subject classification, and it is hoped that Dr. Rappoport may edit the foreign section. An "Index to periodicals," to cover more than one hundred and fifty English and foreign periodicals, is also planned. The subscription price has been fixed at 9/- quarterly, but a reduction later is anticipated. The Index will be arranged on the Brussels extension of the Dewey decimal system. There will be an index to this classification and also an author index.

Many librarians do not seem to be familiar with the department of "Reports and documents" conducted in the quarterly *National Municipal Review* by Miss Adelaide R. Hasse, head of the public documents division of the New York Public Library. Much of the material listed is free, and many of its items would be very valuable to public libraries. The copy for April, the latest one received in this office, contains special bibliographies re-

lating to municipal government and municipal accounting, besides the regular list of current references.

The *St. Louis Public Library Bulletin* for May, 1914, p. 120-132, contains an index to the publications of the Missouri Geological Survey, compiled by Andrew Linn Bostwick, librarian of the Municipal branch.

Communications

QUERY

THE editor of the LIBRARY JOURNAL has received the following query: For what authors, poets or others, does there exist the greatest demand, from reference librarians or others, of suitable concordances? The LIBRARY JOURNAL would be glad to receive and forward any suggestions from librarians interested.

A BAD PRECEDENT

July 13, 1914.

To the Editor of the Library Journal:

Since the members of the American Library Association in convention assembled are restricted in their introduction of new business to the offering of votes of thanks, and to presenting matters bearing on local arrangements, it becomes my duty to appeal to the Council and urge them to note the unhappy example set by the National Educational Association at their recent meeting at St. Paul, where, in addition to many pertinent resolutions, were also adopted resolutions favoring woman's suffrage, the teaching of sex hygiene, deformed spelling, and favoring the Mexican policy of President Wilson. Why nothing was said about Mr. Hobson and national prohibition, anti-vaccination, anti-vivisection, and dress reform is remarkable! It may be, after all, as well that in our Association the introduction of revolutionary topics should be restricted to the Council, if it shall be the means of defending the Association from the consideration of every fad, fancy, or whim which may be presented to a deliberative body.

The National Educational Association stands for the highest ideals and the best methods of conducting the school system of the United States; its career is honorable, and it has made history. By the introduction of sociological questions, passed in a large assembly on the motion of a Committee on Resolutions, it has committed itself to a precedent, which, to my mind, seems fraught with mischief. We all know that resolutions, usually presented in the closing hours of a session when the delegates are wearied, are often passed against the better judgment of many members who would be glad to discuss the subject and show the demerits, if proper time were given the discussion. Again, there seems to be a sort of sacro-sanctity attached to resolutions presented by presumably leading members of an organization.

The American Library Association should stand for high ideals, and methods best adapted to provide, according to its primary motto, the best books to the most people, with the least trouble. It should studiously avoid everything of a sectarian, religious, or political bias. As every library should have upon its shelves books on both sides of every mooted question, so librarians as a class should not put themselves on record as favoring one side or the other of controverted social questions. Individually, they should feel as free as air to prance with the Pankhursts, or hobnob with the Hobsons, if they like—to take sides emphatically on any question of sociological importance. But where opinions differ strongly as they do, on matters entirely unrelated to library affairs, there should absolutely be no resolutions passed which would cause the organization, as a whole, to take sides on any subject which does not belong properly to literature and its appraisal, or to library management, ideals, and administration.

GEORGE H. TRIPP.

A BRICK BUILDING which has been erected for the purpose of housing the children's corner of the Leipzig Exposition. The building is situated in the city of Leipzig, Germany. It is a fine example of modern architecture and is well adapted for the purpose for which it was erected.

THE CHILDREN'S CORNER of the Leipzig Exposition is a most interesting and instructive place. It is a place where children can learn about the world and their place in it. The children's corner is a place where children can learn about the world and their place in it.

THE GOOD CITIZEN SAYS

I am a citizen of this country and I am proud of it. I am a citizen of this country and I am proud of it. I am a citizen of this country and I am proud of it.

THE CHILDREN'S CORNER, A. L. A. EXHIBIT, LEIPZIG EXPOSITION

THAT the civilized world, close linked in scholarship and art, no less than in commerce and finance, should within a month be in the grip of a merciless war would have seemed utterly incredible when the last issue of the LIBRARY JOURNAL went to press. But as the frenzied expostulations of international business were powerless to check the torrent, so the restraining influences of the arts of peace proved equally futile in the crisis which within the month has overwhelmed the European world. What thought could armed camps take of scientific congresses and bibliothecal exhibitions? If civilization itself, as represented by the men who are truly bearing its torch onward, stands in the way of "mobilization," then civilization, it appears, is to be brushed aside. At first glance, as so many editorial writers have already pointed out, the prospect is a disheartening one. We have not heard that the Leipzig Book Exhibit has closed, but, in any event, the war must prove disastrous to it. The Oxford Conference, which promised so much of vital interest, has been "indefinitely postponed." Every journal bears word of similar "postponements" in scores of lines of scientific thought. M. Otlet, from Brussels, has sent out an earnest plea for the preservation of the enormous bibliographic and scientific collections gathered there in his charge; and his fears are but earnest of the irremediable damage of war, of destruction from which mankind and the race are permanent sufferers. It is monstrous to suppose that the librarians of France are in any sense the "enemies" of their fellow librarians in Germany. War is but a tragic interlude between events which really count. It raises no feelings with us but horrified bewilderment, for our own professional friendships are as sincere north of the Rhine as south of it. The world will always be the debtor

of German thoroughness in scientific research as it is the debtor of French brilliancy in analysis and English sanity in things political. Our sympathy is with each and all of the contestants, our only hope an early return of peace.

Meanwhile the war has caught many American members of the library profession abroad and brought many of them without doubt the annoyance and possible danger that has proved the unexpected lot of the European tourist this summer. The double magnet of the Leipzig Exhibit and the Oxford Conference drew an unusual number from this side, and the whereabouts of many are still unknown as the LIBRARY JOURNAL goes to press. Mr. Hill, of the Brooklyn Public Library, was caught abroad but was fortunate enough to be among the first to get out of the trouble zone. Mr. R. R. Bowker and Mrs. Bowker were, by last accounts, in Switzerland. Among others of the library profession now abroad are: Mr. Asa Wynkoop, Miss Adelaide Hasse, Mr. W. N. C. Carlton, Miss Josephine A. Rathbone, Miss Helene L. Dickey, of Chicago Normal College, Miss M. E. Ahern, of *Public Libraries*, Miss Jessica Hopkins, of Paducah, Ky., Miss Mary L. Titcomb, Mr. and Mrs. J. C. M. Hanson, Miss Cora E. Hinkins, of Chicago Public Library, Miss Grace E. Babbitt of Public Library of the District of Columbia; also, we believe, Dr. George H. Locke, of Toronto, Mr. C. F. D. Belden of the Massachusetts State Library, Miss Mary F. Isom of Portland, Ore., and Mr. Samuel S. Green of Worcester.

THE continued emphasis laid upon library work with schools and *in* schools is reflected in this school number of the LIBRARY JOURNAL. It is reflected also in the increasing attention given the subject

in the programs of regular meetings of both educational and library organizations. This year, for the first time unless the LIBRARY JOURNAL is mistaken, the Library Section of the National Educational Association held a full-fledged conference of its own. The meetings of this Library Section at St. Paul, July 8, 9, 10, were enthusiastic and inspiring. To Miss Martha Wilson of the Department of Education of the State of Minnesota, especial credit is due for her unceasing efforts to make the meetings count both locally and nationally. A notable feature was the eagerness of some of the other departments of the N. E. A. to co-operate. The first session was a joint meeting with the National Council of Teachers of English at which both teachers and librarians discussed the "Cultural possibilities of libraries." The second session at the University Farm attracted 300 country teachers. Emphasis was placed upon the importance of equipping teachers for intelligent library work before sending them into the schools. Finally, to emphasize this spirit of practical co-operation, the chairman of the committee of the High School Section charged with the preparation of a library list for history, asked the Library Section for the appointment of a librarian to work with the American Historical Association.

AN admirable statement of the true position of the school library, which we reprint in this school number of the LIBRARY JOURNAL, was brought before the Council of the American Library Association, and received unanimous endorsement. Nowhere more than in the work of schools is the real value of the library as a factor in education more manifest, and it should go without saying that the school librarian should be a person picked for the work, ranked fairly, and paid properly. The too frequent practice of retiring incompetent teachers by giving them charge of the school library is a remnant of the dark ages in library work which should no longer be possible. The time

will soon come when every well equipped school that is to hold its rank in our educational system must provide for a school library, not only well selected but well administered, and this will mean the development of the post of school librarian—a connecting link between the two great functions.

THE LIBRARY JOURNAL is able to print elsewhere in this issue an authoritative statement of the present situation in a phase of educational extension work in which many librarians are interested and few have as yet been able for various reasons to do much, namely, motion picture exhibits. The difficulties facing the librarian are various. He faces a highly commercialized and powerfully entrenched industry which cannot be expected to be over-friendly to him unless, in the vernacular phrase, "he means business." Motion pictures are unquestionably coming to be an educational agency of stupendous value. The librarian cannot afford to ignore it. Oftentimes, unfortunately, he can hardly see how he can afford to use it. Nevertheless, as Mr. Cocks points out, dabbling with it, playing with it, is as unsatisfactory to the librarian as it is to the film manufacturer. Strange as it may seem, we are told by the film people themselves that there has been only a scattered demand for the finest type of film on the part of libraries. They also, we are told, and this is more easily explicable, "have been unwilling to pay the prices necessary to obtain films which cost much to produce." We believe it to be the function of the LIBRARY JOURNAL to develop so far as possible a demand for such films, for just as the demand increases, the supply will appear. Apart from the educational departments of some of the larger motion picture manufacturers, the work of handling the exchange end of educational pictures is being developed by at least three companies with a larger or smaller amount of capital and experienced ability in this field.

THE ADMINISTRATION OF HIGH SCHOOL LIBRARIES AS BRANCHES OF PUBLIC LIBRARIES*

BY HARRIET A. WOOD, *Supervisor of High School Branches, Library Association, Portland, Oregon*

THIS rather formidable heading might well be changed to "The supreme opportunity of the public library." Long have public libraries hoped for popular recognition as educational institutions, but fulfillment has been slow because of the lack of a teaching force. Women's club leaders and university extension lecturers have helped and public school teachers have responded nobly as individuals, but we librarians must acknowledge that our point of view has been very little understood by educators. The fact that no officer of the National Educational Association took any part in the discussion of the Library Section at the Salt Lake City meeting or, so far as known, attended its sessions, is indicative of the insignificant place that libraries hold in elementary and secondary education. If we librarians are to be welcomed into the councils of educators as co-workers we must have first-hand knowledge of school conditions. This can be gained by reading educational books and magazines and by observing intelligently and sympathetically the work of teachers and pupils in the schoolroom. The term "teacher" should be taken in its widest sense to include all leaders of study groups whether public or private. When teachers and librarians depend upon each other for inspiration there will be an exchange of ideas upon educational movements and upon book values that will affect the school and library tremendously. The stream of influence must flow from the school into the library just as steadily as from the library into the school, if educational isolation is to be made a thing of the past. If this ideal is faithfully followed a body of intelligent book lovers will be developed. Training the young people of the rising generation to work out their own salvation in the laboratory

of books means to lead them from the textbooks and selected libraries of the school to the larger resources of the local branch and central libraries, the state library, the special libraries, and the great national library at Washington, as well as to inspire them to accumulate for themselves those books that represent their own tastes and personal developments. The joint work of teacher and librarian is to remove all handicaps in this intellectual race. Days in school are few compared with days after school, and the present tendency in education is to acquaint young people with the environment in which they are to live. What library system will serve best in the solution of this problem? Every community must face this question, for no school worthy of the name can exist without its laboratory of books, the only laboratory that every pupil may use throughout life.

One of the most recent solutions offered is the coöperation of the school boards and library boards in the support and management of school libraries. The elementary school seems to be best served by the small class room library in charge of the teacher, together with a very carefully selected building library of the most vital reference books. The high schools, however, need larger collections and the service of special librarians.

The following cities among others are known to be trying the plan of public library administration of high school libraries: Cleveland, Ohio; Madison, Wis.; Newark and Passaic, N. J.; Portland and Salem, Ore.; Somerville, Mass. Tacoma, Wash., and Gary, Ind., have decided upon this course, and Manchester, N. H., expects to do so next year. Before discussing the merits of the system let us glance at the practical adjustments that these cities have made. There seems to be a great variety, due doubtless to the condi-

*Paper to be read at the meeting of the Pacific Northwest Library Association in Spokane, Sept. 4, 1914.

tion of the treasury, the method of taxation, and to the pioneer stage of the work. In every case the room, furniture, fixtures, and janitor service seem to be provided by the school board.

Books and periodicals with binding and cataloging are as a rule supplied by the library board. In Portland the school board appropriated \$10,000 for two successive years, 1910 and 1911, for the purchase of books for grade and high schools. From 1912 on, the book fund for school libraries has been a part of the public library budget. The public library has cared for the books from the beginning. In Cleveland the school board buys most of the reference books and magazines. In Madison the school board provides teachers' magazines, but all other books and magazines are furnished by the library board.

The question of who shall furnish supplies does not seem to be easily determined in libraries chiefly reference with records made at the central library. In Cleveland and Portland the public library board provides them for the most part. In Madison in 1912 the expense was equally divided and in 1913 chiefly borne by the school board.

Salaries at present are paid in various ways. In Newark the entire salary is paid by the school board, in Portland for three schools entirely by the library board, and in Tacoma three-fourths by the school board and one-fourth by the library board. Salaries at present range from \$570 to \$1200, the latter being the salary offered by Tacoma for the first year of the Stadium High School Library under joint library and school control. In so new a work salaries are not so high as they are likely to be when the position of high school librarian is on a firmer footing. It is to be expected that good work in this line will be rewarded by financial recognition. The chief endeavor should be to do a work that will provide lasting results.

Advocates of the organization of high school libraries as branches of public libraries recognize the splendid work that is being done in libraries under school management, realizing that spirit and equip-

ment are larger factors in the success of a library than any scheme of organization. In this discussion, however, it is assumed that an organization presenting the fewest handicaps is being constantly sought by educators who hold themselves open to conviction. Mutual confidence must form the basis for any such union of forces, and complete sympathy with the work and ideals of both institutions will surely result from the close alliance. The public library wishing to have the great privilege of entering the school must inspire the school authorities with faith in its ability to carry on the work satisfactorily and with belief in its readiness to enter into the life of the school.

The community at large will profit by the close coordination of its two greatest educational forces. Undoubtedly this coming together of school and library is a manifestation of the modern movement toward economy and efficiency. While educational effectiveness cannot be measured by comparative statistics of cost because of the intangible quality of its product, nevertheless the first argument for this plan that will occur to the taxpayer is the economy in using the machinery of the library for the school and that of the school for the library.

Any one conversant with book-buying realizes that the order department of a library is obliged to keep constantly on the alert. The buying of books at right prices and in suitable editions is a business in which long experience and practice are essential to success. The order clerk must be an expert if the purchasing capacity of a library is to be kept at its maximum. The handling of the book-buying through the library gives to the school the advantage of frequent purchases at the best discounts. This is particularly important in cities far removed from book centers, for book bargains are difficult to secure even with the utmost promptness. Nor are the teachers and high school librarians ignored in the selections, for the order originates in the school. The high school librarian watches the new books at the public library and borrows for trial at the school those especially suitable. In some cases the copy at the central library will

660A

EAST HIGH SCHOOL BRANCH LIBRARY

LIBRARY AT ORCHARD SCHOOL

TWO BRANCH LIBRARIES IN SCHOOL BUILDINGS AT CLEVELAND, OHIO

be sufficient to supply the occasional demand at the school. Thus unwise purchases and unnecessary duplications are avoided.

A book that ceases to be of service in the high school may be transferred permanently or temporarily to another part of the system. Changes in the course of study and even in the faculty often cause excellent books to be set aside. The librarian of the board of education in one of our large cities testifies that numbers of books are thus put out of service. Whether the books were purchased with school or library funds, the school should always be consulted in their disposition.

The cataloging of books, so vital to their usefulness, is as expensive as it is important. Every high school library should be fully cataloged, as nearly as possible like the public library, without the use of short cuts, in order to enable the pupils to make the most of the school and public libraries, and to furnish an object lesson in system and order. If this cataloging is done by the catalog department of the public library, not only is there a saving in expense, but also a uniformity in method that greatly aids the young student in his use of public libraries. There should be harmony in the catalogs from the juvenile department up.

At first thought it might seem as if the high school library should be modified to fit the college library, but the vast majority of high school students will not go to college; their only universities will be public libraries. College students with their advanced training will adjust themselves to modification. In every way the librarian will emphasize the use of the library in the school as a laboratory where students may secure not only the information needed for the next recitation but the means of unlocking all of the gates of knowledge.

The high school library should be carefully selected to set right standards before young people. For this reason some school librarians hesitate to open the high school library to the general public. The problem becomes complicated with a varied constituency. Other librarians with Mr. Dana encourage the immediate com-

munity to use the library for reference, contending that "the presence of adult fellow-workers is stimulating to the pupils and it is well to have intimate knowledge of school conditions widespread among adults." Tacoma is to open its high school library for circulation three evenings a week as well as during the day, so that the merits of this plan will soon be well tested.

The high school librarian, freed from the exacting work of cataloging, can give her individual attention to personal work with students and teachers. A certain amount of bibliographical and analytical work is very profitable, but no high school librarian can be fresh for work with her public who is absorbed in record work during school hours or who stays overtime to do it. School librarians who attempt to do personal work in addition to the cataloging certainly violate the eight-hour law. One writes: "I have such busy days at the high school from 8 a. m. to 6 or 7 p. m. that I cannot write a line and have to bring all my mail home to answer." Another states: "I work regularly ten hours a day and do all my reading besides."

The high school librarian studies with the teacher the best methods of bringing books and readers together, and of making books not a necessary evil through which to make credits and escape from school, but a means of pleasure and the enlargement of life.

The high school librarian is the go-between whose attendance upon the meetings of school faculty and staff acquaints the worker in each field with the interests and activities of the other.

The general school librarian is indebted to the high school librarian in the selection of books for the upper grammar grades and they in turn are glad of the light thrown upon the high school work by familiarity with the work of the grades. The increasing popularity of the junior high school, which includes the two upper grammar grades and the first year of high school, is bringing about a clearer understanding between the teachers of the older and younger pupils, to the great advantage of the pupils.

The gulf that has existed between the

grades and the high school is thus being bridged and librarians should not be slow in noting the significance of the movement.

Close touch with the reference librarian prevents duplication in bibliographical work, especially relating to debates, and brings much helpful pamphlet material to the attention of the high school faculty. While important numbers of the magazines should be found on the high school shelves, the accumulation of pamphlet files of periodicals is superfluous if students are trained to the use of the reference room.

The high school librarian holds a unique position in the school. The students are brought into intimate contact with her every day during their entire course, and the faculty hold her in constant review. It is not surprising therefore that a wise superintendent recently asked, "What about the misfit in the high school library?" Great care should be exercised in selecting a librarian who seems equipped for this peculiarly difficult

and important position. The general requirements are a college degree, library school training, and previous experience in school and library work, as well as a personality that appeals to young people. In case of an error in selection, the situation can be more easily adjusted in a public library system calling for librarians possessed of a variety of talents than in a public school system where library positions are not so diversified.

Granted that the right librarian has been secured and provided that her hands are not tied with technical details, there is no one in the schools with so wonderful an opportunity to mold the lives of the students and to assist them in finding themselves in their life work. Through the very atmosphere created by the personality presiding over the library are the students receiving impressions that are preparing them for that self-mastery that is the true basis of self-government, not only in the school but in the world after school.

LIBRARY WORK IN VOCATIONAL GUIDANCE*

BY SAMUEL H. RANCK, *Librarian, Grand Rapids Public Library*

VOCATIONAL guidance, as we know it to-day, is closely related to the movement for vocational and industrial education; but vocational education, it should be clearly understood, is much broader than industrial education. It includes the latter. Furthermore, vocational guidance is not vocational education, though it is sometimes so spoken of. Industrial education is largely encouraged by the employers of labor who find that the schools do not send them boys and girls immediately fitted for the work they are to do as producers. This movement on the part of employers is due to a strong conviction that many of the things taught children in school are of no use to them as wage earners. The difficulty of the problem of our schools fitting children for industry is increased by the fact that most children are "motor-minded or thing-minded," while most teachers (especially women) are "word- or symbol-minded."

*Read before the joint meeting of the Michigan and Wisconsin Library Associations, Menominee-Marquette, Aug. 29-31, 1914.

Time was when the expense of the training of young people for industry was borne by the industry itself, through the apprentice system. Most of the industries cannot, or will not, take the time or trouble to train men and women for those industries, but wish the boys and girls to come to them fairly well prepared—preferably at the expense of someone else. The use of machinery where each individual makes only a fractional part of the finished product makes the old fashioned apprentice system impossible. In such industries many of the workers are operators of machines, not skilled workmen, and they enter these industries not from choice or by reason of preparation, but because of the first opportunity to earn wages.

Vocational guidance is the effort to guide young people into useful occupations for which they are best suited. This applies to every kind of occupation or work, to professional as well as to industrial and technical work. Vocational guidance is

simply an attempt to introduce organized knowledge into a field long left to blind chance.

Vocational guidance has been defined as the science of self-discovery, as an organized conscious effort of helping people to find themselves, developing in each person genuine manhood and womanhood. It has to do with problems educational and social, as well as occupational, for one's occupation is only a portion of a normal human life. Let me quote here the advice of one of the great engineers of modern times: "Make a *man* of yourself first, and afterwards an engineer." To help a person to find himself is a very big undertaking. On the results of it depend largely the usefulness and happiness of the individual, and ultimately of society. It is not only a problem of the schools and of the library, but it is a problem of society, and fundamentally it is a problem of democracy, for no one can be as good a citizen as a democracy requires unless he is engaged in useful work, in the doing of which he can find full self-expression, which alone can spell happiness. All this means that he must be temperamentally, intellectually, and physically adapted for his work, and that he has a noble conception of the ends and aims of life and of what constitutes genuine success. It is the very great privilege of the librarian to place in the hands of readers the books of the wisest men of all ages, whose words and thoughts still live and help others to live, by helping them find themselves.

Along with this self-discovery goes the necessity of "preserving to the individual his ambition to aspire to make of himself what he will"—the most glorious prerogative of a human being. A democratic society ought not to tolerate for one minute the thought that our boys and girls before they leave school, or a few years thereafter, can be shunted into a line of work which they are expected to follow the rest of their lives. In that direction lies a society based on the idea of caste. No person, however great his knowledge of occupations, or vast his experience in life, can ever tell with exactness what any given individual is best fitted to do. He can only suggest the opportunity that certain occupations offer and discuss with the person his possible adapta-

bility for them. With this knowledge and help each person must work out his own salvation.

The work of the vocational director or guide is not only to help a person to find himself and to realize the most of his possibilities, but it is just as important for the guide to steer young people away from a vocation as into it, by pointing out the limitations that are a part of particular lines of work. He must systematically instill in the thought of serious-minded young people the challenge, What has this occupation to offer me?

Perhaps I can best illustrate this point by citing two instances that came under my observation recently. Some time ago I had the privilege and pleasure of going through a factory in Detroit that employs some 3,000 persons. It is an institution that has an international reputation. The work is high grade and the wages and factory conditions excellent, but the thing that most impressed itself on my mind was the fact that the workers were nearly all young men. On asking about this the superintendent who was my guide stated that in that particular factory forty years was the dead line, that when a man reached that age, with rare exceptions, it was the policy of the institution to let him out. The only thought in the management of this factory was the quality and quantity of the product turned out, the most possible in a given length of time. By the time the young men who go into that factory reach the age of forty they are nervously incapacitated for keeping up the pace and the institution drops them, and they are then thrown on the world to begin anew their struggle for life. Such a factory may be a great commercial and financial success, but I cannot help believing that an institution that deliberately scrapes men by the time they are forty is a curse to the social life of its community, and to the men who must work in it. It is the business of those who are giving vocational guidance to know the limitations that go with an institution of that kind. It is most decidedly *not* the chief business of the public with its taxes to train workers for an institution that expects to scrap them at the age of forty.

Last June I visited a factory for the

manufacture of men's clothing, in Cleveland, where about 1,000 persons are employed, two-thirds of them women. The sanitary and other appointments of this factory are all that could be desired; in fact they are very much better than the working conditions in the average public library. By the way the people moved, however, one could not help but realize that everyone was working at tremendous pressure and speed, for nearly everything was done on a piece-work basis. One of the impressive sights was a man with a tablet before him and two stop watches, analyzing and recording the motions of a worker at her machine. In a group of workers who were perhaps making button-holes, or another group who were simply sewing in pockets, or perhaps making the bands for the belt to hold up trousers, before machines going at tremendous speed, the stop watch man was watching a new girl, analyzing her motions, finding out where her lost time occurred, for the purpose of coaching her in the effort to increase her speed of production three or four times; in other words, the driving of the individual, and the regulation of the routine of the individual, were all directed to the purpose of getting the largest possible amount of product with the least amount of expenditure of time and energy as well as space. I was told that for this work the average American was not well adapted, that it required persons from families of a foreign race of the first or second generation, who were able to withstand the nervous strain of work under such conditions.

Now I find no fault with economic and industrial efficiency, and the methods of scientific management to help us arrive at such efficiency. We need much more of this sort of efficiency in all our occupations, libraries included. But I do insist that such efficiency shall not be at the expense of the vitality of the worker and his efficiency as a factor in human society. It is the business of the vocational guide to understand and know working conditions and their effect on the worker; for vocational guidance operates not only for economic efficiency, but for social efficiency.

In its early stages vocational guidance concerned itself largely with that of finding

a job for the boy or girl. At the present time where vocational guidance is organized through the public school system the emphasis has been largely transformed into the effort to keep boys and girls out of industries as long as possible, by convincing them and their parents that the best thing they can do at the school age is to continue in school. This means that those who endeavor to act as vocational guides must know the facts (as they have been brought out in a number of investigations) of the great economic value to the child of his continuance in our schools with all their present faults, real or imaginary. There are others who believe that the persons most in need of vocational guidance are the teachers and parents, rather than the boys and girls themselves.

A vocational guide or vocational counsellor, in addition to knowing the industries, must also know the individual boys and girls. This view is based on the idea that it is because of the failure of teachers and parents to understand life and the problems of the child, and because of the lack of proper teaching in the schools, that children go into industry so soon and so poorly prepared. The facts back of this view are those studies that claim to show that nearly three-fourths of the children who leave school when the law allows, do so not because of direct economic pressure in the home, but because the school has lost its grip upon them.

At the recent national conference in Grand Rapids the present trend of vocational guidance was summarized as follows:

"(1) The work began originally with the attention given to various types of misfits in the social settlements. It was based on what might be characterized as a 'niche' theory of society, which states the problem as that of finding the particular place or station (niche) in life which exists somewhere for each individual. (2) In the second stage it was held to be the duty of society to tinker with, and in some way to patch up, individuals that are defective. (3) The idea was conceived of working through the public schools to prevent individuals from being spoiled in the making. (4) Next came a shift in emphasis to the necessity of vocational training. (5) And

finally we have come to a recognition of the necessity for an educational survey of the community in order to determine and to make known the facilities and opportunities that are already available, and for a survey of the industries in order to determine what the real needs are. The present tendency undoubtedly is to seek to utilize the public school system as the agency for the prosecution of the work, looking toward the solution of these great problems."

Where does the library and the librarian come in in all this vocational guidance scheme, particularly for the boys and girls who have left school and are earning wages, most likely a blind alley job? First of all the librarian must know and thoroughly understand the vocational opportunities of his own community. This means working conditions, wages, hours of labor, chances for personal improvement, chances for advancement in wages, etc., as well as the hazard to life and limb and health. In short, the business of the librarian who attempts to give vocational advice is to know the full social significance of the industries and occupations of his community. This is a very big job, a bigger job than most of us have time to undertake. The smaller the community, however, the easier it is for the librarian to master it.

Next, the librarian must know the literature that relates to these occupations in his community, so that he may help the boys and girls at work in them to find themselves and improve themselves in the work they are daily doing. In this direction the librarian has the greatest opportunity once you get such persons into your library. To get a young person interested in reading and studying about his work is an achievement that will mean much to him, to his employer, and to society at large. It is the kind of vocational guidance, a kind of vocational enlightenment, that makes for the highest efficiency. And here the average librarian can do more than in any other way. By a better understanding of his job, such as one can get from library books, the worker learns to see his work whole, and that will dignify it and give him a self respect and an interest that is of the utmost value to himself and to society.

Third, the librarian must know something about the opportunities of occupations and the literature relating to them in other communities, so that he may know what to place in the hands of particular boys and girls who wish to seek such opportunities elsewhere, especially in a community where the outlook is limited.

And finally the librarian must personally know the boys and girls. This is absolutely necessary for worth-while work in this direction. Nothing can take the place of this personal knowledge. And it is this that is most difficult for the librarian in a large city to get. A certain amount of general work with worth-while books the library is doing all the time; but to deal with a particular case the guidance offered, or indirectly suggested, can only be given intelligently on the basis of personal knowledge.

In Grand Rapids the library and the schools have been coöperating in the work of vocational guidance for a number of years. The more I see of it the more I am convinced of the difficulties of the problems and the more I am convinced that vocational guidance attempted with a lack of comprehensive knowledge may easily do as much harm as good. In all this work, however, I am convinced most thoroughly that we should emphasize all along the line the fact that the most important vocation for which we are training our boys and girls is that of citizenship, and therefore, that we must emphasize the moral and social elements of life as over against the mere industrial or productive elements: in other words, that we are dealing with human beings with hearts and souls rather than with mere units of human energy who may be used for the production of things—and dollars. For after all is said and done the chief business of life is not the getting of a living, great in importance as that is, but to *live*, and to realize the full possibilities of human personality. To use the words of Dr. Saleeby, "The soul of all improvement is the improvement of the soul."

If the crowns of all the kingdoms of the empire were laid down at my feet in exchange for my books and my love of reading, I would spurn them all.—FENELON.

LIBRARIES AND MOTION PICTURES—AN IGNORED EDUCATIONAL AGENCY

BY ORRIN G. COCKS, *Advisory Secretary, National Board of Censorship*

THE libraries of the United States have failed to see the educational value of motion pictures during their period of growth in the last 15 years. These have now become overwhelmingly commercial and are supplied daily to over 17,000 motion picture houses. The libraries propose entering the field by exhibiting films which are peculiarly suitable for instruction and enlightenment. They must pay the price for their earlier indifference!

For years, the National Board of Censorship has been urging the development of the use of educational films. It has found many difficulties in the way, including an inertia on the part of schools, colleges, libraries, and churches. It is necessary to state these facts if librarians throughout the country are to realize the obstacles in the way of securing satisfactory programs.

There is no question but that splendid films are in existence. The manufacturers abroad and in the United States have scoured the world for scientific, literary, historical, artistic, scenic, and nature films. These manufacturers hold the sample copies of possibly 15,000 subjects, a part of which can be bought outright if desired. The trouble is not with the film supply, but with the ability of occasional renters to obtain from exchanges what they want, when they want it and at a satisfactory price.

In order to explain this technical situation, some facts should be given. There are a number of elements entering into the production, distribution, and exhibition of motion pictures. The raw stock of celluloid from which films are made has a certain life. The film base is usually inflammable. Before pictures are manufactured or exhibited, it is necessary to obtain splendid cameras, studios, staging, and highly paid actors and actresses, or to search diligently for proper out-door settings for subjects. The proper use of the camera is an art in itself. The skilful direction of people and scenes to obtain illusions is also a highly technical

business; even the production of travel, scenic, and scientific pictures with a minimum waste of film requires a high grade of artistic ability. When once the picture has been constructed, prepared with subjects and sub-titles, and has been submitted to the National Board of Censorship, it must be advertised, circulated among exchanges throughout the states of the Union, and await its demand by the exhibitors. In most cases, the man directing an exchange orders only a partial list of the films manufactured by the group of producers with whom he has affiliation. He rents the films to the exhibitors in circuits immediately around his city. The price for a day's use varies with the number of times it has run, the demand for the picture, its original cost, and the number of reels or parts.

All this process has been built up because of the regular daily demand of the people for entertainment and enlightenment. Let me emphasize the fact that the demand is regular. The manufacturers also know the percentage of film subjects demanded, whether it be thrilling, tragic, humorous, artistic, or educational.

The libraries which desire motion picture films are scattered. They make demands upon the exchanges only occasionally. They insist that films having comparatively little popularity in the commercial houses shall be furnished them. It is only natural that these exchange men who obtain their living from the regular demand of the commercial exhibitor are little interested in meeting the occasional request of the libraries for service.

The manufacturers and exchange managers realize that the increasing use of motion pictures in libraries, colleges, schools, and churches will, necessarily, draw away somewhat from commercial houses. They have cast their interest in with the commercial exhibitor and are loyal to him.

Another fact which should be stated is that librarians sometimes demand a conces-

sion in price. This has been the case many times in and around New York. They also have not always been business-like in the return of films.

The following firms of manufacturers announce that they have libraries of educational films which can be obtained:

The General Film Company, 71 West 23d St., New York City;

The Pathé Frères, 1 Congress St., Jersey City, N. J.;

The Eclair Film Company, 126 West 46th St., New York City;

Thomas A. Edison Company, 239 Lake-side Ave., Orange, N. J.;

The Gaumont Company, 110 West 40th St., New York City;

The Hepworth American Film Corporation, 110 West 40th St., New York City;

George Kleine Company, 166 North State St., Chicago, Ill.

There may be others, but these are the larger manufacturers. It is possible to obtain their books of educational films upon request. It does not follow that the films noted in these books can be obtained upon demand. Correspondence with the companies will undoubtedly make clear the conditions. A further fact is also important. The manufacturers of films withdraw from circulation most of their film subjects after they have been in circulation from 3 to 6 months. This gives them the opportunity to construct new films and to increase the profit of a lucrative business. Unless films are purchased outright, as time goes on it becomes increasingly difficult to obtain some of those which have been most beautiful and inspiring.

I desire to speak of solutions for these difficulties later. In the meantime, let us consider motion picture projecting machines and booths. Since the celluloid films are inflammable—though many of them are slow burning—it is necessary to protect audiences. Hence the fire-proof booth. Since pictures tend to flicker as they pass by upon the screen, it is important that a good grade of projection machine be obtained for regular exhibition. This minimizes the eye strain. Since most films are of standard size with standard perforations for exhibition, it is economical to obtain machines which will permit the display of the regu-

lation film. The ordinary machine costs about \$225 and a fire-proof booth about \$100. Many companies are experimenting to produce satisfactory small machines that cost in the region of \$100. This has been accomplished for small rooms and limited uses. Advertisements can be found in the motion picture trade papers.

A word about the psychology of audiences. Exhibitors everywhere testify that their patrons cannot be held with programs which are exclusively educational or consciously inspiring. The so-called educational picture has been used in many theatres as, in the motion picture slang, "a chaser." When these appear, the crowd leaves, making way for a new audience. An increasing number of exhibitors, however, recognize the appeal of the rest of these technical pictures and hold their audiences with them. A warning should be given to librarians against an attempt to furnish instruction at the expense of entertainment. A well-balanced program will produce a far more satisfactory result than a program which excludes laughter and thrills.

It ought to be clear by this time that it is no easy work to provide a regular program of a high grade. It cannot be done by a librarian who looks over a stock booklet and quickly makes two or three selections from likely subjects. This business should be left to someone who makes it a large part of his or her duty. He can obtain the films if the library is within striking distance of an exchange centre for films, but time, ability, patience, and money must be expended.

A final statement should be made about obtaining films. From the standpoint of the library or the school, the present system is unsatisfactory. The commercial companies with large stocks of films are not particularly interested in the occasional trade of institutions for education and enlightenment. Several organizations are in process of development which aim to cater to the forces of enlightenment in the community. It must be said that this demands large capital for the purchase of films and keen business ability to maintain a circulation which will be profitable. The organizations which have been launched are based

largely upon the plan of circulating a set program in 52 circuits composed of 7 members each. This will enable such a company to furnish 360 institutions with a five-reel program once a week at the initial expense for 230 reels of film. It makes it difficult, however, to obtain a varied program or to have it more often than once a week. The weekly rental for such a service will probably range from \$10 to \$25.

Another solution which would be more satisfactory for schools and libraries is the annual appropriation by the state of a sufficient sum to allow the purchase of a number of the best films each year by the state libraries or the state department of education. This increasing library of films could be held for circulation throughout the state at a nominal rental for libraries and schools. A committee skilled in the demands of these institutions for certain classes of films could make the selection. Such a plan pre-supposes, however, a far more general demand than there is at present for such purposes. The only other solution which has occurred to thinkers on this subject is the purchase at a large initial cost of a supply of films for rental and exhibition by some philanthropists or philanthropic foundation. Even this plan would have the disadvantage of being located in one section of the country and unable quickly and economically to supply the demands in various parts of the country. It would appear that either these social service film exchanges must develop rapidly and satisfactorily or public demand must cause the creation of state film libraries. In the meantime, libraries must make the best use possible of the commercial film exchanges or co-operate far more than they are at present doing with the motion picture exhibitor who is in their vicinity. Both librarians and teachers will be surprised to find a willingness on the part of many such men to furnish entirely satisfactory programs if audiences of library patrons, school children and their parents will be guaranteed.

To supplement Mr. Cocks' article the JOURNAL on its own responsibility prints below a selected and, it believes, an authoritative list of manufacturers of inex-

pensive machines and of companies which furnish educational motion pictures, in the hope that librarians who are interested in the use of motion pictures in the library may find the information of value.

Machines which can be furnished for a price around \$100 are as follows:

- Pathéscope, Pathé Frères, 115 East 23d St., New York City;
- Kineclair, Eclair Film Co., 126 West 46th St., New York City;
- Phantoscope Mfg. Co., Bond Bldg., Washington, D. C.;
- The Animatograph, Victor Animatograph Co., Davenport, Iowa;
- Edison Home Kinetoscope, Thos. A. Edison, Inc., Orange, N. J.;
- Nicholas Power Co., 90 Gold St., New York City.

These machines operate under different mechanical devices, with various forms of lighting, projection, protection of film, etc. Some of them advertise that the fire hazard is reduced to a minimum, and we believe all but one use the standard size of film. Screens, tickets, equipment, etc., may be obtained from the American Theatre Supply Co., 218 West 42d St., New York City. Any one of the companies mentioned will be glad to send complete information concerning their machines in response to inquiries.

There are at least three bureaus which have declared themselves ready to furnish film service of the kind desired in libraries, though no guarantee can be made at present that service can be obtained except within, possibly, 200 miles of New York. There is little doubt about the satisfactory character of the films they furnish. These bureaus are:

- The Community Service & Film Bureau, Rev. Charles Stelzle, managing director, 200 Fifth Ave., New York City;
- The Church and School Social Service Bureau, Rev. Wm. Carter, president, 18 East 41st St., New York City;
- The Motion Picture Bureau, Edward W. Robinson, Singer Bldg., New York City.

Besides these, the following large companies have educational departments:

- The General Film Co., Educational Dept., 71 West 23d St., New York City;

Gaumont Co., Congress St., Flushing, L.I.;
 Pathé Frères, 1 Congress St., Jersey
 City, N. J.

Large commercial exchanges of the great film producing companies have many educational subjects on their shelves, and libraries and schools in different parts of the country desiring to obtain programs should

make a more serious effort to discover what these subjects are. Any motion picture exhibitor will tell the names of these exchanges, and an examination of their resources will show the investigator the great possibilities already existing for arranging programs well suited to production either in library or school.

SELECTION AND COST OF EDITIONS*

BY LEROY JEFFERS, *Of the New York Public Library*

ONE of the most important factors in the purchase of books for a new library, or in adding to a collection already established, is that of editions and their cost. No library large or small can afford to overlook the great possibilities of extending the purchasing power of the book fund.

As you all know, the day of the net book is fairly here. It is only a short time ago that Doubleday, encouraged by the success of all publishers in issuing their new books at net prices, decided to make their entire list net. Other publishers watched with interest, and as nothing unpleasant happened, Macmillan decided to try it. Libraries still continued to buy, and Appleton, Dodd, and Houghton have just come in for the feast by making their entire catalogs net. Putnam, Lippincott, and Little will do so in July, and before we realize it practically all publishers will do likewise. Let us consider briefly the result to a library.

Fiction was \$1.50 regular, less 33 1-3 per cent., or \$1.00 a copy for the first year; now it is often \$1.35 net, less 10 per cent., or \$1.22. After the first year of protection it was formerly subject to as much as 40 per cent. discount, which was 90 cents a copy on thousands of titles. Now there are very few libraries that secure over 25 per cent., or \$1.01 a copy. A greater discrepancy is evident with juvenile fiction over a year old, which is now 25 per cent., as compared with a former 40 to 44 per cent. In non-fiction the increased cost is even more noticeable, as thousands of titles are published at several dollars each. A \$5.00 book could formerly be purchased at 40 per cent. discount for \$3.00; now it costs \$3.75.

The immediate result is a flood of rumors from all over the country to the effect that libraries are securing better discounts than 10 per cent. on net books during the year of protection, from certain booksellers. Although the courts have ruled that the Publishers' Association cannot maintain prices, the bills of individual publishers rendered to booksellers and jobbers specify that their books are not to be sold at less than this rate. I think the fair and honorable way for libraries is to respect the wishes of the publisher and the needs of the bookseller, and to pay this increased cost, and not to enter into secret dealings for additional discounts. The mutual confidence of the publisher and the librarian is of greater value, and it is possible that eventually a better discount may be legitimately arranged for libraries.

When these facts of increased cost are considered it will be apparent to all that there is financial necessity for considering the various editions in which a book is published, and for frequently selecting one of lower price than the original.

In order to purchase books intelligently for a library, it is necessary to build up a card record file of popular titles that are published in different editions. Using the ordinary catalog card, the author and title are shown, below which a separate line is devoted to each edition. The publisher is recorded on the left; the number of volumes, if more than one to the title, is placed between the red vertical lines; after which the published price is given. If the book is a classic appearing in several editions, note is made of the illustrator, followed by data on the type and paper. Symbols are used to indicate which is the best edi-

*Remarks at the New York Library Association Institutes, spring of 1914.

tion to purchase in publishers' covers, and which one to have bound from the sheets in strong binding. When a similar edition to the one entered is published abroad, record of the publisher and shilling price is made on the next line, and the two publishers are joined by brackets to indicate the relation.

This card record file may be gradually built up from the *Publishers' Trade List Annual*, and from current entries in the *Publishers' Weekly* and *Cumulative Index*. English editions may be secured from the *Whitaker Catalog*, and kept up to date from the *Bookseller* and *Publishers' Circular*. As various editions are seen at bookstores or at other libraries, or are purchased or secured on approval, note is made on these cards, so that in time they become invaluable for intelligent book purchasing.

In the selection of suitable editions for a public library many factors are involved. In comparison of different editions, some of the most essential points whereby poor editions may be eliminated and the best discovered are:

1. Eliminate if unauthorized and abridged text with no statement of abridgement or editorship on the title page. Such editions are usually pirated. Be careful to purchase only latest editions of all titles except fiction. This is important in the purchase of reference books, which are occasionally revised; likewise new or revised matter is frequently added to books of travel and biography. In purchasing editions of the standard poets beware of "Poems of," "Poems by," and "Poems," as they are usually only such portion of the complete poetical works as the publisher was able to secure legitimately, or which he could safely steal on account of the expiration of the copyright. It is always wise to consider the general reputation and standing of the publisher when selecting editions.

2. Select whenever possible, when readable type can be obtained, one volume editions in place of those published in several volumes. The first volume of a set is usually worn out before the remainder is ready to be discarded, and readers who lose one volume are forced to pay for the entire set, as publishers will rarely sell the volumes separately. To illustrate: Hugo's "Les misérables" is published by Little in

five volumes at \$5.00 net, but it is obtainable in one volume published by Scott at 3s. 6d. regular. It should be ordered in strong binding, and can be secured for a small fraction of the cost of the five volume set. Dumas, "Three musketeers," 1 volume, Scott at 3s. 6d. instead of Little, 2 volumes, \$2 net. Tolstoi, "Anna Karenina," Scott 3s. 6d. instead of Crowell, 2 volumes, \$2.50.

3. Reject the edition if the type shows through the paper so that there is confusion to the eye in reading. It is surprising how many otherwise good editions are rendered worthless on account of a more or less transparent paper. India paper is unsuitable for library use, yet it is occasionally used by reputable publishers.

4. Note whether the inner margin is too narrow to read the page with ease. Often a good edition becomes a poor one for this reason alone. If the book is one likely to need rebinding soon, or is to be placed in strong binding from the sheets, note whether the margin is wide enough to stand the sewing.

5. Is the type too large for practical use, or, as is far more frequently the case, too small to read comfortably? Very heavy face type is undesirable.

6. What are the wearing qualities of the paper? Is it too thin or too thick; of glazed, or of spongy surface? Form a general impression of its durability based on experience with books of similar character.

7. If illustrated, is its appearance enhanced by a competent illustrator, one in sympathy with the spirit of the author; or do the illustrations discourage the interest of the reader? Classic characters dressed in modern costume are hardly in keeping with real literature.

8. Binding: Is the cover design cheap, or is it attractive? What is the quality of the cloth? Has the book strength in its joint, usually the weakest point of a library book? If it has a paper label, avoid it.

9. Price: What is the actual cost to the library in comparison with other acceptable editions? If you were to purchase it personally would you be satisfied to select the most expensive edition?

10. Is it ordinarily a better investment to purchase it in publishers' binding, or to

have it strongly bound from the sheets? Books with undesirable publishers' covers can be made serviceable through strong binding. Most English editions of fiction are poorly sewn, so that they soon need re-binding. It is better to purchase them in strong binding, importing them free of duty for library use.

In general, fiction by American authors should nearly always be purchased in American editions, while English authors are frequently obtainable in better editions for the money through importation.

We do not recommend pirated editions, but every librarian should become acquainted with the lower priced fiction brought out by the original publishers, such as the 50 cent series of Doran, Lane, and Moffat, and the excellent Macmillan 50 cent net reprints, all of which sell at a liberal discount. The success of the Grosset & Dunlap copyright fiction has led many leading publishers to discontinue their reprint series and to market these editions through Grosset. Copies in publishers' covers, and the sheet stock of the regular edition, are frequently turned over to the lower price publishers, so that the regular edition is obtainable at the lower price until such time as the supply is exhausted and the book is reprinted. This is usually done from a set of plates which are sold by the original publishers and are identical with those of the regular edition. The Burt copyright fiction titles are worth while considering individually. The Crowell Astor fiction has a fair type on many titles, and is published at 60 cents selling at a large discount.

Every librarian should be familiar with the Cambridge Classics of Houghton, published at 90 cents net, which are of the same good workmanship as the \$1.50 net edition. As an example, Stowe's "Uncle Tom's cabin" can be purchased for considerably less than a dollar in the Cambridge Classics, but costs more than a dollar in the regular edition. Emerson's essays, complete in one volume, can be bought in this series, instead of the regular edition of 2 volumes, first and second series, published at \$1.75 net each. The Houghton Autograph Poets series, published at 90 cents net, can often be used to advantage for circulation

instead of the \$2.00 net and \$3.00 net Cambridge editions which are desirable for reference collections. Many titles of the Oxford edition of the standard poets are excellent at 3s. 6d. or 2s. regular.

Contrary to general impression, it has been found by actual record that the lower price editions will give fair service both before and after they are rebound. In the manufacture of low price books, the machine sewing is the same as that used on the regular editions, and the paper is often of fair quality. Both the Grosset and the Burt books are frequently manufactured at the plant of the original publisher, where they are printed from the same plates as the regular editions. Generally speaking, the paper is somewhat inferior, the cloth used on the cover is of a cheaper grade, and gold is omitted from the lettering. Count has been made of the number of issues obtained from the low price, and from the regular editions, before being rebound, and it has been found that the reprint editions average 18 issues in comparison with 19 of the regular edition. After rebinding, the cheaper edition circulates an average of 48 issues and the more expensive one 52 issues, making a total circulation of 66 for the low price book, and 71 for the regular edition. As one can purchase three copies of the lower price book for about the same money as one copy of the regular edition, it is evident that far more circulations may be obtained by use of the lower price book; but we do not recommend its purchase when it is of distinctly inferior appearance. It has been said that it is immoral to circulate a badly soiled book. Perhaps one copy of an expensive edition, retained in circulation until it is filthy, does more damage to a library than would three copies of a little less artistic edition, if they are discarded before they become actively immoral.

In selecting editions of juvenile books, it is necessary to consider the uses for which they are intended. If they are for reading-room collections, it is usually desirable to get the best and most attractive editions. Book covers have an educational value in inducing children to read good literature. It is far easier to teach the child respect and care in the handling of books, if at-

tractive editions are supplied, than if they present a cheap appearance.

However, for ordinary circulation it is worth considering titles in such series as the Every Child Should Know reprints of Doubleday published at 50 cents; the American Fights and Fighters series, Doubleday, 75 cents; the 50 cents Macmillan juvenile reprints; and the Every Boy's Library (Boy Scout edition) of Grosset & Dunlap. The Riverside Literature series of Houghton is desirable for text book or school use. Many English series, as the Black 6s. juveniles, are now published at 3s. 6d. regular. The Jack, 6s. net, published here by Lippincott at \$2.50, are now issued at 3s. 6d. net, as, Scott's "Ivanhoe," "Kenilworth," and "Talisman," and many excellently illustrated juveniles are published by Dent at 5s. net, and are handled here by Dutton at \$2.50.

There are many English editions of books by English authors, which are first published at 6s. regular, and are then brought out in 2s. net, or 3s. 6d. regular editions from the same plates. This effects a great saving over the corresponding regular edition published here. Fiction published below two shillings regular is seldom desirable for library purposes. Very reasonable rates on the shilling on these English books bound in permanent binding from the sheets may be obtained from Cedric Chivers, Bath, England, and libraries may import them free of duty.

Illustrations of the 3s. 6d. regular editions published abroad as compared with the \$1.50 regular or net editions here, are Crawford's novels: Macmillan, 3s. 6d. abroad and \$1.50 net here; Thomas Hardy: Macmillan, 3s. 6d. abroad, and Harper, \$1.50 here; W. W. Jacobs: Methuen, 3s. 6d. abroad, and Scribner, \$1.50 here; A. C. Doyle: Smith, Elder, Longmans, and Cassell at 3s. 6d. abroad, instead of various American publishers at higher rates.

Examples of 2s. net books in place of \$1.50 here are Maurice Hewlett's works: Macmillan, 2s. net abroad, and other publishers here at \$1.50. Methuen, Hodder & Stoughton, Ward Lock, and other English publishers issue 2s. net popular fiction. The Macmillan Standard Novels are a good series with excellent illustrations at 2s. 6d. regular abroad, and \$1.00 net here.

It is far more economical to import the English items from such houses at Putnam, or Baker & Taylor, or from Chivers if in strong binding, at a fixed rate per shilling with no extra charges, than it is to import direct from England, which involves extra charges for boxing, freight, brokerage fees, and cartage.

American publishers who represent English houses bring out many important English titles without copyrighting them in America. Such books when published net are not subject to the 10 per cent. discount during the first year of publication, but such discount as is given on net books after the year of protection may be immediately secured. In some instances the American published price less this discount is cheaper to a library, and in other cases the English published price in shillings billed at the rate at which the library secures the shilling will prove the cheaper method of purchase. If the library purchase is large, arrangements may be made with the dealer or with the publisher to protect the library in the matter of price, and to bill each item at the American or the English price, according to which will be least expensive to the library. In this connection it should be noted that it is not necessary to wait five or six weeks for importation of the books of many publishers, as Scribner handles many titles of Murray, Batsford, Unwin, Jack and Chatto. Macmillan handles Macmillan London, Bell, Black, and some of Methuen, and Whitaker. Longmans has Longmans London, Arnold, and a few of Allen, and Murray. Putnam has Cambridge Univ. Press; and Dutton carries Routledge, Dent, and a selection from Murray, Constable, and Nister.

In the purchase of foreign books do not allow them to be billed at arbitrary American prices less the apparently liberal discount. Insist that the original published price of each book be shown in the money of the country in which it is published; and have the agreed rate specified on the bill, as so much for each mark, franc, lire, peseta, crown, etc.

Where a public library is least wanted it is generally most needed.—H. G. WELLS, in "An Englishman looks at the world."

THE READING ROOM, WITH A GLIMPSE OF THE SHELF ARRANGEMENT

CORNER VIEW OF THE NORTHEAST HIGH SCHOOL BUILDING IN KANSAS CITY, MO., SHOWING ENTRANCE TO THE NORTHEAST BRANCH LIBRARY

HIGH SCHOOL BRANCHES IN
KANSAS CITY*

If there has been a failure in the proper development of the branch library in connection with the high school, as is often charged, it has been brought about by a misunderstanding on the part of the librarian of the actual needs of the teacher, lack of sympathy on the part of the teacher for the work the library is trying to do, or, perhaps, failure on the part of one or the other to co-operate in the work. This is placing the blame where it belongs—on the individual, rather than on the idea.

This does not mean that serious efforts have not been, or are not being, made by both teacher and librarian to solve the perplexing question of how best to reach the desired end. So long as there is an earnest attempt on the part of any considerable number of teachers and library workers who are interested in bettering the condition, there is no reason for discouragement. School work of all kinds is undergoing a radical change at this time, and this should encourage librarians to take advantage of every opportunity offered to establish the library on a proper footing.

The public library is one of the youngest of the great educational aids, but it is developing rapidly, and in no direction is it accomplishing more than in the establishing of branch libraries. Some of these are in close proximity to high and grade schools; some are conducted by separate boards under joint agreement as to support and maintenance, while here one may be supported by the library for school use, and there an effort may be made to serve both school and public in a limited way.

All of which shows that the use of the book is making its way. Strange as it may seem, however, its progress is all too slow. How many will recognize the following as applying to-day as well as when written in the *School Review* for February, 1906: "There is no problem relating to the equipment of the high school which is more pressing than that of the library. School authorities have agitated the question of better buildings, better heating and ventila-

tion until conditions in larger communities are generally very good. To those of us who went to school in the old barracks, the modern structures seem almost palatial. Laboratories for physics, chemistry, botany, and zoology are being rapidly supplied. In many schools in the cities they are far better than those in the colleges of a score of years ago, or even better than those in all but a few select colleges now.

"But the library problem has scarcely been touched. Few books, few current periodicals, absolutely no bound files of the periodicals, and few of the accessories of a good library, is the library story in practically all schools in small towns and in most larger ones. I have visited a great many schools in various states, and the superintendents, in piloting me about, usually take me to the laboratories, the cabinets of fossils, the pickled frogs, the manual training and writing and drawing exhibits. I am glad to see them and have examined some splendid equipment and results of work. But seldom am I taken to a real library. Often, when I inquire, I am conducted to a close, stuffy room, almost windowless, the books piled in confusion, at which I am not surprised, for frequently most of them are musty, abandoned, dog-eared, out-of-date text-books. Intentionally planned and adequately equipped rooms are as scarce as suitable laboratories were a quarter of a century ago."

There is an improvement over this occasionally, for here and there over the country school and library authorities are striving to better conditions. The work in Cleveland, Philadelphia, St. Louis, Newark, Brooklyn, Utica, and some other cities, show a decided advance over the situation indicated by the editorial from the *Review*.

One of the greatest difficulties to overcome has been that of different management—the schools under one body and the library under another. This is not always a source of trouble, but frequently is a cause for disagreement, if not real dissension.

At the risk of being accused of talking on personal matters, I shall attempt to outline in as short a time as possible the plan just put into operation in Kansas City. In Kansas City the public library is supported

*Paper read before the Library Department of the National Educational Association at St. Paul, July 10, 1914.

by and under the control of the Board of Education. For the purpose of the experiment, this makes for ideal conditions. In planning the high school buildings, in addition to the study halls and school reference library, provisions were made for distinct branch libraries. The Northeast branch library quarters have just been completed at a cost, based on the cubic contents of space occupied with equipment, of approximately \$15,500. They have an actual shelf capacity of 16,000 volumes, fully supplied with modern library equipment, susceptible of enlargement. The library is situated in the corner of the building, with a main outside entrance, distinct from the school entrance, but with a door leading to a main hall of the school proper. For all intents and purposes, it is a complete branch library, while at the same time it will answer every purpose of the special school library. It was planned and will be operated to meet the requirements voiced by Miss Mary E. Hall, librarian of the Girl's High School, Brooklyn, in the report of the committee on high school libraries, made to this section two years ago, which I cannot refrain from quoting in part:

"Aside from a very general use of the public library for debating material and other reference work, reports show that high schools are far behind elementary schools in the matter of co-operation with the public library. High school principals and teachers are not yet as a body making the use of the public library privileges which ought to be made. Many rarely visit the public library or know its resources. Reports indicate that at most not more than 75 per cent. of our high-school students have cards in the public library—50 per cent. is the estimate given by some librarians. The most important work school librarians have to do is to reach the 25 per cent. or more who do not use a library and help them to realize what a means of self-education and enjoyment the public library may be. The highest point yet reached in this movement for co-operation between high school and public library is in the establishment of branch libraries in high-school buildings. . . . Next to the introduction of the trained librarian (and largely as a result of that), the most im-

portant feature of the modern high-school library is the definite and systematic instruction of students in the use of a library. This means the saving of much time formerly wasted in using reference books, because of ignorance of how to get at information quickly and intelligently. The lectures given by librarians and teachers include what every educated person ought to know—use of various kinds of indexes to books and periodicals, special points in the use of encyclopedias, dictionaries, atlases, card catalogs, etc."

This branch was opened Aug. 8, without functions of any kind. The daily issue for the week averages 150 books. Formal openings will not occur until after the middle of September.

The building is to be used as a neighborhood center, and the swimming pool is now open daily, with special hours for women, children and men. This attracts many persons to the building. Bulletins in the natatorium and in neighborhood stores, with newspaper notices, comprise all the advertising done. An effective bulletin in the natatorium reads:

AFTER THE SWIM

You are invited to visit the
NORTHEAST BRANCH LIBRARY
Entrance at n.w. corner of
this building.

Books, Magazines and Newspapers.

The use of the library as a working adjunct of the high school has not of course been tried, but a hearty spirit of co-operation on the part of the principals, teachers and students promises well. It is proposed during schooltime to use the reading-room for student use from 8:30 a. m. to 12:30 p. m. in periods of 45 minutes, by classes of 50 pupils each, classes or pupils being assigned by the heads of the school departments. Thus 250 pupils will use the library daily, doing the work required, as well as acquiring a knowledge of how to use a library. And as to the importance of this, let me quote the reflections of that eminent teacher-librarian, the late Dr. Canfield: "Instruction in the most efficient use of a library should form as important a part of the curriculum as instruction in language or in history. It will exert more in-

fluence on the pupils' career than any two subjects in the course of study. The library, rather than the school, makes possible and probable a continuation of intellectual activity and progress after school life is finished." (N. E. A. Proc., 1906.)

This specific school service will in no way interfere with the use of the library by the general public. Special tables will be reserved for the usual library patrons, but little use will be made of these. An investigation of branch use in a number of cities shows that small demand is made for books by the general public in the morning hours.

Within easy walking distance of this building are located three large grade schools, and it is the intention to give regular library service to the pupils.

In every other respect this branch will render the same service to adult patrons as does the general library, specializing in the actual needs of the community.

Aside from rendering the cultural service required in the high-school work, with trained library workers in charge, it is the fervent hope and belief that still another good will come from the close cooperation—that of increasing the number of pupils attending the high school after graduating from the grades, through familiarity with it from a frequent use of the library.

No fear is felt of lack of patronage of the branch library by adults, as is often the case where libraries are located in school buildings, for the reason that the auditorium of the building is also being used as a social center. As a broad result, the building is likely to become one of the most-used institutions in the city. No fear is felt on the part of those connected with the library but that results on broad lines will prove all that could be wished.

On the score of economy and efficiency, much is hoped for the new branch. The pupils in the high school have at their service a much larger collection of books than would otherwise be possible. Many titles are available that would hardly be found on the shelves of a high-school library, because of their limited use—books which a general community use will demand. Any high-school teacher or librarian can tell of

many titles which are seriously needed in some studies for a week or two, the recommendation for purchase of which is withheld from the school authorities for fear of the charge of extravagance. Naturally, many books of this sort will be found on the shelves of the progressive branch.

Another value to the high school of this sort of a branch library, which should not be lost sight of, is the broad, general interest of the public in its work brought about by contact with its various activities. In this instance, it is hoped and believed that the old saying will be reversed, that "familiarity will breed" support and enlarged use.

All this may sound prosaic or an overdevelopment of the utilitarian side of the work-a-day world. But it is the most progressive age the world has ever known. The cultural side must keep in step, grasping at every chance offered, or there will be cause for grief over lost opportunities.

A point which should receive passing consideration is the fact that two or three such branch library buildings may be erected at the cost of one separate and distinct average branch building; that the cost of operation and service shows nearly the same economy. All of which means more and better books, more competent service, therefore more satisfactory results and more lasting good.

So surely is the department of education of this city of this belief, that a second high-school building now under course of erection contains just such a branch library as is herein briefly described. In addition, the plan is carried still further, and three large grade school buildings, to be completed within the year, provide for similar branches. One of these, in a district peopled largely by foreigners, a 30-room building, contains a swimming pool, auditorium, and roof garden. And, of course, the library has a good corner, and will have a share in the development of a new brand of citizenship.

You will have noticed by this time I have avoided touching too closely upon the technical working and details of management of the high-school library. As someone else has truly said, "There's a reason"—indeed, many of them, all patent. These are to be

found in the proceedings of this section, a number of years, in the Proceedings of the A. L. A., the columns of *Public Libraries*, and the LIBRARY JOURNAL. For a most readable article and a comprehensive bibliography of the subject, those interested are referred to an able paper in the last-named JOURNAL of April, 1913, by Edward D. Greenman, of the U. S. Bureau of Education Library, Washington.

In conclusion, let it be borne in mind constantly by both librarians and teachers that their work is mutual, and only by getting this viewpoint of each other, understanding the end sought by each, can satisfactory results be obtained.

PURD B. WRIGHT.

HOW THE LIBRARY OF THE BUREAU OF EDUCATION MAY SERVE THE SCHOOLS*

THE policy of the Bureau of Education favors the widest possible facilities for the use of the collections in its large pedagogical library, which wishes to make itself, so far as practicable, a central reference and circulating library in the field of education for the whole United States.

The library offers to teachers, school officials, and students of education throughout the United States the use of its material under three plans—the inter-library loan system, the package library, and personal loans. Books are forwarded from Washington by mail under frank and may be returned in the same manner, the Bureau thus meeting the expense of transportation in both directions. Volumes may be retained for four weeks, if desired. Under the inter-library loan system, the Bureau of Education serves all classes of libraries using educational literature—university and college, normal school, pedagogical, and public libraries—and desires to extend its usefulness in this connection. The library of the Bureau has two main classes of literature to offer, the first being that adapted for research in educational subjects, namely, official documents, college and school publications, periodicals, pamphlets, and the like, in which it is doubtless the strongest col-

lection in the country. Selections of source material may be sent to any part of the United States for the use of the educational investigator in normal school, college, or elsewhere. When the applicant is properly introduced to the Bureau, this material may also be sent as a personal loan. The second class of literature possessed by the library comprises those standard educational works and manuals which are regularly found in every complete reference collection for teachers. The Bureau has an extensive assortment of this material, to which the best current publications are constantly added soon after their appearance. These books it is ready to loan to teachers who lack ready access to local collections containing them. The Bureau expects, however, this standard professional literature to be secured from a home library, if there available, for the office aims merely to supplement and co-operate with agencies already in the field, not to compete with them.

The Bureau sends, on request, package libraries to superintendents of schools for the use of their teachers. These package libraries contain from two to twenty-five or more volumes, and consist of books designated by the borrower or selected by the library staff to represent some one or more topics. During the past year there has been a large and steady demand for these small collections, and they have been sent to nearly every state in the Union, for use chiefly in the smaller cities and towns and in the open country.

Every possible facility and working accommodations are also afforded to visitors who may desire to use the collections in the library itself at Washington, D. C.

The Bureau has little material to offer for the use of high school students. It can help them with loans only when some subject like compulsory education or student self-government is up for debate or as an essay topic, for the Bureau possesses no collection of young people's literature or of books for collateral reading from which to make loans.

The library makes a specialty of supplying bibliographical information on educational subjects to inquirers of every sort all over the country. In this way it answers many letters from both libraries and indi-

* Paper read at the A. L. A. Conference in Washington, May 29, 1914.

viduals. It maintains a card index to educational articles in current periodicals and reports, and in this way keeps in constant touch with the newest literature. It has on file typewritten reference lists on nearly a thousand subjects, and has others in printed leaflet and multigraph form, and these resources are used in answering the numerous inquiries which are constantly arriving. New reference lists are compiled as occasion demands, and the older lists are revised and kept up to date. The library division of the Bureau of Education also compiles special bibliographies and the annual *Bibliography of Education* for issue as bulletins; likewise the *Monthly Record of Current Educational Publications*, which is a classified survey of current educational literature. While the Bureau library cannot supply the books for a school library, it can assist the school librarian in her choice of them by the provision of book lists and by indicating where additional aids of the same sort may be secured. Aid may also be afforded librarians in the way of professional advice as to methods of organization, classifying, cataloging, etc. The library also will give information regarding government publications suitable for use in schools.

The Library of the Bureau of Education co-operates with the Library of Congress in the production of printed catalog cards for educational books. These cards are of service in many educational libraries, and in order to facilitate their use, the Bureau will gladly give information regarding its cataloging methods, choice of subject headings, etc.

The Bureau of Education has a large collection of text-books, both American and foreign, which it expects to organize and make of service to teachers, librarians, and others interested. This collection includes both the newer and earlier literature, and should be of service in illustrating historic development as well as results of present progress.

The school library exhibit, prepared under the auspices of the Bureau of Education for the A. L. A. conference, indicates another way in which the office may serve the interests of the school libraries of the country. It is planned that this exhibit shall be made permanent and displayed at

various educational meetings throughout the country. Another possible service which might be rendered would be the collection and preparation of a model school library, but no definite steps toward the accomplishment of this plan have yet been undertaken.

JOHN D. WOLCOTT,

Librarian, Bureau of Education.

THE MOVEMENT FOR BETTER RURAL SCHOOL LIBRARIES

THE interest in better libraries for the country school is a part of the library idea that every man, woman and child in the state who wishes to read a book should find one provided for him, and that the child should be so trained that he will wish to read.

It is also a part of the new educational doctrine that it is right, necessary and entirely feasible to have in the country a school equal in every respect to the town school. This involves a modern building, with carefully chosen equipment and a teacher well trained professionally for country school service. To fit into such a scheme the country school library must have new consideration, it must become an equipment, selected and arranged with care and used efficiently.

The problem is almost universal, as every state has now some school library system in operation or in prospect, and many have large collections scattered through the schools. The large majority of the states give some state aid in the purchase of books (see *LIBRARY JOURNAL*, v. 37, p. 310), thus giving substantial recognition of the library as an essential part of the school. Such appropriations are accompanied by requirements in the way of equal expenditure on the part of the school district and some provision for the care of the books. In Minnesota, the rules governing the consolidated school building stipulate that a library room must be provided.

With the giving of aid came the need for guidance in the selection of books, that the purpose of the grant might be fulfilled. Lists of books were compiled and schools required to use them as buying guides. The older lists were comprehensive in scope, many of them of such compass as to make

the selection of a \$10 addition to the library a formidable task. The titles included were mainly suited to older boys and girls, if not for grown people, and there was small provision for reading for little children.

As a necessary step toward better school libraries, the improvement of school library lists has been undertaken by various state agencies, state universities, normal schools, library commissions, and departments of education. There is now a marked tendency toward standardization in school library lists, basing the selection of titles on the same principles of worth in the books and suitability to children's tastes and interests as are used in the selection of books for the best children's collections in public libraries. The needs, tasks, and activities of the country school and country living are taken into consideration, and books are included for all the children from the lowest grade to the highest. Lists have also been improved in arrangement. All now show the grade for which the book is most useful, some lists are annotated, some are classified, and all are indexed.

Results are shown in the improved collections in the schools, and many small libraries whose book funds require careful purchasing are using state school lists as guides in buying good books in inexpensive editions.

Practically all state lists give some instruction in the care and management of school libraries, the classified lists are planned as guides to arrangement, and one state list gives instruction in cataloging the books listed. Brief selected lists, such as \$10 orders, and lists of books for first purchase, reprinted from the larger lists, have helped in applying the efficiency test to old collections and in establishing useful new ones. The League of Library Commissions authorized a list of "200 books for a rural school library" for the National Educational Association meeting in Salt Lake City in 1913, and a briefer list was presented tentatively at the library section of the National Educational Association in St. Paul, 1914, by the Rural School Library Committee of the Library Department. The committee was continued for final report at Oakland in 1915.

Coöperation among states in the compila-

tion and publication of lists is an evidence of the value of the standardized list, and of progress in work. The books that have been used successfully in one state have been found to have equal value in others and by common use of a list much duplication of time, expense and effort may be saved.

Providing a good list is only the first step in bettering the school library. The teachers must be given opportunity to know books and trained to use them. Exhibits at district, state and national educational meetings are being employed as a means of bringing lists, books, pictures, reference material in pamphlet forms, and all school library aids to the teachers' attention. The splendid library exhibit now loaned by the national Bureau of Education is a great stimulus to the movement for better school libraries of every kind.

Interest thus aroused must be further impressed by instruction. Normal schools have for years given some work in the use of books and libraries, but few of the teachers penetrated to the country school. The normal schools are gradually extending their library courses, and with the new sentiment for country school teaching, more trained teachers go to the country.

A more direct line of influence is through the teachers' training departments in high schools, such as are now maintained in twelve states. Here country girls are trained to teach in country schools and whatever acquaintance with books may be acquired at this time will be put to practical use. Many of the girls come to these departments with no knowledge of good children's books. In Minnesota, eighty-seven training departments report some children's books read and country school library matters discussed as a part of the regular work in the year 1913-14. This instruction is sometimes given by the teacher of the training department, or by the librarian of the public library. In the latter case the talks have been given in the library, and the country teachers gain a knowledge of local library resources and have later been a help in promoting county extension from the central library.

Library instruction is becoming more and more a feature of the summer training

schools for teachers in the various states, and library topics are found on programs of country teachers' meetings. One whole session of the meeting of the library department of the National Educational Association meeting in St. Paul in July, 1914, was devoted to rural school library matters. It was, moreover, attended by about three hundred country school teachers. The response from the country teachers and their interest is one of the greatest indications of progress.

The social center idea brings an additional reason and demand for a better school library. Beside its use for the school it may serve as a source of information for the farmers' club, the debating society, and the country women's club. This development is still in the stage of promise rather than fulfillment, but may be expected soon.

State supervision of school libraries has not become general as yet, and is carried on differently in the states. In a state where state aid to school libraries is begun as a part of the library work of the state, and with all library activities centered in the state library as in Oregon, the ideal of efficiency and economy in administration is presented.

The movement for better school libraries is dependent on state encouragement, standard lists, and teachers trained to know and use books. Some state direction is desirable to develop these factors into greatest service.

MARTHA WILSON.

A PLEA FOR THE CATALOGER

It seems the fashion of late to say derogatory or mirth-provoking things of the catalog and cataloger, and it is but fitting that some one should say a few words on the other side, since explanation is all the defence needed.

The "Librarian" in the *Boston Transcript* not only jeers at us for practices which a few words of inquiry would have told him were no longer taught in the best library schools, but also shows a surprising lack of comprehension of the worth of the work. The head of a library school said in public recently, and the remark was received with applause, that she had cut down her course in cataloging to make place for more im-

portant things. This is in reality killing the goose which laid the golden eggs, for how is she to give the information to the people she wishes us to "go out to" unless she has a key to the books? Has anyone ever found a library school graduate *too* well qualified for even the simplest cataloging position?

A prominent librarian has recently published a much praised paper on "Socialized bibliography" in which she says: "It [the library] employs countless tireless women to erect that curious structure, the catalog. * * * Socialized bibliography will reduce orthodox cataloging to a minimum by centralization and will then equip each library with a card directory of every man, woman and institution, club and organization in the city and its environs interested in a special subject or subjects. * * * It will be the business of their colleagues on the inside to have on file a definitive index of information. * * * It will be somebody's business to keep this index constantly up to date." Now, who on earth is going to do this work except the "countless tireless women" above referred to, and the result of their work must be some kind of a catalog, in order to furnish this information. The changing of the name to "index" does not at all alter the fact. Even index-makers must have training to be able to produce satisfactory results. The definition of a catalog taught in at least one library school is, "A catalog is the means of placing the contents of a library at the disposal of the users in the simplest and easiest way," and that is the end toward which all the teaching tends. In this article I am not speaking of the cataloging of incunabula or special collections, but the kind which most of us need to do and know about. Suppose that you were appointed to teach cataloging in a library school, what would be your method of procedure? If you were teaching people who would probably use many Library of Congress cards, as most public libraries do now, the *form* used on those cards would probably be adopted for the sake of uniformity; with the careful explanation that it was not the only form and quite probably not the best for all libraries. The A. L. A. rules for cataloging would probably be adopted, as setting forth the various kinds

of entry as far as they go, and it would be necessary to supplement them with the Cutter rules for subject entry and a few additional points. The fact that it is necessary to have some rules for guidance in any kind of work will be granted, I am sure. The knowledge that cataloging is not an exact science but depends largely upon judgment, and that accuracy and uniformity are essential for any satisfactory result, are carefully instilled at every step. The typewriter has done away with the scrupulous measuring of centimeters, and underscoring in various colored inks is as extinct as the dodo. Students now know that every rule has some reason which it is their business to understand.

The next question for consideration is: what may be omitted from a library card and what must be included, and the explanation must follow that this depends largely on the library under consideration; that it is quite as possible to simplify to a point which defeats the usefulness as to go to the other extreme and include too much. To arrive at a mean for purposes of instruction I could think of no more satisfactory method than to consult reference librarians and scholars who use our product more than anyone else. This procedure gave me some rather curious results, as, for example, in one library whose head is well known as an advocate of the utmost simplicity in cataloging, the reference librarian confessed almost with tears that if a little more could have been included on the catalog cards it would have saved hours of her time in going to the shelves, telephoning or sending to the order department.

Having obtained in this way a consensus of opinion as to what should be included on the cards and using the *form* adopted by the Library of Congress, the next question arises as to what cards shall be made. The instruction as to this is, make no unnecessary cards, put your information where it will be looked for, be generous as to cross references, and keep the users of the catalog always in mind. The making of analyticals is carefully taught and their usefulness is emphasized. No library can be well administered without some key to its contents, and if a catalog made on the plan

outlined above is not such a key our judgment is at fault.

The derogatory things said of catalogs and catalogers are having one very unfortunate effect, the heads of libraries and cataloging departments are coming to us in despair on all sides telling us that it is impossible for them to get any trained people to do their work. The young library worker of to-day in his altruistic zeal feels that helpfulness can be attained only by direct contact with the public, quite forgetting that the result of the labor of a cataloger makes for real and permanent helpfulness.

A few words as to the actual duties of catalogers may not be out of place here. It is not to sit forever in a dusty office, mechanically writing catalog cards for dull and uninteresting books. It is to deal with all knowledge and to act as a link connecting the seeker and the thing sought. A man once said to me after I had responded to the common request to tell him what I do, "How inspiring your work is, since all the interesting things in the world sooner or later come across your desk." A little planning on the part of the head of the department can give sufficient variety so that the work is not monotonous, and with all knowledge as our field our daily task is a constant education.

Nor need anyone feel that cataloging work is unworthy of his powers or without its adequate recognition. Dr. Talcott Williams in his memorial address on Dr. John S. Billings says: "When his name was brought up for membership in the National Academy of Sciences, membership in which is limited to fifty and is granted only to those who have made some original scientific discovery, there was strong opposition on the ground that although Dr. Billings was eminent in hospital organization and planning and had written on a variety of scientific subjects, he had made no discoveries. His election, however, was based on his organization and cataloging of the Surgeon-General's Library, an action that definitely established notable library work as ranking with more purely scientific achievements." Sir William Osler, speaking also of Dr. Billings, says: "There is no better float through posterity than to be

the author of a good bibliography. Years after the iniquity of oblivion has covered Dr. Billings' work in the army, as an organizer in connection with hospitals and even his relation to the great Library, the great Index will remain an enduring monument to his fame."

While many of the heads of cataloging departments are highly educated, and are familiar with many languages and literatures, a more modest class of people can hardly be found. They have no desire to display their erudition to dazzle and confound the world. But one spirit animates the cataloging profession as far as my rather extended observation goes, and that is the desire to make a tool which shall be usable and helpful to all those who may consult the results of their labors, and they should in this effort receive the hearty co-operation and approval of the library profession rather than their somewhat scornful criticism.

AGNES VAN VALKENBURGH.

BOOKS AS A SOURCE OF DISEASE

The following extracts from an article by William R. Reinick, which originally appeared in the January number of the *American Journal of Pharmacy*, are here reprinted as being the latest contribution to a subject of vital interest to all librarians:

"I do not for a moment want anyone to think that I am endeavoring to prove that books, as fomites, are so dangerous that they should be shunned like the plague, but simply to show that books, especially when greasy or moist fingers are placed upon the pages and covers, are excellent hiding grounds for bacteria, both pathogenic and non-pathogenic, and that the same care should be used as in handling other objects of like character.

"As far as our exact knowledge of books and papers as a source of danger is concerned, we, at the present time, have very little evidence, but what we have proves, beyond question, that disease may be contracted by this means. On the other hand, there are many reputable physicians who claim that transmission by this means is an impossibility, due to the fact that the

organisms could not exist for any length of time under such adverse conditions. A statement of this character is generally made by one who only has a superficial knowledge of the subject, especially in its biological aspect. The apparatus needed to properly conduct experiments upon bacteria is quite expensive, and, generally, the young physician who has just graduated has the time and possesses the enthusiasm to undertake these researches, but not the capital, and then when he has the means, he has so many patients that he cannot spare the time.

"Another trouble is the extreme difficulty which arises when one is prepared to study this subject. On account of the great surface covered by the pages of the books, it means a long and tedious series of experiments, and even then, on account of their being invisible to the eye, one is not sure that he has obtained every speck of life that may be on the paper.

"The knowledge that we are now acquiring as to the great resistance of these small forms of life to adverse conditions of climate and atmosphere, their resistance to degrees of heat, their wonderful adaptability to rapid changes of environment, food, and their power to remain dormant for a period more or less unknown at the present day, their ability to form a protective coat, which prevents penetration when placed in material that would otherwise destroy them, all these points indicate that we may be on the wrong track in using the present means of eradication. And furthermore, in making our laboratory tests we are forced to isolate the colonies, giving conditions foreign to their natural state of existence, and also difficulty in separating them into distinct species.

* * * * *

"Very little information of value, to help in deciding whether or not books act as carriers, was received from the various boards of health of the United States. A circular letter requesting a list of cases, the source of which was traced to books and papers, was sent to the boards of health of each state and forty-one cities. Answers were received from only ten states and nineteen cities, about 30 per cent. of the total number of letters sent.

"With these replies no cases were given, although some of the officials stated it to be their belief that diseases were contracted through contact with books, while others ridiculed such a possibility. Quite a number of physicians have sent me histories of cases, which they have observed during their practice.

"Dr. J. Allen Palmer, of Erie, Kansas, notes a case of scarlatina developing in a girl, living in a town where there had been no cases of the disease for months, nor had she been exposed to personal contact. Investigation showed that the patient had received a letter a few days previous to the appearance of the rash, from a child living some sixty miles from her, who was just recovering from scarlatina. Another case of transmission was traced by Dr. Howard W. Lyon, of Chicago. In this instance a little girl living in Chicago contracted scarlatina from being allowed to handle a letter just received from a home in Minneapolis, where one of the family had the disease.

"Dr. A. Maverick, of San Antonio, Texas, sent the following case: A boy convalescent from scarlet fever read a book from the public library and used as book-marks strips of skin peeled from his hands and feet. Unknown to the physician, the book was returned to the library by a servant of the household with no attempt at sterilization or even removing the pieces of skin. During the next month, two boys in different families who borrowed the book from the library, caught scarlet fever and one died from the disease.

"Dr. Robert Britton, of Downsville, New York, writes of two cases in 1902, one of the patients dying, and as there were no cases of the disease in the neighborhood, the question arose where had the children contracted the infection. Questioning revealed, that on account of the weather and conditions of the road they did not attend school on March 27, but played in a house having a garret, in which were stored some old school books which had been taken from an old farmhouse on this farm—in which in 1860 had occurred six cases of diphtheria, four of which were fatal in forty-eight hours.

"Dr. P. A. Jordan, of San Jose, California, states the following: A man, a great reader, continuously used books from a circulating library located in a neighboring town in which there was an epidemic of smallpox, and later developed a severe form of smallpox.

"Dr. Emericus Karacson, while making a translation of a Turkish manuscript, in one of the mosques in Turkey, had his fingers soiled with some of the mould which covered the old musty tomes, and accidentally touched a cut on his face; a few weeks later his face swelled up, causing him intense pain. A quick operation relieved him of this and his face regained its normal size, and he soon resumed his work, apparently in perfect health. About a month later he was taken ill with fever and treated first for influenza, then for typhoid fever. His condition growing worse, a Hungarian physician was sent for, who diagnosed the case at once as blood-poisoning, caused no doubt by the fungi that had entered the patient's system through the abrasion on the face, and he died within a few days.

"A list of articles found to be carriers of the germs of gonorrhoea, the one of the 'social evil' diseases most likely to be contracted through contact, would include every article of domestic and public use, and even the hands of the unclean and ignorant may transfer the germs to the articles. A number of cases have been traced to books.

"The bacillus of anthrax, which occurs in cattle, must certainly be found on the leather bindings, as it is frequently transmitted through abrasions of the hands in cases of those who have occasion to handle infected wools and hides.

* * * * *

"Before considering the mode of over-coming bacteria, consideration should first be given to their power of resistance to disinfection, sterilization, etc.

"Bacteria exist in nature in three states:

"(1) As adult or fully-developed and active microorganisms, with all the characteristics of parasites.

"(2) As spores or reproductive cells endowed with latent life.

"(3) As desiccated germs, whose vital principle had been suspended but not destroyed; which, when placed in a moist and suitable environment, possess the power of resuscitation.

"The air germs,' says Professor Tyn-dall, 'differ much among themselves in their tendency to development; there are some which are young and there are others which are old, some dry and some wet. The same water infected by those germs requires more or less time to develop bacterial activity. This explains the difference in the rapidity with which epidemic diseases act upon different persons. In certain cases the period of incubation, if it can be so called, is long, in others it is short; the difference is the result of the different degrees of preparedness of the contagious matter, and I personally believe that the health of the person infected has most to do with the appearance or non-appearance of a disease.'

"The number of bacteria that may be found on much-used books was investigated by Lion. A novel from a public library varied from 250 bacteria per 100 square centimetres on the middle of a clean page to 1,250, 1,875, and 3,350 on the dirty edges. A college atlas showed from 650 to 1,075 per 100 square centimetres; an anatomy book 2,275 to 3,700. The bindings were by far the richest in bacteria, yielding on an average of 7,550 per square centimetre.

"As to the pathogenic bacteria that may occur on books, the following investigations are of great interest. Krausz inoculated seven guinea pigs with dirty pieces of paper from much-used books and they all died of peritonitis. The eighteen inoculated with pieces from clean books remained healthy. Du Cazal and Catrin found *Staphylococcus pyogenes* on an old book in a hospital. Most striking of all are Mitelescu's experiments. He took 60 much-used books that had been in a public library from six months to two years; he cut out the dirtiest parts, soaked them in salt solution, centrifuged the liquid and inoculated guinea pigs with the sediment. Nineteen died of septicemia, and twelve of streptococcus infection. He repeated the experiment with thirty-seven books

from three to six years old. Fourteen of the guinea pigs died of septicemia, and fifteen contracted tuberculosis. The damp dirt on the older books was a good medium for tubercle bacilli.

* * * * *

"Dr. Kuflewski states that 'after personal investigation and examination of three sets of books taken at random from the shelves of the Chicago Public Library I am prepared to state that I found bacteria in large numbers in all the samples and that each book was more or less infected. These bacteria were in large numbers and were both pathogenic and non-pathogenic—the word pathogenic meaning "disease-producing."'

"In many instances these bacteria do no harm, not even the pathogenic, because of the resistance of the tissue—being unimpaired—or because of the comparatively small numbers of bacteria which gain access to the tissues; but under favorable circumstances, such as a simple exposure to cold and especially to bronchitis, which is so prevalent in Chicago, a little wound or an abrasion of the surface of the body, a little scratch of the mucous membrane or of the skin, which as we all know is often treated as insignificant and is neglected, may be the means of introduction into the system of the most infectious disease germs. It is well known that a fresh wound absorbs bacteria and their toxins very rapidly.

* * * * *

"Flies are now known to carry germs. In some cases as many as six million have been found on a single specimen. In very few cases are libraries protected by screens; the fly just from a patient suffering from a contagious disease, or off the waste matter in a nearby cesspool, has easy access to the interior of the library, where, alighting upon a binding or page of an open book it proceeds to eject a number of germs with its excreta, or by rubbing its body with its forelegs, shakes large numbers off, which find ready lodgement, especially if the spot where the rubbing takes place is greasy, as is generally the case where a book has been much used or circulated for quite a number of times.

"People do not seem able to overcome the vulgar habit of moistening the fingers in turning over the leaves of the books and again placing the finger on the lips each time to remoisten, never considering that each time he is, perhaps, transferring germs to fertile soil for propagation, resulting in sickness later on, or in case of a patient already suffering from disease, especially tuberculosis, helping to afflict another victim with the disease. And we all know that sick persons, especially in the convalescent stage, spend a great deal of their time in reading books and magazines.

"Disinfection in killing germs in books, although recommended, especially by those who have the disinfectants and the apparatus for sale, may be dismissed as of very little use, on account of the impossibility of the gases penetrating into the interior of the volumes, and in no case, even if the entire surface is reached, will they remove all of the spores.

"Both steam and hot air sterilization are of little value for books, because the first will cause the paper of the books to absorb the moisture, and thus to swell and deform the books. In the case of hot air sterilization, the heat would, by drying up all the moisture in the books, have the same effect, besides, in the case of books bound with leather, causing the leather to stretch and often break. The paper will also become dry and brittle, lessening the life of the volume. At present I do not believe that there is any method which may be depended upon to entirely eliminate the possibility of diseases being contracted through contact with fomites, such as books and the hundreds of other articles in daily use, constantly being transferred to a sick-room, returned and ready for another victim. I believe that some of the state boards of health are now beginning to recognize the futility of quarantining and disinfecting. Instead they are spending all their energies in improving sanitary conditions as to the necessity of cleanliness and the proper care of health. If a person using books or any other of the numerous articles named as conveying germs will use precautions as to the degree of cleanliness of the article they

handle, and will take the proper care of their health, they need have no fear of contracting any disease by means of a book or any other article.

"Suppose that a library did disinfect their books, what claim can they make that the book has no germs, after it has been placed on a shelf next to another book or been handled by a reader or one of the assistants. Dr. A. W. Doty, of New York City, states along the line of using disinfectants at intervals: 'I know of nothing in public sanitation which is more farcical than the general or periodical disinfection of books with gaseous disinfectants for the purpose of preventing infection. These agents have no penetration of any account, and I have little faith in them for this purpose. I believe that the careful dusting of the books and an abundance of fresh air and proper ventilation in a library is all that need be done under ordinary conditions.'

"A visit to almost any library will generally show, by placing the hands in back of the books upon the shelves, that there is a great deal of dust lying there. Very few libraries, even those recently erected, have had the vacuum system, which seems to be almost perfected, installed. Instead of making the reader wash his or her hands before using a book, it is very difficult for one to obtain access to the lavatory to wash his hands even if he so desires. In fact, there are some libraries which have no lavatories at all for the public.

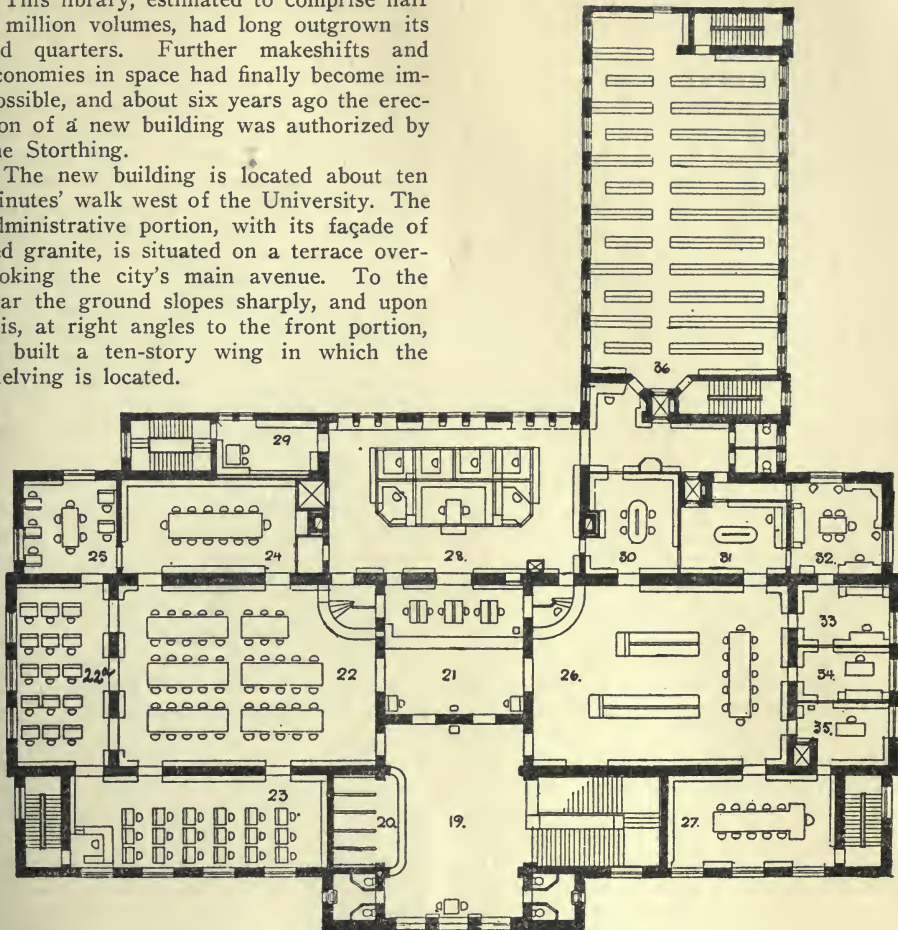

"Not disinfectant plants, but sunlight, fresh air, the elimination of dust, and the proper cleanliness on the part of the employees and readers, is the way, not only to prevent books from becoming fomites, but also the people from becoming carriers in this age of prevention."

THE ROYAL UNIVERSITY AT CHRISTIANIA.

In the March number of the *Zentralblatt für Bibliothekswesen*, W. Munthe furnishes a detailed description of the new building, recently completed, for the housing of the Royal University Library at Christiania.

This library, estimated to comprise half a million volumes, had long outgrown its old quarters. Further makeshifts and economies in space had finally become impossible, and about six years ago the erection of a new building was authorized by the Storting.

The new building is located about ten minutes' walk west of the University. The administrative portion, with its façade of red granite, is situated on a terrace overlooking the city's main avenue. To the rear the ground slopes sharply, and upon this, at right angles to the front portion, is built a ten-story wing in which the shelving is located.

UNIVERSITY OF CHRISTIANIA LIBRARY

The administrative section forms a rectangle, the interior of which consists of three connected halls. Beneath these halls are three almost dark floors used for the storage of newspapers. This arrangement makes the reading rooms brighter and permits of keeping the newspapers away from the injurious action of direct sunlight, so destructive to their pages.

Broad steps lead up the terrace to the main entrance. The ceiling of the lower vestibule is decorated with frescoes by E. Wigeland. To the right of the vestibule is

the entrance to the folklore collection, to the left that to the musical collection. In addition to the newspaper vaults, the ground floor contains the porter's living quarters, packing rooms, bookbindery and a small printing plant, all connecting with the rear stairway intended for the use of the staff. Above the ground floor is a low mezzanine floor.

The main stairway leads past the mezzanine directly to the main floor, where are found the large reading rooms and most of the administrative offices.

Doorways lead from a bright and roomy antechamber to the reading rooms, to the loan desk, the cataloging and exhibition rooms, all of which have overhead lighting and walls of bright color.

Right and left from the main reading room (22 and 22a on the plan) are a periodical room (23) and a newspaper room (24). Below the periodical room and on the mezzanine is a room for the storage of such publications. A corner room (25) is reserved for the professors of the University. The two reading rooms combined have a seating capacity of 122, 71 being in the larger room.

The cabinet library, 12,000 volumes, is arranged on one level. The periodical room has racks for almost 1000 current periodicals.

The large office for the officials (28) occupies the middle of the entire system of rooms. The "boxes," separated by glass walls, are located conveniently near to the loan desk, so that the officials may be called upon for assistance in case of pressure of work at the desk. The other administrative offices (30-35) open off the third large hall (26), which contains a new alphabetic card catalog, the systematic catalogs and the biographical supplements. It also contains cases for exhibitions and shelves for the classical Norwegian literature, the Eddas, Holberg, Ibsen, Björnson, etc.

The eight shelf floors in the wing each have an area of 26 x 12.30 meters. The present capacity is about one and one-half million octavo volumes. All the rooms are steam-heated, are well lighted by electricity, and are kept clean by a vacuum system driven by a six-horsepower motor. The other technical and sanitary installations are as perfect as possible.

Care has been taken to allow the greatest possibility of extension of capacity. The wing already built is only one portion of an H-shaped structure that will be connected at the front by the administrative section. When this is completed, the library's capacity will be about 4,000,000 volumes.

THE POSTAL LIBRARY IN CANADA

Joseph P. Tracy, president of Canada's Postal Library League, has prepared the

following statement of the purpose of the league and the possibilities of the postal library:

"There is a post office in every community in Canada. The most remote lumberjacks, fishermen, hunters, miners, homesteaders, ranchers, and frontiersmen in the country have a convenient office supplied by the government where mail, money, and parcels can be received and forwarded. There are about 16,000 post offices in Canada. Notwithstanding the many services performed and the immense spread of sparsely settled country covered, and the nominal fees charged, the postal service of Canada is conducted at a profit. Last year the postal department earned a surplus of \$1,310,000 over expenses.

"It is now proposed to provide an adequate library service for the people of Canada through the post office department. It is conceived that by an adequate library service the circulation of books among the people should be as easy and inexpensive as to receive or send ordinary mail.

"A library in every post office is the plan.

"The following table shows the comparative number of libraries and post offices in each province at the present time:

Province	Public Libraries	Post Offices
Alberta	2	1010
British Columbia	4	720
Manitoba	No report	720
New Brunswick	1	1560
Nova Scotia	4	1540
Ontario	357	5280
Prince Edward Island	1	480
Saskatchewan	8	1,340
Quebec	No report	3120
Yukon	1	30

"There are three requirements in projecting a library: Books, Housing, and Service. Let us therefore consider these requirements in order as relative to the postal library.

"Books. Let us assume one volume per capita will be an adequate supply of books, that is as many books as there are men, women and children in the whole of the country. Again let us assume \$1.00 per volume as the average cost for a desirable collection of books. The population of Canada may be estimated at ten millions. On these bases of supply, cost, and quantity, \$10,000,000 is a sufficient amount to purchase all the books required for the

postal library for Canada. In purchasing so large a number of books the cost may prove to be much less than this amount. What a wonderful library this would be! It would include all reputable books for which there is a demand. It would include sufficient duplicates. It could include the literature of all languages spoken in Canada. It could in time standardize the size and binding of library books. The postal library of Canada would be the first complete library in the world.

"Housing. It is proposed to house the postal library in the post offices. Adhering to the per capita basis the supply of books will be distributed proportionately to all the post offices in the country. Each post office will receive as many books as there are people in the locality with a minimum of say 250 books for the smaller offices. It is estimated that most of the post offices can at once receive such a supply of books without requiring much if any additional room. When the system is once established the future leases and plans for post offices will of course be drawn with reference to the postal library, just as now for the other postal services. It is estimated an average of 50c. per volume will equip the post offices to receive and operate the library. The whole amount required for equipment would then be \$5,000,000. This is a comparatively small sum for the government of Canada to appropriate. One battleship would cost as much. By means of a bond issue at 4 per cent. annual interest, and allowing for amortization in twenty years, the annual cost of providing the library would be much less than the annual profits of the post office department at the present time.

"Service. The splendid postal service of Canada will administer the postal library. It will house the books and will deliver and collect the books just as mail and parcels are handled. The postmaster—generally the best-known man and the most capable executive in the community—will be at the head of the library. The nation-wide transportation system of the post office which covers all railways, steamships and stages in the country will facilitate the working of the library. The whole system will be related. In this way, when a book is called

for at a small office and it is not contained in the library at that point, the postmaster would requisition for the book on the nearest post office whose library has it cataloged. By such means all the literature of the world is made accessible to anyone anywhere. The staff of trained clerks, carriers, collectors, and inspectors of the department will conduct the library. When coupled with the mail, the money order, the savings bank, the annuities, and the parcel post departments, the postal library service will be most efficient and astonishingly inexpensive. What a convenience it will be when we can obtain any book anywhere, and can receive the same and return it just as we do letters and newspapers! It will not be necessary to go to the library. We will order the books by mail, paying the fee in postage. The service will extend with all its privileges to everyone, however remote.

"To provide such a library with such convenient service is a new idea. It has not yet been tried out. We can therefore only estimate the expense. It is believed a fee of two cents taxed on each loan of a book would be sufficient to support the postal library. At such a nominal charge and with such a supply of books and with such convenient service the postal library would surely commend itself to all. The privileges, pleasures and benefits from reading will become general.

"In the postal library lantern slides, music records, and other devices may be featured in addition to books.

"When the postal library is established the civil service will include a staff of expert librarians. The library service may then include a bureau of research and information covering practically all subjects. For reasonable charges anyone anywhere may be supplied with reliable and ready help in the study of any problem. The postal library may thus become the most notable and useful reference library and fountain of knowledge the world has ever known."

A pamphlet entitled "Questions and answers" is also being distributed by the league. Some points which the above does not cover are touched upon therein, as, for example, the following:

"Would the postal library include public reading rooms such as are now attached to public libraries in some Canadian cities?"

"Public reading rooms are not now in large demand and are expensive to maintain. Best results are had by reading at home or in private. The postal library scheme does not include public reading rooms. Instead the delivery and collection of books through the mail extends the library to every home, school, office, and individual. 'Going to the library' will hereafter be out of date, as the postal library will come to you.

"In what manner will books be secured from the postal library?"

"The method should be very simple. When a book is desired a postal card form prepared for that purpose would be filled up stamped to the amount of the required fee and dropped in the mail just the same as any other mail matter. In due time the book would be delivered in the same manner as other mail. The return of a book would be as simply done. A person might draw any number of books desired provided of course his guarantee was sufficient.

"What will become of such public libraries as now exist when the postal library is established?"

"The books of such libraries could be absorbed into the postal library at their actual value. The real estate can be converted to other uses without loss. As the postal library will supply all needs and will support itself, grants by cities, provinces, etc., to maintain such public libraries will no longer be necessary. Existing libraries desiring to continue on the old lines could of course do so."

AN AMERICAN FREE PUBLIC LIBRARY IN PEKING

In his report to the trustees of the Carnegie Endowment for International Peace, based on observations made in China and Japan during his visit there in 1912, Mr. Charles W. Eliot made certain recommendations concerning the establishment of a public library along American lines in the city of Peking. Mr. Eliot's proposal is so interesting that we reprint it in full.

"Not long after I arrived in Tientsin I had an interview with four gentlemen, three Chinese and one American, who were concerned with educational institutions there established, and had been encouraged by an imperfect report of a speech I made at Shanghai to offer me some suggestions as to useful work which the Carnegie Endowment for International Peace might undertake in China. From this interview and some subsequent conversations there resulted a memorial to the Trustees of the Carnegie Endowment for International Peace, proposing that the Endowment establish at Peking a free public library on the American plan, to be built and carried on under the direction of the Endowment, but with the ultimate intention of transferring it in due time to the Chinese Government or to a board of trustees resident in China. It was proposed that this Library should maintain at Peking a free reading room open day and evening, and a good collection of books on such subjects as agriculture, mining, the fundamental trades, economics, geography, commerce, sanitation, public works, the applied sciences, government, public administration, international law, and the judicial settlement of disputes between nations. It should also permit any book which has been in the library one year and does not belong to the reference collection to be borrowed for home use during a period not exceeding twenty days, provided the borrower, if living outside of Peking, pay the postage. It should also through a special officer select, translate, edit, and circulate leaflets and booklets containing useful information on any or all of the subjects above mentioned, the distribution being made gratuitously, first, to Chinese newspapers and periodicals, secondly, to educational institutions, thirdly, to appropriate government officials, and fourthly, to private persons on request.

"The memorial urged that this free library be placed in Peking, where many office-holders and candidates for office will always be living, where several important educational institutions already exist, and more are likely to be created, and where the Legations and the headquarters of press correspondents are established. This

memorial was signed by many influential men, including three members of the Cabinet, a large group of Chinese graduates of American institutions, and Chinese gentlemen connected with the press and with the bureaus of the present government.

"The argument in favor of such action from the part of the Carnegie Endowment for International Peace is strong. Here is a method of maintaining intercourse between the Western nations and the Chinese nation, by bringing to the knowledge of the educated Chinese the Western books, journals, and magazines relating to those subjects which the educated Chinese need to appropriate year after year and use for the benefit of their country. The influence of such a library would not be momentary, but enduring. It would take first effect on Chinese young men who had been educated abroad and had acquired some European language; but it would also provide a powerful means of influence on Chinese who had never studied out of China, and who knew no language but Chinese. It would provide an effectual means of intercourse between the East and the West; and it would enable the young men who had got to work in China after receiving a Western education to keep themselves well informed in the Western professional subjects through which they were earning their livelihood in China. It has often been observed that Chinese students returning from the Occident with a good knowledge of their respective subjects find it very difficult to keep themselves informed as to the advances later made among Western nations in the scientific, economic and governmental subjects. Such a library would have to be conducted for a generation by American librarians, to be appointed and paid by the Carnegie Endowment.

"It may be confidently assumed that the Chinese government would give an adequate lot of land as the site of the proposed building; for there are large areas of land in Peking which were formerly reserved for the Imperial family and clan, and will now revert to the government. The lot should be large enough to give plenty of light and air, and space for additions to the building.

"The building need not be large at present, but should be of brick and steel construction throughout, and should represent in all respects the best type of American fireproof library construction. A stack capacity of from two hundred thousand to three hundred thousand volumes would be ample, and a reading room for a hundred persons would be sufficient. A building designed to cost a hundred and fifty thousand dollars gold (\$150,000) in the United States, with heating apparatus, plumbing, and all furniture included in that cost, would be sufficient; for that sum would procure in China a building with fifty per cent more cubical contents than it would produce in the United States. Books to the value of about thirty thousand dollars (\$30,000) should be bought at the outset; and thereafter the annual cost of carrying on the library would be from twenty-five to thirty thousand dollars (\$25,000 to \$30,000). This estimate is based on present (1912) prices and costs of living in Peking. If this estimate of annual expenditure seems small, it should be noticed that the memorial does not request that the library be a complete representation of all branches of knowledge. The great subjects of languages, literature, history, theology, philosophy, fine arts, and music are not mentioned.

"The proposed library might well serve as a model for other Chinese provinces or cities. There is room in China for a dozen such institutions; and there is therefore a fair chance that the good work started in Peking by the Carnegie Endowment for International Peace may before long spread and be multiplied. Its influence would all be directed to strengthening the grasp of the Chinese on the applied sciences and the inductive method, and so to building up China as a strong, unified power, capable of keeping order at home, repelling aggression from without, executing the needful works of conservancy and sanitation, and increasing the national wealth and the well-being of all the people."

You may be living in 1914, but you are not alive in the 20th century if you make no use of books.—WILLCOX.

WHAT HAPPENS WHEN A LIBRARY ABOLISHES THE RENEWAL OF BOOKS

THE following is from the annual report of Samuel H. Ranck, librarian of the Grand Rapids Public Library, for the year ending March 31, 1914:

"The most interesting feature of the year's work was the effect of the rule which went into operation on April 1, 1913, abolishing the renewal of books, and the issuance of all books on regular cards (except 7-day books) for a straight period of four weeks, before they become subject to fine, and raising the number of adult books (non-fiction) to be issued on a card at a time from two to four. The first thing we observed in connection with this rule was that the receipts from fines for April were cut in half. The number of books subject to fines was reduced from 19,493 last year to 13,317; the number of books circulated for each one subject to fine increased from 14 last year to 22 this year, and the average fine per book subject to fine increased from 5.6 cents to 6.3 cents. In other words, where three people paid fines last year only two paid such fines this year, but those who paid the fines were largely the more or less careless ones, paying larger fines.

"The following statement, showing the receipts from book fines at the Ryerson building and branches month by month for the last two years, tells its own story:

	Year ending Mar. 31, 1913.	Year ending Mar. 31, 1914.
April	\$107.58	\$55.79
May	100.08	76.15
June	85.49	63.84
July	88.76	59.72
August	71.51	62.58
September	73.15	69.99
October	81.12	69.88
November	96.79	71.08
December	107.27	78.80
January	97.45	86.77
February	83.87	79.19
March	103.25	77.37
Total	\$1,096.32	\$851.16

"It was estimated at the beginning of the year that the decrease in the receipts from fines would be about \$200. The results show, however, a decrease of \$245.16. Including other fines and collections at the library to be paid over to the city treasurer for the book fund, the total decrease for the year was \$238.64.

"There was also a decrease in the number of books issued at first, partly due to cutting out the count of renewals, and partly due to the fact that people do not feel obliged to come to the library so often to avoid an impending fine; for getting people into the building for any reason induces the circulation of books. Only a small proportion of persons (not over 30 per cent.) take four books at a time, so that the losses referred to above were not made up in this way. The issuing of four books on a regular card, however, reduced the demand for special cards and the number of books issued on such cards.

"Another splendid result of the new rule is that it has removed absolutely the cause of more misunderstanding in the circulation department than all other things combined. To receive a fine notice is likely at best to bring one to the discharging desk in anything but an amiable spirit, and especially when one supposed that the book causing it had been renewed. The abolishing of renewals incidentally cut out a lot of routine, "red tape" (both for the public and for the library staff), which gave no real additional service. It was simply going through the motions.

"The abolishing of renewals and the issuing of books for 28 days straight was widely noted a year ago in the newspapers, in the library bulletins, etc. It is a curious fact, nevertheless, after all this publicity, and a year's working under the new rule, that many persons do not yet know about it, for every day many persons still come to the desk and ask to have their books renewed, when they have had them two weeks or less, or offer money for fines for books which they have had more than two weeks but less than four.

"While there was only a small increase in the number of books issued to children, there was a considerable increase in the number of children becoming card holders. Under the old rule this larger number of card holders would have meant an increase of nine or ten thousand volumes issued for home use. This means that a larger number of children drew about the same number of books. The rule tends to decrease the practice of certain children racing through a lot of books without getting much

out of them. On the other hand, it also encourages the exchanging of books among children, the longer period enabling children to read not only the books taken on their own cards, but also those taken on the cards of their friends, before the four weeks expire. To a certain extent, therefore, the rule encourages a considerable circulation that does not get into the records. There was a decrease for the year of over one per cent. in the percentage of fiction issued. The new rule tends in this direction, but not to any marked extent.

"Another interesting fact in connection with this rule is the larger number of books that are out in circulation at one time. On March 31, 1913, the last day under the old rule, there were out in circulation from the Ryerson building 5,545 volumes. On March 31 of this year, under the new rule, there were out in circulation from the same building 7,393, an increase of 1,848 in the actual number of books out in service, although the actual increase in the number of books issued from the Ryerson building in the month of March over last year was only 26. Since less than half the circulation is from this building, this means that about 15,000 volumes were in the hands of readers at the end of March, about 4,000 more than would have been the case under the old rule. In short, the new rule reduces the count of books going into circulation, but greatly increases the actual number of books in circulation, and makes all round for a better and a more satisfactory service.

"A study of the records for the Ryerson building shows that there was a slight decrease in the number of 7-day books issued—new fiction. In spite of the wiping out of renewals—5,327 last year—the decrease of 1,708 in the number of children's books issued from the Ryerson building, there was still an increase of nearly a thousand in the home issues, or an increase over last year of nearly 8,000 volumes issued to adults, from that building. Taking the whole library, therefore, the decrease from not counting renewals was over 10,000. To have made up this loss and increased the home issues over 5,000, while at the same time increasing the number of books in the hands of users at a given time about 35 per cent., is, I believe, a splendid record. Alto-

gether, I am convinced that the present rule greatly increases the educational value of the library."

THOMAS J. KIERNAN

THOMAS J. KIERNAN, superintendent of circulation in the Harvard College Library, died at Arlington, Massachusetts, on July 31, after fifty-nine years of uninterrupted service. He was born July 27, 1837, and entered the library in 1855 at the age of seventeen, succeeding to his father, who had been janitor of the library since 1829, and who in addition to his duties as janitor, had been engaged, as Mr. Sibley says, in "distributing books and extending courtesies." The combined service of father and son covered a period of eighty-five years,—certainly a remarkable record.

Many generations of Harvard students and hundreds of scholars from other institutions have been indebted to Mr. Kiernan's remarkable familiarity with the library and to his unflinching readiness to help, and have come to regard him as a valued friend and as an essential part of the library itself. Receiving only an elementary education before he took up work in the library, he nevertheless had the ability to absorb knowledge from books as they passed through his hands. He also had a retentive memory, and by long practice had cultivated the faculty of comprehending sympathetically the trend of a reader's inquiry and was thus able to serve him efficiently. He had one advantage that will never be enjoyed by any one else—he grew up with the library. He knew it first as a small collection of some 60,000 volumes, and he saw it increase to over 600,000. He has watched the gradual introduction of modern library methods and the transformation of the library thereby, and though naturally conservative, he has welcomed every change that was directed toward making the library more accessible and more generally useful.

In 1877, when Mr. Winsor was made librarian, Mr. Kiernan was appointed superintendent of circulation, and in 1892 the college conferred on him the honorary degree of A. M. He married in 1875 Fannie Crossman of Taunton, who died in May,

1914, after a long and painful illness, which itself was a severe tax on Mr. Kiernan's own failing strength, and from the effects of which he never really recovered. One son survives him, William L. Kiernan, who for some years served the College Library in the third generation and is now assistant librarian of the Massachusetts State Library.

W. C. L.

LIBRARY SERVICE IN SCHOOLS AND QUALIFICATIONS OF SCHOOL LIBRARIANS

The following statement was adopted by the American Library Association, through its official Council, at Washington, D. C., on May 28, 1914:

In view of the rapid growth of the school library and the importance of its function in modern education, the American Library Association presents for the consideration and approval of educational and civic and state authorities the following statement:

First, Good service from school libraries is indispensable in modern educational work.

Second, The wise direction of a school library requires broad scholarship, executive ability, tact, and other high grade qualifications, together with special competency for the efficient direction of cultural reading, choice of books, and teaching of reference principles.

Third, Because much latent power is being recognized in the school library and is awaiting development, it is believed that so valuable a factor in education should be accorded a dignity worthy of the requisite qualifications. Further, it is believed that in schools and educational systems the director of the library should be competent in scholarship, talent, and teaching power, equally with the head of any other department of instruction in the same school; should be enabled, by having necessary equipment and assistants, to do progressive work; and should be recognized equally with the supervisors of other departments as an integral part of the educational system.

NATIONAL EDUCATION ASSOCIATION—LIBRARY DEPARTMENT

The National Education Association held its fifty-second annual convention this year in St. Paul, Minn., from July 4 to July 11. The meetings of the library department were held July 8-10, and were accompanied by a showing of the school library exhibit prepared by the United States Bureau of Education, first exhibited at the A. L. A. conference in Washington in May, and by special library exhibits at the St. Paul Public Library.

FIRST SESSION

The department met in joint session with the National Council of English Teachers, in Elks Hall, St. Paul. The meeting was called to order by the president of the library department. In the absence of the secretary, Mary C. Richardson, librarian of the State Normal School, Castine, Maine, was appointed *secretary pro tempore*.

M. S. Dudgeon, secretary of the Wisconsin Library Commission, read an inspiring paper on "The library's debt to culture," and "The cultural possibilities of school and college libraries" was the subject of a paper given by William B. Owen, president of the Chicago Normal College, Chicago.

There were three papers on "Successful experience with home reading lists"; the first, by Helen M. Baker of the High School at Brownton, Minn., was followed by one by Minnie E. Porter, Emerson School, Gary, Indiana. The third paper on this subject, prepared by Franklin Mathews, librarian of the Boy Scouts of America, New York City, was read by Clara Baldwin, secretary of the Minnesota Library Commission.

This forenoon session closed with a discussion of how to get the best results from home reading. It was pointed out that the system of placing different credit values on different books results in artificial interest, and the child should be kept as free as possible from feeling that he must read certain books.

This subject was discussed by Mr. McComb of Indianapolis, Miss Andrews of St. Paul, Miss MacBride of Worthington,

Minn., Miss Webster of North Yakima, Wash., Miss Richie of West Texas Normal School, Mr. Rice of Madison, Wis., Miss Meyers of Sheboygan, Wis., Mr. Hibbensteel of Stevens Point Normal School, Mr. Barrett of Emporia, Kansas, and Miss Wilson of St. Paul.

SECOND SESSION

This session was in the hands of the committee on rural school library work, and was held at the University Farm, where the large assembly room was nearly filled. Miss Martha Wilson, chairman of this committee, presided.

Delia G. Ovitz, librarian of the State Normal School, Milwaukee, Wis., read a paper on "Training of rural school teachers in the use of books." "The country child in the rural school library" was the title of a paper given by Mrs. Josephine C. Preston, state superintendent of public instruction, Olympia, Washington, and Miss Mary C. Richardson of Castine, Me., talked on "Rural schools in Maine." The last paper was "Making the library earn its salt," by Willis H. Kerr, Emporia, Kansas.

A list of books, "A standard foundation library for a rural school," was distributed to those present, and is printed in full in this issue of the JOURNAL, following this report. It was prepared by a committee appointed for that purpose, consisting of Harriet A. Wood of Portland, Oregon, and Walter Barnes of the State Normal School, Glenville, W. Va.

THIRD SESSION

The department met in joint session with the Minnesota Library Association, Martha Wilson, president of that association, presiding. Miss Wilson spoke of the increase and improvements in library work in Minnesota since the N. E. A. last met in Minneapolis in 1902.

Mr. Utley, secretary of the A. L. A., gave a few words of greeting from that association. Mr. Purd B. Wright, Kansas City, spoke briefly on the importance of the librarian getting the teacher's point of view, and also of the teacher's understanding the librarian.

"The newspaper morgue, the library and the school," was the subject of a paper by

W. Dawson Johnston, librarian, Public Library, St. Paul, Minn., and he was followed by Mr. Willis H. Kerr of Emporia, Kansas, who spoke on "Libraries and schools: educational coöperation."

Miss Delia G. Ovitz read a second paper on "Normal school training in library methods." At the close she read a short paper given at the A. L. A. in Washington, by Lucy E. Fay, librarian of the University of Tennessee, on "Standardizing the course of study in library instruction in the normal schools," and recommended that a committee be appointed to coöperate with a similar committee from the A. L. A. to outline such a course.

A discussion, conducted by Willis H. Kerr, followed this paper. Mr. Rice spoke of the school library law in Wisconsin, where the state has a law for school library support; and soon will have a law making compulsory a ten weeks' course in library instruction in the normal school. A motion was carried to appoint a committee of three, as recommended by Miss Ovitz, and to make Mr. Kerr one of this committee.

The following committees were appointed by the president:

Resolutions: W. Dawson Johnston, St. Paul; Delia G. Ovitz, Milwaukee, and Alice N. Farr, Mankato, Minn.

Nominations: Martha Wilson, Minneapolis; Mary C. Richardson, Castine, Maine, and Marie A. Newberry, New York City.

A delegate from the Mississippi Valley Historical Association, Mr. Dickerson, Winona Normal School, told of a committee of seven to standardize library work in connection with the teaching of history, and said he was commissioned to ask that one member from this department serve on that committee. Miss Florence M. Hopkins, Detroit, Michigan, was appointed.

Thursday afternoon the visiting librarians enjoyed a visit to the Minneapolis Public Library and one of its branches. In the evening they were the guests at dinner of the Minnesota Library Association. The dinner was given at the Country Club, and Dr. Johnston presided as toastmaster.

FOURTH SESSION

The meeting was called to order by the president. Miss Marie A. Newberry of the

reference department of the New York Public Library, read a paper on "A normal budget for a high school library." This was followed by a brief discussion on amounts spent for salaries and for books in various high school libraries. It was agreed that there ought to be more definite knowledge of what it costs to start and to run such a library of a given size. A motion was made and carried that the high school committee continue to investigate this question and report later.

"High school branches of public libraries" was the topic of a paper by Purd B. Wright, librarian of the Public Library of Kansas City, Mo. In the discussion which followed it was brought out that the grades above the sixth, and the high school pupils in Kansas City, have definite instruction in the use of the library. Also, that in St. Paul the library and board of education have recently been united under one commissioner.

The report of the committee on normal schools was read by Mary C. Richardson, Castine, Maine. A rising vote of thanks was unanimously carried, sending Ida M. Mendenhall the appreciation of this department for the library exhibit, now in the hands of the United States Bureau of Education.

The report on high schools was read by Willis H. Kerr, Emporia, Kansas. A motion to send thanks to Miss Hall and her committee was carried.

A committee submitted resolutions of appreciation and thanks to the A. L. A. Publishing Board for its encouragement of the school library movement, of endorsement of the statement adopted by the A. L. A. at Washington, and of thanks to the librarians of St. Paul and Minneapolis for their hospitality.

The committee on nominations reported as follows: President, Harriet A. Wood, Portland, Oregon; vice-president, W. Dawson Johnston, St. Paul, Minn.; secretary, Lucile Fargo, Spokane, Washington. The report was accepted and the officers declared elected.

The president appointed the following committee on standard course in library instruction for normal schools: James F. Hoscic, Chicago Normal College, chairman;

Martha Wilson, State Education Department of Minnesota; Willis H. Kerr, State Normal School, Emporia, Kansas.

A motion was made and carried that the newly-appointed officers be requested to give their careful consideration to getting a paper on the school library question before the superintendents' department of the N. E. A., and that they be given power to act.

A motion was carried that the newly-appointed officers be asked to try to get some paper on school library service before the Fourth International Conference on Home Education, which will meet in this country for the first time next year.

MARY C. RICHARDSON,
Secretary pro tempore.

STANDARD FOUNDATION LIBRARY FOR A RURAL SCHOOL

The rural school library committee for the library department of the National Educational Association has compiled this list of 120 titles because it seemed that a short list would be most helpful to the average country school teacher. If he has no library, he can start one with this list better than with a longer one, since only the choicest books are given. If he has a small library, this list will surely suggest additions. If he has a large library, he will need a longer list than the committee can compile as a foundation.

Of the 120 titles, about 60 are "literature" books and 40 "information" books for the children's reading; about 20 are reference books, most of them suitable for both pupil and teacher. The fear that the price would prevent the purchase of important titles has led to the reluctant selection in some cases of inexpensive editions.

The books are graded according to the reading interests of children: 1-3, primary; 4-6, intermediate; and 7-8, advanced. In general all of the children within a section will enjoy the same book. An exception to this rule is made in regard to the first grade pupils. The mechanical difficulties of learning to read make it necessary to select books for them that third grade pupils would consider too infantile. Younger pupils will listen with interest to older books if read aloud, and upper grade pu-

pils will find much of value in the simpler books.

NATIONAL COUNCIL OF TEACHERS OF ENGLISH—CHICAGO MEETING

School libraries will receive special attention at the next annual meeting of the National Council of Teachers of English, which will be held in Chicago, November 26 to 28. The library, high school, and normal school sections will combine in order to discuss such problems as how to secure the greatest efficiency by means of adequate equipment and of capable librarians, how English teachers can co-operate, the strength and weakness of the Home Reading List, and kindred topics.

Among the speakers will be Miss Mary E. Hall, librarian of the Girls' High School in Brooklyn, V. C. Coulter, of the State Normal School at Warrensburg, Mo., and an experienced high school teacher. The chairmen of the three sections are: Miss Delia Ovitz, Milwaukee, of the library section, E. H. K. McComb, Indianapolis, of the high-school section, and Miss Sarah J. McNary, Trenton, of the normal school section.

An extensive exhibit of library aids and equipment is being arranged for by the Library Department of the N. E. A. and by the United States Bureau of Education. The librarians will have a section meeting for the discussion of library extension and also a banquet. Chicago is now the headquarters of the A. L. A. and hence a place of special interest to all librarians.

A LIBRARY INSTITUTE FOR DISTRICT SUPERINTENDENTS

THE School Libraries Division of the University of the State of New York and the New York State Library School co-operated in a library institute for district superintendents, July 6-10, the exercises being held in the library school rooms. The district superintendents are in direct charge

of all the public schools of the state, excluding cities of 5,000 population or over, and the entire purpose of the institute was to arouse an increased interest in better rural and elementary school libraries. The program was devoted exclusively to subjects directly related to the actual work of these rural and elementary schools, and a definite attempt was made to discuss questions of organization and management from the point of view of the one-room or the small village school with crowded program, few facilities and little or no leisure time on the part of the conscientious teacher in charge. An exhibit of books suitable for the first eight grades, typical book lists and sample traveling libraries available for schools was prepared and, in a number of cases, was used by those in attendance as a basis for library purchases and recommendations for the coming year.

In view of the many professional meetings at which attendance is practically required, the lack of any departmental pressure to attend a meeting devoted entirely to library matters, the recent growth of interest in school library concerns and the further fact that no specific provision was made (as is done in some other cases) for traveling expenses led those in charge to expect a rather small attendance. Contrary to the most hopeful forecast, 31 different superintendents, more than one-seventh of the entire number in the state, were in attendance one or more days. The discussions, even more than the attendance, showed the genuine interest of the superintendents in the matter. All of the four library divisions of the department, the inspection division and the vocational schools division were represented on the program. As an example of willingness to unite forces hitherto not closely related and to recognize in a definite way the part of the library in a state system of public education, the meeting had considerable significance, and it is hoped that it will be but the beginning of larger and better similar meetings in the future. Much of its success is due to the wide personal acquaintance of Dr. Sherman Williams, chief of the school libraries division, and his active interest in the preliminary plans. The program follows: Monday, July 6.—"School libraries," Dr.

Sherman Williams, chief, School Libraries Division; "The essential organization of a library," Mr. Frank K. Walter, vice-director, New York State Library School. Tuesday, July 7.—"The school library in agricultural education," Mr. Layton S. Hawkins, specialist in agriculture, Vocational Schools Division; "Traveling libraries," Miss Grace L. Betteridge, head, Traveling Libraries Section, Educational Extension Division; "The New York State Library and its purpose," Mr. James I. Wyer, Jr., director, New York State Library; "The catalog of the school library: its use and its limitations," by Mr. Frank K. Walter.

Wednesday, July 8.—"Some essentials of cataloging," Miss Jennie D. Fellows, chief classifier, New York State Library; "Desirable editions for school libraries," Mr. Frank K. Walter; "Some essentials of reference work," Mr. Frank K. Walter; "Selection of historical material for schools," Mr. Avery W. Skinner, inspector, University of the State of New York.

Thursday, July 9.—"What the school should expect from the public library," Miss Caroline Webster, library organizer; "Some essentials of cataloging," Miss Jennie D. Fellows; "The state library and its reference work with schools," Mr. Frank L. Tolman, reference librarian, New York State Library; "Classification of school libraries," Mr. Frank K. Walter.

Friday, July 10.—"What is education and who are educated people?" Dr. Sherman Williams; "The Educational Extension Division and its relation to the schools," Mr. William R. Watson, chief, Educational Extension Division.

F. K. WALTER.

THE END OF THE EXPOSITION AT LEIPZIG

WHILE the JOURNAL has had no definite announcement of the closing of the Leipzig Exposition, there is little doubt that it has come to an untimely end. In a letter written from Rotterdam on August 7th, Mr. Hendry, who had charge of the A. L. A. exhibit in Leipzig during July, says:

"I suppose that the exposition is closed by this time—Dr. Schramm told me that such would be the case should hostilities

commence. He said that President Volkmann, he, and pretty much all the people connected with the show, would have to go to the front at once, and that the only thing to do would be to close the buildings and put them under a strong guard. The things would be safe enough. . . . The exposition was about deserted during the last week of my stay."

OXFORD CONFERENCE POSTPONED

A cablegram from Mr. Henry Tedder, secretary of the Library Association of the United Kingdom, states that the pan-Anglican library conference, which was to be held at Oxford from August 31 to September 4, has been postponed till next year, owing to the war. The annual meeting, announced to be held on September 4 in Oxford, will be held in London on the same date. Local secretaries of the Association will do what they can during the week beginning Aug. 31 to help any librarians who may be in Oxford to see the libraries and colleges.

American Library Association

Standing committees for the year 1914-1915 have been appointed as follows:

Finance—H. W. Craver, C. W. Andrews, F. O. Poole.

Publishing Board—Henry E. Legler, C. W. Andrews, A. E. Bostwick, Mrs. H. L. Elmen-dorf, H. C. Wellman.

Public documents—G. S. Godard, A. J. Small, Ernest Bruncken, John A. Lapp, M. S. Dudgeon, T. M. Owen, S. H. Ranck, Ade-laide R. Hasse, C. F. D. Belden.

Co-operation with the N. E. A.—Mary E. Hall, Marie A. Newberry, Irene Warren, W. H. Kerr, Harriet A. Wood, W. O. Carson.

Library administration—George F. Bowerman, John S. Cleavinger, C. Seymour Thomp-son.

Library training—A. S. Root, Faith E. Smith, Alice S. Tyler, W. Dawson Johnston, A. L. Bailey, Chalmers Hadley, M. S. Dudgeon, George O. Carpenter.

Bookbuying—C. H. Brown, C. B. Roden, Anna G. Hubbard.

International relations—Herbert Putnam, E. C. Richardson, Frank P. Hill, C. W. An-drews, R. R. Bowker.

Bookbinding—A. L. Bailey, Rose G. Mur-ray, Joseph L. Wheeler.

Federal and state relations—B. C. Steiner, T. L. Montgomery, Demarchus Brown, Paul Blackwelder, C. F. D. Belden, Thomas M. Owen, W. P. Cutter.

Travel—F. W. Faxon, C. H. Brown, J. F. Phelan.

Co-ordination—C. H. Gould, J. L. Gillis, N. D. C. Hodges, W. C. Lane, Herbert Putnam, Henry E. Legler, J. C. Schwab.

Work with the blind—Lucille A. Goldthwaite, Laura M. Sawyer, Mrs. Emma N. Delfino, Mrs. Gertrude T. Rider, Julia A. Robinson, Ethel R. Sawyer.

Program—H. C. Wellman, George B. Utley, (third member to be appointed).

sity libraries, 2 normal school libraries and the State Library. The president, J. L. Gillis, called the meeting to order at 3 o'clock on the afternoon of June 15.

The president spoke of the great progress made in library service during the year, saying that it would be hard to duplicate anywhere the work of the library people of California. On behalf of the officers of the association, he thanked all those who had so generously helped in the year's work. Reports from the nine districts were presented by the district officers. Eight district meetings were held, one being a joint meeting of two districts. Two of the districts were unable to hold meetings, but they reported keen interest in library work.

The report of the secretary-treasurer showed that the balance on June 3, 1913, was \$541.14; the receipts during the year were \$657.99; the expenditures were \$801.53, leaving a balance on June 12, 1914, of \$397.60. This report was verified by the auditing committee.

For the committee on library exhibits at the 1915 Exposition, Charles S. Greene reported that the committee found the authorities of the Panama-Pacific Exposition very exacting regarding exhibits, the rental very high, and the cost of a "live" exhibit prohibitive; but the committee would be glad of suggestions as to ways of securing the necessary funds.

The nominating committee presented the following ticket: President, J. L. Gillis; vice-pres-ident, Jennie Herrman; secretary-treasurer, Alice J. Haines. There were no other nomina-tions, and the ticket was unanimously elected.

For the committee on county free library sign, L. W. Ripley reported that many draw-ings had been received in the contest, but only one was possible, and that only with some changes. He suggested that the committee, or the executive committee, return the sign for these changes. It was voted by the meeting that the committee be continued with power to settle the matter.

The resolutions committee presented resolu-tions, which were adopted, on the death of three members of the association; of apprecia-tion for the hospitality shown and the speeches heard; of acknowledgment of invitations to meet in 1916 in Humboldt county; and of au-thorization of the executive committee to ar-range for a joint meeting with the A. L. A. in 1915, if such action seems desirable.

The question of affiliation with the American Library Association was discussed, and it was voted that the California Library Association accept affiliation with the American Library Association under the provisions of the A. L. A. constitution and by-laws.

Library Organizations

CALIFORNIA LIBRARY ASSOCIATION

The nineteenth annual meeting of the Cali-fornia Library Association was held at Hotel del Coronado, Coronado, June 15 to 20, 1914, jointly with the fifth annual convention of the California County Librarians. The register showed an attendance of 198, representing 51 public libraries, 21 county libraries, 3 univer-

ADDRESSES AND DISCUSSIONS

Representing the State Railroad Commission, Max Thelen, one of the commissioners, made the opening address on the "Regulation of public utilities." He outlined the history of the commission, and told of the laws and commissions of other states. He described the methods of handling cases and complaints, emphasizing the fact that anyone in the state may present a complaint and it will be given attention.

The part of the university in university extension was presented by Miss Nadine Crump, of the University of California, while Miss Susan T. Smith, of the State Library, discussed the libraries' part in university extension.

"Some points on the county free library law" was the subject of a talk by Miss Harriet G. Eddy, county library organizer of the State Library. Mrs. Harriet C. Wadleigh, of Los Angeles, read a paper on "The relations of, the county free libraries and the city libraries in California."

An illustrated lecture by Harry C. Peterson, director of the Stanford University Museum, traced the development of the moving picture from the first experiments at the Stanford farm to the present time. Dr. William E. Ritter, director of the Scripps Institution for Biological Research, spoke of the multiplication of scientific writings and suggested some ways of eliminating some of it. In "College credit for browsing," Dr. W. G. Carruth, of Stanford University, advocated provision for students to do general reading in literature, and the granting of credit for this reading.

In W. Irving Way's paper, "My friend's library," he sought to present the layman's point of view on some of the duties of a librarian. Special emphasis was laid on the value and importance of an intimate acquaintance with authoritative reference books, and an orderly system of keeping tab on minor as well as major current events. In the words of the late Henry Bradshaw, Mr. Way's friend finds what he believes to be a clear definition of the librarian's chief object in life: "My primary duty as librarian is, of course, rather to help scholars in their work to the best of my power than to pursue any favorite investigations of my own."

John S. McGroarty, author of the Mission play, told in a delightful way how the play came to be written and produced in spite of many discouragements. John Vance Cheney read a number of poems from his book, "At the silver gate."

There were a number of interesting discussions on library subjects, such as "Other ma-

terial than books in library service," which included the use of pictures, slides, the phonograph, and the moving picture; "Library service to schools," and "Uniform forms and blanks." Of particular importance to the libraries of the state is the proposed bond measure for additional state buildings in Sacramento, because it will provide adequate quarters for the State Library.

The trustees' section held a meeting on June 19, with the following program: "Who should buy the books, the librarian or the trustees?" by Samuel Leask; "The relation of the public library to the community," by Earl F. Drake, San Diego; "Building a library; the special collection as a reflection of local conditions," by H. L. Carnahan, Riverside; "The making and marketing of books," by Guy C. Miller, Palo Alto.

The following officers for the section were unanimously elected: President, Guy C. Miller; vice-president, Horace E. Hand. It was voted that the president be authorized at some subsequent date to select a suitable secretary.

Library Schools

NEW YORK STATE LIBRARY SCHOOL

Madame L. Haffkin-Hamburger, lecturer on library economy and secretary of the library course given at the Shaniawsky University of Moscow (the only courses of the kind given in Russia), spoke to the staff of the State Library and the students of the Summer School, July 15, on library conditions in Russia. Mme. Hamburger's talk demonstrated a surprising amount of progress among popular libraries despite adverse conditions. The talk was illustrated by a number of stereopticon views of Russian libraries. Mme. Hamburger has presented the slides to the school with the request that they be lent as occasion arises to other library schools which may desire to use them in their courses.

F. K. WALTER.

UNIVERSITY OF ILLINOIS LIBRARY SCHOOL

SUMMER SESSION

The fourth summer session at the University of Illinois Library School opened on June 22 and ended on July 31. The general plan of the course was similar to that of previous years, and attendance was restricted to persons actually holding library positions. The principal instructors were Mr. Ernest J. Reece and Miss Ethel Bond, members of the regular Library School faculty. Miss Margaret Williams and Miss Nelle U. Branch, members

of the University Library staff, were revisers and assistants. The course in children's literature was given by Miss Effie L. Power, supervisor of work in the St. Louis Public Library, who visited the school in the week of July 20 and delivered five lectures. Miss Power presented the selection of children's reading and illustrated her talks by the use of type books. One lecture dealt with the administration of children's departments. Miss Anna May Price, organizer of the Illinois Library Extension Commission, visited the school on July 24 and 25, held personal conferences with the students, and gave two lectures presenting the work of the commission and the functions of the public library.

Thirty-three students enrolled for the course. Of these twenty-seven were from Illinois, two from Kansas, one from Iowa, one from Ohio, one from Arkansas, and one from Texas. Twenty-four came from public libraries, six from college and university libraries, and three from high school libraries. Eighteen are in charge as chief librarians and the remainder are assistants. Two have master's degrees, two others have bachelor's degrees, six others have had some college work or its equivalent, and eleven others are graduates of high schools. The average salary of those working thirty hours or more per week is \$50 per month.

Altogether each student had ninety-two lecture or class periods of fifty minutes each, nearly every period presupposing two hours of preparation on the part of the student. Cataloging was given twenty-three periods; classification, eleven; reference work, eleven; book selection, thirteen; children's work, five; administration (including extension), five; mending of books, twelve; loans, two; and to each of the following one period: order, accession, binding, bookkeeping, mechanical preparation of books, public documents, serials, shelf-list, trade bibliography, statistics and reports.

The course in book selection this year included discussions of the literature of particular subjects, as follows:

Books relating to nature study, Professor Vaughan MacCaughy, of the College of Honolulu.

Books on rural life and hygiene, Miss Florence R. Curtis.

Some books on religion, the Rev. J. C. Baker.

The literature of sociology, Professor Ulysses G. Weatherly, of Indiana University.

Helpful biographies, Miss Emma Felsenthal.

Types of travel literature, Mr. Ernest J. Reece.

English fiction, Dr. Daniel K. Dodge.

The choice of books and other material relating to history, Miss Marian Leatherman.

Contemporary American novelists, Dr. Daniel K. Dodge.

The large class enrollment and the difficulty of giving the most effective class instruction to persons of unequal preparation led to a division of the class in cataloging, and it met in two sections.

No one claims that Urbana is an ideal summer resort, but in justice to the city it must be said that the weather during the session was, on the whole, very pleasant. This circumstance contributed very materially not only to the evident enjoyment of all, but also to the eagerness for work which was manifest.

LIST OF STUDENTS

In the following list of students "public library" and "Illinois" after the names of cities are omitted:

Anderson, Nita Jeannette, assistant librarian, Highland Park.

Blackwell, Mary, typist, University of Illinois Library.

Cline, Myra Diana, assistant librarian, Waverly.

Cossaart, Estella A., librarian, Chicago Heights.

Culter, Mrs. Lucy Jane, librarian, Wm. Moyer Library, Gibson City.

Fagan, Ellen, assistant, St. Charles.

Fletcher, Mabel E. B., librarian, High School, Decatur.

Forward, Mary Cornelia, librarian, Talcott Free Library, Rockton.

French, Ida Bertram, librarian, Illinois College, Jacksonville.

Gulick, Mrs. Jessie, assistant cataloger, Kansas State Agricultural College, Manhattan, Kansas.

Hall, Mary Helen, first assistant, Carnegie Library, East Liverpool, Ohio.

Handley, Anna, librarian, Loda.

Hargrave, Kathleen, librarian, Illinois Wesleyan University, Bloomington.

Harrison, Alice Sinclair, librarian, High School, Austin, Texas.

Hatcher, Charlotte L., children's librarian, Clinton.

Hughes, Madeline, librarian, Downers Grove.

Inness, Lucy Mabel, general assistant, Galesburg.

Lanquist, Ada M., branch librarian, Chicago.

Levin, Emma, branch library assistant, Chicago.

McGehee, Hester Elizabeth, catalog typist, University of Illinois, Urbana.

McKenzie, Annie Lawrie, librarian, Highland Park.

McLaughlin, Mayme, librarian, Auburn.

Matthews, Irene Estella, librarian, High School, Dubuque.

Meeker, Grace Ruth, assistant librarian, Carnegie, Ottawa, Kansas.

Richards, Alice Mary, assistant librarian, Greenville.

Richardson, Helen, desk assistant, Oak Park.

Scott, Leota, librarian, Mitchell Carnegie Library, Harrisburg.

Simmons, Guy Andrew, librarian, Hendrix College, Conway, Arkansas.

Smith, Irene, substitute, Maywood.

Vandaveer, Harriet, librarian, Greenfield.

Wandrack, Lura May, librarian, Woodstock.

Watt, Margaret Louise, librarian, Winchester.

Wedding, Mrs. Rose McNabb, librarian, Jerseyville.

P. L. WINDSOR, *Director*.

NEW JERSEY LIBRARY COMMISSION—SUMMER SCHOOL

The commission conducted the sixth session of its summer school in the Asbury Park Public Library, June 1 to July 3. The usual course in elementary library science was given, with special lectures by James I. Wyer, of Albany; H. W. Wilson, of White Plains; Miss Theresa Hitchler, of Brooklyn; Miss Rose Murray, of New York; John Cotton Dana, of Newark; and Miss Clara W. Hunt, of Brooklyn. Mr. Hughes, of Trenton, Miss Hinsdale and Miss Smith, of East Orange, and Miss Ball, of Newark, led a round-table discussion of administrative methods and loan-desk supplies; and Miss Maude McClelland and Mrs. Bowen, of Passaic, demonstrated the school library work of the Passaic Public Library. Dr. John Erskine, of Columbia University, talked very delightfully about "Learning to read," the last evening.

Twenty-eight students were enrolled for the entire course, fourteen more came for the week of Miss Hunt's lectures, and twenty-four others came for individual lectures. Adding to these the number of trustees, visiting librarians, and members of the commission, who came at different times, a total of ninety-four people interested in libraries visited the school during the five weeks it was in session.

UNIVERSITY OF CALIFORNIA SUMMER SCHOOL

The summer course in library methods of the University of California for 1914 was held from June 22 to August 1.

For three years the course has been recognized as a part of the regular summer session of the University. Credit not to exceed six units toward a university degree is given for the satisfactory completion of the entire course.

Twenty-seven students carried the full program and four took part of the work. As the class is limited, these were selected with due regard to their personal and educational qualifications and previous library experience, from a large number of applicants.

The course covered the following subjects, and included practice work and examinations: Bookbinding and mending (2 lectures); California library law (2 lectures); Cataloging and accessioning (17 lectures); Classification and shelf-listing (11 lectures); Loan systems (2 lectures); Library buildings (3 lectures); Reference work (11 lectures); Selecting and ordering books (8 lectures).

Instructors and lecturers were: Frank M. Bumstead, Edith M. Coulter, James L. Gillis, Nella J. Martin, James F. Mitchell, Mary E. Robbins.

MARY E. ROBBINS, *Director*.

Reviews

BOOKS FOR HIGH SCHOOLS. Compiled by Martha Wilson, supervisor of school libraries, Minnesota Department of Education. (Reprinted with adaptations from the list as published by the Minnesota Department of Education.) A. L. A. Publishing Board, 1914.

This book, as it comes to our hands, is practically identical with the one published for the high school libraries of the state of Minnesota, the "adaptation" consisting merely of the omission of matter in the introduction which applies to conditions obtaining in Minnesota alone. As indicated on the title page the original book was intended for state circulation but the American Library Association, by arrangement with the Department of Education of Minnesota and the compiler, has issued a special edition intended to reach a wider public. This act alone is sufficient to secure for the little volume in question acceptance by all high school librarians, and its welcome is sure to be a cordial one.

As its compiler says in her foreword: "The titles [of the books listed] have been chosen to supplement the teaching in the schools and to provide some interesting outside reading for the high school boys and girls. The books for recreative reading have been chosen with a view to interesting the boys and girls in reading, in owning books themselves and in the use of the public library."

Very definite explanations and instructions are given for the use of the list of books chosen. The suggestions for the equipment and care of the school library are most helpful and the plan for a reading circle is one worthy of imitation. A valuable feature of the book is the explanatory note following the listing of each title. In almost every case these notes are telling, and to the point.

The system of grouping related books by classes is to be commended; it is, indeed most helpful to high school pupils in their research work. It is with pleasure that we note here the inclusion of vocational and allied subjects. Classes 170—*Conduct of life, Ethics*; 607—*Vocational guidance*; 378—*College life*; 921—*Individual biography*; 650—*Business, Communication*; 700—*Art, Photography*; 736, 740—*Wood carving, Drawing*; 680—*Manual training*, are especially suggestive. We are, however, rather surprised, in view of present interest in the woman movement and the short story, to find no groupings under these heads. The books listed under the following classes are particularly suggestive and interesting: 612—*Physiology, Hygiene, Physical Training*; 630—*Agriculture*; 640—*Household economics*; 790—*Sports*; 808.5—*Debating, Public speaking*; and 813.9—*Historical fiction*. Class 973—*American history*, is especially rich and well-chosen, as is also class 973.9—*Biography for American history course*. These two offer a most valuable bibliography for the high school student of American history. Class 815—*Oration*, is incomplete even from the high school view point and class 793—*Indoor amusements, Amateur theatricals*, might well have been supplemented by comparison with the *Leaflets* issued by the Drama League of America. In fact under this rubric and also under class 812—*English and American drama*, a note might well have been made concerning the work of this organization and references given to its publications.

In any list of this kind each one of us will be sure to discover omissions of certain books which he considers especially fitted for inclusion, peculiarly adapted to the purpose in hand. And so we feel that we must express a little disappointment at not finding under class 170—*Conduct of life, Ethics*, Elbert Hubbard's "Message to Garcia"; under class 814—*Essays and prose miscellany*, Augustine Birrell's "Obiter Dicta," Gilbert K. Chesterton's "Varied types," and Arnold Bennett's "How to become an author." Again we note with regret the omission of De Morgan, Galsworthy, Hardy, and Arnold Bennett from class 813—*Fiction and humor*. Under class 812—*English and American drama*, while rejoicing to see

Percy MacKaye's "Jeanne d'Arc," Mrs. Peabody-Mark's "The piper," Charles Rann Kennedy's "The servant in the house," Stephen Phillips's "Ulysses" and Israel Zangwill's "Melting pot," listed, we are somewhat surprised to find such playwrights as William Vaughn Moody, Bernard Shaw, Arthur Wing Pinero, John Galsworthy and David Belasco unrepresented.

In the use of this book for home reading the teacher should always allow for a difference of taste in his pupils, remembering that,

"Talk as you will of taste, my friend, you'll find
Two of a face as soon as of a mind."

The majority of high school students will prefer fiction and adventure for their outside reading; but some boys will be more interested in the practical things of life—mechanical contrivances, inventions, business, while a very small minority occasionally will eagerly devour biography, autobiography, and such books as those listed under Class 170—*Conduct of life, Ethics*. Dr. Johnson speaks of Milton's "harsh diction, uncertain rhymes, and unpleasing numbers" while Macaulay grows enthusiastic over "the incomparable harmony" of this same poet's numbers. When the doctors disagree may we not pardon something to the high school student who "hates" the book which according to all the canons of taste he should delight in?

Let us, then, take account of native tastes in selecting our lists for outside reading, and let us by all means beware lest we ask too much of the pupils. Spontaneous reactions are what we want. A list of books, including selections from various classes, thus appealing to all tastes, may be given out. But the pupil should be allowed to choose his own books from such a list; for he balks at the prescribed in his home reading. At least fool him into believing he is having his own way here. Suggest that three or four read the same book so that material may be furnished for discussion and debate later on. A special reading club day when the teacher annihilates himself—though present in the flesh—when a pupil presides, and when discussion and debate become informal and conversational, will be far more productive than the ordinary report day on the outside reading. Each pupil may construct for himself a library shelf—he should build up at least four shelves for the home library while in the high school—he will joy in doing so if the matter of outside reading is handled in a tactful way.

The book before us is certainly adequate for the purposes its compiler had in mind when preparing it—"to supplement the teaching in

the schools and to provide some interesting outside reading for the high school boys and girls"—and will do much, we trust, in the hands of our teachers and librarians to develop a permanent interest in reading, to arouse enthusiasm for books, and to create a true library spirit in the youth of America.

SARAH E. SIMONS.

BODLEIAN LIBRARY. Staff manual, 1913. Oxford: Horace Hart, printer to the University. 150 p.

NEW YORK PUBLIC LIBRARY. Rules and instructions for branch librarians and assistants. 1913. 40 p.

BROOKLYN PUBLIC LIBRARY. Rules for the guidance of the staff of the Brooklyn Public Library. 1913. 62 p.

QUEENS BOROUGH PUBLIC LIBRARY. Rules for the guidance of the staff. 1912. 33 p.

For years Mr. Nicholson's annual Bodleian Staff-Calendar passed as a professional pleasure in this country and served as the one oasis of mirth in a desert of super-serious library literature. Even the staid and sober LIBRARY JOURNAL (in the halcyon days before "The librarian's Mother Goose" began her dubious bibliothecal utterances) vol. 29, p. 77, under the caption "Back-stairs and boys at the Bodleian" poked some delicious fun at the odd, fat little book with its gay pink cover, half its matter printed up-side-down and its meticulous and reiterated directions for doing the most trivial daily tasks. Even getting up and going to bed would take on hilarity were their every step set down in cold print with Pepsian particularity.

Mr. Nicholson's successor continues the Staff Manual, much the same in matter and style, and in this, the definitive edition (presumably distributed only within the guild) are bound the "Manual for readers" and the "Bodleian cataloguing rules" usually issued apart.

But we in America are now forever estopped from further fun at its expense for we have lately begun to do the same thing ourselves. The sincerest flattery of our imitations may not be taken lightly and there come to your reviewer this year with the familiar little pink book, similar publications from the three public libraries of Greater New York.

In these four titles the greatest university library in the world, the largest library enterprise in the world and two other considerable and highly organized public library systems confess to the wisdom, nay necessity for thus reducing to print the hundreds of petty rules for staff guidance. Mr. Nicholson and the Bodleian were right. The verdict of 300 years of experience was sound though much

of it had a queer sound when read from cold type between pink boards. Smooth and efficient library administration is the sum of countless details, often trifling in themselves, the correct doing of which can be ensured only by having them set down in black and white to be seen of the doers. If we in America have never before been thus particular in print it is because our library establishments are new, raw, unformed and groping—their customs and practices hardening slowly through much experiment and change. They can scarcely yet be called "fixed" in the sense that three centuries have fixed Bodleian practice, but in some American libraries, particularly municipal public library systems of such startling growth as those in New York City, the very rapidity of development has forced such administrative codes into existence. They will doubtless be revised frequently and substantially and the successive issues will mirror accurately and interestingly the progress of our most distinctive and notable library organism, the great city circulating system with its numerous branches.

Both the New York and Brooklyn Public Libraries find more than 300 distinct rules requisite for the guidance of their branch assistants while the smaller Queens Borough Library lists nearly 200—truly a formidable matter of memorizing and machinery which may well terrify or discourage the conscientious prospective apprentice.

J. I. W.

SEVERANCE, HENRY ORMAL. Guide to the current periodicals and serials of the United States and Canada. 3d ed. Ann Arbor, Mich.: Wahr, 1914 [1906, 1908]. 462 p. O.

The appearance of the third edition of any bibliography issued at private expense is in itself strong presumptive evidence of the intrinsic merits of the work. Those who have used the earlier editions of Mr. Severance's "Guide" are likely to find the latest one equally valuable. The compiler's claim to thorough revision seems supported by a comparison of the last with the preceding edition. The general plan of the work is unchanged, the first part being an alphabetical list of periodicals current at the date of compilation, and the second part a classified list. The headings in this second part are sensible and specific. One cannot help regretting the exigencies which obliged the compiler to leave the classification incomplete, for it is the indefinite title about which one usually needs to know rather than the one whose title is obvious. The limitations of scope which the compiler has set himself in this edition as compared with the attempt at relative com-

pletteness in the first edition (1906) shows the rapid growth of periodical material as well as the difficulty of assigning a great part of it to any definite class. Routine reports of corporations and institutions and public documents are generally excluded except those cases which fairly fall within the ordinary definition of periodical literature. In the case of the proceedings, bulletins, etc., of learned societies (of which only the larger and better known are included) there is no indication in most cases as to which are free, which included with membership in the society, and which have a regular subscription price. This information is so frequently useful that it is to be hoped that the compiler may include it in his next edition. Considering the high mortality among periodicals one is surprised, not that the author includes a few which have suspended publication (e.g.: *The Penn Germania*) or that the subscription prices are not always accurate (e.g.: *New York Libraries*, free only to libraries and to trustees in New York State, and 25 c. to others; or *Wisconsin Library Bulletin*, now monthly, 60 c. a year) but that a list in which minute accuracy is so difficult has actually been so accurately done. Those who have found the earlier editions useful will need this revised one while practically any library with even a moderate number of periodicals regularly received will find it useful.

F. K. W.

ROBERTS, KATE LOUISE, *comp.* The club woman's handybook of programs and club management. N. Y., Funk & Wagnalls Co., 1914. 192 p. Nar. D. 75 c. net.

This little book gives in condensed form material necessary or suggestive in the formal work of women's clubs, as it has been gathered by Miss Roberts during her years of service on the staff of the Newark Free Public Library, in charge of club work. Its scope and purpose are clearly indicated in the title; but it should be also extremely useful as an aid to librarians in reference or advisory work with women's clubs. Lists of "suggested subjects" and "suggested outlines" for club programs occupy the first 20 pages, the former offering over 100 topics, the latter outlining more or less extended sub-topics under 28 study subjects. The section devoted to "programs" forms the bulk of the book, and is a piece of useful reference work, giving 16 elaborate program outlines, with detailed grouping and subdivision, and reference lists for each; the programs and reference lists on "American literature" and on "school systems" seem especially excellent, but all are creditable examples of developed topic work.

There follow brief suggestions on "How to form a club"; an alphabetic list of parliamentary definitions and terms used in club administration; compact information on "How and where to get help" with references to available booklists and other printed material; and an index to the subjects covered in the topics and bibliographical references.

H. E. H.

Librarians

BAILEY, Winnifred, of Milwaukee, has been engaged to succeed Katherine Barker as librarian of the T. B. Scott Free Library, of Merrill, Wis., and will assume her duties the first week in September. Miss Bailey has attended the library school at Madison, and for the past two years has been the librarian at Wauwau-toosa. Miss Barker goes to Astoria, Wash.

BLISS, Richard, librarian at the Redwood Library on Bellevue avenue, Newport, retired on Aug. 1 on half pay. Mr. Bliss will have the title of librarian emeritus, in recognition of his long and faithful service.

BRADFORD, Mrs. Frank, librarian at the Barrington (R. I.) Public Library, celebrated her twenty-fifth year as librarian on August 11. An informal reception in her honor was held at the library.

CLAYTON, H. V., law librarian at the State Library, Topeka, Kan., has prepared a useful index of the proceedings of the Kansas State Bar Association, 1886-1913. It is printed as an appendix to the 1913 proceedings, and also as a separate.

COBB, Gertrude, who for the last two years has been in charge of the library at Janesville, Wis., has resigned. Her place will be filled by Miss Mary Egan, of Green Bay, librarian at Marshfield for the last year.

CONNER, Elizabeth, of Two Harbors, Minn., has been appointed librarian of the Northern Normal and Industrial School at Aberdeen, S. D., in place of Miss Ruth King, resigned.

CONNORS, Miss L. E., has resigned her position as librarian of the Heermance Memorial Library in Coxsackie, N. Y., to accept a similar one at her home in Washington. Her place has been filled by Miss E. C. Johnson, of Boston, Mass.

COOK, Ella B., of Trenton, has been appointed branch librarian of the Trenton Free Public Library, as the successor to Miss Helen L. Diverty. Miss Cook stood first on the eligible list as the result of a recent civil service examination. She is a graduate of the

State Model and Normal Schools and of the Pratt Institute Library School, and has taken several university summer courses, besides having had considerable experience both in teaching and in library work.

COWLEY, Amy, of Ligonier, Indiana, a graduate of Northwestern University and of New York State Library School at Albany, has been elected librarian of the Hutchinson (Kan.) Public Library and began her work August 15.

DURKEE, Florence E., New York State Library School, '13-'14, has gone to the John Crerar Library, Chicago, as temporary assistant.

FLOWER, Gretchen, formerly head of the children's department in the State Normal School Library at Emporia, Kansas, has resigned to accept the librarianship of the College of Emporia, at Emporia, Kansas. She begins her new work in September, in the Anderson Memorial Library building, given to the college by Mr. Carnegie in memory of the help received by the young iron-worker from Colonel Anderson, in Mr. Carnegie's early Pittsburgh days. Later Colonel Anderson was a trustee of the College of Emporia.

HARTWELL, Dr. Edward M., secretary of the statistics department of the city of Boston, has been named as the head of the new business branch of the Boston Public Library, to be known as the City Hall branch and to be established in the room formerly occupied by the board of aldermen in the city hall.

HAWES, Clara S., N. Y. S. L. S. 1894, has been appointed cataloger in the Missionary Research Library, 13 W. 18th Street, New York City.

HEALY, Miss M., has been appointed chief of the catalog department of the San Francisco Public Library, and Miss Annette Windle has been made chief of the order department.

HYDE, Mary E., who has been in charge of the cataloging department of the San Francisco Public Library for the past five years, has resigned to accept a position as instructor in library science at Simmons College Library School.

JILLSON, William E., of Ripon, Wis., W. L. S. 1912, is at present reorganizing the Grafton Hall (Fond du Lac, Wis.) Junior College Library. Mr. Jillson arranged an exhibition of circulars and catalogs of the labor-saving devices shown in Washington, which he displayed both in Ripon and in Fond du Lac for the benefit of the business men.

KEMLER, Harry F., of Trenton, has been appointed assistant in charge of the new legislative reference department of the New Jersey State Library.

KING, Ruth, who has been for the past year the librarian of the Northern Normal and Industrial School at Aberdeen, S. D., has been appointed in charge of the children's department of the Butte (Mont.) Public Library.

LEWIS, Sarah Virginia, has resigned her position as librarian of the Allentown (Pa.) Public Library. Miss Lewis has accepted the position of librarian in a branch of the Carnegie Library at Pittsburgh.

MCGREGOR, Mary, has been elected to fill the vacancy caused by the resignation of Miss Nellie Rutherford, who has been librarian of the Gouvernor Library of Watertown, N. Y., for four years. Miss Rutherford will continue library work but will remove to a larger field.

PORTER, Minnie, has been appointed to succeed Mrs. E. A. Call as librarian of the Pittsfield (Me.) Public Library.

RANKIN, Mrs. C. C., librarian of the Newark (O.) Public Library, has resigned her position and will join her son in Evanston, Ill.

REESE, Mrs. Neva, who has been assistant librarian in the Newark (O.) Public Library, has been made librarian in place of Mrs. C. C. Rankin, resigned.

RICHARDSON, Mary C., N. Y. S. L. S. 1910-11, took a temporary position for July and August in the Minneapolis Public Library.

ROY, Myrtle I., for almost two years first assistant in the Free Public Library of Summit, N. J., has resigned that position to become librarian of the Davenport Memorial Library of Bath, N. Y.

SOMERVILLE, Evelyn, Drexel 1914, has accepted a position as assistant in the Public Library of Cleveland, O.

STEPTOE, Elizabeth W., Drexel 1914, has accepted a position as cataloger at the Wistar Institute, Philadelphia.

WARD, Annette Persis, who for five and a half years has been librarian of the Western Reserve Historical Society, and who reorganized the library during that time, resigned Sept. 1. Miss Ward expects to leave Cleveland, and before locating again plans to spend a few months in rest and travel. Her library has been given to the Granville (O.) Library as a memorial to her grandmother, Mrs. Persis Follett Parker, and her mother, Mrs. Jane Elizabeth Parker Ward. Letters may be sent to Miss Ward in care of her brother, Mr. H. P. Ward, 225 North Fourth street, Columbus, O.

THE LIBRARY WORLD

The *Library Association Record* for May contains an article by Ethel S. Fegan, librarian of the Ladies' College, Cheltenham, entitled "Some American libraries," in which she records her impressions of American libraries as seen in a tour lasting only a little over three weeks. The Library of Congress and the public libraries of New York, Pittsburgh, Cleveland, and Chicago receive special comment, and some interesting comparisons of American and English library methods are made.

New England

MAINE

Auburn P. L. Annie Prescott, lbn. (23d annual rpt.—yr. ending Mar. 1, 1914.) Accessions 927; total 18,748. New registration 687; total 7756. Circulation 54,999. Receipts \$3,552.20; expenditures \$3,136.69, including salaries \$1,486.20, books \$889.44, binding \$73.21, newspapers and periodicals \$83.40.

Bingham. The town of Bingham is a beneficiary of the will of the late Mrs. Lillian Washburn, widow of Henry Washburn, to the amount of \$1,000 toward a public library, provided that it is built within 15 years and costs not less than \$5,000.

Brunswick. Bowdoin College L. George T. Little, lbn. (31st annual rpt.—yr. ending May 1, 1914.) Accessions 3129 (books purchased averaged \$1.30 per volume); total number of volumes (including the Medical School Library), 108,518. Circulation for use outside the building 7511. Receipts \$6,861; expenditures \$6861, including \$2919 for books, \$665 for periodicals and serials, and \$406 for binding. The librarian's salary is not included in the budget. Among the gifts of the year were the complete works of Kate Douglas Wiggin, who received the doctorate of letters from Bowdoin in 1904. This collection of over eighty volumes contains copies of the various editions issued in this country and abroad, the numerous translations into French, German, Polish, Danish, Dutch, Swedish, Roumanian and Japanese, partly volumes in Braille prepared for the use of the blind, and the manuscript of "Daughters of Zion." Some of the rarer issues are now out of print and not available through the ordinary channels. It is proposed to place this collection in a case of its own in the alumni room.

Buxton. By the will of the late Andrew L. Berry, a lot of land has been bequeathed to the town for a library site, and he makes the request that it be called the "Berry Library." Under certain limitations he bequeaths the sum of \$5,000 for the Berry Library building, \$1,000 for books for the library and \$3,000 if so much be left of the estate, for the care of the building. Mr. Berry's estate is estimated at \$15,000.

NEW HAMPSHIRE

Berlin F. P. L. Adria A. Hutchinson, lbn. (21st annual rpt.—1913.) Accessions 320; total 8210. Circulation 25,217. Total registration 3,976. Receipts \$2,297.19; expenditures \$2,090.88, including salaries \$740.25, books and periodicals \$356.81.

Rochester P. L. Lillian E. Parshley, lbn. (20th rpt.—1913.) Accessions 522; total number of volumes 16,466. Circulation 56,114. New registration 440; total registration 5858. Receipts \$3,866.80; expenditures \$3,840.53.

MASSACHUSETTS

Amesbury P. L. Alice C. Follansbee, lbn. (Rpt.—1913.) Accessions 550; total 15,017. Circulation 45,566. Total registration 1931.

Attleborough P. L. Eugenia M. Henry, lbn. (Rpt.—1913.) Accessions 1267; total 16,534. Circulation 58,573. New registration 739; total 6494. Receipts \$7,204.70; expenditures \$7,149.18, including salaries \$3,351, books and periodicals \$1,800.04, binding \$264.09.

Beverly P. L. Martha P. Smith, lbn. (58th annual rpt.—1913.) Accessions 1496; total 37,721. Circulation 98,433. Total registration 3202. Receipts \$8,736.91; expenditures \$8,735.01, including \$3,779.83 for salaries, \$1,790.38 for books and periodicals, and \$373.98 for printing and binding.

Boston. John Singer Sargent is completing the long awaited new set of mural paintings for the Boston Public Library at his studio in London. Two commissions cover the work which Mr. Sargent is doing for Boston. For the city's order he is completing some relatively unimportant panels for use at the end of the gallery opposite to that where the paintings of the Hebrew prophets are placed. The subjects at this opposite end of the gallery deal with the doctrine of the Trinity. The important part of Mr. Sargent's present work, however, is a series of large paintings to decorate the long western wall of this gallery.

The tentative sketches for these panels are reported to illustrate the important steps in the humanitarian development of mankind.

Northampton. Forbes L. Joseph L. Harrison, lbn. (19th annual rpt.—yr. ending Nov. 30, 1913.) Accessions of books 3258, pictures 89, music (including 6 graphophone records) 269; total number of books 122,229, pictures 100,445, music 10,537. New registration 826; total 6371. Circulation 86,842. Receipts, aid fund \$10,890.46, book fund 19,353.25, total \$30,243.71. Expenditures, salaries \$7,497.73, books, magazines, pictures, binding, etc., \$10,108.09.

Salem P. L. Gardner M. Jones, lbn. (25th annual rpt.—Dec. 1, 1912, to Dec. 31, 1913.) Accessions 2364; total number of volumes 60,315. Circulation 144,085; 76 per cent. fiction. New registration 2673. Receipts \$54,783.79; expenditures, \$27,300.49.

Shelburne Falls. The new Pratt Memorial Library, which is a gift to the town of Shelburne from Francis R. Pratt of Greenfield, is now completed and plans are being made for the dedication which is to take place in a few weeks. The building is located at the corner of Bridge and Main streets, the sides facing the streets being alike. The material is Roman brick, with limestone trimmings. The building is unusual in form, the idea having been worked out to fit the lot by W. H. and Henry McLean of Boston. The general shape is that of a quarter of a circle, with the entrance at the angle of the two streets. The angle swells out into a circular form, which serves as a delivery room, 20 feet in diameter. This portion of the building is surmounted by a dome which is copper covered. The rest of the roof is tiled. The building spreads out in fan shape, with a reading room for adults 30 by 16 on the Main street side and a children's room 20 by 16 feet and a librarian's room 10 by 9 feet on the Bridge street side. Between, in the fan-shaped space, is the stack room, with radiating stacks to accommodate 39,000 volumes. The inside finish of the principal rooms is mahogany. The stack room and librarian's room are in birch. There are fireplaces in the librarian's room and in the reading rooms. The basement provides ample storage facilities. The 12,000 volumes in the Arms Library will be moved into the new building immediately after the dedication.

Somerville P. L. Drew B. Hall, lbn. (41st annual rpt.—1913.) Accessions 8761; total number of volumes 109,236. Circulation 407,617. New registration 3662; total 11,175. Expenditures for books \$7,756.07 (also \$933.36 for income of special funds); music \$172.78;

periodicals \$1,310.77; binding \$1,641.36; salaries \$21,822.44.

The report contains pictures and plans of the new building and the report of the opening exercises at the latter, Dec. 17.

CONNECTICUT

Branford. Blackstone Memorial L. Charles N. Baxter, lbn. (18th rpt.—yr. ending June 30, 1914.) Net accessions 1281; total number of volumes in library 31,708. Circulation 72,651. New registration 354, total 2588.

Bridgeport. To create two branches of the Bridgeport Public Library the Carnegie Corporation of New York offers to give \$50,000; to obtain this money the city must provide the sites for the two library branches, guarantee \$5,000 per year for their maintenance, and also submit the plans for the buildings for the approval of the members of the corporation before they are accepted. One of the conditions of the acceptance of the money from the Carnegie corporation is that Mr. Carnegie's name shall not appear on either of the buildings, nor be connected with them in any way.

New Britain Institute. Anna G. Rockwell, lbn. (60th annual rpt.—yr. ending Mar. 31, 1914.) Accessions 8867; total number of volumes, about 48,400. Circulation of books 175,012, and of mounted pictures 5824. New registration 1986. Receipts \$17,977.52; expenditures \$17,838.77, of which \$972.93 went for printing and binding, \$380.05 for newspapers and periodicals, \$6,598.80 for books, and \$5,234.67 for salaries.

Middle Atlantic

NEW YORK

Falconer. The new public library building was opened officially on August 1 with about 600 volumes.

New York City. A bronze tablet in honor of the one hundredth anniversary of the birth of Sir Isaac Pitman and "in recognition of the important collection of shorthand literature in the New York Public Library" was unveiled in the public catalog room of the central building of the library on June 20. The tablet was presented by the Isaac Pitman Shorthand Writers' Association of New York.

New York City. The estate of William Augustus Spencer, who lost his life on the Titanic, is appraised at \$2,218,650. With the exception of a \$50,000 bequest, Mr. Spencer's widow has a life interest in the property, which at her death is to be equally divided between the New York Public Library and a

nephew of Mr. Spencer. Mr. Spencer's collection of fine books in modern French bindings has already been received and cataloged by the library.

New York City. The New York Public Library has received from the Central Park Observatory, a collection of 2390 volumes, 7241 pamphlets, 312 circulars, 734 maps, 10 letters, 165 charts and 2 blue prints. The material consists of books and scientific reports on meteorology and terrestrial magnetism. It includes a large number of books sent to Dr. Daniel Draper during his long and distinguished service as director of the Central Park Observatory, from 1868 to 1911. With this notable addition, the collection of material on meteorology in The New York Public Library becomes the second in this country, being exceeded in importance only by that in the Library of the United States Weather Bureau in Washington.

Rochester. A new branch of the Public Library will be opened early in September, occupying rooms that have been used by two stores. A feature of the branch will be the use of the display windows, to advertise the value of right reading and to bring to the attention of the book explorer the books that ought to be read.

Rochester P. L. William F. Yust, lbn. (2d annual rpt.—yr. ending Dec. 31, 1913.) Accessions 17,279; total number of volumes 38,321. Circulation 274,372. Receipts \$36,000; expenditures, books \$13,170.03, including \$267 for periodicals; salaries \$13,355.52.

Rochester has no central building as yet, but has started with a system of branch libraries and distributing stations. The year covered in the report is the first full year of its existence. Some of the most important results are here summarized.

The Exposition Park branch was kept open every day including Sundays and all holidays; the Genesee branch was opened to the public October 1 in rented quarters; a sub-branch was opened at School 9 in a portable building erected for the purpose; books are ready for a second sub-branch in the new building of School 24; 21 deposit stations were established in various sections of the city; organization of the work with schools which was begun last year was extended and the plan thoroughly tested; a prominent part was taken by the library in the child welfare exhibit; and a collection of public documents was started.

Rome. At a special meeting of the trustees of the Jervis Library a resolution was adopted accepting the \$1,500 left to the association

by the late Dr. C. C. Reid. The money was left to be used for the establishment of a picture gallery at the library.

Skaneateles P. L. Lydia A. Cobane, lbn. (37th annual rpt.—yr. ending Jan. 31, 1914.) Accessions 460; total 14,864. Circulation 13,753. Receipts \$1,972.18; expenditures \$1,906.19, including salaries \$862, books \$193.25, magazines and newspapers \$127.75, and binding \$24.80.

NEW JERSEY

During the last session of the legislature, the school library law was so amended that in the future the supervision of school libraries will be in the hands of the State Library Commission, and all warrants for state school library funds must be drawn on the order of the New Jersey Public Library Commission, instead of the Commissioner of Education as heretofore. A committee representing the State Board of Education and the Public Library Commission is now engaged in drawing up rules, regulations, and suggestions for the care and administration of school libraries. These will be printed in pamphlet form and a copy sent to each public library and each public school in the state.

Atlantic City P. L. Alvaretta P. Abbott, lbn. (12th annual rpt.—1913.) Accessions 3051; total 28,398. Circulation of books, 156,858; of pictures from teachers' room 4622. New registration 2382. Receipts \$18,615.19; expenditures \$16,802.19, including books \$4,253.49, rebinding \$685.05, and salaries \$8,901.50.

Bayonne. The \$30,000 addition, for which Mr. Carnegie furnished the funds, will be ready for occupancy in October. Among the special features of the remodeled building is a lecture room equipped for "movies." A municipal room and a high school reference room are planned, as both the high school and the city hall are within two blocks of the library.

Dover. The Carnegie Corporation has offered the city \$20,000 for a Carnegie library, on the usual terms.

Dover F. P. L. Martha A. Burnet, lbn. (9th annual rpt.—yr. ending Dec. 31, 1913.) Accessions 495. Circulation 23,177. New registration 400; total 4383. Receipts \$4,705.76; expenditures \$2,332.41, including books \$481.20 and salaries \$1,117.

East Orange. Mayor Julian A. Gregory has received a letter from Secretary James Bertram of the Carnegie Corporation agreeing to give the city \$40,000 for the addition to the

free library. The only condition imposed is that written assurance be given that the city owns the site of the proposed addition without incumbrance and that the requisite ten per cent. of the gift shall be raised every year for the maintenance of the institution.

Hackensack. The headquarters of the Bergen County Farm Demonstration Bureau are in Hackensack. The librarian there has taken advantage of this opportunity to get in touch with the agricultural interests of the county. She has joined one of the granges, attends the meetings of the Board of Farm Demonstration, has placed in the office of the man in charge of the Demonstration Bureau lists of books that can be gotten from her library, has placed a collection of books there to bring to the attention of farmers who visit the bureau the resources of the library, and is in many ways trying to make known library resources in Bergen county.

Montclair. Work on the new branch building in Upper Montclair is progressing rapidly, and it is expected that the building will be completed some time in October. The approximate cost of the building is estimated at \$33,000.

New Brunswick F. P. L. Cornelia A. See, lbn. (Rpt.—1913.) Accessions 1040. Circulation 66,753. New registration 690. Receipts \$6,403.01; disbursements, \$6,206.22, including salaries \$3,183.33, books \$508.74, newspapers and periodicals \$296.56, and binding and covers \$271.36.

Plainfield P. L. Florence M. Bowman, lbn. (Rpt.—yr. ending May 31, 1914.) Accessions 1633; total 50,693. Circulation 90,627; adult 68,456, juvenile 22,171; 65+ per cent. adult fiction. Registration 4331. 3352 volumes circulated through sub-stations, 5169 through school libraries, 2387 music scores, 1518 from the scientific department, 137 from the department of Americana, 5777 from the duplicate-pay collection. Beginning in October, the library opened its adult circulating department on Sundays and holidays from 2 to 6 p. m., and 1413 volumes were circulated during the eight months. Receipts \$12,604.07; expenses \$3,358.12 (salaries \$4,739.48; books \$1,647.55; periodicals \$775.73, and binding \$356.75.)

The library has an endowed scientific department numbering 9238 volumes; an endowed department of Americana numbering 1076; 1916 music scores for circulation; and a law library numbering 1850 volumes.

PENNSYLVANIA

Braddock. Carnegie F. L. George H. Lamb, lbn. (25th annual rpt.—1913.) Acces-

sions 6839; total 62,986. Circulation 348,850. A re-registration of all the library's patrons was made during the year, showing a total of 9669. No financial report is given.

The report includes a summary of the year's work of the Carnegie Club, in which 3896 members paid \$4,003 in membership dues. In addition 10,907 non-members paid 25 cents each, for single baths. The number of baths given aggregated 68,133, being 1310 for each week, or 218 for each day the club was open. The club also maintained 549 gymnasium classes, with an aggregate attendance of 13,514. Besides these activities 19,000 games were played on the bowling alleys, and ten gala events and water meets were held in the swimming pool. In educational work, three classes in English, for men of different grades of proficiency, were conducted three evenings each week, making a total of 181 classes with an attendance of 3010. A new lounging room was constructed which was much appreciated. It is estimated that 151,000 people used the club during the year, an increase of about 17,000.

The report also includes "Twenty-five years of library history," a survey of library progress in all its phases since this library opened its doors; correspondence between the librarian and the librarian of the Carnegie Free Library of Allegheny, relative to the question as to which institution could rightly be called "the first Carnegie Library"; and some interesting tables, especially one showing relative amount of work done and cost of same in thirty-five large libraries of the United States.

Downington. The new library building was opened to the public July 30.

Philadelphia. Teachers' Institute L. Anna E. Lindsay, lbn. (Rpt.—1913.) Accessions 531; total number of volumes 20,976. No record of registration or circulation is included in the report.

DELAWARE

Wilmington Institute F. L. Arthur L. Bailey, lbn. (20th annual rpt.—1913-14.) Accessions 1576; total 79,237. Circulation 249,178. New registration 274; total 15,541. Receipts \$26,365.06; expenditures \$24,460.74, which include \$3,788.84 for books, \$817.45 for periodicals, \$906.18 for binding, and \$11,998.21 for salaries.

The plan of delivering books by messenger at a charge of 5 cents a volume, inaugurated Jan. 1, has not been used as much as expected. On rainy days it pays for itself, but on other days its use is comparatively slight.

MARYLAND

Baltimore. Enoch Pratt F. L. Bernard C. Steiner, lbn. (28th annual rpt.—1913.) Accessions total 307,540. Circulation 621,924. New registration 9802; total 40,604. Expenditures \$93,945.12, including books \$15,955.01, periodicals \$2,313.91, binding \$3,759.07, printing \$633.89, and salaries \$51,422.71.

DISTRICT OF COLUMBIA

Washington. An examination for "Scientific assistant in library science" in the Department of Agriculture Library will be held by the Civil Service Commission on October 14, 1914. The subjects of the examination and the relative weights of the subjects on the scale of 100 are: Arithmetic, 10; Report writing, 10; Library science, 30; Thesis, 15; Education, training and experience, 35. The subject of library science consists of questions on library economy, including cataloging, classification, book ordering, loan systems, reference work and bibliography, especially bibliographies of sciences that pertain to agriculture. Qualified persons, are urged to enter this examination, as difficulty has been experienced in securing eligibles. The usual entrance salary ranges from \$840 to \$1,000 a year. When writing to the Civil Service Commission for further information and for the necessary forms to be filled out, applicants should state specifically that they wish to take the examination for "Scientific assistant in library science, Department of Agriculture."

The South

VIRGINIA

Virginia State L. H. R. McIlwaine, lbn. (10th annual rpt.—yr. ending Oct. 31, 1913.) Accessions 7694; total number of volumes 98,997. In addition about 700,000 manuscripts were deposited in the library by the auditor of public accounts, which were arranged for accessioning in 13,683 bundles. There were 28,871 visitors to the library; 22,005 books were used in the building and 7917 were issued for home use. The traveling library department contains 11,517 books, and circulated 12,670 volumes during the year. Receipts were \$5,227.84, and disbursements \$5,112.48. In the department of serials \$353.50 were spent on binding periodicals and \$234.40 in binding and repairing books.

NORTH CAROLINA

Charlotte. The sum of \$15,000 has been promised by the Carnegie Corporation for an addition to the Carnegie Library in this city.

GEORGIA

Milledgeville. A new library has been established at the prison farm here. A librarian has been appointed and donations of books are solicited.

KENTUCKY

The second biennial report of the Kentucky Library Commission, in addition to a summary of its own work, states concisely the library conditions of the state. There are now in the state 41 public libraries; 17 college and special libraries; and book collections, mostly inadequate, in 2638 of the 7588 grade common schools, and in 148 of the 176 city schools. Not one of the state prisons has an adequate library, and only one of the four state hospitals has a good library. The Kentucky School for the Deaf and the Kentucky Institute for the Blind have commendable libraries. Ninety-one counties have some kind of library, but 48 have only traveling libraries from the Library Commission. Of the 41 public libraries in the state 13 are free and are wholly or partly supported by taxation; 11 are free and are supported by clubs, associations, etc.; 17 are subscription libraries, one of which will soon be converted into a free public library supported by tax. The commission has been represented at various state and local meetings of women's clubs, farmers' institutes, teachers and school superintendents. Traveling libraries have been exhibited at state fairs, club meetings, institutes, and the Child Welfare Exhibit at Louisville. Circular letters have been sent out to places without library facilities, lists compiled, and pamphlets and leaflets issued. The traveling library office sent out 217 libraries totalling 11,874 volumes. The report includes sketches of all the public libraries in the state, with a statement of resources and the names of the librarians, and the text of the Kentucky library laws.

Louisville. Separate staff rooms for the assistants and pages in the main library building have recently been installed.

TENNESSEE

Knoxville. The court of civil appeals has rendered a decision in the friendly suit brought to test the legality of the transfer of the Lawson-McGhee Library to the city, and holds that the transfer is valid.

ALABAMA

Montgomery. On Monday, July 20, the Alabama Sunday School Association opened its new and enlarged library department with Miss Maude Shaw, of Montgomery, in charge.

This library of books on Sunday school work and methods is said to be the largest and most complete of its kind in America. It includes eleven departments, covering, respectively, the Bible, the Sunday school, the superintendent and his work, the teacher and his work, child study and psychology, the elementary division, the secondary division, the adult division, missions, temperance, and evangelism. A tentative beginning was made last fall but the demand for books from all sections of the state was so great that it was impossible to carry it on further without greatly increasing the size of the library and extending its ability, and the formal opening was therefore postponed. General Secretary Leon C. Palmer states that the facilities of the library now are fully adequate to meet all possible demands and Sunday school workers of all denominations throughout Alabama are invited to make free use of this library. Books will be loaned to any Sunday school workers upon request, free of charge. Library catalogs and full particulars may be obtained by addressing Leon C. Palmer, General Secretary, or Miss Maude Shaw, Librarian, Alabama Sunday School Association, 525-527 Bell Building, Montgomery, Ala.

Central West

MICHIGAN

Allegan P. L. Lenora E. Porter, lbn. (Rpt.—yr. ending Mar. 9, 1914.) Accessions 507; total 6803. Circulation 27,123. New registration 295; total 1625. Receipts \$1,314.29; expenditures \$1,289.46, including salary \$500, books \$265.33, magazines \$59.

Grand Rapids P. L. Samuel H. Ranck, lbn. (42d annual rpt.—yr. ending Mar. 31, 1913.) Accessions 9332; total number of volumes 131,484. Circulation 280,771. Total number of readers in Ryerson building and branches, 291,586. New registration 1071; total 23,135. Total expenditures \$49,162.76, including librarians' salaries \$25,744.21, printing \$1,160.28, binding \$1,333.10, books \$9,340.87, and periodical subscriptions \$2,197.70.

Three new branches have been authorized for three new school buildings, and provision is made for more in plans of three other buildings. A bequest of \$1,000 established the Frederick P. Wilcox fund for the purchase of reference books, to be used in the social sciences. For several years the board has set aside \$400 each year for books on furniture, and a very fine collection is the result. Ninety lectures have been given in the Ryerson building and the branches, with a total

attendance of 17,433. Sixty-three reading lists of books on the subject of these lectures were prepared, and 63,000 copies printed. Most of the placards announcing the lectures were printed at the Truant School Press, the only cost to the library being for stock. With the inauguration of the printers' apprentice class at the Junior High School the library expects to have a large part of its printing done by this school, under a similar arrangement.

OHIO

Cincinnati. The Hotel Sinton has installed a library of 1,500 volumes in the reading room on the second floor of the hotel. The Sinton is the second hotel in this country to take such a progressive step, the first being the Touraine in Boston, Mass. It is planned to have a young woman in charge of the library. Cards such as are used in every library will contain the name, address and room number of the applicant guest. Upon signing the card the guest may take the book free of charge, and the only obligation placed upon him is that it be returned to the library. Handsome catalogs bearing the crest of the hotel in gold and red have been placed in each room of the hotel.

Cleveland. The Cleveland Public Library has opened two large branches in 1914: Alta branch, opened February 10, and Quincy branch, opened May 22. Quincy, the tenth Carnegie branch in the system, is located on the east side of East 79th street, a few blocks south of Euclid avenue. The building, 88 feet wide by 55 feet long, is constructed in the simplest style of rectangular, branch-library architecture—one story and basement, with circulating desk in an entrance corridor dividing the main floor space into adult reading and reference room and children's department. Quincy like most of the large and small branches of the system serves a mixed American and foreign public. As yet the American element predominates, but there are permanent German and Bohemian settlements and Hungarians are settling in the district in large numbers. The new library is distinguished perhaps for the convenience and homelikeness of its equipment and furnishings, only exceeding the other branches in this respect, however, because it happens to have been the latest opened and has profited by the experiments tried in the others, with additional improvements. The platform window settle for the little children, the little ingle-nook book cases, the special exhibit book racks with ledges and the slant-topped reading tables for two or three children, are the newest features. The last mentioned are specially planned to

NASHVILLE'S NEW NORTH BRANCH, WHICH WAS OPENED LAST SPRING

THE QUEEN ANNE BRANCH OF THE SEATTLE PUBLIC LIBRARY, OPENED IN JANUARY OF THIS YEAR

hold the child's book at a proper angle and prevent him from reading with the light directly in his eyes, but their additional and perhaps their chief recommendation in the eyes of the children's room staff is that the children greatly enjoy using them and they tend to break up the noisy, restless groups which gather around the larger tables.

Alta branch is located in what is known as "Little Italy," a teeming Italian quarter in a little pocket of land between the aristocratic Cleveland Heights on the south and Euclid avenue on the north. The Alta Settlement has a gymnasium and swimming pool in the large building and the library has the usual departments, suited somewhat in arrangement to the double uses of the building. Later in the year both agencies hope to co-operate in opening a basement reading room with newspapers, periodicals, and perhaps some Italian books for the use of the older men and boys, the purpose being both to relieve the strain on the library reading and children's rooms and to give a place where more sociability and freedom of action can be permitted to a large class who are restless and not studiously inclined.

INDIANA

Evansville P. L. Ethel F. McCollough, lbn. (1st annual rpt.—1913.) Accessions, 4408; total number of volumes, 9935. Registration, 5334. Circulation, 79,976. Receipts, \$20,398.78; expenditures, \$19,244.56, including books, \$6,790.09, and salaries, \$6413.

The library is housed in two buildings, one on the east side and one on the west side of the city. They were formally opened Jan. 1, 1913. Until the end of June the library was open only from 1 to 6 and 7 to 9 p. m., and from 2 to 6 on Sundays and holidays. Since July 1, Sunday and holiday hours are the same, but on other days the library has been open from 9 a. m. to 9 p. m. Three deposit stations have been opened in schools. Considerable reference work, considering the smallness of the book collections, has been done, and many reading lists have been compiled both for clubs and for individuals. The lecture rooms have been frequently used, and several exhibits held. On Dec. 29 Library Day was celebrated, with the hope of making it an annual occurrence. The children registered number 2823, and the need of a trained children's librarian is felt.

ILLINOIS

Aledo. At a meeting of the board of directors of the Mercer Township Free Public Library, a site was selected for the location of the library building. The site is on the corner of College avenue and Eighth

street, and is only to be purchased in case it meets with the approval of the Carnegie Corporation in New York.

Chicago. John Crerar L. Clement W. Andrews, lbn. (19th annual rpt.—1913.) Accessions, 14,699 volumes and 11,426 pamphlets; total number of volumes, 322,049, and pamphlets 105,280. Total number of visitors was 154,834. Calls for books numbered 142,262, and for periodicals 17,784, while 4,018 persons were admitted to the stacks. Of the expenditures \$59,094.75 went for salaries, \$6,145.31 for printing, \$10,854.35 for binding, \$23,670.50 for books, and \$10,662.23 for periodicals.

A fire in the supply room in November caused a loss of some \$6000, and by the destruction of binding and other records seriously hindered routine work. Of the printed cards prepared by the library, 211,560 have been distributed to depository libraries and also as gifts, sales, or exchanges. The experiment of using printed cards from the Royal Library of Berlin was found unsatisfactory. While the selection at Berlin was made with care it was found that differences in headings made some cards of no use, while others came too long after the books had been received. In addition to its usual map accessions, the library bought the collection of nearly 6000 maps made by the late Emile Levasseur. The library joined with others in securing the services of Dr. Lichtenstein, librarian of Northwestern University, in buying books in South America, and some large collections were purchased.

Decatur F. P. L. Alice G. Evans, lbn. (39th annual rpt.—yr. ending May 31, 1914.) Accessions, net, 723; total number of volumes, 34,728. Circulation, 110,298.

The North West

MINNESOTA

St. Paul. As a result of the competitive examination, June 11, five were admitted to the apprentice class recently established. The class has now completed the summer library course at the State University and has begun its work in the library.

St. Paul. The gift of \$75,000 by the Carnegie Corporation for the erection of three branch library buildings in St. Paul has been accepted by the city council. A branch library has been established in Hamline Park, in conjunction with the Post Office sub-station. The rooms are provided by the Hamline Mothers' Club. The post office attendant is in charge of the branch. The library numbers 942 volumes.

IOWA

Waterloo P. L. Fanny Duren, lbn. (10th annual rpt.—1913.) Accessions, 1341; total number of volumes, 22,052. Circulation, 97,962. New registration, 1394; total, 8226. Receipts, \$12,874.90; expenditures, \$10,737.39, including books, \$1771.49; periodicals, \$388.44; binding, \$460.96, and salaries of staff, \$4984.93.

MONTANA

Butte. The newly organized juvenile department of the Butte Free Public Library, under the direction of Miss Ruth King, has held weekly story hours in Columbia Gardens during the summer.

NEBRASKA

Omaha. A collection of about 600 volumes, including many books on history and engineering, the property of the late Charles Turner, of this city, has been given to the Public Library.

The South West

MISSOURI

St. Louis. A St. Louis woman, whose name is withheld, has offered to contribute \$1,000 to the Catholic Free Library, provided it has 1,000 members by January. There are now 350 members. The \$1,000 would go toward a reading-room and the purchase of more books.

St. Louis. The *Monthly Bulletin* of the Public Library for June contained a list of 105 organizations that meet regularly in library buildings in the city. Many other organizations not included in the list meet irregularly in library buildings, and there are many meetings held for some temporary purpose by unorganized bodies. The list of those holding regular meetings includes organizations civic and patriotic, educational and literary, industrial, military, musical, outdoor, political, religious, social, and those devoted to social service. The date of organization, membership, and general purpose of each group is given, together with a list of officers.

St. Louis P. L. Arthur E. Bostwick, lbn. (Rpt.—yr. ending Apr. 30, 1914.) Accessions, 33,582 (net increase, 9421); total number of volumes, 385,146. Circulation, 1,535,170. New registration, 21,827; re-registration 11,929; total number of cards in force, 95,351. Receipts, \$255,582.65; expenditures for maintenance, \$224,094.57, including \$136,474.89 for salaries and \$51,198.94 for books, periodicals and binding.

The staff this year, including members of the training class, now numbers 242 persons (94 men and 148 women). Since Feb. 1, after noon

tea has been served members of the central staff between 3.30 and 4.30, each member being allowed ten minutes for this refreshment.

The library bindery was started in January, 1913. Actual work of binding began late in the month with two men and two women at work. There are now fifteen on the force. The total cost of equipment for the bindery was \$587.40. The present output exceeds 200 volumes per month, and soon the library bindery expects to be able to handle all the work.

Former methods of publishing have been continued in the holding of a holiday exhibit of books at Christmas, and of other exhibits on special subjects throughout the year; in the monthly "visitors' nights"; in the co-operative preparation of a poster calling attention to the Public Library, City Art Museum, and Missouri Botanical Garden, under the heading, "Places of interest"; and in the contribution of \$300, together with pictures, charts, etc., to the A. L. A. exhibit at Leipzig.

For the first time the *Monthly Bulletin* has been issued regularly, and new editions of "Books I like," "Information for those desirous of entering the library staff," and "Information for readers," have appeared.

The various buildings have 15 rooms suitable for meetings, and in these 3282 gatherings were held during the year. The use of school buildings has now been extended to all legitimate organizations, and the effect of this on the use of library rooms will be interesting to follow.

A training class of 16 was graduated on June 13, 1913, and in September another class of 17 was enrolled, of whom 15 completed the course in June, 1914.

The recorded use of reference rooms was 195,390, a gain of 33,517. A collection of postal cards of American localities has been begun, and already includes 5,000 views. The art department has been making its strongest effort toward attracting those people who "don't know anything about art." By an arrangement with the City Art Museum a small collection of pictures by contemporary American artists is borrowed and displayed in the library. In addition, nineteen special exhibitions have been held.

The applied science department made special effort to interest the public in its resources, and as a result an increase of 10,000 in the number of books consulted was noted. In the open shelf room it is estimated that from 75 to 85 per cent. of the users were men, and sociology, history, and philosophy are most in demand. A collection of 1534 volumes of music, both vocal and instrumental, is kept in this room, and its circulation was 2685.

A full illustrated account of the children's department (also printed in separate form) runs from page 59 to 107, and describes in detail the various phases of the work.

The six branch libraries circulated 757,479 volumes, or 49.35 per cent. of the library's total circulation. The report contains a very interesting pair of maps of the city. The first shows the population of the city by wards, with the number of aliens of different nationalities in each; and the second, which may be superposed on the first, shows the city divided by its principal avenues, and gives the location of central building, branches, and all delivery and deposit stations.

KANSAS

The Kansas Library Association will hold its annual meeting at Topeka in October.

The July *Craftsman* contains a story by Jessie Wright Whitcomb, based on the work of the Kansas State Traveling Libraries Commission, and entitled "A prairie sod house and the Kansas traveling library."

Arkansas City. During its fifth year the Arkansas City Public Library added 429 books, making a total of 4644 volumes. Its circulation for the year was 18,275, an average of four calls per year for every book on the shelves. Total expenditures were \$2784, of which \$820 was book fund. Mrs. A. B. Ranney is librarian.

Atchison. Efforts toward a new library building at the Western Theological Seminary are being made. It is planned to remodel the brick building west of the main hall for library purposes. When the seminary property was the home of the John J. Ingalls family the brick building was occupied by servants. For several thousand dollars it is claimed it can be converted into a very creditable library.

Junction City. The George Smith Public Library at Junction City has its quarters on the upper floors of the George Smith memorial library building, the rentals from the street floor being used for the maintenance of the library. The expenditures last year were \$4330; and its 9399 volumes were circulated 29,437 times. The reading rooms attracted ten less than 20,000 visitors. The librarian is Miss Garnette Heaton.

Kansas City. Sara Judd Greenman, lbn. (Rpt.—yr. ending June 30, 1914.) Net accession 1439; total 23,519. Circulation 133,442. New registration 4747; total 10,100.

Leavenworth. During 1913 it cost the city \$6101 to maintain its public library of 21,658 books and circulate them more than three times

each among 4652 borrowers. One person in four of Leavenworth's population is a library borrower, and many more are reference users. Irving R. Bundy is librarian.

Manhattan. The high school library of 4000 volumes is being systematically classified and organized by Miss Sarah Hougham, of Manhattan. The library will have quarters in the new high school building.

Nortonville. The Crobarger Public Library is being classified and organized by Miss Marguerite Haynes, of Emporia, preparatory to its opening.

Topeka. The Topeka Public Library circulated 86,212 books during the last year, and 22,000 persons visited the reading room. The receipts of the year were \$9507, of which a little more than \$3000 went into books.

TEXAS

Dallas P. L. Rosa M. Leeper, lbn. (13th annual rpt.—1913.) Accessions 4582; total 41,664. Circulation 102,123. New registration 3755; total 15,321. Receipts \$17,712.77; expenditures \$16,986.75, including \$3332.53 for books, \$353.15 for periodicals, \$810.63 for binding, and \$6107.76 for salaries.

Pacific Coast

WASHINGTON

Bellingham P. L. Grace E. Switzer, lbn. (9th annual rpt.—1913.) Accessions 2917; total 18,246. Circulation 93,517, 71 per cent. fiction, 58.1 per cent. being juvenile. New registration 2372; total 14,573, half the population. Receipts \$9270.98; expenditures \$11,227.79, including salaries \$3698.19, and books, binding, and periodicals \$4450. The average cost of circulating each book was 12 cents.

Olympia. It is expected that work on the new library building will be finished by the first of September.

Seattle. The Seattle Bar Association is working for the establishment of a public law library in the new courthouse. It will endeavor to secure legislation so that the state can help support such an institution.

Spokane. The cornerstone of the new branch library at Montgomery Street was laid June 30.

CALIFORNIA

Long Beach. Back files of many magazines are being sent from the library to men in isolated districts. The cause of the "clean-up" is the conversion of the library magazine stor-

age room into a meeting room. Workmen are at present engaged in making shelves for the storing of all magazines which much be kept and for turning the room over to its new use. The room will be turned over to the public for use as a committee, club or organization meeting place. Under the new arrangement, entrance to the art gallery will be from the reading room.

Oakland. A spirited contest is already under way in several sections of the city for the four branch libraries to be built under the \$140,000 Carnegie gift announced by Mayor Mott on Aug. 5. West Oakland and the annexed district will put in claims, and Allendale, Diamond, Rock Ridge and the Santa Fe districts are also clamoring for the libraries. Improvement clubs are preparing petitions. No action will be taken by the city council until after a conference with the library board. The money for the sites for the buildings, which the city must furnish, will probably be appropriated in next year's budget.

Pomona P. L. S. M. Jacobus, lbn. (Rpt.—yr. ending June 30, 1914.) Accessions 2750; total volumes 25,615. Circulation 105,337; fiction 65 per cent. Registration 4162. Total receipts \$11,581.16 (exclusive of balance carried forward, \$5331.54). Total disbursements \$10,284.93; of this, for salaries was spent \$5668.29, books, magazines, and binding \$2820.78.

Circulation per capita was 8.1, and live membership was 32 per cent. of population. Cost per book circulation was .09, and expenditures per capita .79. The library is collecting local history material, including in this personal narratives, photographs, and printed material. Some literary evenings have been held for adults, and a story hour for the children has been established. Advertisements of the library have been carried in the local street car system, but this form of advertising does not seem to pay. Already established activities have been continued, but the business depression has made it seem wise to begin very little new work, since this would incur new expense. In spite of the fact that less money was spent than the year before, the use of the library has increased, both as to circulation and as to reference use.

San Francisco. Mechanics' Institute L. Francis B. Graves, lbn. (50th annual rpt.—yr. ending Feb. 28, 1914.) Accessions 6249; total 50,776. Circulation 125,650; fiction 72.4 per cent. Membership 3341. Receipts \$16,849.45, of which \$8420.71 was spent for books.

San Francisco. At the last meeting of the board of trustees of the Mechanics' Institute

action was taken toward establishing in this city the most complete technical library west of Chicago. A division of technology will be created within the Mechanics' Mercantile Library, and a graduate of the engineering school of Cornell University, thoroughly familiar with books on technology, has been chosen to organize the department and act as its chief. He has held positions in the libraries of this country, Germany and Switzerland and is at present employed in the Library of Congress.

UTAH

Ogden. Carnegie F. L. Grace W. Harris, lbn. (11th annual rpt.—yr. ending May 31, 1914.) Accessions 1923; total number of volumes 9660 (exclusive of 2938 bound government documents). Circulation 60,440, as compared with 13,924 last year. New registration (net gain) 299; total 8209. Receipts \$7152.45; disbursements \$6463.21, including salaries \$3094.75, and periodicals, books, and binding \$2584.25.

Philippine Islands

Manila. Gifts and exchanges have recently brought to the Philippine Library some interesting documents bearing on Philippine history. The first is a parchment manuscript map of the island of Negros, dated 1572. Surrounding islands and some of the present towns can be identified. Accompanying the map is a description of the island and its inhabitants, covering 17 pages of parchment, prepared by the same person, one Diego Lope Povedano.

Manila. At the close of its year's study of art, the Fortnightly Club, composed of American women in Manila, arranged an art exhibit in the Public Library which was visited by about 900 people in the week it was open. The exhibition included a number of Curtis photographs of Indians, modern French and Spanish etchings, large photographic copies of famous paintings, and several painting proofs. Various art publications belonging to the library were also shown, and some artistic bindings from the Filipiniana division. An art exhibition is not easy to arrange in the Philippines, and the success of this one reflects great credit on the library.

Manila. Four bronze tablets that have a peculiar historical interest in the Philippine Islands have just been placed on the walls of the Rizal reading room in the Philippine Library. These tablets read as follows:

1. Magellan—Discoverer—March 16, 1521.
2. Legaspi—Colonizer—May 8, 1565.
3. Pinpin—Printer—1602.

4. Rizal—Thinker, Author, Liberator—December 30, 1896.

The dates commemorate events as follows:

1. The date on which the first circumnavigator sighted the first islands of the Philippine Archipelago.
2. The date on which Legazpi, the first European to effect a settlement in the Philippines, broke ground for the Spanish fort at Cebu.
3. The first known Filipino printer and the date on which the first book was printed in the Philippines with movable types.
4. The date of the execution of the greatest Filipino of all time, who deservedly holds the high place that has been accorded him.

These tablets were made possible by the personal gifts of members of the Philippine legislature.

Canada

SASKATCHEWAN

A committee of the officers of the newly-formed Saskatchewan Library Association recently had an interview with Premier Scott. The purpose of the organization was outlined and the work accomplished by the Ontario Association was reviewed. The co-operation of the association in the proposed establishment of traveling libraries by the government was promised. J. R. C. Honeyman, the secretary, in presenting the resolutions adopted by the newly-formed association, explained that the first one touching on the formation of a traveling library scheme had already been acted upon by the government. Another important resolution, however, asked for the amending of the School Grants Act, so that where public libraries were formed in rural districts, the boards of the same might have power to take over school libraries, if the latter so requested, and administer their affairs. Another important change which Mr. Honeyman urged upon the government, outlined by resolution passed by the association, was the simplification of the returns asked for by the government. At present the cost of getting out the lengthy report which the government requires is about as much as the government grant. A general report dealing with the work of the library could be prepared at much less cost and with considerably less labor, which would serve the purpose just as well. The association has also passed a resolution praying the government that the Libraries Act and all acts governing libraries be brought under the Department of Education. President A. W. Cameron informed

Premier Scott that the Library Association had in view the holding of library institute meetings throughout the province commencing with next year, and he wondered if the government would be favorable to making an appropriation for that purpose. Premier Scott asked the representatives of the Library Association to tabulate their suggestions in the form of a memorandum so that they might be placed before the members in concrete form, and he was sure they would receive the careful consideration of his government.

Regina. Arrangements have been made to open a music lending section of the library. The use of the collection is free to all, but a special card must be obtained, as music will not be charged on the regular card used for books and magazines. The collection includes songs, oratorios and operas in vocal score, piano arrangements of overtures and symphonies, and the works of the best composers for the piano.

Regina. At the Regina Exhibition held at the fair grounds the week of July 27, the Public Library had an attractive booth, designed by J. R. C. Honeyman, the chief librarian. The exhibit showed every phase of library administration and equipment, card systems used and samples of the different classes of books on the shelves of the library. On one wall of the booth was exhibited a plan of a model library building to cost about \$10,000, holding about 7,000 volumes, suitable for a small town, and beside it a specification and estimate of equipment for same. Another drawing showed a library suitable for a village, calling for about \$3,000 for the building and \$800 for equipment. Views of the leading libraries of the United States and Canada were also shown, together with literature and photographs illustrative of the traveling library system in Wisconsin and Minnesota, and the social work of the Chicago Public Library.

Foreign

GREAT BRITAIN

An account of the library of the Medical Society of London, relating mainly to its founding and early history, is published in the *Library Association Record* for May. The account is written by George Bethell, registrar and librarian of the society. The library at present contains about 23,000 volumes and a unique collection of printed tracts on medical and allied subjects, together with about 500 manuscripts.

In the *Library Association Record* for May (p. 239-263) is a memoir of the late James Duff Brown by James Douglas Stewart of the Islington Public Libraries, followed by some personal impressions by Thomas Aldred, Ernest A. Baker, Charles H. Benn, Miss Olive E. Clarke, Henry T. Coutts, Melvil Dewey, William E. Doubleday, Dr. Hallier of Hamburg, Germany, L. Stanley Jast, George H. Locke, H. Keatley Moore, Miss O. Mühlenfeld of Hilversum, Holland, Paul Otlet of Brussels, Miss Kate E. Pierce, Charles Riddle, Ernest A. Savage, W. C. Berwick Sayers, A. S. Steenberg of Denmark, and Henry R. Tedder.

Aberdeen. The *Aberdeen University Review* for February has an interesting article on "The University Library: past and present," by P. J. Anderson, the librarian. The article is accompanied by a full-page half tone of the east end of King's College Library.

A collection of books seems to have been part of the equipment of the College of St. Mary in 1505, and between 1532 and 1545 a special building was erected to serve as a "librarie hous." The building was allowed to fall into disrepair, and various makeshifts were employed until James Fraser, a graduate of King's College, and librarian of the Royal Library in the early part of the 18th century, remembered his alma mater with many gifts, among which were included the rebuilding of the "librarie hous," the augmenting of the collection of books, and the provision of a salary for the college librarian. In 1773, however, his buildings were torn down and the material used for building manses for several members of the Senatus. The books were moved to the chapel, where they were kept for nearly a century. The present library building was completed in 1870, and an extension has recently been authorized that will almost double the present shelving capacity.

Meantime the money originally intended for the librarian's salary, which had been increased until the librarianship was the best paid office in the college, was diverted into other channels. In 1836 an act was passed substituting an annual compensation grant to the four Scottish universities for the copyright privileges previously enjoyed, under which Aberdeen, whose library had been increasingly neglected, received the least of the four, getting only £320. This condition lasted till 1889, when the annual amount was increased to £640, which is still paid.

Under the Universities Act of 1858, an ordinance was enacted that the general library

of the university should be kept in the King's College Library. At the present time the special libraries of law, medicine, and natural science are located in the Marischal College. The books are arranged on the shelves according to subject—an arrangement fully carried out at Marischal College, and to be completed at King's College when the extension of stack room is completed. The classification is a modification of the Dewey system.

In general free access is given to all books, and except certain reference books in the reading rooms, volumes may be freely borrowed by readers. For this purpose the readers are dealt with in different groups, including members of the staff, matriculated students, graduates, research workers, and other libraries.

In 1899 a series of publications called "Aberdeen University Studies" was started, its main object being to stimulate original research within the university and to prove a bond of union between alumni. The university librarian is general editor of the "Studies," which already cover a wide field.

The present revenue of the library is about £3600, of which about £2000 is available each year for the purchase of books and periodicals. Except for the librarian, all members of the library staff are women.

In conclusion, the true aims of the library are set forth in some detail. It is not considered the province of the library to furnish the text books required by the ordinary student, nor to compete with the public libraries in supplying contemporary literature of interest to the general reader. On the other hand, it should be the aim of the library to supply treatises and books of reference on the several branches of university study, and to supply transactions of learned societies and the leading journals devoted to special branches of knowledge. Lastly, it should be the aim of the library to acquire all publications bearing on the district of which the university is the natural center, the collection to include not only all books and pamphlets relating to the district but all publications produced by alumni of the university.

Birmingham. The Northfield Public Library, which was burned by militant suffragettes in February, will be rebuilt.

Cambridge Univ. L. F. J. H. Jenkinson, lbn. (60th annual rpt. of Library Syndicate—yr. ending Dec. 31, 1913.) Accessions 59,340. Ninety-one persons not members of the university were granted annual or quarterly tickets of admission. During the year 30,118 books were borrowed from the library as compared with 31,492 in 1912. Of this num-

ber 888 were borrowed under the librarian's order. Readers consulted 2,132 manuscripts and other select books in the library. For the general catalog 11,880 titles were printed, 7,920 being for new books and 3,960 for books recataloged. Revision of the catalog involved the shifting of 53,959 other slips. A collection of editions of the Testaments of the Twelve Patriarchs was received from Dr. Robert Sinker, for 36 years librarian of Trinity College, who died March 5. The income for the year was £8,377 and expenditures £8,162, which included £4,130 for salaries. £2,093 for books, £858 for binding, and £400 for printing and stationery.

Coventry. The Public Libraries have recently sent out a very attractive pamphlet descriptive of the library system. Besides the historical sketch there are portraits of the late John Gulson, an ardent worker for the establishment of a public library and the donor of the land and building occupied by the present Reference Library, and of Andrew Carnegie. Exterior and interior views of the central library and of the branches, with floor plans, are also included.

Manchester. The John Rylands Library is to be enlarged at a cost of between £50,000 and £60,000. The architect in charge is Basil Champneys. A brief historical description of the library and its contents, illustrated with many views of the building and facsimiles of its most treasured contents, was issued last spring. The building is said to be one of the finest specimens of modern Gothic architecture in existence, built almost entirely of stone and as nearly as possible fireproof, with a capacity of about 100,000 volumes.

Norwich. The reference department of the Norwich Public Library has been augmented by the library of the late Bosworth W. Harcourt, who bequeathed his collection of about 2,250 books and pamphlets to the library, on condition that they should "not be placed in circulation but only read or consulted within the library." The collection includes many volumes dealing with the history and antiquities of Norfolk and Norwich.

Norwich. On the occasion of the George Borrow celebration in Norwich last year, the house in which Borrow resided with his parents when in Norwich, was acquired by Mr. A. M. Samuel (then Lord Mayor of Norwich) and generously presented by him to the Norwich Corporation with the view of its being maintained as a Borrow Museum. The Norwich Public Library Committee has just undertaken to collaborate in the develop-

ment of the literary side of the Museum, and would therefore gladly welcome donations or information respecting the whereabouts of any Borrow letters and manuscripts, engravings or photographs of Borrow's friends and places described in his works, and other items of Borrowian interest. Donations or information should be sent to George A. Stephen, the city librarian.

Oxford. *Bodleian L.* Falconer Madan, lbn. (Rpt.—1913.) Accessions totalled 97,795 pieces, of which 29,856 periodicals, 859 parliamentary papers, 5,164 maps, and 14,147 books and single sheets were acquired under the Copyright Act, 36,506 by gift or exchange, and 8,469 by purchase. The new Bodleian Statute, approved by the curators in 1912, was accepted by convocation as a statute of the university on May 20, 1913. It is an adaptation of the old Latin statute, brought up to date in several respects, and making more clear the responsibility of the curators as the board of management of the library. A subway was constructed connecting the Bodleian Quadrangle with the Radcliffe Camera. It is for the use of the staff only, and used in connection with a new book-lift, will greatly facilitate the transfer of books from one part to the other.

GERMANY

Berlin. The Municipal Library of Berlin, which in 1908 had only 60,000 visitors, to-day stands second only to the Royal Library in popularity. Plans are now being perfected for a new and separate library building. This building will also contain the municipal archives, and the upper floors will be devoted to a municipal art gallery, in which will be gathered the many priceless works of art now belonging to the city but scattered in many places.

FRANCE

Paris. It is reported that a newspaper library is to be established here where the 9000 newspapers and periodicals published in France will be filed and cataloged.

SWITZERLAND

Davos. A collection of 2000 volumes has been offered by Count Tyszkiewicz to start a library here. The library is to be known as the Library of H. Sienkiewicz, in honor of the author of "Quo vadis."

ITALY

Venice. The National Library in Venice, which in 1905 was removed from the Palace of the Doges to the Zecca, has been so enlarged by gifts and other acquisitions that

new quarters have become an absolute necessity. The increase is especially due to the following gifts: The Tessier collection (about 10,000 works and brochures) presented by the widow of the famous historian G. B. Cavalcasse: Salvio's dramatic collection (about 10,000 theatrical pieces), and the library of the linguistic expert Teza (some 30,000 volumes, 9000 brochures, and Teza's correspondence).

RUSSIA

Tygodnik Ilustrowany [Polish Illustrated Weekly], in its issue for May 23, 1914, has an article on "The library of Zygmunt, Count Czarniecki," who was known as a collector of works of art and of books on Polish literature of the fifteenth, sixteenth and seventeenth centuries, and of books on religious disputes of the sixteenth and seventeenth centuries. In 1875 he sold all his collection except the much loved books. Shortly before his death, fearing expropriation [from the German government], he made up his mind to sell his library, and after his death (1908) it became the property of the Library of Count Baworowski's Foundation in Lemberg, for 180,000 marks, half the original price, the rest of its value being considered a gift to the Polish nation. The library comprised only 7218 volumes but is valued for its unrivalled completeness in early Polish literature.

Beginning with the March number the *Vyestnik Yevreyeskavo Prosvyeshcheniya* [Messenger of Jewish Knowledge], the organ of the "Obshchestvo Rasprostraneniya Prosvyeshcheniya mezhdru Yevreyami v Rossii" [Society for Spreading Knowledge among Jews in Russia], will devote a special section in each number to the Jewish library world, the St. Petersburg Library Commission and that of Moscow co-operating in its publication. The section will consist of articles on Jewish libraries of every kind, articles on library questions in general, lists of all new books on the Jewish language, Judaica, and lists of confiscated books. Special attention will be given to Jewish literature for children. This periodical is issued in St. Petersburg.

Cracow. The 1913 report of the Biblioteka Jagiellonska of the city university, printed in the Polish monthly *Ksiazka*, shows an increase of 7,260 volumes in 1912, 6,418 volumes, 2 manuscripts and 2 early printed books, making a total of 429,355 volumes, 6,448 manuscripts, 2,875 rare early printed books, 400 duplicates, 3,257 maps, 9,862 drawings, 4,494 music scores, and 37 medals. In spite of very limited means (36,000 kronen per year), this

library hopes to become a Polish national library, as the Polish publishers agreed some time ago to furnish the library with copies of every book they printed. Statistics show a slight increase in the number of readers. In 1912 there were 41,000 readers using 135,819 volumes, with a daily average of 154 readers and 498 volumes. The administration intends to open more reading rooms and to lengthen the hours, keeping the library open from 7 to 9 p. m. It also proposes to have library courses in Cracow University and that of Lemberg.

Lemberg. The last report of the Lemberg University Library was printed in No. 3 of the Polish Monthly *Ksiazka*. It records an increase of 5,505 titles in the library in 7,950 volumes, making a total of 240,000 volumes. Of these 1,644 volumes came as gifts from the Galician publishers, 1,983 volumes from institutions and government publications, and 1,278 from individuals or private institutions. In 1913, 67,935 readers used 220,317 volumes in the reading rooms, and 8,917 readers called for 17,710 volumes for outside reading, making a total of 76,852 readers and 237,183 volumes. The increase in circulation was 1,455, thanks to easier access to the improved card catalog, and handy catalog of periodicals and publications in the library. The University Library of Lemberg was founded in 1774 by order of Joseph II, from the books of the confiscated cloisters of Galicia. In 1848 it was almost completely destroyed by fire. Its collection was restored from contributions of duplicates from the Biblioteka Ossolinskich and the collection of S. Borkowski, so that in 1898 it once more contained 100,000 volumes and 4,000 manuscripts.

Moscow. It is reported that Tolstoi's house in the Khamovnicheski Pereulok is to be preserved in its present state and that upon the grounds a great library building will be erected in Tolstoi's memory. This building will house a library, a museum, and an elementary school.

Warsaw. The Polish weekly *Tygodnik Ilustrowany* (No. 24, 1914, p. 467-468) states that the efforts of the Public Library Society to open a public library in Warsaw have been successful. The library now contains 70,000 volumes. Its building was erected by Mrs. E. Kerbedziowa. The present capacity of the stack is 300,000 volumes, and it can be enlarged to hold another 500,000 volumes. To maintain the library it is estimated that 30,000 rubles are needed. The society has an assured income of only 6000 rubles from its regular

members, and 1700 rubles from its subscribers, leaving 22,300 rubles to be raised. The president of the library, Antoni Osuchowski, has asked all Poles to come forward with subscriptions, in order that the library may be able to work properly. The library will be known as the Biblioteka Stanislawowstwa Kerbedziow.

ARGENTINA

Buenos Ayres. Plans have been perfected for the establishment in the Argentine pavilion at the Panama-Pacific Exposition at San Francisco, of a library to contain works by the best known Argentine writers of the past and present. The Argentine library will be in charge of experts who can point out to visitors what kind of literature may serve special purposes or throw interesting light on the nation's affairs. Sarmiento, Mitre, Avellaneda, Ameghino, Alberdi, and many other noted authors will be represented through their complete works. The Argentine Social Museum is a prime mover in this library undertaking. The allied institutions of the museum are requested to contribute literature that comes within their special province.

NEW ZEALAND

Ernest J. Bell, librarian of the Canterbury Public Library at Christchurch, has contributed an article on "Public Libraries in New Zealand" to the *Library Association Record* for April. The total population of New Zealand in 1911 was estimated to be 1,087,848, of which number nearly 50,000 are Maoris. There are only four principal cities, Auckland and Wellington in the North Island, and Christchurch and Dunedin in the South Island. Besides these cities there are only seven towns having a population between 8,000 and 16,000, and the most active library work is done by the four large cities.

The first act providing for the establishment of public libraries was passed in 1869, which was subsequently modified in 1875 and 1877. In 1884 the first subsidy of £6,000 was voted, but it was reduced in 1886 to £4,000, and during the next twelve years no grant was made. From 1910 to 1912 £4,000 was available for distribution, usually under the following method: An addition of £25 is made to the amount of income of each library, provided the receipts for the year are not less than £2, and it is made a condition that the whole of the subsidy must be spent for books.

The first library conference was held at Dunedin March 26-29, 1910, and the New Zealand Library Association was formed. Subsequent conferences have been held yearly.

Of the principal libraries, that at Wellington was opened in 1893. The reference library contains about 16,000 volumes, the lending department 13,000, and the juvenile library 2,000. There are a number of books for the blind, and free lectures are given during the winter. There are two branches besides the central library and free access has been adopted in all buildings. The library is controlled by the city council, and is supported by a tax of 1-14 d. in the £ on unimproved value of land, yielding about £2,300 per annum.

The Auckland Library was originally private, and known as the Mechanics' Institute. It was opened to the public in 1880, and was the first in the Dominion to be supported by taxation. The cornerstone of the present building was laid in 1885. The library has several fine collections of books and paintings, and has three branches. There are 34,534 volumes in the reference collection and 14,884 for circulation. The tax rate is ½ d. in the £ and yields about £1,700 annually.

The Christchurch Library had its origin in a mechanics' institute and library which was opened August 4, 1859. In 1869 its name was changed to the Christchurch Literary Institute, and in 1873 its control was given over to the board of governors of Canterbury College. The library receives all its income from various endowment funds, receiving over £2,000 each year. The reference library has about 20,000 volumes, the lending library 30,000, and the juvenile 2,000. Free access has been adopted in all departments. The reference library is classified on the Dewey system, and the lending library is being reclassified on the same system.

The Dunedin Public Library is one of the latest, having been built with Carnegie funds at a cost of over £10,000. The newspaper and magazine room was opened in 1908, the reference library in 1909, children's room in 1910, and adult lending library in 1911. Card-charging and safeguarded open access are used in the adult department, and free access in the children's room. The library is controlled by the city council and is supported by a tax of 1 d. in the £, yielding annually about £2,400. The reference department has 6,734 volumes, the circulating 11,134, and the juvenile 2,305.

A fact worthy of notice is that only trained librarians are being appointed to the librarianships, and in general salaries, both for librarians and assistants, are higher than in England, while hours of service average about 44 per week.

LIBRARY WORK

Notes of developments in all branches of library activity, particularly as shown in current library literature.

General

History of Library Economy

LIBRARY BIOGRAPHY

E. W. B. Nicholson (Bodley's librarian, 1882-1912): in memoriam. Henry R. Tedder. *Lib. Assn. Rec.*, Mr., 1914. p. 95-108.

Read at the annual meeting of the Library Association at Bournemouth in 1913.

Edward William Byron Nicholson was born at St. Helier, Jersey, Mar. 16, 1849. He graduated from Trinity College at Oxford where he won several prizes. While at Oxford he was honorary librarian of the Oxford Union Society in 1872-73. He was a hard reader at Oxford and took part in all university sports. He was not unsocial, but did not make many friends.

In 1873 he was appointed librarian of the London Institution, where in spite of much opposition he entirely reorganized the library and greatly improved the lending library.

After the organization of the American Library Association in 1876, Mr. Nicholson in several articles urged the advisability of a similar meeting in London, and in April, 1877, invited the principal librarians of the city to meet at the London Library. It was then resolved to hold a conference in the autumn, and an influential organizing committee, with Mr. Nicholson as secretary, was appointed. The Library Association of the United Kingdom was formed at this conference, with Mr. Nicholson as one of the secretaries, an office which he resigned in 1878.

On the death of Dr. Coxce, the Bodleian librarian, the curators decided to select a librarian of a new type, and after much search and deliberation appointed Mr. Nicholson. "Perhaps a cyclone was wanted to bring freshness into the air of Bodley, but probably no one looked forward to a cyclone which lasted thirty years."

In the first five years he was in office, some of the chief events were an increase in the staff, the introduction of boy-labor, a new code of cataloging rules, the development of the subject catalog as well as of the shelf-classification of printed books, improvements in the methods of binding books, manuscripts, and music, the incorporation of minor collections and the dispersal of certain donation-collections, much increase in the facilities

for readers, and the establishment of a course of instruction in palæography. A plan to reorganize the library's collection of coins and medals, second only to that of the British Museum, was also one of his achievements.

He was always a zealous champion of the honor and dignity of Bodley, but while his methods were often successful he was not popular among his fellow dons. The underground storeroom, with a capacity of over a million volumes, which was opened nine months after his death, was planned by him.

He was always ambitious of distinction in letters, and his literary productions were many and diverse, but his success was not conspicuous. He had the qualifications of scholarship, untiring industry, originality, a ready pen, a clear style; but everything he wrote was cramped by his anxiety to be thorough and exact in the wrong place and by his microscopic attention to unimportant detail.

Though muscular he was not constitutionally strong. For the last year or two his powers failed, and he died in harness Mar. 17, 1912, having been Bodley's librarian rather more than thirty years. He was a born fighter, more of a driver than a leader, more notable for character than for pure intellect. He had enemies, but even these recognized his noble aims, his conscientiousness, his untiring energy, and his devotion to the library and the university. Extremely self-centered and convinced of the soundness of his own opinions, he yet had an almost tremulous desire to be perfectly fair. At Oxford he led a solitary life, wrapped up in official cares and private studies; in his domestic circle he was a devoted husband and an affectionate father.

Biographical sketches of librarians and bibliographers: II. William Frederick Poole, 1821-1894. William I. Fletcher. *Bull. Bibl.*, Ap., 1914. p. 30-31.

Dr. Poole was born in Salem, Mass., Dec. 24, 1821. He graduated from Yale in 1849, having spent three years teaching to earn his tuition and other expenses. While in college he was librarian of a leading literary society, and in his junior year published the first edition of his Index. He became librarian of the Boston Mercantile Library in 1851, and published the second edition of the Index in 1853. He was librarian of the Boston Athenæum from 1856 to 1868, then after a year

spent as organizer of several important new libraries, among them the Cincinnati Public Library, became the librarian of the latter in 1869, leaving it in 1873 to take charge of the nascent Public Library of Chicago, where he stayed fourteen years. From there he went to the organization of the Newberry Library of Chicago, where he spent his closing years.

Dr. Poole was one of the founders of the A. L. A., in 1876, and was its second president. With the co-operation of about fifty collaborators, a new edition of the Index was prepared, appearing in 1882 in a royal octavo of 1442 pages. Dr. Poole himself did a large share of the work on this volume and on the first 5-year supplement, issued in 1887.

Dr. Poole was truly a pioneer in librarianship. His work was largely done at a time when there were no accepted standards or methods in the profession, and he was recognized as a leader in the development of library work. While a leader in the newer librarianship, which lays stress on the utilization of books, he was an "old-fashioned librarian" in the sense that he had an intense love for books as literature and for bibliography. In this way librarianship was to him a fine art, and he had little interest in tendencies to make it a technical pursuit.

He wrote many articles, chiefly on American history. In 1882 he received his doctor's degree from Northwestern University, and in 1887 he was elected president of the American Historical Association. In 1893 he was chairman of the committee on literary congresses at the World's Columbian Exposition, and his friends felt that his work on this committee hastened his death, which occurred March 1, 1894.

Scope, Usefulness, Founding

Library as an Educator

VOCATIONAL GUIDANCE

The library and vocational training. *Pub. Libs., Ap.*, 1914. p. 161-163.

Extracts from an address by Miss Mary E. Hall before the New York teachers. The first point made was the need of vocational guidance through the library. Many boys and girls leave the elementary schools before they are mentally, morally, or physically fitted for work, because they lack guidance and because their interest is not held. An organized effort is now being made to bring together the employer and the would-be employes from the schools.

The aim of vocational guidance is to help each student find what is for him the best pos-

sible work. Miss Hall dealt with methods, and explained the duties of a "vocational counselor." He may be a specially trained person who has made a study of the various occupations of the city and is in a position to give advice and information to teachers and parents and the pupils themselves. In most schools a teacher does this, though in some cities vocational bureaus have been established and in others employment bureaus are maintained by the schools or by the chambers of commerce.

Miss Hall suggested that the librarian (1) read the best opinions on the work; (2) see what local work is being done along this line and how best the library can help; (3) gather in one place all the literature the library has on the subject, clippings as well as books, with a card index to the material; (4) have special shelves for teachers, others for pupils, grouping books to suit their interests; (5) use the bulletin board to stimulate interest in good biographical material; (6) organize clubs among the pupils and encourage debates and lectures on different occupations; and (7) do constant personal work with the boys and girls.

Library in Relation to Schools

WORK WITH SCHOOLS

The July number of the *Quarterly Bulletin* of the Jacksonville Public Library enumerates the following methods by which the library helps the schools:

"It provides classroom libraries of books suitable for home circulation from the schools.

"It provides supplementary school readers in sets of thirty-five copies for school work.

"It grants the principal the privilege of selecting school duplicate collections of 100, 200 and 300 books.

"It grants a special card to all teachers, which allows them the privilege of withdrawing twenty-five books for a long period of time.

"It circulates pictures from its picture collection; and mimeograph copies of poems and essays for school work.

"It compiles reading lists for the children, study lists for the teachers and reference lists for the students.

"And it stands ever ready to help the teacher to solve all of those problems which arise in her daily work."

Library Extension Work

LANTERN SLIDES

Mr. F. W. Faxon describes in the *Bulletin of Bibliography* for April, 1914, his method

of keeping his collection of lantern slides in order. A water-color stripe is painted on the edge of the black paper binding of the slides, different colors being used at different distances from the center of the slide to designate different countries or classes. If a slide is upside down or reversed the break in the color line shows it at once, and prevents the picture going wrong on the screen.

Library Development and Co-operation

CO-OPERATION BETWEEN LIBRARIES

The Public Affairs Information Service. John A. Lapp. *Spec. Libs.*, Je., 1914. p. 86-88.

Much official and unofficial literature in support and opposition is produced on every public question. No single library is equipped to cover more than a small part of the sources of information on the questions with which it deals. Many agencies supply the needs of the general library, and they are useful to the special library also, but since the special library begins where the general library leaves off, much additional research must be done. Hence in June, 1913, a number of special librarians meeting at Kaaterskill decided to undertake a plan of co-operation. Fifty institutions have been enrolled, many of them are co-operating effectively, and a system of exchange has been developed. Headquarters are with the Indiana Bureau of Legislation, whose staff volunteered their services for the first year. Each institution pays \$25, which is used for postage, stenographic hire, etc. Up to May 1, 1914, thirty-six bulletins had been issued, containing about 1800 first-class references.

Particular attention has been paid to state and municipal legislation and administration. Legislative investigations are closely followed, and so far as possible municipal investigations and special reports of city clubs, commercial clubs, boards of trade, and other civic and trade bodies dealing with public affairs. The most prolific source of information is the national, international, and local associations and organizations in the fields of social science, political and economic science, business, industry, and public affairs. The reports and studies which these organizations issue are the most definite, concrete, and usable material coming into the library. Other sources of information will be covered as soon as possible.

To make the enterprise independent and self-supporting, some conclusions are submitted:

1. Since the co-operative method of getting information has been only partly successful, it is proposed to raise the subscription to \$50,

with credit of one dollar (up to twenty-five) for every acceptable item contributed.

2. The subscribers should be divided into two classes, to allow the smaller libraries to receive service at a lower cost.

3. The bulletins should be issued on cards that may be filed.

4. An independent staff should be engaged to give all its time to the work.

Founding, Developing and Maintaining Interest

CO-OPERATION FROM DOCTORS

During the year in co-operation with a committee of the Kent County Medical Society, the Grand Rapids Public Library prepared a list of all the periodicals taken by the physicians in the city so far as this was possible. More than 100 doctors reported and from these the library listed on cards, under the name of each periodical, the names of all persons taking it. This directory is filed in the medical reading room and the doctors are planning to publish it for the benefit of the medical profession. The work was done by the catalog department. At the time of making up the list 49 medical periodicals were on file. In addition to the periodicals taken by the library there are 84 medical periodicals taken by physicians, so that there are available for students in Grand Rapids 133 current medical publications.

Library Buildings

Fixtures, Furniture, Fittings

LIBRARY FURNITURE

Discipline and furniture. W. E. Henry. *Pub. Libs.*, Je., 1914. p. 238-241.

The writer, librarian of the University of Washington at Seattle, has designed a stationary table and chair that isolates the reader and at the same time economizes space. The tables are 36 x 40 inches, with a partition across the surface giving each reader 36 x 20 inches. The chairs, which are more like benches, are made back to back, and chairs and tables are ranged in rows, with a 2-foot aisle on either side. A diagram giving all dimensions accompanies the article.

Government and Service

Executive Librarian

QUALIFICATIONS FOR A LIBRARIAN

The backs of books. William Warner Bishop. *Bull. of the N. Y. P. L.*, Jl., 1914. p. 677-681.

An address at the commencement exercises of the Library School of the New York Public Library.

One important difference between the graduates of a library school and of an ordinary school or college, is that while the latter have been busy gathering from books the theory and training they will soon begin to exercise, the former have been learning how to handle books in masses for the benefit of other people. What has been gained in theory is to be applied in practice to the very material from which the theory has been evolved.

The chief defect of our American libraries is, perhaps, the exaltation of method over content. "How far may a librarian actually recall the titles of books, much less know their contents? . . . I once asked my honored friend Mr. Anderson H. Hopkins, then assistant librarian of the John Crerar Library, how far he was personally familiar with the books in that institution—I knew they had all passed through his hands (for the library was then new), and that he had a very retentive memory, but I was hardly prepared to hear him say that up to the first sixty thousand volumes purchased he could recall practically every title, but that above that number he began to lose track of the accessions. . . . Such men as Dr. Spofford and Mr. David Hutcheson of the Library of Congress doubtless knew intimately several times that number."

The older choice libraries of about one hundred thousand volumes were probably pretty well held in mind by their directors. Not that they had all been read, but they were known well enough to help others get what they wanted out of them. It should not be forgotten that this knowledge is one of method as much as of the books themselves. It is the librarian's familiarity with classification and cataloging that makes for speed and accuracy.

The librarian must not content himself with knowing only the backs of books, else his mind "will be an intellectual rag-bag after ten years." Some intensive work along some line involving study should be done, for even a small specialty, well cultivated, is worth vastly more than the mere knowledge acquired. The very fact of intensive study keeps the student in touch with methods and men, and is an admirable corrective to the scattering tendencies of librarianship. The leaders of the profession in America, such men as Justin Winsor, Dr. J. K. Hosmer, Dr. Reuben Gold Thwaites, Dr. Poole, and Dr. John Shaw Billings, all attained to productive scholarship, while being at the same time good administrators of large libraries.

Rules for Readers

Readers' Qualifications

REGISTRATION

In an attempt to discover why about one-half of the new borrowers of the St. Louis Public Library fail to re-register, the library during the past year sent out the following communication to one thousand former borrowers:

"In going over our files we find that your reader's-card, which expired more than two years ago, has never been renewed. We should be much pleased to have you use the library again. With a view to the improvement of our service we are anxious to learn the reasons why some of our readers discontinued their use of the library. Kindly reply on the attached card, checking the items that apply in your case or adding others if necessary."

On the reply card attached were questions covering the following: Removal from city; inconvenience of location; failure to get desired books; attitude of assistants; lack of time; use of another library; and blank spaces for other reasons.

The 1913-14 report thus summarizes the result of the investigation:

"Of the thousand persons to whom cards were sent the postoffice was unable to find 389. The assumption is that the majority of these have died or have removed from the city. To the 611 cards that were delivered there were only 108 replies. The 503 persons who failed to answer are presumably indifferent, or if they are dissatisfied with the library service they do not care to make it known. Of the 108 who replied, a few giving more than one reason, 25 had removed from the city; 14 said our location was inconvenient; 10 reported failure to get desired books; 39 pleaded lack of time; 4 were using another library; 7 had died, and 23 gave various other reasons. None found fault with the attitude of the staff. Some of the miscellaneous reasons assigned were 'ill health'; 'buying own books'; 'reading only magazines'; 'dislike shelf arrangement'; 'too much picture-show'; and 'too many steps to climb to enter building.'"

Hours of Opening

LIBRARY HOURS

A long delayed duty. *Pub. Libs., Je., 1914*, p. 248.

Editorial, advocating the opening of libraries in towns of 15,000 inhabitants, both evenings and Sundays, even if necessary to close them mornings to procure the necessary funds.

Reference Use

SIMPLIFYING LIBRARY SYSTEM

Library heresies. Sarah B. Askew. *Pub. Libs.*, May, 1914. p. 191-196.

A paper read before the New York State Library Association at Lake George, September 26, 1913, and presenting in a breezy way a plea for greater simplicity in the numbering and arrangement of books on the shelves, and in preparation and filing of catalog cards, so that much of the confusion now felt by the general public when confronted with an up-to-date catalog and shelving arrangement may be eliminated. There is also a warning to those librarians who are disposed to take up too many kinds of social work, lest they neglect the work of the library itself. Of personal qualifications Miss Askew says, "It is no one's duty to change their disposition or their habits to suit their work. If we find we have got to change our personality to fit our work, don't let's do it. Let's change our work." Further, "I do not believe the 'pronouncement' that we must bring to every man, woman and child the book belonging to him, means always to give him a book on his trade. . . . It is a higher thing to go beyond that and give to him the book that will teach him the spirit of citizenship."

Administration

General. Executive

PROCESS SLIPS, OR "TRAVELERS"

The *Bulletin of Bibliography* for April, 1914, describes the use of the process slip in the Public Library of the District of Columbia and in Cambridge, Mass., which adapted its slip from the one used in Washington. When the new books are received, one of these slips, with blank spaces for the recording of information, is put into each one, and the slip stays with the book till every process has been completed and recorded.

Treatment of Special Material

LOCAL HISTORY MATERIAL

The duty of the public library in relation to local literature and bibliography. William Pollitt. *Lib. Assn. Record*, Mr., 1914. p. 119-126.

The public library movement in England might be divided into three periods: (1) justification, (2) progression, and (3) systematization. So at the present time book collection is replaced by book selection, and extension of resources is largely replaced by systematization of material already on hand. Classification, cataloging, bibliographical work and the compiling of indexes to periodicals have been high-

ly developed. One department, however, that of local history, is apt to be neglected.

The local collection is often simply a museum of miscellaneous material, seldom arranged in definite order. Considering that for matters of local importance the public library is the first and last hope, the collection should be cared for in the most efficient way possible. While catalog entries of local material should be in the general catalog, there should also be kept a separate catalog, which could be used as the basis of a local bibliography which every library should try to make. A reasonable number of analyticals should be included in this catalog. Just as libraries engage special assistants for classification and cataloging work, so there should be one for local historical and bibliographical work.

PICTURES

The Haverhill mounted picture collection. John G. Moulton. *Bull. Bibl.*, Ap., 1914. p. 32-33.

This collection was begun in 1900 when the periodical called *Masters in Art* gave inexpensive but worthy reproductions of great paintings. After some experimenting it was found that "seconds" of mounting card, 22 x 28 inches, could be bought in quantity at about \$3.25 per hundred. Each sheet is cut into four parts, 11 x 14, and cutting costs about 40 cents per hundred, making each mount cost about 4-5 of a cent. The best weight is 10-ply, the best color for black and white photographs and half-tones is steel or ash gray, and for carbon photographs and colored prints, buff or brown. Paste is made from a prepared powder used in shoe factories, costing 50 cents for five pounds. All pictures are mounted well and permanently.

Popular subjects are chosen, such as reproductions of paintings and sculpture, portraits, pictures of places, animals, birds, flowers, trees, articles of commerce and science, and illustrations of trades and occupations. Expensive photographs are not used. Many pictures are cut from duplicate magazines and discarded books, and Perry pictures and similar prints, post-cards, and portfolios of local views collected on vacation trips, are used.

The pictures are stored upright on wooden shelves 14½ inches wide. Each shelf is divided into pigeon-holes 12 x 4½ inches, and pictures are crowded in rather closely. The pictures are numbered in one corner of the back and the pigeon-holes are labeled. Pictures of paintings are arranged alphabetically by artists. Portraits, when the artist is unknown, are arranged alphabetically by the person, and with the portraits are grouped all

pictures associated with the subject and his work. All other pictures are classified by the decimal system.

The collection has proved to be practical, useful and popular, but it requires much care and is rather expensive, as to be really efficient it must be large and constantly growing.

Accession

BOOK SELECTION

Vain pursuits and their relation to public libraries. Arthur J. Hawkes. *Lib. Asst.*, Mr., 1914. p. 45-51.

The question discussed is: Should public libraries spend large sums of money in the purchase of literature to assist dilettante research? Within this category the author includes all books relating to the collecting hobbies, whether stamps, china, prints, or furniture. On the hypothesis that "the success of the public library movement is to be measured in terms of community, not individual value," he concludes that only such books should be purchased as are likely to increase the value of the community. He maintains that the pursuit of the above-mentioned hob-

A letter giving the results of a comparison of *Scribner's*, *Harper's*, and the *Century* magazines for four months, with a view to discovering their relative worth. The conclusion is that *Harper's* leads in fiction, with *Century* second. Almost a fifth of the pages of *Scribner's* are devoted to travel, while the *Century* leads in sociological articles. *Harper's* had a half-dozen articles that might be called history or reminiscence. In art and literature, in addition to the Easy Chair, *Harper's* had one article, the *Century* six, and *Scribner's*, besides its monthly Field of Art, four. The proportion of articles by well known writers was about the same in the three periodicals.

LOOSE-LEAF ACCESSION BOOK

The library of the Rochester Theological Seminary uses a loose-leaf accession book of its own design. The accompanying diagram shows the arrangement of the page. The description is given in the librarian's own words: "We use for accessioning an L. C. Smith & Bros. model 3, that writes a 12½-inch line. The sample page [10½ x 14 inches] is 1-10 of an inch too long, making it necessary to use

bies, while giving pleasure to the individual, are barren of profit to the community at large and so should not be served by a community institution. Again, an enormous amount of historical literature of little practical value, accumulates in the public libraries, and its "constant re-writing . . . by graduates of quite indifferent abilities, who find it an easy road to a pseudo reputation, is becoming a public nuisance." Though libraries, like education, are not directly productive, yet it is held reasonable to expect that their results should be commensurate with the money spent upon them, and when discrimination between two books becomes necessary, the one most likely to create a new value to the community at large, should be chosen.

the 'margin release' key to write the last figure of the price. We shall remedy this mistake when we print next time. We find the advantages to be that we have a much lighter book to handle; that two or more persons can be working on the book at the same time (one or more writing and one or more using for other purposes); that accessioning can be done much more rapidly than by hand, even with only one working; but if one dictated and another wrote, while a third assistant numbered, it would seem that all possible demands for speed could be met; that the work is much neater than by hand; that different persons can accession without changing the appearance of the book (especially valuable during vacation periods); that the cost for a 10,000 entry equipment was just about the same as for a bound book, and would be less if more pages were printed at one time; to this cost will have to be added, sometime, the cost of a permanent bind-

ing. This was an experiment with us, but it is working well so far. If any other library is using a satisfactory form for this purpose, an exchange of experiences may result in the evolution of the ideal form."

Cataloging

TIME REQUIRED FOR CATALOGING

The head of the cataloging department of the Grand Rapids Public Library last spring gathered certain data which might enable the library to determine more accurately the time required for cataloging. This does not include the time for classification. The data is interesting in showing the average number of minutes per book each month during the year. The lowest average for one person for cataloging fiction and non-fiction was 10 minutes per book; for non-fiction alone 21 minutes per book; and for fiction alone, 4 minutes per book. This was for the Ryerson building. For some of the branch libraries, where the cataloging is wholly in the nature of duplicating work, the average was as low as 3 minutes per book.

GROWTH OF A CARD CATALOG

In the Grand Rapids Public Library a study of the rate of growth of the official card catalog by letters has been made, in order to get a better idea of how to distribute the cards in planning for the future, inasmuch as the shifting of cards, if the growth is uneven, involves considerable extra labor. For a year the head of the department measured every three months the growth of the official catalog by letter. The growth during the year was 140 inches. The following shows the growth in inches or fraction of an inch in each letter of the alphabet:

C-10	P-6	J-3	E-1/2
S-9	A-5	N-3	Q-1/4
M-8	W-5	U-3	Y-1/4
B-7	L-4	I-2	X-0
G-6 1/2	F-3 1/2	O-2	Z-0
H-6 1/2	R-3 1/2	K-1 1/2	
D-6	T-3 1/2	V-1 1/2	

Where the gain was less than 1/4 inch it was ignored.

INDEXES.

The Index Office of Chicago is about to undertake, for subscribers, the preparation and publication of a card index to the original articles in the following dermatological journals: *Archiv f. Dermatologie*, Wien, 3 nos. a year; in 1913: 41 articles; *Dermatologische Zeitschrift*, Hamburg, monthly; in 1913: 31 articles; *British Journal of Dermatology*, London, monthly; in 1913: 20 articles; to-

gether with articles on dermatology and syphilis, selected by Dr. Frederick G. Harris, of Chicago, from a number of general medical journals. Briefer notes and transactions of medical societies reported in these journals will not be indexed for the present. The work will be done by Dr. Audrey Goss, an expert medical indexer, formerly medical reference librarian of the John Crerar Library, now bibliographer of *Surgery, Gynecology and Obstetrics*. The thoroughness and reliability of the work can therefore be guaranteed. Cards will be made on the multi-graph. Each card, in addition to the name of the author and the title of the article recorded, with reference to name, volume, page and date of the journal, will contain correct index headings for filing the cards by subjects. It is estimated that about 300 articles will be indexed annually. Orders may be given for (1) two cards for each article, or (2) one card for each index heading, with or without an additional card for an author index. Careful calculation of all elements of cost involved shows that, if 20 subscriptions are received, the cards can be sold at 2 1/2 cents each; if 25 or more, at 2 cents. For the present it will not be feasible to deliver cards for selected subjects or in any quantity less than the total number currently issued. A minimum deposit of \$10 will be accepted and will be credited to the subscriber's name, and cards will be delivered in weekly instalments as printed, until the deposit is exhausted. Subscribers will be notified of the depletion of their deposits in ample time for renewal without interruption of the service. The index will begin with the issues for January, 1914.

Loan Department

DELIVERY BY TROLLEY

A note in *The Librarian* for June says that Brighton (Eng.) ratepayers who borrow books from the public library can now have them delivered at their own doors by tramcar for one penny. The borrower gives the book he has read and his library ticket to the conductor of any tram, together with the fee. The book is then conveyed to an office at a central point of the system, whence it is taken to the library and changed. The new book is then handed to the conductor and the system repeated.

WEARING COST OF BOOKS

The Carnegie Free Library of Braddock Pa., in its annual report for 1913, gives some interesting figures on the wearing cost of books. During the year the library accessioned

5936 books for Braddock proper, and withdrew 4857. Of the accessions, 4226 were in the school duplicate collection, while 3575 of the books withdrawn were in the same class.

"These school duplicates cost an average of 27 cents each. The average cost of the regular library books is a little over a dollar. Book bills paid for the year amounted to \$3336.40, while \$734.88 was spent for periodicals. Assuming that all the books in the library are in as good condition at the end of the year as they were at the beginning of the year, it follows that by dividing the entire circulation for the year by the number of books worn out, we will arrive at the actual wearing life of the books. Thus, 3575 school duplicates actually worn out circulated 146,000 times, an average of 41 times per book. By the same process of division, we learn that the 1618 library books actually worn out by circulating 203,000 times had been used 125 times each. The school duplicates are never rebound, as they are often too much soiled to be worth rebinding, and, costing but 27 cents, a new one can be bought for less than the cost of rebinding. Nearly all of the regular library books are rebound once, and the life of the book is more than doubled thereby. If a child's book cost 27 cents and circulates 41 times, the actual book cost is less than three-fourths of a cent per circulation. An adult book costs a dollar, and the rebinding of it costs 50 cents, and it circulates 125 times; the cost is therefore one and one-fifth cents per circulation. Thus, while the book destruction seems enormous, when the number of books worn out is considered in connection with the service each individual book has rendered, the cost is insignificant.

"In this calculation, it will be noted, the entire wearing loss is charged to the circulation of books for home use, no account being taken of the wear of the thousands of books that are used in the reference department and in the reading rooms of the library and branches."

Binding and Repair

BINDING

In the bindery maintained by the St. Louis Public Library, the volumes bound from May, 1913, to April, 1914, according to the last report, numbered 20,581, at an estimated value, according to the schedule in effect with outside binders, of \$9,609. The job work, including the making of magazine binders, cutting paper and cardboard, etc., and the lettering of books received from publishers with unlettered backs, added \$293.00 to that amount, making the estimated worth of the year's work \$9,902.00. The operating expense, in-

cluding salaries of binders (\$7,176.00), binding supplies (\$1,227.00), and allowance for gas, light, power and deterioration of the plant (\$108.00) totaled \$8,511.00, which shows a saving to the library of \$1,391.00 in the year. This does not take into account the improved wearing quality of binding and materials employed. In addition to the work done by the library bindery, 3,652 volumes were bound by outside binders at an actual cost of \$1,968.00, making in all 24,233 volumes bound at an actual cost of \$10,479.00. Very little binding is sent to outside binders now, and the library bindery will soon be able to do all the work.

Libraries on Special Subjects

SPECIAL LIBRARIES

The business library. D. N. Handy and Guy E. Marion. *System*, J1, 1914. p. 96-99.

Special libraries have recently been installed by business houses, and this article, after giving a few general suggestions for their establishment, is made up of reproductions of photographs showing methods used in various business libraries for the care of clippings and pamphlets, "carding" correspondence, filing magazines and tabulating samples.

The evolution of the special library. John Cotton Dana. *Spec. Libs.*, My., 1914. p. 70-76.

Libraries of a sort have existed since the first clay tablets were baked. After the invention of printing books became more common, but were still regarded as intended only for the use of the upper classes. The "real books," in the opinion of the educated, were the literary masterpieces, including all the older Greek and Latin writings, books about these classics, and books on religious subjects.

When the public library movement took form in this country in 1876, the field of library book collection had widened to cover all kinds of writings, though it might not be thought proper to admit every reader to their use. The librarian was inclined to think his collections were intended for the learned rather than the learner, and the community at large considered them rather exclusively designed for those reared to use them.

These views were gradually broadened through the great increase of printed matter and of the number of subjects taught in schools and colleges, and through the rapid growth of the reading habit among women and children.

The increase of print is marked in new book production, in periodical literature, in

the publications of public institutions and private associations, and in the wide field of advertising. In spite of all that is reported in print of things done, projects planned, tests made, and results reached, much escapes or is unknown to him who can use it to advantage. Besides this constant piling-up of concrete facts, there is another mass of information on social service and government activities, and on the literature of science and the arts.

While the library should very properly continue to serve the student, the child, and the inquiring woman, the industrialist, the investigator, the scientist, and the social service worker, must also be served. The difference in the amount of material and the difference in the length of time it remains useful, make a wise method of administration difficult to find. In the past attention has been paid chiefly to the careful description, indexing, and preservation of material. Now the problem arises of how to handle the print which is useful and yet ephemeral.

"Select the best books, list them elaborately, save them forever—was the sum of the librarians' creed of yesterday. To-morrow it must be, select a few of the best books and keep them, as before, but also, select from the vast flood of print the things your constituency will find helpful, make them available with a minimum of expense, and discard them as soon as their usefulness is past."

The Special Libraries Association came into being when a few large enterprises found it advantageous to have a skilled person devote his whole time to gathering and arranging material bearing on their special lines of work. At that time the Newark Public Library was developing its business branch, and it was at the suggestion of that library and that of the Merchants' Association of New York that invitations were sent out to the librarians for these business houses, suggesting a conference at Bretton Woods, in July 1909. The name "Special Libraries" was chosen as distinguishing from the older order of libraries those institutions which realize how ephemeral in value is much of the present printed material and frankly adopt the new library creed of selection, immediate use, and rejection when usefulness is past.

The association began with about 30 members, within a year there were over 70, and in two years 125. In January, 1910, the publication of a monthly journal, *Special Libraries*, was begun, which has already published 35 numbers with a total of over 400 pages.

The public library, like the special library, should equip itself to handle a vast amount of ephemerally useful material, and by its meth-

ods should suggest to large business institutions how helpful they would find similar work in their own fields. As to suggestions on the selection of material, co-operation is already being tried. The Public Affairs Information Service, under the direction of Mr. John A. Lapp, has established a co-operative service with a membership including both librarians and individuals. In Boston a bureau of general information has been organized by several libraries, with a central office in the Public Library, and the League of American Municipalities has long had in view a plan for establishing a central municipal bureau which should gather notes on the activities of all our large cities.

BANKING LIBRARIES

The library of the American Bankers' Association. Marian R. Glenn. *Spec. Libs.*, May, 1914. p. 78-80.

The Association includes in its membership national, state, private, and savings banks, trust companies, and clearing houses. To answer the questions of these varied interests, a library and reference department was created in 1911. This department also serves the American Institute of Banking, with 14,000 students. The traveling loan collection is the most important feature of the library. Press clippings, financial periodicals, proceedings of bankers' associations, pamphlets, etc., provide most of the material.

Legal size vertical files hold the material alphabetically arranged by subject, with numerous subdivisions, and with cross-references attached to the guide cards. Clippings are mounted on manila cards $7\frac{3}{8} \times 9\frac{1}{2}$ inches, punched to be made up into loose-leaf books if necessary. Periodical excerpts and small pamphlets are placed in manila covers, and clippings of only temporary interest are kept in envelopes. Small red metal "vise signals" are attached to articles to which reference is made from some general subject.

A collection of bank advertisements and one of bank pictures are much used. The library now includes about 2000 books, which must eventually be largely augmented to permit specialization on certain subjects. Both bound and unbound periodicals and proceedings are card-indexed for leading articles and statistics, and analyticals made for many.

The decimal classification devised for the library covers the general subjects Money, Banking, Credit, Exchange, Economics, Investment, Agriculture and industry, Trade and transportation, and Public finance. The 000 class is allotted to general reference books, government documents are classed with pub-

lic finance, and one class has been left for the possible accession of a collection of books on banking law. An official monthly publication, the *Journal-Bulletin*, keeps members of the association informed of the library's resources.

General Libraries

For Special Classes—Children

CHILDREN, WORK WITH

In the 1913 report of the librarian of the Chicago Historical Society is a description of the establishment by the society of children's lectures on Chicago history conforming to the course of study in the public schools. At first the lecturers went to the schools, but since April all lectures have been given in the society's lecture hall, and the museum collections were thrown open to the children each afternoon. At present the salary of the lecturer and the cost of the hundreds of lantern slides required for the proper visualizing of the subject of Chicago, are being borne by a single member of the society, and it is possible to include but 120 of the 300 schools, each of these receiving twenty delegates' tickets. These were given to pupils in the eighth grade, who were expected to report on the lectures in class. The lecturer chosen was Mrs. Mary Ridpath Mann, who divided the subject into four parts: First—Period of exploration and settlement, from Father Marquette to the building of old Fort Dearborn, 1673-1803. Second—Period of settlement, 1804-1837. Third—Growth and expansion, 1837-1871. Fourth—Rebuilding, 1871 to the present. Each Chicago lecture is given on four successive Saturdays, thirty principals of schools being each week invited by letter to appoint twenty delegates, tickets for whom, together with an acknowledgment postal, are sent. The color of the ticket is changed each month in order that unused tickets may not be accumulated and used at later lectures, thereby causing overcrowding. In this way each school is reached every fourth week and the course completed in four months. Letters to principals relative to second and successive lectures contain a statement of the number of delegates credited to his school at the preceding lecture.

Developing a children's room. Marian Custer. *Pub. Libs.*, Je., 1914. p. 242-245.

Furniture and arrangement of rooms are not discussed, but consideration is given to the books to be chosen, the best way of presenting them to the children, and ways of de-

veloping a greater use of the library. Of course the children's classics should be chosen, and in as beautiful editions as possible. Picture books for the little ones, containing pictures of normal life, scenes in the home and field, and sketches of people at their usual occupations, should be provided. As the child grows older he should have myths and fairy tales, Bible stories, poetry, history and geography, as well as fiction. Stories that are lukewarm, improbable, or vicious, must be excluded, and those maintaining a right standard of honor, loyalty, truth, fairness, and kindness, selected.

The children's librarian should be "well informed and of broad interests, with a love and knowledge of books, a wise sympathy and a gracious cordiality. Besides this a sense of humor, a pleasing personality, adaptability, and strength of character she must have."

The children's librarian, particularly in the small town, must take care not to fall into a rut, and must study the results of others' work for suggestive ideas. Co-operation with Sunday school teachers may be as effective as with teachers in day schools. An occasional exhibit and social evening at the library, open to parents and friends, helps to advertise, and the usual bulletins, clubs, and story hours all help to keep up interest.

College

COLLEGE LIBRARIES

The *Pedagogical Seminary* for June (vol. 21, p. 278-283) reports a discussion on the position of the library in the college, at the meeting of the New England College Librarians. This discussion was opened by Dr. H. L. Koopman, of Brown University, who was followed by Dr. Louis N. Wilson, of Clark University. The editor of the *Seminary* has submitted the points brought out by Dr. Koopman and Dr. Wilson, and a number of other librarians and college professors, and prints their comments on the same. The comments of the various librarians which are published are by Dr. Herbert Putnam, head of the Library of Congress; Dr. W. D. Johnston, recently librarian of Columbia University, now of St. Paul; Dr. W. N. C. Carlton, of the Newberry Library, Chicago; and Josephine A. Clark, librarian of Smith College. Prof. E. B. Titchener, of Cornell University, and Prof. J. W. Baird, of Clark University, commented on Dr. Koopman's and Dr. Wilson's remarks from the professor's point of view. One of the points discussed is the protest against the administration of college libraries by a committee of the faculty.

Reading and Aids

Aids to readers

BOOK JACKETS

At Brockton (Mass.) Public Library, the paper covers of new books are put together in bunches of 20 or more, the top left corners punched, and the bunches hung to nails on the bulletin board by strings, so anybody may look them over. Much space is thus saved over the usual method of posting the jackets separately on the bulletin.—*Bull. Bibl.*

VACATION READING

Vacation reading. Lucy M. Salmon. *Pub. Libs., Je., 1914.* p. 233-238.

The book to-day encounters keen competition from the newspaper, the magazine, the short story, the literature sent out by various societies, besides a multitude of papers and reports. There is also the competition of the theatre, the moving picture, the dance, athletics, automobiling, and travel in general. There may be hope for the book in spite of these conditions, but is there hope for the college student in relation to the book?

At the opening of the last academic year 100 students in three classes of an eastern college were asked to present lists of books read during the summer vacation. The lists represented a total of 356 different authors and 642 named books, in addition to "a little poetry," "two or three dozen modern novels, the names of which I cannot remember," "a collection of short stories," and similar reports.

The second charge that college students do not read the right books is not so quickly dismissed, for a book, like a fact, is of value only in association with specific conditions. The same book may be read at different times with entirely different objects. If fiction predominates in the lists presented, it includes works written in many different languages and if "V. V's eyes" leads the list of single books with 29 readers, Dickens has had 31 readers of 16 different books.

The interest in the great questions of life

never ceases with college students, and the fact that they read the authors of to-day is no proof that they hold the early writers in contempt. The lists show less reflection than might be expected of interest aroused by college work, and comparatively little reflection of many of the great questions of the day. They also show little concentration on any one author or subject. Few read more than one work of any given author, and few read more than one author on any subject.

At Vassar various expedients have been tried to stimulate vacation reading. The *Miscellany* publishes each June lists of books suggested by the heads of the different departments. Some of the departments published independent lists, and the alumnæ of a girl's school have established a prize for the student who has best fulfilled the requirement of a special reading course arranged by the department of English.

It may be questioned whether any one of these expedients has been wholly successful. Is it possible that the effort has been misdirected? The feeling is widespread that much reading, however aimless it may be, produces culture, and it is encouraged by the college for this reason. The college, moreover, separates itself from outside conditions as far as possible. No improvement can come in vacation reading apart from improvement in general educational spirit and organization.

Literary Methods and Appliances

Library Appliances

MAGAZINE BOXES

The Allentown (Pa.) Public Library has recently received 300 specially made boxes to hold magazines. Each box will hold six numbers, half a year's subscription. They will be arranged on shelves and so placed that every box will have a hinged lid and front so as to make access to the magazines easy for the patrons. It is also the intention to index all articles to make it easy for applicants to find the magazine articles they want.

THE LIBRARIAN'S MOTHER GOOSE

IX. CHILDREN'S ROOM

*Sing a song of sixpence, a room full of books,
Four and twenty pages storing them in nooks.*

When the door was opened, in the children came.

When they'd pawed around a while, it didn't look the same.

—Renée B. Stern.

Bibliographical Notes

Recent lists issued by the Division of Visual Instruction of the University of the State of New York have been List 23, slides and photographs on forestry and lumbering; List 24, lantern slides on physical geography; and List 25, slides and photographs on flies, their anatomy and their relation to health.

A list of Swedish terms used in bibliographies and by the book and printing trades has been compiled by Axel Moth, chief of the cataloging division of the reference department of the New York Public Library, and was printed in the *Bulletin of Bibliography* for January and April. The first part of a similar set of Spanish terms, also compiled by Mr. Moth, is printed in the July number.

The year book of the British Library Association has been revised and issued for 1914. It is the first issue since 1909, and contains important changes in the by-laws, especially those dealing with membership and branch associations. The list of fellows and members has also been entirely revised. The year book was edited by L. Stanley Jast, honorary secretary of the Association.

There has just been reprinted in pamphlet form from the *Cardiff Librarians' Review*, the address "On the study of early printed books," delivered by Arundell Esdaile, of the British Museum Library, at the opening of an exhibition of early printed books in the Central Reference Library in Cardiff, May 7, 1913. The pamphlet is illustrated with several full-page reproductions of woodcuts from early books.

"Suggestive outlines on children's literature" is an 88-page pamphlet, compiled by Mary Bostwick Day, librarian, and Elisabeth Kissick Wilson, training teacher in the Southern Illinois State Normal University. The table of contents divides the material into four parts: Historical outlines of children's literature, Illustrators of children's books, Suggestive studies in children's literature, and Representative list of books.

The 77th annual issue of "The English catalogue of books" is out. It gives in one alphabet, under author and title, a list of practically all the books published in the United Kingdom during the year. In 1913 there were 12,379 books published, an increase of 312 over 1912. James Douglas Stewart, formerly a librarian at Croydon, England, is the editor of the catalog, which is published in this country by the R. R. Bowker Company.

The *Monthly Bulletin* of the St. Louis Pub-

lic Library for July is given over to a report on the regulation of public dance halls, prepared by Andrew Linn Bostwick, the librarian of the Municipal Reference branch. Information was received from twenty cities, and the report is divided into two parts, the first giving a general summary of dance-hall legislation, and the second being a digest of the regulations of the various cities investigated.

An article on "Public print collections in the United States," by Frank Weitenkampff, D.H.L., of the New York Public Library, was printed in Band x, Heft 2 of *Museumskunde*, and has now been reprinted in separate form. The resources of the collections in the Library of Congress, New York Public Library, and Boston Museum of Fine Arts are described in the most detail, but many other print collections are also touched upon.

A second edition of the monograph issued by the Free Public Library of Jersey City, N. J., entitled "The American flag: its origin and history," was published in June. It was compiled by Edmund W. Miller, the assistant librarian, and contains historical material on the colonial flags as well as the stars and stripes, tracing the many changes made in the latter before its present form was adopted. There are also paragraphs on special flags, signal flags, state flags, flag legislation and manufacture, the Confederate flag, and "The star spangled banner."

The Bureau of Statistics and Municipal Library of Chicago has published a "Chicago city manual," prepared by Francis A. Eastman, city statistician, containing a historical sketch of the city with some biographical notices; a section on the executive government of Chicago, giving the duties of the mayor and all departments and bureaus, with the personnel of each; lists of officers and trustees of the board of education and of Chicago's museums and libraries; and much miscellaneous material relating to city development plans, amusement places, courts, taxes, etc.

A second edition of Lang's German-English dictionary of medical terms has been issued by P. Blakiston's Son & Co. The work has been edited and revised by Dr. Milton K. Meyers, of Philadelphia, and contains 4400 definitions in addition to the 45,000 and over which the first edition contained. The additions include a number of definitions of symptoms, diseases, signs, reflexes, etc., named after individual physicians, many of them very recent, which have not yet been incorporated in the standard English medical dictionaries. touched upon.

The Bodleian Quarterly Record, volume 1, number 1, issued by the Bodleian Library at Oxford, has reached this office. The objects with which it is started are stated in the introductory note as being threefold: "to provide readers in the library and other residents with a list of the chief accessions of the last three months; to afford some account of the various activities of the Bodleian, in the hope of interesting a larger number in its work and progress; and to give literary and personal information, both by notes on current events and on discoveries within the library, and by printing extracts, documents, and essays of permanent value." The divisions will continue to be, as in this first number, Notes and news, Accessions, and Documents and records.

Communications

Editor of Library Journal:

Sometime when you want to publish a small item showing how a librarian is called upon to give up his time and energy to answer questions by an outsider who has no call upon his time, I suggest that you publish the following. I came across the letter the other day. I of course do not give the real name and place:

"Prof. —"

"May I not have your advice? I want you to select 450 books for a minister's library. Kindly name them in three lots. I want the 150 most important books first, the next most important 150 in lot No. 2, and the third lot of 150 in lot No. 3. Do not assume that I have any books at all; just name the first 450 books you would place in the ministerial library as nearly in the order of their importance as you can. Do not assume that I am idling. I am in a serious mood. I am coming to you that I may make my ministry free from tradition and conformable to reason and revelation.

"Signed, —"

Sincerely yours,

WALTER C. GREEN.

Editor Library Journal:

IN a recent conspectus of children's books in a library journal, an American woman librarian speaks in a most disparaging tone of the works of Ellis, and, indeed, implies that they are more or less pernicious for the youngsters. I presume that E. S. Ellis is intended; and, although I have never visited America, and can only speak of this writer's books from memory, I really should like to offer a humble protest. The children of Great Britain love these books; the Deerfoot series, the river series, and such really enthralling boys' books as "The cabin in the clearing," are not great literature, perhaps, but in common with hundreds of British boys, I gained my profound sympathy with America, my love of its forests and rivers, and my interest in American history from my early reading of these. Moreover, they teach self-reliance, observation, initiative, and simple religious truth as well as any books I know. No doubt, if I were to re-read them, much of the glamour would have faded, but the same would apply to any book which one loved in childhood. But my protest has a more serious purpose. Can any of your readers tell me the precise grounds, literary or moral, upon which Ellis is to be condemned? The opinion of two generations of children is

in his favour. What is against him? The answer has an important bearing, as American readers may justly claim that they have surer grounds for judging American works than the Briton has, and also because the critic has probably focussed on this writer some critical canons which might be useful to us all. I am,

Very truly yours,

W. C. BERWICK SAYERS.

Croydon Public Libraries, England.

Editor Library Journal:

May I ask you to note an error in a recent book that does a great though entirely unintentional wrong to California county libraries? The book is Dr. and Mrs. Ernest I. Antrim's "The county library." The greater part of it is taken up with an account of the Brumback Library of Van Wert county, Ohio, the first county library to survive and really deserve the name. The latter fourth of the book deals with the general subject, and here the authors carefully verified their figures, I am told, by reference to the libraries themselves, except in the case of the California libraries. There the authority used was *News Notes of California Libraries*, but the mistake was made of taking the quarterly figures of that periodical for annual figures. All California libraries given in the tables of statistics suffer alike in this matter, and only as an example I mention that the circulation of the Oakland Free Library, which serves as the County Library of Alameda county, is given as 71,724, when as a matter of fact it was 533,585, not including 81,902 unbound magazines circulated.

This misapprehension colors all the comments the authors make on the California county libraries and seriously mars an otherwise well-written book.

Yours truly,

CHAS. S. GREENE.

Oakland (Cal.) Free Library.

RADCLIFFE CAMERA, BODLEIAN LIBRARY, SEEN FROM WITHIN ALL SOULS' COLLEGE QUADRANGLE

THE war in Europe came as a thunder clap from the clear sky of a "hundred years' peace" which at its close was sadly broken on this continent in Mexico and throughout Europe. It was the more sad and surprising because for a generation past the nations had been growing together in international relationship, illustrated by the seven or eight organizations, more or less official, which have their headquarters at Berne, and by the several hundred unofficial associations centering at Brussels. At Berne Prof. Röthlisberger has been diverted from his work of international comity into the service of the Foreign Office; the Brussels Institute, M. Otlet reports, is in the midst of a camp; and the Carl Baedeker of this generation, bearing a name representing those relations of travel which were so knitting the peoples together, was reported as killed in one of the earliest engagements. These personal examples illustrate the sudden change in the face of the world. The Leipzig Exposition of the Book, though still existing, no longer claims attention. Advices from Miss Hasse sent the first week of September, report that the exposition is still open, though with diminished attendance, since the contracts of the exhibitors require continuance until the end of October. Miss Hasse is to return presently but will leave the A. L. A. exhibit in charge of a local representative, who will see that the material is packed and returned when war conditions permit.

THERE is a sudden stop to library progress in every European country. In fact, clear as the skies were, library development had been held back both in Germany and in Russia by the enormous military budget; and the one bright lining in the dark cloud is the hope that when peace comes and Europe is freed from militarism, such development as that of library systems for the good

of the whole people may have every chance again under more liberal and lasting circumstances. Meantime, it should be remembered that if the library spirit, and kindred ideals, had been earlier fulfilled, the present war might have been rendered impossible; and above all, that this is not a people's war but a war of the general staffs, in which the people suffer. What international bitterness remains will not be among the people who have suffered, the clientele of libraries, but among those in authority who are responsible for the conflict; and let us hope that the peoples of the world will be re-united more strongly than ever in the bond of affection for human kind rather than in the narrower bond of national prejudice.

THE friendly feeling toward Germany as a people held by those Americans who do not take the German military point of view as to the war is best expressed in Mr. Oswald G. Villard's article on "The two Germanys" in the last number of the *Review of Reviews*. Our sympathies go out to all those, particularly in the library profession, whose work of peace is negated by the clash of war. In Belgium, as the theater of war, there has been a special suffering, and help is asked from America for librarians there whose libraries have been destroyed or abandoned, and who are for the moment without means of livelihood. It is thought not best to take this up as a national matter, that questions as to neutrality may be avoided, but there can be no possible objection to individual subscriptions for the benefit of fellow librarians abroad who may be sufferers. Subscriptions have already been started in several library systems, and the LIBRARY JOURNAL will be glad to receive contributions of from \$1.00 upward and to see that they are forwarded to the Belgian minister at Washington, who

will be asked to make proper arrangements in his country.

THE international feeling throughout the library world was never stronger than just before the outbreak of the war. In Germany the American Library Exhibit had attracted international attention. Dr. Schwenke, the most active promoter of the library spirit in Germany, was urging upon his fellow librarians the most careful study and full utilization of American library ideas, and had expressed the desire that the American exhibit be permitted to remain in Germany. In Russia in general, and not merely in educated Finland, library development has been quietly going on in a manner surprising to those who have not studied conditions there, as Madame Haffkin-Hamburger brought out in her talk at Ithaca. What is true in these two countries is true elsewhere, and if the people could have voted by plebiscite there would scarcely have been war. It is to be hoped that when the unutterably cruel war is over the library profession may be foremost in renewing the international good feeling, which as the people more and more come to their own and control the government, will be the surest guaranty of peace.

THE war not only dislocated internationalism but caused the prompt postponement of the pan-Anglican library conference at Oxford, to which fifty Americans, more or less, were wending their way, and at which representatives from several of the British dominions and colonies, and at least a few librarians from the Continent, had arranged to be present. It was felt in England, and particularly at Oxford, that all thought and all energy should be concentrated on the national and international task which England had undertaken, and in this view the American librarians, disappointed as they were to have made the long journey without reaching their goal, fully and cordially acquiesced. The local people at Oxford gave cordial assurances of hospitality to

individual librarians who should reach Oxford, but though this was heartily appreciated, none of the visiting librarians so far as is learned felt like accepting such hospitality in the present crisis. Arrangements had been made for participation by leading American representatives of the profession in the several discussions, and the conference would have had an important bearing on library development throughout the English-speaking world. It is now planned to postpone it for a year, but it seems probable that a larger representation could be secured from America two years hence, and it is to be hoped that conditions will then permit a pan-Anglican, and possibly an international, conference which may help to bring the world together again into the normal relations of a brighter future.

"LIBRARY Week" no longer at the once beautiful Sagamore at Lake George, but this year enjoying the hospitality of Cornell University, proved as successful as ever, though the absence was noted of several of those usually present, who were not yet returned from the journeying which reached neither Leipzig nor Oxford. The emphasis of the meeting was on co-ordination among libraries, which is indeed the keynote of the present situation in the library field. President Wyer's paper merely touched upon one corner of this subject in pointing out the desirability of planning libraries in due co-ordination with local needs and possibilities, while Dr. Root's paper on college libraries and Miss Plummer's report on prison libraries dealt with outlying relations of the general library system. The program and discussions, indeed, contributed sensibly to that ideal of library administration which looks to the co-ordination of all classes of libraries into a general scheme in which, by avoiding duplication of effort, every dollar and every book can be used to the best purpose, and through which ultimately every class of the community may be reached by the printed book or auxiliary means.

THE BODLEIAN LIBRARY AT OXFORD

BY THEODORE W. KOCH, *Librarian, University of Michigan*

"I am plain Elia, no Selden, nor Archbishop Usher, though at present in the thick of their books, here in the heart of learning, under the shadow of the mighty Bodley," wrote Charles Lamb. "Above all thy rarities, old Oxenford, what do most arride and solace me, are thy repositories of mouldering learning, thy shelves. What a place to be in is an old library! It seems as though all the souls of all the writers that have bequeathed their labors to these Bodleians, were reposing here as in some dormitory, or middle state. I do not want to handle, to profane the leaves, their winding-sheets. I could as soon dislodge a shade. I seem to inhale learning, walking amid their foliage, and the odor of their old moth-scented coverings is fragrant as the first bloom of those scientific apples which grew amid the happy orchard." It is in some such sympathetic frame of mind that the American librarian must visit the Bodleian Library. He does not go there to study the latest labor-saving devices, the most approved practices in library economy or the most recent developments in library architecture. If his visit is to be profitable he should go in the reverent spirit of the scholar, the student of literature and the beginnings of libraries, ready to pay just tribute to the memory of the founder of one of the great libraries of the world and grateful for the generations of friends and administrators that labored long and fruitfully for the well being of this unique institution. As the annalist of the Bodleian, Dr. W. D. Macray says, its reading room "is not, indeed, one fashioned and furnished after the newest plans, with abundance of iron and much glass, with easy chairs and all that appertains to modern ideas of convenience and fitness and to modern literary lounges: but it is in its old-world form the scholars' precious possession, uniquely grand, gloriously rich, marvellously suggestive. And not least suggestive in its very mode of entrance, albeit sometimes deemed unworthy, sometimes complained of as wearisome and tedious. From the

quadrangle which tells by the storeyed buildings which enclose it that there is much wealth within, you enter, almost stooping, by a plain low door, and then begin to ascend a long, long, winding flight of stairs. You may rest as you go, here and there, on window-seats and benches, but still before you lies that winding ascent. At length you reach a simple green baize door; you open it—and the panorama of the world of learning is before you. Surely it is a very type of the way by which true knowledge is gained. By no railway-travelling in easy carriages, speeding swiftly and smoothly on, that requires little exertion and knows no delay, but by the real 'royal road' of humility that refuses no lowly beginnings, by the patience that is not disheartened by labor, by the perseverance that overcomes weariness, at last the door of knowledge is reached and opened;—and then all the toil is rewarded. It is the way which the true 'Mater Scientiarum' teaches."

So you must not expect to find here a complete card catalog of the books in the Bodleian, with a union catalog of the books in all the other libraries of Oxford, nor a shelf list made on your own approved plan, nor any system of classification which you mastered in your library school days. You must lay aside that pet phrase which the American librarian uses when he is describing his own library and says it contains very little "dead wood," for here the dead wood of literature has sprung into new life. Books of long ago are treasured and made to give up their secrets. The student of the past finds the greatest wealth of both manuscript and printed material to illuminate almost any period of English life and thought. What a pioneer the Bodleian was in English University life, what a great boon it was and is to English scholarship, can be seen from a glance at conditions as they were at various periods before and since its founding.

One can gain some idea of the cost of books in the early days of the University

by reading the old inventories in which they are classed with plate and jewels. Only a privileged few were given access to the first University library. Excepting the sons of lords who were members of Parliament, no Oxford student was admitted who had not spent eight years in the study of philosophy, which was paramount to ruling that the University books were reserved exclusively for its senior members, in other words for the masters who had to lecture to the juniors. As the instruction was entirely oral the undergraduates had little need of books. In the seventeenth century University College Library was reserved for the graduates, and undergraduates were not admitted to Merton College Library until 1827, and then only for one hour per week.

A fifteenth century code of the Augustinian Order of the Canons Regular of the College of St. Mary, Oxford, ruled that no student might enter the library at night with a candle unless for some very important purpose or to compose a sermon for which insufficient time had been allowed him. No student was allowed to spend more than one hour, or two at the utmost, over any one book for fear of keeping others from studying it. A Lincoln College student who in 1600 was found "guilty of sundry misdemeanours in the town to the great scandal of the college" was condemned to "study in the library four hours certain days for the space of two months."

The earliest public library for the University was started in 1320 by Thomas Cobham, bishop of Worcester, who built a convocation house adjoining the Church of St. Mary the Virgin. The library was to be housed in an upper room, to be in charge of two chaplains, the books to be chained, and no one to be admitted unless one of the chaplains was present. One chaplain was to be on duty before and the other after lunch and they were to see that no reader entered in wet clothes, or with pen, ink or knife. Such notes as were taken were to be made in pencil.

In 1412 an elaborate code of statutes for the regulation of the library was prepared. The librarian, who must be in holy orders, was required once a year to hand over to the chancellor and proctors the keys of the

library; if after visitation he was found to be fit in morals, fidelity, and ability, the keys were returned to him. He was to be paid £5 6s 8d per year for his services, and for this sum he not only took charge of the library but said masses for the souls of benefactors. His salary was to be paid semi-annually, because it was rightly argued that if his salary were in arrears he might lose interest in his work. He was allowed a month's holiday in the long vacation and was expected to give a month's notice if he should wish to resign his office.

In 1439 Humphrey, duke of Gloucester, began to send books to the library, giving in this first year 129 volumes, worth, as was stated in a letter of thanks from Convocation, a thousand pounds and more. Before the duke's death in 1447 he had given about 600 volumes and others were received posthumously. It was evident that something larger than Cobham's library was needed to store the University's books, and so in 1444 the authorities successfully appealed to the duke for funds with which to erect a library room over the new Divinity School. The work of building the new quarters went on slowly, the books in the old library being meanwhile chained in 1454. Duke Humphrey's library was opened in 1488 and this was the occasion for new gifts being received. In December, 1550, the commissioners appointed by Edward VI to reform the University carried off or destroyed the treasures of the library, and to-day it contains only three of the manuscripts which Duke Humphrey had presented. The library room was so despoiled that in 1556 the University authorities ordered that the book cases be disposed of. The building was so neglected that the roof and lead gutters suffered from lack of repairs. Part of the furniture was taken away by mechanics, the windows were broken, and even the lead from the windows was carried off. Thus denuded the library had stood for forty years when there came in 1597 the offer of Sir Thomas Bodley to refit and replenish it.

From all this it can be seen that up to the beginning of the seventeenth century the libraries of Oxford did not figure very prominently in the educational equipment of the University, nor were they used very

THE BODLEIAN—DUKE HUMPHREY'S LIBRARY

THE BODLEIAN LIBRARY QUADRANGLE

much in connection with the instruction. When Bodley revisited his alma mater and found the sad condition to which the Duke Humphrey library had been reduced, he resolved to spend the rest of his days in Oxford.

SIR THOMAS BODLEY

Sir Thomas Bodley was born at Exeter March 2, 1545. His father, being a zealous Protestant, fled to Germany and Switzerland after the accession of Queen Mary. On his return to England he held the patent for seven years for the exclusive printing of the Geneva Bible. Young Thomas was educated at Geneva. On the accession of Queen Elizabeth the family returned to England, and Thomas was sent to Magdalen College at Oxford. After taking his degree, he lectured on Greek and natural philosophy, was elected university proctor, and acted as deputy for the university orator. In order to acquire greater familiarity with modern languages and politics, he obtained leave of absence to travel on the Continent and spent nearly four years in Italy, France, and Germany. Upon his return to England he was appointed a gentleman usher to the Queen, and as his first diplomatic mission he was despatched to Denmark. Then followed a confidential mission to France. In 1587 he married a rich widow named Ann Ball. Later he was sent to The Hague on a mission of great importance. Here he remained for seven years, until 1596. As early as 1592 he began to show an ardent desire to return to England and to be relieved of his diplomatic work. On Feb. 23, 1598, Bodley wrote to the Vice-Chancellor of Oxford University, offering to restore to its former use the one room which was all that remained of the old public library. In this letter he said that he had always intended to show some token of the affection he had ever borne to the studies of good learning, and that since there had been heretofore a public library in Oxford, he would reduce it again to its former use and make it fit and handsome with seats, shelves and desks and all things needful so as to stir up other men's benevolence to help equip it with books. He provided an endowment so that it might perhaps in time come to prove a

notable treasure for the multitude of its volumes and excellent benefit for the use and ease of students and a singular ornament to the University. Bodley, when he had determined to keep himself "out of the throng of court contentions," and was pondering as to how he could still "do the true part of a profitable member of the state," had decided to set up his staff at the library door in Oxford, "which then in every part lay ruined and waste." According to a letter written by Sir Dudley Carleton the proposal met with great favor among the people of Bodley's native Devonshire, "and every man bethinks himself how by some good book or other he may be written in the scroll of the benefactors." Bodley lost no time in soliciting help from his "great store of honorable friends." In the first year, however, he found that he had expended much more money on the library than he had planned "because the timber works of the house were rotten and had to be new made." Gifts of books poured in from all parts of England and the Continent. A London bookseller, Bill, was commissioned to make purchases on the Continent. At the suggestion of the librarian, James, the Stationers' Company promised to give a copy of every book which they published.

Sir Thomas looked after details very carefully. In one of his letters to Thomas James, the first librarian, he says: "I have spoken here with Mr. Farmer who hath promised that whensoever you come after Thursday next he will be at home. He hath a carload of books of which you may make your choice, which he will cause to be new bound at Oxon. You shall do well, in my opinion, to be there some morning very early, lest he ride abroad and not come in till night." And again: "Now I must entreat you to send me the register-book, wherein the benefactors' names and gifts shall be recorded. For I will begin to have it written. It would be packed up in a coffin of boards, with paper thick about it, and hay between it and the boards. I pray you be careful about it, and let me receive it the next week, sent by the wagon for fear of rain."

At another time he writes: "I pray you salute and intreat Mr. Principal from me,

to cause such bars to be supplied, as are wanting: And your self I would request to write as often as you find a fit messenger, to the chain-man, to dispatch the rest of the books, and to make as many chains before midsummer, as is possible.* For I am like to bring more books than is imagined. I do not find in your catalogue Fricius de Rep. emendanda, and yet I think it is in the library, whereof I pray you advertise me: And likewise what works of Sigonius are wanting."

In 1598 it is recorded that six trees from Shotover Forest were sold for forty shillings "to Mr. Bodley . . . for building of a public library in Oxon." The work of renovation was carried on quite rapidly. The oldest or central portion, still named after the first founder, Duke Humphrey, remains to-day practically as Sir Thomas left it. It is entered from the east wing through low latticed wooden gates, and contains ten alcoves, each lit with a two-light window. The low-pitched, open-timber roof, is still handsomely decorated with the painted arms of the University and arabesques of the founder's time.

The library grew so rapidly that it was soon necessary to add to the simple oblong building of 1480. In May, 1610, Bodley made arrangements for the masonry work on the eastern side, over the Proscholium, for what is the "cross-aisle" of the library. On May 3, 1611, a grant of timber was made by the Crown for the enlargement of the library, and the roof of the new part was ready for decorating in the autumn of that same year. Here the book cases were provided with a projecting colonnade of oak, carrying an overhead gallery which enabled books to be shelved up to the roof.

James I visited the library in August, 1605, read aloud the inscription under Bodley's bust and suggested that Bodley might appropriately have been surnamed Godley. He praised the happy estate of readers who had leisure to frequent such fair arbors of study, and commented on the various divinity books he opened. The

librarian made a congratulatory speech in which he said there were then in the library books in at least thirty languages and that it was frequented by Italians, Frenchmen, Germans, Danes, Poles and Swedes. Robert Burton, in his "Anatomy of melancholy," says that King James on his departure remarked: "If I were not a King, I would be a university man; and if it were not that I must be a prisoner, if I might have my wish, I would desire to have no other prison than that library, and to be chained together with so many good authors *et mortuis magistris.*" He promised Bodley the pick of the royal libraries. When Bodley went to Whitehall to carry away some rich prizes in the way of manuscripts, he found that this was not so simple a procedure as he had been led to think, and he got none of them.

In his last will and testament Bodley says that inasmuch as the perpetual preservation, support, and maintenance of the public library in the University greatly surpasses all his other worldly cares, and because he foresees that in process of time there must be very great want of "conveyance and storage for bookes, by reason of the endless multitude of those that are present there and like hereafter to be continually bought and brought in," he bequeaths the residue of his estate to the University for the enlargement of the library quarters. He devised that a third story room should be built over the schools, "framed with some special comeliness of workmanship." Sir Thomas died Jan. 28, 1912, and is buried in Merton College chapel, where his monument is provided with pilasters carved to represent piles of books, edges outward, according to the contemporary method of shelving books.

The foundation stone of the quadrangle was laid March 30, 1613, and the quadrangle was completed in about six years time. It consists of three storeys on the north, east and south, with a vaulted passage running through the middle of the north and south sides. The entrances from the quadrangle to the various schools have their names lettered in gilt over the doorways. The gate tower in the middle of the east side is open at the ground level; its west front toward the quadrangle has superim-

*The last recorded purchase of chains took place in 1751, and the earliest removal in 1757. In the early days one could hardly see the books for the chains, but to-day only one volume preserves its ancient appearance in this respect, and a number of old fragments had to be pieced together to make a complete chain for this volume.

posed columns of the five classic orders. On the third floor is a sculptured group representing James I enthroned under a canopy between allegorical figures of Religion and Fame. The figures were originally gilt, but in 1614 King James had them painted white because when the sun shone on them they dazzled his eyes. In 1634 a beginning was made in the erection of the new western side of the quadrangle, ostensibly to correspond with the eastern cross-aisle of 1610. It was finished in 1640 and its upper floor constitutes the latest structural addition to the library, above ground. In 1659 this part of the library was named in honor of John Selden because of his valuable bequest of books, and is still known as the Selden end.

THOMAS JAMES, BODLEY'S FIRST LIBRARIAN

Thomas James was appointed librarian on November 8, 1602, the day that Bodley's Library was formally opened. Previous to his appointment as librarian, James had been a fellow of New College, and he had become favorably known through his researches among the manuscripts in the college libraries of both Oxford and Cambridge, as well as by his editing the *Philobiblon* of Richard de Bury. The 1599 Oxford edition of the latter work has a long dedication to Bodley, giving much praise to him and his associates for their liberality in the founding of the new library. There is no hint of the writer's aspiring to the librarianship.

When James was first appointed, his salary was £22 13s 4d per year, but he almost immediately asked that it be raised to £30 or £40 and at the same time he asked permission to marry. In his statutes, drawn up about 1600, Bodley had made celibacy a requisite for the librarianship, and he remonstrated with James on these "unseasonable and unreasonable motions." Bodley reluctantly consented to become the first breaker of his own statutes, which he intended should thereafter become inviolable.

No sooner was James appointed librarian than he gave evidence of his interest in the new institution by presenting to it various manuscripts, mostly of the church fathers, but which Anthony Wood says he had

taken out of several college libraries. In addition he gave sixty printed volumes. In 1605, James published the first catalog of the library, a quarto volume of 655 pages in which the books and manuscripts are grouped under the four classes of theology, medicine, law, and the arts, in a roughly alphabetical order as they stood on the shelves. There were lists of expositors of Holy Scripture, commentators on Aristotle, Hippocrates, and Galen, and also in civil and canon law. The medical and legal lists were suggested by Bodley himself.

James was desirous of helping the younger students and proposed the formation of what might be called an undergraduates' library, but Bodley did not favor the plan. "Your device for a library for the younger sort," wrote Sir Thomas, "will have many great exceptions, and one of special force, that there must be another keeper ordained for that place. And where you mention the younger sort, I know what books should be bought for them, but the elder, as well as the younger, may often have occasion to look upon them: and if there were any such, they cannot require so great a renown. In effect, to my understanding, there is much to be said against it, as undoubtedly yourself will readily find upon further consideration."

Brian Twyne, the historian, expressed a wish "that Mr. James would frequent his place more diligently, keepe his houres, remove away his superfluous papers lienge scattered about the desks, and shewe himselfe more pliable and facill in directinge of the students to their bookes and purposes." We have other evidence that his career as librarian was not what had been hoped for by either the founder or his later associates. Yet it is granted that his learning was extensive, and he was "esteemed by some a living library," and he was also skilled in deciphering manuscripts and in detecting forged readings. He says that he resigned the librarianship on account of his severe bodily suffering.

Shortly after his resignation, James issued a second edition of the catalog in 1620, a quarto of 575 pages, in which the classified arrangement of the first edition was abandoned for the alphabetical author list, which has been retained ever since. In his

preface, James gives as his reason for the change the frequent difficulty of deciding to what class a book should be assigned and the inconvenience resulting from binding together the works of the same author. He dilates on the value of the library to foreigners who can there consult 16,000 volumes for six hours each day excepting Sundays and holidays. As evidence of the richness of its stores, he says that there are over one hundred folios and quarto volumes on military art in Greek, Latin and other languages, and that there are some three or four thousand books in French, Italian and Spanish. He calls attention to the fact that heretical and schismatical books are not to be read without leave of the Vice-Chancellor and Regius Professor of Divinity.

LATER LIBRARIANS

Humphrey Wanley was given the place of assistant in the library in 1695-96, at a salary of £12 per year, but at the end of the year he received a special stipend of £10 and later of £15 "for his pains about Dr. Bernard's books." His task was to select from Dr. Bernard's books such as were suitable for purchase by the Bodleian. The selection brought on a bitter quarrel with Dr. Thomas Hyde, the head librarian. This estrangement was of short duration, and in 1698 Hyde suggested Wanley as his successor, but, without a degree, he was ineligible. In April of 1701, in introducing Wanley to Harley, Dr. George Hickes said that Wanley had "the best skill in ancient hands and manuscripts of any man not only of this, but I believe of any former age, and I wish for the sake of the public that he might meet with the same public encouragement here that he would have met with in France, Holland, or Sweden, had he been born in any of these countries." Wanley lived so much among old manuscripts that he seems to have fashioned his ordinary talk after the formalities of the old documents. Alexander Pope, who was an excellent mimic, took pleasure in taking off Wanley's stilted phraseology.

The salaries paid the librarians during the eighteenth century were pitifully small, but then the duties were not particularly onerous. The staff was expected only to catalog the few books that were received in

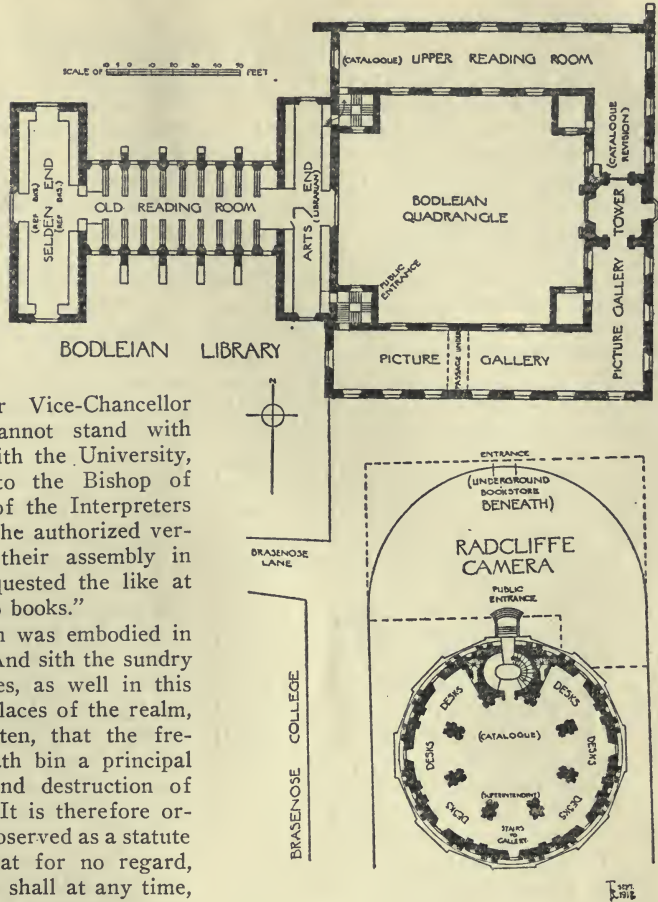

the ordinary course of events and to wait upon the readers, who were by no means numerous. During the decade 1730-40 an average of only one or two books per day are entered in the registers as loaned to readers; frequently there are many days without a single entry. For the arranging or cataloging of any new collections the staff expected special pay. Thus in 1722 the librarian asked payment for making certain new hand-lists, but the request was denied. Nothing daunted, he repeated his claim annually until in 1725 it was allowed to the amount of nearly £6. That it was clearly understood that such work formed no part of the librarian's regular duties is seen from a letter of 1751 from Richard Rawlinson, the generous donor of the large collection bearing his name, to Owen, the librarian, saying, "I think large benefactors should pay the expenses of entries into the Bodleian, as their books are useless till so entered." In this same letter Rawlinson says that he had heard a complaint that in the time of the previous librarian, Dr. Fysher, "there was a great neglect in the entry of books into the Benefactors' Catalogue, and into the interleaved one of the library; as to these objections, my answers were as ready as true, at least I hope so, that Dr. Fysher's indisposition disabled him much from the duty of his office, and that I did not think every small benefaction ought to load the velom register." In a letter to Rawlinson, two years previous, Owen had defended the administration of his predecessor, Dr. Fysher, saying that "no man could have the faithful discharge of his office more at heart than he had, as I can assert from my knowledge of the man's personal character, and from the minutes I find in the library as his successor."

REFERENCE VS. CIRCULATION

The Bodleian is primarily devoted to study and research, and works of fiction are not in general given out to other than graduates of the University, unless the reader has some literary purpose in asking for them and so states it on the call slip. Sir Thomas was very explicit in his directions as to the use of the library for reference purposes only. He confesses to having connived at first at Sir Henry Savile's having a book for a very short space of time,

because he was likely to become a great benefactor of the library. But Bodley declared that, after making the statutes, neither he nor anyone else should be allowed the same liberty upon any occasion whatsoever. "The sending of any book out of the library may be assented to by no means," said he in a letter, "neither is it a matter that the University or Vice-Chancellor are to deal in. It cannot stand with my publick resolution with the University, and my denial made to the Bishop of Gloucester and the rest of the Interpreters [*i. e.* the translators of the authorized version of the Bible] in their assembly in Christ Church, who requested the like at my hands for one or two books."

The founder's decision was embodied in the following statute: "And sith the sundry examples of former ages, as well in this University, as in other places of the realm, have taught us over-often, that the frequent loan of books, hath bin a principal occasion of the ruin and destruction of many famous libraries; It is therefore ordered and decreed to be observed as a statute of irrevocable force, that for no regard, pretence, or cause, there shall at any time, any volume, either of these that are chained, or of others unchained, be given or lent, to any person or persons, of whatsoever state or calling, upon any kind of caution, or offer of security, for his faithful restitution; and that no such book or volume shall at any time, by any whatsoever, be carried forth of the library, for any longer space, or other uses, and purposes, than, if need so require, to be sold away for altogether, as being superfluous or unprofitable; or changed for some other of a better edition; or being over-worn to be new bound again, and immediately returned, from whence it was removed. For the execution whereof in every particular, there shall no man intermeddle, but the keeper himself alone, who is also to proceed with the knowledge, liking, and direction of those publick over-

seers, whose authority we will notify in other statutes ensuing."

Thomas Barlow, at one time librarian, tells how William, Bishop of Lincoln, was in 1624 denied a certain book which he wished to borrow. Sir Thomas Roe presented 29 manuscripts to the Bodleian in 1628 and suggested that his books should be allowed to circulate for purposes of printing if proper security were given, and this suggestion was accepted by convocation. In the following year the Earl of Pembroke presented the Barrocci collection and expressed a willingness to allow the manuscripts to be loaned if thought necessary, but one of them suffered irrevocable injury shortly after it came into the library. In 1634 the library acquired by

gift the manuscripts of Sir Kenelm Digby with the stipulation that their use could not be strictly confined within the walls of the library, but afterwards he modified this, leaving the matter to the discretion of the university authorities and consequently they fell into the general Bodleian statutes. The next five years were signalized by the donations of Archbishop Laud, who charged that none of the books should on any account be taken out of the library, only on condition that they be printed and so become public property, in which case there was sufficient security to be demanded and proof by the Vice-Chancellors and proctors, and after printing the manuscripts should be immediately restored to their proper places in the library. Professor Chandler claimed that this stipulation of Laud had not been observed of late years by the curators. In 1636 Laud himself was refused when he wished to borrow the manuscript of Robert Hare's book of University Privileges. King Charles requested the loan of a book and was refused in 1645, and in 1654 Cromwell, who wanted to borrow a book for the Portuguese ambassador, was also refused. Both rulers not only acquiesced in the decision but expressed their approval of the Bodleian statutes. In 1654 Selden was permitted by convocation to borrow manuscripts from the Barrocci, Roe, and Digby collections on condition that he did not have more than three out at a time and that he gave a bond of £100 for the return of each manuscript within a year. When Selden's own books came as a bequest to the Bodleian his executors stipulated that no book from his collection should thereafter be loaned to any person on any condition.

At different times it has been proposed to so modify the statutes as to sanction the lending of books, a practice which had been permitted to go on at various periods without authority. The proposal to convert the Bodleian into a lending library has been scornfully rejected on several occasions as a violation of the Founder's expressed will, and sure to work harm to the institution. The argument that since foreign libraries were willing to lend, the Bodleian ought to be willing to reciprocate, did not appeal to Professor Chandler, one of the most ac-

tive and outspoken of the curators. He thought it about as valid as if one should say: "My friend X has signified his willingness to lend me his banjo, and therefore I am bound to lend him my Erard's piano, if he asks for it." "The Bodleian," said he, "is equalled and even far surpassed in point of numbers by other libraries, but for quality and real value there are not in all the world a dozen that could, or by any competent person would, be compared with it, and this fact makes all the difference when lending is in question. You might lend and lose half the books at Göttingen, and still be able without very much trouble or expense to replace them to the satisfaction of that University. By losing a single half-dozen of some of our Bodleian books, you might seriously maim and cripple a large department; and as to replacing the half-dozen, you might just as well try to replace the coal in our coal pits."

Chandler considered it a degradation of the Bodleian to look on it as a sort of enlarged and diversified Mudie. "Our books may be all over Oxford,—nay, all over Europe; they may be in Germany, in France, in India, in London, at Cambridge, and Heaven only knows where! What is all this but the first step toward turning the Bodleian into a vast and vulgar circulating library? I must say again, as I have said elsewhere, that the Bodleian Library is absolutely peerless and unique; it was founded and augmented by learned men for learned men; it was never meant for the motley crowd which in the present day crams the Camera and the library itself. It is sad to one who remembers what the Bodleian was even thirty years ago to see such rapid decline, such manifest token of disregard for all that once rendered the place a sacred spot." If the University "would but remember what a unique and priceless treasure it possesses in this noble library, if it only knew how easy it is for rashness and ignorance to damage and to ruin it, how difficult it is even for knowledge to preserve it, ability and willingness to serve it would be the indispensable and the only qualifications demanded, and neither age, nor rank, dignity, nor above all party, would be for one moment taken into account."

[To Be Concluded.]

LIBRARY PLANNING

BY JAMES I. WYER, JR., *Director New York State Library, Albany, and President of the New York Library Association, 1913-14.*

FOR over 200 years American cities have grown fortuitously haphazard, with no studied or logical effort to secure beauty, utility or healthfulness. Their location, lay-out, industries, etc., have been matters of chance. Their streets have followed cow-paths and Indian trails. Now after a century or two we have begun to give some attention to their welfare and are on the crest of a wave of city planning. Architects and landscape gardeners dream dreams and see visions of an idealized, often a fanciful city. Engineers and skilled executives bring these visions down to earth, attach to them conditions for practical development. Professional city planners, latest of the countless brood of experts, provide open spaces, parks, playgrounds, boulevards, see that public buildings are segregated and beautified, that art objects are effectively placed, that all building is so restricted as to be sanitary, and arrange for all necessary details to realize the dream. These dreams, the details for their interpretation, the ideal as well as the practical, with pictures, plans and specifications are then all put into print as a definite program for the city's growth.

Why not a similar program for each library? Why not library planning as well as city planning? How many librarians have ever taken pencil and paper and set down or spread upon the records a definite, carefully considered statement of the aim, functions and work of their libraries, the scope of their collections and the environments which condition these things? It would surely be a salutary and interesting exercise in composition, for every library no less than every city needs such a plan, and the library plan like the city plan should be a blend of dream and detail, of prophecy and performance. It should be a survey noting not only past history and present conditions, but also looking into and planning for the future so far as this may ever be possible.

Such a library plan is only in accord with

an increasingly prevalent usage of which the city plan is but one instance. We hear of surveys, educational, industrial, military, scientific, social, relating to a city (Pittsburgh Survey), a state (the Carnegie Foundation report on education in Vermont), a region or a nation (the work and report of the Country Life Commission), which clear the ground, assemble the data and pave the way for the definitive plan. A competent survey and plan are commoner in commerce, in industrial enterprise, where gain is at stake than in intellectual and spiritual enterprise, though the latter have in very recent years been taking many leaves from the books of business and affairs.

I suppose surveys and plans are but necessary preliminaries and parts of that semi-mythical ogre, Scientific Management, of which we hear so much nowadays, a truly odious and impertinent term when applied to things of the spirit, but which may with a degree of propriety be applied to the conduct of institutions which foster the intellectual and spiritual life, for while education, religion and culture in essence have naught in common with scientific management, it can scarcely be denied that schools, churches and libraries may be administered either well or ill. They are all spenders of public or trust funds and certainly every such institution is under obligation to spend these funds not only honestly but wisely. I fear it is true that libraries and schools in our country have, Topsy-like, "just growed" instead of having been "brought up" with method, foresight and large-mindedness, and that untold waste, duplication and groping for adjustment have resulted. Crass individualism has been the too dominant note in library development. Each library for the past fifty years has gone on its way pretty much regardless of its neighbors, its most fitting office, its obvious special functions or the conditions of resources and environment which must color and condition its work. More attention

has been paid to getting libraries launched than to providing them with chart and compass. Once launched, two familiar and sacred articles in the sailing directions were, and too often still are, "Take everything" and "Part with nothing." After a half century many single libraries are getting pretty well organized and in service they are differentiating into distinct types. The time has come to survey the entire field at once and to consider each library not alone and unrelated to any other, but as a part of the great whole, as a factor "in a single comprehensive organization in which each member shall have its own definite part to play, yet will also stand in distinct and mutually helpful relations to all the other members." (C. H. Gould, A. L. A. Bulletin 3:122.)

Social and industrial changes too, swift and momentous, have profoundly affected the aims and methods of all social and civic institutions, libraries no less than others. The telephone, the parcel post, rural delivery, good roads and motor cars, the ultimate possibilities of which in library administration are not yet remotely realized, may easily affect and have affected not only practices but policies as well. Within the library field itself union card catalogs, union lists of serials, lists showing the location of special collections, information bureaus, interlibrary loans, all serve to weld library resources together for reference work and to scatter books far and wide at slight cost, in a way undreamed of twenty-five years ago. And as the resources of *all* or of *many* libraries are thus brought within easy reach of *each*, there open at once vast possibilities for inter-library relations, the highest effectiveness of which will depend upon the measure in which each library plans its own work and shapes its own collections with relation to the whole. With the resources of *all* more and more available for *each*, libraries will be freer to become careful selections of books instead of mere collections. Any one may collect books but not all can select from them a notable library.

What are the factors and influences which suggest and condition a library plan?

1. The community and clientele.

These are the chiefest of all factors in

determining the program for a library. Is it in an industrial center (Gloversville), an educational center (Ithaca), the suburb of a great city (White Plains)? In no one of these three typical communities will the library's collection of books, its methods of work and the demands upon it, closely resemble these factors in either one of the other towns.

2. Other libraries in the community.

The library facilities of any city must be considered as a unit and the fullest measure of co-operation between all of them should exist. One, and only one library in a community should attempt an exhaustive collection relating to local history; an extensive collection of government documents should be built up at only one library. One library should emphasize reference work and another circulation, and each attempt to strengthen itself and the other in their respective fields.

3. Other libraries anywhere available.

Every library in even the smallest town, particularly in the smallest town, should know intimately the resources and privileges offered by libraries in the nearest large city, by the state library, by the Library of Congress, and should rely upon and utilize these privileges for all exceptional demands.

And in turn the small library will sometimes acquire or learn of a rare book, an unusual broadside or manuscript, or a special collection which obviously relate to or belong in a larger library in another county or city, perhaps even in another state and which it may be instrumental in locating appropriately.

4. Present and prospective resources of the library.

Present fiscal resources are easier to reckon with than those to come. Gifts and bequests are fitful, public appropriations fluctuate, income waxes and wanes with commercial and industrial plenty or dearth. And yet such factors as are reasonably constant may be counted upon to justify undertaking a new line of work or adding a new collection or subject to the book resources or scope of the collections. This matter of the growth of a library suggests some interesting observations. Not every library should expect to continue indefinitely to

798A

See page 761

grow in number of titles. Some libraries will fulfill their proper ends without ever becoming appreciably larger, and the number of such (chiefly public, circulating or subscription libraries) will tend to increase. In places where the population is stationary or is tending to become so and which have been served for say twenty-five years by wide awake public libraries with reasonably adequate incomes the new titles bought each year will very often not greatly exceed the total of books replaced, worn out and not replaced, weeded out as obsolete or no longer useful and the annual additions of bound periodicals, which latter while strengthening the library do not add new titles to its catalog. A regular examination of a large number of library reports will show a good many which record a net gain of accessions very much less than the number of new titles acquired. Just as a store in the country or outlying part of a city will do a healthy and successful business for years with a stock of goods frequently turned over but nearly constant in size, without ever becoming or expecting to become a mammoth down town emporium; so a public library in a small town or a branch serving a stable population of 40,000 will some day reach a size which will be about adequate for the normal and regular needs of its community. For exceptional needs in literature as in laces, in magazines as in millinery, the small local vendor must expect to serve his customers by bringing from the larger metropolitan shops what he does not find necessary to carry constantly in stock. But the small and constant stocks of neither grocer nor library will be identical in detail year by year. Each will reflect the new and changing tastes of their patrons in books as well as in breakfast foods, in fiction as in fruits, in poetry as in provisions. Is it not possible that some libraries strive unduly for mere size, for a large accessions number and pay too little heed to the fitness of the books for their patrons? When a merchant embarks upon unwise and ill-judged expansion he invites disaster.

There are on the other hand, certain factors and influences which operate to make library planning difficult, sometimes wholly to prevent it. These are:

1. An unsympathetic or indifferent gov-

erning board, one which will refuse to do its proper part in occupying the local library field, which may be oblivious to its opportunities or narrow in its conceptions of the library's field and functions; unwilling, for example, to part with inappropriate books. Another type of library board may be too ambitious, insisting upon needless and wasteful duplication, so zealous of the library's renown or so filled with the spirit of competition that its effort will be to drive out all other library enterprise as a business house drives out a competitor;

2. Disregard or ignorance on the part of other libraries of natural, logical or definitely settled co-operative functions and opportunities;

3. Gifts and bequests which are inappropriate or which have ill-judged conditions or restrictions attached.

This is a large, a difficult and a delicate matter. It is ungracious to specify them, but we all can cite cases where a person sincerely desirous of giving a library to a city or village and of providing adequately for its conduct and support has left matters as nicely calculated to harass, postpone or actually to defeat the desired end as if an enemy had planned the bequest and written the will. The specific varieties of awkward, ill-advised, unconsidered testamentary efforts in nominal behoof of libraries are numerous far beyond belief or the time to catalog them here. This may be a good time and place to record a bit of sound and gratuitous advice to which may be referred prospective library benefactors. It is this—that no testamentary provision touching a library should be finally fixed without full consultation with a library adviser of recognized renown and familiar with the local conditions to be affected.

Once fairly founded and running the library, or more accurately the librarian, will again and again be beset by this business of inappropriate gifts. If its founder or a long-time trustee is unswervingly determined to present to the library at Rustic Cross Roads the finest collection of books in the world on Tlingit mythology, how are you going to prevent it? And this is exactly the kind of thing that is being done every week.

We find collections, notable but erratically bestowed, on Arctic exploration in the

library of the Western Reserve Historical Society and in the New London, Connecticut, Public Library, on chess at the Library Company of Philadelphia, on English grammars at Ohio Wesleyan University, and at St. Lawrence University the Credner collection, unclassified, uncataloged, unknown, of 2000 German titles on the theological history of the Reformation. The Scottish Rite Masonic Library in Washington has an important collection on American travel; the Metropolitan Museum of Art has an unusual Franklin collection; the Brookline, Massachusetts, Public Library has a collection of slave laws of the southern states; a public library in a distinctly rural community of 1200 people in this state has the \$3000 set of Curtis' American Indian. How many libraries ever engaged in diplomacy or argument to avert a gift or to direct it into more sensible and legitimate channels? How many even scrutinize as to suitability the considerable grist of free books and pamphlets which daily reach their libraries?

Library planning begins with the smallest single library. No library is so tiny or so remote that it may not with profit take thought of its own proper and particular purpose, but the very first such thought must and will be inseparable from the obvious fact that no library can or should live to itself alone. "All are needed by each one."

The best plan for even the smallest library involves thought for other libraries and forces consideration of the programs, or at least the facilities—the possibilities for co-operation afforded by neighboring libraries and in turn the reciprocal favors and facilities which your own library (be it small or great) can offer to all other libraries of the county, city, state, or even country. These considerations will be factors and large factors in determining the legitimate field and function of your own collection and in preparing for it a formal plan.

While there probably is more informal regard paid to such local co-ordination among libraries than is generally known, especially in the purchase of books, yet there are certainly few such examples as that of the written agreement existing between the chief libraries of Chicago, defining the

scope of their respective collections. It would be interesting to know how many single libraries have ever drawn up a formal program for their own guidance. If every library in the land should after careful consideration formulate such a plan as is here suggested and live up to it, while absolutely rigid and exact results would not follow nor are they indeed probably desirable even if possible, these very salutary tendencies and results among others would inevitably and eventually appear:

1. Duplication of purchases would be prevented. One illustration will suffice. Liberal grants to American college libraries for books plus the zeal and vigilance of European book sellers have resulted in placing more sets of some of the expensive and relatively little used European serials in American libraries than are really needed. Two sets of a carefully selected list of such serials placed in the John Crerar Library, for example, would probably serve two dozen Mississippi Valley college libraries each of which has either bought these sets or means to buy them at the earliest opportunity, at prices which are rapidly increasing because of the large number of competitors;

2. Unnecessary competition among libraries for material would be greatly reduced. Too many libraries are buying material itself intrinsically desirable but which a wider knowledge of the contents of other libraries would show to be more logically placed elsewhere. This refers, of course, not to minor current purchases but to libraries *en bloc* or to extensive and unusual sets of periodicals and transactions.

3. Library resources on special subjects would become better segregated and consolidated. Notable special collections would acquire added material and renown and would be more appropriately located;

4. The functions of different types of libraries as well as the resources of individual libraries would become more sharply defined and more easily and exactly known;

5. The reference resources of all libraries would acquire added and easier effectiveness, mobility and unity;

6. Many libraries would be freed from fixed over-head charges for organizing and administering irrelevant and unnecessary

material which if kept at all would be diverted or transferred to more appropriate depositories.

Library planning to be most potent must be universal and therefore of wide publicity. Of course if every library had a model plan based on the knowledge of every other library necessary to its own program, then a wide and sufficient publicity would be obtained. This ideal cannot be reached at once or rapidly but the best way to work toward it is for each library to make its own plan and furnish copies to all other interested libraries. In the Handbook for readers issued by the New York State Library and distributed to all registered libraries and high schools in the state appears a detailed statement of the scope of the State Library's collections and the privileges offered by it to all other libraries of the state. This is very well—though our correspondence indicates that the contents of the Handbook are not as minutely familiar to many libraries as they should be—but think how useful would be a handbook containing similar statements for every library in the state.

Another benefit from library planning is that it brings to each library and especially to small libraries a new sense of professional solidarity. It reveals you to yourself as part of a much broader and more effective library machinery. It widens horizons.

The moment that, in making a plan for one library, you consider (as you must) other libraries, that moment you touch the fringe of a kindred and equally important topic, library co-ordination.

This is not a new subject. It has been discussed at library meetings and by committees for a dozen years or more, notably by President Eliot at the Magnolia conference in 1902 when he urged the separation of dead books from live ones and the providing of a place of sepulture or storage for them. In 1909 at Bretton Woods, Mr. C. H. Gould, who has already been quoted, elaborated and vivified Dr. Eliot's plan by suggesting regional libraries which should not only act as custodians of all books, dead or live, deposited with them by libraries in their district, but which should act as clearing houses, central reference and lending libraries and in general relieve all libraries of

all functions not appropriate to their current local work. This ambitious plan for library co-ordination has as yet been wholly theory. It can be tried fairly only on a very large scale. Other papers have discussed it, committees have turned it round and round and while there is general agreement as to the importance of the matter, no practical realizing step has ever been taken. Does not library planning make library co-operation more definite? May not library planning hasten library co-operation in the following definite ways?

1. Let every library make a plan for itself.

2. Let certain great libraries plan for and with those of a given region, for example, the state library for all libraries in the state, or all the libraries of the same city. Suppose in New York state the State Library should attempt to put into print a statement emphasizing and detailing its relation to all other New York libraries; defining more specifically the functions and limitations of local collections whether in public, college or historical libraries, and stating in detail the specific opportunities for mutual co-operation.

3. Certain groups of libraries of the same type (college libraries, state libraries, historical libraries) might make a plan for the entire group. Thus it might be agreed among them that each state library should have first claim to the best collection of laws and public documents of its own state, that all others should recognize this by refraining from competition, by referring offers to the state most interested, perhaps even by turning over books owned by one state library which are lacking from the collections of the state of first publication.

The foregoing statements are based on the general assumption that there is far too little method in planning and building up the book collections in our libraries and too little definite and formal thought as to their aims and work. Libraries are not alone in this aimless or indifferent attitude. An analogy is not far to seek. It is a truism in educational circles that there are too many colleges; Bulletin 4 of the Carnegie Foundation asserts in positive fashion that there are too many medical schools. There are not yet too many libraries for we are later

in the educational field than schools and colleges but ere there shall be too many libraries let us stop and do some sober thinking so that the warning already sounded to other educational institutions shall not come to be true about us. I said a moment ago that there are not yet too many libraries. But in one field of library endeavor—the offices created by our several state governments to centralize certain library functions which should be performed by the

state—state libraries, library commissions, legislative reference bureaus, historical libraries—it seems quite clear that there has already been some duplication of work and that consolidation would be wise in some states. It is probably well merely as a measure of reasonable precaution in the case of a movement developing so fast as our libraries have lately grown and are now growing, occasionally to “stop, look and listen.”

RELATION OF THE LIBRARY TO THE BOY SCOUT AND CAMP FIRE GIRL MOVEMENT*

By MISS ELIZABETH MANCHESTER, *Detroit Public Library.*

It is full many a league from the illuminated manuscript and the chained volume of the past to the printed page and open shelf of to-day, and as we see history in the making, as well as standard and popular fiction flashed upon the screens of the “movies,” one peers into the future and wonders if our library buildings with all their elaborate equipment may not be outgrown, and the knowledge conveyed by the printed page of the present transmitted in some more advanced manner.

In the face of progress and changing conditions why should we cling to only one method of distributing knowledge? The passing of a book over a charging desk.

It seemed that almost unawares the story-hour stole upon us and we found ourselves giving the children in the most concrete form and in the most fascinating manner the best that literature had to offer. This was followed by the illustrated lecture of the specialist furnishing the busy adult with a broad knowledge of technical subjects as well as of travel and of history, formerly obtained only through individual research and study; and now we are reaching out through clubs of various sorts, to attract and hold our young people, and it is of our work in this connection, that I am asked to speak to you to-day. The Boy Scout and Camp Fire Girl

organizations as developed in connection with branch library work in Detroit.

For some years we have had literary and scientific clubs for boys and girls as a part of our library work, but there is a large percentage of young people whom the library never can hope to reach by books or reading, and it is to this class that the Boy Scout and Camp Fire idea especially appeals. Through introducing these organizations in connection with our work we may attract their attention and then it is our own fault if we do not make the most of our opportunity.

I have seen a group of Camp Fire girls who formerly had refused to read anything but the lightest fiction, led through their interest in first aid work to the biographies of Florence Nightingale and Clara Barton and through searching for an Indian legend upon which to found their Camp Fire, become thoroughly interested in Indian folk lore. Moreover, boys who never used the library before becoming scouts, were persuaded to read Cooper and biographies of Audubon and Crockett, through a system of merit marks offered by their scout master, for a certain number of books checked on their library cards.

The impression seems to have gone abroad that our branch librarians have personally conducted these clubs. This is not the case. We have simply confined ourselves to organization, the supplying of our library auditoriums as meeting places, and

*Read at the Michigan-Wisconsin library meeting, Menominee-Marquette, July 29-31, 1914.

782A

NEW ADMINISTRATION BUILDING OF THE UNIVERSITY OF UTAH

the purchase and distribution of relative literature. The clubs are under the direct charge of scout masters and guardians supplied from the headquarters of these organizations, or secured by the librarian through interesting someone in the neighborhood capable of being placed in charge. These in turn obtain the services of specialists who give instructions in first aid, astronomy, etc. The Boy Scout troops have adopted the names of branches with which they are affiliated, and in some cases the librarian has acted as secretary and treasurer and assisted in raising funds to finance the summer camp. The library also furnishes lectures allied to their various activities, and places on exhibition photographs, posters, and bulletins to illustrate to the people in the neighborhood the part their clubs are taking in the general work. Properly conducted a Boy Scout troop soon becomes a vital factor in any community. "Be prepared" and "Do a good turn daily" is their motto, and scouts are always ready to lend a helping hand individually or collectively. To illustrate: On Memorial Day the patriotic societies of our neighborhood called upon our branch library for scouts to decorate graves in the cemetery. A large delegation responded and worked diligently all day, notwithstanding the fact that there was a circus within a few blocks. On another occasion, we received a call for help from a lady who had recently moved into our district, whose two small boys were, for some unknown reason, being persecuted by a band of malicious youngsters. She was at a loss how to handle the situation, when one of the children remarked, "If there were some boy scouts around these fellows would be afraid to pick on us." Being impressed with this idea she called and asked our advice. A couple of the scouts were sent to the home to discuss the situation with the mother and it was decided to warn the gang to behave themselves, and if this had no effect to call for reinforcements to handle the situation. It happened, however, that several of the gang lurking in the neighborhood observed the visit of the scouts and learned from one of the small boys why they had come. Although the scouts were prepared to enforce order, their mere appearance proved suffi-

cient to check the trouble and nothing more was heard of the matter.

We all know Tom Sawyers exist to-day as surely as they did in Mark Twain's time. Imagine if you can, the ingenuity of a Tom Sawyer directed to the daily invention of a good turn. While this practice often has its humorous side, its daily repetition is an influence for character building which cannot be over-estimated. We have in our Library a "good turn box" belonging to the scouts and made by them, in which each week are deposited accounts of good turns rendered. At the weekly scout meeting these are read aloud, names being withheld, and the troops vote on the number of credits each scout deserves.

The foundation of the Boy Scout movement is so secure, its development in all countries and under all conditions capable of such constant growth, that I do not think it too much to assert that the idea was an inspiration. It is, primarily, applied discipline to the "gang" spirit, and as has been said, "Not the discipline of the barrack yard, but the discipline of the New Testament."

The Boy Scout movement has for its aim the development of the boy, mentally, morally and physically. The clean, wholesome, outdoor exercise gives him an outlet for his high spirits, at the same time training him for his coming manhood. When on a "hike" or in a summer camp the scout learns many things of value that the ordinary boy never has an opportunity to become acquainted with.

Before he becomes a scout a boy must promise:

"On my honor I will do my best:
To do my duty to God and my country
and to obey the scout law;
To help other people at all times;
To keep myself physically strong, mentally
awake, and morally straight."

Following are the twelve scout laws which he promises to obey: To be trustworthy, loyal, helpful, friendly, courteous, kind, obedient, cheerful, thrifty, brave, clean, and reverent.

It appeared that the introduction of Boy Scout troops in connection with branch libraries in Detroit was undertaken at the

psychological moment. Last year we opened six branch libraries and this meant the handling, subduing and winning over, of just as many "gangs" as happened to exist in these six districts. Those branch libraries where scout troops were immediately organized found them of the greatest assistance. They were able to handle difficult situations when the police failed and in some cases the "gangs" were converted into scout troops, thus establishing order in a very short time. We have not, however, thought it advisable to attempt to found a troop in a neighborhood where a similar movement was already under way; wasting time and energy when as much might be accomplished along library lines, by co-operating with troops already established. On the other hand, the library is in a position to reach boys and girls who can not be appealed to through either the church or the school, and the Boy Scout leaders tell me that for this reason the library troops are most successful. They have no particular religious affiliations and they are cosmopolitan.

When our librarian was requested by the Michigan Library Association to give a report on the Boy Scout and Camp Fire work at this meeting, the President wrote: "It seems that there are people who do not approve of the Boy Scouts or Camp Fire Girls idea, and therefore, of course, feel that the library should have nothing to do with it." In our work in Detroit we have met with no opposition along this line, but when the Boy Scouts were first organized the labor unions, the Socialists and the Roman Catholics raised some objections. The Boy Scout Manual first printed in England and from which our manual was copied, contains some references which offended the labor union leaders of this country. As soon as this was discovered the whole edition of this work was called in and the offending clauses eliminated. In the meantime, word had gone over the country that labor union leaders were not in sympathy with the movement. It has taken time to live this down, notwithstanding the fact that later all objections were withdrawn, and there is a letter on file at scout headquarters in New York to this effect. The objections raised by the Ro-

man Catholics have also been overcome and they are now hearty in their co-operation.

The criticism advanced by the Socialist party is based on alleged militarism. It is a fact that the Boy Scouts drill and march, but when scouting is understood it is plainly seen that this is only for the purpose of organization and discipline. An editorial in the *Detroit News* on this subject says in part: "Boy Scouts wear a uniform, it is true, but so do ambassadors and bell hops. Probably it is because their activities lead out into the open that their uniform is more like the standard military dress than some others. For some people of queer notions a uniform is in itself an offence to the eye and an alarm to the understanding. The Boy Scout learns to obey orders, keep himself clean, support contention with his fellows without recourse to rowdiness, and have regard for his physical and moral health. This may be military in the sense that military training aims to accomplish the same effects, but they are the effects which fundamentally are required for good citizenship and that seems to be the really all inclusive aim of the Boy Scout organization."

The expense involved in founding and maintaining Camp Fire groups is the only point of disapproval I have heard advanced in connection with this movement. It does not seem to me that this is great enough to stand in the way of any wide-awake club of girls. Miss Parker, the national secretary of the Association, says on this subject: "We believe absolutely in the principle of self-support. Instead of girls being encouraged to expect something for nothing they are trained to pay with their own effort for what they get. An economic principle which will affect their whole lives is being taught through this Camp Fire fee. Girls take much more pride in the organization when they feel that they are carrying their share of responsibility in it. The annual dues amount to fifty cents a girl. There are other expenses, but these can be made as much or as little as the girl desires."

In defining for you the meaning of the Camp Fire organization I had perhaps best quote from their manual. "The Camp Fire Girls organization is for girls, what the Boy

Scout organization is for boys, with a difference. The Camp Fire girls place the emphasis first on fire, which is their symbol and which stands for the center of the home. Their watchword is Wohelo, a word made up by combining the first two letters of each of the words, Work, Health and Love. The groups are composed of members for the most part in their teens and the leader is appointed by the National Board. Her title is Guardian of the Fire, and her aim is to improve the girls morally, mentally, and physically." We have in our branch a Camp Fire group which meets once a week in our Library Club Room. But in order to emphasize the central idea of the Camp Fire the guardian holds the monthly ceremonial meeting in her home.

In the library the girls have been taught first aid, basketry and bead work, a library assistant reading aloud or entertaining by story telling while these activities are in progress.

Detroit, because of its phenomenal and sudden commercial growth has found itself unprepared to cope with the recreation side of its civic activities. The library received the S. O. S. call to save our young people and responded by contributing its branch library auditoriums and the services of its branch librarians in organizing these neighborhood clubs. This experiment has worked out successfully for the good of all, and if our library ship has drifted somewhat out of the prescribed course, in establishing a precedent, it does not follow that we have lost sight of any of our library ideals or intend to unduly emphasize the social service of our branch library work.

THE A. L. A. PARTY IN SOUTHERN EUROPE

FROM a journal written by Miss Theresa Hitchler of the Brooklyn Public Library, descriptive of the travels of the A. L. A. party in Europe last summer, we are able to quote some interesting paragraphs. The party sailed from Boston July 11 on the *Canopic*, and after stopping at the Azores, Madeira, Gibraltar, and Algiers, the party was landed at Naples. From Naples the party visited Amalfi, Sorrento, and Pom-

peii, and went from there to Rome. The remaining paragraphs are quoted verbatim from Miss Hitchler's account:

It was here in Rome that the first fearsome echo of war saluted our unbelieving ears. So well and carefully are newspapers censored in European countries that America in all probability knew before we did what the Powers were contemplating. On Saturday, August 1, we received our first disquieting conviction and the tug of war began everywhere to be felt, literally. From this time forward a damper was placed on our spirits, on our unalloyed enjoyment of the treasures and pleasures of sightseeing. Banks, hotels, and the American Express Company temporarily suspended the important operation of cashing checks and all communication with America by mail seemed cut off for the time being.

An undaunted but serious minded party of twenty-four left Rome on Monday, August 3, for Florence, a seven-hour trip by train through the most beautiful country imaginable, with the green hills of Tuscany to gladden the eyes. We now knew that the war was serious. Everywhere trains were carrying back to their various countries loyal subjects recalled by their sovereigns. Italy was neutral but mobilizing her troops. Fields as we passed them showed fewer and fewer men at work and we were glad when at last at 9:30 o'clock in the evening, we reached Florence, a city which impressed one as sad and somewhat secretive.

One of the first things we were instructed to attend to was the getting of emergency passports or certificates. To the Consul's we went and made out the necessary forms, still thinking, however, that this would prove an unnecessary precaution. But we soon began to realize the very serious aspect of the war. Our guide no longer engaged carriages for us in our visits to the various points of interest, money was scarce and the future so uncertain that the little we had, had to be carefully husbanded. We either walked or took the tram to the churches, the museums and the galleries. A visit to Dante's house was highly interesting and entertaining, not only because of the treasures there pre-

served but for the reason that a most sympathetic and intelligent guide took us through and explained everything in detail.

This was the beginning of the uncertainty as to whether we'd remain in Italy and take passage home from there or make an effort to reach London. A few fell by the wayside and returned to Naples, gaining little thereby. Most of the party were good sports and decided to push through to England if at all possible. Fortunately the danger that threatened us most seriously did not occur to the women and the mention of such possibility was withheld by the men. If Italy had not declared her neutrality we should have been trapped, unable to leave the country.

After a few days in Florence it was decided to run the risk of pushing on to Venice, so at 3 o'clock in the afternoon of Saturday, August 8, we started. At Bologna we stopped and dined in the station and to our horror and surprise found our train had gone, our bags and other impedimenta dropped on the platform helter-skelter and our guide busy readjusting things to meet this unexpected change of train. The first half of our trip to Venice was wonderful. We crossed the Apennines, passing through forty-nine tunnels and over viaducts to accomplish it. The second half of the journey was through flat, green country with little variation. After crossing a narrow causeway we reached Venice at 9:55 in the evening and had our first glimpse of the fascinating old lady by moonlight, thus missing all her imperfections and seeing only what she once was. This impression remained next day when in the garish light of day we eyed her again and more keenly and critically. Out of the station we tumbled, bag and baggage, to the water front, where a barge or baggage gondola waited to take us safely to our hotel. The romance of that moonlight ride through the Grand Canal and the smaller canals, with the full moon shining overhead was only excelled by the one we took the following night, when we listened for half an hour to the strains which emanated from the floating Venetian serenaders!

The libraries we visited in Rome and Florence and Venice particularly were so different from our modern conception of

what a library should be—and do—and the collections so rare and valuable, so beautifully illuminated, many of them, that I'd almost forgotten to mention them as libraries, and our visit to them as a justification for our trip, our library pilgrimage. They have really grown in importance since the visit to the Leipzig exhibit had to be given up and the Oxford meeting faded into nothingness as we advanced. In Venice the most courteous of librarians showed us his treasures among which was the original of the Grimani Breviari, the sight of which made me want to become a collector on the spot.

The International Exhibition of Arts held in the grounds of the Gardens, which we visited one morning, was one of the strongest I'd ever seen, most interesting, and representing a refreshing variety of subjects, a welcome change after the many Madonnas and other religious pictures we'd seen and enjoyed. It was drawn from all over Europe and impressed one with the wide horizon possessed by European artists who seem not afraid to paint pictures that mean something as a rule, choosing their subjects from the great allegories or great epochs of history.

At Venice it was we heard definitely and officially that the United States Government had appropriated \$2,000,000 to assist in getting Americans home. While in Venice we three Brooklynites offered our services to Mr. Carroll the American consul and compiled for him a card catalog of all American residents registered in Venice, numbering about 800. From this time forth it became such a matter of course to state one's age and nationality upon meeting a stranger, that some of us felt quite disappointed when it wasn't demanded. Something we'd kept fairly dark for ages we quite shamelessly proclaimed to whomsoever would know. We loitered in Venice longer than we had at first intended, for our plans had to be made and remade from day to day and were contingent upon news received by our guide regarding the advisability of pushing on.

Suddenly on the night of August 11 we were notified to be ready to leave Venice for Milan next morning at 9 o'clock, the which we did, arriving there at 2:45 in the

afternoon. All pleasure and spice had gone from sightseeing. Our one thought and one topic of discussion being "Shall we be able to leave Italy, and when and how?" We visited the Milan cathedral, *cela va sans dire*. Our passports were viséd in Milan by the French consul and after an informal meeting of the members of the party it was decided that each should get all the ready money possible and that we pool it for the trip and push on at the earliest possible moment across the frontier into France. We knew for certain by that time that cutting across Switzerland was out of the question. We spent the intervening two days of waiting, while our guide went alone to the frontier at Modane to see if it looked feasible and safe, in trolley riding about the city, the most modern and least interesting we had yet seen.

At last the men of the party, who had carefully shielded us from all knowledge of possible personal danger, buckled on their spurs, metaphorically speaking, and we were off. We took with us rations sufficient for three meals, for Miss Baldwin and I had been appointed Commissary Committee and had done unto the others what we would have had them do for us had the tables been turned. Personal discomfort we were all prepared for and the spirit of adventure within us, which had grown with the hours, fair welcomed the thought of it. I am not at all sure, that some of us, *now*, do not wish there had been *more*, either to brag about or become martyr-like about—when telling the story to our friends over here. At noon on August 15 we left Milan for Modane on the frontier of France and forty-four hours later we reached Paris still fresh in mind but somewhat jaded in body. We reached Modane at 8 p. m. and after having been inspected by the French customs and military officials were allowed to pass into the station, where we had supper and where we were obliged to remain until notified that the 12:50 train was ready to take us into France. During these memorable forty-four hours we had neither washed nor slept, except for such naps as we could snatch in an upright position on a not too comfortable seat, and had changed cars at

various and unexpected times. Our first view of the Alps was awe-inspiring. We simply lined the corridors and gazed our fill out of the windows.

We might have concluded that we really had suffered hardships, had we not "heard tell" of other experiences which cast ours into the shade in that respect. Looking back now one cannot help but see that we were unusually fortunate from beginning to end, and that was due in large measure to the executive ability displayed by our men, who thought over each move so carefully and, what was of greater moment, knew just when to make it. We left Italy for England at the psychological moment, when chaos was resuming form and order and the dread results of the war had not yet taken shape and we were not hemmed in on either side by contending elements. On changing cars for the third time at Culoz, the morning after our start, we were put into a compartment with strangers and the very pretty little French girl who offered me a seat beside her soon began to talk to me and tell me of her experiences. She'd been in Vienna visiting a friend and started for home when war was declared, being in the care of the French Ambassador to Austria part of the way, until met by her father. So brave and cheerful she was, even when telling me that her brother had been taken from school and sent to the front and that her sweetheart, too, whom she was to have married in December was there, their fate as yet unknown to her.

At Amberieu we again changed cars, after a wait of four hours, during which we lunched at a small over-crowded hotel, and tried to kill time by walking about and seeing the country. This we were prevented from doing, however, for the sentinels stationed near the cross roads refused us permission to pass without satisfactory passports. At 12:45 we again boarded a third-class train which reached Dijon at 8 o'clock. By this time it was raining fast, and an hour later when we changed for the Paris train it was quite dark besides. There was but a minute allowed us for the change and we rushed for the cars, boarding them wherever possible. They were packed. Some of us stood up in the aisles, clinging to the window rails, with rain leaking

through the roof and swishing about our feet. Others sat on their bags and suitcases, but all remained cheerful even under these trying circumstances. The French cars are not corridor cars, so when our guide appeared at one of the stations and told us there were some empty compartments ahead we took up our bags and fairly sprinted along the platform to reach them. It was a hazardous thing to do, for there was but one guard for the whole train and had he signalled it to go we'd have been left stranded in the dark and wet somewhere in France. The engineer we knew was not an experienced one because of the way he started and stoppd the train. Anyone in a standing position was sure to go down unless he clung hard to something fixed. Ghostly-looking sentinels were posted at regular intervals all along the line of railroad until we reached Paris.

At daybreak we took some French passengers aboard, one young woman, who had just parted from her soldier husband, selecting our compartment. In Italy we felt the war and in France we saw it. At 9 o'clock in the morning of August 17 we arrived in Paris and breakfasted in the Gare de Lyon. After waiting in the station an hour or so for the bus we drove to our hotel, the D'Iena. The quiet and seeming apathy of this gay city struck us even then. The hotel was undermanned, almost all the men having gone to the front, leaving one woman in charge with an old man and two halfgrown boys to run it. Two of us felt that we might never see Paris again (and had never seen her before) so we scorned the idea of waiting for the luncheon which was about to be served, and without troubling to do more than wash our faces, we left the hotel at once on a tour of our own. We saw all that could be seen in a steady, brisk four hours' walk and a drive at the end of it down the Champs-Elysees and through the Bois de Boulogne and back to the hotel at 5 o'clock. Here we were met by the upraised hands of the party which had been waiting for us to go to the police station and have our passports examined and viséd in order that we might leave Paris. That police station and that chief of police, with his fierce black moustache and his piercing eyes, brought

before me visions of the tumbril and the guillotine. Robespierre sat before me in person, condemning us to instant execution. But again we were fortunate in passing inspection so quickly and readily. In twenty minutes we were again gliding through the deserted streets of Paris in a taxi, visiting the Latin Quarter this time.

By nightfall we were all ready and anxious to leave this once-so-gay city. We felt the sadness so seep into our veins that tears were always near the surface. The streets deserted of people and cabs, the closed shops with their placards "The head of this business with his entire personnel has gone to the war," the sad faces of the women on the streets and the pathetic figures of the praying mothers and wives, sisters and sweethearts in Notre Dame almost overcame us. Some street car lines had stopped running. Troops, infantry or cavalry, marching to the station on the way to the front went quietly, without music or a single demonstration of joy or sorrow or emotion of any kind from the people on the streets, their faces grim and set, serious and determined, altogether unlike what we would expect from this impulsive, volatile people. The much-vaunted liveliness of the Rue de la Paix was a thing of the past. I can express it no better than by saying that Paris, the gay and lively lady, was prostrated with grief and anxiety for her children, with no longer any thought of pleasure or jollity. There were so few men to be seen, even the wicked ones had responded to their country's call. Women even then were beginning to take the places of men as conductors on trams, etc. Everywhere we saw nurses whizzing by in automobiles, soliders marching, people making flags and buttons with the colors, hotels closed to guests and given up to Red Cross work. It all just gripped one's heart.

Next morning, after a night's sleep in bed, on August 18, we continued our journey, leaving on a noon train, because we could get neither cabs nor busses to take us and our luggage to the station in time for the earlier one. The trip to Amiens was uneventful, if slow, except that a Russian gentleman and his wife who'd been in Germany at the outbreak of the war told us of their experiences in reaching France and

getting out of it. Again we felt we had cause to congratulate ourselves on our good fortune. At Amiens, which we reached at 5:45 p. m., we expected to spend about four or five hours visiting the Cathedral, etc., until the 10 o'clock train for Boulogne was ready. But we were not permitted to leave the station, so after a hasty supper we boarded the train for Boulogne, which was scheduled to leave at 6:23. It didn't, but that's a mere detail. We'd become accustomed by that time to the knowledge that everything had to give way to the troops, and that engineers and conductors themselves were never sure of their directions until they reached a station.

While sitting in our compartments we saw the first detachment of English troops which had been sent across the Channel into France so secretly. They passed close by us on the next track, going in the opposite direction, car upon car filled with them, all in khaki, enthusiastic and brave and young. We all hailed them, some of us wishing them "good-bye" and "God-speed" and shaking hands with the boys through the car windows until that became too dangerous. They cheered back vociferously. Provision and ammunition cars followed until the seemingly endless train had disappeared. Then we started and at 10:45 in the evening reached Boulogne-sur-Mer. After we'd passed the rigid inspection necessary we were deposited bag and baggage outside the station, cold and tired and dreary. After some parleying, it was decided to stop for the rest of the night at a small inn across the way, where we snatched as much sleep or rest as possible in the four hours that intervened before we were again on the march to the boat landing, at 4:30 o'clock in the morning of August 19.

Here we experienced considerable delay while once more we and our passports were carefully scrutinized by a French official and allowed to pass on to the boat, where we were directed to the smoking room to run the gauntlet of three English officials who put the question to us again and gave us a landing number. After this we were permitted to go on deck, where we watched the others come aboard and the loading of

the most stupendous amount of mail I'd ever seen at any one time. We were fortunate in having a perfectly smooth passage across the Channel and reached Folkestone one hour and twenty minutes after leaving Boulogne, landing at 8:30 o'clock. After passing the customs we boarded the train, which was held in the station for over an hour to permit the passing of a troop train with nurses and doctors, and at last arrived at the Charing Cross station in London, dear old beloved London, at noon, and were driven directly after lunch to the Imperial Hotel, Russell Square, safe and sound and happy.

Here the party broke up officially and said "good-bye" to our conductor at a meeting arranged expressly for the purpose by Dr. Hill, and began to go on our own, paying our own way and otherwise looking out for ourselves. The first thing we saw on looking from our hotel room window was a squad of territorials (corresponding to our state militia troops) in the garden opposite being drilled in tactics, manoeuvres, sharpshooting, etc. There was no escaping from the war atmosphere we realized, even though we were not actually on fighting ground. During the twelve days we spent in London we fairly saw the English people slowly wake up to the seriousness of the situation. Prices of food, meat in particular, went up, luxuries were dispensed with, business became dull, shops began to close, more and more reservists were training for active service, shipping was disorganized and the Americans pouring into London from all parts of the continent were distraught with anxiety to secure passage for home, which was not plain sailing under the circumstances. Many ships had been taken off altogether to be used as transports and the American line was the only one pursuing her steady course and routine. Dr. Hill took upon his shoulders all the unpleasant task of daily haunting the White Star offices making inquiries regarding our passage to America, leaving us free to enjoy London to our utmost. Dear, delightful London with its elephantine busses with their expert mahouts so cleverly worming their way in and out of the congested traffic, its taxis which even we felt we could afford to

indulge in now and again, its dignified, good-looking, courteous "bobbies," its fascinating river, its quaint little houses and gardens with their inevitable hedges, and its numerous points of historic interest, endeared itself to all of us.

The last bit of soldiery we saw before we left London was the parade of 17,000 clerks who had enlisted and were on their way to be inspected by General Roberts before going into their three weeks' training. At last we had decisive news as to the sailing of our ship, the *Lapland*. She would leave Southampton on September 1. Others of our party had already gone on the *New York* and *St. Paul* and a few were to follow on the *St. Louis*. Such excitement! When we reached Southampton on the morning of the 1st we found the inquisitors ready for us again and we all felt mightily relieved when at last we'd broken through this bit of red tape and were safe aboard the ship, with trunks and bags. Some of us found our trunks in London at the eleventh hour, those that is who were so fortunate as to have sent them to Oxford, while others have still to hear what Leipzig has done with theirs.

We found the *Lapland* with a new lot of seamen and stewards, all English or Belgians, with registered English certificates, the Germans having been taken as prisoners of war and sent to Portsmouth. Even the first officer who for nineteen years had been with the Red Star people was deposed because of his nationality and given a free passage to America. The exigencies of war are hard and cruel but I presume "it has to be." Two hours later than schedule time, at 1:45 o'clock on September 1, the *Lapland*, flying the English flag, reluctantly bowed herself away from her dock at Southampton and after swinging round on one heel tiptoed her way gingerly down the Channel between two rows of stately warships who took care that no one stepped on her train. She coyly took a course more northerly than usual, conversing with her English cousins at intervals along the road. Life on board was unmarked by any of the usual jollifications, music was conspicuous by its absence, the passage for the most part was very smooth, and with the exception of a full moon, three icebergs, a school

of porpoises, some whales, and a stray ship or two, nothing untoward happened on our way home.

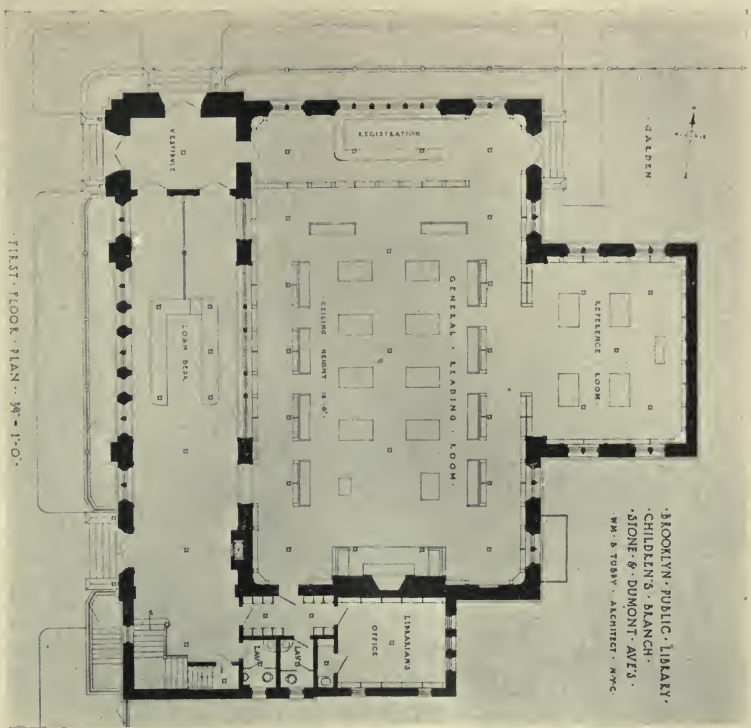

Those who went with the party whose travels Miss Hitchler describes, were the following:

- Miss Elizabeth Forrest, assistant librarian, State College, Pa.
 Miss Lillian I. Powers, Brooklyn, N. Y.
 Miss Julia H. Powers, assistant, Brooklyn Public Library, Brooklyn, N. Y.
 Miss Rose Stewart, chief cataloger, Free Library, Philadelphia, Pa.
 Mrs. S. L. Brown, Wellesley, Mass.
 Miss Pauline Brown, Wellesley, Mass.
 Dr. Frank P. Hill, chief librarian, Brooklyn Public Library, Brooklyn, N. Y.
 Mrs. Frank P. Hill, Brooklyn, N. Y.
 Miss Emma R. Engle, chief children's department, Free Library, Philadelphia, Pa.
 Mr. Charles Belden, librarian, Mass. State Library, Boston, Mass.
 Mrs. Charles Belden, Boston, Mass.
 Miss Jaquetta Gardiner, Guelph, Canada.
 Mr. Frank H. Whitmore, librarian, Public Library, Brockton, Mass.
 Miss S. Ethel Stilson, assistant, Brooklyn Public Library, Brooklyn, N. Y.
 Miss Hannah M. Jones, librarian, Friends' Free Library, Germantown, Pa.
 Miss Mary Anna Jones, Germantown, Pa.
 Mr. E. Lemcke, New York City.
 Miss Mary E. McLennan, Guelph, Canada.
 Mr. Henry M. Marx, Easton, Pa.
 Mrs. J. H. Gray, Washington, D. C.
 Miss Emily R. Jones, Washington, D. C.
 Dr. Edward J. Nolan, librarian, Academy of Natural Sciences, Philadelphia, Pa.
 Mr. Charles C. Heyl, principal, West Philadelphia High School, Philadelphia, Pa.
 Miss E. V. Baldwin, librarian's secretary, Brooklyn Public Library, Brooklyn, N. Y.
 Miss Emma F. Blood, Groton, Mass.
 Miss Theresa Hitchler, supt. cataloging dept., Brooklyn Public Library, Brooklyn, N. Y.
 Mr. and Mrs. Bucholtz, Chicago, Ill.

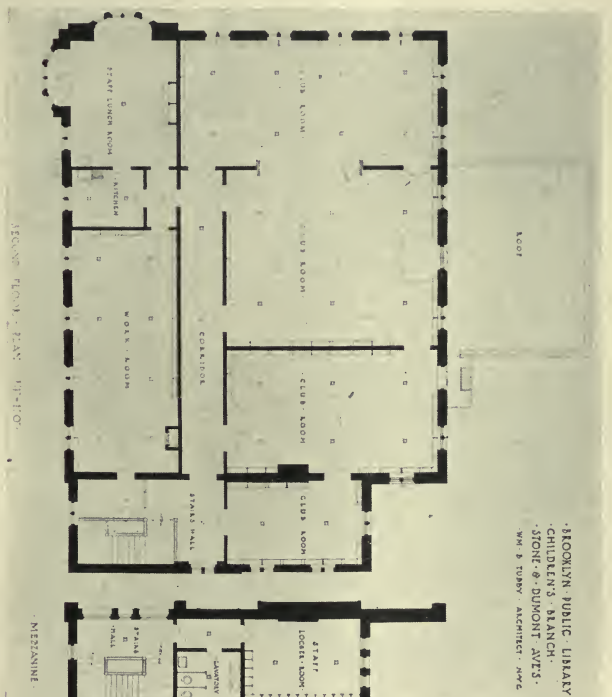

THIRTIETH ANNIVERSARY OF WILLIAM H. BRETT

THE first regular meeting of the Cleveland Public Library staff after the vacation season was made the occasion of a celebra-

SECOND FLOOR PLAN - 3/8" = 1'-0"

BROOKLYN PUBLIC LIBRARY - CHILDREN'S BRANCH OF THE BROOKLYN PUBLIC LIBRARY

tion of the thirtieth anniversary of Mr. W. H. Brett's connection with the library as its chief librarian. The exact date of Mr. Brett's entrance on his duties was thirty years ago September 1, but Thursday morning, September 10, was the first date when the majority of heads of departments and branches could be assembled.

The special feature of the meeting was a complete surprise to Mr. Brett when he was ushered into the flower-decorated room where the staff had as usual assembled for lunch, after the regular business of the staff meeting.

Miss Linda A. Eastman, the vice-librarian, expressed briefly and earnestly the staff's appreciation of their chief's open-mindedness, breadth of vision and inspirational power, and of their feeling that they had been specially privileged in having had the opportunity to work with and under him during these years of the library's phenomenal development. She testified, too, to the warmth of their loyalty and regard, and presented, as the visible tokens of this appreciation and affection, a giant armful of American beauty roses and some handsome growing plants for the decoration of the librarian's office.

The combined effects of surprise and pleasure threatened to interfere with Mr. Brett's response, but he rallied to return thanks and thereafter paid a cordial tribute to the various forces which he said had co-operated with him in producing results—to the staff for its efficiency and unity of purpose and interest, to the city for its live reaction to all library work in its behalf, and finally to the successive library boards for their unstinted expenditure of valuable time and effort for the library's welfare.

A few of the Old Guard who have been connected with the library during practically all of Mr. Brett's librarianship either put off or cut short their vacations to be present at the celebration. These included Miss Anne Granger, who has held a position on the staff 31 years, a year longer than her chief; Miss Cecelia Hutson, 29 years; Miss Jessie Ritter, 27 years; and Miss Gertrude Hanna, 27 years.

Every one falls naturally into reminiscent vein on such occasions, and among the things noted was the fact that when Mr.

Brett entered on his position the library staff numbered only ten assistants and had no branches or other agencies outside of the main library. Now there are 425 regular employes on the payroll and there are over 547 library agencies through which books are placed at the disposal of citizens, including thirteen large and twelve smaller branches.

BROOKLYN OPENS THE FIRST CHILDREN'S BRANCH

ON THURSDAY, September 24, the Brooklyn Public Library opened a branch which represents a new experiment in the planning of library buildings. This new library is to be known as the Brownsville Children's branch, and the history of its coming into existence is briefly this:

In a section of Brooklyn known as Brownsville the crowded conditions in the branch opened in 1908 have been such as to make necessary some restrictions in the use of the library by its borrowers. Nearly every afternoon during most of the year, a line of children reaches down the street, patiently waiting a turn to get into the building. A new branch for Brownsville being contemplated, it was clear that the usual Brooklyn Public Library rule, allowing any resident of the city to have a card in every branch, could not be followed; for this would mean that, instead of relieving the situation in the old building, we should have two overcrowded Brownsville branches, since borrowers in that section have a perfectly insatiable appetite for books. How to divide the crowd fairly between the two branches was the question. Geographical boundary lines would mean infinite trouble where people are so constantly on the move as they are in a crowded tenement district.

Since the circulation in the old branch is nearly evenly divided between children and adults (the latter term including high school boys and girls, in this case), it was decided to make the division by school grade, grammar and primary grade children to be sent to one, high school and working children and adults to go to the other branch.

Next came the question of deciding which building was to be assigned to each

group. It was soon settled that a library of child borrowers only called for such special planning as made the old building not adaptable to the purpose.

Certain requirements stood out prominently in considering the floor plans, namely: that we must get inside the building those long lines of children who have had to wait, out of doors, their turn at loan desk or registration desk; that the loan and the registration desks must be rather widely separated, to relieve congestion at one place; that circulating and reference work must be on the main floor, club rooms on the second floor; that the main floor must be one great open room except for low book case partitions dividing working and reference sections from the principal book and reading room space. This great unencumbered floor space would mean perfect supervision, the free passing of the children from one place to another without too great congestion in any one spot, and the elimination of difficulties incident to managing hundreds of children on stairways.

A careful examination of the floor plans will show how we divide the crowd into two diverging lines at the entrance vestibule, how the shape and placing of the loan and registration desks permit long lines of children to come in under cover, how the exit, though in the same vestibule as the entrance, is by a different door, thus preventing the incoming and outgoing crowd from interfering with one another.

Sound deadening floor coverings, all push buttons out of reach, rounded corners to projections that might bruise small limbs—every possible precaution has been taken in the furnishing to help relieve assistants of nervous wear and tear in managing the children.

The architectural style of the building is Collegiate Gothic. This seems peculiarly appropriate to an educational institution and since Tom Brown's Rugby is a Collegiate Gothic building, sentiment makes it seem even more fitting for a children's library in which the famous story holds a place of honor.

On the exterior of the building are carvings, of Alice's rabbit, of King Arthur's sword in the anvil, of Mercury's staff, of

Æsop's crow and other designs suggesting famous tales upon the shelves within. As the children enter the building they will find in the door handle a jolly little face grinning up at them. On the arms of specially designed oak settles are delightful little rabbits' heads. The Rookwood fireplace tiles picture a castle beyond a forest. It is hoped that in time the exterior surroundings will be in keeping with the beauty of the building itself. The Park Department has promised to set out shade trees next spring. We hope to have the walls covered with ivy, and if possible ivy with a "story," if we can obtain shoots from places famous and interesting to children. Other special decorative features are as yet unsettled but they are not forgotten and will be supplied in the course of time.

On the shelves will be not only the usual "juveniles" but a generous supply of such books from the "adult" list as many growing boys and girls desire and should be encouraged to read. In the old Brownsville branch juvenile books will be provided for the high school borrowers, but as the children in this section mature very rapidly probably it will not here be necessary to supply very many books of this class.

Special and grateful mention should be made of the keen interest of the architects, W. B. Tubby & Sons—and particularly of the enthusiasm, understanding and skill of Mr. J. T. Tubby, Jr.—who have made this, the first institution of its kind, a wonderfully fine, attractive and satisfactory building.

CLARA WHITEHILL HUNT,
Superintendent of the Children's Department, Brooklyn Public Library.

THE HIGH COST OF FAME

A SMALL girl interested in snakes and eager to know what John Burroughs thought of them wrote to the famous naturalist, and showed herself more considerate than many of his correspondents by concluding her letter as follows: "Inclosed you will find a stamp, for I know it must be fearfully expensive and inconvenient to be a celebrity."—*Christian Register.*

THE DESTRUCTION OF LOUVAIN'S LIBRARY

On August 27 the city of Louvain, in Belgium, was destroyed by the Germans. In retaliation for an alleged attack on German officers and soldiers by Belgian civilians, the order was given to burn the city. With characteristic German thoroughness and system the soldiers went through the streets of the city, piling up furniture on the lower floor of each house and setting it afire. When every house was ablaze, the next street was passed in the same way. With the exception of the beautiful Hotel de Ville, not a building was spared, and the splendid church of St. Pierre, the University buildings, the library, and the scientific establishment were all delivered to the flames.

The library of the Catholic University of Louvain was based on a collection bequeathed by Beyerlinck to his alma mater in 1672. His example was followed by Jacques Romain, a professor of medicine, but the proper organization of the library was not effected until 1637. The librarian at the time of the disaster was M. Paul Delannoy, and the number of volumes it contained is variously estimated at from 211,000 to 230,000 volumes. Scientific agriculture until recently was the chief study at Louvain University. One may recall, too, that it was at Louvain in 1546, at the command of Charles V., that the academic authorities issued the first "Index" of pernicious and forbidden books.

At the annual meeting of the Library Association held in London on Sept. 4th, the following resolution was passed with acclamation:

"The members of the Library Association, representing the principal libraries of the British Empire, in annual meeting assembled, desire to place on record their feelings of profound indignation at the wanton and unprovoked act of vandalism on the part of the German Army by the destruction of the City of Louvain, that ancient seat of learning, with its famous University and Library, whereby the world of scholarship has suffered irreparable loss."

A late dispatch from The Hague says that a committee presided over by Dr.

Fruin, keeper of the State archives, has started a movement to restore the library of Louvain, destroyed in the German bombardment of that town. It is hoped to accomplish this work by Dutch subscriptions.

"LIBRARY WEEK" OF THE NEW YORK LIBRARY ASSOCIATION

About one hundred and fifty registered at Prudence Risley Hall, one of the girls' dormitories at Cornell University, Ithaca, for the twenty-fourth annual meeting of the New York Library Association, held this year September 7-11. A number of members arrived in Ithaca on the Sunday preceding, and many others remained until the Saturday and Sunday following the meetings, to enjoy the beautiful country scenery for which Ithaca is so justly celebrated. The hospitality committee of the association (Miss Agnes Van Valkenburgh, chairman) and the local entertainment committee (Mr. Willard Austen, chairman) arranged a program of walks and drives which provided more than sufficient entertainment for every free hour.

Monday evening was devoted to a pleasant "get acquainted" reception in the parlors of the dormitory. The receiving line included Mr. and Mrs. Wyer, Mr. George W. Harris, the librarian at Cornell, and Mr. and Mrs. Willard Austen.

TUESDAY MORNING

The first general session was held in Goldwin Smith Hall on Tuesday morning. On behalf of Cornell University, Dr. Jacob G. Schurman welcomed the association to Ithaca, and his greeting was followed by one from Mr. Harris. It was through the initiative of Mr. Harris and the university library that this meeting was held at Cornell, and Mr. Wyer, in his response, paid tribute to Mr. Harris and his work, by which the Cornell Library has been made one of the greatest college libraries in the country. Mr. Harris has been connected with the library, in various capacities, for over forty-five years. For over thirty years he has been chief librarian, and as he retires after this year there was a particular satisfaction in meeting him in his own library at this time.

The secretary's very brief report was followed by the report on library institutes. Since Mr. Wynkoop, the chairman, was detained in Europe, the report was prepared and read by Mr. F. K. Walter. These institutes are regarded as the most important work of the association, providing a systematic and progressive course of instruction for those who are otherwise untrained and who are unable to attend the library schools. Under a new plan this year Mr. Wynkoop had prepared and distributed to all the libraries of the state a syllabus covering the plan of instruction, the work this year being concentrated on the topic "Stocking the library." No advertising campaign was carried on, and instruction, not recreation, was featured in the announcements. Twenty meetings were held with an attendance of about 850, representing 418 libraries. The expense of the institutes was considerably below the appropriation. In discussion of this report Miss Anna Phelps, one of the state's library organizers, urged the librarians of the larger libraries to attend these institutes and take part in the discussions, thereby helping the leaders to make the meetings more interesting. Dr. Sherman Williams, chief of the School Libraries Division of the State Education Department, testified that the work with district superintendents had been most useful, and was the only way of reaching many teachers and pupils who now know little of libraries.

Miss Harriet R. Peck reported for the publicity committee that a campaign for new members had been inaugurated. Letters had been sent to 600 non-members, as well as to delinquents. There are 600 libraries in the state and only about 375 librarians who are members of the association. It is too soon to give any figures on the result of this campaign, but certainly there are many librarians not now members who should join.

In the absence of Mr. W. R. Eastman his report on library legislation was read by Miss Peck. It included much of the material given in his article in the LIBRARY JOURNAL for January, made note of the fact that Massachusetts, New Jersey, and New York were the only states

legislating in favor of libraries during the year, and called attention to the important amendment of the New York law by which school libraries are now open to the public where no other public library exists.

All reports were accepted, and the president appointed the following committees:

Resolutions: Miss Mary L. Davis, Dr. D. F. Estes, and Miss Mary W. Plummer.

Nominations: Mr. Walter L. Brown, Mrs. Mary Summers, and Miss Isabella Cooper.

Audit: Mr. H. J. Carr and Miss Isabella K. Rhodes.

Mr. Wyer then read his paper on "Library planning," reprinted elsewhere in this issue, in which he urged more careful consideration of the community and existing library facilities before installing a new library.

TUESDAY EVENING

Tuesday afternoon was given over to exploration of Cornell's beautiful campus, under the guidance of members of the staff of the University Library. At five o'clock Mr. James T. Quarles, the university organizer, gave a most enjoyable recital in Sage Chapel. By a happy accident, he included in his program a "Procession Indienne" by Ernest R. Kroeger, a brother of the late Miss Alice Kroeger. In the evening Mme. Haffkin-Hamburger of Moscow, Russia, gave a most interesting stereopticon talk on Russian libraries. In his introduction of the speaker Mr. Wyer said that Mme. Haffkin-Hamburger has done for Russia what Melvil Dewey did for the United States. She has translated much foreign literature into Russian, besides writing a manual of library economy which has recently had extensive revision. She has lectured on libraries and library needs before educational and other meetings in all parts of Russia, and this summer, after twenty-five years' library experience in her own country, came to America to study American methods. There are now in Russia nearly 800 public libraries with about 8,000,000 books. Every public library has its reading and circulation rooms. The use of the reading rooms is everywhere free, but the public must pay a small fee for the privilege of taking books home. Be-

sides these public libraries, there are over 7000 free popular libraries, and 20,000 free rural libraries. Children's libraries are more frequently maintained separately than as departments of other public or popular libraries. The Siberian railroad maintains a library of 200,000 volumes for its employes, with headquarters in Tomsk, and various library stations along its lines. In addition it has two library cars, each equipped with stacks and accommodating 12,000 volumes, with a sleeping compartment for the librarian, and these cars run over the company's lines, stopping for varying periods at the different stations for the distribution of books. Public library legislation in Russia is peculiar, and it is difficult to open new libraries. The first library courses were opened in the Shaniavsky University in Moscow in 1913 with 357 students from forty different governments, 240 being women. Last spring the number was limited by the university to 200, for the sake of doing more individual work with the students. The library trustees realize the importance of the training, and this year's class contains 133 librarians sent by their institutions.

WEDNESDAY MORNING

The original program for Wednesday morning had to be abandoned. Dr. John H. Finley, who was to have given an address, was detained in Europe, and Dr. Andrew D. White, former president of Cornell, was prevented by ill health from being present. Consequently the round table for branch libraries, scheduled for Wednesday evening, was held in the morning, and the hospitality committee arranged a dance to take its place for the evening's entertainment.

Miss Sarah Askew of New Jersey was the leader of the round table, and the first question discussed was "Gifts—how to get, receive, and dispose of them." Mr. Yust told how Rochester had sent out a printed appeal to a selected list. When word was received that material was available it was called for promptly, a special personal letter of thanks sent, and the material speedily arranged on the shelves. Dr. Azariah S. Root, of Oberlin, said he never refused any proffered gift, but always said frankly that

if he found it unsuited to his library or duplicating material already on hand, he would pass it on to some other institution. Emphasis was laid by several speakers on the value of tactful personal acknowledgment of gifts to promote cordial feelings toward the library.

The question of purchase and cataloging of books published with two titles was discussed. There seems to be no way of preventing this practice, and librarians can only hope they will not often order the same book twice. Miss Van Valkenburgh suggested a form of cataloging for such books, and Mr. Brown, of Buffalo, suggested that the book itself be marked with the alternate title.

In discussing the problem of getting the rural reader to the library Miss Mönchow, of Dunkirk, told how her library had been invited by a group of social workers in the county to cooperate in an exhibit at the Chautauqua county fair, and said that the exhibit sent an unusually large number to the library's reading room during the fair. Miss Pratt, of New Jersey, described the cooperation of certain libraries of that state with the farm demonstration bureaus. Miss Elizabeth P. Clarke, of Auburn, said her library was sending books to three counties, and had plenty of readers so long as no charge was made.

The question of the value of the *Patent Office Gazette* and the advisability of binding it brought out a variety of opinions. The consensus of opinion seemed to be that current numbers, or even for five to seven years back, were frequently consulted, but that it was not worth while for most libraries to put it into permanent binding.

How large a town must be before it is wise to start deposit stations depends largely, in the opinion of Miss Brainerd, of New Rochelle, on the territory it covers, while Miss Adeline Zachert, of Rochester, thought that any town large enough to have a jail, a Y. M. C. A., a factory, or any other place where fifty to a hundred people gathered together regularly, should have deposit stations. The Rochester Library already, in its second year, has fifty-seven.

Miss Elizabeth Clarke told of the publicity methods she had used to advertise her

library, placing posters in factory rooms, lists on different trades in payroll envelopes, postcards to individuals, and cards in the business directory frames placed on street corners of the town. Miss Foote, of New York City, described an interesting card index she keeps of her library patrons, with their occupations and the subjects they are interested in.

Concerning the practice of sending unsolicited books on approval the opinion was practically unanimous that it was a pernicious custom and one to be discouraged. Mr. Walter discussed the binding of periodicals. He said that most libraries bind too many, and that magazine boxes, each holding six numbers, could be substituted. Cost of binding could be reduced by using buckram in place of leather, but it was inadvisable to cheapen the process otherwise.

Miss Zachert recommended the use of stereographs in the children's room. By pasting a typewritten slip on the bottom of travel pictures, giving reference to descriptive text in children's books, interest in the books could be stimulated.

Mr. Yust described the Rochester Historical Museum, of which he is secretary, and said that while he thought such an institution was valuable in the community, he would advocate its administration and housing quite separate from the library, a recommendation which was endorsed by others.

On Wednesday afternoon a large party went by motor to Freeville to visit the George Junior Republic, while another party visited the College of Agriculture, where members of the faculty met them and explained the work of the various departments. This afternoon the Albany Library School had a tea in the parlors for its members and alumni, and to those ineligible to share in these festivities the management of the house served tea by the large hall fireplace, at the reasonable rate of three cents a cup.

THURSDAY'S SESSIONS

In the morning Dr. Azariah S. Root conducted a round table for college libraries. Dr. Root made the opening address, taking as his subject "The future development of college libraries." Basing his forecast on

development during the past generation, he said that unless more advanced methods were adopted, in another generation the libraries would become unmanageable. The present crass individualism must cease and closer cooperation be effected. He made some very definite suggestions for the prevention of duplication in cataloging and bibliographical work, and for the exchange and distribution of duplicate material.

Discussing usefulness of student assistants in college libraries, Dr. D. F. Estes of Colgate University said he found they could do almost all routine work satisfactorily. There was an exchange of information by college librarians present concerning the pay of student assistants, and it was found that twenty cents an hour was the average rate, the money often being a real help in keeping the students in college.

Miss Fanny Marquand, of Rochester University Library, had a paper on "The function of the college library in the care and distribution of college publications." Discussion brought out much divergence in practice among the different libraries represented, some colleges handling publications through the library, others through the secretary's office, while still others divided the work between the two.

This was followed by a talk by Mr. J. D. Ibbotson, Jr., of Hamilton College Library, on "The college librarian and the student." He feels that every college librarian should be recognized as a part of the teaching staff. He should be "a mediator between the boys and the books," and should know one as well as the other. He had been successful in interesting his students in many books that were not required reading, by having a bookcase (nicknamed by the students "the net") on which he placed in haphazard order worth-while books from all classes, from which the students were in the habit of selecting their over-Sunday reading. Miss Borden of Vassar spoke briefly of the efforts of that library to get into direct personal contact with the freshmen and to make them feel that the librarian is a friend to be consulted freely. In the discussion following, the question of instruction in the use of the library was taken up, and many varying practices were brought out. Other questions for general

discussion in which much interest was shown were "Reserved books," "Fines in college libraries," and "How to keep the library quiet."

THURSDAY EVENING

Thursday afternoon the local entertainment committee arranged a trip, by motor car or by motor boat on Lake Cayuga, to Taughannock Falls, about ten miles from Ithaca, said to be 215 feet high. The College of Agriculture was again open for inspection, and a large party took advantage of each opportunity. The Library School of the New York Public Library and members of the library staff had a dinner Thursday night.

In the evening the third general session was held, and was devoted to the extension work of the New York State College of Agriculture. Mr. Royal Gilkey, supervisor of reading courses and the mailing division, spoke on extension teaching of agriculture. All work is cooperative, and university speakers go to country communities on a dollar for dollar basis. The work is divided into (1) demonstration of methods, including farm visits; (2) cooperative experiments; (3) the use of the demonstration car; (4) lectures; (5) farmers' week in February, at which last year 3,000 farmers attended 300 lectures and exhibits; (6) extension schools lasting a week and held in different communities, for which enrollment and a fee are required; (7) correspondence, over 30,000 letters (27,000 of them in answer to questions) and 50,000 special bulletins being sent out in 1913; and (8) publications. Mr. Gilkey urged the librarians to get acquainted with the publications and the index to experiment station literature issued by the U. S. Department of Agriculture, to study local conditions, and to become rural leaders to better agriculture.

Following Mr. Gilkey, Miss Martha Van Rensselaer spoke on "Extension in home economics," telling of the work of the department of home economics in promoting the interests of the farmer's wife. She was followed by Miss Flora Rose, of the same department, who spoke of the bulletins issued on the subject by Cornell and by other agencies. Miss Clara W. Bragg, until re-

cently librarian at Bath, Miss Harriet E. Wilkin, of Fayetteville, and Miss Mary S. Crandall, of Warrensburgh, all told of their efforts to circulate the Cornell bulletins and what measure of success they had. An interesting exhibit illustrating the work and publications of the College of Agriculture was on view in room 137, Goldwin Smith Hall, all the week.

The report of the treasurer, Mr. W. B. Gamble, was read at this meeting. The report covered the period from Sept. 25, 1913, to Sept. 9, 1914. The association now has a membership of 351, of whom sixteen joined after Sept. 9.

The audit committee, Mr. Carr chairman, reported that they had examined the treasurer's report and found it correct.

FRIDAY MORNING

The nominating committee reported through Mr. Brown the following ticket, which was elected. President: Miss Caroline M. Underhill, of the Utica Public Library; vice-president, Mr. Joseph D. Ibbotson, Jr., Hamilton College Library; secretary, Miss Elizabeth Porter Clarke, Seymour Library, Auburn, and treasurer, Mr. W. B. Gamble, of the New York Public Library.

Following the election of officers Dr. Estes, for the resolutions committee, read resolutions of thanks to all the several people whose efforts made the week at Ithaca so pleasant. He also submitted a resolution, which was adopted and forwarded to Mr. James R. Preston, of Baltimore, expressing the best wishes of the association for the success of the celebration of the centenary of the "Star spangled banner."

*A balance of \$61.61 from the appropriation of \$150 voted in April, was returned to the treasury in July.

An amendment to the constitution providing for institutional as well as individual membership was adopted without debate. The address on "The Publishers' Cooperative Bureau," which was to have been delivered by Mr. Richard B. G. Gardner, the manager, had to be omitted as Mr. Gardner himself was ill, and the paper, supposed to have been sent on, was not received.

Miss Mary W. Plummer read the report of the committee on libraries in charitable, reformatory, and penal institutions, extracts from which will be printed later. She was followed by Mr. Thomas M. Osborne, chairman of the commission for prison reform. He began with the sweeping statement that the condition of prison libraries in the state is characteristic of the whole prison system—there is not one single thing right in it. He gave a vivid picture of life in a prison, illustrated out of his own experience as well as from his acquaintance with genuine prisoners, and ended with an urgent appeal for some trained library worker to volunteer for service in the Auburn prison during the winter, in an effort to show what a prison library may and should be.

The formal program closed with a paper by Mrs. Louise Collier Willcox on "The trend of modern literature." She says that we suffer from overproduction, demand for speed, and cheapness of quality. Sentimentality is a characteristic of much modern literature, because life is becoming so unbearable we cannot bear to have it reproduced in our literature. Mrs. Willcox is very dogmatic in her opinions, and whether all agreed with her conclusions or not, she held the attention of her hearers to the end, when she gave a beautiful reading of Francis Thompson's "Hound of heaven."

Before adjournment, Mr. Wyer introduced Miss Underhill, the new president, who said a few words of appreciation of what she was pleased to call "the great honor which had been forced upon her," and of hope that the coming year might be one of profit to all.

In the afternoon the last of the excursion, a tally-ho ride to Enfield Falls, was made, bringing to a pleasant close a most successful "library week."

F. A. H.

NEW ADMINISTRATION BUILDING OF THE UNIVERSITY OF UTAH

THE formal opening of the new Administration Building of the University of Utah was held during Commencement week, Tuesday, June 2. The building, especially the library, was used during summer school, and was found a great improvement over the former cramped quarters.

The building houses the offices of administration, the reception rooms, the library, the art gallery and the archaeological museum. The library occupies the whole of the second floor, with one stack room on the third floor and an unpacking room in the basement, or ground, floor. The plans for the library had to be adapted to conditions and, therefore, could not be as satisfactory as if the building were planned for the library alone. The reading room extends practically the whole length of the building and is 190 x 42 ft. and 18 ft. high. Opening from the room at the north is a small room for current periodicals. To the east of the reading room are four seminar rooms and the stack room; the stack room is entered directly from the reading room through four arches, giving direct access to the books. At the extreme south end are the cataloging room and the librarian's office. The capacity of the stacks is 100,000 volumes, and the reading room will seat four hundred readers. The building is of Utah granite and sandstone, the facings of the first floor and the stairway being of Alaska marble. The total cost of the building, including the equipment, was \$300,000. Cannon & Fetzer and Ramm Hansen were the associated architects who had charge of the design and construction of the building.

The work of moving the library was done on Saturdays and Sundays, under the supervision of Miss Esther Nelson, the librarian, and took only six days in all, the library being kept open all regular hours during the process.

LEIPZIG EXHIBIT STILL OPEN

IN a brief message sent to the New York Public Library, written Aug. 28, Miss Adelaide R. Hasse, who went to Germany to take charge of the A. L. A. exhibit at the Leipzig Exposition, writes that the expo-

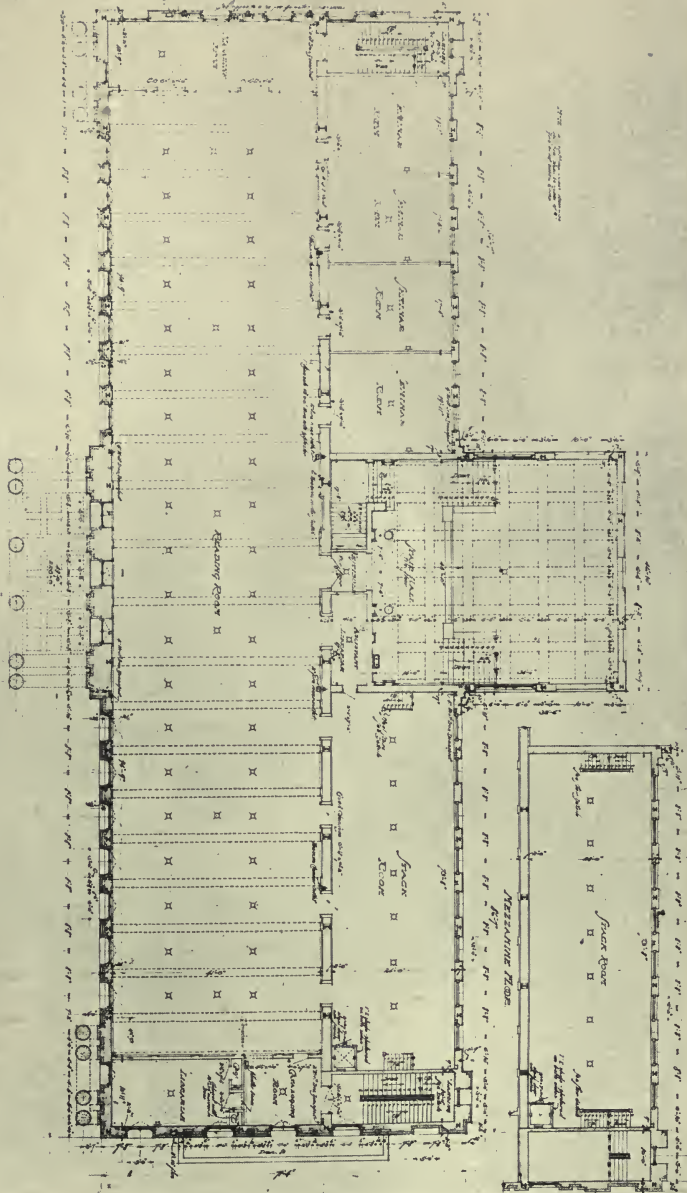

7687

CENTRAL BUILDING

CANNY & FRIER & HANCOCK
SALT LAKE CITY, UTAH

PLAN OF THE LIBRARY FLOOR OF THE ADMINISTRATION BUILDING, UNIVERSITY OF UTAH

sition is still open except the pavilions of the hostile states, and that the intention of the authorities is to keep it open till the end of the time originally planned. Attendance, of course, is very small. An unconfirmed report says that the Exposition buildings are to be used for hospital purposes. This undoubtedly refers to some plan for their use after the close of the Exposition and the removal of exhibits.

Library Organizations

VERMONT LIBRARY ASSOCIATION

The joint meeting of the Vermont Library Association and the State Commission will be held in Proctor, October 20-22, beginning the evening of Tuesday the 20th with a "get-together" supper for the visiting librarians, trustees, etc.

The V. L. A. will hold its business meeting Wednesday morning, and its public meeting Wednesday afternoon.

On Wednesday evening the members of the V. L. A. will be given complimentary tickets to see the Ben Greet players in "As you like it." This and free entertainment during the meetings are due to the generosity of Proctor people.

On Thursday the 22d, in the morning, the Free Library Commission will hold its annual public meeting.

All librarians and trustees who plan to attend these meetings are requested to notify Miss Mary K. Norton, Proctor, of train on which they will arrive, date and probable length of stay, before October 17.

MASSACHUSETTS LIBRARY CLUB

The Massachusetts Library Club will hold its fall meeting at Stockbridge, Mass., Red Lion Inn, Thursday-Saturday, Oct. 22-24, 1914. This will be a union meeting with the Western Massachusetts Library Club and the Berkshire Library Club. The commission will have charge of the meeting Saturday morning, Oct. 24.

The Red Lion Inn will probably give rates of \$5.00 per person for room without bath, and \$6.00 per person for room with bath, for the period from dinner on Thursday evening to and including breakfast Saturday morning. For those who want to make a longer stay, a special rate of \$4.00 a day probably will be made. Reservations should be made directly with the proprietor, Mr. Allen T. Treadway, Red Lion Inn, Stockbridge, Mass.

Full details as to the meetings, etc., will be sent as soon as possible.

JOHN G. MOULTON, *Secretary.*

WESTERN MASSACHUSETTS LIBRARY CLUB

The annual business meeting of the Western Massachusetts Library Club was held Friday, July 31, 1914, at the Massachusetts Agricultural College at Amherst, in connection with the fifth annual conference on Rural Community Planning. This session, like all the other section meetings of the conference, was held in the open air near the college library.

Miss J. M. Campbell, director of work with foreigners of the Free Public Library Commission, delivered the main address of the session. She took for her subject "The library as a social force in the countryside," briefly telling what the library should stand for in the community—being well equipped to become a dynamic force, as it is the most democratic of institutions and intended to serve everybody. To show how this service has been brought about in some places, Miss Campbell conducted a round table, drawing forth the experiences of different libraries in serving and working with various social organizations in the country. One librarian told how he used the Boy Scouts to deliver books to shut-ins; another told how she used the Camp Fire girls and Blue Birds, and another told of her work with the grange.

Miss Nellie L. Chase, children's librarian in the City Library in Springfield, then conducted a class of children to illustrate her method of teaching them how to use the library. This class was composed of ten small children chosen from the families of the members of the college faculty. The club has been working the past year on outlines of instruction for children in the use of the library and this class work demonstrated the use of school outlines. Miss Chase has been very successful in teaching the children of the eighth and ninth grades of the Springfield schools how to use the library, and she conducted this class in the same manner, illustrating the use of the card catalog and describing the classification of books and the arrangement of the books on the shelves. The purpose of all this was to illustrate methods which might be used in a small library.

George L. Lewis, librarian of the Westfield Athenaeum, and chairman of the committee on school outlines, presented his outlines, and after carefully considering these, it was voted to have them printed and distributed in Western Massachusetts at the opening of the school term in September.

The present officers were re-elected as follows: President, Miss Bertha E. Blakely of Mt. Holyoke College Library; vice-presidents, Mr. J. L. Harrison, Forbes Library, Northampton, and Miss Lucy Curtis, Williamstown Public Library; secretary, Miss Alice K. Moore, Springfield City Library; treasurer, Miss Bertha Gilligan, Holyoke Public Library; recorder, Mr. James A. Lowell, Springfield City Library.

LONG ISLAND LIBRARY CLUB

A special meeting of the Long Island Library Club was held at the Children's Museum, Brooklyn, at 3 p. m., on September 15.

The president, Miss Harriot E. Hassler, explained that the reason for calling the meeting was to hear the report of the committee on continuance and consolidation appointed at the annual meeting in May to consider the question of the continuance of the Long Island Library Club, with authority to confer with the New York Library Club as to consolidation. She outlined briefly the causes which led to the appointment of this committee, and then called upon Mr. Chas. H. Brown, the chairman, for the report. Mr. Brown stated that the committee had met with the council of the New York Library Club and presented to it the following reasons for the action taken by the Long Island Library Club:

1. The formation of Greater New York from various cities. One large city has replaced several smaller cities.
2. Closer union of various boroughs through building of subways and lines of communication.
3. The outlying Long Island villages and cities, once closely allied to Brooklyn, are now, through the opening of the Pennsylvania station, more accessible to New York than to Brooklyn and Queens.
4. The membership of the two clubs is composed to a large degree of the same persons, and similar programs are being arranged for discussion by the two clubs.

He further stated that after some discussion, the council passed resolutions inviting the Long Island Library Club to consolidate with the New York Library Club, and arranged that the members of the Long Island Library Club become members of the New York Library Club, with all dues considered paid to Jan. 1, 1915, which resolutions were confirmed at a special meeting of the New York Library Club called for the purpose. The report further stated that the council of the New York Library Club had suggested that the name of the new club should be New York City Library Club. This the committee thought especially unfortunate at the time of

proposed consolidation with the Long Island Library Club—a club whose limits extend beyond New York City—to insert the word "city" in the name of the consolidated club, and suggested the name "Southern New York Library Club."

The report was accepted, with thanks to the committee for its work. It was then moved that the Long Island Library Club accept the invitation of the New York Library Club to consolidate.

After some discussion over the suggested change in the name of the club, it was unanimously resolved to adopt the report of the committee, with the suggestions advanced, and voted to consolidate with the New York Library Club, suggesting that in case of a changed name for the consolidated club the word "city" should not be included.

A resolution of appreciation was extended to Mr. Stevens for his unselfish interest in the promotion of library welfare in this vicinity and for his earnest work as a member of both clubs, which resolution the secretary was instructed to spread upon the minutes and to forward a copy to Mr. Stevens.

The club then adjourned after a vote of thanks to its president, Miss Hassler, for her tireless efforts on behalf of the club, and to the executive committee for its work.

ELEANOR ROPER, *Secretary*.

MICHIGAN AND WISCONSIN LIBRARY ASSOCIATIONS—JOINT MEETING

The wisdom of neighboring states meeting together from time to time was again shown by the joint meeting of the Michigan and Wisconsin Library Association, which took place at Menominee, Michigan, and Marinette, Wisconsin, July 29-31. The opening session was held on Wednesday evening at the Spies Memorial Library, Menominee, at which the president of the Michigan association, Mr. Theodore W. Koch, gave his impressions of the Leipzig Exposition and the opening of the A. L. A. exhibit. This was followed by an informal stereopticon talk by Mr. Koch on "The physical side of the book," this being a sort of a corollary to the main theme of the Leipzig Exposition. The Thursday morning session opened with a round table on "Work with children," at which Miss Adah Shelly of Sault Ste. Marie spoke on "Reference books for a children's room"; Miss Martha Pond of Manitowoc on "Evening work with children;" and Miss Marion Humble of the Wisconsin Library Commission, and Miss Minnie Hill of Racine, on "Graded lists of children's books." This was followed by a paper on "How to interest mothers in chil-

dren's reading," by Miss May G. Quigley of Grand Rapids. The children's librarian in Grand Rapids accomplished this result by attending different mothers' meetings, in the schools, the churches, and women's clubs. To succeed in this movement one must know her books, and be ready to have a human interest in every child's mother, be she rich or poor, American or foreign born.

Then followed the first general session, at which an address of welcome was given by the Mayor of Marinette, to which Miss Mary A. Smith, the president of the Wisconsin Library Association, responded. Mr. Charles P. Cary gave a vigorous talk on "Industrial education and the public library," and Mr. Samuel H. Ranck read a paper on "Vocational guidance," (printed in the LIBRARY JOURNAL for September, pp. 662-665). Mr. Charles E. McLenegan of the Milwaukee Public Library read a paper on "How to reach the other half,"—so filled with wit and humor that no summary could do justice to it. Doubtless the full paper will be published in the near future. The meeting then adjourned for a delightful luncheon at the Presbyterian Church, given by the city of Marinette.

The Thursday afternoon session opened with an informal presentation of "The place of art in the library," by Mrs. James H. Campbell, which was largely devoted to the possibilities of art exhibits in our public libraries. Mrs. Campbell spoke particularly of the work of the American Federation of Art, and made a plea for more institutional memberships among our public libraries. A paper by Richard B. G. Gardner, of the Publishers' Co-operative Bureau, "Competitors to books," was read by title, as the author was unable to be present. The time assigned to this was given to the Rev. Matthew Daly, who spoke of his work as a missionary of the Presbyterian church among the lumber men in the camps in the northern peninsula. He made a plea for more virile literature to be sent to these camps, and deplored the tendency on the part of some charitably disposed people to send to his men such things as *Harper's Bazar*, the *Ladies' Home Journal*, and back numbers of periodicals of the past generation. Miss Lutie Stearns gave a review of the Washington meeting of the American Library Association.

At the evening session Mr. A. S. Root gave an inspiring talk on "The growing librarian," in which he argued against the tendency which besets so many library workers of getting into a rut; of doing a thing in one way and thinking that there was no other way in which it could be done. He urged library

assistants and librarians to broaden out; to read more professional literature; to become more alive to the possibilities of their work.

At the Friday morning session Miss Elizabeth Manchester, librarian of the Chauncy Hurlbut branch, Detroit, spoke of the "Relation of the library to the Boy Scout and Camp Fire Girl movement." She gave illustrations of girls who had formerly refused to read anything but the lightest fiction who were led through their interest in first aid work to read the lives of Florence Nightingale and Clara Barton, and by searching for an Indian legend upon which to found their Camp Fire to become thoroughly interested in Indian folklore. Boys were likewise persuaded to read Cooper and biographies of Audubon and Crockett.

Miss Elva Bascom told of the study club department of the Wisconsin Library Commission. Miss Julia Rupp and Miss Nina K. Preston discussed the problem of how to increase non-fiction reading. Frequent changes on the open shelves were suggested, bringing out old and new books; catchy placards or quotations on books to be placed above the shelves; short lists of books, with annotations showing the personal touch, published in the daily newspapers; slips pasted at the end of books referring the reader to volumes of history or biography of the period covered, thus suggesting further reading along the same lines. The problem of securing suitable assistants for a small library was discussed by Mrs. Jessie Luther, librarian of the Antigo Public Library. "The library as a moulder of public opinion" was the subject of an informal talk by Mr. Harry M. Nimmo, editor of the Detroit *Saturday Night*, in which he made a plea for greater publicity.

WISCONSIN LIBRARY ASSOCIATION

At the business session of the Wisconsin Library Association, the following officers were elected for the ensuing year: President, W. K. Calkins, Eau Claire; vice-president, Lucy Lee Pleasants, Menasha; secretary, Laura M. Olson, Eau Claire; treasurer, Cora Frantz, Kenosha.

A motion was carried recommending that the next annual meeting be held at Eau Claire, during the fourth week of February, 1915. An invitation to hold the 1916 meeting at Green Bay was extended by Mrs. A. H. Neville, trustee of the Kellogg Public Library of that city.

The Association voted to affiliate with the American Library Association.

Mr. M. S. Dudgeon, secretary of the Wisconsin Library Commission, gave a talk on

Wisconsin laws relating to libraries, especially the recently enacted law relating to the payment of library bills, and the Wisconsin health laws in regard to books. He presented a resolution which was adopted, requesting the Wisconsin Board of Health to provide that public libraries be notified of the existence of communicable disease in the community, that all rules relating to the prevention of the spread of disease through the public schools be made applicable to libraries, and that provision be made for the co-operation of local health officers with the public library authorities in all disinfection and preventive measures.

Mrs. A. H. Neville made a motion that the Wisconsin Library Commission be requested to draft a bill to be introduced into the next legislature embodying the following provisions: If any member of a library board shall be absent from three successive meetings without sufficient excuse, said member shall be deemed to have resigned from said board, and a successor shall be appointed as provided by law.

The following memorial resolutions were adopted in honor of Reuben Gold Thwaites and Frank Avery Hutchins, two of the best known and most valued members of the Association.

The Wisconsin Library Association has to record the loss during the past year of two of its most widely known and valued members, Reuben Gold Thwaites and Frank Avery Hutchins.

During the quarter century and more of Dr. Thwaites' service as superintendent of the State Historical Society, he became a familiar and loved figure in all parts of the state, and his name was associated with every movement of importance for the conservation of the state's historical records and traditions, and for the recognition of its history. No service in these important interests was too small for his attention. While carrying on with punctilious care the many duties of his official position, building up one of the richest historical collections in the country, and making available from year to year a large amount of valuable material pertaining to the state, his interest was wider, and not only Wisconsin, but the country at large acknowledges its debt to his laborious research and his ability as author and editor in the fuller knowledge they have afforded of the Northwest and its pioneer leaders, of Rocky Mountain exploration and the work of the Jesuit missionaries.

Through the State Historical Society and through the Wisconsin Library Commission, of which he was for many years a member, the libraries throughout the state have benefited from Dr. Thwaites' interest in library efficiency and service, while his personal interest in the work of many libraries remains a treasured memory. We hereby record our appreciation of his distinguished services to the library profession as a whole, and in particular, of his untiring efforts in the promotion of library interests in Wisconsin, and express our deep regret that he will no longer greet us, either in our own libraries or at the meetings of this Association.

In the death of Frank Avery Hutchins, the Wisconsin Library Association lost its founder and loyal friend. Mr. Hutchins conceived the idea of the Association in 1891, the second association of the kind in America. He was its President and Secretary at various times and gave it every encouragement and support.

To Mr. Hutchins, more than to any other person,

Wisconsin owes a debt of gratitude for its library development.

The Wisconsin Library Association places upon its permanent records this mark of its love for Mr. Hutchins, its appreciation of his never-to-be-forgotten spirit of idealism and self-sacrifice, and commends to the members of the Association the study and emulation of his character.

MRS. A. H. NEVILLE,
LUTIE E. STEARNS,
ELVA L. BASCOM, *Chairman.*

Resolutions expressing the appreciation of the Wisconsin Association for the splendid hospitality offered by the cities of Marinette and Menominee, and thanking all those who contributed in any way to the pleasure and success of the convention were unanimously adopted.

GERTRUDE COBB, *Secretary.*

OHIO LIBRARY ASSOCIATION

The twentieth session of the Ohio Library Association will be held in Dayton, Oct. 6-9. The library board, the librarian and staff and the citizens will extend a hearty welcome to the library people of Ohio. Dayton offers many opportunities on the recreational side. The National Cash Register Company, the Soldiers' Home, the Wright aviation field, hills and dales, and the city itself, emerging from the flood conditions of a year ago, will make a visit to Dayton well worth while.

The association hopes to have as its guest Miss Ahern, the editor of *Public Libraries*, who returns from the war zone, where she has been in attendance upon the Book Arts Exposition at Leipzig. Miss Masee, editor of the *A. L. A. Book List*, is also expected. Prof. Richard Burton, of the University of Minnesota, is expected to give an address at the opening session, which will be followed by a reception. Many well-known librarians of the state will read and discuss papers on "Book buying and book selection," "The library and school," "Children's books," and "The library and social service." The closing address will be on "The larger life," by President Henry Churchill King, of Oberlin.

The program committee has secured the U. S. Bureau of Education exhibit in library and school material, which attracted so much attention at the American Library Association meeting last May. The autumn exhibition of local artists of the Montgomery County Art Association will be held at this time.

ILLINOIS LIBRARY ASSOCIATION

The nineteenth annual meeting of the Illinois Library Association will be held at Springfield October 21-22.

The Illinois State Library is to be the host on this occasion, and the meetings will be held in the capitol.

The public meeting on Thursday evening will be addressed by Professor Walter Dill Scott of Northwestern University on the "Psychology of the rising generation of Americans." On Friday morning Mrs. Gudrun Thorne-Thomsen will hold a story hour. Ex-president R. E. Hieronymus, now community adviser at the University of Illinois, will speak on "The library as an aid in community development," and it is hoped that Miss Florence R. Curtis will contribute to this part of the program by a talk on "Social surveys." Miss Frances Simpson will present an appreciation of the work and services to Illinois libraries of Miss Katharine L. Sharp, and a white list of periodicals will be presented for discussion and dissection by Miss Nellie E. Parham.

Three round tables will be held, one for small libraries, one for reference librarians, and the third for trustees, being the annual meeting of the Illinois Library Trustees Association.

The report of the legislative committee will be of more than passing interest, and it is hoped that it will be discussed and endorsed by the librarians present.

The headquarters have been fixed at the New Leland, where special rates have been given for this meeting.

F. K. W. DRURY, *President.*

IOWA LIBRARY ASSOCIATION

The twenty-fifth annual meeting of the Iowa Library Association will be held in Marshalltown Tuesday to Thursday, October 20 to 22. Speakers from out of the state include Miss M. E. Ahern, Miss Alice Tyler, Miss Mary Masee and Mr. W. N. C. Carlton.

MISSOURI LIBRARY ASSOCIATION

The Missouri Library Association will meet this year in Sedalia, and tentative dates of October 29 and 30 have been set. On account of the illness of Miss Whittier, president of the Association, Mrs. Harriet Sawyer of the St. Louis Public Library, vice-president of the Association, is assuming the duties of the president.

JESSE CUNNINGHAM, *Secretary.*

Library Schools

UNIVERSITY OF IOWA—SUMMER LIBRARY SCHOOL

The Summer Library School conducted by the University of Iowa, at Iowa City, was part of the general session of the Summer School, and the students of the Library School had the advantage of attending many lectures given by various professors, both visiting and local. The dormitory, Currier Hall, made a delightful headquarters, where nearly all of the women

students of the university were in residence, and where the occasional hot day made little or no impression upon the thick walls and cool corridors.

The plan of localizing in one week most of the out-of-town speakers was tried again in the session, and proved as much of a success as ever. It is hoped that the idea may be used in other years, for during this week between twenty-five and thirty visitors came to the school, and a great deal of interest was aroused by the program. Mr. Utley was the chief speaker, on Tuesday, July 14, using as his topic, "How the community views its librarian." Miss Grace D. Rose, librarian of the Davenport Public Library, spoke on "The larger library and its community"; Miss Robinson presented the rural extension bill in Iowa, urging all present to extend their radius of influence under the provisions of this bill. Mrs. A. J. Barclay, of Boone, a trustee of the public library there and a member of the State Library Commission, spoke upon the "Effect of libraries in rural communities." The Library Club of Iowa City gave a dinner to the visiting librarians in the evening, after which Miss Robinson showed views of many of the library buildings in the state of Iowa.

Other lectures were given during the week as follows: Mr. Jacob Zan der Zee, of the Historical Library, an Oxford Rhodes scholar, spoke on "Oxford libraries"; Dr. Shambaugh, librarian of the Historical Library, told of the work of that institution, showing many of their publications; Dr. Shambaugh also gave an illustrated lecture upon the Amana colony, which the class afterwards visited; Professor Irving King, author of the books, "Education for social efficiency" and "Social aspects of education," gave suggestions for a community study; Professor Wyckoff, head of the economics department at Grinnell College, spoke on "Social work and the library"; Professor Klingaman, head of the university extension department, discussed "University extension and the library"; Mr. Dickerson, librarian of Grinnell College Library, talked upon the "College library and its community"; Mr. Johnson Brigham gave an inspiring paper on the "Librarian's attitude toward current literature"; and Miss Robinson discussed the "Library commission," "Library publicity," and told of the work in state institution libraries.

The visiting librarians and members of the school were entertained at a six-course dinner one evening by the Iowa City Library Club. This was held at the Burkley Imperial. A few members of the university faculty, the trustees of the Iowa City Public Library, and members of the club were also present, making a total

of fifty-one. Guests of honor were Mr. Utley; Mrs. Barclay, of Boone, a member of the state commission; Mrs. Loomis, of Cedar Rapids, former president of the Iowa Library Association; Miss Robinson, of Des Moines; and Miss Rose, of Davenport. The decorations were striking, consisting of a broad mass of ferns and black-eyed Susans on the T-shaped table. This note was carried out also in the place cards. On account of a lecture which was scheduled later the toasts were omitted.

RIVERSIDE PUBLIC LIBRARY SUMMER SCHOOL

The short course in library service offered by the Riverside Public Library completed a six weeks summer session August 15. The following students completed the work:

Virginia Cleaver Bacon, Portland, Ore.
Ruth Bullock, Redlands, Calif.
Clara A. Clark, Los Angeles, Calif.
Mary Royce Crawford, Pasadena, Calif.
Lynette Furley, Wichita, Kan.
Inez M. Harmer, Santa Barbara, Calif.
Faye T. Kneeshaw, Escondido, Calif.
Eva Irene Ratliff, Colton, Calif.
Annie M. Taylor, Azusa, Calif.
Eva West, Greenfield, Iowa.
Lilla B. Dailey, Escondido, Calif.
Arline Davis, Orange, Calif.
Zelia Frances Webb, Calexico, Calif.
Virginia Dearborn, Riverside, Calif.
Helen Evans, Riverside, Calif.
Alberta Speer Coffin, Azusa, Calif.
Margaret R. Ingrum, Kansas City, Mo.
Dorothy Daniels, Riverside, Calif.
Esther Daniels, Riverside, Calif.
Mignon Baker, Canon City, Colo.
Nellie L. Conrad, Fenton, Mich.
Carric O. Swank, Visalia, Calif.

The names of the instructors, the program of the summer school and the general plan of instruction throughout the year is set forth in bulletin 101, published in April, 1914.

This is the last summer session of the library service school; hereafter the winter school will be the short course feature. Announcements of the winter school will be issued early in the fall.

CHAUTAUQUA SUMMER LIBRARY SCHOOL

The fourteenth annual session of the Chautauqua Library School was held July 4-August 14, under the supervision of Mary E. Downey, assisted by Sabra W. Vought and Sabra A. Stevens.

The work of the regular instructors was supplemented by special lectures as follows: Mr. W. F. Yust told of reorganizing the Louisville and Rochester Public Libraries; Mrs. Evelyn Snead Barnett spoke of "The technique of the short story," illustrating with one of her own charming stories; Mrs. Earl Barnes talked on "Children's reading in the home"; Mr. Earl Barnes lectured on "Research work in American libraries;" Miss Kate Kimball addressed the class on "The Chautauqua reading course"; Mr. Ernest J.

Reece discussed "Public documents;" Prof. Vaughan McCaughey spoke on "Books related to nature study;" Mrs. Anna Sturges Duryea talked on "Peace literature;" and Mme. Haffkin-Hamburger gave an address on "Libraries in Russia." The students also attended Miss Mabel C. Bragg's story telling classes.

Miss Downey lectured daily on library organization and administration, including the American Library Association; State associations; District meetings or Institutes, Clubs and Staff meetings; Noted library workers; State Commissions; Evolution of the library; Extension in the United States; State, County, Township, and local extension; Developing a library; Reorganizing a library; Building and equipment; The trustee; The staff; Reading of the librarian; The maintenance fund; Values in library work; Supplies; Book selection and buying; Preparing books for the shelves; Care of periodicals, clippings, pictures and pamphlets; Special collections; Simplifying routine work; Work with children, schools and clubs; How to use a library; Reports and statistics.

Miss Vought gave lectures in cataloging three times a week and in classification twice a week. Each student cataloged not less than one hundred books and classified over two hundred.

Miss Stevens taught the reference course, including three periods a week, and also accessioning, shelf listing, binding and mending, loan systems, and bibliography.

Lectures were followed by practice work which was carefully revised. Opportunity was given for questions and discussion of problems relating to library experience and consultation with the instructors.

In addition to the Chautauqua Library, students have had the use of books from the New York Traveling Library for reference and practice work. On Wednesday and Friday afternoons the class made trips to Westfield, where the Patterson Library was used to further demonstrate the subjects of study. The Prendergast Library at Jamestown was also visited and the Art Metal Construction Company gave opportunity to examine library furniture and equipment.

Quarters are to be ready next year for the Library School in a new wing to be added to the Arts and Crafts Building. Students visited the book-binding department there, where Miss Nancy Byer, the instructor, explained the various forms of binding.

The students had the privilege of attending many lectures on the general program relating directly to library work, child study and literature.

Visiting librarians, trustees and others interested in library work attended special lectures and consulted in regard to library matters, making this feature a very important part of the work.

The registration included thirty-one students representing libraries of the following sixteen states: Ohio, ten; Indiana and New York, 3 each; Maryland and West Virginia, two each; Arkansas, Kansas, Kentucky, Illinois, Maine, Mississippi, Missouri, Pennsylvania, Tennessee, Virginia and Wisconsin, one each.

MARY E. DOWNEY.

UNIVERSITY OF MICHIGAN SUMMER LIBRARY SCHOOL

Thirty-three students enrolled for the sixth session of the University of Michigan Summer Library School, June 29-August 21. Of these, sixteen were college graduates, six of them being graduates of the University of Michigan. Eleven had taught, some for only one semester or one year, others as long as sixteen years. Twenty-three had library experience, varying from short periods up to six years. Two of them were undergraduates in the University and four had taken other University of Michigan summer school courses. Three were assistants in the University Library and two were appointed to assistantships upon completion of the course.

There were comparatively few changes in the curriculum, but there was a larger number of illustrated lectures than in previous years. Multigraphed copies of the cataloging rules were distributed to each student, together with many directions formerly given in the class room. By this means more time was left for discussion in the class. Each cataloging problem contained two books which every student was required to catalog. The students were expected to report in class upon these books, the entries being written on the blackboard before the class and these reports forming the basis for the discussions. The work in classification brought out some new problems, including some which were brought up by new books and the newer subjects. Four lectures were given on the subject of municipal, state, and government documents. The class was quizzed on the lectures, and each member was required to bring one state or municipal, and one congressional document, and explain its use and value, handing in descriptive annotated cards. Each member of the class acquired acquaintance with all of the documents on which reports were made, which were selected for their value and importance in the small or moderate-sized library. More

than usual interest was exhibited by the class in a subject which is generally considered to be dry and tedious.

Six lectures on literature for children were given by Miss Edna Whiteman, instructor in story-telling in the Training School for Children's Librarians, Carnegie Library of Pittsburgh. The lectures were designed to cover the main points in book selection for children and included careful analysis of certain pieces of literature and discussion of methods of introducing and presenting different forms of literature to children. The illustrative material used was chosen to inspire appreciation for the types of literature which have the greatest influence in forming standards of selection. Among the topics considered were general principles of book selection for children, the beginnings of literary interest, books for little children, fairy tales, the development of literary interest and the hero worship period, mythology, great hero tales in world literature, poetry, fiction, travel, history, and biography.

Visits were made to the Detroit Public Library and the State Normal College Library, Ypsilanti.

T. W. KOCH.

LIBRARY SCHOOL OF THE UNIVERSITY OF WISCONSIN
SUMMER SESSION

A six weeks' course was offered for librarians and assistants from Wisconsin libraries August 4 to September 11. This paralleled the instruction given to the entering class in the legislative reference course. Sixteen were in attendance for the full course.

The subjects offered included all phases of library work, with special emphasis on the technical side; the work was in charge of the regular faculty of the school.

Miss Carpenter entertained the faculty and students at her home upon the first Friday, affording an opportunity for the class to become better acquainted. The faculty planned a picnic, always an annual event, for the students and it was held at Turvillwood. The class in turn entertained the faculty on the last Saturday of the session. Clever jokes and "grinds" made a jolly time for all. As a mark of their appreciation the students presented to the school a dozen and a half sherbet glasses.

The students enjoyed Miss Stearns's lecture to them on "Library progress during a quarter century." Miss Abbie Carter Goodloe, the author, who is spending the summer in Madison, spoke informally to the class on "Experiences in Mexico." Following her lecture punch was served and the class gift christened.

ALUMNI NOTES

Ella V. Ryan, 1907, is now first assistant in the document department of the Wisconsin Historical Library.

Edwina Casey, legislative reference course, 1909, who has been connected with the Kansas State Library, has accepted a similar position in charge of the Illinois Legislative Reference Bureau.

Angie Messer, 1909, spent the summer in Europe.

Gretchen Flower, 1910, has resigned her position in the Kansas State Normal School and will organize the library of the Presbyterian College, Emporia, Kansas.

Corina Kittelson, 1910, has been made state librarian of Colorado, beginning September 1. Since April 15 she has been acting as special cataloguer in the State Library, Denver. Her appointment was made under the state civil service.

Sarah V. Lewis, 1911, becomes librarian of the Homewood branch, Carnegie Library of Pittsburgh, October 1, resigning the librarianship of the Allentown (Pa.) Public Library.

Beulah Mumm, 1911, passed the examinations for county library positions in California and was appointed August 1 librarian of the Glenn County Free Library, Willows.

Pearle Glazier, 1912, was married August 5 to Mr. John L. Miller, Rawlins, Wyo. She has been librarian at Hampton, Iowa, since graduation.

Helen Pfeiffer, 1912, is now librarian for the Sears, Roebuck Co., Chicago, succeeding Althea Warren, 1911, who resigned in June.

Marion E. Potts, 1912, has been appointed package librarian of the Extension Division of the University of Texas, Austin.

Marion E. Frederickson, 1913, has been elected librarian of the Delavan (Wis.) Public Library.

Nora Beust, 1913, who took the training course for children's librarians at Cleveland, has been made children's librarian in one of the Cleveland branch libraries.

Alice M. Emmons, 1914, who had a temporary position in the East Orange (N. J.) Public Library during the summer, has been permanently elected branch librarian.

Verna M. Evans, 1914, assumed the librarianship of the Elwood (Ind.) Public Library on September 15.

Doris M. Hanson, 1914, has received an appointment in the Birmingham (Ala.) Public Library. She will be librarian of the West End branch, beginning October 1.

Agnes King, 1914, has received an appointment as assistant in the Kansas State Normal School, Emporia.

Glenn P. Turner and Jennie W. McMullin, both students in the legislative reference course, 1914, were married September 10.

MARY EMOGENE HAZELTINE.

LIBRARY SCHOOL OF THE NEW YORK PUBLIC LIBRARY

The following twenty-three students received diplomas from the school in June, 1914:

Mabel Louise Abbott, Minnesota.
Katharine M. Christopher, Michigan.
Alta B. Claflin, Ohio.
Azalea Clizbee, Brooklyn Borough, N. Y. C.
Letty Lucile Davis, New Jersey.
Frederick Goodell, Michigan.
Minerva Grimm, New York City.
Anna Marie Hardy, Nebraska.
Elizabeth A. Haseltine, Massachusetts.
Dorothy G. Hoyt, Michigan.
Mary Ethel Jameson, Michigan.
Florence D. Johnston, Iowa.
Ida W. Lentilhon, Queens Borough, N. Y. C.
Metta Ryman Ludey, New Jersey.
Keyes D. Metcalf, Ohio.
Louise Millmore, New York City.
Amy C. Osborn, New York.
Martha C. Pritchard, Rhode Island.
Forrest B. Spaulding, Brooklyn Borough, N. Y. C.
Marion P. Watson, New Jersey.
Enid M. Weidinger, New Jersey.
Marjorie L. Wilson, Iowa.
Gladys Young, Iowa.

All but one have taken or continued to hold library positions, thirteen in the New York Public Library, one each in Minneapolis, Cleveland, East Orange, Cedar Rapids, Bloomfield (N. J.), White Plains (N. Y.), Far Rockaway, and two in New York City. The remaining member of the class became Mrs. Fayette Andrus Cook in June, 1914, and retired from regular library work.

The thirty-six students receiving certificates for the first year or general course, were as follows:

May E. Baillet, New Jersey.
Rachel H. Beall, New York City.
Elizabeth V. Briggs, Michigan.
Jessie Callan, Pennsylvania.
Mabel Cooper, Oregon.
May V. Crenshaw, Virginia.
Alma D. Custead, Pennsylvania.
Francis J. Dolezal, Missouri.
Katharine Esselstyn, New York State.
Italia E. Evans, Indiana.
Agnes Fleming, Iowa.
Florence E. Foshay, New York State.
Beatrice M. Freer, New York State.
Marietta Fuller, Brooklyn Borough, N. Y. C.
Edith H. Roswell Hawley, Connecticut.
Dollie B. Hepburn, New Jersey.
Marjorie H. Holmes, Alabama.
Frances Kaercher, Pennsylvania.
Rose Kahan, Washington.
Elizabeth Kamenetzky, New Jersey.
Alexandra McKechnie, Canada.
George S. Maynard, Massachusetts.
Katharine Maynard, Massachusetts.
Dorothy P. Miller, New York State.
Mary L. Osborn, New York State.
Dorothy N. Rogers, Minnesota.
Alice F. Rupp, New York State.
Irene E. Smith, Oregon.
Rachel N. T. Stone, Connecticut.
Allan V. Rönnudd, Finland.
Mignon R. Tyler, New Jersey.
Sophie A. Udin, Pennsylvania.
Mary I. Weadock, Michigan.

Elizabeth T. Williams, Connecticut.
Mary E. Winslow, Vermont.
Frances R. Young, Florida.

Of those not returning for the senior year, one has been appointed in each of the following libraries: Braddock, Pa.; Ft. Wayne, Ind.; Kingston, N. Y.; Montgomery, Ala.; Calgary, Alberta. Two seniors will occupy positions in Patchogue, L. I., and New Rochelle, coming into town for school work two mornings a week. The remaining seniors will probably hold positions in the New York Public Library during the year.

The entering class of the coming year numbers thirty-nine, with possible additions, the senior class thirty-four, with one or two possible withdrawals. The total enrollment represents twenty states, the District of Columbia, Canada, China, and Finland. Colleges and universities represented by their graduates are Barnard, Boone (China), Cornell, Harvard, Helsingfors, Johns Hopkins, Penn (Iowa), New Rochelle, Smith, Western Reserve, and the universities of Michigan, Minnesota, Oregon, Vermont and Washington. State normal schools of California, New York, Ontario, and Wisconsin are also represented by graduates.

Preliminary practice for students without library experience began September 14, the school opening for term work September 28.

Miss Newberry (1913) and Miss Greene, (junior, 1913) conducted courses and gave lectures at normal schools and teachers' institutes in Michigan during the summer.

One graduate and three junior students were caught on the Continent by the announcement of war, but contrived to get out of the danger zone without much difficulty.

MARY W. PLUMMER, *Principal*.

SIMMONS COLLEGE LIBRARY SCHOOL

The summer library class met from July 6 to August 14, with an enrolment of forty-one students. New England sent the largest number, and Ohio, Kentucky, Arkansas, and Toronto, were also represented.

Miss Harriet R. Peck, librarian of the Rensselaer Polytechnic Institute Library, Troy, N. Y., was in charge for the first three weeks, and Miss Florence Blunt, of the Haverhill Public Library, for the last three. The children's course was conducted by Mrs. E. S. Root, of the Providence Public Library.

Besides the lecturers previously announced the class had the pleasure of hearing Miss Caroline M. Underhill, of the Utica Public Library, Miss Elva S. Gardner, of the Providence Public Library, and Miss Jane Crissey, of the Troy (N. Y.) Public Library, who

gave a practical demonstration of book mending.

An important part of the work was the visiting of libraries. Somerville and the North End branch of the Boston Public Library were among those visited.

The college year opened September 23, entrance examinations having been given September 12-19.

ALUMNAE NOTES

Recent appointments include the following: Helen Carleton, 1914, librarian, Public Library, Dickinson, N. D.

Anna R. Foster, assistant librarian, Swarthmore College Library.

Esther C. Johnson, librarian, Heermance Memorial Library, Coxsackie, N. Y.

Ethel Kellar, children's librarian, Public Library, Fort Worth, Texas.

Margaret Kneil, 1914, high school librarian, Olean, N. Y.

Lillian Nisbet, 1914, assistant, Public Library of Cincinnati.

Mary McCarthy, 1914, assistant, Library of Landscape Architecture, Harvard University.

Edith Newcomet, 1914, assistant, Brownsville branch, Brooklyn Public Library.

Edith Phail, librarian for the National Cash Register Company, Dayton, Ohio.

Iona Randall, 1914, assistant, Clark University Library.

Margaret Watkins, librarian, Social Service Library, Boston.

Louise Hoxie spent August cataloging in the Ashfield (Mass.) Public Library, under the Massachusetts Free Library Commission.

Helen Smith, 1914, substituted in the Harvard Medical School Library.

Edith Fitch, 1906-07, has resigned from the Carnegie Library of Pittsburgh to become librarian of the Lenox Library Association, Lenox, Mass.

Elizabeth Knapp, 1903-04, has resigned from the Carnegie Library of Pittsburgh, to become supervisor of children's work in the Detroit Public Library.

Cornelia Barnes resigned from the Denver Public Library in May, to accept a cataloger's position in the United States National Museum, Washington.

Marion Lovis, 1909, resigned as the librarian of the Somerville (Mass.) High School to accept a similar position in Tacoma, Wash.

Eva Malone resigned the librarianship of Meredith College to go to the Trinity College Library, Durham, N. C.

Josephine Hargrave resigned from the Public Library of Dickinson, N. D., to become librarian of her Alma Mater, Ripon College.

Dorothy Hopkins, 1911, who during the summer was engaged in story-telling to groups of children visiting the Boston Art Museum, in behalf of the Playground Association, has accepted a position as assistant in the Radcliffe College Library.

Alice Gertrude Kendall, 1910, was married August 15, to Mr. James McKeen Lewis.

J. R. DONNELLY, *Director*.

CARNEGIE LIBRARY OF PITTSBURGH—
TRAINING SCHOOL FOR CHILDREN'S
LIBRARIANS

The members of the class of 1915 have received the following appointments:

- Mary Baner—Children's librarian, Public Library, St. Louis, Mo.
 Alice Pauline Burgess—Assistant children's librarian, New York Public Library, New York City.
 Margaret Baxter Carnegie—Assistant children's librarian, Carnegie Library of Pittsburgh.
 Dorothy Virginia Forbes—Children's librarian, New York Public Library, New York City.
 Celia Florence Frost—Children's librarian, Public Library, Minneapolis, Minn.
 Mary Elizabeth Fuller—Children's librarian, Public Library, Council Bluffs, Iowa.
 Grace Nellie Gilleland—Assistant children's librarian, Carnegie Library of Pittsburgh.
 Alice Rowan Douglas Gillim—Children's librarian, Public Library, Cincinnati.
 Mary Benton Harris—Children's librarian, Public Library, Carnegie, Pa.
 Edith Irene Groft—Assistant children's librarian, Carnegie Library of Pittsburgh.
 Mary Hughes—Children's librarian, Public Library, Victoria, B. C.
 Veronica Somerville Hutchinson—Assistant children's librarian, Public Library, Cleveland.
 Helen Edith McCracken—Assistant children's librarian, Carnegie Library of Pittsburgh.
 Virginia McMaster—Children's librarian, Public Library, Portland, Ore.
 Helen Martin—Assistant children's librarian, Carnegie Library of Pittsburgh.
 Helen Margaret Martin—Children's librarian, Public Library, Cincinnati.
 Mary Robinson Moorhead—Children's librarian, Public Library, Detroit.
 Marjorie McCandless Morrow—Children's librarian, Public Library, Duluth.
 Mary Caroline Pillow—Assistant children's librarian, Carnegie Library of Pittsburgh.
 Vera Julia Prout—Children's librarian, Public Library, Detroit.
 Mary D. Rains—Children's librarian, Public Library, Mason City, Iowa.
 Muriel Rose Samson—Children's librarian, New York Public Library, New York City.
 Martha Josephine Sands—Assistant children's librarian, Carnegie Library of Pittsburgh.
 Jessie Gay Van Cleve—Assistant children's librarian, Carnegie Library of Pittsburgh.

The entrance examination to fill vacancies occurring in the entering class was held September first.

ALUMNAE NOTES

Miss Frances Pillow Gray, 1914, was married to Mr. Samuel Dunlap Everhart, Jr., September 3, 1914.

Miss Helen Beardsley, 1913, was married to Mr. Percy Scott Hazlett September 8, 1914.

Miss Emily Adele Beale, special student, 1903-1904, was married to Mr. James M. Lambing September 7, 1914.

Miss Effie L. Power, class of 1904, formerly supervisor of children's work, St. Louis Public Library, has been appointed supervisor of work with schools, Carnegie Library of Pittsburgh. Miss Power begins her new work October 1.

SARAH C. N. BOGLE, *Director*.

PRATT INSTITUTE SCHOOL OF LIBRARY
SCIENCE

The School opened September 16 with a class which it was pre-determined to limit strictly to twenty-five members. These are:

- Mary Taft Atwater, Boston, Mass.
 Carson Brevoort, Brooklyn, N. Y.
 Ethel Seymour Brown, Cincinnati, O. Assistant, Public Library, Cincinnati, O.
 Myra Whitney Buell, St. Paul, Minn. Assistant, Public Library, St. Paul, Minn.
 Estelle May Campbell, El Paso, Texas. Assistant, Public Library, El Paso, Texas.
 Portia Maja Conkling, Regina, Canada. Assistant, Public Library, Regina, Canada.
 Inger Helene Garde, Denmark. Assistant, Industriforenings Bibliotek, Copenhagen, Denmark.
 Esther Albertina Giblin, Utica, N. Y. Simmons College, 1912-14.
 Florence Irwin Griffith, West Chester, Pa. Graduate, State Normal School, West Chester.
 Janet Elizabeth Gump, Everett, Pa. Assistant, Juniata College Library.
 Helen Mary Heezen, Muscatine, Iowa. University of Wisconsin, A. M., 1912.
 Janet Elizabeth Hileman, Kittanning, Pa. Packer Institute, Brooklyn.
 Ruth Sydney Hull, Millersville, Pa. Graduate State Normal School, Millersville.
 Mildred Gould Lovell, Fall River, Mass. Graduate, Bradford Academy.
 Mary Mildred MacCarthy, Waterville, Kansas. Kansas State University, A. B., 1914.
 Edith Meserole McWilliams, New York City. Graduate, Ely School.
 Mildred Maynard, Williamsport, Pa.
 Grace Bushnell Morgan, Avondale, Cincinnati, O. University of Cincinnati, 1911-13. Assistant, Cincinnati Public Library.
 Helen Harrison Morgan, Avondale, Cincinnati, O. Assistant, Cincinnati Public Library.
 Anna May Neuhauser, Millersville, Pa. Graduate, State Normal School, Millersville.
 Lillias Pendleton Nichols, Northampton, Mass.
 Alice Elizabeth Ogden, Summit, N. J.
 Gladys Elizabeth Schummers, Fairport, N. Y. Sweet Briar College, 1911-14.
 Antoinette W. Van Cleef, Jersey City, N. J.

There are seven students from Pennsylvania, four from New York State, three each from Massachusetts and Ohio, two from New Jersey, and one each from Minnesota, Iowa, Kansas, Texas, Canada, and Denmark. Eight members of the class have come to the school from library positions, and six others have had library experience. Eight of them taught and three have had business experience.

ALUMNI NOTES

Cards have been received announcing the marriage of Miss Rhoda C. Shepard, 1907, to Mr. Victor J. Whitlock on July 8.

We learn with great regret of the death of Miss Helen M. Davis, 1910. Miss Davis was an assistant in the library at Portland, Oregon,

from her graduation until November, 1912, when she was made librarian of the Public Library at Franklin, Indiana. She entered upon her work in Franklin with great enthusiasm, and during the year and a half of her librarianship she did a strong and constructive piece of work.

Miss Madalene F. Dow, 1914, has been in the catalog department of Columbia University during the summer.

Miss Kate A. Goodrich, 1914, has been appointed assistant in the catalog department of the Queens Borough Public Library.

Miss Sarah Greer and Miss Edith I. Wright, 1914, have both been appointed to the reference catalog division of the New York Public Library.

JOSEPHINE ADAMS RATHBONE, *Vice-Director*.

UNIVERSITY OF ILLINOIS LIBRARY SCHOOL ALUMNI NOTES

Graduates and former students of the School have been appointed to positions as follows:

Mary H. Clark, 1902-03, cataloger of the library of the George B. Carpender estate, at Park Ridge, Illinois, during the month of August; beginning in September cataloger in the Newberry Library, Chicago.

Catherine S. Oaks, B. L. S. 1913, assistant cataloger, Miami University Library, Oxford, Ohio.

Marguerite Mitchell, 1911-13, assistant in the Ohio State University Library, Columbus.

Elizabeth H. Cass, B. L. S. 1913, assistant in the Western Reserve University Library School.

Edith H. Morgan, 1912-13, librarian of the State Normal School, Gunnison, Colorado.

Eugenia Allin, B. L. S. 1903, librarian of the James Millikin University, Decatur, Illinois.

Fanny W. Hill, 1913-14, temporary assistant in the Classical Seminar, University of Illinois.

George H. Roach, 1913-14, assistant in the Oregon State Agricultural College, Corvallis.

Grace Smith, 1913-14, cataloger, University of Oklahoma.

Cena Sprague, 1913-14, assistant in the Iowa State University Library, Iowa City.

Leila B. Wilcox, 1913-14, librarian of the Franklin (Ind.) Public Library.

Grace Barnes, 1913-14, temporary cataloger during the summer at the University of Illinois Library.

Ethyl Blum, 1913-14, cataloger for the Illinois State Historical Library at Springfield.

Agnes Cole, B. L. S. 1901, cataloger, State Library, Salem, Ore.

P. L. WINDSOR, *Director*.

CLEVELAND TRAINING CLASS FOR LIBRARY WORK WITH CHILDREN

The class of 1913-1914 of the Cleveland Public Library Training Class for Library Work with Children finished the year with ten members, one student, Miss Mary Randell, having dropped out Feb. 1, to take a position in the Fort Wayne (Ind.) Library. The entire class were asked to stay on as assistants in the Cleveland Public Library; seven accepted and were given positions as follows: Branch librarians, Charlotte Fairchild, Helen Starr; children's librarians, Mary Hoover, Anna Klumb, Annabel Porter; school librarians, Gladys Cole; first assistant and children's librarian, Jane Brown. Positions accepted in other libraries were as follows: Nora Beust, assistant, La Crosse Normal School Library; Sarah Caldwell, children's librarian, New York Public Library; Adeline Cartwright, Toronto Public Library.

The class of 1914-1915 opened Sept. 15 with thirteen students from nine states. Eight of this number are library school graduates; the remaining five have each had several years' experience in library work. Five of the students have college degrees, and two have had one year of college work. Five colleges are represented; four library schools—Pratt, Simmons, Drexel and Western Reserve; and the thirty-two years of library experience totaled by the class of thirteen was gained in seven different libraries—Buffalo, St. Louis, Indianapolis, Gary (Ind.), and Cleveland Public Libraries—Bryn Athyn (Pa.) Academy Library and the Mercantile Library of Cincinnati.

The students' names and credentials are as follows:

Brown, Helen Clare, Covington, Ky., Mercantile Library, Cincinnati, 1910-13.

Fowler, Maude Woodward, Franklin, N. H., Pratt, 1914.

Gibson, Anna Ashton, Gary, Ind., Gary Public Library, 1910-13; Cleveland Public Library, 1913-14.

Greenamyer, Helen Loretta, Cleveland, Ohio, Western Reserve University Library School, 1912; Cleveland Public Library, 1910-14.

McConnell, Josephine, Lakewood, Ohio, Western Reserve University Library School, 1914.

MacMahon, Joyce, Indianapolis, Ind., Indianapolis Public Library, 1908-14.

Potter, Margaret A., Sharon, Mass., Simmons, 1914.

Shafer, Clara Louise, Cleveland, Ohio, Western Reserve University Library School, 1914; Cleveland Public Library, 1910-13.

Smith, Alice Mildred, Stillwater, N. Y., Western Reserve University Library School, 1914; Buffalo Public Library, 1907-09; Cleveland Public Library, January-June, 1913.

Somerville, Evelyn, Aliceville, Ala., Drexel, 1914.

Stealey, Laura, St. Louis, Mo., Simmons, 1913; St. Louis Public Library, 1912-14.

Stroh, Cornelia Elizabeth, Bryn Athyn, Pa., Bryn Athyn Academy Library, 1907-14.

WESTERN RESERVE LIBRARY SCHOOL

Western Reserve Library School announces an open course on the "Public library and

community welfare," including lectures on other subjects, during February, March and April, 1915. The course will be open to librarians who have had library school training, or who can submit to the dean and director of the school a record of several years of acceptable library experience.

The course in the "Public library and community welfare" is a part of the regular work of the school, but special students will be admitted for it who, out of actual experience, have felt the need for a study of some of the human problems of library work, which are presented by present civic and social conditions, and which are being met by the Cleveland Public Library and by many humane organizations in Cleveland which are united in the Cleveland Federation of Charity and Philanthropy. Lectures on "Library administration," by Mr. W. H. Brett, librarian of the Cleveland Public Library, and Miss Linda A. Eastman, the vice-librarian, and a study of the branches of the Cleveland Library system will be a most important part of this open course. There will also be lectures during this period by other well-known librarians on some of the larger aspects of library work which will be announced later. The series of lectures by Professor A. S. Root, of Oberlin College, on "The history of the printed book," will be given during this period, and also the series by Miss Gertrude Stiles on "Bookbinding and book repair."

For specific information regarding this short course, the conditions of admission, tuition, etc., write to the director, Alice S. Tyler.

LIBRARY EXTENSION COURSE AT COLUMBIA

Columbia University, Department of Extension Teaching, offers evening courses beginning September 24 in Library administration, Bibliography and reference, Cataloging and classification, and Indexing, filing and cataloging as applied in business.

For complete statement of courses write to the Secretary of the University for the extension teaching announcement.

Librarians

BOLLES, Marion P., Pratt 1911, has been made assistant in the New York Public Library.

BROOMELL, Ellyn C., New York State Library School, 1913-14, has been appointed assistant in the Lewis Institute branch of the Chicago Public Library.

BURNS, S. Helen, Drexel 1914, has been appointed assistant in the library of Bryn Mawr College.

CALDWELL, Sarah P., Pratt 1913, has been made children's librarian in one of the branches of the New York Public Library.

CHRISTIANSEN, Bolette L., New York State Library School, 1912-13, has been engaged as assistant in the library of the University of Christiania, Norway.

DINGMAN, Annie P., has resigned from the cataloging department of the Yale University Library to accept the position as head of the foreign language department of the Cleveland Public Library.

EUSTIS, Annita, has been appointed librarian of the Birmingham (Ala.) High School Library to succeed Miss Sara Bruce.

FURBECK, Mary E., New York State Library School, 1913-14, who went to the Forbes Library, Northampton, Mass., as summer assistant, will remain as a regular assistant for the coming year.

GOODELL, Frederick, librarian in charge of the Seward Park branch of the New York Public Library, was married, Aug. 27, to Miss Martha Lonyo, of the Detroit Public Library. Mrs. Goodell was a member of the Detroit Library staff for four years, and Mr. Goodell came to New York from the same institution two years ago. Mr. Goodell is a graduate of the Library School of the New York Public Library in the class of 1914. In connection with his work there, he spent some time in the documents division of the reference department, leaving that work to become librarian of the Hamilton Fish Park branch, a position he held until his transfer to Seward Park on Jan. 1 of this year.

Goss, Harriet, for nearly eight years chief librarian of the Carnegie Public Library in East Liverpool, O., has tendered her resignation to take effect Oct. 1. Miss Goss will become first assistant in the library at Lake Erie College, in Painesville, O., of which institution she is a graduate.

GREEN, Mr. Samuel S., of Worcester, was not among those caught in Europe, as stated in the September JOURNAL. It was his intention to sail for Liverpool Aug. 15 and to return Sept. 8, but as the date of sailing drew near affairs were so unsettled that he gave up his tickets.

HANSON, Doris M., of Ysleta, Texas, a graduate of the Wisconsin Library School 1914, has been appointed librarian of the West End branch of the Birmingham Public Library to succeed Miss Louise Roberts, who

has been granted a leave of absence to attend the Carnegie Library School at Atlanta.

HEALY, Alice M., has been appointed chief of the catalog department of the San Francisco Public Library, to succeed Miss Mary E. Hyde.

HENLEY, Lillian, formerly with the Legislative Reference Library, Indianapolis, Ind., joins the staff of the H. W. Wilson Company, Oct. 1. She will take charge of the Public Affairs Index and the Public Affairs Information Service, which the Wilson Company has taken over from the Indiana Bureau of Legislative Information.

MERCER, Martha, for twenty-four years librarian of the Mansfield (O.) Public Library, has resigned because of ill health. The resignation has been reluctantly accepted by the library board, and Miss Helen Fox, who has been first assistant for several years, has been appointed librarian. When Miss Mercer took charge of the library it was located in the Memorial building and contained only a small collection of books. Eleven years ago, when its quarters became too cramped for further use, Miss Mansfield was able to get a Carnegie grant of \$35,000 for a new building. This was supplemented by an additional grant of \$2,000 for equipment. The library now has a collection of 20,000 volumes and a circulation of 75,000 volumes a year. Through Miss Mercer's efforts branch libraries have been established throughout Richland county. Miss Mercer was one of the twelve organizers of the Ohio Library Association, which now has a membership of 500, and she was its secretary for two years.

MOORE, David R., librarian of the public library in Berkeley, Cal., died on May 27 in that city, after a brief illness. Mr. Moore became librarian of the Holmes Library in Berkeley in 1893, soon after it was founded. In 1895 the Holmes Library became the Berkeley Public Library, with Mr. Moore still as librarian. He is therefore the only librarian the Berkeley Public Library has ever known, and it became his very life. It has grown in his hands into a particularly fine, well-balanced institution. Mr. Moore was always kindly and considerate, and while conservative, was quick to respond to any new call upon the library resources. He will be greatly missed in the community, and particularly by the library staff, and his place will be difficult to fill.

ROBBINS, Mary E., formerly the head of the Simmons College Library School, will join the staff of the H. W. Wilson Company, Oct. 1.

SCRIPTURE, Bessie B., New York State Library School, 1912-13, has resigned her position as reference assistant at Columbia University Library to become reference librarian of the Minneapolis Public Library.

SMITH, Louise, formerly of Seattle and a graduate of the University of Washington, has been appointed librarian of the Lincoln High School at Tacoma, Wash.

STEARNS, Lutie, who has been head of the traveling library department of the Wisconsin Free Library Commission since its establishment seventeen years ago, has resigned, her resignation to take effect Oct. 1. Miss Stearns has given up her library position to enter the lecture field. While giving up the responsibility of a department, she will continue her connection with the commission as official lecturer, as for many years past. While chief of the traveling library department of the commission, she aided in establishing 150 free public libraries and over 1,400 traveling libraries, including fourteen county systems.

STRANGE, Joanna Glead, reference librarian of the Detroit Public Library, has resigned. After October Miss Strange will be connected with the Anti-Capital Punishment Society of New York, with headquarters at 440 Fourth avenue, New York City.

THOMPSON, Elizabeth H., New York State Library School, 1911-12, joined the staff of the New York State Library as reference assistant on September 1. Miss Thompson will also continue her studies in the State Library School.

THOMPSON, Nancy I., Pratt 1912, has resigned from the librarianship of the Public Library of Bernardsville to accept the librarianship of the Newark State Normal School.

VAILE, Lucretia, New York State Library School, 1914, has been appointed assistant reference librarian of the Denver Public Library.

VER NOOY, Winifred, New York State Library School, '15, spent the month of July as loan desk assistant at the University of Chicago Library.

WINSHIP, Vera L., New York State Library School, 1913-14, has been appointed assistant in the catalog and reference departments of the Cincinnati Public Library.

WITT, Mrs. Edgar E., for six years librarian at Baylor University, Waco, Tex., has resigned. She is succeeded by W. P. Lewis, former librarian of the Albany (N. Y.) Y. M. C. A. Mrs. Witt had planned to go abroad this year, but her European tour has been postponed for a year on account of the war.

THE LIBRARY WORLD

New England

MAINE

The dates and places of the meetings for librarians and others interested in the work of public libraries to be held under the auspices of the Maine Library Commission have been announced as follows: Biddeford, Monday and Tuesday, Oct. 5 and 6; Auburn, Wednesday and Thursday, Oct. 7 and 8; Waterville, Friday and Saturday, Oct. 9 and 10; Dover, Monday and Tuesday, Oct. 12 and 13; Bangor, Wednesday and Thursday, Oct. 14 and 15. Meetings will be held on the first day in each place at 9.30 a.m. and at 2 and 7.30 p.m., and on the second day in each place at 9.30 a.m., giving each of the cities visited the benefit of four sessions. These meetings will be under the direction of Miss Belle Holcombe Johnson of Hartford, Ct., a well known library worker. The evening meeting at each place will be especially for students and teachers.

NEW HAMPSHIRE

Newton. The Public Library has been bequeathed \$2000 by John A. Gale of Brookline, Mass., who was killed in an automobile accident in August.

VERMONT

Through the activity of the literature and library extension committee of the Vermont Federation of Women's Clubs, the State Library Commission has received two gifts amounting to \$40.75 with which, at the request of the givers, the commission has bought two school libraries, for use particularly in district schools.

MASSACHUSETTS

Ashfield. The Milo M. Belding Memorial Library, presented to his native town by the silk manufacturer, was dedicated Aug. 29. The building is of gray marble with interior finish of quartered oak, and stands on the Main street, surrounded by a fine lawn. The Ashfield Library was started ninety years ago in a private house, and migrated from house to house and shop to shop until it was given a room in the Field Memorial hall in 1889, where it rested until it was moved to the town hall in 1908. From this home it has been moved to its new building.

Chelsea P. L. Medora J. Simpson, lbn. (44th annual rpt.—1913.) Accessions, 1395; total, 15,313. Circulation 88,077. New registration, 1635.

Leyden. A feature of the Old Home Day celebration Sept. 7 was the dedication of the Robertson Memorial Library. Ground for the new library, which has previously occupied quarters in the town hall, was given by A. J. Shattuck, and the building erected by James Robertson in memory of his parents. It is a one-story structure, painted gray with white trimmings, and contains one room 16 x 24 feet.

Waltham P. L. Orlando C. Davis, lbn. (Rpt.—yr. ending Jan. 31, 1914.) Accessions 2096; total 40,543. Circulation 117,954. Registration 8107, about 23 per cent. of population.

Waltham. Plans for the new library have been approved by the commissioners and the trustees. The drawings call for a three-story fireproof building 122 x 114 feet, set in the middle of the lot and surrounded by lawns and shrubs. The style is colonial, executed in brick and stone trimmings.

Worthington. Ground was broken for the new library building in August. Men came from all parts of the town with their teams to take part in the work, and the "ground breaking" day was made a gala occasion. The workers brought their lunches, and coffee was served by a committee. There were short talks by men who have been active in promoting the work, and plans for the new library were shown and discussed.

RHODE ISLAND

Newport. The People's Library was moved in July from its former home on Thames street to its new quarters in the King homestead in Aquidneck park. The homestead was a gift to the city from George Gordon King. The original plan of the house lent itself excellently to library purposes, and the general arrangement of the rooms has been kept. The most difficult part of the alteration was the arrangement of the large stack room. This room is 54 feet in length, with an average width of 24 feet, and forms an uninterrupted open space from the first floor to the roof, which will accommodate four floors of library stacks having a capacity of 100,000 volumes. To arrange this large space the old floors, partitions and walls were completely removed, a new fireproof concrete floor put in and supported upon steel beams and columns, and a new fireproof ceiling hung from steel girders. The doors from the hallway to the stack room are also protected by sliding fireproof doors.

Providence. Mrs. Josephine Angier Binney of Providence and Newport, who died some time ago at Newport, has left the sum of \$10,000 to the Providence Public Library.

Providence. The Public Library has on view an exhibit apropos of the 150th anniversary celebration of the founding of Brown University in October. Besides an exhibit relating to the nine successive presidents of the university, there is an interesting showing as to the six colleges which were already in existence in the American colonies when Rhode Island College (now Brown University), opened its doors in 1764. These are Harvard (1636), William and Mary (1693), Yale (1701), Princeton (1746), University of Pennsylvania (1749), and Columbia (1760).

CONNECTICUT

Hartford. The 70,000 volumes in Trinity College Library were moved into Williams Hall, the new library and administration building, in the summer. The books were dusted, packed in boxes, and carried to the new building. The work of shifting them consumed about three weeks. With the addition of Williams Hall to the main building, composed of Jarvis Hall, Northam Towers, and Seabury Hall, Trinity College has one of the longest buildings of any college in the country, as it has now a frontage of over 700 feet. Over the main entrance of the new library building a picture of Bishop John Williams has been cut. Bishop Williams was the fourth president of the college, serving in that capacity from 1848 to 1853. He was a trustee of the college from 1848 until his death in 1899. The hall has been added to the north end of the main building. It will contain the administrative offices of the college on the ground floor. The reading room occupies the upper part of the entire east wing. It is about 34 feet wide by 80 feet long, with a timber roof constructed with open trusses in heavy oak. The floor space of the reading room is entirely unobstructed, the walls being lined with books subject to the greatest demand, to a height of eight feet from the floor just above which are the sills of the large windows. Direct communication is had with the stack room which extends in a northerly direction prolonging the line of the main building; between the stack and reading room, adjoining the passageway connecting the two, is the librarian's office commanding the entire situation.

Waterbury. Bronson L. Helen Sperry, lbn. (44th annual rpt.—1913.) Accessions 8915; total 94,806. Circulation 257,121. Receipts

\$32,416.10; expenditures \$31,584.71, including \$12,387.51 for salaries, \$5,144.18 for books, \$1,109.65 for binding, and \$430.85 for periodicals.

A table shows that the circulation of the library increased from 92,154 in 1902 to 228,353 in 1912, a gain of 147.1 per cent. During the same time the cost of maintenance and operation per thousand of circulation decreased \$41.53 or 30.4 per cent, dropping from \$136.23 in 1902 to \$94.70 in 1912. The cost of operation and maintenance in 1912 was \$21,626 as compared with \$12,555 in 1902, an increase of \$9071, or 72.2 per cent.

Middle Atlantic

NEW YORK

Falconer. The public library formerly maintained by the Y. M. C. A. has been discontinued and its books transferred to the new Falconer Public Library.

Jamestown. James Prendergast F. L. Lucia Tiffany Henderson, lbn. (23d annual rpt.—yr. ending May 31, 1914.) Accessions 1038. Circulation 78,508. Registration 10,808.

New York City. Mr. and Mrs. Cluff Bjorneseth of Bergen, Norway, have sent a Christmas gift to the children of New York. It is a collection of children's books and tales from Norway, and it has been put in the children's room at the main building. Last year, when Mr. and Mrs. Bjorneseth were in New York, they visited the library and were much impressed with the children's room, and on their return to Norway they immediately set about making this collection of books, tales, music and pictures which the children of their land know and love.

Rochester. The new Monroe branch of the public library was opened Monday, Sept. 21.

Saratoga Springs. At a meeting of the board of education Sept. 14, the abolition of the Public Library and the distribution of its books among the schools, was recommended. The matter was referred to the library committee with power.

Troy P. L. Mary L. Davis, lbn. (79th annual rpt.—1913.) Accessions 1972; total 48,852. Circulation 103,267. New registration 2415; total 10,374. Receipts \$19,929.40; expenditures \$19,883.78, including \$6892.84 for salaries, \$819.96 for binding, \$1057.16 for books, and \$218.57 for periodicals.

PENNSYLVANIA

Philadelphia F. L. John Thomson, lbn. (18th annual rpt.—1913.) Total number of vol-

umes 443,121, in addition to 200,271 pamphlets. Circulation 2,296,368. Registration 149,735. Receipts \$315,359.51; expenditures \$284,703.79.

Numerous efforts have been made to bring about the commencement of the new main library building, but without practical result. The first annual apprentice class, composed of ten members, completed its course in April and a second started with fifteen members in November, a date which will be changed to Sept. 15 this year. The most satisfactory result of the year's work with children has been the increased interest shown by public school teachers in the resources and methods of the children's room, while at the 432 regular story hours 34,974 children were present.

MARYLAND

Frederick. The Frederick County Free Library, which was opened May 22 with 1400 books, is meeting with appreciation and support. The \$2000 with which the library was established was raised by the Civic Club between fall of 1913 and April 1914. A Library Association has been formed, with county as well as city members, and after the first year this will support the library. Since opening over 700 people have registered, representing 17 places in the county, and the second month's circulation was 2934. Ten rural schools are using the library, and it is expected that three county branches will be opened in October. It is not known whether the Artz bequest (noted in the July number of the JOURNAL) will be applied to this library or not, and in any case it will not be available during the lifetime of Miss Artz.

Princess Anne. The Public Library has been moved into its new building in the old station of the New York, Philadelphia & Norfolk railroad. When the railroad built its new station the old building was given to the library, and after refitting it is found well adapted to its new use.

DISTRICT OF COLUMBIA

Washington. A training class for persons who wish to obtain positions in the Public Library will be organized at the library on November 1. Entrance examinations for those who wish to join the class will be held about the middle of October. The course of training will continue seven months, from November 1 to May 31, and all who complete the course satisfactorily will be placed on the library's eligible list, from which all vacancies are filled. Applicants for admission to the class must be in good health and between the ages of eighteen and thirty-five, and must have had at least a high school education or its equivalent.

The South

GEORGIA

Following the passage by the legislature of a bill providing for the establishment and maintenance of a legislative reference department in the State Library, much preliminary work is going forward in the library toward making the new department an actuality at an early date. Although carrying the small appropriation of only \$1200 annually, the legislative reference bill is one of the most progressive measures passed by the last legislature. Miss Ella May Thornton, who has been assistant in the State Library since 1909 and has made a special study of legislative reference work, will be directly in charge of the legislative reference department under the supervision and direction of Mrs. Maud Barker Cobb, state librarian.

Atlanta. Miss Katharine H. Wootten, of the Carnegie Library, has joined the citizens of Fulton county in requesting the board of county commissioners to make an annual appropriation of \$5000 for the maintenance of the library. The appropriation would make it possible to extend the library service throughout the county. The matter has been referred to the finance committee and will probably be acted upon definitely at next month's meeting of the board.

KENTUCKY

Hopkinsville. The books of the old public library have been moved to the new Carnegie Library on Liberty street. Miss Virginia Lipscomb will be librarian.

Stanford. A new free public library is to be opened at Stanford.

TENNESSEE

In Tennessee the state duplicates any amount between \$10 and \$40 raised by any community for school libraries.

Memphis. The fourth branch of the Cossitt Library in Memphis is to be opened at an early date by C. D. Johnston, librarian. The new branch will be at the corner of McLemore avenue and Latham street. In addition to the new branch for the white people a new branch has been opened for the negroes at the Howe Institute. Cecelia Yerby, who has just completed a two years' course of training in library work at Louisville, Ky., will have charge of the branch at Howe Institute.

MISSISSIPPI

Jackson. It is expected to have the new Carnegie Library open about Nov. 1, though the exact date is not yet announced. Mrs. E. M. Porter will be the librarian.

LOUISIANA

New Orleans. Work on the branch library for negroes has begun, and it will probably be completed this fall. The cost will be about \$25,000.

Central West

MICHIGAN

Detroit. Ground probably will be broken for Detroit's new million-dollar library on Woodward avenue about Oct. 15, according to the *Detroit Journal*. The houses to be torn down, together with the land which they occupy, cost the library board \$222,431.63.

Port Hudson. The North End branch of the city public library is nearing completion and will be ready for occupancy about October 1. The entrance hall to the Fillmore school building was remodelled for the purpose.

OHIO

Hamilton. Before an assembly of 1200 the Lane Public Library was re-dedicated Sept. 6, after having been closed for eighteen months in order to repair the damages caused by the flood of 1913. The library now contains about 15,000 books. Mrs. Maude Jackson, one of the heirs of Clark Lane, who founded the library in 1867, was present. She and her brother recently released the title to the real estate, deeding it to the city.

Toledo. The contract for the proposed addition to the public library has been let for \$26,985. The extension will extend 80 feet to the south of the present building and come close to the sidewalk line.

INDIANA

Evansville. Owing to the failure of the books to arrive, the date of the opening of the Carnegie libraries has been postponed until Nov. 4, according to Miss Eethel McCullough, Carnegie librarian.

Hobart. Foundations have been laid for the Hobart branch of the Gary Public Library, and it is expected the library can move into the building by Christmas.

Kirklin. Work will be started this fall on a new Carnegie library building to be erected on two lots donated for the purpose by Mrs. Edith McKinney. The building will cost \$7,500.

ILLINOIS

Anna. The Robert Burns Stinson Memorial Library was dedicated here in August. The library is the gift of Captain Stinson, for many years a resident of this city, and cost \$35,-

000—the earnings from \$50,000, which was accepted by the city of Anna in 1904 in compliance with the terms of the donor's will. The library opened with 2500 volumes, classified and cataloged. Miss Lueva Montgomery has been appointed librarian.

Chicago. A foreign book department, comprising 25,000 volumes of the best literature in seventeen languages, will be established by the Chicago Public Library directors. The department will be located on the fourth floor of the library building and will be composed of "open shelves." Attendants conversant with several languages will be in charge of the department to assist the patrons in their selection of books and periodicals. It is hoped to have the new department ready for business within two months.

Mt. Vernon. The Mt. Vernon Public Library circulated 13,731 books during the last year and 4,931 persons visited the reading rooms. More than twice as many adult non-fiction books were issued between May 31, 1913, and June 1, 1914, as in the preceding year.

Polo. The Polo Public Library has been advertising the library by having posters printed with a photograph of the building and plan, giving the hours the rooms were open and asking people stopping in town between trains to spend their time at the library. Much credit is given E. Frances Barber, the librarian, for the growth and success of the library.

Shelbyville F. P. L. Grace L. Westervelt, lbn. (Rpt.—yr. ending May 31, 1914.) Accessions 542; total 7483. Circulation 26,237. New registration 339; total 1611. Receipts \$3036.55; expenditures \$1655.24.

Sheldon. A public library has been established here, through the efforts of the Woman's Club. The library has been made free to all residents of the township, in the hope that some time it may become a tax supported township library. With the help of the Library Extension Commission, the library has been classified and the proper records made.

Urbana. The University of Illinois Library has been making an addition to the library building this summer. It is built of Minnesota sandstone to match the main building, and was completed at a cost, including steel shelving and equipment, of \$27,000. This addition to the rear or stack portion of the building, is 28 by 52 feet outside measure, and the five floors of stacks will provide shelving for 100,000 volumes or four years' growth.

By the end of the four years it is hoped the university will have made at least a beginning on its new library building, the site for which has already been set aside by the board of trustees.

Winnetka. The annual report of the board of directors of the Winnetka Free Public Library for 1913-1914, shows the total circulation to be 18,382, which is an increase of 7051 in five years. Since last fall magazines have been allowed to circulate as non-fiction with a restriction to seven days. Miss Mary E. Hewes was elected librarian to succeed Miss Jessie McKenzie, who resigned her position Oct. 1, 1913.

The North West

WISCONSIN

Milwaukee. The Henry Llewellyn branch of the Public Library was dedicated Sept. 5. Two sons of Henry Llewellyn, for whom the branch is named, were present. They have given the ground on which the building, a one-story structure of concrete and stone costing \$33,000, was erected.

MINNESOTA

Eveleth. The Eveleth Public Library, erected at a cost of \$30,000, was formally opened July 1, with brief dedicatory exercises. The library opened with about 2000 volumes, 50 current magazines, and 17 daily papers. The library will be open week days from 1 to 9 p. m., and on Sunday the reading room will be open from 2 to 6 p. m. Miss Margaret Hickman, a graduate of Pratt Institute Library School in 1913, is the librarian in charge.

Mountain Iron. The contract for the Carnegie Library has been awarded for \$16,900, and work was started early in September.

New Duluth. A branch library, with separate entrance from the street, is to be established in the new school building which is expected to be completed by Feb. 1.

IOWA

Muscatine. The children's department of the P. M. Musser Public Library was opened the first week of September. Mrs. Nellie S. Sawyer has been placed in charge of this department.

NORTH DAKOTA

The secretary of the North Dakota Public Library Commission takes exception to the statement made on page 646 of the August JOURNAL, that the Wisconsin Library Com-

mission is "the only one which is the administrative body in control of a legislative reference department," and says that the "North Dakota Commission, which was modeled after the Wisconsin plan, has had administrative control of the legislative reference department since its inception in 1907." The statement appeared in the JOURNAL in a summary of an article printed in the *Wisconsin Library Bulletin*, and happens to have been couched in the words of the original. In such summaries in the *Library Work* department, the aim is to give the gist of the author's own thought, without comment or correction by the JOURNAL.

COLORADO

Denver. In *The City of Denver* for Aug. 22, the department of "Library notes" contains some interesting facts about the work of the Public Library. Library work, including the circulation of books and the holding of story hours, has been carried on during the summer in eight playgrounds; two new deposit stations have been opened; books in modern Greek, Yiddish, French, German, and Dutch have been added; and a free public lecture course is again planned for the coming winter. Denver's branch library buildings, which have been open about a year, have been found serviceable and successful.

The South West

MISSOURI

Belleville. The Carnegie Corporation of New York has notified the library board of Belleville that the plans for the Carnegie Library have been accepted. The building is to cost \$45,000.

TEXAS

The Library and Historical Commission is distributing an 8-page pamphlet containing the library laws of Texas, covering besides the general provisions, the laws regulating city public libraries, farmers' county public libraries, and the Library and Historical Commission.

Dallas. The Oak Cliff branch of the Dallas Public Library, corner Jefferson and Marshall streets, opened in September, with approximately 4,000 books.

Houston. A library costing between \$10,000 and \$12,000 will be opened on the fifth floor of the court-house by the Law Library Association of Houston, organized last February. The fifth floor of the structure is being remodelled and put in readiness.

Palestine. The new \$15,000 library will be dedicated Oct. 14. Dr. S. P. Brooks, president of Baylor University, has been invited to deliver the dedication address.

San Antonio. A branch library for negroes will be opened shortly at a negro drug store on East Commerce street, the books to be selected and sent out from the Carnegie Library. About ten years ago, when the Carnegie Library first was opened, a sub-station for negroes was in use. There was, however, very little interest taken in the books and so the project was abandoned. It is thought the station will prove more popular now, as it is planned upon the earnest solicitation of a number of negroes.

Pacific Coast

CALIFORNIA

Clovis. The contract for the new Carnegie Library has been let and work has been started. The building will cost \$12,000.

Los Angeles. The training school in library work which the Los Angeles Public Library carries on each year will open October 1. The course includes instruction in cataloging, classification, reference work, and various branches of library science, and also numerous lectures in literature, current events, and other subjects of general value in library work. Mrs. Theodora Brewitt, will have charge of the school.

Palo Alto. Miss Stella Haughtington, librarian of Santa Clara county, has appeared before the Palo Alto library board to present a plan for the consolidation of the Palo Alto library and a proposed branch of the county library. The local library would then receive the books and funds for the county branch, while the country people would have the full use of the combined library. Members of the board failed to see the benefits of such a scheme and looked askance at the proposition, so action was delayed for further investigation of the details of the plan.

Pasadena. Pasadena's advisory library commission has decided against contributing toward a state library exhibit at either of the California expositions next year, agreeing that it would be better to centralize efforts on the local library, in arranging for the expected tourist patronage. To this end, special stacks of books bearing on matters Californian will be provided at the local institution. The volumes will deal with the state's resources, his-

tory, physical features and literature. Fiction of a California nature, such as the works of Bret Harte, will be included in this group of volumes.

Redlands. A. K. Smiley P. L. Artena M. Chapin, lbn. (20th annual rpt.—yr. ending June 30, 1914.) Accessions 2264; total number of volumes 25,825, pamphlets 5307. Circulation 105,308. Registration 6972, a gain of 764. Receipts \$17,281.27; expenditures \$17,288.76, including books, \$2697.95, periodicals \$575, binding \$228, and salaries \$5276.57.

There were 3452 books repaired at library, 22 books rebound at binder's and 98 magazines bound. The most important work with schools was a series of talks on vocations given before the high school students by experienced workers.

San Francisco. Miss Laura McKinstry has been elected a member of the board of trustees of the San Francisco Public Library, the first woman in the history of the library to hold the office.

San Francisco. An examination of applicants for positions in the library service has been held recently. One hundred and twenty made application, of which number forty-five qualified. Twenty-three passed the written tests and are now doing probationary work. The examination consists of two written tests, one in literature and one in history and current events, followed by one month's probationary work to determine personal qualifications and aptitude for library work. The board of library trustees was the first body of the municipality to establish a system of civil service, holding the first examination in 1896 and since then, with few exceptions, making appointments from the eligible lists thus established. The tests are wholly under the supervision of the trustees and are in no way connected with the other branches of municipal civil service. While the city charter provides that municipal employes must have been residents of the city for one year prior to appointment in any branch of the municipal service, whenever necessary experts who have not lived in the city for that length of time may be employed.

Santa Barbara. Andrew Carnegie is going to give Santa Barbara a \$50,000 library. It is agreed that the Chamber of Commerce will raise \$30,000 for a site, the county and city officials securing any balance that may be needed. The plans include developing a civic center, which will include library, art gallery, recreation center, postoffice and city and county buildings.

Canada

ALBERTA

Edmonton. The first annual report of the Edmonton Public Library and Strathcona Public Library, for the year 1913, has been issued. Although the first move for a public library was made in Edmonton in 1908, it was not till 1910 that a site was purchased. Since that time negotiations have been carried on with the Carnegie Corporation for aid in erecting a building. With the rapid growth of the city the city authorities now feel that at least \$200,000 is needed for a suitable building. Of this sum the Carnegie Corporation agrees to contribute \$75,000 on condition that the plans be submitted to it for approval and that the grant be used for the final payment completing the building entirely free from debt. The library at present is located in temporary quarters in a business block. Meanwhile in Strathcona in February, 1913, was completed a \$30,000 building, and since the two cities were amalgamated in 1912, the Strathcona Library, originally an independent institution, is now to be considered a branch of the one at Edmonton. During the first twelve months Strathcona accessioned 10,819 volumes, registered 3445 borrowers, and circulated 72,829 books for home use. The figures for the Edmonton Library for the same time are: accessions 12,250, registered borrowers 6867, and circulation 120,655. Both buildings are open on week days from 9.30 a.m. to 9.30 p.m. and on Sundays the reading rooms for adults are open from 2.30 to 5.30 p.m. The men's reading room in the Strathcona building is kept open till 10 p.m., and has an average daily attendance of 65, as compared with 40 in the general reading room and 125 in the general reading room at Edmonton. The Strathcona auditorium is greatly appreciated and is used regularly by a number of associations for their meetings, by Robertson College for its closing exercises, and for the children's weekly story hour.

Foreign

GREAT BRITAIN

The retirement of Mr. Edmund Gosse from the post of librarian to the House of Lords is announced. Mr. Gosse in his younger days was an assistant librarian at the British Museum, and subsequently at the Board of Trade.

GERMANY

Berlin. The Royal Library was reopened Aug. 10, though only from 9 to 3, and its use is confined to the reading-room. No books are

charged for home use. About 60 members of the staff had been called to service in the army before the end of August. The books most called for have been placed in the large space under the reading-room to make work easier for the smaller staff. There are from 400 to 500 visitors daily. The *New-Yorker Staats-Zeitung* of Sept. 27 records that the new regulations prepared for readers ends with the statement that "no Russians, Frenchmen, Englishmen or Servians will be admitted."

Cologne. The great department store of L. Tietz in Cologne, has established a circulating library in its new building. This is a new departure for such establishments in Germany. The handsome catalog of 400 pages shows titles of works which, while fiction is naturally in the majority, are all of a high standing. The best of modern German and foreign literature is represented and no fear of censorship has kept out even the most radical of writers. Among non-fiction books, works on economics, popular science, and philosophy are well represented.

Göttingen. The library of the Royal University has expended 19,167 marks, its yearly interest for 1913 from the J. Pierpont Morgan endowment, on some valuable editions of English and American books on art, history and literature, as well as several valuable catalogs, and a number of new subscriptions to American and English periodicals of a scientific character.

AUSTRIA

Cracow. It is reported that part of the famous Polish library, the Biblioteka Jagiellonska of the city university, has been removed to safer quarters by the inhabitants of the city fleeing before the Russian invasion. Since Polish publishers began to furnish the library with copies of every book they printed, it has been the hope of the administration that the library may become a national library for Poland.

SPAIN

Madrid. M. Rodriguez Marin, chief librarian of the Biblioteca Nacional in Madrid, recently published an open letter in all the daily papers of that city, giving the hours of opening of all the public libraries, and calling the attention of the people to their opportunities. Madrid is said to have no fewer than twenty-three libraries of various sorts, all of which are open to the public, although some of them but for a few hours a day, and none at all for the evening hours. The libraries all together possess about 1,400,000 volumes, and are consulted by about 1500 readers each day.

LIBRARY WORK

Notes of developments in all branches of library activity, particularly as shown in current library literature.

General

Education, Training, Library Schools

LIBRARY INSTRUCTION IN NORMAL SCHOOLS

The Milwaukee Normal School offers four courses—for primary, grammar grade, and high school teachers, and for principals of state graded schools. In the second year of each course a twelve-week library course is given, classes meeting three times a week. For this work one-half a credit is given. Courses in literature are also included in the second-year work, and they include juvenile literature and story telling for the primary teachers, juvenile literature and guidance of pupils' reading for the grammar grade teachers and principals of state graded schools, and guidance of pupils' reading for high school teachers. For each literature course one point credit is given, 26½ points for the two years being required for graduation.

LIBRARY INSTITUTES

Progress in library institutes. *N. Y. Libs.*, My., 1914. p. 68-69.

Editorial. In 1902, when the institutes for small libraries in New York state were started, there were but 109 libraries and 299 library workers participating in the meetings, and the great majority of these represented the less needy districts. Last year there was an attendance of 963 library workers, representing 23 different libraries or districts. Including public meetings held in connection with the institutes, there was a total of 1618 persons participating last year in this enterprise. While in twelve years the number of free libraries in the state has increased 60 per cent. and the circulation from free libraries 10 per cent., participation in these library institutes has increased 400 per cent. With the expressed approval of the State Association, the committee in charge has worked out and adopted a new and comprehensive plan, whereby provision is made for a progressive course of work and study to cover 3 or 4 years, the work for each year to be concentrated on a particular subject, thus assuring to those who will regularly attend, something new, specific and progressive each year, and at the end of the course, at least an elementary knowledge of the whole field of library economy as related to the small library. The

subject for 1914 is "Stocking the library," and the syllabus is printed in full on pages 82-88 of this same issue of *New York Libraries*.

TOPICS FOR LIBRARY MEETINGS

The following suggestive list of topics was used for the district meetings of librarians in Maine, which last summer took the place of the usual summer school:

The Sunday opening—is it advisable for the smaller public library?

Rural extension—A privilege, a duty, and a benefit to the public library.

Books for the smaller library—What, where and what to buy. Juveniles, sets, inexpensive editions. The library income and the library budget.

The library a social center—Rest rooms and auditoriums.

Government documents—which are useful, and how shall they be used in the small library?

The librarian—What more should he or she be than a dispenser of books?

Creating a reading public, and directing aimless or purposeless readers.

Public and high school libraries in a small town—Are both needed, and to what extent shall the public supply the school demand?

Library trustees—Their responsibility for the success of the library; their relation to the library and librarian.

What can be done to attract children and young people to the library and keep them from the streets, the cheap theaters and questionable places of amusement?

Five readable books of the past year—non-fiction. Five wholesome recent novels. Recent children's literature.

Scope, Usefulness, Founding

ARGUMENTS FOR LIBRARIES

Why have libraries. *Wis. Lib. Bull.*, Je., 1914. p. 136-139.

Ten reasons, each elaborated, are given.

1. Because public libraries are an essential part of a complete education.

2. Because libraries are schools for adults.

3. Because libraries are the only schools which reach the many who are workers and must earn a living while they learn.

4. It will help and supplement the vocational school work.

5. The library furnishes rest, relief, and recreation for tired workers.
6. It helps make intelligent citizens.
7. The library builds up good morals.
8. The library is more democratic than any other institution in the city.
9. By its co-operative principle, the library makes one dollar do the work of many.
10. Quotes what Franklin, McKinley, Roosevelt and Bryan have said commending libraries.

Library as an Educator

EQUAL RIGHTS FOR READERS

Equality of rights in the library. *N. Y. Libs.*, My., 1914. p. 67-68.

Editorial. Defends the right of the man or woman of crude taste and culture to a share of the librarian's consideration when books are being chosen. "The superior book is not to be rejected because it has no interest for the ordinary reader. The ordinary book is not to be rejected because it has no interest for the superior reader. The American public library, as distinguished from the great libraries of Europe, has its special distinction and pride in the fact that it appeals and ministers to plain, ordinary, average men and women."

How equality is often denied. *N. Y. Libs.*, My., 1914. p. 68.

Editorial. "Where current fiction makes up as much as 80 or 90 per cent. of the circulation, the figures are no proof that the main book wants of the community are for that class of books. Rather they show that the library has favored one class of readers at the expense of the others. It has been demonstrated that in almost every variety of American community, when non-fiction is well selected, adequately supplied and properly displayed, it is wanted and read by a larger proportion of the people than fiction."

Library in Relation to Schools

SCHOOLS, WORK WITH

The Guernsey Memorial Library of Norwich, N. Y., has issued a four-page leaflet entitled "The library page in the catalog of the Norwich public schools," which contains a summary of the year's work with children. An interesting feature has been the children's work exhibits held in the children's room, the exhibits being provided by different classes in the public schools. Every holiday brought appropriate posters made by the children for the bulletin boards, and at Christmas time a tree occupied the center of the room. Every

ornament, toy, and decoration upon the tree had been made by the children. The inspiration for the tree had been largely gleaned from books on "making things" drawn from the shelves of the children's room. This served as the first exhibition of manual work done in schools. After the new year began there were frequent changes of the exhibits. May Day was fittingly observed with a May pole, designed and decorated by the pupils in a sixth grade room. Later they also sent Guernsey Memorial Library a mammoth bouquet of violets, that there might be real flowers as well as the painted dandelions which the pupils of another room had done. Four story hours were held as an experiment and proved a decided success. In December certain English classes from the high school visited the library and received instruction in its use. Following this visit an essay contest was started on the subject, "How to use the library," and a first prize of \$5.00 in gold and a second prize of \$2.50 in gold was offered the seniors for the two best original essays, the prizes being awarded at commencement.

HIGH SCHOOL BRANCHES

For some years past the Free Public Library of Jersey City has made a special feature of its work with the high schools. Jersey City now has two high schools. The Dickinson High School, which was erected in 1906, is one of the largest and best equipped high schools in the country. The Public Library established a branch here as soon as the new building was completed. This branch is operated and maintained solely by the library, all expenses, including the salary of the librarian, being paid from the funds of the Public Library. The librarian was one of the staff of the Public Library, having had several years' training in the catalog and loan departments before being promoted to her present position. She is exceptionally well qualified for the work and has filled the position admirably. The collection now numbers 2346 volumes. Last year (1913) the circulation for home reading was 13,465 volumes. The use of books in the rooms was 53,415 and the attendance 51,333. The High School branch is used very extensively by the faculty as well as by the students. A branch library has also been established in the new Lincoln High School, where it is planned to give the same facilities as in the Dickinson High School. The use of this branch has so far been very satisfactory, and there is every indication that when the new building is completed the work will equal that of the Dickinson branch.

Library Extension Work

LIBRARY CLUBS

In each division of the Library League, or evening reading club maintained by the children's department of the Free Public Library of Philadelphia, the year's work has developed new interest and new methods of holding these growing girls and boys during the transition period from school to mills or shops, attracting them to the library by something more than the casual open door, and demonstrating the possibility of self-development by encouraging them to use books as tools. At the Richmond branch there are five divisions of the Library League, two of which are for young men and boys, three for young women and older girls. These organizations continue to do excellent work and have come to be recognized as useful and efficient factors in the neighborhood life. At the close of the club year the Library League Lyceum, which is composed of young men, published the initial issue of a club paper, called the *Library League Review*, in which they reviewed the work of the year in the various branches of the league. This rather ambitious enterprise was financed by the members, and proved a success, both financially and as a means of making the league known to the community. Another venture which this group successfully accomplished was an illustrated lecture given by Dr. Francis B. Brandt, of the School of Pedagogy, upon "Visits to the haunts and homes of the European philosophers." The young men secured the lecturer, attended to the advertising and succeeded in gathering an audience of about two hundred, the greater part of which was composed of young men and older boys.

Library Extension Work—Exhibits

ADVERTISING EXHIBIT

An advertising exhibit is being planned for the Carnegie Library at Atlanta, Ga. Miss Katharine Wootten, the librarian, announces that it is intended to be one of a series interesting to several trades and professions, and its purpose is to interest particularly commercial printers, sign makers, etc. Arrangements for the exhibit have been perfected by Miss Wootten with *Signs of the Times*, a specialized periodical devoted to commercial publicity. The periodical has undertaken the work of securing the exhibit for the library, and of changing it at frequent intervals, and also has given wide publicity to the idea, commending it to its readers everywhere and urging advertising clubs, classes in advertising,

sign men's associations and other libraries to adapt it to their own purposes.

BIRD EXHIBIT

An annual bird exhibit, held in the children's room of the Fort Wayne (Ind.) Public Library since 1911, has had far-reaching results with the children. The first year, besides a display of bird books, pictures, charts, and calendars, some twelve or fifteen bird houses made by the boys were shown. These attracted so much attention that each year since there have also been shown houses made by firms who make a study of bird-house construction. The firms have been glad to co-operate, and from twelve to twenty-five of these are sent in by out-of-town firms. Different men in the city have also lent very attractive specimens from their own yards, and one year the board of park commissioners sent the houses they had had made for the city parks. In the library building is kept a large private collection of stuffed birds, nests, eggs, etc., and these the library is allowed to borrow freely. One year a set of Gene Stratton-Porter's bird photographs were shown: another year there were bird compositions from the schools; and two different years there have been bird-talks that were both instructive and well attended. This year teachers were invited to bring their classes to the library during school hours, and these visits were so successful that they will be repeated each year.

Another successful series were the exhibits of model aeroplanes made by a number of boys. The boys also furnished pictures, magazines, pamphlets, working drawings, propellers, etc., so that the younger boys and those less expert in construction might have the advantage of seeing this material. One evening talks were given by two high school boys, who illustrated the principles of construction with their own models. The exhibit "caught the boys as nothing else has done," and one of the most gratifying results was the continued kindly feeling and interest of these older boys, who had been transferred to the adult department, in the children's department.

INDUSTRIAL CATALOGS EXHIBIT

A collection of catalogs, showing the industries of Denver, Colo., have been displayed in the reference room of the main library building. As the main library building is on the route from the mint to the capitol building, it is visited by thousands of tourists every month. Many business men from other sections of the country have examined the catalogs displayed and many notes have been taken.

LOCAL HISTORY EXHIBIT

A local history exhibition was arranged by Miss Caroline B. Garland, librarian at Dover, N. H., for Old Home week. Pictures of ancient buildings, engravings and photos of old-time notabilities, long-standing albums, diaries and scrap-books, local stories, annals, tales, all of which must be examined by the future historian, were on view.

Library Development and Co-operation

CO-OPERATIVE INFORMATION BUREAUS

Boston Co-operative Information Bureau. G. W. Lee. *Spec. Libs.*, Je., 1914. p. 92-94.

This bureau has besides the usual offices, a chief of service and two reference workers, one who works in the local libraries and one who works chiefly with the telephone. It keeps a card index of resources in the community for getting at facts, and a list of all questions and answers supplied. Membership includes five classes, from those who merely co-operate, without money payment, to those who pay \$100. So far most of the questions have been on commercial and engineering topics, and few have been made by mail. The bureau issues a bulletin, with several regular departments, which are described in detail in the article.

Sponsors for knowledge. G. W. Lee. *Stone & Webster Pub. Serv. Journal*, Jl., 1914. p. 47-53.

When a man has made an exhaustive study of any question so that he has the latest word on ventilation or public service commissions or whatever line he may have been pursuing, he becomes a "sponsor for knowledge" on that subject.

"Should we organize an information system with these two individuals responsible for just two topics (out of a possible million), we should have the nucleus of what people are unwittingly after.

"Publicity concerning a few sponsors for interesting and important topics would bring to light many a candidate and many a specialty; and when the public realized there was an organized 'where-to-look' on questions hitherto vaguely disposed of, it would turn to the same organization for much else. The up-building would be largely that of supply answering demand. Many a local undertaking would become the cog of a national wheel; we should have union lists of periodicals henceforth compiled on a national scale; overlapping indexes and bibliographical work henceforth compiled on a national scale; overlapping indexes and bibliographical work henceforth arranged for so as to avoid duplication; book

reviewing and evaluating done by experts in every department; rare books located in a central index for the country over; we should have a listing at headquarters, with quite likely a correspondence auction (such as is already conducted monthly on a small scale in Boston), of over-supplies and locally-not-needed literature, thus affording an efficient clearance system of what people have to dispose of and what they wish to obtain; and incidentally there would be a standardizing of forms and sizes in stationery and print."

Founding, Developing and Maintaining Interest

STIMULATING INTEREST

Creating a reading public and directing aimless or purposeless readers. Fannie V. Eastman. *Iowa Lib. Quar.*, Ap-Je., 1914. p. 81-83.

Do we always in building a library give sufficient thought to making it a matter of common interest? When nearly every organization in a town has a share in some way in contributing to the library an interest must exist in the work that is done. It remains for us to hold that interest and convert it into an increasing interest in the use of the contents of the building.

Do our shelves contain the books best fitted to the needs of our immediate community? In the desire to keep the library up to its highest standard of literary excellence, do we not sometimes slight the desires of the many? If we would create an interest in the books we have, we must know our community and its needs. Time is well spent in preparation of library notes for local papers, and in lists of books on special subjects. Special days in the library are a help when some topic of interest is made a feature, and new comers should be made to feel that the library is meant for them.

The library patron enjoys feeling that he has a part in the selection of books. Lists of books called for but not in the library are often helpful in making out order lists, and help to give the reader a feeling that his opinion is of value to the librarian.

LIBRARY EXHIBIT AT AN EXPOSITION

The Library Association of Portland, Ore., will maintain a booth at the Manufacturers' and Land Products Show, to be held at Portland from October 26 to November 14, for the purpose of dispensing information regarding mechanical and industrial work and conditions of Oregon. Small special library lists have been printed, giving the names and numbers of books calculated not only to aid the mechanic, but the employer. Charts will be shown in

this booth and an effort will be made to call the attention of visitors to the specialized work of the public library in this new technical department recently organized.

PUBLICITY BY POSTERS

The Buffalo Public Library sends out the following poster to offices, stores and factories, with a request that it be posted on the bulletin board:

Do you know all you want to?

Why not know a little more this year?

The City of Buffalo has given the free use of books to all its residents.

What does that mean to you?

If you are able to read, it certainly means an opportunity of adding to your education year by year through the right use of books.

It means the free use of many delightful books of entertainment and of inspiration.

Systematic study is worth while even for a few hours each day or each week. The right books may be had from the Public Library.

It is possible to add much to your force and to your value in your work or business by making use of the practical books which are provided.

A book has been written by some expert in your work, giving the result of years of experience. Why not have that information?

You may select your books from open shelves, or you may call upon the Library people for help in finding the book you need. The Public Library is yours, and its service is freely offered to you.

A valuable book may be read in the same length of time that is spent on a poor magazine.

319,000 volumes. 125,000 Buffalo people to use them. Do you?

Free Library cards will be issued upon application at the main building or any of the Branch Libraries.

THE BUFFALO PUBLIC LIBRARY.

MOTHERS, WORK WITH

In Grand Rapids the children's librarian makes special effort to interest mothers in their children's reading, and for this purpose she attends all sorts of mothers' meetings and women's clubs. The mothers, coming from widely different circles of society, are always attentive listeners, and many frequently remain for a little private talk, inquiring as to whether fairy tales are considered good for their children, or what is thought about detective stories for their boys. Foreign-born mothers are very anxious to have their children learn the English language, and they ask

intelligent questions as to books on history and civics for their boys and girls. Birthdays and holidays are strong factors by means of which the library can be made interesting to mothers. Considerable help has been given in the selection of books during the Christmas season. Book exhibits have been held at the schools. There is an annual conference on children's reading held on the first Saturday in May, which brings together another group of people. The mothers are represented on this program, and they take a part in the discussion. Three-fourths of the mothers, regardless of nationality, social position or education, have no definite idea as to the kind of books their children ought to read.

"BETTER BABIES" BOOKLETS

The Jacksonville (Fla.) Public Library has begun issuing to every new mother, within a week of the birth of her child, a bulletin called "Better babies and their care." Through the co-operation of one of the large medical and surgical houses the circulars are enclosed in all their sales of baby supplies, and they are also available at the circulation desk in the library. As the work was only started in August it is still too soon to give circulation figures, but already the books listed are being freely used. Several letters have been received on "good work in Jacksonville" from national workers in education and social work, and the State Health Department has asked for a thousand copies for state circulation.

Library and the State School

SCHOOL LIBRARY LEGISLATION

Significance of new law for school libraries. *N. Y. Libs.*, My., 1914. p. 66-67.

Editorial. The new law enacted by the last legislature in New York makes an important advance in at least five respects.

1. It makes every school library a free circulating library for all the people of those districts where there is not already a free public library in operation.

2. A definite legal status and recognition are given to the position of school librarian.

3. Provision is specifically made for the joint employment of the same librarian by the school library and the local public library.

4. Great stimulus is given toward the support of the rural school librarian by enlisting the interest of the general public.

5. Where the use of the school library by the general public and public demand develop to a degree which makes it embarrassing for the school authorities, legal provision is made for the creation by the school trustees, of a separate public library, and the transfer-

ence to this new library of such of the school library books as are not needed for school use.

Library Support. Funds

RAISING FUNDS

In Swanton, Vt., a campaign for a new library building was carried on during the summer. The results of each day's work was shown on a blackboard arranged in the following form:

WHAT CAN WE RAISE FOR THE LIBRARY?
THAT DEPENDS—ON YOU!

We want Ten \$ 100																				
We want Ten \$ 60																				
We want Ten \$ 40																				
We want Ten \$ 30																				
We want Ten \$ 25																				
We want Ten \$ 15																				
We want Ten \$ 10																				
We want Ten \$ 10																				
We want Ten \$ 5																				
We want Ten \$ 3																				
We want Ten \$ 2																				

Government and Service

Governing Board

RESPONSIBILITY OF TRUSTEES

Library trustees—their responsibility for the success of the library. William Irwin. *Iowa Lib. Quar.*, Ap.-Je., 1914. p. 89-91.

Too many trustees fill out the full term of their six years' service on the theory of "all honor and no work." There is a way to conduct a library by which it will live at a poor dying rate. It is the stingy way—the way that reduces expenses to the minimum. Then there is the way that is aggressive and ambitious; the way that keeps the property in first-class condition—really a library that is worth while.

The library is a public institution and should be maintained for the good of all the people. The business of the trustees is largely a matter of maintenance. If you feel certain that your entire five mills can be invested to the decided advantage of your town and community, then ask for the limit, and count the dividends in better men and women who have gotten some of their best qualities through the libraries.

Executive. Librarian

QUALIFICATIONS FOR A MUNICIPAL LIBRARIAN

Municipal librarianship: a rational view. William Pollitt. *Lib. Asst.*, Je.-Jl., 1914. p. 112-116; p. 142-146.

The question of most interest to municipal librarians and assistants is that of their present position and probable future. Until quite recently the assistant was prepared to accept the current opinion that prospects of advancement were slight and that his great hope was that at some future time attention to duty would raise him to the position of chief librarian.

With the development of the library as a department of municipal service, increased efficiency was demanded of the assistants, without a corresponding increase in opportunities for advancement. The municipal librarian at first was only the guardian, then the showman of the books in his case. He is now passing into the third stage, that of guide and interpreter for the books. During the last few years there has been improvement in a number of library centers, which it is hoped will become much more general. With one or two notable exceptions the highest-paid staffs are those governed by the most advanced chiefs, but it is unreasonable to hold chiefs altogether responsible where less desirable conditions prevail, for the librarian has a duty to his committee as well as to his staff. The committee represents the people who furnish the money, and the librarian must please them or find his position untenable.

Since the assistants of to-day will become the librarians of the future, they must keep ahead of their opportunities. The unqualified members of the profession have been a decreasing body for some time. Increased personal efficiency will be followed by increased general efficiency, and its effect will be seen in the whole library service.

Administration

Accession

SIMPLE RECORD SYSTEM

In a leaflet, entitled "Care of free textbooks," by H. O. Severance, issued by the University of Missouri as one of its regular bulletins, two methods of keeping track of text-books lent to school pupils are described. The first, or card method, is considered most satisfactory. Three forms are illustrated, 3 x 5 cards being used. The first is a record of stock, one for each kind of book, showing the number of copies and the date of receipt. The second form is a loan card, one for each book, which should be numbered consecutively. When the pupil receives the book he should sign the card and enter the date, and when the book is returned the second date should be entered. One card will serve several readers. A third

form, a pupil record card, may be used at the option of the teacher. On this would be entered the titles of all books issued to a certain student.

If the book method is preferred, the pages of the record book should be ruled in columns, giving space to enter author, title, copy number, date received, and name of bookseller. In another part of the book, pages should be ruled for a record of books issued to pupils. The pupil's name should be at the top of the page, and underneath columns should be provided for author, title, copy number, date lent, date returned, and remarks.

Classification

SIMPLIFIED CLASSIFICATION

Easy method of classification for libraries having from 500 to 1500 volumes. *Bull. Vt. F. P. L. Comm., Je., 1914. p. 2-5.*

Separate the books into four divisions: adult fiction, adult non-fiction, children's fiction, and children's non-fiction. Arrange adult fiction alphabetically by authors, and divide non-fiction into the ten classes of the Dewey system, marking the first figures of each class on the back of each book and inside the cover. Arrange children's books in the same way, but mark every one with a *j* in addition to the class number, and shelve them separately. Make a simple author and title index the books.

CLASSIFICATION OF SWEDENBORGIANA

Cataloging and classifying Swedenborgiana: the system used by the Academy Library Bryn Athyn, Pa. Emil F. Stroh. *Jour. of Educ. of The Academy of the New Church, Ja., 1914. p. 141-163.*

Classification. The Academy Library, having what is probably the largest collection of Swedenborgiana in existence, has evolved a special classification for the collection. It is first divided into two main classes: (1) the writings of Swedenborg, and (2) New Church collateral literature. The main class sign is S, for (1) is Sw, and for (2) is S followed by a figure. Works under Sw are divided chronologically, and then subdivided by language and editions, except the original editions published by Swedenborg, which have no further subdivision marks.

The collateral pamphlet literature is bound into volumes, grouping by size rather than subject. Classification is as follows: S1 is Bibliography; S2, General collateral literature; S3, Concordances and dictionaries; S4, Annuals; S5, Periodicals; S6, Societies; S7, Education; S8, Individual biography; S80, Collective biography; S8S, Biography of Swe-

denborg; S9, The Swedenborg library; S10, Miscellaneous books of interest to New Church students; S11-S17, reserved for future use; S18, Fiction; S19, reserved; S20, Liturgics.

Cataloging. The cataloging of any of Swedenborg's works printed before 1906 is simply done by using two copies of Hyde's "Bibliography" in sheets, cutting out the necessary entries, and mounting them on standard cards. For editions published after 1906 the L. C. cards are used when available. An alternative method would be to use a bound volume of the "Bibliography," checking in the margin the library's editions.

In cataloging the collateral works, author, title, and subject cards are made. Also every work is entered under the general heading "New Church collateral literature," in alphabetical order, and a second series under the same head is classified by languages.

Appendices to the article give alphabetical and chronological classifications of Swedenborg's works, special Cutter numbers used, and a short list of useful technical works.

Loan Department

SIMPLIFIED CHARGING SYSTEM

Easy charging system. *Bull. Vt. F. P. L. Comm., Je., 1914. p. 5-6.*

In a blank book have a separate page for each day's record. At the top put the date the books taken out are due, and underneath write the name of each borrower with the accession number of the book taken. At the end of each day the record for each class of books can be easily made, making easy a complete report at the end of the year.

Libraries on Special Subjects

Special Libraries

SPECIAL LIBRARIES

The special library and public efficiency. Edward A. Fitzpatrick. *Spec. Libs., Je., 1914. p. 89-92.*

After a preliminary description of the special library, the subject is treated under three headings, (1) the efficiency movement as it affects the special library, (2) the special library as a factor in an efficiency organization, and (3) efficiency organization for modern society.

(1) The special library is simply the organized expression of the principle of competent counsel, and it is efficient if its records are reliable, immediate, and accurate—whether they be books, clippings, letters, or models.

(2) If the special library is to be constructive as well as receptive it must be supple-

mented by a research division, with a staff of men scientifically trained, able to profit by contact with actual conditions, with methods of administration, and with the personnel of the organization. The best example of such an organization to-day is found in the New York City department of education, which has established a division of reference and research. If there are no records or experience for such a division to work with, then an experimental division will have to be the foundation of the organization; otherwise it is the crowning point.

(3) Granting that any efficiency organ must combine special library, research division, and experiment station, together with directing intelligence and a trained personnel, and considering the government of state or nation as the largest single organization in which each one has an interest, should it not have a planning or efficiency division? The greatest opportunity in the country at the present moment is in the College of the City of New York becoming an efficiency organization for New York City. When the modern university realizes its opportunity to build up administration through a trained public service, it will inevitably become the planning department of modern society.

FOUNDING MUNICIPAL REFERENCE BUREAUS

How to organize a municipal reference bureau. John A. Lapp. *American City*, S., 1914. p. 206-210.

In this article Mr. Lapp gives practical advice on the organization of a municipal reference bureau, discussing among other things the materials for such a bureau, the source of material (of particular value to all librarians), the control of a municipal reference bureau, the classification of material, etc. Librarians will be particularly interested in the following paragraphs on the control of a municipal reference bureau, and doubtless many will take exceptions to his statements and conclusions:

"Municipal reference bureaus have usually been considered as libraries and the directing officials have been called librarians. Several of the important bureaus are organized in

connection with the public library and are controlled by the public library. Others are organized as independent bureaus. It is a much discussed question whether the work which a bureau is expected to do can best be done through an independent bureau or through the library. Those who contend for the connection with the public library claim that the work is essentially that of the public library specialized to meet a particular need; that the public library must be relied upon for a large part of the materials used in such a bureau, and many contend that such bureaus should be manned by librarians.

"Those who argue for the separate bureau contend that while it is a library in that it collects and preserves materials, its aims, purposes, methods and results are so foreign to the work of the library as to make its connection with the library misleading. It is claimed that the work is essentially research work and that the direction of such work should be in the hands not of librarians, but of municipal experts.

"The writer inclines strongly to the latter view. It is recognized, however, that in some cities where the public library has obtained a strong foothold as a practical institution, the work might profitably be conducted under its auspices. Several of our leading cities maintain libraries which fill a large place in the practical affairs of the city. But most of our city libraries, unfortunately, do not have a standing among practical men. Too many of them devote their attention exclusively to the esthetic and cultural. In many cities the majority of the patrons are women and children and the circulation consists largely of light literature. Most of our city libraries are manned by people having little conception of the practical functions of a municipal reference library. Many public libraries are located at considerable distance from the seat of administrative and municipal activity. Obviously such a library is not a satisfactory place in which to establish a municipal reference branch. It would not have the proper standing with the men whom it would serve, and its usefulness would be curtailed both from within and without."

THE LIBRARIAN'S MOTHER GOOSE

X. BINDERY

*Peter, Peter, pumpkin eater,
Had a book and couldn't keep her.
Put her in a brand new shell
And there he kept her very well.*

—Renée B. Stern.

Bibliographical Notes

Printed catalog cards of their new books are being supplied by Messrs. Dodd, Mead & Co. to libraries.

The Library of Congress has issued a book on "The star-spangled banner," by Oscar George Theodore Sonneck, chief of the division of music. The book is revised and enlarged from the report on "The star-spangled banner" and other airs first issued in 1909, and now has 115 pages of text, together with twenty-five plates reproducing early forms of the song, and a frontispiece portrait of Francis Scott Key.

The Free Public Library of Jersey City has issued an attractive souvenir of the centennial of "The star-spangled banner." This consists of an eight-page pamphlet containing an account of the origin of the song and the circumstances connected with its writing; an account of its first publication, with an extract from the newspaper in which it was first printed; a sketch of the life of Francis Scott Key and a description of the battle of North Point and the attack on Fort McHenry. A very complete bibliography of the subject is also given. This pamphlet is in the same style and forms a companion publication to the monograph on the American flag which the library published last June.

The second supplement to Miss Alice Kroeger's "Guide to the study and use of reference books" prepared by Miss Isadore Gilbert Mudge of Columbia University, of Columbia University, has been issued by the A. L. A. Publishing Board. The supplement includes the reference books published 1911-1913, and gives in a classified and annotated list the material which has appeared in her articles in the LIBRARY JOURNAL.

The board has also published the fourth edition, revised up to March, 1914, of J. I. Wyer, Jr.'s, "U. S. government documents in small libraries." Its usefulness to small libraries is indicated by the fact that several states have reprinted it since it was first issued by the Minnesota Library Commission in 1904. The first reprint was made by the library of the University of Nebraska, a second edition, slightly altered and enlarged, was printed by the Wisconsin Free Library Commission in 1905, and a third, considerably extended and revised, by the A. L. A. board in 1910. The pamphlet should not be confused with the larger one of 78 pages, by the same author, issued by the New York State Library in 1906.

FLOOR, TEMPORARY MAIN LIBRARY, KINNEY & LEVAN BUILDING, CLEVELAND, O.

THERE seems to be no corner of the earth and no province of work in which the direful war of Europe has not been felt to disadvantage. The great municipalities have cut down their budgets to the last possible penny, and that municipal library is lucky which obtains for the new year as much as in the old year, despite the allowance that should be made each year to cover normal growth. New York City has taken this course of confining library appropriations this year to last year's figures and Brooklyn must still be content without the necessary central library building, for which foundations are waiting. In fact, even before the outbreak of the war there was some tendency this year to curb library expenditure. The Providence Public Library has discontinued for lack of funds the *Bulletin* which it has published for some years past. Los Angeles has closed one of its branch libraries for like reason. Although dull times sometimes furnish more readers to libraries than the seasons when prosperous readers are too busy to read, libraries are restricted from taking advantage of this opportunity wherever additional expenditure is involved. The whole world is now so geared together that it works in unison, and pity 'tis that instead of the unison of international harmony, to which we had all looked forward, the world has to-day been thrown out of gear altogether.

THE Scotch congregation which wanted to build a new church out of the materials of the old and to worship in the old while the new should be a-building, is not without parallel in the library field. Cleveland has found a solution of its problem by taking quarters in an office building pending the erection of its new central library, and Los Angeles, which hopes some day for an adequate central building, has still to be content with its quarters in an office sky-

scraper, an improvement on its former occupancy of part of a department store. We present in this number illustrations of how these two libraries are making the best of what at best is but a makeshift and really making their habitat attractive and effective despite disadvantages. The office building is now used in our great cities for all sorts of purposes, including dental parlors, tailor shops and the like; but a library system in a city of any size is not what it should be unless and until it has a central library building which may adequately typify and centralize library work. On the other hand, such quarters are entirely suitable for branch libraries, especially those appealing to business men, in locations convenient to a daytime clientele. Such a business branch as Mr. Dana has made notable in Newark can very properly often find its best location in an office building centrally located in the business section.

WHEREVER the branch library and whatever its special function it can best be organized and served, we believe, as a part of the general library system. We cannot therefore agree with Mr. Lapp, who holds that the municipal reference library should be a separate institution from the municipal public library system. New York has done wisely in linking the Municipal Reference Library, which is housed in its enormous municipal building, with the public library system, to the general advantage of all concerned. Thus New York's Municipal Reference Library has the benefit of the experience and skill of Dr. C. C. Williamson, the practiced economist and statistician, who has been the head of the economics division since it was segregated in the new library building, and has now been transferred to the librarianship of the Municipal Reference Library as his special field. This

Municipal Reference Library has also the benefit, in advisory relations, of Miss Hasse, with her wide knowledge of public documents, and of Mr. Gamble in the engineering field, as heads of the public documents and technology divisions of the central library. This is a vital and useful association. The American Statistical Association, as another example, has definitely associated its library work with the Boston Public Library, which houses its special collection and extends it from time to time. The Reform Club of New York has its special library in economics and politics similarly deposited with the Boston Public Library, which houses its special collection and extends it from time to time. The Reform Club of New York has its special library in economics and politics similarly deposited with Columbia University Library, which in effect a public library. There is still room for separate special collections, separately housed and managed; but in the interest of public service and public economy, probably the best results are obtained when special libraries are put at the service of a wider public through association with the public library system.

IN view of the increasingly close relations between schools and libraries, and especially the advanced position which the Commissioner of Education has taken in that respect, it is astonishing to find a book on "Better rural schools" put forth without mention of the word "book" or "library" in the table of contents, and without any indication that the writers had at all heard of the value of libraries in connection with rural education. This would be rather discouraging but for the sure fact that the book does not in this respect represent the teaching profession. Nothing is more notable in the modern history of education, especially in this country, than its use of auxiliary methods aside from direct class-room work with the text-book, and among these the school library and the use

of the public library hold first rank. The demonstrations by Mrs. Root, children's librarian of the Providence Public Library, of teaching children how to use books, made at the Massachusetts Library Club meeting at Stockbridge and elsewhere, are interesting and valuable proof of the vital relationship between the school child and the book as a tool. As Mrs. Root points out, the idea of a book as a tool has never occurred to many children and, it may be added, to some school teachers yet the book is to the person of education what the chisel and the plane are to the carpenter. Closer relations between schools and libraries, between teachers and librarians, between school children and children's librarians, as such are much to be desired and are more and more coming about.

THE larger elements in President Wilson's policy having been carried through the hard-worked Congress which adjourned last month, there should be opportunity in the next session for consideration and passage of bills concerning administrative reform which have for years been awaiting action. One of these concerns the administration of the post office, as a result of which there may be reshaping and betterment of the parcel post, and another is the Printing Bill, important because it will save hundreds of thousands of dollars to the government and better the utility of public documents. In this the libraries are vitally interested and we print in this issue the full text of the explanation by Mr. Carter covering the features of the bill, which was given only in part in the published A. L. A. Proceedings. Librarians should read this paper carefully and if they have any suggestions to make send them to State Librarian Godard at Hartford, Conn., who is chairman of the A. L. A. Committee on Public Documents. When the bill is before Congress librarians should be ready to give their active and energetic support in pushing for its passage.

THE BODLEIAN LIBRARY AT OXFORD

(Concluded)

BY THEODORE W. KOCH, *Librarian, University of Michigan*

COXE AS LIBRARIAN

HENRY OCTAVIUS COXE, characterized by Dean Burgon as "the large hearted librarian," was born in 1811, and while still an undergraduate of Worcester College, received an offer of a position in the manuscript department of the British Museum. Here he remained for six years, returning to Oxford in 1838 as sub-librarian at the Bodleian under Dr. Bandinel. For the first thirty years of his work there he never took the full six weeks vacation to which he was entitled. His love for the library was so strong that he was never quite happy away from it. He succeeded to the headship upon the death of Dr. Bandinel in 1860. Bandinel had carefully watched sales and studied catalogs, and had brought up the collection of printed books to a high standard. When Coxe was appointed librarian, he saw that two things were needed: first, it was necessary to make the library more accessible; secondly, to see that a careful inventory was taken, preparatory to making a general catalog of the library. His chief work was this new general catalog, made in duplicate form slips pasted into 723 folio volumes, a work which took twenty years to complete. The author entries were written in triplicate, the third copy being reserved for the subject catalog. All the printed books except those in Oriental languages were included.

"I never enter the library," he said upon one occasion, "without looking at the portrait of Bodley, and resolving to do nothing which would have offended Sir Thomas." Coxe had often watched hard-working tutors come to the Bodleian at the end of their day's lectures, to use the one or two remaining hours during which it was open for study, and he felt that there ought to be a reading room open in the evening for the use of such men; and he was the means of obtaining the Radcliffe Library for this purpose.

"Coxe was always working—over working," said Dean Farrar. "Yet he always

had a kindly temper in spite of being bored. He was in this respect the ideal of a librarian. On my going to consult him on some literary point one afternoon, he sighed and said,—'My dear Farrar,'—he always opened his vocative with 'my dear' in this way—'I am so tired. I have lost two hours this morning, through a visit of old ——' [a noted archæologist, a country clergyman, then in Oxford for his holiday, and always rather a *dilettante*]. 'He brought his wife and a friend, and asked me to show them our coins.' [The Bodleian coins are seldom seen. They live upstairs in a cupboard of the Bodleian Gallery.] When he got sight of the Roman *as*, he took it up, and fixing his bright eyes on his friend, exclaimed, 'Yes, this is a real *as*; this *is* an *as*.' What a pity, I thought to myself, that he could not see that there were two,—not one,—and so have had the sense to set me free without consuming my time in library hours."

A friend once brought him a small, carefully bound volume of papers by his deceased father and asked, with some show of filial piety, that it be accepted by the Bodleian. "Oh, yes," said Coxe, with moistened eyes, "You wish this little book to be cherished. I quite understand. I will see to it. Leave it to me."

"With the officials of the Bodleian, Coxe was thoroughly popular," writes Dean Burgon. "There was in him no affectation of dignity. His welcome to the janitor was as cordial as to any one. He had no *suspicious* ways: he assumed that all beneath him were doing what they ought to do, though he could be playfully sarcastic with them on occasion if he found any of them off their duty. He loved a *trusty* man supremely. There was in him a real power of governing and guiding a great institution; his intellectual supremacy keeping him first in all matters requiring headwork, and giving him a right to the authority conferred on him by his office. To Oxford men visiting the library he was simply delightful. In

the words of an ancient resident in Oxford, Archdeacon Palmer,—“It will not be easy to get so good a librarian as Coxe, though his successor may grow to be as good; as *lovable* a librarian it is out of the question to expect.”

“He never suffered his private work to encroach upon his official time,” says Stanley Lane-Poole, “and avoided interference in academic controversy, lest it might lead to the intrusion of party spirit into the management of the library. He showed perfect tact and consideration for his subordinates, who respected his authority the more because it was exerted without fuss or self-importance, and with a general air of camaraderie. His personal charm was due to a rare combination of playfulness, dignity, and old-fashioned courtesy; and his wit and stores of anecdote were equally remarkable. His social powers and his unaffected sweetness of character made him a welcome guest in all society.”

THE CATALOG

No sooner had the discussion about lending Bodleian books died down than Professor Chandler started a new tirade in a pamphlet entitled, “Some observations on the Bodleian classed catalogue,” (Oxford, B. H. Blackwell, 1888). In 1885 he had printed a memorandum on that subject in which he contended that the classed catalog and all the work it entailed was so much labor thrown away, that no real scholar, no man who is capable of literary research, wants a classed catalog. He argued that it served no useful purpose, and was but a snare and a delusion. The sciolist alone thinks how delightful it would be to turn to any given subject and there see all that has been written on it. Most French catalogs are classed, and Professor Chandler retained a lively sense of detestation for those who were foolish enough to attempt to class the books of a large library. In answer to the question, How is a man to know what books have been printed on this or that subject, Professor Chandler would answer that every man fit to be admitted to a great library knows many ways of acquiring this information.

On another occasion Professor Chandler handled the subject-entries of the Bodleian

catalog without gloves. The arrangement of the titles of the books under classes and sub-classes is easy in some cases, difficult in others, while simply impossible in many. Some go quietly enough under one class, some under two or three heads, some under many, while some utterly defy all attempts at classification. Our pamphleteer puts the following into the mouth of the man whose ideas of books are hazy: “My dear Sir, you are really very obtuse, you make difficulties where none exist; the thing is exceedingly simple. Put all your theological books together, put all your law books together, and so on; range all the histories of England, all the histories of France, side by side; proceed on the same principle with the whole of your books, and your classed catalogue will be made: it may take a slight amount of trouble, yet anybody with an ounce of brains and a little good-will can and must succeed; real difficulty there is none.” Chandler said that it was impossible to suppress a smile when one thought how many men there were in Oxford to whom this sad nonsense appeared to be perfectly sane and rational. And if his hazy friend should reply that what he “so dogmatically calls nonsense is advocated by a large number, perhaps by a majority of librarians; they must know all about books; it is their profession.” No, rejoined our philosopher, he did not forget the librarians, to whom and the subject of their profession and qualifications, he hoped some day to return. So far as I know he never gave the world of librarians the full benefit of his opinion of them.

Under what head, asked Professor Chandler, ought “balloon” to come? Those who dream of traveling in the air will be disposed to think that this should stand somewhere near traveling on land and traveling on water, while those who look on the balloon as a toy will be inclined to look under sports, pastimes, and amusements; those who regard them as bags full of gas lighter than air may look under physics. *Quot homines tot sententiae*, and, wonderful to relate, everybody is right. A balloon may very correctly be looked at in an indefinite number of ways and the classification will vary accordingly. A large number of books, perhaps thirty or forty

per cent, would be found obstinate when one tried to classify them, and the *opera omnia* of a polygraphic writer like Aristotle or Leibnitz would prove a veritable crux. Moreover, since all classification is arbitrary, what suits one reader will not suit another. "If any two persons would spend an hour in assigning to their respective classes a hundred books taken at random, they would discover that the arrangement which one considers to be natural and proper, is to the other in the highest degree unnatural and improper. A man may discover more than this; he may find, and certainly will find, not only that he differs widely from other people, but, what is more confounding still, that he differs from himself. The classification which seemed natural enough a month ago looks very different to-day. And the classed catalogue of a library is largely, if not wholly, the vagary of the librarian; even if it is fashioned on results arrived at in a congress of librarians, it by no means follows that any but the authors of the scheme can find their way about in it, nor can they always do so. Each system of classification—and there are many such—is a maze in which all but those in the secret are lost. But even were such a catalogue possible, no one man could compile it; for to class all the books in a library as large as the Bodleian, is to class works which cover, or nearly cover, the *omne scibile*; and unless a man knows every branch, nay, every twig and bud of human knowledge, he will never be able to assign to each book its proper place, even if the book has only one proper place; still less successful must he be, if, as is usually the case, a book has two, three, or more places. . . . Some books are definitely this or that, and nothing else; but large numbers are as vague and indefinite as the transition tints in a rainbow, or as those excruciating notes somewhere between C and C sharp which may be heard on a summer's night in a conversazione of excited cats. The man with no ear for music has no difficulty in classing the ambiguous note; the man insensible to color boldly classes the equivocal tint; and some charming book that laughs at classification, a perfectly sane and delightful volume like the 'Essays

of Elia,' or Fuller's 'Holy and profane state,' will be seized by the stolid slave of a system and thrust like a lunatic into the straight-waistcoat of a class where its best friends will never more be able to find it."

"A protest by Bodley's librarian" was set up in type in November, 1888, but Mr. Nicholson kept back the printing in the hope that Professor Chandler's pamphlet against which he was protesting would fail in its object, and, happily, it did so fail. In May, 1890, Mr. Nicholson had struck off a small number of copies of this protest for private distribution and for preservation in a few libraries. Mr. Nicholson said that there was no one in Oxford whose sincerity and unselfishness he honored more heartily, no one in Oxford with whom he had had so many long, pleasant talks, no one in Oxford whom he believed to be more kindly disposed to him or more ready to defend him against ungenerous and unjust criticism than was Professor Chandler. To Professor Chandler's statement that "the unfortunate officials are harassed with reports which cost an infinity of trouble to compose," Mr. Nicholson replied that among the reports required from him had been some relating to the subject-catalog, and the preparation of those particular reports had caused him weeks of overworry and bad sleep. The curators considered them necessary for their information, and the curators alone could be judges of that necessity, but Mr. Nicholson thought that Professor Chandler was ultimately responsible for any trouble which the preparation of the reports on the subject-catalog caused him. For the future, said Mr. Nicholson, any librarian of the Bodleian must understand that, if the reports which he presents to the curators tend to lead them not to take the views of a particular curator, he may be further harassed by having to occupy his scanty and fagged leisure in public controversies with that curator, unless he prefers to risk what he believes to be the vital interests of the library. It is idle to say "Why not leave other curators to defend them?" Many curators have probably as little time for pamphlet writing as has the librarian, nor is it possible for those not in library work to speak from the special standpoint of a

librarian's professional experience. Moreover, no librarian of Bodley whose heart is in the right place could stand by and leave others to defend the library from such criticisms as those of Professor Chandler. Mr. Nicholson considered it perfectly proper for Professor Chandler to address to the University printed appeals to decide for his particular views on the lending-question, but he considered the subject-catalog a matter of internal administration of the library within the province of the curators and of no other body. Mr. Nicholson asked whether it was a right thing to do to try to upset the direction of the Bodleian in the way Professor Chandler was trying to upset it, and consequently whether it was a prudent thing to do in the interests of the library. "There are no doubt many persons in the University not curators of the Bodleian who would be highly qualified to act as curators," said Mr. Nicholson, "but until they are curators they cannot possibly have the same opportunities as the curators for acquainting themselves with the merits of questions of internal administration. And of course this is equally true of the entire body of members—even resident members—of Convocation. To appeal then to them against the curators is to appeal from an (*ad hoc*) necessarily more instructed body to an (*ad hoc*) necessarily less instructed body. Is that a prudent thing to do in the interest of the Bodleian? And what does any sensible man, who will think of the matter for half a minute, think of the proposal to direct the internal administration of any library—let alone the Bodleian—by a committee of about 400 residents and 5400 non-residents? That is the proposal that Professor Chandler's appeal to Convocation amounts to—for be it remembered that if such an appeal can be made once it can be made an infinite number of times, whenever a particular curator cannot get his own way, or for that matter even when the curators are unanimous. Suppose that on October 25 a majority of the curators including Professor Chandler had resolved to discontinue the subject-catalog. Suppose that a member of the minority had published an appeal to Convocation and had succeeded in forcing the curators to continue the catalog against their will. What

then would Professor Chandler have said about the prudence of such an appeal in the interests of library-administration? And yet such an appeal would have been laudable in comparison with Professor Chandler's. For in 1879, some time after the subject-catalog was begun, the curators went to Convocation for a two years' grant of £270 a year 'for the purpose of a classified catalog of the library.' A discussion and a division took place on the merits of the question, previously to which Professor Chandler might most properly have addressed to Convocation whatever appeal he chose. Convocation declared by 50 to 16 for the subject-catalog, and it is a perfectly arguable position to take up that if the curators had decided on October 25 to abandon that catalog it would have been right for one of a dissenting minority to appeal to the University to force them to resume it. Professor Chandler has no such justification. I fancy, however, that I hear Professor Chandler say 'What have you to do with protesting? It is for the curators, if for anyone, to protest.' But even a Bodley's librarian has his statutory rights, and one of those rights is that he is subject to the direction of a stated committee only—and that when he has been engaged for over six years in continuing a work which was approved by his predecessor, approved by his curators, assisted by Convocation, amply reconsidered and reapproved by his curators, and when that work has been brought into a state in which it is already of high practical usefulness to readers who may avail themselves of it, his curators shall not be coerced or worried into ordering him to abandon it. That is my protest. If I were to enter into the details of Professor Chandler's attack on the subject-catalog, I trust that I should be able to absolutely demolish them to the satisfaction of most members of this University, no less than to the satisfaction of most librarians—if indeed any librarian of practical experience in the matter requires such a demolition. And if the need ever arises, and I am still Librarian, I pledge myself to do all that in me lies to save the library from the immense and almost irreparable disaster threatening it. No one, however, but a librarian knows what labor of expla-

nation, argument, and collection of opinions—not given forty or fifty years ago—such an effort might involve, and no one knows so well as myself how much (I do not mean of money, though I should not spare that) such an effort might cost me. And for the reasons I have given above I protest against being compelled to make it.”

Inasmuch as the memorial address on Mr. E. W. B. Nicholson, Bodley's librarian from 1882 to 1912, has already been summarized in the *LIBRARY JOURNAL*, November, 1913, p. 616-617, and again more briefly, in the number for September, 1914, p. 722, it will not be necessary to give here any details of his career. The address in question called forth considerable discussion not only on the occasion of its delivery at the Bournemouth meeting of the English Library Association, but also since then in English library periodicals. Mr. Falconer Madan said that, as Mr. Nicholson's successor and having served under him for thirty years, he might almost be expected to say one or two words in appreciation of the address. He called especial attention to his immense capacity for taking pains. This was amply illustrated by the "Staff calendar," which in Nicholson's day was a most remarkable volume filled with detailed instructions about everything, from the sweeping of the back stairs and "the H," the cleaning of the chimney and the flues of the Camera, to the winding of the clocks, the look-out for student bonfires and the keeping of an extra pair of dry shoes and socks at the library! But the personality of the librarian to whose care was due this unique annual showed out from between the lines and in the last one edited by Mr. Nicholson there is a pathetic appeal for indulgence and co-operation from members of the staff in case he should wish them to take from him an increased amount of work which he had been hitherto accustomed to do himself. He said that his desire was not to do less than his own proper share of work, but to be able to find more time for such parts of that work as could not be deputed to others and so avoid as far as possible a continuance of the overpressure which had for years so affected his sleep as to lead to several breakdowns, the last of which "was so long and

distressful that a recurrence might compel him to apply in February, 1912, (when he will have held his office 30 years), to retire under § 3.2 of the Bodleian statute. Now the Bodleian income is not enough to meet the ordinary annual expenses of the library—what would be the result of loading it in addition with a pension of £500 a year for perhaps a quarter of a century to come! And he feels that his natural health and strength ought to make such a retirement—at an age 20 years below that at which Oxford professors often perform their duties—quite needless. Nor, in the interests of that extensive scheme of development and improvement of which the last few years have seen only a first installment, does he think it would be otherwise advantageous to the library. And if, as he cannot doubt, the curators of the library and the trustees of the Oxford University Endowment Fund kindly continue to minimize as far as in them lies the pressure and anxiety which are not altogether to be eliminated from a period of varied and strenuous progress, he feels that with the willing co-operation of the staff he can give the Bodleian much further work before (if at all) the need comes to make himself its unwelcome pensioner.”

Those who had known the remarkably sympathetic nature of Dr. Coxe naturally contrasted Dr. Nicholson with him. There was a charm of character about the earlier librarian which his successor did not have. Added to Mr. Nicholson's aloofness were the difficulties arising from poor eyesight. Mr. T. W. Lyster, of the National Library of Ireland, felt that though his knowledge of Mr. Nicholson was slight, it gave him much stimulus. He felt that Mr. Nicholson's excessive partiality for detail almost approached the limits of mania, and Mr. Lyster supposed that in his later years the universe and the Bodleian were too much for Nicholson, just as the universe and its problems were toward the end too much for Tolstoi. Mr. Nicholson impressed him as being a nervous man, with a not unkindly gruffness of manner, a man who was always in haste, whose health was not good, but who always meant well. He thought that Mr. Nicholson was a very great librarian. Oxford could hardly have under-

stood him, and certainly his gruffness of manner could not have been helpful to such an understanding, but still he did great things at Oxford, and to a very great extent revived a mighty, noble, and ancient institution, whose size and requirements of scholarship and management might well daunt any man, for in the Bodleian many things were attempted by one brain which in the British Museum were allotted to several.

THE READING ROOMS

In 1860 the Radcliffe trustees offered the use of the building under their control as a supplementary reading room for the Bodleian. This offer was accepted as a most welcome relief from the congestion which was evident everywhere in the Bodleian. The building is a handsome rotunda, embellished with columns and surmounted by a dome resting on an octagonal base. It dates from 1737-39 and Freeman called it "the grandest of all English-Italian designs." It was originally the home of the Radcliffe library of medicine and natural history, founded by Dr. John Radcliffe, court physician to William III and Mary II. The main floor was remodelled into a reading-room, open from ten in the morning till ten at night. The ground floor was also utilized for the storage of books from the overflowing Bodleian; the stone floor was covered with wood, windows were placed in the hitherto open arches and bookcases built inside, giving a total book capacity for the whole building of about 130,000 volumes. In 1909, when a new heating plant was installed, it was found that a beam ran into the flue and the authorities congratulated themselves that the building had not burned to the ground long before. Some years previous certain openings in the dome had been covered with wire netting so as to keep out the birds whose noise disturbed the readers. When the dome was examined to find out whether it had not been damaged by the defective flue, there was discovered a large accumulation of twigs and other rubbish carried there by the birds before the netting was put up. The surprising amount of 226 bushels of rubbish was cleared away.

There are two sets of the manuscript catalog bound up in folio volumes,—one set

kept in the old reading room and the other in the Radcliffe Camera. Several years ago Lord Hythe gave £3,000 towards the expense of the catalog revision, which it is expected will defray the cost up to the early part of 1916, when it is believed that the catalog will be ready for any scheme of printing which may be adopted. In this revision one of the chief difficulties is found in the large groups of anonymous works, formerly found under such headings as "Novels," "Journals," "Poesis," "Plays" and the like. In one year (1909) one assistant ascertained the authorship of 1058 works previously entered as anonymous.

A reader having selected his seat, enters its number and the number of the book on his call-slip. The book is brought as soon as possible to the reader's desk and is left there, even if the reader is absent for the time being, except that manuscripts and especially valuable books are in such cases reserved at the counter until the reader applies for them. Books can be left at the reader's desk with a protective slip of paper bearing his name and the date, and they will remain undisturbed for three days, after which time, if the reader does not return and alter the date, the books will be moved to an adjacent place of reserve, where they will be kept for seven days more. At the Selden end books with protective slips are left at the reader's desk for ten days. Manuscripts and valuable printed books are never to be left at a seat but must be given up at the counter where they are reserved for the reader's use, provided each volume has a slip bearing the name and date. In the Camera reading room, all ordinary books which the reader desires to reserve must be given up with a protective slip to the superintendent, who will reserve them for seven days. If a reader is likely to be absent for more than ten, or in the Camera more than seven days, and wishes to use the same books on his return, his best course is to keep a list of the shelf marks of the books and then let them go back to the shelves, unless special permission is granted to have the books retained. Ordinary books when done with may either be left at the reader's desk or given up at the counter on leaving. In both parts of the library are found suggestion

WHERE THE BODLEIAN LIBRARY HAS OVERFLOWED INTO THE ART GALLERY

books in which readers may enter the title of any works of permanent value which they need and which cannot be found in the general catalog. Such suggestions are welcomed, especially if adequate details are supplied, with an estimate of the value of the book. They are considered by the librarian every Wednesday and often lead to the filling up of gaps in the collection.

The quicker delivery of books to readers is occupying the attention of a committee of curators. It is admitted that there is a considerable interval of time between the order for a book and the receipt of it, but the problem is considered as well nigh insoluble in a large old library, shelved and housed as is the Bodleian. The reader naturally desires a book the moment he has handed in a call-slip for it; on the other hand, the volume may be in a distant room, or even building, and it would require a much larger staff to enable a messenger to attend to each individual call as soon as it is handed in. There are about 380 of these each working day. The necessary processes of registering a book have to be gone through, while the complications of the old collections and the new classification by subject are considerable, and the state of the finances do not permit at present of any enlargement of the staff. The subway, opened April 13, 1914, will of course materially aid in saving time but, as the librarian says, it cannot be expected to work wonders. If call-slips properly filled out are sent to the library by mail the books may be obtained in advance and reserved for the readers.

RECENT HISTORY

If both size and importance are taken into consideration, the Bodleian may be considered the most important university library in the world, and the greatest library not directly aided by the state. It contains about 2,750,000 printed literary pieces bound in about 860,000 volumes. There are in addition some 40,000 manuscripts exclusive of 18,500 separate charters and deeds. The incunabula number about 5,600, as contrasted with 11,500 in the British Museum, 2,800 in Cambridge University Library and 2,400 in the John Rylands Library, Manchester.

The manuscripts of five colleges are de-

posited in the Bodleian—University, Jesus, Hertford, Brasenose and Lincoln. The last two deposited their manuscripts on the understanding that they should be kept separate and called by the name of the college; that the loan should be revocable by the college at any time, but that nothing should be recalled except by authority of a college meeting signified in writing to the librarian or curator of the Bodleian; that the manuscripts should be treated with the same care and on exactly the same footing as Bodleian manuscripts, except that they should not be sent over to the Radcliffe and that all applications to borrow them should be referred to the college for decision; that the Bodleian should not be responsible for loss or damage when reasonable care had been exercised; any binding or repairs necessary at the time of the transfer were to be done at the expense of the college, but all subsequent repairs at the expense of the Bodleian, and that the college should have reasonable power of inspecting the collection.

In Bodley's time there was no copyright act, but the Founder was farsighted enough to secure from the Stationers' Company an agreement whereby copies of new books were to be sent to the library as issued. In 1623 or 1624 the Company sent the sheets of the recently issued first folio edition of Shakespeare's collected works. The sheets were sent to the binder and on its return the book was chained to the shelves and it appears duly entered in the supplementary catalog of 1635 but not in the catalog of 1674. It is supposed that it was disposed of as superfluous in 1664 when the second issue of the Third Folio was received. It was probably among a lot of "superfluous library books sold by order of the curators" for which the library received £24 from Richard Davis, an Oxford bookseller.* Nothing is known of its subsequent history until 1759 when it was acquired by Mr. Richard Turbutt of Ogston Hall, Derbyshire, from whose possession it eventually descended to that of his great-great-grandson, Mr. W. G. Turbutt. On Jan. 23, 1905, Mr. G. M. R. Turbutt, the son

*"It is the only one which can be regarded as a standard exemplar," says Mr. Madan. "It was the copy selected by the publisher for permanent preservation."

of the owner, brought the book to Mr. Madan to ask for advice as to having the binding repaired. Mr. Madan showed it to Mr. Strickland Gibson, who had made a study of Oxford bindings and he soon found proofs of its being the old Bodleian copy. It was proposed that the book be valued and purchased for the Bodleian by subscription. An American collector offered \$15,000 for it and the owner gave the Bodleian the refusal of it at that price, allowing a period of five months for raising the money. There were 823 subscribers and chief among those who helped to bring the matter to a successful issue was Sir William Osler, of whom grateful mention is made.

On October 8 and 9, 1902, the three hundredth anniversary of the foundation of the Bodleian was fittingly celebrated by the University. About one hundred and fifty delegates came from various universities, libraries, academies and learned bodies of Europe and America, and there were in addition sixty specially invited guests. The public orator, the Rev. Dr. W. W. Merry, delivered a Latin address in which he dwelt on the nothingness of 300 years and took his audience back to the time of Nineveh, ancient Egypt and Imperial Rome, lamenting the wanton ruin and waste of the barbarian invasions and glorying in the scholarship of the renaissance. In this retrospective manner he brought out the humanistic interests of Oxford, to the furtherance of which the Bodleian has been chiefly devoted. As a memorial of the centenary, there was issued a beautiful quarto volume of 50 pages, "Pietas Oxoniensis," containing a life of Bodley, an account of the University Library before his time, the foundation of the new "public" library of the University, the chief gifts to the library after Bodley's death, the main transfers and deposits, a list of librarians and sub-librarians, with a bibliographical list of printed Bodleian library catalogs.

In 1900 the curators approved a scheme of extension of the storage space by providing a large underground two-story stack between the Bodleian and the Radcliffe Camera. Authorities on underground construction gave assurance of the security of such a chamber against damp. The trustees of the Oxford University Endowment

Fund offered to place at the disposal of the University such a sum as might be required to defray the cost of construction. By the end of 1910 the underground stack room begun in August, 1909, was practically completed so far as construction, heating, ventilation and structural iron-work were concerned, but money was lacking for the rolling bookcases. In 1912 two hundred of these, made by Lucy & Co., Oxford, were put in place and by pressing some temporary wooden shelving into service, it was possible to deposit about 120,000 volumes in this underground room before the end of the year. It is expected that £500 a year will have to be spent on new stacks for the next twenty-five years in order to keep pace with the accessions. A subway connecting the Bodleian quadrangle with the Radcliffe Camera was constructed in 1913 and so facilitated the staff passing from one part of the library to another. This together with a new book-lift has aided very materially in the prompt delivery of books to readers. The yearly accessions for 1913 were 97,795, of which 571 were manuscripts. The income for that year was £11,700 and the expenditures £12,000. "The financial position causes anxiety," says the *Bodleian Quarterly Record* in its first number. "A joint committee of council and curators have been unable to recommend a reduction of expenditure, if the efficiency of the library is to be maintained, and an appeal for funds will shortly be issued."

In closing we cannot do better than quote the lines which Henry Vaughan, the Silurist, wrote when he visited the library:

Most noble Bodley! we are bound to thee
For no small part of our eternity.

Thy treasure was not spent on horse and
hound,

Nor that new mode, which doth old States
confound.

Thy legacies another way did go:

Nor were they left to those would spend
them so.

This is thy monument! here thou shalt
stand

Till the times fail in their last grain of sand.

And wheresoe'er thy silent reliques keep,

This tomb will never let thine honor sleep,

Still we shall think upon thee; all our
fame

Meets here to speak one letter of thy name:

Thou canst not die! Here thou art more
than safe

Where every book is thy large epitaph.

THE FUTURE DEVELOPMENT OF COLLEGE AND UNIVERSITY LIBRARIES*

BY AZARIAH S. ROOT, *Librarian, Oberlin College*

IN discussing the future development of college and university libraries it is necessary for us in the first place to establish a "base line" from which we can measure the possibilities of the future. Such a "base line" can only be obtained by a rapid review of the achievements of the past.

In 1875 the U. S. Bureau of Education made the first careful and exact collection of statistics on the libraries of the United States. This material was published in the special report on public libraries issued by that bureau in 1876. At various intervals since, the Bureau of Education has gathered similar statistics, the last in 1908, published in Bulletin Number 5 of the year 1909. Between the first and the last of these reports there intervenes a period of 33 years, or exactly that period which we allot to one human generation. A comparison of these statistics, therefore, will show what one generation has been able to accomplish in this part of the library field and in the light of that development we may venture to predict the future development of the college and university libraries of America.

When we come to compare these statistics we are at once impressed with the fact that in 1875 there were few large libraries among the colleges and universities. Only 18 libraries in the United States had more than 50,000 volumes and of these 18 only two, Harvard and Yale, were libraries of educational institutions. In 1908, on the other hand, there were 54 college and university libraries which exceeded the 50,000 volume limit and if to these we add the libraries of theological, medical, and legal schools, and of historical societies, all of which are libraries intended to advance work of the scholarly type, the total aggregates 84. There were in all 210 libraries in the United States having more than 50,000 volumes, so that the libraries of the scholarly type were 40 per cent. of the total. To these, how-

ever, should be added such libraries as the Newberry and the John Crerar of Chicago; so that it is probably not at all unreasonable to say that in 1908 at least 50 per cent. of the libraries exceeding 50,000 volumes were devoted chiefly to the interests of scholarly study. This remarkable development makes it evident that in the future this type of library is to be the representative large library.

Assuming then that the future development of large libraries in this country is to be along lines of college and university research, our next question is as to the probable rapidity of the growth of individual libraries. Can any general rule of growth be established by a study of the past? If we take a concrete instance, for example Harvard (as being the largest of our university libraries), we find the facts to be these: In 1875 Harvard College Library proper (distinguishing the collections in Gore Hall from the other more or less loosely attached collections in Cambridge), numbered 154,000 volumes, the average annual additions were 7,000 volumes, and the yearly expenditures for books, periodicals, and binding were \$9,158. In 1908 the total number of volumes was 496,256, the volumes added 18,716, the amount spent for books, periodicals and binding \$28,051. These numbers are approximately three times the corresponding numbers for 1875. Comparison of several other institutions leads me to think that this per cent. is perhaps too low, the development of the central library of Harvard having possibly been held in check by its inadequate central building, and by the rapid development of its outside libraries. A four-fold increase would seem to be on the whole a truer general average.

With this rule of development established we may now venture to look forward to the future. With resources approximately four-fold those of 35 years ago, with additions also approximately increased four-

*An address given before the New York Library Association at Ithaca, Sept. 10, 1914.

fold, and with a public interest constantly enlarging, it seems to me we have every reason to expect that in the next human generation we may see a four-fold growth. That is to say in 1941 the majority of our larger educational institutions are likely to have a library four times as large as the existing collection. Harvard in that case will have in its central building not less than two million volumes. It will be spending more than \$150,000 yearly for the purchase of books and its staff will have to be large enough to handle not less than 80,000 volumes of new accessions yearly.

Comparison of the accounts of a number of university and college libraries leads also to the determination of another rule, namely: that the amount spent for books, periodicals and binding, multiplied by four will give the approximate expense of the library. While this rule will not apply in every particular case it does seem to hold true when applied to a number of libraries. If this be true, then in the case we have selected for our comparison, the annual expense in 1941 will be \$600,000 or more. This is more than half the amount now spent annually by Harvard in the maintenance of its art department.

Such figures, it seems to me, give us occasion to stop and to consider the possibility and the necessity of every sort of co-operation among the libraries of this type by means of which cost of maintenance can be reduced. We have no certainty that the present era of large gifts to colleges and universities will continue. Indeed, there are some reasons for suspecting that it has already reached its height. But even if we could expect the continuance of such generous gifts the obligation would still be upon us to endeavor in every possible way to reduce the fixed charges which year by year prevent any attempt at new lines of work. All of us who have to do with libraries of considerable size are convinced, I am sure, that we fall far short of the service we ought to be rendering; that our library assistants are too busy in preparing the books for use to be of much direct service in promoting the greater use of books. Our efforts ought therefore to be directed toward the study of the reduction of the

cost of preparing the book for use, thus making available money for increasing the efficient use of the book. The larger our universities become, the more specialized our teachers become. One man, in economics for example, devotes himself to the problems of production, another to the methods of distribution, etc. The longer this tendency continues the more difficult it is going to become for the average instructor to really use the library. While thoroughly understanding the books in his particular field of work, he will increasingly need help in other fields and sometimes in the general field of which his subject is a part. It is the realization of this fact which has prompted in recent years some of the efforts to furnish more intelligent assistance, as for example the efforts of Mr. Johnston at Columbia, to provide bibliographers for departments, and that of Harvard to establish departmental curators for the library. It seems to me that more and more libraries will be compelled to furnish this intelligent assistance, and unless we can reduce our costs at some other point, we shall be under the necessity of an even more than four-fold increase for the current expenses of the library. I ask you therefore to consider with me a few possibilities which may in the future help reduction of the current annual expenses of our libraries.

The ideal which should prevail, it seems to me, is the idea of co-operation. Our libraries are now too individualistic. Each is interested only in meeting its own problems. There is comparatively little of actual co-operation. It is true that, thanks to the farsighted planning of our national librarian, the Library of Congress has made a great advance in real co-operation, by making available for us its printed cards. I have been surprised, however, to find how many larger libraries were not availing themselves of this co-operation, either because their methods varied slightly, or for reasons of supposed economy, or for other reasons. Many of us have found the efficiency of our cataloging departments enormously increased by the use of the Library of Congress cards. In my own library I know not how I could have met our greatly increased growth, without this aid. But

after we have obtained all the Library of Congress cards that we can buy, there still remain in our annual accessions a very large number of books which each one of us must catalog. To a slight degree the Library of Congress has undertaken to meet this need by printing cards for books which are not in its library, but the total aggregate for the year of such cards, if I am correctly informed, is only about 1600. Unless this part of the service of the Library of Congress can be greatly accelerated, we must devise some other method of co-operation.

Now of the books which we catalog, each in his own library, I presume it is safe to say that the greater part are to be found among others of the 210 libraries having more than 50,000 volumes. The fundamental principle of co-operation in cataloging ought to be that good, scholarly work done in any one of the 210 libraries should be available for each of the remaining 209. How can this be brought about so far as cataloging is concerned?

Those of us who attended the A. L. A. Conference in Washington last May were, I am sure, exceedingly interested in the exhibit of labor saving devices held in connection with this conference. Among the appliances thus exhibited I found a mechanical duplicator run by electric motor, self-inking, self-feeding, and with a stencil which, after use, could be cleaned and filed and was then available for subsequent use. Let us suppose each one of the 210 libraries was equipped with one of these machines, especially adapted for the production of library cards. The procedure in each library would then be something like the following: Having determined, by application at the Library of Congress for cards, that no printed cards were available for the book, and by that very inquiry having indicated its readiness to make for the use of other libraries the card for that book, a slip would be prepared by the cataloging department showing exactly the form of the "unit" card for the book. This slip would be in all respects like the Library of Congress cards, including list of subject headings to be used. The slip when revised would be turned over to the typist who would prepare the stencil on a special type-

writer equipped either with letters like print, or of "elite" size. It would then go to the duplicator who would manufacture enough cards for the need of the library for its accession catalog, shelf catalog, official catalog, and public catalog. The stencil would then be removed, cleaned, placed in an envelope, and filed under its numerical number, similar to that of the Library of Congress, and would await calls for cards. A card sent to the Library of Congress could be filed in their search catalog and would enable the assistant in the Card Section to see at once that cards were available for that book and, if there is authority of law to warrant it, to forward the slip direct to the supplying library. This library would run off the number of cards asked for and mail direct to the applying library. In this way, if the 210 libraries would co-operate, there would be before the end of the first year a very large number of cards available for the other libraries and the problem of handling that older material which is continually coming to our libraries would be greatly simplified.

The work of the cataloger would be vastly changed by such a plan. Instead of the mechanical reproduction of the cards which now constitutes so large a part of her work, her task would be simply to prepare the main card and to select the proper subject headings. Thanks to the Library of Congress list of subject headings (with perhaps more frequent bulletins giving subject headings approved), it ought to be possible to work out essential uniformity among libraries. Were the cataloger freed from the labor of mechanical reproduction it seems to me it would also be possible for her to specialize. Our libraries could take a certain field, as, for example, European history, and have one or more catalogers whose business it should be not only to prepare the copy for the new books in this subject, to be familiar with the literature of the field and with the books on the shelves, but also to serve as reference assistants whenever problems relating to that class of books arose, and so to tie together the reference work and cataloging work far more efficiently than at present is the case. Eventually such assistants would probably be selected from among the students in a

particular subject and after a year's preparation in general library methods each would become a member of the staff for work in the subject in which she had already specialized. An incidental advantage that would also come from such a plan would be the gradual building up at the Library of Congress of a great central catalog by means of which obscure and out of the way books could be located when needed.

Now whether the above is a mere dream or whether it is a practicable idea I must leave to you to judge. It seems to me to be a possible plan which, no doubt, will require much further study and working out of details, but which would be destined to lead us out from the mechanical lines into which we have now fallen into a larger liberty and a greater service. It would give us a staff far more efficient than at present for assisting the user of books and probably a catalog superior to that we are likely to make by present methods.

Another field wherein co-operation will affect the future is in the field of reference work. Every day in our reference departments we are preparing for people lists of books, finding material upon all sorts of out of the way and unusual subjects, or working out some perplexing problem as to authorship. As to a certain extent the same queries are liable to arise in other libraries, this work is being done over and over again, except in the rare cases where it is put in print and made available for others. To give a concrete instance of what I mean: There is in volume one of the *Bulletin of the Cornell University Library* a list of the series known as *Anti-Slavery Tracts*, published by the American Anti-Slavery Society. Since most of these were published anonymously, the list gives on the knowledge and authority of Mr. Samuel May, an early Anti-Slavery leader, the authorship of each pamphlet. Now Cornell University might have obtained this information from Mr. May and used it only for its own catalog. Each library subsequently endeavoring to understand this puzzling series would have been compelled to obtain the same information at much expense of time by correspondence. The fact, however, that this list was put in print and through the distribution of the bulletin

made available has, as I can testify from repeated consultation, been of the greatest use to other American libraries. Are not similar instances occurring all the time and could not a great deal of help be given both to the catalog and reference departments through the circulation of such information by the simple means of duplicating the information and sending it around. These items filed in a vertical file under subject would in a little while prove of the greatest service in other libraries. The cost of duplicating with the modern duplicating machines is but little, and the cost of postage quite worth while in view of the resulting benefit to other libraries. Such circulation of reference material, if generally adopted, in time ought to greatly simplify the labors of our reference departments and give us more time for the solution of bibliographical problems and for the preparation of special catalogs. We should be doing a far wider work in each library, and at the same time be getting the results of work in all the other 209 libraries.

There is another way in which I hope there will be more extensive co-operation than at present: Each one of us is constantly receiving among other gifts many books, pamphlets, and magazines which are duplicates. The constant problem is what to do with them. Methods heretofore employed have seemed to involve the expenditure of more time and money than seemed worth while. On the other hand, each one of us has and is constantly acquiring incomplete files of reports of commercial, philanthropic, religious and other societies. Every now and then some second-hand dealer comes along and offers a mere fraction of the real money value of our duplicates and we accept it because it seems less bother than to try and exchange them. Other libraries from these very dealer's lists are buying, at prices five to ten times higher than the dealer pays, these very books. In the future we shall take a larger view point than the mere financial interest of our own library and see that a piece for piece exchange of such duplicates will in the long run be the most advantageous policy for all our libraries. Simple author title-a-line entry lists duplicated and sent out freely are certain to carry much of this material where it is

wanted and in the long run to bring us back an equivalent. During the last year I have been sending out on the first of each month to about 70 libraries a list averaging each about 150 titles. Of the first list which I sent out more than 120 titles were called for. If among the 210 large libraries of the country such a friendly co-operation in exchange of duplicates could be established, would not our efficiency be greatly increased and the service which we can render to the world be broadened?

I am sorry that time fails me to emphasize other aspects of co-operation which would affect the future of college and university libraries. I wish to close, however, with one other word related to my topic.

When we see what the larger and greater libraries of the future are to be, we are sure to ask ourselves: "Where are the men who will manage these libraries?" They must be men of broad vision, men of executive capacity, men of fertility and ingenuity, able to do much with little, themselves scholars in some limited field, and with the sense of scholarly needs in other fields. Such men, if they are to be found at all, must be found among the university and college graduates of America. Is there not the imperative duty laid upon us to seek out such men and to point out to them the opportunity and obligation of this service and thus by every means in our power to provide the men whose service shall enrich the learning of the future?

Such then, within the limits of the time allotted me, are some of the suggestions which I can bring you as to the future of our common work. In friendly co-operation with one another, with a larger viewpoint than that of our own little library and its own little interests, let us so work together that the future of the college and university libraries of America may be ail and even more than we have dared to dream.

God be thanked for books. They are the voices of the distant and the dead, and make us heirs of the spiritual life of past ages. Books are the true levellers. They give to all who will faithfully use them, the society, the spiritual presence of the best and greatest of our race.—WILLIAM ELLERY CHANNING.

PURPOSE AND SCOPE OF THE NEW FEDERAL PRINTING BILL*

ON behalf of the Joint Committee on Printing, I am pleased to express its thanks for this opportunity to explain to your round table the purpose and scope of the printing bill now pending before Congress. The *purpose*, briefly stated, is economy and efficiency, two essentials now sadly lacking in the public printing and binding and the distribution of government publications. In *scope*, the bill is intended to cover the entire printing activities of the government, and to assemble in one harmonious act the multitudinous printing provisions now scattered along through a century of congressional legislation. I take it, however, that your interest in the bill is chiefly from a librarian's point of view, and shall endeavor to keep that fact in mind as I present the provisions that seem to be of special importance to the libraries of the country.

First, permit me to state, the bill is the result of almost ten years' investigation and study of the printing problems of the government. The extravagances and wastes in the public printing and binding had become so enormous that Congress, in 1905, created a Printing Investigation Commission with authority to inquire into the subject and report such remedial legislation as seemed proper. That commission caused the adoption of a number of urgent reforms in the public printing and binding, largely as a result of which the annual expenditures for the Government Printing Office decreased almost a million dollars in five years from the time the commission started to put the public printing on a sensible business basis. The commission then concluded its work with the preparation of the printing bill, which was first submitted to Congress in 1911 by Senator Smoot, who was the chairman of the commission. It was my privilege to be its secretary then.

When the Printing Commission went out of existence, the Joint Committee on Printing assumed a sort of guardianship over the printing bill, and, as clerk of that committee, I have become somewhat familiar with its trials and tribulations in the effort to

*Paper read at the documents round table during the A. L. A. conference in Washington, D. C., May 29, 1914.

have Congress enact the measure into law. The bill, in substantially its present form, was passed by the Senate in the 62d Congress (April 9, 1912) and was favorably reported to the House, but the crowded condition of the House calendar prevented any further action in that Congress.

The Printing Committees of the Senate and the House, working together through the Joint Committee on Printing, have perfected the bill in numerous details during the present session of Congress, and have favorably reported it to their respective Houses. Senator Fletcher, as chairman of the Senate Committee on Printing, reported the bill to that body on April 22, 1914, and the same day, Representative Barnhart, chairman of the House Committee on Printing, submitted the bill to the House of Representatives. The two bills, S. 5340 and H.R. 15902, are identical in text, as are the two reports thereon, Senate No. 438 and House No. 564.

Up to date the two bills are resting quietly on the calendars of their respective Houses. The committee has good reason to believe, however, that the bill will be enacted into law in some form before the 63d Congress passes into history. Once free of the legislative jam, it is believed that the economies proposed in the bill, amounting to \$860,000 annually, will so appeal to members as to insure its passage through both Houses. The situation is not discouraging in view of the fact that it required three years to get the printing act of 1895 through Congress.

In brief, the printing bill covers five general subjects, which may be grouped as follows:

1. The Joint Committee on Printing and its supervision over the public printing and binding and distribution of government publications.
2. The Government Printing Office, its officers and employes, and their duties.
3. Printing and binding and the distribution of publications for Congress.
4. Distribution of government publications to libraries, and other functions of the superintendent of documents.
5. Printing and binding for the various departments and provisions relating to their publications.

THE JOINT COMMITTEE ON PRINTING

As it comes first in the bill, I shall begin with a discussion of the provisions relating to the Joint Committee on Printing. The bill provides, as does the present law, that the Joint Committee shall consist of three senators and three representatives. This makes the committee a statutory body and not a legislative committee created by the rules of either House. Its functions are entirely administrative, dealing largely with the purchase of paper and other material for the Government Printing Office. The committee is also vested with supervision over such publications as the *Congressional Record*, the Congressional Directory, memorial volumes, and the publications of the Patent Office. It has the additional power, under the present law, to "adopt such measures as may be deemed necessary to remedy any neglect or delay in the execution of the public printing and binding." This broad authority really makes the Joint Committee a board of directors for the Government Printing Office. It will thus be seen that the committee is strictly a *business* organization.

There is only one other committee of Congress that has been assigned ministerial duties by law. I refer to the Joint Committee for the Library (of Congress), which exercises general supervision over the expenditures of the library as well as its relations with Congress, and, oddly enough, also has charge of the appropriations for the Botanic Garden. Thus, the Government Printing Office, the Congressional Library, and the Botanic Garden occupy similar positions in the organization of the government so far as their peculiar relations to Congress are concerned.

The Joint Committee on Printing was created by Congress in 1846 to supervise the printing for the two houses which was then done by private contractors. From time to time, Congress has added to the duties of the committee; and the pending bill proposes to complete its supervision over the public printing and binding by filling in the minor gaps, so as to make definite, beyond all question, the control by Congress, through the Joint Committee, over the Government Printing Office, which necessarily must be immediately responsive to

the requirements of the legislative branch of the government.

Section 2, paragraph 1, of the bill, provides that the Joint Committee, in addition to its present power "to remedy any neglect or delay in the public printing and binding," shall also have similar authority in regard to the distribution of government publications. This section confers on the committee the additional power to remedy the "duplication or waste" in the public printing and binding and the distribution of government publications. Every person conversant with public documents must know that there is an unnecessary and an increasing duplication in many of them with a consequent great waste in printing. For example, the Public Health Service, the Department of Agriculture, the Children's Bureau, the Bureau of Education, and the Bureau of Medicine and Surgery of the Navy Department, are all issuing publications relating to health topics, sanitation, and certain diseases. The Bureau of Education and the Department of Agriculture are both dabbling in the field of school gardening. The Geological Survey and the Bureau of Mines, in the same department, are overlapping in their publications. There is little or no effort for collaboration in the preparation of government publications upon subjects that may come under the scope of two or more branches of the service. The Joint Committee has a broad and busy field before it, if Congress gives it authority to remedy duplications and wastes in the printing and distribution of public documents.

The bill also confers on the Joint Committee authority to make investigations at any time into all matters pertaining to the public printing and binding and the distribution of government publications and to report thereon to Congress from time to time. This makes the committee a continuous investigating body, which appears to be necessary to curb the constant tendency toward printing extravagances. There have been a score of investigations into the public printing, each of which has been followed by a period of economy for a few years and then a recurrence of the old extravagances and wastes. It is hoped by having the Joint Committee constantly on the watch in the future, that the

proposed reforms and economies can be made effective and permanent.

GOVERNMENT PRINTING OFFICE

Sections 4 to 44 relate particularly to the purchase of paper, machinery, materials, and supplies for the Government Printing Office, its organization, principal officers and employes, and various duties of the public printer. I take it that these sections are not of special interest to you at this time and shall, therefore, pass over them with brief mention of one item, that of paper. The Government Printing Office uses about 30,000,000 pounds of paper a year for printing and binding purposes. This immense quantity of paper, costing approximately \$1,250,000 annually, is all purchased under the supervision of the Joint Committee on Printing. The committee fixes the standards, directs the procuring of proposals, receives and opens the bids, awards the contracts, and then acts as a court of last resort in hearing appeals from contractors whose paper may have been rejected by the public printer for not conforming to the government standard. Most of these duties relating to paper purchases date back to the printing act of July 27, 1866. The Joint Committee on Printing was practically the pioneer in adopting definite standards for material purchased by the government. Its standards are now being adopted by users of paper throughout the country and are not excelled by any other government in the world.

CONGRESSIONAL DOCUMENTS

The method by which either House of Congress orders its documents printed is prescribed in section 44. It follows the general line of present procedure with certain restrictions that are intended to check the so-called "unanimous consent" printing by which a member may, on his own motion, have almost anything he fancies printed as a congressional document, unless some other member happens to object. In the last two years, one member of Congress has caused an expenditure of fully \$70,000 for printing ordered by the courtesy of "unanimous consent." There have been other similar instances. The committee believes that the printing of congressional documents should be properly and carefully considered

and it proposes that practically all matter submitted for printing as a document shall first be reported upon by the Printing Committee of the respective House before it becomes embalmed with printer's ink at the expense of the public.

Provision is made in section 44, paragraph 1, that the "usual number" of a congressional document for distribution purposes shall include the principal officers of Congress and the departments, the Senate and House document rooms, the depository libraries and the Washington newspaper correspondents. The "usual number" at present is approximately 1,345 copies, varying with the number of depository libraries. The "usual number" under the proposed bill will be about 1,800 copies, varying with the number of libraries and newspaper correspondents to be supplied. An order to print a congressional document carries with it simply the "usual number" of copies unless an extra number of copies are authorized by the resolution, in which event the copies so provided for are printed in addition to the regular number. This insures a definite distribution for every publication printed as a congressional document.

The bill continues the four series of congressional publications, namely, Senate Documents, Senate Reports, House Documents, and House Reports. It proposes an important change, however, in regard to the printing of departmental publications as numbered documents of Congress. Under the present law, every document and report, departmental or otherwise, ordered printed by Congress is included in its numbered series, with the exception that copies of annual and serial publications originating in a department are not included in the numbered congressional sets distributed to depository libraries, but are designated by title the same as the departmental edition. This has resulted in much useless and costly duplication and endless confusion in the cataloging of public documents for library purposes, as you undoubtedly know. The bill proposes the following remedy:

"Provided, That no publication authorized by law or issued by any executive department, independent office, or establishment of the Government shall be printed as a numbered document or report of Con-

gress, but shall be designated by its original title if reprinted by order of either House, except that reports required by law or resolution to be submitted to Congress, or either House thereof, and printed shall be designated for all purposes as numbered documents thereof and shall be bound the same as other congressional documents, and all reprints of congressional publications shall bear the original title and number thereof."

The purpose of this provision is to include in the congressional numbered series all those publications that are printed primarily for the use and the information of the Congress and to confine to departmental editions those publications that are not required to be submitted to the Congress. It also insures one edition or title to a government publication by providing that all reprints, whether by the Congress or the departments, shall bear the original title or number. Such publications as the Geological Survey's monographs, bulletins, water supply and professional papers, the bulletins of bureaus of ethnology and fisheries, and those of the Hygienic Laboratory and the Yellow Fever Institute, will not be continued in the congressional numbered series under the new act. The annual reports of the departments and those required by law to be submitted to Congress and printed, will, however, be issued only as congressional numbered documents, as they are considered of prime importance for legislative purposes.

COMMITTEE HEARINGS AND BULLETIN

Committee hearings and publications are to have a regular distribution, including depository libraries, if section 50 of the bill is enacted into law. The committee recognizes that hearings are coming to occupy a more and more important part in the proceedings of Congress; in fact, substantially all important legislation is now based upon such hearings, and it has been decided that they ought to be insured proper publicity and preservation by regular distribution to the libraries of the country. Provision is made that the hearings and publications of each committee or commission shall be numbered consecutively throughout a Congress. All except "confidential" hearings, of which there probably will be few in the future, are included in the distribution.

A bulletin of committee hearings is provided for in paragraph 3 of section 50. This bulletin is to be issued daily during the sessions of Congress and prepared under the direction of the Joint Committee, which also has charge of its distribution. In addition to a schedule of committee hearings, the bulletin is to contain such other announcements relating to Congress, its committees and commissions, as the Joint Committee may deem appropriate to publish. Strong arguments have been made for the publication of such a bulletin. It fits in with the growing movement for greater publicity of the doings of the committees of Congress, the registration of lobbyists, and the public distribution of the printed hearings.

JOURNALS OF CONGRESS

Under the present law, the superintendent of documents may designate three libraries in each state and territory as special depositories of the *Journals* of the Senate and the House of Representatives. These *Journals* contain simply the parliamentary proceedings of each House, and are believed to be of little or no value in the average library. The committee decided to restrict their distribution to each state and territorial library on application. An inquiry developed the fact that 11 of the libraries receiving the *Journals* did not desire them, while 33 others were not sufficiently interested to reply. There are now 141 libraries on the *Journal* list.

SUPERINTENDENT OF DOCUMENTS

Sections 57 to 68, inclusive, relate especially to the superintendent of documents as the sales agent for government publications and the distributor of documents for the departments and the Congress and to newspaper correspondents and depository libraries. The office of the superintendent of documents is increasing in importance and, if the pending bill becomes a law, it will soon correspond in rank to that of the public printer. The committee has proposed in the bill that hereafter the superintendent of documents shall be appointed by the President and confirmed by the Senate, thus giving opportunity always to secure the best fitted man in the country for the place,

whether he happens to be in or out of the government service.

Congress in 1912 placed the distribution of all departmental publications in the hands of the superintendent of documents. This centralized distribution was first proposed by the Printing Committee when it submitted the printing act of 1895 by which the office of the superintendent of documents was created. The provision is included in the pending bill with a slight modification permitting the departments to supply certain individual requests that may be received subsequent to the regular mailing list distribution.

The superintendent of documents is made the sole sales agent for all government publications, except certain charts, maps, navigation publications, and patent specifications. The sale of government publications is rapidly increasing and the day is approaching when practically every departmental publication will be placed on a sales basis. The bill opens the way by providing that any department may permanently discontinue the free distribution of any of its publications, which shall thereafter be sold by the superintendent of documents. The Department of Commerce already is placing many of its publications on a sales basis and has met with general approval of the plan. In the interest of education and publicity regarding governmental affairs, it seems desirable that the free distribution of publications by Congress should continue for a time, but the proposed valuation plan for congressional distribution is a marked step toward the ultimate sale of all government publications. Placing public documents on a sales basis, undoubtedly will increase the importance and the value of their library distribution.

DEPOSITORY LIBRARIES

Depository libraries are designated under section 64 of the bill. They include the libraries of each executive department, the United States Military and Naval Academies, each state and territory, the District of Columbia, the Philippines, Porto Rico, the Pan American Union, each land-grant college (67 in number), the office of the superintendent of documents, the Historical Library and Museum of Alaska, the Ameri-

can Antiquarian Society of Worcester, Mass. (designated in 1814 as the first depository of public documents), and one library in each congressional district and territory and two at large for each state. This makes a total possible designation of 663 libraries, of which only 474 have been named to date.

It will be noticed that the bill takes the future designation of libraries, other than those specifically named in the act, from senators and members and lodges this privilege with the superintendent of documents. Members of Congress have had the right to designate libraries as depositories of government publications ever since 1858. That privilege was greatly curtailed, however, by the sundry civil appropriation act of June 23, 1913, making all existing designations permanent. It is believed that the permanency of designation and the making of future selections by the superintendent of documents will remove the depository libraries entirely from the field of partisan politics and insure their becoming, what was originally intended, fixed places where the people may have free access to any of the publications of their government. The proposition to make the library designations permanent was originally submitted to Congress in the printing bill, but its earlier enactment was due to a desire to protect the existing depositories in the rearrangement of congressional districts occasioned by the new apportionment.

SELECTION PLAN

Perhaps the next most important provision as regards the depository libraries is that which permits them to select in advance the publications that the superintendent of documents shall send to them. The selection plan is contained in paragraph 2 of section 64. The committee hopes that it will put an end to the enormous waste of documents that the depository libraries are either unwilling or unable to place on their shelves. During the last 20 years more than 14,000,000 government publications have been distributed to the depository libraries throughout the country. In the same period, fully 2,000,000, or an average of 100,000 a year, of these publications have been returned to the superintendent of documents by the depository libraries. That the

libraries should thus reject 15 per cent of the publications sent to them by the government, clearly indicates the necessity for the proposed change in the method of library distribution.

A recent inquiry shows that 276 depository libraries are ready to adopt the selection plan, while 198 desire to continue receiving all the publications of the government. The superintendent of documents has taken steps already toward putting the plan into operation.

The selection plan, as proposed in the bill, provides that if any designated depository desires to receive a copy of every government publication available for library distribution, it shall be supplied therewith, if, in the opinion of the superintendent of documents, it is prepared to make all such documents accessible to the public. It is expected that, under this provision, the superintendent of documents will see to it that the future distribution to libraries is made in accordance with their capacity to handle the publications of the government.

Practically every publication issued by the government is made available for depository library distribution by section 65, which includes those not bearing a congressional number, the numbered documents and reports having been provided for in section 46, paragraph 6. In fact, about the only publications that will not be available for depository distribution are the bills and *Journals* of Congress, reports and digests of the United States courts, and patent specifications and drawings. The bill also provides, in section 69, that a copy of the daily *Congressional Record* shall be sent to each depository library, as well as a set of the bound *Records*.

The superintendent of documents is authorized by section 64, paragraph 4, to supply duplicate copies to any depository library whose government publications have been destroyed by fire or other unavoidable cause. He is also authorized to distribute surplus documents to such other libraries as are suitable custodians of government publications for free public use. A somewhat similar provision is contained in the present law which provides that the so-called "remainder libraries" shall be named by members of Congress.

The binding of congressional documents and reports for the depository libraries is under the direction of the Joint Committee on Printing, as at present. You may remember that the committee adopted the present buckram binding in 1908 after an extended conference with prominent librarians and members of this association. There is some suggestion of doing away with the special depository binding, except for the smaller documents and reports, and of distributing the depository copies in the same binding as the extra copies printed for the use of Congress. I understand that the superintendent of documents has adopted the original binding for all annual and serial publications of the departments that are now sent to the depository libraries. The pending bill provides that the binding of all publications for library as well as congressional distribution shall be under the direction of the Joint Committee, which would be pleased to hear your views on the original-binding idea. Such a plan should result in the delivery of bound documents to the libraries at the same time as the original distribution is made. It would be a great economy to the government and might result in less confusion to librarians and the reading public by providing only one form of binding and back title for any given publication.

DUPLICATION IN DISTRIBUTION

Section 66 of the bill is intended to prevent unnecessary duplication in the distribution of government publications to libraries. The Printing Commission investigated the departmental mailing lists a few years ago and found 2166 duplications of depository libraries on the various lists. The Department of Agriculture alone, by striking 184 depository libraries from its mailing lists, saved more than 220,000 copies of various publications in one year. It is recognized that some of the larger libraries have need for duplicate copies of certain publications, and provision is made for that emergency in section 66, but the request for such a duplicate must originate with the library itself. The departments are required to revise their mailing lists every three months and strike off the names of all depository libraries, except such as specifically request duplicate copies of a publica-

tion. With the prompt dispatch of depository copies in the original binding, it is not thought that the libraries will have the same need to request duplicate copies of the departments that they have had in the past.

PATENT PUBLICATIONS

By including a provision from the printing bill in the sundry civil appropriation act, approved August 24, 1912, Congress abolished the so-called "library edition" of patent specifications and drawings. This edition consisted of three volumes, each larger than a Webster's dictionary, which were sent monthly to every state and territorial capitol and the clerk of each United States district court. The edition cost \$65,000 a year, and a careful inquiry developed the fact that the volumes were of practically no service to anyone. There is a demand, however, for patent specifications and drawings in some of the larger manufacturing cities, and to meet this situation, the printing bill proposes that the commissioner of patents may furnish one public library in each state with a complete set of patent specifications and drawings for free public inspection, at the nominal price of \$50 per annum. It costs the government, on an average, \$435 a year to print a set of patent specifications and drawings. They make 10 or 11 volumes a month and will cost between \$200 and \$300 for the necessary binding, which must be done by the library itself. The commissioner of patents recently submitted an amendment to remove the limitation of one library per state, arguing that, in such states as New York and Pennsylvania, at least two cities ought to be permitted to have a set of patent specifications for public library use. It is quite likely the bill will be amended so as to extend the privilege to not to exceed three libraries in a state.

The bill also proposes to abolish the *Patent Gazette* libraries, but this publication will be available for the regular depository libraries. Under the present law, each senator and member is entitled to designate eight libraries to receive the weekly *Patent Office Gazette*. The Printing Commission investigated this distribution in 1910 and found that out of 3,201 libraries then receiving the *Gazette*, 925 stated they had no

use for it, and 702 others did not take enough interest in the publication to reply to the commission's inquiry. Consequently 1,627 libraries were stricken from the *Gazette* mailing list on the recommendation of the commission. Recently, the superintendent of documents reported that there were only 1,619 libraries on the *Gazette* list out of a possible designation of 4,264, clearly indicating the small interest in this publication. It is believed that the distribution to depository libraries will fill every need.

GEOLOGICAL PUBLICATIONS

The bill likewise proposes to abolish the special depositories for geological publications. Under the present law each senator and member is entitled to designate four public libraries in his state to receive the monographs, bulletins, and reports of the Geological Survey. The Printing Commission investigated these libraries in 1910. It found that out of 1,008 designated libraries, 158 had no use for the geological publications, 145 others expressed a desire to make selection of such geological publications as they wanted, while 189 others failed to make any response. The superintendent of documents reported recently that he had only 716 libraries on his geological depository list out of a possible designation of 2,132. It seems apparent that the distribution of the geological publications to the regular depositories will be sufficient.

LAW LIBRARIES

The distribution of the United States Revised Statutes and Supplements, the Statutes-at-Large, and the Session Laws of Congress will be made by the superintendent of documents. The present law provides that the secretary of state and the secretary of the interior shall make certain distribution of the Revised Statutes and Supplements and that the secretary of state shall make the general distribution of the Statutes-at-Large and the Session Laws, while copies of the same for state supreme court libraries shall be distributed by the Department of Justice—a rather perplexing procedure.

The bill adds state supreme court libraries to the distribution of the Revised Statutes and Supplements. It also provides that copies of the Statutes-at-Large and

Session Laws shall be sent to the library of "the court of last resort of each state." The present law makes this distribution to the "state supreme court libraries," but as there has been confusion in some states as to which library is intended by the term "state supreme court," the Committee decided to use the designation "court of last resort of each state," which can leave no doubt as to the library intended as a depository of the federal statutes.

CONGRESSIONAL RECORD INDEX

Undoubtedly you will be pleased to learn that the committee has adopted the suggestion of the American Library Association that a table of contents be provided for the daily *Congressional Record*. This is provided for in section 69, which relates to the publication of the *Record*. The committee in its report on the bill quotes at length the resolution adopted by the official council of your association on January 2, 1914, urging the insertion of a table of contents in the daily *Record*. Perhaps the problem of its preparation will be less difficult if the committee is successful in its proposition to restrict the *Record* to substantially a verbatim report of the proceedings of Congress and the elimination of all extraneous matter. It is believed that the *Record* can be reduced at least one-fifth of its present size, if properly confined to the actual proceedings of Congress and not made the dumping ground for everything that someone happens to want to get into print at government expense for one reason or another, chiefly because the franking privilege accompanies such publication.

CONGRESSIONAL VALUATION PLAN

In conclusion, I want to call your attention to the proposed valuation plan for the distribution of government publications by senators and members. It is the most radical change in regard to the distribution of public documents included in the bill. As you undoubtedly know, documents now printed for distribution by members of Congress are allotted to them in quotas, each member of the House receiving the same number of a given document as every other member, and each senator the same number as every other senator. For ex-

ample, under the present law, 1,000 copies of the annual report of a department are printed for the use of the Senate, and 2,000 copies for the use of the House. This makes the quota for each senator 10 copies and for each representative, 4 copies. Similar division is made of every document printed for distribution by Congress, regardless of the varying interests of members in such publications. For instance, a member from North Dakota receives as many documents relating to the production of cotton as a member from Georgia, and a member from Georgia gets as many wheat publications as a North Dakota member. A senator from Idaho receives as many documents relating to navigation as a senator from a sea-coast state, and, on the other hand, a senator from Florida has as many publications about the irrigation of arid lands, as a senator from Arizona. Such a ridiculous system has resulted in the enormous accumulation, from time to time, of documents that have remained undistributed in the folding rooms of Congress until they have become obsolete and utterly worthless except as waste paper. In 1910, the House folding room became so congested with such documents that it had to get rid of more than 1,000,000 to find room for the incoming current publications. The Senate has just disposed of nearly 900,000 obsolete and useless documents that its members failed to distribute. The committee has figured that this waste of public documents is costing the government fully \$125,000 a year. The estimate does not include the thousands of useless documents that senators and members send out to their constituents simply because they have nothing else to distribute and which, undoubtedly, are promptly consigned to waste-baskets and stoves in as many thousands of homes throughout the land.

To check this vast waste, the committee has worked out a plan of allotting public documents to senators and members on a valuation basis. The committee ascertained that the average reprint value of documents allotted to senators in the last nine years was approximately \$2,200 per annum, and to members, \$1,800 per annum. It is proposed to place a similar amount to the credit of each senator and member with the

superintendent of documents annually. The bill provides that these credits shall be available only for the purpose of obtaining government publications for free public distribution and they shall be charged to each member at a uniform price based on the reprint cost. The document credits cannot be converted into cash, neither are they transferable from one member to another, and the unused balance at the end of a year lapses to the government.

Certain stock publications for valuation distribution are specified in the bill. Other publications can be made available for such distribution only by concurrent resolution of Congress, except that a member may obtain not to exceed two copies of any document the superintendent may have on hand and have the same charged to his valuation account. The *Congressional Record* is not included in the valuation distribution, each member being accorded the same quota of that publication as at present.

The entire valuation distribution is placed under the supervision of the superintendent of documents, who is authorized to reprint government publications in such editions as may be required for that purpose, but the right to reprint is restricted to two years, so as to impel distribution before the publications become obsolete. Many prominent publishers have approved the plan as a business-like arrangement. It gives the member an opportunity to supply his constituents with such publications as are of special interest to them and this alone ought to be of immense benefit to the government in distributing the information it has acquired, at great cost, among the very people it most desires to reach. The plan is rapidly growing in popularity among members of Congress and the committee has every reason to believe that it can be put into successful operation.

GEORGE H. CARTER,

Clerk, Joint Committee on Printing.

THE NEW QUARTERS OF THE LOS ANGELES PUBLIC LIBRARY

If a modern public library should play a large, vital and intimate part in the workaday life of the people, few if any library buildings give this idea such complete expression as does Los Angeles in the new, rented quarters which it has occupied since

June 1. Some of the problems of fitting into rented space a library which circulates 1,600,000 volumes a year, in a way to give the sort of service which the public likes, may be of interest, especially in the light of a three months' trial. The present lease is for seven years, with a three year renewal privilege. The rental is \$22,000 a year for 50,000 square feet. This provides shelving for 50,000 more books, and table space for 300 more readers than in the quarters formerly occupied.

The building, whose upper three floors are used by the library, is a new office (or loft) building. "Fifth and Broadway" is in the very heart of the rental and office section, and by the consensus of opinion is the busiest and most centrally located corner in the city. Without climbing any steps, readers can walk from the sidewalk to the express elevators, and out of them to the receiving desk, thence to the open shelves, have their books charged, and return to the sidewalk in the space of two or three minutes, and as an ordinary procedure. This time-saving service is something which the public appreciates very highly, and suggests a feature which deserves to be carried out in more of the permanent library buildings, whose architects are inclined to put entrance steps, stairways, corridors and formality in the way of the patrons. Another feature (unsuccessfully attempted, so far, on account of high rentals) offers a suggestion for permanent buildings, namely the encouraging of certain organizations to secure space on adjoining floors of the building.

The time may come when large public libraries will not only have their busiest departments on the street level and near the entrance, and have quick access to upper floors by elevator, but will contain offices and work rooms, and union lecture halls, for the use of scientific and literary associations, advertising clubs, teachers' clubs, and the like, at nominal rentals. These may have been operating libraries or research bureaus that could be managed by the public library with greater results and less expense to both parties.

Reference to the plans of the eighth and ninth floors shows the solution of the two main problems of arrangement, namely, the

provision for open access to books, and the relative location and partial combining of reference and circulating features. One of the great faults of the former quarters was the distance between the main card catalog and book stacks, and the reference room. The most zealous scholar, as well as the impatient school girl, was discouraged from the reference use of books by being largely limited to the collection in the reference room itself. The building up and emphasizing of a working collection of books in the reference room itself had the inevitable result of barring from circulation hundreds of titles which were not reference in character, but only one copy of which could be afforded.

In the same way, the periodical department was distant from both circulation and reference departments. The reference use of books and magazines together, so highly desirable and necessary, was only possible at much inconvenience, especially in the fields of art, applied science and sociology. So irksome was this previous lack of connection between the two features of the work, that in the present plans it has been remedied to a large degree.

The limited amount of space on single floors in the new quarters, made necessary a separation of adult books. The juvenile books, and the newspapers and reading-room copies of popular magazines were placed on the seventh floor, together with the offices, staff rooms and work departments. This left all of the circulating and reference books for adult readers to be divided between the eighth and ninth floors. The theory in this planning was that for the best and fullest results to readers the basis of division should be the most convenient use of the books, rather than the distinction between reference and circulating books and magazines; that it is immaterial whether books are studied or read in the library building or at home; that it is important that the reader secure all the literature on his subject, in whatever form the literature may be, without loss of energy or time.

The size and shape of the available space allowed the carrying out of the plan with some subjects, though not all. Accordingly the literature on several broad

THE CIRCULATION DESK, LOS ANGELES PUBLIC LIBRARY

subjects was placed on the ninth floor. The circulating and reference collections and the bound and unbound magazines on pure and applied science are combined in the newly created industrial department. The material on art and music is in the same way collected in the new art department. The former document department has been enlarged by adding to it all the literature in the "300's", and is now called the sociology department. There is no barrier between it and the industrial department, to which it stands next and is closely related. Inquirers for literature on mining and agriculture, for instance, can receive the benefit of all the books and magazines in the industrial department, and at the same point will be handed the bulletins and reports which the sociology department may have. A space in the sociology department has been set aside for the literature and readers on education. As an adjunct to the art department there is a sound-proof room, for the use of a piano. The same room is also available, at certain hours, as a study club room for the group study of the books from any part of the library.

In the new quarters of the Los Angeles Public Library all the books which the average reader wishes to see, are on open shelves. The document collection and the magazine portion of the reference collection are alone shut off from the public, and this only by gates, which may be passed by anyone who has need for visiting the shelves.

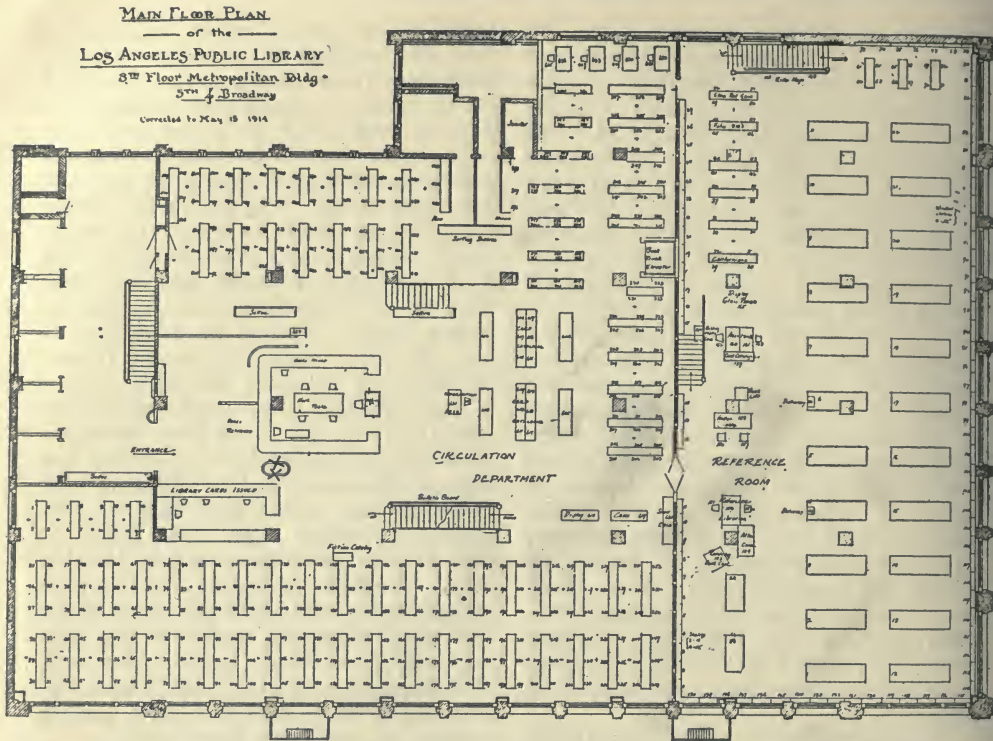

The reference use of books and the placing of books on open shelves having been provided for, the next problem was to devise a plan whereby patrons in the circulation department could have any specified books brought to them, or such definite directions given that they could find any book. It is well known that only a small portion of readers, left to themselves, can find their own books, even when provided with book numbers from the catalog. The plan decided upon was as follows: An "information desk" distinguished by signs, stands prominently in the very center of the open space (shown in the illustration of the circulation department). Readers naturally go directly to this desk in need of help. The card catalog is behind the in-

formation desk, and in many cases the information assistant helps readers find book numbers. Three assistants are scheduled "in the stacks," making their headquarters at three seats, which are at the outer edge of the open space. One of the seats is shown near the card catalog, in the view of the department. The sign on the column above the seat reads "Ask here for assistance." When no one is scheduled for this work, the sign is reversed, and then reads "Ask at the information desk for help in finding books." One of the three seats is near the fiction stacks, the second is near the works of literature, the third (shown in the illustration) is near the travel, history and biography. The three assistants go to the shelves, find books, or find and suggest substitutes, and devote their time to seeing that readers are satisfied. The system of having pages bring books by call slips has never been used in Los Angeles. Trained assistants have always brought books, and talked directly with the borrowers, answering questions and making suggestions about books. The plan, although more expensive, is much more satisfactory to the public, and has a decided tendency to get better books read.

As a further aid in directing readers, each section of book case is numbered in white figures, and schedules of location are kept on the information desk and at the card catalogs. Well lettered labels are used on the ends of the book cases, also.

From the foregoing description of the methods of handling the "open shelf" problem, it will be seen that with the circulating books on literature, travel, history, biography, philosophy, and literature, as well as with the fiction and circulating magazines, an attempt has been made to give the same personal, intensive service which characterizes the work of the special departments on the ninth floor. Lack of funds makes it impossible to carry out the plan fully. Three, and sometimes only one or two, assistants can be detailed to pass through the stacks and direct readers. The pages, who merely shelve and "straighten" the books, are of considerable aid in answering questions as to location of books, but they do not volunteer any information.

The loss of books at the former location,

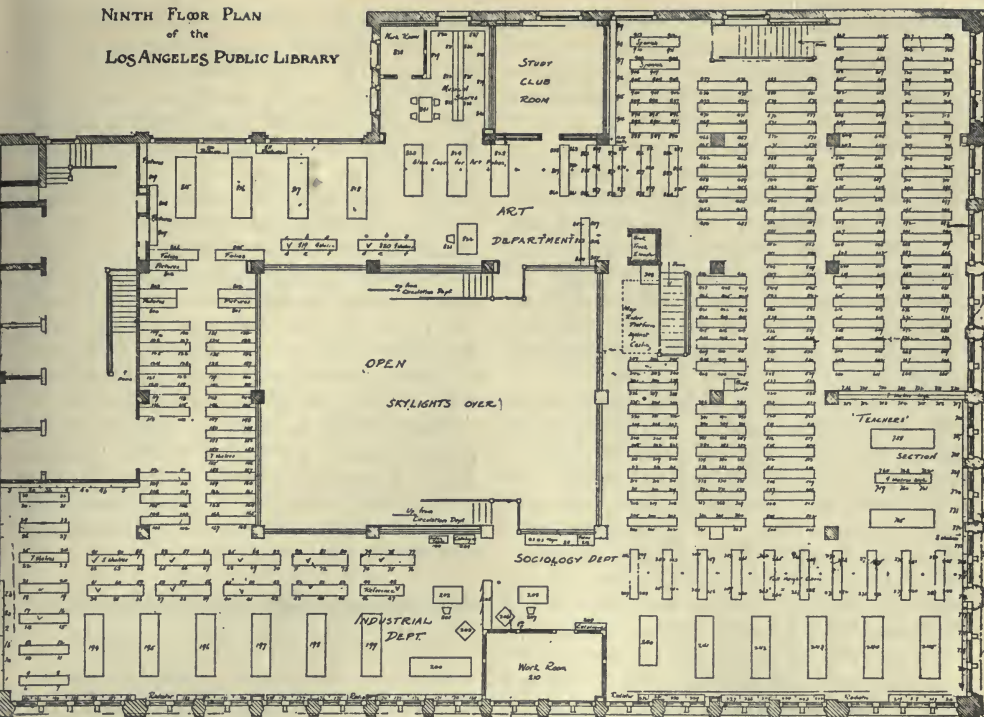

on account of having three exits from the library, made the problem of supervision a very pressing one, and possibly more thought has been given this than in most libraries. All use of books by adults is limited to the eighth and ninth floors, and partly because it seemed desirable to center all the charging and returning of books on the delivery desk on the eighth floor, the ninth floor entrance was permanently closed, and no elevators stop on the ninth floor. By this means all entrance and exit is on the eighth floor, the ninth floor departments being reached by easy stairways. From the elevators to the reference room door is a straight passage, interrupted only by a double brass turnstile, the arms of which run on ball bearings. These turnstiles are therefore not objectionable to any one in entering, but they prevent any exit on the south side of the delivery counter. All patrons from every portion of the eighth and ninth floors must pass out between the

railings shown in the diagram at the north side of the delivery counter. The outer one of these two passages is to accommodate persons who have no books to charge. It is provided with a gate electrically controlled, which is operated by the assistant inside the charging desk. Having seen that the person has no books, she presses a foot control and releases the gate. After the person has passed the gate swings back and locks again. There is close supervision over the books. Constant vigilance on the part of the charging assistant is necessary, and this is a heavy strain, as about 4,000 persons pass this point each day. During busiest hours the gate is fastened open and an attendant watches this second exit.

Two months' experience in the new quarters shows the following things:

1. The vast importance of a central location.
2. The response and the satisfaction of the public in using a library devoid of for-

NINTH FLOOR PLAN, SHOWING THE INDUSTRIAL, THE SOCIOLOGY AND THE ART DEPARTMENTS

malities, and having an appearance and atmosphere of welcome and of readiness to serve.

3. The effect of the open shelf idea on circulation. While fiction, which has always been on open shelves, shows an increase in circulation of 19 per cent. over the same month a year ago, the increase in non-fiction, previously in closed shelves, shows an increased circulation of 54 per cent.

4. The better service gained by the subject department plan of arrangement.

5. The possibility of practically stopping the theft of books, by methods which do not greatly bother library patrons.

JOSEPH L. WHEELER.

REPORT OF THE BRITISH MUSEUM
FOR 1913

THE year 1913 showed a considerable increase in the number of visitors to the Museum, the total amounting to 947,090, as

compared with 754,872 in 1912. The total is the highest on record with the exception of 1904, when it reached 954,551. There were 243,659 visitors to the reading room, the daily average being 804. These readers used 1,542,701 books, exclusive of those on the open shelves of the reading room. In the newspaper room there were 17,938 visitors, against 18,450 last year, who used 67,568 volumes. The number of volumes of country newspapers brought up from the repository at Hendon was 2370.

The visits of students to other departments decreased from 38,698 in 1912 to 37,688. This may be accounted for by the fact that the department of prints and drawings was closed the last four months of the year, during the removal of the collections to the new wing.

During the year the main structure of the Extension Building was completed and was handed over to the trustees in October. No great change was made in the exhi-

bition galleries during the year. The lectures of the official guide continued to be popular, and it is estimated that about 23,000 persons accompanied his tours during the year.

At the stall established for the sale of photographs, guide books, etc., an extension of the stock of postcards sold in sets to illustrate particular subjects was planned.

An officer of the department of printed books was sent to America to study the latest developments in the methods of transporting books from the shelves to the readers, and to consider their adaptability to conditions at the British Museum.

The department of printed books made the following accessions: books and pamphlets 38,116; serials and parts of volumes 78,597; maps and atlases 3741; music, 12,223; newspapers (single numbers) 230,922; miscellaneous 8624. Of manuscripts and seals there were received 1475; oriental printed books and manuscripts 3512; prints and drawings 8410; besides many and varied additions to the collections of antiquities. The department of printed books acquired 61 incunabula and 38 English books printed before 1640, to add to its collection of early printed books.

Into each of the three copies of the general catalog 39,179 title-slips and index-slips have been incorporated. This made it necessary to remove and re-insert 53,517 slips in each copy and to add to each copy 702 new leaves. In the map catalog 1476 title-slips have been incorporated in each of the three copies, making it necessary to remove and re-insert 897 title-slips in each, and to add to each copy 14 new leaves. In each of the two copies of the music catalog 13,648 title-slips have been inserted, necessitating the shifting of 24,970 title-slips and the addition of 548 new leaves in each copy.

Part III of the "Catalogue of books printed in the XVth century," describing the books printed in the remaining towns of Germany, in German-speaking Switzerland, and in Austria-Hungary, together with an index to Parts I-III, and a typographical map, was published in December.

The number of volumes and sets of pamphlets sent to be bound was 11,484, including 3245 volumes of newspapers. By

frequently binding two or more volumes in one, the number returned was 9433. In addition, 915 volumes were repaired in the binders' shops, and in the library itself 4177 were repaired, 1586 cleaned and polished, 200 broadsides were bound in guard books and 3340 reports, etc., were put into light binding. Fifty-four volumes of the general catalog were broken up and rebound in 76 new volumes. Seventy-seven columns were re-laid, owing to the accumulation of titles under certain headings, as well as 150 columns of reprinted headings, in the three interleaved copies of the general catalog. Similarly 27 volumes of the music catalog were rebound in 32 new volumes.

Besides the report of the department of printed books, the report includes an account of progress made in all other departments of the museum, with annotated lists of acquisitions, records of attendance, publications, etc.

BERNARD RICHARDSON GREEN

BERNARD RICHARDSON GREEN, superintendent of the building and grounds of the Library of Congress, died at his home in Washington, Oct. 22. Although he had been in failing health for fourteen years, his last illness was of but three days' duration.

Mr. Green was born at Malden, Mass., December 28, 1843. His early education was obtained in the public schools and later he was graduated from the Lawrence Scientific School of Harvard University in civil engineering, with the class of 1863, taking the degree of B.S. On the first of January, 1868, he married Miss Julia E. Lincoln, their children being Bernard Lincoln, civil engineer of Cleveland, Ohio; Julia Minerva, physician of Washington; William Ezra, violinist and music teacher of Washington, and Arthur Brooks Green of Portland, Me.

Since 1863 Mr. Green had been in the service of the government, remaining continuously in the practice of his profession on various engineering works, principally those of construction. He began with the construction of the seacoast fortifications of Maine during the Civil War, and continued there, with more or less connec-

tion with the fortifications of Portsmouth and Boston harbors, for fourteen years.

He came to Washington in the spring of 1877 and took charge of the construction of the building for the State, War, and Navy departments, under the direction of Lieut. Col. (later Brig. Gen. and Chief of Engineers) Thomas Lincoln Casey. While engaged mainly on this work, Mr. Green acted as professional adviser and assistant to Col. Casey in all the engineering works in his charge, including, particularly, the Washington Aqueduct and its projected conduit extension, and the Washington Monument. He also supervised the construction of the Army Medical Museum and several of the principal buildings of the national Soldiers' Home.

On the completion of the State, War and Navy building in 1888 he was called to take charge of the construction of the new Library of Congress, under the immediate direction of the commission for its construction. The first half of the foundation was laid that summer, but funds were low and Congress was investigating the unsatisfactory character of previous operations. As a result, in October, 1888, all former proceedings and organization were set aside and entire control, under new conditions, was given to Brig. Gen. Casey, to report directly to Congress.

Gen. Casey at once put Mr. Green in complete local charge, under his direction, the result being that he reorganized the office and building force, remodeled the plan with the assistance of architects employed for the purpose, and conducted the work rapidly to within a year of completion, when, on the death of the general, he succeeded to the entire charge by act of Congress. The building and grounds were completed in 1897 within the limits of design, cost and time originally submitted by Gen. Casey to Congress. He also built the Washington Public Library building. The book stacks and carrying system at the Congressional Library are his inventions, as are also the racks for maps and newspapers.

He also, by express order of Congress, supervised the construction of the new National Museum and was adviser in connection with the Corcoran Art Gallery, the new

state capitol at Harrisburg, Pa., and with various private structures.

Since the completion of the library building he has been in charge of it as superintendent, an appointee of the President, and also acted as disbursing officer of the Library and Botanic Garden.

Mr. Green was a member of the American Society of Civil Engineers, of which he was formerly vice president; member of the Philosophical Society of Washington, as well as the Washington Academy of Sciences; American Association for the Advancement of Science; National Society of Fine Arts, Cosmos Club, trustee of the Corcoran Gallery of Art, a member of the National Geographic Society, director of the Union Trust Company and chairman of the consultative board of the President on location and design of public buildings of Washington.

On the completion, March 7, 1913, of Mr. Green's half century of service for the government, some of his friends indicated their regard for him in a testimonial presented, with an accompanying memento, on the anniversary celebration.

THE LIBRARIANS' PARTY IN NORTHERN EUROPE

THE following notes on the tour in northern Europe which was made by a party of librarians last summer, were written by Miss Helen Harcourt Morrow, librarian in charge of the Wanamaker branch of the Free Public Library of Philadelphia, and form an interesting supplement to Miss Hitchler's account of the southern tour, printed in the October JOURNAL.

Seeing Mr. Hanson's name as leader of the party who would take the northern route, I promptly decided I, too, would join that party. Our route was planned as follows: To sail directly to Christiania; after seeing Norway, to proceed to Sweden, Denmark, and Germany, attending the International Exhibition of the Book Industry and Graphic Art at Leipzig, and then proceeding to England to attend the international meeting of librarians at Oxford. Needless to say, this program was not carried out to the letter.

However, we did reach Christiania after a delightful ocean trip. While very few librarians took the northern trip (only five in the party) these five were most congenial and always ready to take any part in games or amusements peculiar to sea travel. So pleasant was the voyage, it was not without regret that we left the ship at Christiania, and we took with us very pleasant memories of the ship, especially of the courtesy extended to us by Captain Goetsche.

Immediately upon reaching Christiania, and getting our luggage through the customs, our guide, Mr. Herman (who met the steamer), took us for a drive through and around the city. While Christiania is one of the youngest capitals of Europe and has few of the gruesome relics of the Middle Ages, it possesses no mean attractions. Its position on the fjord, dotted with groups of beautiful islands and surrounded by hills and mountains rich with verdure and forest covered slopes, could scarcely fail to awaken the admiration of the tourist. Add to this the charm and elegant simplicity of the houses, and Christiania becomes an ideal spot from which to start a tour through Norway.

On the drive, one of the first places of interest was the Norsk Folk Museum—an open air museum at Bygdø—very good collection of old farmhouses and cottages brought from various parts of the country and in an excellent state of preservation, showing workmanship both artistic and durable. Here also is a finely preserved church, dating back to the twelfth century, and brought by Oscar II, from Gol to its present location. In the afternoon, we took a ride to Hollem-Kollen, a place situated about 600 feet above the sea level. From here we had a splendid view of Christiania and the fjord.

The second day we visited the University Library, a most imposing building, and well laid out to suit the wants of a library. I believe it is about one hundred years old; the present librarian, Dr. Drolsein, has been there forty years. He was very kind in showing us the building and explaining his method of doing the work. He told us that July 27, the day we visited the library, was the first day they had commenced using the

American International sized cards; they were also using the typewriter for the first time. He showed us a manuscript of Ibsen's, bought for 45 Krns. and sold to Germany for 200 Krns. We asked the reason, and he said: "Germany used to have only one god, Goethe; now she has two gods, Goethe and Ibsen."

We also went to the International Exhibition being held in Christiania at the time, and were delighted with the strides that Norway has made in her mechanical and industrial manufactures.

On the 29th, we took the early train for Bergen. I feel safe in saying that no wrecks will occur in Norway as the result of excessive speed of the trains. However, they were very comfortable, and riding as we did in the observation car, we had a splendid view of this beautiful country. The ride was about fourteen hours long, but the strain was relieved by getting out and walking when the train made frequent and sometimes long stops. These delays gave us a still better opportunity of enjoying the wonderful scenery. The train kept winding up the mountain sides until we finally reached an altitude of more than 4000 feet. Here some members of the party grew slightly deaf or had a buzzing in the ears. We descended gradually until we reached Bergen. We were very tired and dirty, and delighted to reach our hotel, The Norge.

In the early morning we walked to the fish market—a very interesting sight. The fish are caught and brought in alive, and placed in bins or large square troughs full of running water. These bins extend along both sides of the market place. The customer selects the sort of fish he wants, pays for it, and takes it, squirming, home. Here, at least, one can always be sure the fish is fresh.

We next visited an old warehouse built by the German merchants in the eleventh century. We saw the weights they used—the one which they bought by and the one which they sold by. They also had a secret staircase where they disappeared when their creditors were upon them. We saw the books in which they kept their accounts with their customers; also their old square beds of straw—so placed that no air

could possibly reach them. They could only be made from the outside, as no maid servant was allowed inside. A room for apprentices had three beds in a row, with the foreman's opposite, where he could keep an eye on them. The confidence they had in one another was remarkable. For instance—their safe consisted of a square box with one compartment. There were three keys and each merchant had a key, but each key was different, so that it required the three men to unlock it all at one time.

We next visited the library, a very unpretentious place. The librarian showed us the plans for a very fine building and I am sure when completed, it will be as attractive as useful.

At 9 o'clock in the evening we got on the little boat, named "Irma," which cruised on the fjords, and from here until we reached Trondhjem the scenery was beautiful. Our first stop was Odda. We left the boat, and carriages were engaged to drive to the Lotefos, a cataract about 1500 feet high. On this drive we passed menacing rocks, and enjoyed a splendid view of the Jordal valley, a valley enclosed by precipitous rocks but remarkable for its rich vegetation.

Early in the afternoon we returned to the boat and proceeded through the Hardanger fjord, one of the principal attractions of Norway. The Hardanger is composed of several fjords, each beautiful in its way. The women of the Hardanger are very picturesque. Here may be seen many of the quaint costumes and silver ornaments of original design. The brides wear heavy gilt crowns, and from all we hear a wedding must be a sight to see. Married women always wear the skout, a headdress of stiff white muslin, while unmarried women go bareheaded, sometimes with a red handkerchief twisted around the head.

Our next stop was Eide, on the Noreimsund. Here we walked to the Stendall falls. The path in the rock leads behind and under the falls, which thunder down over the traveler's head. The entrance is attended by a young woman in national costume. While the falls were interesting, the discussion as to its merits as a shower bath was more interesting. I thought that personally I would prefer one arranged for

the purpose less than 500 feet high. We returned to the boat late in the afternoon.

The next morning we reached a place called Ballholmen, where Emperor William erected a statue on the site of the ancient tomb of King Bele of the Futhjof's Saga, and on the other side is a bronze statue of the German Emperor himself.

Leaving here, one enters the Flaam valley, then on into the Naero fjord, the most beautiful of all the fjords. It is about 1000 feet wide. Soon one sees an immense waterfall about 1000 feet high, then farther away two pointed hills, and between these, glimpses of the snow-clad Steganaase and other hills with the ever recurring views of snow covered peaks.

We next stopped at Leon. Here we again took carriages and rode to Leon lake; took a sail on this lake, which was very interesting. After landing at a little wharf we walked quite a distance to view the Kjendal glacier—one of the largest in Norway. This place is difficult of access because of the glacial stream which we had to cross on stepping stones. This we did in the pouring rain. The stream comes from a vault of blue ice (the color was very appropriate to our feelings). Many of us were a little depressed: the cause, perhaps, being the shadow of the trouble which was ahead of us, for it was upon our return from this excursion that we were told by the captain of the boat that all Europe was at war. He advised us strongly to return to Bergen. Not having papers to read, nor being able to read them if we had had them, some of us contended that things were not so bad as the captain tried to represent them, and those few refused to return. As consent of all the passengers was necessary to permit our captain to return, we proceeded on to Trondhjem, taking a small number of very happy people and a large number of dejected people, dejected because they could not get to Bergen. As it was chiefly the Americans who refused to return, we were dubbed by the English "the cocksures." Nothing daunted, however, we continued to enjoy the wonderful beauties everywhere around us as we passed through the Geiranger fjord, notable for its high cliffs and its numerous waterfalls.

Our next important stop was Molde. I think the most interesting place here is the church, because it contains that wonderful painting "The women at the selpulchre" by Andes. The next place we reached was Christiansund, a city built on four islands, which was reached about 11 p. m. We left here and reached Trondhjem about 8 a. m. What disappointment awaited us! We were told we could not go to Sweden, Denmark, or Germany, and had best proceed immediately to Christiania and await developments. As we could not get a train until the next morning, we put in a day of sightseeing in Trondhjem.

Our first move was to cross over in a motor boat to Monk Holmens, once the site of a Benedictine monastery founded about the eleventh century and afterwards used as a place of execution and in 1680 as a fortress. Here we could see the old tower in which for eighteen years was confined Griffensfeldt, minister of Christian V. This island is admirably described in Hugo's "Han d'Islande." The view from the fortress walls is very beautiful.

Our next ride was to the famous cathedral, which is in the process of reconstruction. It has been declared by ecclesiastical experts to be the finest in Northern Europe. We took the famous ride to Ffeldsaeter, through that part of the city which was the old fortification, now used as barracks. The old city gate is still there. Trondhjem is a most interesting city. Most of the people are prosperous, in fact, the general impression we had of the people of Norway was that they were intelligent, orderly, and thrifty, deserving of all the prosperity they had. Their small pieces of land showed such intensive farming that they were able to build good substantial houses, and, if necessary, send their children away to a good boarding school. Everybody worked in a leisurely but intelligent manner. The people do not demand luxuries, but only the comforts of life.

We left Trondhjem in the morning, after a heated discussion as to whether we should remain in Norway or try to reach Sweden. The decision was in favor of remaining in Norway.

We reached a town called Hamer later in the afternoon, and spent the night there.

We viewed the ruins of a fine old cathedral dating back to the twelfth century and destroyed by the Swedes in the sixteenth century.

We reached Christiania the following morning and immediately visited the ambassador, who informed us that a restriction existed against Americans entering England, and we were advised to remain in Christiania, although he could see no real danger in proceeding to Sweden or even Denmark. Our guide, acting under the advice of Cook's, left us to get out or remain in Christiania as best we could.

Out of a party of twelve, ten remained in Christiania, and only myself and my friend left for a visit to England and Ireland, where we were most generously treated.

LIBRARY DEVELOPMENT BEYOND THE MISSISSIPPI

IN the diner, on the train going from Seattle to Portland, a few weeks ago, there sat at our table a Seattle business man whom we found an excellent conversationalist. The chief topic of conversation was Seattle. Before the close of the meal we asked him if he ever grew tired of climbing the city's hills. His reply was: "No, I like the hills of Seattle and really enjoy climbing them. The fact is, I have become so used to them that when I go to a flat country I make it a point to ascend numerous stairways because I miss the hills and need the exercise."

This incident typifies the spirit found beyond the Mississippi. Although it is hazardous at any time to generalize, yet no one will criticize the assertion that most of the people beyond the Mississippi are boosters. Nor do they stop with simply boosting the many good things that they have, but like Duke Senior in "As You Like It," they find "good in everything."

Our country owes no inconsiderable debt to the twenty-one states beyond the Mississippi. They represent the youth, vigor, enthusiasm, initiative and optimism of the nation. We remember that it was in Oregon that the Initiative and Referendum were given their first trial in the United States; and since Oregon has become a direct legislation state most of the other

MAIN LIBRARY, CLEVELAND (447 FEET LONG)

states beyond the Mississippi have embodied the Swiss governmental innovation in their organic laws. The centralized school has also become popular beyond the Mississippi. There is little question that of the two thousand centralized schools in the whole country, the West has more than its proportionate share. In the matter of temperance it is very likely that a few years will see a very small percentage of the twenty-one western states still outside of the dry column, if the people of these states are good prophets. When it comes to good roads, which is the cry of more than a million automobilists in this country, investigation shows that many parts of the West are building a veritable net-work of the finest kind of highways, and some of these are being constructed by penitentiary inmates put on their honor. In the field of agriculture the West has been making unusual progress. We may all have to go West to learn the great lesson of co-operation, which our progressive farmers tell us will prove to be an absolute essential to success in the future.

But the readers of the *LIBRARY JOURNAL* will be more interested in a statement regarding the library work of the West, than in an account of any of the other activities of the people living beyond the Mississippi, so we will consider the West from the standpoint of what its libraries are doing, with the understanding that in our Zeppelin flight only the high spots can be touched. To be frank, we do not profess to have sufficient data to warrant a comprehensive, general statement.

In the first place, the tendency all through the West seems to be to emphasize the larger governmental units in library activities. As a matter of fact, along practically all lines, the western states as states exemplify the progressive spirit. This is no doubt due to the population beyond the Mississippi being very largely a rural population, which will not allow itself to be dominated by the cities.

But much as the states accomplish as states, through their state libraries, state library commissions and other state institutions, the popular library unit of the West is the county, and this too in spite of the magnificent distances and the extraordi-

nary size of many of the counties in most of the western states. There are many western counties as large as some eastern states. Of the twenty-one western states eight have already passed county library laws and three others are likely to be added to the list this winter. Of course California is leading the way in the county library movement, not only in the West, but in the whole country, already having fully half of its fifty-eight counties in its county library system. And the splendid success of the California county libraries is a great inspiration to all of the other states beyond the Mississippi.

Here and there in the West excellent work is being done under township library laws. Where townships are permitted to unite with one another or with towns or cities, either in their own or in adjoining counties, a library unit can be established that will have large possibilities for all people of the surrounding country. In one county in the West, under the direction of a very efficient librarian, almost all the townships of the county are united in library work. A township library law is almost as necessary in states having county library laws as in states without such laws, since in the former case rural sections may be supplied with library service that might otherwise be denied them.

Of course municipal library laws are general, and the twenty-one states beyond the Mississippi are not especially unique in the matter of municipal library activities. But the school library work of the West is worthy of mention. The traveler finds many innovations in the western schools that interest him, and certainly not one of the least is the advanced position taken with reference to the matter of getting books of the right character among the pupils of the schools. It will be a surprise to some that one of the newest western states stands second of all the states of the union in literacy. Of course the popularity of the county and township libraries, as well as the extensive library activities of the schools of many of the western states, in a measure explains the high educational standards of the great mass of the people.

A number of special cases were brought to our attention in the West that it might

be of interest to mention. Butte, a city of possibly 45,000, most of whom represent miners' families, is planning to keep its library open day and night for the benefit of the night as well as the day shifts of workmen. In Denver the scope of the library work has been broadened to such an extent that books are sent all over the state, of course only in limited numbers. Why cannot all our city libraries send books all over their respective states? The cities are largely dependent on the people living on the farms and in the villages and towns. Although the cities receive nothing from the country for the support of their libraries, the cities are what they are because of the trade of the country. So the cities owe a debt to the country that in this way they can partially pay. In Portland, Oregon, a very important work is being done among the schools of Multnomah county. And a visit to the school department of the beautiful new library building will show one scores of boxes ready to be sent out to the schools in all parts of the county, in accordance with a specific plan for their circulation. How much more helpful is a flexible school collection than one that is fixed. The former represents well-chosen and up-to-date books, while the latter often represent books chosen by persons not qualified to purchase books for school purposes, and soon becomes, in the case of many of the books, useless for progressive school work. Flexibility is an absolute essential of a useful library. In the Salt Lake City Library especial emphasis is laid on both local and state history, as well as on all other matters that pertain to the welfare and progress of the state. The library has a very large collection of Salt Lake City and Utah books, well arranged and open to the public at all times. This valuable collection whose purpose and importance are emphasized in more ways than one is a great stimulus to all the people of the state that avail themselves of it. Then we believe most of the city libraries of the West are putting forth special efforts to make their varied resources serviceable to all the manifold interests of their respective sections of the country. In short, they are seeking to adapt themselves to the activities of the people, that all possible assistance may be

rendered the people in their work. The State University of Wyoming has a traveling library system that means much for the remote places of that large and thinly settled state. The work of the University Library together with the work of the many county libraries gives the country people of Wyoming library privileges possibly second to none in the country. These few cases are sufficient to give the reader some idea of what the states beyond the Mississippi are doing along library lines.

In recent years we have been redrafting many of our library laws. Most of us have formulated a library law that we should like to see by way of a beginning on the statute books of some progressive state. The key-note of our new law is co-operation. It provides for a well-equipped state library and a liberally supported library commission; for state-wide work on the part of the libraries of state universities, state normal schools and other state institutions that have libraries, as well as state-wide work on the part of the libraries of other colleges and universities and the larger cities; for county, township and municipal libraries; and for the co-operation of all these in supplying with the best possible library service all the people of the state.

One of the best-known phrases in the country to-day is "the conservation of natural resources." Beyond the Mississippi this is more than a phrase. It is more than a phrase because the people of the twenty-one western states call their rural population their greatest natural resource, although it is no more important to the West than the rural population of the whole nation is to the United States. The future of America is chiefly dependent on the development of this natural resource, in whose development the West is taking the initiative and making perhaps the most rapid progress. From the preceding paragraphs we see what is being done in the development of this natural resource in the library field.

E. I. ANTRIM.

"THE LIBRARIAN" VERSUS THE CATALOGER

"THE LIBRARIAN" of the Boston *Transcript* has replied to Miss Van Valkenburgh's "Plea for the cataloger" (published

in the September JOURNAL), defending his advocacy of a simplified catalog. The JOURNAL has taken pleasure in reading "The Librarian's" defence, and proceeds to share its pleasure in the friendly discussion by reprinting his arguments in full.

"The jolliest librarian in the United States writes a defence of the cataloger in the LIBRARY JOURNAL. Her plea is couched more in sorrow than in anger, as she relies to the charges made against catalogs and catalogers by a number of her colleagues. Humorously, perhaps, she heads the list of the offenders, who have been throwing stones at the catalogers, with the name of the least of them, to wit, "The Librarian" of the *Transcript*.

"That person, so Miss Agnes Van Valkenburgh affirms, has been accusing catalogers of sins which 'the best library schools' have ceased to inculcate. And this 'The Librarian' could easily have discovered. Moreover, he shows a surprising lack of comprehension of the worth of cataloging work as a whole.

"Now, the particular offences which were charged against catalogers in this column are ones which were found and may be found by anyone who looks on the printed catalog cards of such an eminently respectable and esteemed library as the Library of Congress in this year 1914. And if the best library schools have ceased to teach these things as correct and desirable, then it is too bad that the catalogers who make these cards could not be sent, for a term, to one of these reformed library schools.

"The two practices which are cited in Miss Van Valkenburgh's article as customs now out of date (one of them is 'underlining in colored inks') have never been mentioned here, for the simple reason that the writer of this had never before heard of them.

"Consequently, if 'The Librarian' has been preaching to catalogers for sins from which they have totally abstained for several years, it is not clear which these sins are, and so an apology would be—at this time—not particularly intelligent.

"Turning from this one phase of the subject, and considering the fact that the work of the library catalogers is admittedly, ac-

ording to their defenders, under attack from all sides, the question arises: Do the catalogers see any reason in this? Or do they attribute it all to a sort of wilful cussedness on the part of their colleagues? If certain fussy practices have been abandoned, did the reform come from within or was it brought about because a number of librarians became tired of the complexity of cataloging which the schools were teaching? Did the criticism of complex cataloging in the library press and elsewhere do anything toward the change?

"The article in the LIBRARY JOURNAL, to which we have referred, declares with some sorrow, that cataloging is falling into disrepute among librarians, and that it is harder all the time to get people to do cataloging work. But surely the criticism—if it had no real grounds—could not have brought this about. There must have been something wrong with the work, or with the way it has been carried on.

"The persons who use the catalog most—the reference librarians and scholars or specialists—are the ones who should be consulted when it is needed to find out whether the catalog is a success or not. So says the article in the LIBRARY JOURNAL, and in our opinion it points out in that sentence the fundamental trouble with library catalogs. They have been made to please other librarians, and a few more or less mythical 'scholars,' who are fancifully supposed to like complexity.

"The case is cited of a library whose chief librarian was an advocate of simple cataloging, but whose reference librarian confessed 'almost with tears' that the lack of a lot of detailed information on the catalog cards caused her to take many weary steps to the stacks. Yet the time thus lost and the shoelather thus worn out by the reference librarian might have been multiplied by five, and not have reached the sum total of the time and labor consumed—most of it quite unnecessarily—in the catalog room had these details been added to the cards.

"The criticisms of complex cataloging which are being made from so many different points have, very likely, different ends in view. Some librarians, it may be, dream of making the catalog popular, of

getting their readers to consult it with something else than loathing.

"This is a vain dream. Readers have never—save in the case of a small minority, been willing to look at a catalog. They have sometimes been driven to it—and with as much success as might be expected. The great majority give it a wide berth.

"Librarians frequently do not realize how little love is bestowed upon the card catalog. They are so used to hearing it described as 'the heart of the library,' to hear that the library should be 'built around' the catalog, and other professional cant phrases, that they simply close up their intelligences when they come to consider it. Let any such reflect for an instant how often any of their associates—whose work does not directly require it—ever consult the catalog. It is a notorious fact that chief librarians, in nine out of ten cases, avoid the catalog as if it were full of germs. It is good to be a chief librarian!

"No; there is nothing to be done which can win back the public to liking and using the catalog. You cannot win people back to a place they never occupied. The catalog is a necessary evil, and presumably has to stay, but not, it may be hoped, in its present prodigious size. Some of its grosser absurdities may be lopped off, and this will be done principally to liberate the catalogers from the useless work which takes up so much of their time, and shuts them off from things of real importance.

"The details of cataloging particularly deplored in this place have been: Elaborate collation, including pagination; the seeking out and recording of 'full' names of authors according to an arbitrary fashion; certain customs regarding noblemen's names and titles, regarding pseudonyms, and regarding oriental names. A considerable library experience, not only as a cataloger and reference librarian, but, more important, as an actual user of libraries, has convinced the writer that the present practice of the large catalogs in these matters is not only not helpful but actually a hindrance; not only not 'scholarly' but foolish, unnecessary and pedantic. Outside of a few professional catalogers he has never heard these practices referred to with anything but derision. Among bookmen, outside of

the library profession, among authors, book lovers, book dealers, collectors, journalists and others, he knows them to be one of the reasons why librarians have been considered 'queer'; considered not bookish folk, but folk devoted to codes of rules."

FIFTEENTH ANNUAL MEETING OF THE VEREIN DEUTSCHER BIBLIOTHEKARE, LEIPZIG, JUNE 3-5, 1914

THERE were various reasons why the fifteenth conference of the German Library Association which met in Leipzig the first week in June should have been the most largely attended of any in its history.

The city of Leipzig offers a great deal that is interesting to those whose occupation it is to collect books and place them within reach of others who need them. For generations Leipzig has been known as the most important city in Germany for the publication and distribution of books. In this city of 600,000 population, there are over 1000 publishers and booksellers, and one person in every fifty belongs in some capacity to the book trade. Here are located famous old publishing houses whose names are familiar to readers of German throughout the world; here are also those enterprising younger firms which by energy and enterprise have built up business connections in all countries. An opportunity to visit this book center could not fail to be attractive to the librarians, and the cordial reception and lavish hospitality extended to them by their Leipzig colleagues (at whose head stands Geheimrat Boysen, director of the University Library), by the members of the book trade, and by the city of Leipzig, were convincing proofs that the town was sincerely glad to welcome them.

But this year Leipzig was additionally interesting on account of the International Exposition of Book Industries and the Graphic Arts, which, having opened in May, was in full operation when the conference met. It is therefore not surprising that the register showed an attendance of 243, which is a record for these meetings. To an American, the preponderance of men at a library convention was striking; of the 243 in attendance, only 31 were

women; less than 13 per cent! A considerable number of librarians from foreign countries were present; from Austria-Hungary, 21; Switzerland, 11; Finland, 3; Sweden and Denmark were also represented, and there was a librarian there from the Bombay University Library. Three Americans were present: Theodore W. Koch, of the University of Michigan Library; Ernest Kletsch, of the Library of Congress; and Donald Hendry, of Pratt Institute Free Library, Brooklyn; the latter of whom had been delegated to convey greetings from the American Library Association, which he found occasion to do at one of the meetings.

An informal evening reception in the large hall of the *Buchhändlerhaus*, on Tuesday, June 2, to which ladies were also invited, afforded the first opportunity for old friends to meet and new acquaintanceships to be formed. Director Boysen and Oberbibliothekar Helssig of the Leipzig University Library welcomed the company, refreshments were served, and appropriate printed matter was presented to all present. The presentation of books and pamphlets was a feature of all the meetings.

A large lecture room in the University building was placed at the disposal of the conference, and here the papers were read and discussed. At the first meeting on June 3, at 9 o'clock in the morning, the University, through its prorector, and the city of Leipzig, through a member of the council, both welcomed the librarians, after which the president of the association, Schnorr von Carolsfeld, read the usual yearly report on the important events of the past year in the library field.

The program of this first meeting contained four papers:

"Systematic or mechanical shelving of books," by Dr. Leyh, of the Royal Library, Berlin.

"Martin Schrettinger and the shelving of books in the Munich Court and State Library," by Dr. Hilsenbeck, of that library.

"The subject catalog," by Professor Zedler, of Wiesbaden.

"The beginnings of the German library movement," by Prof. Fritz, of Charlottenburg.

As is not unusual on such occasions,

the program proved to be much too long, and only the first two papers could be presented. As will be noticed, these two papers treated of the arrangement of books on the shelves of a library. Dr. Leyh's paper treated the subject theoretically, and Dr. Hilsenbeck's was an interesting account of how a Munich librarian solved the problem a century ago. Dr. Leyh's paper had already been printed in expanded form in the *Zentralblatt für Bibliothekswesen*, the object in presenting it at the conference being that the matter might be freely discussed. The speaker's point of view was that of the librarian of a large and growing library, and he argued that a systematic shelving of books led to waste of space, owing to the room necessary to be reserved for new accessions, also the labor of moving books along from time to time as the reserve spaces became filled. The advantages of shelving books by classes were also considered. The long discussion which followed brought forth diversity of opinion, and interfered with a visit to the University Library, which had been scheduled for 3 o'clock in the afternoon. At 4 o'clock, the librarians following an invitation of the firm, assembled in the reception room of the great B. G. Teubner publishing house. The visitors were conducted, in groups of twenty, through every part of the vast establishment, and had opportunity to witness all the processes employed in the making of books on an enormous scale.

The evening of this first day was devoted to the great social function of the conference, a gala dinner given by the *Börsenverein* of the Leipzig book-trade. The tables were spread in the great hall of the *Buchhändlerhaus*, on the walls of which hang the portraits of many generations of celebrated publishers. Several hours were occupied in the serving of many courses and the making of many speeches. The A. L. A. delegate upon invitation acknowledged the hospitality of the *Börsenverein* in the name of all the foreign guests present. Between all the courses books and pamphlets were distributed. The menu cards were works of art and will be cherished as souvenirs of a fine dinner and a most enjoyable evening.

There were only two papers on Thursday's program:

"What I learned by the building of the library," by Dr. Geiger, head of the Tübingen University Library, and "On music libraries," by Prof. Schwartz, of the Peters Music Library, Leipzig.

Dr. Geiger spoke of the new building at Tübingen, and called attention to the views and plans in the Exposition. Prof. Schwartz spoke interestingly of music libraries, advocating the founding of music libraries for the people.

Dr. Zedler read his paper on the "Subject catalog," which had been crowded out of the program of the preceding day. The speaker laid down detailed rules, in 36 paragraphs, for a subject catalog. In the discussion which followed, the opinion seemed to prevail that the dictionary catalog could not replace the systematic catalog, but might be a useful auxiliary. Lack of time prevented the reading of Prof. Fritz's paper.

At the annual business meeting which followed, Geheimrat Boysen, director of the Leipzig University Library, was elected president for the ensuing year.

In the afternoon a visit was made to the book-jobbing establishment of F. Volckmar, a colossal business with clients in all countries, and employing 900 persons. After this, the Enders book-bindery was inspected, where astonishing things were performed by machinery.

For the evening, the city of Leipzig invited the librarians to a performance of an operetta, "*Der alte Dessauer*," in the New Theater. The performance seemed tame compared with Broadway offerings of that sort.

Friday, the last day of the conference, was devoted to the "Bugra," the name commonly given to the Exposition. The word "Bugra" is made up of the beginning letters of the words *Buch* and *Graphik*. At 9 o'clock on that day, Geheimrat Boysen read a paper descriptive of the Bugra. When the plan of the Exposition was first outlined, in 1912, Boysen was entrusted with the organization of a library section, which he accomplished with great success. His paper, therefore, was the very best kind of preparation for a visit

to the Exposition. After the reading of this paper, the A. L. A. representative extended a special invitation to the foreign librarians to inspect the American exhibit. When the party arrived at the Bugra, they were received by the president, Dr. Volkmann, and spent the rest of the day looking over the exhibits.

The final getting together was at a dinner in the restaurant of the Bugra, which was well attended. Many speeches were made. Especially interesting to Americans was the speech of Geheimrat Schwenke, of the Berlin Royal Library, in the course of which the speaker spoke warmly of his recollection of the cordial reception which he had met with from American colleagues. He spoke also of American library methods which he had studied, advising his hearers to look into American library methods, which they might do with profit. A wish was expressed that the entire library section in the Bugra might be kept together and permanently exhibited in some convenient place. In the course of the evening, Dr. Boysen brought a small American flag, on a standard, and placed it on the table in front of the Americans. Nothing could have been more cordial than the manner in which the Americans were received by their German colleagues.

The German Library Association has accepted an invitation to hold its next meeting in Vienna.

DONALD HENDRY, *A. L. A. Delegate.*

REPORT OF NEW YORK COMMITTEE ON LIBRARIES IN CHARITABLE, REFORMATORY AND PENAL IN- STITUTIONS

At the meeting of the New York Library Association at Ithaca Sept. 11 Miss Mary W. Plummer, chairman, read the report of the committee on libraries in state institutions, from which we print some extracts. Not long after the close of last year's meeting, Mr. Thomas M. Osborne, chairman of the State Prison Reform Commission, requested from the State Library information on these libraries.

"An investigation was made, and a report submitted to the commission, which covered the libraries in Auburn, Great Meadow,

Sing Sing, and Clinton prisons, the reformatories at Elmira, Napanock, and Bedford, and the state hospital at Matteawan. A list of questions was sent to each institution and the information gained through answers to these was supplemented by that acquired through visits of inspection in all cases but that of Elmira. In most of the institutions, the library quarters were found totally inadequate and unsuitable and apparently no special provision had been made for libraries. Book stock was found to be insufficient in quantity and in bad repair. And the weakest feature in all the libraries, with the possible exception of one or two reformatories, was found to be the selection of books. All of the libraries contain some excellent books, many that are good, but out of place in a prison library, many that are mediocre, and some that are absolutely bad. With the exception of two or three institutions, probably a third of the books could be discarded profitably. In the judgment of the inspectors there ought to be a much better and more representative supply of books in foreign tongues, so that no reader should be deprived of the privilege of reading in the language in which he reads with the greatest pleasure and facility.

"Very few tools, aids, and guides were found, and not all the necessary records are kept in any of the libraries. Methods were found to be so loose and confused that it was difficult to get correct statistics of use. Nowhere was there a librarian whose whole duty was the care of the library. Chaplains and superintendents give what time they can from their other and primary duties.

"The State Library, in view of these findings, made the following recommendations:

"1. The appointment of a state supervisor of prison and reformatory libraries, after a civil service test of library training and experience, the office being attached to the Education Department; also the appointment of a civilian librarian at one prominent institution to organize a thoroughly satisfactory library as an example.

"2. A general overhauling of the books and weeding out of the unfit.

"3. The recording of the remainder in a simple accessions book.

"4. Arrangement of books by subject ac-

ording to some standard system of library classification.

"5. Making of a card shelf list, from which an annual inventory should be taken.

"6. Author and title list, at the least, on cards; though an analytical dictionary-catalog would be preferable.

"7. Fully annotated printed finding-list of about 1000 volumes, for distribution to inmates in their cells, to be used in all institutions.

"8. Typewritten lists of new books in shops and other places where they can be consulted by the inmates.

"9. Circulation of current magazines to inmates.

"10. Selection of books in foreign languages.

"11. A few indispensable aids to book selection and annotated lists of juvenile books and books in foreign languages.

"12. Limited access to the shelves.

"13. Reading-room for trustworthy inmates.

"14. Closer censorship of novels.

"15. New books, carefully selected."

Following the receipt of this information, Mr. Osborne asked for recommendations in a form that could be presented to the governor. This report as submitted included a recommendation, as the first step toward necessary reform, for the appointment of a library inspector for the prison and reformatory libraries throughout the state, and the action of Iowa, Nebraska, Minnesota, Wisconsin, Oregon, and Ohio in appointing such supervisors is described. As a result of the committee's report, the state commission included in its report to the governor recommendations for the establishment in the penal institutions of the state of a thorough system of education under the administration of the state commissioner of education, and that the libraries in such institutions be at once improved and their administration be placed under the direction of the New York State Library.

No action has yet been taken on this part of the commission's report, but the superintendent of prisons and the State Library are on friendly terms, and the former assures the library that the prison department is ready at once, or as soon as a suitable inspector can be appointed or designated by

the library, to clothe him with all necessary authority to carry out the needed reforms and to continue to supervise the libraries in all the prisons. An effort will be made by the State Library to get authority and salary for such an inspector from the coming legislature. Meantime, it has helped to select books for several of the prison libraries during the past year, and is likely to be called on for more of this kind of assistance. The committee feels that the situation is distinctly hopeful.

THE DISTRIBUTION OF STATE DOCUMENTS

THE following recommendations presented by the Committee on Exchange and Distribution of State Documents, Mrs. M. C. Spencer, chairman, at the 1914 meeting of the National Association of State Libraries, were adopted by the association and a copy ordered sent to each state librarian:

First. It is the unanimous opinion of the committee that state exchanges should be distributed as generously and widely as

possible regardless of any lack of reciprocity on the part of the recipients.

Second. That so far as possible this distribution should extend to other institutions which might wish to use them.

Third. That the state library should be the distributing point of all state documents, and that enough copies of these documents should be given to every state library to satisfy all possible requests. This committee, however, would not encourage the distribution by state librarians of duplicate documents of other states.

Fourth. Recognizing the fact that "the trash of to-day is the treasure of to-morrow," it is the belief of this committee that state librarians should realize the importance of state documents from an historical as well as a legal standpoint, and should make their sets as complete as possible.

Fifth. That a standing committee be appointed from this association which during the year shall correspond with all state librarians for the purpose of increasing the exchange of state documents, gathering statistics, etc., and investigating conditions.

Sixth. That the Librarian of Congress be requested if possible to publish a check list of foreign documents which are in the principal libraries of the United States. This would be of great advantage not only to the state but to all the large libraries.

Seventh. That a list of states be prepared by the National Association of State Libraries in which should be included only the states which give all documents which are under their control; that this list be published in connection with the proceedings of the association.

Library Organizations

MASSACHUSETTS LIBRARY CLUB

The eighty-fifth meeting of the Massachusetts Library Club was held at Stockbridge, October 22-24, in connection with the Berkshire Library Club, the Western Massachusetts Library Club and the Free Public Library Commission. All the meetings but one were held in the High School.

Mr. R. R. Bowker, editor of the LIBRARY JOURNAL, and president of the Stockbridge Library Association, welcomed the club. In most happy vein he invited all visitors to enjoy

PARENTS' AND TEACHERS' ROOM, MAIN LIBRARY, CLEVELAND

the natural beauties of Stockbridge, and outlined for them the interesting historical and literary associations of the place; he mentioned as deserving particular attention a collection of books in the library written either in or about Stockbridge, or by people of the town.

Rev. George N. Holcomb followed Mr. Bowker with an address upon "Rural literature." The speaker limited the title to writings which are artistic in form and expression, which make their appeal primarily not to the intellect, but to the emotions and the will, and which aim to interpret nature or to idealize country life or rural vocations. He treated the subject historically, tracing the rural idea in literature from early Greek and Roman times to the present.

Mr. J. Randolph Coolidge, Jr., opened the session, Friday morning, by the reading of a letter from Mr. Lane, of the Harvard College library. Mr. Lane again called the attention of the club to the union list of periodicals of Boston and vicinity being edited by Mr. Homer. He expressed the hope that many libraries would further the work of Mr. Homer by subscriptions.

Mr. Fleischner showed a copy of the new edition of the "Catalogue of architectural literature" published by the Boston Public Library. It contains many new topics—city planning, village improvement, restoration of buildings, expositions—which make it a valuable bibliographical tool for libraries, both large and small.

Mr. Wellman, as president of the A. L. A., and Dr. Hill, of Brooklyn, as a visitor, were officially greeted by the president of the club and made fitting reply.

Mr. Henry D. Johnson, editor of the *Graphic Art*, who read the first paper on "American printing of to-day: its achievements and its faults," divided the subject into two parts—book and commercial printing. He brought before the club some of the general features of the printing industry of to-day: 1—The dominant note of beauty and comfort prevailing in the buildings of modern printing and publishing houses. 2—The great improvement in illustrations and commercial printing constantly taking place. 3—The status of book printing. In the thirty thousand publishing and printing offices of the United States, there are hardly a score pre-eminent for the high standard of their book-making. This is due partly to the fact that comparatively few employes in such shops are by training and interest qualified for book-making, and partly to the indifference to craftsmanship on the part of the publisher. 4—The enormous de-

velopment of commercial printing, beginning with the day of the handbill and the market report and coming down to our own period of the mail-order catalog, which sells literally millions of dollars worth of goods a year. 5—The need for thorough training in historic ornament and classic lettering to be applied to industrial design. The requirement is not for a greater originality and versatility on the part of the designer, but a personal expression resulting from instruction as laid down above. The best letterers we have to-day, such as Goudy, Hapgood, Dwiggin, Cleland and Edwards, are students of historical design and of classic lettering. 6—The educational steps which have been taken in printing. Since the apprenticeship system has lapsed there has been nothing to take its place until recently, when printing classes have been started in grammar and high schools, which contribute somewhat to advancement in the craft. In Boston, New York, Chicago and Pittsburgh, courses in printing and an apprenticeship system have been successfully combined. In the same cities a zest for better printing is shown by the organization of craftsmen's clubs. Since the men composing these associations will naturally turn to libraries for books on their subject, the best must be gathered here for them. Mr. Johnson recommended the following books on lettering and printing, designating Mr. Brown's book on "Letters and lettering" as the best single volume.

The practice of typography. By Theodore L. Devine. Four vols. Published by The Century Co., New York. Each a 12mo volume of from 400 to 500 pages, with full indices. Price per volume, \$2.00 net. (Postage, 12 cents in U. S.) The four titles are: "Plain printing types," "Correct composition," "Modern methods of book composition," "Title pages."

Alphabets, old and new. By Lewis F. Day. Published by Chas. Scribner's Sons, New York. 12mo, 219 illustrations. Price, \$1.25; postage, 10 cents.

Principles of design. By G. Woollescroft Read. Published by Chas. Scribner's Sons, New York.

Letters and lettering. By F. C. Brown. Published by Bates & Guild Co., Boston. 234 pp.; size, 5 3/4 x 8 3/4 inches, bound in buckram. Price, \$2.00. An illustrated treatise, containing two hundred and ten examples, a complete and varied collection of alphabets of standard and modern forms, so arranged as to be most practically and conveniently useful to designers, architects, craftsmen, and all who have to draw letter-forms.

Writing and illuminating and lettering. By Edward Johnston. Published by Macmillan Co. 8vo, cloth. Price, \$2.00.

Book of alphabets for use in schools. By H. W. Shaylor. Published by Ginn & Co., Boston. Pamphlet, 8 x 6 1/2 inches, 24 pp. Price, 10 cents a copy; \$1.00 a dozen.

Proofreading and punctuation. By A. M. Smith, Philadelphia. Published by the author. 187 pp., cloth, illustrated. Price by mail, \$1.10.

Of the decorative illustration of books old and new. By Walter Crane. With numerous illustrations. 12mo. \$2.00 net. A very useful résumé of book illustration from the earliest times, with numerous reproductions of the best examples.

Lettering in ornament. By Lewis F. Day. An enquiry into the decorative use of lettering, past, present, and possible. With 200 illustrations of old and modern work. 12mo. \$2.00 net. Contains very useful examples of old lettering and wood-cut initials from Mss. and early printed books.

The second part of Mr. Johnson's talk consisted of running comments on his exhibit of commercial printing and the best in American book-making.

"Quest of the type ideal," by Mr. William Dana Orcutt, of the Plimpton Press, was closely allied to the foregoing paper. He took the subject back to the beginnings of printing, and explained the evolution of type designing from the earliest times to the present. With the aid of the stereopticon, he showed examples of the famous type faces cut by Schoeffer, Jensen, Aldus, Etienne, Plantin, Elzevir, Baskerville, Didot, and William Morris, pointing out their characteristics and showing the rise and fall in the degree of excellence as indications of the culture of the period. A pleasing feature of Mr. Orcutt's talk was a recital of his personal experiences at the Laurentian Library in Florence in designing the "humanistic type." "It seemed strange," Mr. Orcutt said, "that no one had ever used the hand lettering of the original manuscripts as the basis of a type, being content to base new faces on old types, themselves based upon hand lettering of lesser excellence."

In the afternoon the meeting was held at the log cabin of Mr. R. R. Bowker, where the program was carried out in connection with the reception and tea. As the day was warm, the meeting was held outdoors in the pine woods.

Mrs. Mary E. Root, children's librarian of the Providence (R. I.) Public Library, spoke on "The negative and the positive side of the library work with children; or, Is there a backbone in library work with children?"—the latter half of the title being added as a concession to the critics of children's work. While the latter have ceased to call it sentimental, there is still a question as to whether it is overdeveloped. A recreation survey conducted in Providence in 1912 showed 25,000 children patronizing the moving pictures, 10,000 the poolrooms, and 8,000 the dance halls in one week. A questionnaire conducted by the schools brought to light who is supplying the reading besides the library and what is its character. Probably Alger's books sell better than those of any other one juvenile author. He has seven publishers, and his books can be bought for from ten cents to one dollar per copy. The need is for more good books in cheaper editions. The Boy

Scout library is a fine beginning, but good books for less than fifty cents should be found on the market. Mrs. Root has had remarkable success in conducting a "story hour," where she read aloud to a group of children a book, chapter by chapter, from week to week. To make 100 boys understand one fine book is better than charging 1,000 books simply to run up the circulation.

Mr. Lewis continued the subject of work with children, explaining an outline prepared by the Western Massachusetts Library Club (to be printed in full in the JOURNAL next month), covering the arrangement of books, the catalog, and reference books. A general discussion followed the presentation of this subject. Miss Jordan, of Boston, suggested that the value of the outline would depend upon the co-operation of the teachers. She also thought it advisable to include in the hour's work some explanation of the use of indexes and tables of contents in an ordinary book. Cambridge has 600 high school freshmen in different divisions; they come to the library for two periods five days in the week for a fortnight. At Springfield they cover fewer subjects and more simply. The children learn to use the catalog and answer five questions from books found in their room.

At the evening meeting there were two sections. At one, Mr. Walter R. Briggs, librarian of Trinity College, Hartford, Conn., spoke on the "Use and care of maps," and Mr. Archibald Cary Coolidge, director of the Harvard University Library, spoke on "Some problems of a university library." At the other, the local secretaries related the experiences they had had in their work. Miss Louisa M. Hooper being unable to preside, Mr. Fison conducted this meeting.

Mr. Briggs thinks so much has been done in the way of general indexes, such as Poole's, that it would be both possible and desirable to compile a fully annotated list of atlases and maps in print, together with an index to the best maps in recent books and periodicals, and to keep up a yearly supplement of the same. But even if this is not done, he says, "we have not extracted from the books upon the shelves of our libraries all the 'by-products' which they are capable of furnishing and for which there is popular and genuine demand," and we can go a long way toward solving the problem by adding to the catalogs under the subject of maps, many more cards than is now the practice, by adopting some uniform method of more fully describing the maps, and by exhibiting them on a revolving map rack.

Mr. Coolidge, seconding Mr. Briggs's suggestions for a usable map collection, added that libraries ought to acquire old county maps, which are invaluable for future as well as present use.

The first of "Some problems of a university library" is the financial one. "It is not a question of making ends meet, but of making too many ends meet," Mr. Coolidge says. Then comes the question of providing duplicate copies, of having an excellent reference librarian, of keeping abreast of the times, of how thoroughly books in foreign languages should be cataloged. Last, but not least of the problems of a university library, is the one of lending books. It is flattering to be asked for rare books, but often they are gone when they are most needed on the shelves of the home library—and sometimes it is hard to feel that it is more blessed to give than to receive.

Mr. Fison heard the reports of the various local secretaries appointed by the Free Public Library Commission. These revealed a number of novel methods of dealing with the question involved, which is, to bring the smaller libraries together in groups where they may talk freely without feeling the constraint imposed by large numbers of people, and without being obliged to go far and be at great expense. In some instances the largest library of the group made a sort of social affair of a meeting, serving tea or other refreshments, discussing the problems of the smaller libraries at the same time. Some had meetings to which outside speakers were bidden. Others showed their own resources, discussed new books, saved up typical questions to be answered. Again, other secretaries have simply made neighborly calls. Inter-library loans have been established as the result of meetings. Such gatherings will doubtless serve as a clearing-house for ideas, and an incentive to enthusiastic work upon the part of all concerned.

At the end of the Friday evening meeting, Mr. Moulton moved a vote of thanks for the kindly reception by the Stockbridge Library Association, Mr. and Mrs. Bowker and the hotel management, and so filled was everyone with a sense of friendly hospitality enjoyed and of general pleasure in the entire meeting, that a blanket motion to cover all exigencies was proposed by the president and heartily acceded to by all.

Saturday morning's session, the Free Public Library Commission Conference on "How some interesting problems have been practically solved," was presided over by Mr. O. C. Davis, of Waltham. Miss Abby L. Sargent, of Med-

ford, said her aim this year had been to draw children from the cheap picture shows. Accordingly, the library bought a radioticon and screen for approximately \$30 and began work last December with a presentation of "The Birds' Christmas Carol." From that time on, stories in series were conducted. Travel talk afternoons were followed up with the circulation of books on the subject. Industries of Medford, logging and shipbuilding, care of and kindness to animals, were other afternoons' entertainments. This year, Miss Sargent expects to try one long story continued from week to week, since desultory work merely produces "mental indigestion." Mr. Evans, of Woburn, thinks the services of many people who cannot afford to contribute money to the library can be had for the asking in a small community. He made most practical and economical suggestions for covering circulating magazines, for keeping newspapers when a library had no newspaper room, and disposing of other vexing matters of a like nature. Miss Thurston, of Leicester, spoke of the need in her library of a lecture room, and how she can make over what is now a museum for that purpose. She spoke, too, of getting a group of librarians together to solve the problems of book repairing, under Miss Tillinghast's direction. Miss Sornborger, of Hopedale, told of the Victrola concerts given at her library Sunday afternoons. People are invited to bring their own records, and one-twentieth of the population have so far cordially responded. The latter part of Saturday morning, Miss Tillinghast gave her book-binding demonstration.

EUGENIA HENRY, *Recorder.*

WYOMING LIBRARY ASSOCIATION

Six librarians and library trustees of Wyoming met in Laramie, Wyoming, on October 6 to discuss Wyoming library affairs. This was the first meeting of librarians ever held in the state. The meeting had been arranged by Mrs. William Snow, a trustee of the Basin Public Library, and chairman of the Library Extension Committee of the State Federation of Women's Clubs, and Dr. Grace Hebard, librarian of the University of Wyoming. Mr. Chalmers Hadley, librarian of the Denver Public Library, was invited to participate in these meetings and did so as the representative of the American Library Association.

The first meeting was held in the auditorium of the Laramie Public Library building. Mrs. Snow presided and Miss Clark, candidate for state superintendent of public instruction, acted as temporary chairman.

Mr. Hadley was asked to explain the workings of a state library association and to tell what benefits to the library interests of Wyoming such an association might bring.

During the meeting about fifty members of the Federation of Women's Clubs, many of whom were interested in the library development of the state, and whose clubs were back of the library activities, joined the meeting.

Following Mr. Hadley's address, it was decided by unanimous vote to organize a Wyoming Library Association, and a committee on constitution and by-laws was appointed consisting of Dr. Grace Hebard, Mr. Hadley, Mrs. Gibson Clark of Cheyenne, chairman of the Federation's legislative committee, Mrs. N. E. Corthell of Laramie, Mrs. Merritt of Douglas, and Mrs. William Snow.

Dr. Hebard then discussed the activities of the University of Wyoming in sending out traveling libraries over the state. Dr. Hebard has the department of political economy at the State University, but for many years she has also served as librarian at the University, which has a library containing some 36,000 volumes. Owing to the call for books from isolated communities in the state, she started eleven traveling libraries from the University and will continue to send them out until a Library Commission can take charge of this phase of work.

A second meeting of librarians and trustees and those interested in library work was held on the following day. Dr. Hebard presided and Mr. W. S. Ingham, librarian of the Laramie Public Library, was made secretary. Among those present at this meeting was Dr. C. A. Duniway, president of the University of Wyoming, who gave a short talk on the library needs of the state. He said that one of the hindrances to the best library work came from the fact that in Wyoming the three library trustees for each public library were appointed by their respective county commissioners and that these commissioners frequently failed to appreciate the proper qualifications for successful work by library trustees. Dr. Duniway then presented a resolution, which was passed, and which will be sent as a communication from the Wyoming Library Association to all the county commissioners in the state. The resolution requested the county commissioners, in naming trustees of Wyoming public libraries, to appoint only those who by their interest in libraries, or experience, were fitted to fill successfully the position of trustee.

In discussing library support, Mr. Hadley stated that the maximum county tax of one-fourth of a mill for library purposes, which

was designated by the Wyoming law, was too low; and advocated that this amount be raised to a tax of a mill for library purposes. The association decided to take up this matter of increased taxation for library support. Mr. Holiday, president of the Laramie Public Library board of trustees, stated that in his opinion the matter should be brought before the Wyoming legislature and the law amended to increase library appropriations. He called attention to the immense territory that each public library in Wyoming had to serve. The Wyoming library law makes each public library in the state a county library. As the distances are immense, it means that library service is expensive. The Laramie Public Library, for instance, is the county library of Albany county, which is 120 x 70 miles in extent, an area of 8400 square miles.

Mrs. Gibson Clark of Cheyenne, chairman of the legislative committee of the Federation of Women's Clubs, stated that library work was backward in many Wyoming libraries because of the untrained librarians in charge of work. She urged that the new association take its stand for the appointment only of trained librarians.

The committee on the constitution then submitted a report which was adopted unanimously. An interesting feature in the by-laws was a provision that the chairman of the library extension committee of the Federation of Women's Clubs should be ex-officio a member of the executive committee of the Wyoming Library Association.

Twenty-one persons then signed the constitution and became charter members of the Association. Dr. Duniway was one of these. Officers for the ensuing year were elected as follows: President, Dr. Grace Hebard, librarian University of Wyoming; vice-president, Mrs. William Snow, trustee of the Basin Public Library; secretary-treasurer, Mr. J. S. Ingham, librarian of the Laramie Public Library.

The members felt enthusiastic over the formation of the association. It was decided to meet annually and to join the Colorado Library Association in bi-state meetings when this was feasible. The officers of the association believe that the librarians of the state will attend the state meetings, although the distances are very great. One librarian present who lived nearer Laramie than many others, stated that the round trip fare to the library cost her \$60 and that over 24 hours were spent in the journey on the train.

On the evening of the 7th, the newly organized Library Association met with the general Federation of Clubs, when Mr. Had-

ley spoke on the work of a public library commission and its influence on the state.

At a meeting of the executive committee of the association following this address, it was decided that until a Library Commission could be established by the state legislature, the University of Wyoming should be asked to permit Dr. Hebard to devote some of her time to acting in an advisory capacity for librarians of the state. At present there are seventeen libraries in the state of Wyoming. A resolution was passed asking the club women present to request the library trustees in their respective towns, to see that their librarians join the Wyoming Library Association and to send them to its annual meetings.

MINNESOTA LIBRARY ASSOCIATION

The twenty-second annual meeting of the Minnesota Library Association was held in Little Falls, Tuesday, Wednesday and Thursday, September 15 to 17, 1914. Arriving librarians and guests of the association were met at trains by a cordial receiving committee of Little Falls citizens and were taken in automobiles to the homes, where they were entertained during their stay in the city.

An informal reception was held, Tuesday afternoon, in the library, where tea was served by the staff, and after registration, members of the association were taken for an automobile ride through the town and adjoining country. In the evening a dinner was served by the ladies' club of the Congregational Church in the church gymnasium to ninety guests. An address of welcome was given by Mrs. L. D. Brown, vice-president of the Little Falls Library Board, to which the president of the association, Miss Martha Wilson, responded.

The address of the evening was given by Dr. William Dawson Johnston, librarian of the St. Paul Public Library, on "The margin of leisure." He classified people generally in two classes—one class comprising those who are so busy that they have no time for anything but themselves and their own pursuits; the other class, including those who, through wiser expenditure of their moments, find time to admit the performance of many things outside of their professional limits. Dr. Johnston recommended gardening or the pursuit of nature study as a means of contrast and relief from the confinement of library work. His second recommendation for the use of leisure was for the librarian to inform himself of the contents of the volumes on the shelves of the library. This, he pointed out, is the most profitable means of recreation for the librarian. At the conclusion of the evening

program, the visiting librarians were guests of Mr. C. A. Weyerhaeuser and Mr. R. Drew Musser at a special performance of the photoplay, "Hiawatha," at the Victor Theater.

On Wednesday morning the second session was held. Miss Baldwin spoke of a teachers' pension bill which is to come before the legislature at the next session. School librarians are not included in this bill, and at Miss Baldwin's suggestion, a committee, consisting of Miss Baldwin, Miss Dorothy Hurlbert and Mr. R. L. Walkley, prepared a resolution which was adopted by the association, that school librarians should be eligible for teachers' pensions, according to the standard of service and training. A copy of this resolution will be sent to the Minnesota Education Association.

A tentative suggestion was made by the president that the secretary of the library committee be made *ex-officio* permanent secretary of the Minnesota Library Association, but no action was taken on the matter.

The program of the morning followed, the main theme being "The library and public recreation." As recreational adjuncts, Miss Dorothy D. Hurlbert, librarian of the Moorhead Normal School Library, advocated the use of moving pictures in the library. Miss Hurlbert has investigated the film-making concerns, their educational or otherwise advantages, their use at the present time in libraries and other educational and scientific institutions, and strongly recommends the use of moving pictures either through the State Library Commission or independently. Miss Stella Stebbins and Miss Ethel Wright, of the Virginia Public Library, told of the use of the Victrola in that library. Miss Margaret J. Evans, of Northfield, gave a talk, entitled "After all—books," maintaining that there is nothing so truly recreative as reading for pleasure, the reader having as reward not only the accretion of knowledge and strength, but also the friendships of those great characters who live in the pages of books. "How to tell a story" was outlined by Mrs. Gudrun Thorne-Thomsen, of Chicago, who advocated the grouping of children by age, and advised small groups. In answer to a question, Mrs. Thomsen stated that it was better primarily to tell the story; but in stories where the language of the author is essential, rather than to commit it to memory, it is better to read it aloud. The great art of the story-teller is for her not to be noticed in the telling, to forget everything but the children and the story.

The topic of the afternoon was "The library and the club." The first subject, "Program-

making for clubs," was discussed by Miss Margaret Palmer, librarian of the Chisholm Public Library. Mrs. Margaret Baker, of the Agricultural Extension Division of the University of Minnesota, spoke on "The town library and the country club," telling of the work done in the department for rural communities and emphasizing the value of clubs and co-operative industries. She also described a model rural community in miniature, which was to be exhibited the following week at the Duluth Industrial Exposition. "Women's clubs and the recreation movement" was the subject of an inspiring talk by Mrs. Clarence L. Atwood, president of the Minnesota Federation of Women's Clubs. Mrs. Atwood defined the library as the first friend of the federated clubs of this state, stating that the foundation for all the clubs is study, and that first aid and co-operation have always been found at the library. Mrs. Atwood stated that there are at present 17,000 women enrolled in the various federated clubs of the state, and asked the co-operation of the libraries with these women in obtaining the passage of measures providing for (1) conservation of forests, especially in the northern part of the state; (2) good roads: the creation of a revolving fund to be used in road-making; (3) women's reformatory; the same opportunity for delinquent women that is given to girls in the reform school at Sauk Center. Mrs. Atwood made an earnest plea for the conducting of public amusement through libraries and schools. The afternoon session was closed with a story hour for the children of Little Falls by Mrs. Thomsen, and a trustees' round-table conducted by Mr. L. R. Moyer, of the Montevideo Library Board.

The evening meeting was held in the auditorium of the high school building. A group of ballads was sung by Mrs. C. A. Weyerhaeuser, accompanied by Mrs. R. Drew Musser at the piano.

The address of the evening, "The educational value of literature for children," was given by Mrs. Thorne-Thomsen. She deplored the story with a moral or truth attached, a sermon in disguise, saying that the child will not have that kind, and that it is hard to realize how children analyze even our most moral stories. She also objected in no uncertain terms to the teaching of nature by means of the well-known, belittling stories which make its wonders a mixture of human emotions and not a science; also the use of the finest of our literature to teach grammar. She advocated plays for children as a means of directing the imagination.

Thursday morning an experience meeting was conducted by the president. The first topic, "Helps in meeting the demands of the day," was discussed by Mr. A. D. Keator, of the Minneapolis Public Library. Mr. Keator outlined a large number of helps for the librarian in the way of special publications, speaking particularly of trade catalogs, informational booklets put out by manufacturing concerns, railroad and steamship advertising material, and state and municipal reports, besides the publications of various societies and institutions which may, in many cases, be obtained without cost. Bliss' Encyclopedia of Social Reform, in its discussions on special topics, often notes the name of the society or institution where more detailed information may be obtained, and a pamphlet compiled in 1911 for the New Jersey Library Association by the Newark Public Library, is entitled "Social questions of the day; selected sources of information." Mr. Keator mentioned a successful display of seed and nurserymen's catalogs in the Minneapolis Library in the spring, which was much used and appreciated. Emphasis was laid on newspaper clippings, and in addition, Mr. Keator advised making use of duplicate copies of good news-magazines like the *Outlook*, *Literary Digest* and the *Independent* for supplementary clipping.

Social conditions governing the school and library were discussed under the head of "School relationships," by Miss Frances Sawyer, of Keewatin; Miss Eva Davis, of Sauk Center; and Miss Stella Stebbins and Miss Ethel Wright, of Virginia. While due emphasis was laid upon the economy in administration, the main argument advanced was that the school and library formed the ideal nucleus for social center activities in the small towns and that by means of the library and through the school the librarian is given the opportunity to reach and direct the children in their reading.

An administration question-box, conducted by Miss Baldwin, disclosed a number of interesting features of library work throughout the state. The new Chisholm Library has a room devoted to games which is used by various groups of boys in charge of a market; also by groups of girls from department stores, etc.; Miss Wiley, of Hibbing, reported a library booth at the county fair; the Minneapolis Library, by judicious advertising, secured a very successful circulation of books on the care of babies; the Two Harbors Library reported very satisfactory work with girls' clubs; the Fergus Falls Library had great success with the story hour during the past year.

Mankato Library plans to use library fines to pay for bringing art exhibits to the library.

The resolutions committee presented resolutions of thanks to the citizens of Little Falls for their hospitality, and to all officers and speakers for the excellent program provided.

The nominations committee made the following report: President, Dr. William Dawson Johnston, St. Paul; vice-president, Miss Alice Farr, Mankato; secretary, Miss Clara F. Baldwin, St. Paul; executive committee, Miss Mabel Newhard, Virginia; Mr. L. R. Moyer, Montevideo.

A suggestion was made by the president that a committee be appointed to revise the constitution of the association. On motion, duly seconded and carried, this matter was referred to the incoming executive committee.

CLARA F. BALDWIN, *Secretary*.

NEW YORK LIBRARY CLUB

The first meeting of the year was held in the auditorium of the Young Women's Christian Association, 7 East 15th Street, New York City, October 8, 1914, with President Stevens in the chair and 128 members and guests present.

Four new members were elected, and the president then made a brief statement expressing pleasure at the union of the Long Island Club with the New York Library Club and welcoming the new members.

Mr. Donald Hendry, who was in charge of the A. L. A. exhibit in the International Exposition of the Book Industries and Graphic Arts at Leipzig in June and July, read a paper on Leipzig and the Exposition. After speaking of the importance of Leipzig as a publishing center and of the "Deutsche Bücherei," an institution founded in 1913 which is to contain one copy of every book published in Germany and of books in the German language published in other countries dating from 1913, Mr. Hendry described the "Städtische Büchereien," a system of four public libraries recently installed, and the "Leipziger Arbeiterbildungsinstitut" a private library enterprise with sixty branches which are patronized particularly by the Social Democratic party. Their circulation is very large and those who act as librarians and assistants give their services voluntarily.

Mr. Hendry gave an informal report of the annual meeting of the Germany Library Association, which he attended, and a general description of the scope of the Exposition.

In the library section German university libraries were strongly represented. The Berlin Royal Library showed a section of its reading-room and cases of printed catalog cards.

Leipzig University Library exhibited a charging-desk and there was a model of the Royal Library in Florence. In the A. L. A. section the exhibit did much to acquaint the library world of Europe with the extent of library work in America and with the methods employed. The children's room, fully equipped, was one of the most popular features.

The resignation of the officers elected in May was read. Their action was taken as a result of the consolation of the New York and Long Island clubs, which by forming a new club rendered their election invalid. The following officers were elected to take their places: President, Mr. Frederick W. Jenkins, librarian, Russell Sage Foundation Library; vice-president, Miss Harriot E. Hassler, Queens Borough Public Library; secretary, Miss Eleanor H. Frick, librarian, American Society of Civil Engineers; treasurer, Mr. Robert L. Smith, Brooklyn Public Library.

Mr. Jenkins on assuming the chair made a short address and said in part that the diversity of interests on the part of members in both the Long Island Library Club and the New York Library Club was now a thing of the past; that the two clubs were now one, and that there should be a desire to do twice as much because of our enlarged membership. He stated further that there was an opportunity to make the New York Library Club not only one of the largest but one of the most effective clubs. Becoming better acquainted one with another, and making the *Bulletin* representative of the club, were two suggestions to this end.

ELEANOR H. FRICK, *Secretary*.

BAY PATH LIBRARY CLUB

The Bay Path Library Club held its autumn meeting at the Damon Memorial Public Library, Holden, Mass., Oct. 1. The club received a very hearty welcome from Mr. W. L. Williams, trustee of the Holden Library.

After a short business meeting, the "Question-box" was opened by Miss Florence E. Wheeler, and the members of the club joined in a most informal discussion of library problems. It was such a practical method of solving problems, it will undoubtedly be repeated at future meetings.

Miss Abby B. Shute, librarian of the Free Public Library at Auburn, Mass., gave a very interesting paper on the work with children in a small library. "How the public libraries may assist in the work of the extension service of Massachusetts Agricultural College" was taken up by Prof. Laura Comstock, of the department of home economics. Prof. Comstock not only pointed the way to help the

M. A. C. work, but she gave many practical suggestions in regard to the best books to purchase, and told of many ways in which the college extension work could be of service to the libraries.

Mr. Orlando C. Davis, librarian of the Waltham Public Library, read a paper on "The library and the general morality of a community." The paper was full of very broad ideas, and was a splendid inspiration to all library workers.

FLORENCE E. WHEELER, *Secretary*.

Library Schools

NEW YORK STATE LIBRARY SCHOOL

Forty-seven students are enrolled for the school year, which began Oct. 7. Twenty of these are in the senior and 27 in the junior class. Six of those listed with the former class are members of earlier classes who are continuing their school work in connection with their service as members of the State Library staff. Fifteen of the 20 seniors and 18 of the 27 juniors have had some library experience. The European war and the resulting financial stringency in many parts of the United States has caused an unusually large number of admitted candidates to postpone entrance until 1915. One European student has been unable to attend until conditions are more stable, and in one case an applicant under consideration has gone to the front as a volunteer in the allied armies. One of the present senior class was in Europe at the beginning of the war, but was, fortunately, able to return without serious delay. A list of the students follows:

Class of 1915

Bailey, Beulah, Troy, N. Y., B.A., Cornell University, 1912; indexer, Shaw, Bailey & Murphy Law Offices, Troy, July-Sept., 1914.
 Clafin, Helen Mildred, Attleboro, Mass., B.A., Smith College, 1913.
 Cobb, Mary Elizabeth, Albany, N. Y., B.A., Syracuse University, 1912; assistant, New York State Library, Sept., 1913-date.
 Colwell, Emily Kerr, Granville, O., Vassar College, 1911-12; B.A., Denison University, 1913; student assistant, Denison University Library, Oct., 1912-Feb., 1913.
 Gilchrist, Donald Bean, Franklin, N. H., B.A., Dartmouth College, 1913; student assistant, Dartmouth College Library, 1910-13.
 Grant, Thirza Eunice, Cleveland, O., B.A., Oberlin College, 1907; Western Reserve University Library School, 1907-08; assistant, Cleveland Public Library, July-Dec., 1908; instructor, Western Reserve University Library School, Jan., 1909-Aug., 1913; assistant in charge of reference work, Michigan Normal College Library, Ypsilanti, Sept., 1913-Jan., 1914.
 Greene, May, Albany, N. Y., B.A., Wellesley College, 1910.
 Hall, Anna Gertrude, Albany, N. Y., B.A., Leland Stanford Junior University, 1906; student assistant, Stanford University Library; assistant, catalog and

accession departments, Stanford University Library, 1906-13; cataloger Lane Medical Library, San Francisco, 1913-14; organizer, Salinas (Cal.) Public Library, 1909.
 Hallsted, Sarah, Waterloo, N. Y., William Smith College, 1909-10; B.A., Mt. Holyoke College, 1913; student assistant, Mt. Holyoke College Library, 1912-13.
 James, Helen Craig, Albany, N. Y., B.A. Vassar College, 1912; assistant cataloger, W. H. Bartlett' private library, Vermejo Park, N. M., Sept., 1914.
 Lawson, Mildred H. Troy, N. Y., Pd.B. New York State Normal College, Albany, 1907; B.A. 1912; organizer, Sabbath school library, Temple Beth Emeth, Albany, Sept., 1914.
 McCollough, Ruth Dorothy, Franklin, Ind., B.A. Franklin College, 1913.
 McMillen, James Adelbert, Albany, N. Y., B.A., University of Missouri, 1913; assistant and librarian, Maryville (Mo.) Public Library, 1906-09; assistant, University of Missouri Library, 1910-13; cataloger, reference department, New York Public Library, July 1-Sept. 30, 1914; assistant, legislative reference section, New York State Library, Oct., 1914-date.
 Norton, Margaret Cross, Rockford, Ill., Rockford College, 1909-12; Ph.B. University of Chicago, 1913; M.A. 1914.
 Pidgeon, Marie Kiersted, Saugerties, N. Y., B.A. Vassar College, 1912; student assistant, Vassar College Library, 1912; assistant, New York State Library, Sept., 1913-date.
 Sherrard, Mary Campbell, Albany, N. Y., B.A. Wilson College, 1900; assistant, reference section, New York State Library, Oct., 1914-date.
 Thompson, Elizabeth Hardy, Albany, N. Y., B.A. Smith College, 1908; New York State Library School, 1911-12; temporary cataloger, Bay City (Mich.) Public Library, July, 1912-July, 1914; assistant, New York State Library, Sept., 1914-date.
 Thompson, Ruth Elizabeth, Denver, Colorado; New Hampshire State College, 1908-09; B.A. University of Denver, 1912; assistant Denver Public Library, June, 1912-date.
 Vasbinder, Lida C., Albany, N. Y., B.A. Elmira College, 1901; apprentice assistant, Binghamton (N. Y.) Public Library, Mar.-May, 1909; New York State Library School, 1909-10; cataloger, Waterloo (N. Y.) Public Library, July, 1910; assistant, New York State Library, Feb., 1912-date.
 Ver Nooy, Winifred, Albany, N. Y., Ph.B. University of Chicago, 1912; apprentice, University of Chicago Library, Oct., 1912-Sept., 1913; loan desk assistant, July, 1914.

Class of 1916

Beatty, M. Irene, Oil City, Pa., B.A. Allegheny College, 1913; apprentice course, Oil City Carnegie Library, 1909.
 Bircholdt, Harriet Nebe, Buffalo, N. Y., B.A. Cornell University, 1911.
 Bronk, Clara Louise, Amsterdam, N. Y., B.A. Mount Holyoke College, 1912; substitute, Amsterdam Free Library, July, 1913-Sept., 1914.
 Brown, Ruth Lydia, Montpelier, Vt., B.A. Smith College, 1914; apprentice, Kellogg-Hubbard Library, Montpelier, summers of 1913, 1914.
 Carver, Helen, Cambridge, Mass., B.A., Radcliffe College, 1911; B.S. Simmons College, 1913.
 Castle, Carolyn May, Rochester, N. Y., B.A. University of Rochester, 1913; assistant, Rochester Public Library, 1913-14.
 Dart, Izella M., Minneapolis, Minn., B.A. University of Minnesota, 1907.
 Driscoll, Marie Monica, Reading, Pa., B.L. Trinity College, Washington, D. C., 1912; assistant, Reading Public Library, Jan.-Aug., 1914.
 Edwards, Edith, New York, N. Y., Wells College, 1897-99; B.A. University of Chicago, 1901; John B. Stetson University, 1907-12; probationer and substitute, New York Public Library, Mar.-Sept., 1914.
 Emerson, Ralf Pomeroy, Detroit, Mich., B.A. Williams College, 1907.
 Furness, Marcella Moore, Valley Mills, Ind., B.A. Earlham College, 1906; Bryn Mawr College, 1909-10; summer school, Indiana Public Library Commission, 1911; assistant cataloger, Indiana State Library, Indianapolis, Oct., 1913-date.

Giffilan, Emily Muriel, New York, N. Y., B.A. University of Michigan, 1914; student assistant, University of Michigan Library, Jan.-June, 1913.

Grannis, Edith Emily Higbee, Mankato, Minn., Hamline University, 1911-12; B.A. University of Wisconsin, 1914; assistant and temporary librarian, Minnesota State Normal School, Mankato, 1907-10; substitute assistant, Mankato Public Library, 1907-10.

Grenside, Adelaide Hildegard, Guelph, Canada, B.A. Trinity College, University of Toronto, 1914.

Haynes, Marguerite Biddle, Emporia, Kan., B.A. College of Emporia, 1913; Kansas State Normal College, Course in Library Science, 1913-14; organizer, Nortonville (Kan.) City and high school library, July-Aug., 1914.

Hull, Edna Morris, Warren, O., Oberlin College, 1903-04; B.A. Mount Holyoke College, 1907; student assistant, Mount Holyoke College Library; apprentice course, Carnegie Library, Conneaut, O., July-Aug., 1914.

Lancfield, Hilda Marguerite, Amity, Ore., Pacific University, 1908-10; B.A. Whitman College, 1913; desk assistant, Whitman College Library, 1911-13.

Laws, Helen Moore, Milford, N. H., B.A. Mount Holyoke College, 1910; student assistant, Mount Holyoke College Library, 1907-10; assistant, 1910-14.

Meisel, Max, Brooklyn, N. Y., B.S. College of the City of New York, 1914; Cornell University, summer session, 1912.

Moore, Edna Grace, Westerville, O., B.A. Otterbein University, 1904; M.A. Ohio State University, 1907; Columbia University, summer session, 1909; Chicago University, summer session, 1910.

Morgan, Jeannette Catherine, Schenectady, N. Y., B.A. Leland Stanford Junior University, 1909; University of Greifswald, Germany, summer session, 1909; University of Berlin, winter semester, 1909-10; classifier and cataloger, Stanford University Library and Lane Medical Library, San Francisco, 1912-14.

Oberholtzer, Katherine Acker, Troy, N. Y., B.A. Vassar College, 1914.

Retvedt, Ragnhild, Trondhjem, Norway, B.A. Trondhjems Katedralskole; assistant, Trondhjems Folkebibliotek, 1913-14.

Shields, Ethel Agnes, Rochester, N. Y., B.A. University of Rochester, 1914; student assistant, University of Rochester, summers of 1911, '12, '13; temporary assistant, Rochester Theological Seminary, summers of 1913, '14; assistant, Rochester Public Library, Mar.-Sept., 1914.

Webb, William, Westchester, Pa., B.A. Haverford College, 1913; student assistant, Haverford College Library, 1911-13.

Wilkie, Florence, Ashville, N. C., B.A. State College of Kentucky, 1906.

Winslow, Mary Amy, Indianapolis, Ind., B.A. Earlham College, 1910; University of Wisconsin, summer 1911.

The class of 1914 has elected the following officers for the year: President, Mary C. Sherrard, Albany, N. Y.; vice-president, Ruth D. McCollough, Franklin, Ind.; secretary-treasurer, May Greene, Albany, N. Y.

A reception for the students and faculty was given by Mr. and Mrs. Wyer in Room 310, one of the school lecture rooms, on the evening of October 8. This room, which is in many ways admirably adapted to the holding of informal receptions and similar social functions, has supplied the need of a school social center, so much felt while the school was in its old quarters in the Capitol.

Miss Mary L. Sutliff ('95), for several years an instructor in the school and now an instructor in the New York Public Library School, has given her excellent collection of book plates and *ex libris* literature to the school in honor of the faculty anniversary of

April 1, 1914. It contains 703 book plates, many of them of considerable value, 4 books and 62 pamphlets relating to book plates, 11 autograph letters and a large amount of miscellaneous material on the subject.

Those who had the pleasure of meeting Mme. L. Haffkin-Hamburger this past summer will be pleased to learn that she finally secured passage on one of the Pacific lines of steamers and sailed from San Francisco for Moscow via Japan and Siberia, Sept. 26.

F. K. WALTER.

PRATT INSTITUTE SCHOOL OF LIBRARY SCIENCE

Miss Harriet B. Gooch, teacher of cataloging, has returned, looking entirely made over by her five months of enforced rest, and her marked improvement during the first two weeks of teaching encourages us to believe that she will be able to carry on the work of the year without difficulty.

Of the twenty-five members of the class of 1914 now at work, nine are in Greater New York, five of these being in the New York Public Library; seven are in the Middle Atlantic states, three in New England, four in the Middle West, one on the Pacific coast, and one in the District of Columbia; seven are general assistants in public libraries, six are doing cataloging or other clerical work, four are in children's work, four in special library work, and two are doing reference work; one is head of a branch, and one is librarian of a small public library. They are placed for the most part in public libraries, only three being in college libraries and four in special libraries.

ALUMNI NOTES

Miss Florence J. Higley, 1910, was married on October 6 to Mr. Alfred C. Duncan, of Brooklyn.

Miss Mabel Bogardus, 1913, has been made children's librarian of the St. Agnes branch of the New York Public Library.

Miss Helen G. Alleman, 1914, has received an appointment as general assistant in the Osterhout Free Library, Wilkes-Barre, Pa.

Miss Eleanor Gleason, 1914, has been appointed librarian of the School of Religious Pedagogy at the Hartford Theological Seminary.

Miss Eleanor Gray, 1914, has been made assistant at the Library of the Children's Museum, Brooklyn.

Miss Catherine E. Pennington, 1914, has been given a permanent appointment in the Library of the Department of Agriculture.

Miss Elizabeth M. Sawyer, 1914, who re-

turned to the Cleveland Public Library, has been put in charge of the Temple branch.

JOSEPHINE ADAMS RATHBONE,
Vice-Director.

LIBRARY SCHOOL OF THE NEW YORK
PUBLIC LIBRARY

The school reopened September 28, with an enrolment of 39 juniors, 3 (probably 4) part-time students from the staff, and 35 seniors. The juniors represented 15 states, Canada and China, as follows: New York, 12; Minnesota, 4; New Jersey, 4; Michigan, 3; California, 2; Massachusetts, 2; and one each from Arkansas, District of Columbia, Iowa, Nebraska, Oregon, Wisconsin, Vermont, Canada, and China. The part-time students represented three states—New York, Pennsylvania and New Jersey—and the seniors fifteen states and Finland, as follows: New York, 10; New Jersey, 4; Connecticut, 3; Massachusetts, Ohio, Oregon and Pennsylvania, each 2; and one each from Florida, Indiana, Michigan, Missouri, Washington, Wisconsin, Vermont, Virginia and Finland. In the total enrolment, 17 colleges and universities and 4 state normal schools are represented by 28 graduates. The staffs of the following libraries are also represented: the public libraries of New York, Akron, Cleveland, Detroit, East Orange, Hartford, Madison (N. J.), Minneapolis, Newark, New Rochelle, Omaha, Pittsburgh, Pottsville (Pa.), St. Paul, St. Louis, Seattle, Tacoma, Washington (D. C.); the libraries of Boone College, Columbia University, Harvard University, Leland Stanford University, and of the state universities of Idaho and Iowa.

Eleven students arrived September 14 for the preliminary fortnight of practice. Several students were among the American refugees abroad, but all but one senior and one junior reached the school during the first week of the term.

Some changes have been made in the junior curriculum, giving less time to the expansive classification and more to book selection. The class has also been divided into two sections for the work in fiction, Miss Mary O. White taking Section II. The seniors are distributed as follows: seven in the school and college course, seven in the advanced reference and cataloging course, sixteen in the administration and seven in the children's librarians' course. Two students are following two courses and doing unpaid practice. The others are placed for the year in various departments of the library as listed:

May E. Baillet, 115th Street branch, children's room.
Rachel H. Beall, 58th Street branch, children's room.
Elizabeth V. Briggs, reference catalog room.

Mabel Cooper, 96th Street branch.
May V. Crenshaw, Central circulation.
Francis J. Dolezal, stack division.
Florence E. Foshay, Aguilar branch.
Marietta Fuller, reference catalog room.
Edith J. R. Hawley, unpaid practice.
Frances Kaercher, Tompkins Square branch, first assistant.
Rose Kahan, science division.
Elizabeth L. Kamenetzky, Woodstock branch.
Mary McDonnell, Central circulation.
Katharine Maynard, Webster branch, first assistant.
Dorothy P. Miller, Travelling libraries division.
Mary L. Osborn, Riverside branch.
Dorothy N. Rogers, Ft. Washington branch.
Irene E. Smith, Library School, teachers' assistant.
Rachel N. T. Stone, Central circulation.
Allan V. Törnudd, main reading-room.
Elizabeth T. Williams, unpaid practice.
Mary E. Winslow, Washington Heights branch, children's room.
Frances R. Young, Cathedral branch, children's room.

Mrs. Alma D. Custead, a senior, comes in from the Public Library of Patchogue, L. I., of which she is librarian, two mornings a week for the work of the school, and Miss Dorothy B. Hepburn takes the work while holding a position in the library of the American Museum of Natural History.

The following students, graduates of other library schools, have been admitted to senior courses: Ruth Brewer, Indiana Library School and library of Idaho University; Margaret E. Calfee, Western Reserve Library School and Cleveland Public Library; Elsie M. Cornew, Drexel Institute Library School and New York Public Library; Juliet A. Handerson, Western Reserve Library School and Cleveland Public Library; Sara L. Kellogg, Drexel Institute Library School and Columbia University Library; May L. Milligan, Western Reserve Library School and Akron (O.) Public Library; Susan M. Molleson, Pratt Institute Library School and New York Public Library.

The schedule of senior lectures of the first two weeks is here given:

School and college library course: Marie A. Newberry, on "The normal school situation," "Training in books in normal schools," "Teachers' Institutes," and "The bibliography of school libraries."

Advanced reference and cataloging: Henrietta C. Bartlett, four lectures and a quiz on "Bibliography."

Administration course: Frederick W. Jenkins, on "Relation of the library to civic institutions," "Study of a community," "Immigration," "Industrial questions," "Recreation," and "Child welfare activities."

Children's librarians' course: Frederick W. Jenkins, "Study of a community," "Immigration," "Industrial questions," "Recreation," "Child welfare activities"; Annie C. Moore, "Selection of children's books," first of a

course of talks on the subject. As an exercise in observation, the class was assigned to the visiting of various east side branch children's rooms.

APPOINTMENTS

Students who have not returned for the diploma are placed as per the ensuing list:

Jessie M. Callan, assistant, Carnegie Library, Bradock, Pa.
 Katharine Esselstyn, assistant, Harlem branch, N. Y. P. L.
 Italia E. Evans, assistant, Public Library, Ft. Wayne, Ind.
 Agnes Fleming, assistant, 67th Street branch, N. Y. P. L.
 Marjorie H. Holmes, first assistant, Public Library, Montgomery, Ala.
 Mignon R. Tyler, assistant, Hudson Park branch, N. Y. P. L.
 Sophie A. Udin, assistant, Rivington Street branch, N. Y. P. L.

Other appointments will be found in the column, "Librarians."

ALUMNI

A committee of the Alumni Association has prepared for the use of the entering class a list of satisfactory lodging and boarding houses and of inexpensive restaurants. Sixty-seven of the seventy alumni of the classes of 1913-14 and 1914-15 have joined the Alumni Association.

SIMMONS COLLEGE LIBRARY SCHOOL

The total enrollment in the college is greater this year than ever before. On October 6, the number of students was 1056 with applications for admission being received. Of this total registration, over a hundred are in the various classes of the library school. The freshman class in that department shows an increase over that of 1913-14.

No very radical changes in program are to be noted, but some few have been made which it is hoped will be improvements. More time is to be given to classification and less to the preparation of an original bibliography. In the one-year course, the amount of cataloging will be nearly doubled. In the first term the students are having a course by themselves which corresponds to that given to the sophomores, and in the second term they will combine with the seniors. In order to gain time for this it will be necessary to omit the course in business methods, but some of the work formerly included in it will be given in library economy, especially the printing, proof reading and editing, where it is possible to utilize the experience of Miss Hyde in those lines. The only other change of any significance is in the course in book selection. This was formerly given once a week throughout the year to a class consisting of juniors and the one-

year students. As there seemed advantages in making it a senior subject, the way was paved last year and in 1914-15, there will be two divisions, the seniors meeting once a week throughout the year and the one-year students twice a week during the second term. In order to afford a concrete test of the principles laid down for book selection, namely, that a knowledge of the community and of the library are essential as well as a knowledge of books, the seniors are to make a study of the problem of the selection of books for the Simmons College Library for 1914-15 and to embody the results in a paper.

Most of the present senior class and many of the juniors had at least two weeks of actual practice in libraries during the summer and their reports testify to the value of the experience.

The school looks forward to the privilege of hearing Prof. Root lecture, when as chairman of the A. L. A. Committee on Training he inspects the school on November 5-7.

JUNE R. DONNELLY, *Director*.

WESTERN RESERVE LIBRARY SCHOOL

The opening exercises of the school were held on the afternoon of September 22. They were presided over by President Thwing, who gave a stimulating talk on the elements entering into successful professional work. The dean, Mr. Brett, and the director both spoke briefly.

The regular class of 1915, consisting of 25 members, represents 12 states and territories, as follows: Ohio, 10 (5 being from Cleveland); two each from Pennsylvania, Indiana, Iowa, and Washington; one each from New York, Michigan, Minnesota, Missouri, Illinois, Montana, and Hawaii. Twenty-two have had previous library experience, ten have had college work and four have college degrees. Only two part-time students are enrolled, as it is now the policy of the school to accommodate as many full-time students as possible within the limit of the class number. The "open course" during the winter will, it is expected, provide for special students.

Slight adjustments have been made in the faculty assignments, the book evaluation course, formerly conducted by Miss Bessie Sargeant Smith, being now in charge of the director with lecturers on special classes of books. The course in trade bibliography and loan systems will be conducted by Miss Howe, and the minor technical subjects will be given by Miss Elizabeth H. Cass, the new member of the faculty who comes to the Library School from the Illinois State University Library.

The gift from the alumni to the school of a Victor victrola, with a number of records, is much appreciated and enjoyed by the faculty and the present class. It is planned to make use of it in connection with story recitals of some of the great music-dramas and also for class and school functions.

The school was represented at the Ohio Library Association meeting at Dayton, Oct. 6-9, by the director, who spoke on the "Library survey of the Woodland Library district" made by the students last year. Mr. Brett, Miss Eastman, Miss Burnite, and Mr. Hirshberg were in attendance. Several of the alumni from the libraries of the state were present, and a Western Reserve dinner was given, with Miss Doren, the Dayton librarian and the first director of the school, as an honored guest.

ALUMNI NEWS

Zana K. Miller, 1905, formerly librarian with The Indexers, of Chicago, is now the librarian of the Spies Public Library at Menominee, Michigan.

Theodosia E. Hamilton, 1907, has taken the position of assistant cataloger in the Public Library of Des Moines, Iowa.

Thirza E. Grant, 1908, will attend the New York State Library School this year.

Alicia Burns, 1908, was married Oct. 1, to Mr. Isaac M. Stickney, of Cleveland.

Gertrude H. Sipher, 1913, has taken a position in the catalog department of the Cleveland Public Library.

Margaret E. Calfee, 1914, is a senior in the New York Public Library School this year.

ALICE S. TYLER, *Director*.

CARNEGIE LIBRARY OF PITTSBURGH—
TRAINING SCHOOL FOR CHILDREN'S
LIBRARIANS

The Training School for Children's Librarians opened for the fourteenth year on Thursday morning, Oct. 1. The director, Miss Sarah C. N. Bogle, made the opening address, after which Miss Sarah B. Askew, assistant librarian of the New Jersey State Library and organizer of the New Jersey State Library Commission, gave a series of lectures on "What makes library work a success," "Experiences of an organizer," and "Point of contact."

The enrollment for the year is the largest the school has ever had, a total of 40 students, the entering class numbering 32 and the senior class 8. Ten states, the District of Columbia, and British Columbia, Canada, are represented. Three students have had previous training in other library schools, and 12

hold university or college degrees. The list of students is as follows:

Junior Class

Alice Elizabeth Booth, Rochester, N. Y.
Annie E. Carson, Saltsburg, Pa.
Margaret Jean Clay, Victoria, B. C., Canada.
Mary Frances Cox, Sandwich, Ill.
Irma Endrés Diescher, Pittsburgh, Pa.
Stella Tabor Doane, Philadelphia, Pa.
Louise Endicott, Washington, D. C.
Esther Friedel, Jefferson, Wis.
Irene M. Galbreath, Butler, Pa.
Louise Guiraud, Pittsburgh, Pa.
Ruth Hughes, Washington, D. C.
Rachael Helen Langfitt, Pittsburgh, Pa.
Harriett Worrall Leaf, Rochester, Pa.
Isobel McConnell, Cadiz, Ohio.
Jean McFarlane, Pittsburgh, Pa.
Maud W. Marston, Detroit, Mich.
Bessie Painter, Wireton, Pa.
Amelia Pickett, Montrose, Pa.
Marion M. Pierce, Pittsburgh, Pa.
Mary Helen Pyle, Pittsburgh, Pa.
Maud B. Rackett, Amangansett, L. I., N. Y.
Frances Rhoades, Ann Arbor, Mich.
Leslie Shaw, Indianapolis, Ind.
Maude I. Shaw, Sandusky, Ohio.
Virginia Slagle, Fullam, Washington.
Edwina M. Steel, Huntingdon Pa.
Carolyn D. Stevens, Munhall, Pa.
Alice Stoeltzing, Pittsburgh, Pa.
Lillian Elizabeth Sullivan, Pittsburgh, Pa.
Lenore Townsend, Spokane, Washington.
Dorothy Wilson, Topeka, Kan.
Mary R. Witmer, Brevard, N. C.

Senior Class

Margaret Baxter Carnegie, Pittsburgh, Pa.
Grace Nellie Gilleland, Bellaire, Ohio.
Edith Irene Groft, Pittsburgh, Pa.
Helen Edith McCracken, Wilkinsburg, Pa.
Helen Martin, Oberlin, Ohio.
Edith Collins Moon, Morrisville, Pa.
Mary Caroline Pillow, Butler, Pa.
Jessie Gay Van Cleve, Marquette, Mich.

ALUMNAE NOTES

Dorothy Bell Aschman, 1913, has resigned her position as children's librarian of the Carnegie Library of Pittsburgh.

Jessie MacDowell Lowry, 1910, has been appointed to a position on the staff of the Cleveland Public Library.

Lucy Dalbiac Luard, 1906, has resigned from the position of reference librarian in the Milton (Mass.) Public Library.

SARAH C. N. BOGLE, *Director*.

UNIVERSITY OF ILLINOIS LIBRARY SCHOOL

The twenty-second year of the School opened Sept. 21, with an enrollment of 46—as many students as our present quarters and equipment can well accommodate. The seniors number 19 and the juniors 27.

Seniors

Elsie L. Baechtold, Talladega, Ala., Grinnell College, A.B., 1911.
Susan T. Benson, Urbana, Ill., Missouri Wesleyan College, A.B., 1909.
Minnie J. Bollman, Champaign, Ill., University of Illinois, A.B., 1910.
Mabel L. Conat, Detroit, Mich., University of Michigan, A.B., 1909.
Fanny Dunlap, Champaign, Ill., State University of Iowa, Ph.B., 1905.

Grace A. England, Detroit, Mich., Albion College, A.B., 1910.
 Antoinette Goetz, Iowa City, Iowa, State University of Iowa, A.B., 1906.
 Margaret Herdman, Winnetka, Ill., University of Illinois, A.B., 1910.
 Edith Hyde, Lancaster, O., Ohio State University, B.A., 1908.
 Marian, Leatherman, Pittsburgh, Penn., Cornell University, A.B., 1907.
 Fanny W. Hill, Champaign, Ill., University of Illinois, A.B., 1910.
 Rose M. Mather, Plainfield, Ill., University of Illinois, A.B., 1905.
 Norma Lee Peck, Ottawa, Kan., Ottawa University, A.B., 1913.
 Alma M. Penrose, Grinnell, Iowa, Oberlin College, A.B., 1901.
 Nellie R. Roberts, Champaign, Ill., University of Illinois, A.B., 1913.
 Nellie M. Signor, Urbana, Ill., University of Illinois, A.B., 1912.
 Alta C. Swigart, Champaign, Ill., University of Illinois, A.B., 1910.
 Zellaette Troy, Tuscaloosa, Ala., University of Alabama, B.A., 1912.
 Margaret S. Williams, Hamilton, Texas, B.A., 1912.

Juniors

Effie G. Abraham, Muncie, Ind., Miami University, A.B., 1913.
 Jessie E. Bishop, Evanston, Ill., Smith College, A.B., 1911.
 Roma Brashear, Kirksville, Mo., University of Missouri, A.B., 1907.
 Mary G. Burwash, Savoy, Ill., University of Ill., A.B., 1913.
 Hazel Dean, Rolla, Mo., Northwestern University, A.B., 1913.
 George A. Deveneau, Chicago, Ill., University of Chicago, Ph.B., 1912.
 LeNoir Dimmitt, Austin, Tex., University of Texas, B.A., 1911.
 Kate D. Ferguson, Petaluma, Cal., Special.
 Florence M. Floyd, Austin, Tex., Assistant, University of Texas Library, 1912-14. Special.
 Margaret D. Henley, Indianapolis, Ind., Earlham College, A.B., 1914.
 Ethel Gyula Kratz, Champaign, Ill., University of Illinois, A.B., 1910.
 Mildred McElroy, Delaware, O., Ohio Wesleyan University, B.A., 1914.
 Katherine L. McGraw, Urbana, Ill., University of Illinois, A.B., 1914.
 Alma A. Menig, Denver, Col., University of Colorado, A.B., 1908.
 Olga F. Moser, Sigel, Ill., University of Illinois, B.M., 1913. Special.
 Gladys Nichols, Westerville, O., Otterbein University, B.A., 1914.
 Wilma E. Ponder, Urbana, Ill., University of Illinois, A.B., 1912.
 Beatrice Prall, Hope, Ark., University of Arkansas, B.A., 1911.
 Miles O. Price, Plymouth, Ind., University of Chicago, S.B., 1914.
 Ruth Sankee, Lawrence, Kan., University of Kansas, A.B., 1914.
 Wilma L. Shelton, Terre Haute, Ind., University of Arkansas, A.B., 1914.
 Maud Siebenthal, Bloomington, Ind., Indiana University, A.B., 1906.
 Georgia O. Sloan, Bloomington, Ill., Illinois Wesleyan University, A.B., 1914.
 Dey B. Smith, Hamilton, O., Miami University, B.A., 1911.
 Charles H. Stone, Athens, Ga., University of Georgia, B.S., 1912, M.A., 1913.
 Vendla Wahlin, Lindsborg, Kan., Bethany College, A.B., 1913.
 Jessie B. Weston, Chicago, Ill., University of Chicago, Ph.B., 1907.

and Miami University; and one each from 22 other institutions. Three of the students are "special"; not presenting the required degree for entrance. Three students are men. The homes of the students are in the following states: Illinois, 18; Indiana, 5; Ohio, 4; Texas, 3; Kansas, 3; Michigan, 2; Iowa, 2; Alabama, 2; Pennsylvania, 2; Arkansas, 1; California, 1; Colorado, 1; Georgia 1; Missouri, 2. Thirteen of the seniors are carrying only a part of the senior courses, being employed for whole or part time on the staff of the University Library.

The senior class entertained the juniors and the faculty informally on Wednesday evening, Oct. 7, in the parlors of the Woman's Building.

The Library Club gave its annual formal reception Friday evening, Oct. 16, in the Woman's Building, the guest of honor being Professor A. S. Root, librarian of Oberlin College, who gave two lectures before the School Oct. 16 and 17, on "European libraries" and "Bibliography in colleges."

ALUMNI NOTES

Recent appointments are as follows:

Alma M. Penrose, 1913-14, reviser, University of Illinois Library School.

Margaret S. Williams, 1913-14, cataloger, University of Illinois Library.

Lucile Warnock, 1913-14, in charge of the loan desk in Kansas State Agricultural College Library, Manhattan.

Grace Barnes, 1913-14, assistant in the Mississippi State Agricultural College.

Stella B. Galpin, B. L. S., 1914, loan assistant, University of Illinois Library.

Margaret I. Winning, 1913-14, assistant in Rosenberg Library, Galveston, Texas.

P. L. WINDSOR, *Director*.

SYRACUSE UNIVERSITY LIBRARY SCHOOL

The Library School has been separated from the College of Liberal Arts and is now an independent school, instead of a department of the larger college.

The names of the students in this year's freshman class are:

Ball, Gratia Helen, Auburn, N. Y.
 Ball, Ruth Elma, Weedsport, N. Y.
 Bergh, Hazel Elizabeth, Webster, N. Y.
 Blue, Delta Nellans, Niagara Falls, N. Y.
 Branch, Catherine, Syracuse, N. Y.
 Canfield, Edna Rae, Syracuse, N. Y.
 Dixon, Lyla Mae, Auburn, N. Y.
 Dollard, Mary E., Syracuse, N. Y.
 Dominick, Leila Mae, Syracuse, N. Y.
 Dusenbury, Mildred L., Conneaut, Ohio.
 Foster, Dorothy, Syracuse, N. Y.
 Howe, Fanny C., Hoosick, N. Y.
 Hughes, Esther Marie, Palatine Bridge, N. Y.
 Johnson, Elsie Evelyn, Point Chautauqua, N. Y.
 Lapp, Florence Evelyn, Williamson, N. Y.
 Meyer, Margaret Evans, Hazleton, Pa.

The 46 students have received bachelors' degrees from 27 colleges and universities; 12 from the University of Illinois; 3 from the University of Chicago; 2 each from the University of Arkansas, the University of Texas

Nau, Elma Vaupelle, Honeoye Falls, N. Y.
 Olmstead, Laura M., Coudersport, Pa.
 Robinson, Anita Grace, Cambridge, N. Y.
 Rosbrook, Ina Ada, Syracuse, N. Y.
 Saul, Esther Viola, Hazleton, Pa.
 Scull, Lucile R., Poughkeepsie, N. Y.
 Scutt, Helen Almira, Marion, N. Y.
 Stiles, Helen, New Haven, Conn.
 Thomas, Martha Louisa, Lyndonville, N. Y.
 Vanderveer, Lillie Hathaway, Saranac Lake, N. Y.
 Wagner, Florence, Syracuse, N. Y.
 Welch, Dorothy Blakely, Saratoga Springs, N. Y.
 Wilson, Lucile L., Nicholson, Pa.

ALUMNI NOTES

Margaret S. Green is librarian of the Far Rockaway branch of the Queens Borough Public Library.

Ruth King has been appointed director of the juvenile department in the public library at Butte, Mont.

Clara Newth is head of the catalog department in the library of the State Normal School at Ypsilanti, Mich.

Florence M. Lamb has been assistant in the Wells College Library at Aurora, N. Y.

Vesta E. Thompson was married to De Grover Van De Boe on September 16 at Coudersport, Pa.

E. E. SPERRY, *Director.*

RIVERSIDE LIBRARY TRAINING CLASS

The Riverside (Cal.) Public Library has decided upon a very radical change in its plans for a training class. Heretofore it has had summer school for six weeks, winter school for six weeks, and training class work throughout the year. It was announced last summer that the summer school would be discontinued henceforth. The winter school has usually been conducted for six weeks beginning about the first week in January, but difficulties in the way of engagement of eastern teachers delayed the arrangement for the six weeks winter school this year and it has been found that better teachers can be secured and the work more conveniently adjusted both for students and for teachers by stretching out the work from about the middle of January to about the middle of May, a period, which is somewhat indefinitely fixed at present, from fifteen to nineteen weeks.

The plan will give one principal instructor with a practically clear field for her subject; after her subject has been completed another principal instructor, and after that another, and so on. Meanwhile there will be shorter programs and middle course work which will not seriously interfere with the principal instructor but will round out the subject matter and the whole plan which heretofore has been attempted in six weeks.

The plan may not attract as many people to the winter school because of its stretching

over such a long time. On the other hand it may attract a number of persons who will do just one thing; for example—a thorough course in cataloging, or in classification, or in reference, or in documents. In either case the library feels justified in trying the experiment for one season. Miss Sabra Vought will be one of the instructors under the new arrangement, and it is hoped that other names will be announced in the next issue of the *JOURNAL*.

The training class will be divided into two sections. The first section will include those students who attended the summer school and the second session all who entered between the close of the summer school and the first of October. The list of names follows:

First Division

Bacon, Virginia Cleaver, Portland, Ore.
 Dailey, Lilla B., Escondido, Calif.
 Davis, Arlene, Orange, Calif.
 Furley, Lynette, Wichita, Kan.
 Kneeshaw, Faye T., Escondido, Calif.
 Ratliff, Eva I., Colton, Calif.

Second Division

Inwood, Ruth, Santa Ana, Calif.
 Saxton, Harriette A., Clarkston, Wash.
 Lott, Emma Lee, Houston, Texas.
 Moss, Dorothy R., Palo Alto, Calif.
 Shuler, Evelyn, Raton, N. M.
 Gazzam, Ruth, Chrystal Springs, Wash.
 Sanford, Nellie, Highgrove, Calif.
 Rhine, Mrs. J. W., Goshen, Calif.
 Stamm, Hannah, Visalia, Calif.
 Smeal, Hilda, Long Beach, Calif.
 Kimbley, Gertrude, Riverside, Calif.
 Gantz, Flo, Pomona, Calif.

LOS ANGELES PUBLIC LIBRARY TRAINING SCHOOL

The Training School of the Los Angeles Public Library commenced its twenty-seventh session Oct. 5.

The sixteen students comprising the class of 1914-15 were selected by competitive examinations in which sixty applicants participated. All but three members of the class have had some college work or other advanced study.

The curriculum has been strengthened by increase in the number of lecture and study periods and by the addition of new courses. Miss Helen Haines has been engaged as special lecturer to the Training School and will give among other courses a series of talks on library movement and on the selection of titles.

All members of the class of 1913-14 who desired positions have been engaged in library work during the summer and a number are now working under permanent appointments.

The work of public libraries is a constant irritant to intellectual apathy.—LORD ROSEBURY

 Reviews

J. HENRY QUINN. Library cataloging. London: Truslon and Hanson, 1913. 256 p. D.

This desirable addition to the literature on cataloging is the work of an English pen. The opening paragraph truly epitomizes the layman's (and alas not only his) conception of what cataloging a library means, one of the constant discouragements a cataloger is called upon to face. The author gives a brief resumé of the history of modern cataloging of public libraries in his own country, and goes on to enumerate the qualifications necessary to the making of a good cataloger. It is interesting to note that there is no radical difference between the English and American librarian's demands and expectations, despite the difference in the libraries of the two countries and the variation in details of organization and administration. Mr. Quinn truly says "The cataloging of a library is one of the most troublesome and expensive departments of its administration" and he might have added just as truly that that is one of the great discouragements of the cataloger, who seems to be held morally responsible for an expense he or she cannot well control if good results are demanded. Miss Agnes Van Valkenburgh has ably spoken in the September number of the LIBRARY JOURNAL and her "Plea for the cataloger" should be read by every cataloger. The author does not confine himself strictly to the dictionary catalog nor the card catalog, but rambles in the field of the classified catalog and the printed one. The practice of having printed catalogs in libraries still seems to obtain in England to some extent, to judge by the careful and minute directions given for the preparation of copy for the printer. The work contains many suggestions and hints which will prove useful to the American cataloger if looked upon merely as such and not observed unquestionably as rules. The various kinds of cards are taken up and explained, with illustrative examples, and though they differ somewhat in form and fullness from ours are sufficiently like to be very suggestive even to American catalogers. The form is not always to be commended however, or blindly followed. For instance, exception may well be taken to putting West Virginia under Virginia, West. Why not York, New, as well? The practice of not inverting the second author in a joint author entry, and of omitting the surname of the second should they be the same, as in the case of husband and wife, is hardly to my liking, our own method seeming de-

cidedly preferable. But one must not forget that habit makes slaves of us all.

T. H.

A. L. A. COMMITTEE OF CODE FOR CLASSIFIERS. A code for classifiers; a collection of data compiled for the use of the committee by William Stetson Merrill, chairman. Type-written copy. 124 p.

After a careful reading and consideration of the tentative rules with their examples I ask myself "*cui bono?*" It is rather difficult to understand just the kind of people for whom this knowledge is intended. If, as the title reads, "for classifiers," it would seem somewhat superfluous surely, as we must presuppose in that case some previous training and a knowledge of and experience in cataloging and classification. It doesn't seem possible that any classifier deserving the name would need most of the directions given, or that an inexperienced and untaught classifier would sufficiently profit by them without expert supervision. If, however, this code has been compiled with the intent of having it serve as a text-book for the study of classification, it would serve a more definite purpose and gain greatly in value, if a few more rules and examples were added. The elaborate pains taken by the committee, particularly its chairman, to record so fully the decisions or problems a classifier has to make and ponder over would make it especially valuable to an instructor in classification. If that is the committee's intent I would suggest changing the title to bring out this fact. The code could be made much more useful if the class number of some well-known and widely used system of classification (the Dewey decimal and the Cutter expansion for instance) were assigned in each case to the examples quoted in order to emphasize and make clear the point to be brought out. They would be much more suggestive so. In many instances the explanation does not seem to me to be sufficiently clear nor does the example, and in many others it would seem they are both unnecessary because so obvious, because a classifier worthy the name would not dream of thinking or doing otherwise than as indicated, except through carelessness or incompetence. Why, therefore, provide for a contingency not likely to happen? An unnecessary amount of stress has been laid on the problems of classifying biography, a class which in my opinion requires less explanation than almost any other. I find, too, that both in the body and the index of the Dewey decimal classification many of the directions repeated in this code are clearly given. A frequent trouble or cause of indecision in

classifying books is not due nearly so much to doubt of the intent of the author as to difficulty in finding a number in one's system of classification which fits it, which embraces that subject. For example I have a book under my hand at this moment "Unifying rural community interests" where both title and contents are *vague* and leave you somewhat in doubt as to the author's intent without a rather careful and detailed study of the book. When that is at last clear to you there remains the difficulty of finding a number in the Dewey decimal system of classification to fit it satisfactorily, or rather a number that will fit this and not too many other works apparently similar yet written from altogether different viewpoints. For example I should class this book in 630 as the best available place. Yet in this same class we put such books as Boss' "Farm management," Bailey's "Principles of agriculture," etc., which while they treat of the actual subject, yet are not written with the same intent and do not seem rightly to belong shoulder to shoulder with the first mentioned and others of like ilk.

'Twould be a tremendous advantage to the cataloger could authors, potential and otherwise, be made to elucidate in plain language in a preface or introduction their "intent" for every book they write and publish. Some of them should be made to classify their own works as a penance. Of course one source of disagreement in the classification of books lies in the varying personalities doing this work and the consequent various view points which make different people interpret differently the intent of an author. The ideal way would be to have one person or one staff of classifiers working together classify all books purchased for libraries—but—that's a dream. After all a book can only occupy one space on the shelves and can therefore receive but one class number no matter how many subjects are treated or touched upon in it. So long as the classification of a collection is done consistently, so long as all material or like subjects are grouped together on the shelves, even if the result is disapproved of by some whose opinions differ as to the exact place, does it matter vitally after all? The public is rarely sufficiently familiar with the library's scheme of classification to do more than acquire a general idea or comprehension of it, and in any case it should not be encouraged to depend *solely* on the classification or in other words on the books grouped together on the shelves in the various classes—for all material on a desired subject. That would be misleading. It is the catalog after all which should and does supply full information regarding the

material on any given subject contained in the library, whether classed by itself under its own subject class number or of necessity with some other subject with which it is bound or incorporated. A book considered last year by the classifier may have been put in 630 and looking at it again in the light of present day experience and knowledge of the subject and its ramifications, she might desire to change it to 331. Yet if that should entail too much work it would not seem to me such a terrible thing to leave it in 630 provided always that all other material of similar import with similar intent were placed with it in the same class. Any wide awake classifier is prone to change her mind regarding her own decisions as her knowledge of a subject increases and broadens, but if she would retain her mental serenity she will not *always* change the class number with her mind. Else of changes there would be no end.

T. H.

Librarians

ADAMS, Elsie, Pratt 1898, has resigned her position in the cataloging department of the Queens Borough Public Library, to accept a position in the reference catalog division of the New York Public Library.

ADKINS, Venice A., New York State Library School, 1912-13, has been promoted to the position of first assistant in the Bloomingdale branch of the New York Public Library.

ALLEN, Mary W., Pratt 1900, who for some years was cataloger in the library of the Hispanic Society, has been made bibliographer to the New International Encyclopedia.

AVE-LALLEMANT, Theodore M., L. S. of N. Y. P. L., jun., 1914, has been engaged as indexer and translator by the Bureau of Education.

BLUE, Thomas Fountain, the colored librarian in charge of the eastern and western branches of the Louisville (Ky.) Public Library, was the subject of a biographical sketch in the Indianapolis *Recorder*, a newspaper devoted to the interests of the negro race. Mr. Blue has been in charge of the western branch since its establishment in 1905, and is the first colored man in this country to be appointed librarian of a library exclusively for colored people.

BROWN, Martha, has been appointed librarian of the Carnegie branch of the St. Joseph (Mo.) Public Library to succeed Miss Helen Pfeiffer, who resigned several weeks ago. Miss Brown has for the last five years been

in charge of the children's department at the central public library.

CALKINS, Ruth H., New York State Library School, 1913-14, has gone to Wellesley College Library as temporary assistant.

CARSON, Jessie M., for seven years head of the children's department of the Tacoma Public Library, has resigned her position, to become assistant to the supervisor of children's work of the New York Public Library.

CASKEY, Emily J., formerly first assistant in the children's department of the Tacoma Public Library, has been appointed head of the division of work with schools just created in the juvenile department.

CLARK, Mabel, B.L.S., New York State Library School, 1914, has been appointed assistant in the library of West Virginia University, Morgantown.

CROWELL, Edith H., L. S. of N. Y. P. L., 1913, has been appointed librarian at Bernardsville, N. J.

DE GOGORZA, Mrs. Flora, Pratt 1901, formerly librarian of the Leonard branch, has been made children's librarian of the new Brownsville children's branch of the Brooklyn Public Library.

DILLS, Clara B., Pratt 1912, librarian of the Kings County (California) Library, has been appointed librarian of the Free Library of Solano county.

EGBERT, Mabel, who has been in Braddock (Pa.) Public Library for the past eleven years, has tendered her resignation. Miss Ida Wolf of Chicago, Ill., cataloger of the library of the University of Chicago, will succeed Miss Egbert, who goes to Connecticut.

FESENBECK, Mrs. J. A., librarian of the Cloquet (Minn.) Public Library, has resigned her position, after nine years of service. Miss Mildred Riley has been named as her successor.

Flickinger, Mrs. Caroline, head of the reference department of the Braddock (Pa.) Public Library, has resigned her position, and Miss Jessie Callan, formerly connected with the Braddock Library, but for the past year with the New York City Library, will take the place of Mrs. Flickinger.

FOOTE, W. W., formerly of Oberlin Library, who has been assistant librarian at the Mississippi Agricultural and Mechanical College for more than three years, has been elected librarian of Oklahoma Agricultural and Mechanical College. He is succeeded at the Mississippi College by Miss Grace Barnes, who is an

alumna of Purdue University and who received her library training at University of Illinois Library School.

FORREST, Elizabeth, B.L.S., Illinois, 1906, has resigned her position in the Pennsylvania State College to become librarian of the Montana State College, Bozeman.

GORDON, Alys M., Pratt, 1902, has been appointed reference librarian at the East Orange Public Library.

GRASTY, Katherine, Pratt 1906, librarian of the Baltimore Eastern High School Library, has returned to New York as children's librarian at the Washington Heights branch of the New York Public Library.

GREER, Agnes F. P., librarian of the Ballard branch at Seattle, Wash., has been appointed head of the circulating department of the Tacoma Public Library, beginning October 1.

GRUBBS, Eva, has been appointed librarian for the Zanesfield (O.) Public Library which was presented to the village by Dr. E. S. Sloan of Boston.

HAINES, Mabel R., has resigned her position as librarian of the Summit (N. J.) Public Library in order to work for the New Jersey Women's Political Union, at the headquarters in Newark.

HALL, Mary, former assistant librarian at the East Liverpool (O.) Public Library, has been appointed librarian to fill the vacancy created by the resignation of Miss Harriet Goss. Miss Mary Miller, a former assistant at the library, will fill the vacancy created by the promotion of Miss Hall.

HIGGINS, Alice G., has resigned her position as assistant to the supervisor of work with children in the New York Public Library. Miss Jessie M. Carson, formerly head of the children's department of the Tacoma Public Library, succeeds Miss Higgins.

HILD, F. H., formerly the librarian of the Chicago Public Library, died at Charlottesville, Va., Aug. 10. Mr. Hild was successor to Dr. W. F. Poole as chief of the Public Library when the latter resigned in 1887, and he remained in charge until 1909, since which time he has not been engaged in library work.

HINCKLEY, George L., of the Forbes Library of Northampton, Mass., has been elected librarian of the Redwood Library, in Newport, R. I., to succeed Mr. Richard Bliss, whose resignation went into effect Oct. 1. Mr. Hinckley is a graduate of Yale, and has had about ten years' experience in library work, having been connected with the Boston

Public Library before going to the Forbes Library at Northampton.

JEROME, Janet, Pratt 1907, formerly librarian of the Warren branch of the Denver Public Library, has been appointed children's librarian in the Brooklyn Public Library.

JILLSON, William E., has been elected librarian of the West Allis Public Library, West Allis, Wis. He will install the library in the new Carnegie building.

JOECKEL, Carlton B., B.L.S., New York State Library School, 1910, has resigned his position as superintendent of circulation at the University of California Library to become librarian of the Public Library of Berkeley, Cal.

JOHNSTONE, Ursula K., Pratt Normal course 1913, formerly children's librarian at the Binghamton Public Library, has been made assistant in the library of the Brooklyn Training School for Teachers.

JUDSON, Katherine B., New York State Library School, 1904-05, has been appointed temporary assistant in the Newark (N. J.) Public Library.

KAISER, Leila M., librarian in charge of the Winthrop branch of the Brooklyn Public Library, died, Oct. 19, after a brief illness. She had been connected with the Brooklyn Library service for eight years, and until recently had been in charge of the Concord branch in lower Brooklyn.

KARSTEN, Eleanor G., Ph.B., for two years secretary to the librarian of the University of Illinois, has resigned in order to become secretary to the president of Bryn Mawr College.

KNAPP, Ethel, of Bloomington, Ill., has been appointed to the position of reference librarian at the Davenport (Iowa) Public Library. Miss Knapp is a graduate of Worcester College and of the Cleveland Library School.

KOSTOMLATSKY, Zulema, New York State Library School, 1912-13, has resigned her position as librarian of the Hazelwood branch of the Carnegie Library of Pittsburgh, to become superintendent of the circulation department of the Seattle Public Library.

LAIDLAW, Elizabeth, Illinois, 1904-06, has resigned her position as cataloger in the Lincoln Library, Springfield, Illinois, to accept the librarianship of Bradley Polytechnic Institute, Peoria, Illinois.

LA TOURETTE, Alexandrine, Pratt 1908, assistant librarian of the Library of the University of Nevada, has gone to the Seattle Public Library as head of the Yesler branch.

LIBBY, Fanny M., Drexel 1914, has been appointed assistant in the Public Library, Newton, Mass.

LOTHROP, Alice B., who has been in charge of the periodical room in the Carnegie Library of Pittsburgh for several years, has resigned her position, to become general secretary of the Young Women's Christian Association of that city.

LOVIS, Marion, formerly librarian of the high school library at Somerville, Mass., has been appointed librarian of the Stadium High School Library, Tacoma, Wash. This library is now under the joint jurisdiction of the Board of Education and the Public Library of the City of Tacoma for the first time, and it is planned to make it a circulating branch for the community as well as a reference library for the high school students and teachers. Miss Lovis is a graduate of Simmons College and its library school.

MAHIN, Mrs. Emma L., librarian of the Muscatine (Iowa) Public Library, died Oct. 3. Mrs. Mahin began library work in 1898, in connection with a small book collection quartered in the basement of the high school building. On the dedication of a library structure in Muscatine, in 1901, and the perfection of a library organization under the state law, Mrs. Mahin was made a library trustee, and after a period of preparation was also chosen librarian. Her services in both capacities closed only with her death.

McMILLEN, James A., New York State Library School, 1915, has been appointed assistant in the legislative reference section of the New York State Library.

McKECHNIE, Alexandra, L. S. of N. Y. L., jun., 1914, has been appointed head of the circulation department in the Public Library of Calgary, Alberta.

MILLS, Gertrude D., assistant in the catalog department of the Tacoma Public Library, has resigned, to enter the University of Washington, at Seattle, and later the library school of that institution.

MORGAN, Edith Marian, Illinois, 1912-13, who has been acting librarian of the Chicago Theological Seminary during the past year, has been appointed librarian of the State Normal School, Gunnison, Colorado.

MORROW, Marjorie, a graduate this year of the Pittsburgh Training School for Children Librarians, has been placed in charge of the children's department of the Duluth Public Library. Miss Alice Gaylord, Western R.

serve, 1906, who was formerly children's librarian, now has charge of stations and extension work.

PACKARD, Ella E., has been appointed librarian of the Oak Cliff branch of the Dallas (Texas) Public Library. Miss Packard is a graduate of the University of Colorado, studied one year in the Library School of the University of Illinois, and has been connected with the Dallas Library for over two years.

PARSONS, Mrs. Willis, who has been acting as temporary librarian of the Worthington (Ohio) Public Library, has been elected the regular librarian.

PEARSON, Harriet A., Illinois, 1912-13, has resigned from the staff of the Lincoln (Nebraska) City Public Library, to become an assistant in the North Dakota Agricultural and Mechanical College Library, at Fargo, North Dakota.

PETERS, Louise M., New York State Library School, 1911-12, has been appointed first assistant in the catalog department of the University of Missouri Library.

PORTER, Annabel, formerly head of the circulating department of the Tacoma Public Library, has been transferred to the juvenile department, of which she will have charge. Miss Porter is a graduate of the Pittsburgh Training School for Children's Librarians, and has been head of the circulating department of the Tacoma Public Library for several years.

POTTS, Marian Edith, who has just accepted and entered upon the work of a newly created position in the University of Texas, is a graduate of the University of Wisconsin and has taken special work under Dr. Charles McCarthy, legislative reference librarian of that institution. Miss Potts will have charge of the package libraries which the university has prepared for use by clubs throughout the state.

ROTHROCK, Mary U., New York State Library School, 1914, has been appointed reader's assistant in the Cossitt Library, Memphis, Tenn.

SAVAGE, Etta Virginia, is filling the position of reference librarian in the Duluth Public Library, made vacant by the enforced absence of Miss Kaiser on account of ill health. Miss Savage is from the New York State Library School, 1913-14, and has been connected with the reference department in the University of Missouri Library and the Kansas State Agricultural College at Manhattan, Kansas.

SAWYER, Ethel R., Pratt 1906, until recently head of the circulating department of the Seattle Public Library, has gone to the Multnomah County Library, Portland, Oregon, to take charge of the new training class.

SCEARCE, Helen A., New York State Library School, 1913-14, has been appointed assistant in Purdue University Library, Lafayette, Ind.

SEARCY, Katherine A., New York State Library School, 1907-08, has been appointed temporary assistant for the Illinois Library Extension Commission.

SHERRARD, Mary C., New York State Library School, 1915, has been appointed assistant in the reference section of the New York State Library.

STEVENS, Elizabeth C., Pratt 1898, has accepted the position of cataloger at the Paterson (N. J.) Public Library.

WALLACE, Charlotte E., Pratt 1897, who has been abroad for two years, has accepted the librarianship of the Yorkville branch of the New York Public Library, to begin work January 1.

WALLACE, Marian K., assistant in the children's department of the Tacoma Public Library, has been appointed children's librarian in the reorganization of the department which took place October 1.

WESSLEY, Frances, formerly assistant librarian at Brandon, Vt., has been appointed librarian at Westfield, Mass.

WHITEMAN, Margaret M., has been elected librarian of the Connellsville (Pa.) Public Library, to succeed Miss Elizabeth Clark, resigned. Miss Whiteman was graduated from Dickinson College in 1910 and from Drexel Library School in 1911. She spent a year as a cataloger in Columbia University Library and assisted in the organization of the Free Public Library at Pottsville, Pa. For the past two years she has been assistant librarian at Swarthmore College Library.

WILLIAMSON, Dr. C. C., who has been at the head of the economics division of the New York Public Library since its opening in the new building, has been transferred to the Municipal Reference branch, located in the municipal building.

WILSON, Mabel, temporary assistant in the circulating department of the Tacoma Public Library, has been given a permanent position, to succeed Miss Gertrude Mills, resigned.

THE LIBRARY WORLD

New England

MAINE

Portland P. L. Alice C. Furbish, lbn. (25th annual rpt.—1913.) Accessions 1713; total 69,631. Circulation 85,985. New registration 4002; total 7070. Receipts \$23,854.58; expenditures \$22,615.84, including salaries \$7269.30, books \$1262.88, periodicals \$515.43, and printing and binding \$744.04.

MASSACHUSETTS

Andover. Memorial Hall L. Edna A. Brown, lbn. (41st annual rpt.—yr. ending Dec. 31, 1913.) Accessions 1108; total 20,900. Circulation 35,737. New registration 394; total 2211. Income \$6602.84; expenses \$6786.74, including salaries \$2828.57, books and periodicals \$1048.55, binding \$295.13.

Boston. The program of free public lectures to be given in the lecture hall of the Boston Public Library has been issued. About 60 lectures, on a wide range of topics, are announced. Those under the auspices of the Ruskin Club are given Monday afternoons, the others on Thursday evenings and Sunday afternoons.

Cambridge. There is further delay on the Widener Library at Harvard as a result of the continuation of strikes of men working on the interior. It is unlikely now that the building will be ready for occupancy before spring.

Northampton. The trustees of the Forbes Library have placed a bronze bust of Judge Forbes, by Bela Lyon Pratt, in the main entrance hall of the library.

RHODE ISLAND

Providence. Educational visits to the Providence Public Library, Rhode Island School of Design and the Rhode Island Historical Society rooms during the coming four months have been arranged for classes in various grades of the grammar and primary schools throughout the city by Assistant Superintendent of Schools Towne. The visits began Oct. 14, and the last will be held Jan. 12. The trips will all be taken during regular school hours.

CONNECTICUT

East Hartford. A branch library has been started in Burnside by Miss Jessie Hayden,

librarian of the East Hartford Public Library, and Miss Bessie Robinson, assistant librarian. The library is situated in the kindergarten of the new Burnside School, and has proved very popular. Miss Hayden has 200 volumes, and on the opening day seventy-four children received books. There are about 100 books for the children in the branch and the same number for older people.

Hartford. Williams Memorial, Trinity College's new library and administration building, a gift of the late J. Pierpont Morgan, for twenty-seven years a member of the board of trustees, will be dedicated on Saturday, October 31. Addresses will be made by Dr. Arthur A. Hamerschlag, honorarius of Trinity College in the class of 1912, director of the Carnegie Institute of Technology at Pittsburgh, Pa., and by William N. C. Carlton, for ten years librarian at Trinity and at present head of the Newberry Library in Chicago.

Middle Atlantic

NEW YORK

Clinton. The mystery surrounding the identity of the donor of the \$100,000 library to Hamilton College was maintained at the dedication, Oct. 10, by Senator Elihu Root, when he said that the name would not be announced. Andrew Carnegie witnessed the ceremonies, but his presence is not believed to lend any clew to the unknown benefactor. Mr. Carnegie, just before the library was dedicated, received the honorary degree of LL.D., awarded him in 1913, which he had been unable to accept in person previously. Senator Root said, in dedicating the library, that Baron Steuben laid the cornerstone of the first college building 120 years before, near the site of the new library, which thus marked the connecting link between Hamilton's present and past. Mr. J. D. Ibbotson, Jr., the librarian, was recently elected vice-president of the New York State Library Association.

New York City. An important gift to the Public Library has come from Theodore Roosevelt. It is a collection of 464 volumes, 303 pamphlets, 19 maps, 5 charts and 58 plans, all relating to the commerce, customs, industries, sociology and literature of the Argentine Republic. Many of the works included in this collection are government documents and are of particular interest for the economic history of Argentine provinces and states.

New York City. The regular yearly examinations for eligibility to various grades in the Queens Borough Library service will be held in the latter part of November. Examinations will be held for all grades for which applications are received. These grades consist of Grade A, Branch Librarian; Grade B, First Assistant; Children's Librarian; Traveling Librarian; Cataloger; Grade C, Second Assistant. Persons desiring to take any of these examinations should send in their applications immediately.

New York City. The Public Library has received a collection of musical literature from Mrs. Julian Edwards as a memorial gift to her late husband. Mr. Edwards was born in England, but came to this country in 1888, and became an American citizen. For many years he was recognized as one of America's foremost composers of light opera. The collection presented by Mrs. Edwards contains about ninety full scores of operas; one hundred and fifty full scores of cantatas, concertos, oratorios, overtures, suites, etc.; three hundred vocal scores of operas, operettas, cantatas and oratorios; and three hundred and twenty-five books.

New York City. The New York Public Library has issued an 11-page pamphlet, entitled "Scheme of library service in the circulation department." After a short introductory statement describing the general administration of the library as a whole and the operation of the main building, description of the work of the circulation department is divided into seven sections under the headings, Appointments, promotions, and removals, Non-graded service, Graded service, Salaries, Substitutes, Examinations, and Probationers.

New York City. Three important collections of books and documents were destroyed in the fire which swept through offices in the superstructure of the uncompleted University Hall on the Columbia University campus, Saturday, Oct. 10. The collections destroyed included all the personal library on the history of Germanic civilization, brought to this country by Dr. Ernst Richard, professor of Germanic history. With Dr. Richard's documents went his personal notes, which he had gathered in a lifetime of study. All the official documents and records of the American Mathematical Association, which had its headquarters in the building, were also destroyed. Dr. F. N. Cole, professor of mathematics, was its secretary, and he had moved the documents from East Hall two years ago because he feared that East Hall might burn, while

University Hall, except for the temporary superstructure, was fireproof. The files of the first ten volumes of its publication, the *American Mathematical Society's Bulletin*, were destroyed, along with the stock collection of copies of all subsequent volumes. All of Dr. Cole's personal papers were destroyed with the society's papers. The complete reports of the investigations for the Prison Reform Association, with all the other notes and documents belonging to the association, were also stored here, and the only way to replace them will be to conduct the investigations a second time. As the lower floors, which were part of the permanent structure, were fireproof, the flames did not work down through them, but died out when they had consumed the temporary superstructure.

NEW JERSEY

Newark. Extensive improvements have been made on the Dryden Memorial Library, for employes of the Prudential Insurance Company. The library room has been greatly enlarged and more volumes are being added. The library now contains about three thousand books. The library acts in co-operation with the Public Library, and has a borrowing system similar to that of public school libraries. Collections of paintings and drawings are also borrowed from the Public Library, and are displayed on the walls. Part of the library room has been reserved for a Prudential museum which will be started during the next few weeks. Objects of interest to the employes will be on exhibition here, including the first policy written by the company and the first desk used by the late founder of the company.

Newark. A complete and careful revision of the 500,000 mounted and unmounted pictures for lending in the Public Library is now in process. The main object is to make the collection more useful to the public (1) by discarding mediocre material which it was thought necessary to save before the collection grew to its present size; (2) by systematically collecting material on subjects frequently called for and not adequately illustrated; (3) by choosing with the greatest care the main subject headings and the sub-divisions under which the pictures will be filed in a classification which will correspond to the needs of the various classes of borrowers. The collection will be self-indexing, with references from one subject to another whenever allied material may prove helpful. A vertical file contains lists, notes, pamphlets and catalogs on all art subjects.

West Hoboken. Branch libraries have been opened in Public School No. 6 and in Public School No. 3. At first, books will be lent to children only, but later it is expected to serve adults also. Each branch will have about 600 books, which may be returned at the library proper or at either branch.

DELAWARE

Wilmington. War has made itself felt in the project to raise the necessary \$300,000 for the purpose of erecting a new library building in this city. The managers of the institution have decided, because of the unsettled condition, not to start the subscriptions at this time. As soon as business recovers, however, a determined canvass will be made for funds.

The South

NORTH CAROLINA

Hendersonville. The commissioners of Hendersonville have appointed Mrs. Norma Bryson Sandifer as librarian of the Carnegie library of this city. The library, which was opened the last of September, is a \$10,000 building, erected of brick.

GEORGIA

Macon. Sixty members of the Macon Bar Association have organized the Macon Law Library Association, incorporated at \$3000. The new library will be open in a short time on the sixth floor of the Georgia Life building.

KENTUCKY

The annual meeting of the Kentucky Library Association was held at Lexington, October 29-30.

Ashland. A small public library has been organized at Ashland under the direction of the Library Commission. The book collection was given quarters in one of the prominent retail stores, and consists of about 800 volumes. This collection is supplemented by a traveling library loaned by the commission.

Corbin. The contract is about to be let for a \$6000 Carnegie library here. A desirable lot in the center of the town has been donated by the town council, and the building will soon be started. In the meanwhile, the club women are conducting a flourishing little library and reading-room. The book collection, consisting of about 2000 volumes, will be donated to the city on the completion of the library.

Frankfort. The Frankfort Subscription Library, formerly conducted and supported by

the club women, has been converted into a free public library, with an annual appropriation from the town council of \$600. The book collection consists of about 3500 volumes, which are housed, rent free, in roomy quarters in the old State Capitol. The librarian, Miss Lockett Smith, has recently completed a course in the Indiana Summer Library School.

Hopkinsville. The negro citizens here have started a movement to secure an \$8000 library, the money to be secured through the Carnegie Corporation of New York. Already the promoters of the movement have secured a favorable answer from the Carnegie Corporation, and the matter will be laid before the city council at an early session. The \$15,000 Carnegie library for the white people has just been completed and was opened to the public Sept. 28.

Stanford. A public library and reading-room has been established at Stanford, with quarters in the newly erected county court house. The collection of books was put in order under the direction of the Kentucky Library Commission, and the library was formally opened to the public in September.

Taylorville. The subscription library has been moved into an attractive little library building erected through the efforts of the King's Daughters' Circle. The reading-room is free to the public. A catalog will be installed under the direction of the Library Commission.

TENNESSEE

Nashville. Exercises conducted by the Negro Board of Trade were held Sept. 28, when the cornerstone of the new Carnegie library for the negroes was laid. This board of trade raised \$1000 for the purchase of the site.

Central West

MICHIGAN

Colon. Plans for the new \$15,000 Culver Memorial Library building are being drafted. The new library building will be the gift of Mr. Culver, a well-known resident of the village.

Detroit. The George Osius branch, on the corner of Newland and Gratiot avenues, opened for circulation Sept. 14. Formal dedication exercises were held Oct. 8, with suitable addresses. The site for a new branch library has been bought on West Grand boulevard, between Hanover and Dunedin avenues.

OHIO

Cleveland. The library board, on Oct. 3, approved the plan of locating a \$2,000,000 library building on the site of the present city hall, with the adoption of a resolution accepting the offer of the site made July 13 by city council. It is believed a test suit will be filed to obtain a decision as to the right of the city to turn this property over to the library board, and to determine the right of the board to accept the property with the restricting clause suggested by city council. An effort will be made to have these matters adjusted as soon as possible and to decide on preliminary plans. The board has authorized the building committee to choose an adviser who will assist in selecting an architect.

INDIANA

Auburn. At the annual meeting of the officers of the Eckhart Public Library, Mr. Charles Eckhart, who is president of the board and who donated the library building, made it known that he had endowed the building with \$15,000.

ILLINOIS

Three very helpful library institutes have been held at Kewanee, Gilman, and St. Charles under the auspices of the Illinois Library Extension Commission. These conferences were attended by librarians of surrounding towns, as well as members and trustees of library boards. The following subjects were treated by Miss Emma Felsenthal, of the University of Illinois Library, Miss Josie Houchens, University of Illinois Library, and Miss Anna May Price, secretary of Library Extension, after which an open discussion followed: "Books for the smaller library; what, where and how to buy"; "Use and care of periodicals"; "Ways and means of developing larger interest in the library." An especially interesting feature was a series of educational lantern slides, borrowed from the Russell Sage Foundation, which were exhibited at Kewanee.

Chicago. The librarian of Virginia Library of McCormick Theological Seminary offers two elective courses to students of the seminary. The first is on "The best theological books," its object being to familiarize the student with these books, giving attention to their authors, general character of their contents, date, price, etc. The books themselves will be taken to the classroom, and later placed on reserve shelves, where the student will be expected to examine them for himself. The lectures during the second semester will be on "The minister's library," and the principles of

selection, economy in buying, classification, arrangement, indexing, etc., in so far as they may apply to a private library, will be discussed in class lectures. The best general reference works and periodicals, needed for a minister's library, will be discussed and examined, and attention will be given to methods of caring for clippings and sermons. One hour a week will be given to each course.

The North West

WISCONSIN

Marinette. Stephenson P. L. Ada J. McCarthy, lbn. (Rpt.—yr. ending June 30, 1914.) Net accessions 352; total 14,904. Circulation 53,258, of which 26,307 was juvenile. New registration 781; total 4598. Receipts \$4826.17; disbursements \$4826.17, including salaries \$2104.85, books \$1005.34, periodicals \$161.35, binding and repair \$254.22.

Milwaukee. Under the joint auspices of the Library Section and the State Department of Education, the United States Bureau of Education exhibit will be on exhibition at the State Teachers' Association meeting here, November 5-7. In addition to this material, there will be special exhibits of school library activities in Wisconsin, in which practically all phases of school library work will be represented.

MINNESOTA

Barnum. Mr. G. G. Barnum, of Duluth, for whom this village was named, has offered to present the school with a library if a list of the books wanted is furnished him, and a list is now being compiled.

Duluth P. L. Frances E. Earhart, lbn. (Rpt.—yr. ending Dec. 31, 1913.) Accessions 2039; total number of volumes 62,184. Total circulation 206,626. Total registration 21,907, a gain of 2313. Total receipts were \$26,729.40, and of the expenditures \$8052.35 went for salaries, \$2426.83 for books and periodicals, and \$1082.18 for binding.

The small increase in the number of additional volumes was due to the fact that a number of repairs were required on the library building, including the purchase of shelving for bound newspapers and the necessity of renewing insurance on the main library and branches. Because of limited book purchases, there was no gain in circulation except in the branches, which show increased use.

Mankato. Garden City, a small village of this county, is to have a public library, park and playgrounds as the gift of Dr. Henry S. Wellcome, of London, England, a former resi-

dent of Garden City, in memory of his parents, who were pioneer residents. Dr. Wellcome is a manufacturer of chemicals. He is at present conducting scientific explorations in the Soudan, Africa.

St. Paul. The cornerstone of the new library building was laid Sept. 15.

IOWA

Cresco. Plans have been completed for the new Carnegie library at Cresco, the cost of which will be \$17,500, complete. A tax of \$2000 a year will be levied for maintenance.

The South West

KANSAS

Emporia. The Kellogg Library of the Emporia State Normal School had a "sight-seeing day" recently. Four hundred and fifty students and teachers were conducted through the departments of the Kellogg Library, and the resources and use of the library were explained. Miss Grace Leaf, reference librarian; Miss Gertrude Buck, professor of library science; and Willis H. Kerr, librarian, conducted the groups. The plan was so popular that it will be repeated.

Concordia. The Concordia Public Library, now in its seventh year, reports a steady increase in circulation of non-fiction, with a decrease in the reading of fiction. In 1913, the 4427 citizens of Concordia read $3\frac{1}{2}$ books each, for a total circulation of 15,737. Eighty-eight per cent. of this reading was fiction.

Coffeyville. The Coffeyville public schools and public library are co-operating, with splendid results, in a systematic home-reading course for pupils. The superintendent is A. A. Hughart, and the librarian, Miss Madge Evans.

Dodge City. The Dodge City Public Library has 1386 cards in use by its 3000 citizens. In 1913, the 2078 volumes were checked out an average of six times each. One-third of this reading was by children. The year's disbursements were \$1103. Mrs. S. E. Fox is librarian.

Iola. For the use of Iola young men and women, the Public Library keeps a file of the catalogs of Kansas colleges and state schools and of the larger colleges and universities throughout the country. The library has 6000 volumes, and at present has 2600 readers. The librarian, Mrs. Florence P. Cass, emphasizes the library's service to the public. Miss Louise Heylman, an Iola high

school 1914 graduate, has been appointed assistant librarian.

Parsons. The Parsons Public Library has received, by the will of the late Mr. A. J. Guille, his books, pictures, statuary, Chickering grand piano, and \$1000. The library now has 7830 volumes, and the circulation is at the rate of 40,000 per year. The librarian is Mrs. Belle Curry.

Wichita. The Wichita high school is believed to be the first in Kansas to have a specially trained librarian giving full time to its library. Miss Hazel Howes, the librarian, is a college graduate and took special library training at the University of Missouri. The library has 4500 volumes and receives a dozen or more standard magazines. Library of Congress cards are used.

Garnett. The public library here, after being maintained for two years by the women of the city, is now tax supported. It has 1300 volumes. The librarian is Miss Nannie Hunter.

MISSOURI

St. Louis. The Public Library has opened a writing-room on the west corridor of its upper floor. Facilities for writing letters, preparing articles or essays, making notes, or doing any other kind of writing, will be provided here free of charge. Pens and ink will be furnished. The use of ink is not allowed in any other part of the building. In this writing-room will be a public stenographer and typewriter, who is also a notary public, who will do work as required at regular current rates. The establishment of this writing-room is at present only an experiment, but if it meets with favor from the public it will continue permanently. Postage stamps will be sold by the stenographer.

LOUISIANA

New Orleans. The Engineering Society has accepted the offer of the Museum Commission to provide it with a location for a library of engineering works, free of all expenses. This makes possible the enrichment of the collection by the use of the funds saved from rent and other charges.

Pacific Coast

OREGON

Portland. The Lents branch of the Public Library has moved to the attractive new building which has just been erected for the purpose on the corner of Foster road and First avenue. This building furnishes much more adequate

accommodations for the public than the previous quarters. One end of the large room is devoted to magazines and reference and circulation books for the grown people, and at the other end are books for the children. The Woodstock library has also moved into a larger room at 4426-28 Sixtieth avenue, Southeast.

CALIFORNIA

Berkeley. The University of California has recently installed a bronze tablet in memory of Charles Franklin Doe, who bequeathed nearly three-quarters of a million dollars to build the University Library. The university has outgrown already the library built from Mr. Doe's bequest, yet it is only three years since it was thrown open, unfinished, large areas of the building as originally planned having been left to be provided as need arose, so great enlargements can readily be made at a minimum of cost whenever funds may become available. The library's book storage limit of 300,000 volumes will this year be attained.

Los Angeles. The August *Bulletin* of the Los Angeles Public Library was a special branch library number, and besides a general survey of the whole branch library system, contained a short description of the work of each individual branch, written by the librarian in charge. For financial reasons, the Washington branch was closed Sept. 30. The additional cost of equipping and operating the main library in its new quarters has made imperative some economies, and since the Washington branch is nearer the main library than any other, and its circulation the smallest, it was felt that its patrons could all be served by the main library or by other branches.

UTAH

Salt Lake City. The formal dedication of the new administration building of the University of Utah, described in the LIBRARY JOURNAL for October, took place Oct. 8. Hon. Henry S. Pritchett, president of the Carnegie Foundation for the Advancement of Teaching, was the principal speaker, his address being on "Education and happiness."

Foreign

GREAT BRITAIN

Mr. G. F. Barwick, formerly superintendent of the reading-room of the British Museum, has been appointed keeper of printed books, to succeed the late Arthur William Kaye Miller. His position in the reading-room will be taken by R. F. Sharp, assistant keeper of the department of printed books.

Birmingham. On Wednesday evening, Sept. 30, the staff of the Birmingham Public Libraries met at the Colonnade Hotel, the chief librarian, Mr. Walter Powell, presiding, to give a send-off to the seven members of the staff who had joined the City Battalion, as well as to two of the porters at the Central Libraries who had also rejoined the colors. One of the latter was a reservist called up at the outbreak of hostilities and only able to be present by reason of having been invalided home after the battle of Mons. There was a very large gathering and great enthusiasm was shown when the chairman wished the men God-speed and a safe and happy return.

FRANCE

The Association of French Librarians has, after long debate, decided to recommend the employment of a third class of library officials, in rank between the librarians and the attendants (*gardiens*). It was suggested that the former "*commis d'ordre*," a class of employes dropped some time since, are sadly missed and should be taken on again. It was also suggested that for this third class of library employes, as indeed for many sorts of work about a library, women were as well if not better qualified than men. They were cheaper also, and their employment would render it possible to keep many a small library open, which must now be closed several hours a day. The women to be employed must pass a certain examination, particularly in languages, as it would be necessary to catalog titles in all tongues.

Paris. The *Revue des Bibliothèques*, nos. 1-3, 1914, has an interesting article by Alfred Rebelliau concerning the new Thiers Library given to the French Institute by Mlle. Dosne, sister-in-law of the great statesman and former President of the Republic. The library is housed in the Hôtel Thiers, 27 Place St. Georges, which was Mlle. Dosne's home until her death. She has given the house itself and the interesting relics it contains to the Institute as well as the collection of books. The library is endowed and a commission consisting of MM. Georges Picot, L. Delisle, Ludovic Halévy (who is an enthusiastic student of French history as well as a successful playwright), assisted by several others, has been appointed to administer the funds of the foundation and supplement the collection in such a way that it will prove in time an invaluable source of information to the student and writer of French history. Thiers' study and his private apartments, kept as they were during his lifetime, are part of

the donation. The great statesman's correspondence and the first drafts of his books are in the possession of other libraries and archives, but many which were in the possession of private individuals have been given to the new library since its opening. The Thiers Library is particularly rich in books and documents concerning the history of the Revolution and the Republic of 1848. The library is open to the public on the same terms as is the Library of the French Institute: a card signed by two academicians is necessary to admit the student to its rooms.

GERMANY

Hamburg. "Die Oeffentliche Bücherhalle," a system of popular libraries organized by the Patriotic Society of Hamburg, has issued its report for 1913. The "Bücherhalle," with its five branches, had a circulation of 2,000,000 volumes in 1913, a record for German libraries. The majority of these were fiction, but the 50,000 technical works taken out show that the Bücherhalle is filling a long-felt want in placing useful educational and vocational works at the easy disposal of those who need them. Originally intended to supply good fiction and popular scientific books to the poorer classes, the Bücherhalle finds itself, after several years of existence, the literary and educational mainstay of a large middle strata of the population, for which neither the usual cheap "popular libraries" nor the University libraries had made any provision. Artisans, small shopkeepers, and clerks, flock to the libraries and use them in connection with the night schools and the vocational schools to further their careers by fitting themselves for a higher type of work. They demand technical and easily comprehensible scientific books of all descriptions and the better class of fiction, the classics of every language, to such an extent that the Bücherhalle has found it best to cater to the definitely expressed wishes of this large class of readers. Books on all commercial subjects, finance, banking, bookkeeping, and the like are eagerly sought for and ordered long ahead. The demand for music and books on music has increased greatly during the past year, and the Bücherhalle saw itself compelled to increase its supply accordingly. The children's department lent out 260,000 books during 1913, and the reading rooms for children were much frequented. A new branch in a hitherto neglected city quarter is planned. The government promises the land, and the municipality pledges 35,000 marks towards the building and a yearly subsidy of 20,000 marks for its maintenance. An already existing branch

is to be newly housed in a fine building to be erected by the city.

Wolfenbüttel. An item in the *Braunschweiger Allgemeiner Anzeiger* of Sept. 17 records the death of Dr. Phil. Robert Bürger, for ten years librarian of the Ducal Library of Wolfenbüttel. Dr. Bürger, who was a vice sergeant major in one of the German regiments, was wounded by a shot in the face in a battle back of St. Quentin and was brought to the hospital at Noyon, where he died of his wound. He was 37 years old.

SCANDINAVIA

"The libraries of Scandinavia" is the title of a paper by Jacob Hodnefeldt, published in the *Publications of the Society for the Advancement of Scandinavian Study* for June, 1914. It is a carefully prepared paper compiled from reports of Scandinavian libraries, library periodicals, and personal correspondence and conversation with Scandinavian librarians.

There are four types of libraries in Scandinavia: the royal libraries (found only in Sweden and Denmark), university libraries, public libraries, and those belonging to societies and individuals. The royal libraries, founded from the fifteenth to the seventeenth centuries, at first were like museums, their object being to preserve the books rather than to give service except to the favored few. Now they are really national libraries, and their service is nation-wide. The public libraries are still not fully developed. Only the larger city libraries have reading and reference rooms, the others being simply book collections, open a few hours two or three times a week for the lending of books.

The article describes with more or less detail the resources of the Royal Library, the University Library, and the Public Library in Copenhagen, the State Library at Aarhus, the National Library of Iceland, the Royal Library at Stockholm, the University Libraries at Lund and Upsala, the Public Library at Gothenburg, the Royal University Library of Norway, the Deichmanske Bibliotek in Christiania, and the Public Library in Bergen.

In 1909 Norway had 800 public libraries besides traveling libraries and 3000 children's libraries in schools. The national department in charge issues a selected list of books, and all books bought with government appropriations must be selected from this catalog. Duplicate orders are sent to the government department and the bookseller. The books selected are all sent to one bindery, which does the binding for all the public libraries in the country. For 40 öre (about 11 cents) per volume, the books

are bound ready for use, this price including a book pocket. The government department sends proper catalog cards for each order to the bindery, where they are put into the books, and the books are then franked through the mail to their various destinations. Catalog cards cost 3 öre each, and the slugs from which they are printed are kept, so that finding lists for the libraries may be printed at very low rates.

DENMARK

Copenhagen. The Communal Public Library reports for 1913-14 a most successful year. There were 11,595 borrowers who took out 460,904 books, a gain of over 100,000 over the figures for the preceding twelvemonth. This year 100,458 technical or instructive books were taken out, as against 40,987 the preceding year. The reading rooms in the main library and its four branches were visited by 145,164 persons, of whom about 30,000 were children. The great gain of this year is laid to the heavy purchases of new and important books, and also to the fact that the circulation department was open not only in the evening as before, (from 6 to 9) but also from 12 noon to 2 p. m.

SWEDEN

Christiania. The Deichmann Library reports 565,792 books taken out during 1912, and 286,875 taken out during the first half of 1913. The library now owns 119,023 books and has one main building and three branches, a new branch having just been opened in the suburb Gronland. Gifts to the library during 1912 and the first half of 1913 numbered 2,557 volumes.

NORWAY

Bergen. The town has completed its subscription lists for the building of its new library. The city has given a piece of ground in a good central location and the money for the building has been subscribed by private parties. One rich merchant, Oluf Bjorneseth, whose interest in children's libraries was aroused in America last year and who has recently presented a very interesting and complete collection of Norwegian children's literature to the New York Public Library, gave 20,000 kroners for the children's room alone, that it might be made a model of its kind. Professor Olaf Nordhagen is to be the architect for the new building.

SWITZERLAND

Berne. The report for 1913 of the National Swiss Library shows an accession list of 15,085 volumes, a falling off of several thousand from the record of 1912. The difference is

explained by the fact that a larger proportion of the library funds was spent in cataloging. Owing to alterations in the library building the rooms were closed for a longer time than usual, which resulted in a falling off of the attendance compared with the year 1912. 10,238 visitors were registered for 1913. The home circulation was 26,958, a gain of 2,000 over the previous twelvemonth. An amusing incident noted in the report is the anonymous gift of 250 francs, which is a compensation on the part of the unknown donor for damage done by him to the library property. The damage consisted of a deliberate tearing out and carrying away of maps from four different atlases. The theft was perpetrated six or seven years ago, and the thief was never discovered. The librarians have not been able to discover him even now, nor to discover the reason for his tardy awakening of conscience. The chief aim of the National Library is to conserve all literature which comes under the head of "Helvetica," particularly all writings touching on Swiss history since the foundation of the present Confederation in 1848. It is under the direct supervision of the Department of the Interior. The library has now 332,000 books, 48,000 prints, 9,000 maps, and a thousand MSS. It serves furthermore as Regional Bureau for the London International Catalogue.

Geneva. The University and Public Library (M. Frederic Gardy, director; M. Henri Delarue, curator) shows an accession list for 1913 of 4,852 books, 18,081 installments of books or periodicals, 7,016 pamphlets and 7,502 academic theses. 5,501 volumes were lent to 459 readers, and 418 volumes and 7 manuscripts were lent to twenty-seven libraries, archives, or public institutes in Switzerland, while forty-seven volumes and five manuscripts went to nine foreign libraries. There was a large attendance in all the various reading rooms and reference halls, the year being considered a very successful one, in spite of the fact that the opening of a new stack room necessitated the moving of 80,000 volumes, and the consequent prolongation of the usual summer closing time. An appropriation of 7,500 francs has been made by the municipal council for special alterations to the building, giving greater security against flood and fire.

Lausanne. The University and Cantonal Library reports 405 new subscriptions to periodicals, bringing the total number held by the library up to 7,566. Besides these new periodicals, the library bought and cataloged 790 books, 159 pamphlets, and ten maps during

the year 1913. The library lent 400 volumes to the organizers of the vacation courses at the University, and included students of the courses, under certain regulations, among those permitted to borrow works of fiction. The library was frequented by 40,941 persons during the year. Of these 6,700 were borrowers of books, 34,241 came to read and consult the works of reference, and 8,363 were visitors to the special Exposition and to the Hall of Medals.

Zurich. In its report for 1913 the City Library gives considerable space to the project for a new great Central Library, a plan which has been eighteen years in the making. At the close of the previous year 750,000 francs of voluntary private contributions for the new library had already been promised. During 1913 the matter was brought to a referendum vote of the citizens of Zurich and carried by a large majority, after having been passed by the cantonal council and the city council. The only measure still needful is the referendum of the canton, which it is hoped will be favorable. The plan is to concentrate the various collections belonging to the City Library and house them in a suitable building. During the year 1913 the collections of the library have been newly assessed for the purposes of fire insurance. The result gave as values for the various collections: books, 1,539,024 francs; manuscripts, 1,008,565 francs; periodicals, 306,605 francs; coins, medals, 382,800 francs; catalogs, 155,600 francs; furniture, 23,500 francs, making a total of 3,416,094 francs. The new accessions for the year show a total of 6,604, of which 2,628 were books.

AUSTRIA

An official dispatch from Vienna to the Austro-Hungarian ambassador in the United States repeats the assertion made by Polish refugees from Galicia that after the occupation of Lemberg by the Russians the famous

Polish Library housed in Osselinsky Institute was sent to Petrograd.

RUSSIA

Moscow. The fourteenth library "Biblioteka L. P. Vakhterovoi" has been opened in Moscow by the Society of Free Public Libraries.

Moscow. The University of Moscow Library is to have a new hall with open shelves. A collection of 2000 books will be placed on them.

Petrograd. The city at present has twenty free public libraries. During 1912-13, the record of attendance in eighteen of these showed that 37,427 admission tickets, entitling the holder to the privilege of using books in the libraries, were issued. The number of visitors was 206,786; books issued for reading room use 299,664. For home use 260,409 volumes were issued to 12,675 readers.

Ufa. Library courses will be opened this year in Ufa, the city council having appropriated 3500 rubles for the purpose.

Warsaw. Work on the Biblioteka Ordynacyi hr. Krasinskiich, which is under construction, is progressing rapidly, and it is expected that the library will be opened soon. The library already contains over 100,000 volumes.

AUSTRALIA

Adelaide P. L. H. Rutherford Purnell, lbn. (Rpt.—1912-13.) Accessions 3242; total number of volumes 80,480 (exclusive of 7000 U. S. and Canadian public documents). Attendance 105,400, a decrease of 2130. The library is being reclassified by the Dewey system, and the books rearranged on the shelves. In 1913, the work of fitting up a periodical room was completed, and with the installation of furniture and electric lights, it will be available for public use. Books have been purchased to start a children's library as soon as the necessary room can be furnished.

THE LIBRARIAN'S MOTHER GOOSE

XI. SHIPPING STATION

There was a little man

He had a little trunk.

And it was heavy as lead, lead, lead.

He took it to the station—

They gave an exclamation—!

But I wouldn't dare tell what they said, said, said!

—Renée B. Stern.

LIBRARY WORK

Notes of developments in all branches of library activity, particularly as shown in current library literature.

General

Education, Training, Library Schools

INSTRUCTION IN USE OF LIBRARIES

Various methods of giving instruction in use of libraries to college students were told at a college library round table at the Ithaca meeting of the New York Library Association in September. At Syracuse the English department and the Library School co-operate, and groups of freshmen are taken through the library, where every department is explained to them. This resulted last year in adding 200 names to the list of registered borrowers, and in increased circulation and reading room attendance. This year a course in library instruction is to be given with the English department.

At Vassar freshmen are taken in groups of three or four on 15 minute trips around the library. This creates a better personal relation between the students and assistants than a lecture could establish.

At Oberlin Mr. Root, the librarian, gives an elective course in the use of libraries to classes of from 60 to 75 freshmen. Credit is given for work done in the course.

At Hamilton College time is borrowed from the different departments to get an opportunity to give instruction, whenever possible the instruction given to the different groups helping them to a better knowledge of the books most useful to the work of their department.

CARE OF BOOKS TAUGHT IN SCHOOLS

Permission has been granted, to the library authorities of Middletown, O., to send lecturers to the different school buildings to co-operate with the regular teaching staff in teaching the children the care and proper use of books. Miss Elsie Ingalls of the library staff has already made visits to several of the grade buildings and has pointed out the proper way to open books and care for them. She has emphasized the importance of use of the public library and has explained the aid that the library attendants can offer to students in search of reading material. At the opening of school this year the teachers made a visit to the local library at which time Miss Ellinwood and her assistants explained the facilities of the library.

Library Biography

LIBRARY BIOGRAPHY

Biographical sketches of librarians and bibliographers: III. Charles Ammi Cutter, 1837-1903. Samuel Swett Green. *Bull. Bibl.*, JI., 1914. p. 59-60.

Mr. Cutter was born in Boston, Mar. 14, 1837, was graduated from Harvard in 1855, and from the Divinity School in 1859. While still in the Divinity School in 1858, he became its librarian, and in 1860 he entered the Harvard College Library. He took charge of the Boston Athenæum, Jan. 1, 1869, and remained until 1893. Soon after he became librarian of the Forbes Library in Northampton, Mass., where he stayed until his death, Sept. 6, 1903.

Mr. Cutter had great natural qualifications for librarianship, and an international reputation for his skill in cataloging, which was manifested in the Athenæum catalog which was issued under his supervision, volume by volume from 1874 to 1882. He also compiled a set of rules for making a dictionary catalog which the United States Bureau of Education issued in 1876 as the second part of the great work on the libraries of this country, and which was kept up to date by revisions.

Mr. Cutter took an active part in the forming of the American Library Association, and was for many years, from its inception, the editor of the bibliographical department of the LIBRARY JOURNAL, and for the last ten years of his connection with the JOURNAL he shared the responsibility of its general editorship. He was the author of the Expansive Classification for the arrangement of books on a library's shelves, left unfinished at the time of his death, which was placed in the hands of his nephew, Mr. W. P. Cutter, for compilation.

Mr. Cutter was a hard worker, learned and accurate, and of fine taste in art, architecture, and literature. He was modest, unselfish, gentle, and generous. "His readiness to help others, his simplicity of spirit, the catholicity of his interests and enjoyments, made him as delightful as a companion as he was lovable as a friend."

History of Library Economy

MEDIEVAL LIBRARIES

Old time books, scribes, and librarians. Marion Nesbitt. *Ave Maria*, S. 12, 1914. p. 328-334.

A good part of this article is devoted to the librarians of the monastic libraries.

POOLE'S INDEX, HISTORY OF

The origin of Poole's Index. John Edmands. *Pub. Libs.*, O., 1914. p. 341.

During Mr. Edmand's senior year at Yale, 1846-47, he had charge of the library of one of the literary societies. He had to help students with references to subjects they were looking up, and for his own convenience kept copies of the references arranged for ready reference. This was published anonymously during the winter in a 8-page pamphlet called "Subjects for debate with reference to authorities."

The following year Mr. Poole had charge of this same library, and as the pamphlet continued in demand and the supply was exhausted, he undertook a new edition. Instead of going on with this work, he made a general index to the periodicals then in the library, and this was published in 1848. When, in 1876, it was decided to have a general index to periodicals, Mr. Poole was made editor.

Chapters from an impossible autobiography, Chapter XXIII. The lost manuscript. William I. Fletcher. *Pub. Libs.*, O., 1914. p. 334-336.

The history of the loss of a package containing several letters of the alphabet in the entries prepared for the Poole's Index of 1882. The missing manuscript was subsequently discovered under a fruitstand in front of a grocery store and the mystery was cleared up a few days later when a similar sized package fell off an express truck at Mr. Fletcher's feet, without being missed by the man in charge.

Scope, Usefulness, Founding

Library Extension Work

PHONOGRAPH CONCERTS

Miss Stella Stebbins and Miss Ethel Wright, of the Virginia (Minn.) Public Library, told of the use of the victrola in that library, at the meeting of the Minnesota Library Association at Little Falls. The victrola concerts are given for the most part on Sunday afternoons. The program is printed in the paper and copies distributed in the library. In making the programs, the aim is to make the selection broad enough to contain something that will please people of different tastes. Special programs are made for holidays, suggestions for these being found in a monthly pamphlet published by the Victrola Company. Most of the records

used are borrowed or rented from the victrola dealers, the test for purchase being the approval of the audience after hearing a record again and again. By means of these Sunday concerts, foreigners have been brought to the library who otherwise would be very difficult to reach. Miss Wright emphasized the value of the victrola in connection with the story hour, specially recommending selections from Lohengrin, the Niebelungen Ring, the Procession of the Knights from Parsifal, the Sextette from Lucia di Lammermoor, and Home to our Mountains and the Miserere from Il Trovatore. A number of separate selections were also named by Miss Wright as being continual favorites with the children.

EXHIBITS

An interesting collection of maps, photographs and diagrams bearing on the European war has been placed on exhibition in the geological library at Columbia University. The position of the various armies is indicated on the maps by different colored pins, and these are shifted daily.

Lists of books on occupations were sent out from the branches of the Minneapolis Public Library early last summer. Prizes were offered to boys and girls who would make some article during their summer vacation and bring it to the library in the fall. An exhibit of these articles, which was held in the main library, was exceedingly interesting, not only to the young people but to the grown-ups as well, and was a valuable lesson in well directed effort to both groups of people.

Library Development and Co-operation

CO-OPERATION BETWEEN LIBRARIES

How the Library of Congress serves the people. Wm. Warner Bishop. *Pub. Libs.*, O., 1914. p. 331-334.

The Library of Congress serves the people by its mere existence, which is a recognition of the library profession and its importance that reacts helpfully on every librarian. Its receiving the compulsory deposits of all copyrighted articles makes it unique among American libraries, entailing the maintenance and rounding out of some collections, as music and prints, which ordinary libraries need not always do. It prepares a large number of bibliographies which can almost always be lent to libraries, and frequently given. It publishes the *Monthly List of State Publications*, and three times a week the *Catalog of Copyright Entries*, the most complete record of the press of America. It is the central

cataloging bureau for the United States, and carries a stock of over 40,000,000 copies of its printed cards. It also prints a notable array of calendars, special catalogs, bibliographies, and texts, which are available for libraries and individuals for trifling sums.

This usefulness is rather indirect than direct and personal. The most direct service to persons outside Washington is in answer to inquiries by letter, along certain lines set forth in the "Rules and practice." The inter-library loan is another direct service, from which few classes of books are excepted. Books are lent in aid of research, with a view to enlarging the boundaries of knowledge, but not for mere self-instruction. The library cannot do research work for people at a distance, nor lend its reference books. Neither can it lend new novels, cheap books, genealogies, local histories, and newspapers. Transportation charges rest on the borrowing library.

Founding, Developing and Maintaining Interest

LIBRARY EXHIBITS AT COUNTY FAIRS

J. H. Newman, librarian of the Ohio State Library, made the rounds of the county fairs in his state to stimulate interest in the State Library and to show the citizens the advantages to be gained from its use. The Ohio Library Association prepared an exhibit of books to be shown at the various fairs, and the work of the five departments of the state library—reference, circulating, traveling, documents, and legislative—was described in lectures and informal talks. Miss Helen Atkinson of the State Library assisted Mr. Newman in explaining the exhibit.

"BETTER BABIES" PHOTOGRAPHS

Last year the Grand Rapids Public Library printed a selected list of books on the care of children, entitled "Better babies," which was mailed to the new mothers in the city regularly as their names appeared in the official records of birth. The superintendent of circulation has collected a series of photographs of babies whose mothers brought them up on library books. These are on exhibition on one of the bulletin boards of the Ryerson building, and show at a glance that the mothers who use library books on this subject know how to raise better babies. The newly revised list of these books is printed in the library's *Bulletin* for September.

PUBLICITY POSTALS

At the meeting of the New York Library Association in Ithaca in September Miss Elizabeth L. Foote, librarian in charge of the 125th

Street branch of the New York Public Library, described the publicity postals used in her branch, and also two files she keeps showing the book interests and occupations of card-holders.

"The 'interested postal' as used in a number of libraries, reads something like this:

(Name and address of library)	(date)
You may be interested in the following book which has been placed in this library:	
.....	
.....	
The book will be reserved for you till 9	
p. m.	
Bring this card with you.	

"The postal being approved, the next problem is to whom to send it when certain new books come in which you are sure will be of special interest to someone. This card is used in some libraries:

Subject	
Name	
Address	
The library will be glad to notify you when books are added which treat of the subjects in which you are interested. Please fill in the above for our file.	

"A pile of these cards lies always on the desk or the catalog case and readers take and fill them out as they please. In this branch the librarian assigns a class number to the subject and if the reader has named more than one or if the subject has more than one place in the D. C., duplicate cards are made and filed, so that the reader's name is kept with each subject in which he is interested. When new books are ready, the file is consulted for the numbers represented in the new books, and postals sent. There is also an "occupations" file, in which a card is made for each reader from the application slip, according to the occupation named there. This can often be used in getting books to the right people, and it is also useful as a general indication of the character of the constituency and a guide to choice of books.

"The 'interested postal,'" says Miss Foote, "brings such delightful expressions of appreciation from grateful readers, that it more than pays for the trouble it takes."

LIBRARY ADVERTISING

The Brumback Library of Van Wert County, Ohio, this year followed up its line of advertising introduced at the Van Wert County Fair last year by an entirely different development of the same idea of placing placards in the various exhibits throughout the fair grounds. This year the library introduced the "picture bulletin" idea, but of an unconventional and untraditional style, colored pictures on cardboard with black gummed letters were used. In the bread and cake section was placed this one: The picture, recently a *Life* cover, of a young woman with horror stricken face, holding up hands dripping stickily with the bread she is mixing. On *Life* she was saying, "Gracious, there's the telephone!" On the library bulletin she said: "My goodness! Where's a cook book? Answer: At the Library." Tacked to the entrance to the grandstand was a picture of a boy with uplifted bat ready to strike an approaching baseball. This read: "Strike out" (above the picture) and "Read some books from the Brumback Library" (below the picture). In the fruit exhibit was shown a *Saturday Evening Post* picture of an old man looking through opera glasses (at air ships). The air ships had been cut away and pasted above the opera glasses and crawling all over the letters of the big word BUGS were various sorts of insects. Below the picture "A book on spraying might help." On the front of a horse stall in the stock exhibit was a picture of a horse with a little girl on its back, leaning caressingly over: "Horse sense—Let's go to the Library." In the school exhibit appeared the picture of a mother tying her small boy's necktie and saying as he starts for school: "Johnny, be sure to bring home a book from your school library." These are a few of the seventeen "picture bulletins" used. The library exhibit in the Main building attracted much favorable attention and comment. On the back wall was a large "sectional" map of the county made up from cardboard and the townships outlined in passepartout. The names of the fifteen branch stations were placed in position in the black gummed letters, with a picture of the main library where Van Wert would be. Four shelves of books and a few pictures completed the display. The assistant in charge of the booth each day gave away souvenir post cards advertising the library. These cards had a picture of the library building, a list of branches, and the following text:

"Dear Neighbor:—Do you know how easy it is for the people of Van Wert County to get good books for all the family to read?

Our County Library has branches at fifteen different places in the county, (a different collection at each every three months)—books on EVERY subject you can think of, as well as good novels and books for children.

"Besides this, the rural teachers borrow school libraries from the county library, and the children bring these books home."

BIRTHDAY LISTS OF BOOKS

The Grand Rapids Public Library placed on the open shelves for September a collection of biographies of people whose birthdays occur in September. This "birthday calendar" will be a feature for each month hereafter.

COUNTY SOCIAL SERVICE WORK

A year ago the county Y. W. C. A. secretary and the county agent for dependent and delinquent children called a meeting of all paid workers in social service work in Chautauqua county, New York, including the librarians at Jamestown, Westfield, Fredonia, and Dunkirk. About twenty-five responded to the invitation, the group including secretaries of the Y. M. C. A., Y. W. C. A., and charity organization societies; county, district, and public school nurses; the secretary to the police board; and librarians. Three meetings have been held, with practical discussions of the problems to be solved, each line of work being represented by one speaker at each discussion.

A committee of three was appointed to secure space at the Chautauqua county fair, that the separate interests might be brought before the county collectively. Ample space was obtained and a rest room furnished with some of the results of the work. The county agent for dependent children had a better babies exhibit, and the Y. W. C. A. took charge of the welfare work. The libraries had bulletins showing all the libraries in the county; a bulletin with the number of volumes in each and the number of books issued; two illustrating books; and one on the development of Chautauqua county; eight boards in all. The entire exhibit attracted a good deal of attention and received many flattering comments from the visitors. The authorities were so well pleased with the experiment that a larger space was offered for next year, when the librarians hope to furnish material for a historical pageant to be carried out by the children of the county in the various classes conducted by the Y. M. C. A. and Y. W. C. A. This co-operation brings the librarians in personal touch with those having charge of the county jail, almshouse, city jails, and through the state board of charities, with the orphanages, as well as the organized charities throughout the county.

BRUMBACK LIBRARY EXHIBIT AT THE FAIR IN VAN WERT COUNTY, OHIO, AND SOME SAMPLE POSTERS

BULLETINS

Picture bulletins at the May Day fête, Library School. Marion Humble. *Wis. Lib. Bull.*, Je., 1914. p. 142-144.

Descriptions of an exhibit of picture bulletins, with lists of books, on poetry and song, advertising, business of a circus, circus day, poultry culture, pottery, "they who knock at our gates," fire prevention, and Norway.

Libraries and the State

MUNICIPAL RELATIONS

The place of the public library in the administration of a city. William A. Schaper. *Nat. Municipal Rev.*, O., 1914. p. 672-682.

Professor Schaper traces the growth of the Boston Public Library from its first projection in 1847 down to the present time, and enumerates the library facilities of several of the more active cities. In all of these the school and library authorities are distinct, and it is consequently natural to find two sets of educational buildings erected. Some duplication of schools and library buildings may be both inevitable and desirable, but in many cases it involves large public outlays that are unnecessary.

"The independent boards still having charge of the public schools, libraries, art galleries, museums, and other secondary educational activities will probably in course of time become an organic branch of a properly organized city government, responsive and responsible to the rising municipal democracies.

"The advantages of uniting the public library system with the public school system under one central authority properly related to the rest of the city government are many, including the following:

"1. A marked saving in the amount spent on buildings and in their operation and maintenance.

"2. A unification of all the educational activities under a single directing agency would result in a better utilization of the school buildings.

"3. This plan simplifies the machinery of city government and gives democracy a better chance to direct it intelligently.

"4. The uniting of the public libraries and other secondary educational agencies with the public schools would greatly strengthen the influence of the educational interests as opposed to the material, the purely mercenary and political.

"5. Placing the schools and libraries under one directing agency will promote a closer integration between them."

Support. Raising Funds

CO-OPERATIVE LIBRARY SUPPORT BY CITY DEPARTMENTS

For two years the Denver Public Library conducted a branch library in the abandoned town hall in Valverde, a suburb of Denver. When the city went under a commission form of government, this old building was assigned to the commissioner of safety, who planned to remodel the structure into a fire house. When the work of altering it began last spring, the library moved out and until other quarters were available, Valverde received only weekly visits from the library's book truck. The discontinuance of the library's reading room and book distribution resulted in unfortunate conditions in Valverde. In communications sent by the Valverde Improvement Association, it was stated that men and boys were going in increasing numbers to drinking places across the river and that parents no longer knew where to find their children in the evenings. Valverde is one of the poorest sections of Denver, but a committee of citizens visited the mayor and asked to be assessed for a library building. This was not done, as the mayor decided the section was too poor to stand this assessment. Following several public meetings in Valverde, Mr. Alexander Nisbet, commissioner of safety, decided that since the library had meant so much to the suburb and had been discontinued because of changing the library building into a fire house, he would provide for other branch library facilities. Consequently, plans have been completed under the direction of the Denver Public Library for the erection of new quarters. The new branch building will consist of a wing added to the fire house. It will be paid for by monies from the department of safety, but will be under the jurisdiction of the Denver Public Library. It is unique in commission form of government, to see a department pay for any activities that are not strictly under its jurisdiction. In Denver the library activities are classified under the department of social welfare.

Government and Service

Constitution and Bylaws for Governing Board

BY-LAWS

By-laws suggested for public library boards. *Wis. Lib. Bull.*, Je., 1914. p. 144-146.

A set of suggested by-laws framed by the Indiana Library Commission which Wisconsin workers have tried and found excellent.

Staff

STUDENT ASSISTANTS IN COLLEGE LIBRARIES

In a round table discussion of student assistants and their work during "library week" at Ithaca in September, some interesting points were brought out. Dr. D. F. Estes of Colgate University opened the discussion. He found the student helpers able to do almost any routine work. In the cataloging department in his library they collate and cut leaves; in the accession department they do perforating, pasting, etc., and numbering on books and cards; in the order department nothing is given them; in the loan department they shelve books and read the shelves when a library assistant reads the shelf list, and work at the loan desk in the evening and certain hours during the day; they open book packages but do not check up the orders, take charge of books for debate material after the reference librarian has made up the lists, do alphabetizing, and order the L. C. cards. In choosing the men a written application is required and kept on file. Dependability, general good character, and practical intelligence are requisite qualities, and other things being equal, the man most in need of the money is chosen. Disadvantages of the system are limited service, irregular hours, and spasmodic interest in the work. Its advantages lie in the possibility of securing cheap, abundant, and intelligent labor; in the closer contact with the student body and the student point of view; in the greater ease in tracing books that disappear; in providing real help to students who might not otherwise be able to stay in college; and finally, in getting a number of men in such close touch with the books that they are interested to go into the work themselves after graduation.

Mr. Willard Austen, reference librarian at Cornell, said he was a convert to the use of students as pages and in all work where one can train another, but where their work will be supervised by a trained assistant. The work benefits the men by stimulating their interest in books.

Miss Sanborn of Wells felt that too much time was lost in training assistants to make their employment worth while. Miss Borden of Vassar said they had twelve students who put the books on the shelves, different students having charge of certain sections. The students also keep up the library scrapbooks, and do collating, pasting, etc.

In Colgate the students are paid 25 cents an hour; at Vassar they receive 15 cents at the start and work up to 25 cents; at Hamilton College they receive about 20 cents; at Roch-

ester they work 125 hours per term for their tuition, which is equivalent to about 20 cents an hour; and at Syracuse they are paid 20 cents.

Rules for Readers

Home Use. Loans

RESERVED BOOKS AND FINES

The question of reserved books and fines in college libraries was discussed during "library week" at Ithaca. At Syracuse University the books were kept in the reading room at first, but it was found they had to be put behind the desk. A long card for each book is kept, on which the students sign for reservations. Books may be taken out over night, with a 25-cent fine if they are not returned in the morning.

At Colgate few are kept at the loan desk, most reserved books being in department rooms, but it was felt it would be an advantage to have more at the loan desk.

At Oberlin about 2500 are kept on reserve behind the desk. Students may select their own books, but must sign a card for the books before leaving. If the book is not returned at 8:15 the next morning a fine of 25 cents is charged.

At Wesleyan a fine of 5 cents is charged for the first ten minutes' delay in returning a reserved book in the morning, 10 cents for the second and succeeding ten-minute periods up to 30 cents, then a messenger is sent for the book and 15 cents extra is charged.

Columbia has forty reading rooms, and as few books as possible are put on reserve. If such books are taken out over night a 25-cent fine is charged if they are not returned when the library opens in the morning, with an additional fine of 25 cents for each library day the book is kept.

Administration

General. Executive.

SIGNS

Library signs. *Wis. Lib. Bull.*, Je., 1914. p. 134.

Editorial. On the advantage of having plenty of readable signs posted in the library so the stranger may go directly to the material in which he is interested, without having to ask frequent questions of busy librarians.

Treatment of Special Material

CIRCULATION OF PICTURES

The Binghamton (N. Y.) Public Library has prepared a collection of mounted pictures.

for circulation. The pictures are circulated in envelopes, so that they are convenient for carrying. As many as are desired may be taken, with the time-limit set by the borrower. No fine is charged if pictures are kept beyond the limit, but overdue notices will be sent. Additions to the picture file are being constantly made. Special attention will be given to requests for pictures on subjects in which the collection is lacking.

Accession

BOOK REVIEWS

An interesting feature of the Danish library journal, *Bogsamlingsbladet*, the organ of the State Library Committee and the Association of Danish Public Libraries, is its book reviews. They are written especially with a thought for the needs of librarians desiring to replenish their shelves. The books to be reviewed are selected and reviewed by a committee of book readers appointed by the Library Association. The reviews give the story of the book where fiction, its character if non-fiction, its literary value in either case, and then a few words of commentary on the department for which it is especially fitted. This review department must prove of great value to librarians throughout Denmark, particularly in smaller towns. Such librarians have the advantage of the work of a corps of trained assistants in the choosing of books, with no extra expense on their part.

In the same way the *The Librarian and Book World*, the English independent professional journal, has the libraries in mind when conducting its "Best books" department. A complete catalog entry is given, with classification number according to the Dewey system, and careful annotations, and the entries are printed a suitable width for cutting and pasting on standard-sized catalog cards. In its book review department, besides the usual bibliographic data, information is given as to the material and strength of binding and quality of paper.

Loan Department

POSTAL CARDS

To avoid frequent and fruitless calls for books in great demand, cardholders in the San Francisco Public Library may purchase printed postal cards from the secretary or the branch librarians, state thereon the numbers of the books wanted and present them at the desk properly addressed. The cards will be filed, and mailed to the applicants as the books become available.

Libraries on Special Subjects

Municipal Libraries

MUNICIPAL INFORMATION BUREAU

A national bureau of municipal information. *Spec. Libs., S.*, 1914. p. 104-106.

Notes of J. C. Dana's talk to the Special Libraries Association at Washington, May, 1914, describing his efforts to interest the League of American Municipalities and the New York Bureau of Municipal Research in establishing a national Bureau of Municipal Information. Two other suggestions have been made by Herman Brauer, librarian of the University of Washington, that the Census Bureau undertake the work, or that a separate federal Bureau of American Municipalities be established. Mr. Dana thinks that the libraries of the country could establish such a bureau themselves, and that it would go far to give them standing in the business world. He also suggests that the Special Libraries Association itself should establish a bureau of information about libraries, particularly special libraries, and is sure that such a library would come in time to be self-supporting.

General Libraries

For Special Classes—Children

GIRLS, WORK WITH

Through the work of the New York Public Library, girls whose reading was flippant have become interested members of a "Girl's Romance Club," devoted to the study of good literature. There was no attempt on the part of the librarian to take them out of their inclinations and push them into another attitude of thought, but by taking them just at the point where they were and creating a right atmosphere about the very thing they were interested in, wonders are said to have been wrought.

CHILDREN, WORK WITH

The library and the child. Arthur E. Bostwick. *Pub. Libs., O.*, 1914. p. 337.

Abstract of an address. The difficulty in dealing with the child arises from the fact that he must be dealt with both individually and in groups, and because the adult and child do not understand each other. The library can give more individual attention in its children's room than is possible in school, and at the same time group reactions are possible in the library found elsewhere only in play.

In meeting the second difficulty, the book seems to create a bond of sympathy between child and adult, and the freedom of intercourse

helps to a better mutual understanding. Another point of vantage is the fact that the child comes to the library voluntarily. While he should not be left to read or study only what he likes, he can be influenced to like what will be best for him.

"Each one of us is at the same time, in the eye of Nature, both descendant and ancestor. It is only by regarding humanity as a whole and the child as a changing group within it that we can treat the problem adequately."

Bibliographical Notes

It is announced that Albert Hafner has purchased the interest of the estate of Gustav E. Stechert, thus becoming sole owner of the firm G. E. Stechert & Co.

A brief list of organizations which distribute free reference material, compiled by Miss Lillian E. Henley, is printed in the June issue of the *Library Occurrent*, published by the Public Library Commission of Indiana.

The Law Division of the University of the State of New York, of which Frank B. Gilbert is the chief, has issued its third law pamphlet under the title, "Educational legislation of 1914."

The H. W. Wilson Company has taken the American agency for "Library jokes and jottings," by Henry T. Coultts, published by Grafton & Company, of London. The book, in a new binding, will be put upon the market before the holidays. Price, 65 cents, postpaid.

The Public Library of Fort Wayne, Ind., has followed the example of St. Louis in issuing, in an attractive pamphlet form, the report of its work with children. "The story of a children's room" gives an easy running account of the various lines of activity which the children's department follows out, with very little attempt to give statistics, but with many pictures showing all phases of the work.

Mr. Frank Weitenkamp, of the New York Public Library, had a note, about a column and a half long, in the September issue of *Art and Progress* on the exhibit of graphic art (some 4000 pieces) at the Leipzig Exposition. So far as known, Mr. Weitenkamp's brief review is the only one that has been published in this country on that particular exhibit.

Joseph F. Daniels, of the Riverside (Cal.) Public Library, is collecting statistics for a book on the county free library situation in America. Sufficient material is already at hand

to warrant publication as soon as it can be tabulated. Bulletin 103 of the Riverside Library is a 12-page bibliography of references on county free libraries in California and elsewhere.

The World Book Company has recently brought out three new books in its School Efficiency series, edited by Paul H. Hanus. They are "High school organization," by Frank W. Ballou; "High school courses of study," by Calvin O. Davis; and "School training of defective children," by Henry H. Goddard. The deductions embodied in the volume are based chiefly on the results of investigations made in the schools of New York City.

The address on "The Lincoln and Douglas debates," given before the Chicago Historical Society last February by Horace White, who reported them for the *Chicago Press and Tribune*, has been reprinted in pamphlet form. It is illustrated with portraits of Lincoln, Douglas, and Mr. White himself, as well as a facsimile of Lincoln's letter accepting the challenge to debate.

The Division of School Libraries of the University of the State of New York has issued a 6-page leaflet of "Rules to govern the lending of school library books," accompanying the commercial subjects section of an annotated book list for school libraries. The pamphlet is a result of the amendment of the education act, providing that a school library may be a circulating library in districts having no other library facilities.

The Bureau of Railway Economics, of Washington, D. C., has issued as Bulletin 66 a 75-page pamphlet, entitled "Statistics of railroads, 1900-1912, United States." The tabulations are based upon official data published by the Interstate Commerce Commission for each fiscal year from 1900 to 1912, and upon reports of the Bureau of the Census, and include figures on population and area, railway mileage, capital, securities and dividends, revenues, etc., employes and compensation equipment, and freight and passenger traffic statistics.

The State Normal Record, published semi-monthly by the Kansas State Normal School at Emporia issued a school library number last May that was worthy of more prompt recognition. All the articles are written by students or teachers of the school, and include "High school libraries in Kansas," by Benjamin Mallory; "Library training for teachers," by Gertrude Buck; "Getting books into the country," by Mary Virginia Kellogg; "Use of public documents in schools," by Vera W. Kayser.

The Boston Book Company has issued a little booklet entitled "Periodicals which supply title and index only on request," compiled by Miss Gertrude P. Hill of the New York Public Library. The pamphlet is just the size of a catalog card, and is intended to be filed in the card tray for ready reference. The periodicals are arranged in three groups—American, British (including colonies), and Foreign (other than English). It is a surprise to find in the American list the LIBRARY JOURNAL, which since its establishment in 1876 has made it an invariable rule to send title page and index for the preceding year with each January number.

The "Canada year book, 1913," edited by Ernest H. Godfrey, of the Census and Statistic Office at Ottawa, and published by authority of the minister of trade and commerce, has made its appearance. In addition to the departments included in the 1912 volume, there have been added illustrated articles by competent authorities on the history and physical characteristics of Canada. New tables have been added, and the old ones revised and brought up to date. Other changes have been made in various sections, the map of Canada has been printed on a larger scale, and the book now runs to 656 pages.

The National Association for the Study and Prevention of Tuberculosis has on hand a limited number of complete sets of the Transactions of its previous meetings, dating back to the year 1905, and making nine volumes in all, which it will distribute free of charge to any libraries that wish them and which will pay the transportation charges from New York City. These volumes take up all phases of the movement, clinical, pathological and sociological. The association also has on hand for free distribution a very few sets of the Transactions of the Sixth (1908) International Congress on Tuberculosis, in English. These transactions comprise eight volumes, and are valuable both historically and for immediate use.

The September issue of the *A. L. A. Booklist* starts a new volume, and in it a new arrangement of books has been adopted. Instead of the general alphabetic arrangement, the books are all arranged roughly by classes, books in each class alphabetized by author as before, and an author index will be included in each number. This will make it easier for librarians to find books needed for their special departments, and the author index will cover the need of an alphabetic arrangement. Another new feature has been added, or, rather, an old feature is being emphasized. In each number hereafter will appear an index to the

books specially recommended to the attention of small libraries, and if the editor has any special note for the librarian it will be included in this index.

Forthcoming volumes in the Debaters Handbook series will include the following: "The single tax," by Edna D. Bullock; "The Monroe doctrine," by Edith M. Phelps; "Government ownership of telephone and telegraph," by Katharine Berry Judson; and "Agricultural credit," by Edna D. Bullock. The following new editions of the H. W. Wilson Company's publications are also in preparation: "Child labor," "Compulsory arbitration of international disputes," and "Federal control of interstate corporations." As the first volume of a new series, to be called "The Handbook series," which is to deal with timely subjects not debatable, Mr. William D. P. Bliss, editor of the "New encyclopedia of social reform," has prepared "A handbook of the European war." This work, which is now in process of printing, is made up of chapters on the countries concerned, written by Mr. Bliss, with reprints of important documents and articles. A special chapter is devoted to the position of the United States.

Humors and Blunders

LOVE IN THE LIBRARY

OR,

COURTSHIP A LA CUTTER

LATE in the afternoon, as the sun was sinking behind the Ill. hills, C: J:son, the handsome chief of the circulation division, walked with a firm step into the cataloging room. Would she be there? Yes, there she was, the beautiful A. W:son, leaning negligently on the shelf-list. He hastened to her side.

"A.," said he, "you are a perfect dk."

"Hush, C:," she warned, "Mrs. B:; the assist. classifier, will hear you. Make believe to be reading this."

And she picked up a copy of "R.. of Sunnybrook Farm."

"I prefer something more serious," said he; "have you ever read 'Progress and Poverty,' by H: G:?"

"No," replied A., "and my brother S: says it's too hard for girls to understand."

"Your brother S:," replied C:, with great scorn, "is a cf."

"Oh, C:!"

"Well, at any rate, a hf. cf."

"That is most unfair. My mother says he resembles his grandfather, and he was the bp. of O."

"I don't care if he was G: Wash. or R: of the Lion Heart."

"And that his mind is like that of W: Ja."

"!" exclaimed C:

"Now I must go," replied A.. "I am on the bd. of directors of the lib. of St. M:'s parish house and—"

"Oh, these bds.," cried C:, "look here, A.. I don't think you're giving me a sq. deal. I believe I have some anon. rival."

"Don't be ridiculous. Come here, C:."

And drawing him for an instant behind a book-case, she priv. pr. a kiss upon his lips and fled like a bird.—THE LIBRARIAN, in the Boston Transcript.

THE YOUNG IDEA

[The first school composition of Elizabeth Gay, aged 9, of Norwood, Mass.]

WHAT I'M GOING TO BE

When I grow up I will be a librarian. In my spare time I will read some of the books. When I have read them I can tell people what books are good. I will pick out interesting Fairy-Tales for the children. When I get tired of being a librarian I will be a mother. I hope I will have twin babies. If I do their names will be Elizabeth and Edward. Probably their eyes will be blue.

ELIZABETH GAY.

VOTES FOR WOMEN I

Many interesting sidelights on those who come to the library are evident to the librarian. Recently a man came into the Louisville Public Library and asked for some of the arguments against woman's suffrage. The proper articles were sought out, and the librarian suggested that he might care to look at those in favor of woman's suffrage as well. "No matter," he replied wearily, "I get those from my wife."

EXACTLY!

"The librarian who finds most pleasure in his life strives for exactness, but he will not always be able to deal with reference questions put to him.

"I will give you one that has cropped up in our own library. The question is: Please give the reference to Emerson's Essay in which he says, 'If a man write a better book or preach a better sermon than his neighbor, the world will bring rat-traps to his door, though he live in a forest.' You will find it on the back of Elbert Hubbard's *Philistine* for August, 1912. If any of you can find it in Emerson or elsewhere and give me the answer to it, you will relieve the assistants in my reference room from a great deal of worry."—From the Proceedings of the American Library Institute, Kaaterskill meeting, page 27.

NO LIBRARY FOR LIZZIE

"I don't know what to give Lizzie for a Christmas present," one chorus girl is reported to have said to her mate while discussing the gift to be made to a third. "Give her a book," suggested the other. And the first one replied meditatively: "No, she's got a book."—*Literary Digest*.

W. A. STEWART, 241 W. 37th St.

FREMONT RIDER, 241 W. 37th St.

There are no bondholders, mortgages or other security holders.

Statement to the above effect subscribed and sworn to Sept. 20, 1914, before E. D. LOSEE, Notary Public, by JOHN A. HOLDEN, Business Manager.

LIBRARY OF THE UNITED ENGINEERING SOCIETIES, NEW YORK CITY

THE date of the 1915 A. L. A. conference has been fixed for June 3-9 inclusive, and the University buildings at Berkeley, opposite San Francisco, will be the place of meeting. The date is intended to make it possible for college librarians to be present, with time to reach the home base before Commencement Day, and the place gives opportunity for visit from day to day to the Panama-Pacific Exposition, within easy reach without the discomfort of housing in the crowded city. The Association will owe much to the University of California for this proffered hospitality. The time also makes it possible for those from the East to return by the northern routes and enjoy the wonderful mountain scenery of the Canadian or our own northern Rockies, and the great national parks which will be at their best in the month of June. The travel plans will be announced later, and they will be so arranged as to give to those who visited southern California in 1911 full opportunity to journey in northern California, and though it has proved impracticable to attempt to include the Panama Canal in the official plans, this route offers a pleasant alternative for personal journeying. The mid-winter meeting at Chicago becomes more comprehensive each year. This year it is coincident with the annual meeting of the American Historical Association, so that librarians will have a double opportunity. Besides the Council meeting and that of the Publishing Board, both A. L. A. meetings proper, there will be the conferences of the League of Library Commissions, the college librarians of the Middle West, and the normal and high school libraries. Let us rejoice that in this country of peace, these peaceful conferences are still possible, as nowhere else.

do, first from the report of Miss Hasse who has safely returned from Leipzig, and secondly from recent correspondence from that city, that the Exposition of the Book and Graphic Arts was kept open through the period planned, and that the English, French, and Russian buildings were intact and their contents safe. The treasures in these three buildings were removed for safe keeping, when the buildings were closed, to the Museum at Leipzig, and the buildings placarded with notices that they were under the protection of the German Government and must not be harmed. During September, a fair though decreased attendance was maintained, reaching twenty to thirty thousand on Sundays and holidays. The American Library Exhibit has been put in safe hands, but it is not expected that it will be shipped back until spring, so that unfortunately it will not be available, as originally planned, for display at the Panama Pacific Exposition when it opens February 20. As the circular of the committee indicates, new exhibits will have to be obtained.

We are requested to add on behalf of German agents that it is both unnecessary and inexpedient to transfer orders for German periodicals and books to agents in other countries who are seeking that business. We are informed that no German periodical of importance has been discontinued, though some have been decreased in size, and that all are regularly mailed to subscribers throughout the world. We regret to say that they do not reach their destination regularly, and that American libraries are much concerned lest important sets should be broken; but this is owing to delays and difficulties incident to transportation in war time, which cannot be remedied by any change of method in ordering. This is of course true as to importations from

It is gratifying to reassure the library profession, as we have double authority to

all the belligerent countries on the Continent. The LIBRARY JOURNAL is taking special pains to safeguard foreign libraries which preserve sets of the JOURNAL, and it is to be hoped that foreign periodicals will take like precautions.

ONE of the best kinds of what is essentially co-operative work is illustrated in the new catalog of books on architecture issued by the Boston Public Library, largely through the instrumentality of Mr. J. Randolph Coolidge. This supplants the early catalog of twenty years ago, and incidentally shows the remarkable growth of books on this subject, especially in ancillary details, such as mural painting and wall decoration otherwise, and the development of architecture and the subordinate related arts. Furnished to libraries practically at cost of manufacture, this valuable piece of work makes duplication by other libraries of like work quite unnecessary. It is so well done that it is done once for all, until there comes time and occasion for a revised reissue. Every library should be prepared to take advantage of this effort at co-operation by spending its dollar for a copy of this catalog, for few communities are so small as to be without an architect or at least a carpenter who will want to know through what books he can obtain the best information on a specific problem before him. With the general system of library exchange to supplement such a catalog any reader can thus be posted to know what book he wants and put in position to obtain the book through library loan if it is not to be found in the local library. How admirable an example is this of the final outcome of our American library system!

ANOTHER kind of co-operative work has rather fallen behindhand than made progress in recent years. We refer to the preparation of special bibliographies for circulation amongst library readers, as, to take a present example, a purchase list of good books to buy for children at Christmas time.

The New York Public Library issued such a list two years ago and last year published a supplement, but this year it has not found sufficient new material of value to issue a second supplement. A list of this sort issued by such a library should be a general standard and serve the purpose of any library desiring to put such a list at the service of its readers. The New York Public Library has not been unwilling to furnish editions to other libraries, but there is still a tendency on the part of smaller libraries to print lists of this sort, each for itself, notwithstanding the cost of individual enterprise. We are always prepared to make announcements through the LIBRARY JOURNAL of catalogs of this sort in preparation or published, of which other libraries may obtain editions. Every hour or every penny saved in this wise adds in other directions to the efficiency of a small library, and if the smaller libraries will take advantage of the work of the larger in this field the total saving will be great indeed.

THE card catalog has made its entry into the courts in a French case recently before the Tribunal of the Seine, involving the question of copyright. It was held in the case of cards on "The science of cosmetics" exhibited at Brussels, that as the cards were simply records of individual titles arranged alphabetically, there was no originality in the cards or in their arrangement to justify copyright protection. The decision implied that had the cards an original character, as for instance an annotation or other individual features, they might have been protected. This would mean that in a country where no formalities are required catalog cards involving original labor could not be copied without authority. In the United States the question would take another shape, as the copyright law requires the formality of entry and of notice printed on the copyright work, and the fee in most cases would be prohibitive unless it were decided that a series of cards could be protected under one copyright entry.

THE LIBRARY AND HISTORY STUDY *

BY W. DAWSON JOHNSTON, *Librarian, St. Paul Public Library*

A REPORT of the Committee of Review of the College Entrance Examination Board, lately made public, says that examinations in history set by the board showed the largest percentage of failures of any set by that body, and that a reconsideration of the history requirements must soon be undertaken if a higher percentage of pass marks is not forthcoming. Professor MacDonald of Brown University in a paper in *Education* for June entitled "College entrance requirements in history," agrees with those making the report and feels that perhaps too much emphasis has been laid on collateral reading. Professor Sioussat in the *History Teacher's Magazine* for September takes issue with him. He does not think that too much emphasis has been laid on collateral reading, but fails to offer any other satisfactory explanation of existing conditions. In fact, both Professor MacDonald and he seem to incline to the view that it is the lack of equipment of the teachers which is chiefly if not solely responsible for the failure of historical teaching. In a sense this is true, but it is, I am certain, equally true that the equipment of the history teachers is not inferior to that of other teachers, and that the failure of the students to pass these examinations shows the inadequacy of the examinations as much as it does the inadequacy of teaching. In other words, the standards of the College Entrance Examination Board are no longer the standards of the majority of history teachers. At the same time one who is much interested in the advancement of historical teaching cannot but admit that we are far from having a clear idea of the aims or methods of historical teaching, and in particular, very far indeed from having a clear idea of what collateral reading should be required and how library resources may be organized in order to get it done most effectively. Yet collateral reading and library research constitute the main difference between the old and the new methods of historical teaching.

RECOMMENDATIONS OF COMMITTEE OF SEVEN

After the publication of the report of the Committee of Seven of the American Historical Association on the study of history in schools in 1898, the textbook method of instruction in history was definitely abandoned and the laboratory method adopted. Boys and girls, it was said, do not remember one-tenth of one per cent. of all the facts they are asked to learn in history courses, and the most radical were bold enough to say that the facts would be of no use to them even if they could remember them. There seemed to be general agreement among the leaders of opinion that history could keep its place in the curriculum only as a disciplinary study, and that in teaching emphasis should be laid upon historical method rather than upon historical fact.

At the same time, however, little organized effort was made to adapt methods of teaching to the new ideal, and little effort made to equip historical laboratories. The Committee of Seven said that the library should be the center and soul of all study in history and literature, and that no vital work could be carried on without books to which pupils might have ready and constant access. "History more than any other subject in the secondary curriculum," they declared, "demands for effective work a library and the ability to use it."

The committee observed that few schools require as many as 300 pages of collateral reading a year, and that three-fourths of them had no specified requirements whatever, but it made no effort to indicate what the minimum of collateral reading should be.

The committee described library conditions as equally unsatisfactory. Practically every school, it said, recognizes that a library is necessary and has a few books more or less wisely chosen and more or less antiquated, but it is still easier to get five thousand dollars for physical and chemical laboratories than five hundred dollars for reference books. As a consequence few schools have good collections of even the

* Read at the meeting of the Minnesota Educational Association, St. Paul, Oct. 23, 1914.

standard secondary writers, and even schools with considerable libraries seem unable to add the new books of importance. Yet in full view of these facts the committee merely recommends the establishment of a library in each school and the display of its book collections on open shelves.

In the third place it recognized the value of instruction in historical method in general and in bibliographical method in particular and gave expression to their feeling in a few benevolent platitudes to the effect that teachers should develop the power of using books gradually but systematically. In the earlier years teachers should read to the class passages from entertaining histories. In later years pupils should do their own reading and to some extent find their own reading. "Let the pupil learn how to understand and use pages," they said, "before he uses books; and let him learn how to use one or two books before he is set to rummaging in a library." In other words, they observed, teach pupils how to use intelligently tables of contents and indexes, and also how to turn to account library catalogs and indexes to general and periodical literature. But beyond making these rather sophomoric recommendations they did nothing either to systematize bibliographical instruction or indicate what should be the minimum of requirements in this direction. Pupils were still left to rummage in the library.

Later the Committee of Five on the study of history in secondary schools appointed in 1907 included in its investigation an inquiry upon school equipment for teaching history. But its report published in 1911 contained no definite information with regard to conditions, and no comment upon conditions beyond the vague statement that the equipment for the teaching of history in most schools was quite inadequate.

Again, the Committee of Eight on the study of history in elementary schools in their inquiry asked to what extent supplementary material was introduced, but only reported that it appeared to be difficult to secure sufficient appropriations for the purchase of this material, adding the somewhat academic observation that the public library under the control of the school board does

at times render effective co-operative service.

Indeed, it was left for a committee of the Council of Teachers of English to outline the problem created by the new conditions of history teaching and throw some light upon a possible method of solving the problem. This committee found that the equipment cost per pupil in history as well as in English was very much less than for any other subject which requires extensive equipment. To be exact, it found that the history equipment cost per pupil in 60 schools reporting was \$2.39 and that the average annual increase per pupil was 22 cents. These facts, it seems to me, indicate more clearly than any report made by historians that the subject of historical equipment should receive more serious consideration.

Side by side with these facts may be placed those given in the report of the U. S. Commissioner of Education for 1910 regarding the number of students of history in secondary schools in this country. In that report, he said that in 8,097 schools there were 406,784 students of history, in other words 55 per cent. of all pupils in secondary schools. That means that in St. Paul, for example, there are in the public high schools alone about 1,670 students of history. The effective direction of the reading of this great body of students constitutes a problem which is of interest not only to the teacher but also to the librarian.

It is not possible on this occasion to do more than outline the problem as it presents itself to a librarian, but even an outline may be useful as far as it goes. In the first place, I may say, the librarian as such is not interested in the aims and methods of historical teaching, except in as far as these make it necessary for him to provide the material required by teacher and pupil, and provide what is wanted, when it is wanted, and where it is wanted.

It may be desirable to determine the minimum amount of reading which should be required in general, but whether it is or not, it is desirable that in each school the amount of time which can and should be given to reading in each subject should be determined, the required and recommended reading listed, and both pupil and librarian advised not only as to what is to be re-

quired and what recommended, but also as to when the required reading is to be done, and how many are expected to do it.

LIBRARY ORGANIZATION

In determining what books should be provided at any point, the number of copies of each which should be provided, and the number of seats for readers, it is necessary to know not only what number of pupils are expected to use the books, and how much time is allowed for the reading, but also where the reading can be done most effectively and most easily. In other words, it is necessary to decide which books should be placed in the class room either permanently or temporarily, which in the school library either on reserved shelves or on open shelves, and which may be left to the public library to supply from its own shelves either for reference use or for home reading.

And here again we must be influenced in a large measure by the grade of pupil. The younger pupil must do most of his work in the class and in the class room, but the more mature student will do the better part of his work in the school library and in the public library, and should receive as much if not more credit for work of this kind than for attendance at recitations.

We must be influenced also by considerations of economy. The classroom library cannot be made a substitute for the school library and should not be, nor can the school library be made a substitute for the public library. For this reason a measure of centralization of library administration is desirable. Without it the teacher with the loudest voice is likely to have the advantage in the distribution of funds for equipment, books are likely to remain in a school or classroom after the use for them has passed, and the greatest needs of the school in respect to library equipment are apt to be slighted.

DUPLICATION OF BOOKS

At the same time it is essential that the books in common use be duplicated in large numbers, especially in the elementary courses and in required reading. In the field of general history much has been done to improve conditions and incidentally re-

lieve the pressure upon libraries by the publication of collections of illustrative material from original and other sources. In the field of local history, too, something has been done. The Rhode Island Department of Education, for example, published among its "Rhode Island educational circulars" an historical series relating to local history and intended primarily for use in schools. The Minneapolis Public Library publishes a series of mimeographed sheets relating to Minneapolis and vicinity for the same purpose. Much more may be done by commercial publishers, by school departments, by historical societies, by libraries, and by local newspapers to facilitate the documentation of elementary historical research.

USE OF SYLLABI

If duplication of copies of books or of extracts from books, is the one thing useful in the successful organization of required reading, a syllabus is the thing most needed in the direction of recommended reading. At present it is customary at the expense of the time of teacher or pupil to write this outline on the blackboard and ask pupils to copy it, or to dictate it to the class. In either case the bibliographical references are ordinarily incomplete or inaccurate, or if they are not they are rendered incomplete and inaccurate by the copyist. The result is not bibliographical guidance but a series of bibliographical puzzles. The only remedy for this condition of affairs is the preparation of syllabi. These must be compiled by the teacher but in their compilation the teacher should receive the assistance of the librarian, and if the school cannot print or mimeograph them the library must.

BIBLIOGRAPHICAL INSTRUCTION

By means of required reading and by means of a course of recommended reading it is possible to conduct a student far on the road to historical learning, but it is not possible to give him even an elementary knowledge of historical science and method, it is not possible to make him an independent student or give him the freedom of the library without systematic bibliographical instruction. Whether this instruction be given by the teacher of history or by the

librarian or by both is immaterial, provided the instruction be good. For my own part I feel that general bibliographical instruction should be given by the librarian and special instruction by the specialist, that the teacher of the more advanced courses in history should require a certain degree of bibliographical skill, should assign exercises intended to develop such skill, and include in examination papers questions which will determine what progress has been made. Bibliographies and answers to bibliographical questions may very well be turned over to the librarian for examination and grading.

SURVEY OF EXISTING CONDITIONS

I do not know whether the survey committee has included in its plans provision for an inquiry into the requirements regarding collateral reading, the extent of library collections, their organization and administration, the amount and character of bibliographical instruction. If it has not, I hope that it will do so. Information with

regard to present conditions is the first step toward improving them. We need to know not only how large our library collections are in general but also what proportion of the collections relate to history, and how many volumes are added annually. We need to know whether the pupils in our history classes are registered borrowers from the library, and how much time they spend in library work. We need to know how much the books recommended for reading are actually read. A state survey along these lines may, I believe, accomplish almost as much as a national survey toward defining this problem and toward indicating how it may be solved. The time is past when teachers should depend upon pupils for information as to the sources of the library and its administration; teachers of every subject and especially teachers of history should have first hand information upon this subject, and not only with regard to local conditions but with regard to conditions in other communities which are superior to those at home.

SPONSORS FOR KNOWLEDGE. II

OUTLINE FOR A NATION-WIDE INFORMATION SYSTEM

By G. W. LEE, *Librarian, Stone & Webster, Boston*

THE first article entitled "Sponsors for knowledge"* suggested the need for a general information system and had the following recapitulation:

"People ask multifarious questions, for which they get irresponsible answers.

"Signs of the times indicate a widespread restlessness to systematize answering questions through reliable sources.

"A desire for organized method has recently been expressed by several librarians at their annual meeting.

"Librarians, as natural reference workers, are particularly fitted to initiate such a method."

Upwards of twenty-five responses to the appeal thus made encourage the belief that there is a general readiness to have such a

system created. The responses have come chiefly from prominent librarians in America and England. While almost none go so far as to say, "I will be one of the promoters," yet, between the lines, it is easy to read that many would gladly join in, if once the organization were launched as a serious undertaking. A few quotations, selected from comments of those who would have the American Library Association, the Library of Congress, or "Washington," the prime mover or the headquarters, may be of interest:

"There is no doubt but that a bureau such as you outlined would be of great value to those who use the public libraries of this country. It is a great misfortune that the A. L. A. is so organized as not to have any sufficient income for such purposes."

"In the event, of course, that it would not be feasible to locate such bureau at the

*Reprinted from pages 48-54 of the *Stone & Webster Public Service Journal* for July, 1914; a few copies still available for distribution gratis. Abstract in *LIBRARY JOURNAL* for October, 1914, page 792.

national headquarters of the A. L. A., the location elsewhere would be better than not to have any at all."

"I will join with you in the effort to have a research headquarters located wherever you choose, provided you will combine with it an effort to put the A. L. A. headquarters in the same place and consolidate the staffs and the work."

"I understand the Carnegie Institution and the Smithsonian Institution are doing to a limited extent something of this sort, although I do not know that they have gone about it systematically. It seems to me, however, that the whole thing ought to be a national undertaking, and handled by a national institution, such as the Library of Congress, for example."

"I must thank you for your paper on 'Sponsors for knowledge,' and especially for your picture of the Library of Congress as the national library."

"I think that we do need headquarters for research work, and perhaps Washington does offer opportunities that no other city does, especially along government and federal lines."

Assuming from the above that an information system founded upon special libraries and special departments of general libraries is needed, how shall it be brought to pass? Suppose a request were to go forth from the American Library Association headquarters urging all A. L. A. members, and all others who will, to send (on forms furnished for reply if desired) a record of their strength on subjects in which they consider themselves relatively strong, and upon which they would be willing to be looked to as sources of information; would there not result within a few weeks a most valuable new asset for the Association, as well as the beginning of an information system whose evolutionary course could hardly be stopped?

While the A. L. A. or the L. C. could most logically embark in such an undertaking, doubtless the work could be effectively done by any one of several other accredited bodies, such as the Special Libraries Association, "The Index Office" (Chicago), the Chamber of Commerce of the United States, the American Tel. & Tel. Company, Sears,

Roebuck & Company, or, in default of these, the Boston Co-operative Information Bureau, with perhaps a change in its title.

What sort of specialties would thus be recorded? is a pertinent question. It is easy to suggest an answer by referring to the American Library Annual. In its 1913-14 edition there is a goodly list of special libraries and of private book collectors (which, by the way, with their courteous permission, might at once be recorded as the nucleus of the *magna* catalog). Referring to the tabulation of Special Libraries, pp. 196-197, we may note the following as typical of what ought to be found in the records: American Bankers' Association, sponsor for all knowledge of *banks and banking*; American Tel. & Tel. Co., for all knowledge of *accounting* and of course for everything pertaining to *telephone and telegraph*; Wisconsin Tax Commission, likewise, for *taxation*; Investors' Agency (New York), *corporation statistics*; Philadelphia Commercial Museum, *statistics of foreign countries*; Insurance Library Association of Boston, *fire insurance*; New York Public Service Commission, First District, *public service regulation*; Bureau of Railway Economics (Washington), *railway economics*; Steel Works Club (Joliet), *steel working*; Studebaker Company (South Bend), *vehicles*; United States Department of Agriculture, Forest Service, *forestry*; American Brass Company (Waterbury), *metal working*; B. F. Goodrich Company (Akron), *rubber*; Social Service Library (Boston), *social service*; Women's Educational and Industrial Union (Boston), *women's work*; etc., etc. And from the 35-page list of Private Book Collectors, of which over two hundred are recorded under New York City alone, we have the suggestion of a vast wealth of special repositories of knowledge, whose keepers should need but a polite invitation to render most of it available through a responsible channel. To be sure, these collections are not all on different subjects, nor all on subjects that would often be called for by the research worker. Random selection, however, from the New York City list will indicate what might be most helpful to the very many (or the worthy few) if better known, viz.: revenues of nations; early

Dutch; New York City; Hungary; angling; stained glass; hymenoptera; Spanish law; gems and precious stones, etc., etc. And if such is the diversity of New York City specialists, what may we not expect from the country at large? And would the average collector snarl at the request to share a little of his knowledge? Not if he is as properly educated as the very fact of his collecting gives evidence of.

But is there not vastly more specializing and storing of information than even the American Library Annual has yet recorded? What about the publishers of technical journals? We know that some are mere purveyors of news and make little pretense of knowing what they published last year. They shove in the material that comes their way or that they have fished for as timely news, and that is the end of it. Theirs is an effectual weekly or monthly newspaper, and they confess that they haven't the facilities for knowing much of what they have printed. If their publication has an index, that is the best they can offer to the inquirer who looks for something which appeared in their columns a year or two ago. But has not the day arrived when the respectable editor may legitimately be looked to as able to find substantially every contribution to knowledge that has gone into the publication he represents? A sign of the times is an editorial in the *Electric Railway Journal* for Aug. 1, p. 194, entitled "Information clearing houses." It was written in approbation of the general proposition for systematized sponsorships for knowledge, and ends by saying that "a movement for a central index bureau ought to be inaugurated by leaders in the library field, but it will take time to initiate this movement. In the meantime this paper will be glad to act as a clearing house for information relating to electric railways and will systematize the filing of such data of this kind as may be sent to it, so that the information will readily be accessible to subscribers. The editors believe that this is part of their duty to their readers."

The question arises, Are you not likely to have overlapping returns—more than one sponsor for accounting, or for gas, or Shakespeareana, or what not? In all proba-

bility, Yes! and the assignment of the chief sponsor will be a matter of business detail.

It may be objected, why the need of an organization on national lines when ninety-nine per cent. of the questions can probably be answered in most large cities? We may say that if all large cities were like New York, a local organization might reasonably suffice; but as yet even New York is not organized, and from Boston and elsewhere New York is often informed of its own sources of information which it was not yet aware of. And such is the case the world over, in accordance with the old saying, "A prophet is not without honor save in his own country." The existence of our Boston bureau has brought to light individuals and organizations in New York that seem ready and anxious for the moment when they are to come co-operatively together and to know each other; and, while waiting for local organizations to be formed, the central bureau might well inform many a man of a neighbor who has the facts that would be most helpful to him.

Moreover, we in Boston could cite many questions which need to be handed about far and wide before the answer will come. "What is Australian Bee?" We know it is a beverage-making substance, in vogue several years ago; but as to its constituent part, one is likely to get satisfaction only through chance knowledge—and this in whatever locality the question should come up. "The rainfall of a tropical country," we found to be known not by our local weather bureau, but by a certain professor. The facts of a village enterprise in Connecticut were inquired about from one individual to another, until finally a member of the "Bald-Headed Club" answered by writing up the story in a country newspaper, a copy of which the questioner received.

Then comes the question, Will each and all bother to give information without charge? By no means. Some organizations exist for the very purpose of selling information, while others, particularly libraries, by their constitution and bylaws, if not by their very charter, are obliged to give information without charge. But, of course, many specialists, and incidental possessors of facts that are particularly in demand,

may most legitimately look for money compensation in return for what they from their vantage ground can produce forthwith upon request; else, why may the surgeon who was glad of \$50 for saving a life ten years ago be discontented with less than \$500 for a similar performance today?

The central catalog could tell of the terms, and the central organization would naturally have the duty to protect both givers and receivers from imposition. In providing a channel of free advertisement it would be important to provide (or gradually build up) a censorship as to the reliability of information that has thus been made publicly available. The experimental stage would certainly exist, and therein the experiences of the Boston Co-operative Information Bureau would have their value. The local units would indeed be most appreciated. A knowledge of Silver City, as the center of information on silver, would hardly help the man in New York City to borrow an authoritative book on silver from his business neighbor, or know offhand where to get a telephone answer from a silver expert who may have an office in town. Regardless of whether the Boston bureau should serve as the organizing center for a larger scheme, it might well serve as a pattern to follow (or possibly to avoid) for undertakings that aim at a quick and more personal service for their respective communities.

And what about a name, so that people may readily talk about it? Call it the Information Bureau System until a more satisfactory one can be found.

And what other functions than to act as a clearing house of people who know things or have things? Plenty else. Here is a memorandum for a docket of possible activities (national and local, unless otherwise indicated), from the easiest functions, which call for little additional assistance, to some of the most difficult and Utopian, which could hardly be assumed without a large clerical force, and only after the system had matured:

1. Guaranteeing loans between members, so that the unusual may be borrowed with some degree of safety.

2. Card indexing periodicals subscribed for in any part of the locality, the headquar-

ters itself having a list of the whereabouts of rare periodicals throughout the country. (Union lists for larger cities not uncommon to-day. Boston is having a new one made.)

3. Reservoir libraries—one having been informally started in connection with the Boston bureau.

4. The availability of maps of distant places (*e. g.*, Shanghai, Valparaiso, Auckland, etc.), which would be useful to business prospectors, as well as to intending travelers.

5. Correspondence auction, such as is now carried on by the Boston bureau. (Note that such publications as Poor's Manual, bankers' directories, McGraw Lighting and Power and Electric Railway Directories for a year past, often go unsold, yet might be appreciated by many public libraries, which could hardly afford to buy the latest copies, some of these costing as much as \$5.00 apiece.)

6. An organized center of knowledge of a town's activities and the scope of its sociological undertakings—charities, commercial organizations, foreign language clubs, educational centers, etc.

7. Systematized collections of catalogs of publishers and second-hand dealers.

8. A museum of new books, *i. e.*, co-operation with the publishers, to enable a community to have the latest books in one place, where they could perhaps be borrowed on a circulating library basis. (Local.)

9. Providing for secretarial work and headquarters for organizations that are not sufficiently strong to have a home of their own. (Local.)

10. Providing for the co-operative buying of books not generally needed, but of value to the business man, like Garcke's "Manual of electrical undertakings," and other directories, which public libraries can hardly afford to purchase every year and keep up to date. (Local. We are at work on this in Boston now.)

11. Standardizing of books and book reviews. (National.)

12. Business directory in card index form and a card index of publications similar to Pitman's "Where to look."

"Rome was not made in a day"; neither

could these functions, however simple most of them may seem, go into operation with the opening of an information system. But they could well be entered on the *docket*, and the docket could be looked over once in a while to see if anything may have been suggested that the time is now ripe for.

To the above list might also be added most of the items on the docket for the Boston Co-operative Information Bureau, which are recorded in its *Bulletins* and which may be worth citing below. Some are, or may soon be, accomplished facts, while some are likely to remain mere suggestions into the indefinite future. They are listed according to accession number, as follows:

(1) To make available knowledge of the publication of the state and city documents as soon as received from the public printer.

(2) To consider the establishment of a center of registration of back numbers of periodicals not bound, from which the separate copies can be borrowed.

(3) Center of information on the value of reference books used for various purposes: encyclopedias, dictionaries, etc.

(4) The availability of topographic maps and maps generally for borrowing purposes throughout the community.

(5) A registration of dates of events in Boston, so that by inquiry as to what is proposed for weeks and months ahead one may be able to arrange his own functions so as not to conflict.

(6) To incorporate.

(7) To publish a year book.

(8) To receive and have available opinions looking to an all-round estimate of things open to criticism, *e. g.*, types of furnaces, gas stoves, lamps, vacuum cleaners, etc., etc.—and why not summer hotels?

(9) Standardization of bills, business cards, letter paper, etc., as to format and general makeup. If, for example, business cards were regularly made 3 inches by 5 inches, with a catchword in the corner to indicate the bearer's business, would they not oftener be filed than thrown in the waste basket?

(10) A reservoir library system for the storage of books not in demand, whether

those of the larger libraries or of business libraries. This might possibly be worked out to a certain extent by an interloaning system whereby one library would care for the books of another during a limited period.

(11) Competent opinions on publications of every description. (The bureau currently receives many publishers' announcements.)

(12) A list of dealers in back numbers of periodicals and where to buy certain rare periodicals, locally and generally. The American Library Annual gives a list of booksellers and indicates second-hand dealers, but with no further comment.

(13) To advertise the auction as a medium for waning as well as exhausted editions. At present persons desiring copies of "The library and the business man" and *Bulletins* 1 and 2 of the bureau may possibly get them at the next auction price.

(14) Negotiate subscriptions for periodicals that are not altogether wanted by an individual concern, but yet collectively wanted in the community.

(15) Announce function of "secretariat" and itinerary center for persons sojourning in the city, by performing, as it were, the services of private telephone operator.

(16) Social arranging—invitation addressing, shopping agency and such functions as the bureau could act as sponsors or medium for by securing, or having list of, persons available.

These two articles on "Sponsors for knowledge" are in themselves an invitation to express opinion as to the need for and practicability of the scheme suggested; and the writer will welcome comments, to be collected and collated for the next step that may wisely be taken.

The political party in this country that will first be practical with the people, and that will first get what it wants, will be the political party that first takes literature seriously. Our first great practical government is going to see how a great book, searching the heart of a nation, expressing and singing the men in it, govern a people.—GERALD STANLEY LEE, in "*Crowds*."

EVENING WORK WITH CHILDREN*

BY MARTHA E. POND, *Librarian, Manitowoc, Wisconsin*

WE as librarians are striving in our work from day to day, to give to the public the best possible service. We try to render that service in the most efficient way, giving to each patron, whether man, woman, or child, the help he needs. We must plan to give to each one the time and attention which he wishes, without favoritism to any. The time in every library is necessarily limited, and unless we are blessed with a large staff, a condition which does not often exist, we must conserve the time and be most careful in our disposal of it, that we may be able to satisfy all who may have claim upon it.

The adults and children constitute our public. We must render good service to both. How much of our time shall be given to each? The natural time for the children to come to the library is during the day, particularly after the schools are closed, from four to six o'clock. In most libraries they are expected at that time and special preparation is made to serve them at the children's desk and in the reference department. The natural time for the adult patron to visit the library is during the afternoon and evening, especially the evening, since men and women who are employed during the day are not free to come until that time.

A question which is being considered by many librarians at present is, "Can we do evening work with children?" or, "How does the presence of the children in the library in the evening affect the service rendered to the adults?"

Let us consider some of the problems which arise when both the adults and the children are in the library at night. There is the matter of desk service. Either it is necessary for two people to be in attendance at the desk, or else the service is crippled, the attention divided and people are made to wait. During the day an extra attendant can usually be on duty to look after the children, but with a small staff it is hard to arrange for two at night. Or,

if the library is so small as to be able to have only one person in attendance at any time, should she be obliged to submit to the same strain at night that she has had during the day? Will an attendant, working alone in the evening, feel that she is giving the best service, if she is obliged to keep the busy man waiting while she is looking up something for the boy who came in twice before six o'clock, or can she successfully aid the high school boy in selecting material for his debate, if she has one eye on the group of boys in the children's room who are waiting for the moving picture show across the way to open? Granted that there are other children in the room who are quietly reading, nevertheless, the extra attendant is needed, the same supervision is necessary as during the day time and often the discipline problem is more in evidence than at any time during the day. Sometimes it is true, that only under such circumstances is there a discipline problem at all. There is a novelty to the child in being out at night, which results in a friskiness that is not always easy to curb, and the attendant must be constantly on the alert.

Conditions, of course, vary in different localities, but we found that service, supervision and discipline were the things most affected by having the children in the library in the evening. We formerly closed the children's department at seven-thirty. Close observation showed that the children who frequented the library most between six and seven-thirty were those who lived in the immediate neighborhood of the library and who were in the habit of coming in several times a day; those who used the library as a place to meet if they were going to the moving picture show, athletic practice or dancing school; and those boys who wandered in aimlessly from the streets for a few minutes, about whom there was sometimes the odor of cigarettes. We found it necessary for two people to be in attendance until seven-thirty for the sake of supervision, and that the service to adults should not be affected. When it was time to close the children's department, they were apt to

*Read at the Michigan-Wisconsin Library Association Joint Meeting, Menominee-Marquette, July 29-31, 1914.

become unruly and noisy as they left the building, thereby disturbing readers in the reading rooms. Sometimes, when they were not inclined to depart at the closing time and knew that they could make no disturbance within, they would be very noisy on the outside of the building. With the children's department closing at six o'clock, there is no break in the quiet of the evening, and one attendant can look after the needs of the adult patrons. Our work may be a little heavier from four to six, but we are prepared for it and the children are given good service and we are better satisfied with the conditions in the evening.

In correspondence with other librarians similar experiences were related. One librarian writes, "Our children's room is closed every day at 6:00 p. m. This ruling was made about two years ago. Previous to that time children had been allowed to come in the evening, but 'twas found that many made the library a mere pretext for getting away from home in the evening, and parents sometimes called for children who had not even been seen about the building. Also we observed that those who did come were the same ones who came during the day, and they were restless and not at all in the mood for quiet reading. None of the staff members could be spared for the entire evening in the children's room and the restlessness greatly disturbed the readers. Our rule now requires all school children below high school to use the library before six o'clock unless accompanied by parent or guardian. Exceptions are made upon receipt of statement from teacher, parent or guardian that the child is working after school and cannot come except in the evening." Another says, "This library does not have the children's room open after six o'clock and I think it works no hardships to anyone. There are a few boys who work and we let them get their books from the children's room at night. I think the place for children at night is at home. If the children came in we would be overrun with those in the neighborhood running in and out. It makes it much better for the adult patrons, too, as they are not bothered with children around the desk or by having to wait while the children are being given books or reference help."

Letters from librarians who allow the children to come for all or part of the evening are in part as follows: "We close the children's room at 7 p. m. and do not allow children below the eighth grade in school to come to the library in the evening. I am going to ask the Library Board to vote to close the children's room at six o'clock beginning with another school year. I think it is unwise for small children to have the library as an excuse for leaving home after supper, and we do so much reference work with high school pupils in the evening and our discipline problem is such a difficult one that it is impossible for us to keep the children's room open in the evening, even if it were desirable for small children to come at that time." One librarian writes, "I strongly disapprove of allowing children to come to the library in the evening, as they neither read nor allow other people to read. I have never tried to prohibit their coming, because, situated as our library is, I think it would be very hard to enforce; but, if we could begin over again, I should most certainly not allow children under sixteen to come to the library in the evening." Another "doubts the wisdom of allowing children to be on the streets at night, even to come to so good a place as the library." Others are in favor of keeping the room open all evening. One such says that the children's room is kept open until eight o'clock during the school year. This is done, "not so much to circulate books as to encourage children who would otherwise spend their evenings on the street." Some librarians state that so few children come in the evening that it has never been necessary to make any regulations regarding their coming; others that they give no trouble and that the adult patrons rather enjoy having them there, even though they are apt to cause disturbance. Such conditions are more apt to prevail in a small town where every one knows every one else and the town life is like that of a large family. A few librarians contend that it is better to let the children come at night no matter how greatly they interfere with the library routine, than to have them roaming the streets, or going to places which they should not frequent, since parents pay so little attention to their whereabouts at night. But is

it the function of the public library to assume the duty of parent or guardian in the care of the child? Every librarian that has the welfare of the children at heart is anxious to do whatever is in her power for the betterment of the children, but by keeping them at the library until nine at night, is she sure that nothing will happen to them after they leave the library? This introduces a new element into our problem, and it is a factor of the home problem rather than of the library problem. We should work with the home in trying to keep the children there in the evening and do nothing to draw them from their homes at night. Often the fact that the library is open offers an excuse to bring the children down town in the evening. Even though the library may do more for the child than the home, it is, at least, assumed that the greater responsibility lies there.

So, if we decide we can give better service to both classes of our patrons, by excluding the children from the library at night, we can establish an age limit, possibly twelve or fourteen years, below which children cannot come at night. Children accept changes readily, and if at first they are inclined to resent the loss of the privilege, they will see if carefully explained to them personally, that as they would dislike the intrusion of the adults into their room, even so do the adults like to have the library to themselves without the presence of the children for a short period of the day. In a short time they will have forgotten that conditions were ever different from the new ones.

THE PRAIRIE DU CHIEN IDEA*

A NEWSPAPER with a public-spirited editor can be a great force for good in a city of any size. The public library in Prairie du Chien, Wisconsin, has long needed more support and interest from the city. Mr. Howe, the editor of the *Prairie du Chien Courier*, is deeply interested in the needs of this library, and in January offered to let the library board publish one issue of the *Courier*, the board to furnish all news articles and advertisements except those

*Reprinted from the *Wisconsin Library Bulletin*, April, 1914.

running for the year by contract, and to receive all the proceeds from advertising, sale of extra copies, and one-third on all new subscriptions. The board decided to publish a "Public Library Edition" on February 24, planning the edition as much as an appeal to the citizens for interest in the library, as a money-making project.

A 24-page paper in three parts, instead of the usual eight-page issue, was published, and the edition cleared for the library \$420. Many illustrations, special features, full pages of advertisements make the paper neat, attractive and valuable; and in addition to the money raised for the library, public sentiment has been aroused, and the citizens of Prairie du Chien are now anxious to build up a library worthy of the community.

The work of collecting material for the edition was divided among the members of the library board and the women of the Twentieth Century Club. Two men on the board solicited the advertisements; nearly every concern in the city is represented, and the proceeds from this material amount to over \$250.

The special feature of the edition is the Home Coming Department, edited by the secretary of the library board, and consisting of fifty letters from former residents of Prairie du Chien, written for the paper in response to circular letters of invitation sent out with printed return envelopes enclosed. These invitations were in the following form:

Prairie du Chien Public Library
Secretary's Office,
Prairie du Chien, Wis.,
January 27, 1914.

Dear Friend: The publisher of the "*Prairie du Chien Courier*" has very generously donated the issue of February 24th to the benefit of the Public Library, the Library Board to edit said issue and all income from advertising and sale of papers of that number to go into the library fund for the purchase of books.

It has been decided to print as a feature of that issue, letters from former citizens of Prairie du Chien, who now reside elsewhere, giving their reminiscences of life at Prairie du Chien or something of what has befallen them since leaving here, each letter to be limited to one hundred words. Copy for this feature must be in the hands of the printer not later than February 10, 1914.

Will you favor us with such a letter? Trusting that we may have the pleasure of receiving something from you, we are

Very truly yours,

The letters received and published in the paper came from every part of the country and are full of personal interest. Copies of the paper were sent to all the letter-writers, and carried them news of their home town and the letters of their old friends. In addition to letters, gifts of money and books were received from these former residents.

Each of the schools and colleges of the city has a special write-up by some member of the faculty; illustrations from photographs make these articles doubly interesting and valuable. Histories of the churches and church societies were collected by two women of the Twentieth Century Club. There is an interesting article on the industries of Prairie du Chien.

Other features of the issue are a household page of about 50 signed recipes, collected by three of the club women, a funny column, club and society column, fashion department, "Beauty and health" and "Propriety" columns, with queries of citizens and answers, conducted by two other women. Some of the jokes in the paper are illustrated by cartoons adapted to apply to several Prairie du Chien residents.

A history of the local library, and statement of its meager resources of 528 books for 605 registered borrowers, in a city with a population of over 3,000, occupies the first page, with an editorial appealing to the people for interest and support and emphasizing the value of the public library in a community. Statistics in this editorial and in articles contributed by librarians and teachers of nearby towns the size of Prairie du Chien, convince the reader of the needs and possibilities of the local library.

The final work of printing so large an edition was successful, because of the energy of the editor, of his extra office help, and of all the members of the board. Circulars had been distributed throughout the city advertising this special issue of the paper, printed as follows:

Library Benefit Number

The Prairie du Chien Courier for Feb. 24th is to be published by the public library board assisted by other friends and well wishers of

the library, the entire proceeds of the edition to be used for the purchase of books.

This will be a 16 page edition, containing a home-coming department, (letters from former residents), a household department, write-ups of the library, schools, clubs, churches, and church societies and other special and interesting features.

The subscription price of the Courier is \$1.50 per year. For every subscription beginning with this edition or secured at this time 50c. will go to the library fund. Extra copies of the paper will be sold at 10c. each, or 3 for 25c. Send your order to the Secretary of Library Board, Prairie du Chien, Wis.

Copies of the paper went to regular subscribers, to contributors to the Public Library Edition; twenty of the high school children each took twenty copies for sale and canvassed the city; copies were also placed on sale in several stores.

As a business man said: "This is the biggest thing that has ever happened to Prairie du Chien." The library has received \$420 for books, and also the enthusiastic support of the citizens. New books have already been purchased, more adequate quarters will soon be secured, and Prairie du Chien will have a useful and usable library. The city has been advertised in this edition of the *Courier* as never before, and both library and merchants have profited.

The public library edition of a newspaper can be published in any city with an energetic and interested editor, and a library board willing to work. Material for copy not requiring attention at the last moment should be prepared two weeks or more before publication to allow time for careful proofreading and arrangement of all the material at the last. Copies of this February 24 edition of the Prairie Du Chien *Courier* may be secured for 10 cents from the secretary of the library board, Mrs. J. S. Earll.

MARION HUMBLE.

THE ENGINEERING SOCIETIES LIBRARY*

One of the largest collections of engineering literature in the world is housed in the Engineering Societies Building, at 29 West 39th Street, New York, the headquarters

*Reprinted from the *Journal* of The American Society of Mechanical Engineers, 29 West 39th St., New York.

of The American Society of Mechanical Engineers. It is made up of the joint libraries of the American Institute of Electrical Engineers, The American Society of Mechanical Engineers, and the American Institute of Mining Engineers, and contains more than 60,000 volumes of great technical value, including, besides all the important works in these three fields of engineering, many books of reference, the bound sets of the proceedings of practically all the engineering societies of the world in these fields, and of many others allied with them. Some of these sets cannot be found in complete form in any other library in the country.

The library also receives every important engineering periodical of the world in

contents accessible to readers, and only a few of the greater rarities are in locked cases, all the other volumes being on open shelves. Those most frequently called for are in the main reading room on the top floor, while the stack room on the floor below contains the ones less seldom referred to.

The main reading room, a photograph of which is shown in this issue, is dignified in its simplicity. Three massive columns on each side separate the north and side sides into spacious alcoves, where wide tables and comfortable chairs have been placed for the convenience of the reader. The mezzanine gallery recently erected, has increased the shelf space, and adds to rather than detracts from the general appearance.

At the rear of the room, facing the visitor as he enters, is Frank Dana Marsh's fine mural painting depicting the operations of engineering. The central figure is that of the directing engineer, robust and keen-eyed, while on each side are brawny workmen handling machinery, drilling hard rock, running surveying lines, and erecting dynamos. In the background are railroads, bridges, blast furnaces,

PLAN OF LIBRARY

the mechanical, electrical and mining fields, as well as many others covering chemical technology and other allied industries, numbering in all more than 800 current magazines, printed in more than ten languages.

The location of the library at the top of a great building is almost ideal, insuring as it does splendid lighting and the absence of dust and street noises. Its arrangement was planned with a view to making its

steel works—a Pittsburgh in miniature. A fine view of New York and its massive skyline can be obtained from the wide windows of the reading room.

Through the generosity of the members of the three societies which jointly maintain the library, supplemented by the annual appropriations of the societies themselves, there has been accumulated this collection of technical literature of exceptional value. Among the volumes

available are the publications, in their original editions, of the two oldest learned societies of the world, the Royal Society of London and the Academy of Science of Paris, the former dating from the time of Charles II. of England. Electricity and magnetism are completely covered by the Latimer Clark Collection, presented in 1901 by Dr. Schuyler Skaats Wheeler, and through the kindness of Dr. Carnegie properly cataloged and housed. The great works of the mathematicians, physicists, and chemists which are the basis of all engineering, are well represented.

The early work of the engineer is represented by many valuable works dating back to the beginning of the printing of scientific books, and the many volumes in Latin and mediæval English form a nucleus of what, it is hoped, may in the future be a valuable source of information for the American engineer interested in the history of his profession.

But, however great may be the value of old books, the engineer of to-day wants the literature of to-day. The library is not a dry-as-dust museum. It has records of the past for reference when required, but it has in even greater profusion the literature of the immediate present. Every engineering periodical is accessible to readers as quickly as the mail can bring it to the library, and books are usually available before they reach the review columns of the engineering journals. Every work is cataloged and shelved as promptly as possible.

Through the gift of a lately deceased member of The American Society of Mechanical Engineers, the library has acquired one of the most complete collections in the world of books on machinery and appliances for handling and conveying materials of all kinds, and this collection is being expanded as rapidly as possible. In these days of large enterprises the literature of this subject is of enormous importance. An attempt is being made to cover every subject of contemporary interest in the same complete manner.

The 800 serial publications received from all parts of the world are for the most part preserved and bound. These are largely received in exchange for the publi-

cations of the founder societies. A list has been issued by the library showing the periodical sets which it contains, and a second list, in which will be shown the resources of seven libraries in New York and its vicinity, is being edited for publication. It is hoped that ultimately a list covering the libraries of the United States may be issued.

It is manifestly impossible for any engineer to collect, preserve and digest for himself the voluminous literature of his profession. He must depend on the work of others, reviewers, indexers, abstractors, and librarians. Until a very recent date a library considered its duty accomplished when it had acquired, preserved, cataloged, and indexed the literature of the subjects covered. A reader was forced to visit a library in order to get information. But the up-to-date library is adopting a new policy which makes complete service possible to students at a distance.

To be more specific, the library of the Engineering Societies is prepared to render the following service to any one who desires it:

- (a) It will verify references, furnish abstracts, copies, and translations of any article from citations sent by an engineer or student.
- (b) It will furnish partial or complete bibliographies of engineering subjects; and where the original sources are not available to the client, furnish either the original print, or such abstracts, copies, photographs and translations as are necessary.

During the period in which this service has been in operation, some 500 reference lists have been compiled, and copies have been retained and are available to any one. It is manifestly impossible to give here a complete list of the subjects; it can only be said that nearly the whole engineering field is covered. The library keeps a card index of the important articles in the current periodicals and society publications as it receives them, so that the inclusion of the literature of the minute is assured in the reference lists.

This special service is particularly commended to the attention of engineers in isolated places. Its international scope is

evidenced by the fact that during the past two years it has been of assistance to engineers in such far-off countries as Patagonia, Korea, Japan, South Africa, Germany, and Australia. References have also been sent to Alaska, British Columbia, Mexico, and the Canal Zone. In the improbable event that a reference is not found in the library, books are borrowed from other libraries, either in New York or other cities. When transcripts of articles are desired, photographic copies are preferable in most cases, as being cheaper than type-writing and a guarantee against mistakes.

The library is a general bureau of information for engineers. It will furnish addresses of engineers, names of publishers, of books and periodicals, addresses of manufacturers, and statistics of various kinds. It also has facilities for accurate technical translation. Requests by telephone, telegraph and cable will receive immediate attention. A nominal charge (net cost) is made for this service.

W. P. CUTLER, *Librarian.*

A. L. A. EXHIBIT AT THE PANAMA-PACIFIC EXPOSITION

THE committee of the A. L. A. charged with the duty of preparing a suitable library exhibit for the Panama-Pacific International Exposition, which opens in San Francisco on Feb. 20, 1915, has sent out the following circular letter of appeal to librarians:

November 18, 1914.

To the Librarian:

With such patience as it possesses the American Library Association Committee on The Panama-Pacific International Exposition has waited in the hope that the exhibit sent to Leipzig would be returned in time to form the basis for the San Francisco exhibit.

Thus far the efforts of the committee to ascertain when the exhibit would be returned have been futile owing to war conditions prevailing in Europe.

As a last resort the Library of Congress has made an appeal to the Secretary of State for the return of its contribution, and the American ambassador at Berlin has been instructed by cable to endeavor to arrange for the return of the exhibit.

Even if successful in this new direction the material is not likely to reach the United States before the first of the year. The committee, therefore, has decided to form another collection and have the same installed at San Francisco next year.

To make this exhibit a success there must be active interest and co-operation among the libraries of the United States.

This is not the year to ask for large contributions of money (although \$3,000 must be raised to carry through the project) but the committee does feel that libraries should respond promptly and generously to the appeal for material.

The time is so short that the committee has arranged with Mr. J. L. Gillis, state librarian, Sacramento, California, who has volunteered the services of his staff, to receive and arrange the exhibit under a plan outlined by the committee.

This circular asks you to contribute, for the exhibition, pictures, reports, leaflets, maps, diagrams, catalogs, book-lists, blanks, posters, etc., etc.

Your contributions, to receive attention and secure a place in the exposition must be forwarded soon, leaving your library, by express prepaid, as per shipping directions below, not later than December 15th.

Send all material flat and unmounted; though large posters, and large maps and floor plans can be folded if on thin paper.

Do NOT mount photographs, blanks or any other material in any way.

Number the photographs you send with a series of consecutive numbers written in ink on front, in the upper left corner. Clip to each photograph a slip bearing the number of the photograph and stating very clearly and fully what it pictures and from what library it comes.

It is much better to send one or two large, clear photographs, 5 x 8 or 8 x 10, than a dozen small or inferior ones.

Mark plainly everything, not already so marked, as coming from your library.

Arrange the material to take the least possible space and so pack it that it will travel safely, yet make the whole package as light as possible.

Address all packages to

J. L. GILLIS, State Librarian,
Sacramento, Cal.

(Put the name of your library on the outside.)

Mr. Gillis, in making up the exhibit, will follow the methods used in installing that for Leipzig. All large photographs and as much other material as seems proper for the purpose, will be mounted and matted, so far as possible, on mounts of one of these two sizes: 13 x 17½ and 17½ x 26.

The best of the photographs and the best of other material will be shown on walls or screens, each mount being appropriately labeled. Blanks, leaflets, short lists, illustrations of methods, etc., etc., will, for the most part, be mounted on larger sheets and be shown in multiplex display frames.

Libraries will not be shown individually. The material sent will be used to help make exhibits of subjects—as Charging systems; Library buildings, exteriors and plans; Children's rooms; Periodicals; Pamphlets, method of handling; Binding; Story telling; etc., etc.

Mr. Gillis's task will be a very difficult one. He needs an abundance of the best material, and needs it at once.

A. L. A. COMMITTEE ON PANAMA-PACIFIC EXHIBIT.

FRANK P. HILL, Chairman.
MARY EILEEN AHERN,
JOHN C. DANA,
J. L. GILLIS,
GEORGE B. UTLEY.

RELIEF FUND FOR BELGIAN LIBRARIANS

There has been forwarded to his Excellency Emanuel Havenith, Belgian Minister at Washington, the subscription, amounting to \$340.70, raised by the library staff of the New York Public Library for the benefit of librarians in Belgium whose libraries have been destroyed or who have been deprived by the war of their occupation. There has also been received by the LIBRARY JOURNAL and forwarded through this office to His Excellency, \$61.65 from the staff of the Portland, Oregon, Public Library; \$20.00 from the LIBRARY JOURNAL, and \$2.00 from Miss Edith Rice. This money is sent for the relief of librarians in Belgium, because it is in that country that librarians have especially suffered.

HOW TO USE THE LIBRARY

The following outline for an hour's exercise on how to use the library was prepared by the Western Massachusetts Library Club, and was read and discussed at the October meeting of the Massachusetts Library Club at Stockbridge. The outline is intended for use with children in the highest grammar grade and has been used with good results in the schools of Westfield, Mass.:

THE LIBRARY

What is a library? Not merely a collection of books, but a storehouse of information, a place to find reading for amusement or instruction. Information chiefly taken up under this exercise.

What is the public library? Supported by the people and open to all the people it forms a part of the system of public education, and one which all can continue participating in through life.

How many of you are in the habit of using the library? Your father's taxes help support the library, and we would welcome you and urge you to regard it as your own for all legitimate purposes.

THE ARRANGEMENT OF BOOKS

How many of you have ever noticed whether the books seem to be in any special order? It is necessary to group books on similar subjects together as, *e. g.*, all American histories.

Can you think of some other kinds of books to be grouped together? Books on how to do things, bird books, travel books, cook books, etc.

Have you ever noticed numbers on the books? (Explain briefly the general grouping and the numbering used in the library. If the decimal classification is used, explain the grouping into ten main divisions and what these are. Explain terms not readily understood.)

(If book numbers are used show how it is necessary where there are many books on any subject to arrange them in some definite order so that any particular book can be quickly found, and that this order is usually alphabetical by author. In looking for a book by number find the classification number first and then the book number.)

How is biography arranged? Alphabetically by the individual about whom the book is written.

How is fiction arranged? Alphabetically by the authors.

(Have a practical exercise giving each pupil the number of a book to be looked up on the shelves; then interchange the books and have them put away, the pupil remaining by the book until the librarian has verified the work.)

THE CATALOG

Explain the necessity of having a key to the contents of the library when you are in search of some particular thing or book. What is such a key called? The catalog.

How many of you are in the habit of using the catalog?

What kinds of questions would you expect the catalog to answer? (a) Whether the library has a book of a certain title. (b) What books the library has by any particular author. (c) What books the library has on any particular topic.

How are the cards in the catalog arranged? Author, subject, and title, all in one alphabet, as in a dictionary.

Of course, you must know thoroughly the order of the letters of the alphabet, for this is absolutely essential in hundreds of ways in daily life.

What are reference cards? Cards directing you to look in another place for the items you are in search of, as, *e. g.*, Twain, Mark, *see* Clemens, S. L.

(Have a sample set of typical cards, author, title, and subject, and reference, and explain the significance of the different parts, the call number, the imprint, why the author's name is inverted, etc.)

(Give pupils different topics, authors, and titles to look up in the catalog, and then find the books from the call numbers.)

REFERENCE BOOKS

What are reference books? Books containing much information in small compass for use in the library only.

How many can name a reference book?

(a) *The dictionary*

What do you use the dictionary for? Primarily to find the spelling and meaning of words, but many other things can be found there as well.

How is it arranged? Alphabetically.

What are some of the other things that can be found? The pronunciation, part of speech, earlier and possibly obsolete meanings, derivation of the word, phrases illustrative of its use, idiomatic phrases or expressions into which it enters, pictures, synonyms and antonyms.

(Quote sample word from the dictionary, reading all that is found under it, and have the children tell the above items as they are read.)

What supplementary material can be found in the dictionary? Abbreviations, biographical, geographical, scriptural names, foreign phrases, names famous in literature, arbitrary signs, pictures, etc.

Where is this supplementary material found? At the foot of the page, and to some extent in the back, in the case of the New International; in the back of the Standard; in the text of the Century and in its Book of Names.

(b) *The encyclopedia*

How does the encyclopedia differ from the dictionary? Does not list all words, but gives extensive description of the topics included, treats of history and description of countries, lives of people, general subjects such as natural history, science, telegraphy, and the like.

How is it arranged? Usually alphabetically.

How do you use it? Notice the letters on the back to find the volume in which is the article which you desire. Heed the cross references. In the case of the Britannica use the index.

(c) *The World Almanac*

What is it? A remarkable compilation published annually, giving an immense variety of facts and figures on politics, statesmanship, happenings of the day, great men of the time, officers of states and nations, etc. "If you cannot find a thing anywhere else look in the World Almanac."

How do you use it? By means of the index in the front.

(The use of other reference books such as indexes to periodicals, books of quotations, atlases, etc., can be taken up at the discretion of the librarian.)

"When in doubt consult the librarian."

GERMANY STARTS ITS FIRST LIBRARY SCHOOL

THE first regularly organized library school in Germany was opened on the morning of October 12, 1914, in the Hoch Schule für Frauen in Leipzig.

The Hoch Schule für Frauen, the only institution of its kind to be found in Germany, is a technical school for training women for professional and public service. It occupies a very handsome building in Königstrasse 18, and is generously equipped with libraries and devices. Its chemical laboratory is especially large and complete.

During the summer of 1914 the Zentralstelle für Volkstümliches Büchereiwesen (Central Bureau for Public Library Interests) was established in Leipzig. This bureau is housed in the Frauen Hochschule. It is supported by funds contributed by the city of Leipzig, by individuals and libraries. Through its efforts the library school (Fachschule für Bibliothekverwaltung und Technik) was brought into being, and quarters for it were secured in the Frauen Hochschule.

Dr. Walter Hofmann, the director of the public library system of Leipzig, and Mrs. Hofmann, librarian of Branch Library No. 2, of Leipzig, were the prime movers in establishing both the Zentralstelle and the Fachschule.

There were twelve pupils present at the opening exercises. Dr. Boysen, of the University Library, made the introductory remarks and was followed by Dr. Hofmann, who reviewed the beginnings of the efforts which led to the realization of the school. Both speakers were happy in their references to American libraries and their methods.

The required time of instruction is a year and a half, beginning in October. A fee of 200 marks is exacted. Pupils must be at least 20 years of age, and must have absolved certain educational requirements.

Among the applicants were several men. Thus there is here the singular event of men attending a technical woman's school in Germany, where opinion as to the progress of woman is supposed to be so conservative.

A. R. H.

SOUTH AMERICA AND OPPOR- TUNITY.

PUBLIC interest in the South American republics, gradually growing greater, has become suddenly intensified for two reasons. The first is the opening of the Panama Canal, and the second is the war now being carried on by six of the greatest commercial nations in the world. The United States has been slow to recognize and appreciate the possibilities of South America and the opportunity for building up a mutually profitable trade. A few years ago only a stray article on South America appeared in the magazines. Now in almost every newspaper and magazine are found glowing accounts of golden opportunities that await American business men. It is to be hoped that the result of all this publicity will not be a mad rush of men who expect to grab and exploit. South America does not need such men, but does need men who understand fundamental conditions, men who can help existing trade and lay a foundation for further extension.

This is the time for the public library to step forward. It can place in the hands of its patrons books, pamphlets, bulletins giving reliable information about South America, and telling to what authorities to go in search for more detailed information. By a display of attractive books and a judicious advertising of same, the library can inspire the earnest business man or the enterprising young man or woman. It can perhaps be the means of opening a career to some hitherto plodding clerk. It can help to open the door to a better understanding of conditions in South America, and of the reasons why a great many of our business men have become discouraged in dealing with South Americans and have given up trying.

Men from the United States have not taken the time or the trouble to understand Latin-Americans. Germans and Englishmen have done so, and have been more successful in the field. Few Americans have stopped to learn Spanish or Portuguese, or even French, which is a favorite language with the better-class South Americans. They have not stopped to learn the etiquette of the country. They have hustled in a

country which does not understand hustling. It is to be regretted that more business schools do not teach languages which would be of use in dealing with foreign countries. Someone has said: "It is a sweet little peculiarity of American schools and colleges that they treat living languages as dead."

In the Binghamton (N. Y.) Public Library, at the entrance to the reading-room, was placed a case containing books on South America, pamphlets, guide books, Spanish and Portuguese grammars and dictionaries. A sign on this case read: "South America and opportunity." As men passed by to read the morning paper or their favorite magazine, this sign caught their eyes. Some paused and read from the books. One young man, a hotel clerk, stopped longer than the others and selected one large book and a *Pan-American Bulletin*. He borrowed these; incidentally, he kept them much longer than his allotted time. Now he is taking a correspondence course, and learning the Spanish language by phonograph. We have hopes for that young man.

The best authorities on such American affairs are, of course, the Pan-American Union and the United States Department of Commerce, Bureau of Foreign and Domestic Commerce. Both of these are glad to give information and help. Both have pamphlets for sale and free, and the Pan-American Union will send, on request, a list of books which they have for sale, and will suggest the best text-books for the study of Spanish and Portuguese.

The Pan-American Union, formerly known as the Bureau of American Republics, is an international organization and office maintained by the twenty-one American republics and devoted to the development and maintenance of commerce, friendly intercourse, and good understanding among them. Its affairs are administered by a director and assistant director, elected by and responsible to a governing board comprised of the Secretary of State of the United States and the diplomatic representatives in Washington of the other American governments. The Pan-American Union issues a monthly bulletin or magazine called the *Bulletin of the Pan-Amer-*

ican Union. These bulletins contain reliable information concerning the republics, such as commerce, exports, banks, railways, and each month special notes on each of the republics. The *Bulletin* is two dollars a year. Other pamphlets issued by the Union which have been of use are "Cotton," "Factors in Latin-American trade," "Latin-America, the land of opportunity," "Rubber and its relatives," "Tobacco," "United States and Latin-America," "Pan-American possibilities."

The Department of Commerce has published a "Trade directory of South America for the promotion of American export trade" (1914). This publication was prepared solely for the object of benefiting American export trade, and will materially assist American manufacturers and exporters. The directory is arranged according to countries, under country by city, under city by articles. The use of the volume is facilitated by a classified schedule giving the main heads under which the various articles are listed, and by a good index. The Department of Commerce has also recently issued a pamphlet called "Foreign publications for advertising American goods," which gives a general idea of the cost of advertising in some of the principal foreign publications, the lines of trade represented, circulation, and subscription price. Other interesting and useful pamphlets issued by this department are "Banking and credit in Argentina, Brazil, Chile, and Peru," "Foreign credits," "South America as an export field," and "Trade of the United States with the world."

The Alexander Hamilton Institute, Astor Place, New York, has prepared a war map of American trade opportunities, with statistics, comments, and predictions. The map has been carefully prepared and shows, not at a glance, for the map is large, the comparative importance of the leading industries of the United States and the probable effect of the war upon them.

The following books have been found useful in the Binghamton Public Library:

- Bingham, Across South America.
- Boyce, Illustrated South America.
- Bryce, South America.
- Calderon, Latin America.
- Clemenceau, South America to-day.
- Enock, Ecuador.
- Hale, Practical guide to South America.
- Hale, South Americans.

Ruhl, Other Americans.
 Whelpley, Trade of the world.
 Winter, Brazil and her people of to-day.

Portuguese Language

Branner, Portuguese grammar.
 Vieyra, Dictionary

Spanish Language

Ahn, New practical and easy method of learning the Spanish language.
 Loiseaux, Elementary Spanish reader.
 Pitman's readings in commercial Spanish.
 Toledano, Pitman's commercial Spanish grammar.
 Vieyra, Dictionary.

HELEN STRATTON.

ADVERTISING A TECHNICAL DEPARTMENT

THE Pratt Institute Free Library has put out a folder advertising their applied science department, which is a striking departure from the usual library circular. The cover page, which we reproduce, is printed

in black-and-white, with a background of bright yellow, and the inside facing pages read as follows:

APPLIED SCIENCE ROOM

A RESORT FOR READING, REFERENCE
 AND STUDY FOR THE FREE USE OF

Engineers who must keep in touch with the newest undertakings and most advanced principles of their profession.

Chemists who need to know what processes have already been developed, and what may be expected to result from their own experimentation.

Machinists and Expert Mechanics who appreciate the value of up-to-date information as to the new types of machinery and mechanisms and modern tendencies of their trade.

Builders and Architects who realize the importance of close acquaintance with the changing materials and principles of building construction.

Inventors with schemes taking shape who are interested to see whether their ideas have been anticipated.

Workers in the Trades who desire information regarding the latest trade developments and how far they may share them.

Students and Apprentices who must grasp every opportunity that shall lead to advancement in their line of work.

PRATT INSTITUTE FREE LIBRARY

PLACES AT THE DISPOSAL OF EVERY VISITOR UNDER THE GUIDANCE OF A SPECIALIST LIBRARIAN

A Working Library of more than 1200 picked books in every branch of engineering and technology in the latest editions available.

Current Technical Periodicals, numbering over 150, familiarly displayed on tables for convenient reading, with the back numbers at hand for consultation.

Bound Sets of periodicals and transactions of engineering societies, with comprehensive indexes for quick reference.

Patent Office Reports complete from the beginning, together with their indexes, specifications and drawings.

Trade Catalogs representative of the leading manufacturing concerns in America, carefully selected and constantly added to.

Lending Books from the Circulating Department, where selection for home reading may be made from an extensive library of technology.

Personal Direction in the search for material and the use of library equipment, by the man in charge of the room.

The fourth page gives general information about the library—its location and street-car routes by which to reach it, the location in the building of the applied science room, the hours of opening, and information on all departments free to the public.

REPORT ON PERIODICAL INDEXING

The committee on periodical indexing of the Keystone State Library Association made the following report at the annual meeting of the association in Wernersville, Oct. 15-17:

To the Keystone State Library Association:

The committee appointed at the 1913 meeting of the association to confer with the H. W. Wilson Company with a view to having them include in their indexes certain periodicals, begs leave to report:

That it has been in almost continuous correspondence with the Wilson Company since the date of its appointment, and, first of all, wishes to record its sense of the courteous manner in which its recommendations have been received.

That, in making its requests to the Wilson Company, it endeavored to emphasize two conditions that have obtained since the Poole indexes have been discontinued, and since libraries have become entirely dependent upon indexes issued by the Wilson Company, these conditions being:

First: That libraries, realizing the immense importance for reference and historical work, of material published in periodicals, had for years, despite the heavy cost involved, worked towards collecting complete sets of those indexed in Poole, and the sudden elimination of many of the important ones from all indexes procurable, rendered a great deal of their work nugatory and handicapped their ability to serve the public.

Second: That, owing to all periodicals at the present included in the index being either issued by American publishers or by houses which are in greater or lesser degree affiliated with American publishing interests, the index is to a certain extent provincial—a key to American thought rather than that of the civilized world.

The request finally made to the Wilson Company was that it include four typical English periodicals, namely *The Spectator*, *The Saturday Review*, *The Academy*, and *The Athenaeum*. The Wilson Company, during the time of correspondence with the committee, sent out questionnaires to a hundred or so libraries scattered all over the states, in an endeavor to find out which

periodicals the hundred or so libraries were most desirous of having included. The *Revue de Deux Mondes* received more votes than any other. A second questionnaire as to English reviews resulted in *The Spectator* receiving more votes than any other English periodical.

Ultimately on Sept. 23, your committee received a letter from the Wilson Company stating that they have definitely decided to index as soon as possible *The Spectator*, *English Review*, *Cornhill Magazine*, *Dublin Review*, *Geographical Journal*, *Revue de Deux Mondes*, *Burlington Magazine*, *London Quarterly Review*, *National Review*, and *The Journal of the Royal Asiatic Society*. Of these periodicals they have already purchased the numbers of *The Spectator*, *English Review*, and *Dublin Review*.

With the ideal held constantly in view of making the index a key, not only to American ideas but to continental thought as well, your committee is firmly of the opinion that the association should go strongly on record as advocating that, the inclusion of *The Spectator* being assured, the next periodicals included should be the *Revue de Deux Mondes* and the *Deutsche Rundschau*, both of which received large votes in the recent referendums.

It is necessary, if library work at large is to advance in efficiency, that the libraries practice unselfishness. And though it is very possible that for a number of years some of the libraries which subscribe to periodicals such as the *Etude*, *Munsey* and *Cosmopolitan*, on the one hand, or such as the *Journal of the Franklin Institute*, *Journal of Educational Psychology*, and the various publications of American universities on the other hand, would get more use out of the index through the inclusion of these periodicals, than they would through the inclusion of the French and German publications mentioned, the committee believes that the widening of this bibliographical tool to include continental thought would, in a short time, prove of much greater and more lasting benefit.

The nuisance of having the index in two parts—"The Readers' Guide" and "Readers' Guide Supplement" is undoubtedly by no means a small one, but a minor one compared to the curtailment of its scope to

American periodicals. Only a large view of the matter, only the treatment by the libraries of the Wilson bibliographical undertakings in the spirit in which they treat bibliographical undertakings of the American Library Association or other non-commercial bodies, can yield worth-while results.

Your committee therefore awaits the further instructions of the association.

Respectfully submitted,

MYRA POLAND.

HENRY J. CARR.

O. R. HOWARD THOMSON.

(The Association voted to continue the committee for another year and instructed it to make an effort to have the *Revue de Deux Mondes* and the *Deutsche Rundschau* included before any other magazines.)

American Library Association

THE 1915 CONFERENCE

The annual conference of the American Library Association will be held next year in Berkeley, California, June 6-9.

MIDWINTER MEETINGS

The usual Chicago midwinter meetings will be held this year, Wednesday, December 30, to Friday, January 1. Headquarters will be at the Hotel La Salle, corner of La Salle and Madison streets, and meetings will be held there unless otherwise announced.

Rates at Hotel La Salle

<i>One Person</i>	<i>Per day</i>
Room with detached bath.....	\$1.50 and up
Room with private bath.....	2.00 and up
<i>Two Persons</i>	
Room with detached bath.....	3.00
<i>Two Connecting rooms with bath</i>	
Two Persons	4.50 and up
Four Persons	7.00 and up

Make reservations direct with management of hotel, stating time of your expected arrival.

The Hotel La Salle will provide meeting rooms and committee rooms free of charge. Those having charge of meetings not here referred to should make arrangements for suitable meeting rooms direct with the hotel management or through the secretary of the A. L. A.

Besides the well-equipped dining rooms of the Hotel La Salle there are many restaurants with a wide range of service and price in close proximity to the hotel. All the leading theaters are within a few blocks of the La Salle.

The Executive Board will meet on Thursday evening, December 31.

The Council will hold sessions on Wednesday afternoon, December 30, and Thursday afternoon, December 31. Program will be mailed later to individual members. Members of the Council are requested to notify the secretary of the A. L. A. whether or not they expect to be in attendance.

The Publishing Board will meet on Thursday morning, December 31, at the A. L. A. executive office. Further notice will be sent to individual members.

The League of Library Commissions will meet Wednesday, Thursday and Friday mornings, December 30, 31, and January 1. There will be no papers presented; the meetings will be in the nature of a discussion or conference. A definite list of subjects will be discussed, one or two persons being asked to open the discussion of each subject.

The library school faculties will hold meetings on Friday morning and afternoon, January 1.

A meeting of the college librarians of the middle west will be held Friday morning and a round table for librarians of small colleges on Friday afternoon. Correspondence regarding this round table should be addressed to Miss Iva M. Butlin, Beloit College Library, Beloit, Wis.

The Chicago Library Club will entertain visiting librarians on Wednesday evening, December 30.

There will be a meeting of normal school and high school librarians some time during the week. Mr. W. H. Kerr, Kansas State Normal School Library, Emporia, will be glad to receive suggestions, topics for discussion, etc.

The annual meeting of the American Historical Association will be held in Chicago, December 29-31, with headquarters at the Auditorium Hotel, and members of the A. L. A. will doubtless be welcome at the meetings. Unfortunately it has not been possible to avoid a conflict of dates between these two associations.

GEO. B. UTLEY, *Secretary.*

Library Organizations

VERMONT LIBRARY ASSOCIATION

The annual meeting of the Vermont Library Association together with the Vermont Library Commission was held at Proctor, Vermont, Oct. 20-22.

By invitation of the trustees of the Proctor Library, the librarians met at a "get-together supper" Tuesday evening. In this way the

librarians were on hand promptly for the meeting next day, when the reports of the county vice-presidents were read. These were very encouraging, showing good progress in all ways, especially with the schools. While wild flower tables are in many libraries, two reported garden flower exhibitions in August which had increased the interest in gardens and brought to the library people who were not in the habit of coming. Very few notable gifts were received during the year. The most pressing problems seem to be the same old ones—lack of money, lack of interest in anything but fiction, and in some cases boards of trustees who do not meet and have no interest in the library. One librarian who reported that she had “no problems” was the envied of all.

Wednesday morning after the regular business meeting a round table was held, the first subject being “What the U. S. Department of Agriculture can do for librarians.” As a medium between the department and the libraries the county agent can be of the greatest service, as he is the link between librarians and the department on one side, and librarians and farmers on the other. He knows the kind of books the farmer and his wife will use. Some of these agents are cleaning out the local libraries of books that are not helpful to the farmers and replacing with up-to-date material. Through them bulletins of books on agriculture and home economics that are in the local library may be sent to each farmer in its vicinity.

Other topics were “Some of the newer fiction,” “Books other than fiction,” and “Magazines on the ‘white list.’” General discussion followed each paper. It was found that most of the cheaper magazines had been taken from the reading-rooms, *McClure's* and *Harper's Weekly* especially having been dropped this last year. The last topic was “A simple charging system.” This has been worked out by Miss Rebecca Wright, secretary of the Vermont Library Commission, Montpelier, and is especially adapted to the smaller libraries.

At the afternoon session Miss Caroline M. Hewins of Hartford, Ct., gave a most amusing and instructive paper on “Work with children in schools, and vacation book-talks” and Mr. Arthur Stone of Springfield, Vt., told how to treat current events in the library by means of the bulletin boards, pictures, best reviews, lists of books, and current event talks.

An interesting visit was made to the Vermont Marble Company's works, where the entire process of marble cutting after quarrying was shown. Tuesday evening the Asso-

ciation was invited to see the Ben Greet Players in “As you like it.”

As during the entire meeting the Vermont Library Association was the guest of the Proctor Library trustees and the people of Proctor, a sincere vote of thanks to them and the librarian for their gracious hospitality was passed. An invitation to meet at Rutland next year was received.

Officers elected were: president, George Dana Smith, Montpelier; vice-president, Miss Fanny Fletcher, Proctorsville; secretary-treasurer, Miss Elizabeth C. Hills, Lyndonville. There are 91 members in the Association.

ELIZABETH C. HILLS, *Secretary.*

CONNECTICUT LIBRARY ASSOCIATION

The Connecticut Library Association held its autumn meeting in the Norwalk Public Library on Tuesday, Oct. 27. Dr. James G. Gregory, president of the board of directors of the library, welcomed the Association, after which the minutes of the last meeting were read and approved.

The general topic of the morning was introduced by Miss Edith M. Peck, of the Rockville Public Library, with a paper entitled “How to interest and train children under grammar grades.” Miss Peck laid special emphasis on the importance of interesting the teacher as well as the child. Story-telling forms an important part of the work at Rockville.

Miss Frances H. Bickford next read a paper on “The library in relation to the grammar and high schools.” She told of the New Haven school branches and of the classroom libraries, also of the use made of bulletins and the picture collection. The concluding paper, on “Library children,” was read by Gertrude F. White, children's librarian in New Haven.

Miss Pinneo then told of the reflectroscope used by the Norwalk Library and of the interesting lectures which it had made possible during the past winter.

In the afternoon, Mr. William A. Borden, who for over two years was director of Baroda State libraries, gave an account of his organization of the library system there, closing with a plea for a central storehouse of books bought by state money—with the cities and villages able to borrow freely to supplement their own collections which would be of a more popular nature—leaving the important but less likely to be used books to be bought by the central library. Mrs. Borden followed with a delightful talk on life in India.

Before coming to the general topic of the afternoon, “Public school libraries,” Mr.

Thayer read a letter from Miss Hall, librarian of the Girls' High School, Brooklyn, urging the Connecticut Library Association to appoint a committee on high school libraries. This committee was later appointed by the president and consisted of Miss Hadley of Winsted, Miss H. M. Spangler of the Hartford High School, and Edwin A. Andrews of Greenwich.

Miss Elizabeth B. McKnight, associate librarian of the Girls' High School, Brooklyn, then read a paper on "Library work with high school students" showing the importance not only of reference work with the pupils but also of influencing their choice of books. She gave many practical suggestions for such work. Discussion followed in which librarians from various schools took part.

After a vote of thanks to Miss Pinneo, and all others who had contributed to the success of the day, the meeting adjourned.

EDITH McH. STEELE, *Secretary*.

KEYSTONE STATE LIBRARY ASSOCIATION

The fourteenth annual meeting of the Keystone State Library Association was held at Galen Hall, Wernersville, Oct. 15-17.

The meeting was called to order by the president, Mr. Frank Grant Lewis, librarian of Bucknell Library, Crozer Theological Seminary, Chester, and the first session on the evening of the 15th was devoted to business, the reports of the treasurer and of the committees on magazine indexing and library legislation. Mr. H. S. Ehrhart of Hanover, chairman of the committee on library legislation, reported that his committee was of the opinion that the present law on the subject of free public non-sectarian libraries is entirely inadequate and it recommended that Home Bill 689 as submitted to the session of 1913 of the Pennsylvania legislature be presented to the next legislature and its passage urged by the members of the association. Mr. O. R. Howard Thomson, chairman of the committee on magazine indexing, gave a satisfactory report on the work of his committee during the year. (This report will be found in full elsewhere in this issue.) After the appointment of committees, the informal social and "get acquainted" session followed, which is always a most enjoyable feature of the meetings.

The Friday morning session was devoted to the consideration of fiction for the public library, Miss Corinne Bacon, former director of the Drexel Institute Library School and now with the H. W. Wilson Co., presiding. "The characteristics of the French novel" was the first subject, which was handled in a most able and interesting manner by Mrs. Isaac H. Rhoads of Lansdowne. Mrs. Rhoads

made a plea for an open-minded consideration of the French novel, pointing out the difference in the French viewpoint from that of the American, and urging a wider reading of the best in that language. She was followed by Miss Bacon, who spoke in a most helpful way on "How to select fiction for public libraries," defining an immoral novel, touching on the problems of selection for the large and small libraries, and suggesting some of the principles to guide in the selection and some of the dependable aids.

The selection of fiction in a large public library was discussed by Miss Waller I. Bullock, chief of the loan department of the Carnegie Library of Pittsburgh, who told of the methods employed in that system, where every novel is read by some member of the staff, who reports on it at the regular staff meetings. "The problem of the medium sized public library" was discussed by Miss Alice R. Eaton, librarian of the Harrisburg Public Library, who said that they were such a new library that their choice had been determined by need rather than intention, that the books were read by the staff, and that they were mindful of the recreative effect of fiction and had bought many books of imagination and stimulation. Miss Anna A. MacDonald, consulting librarian of the Pennsylvania Free Library Commission, then told of the selection of fiction in the very small public libraries where there are just as many classes of readers as in a city, with little money for books. She suggested reading committees made up of members of the boards of trustees or of different classes of readers, and the sending of lists to the commission for checking. She was followed by Miss Clara E. Fanning of the H. W. Wilson Co., who spoke of the several fiction lists printed by the company for the purpose of drawing readers from the new fiction to the older, worth-while books, also of the Wilson experiment of the co-operative printing of fiction catalogs.

Miss Mary White Ovington of Brooklyn, New York, then discussed the subject of "Fiction—from the borrower's standpoint," speaking of the change in the library attitude during the years of its development from the time when the librarian congratulated himself at the end of the day that every book was in its place, to the present time when the aim of the library is to circulate every volume on the shelves. She made an appeal for the reading of the classics, modern drama, and poetry, and the better magazines; for a greater expenditure of the libraries' funds on the best children's books, freely duplicated; and for an open-minded attitude on the part of libra-

rians towards the selection of books for their shelves; and she closed by stating that, in her opinion, the card catalog was to a borrower the most unsatisfactory thing about a library.

Friday afternoon was left open for recreation and the delegates had this opportunity to enjoy for a few hours the wonderful mountain walks and scenery.

The first speaker of the evening was Miss Alice S. Tyler, director of the Western Reserve Library School, Cleveland, Ohio, whose subject was "The widening field and the open book." Miss Tyler spoke of the widening field of library endeavor, of the library commissions, and of the larger view of the functions of the individual libraries (the rural extension and county library systems); and suggested ways of "opening" the book, by story hours for adults, travel talks with pictures, hours with the poets, and the free use of the lecture room for all subjects.

Miss Tyler was followed by Dr. Samuel McChord Crothers, of Cambridge, Mass., on the subject of "The therapeutic value of books." Dr. Crothers, in his delightfully humorous manner, divided books into several classes according to their effect upon their readers—the stimulants, depressants, sedatives, and counter-irritants. He declared that librarians should treat the people who come to the library as patients who come with various kinds of maladies, mostly suffering from mal-nutrition, and that they should watch the effect of different books; that people need various kinds of books, not only those that stimulate, but the sedative books that bring a certain harmony with life, and what is one man's stimulant is another man's sedative.

Dr. Scott Nearing, of the University of Pennsylvania, was the principal speaker of the Saturday morning session, giving a most interesting address on the subject of "Some recent developments in social and economic literature." Dr. Nearing spoke of the revolution in the subject matter and the viewpoint of social science, and reminded librarians of the great responsibility that rests upon them as guardians of the storehouse of knowledge, saying in closing: "In so far as your library seeks to be a force in shaping the civic and social life of your community, see to it that the social and economic books on your shelves represent the modern viewpoint of social service; treat the possibilities of social amelioration in terms of living reality; and present the message, as it should and can be presented, in the language of the people."

Dr. Nearing was followed by Miss Caroline

Griest, reference librarian of the Erie Public Library, who gave a paper on "The relation of the library to social movements," emphasizing the duty of the library to create a sentiment in favor of any social movement for the betterment of mankind. Miss Alice S. Tyler spoke briefly of the Western Reserve Library School and of the three months' course, during February, March and April, to which librarians of training and experience who are in the work can come without examinations and without credit, to gain in enthusiasm and to broaden their outlook.

After the reports of several committees, among them being the report of the committee on normal training in the use of books by Miss Mabel F. McCarnes of the Slippery Rock State Normal School, the association confirmed the two recommendations made to it by the executive committee: first, that Dr. Horace E. Hayden, in recognition of the work done by him as secretary and librarian of the Wyoming Historical and Geological Society of Wilkes-Barre, be made an honorary member of the association for life; and second, that a handbook of the Keystone State Library Association, including the history, constitution, and list of members, be printed during the coming year, the publication to be carried on under the direction of the executive committee of the coming year.

The nominating committee made the following report: for president, Mr. W. F. Stevens, librarian of the Carnegie Library, Homestead; vice-president, Mr. O. R. Howard Thomson, librarian of the James V. Brown Library, Williamsport; secretary, Mabel N. Champlin, librarian of the Public Library, Hanover; treasurer, Miss Anna A. MacDonal, consulting librarian of the Pennsylvania Free Library Commission.

MABEL N. CHAMPLIN, *Secretary*.

MICHIGAN STATE TEACHERS ASSOCIATION— LIBRARY SECTION

The importance of the library as a part of the educational machinery of the people was well recognized in the 62d annual meeting of the Michigan State Teachers Association, which was held at Kalamazoo, October 28, 29, 30. The session of the Library Section was held on Friday morning, and was attended by several hundred persons. Dr. Charles H. Eastman, the well-known Indian author, gave a most interesting address on the "Education of the Indian child," paying a wonderful tribute to the Indian mother, and showing the place of the story in such education. Miss Caroline Burnite, of the Cleveland Public Library, gave an address on "Children's read-

ing," which was followed by a general discussion in which many persons took part.

At one of the evening sessions devoted to rural education, Mr. Samuel H. Ranck, of Grand Rapids, gave an illustrated address on "City library service to the farmer." Most of the slides shown were from photographs taken by himself in his visits to libraries giving service to the rural population in different parts of the country.

The Library Section elected as its officers for the ensuing year: Miss Nina K. Preston, of Ionia, chairman; and Mr. David E. Heine-mann, a member of the State Board of Library Commissioners, of Detroit, secretary.

ILLINOIS LIBRARY ASSOCIATION

The Illinois Library Association held its nineteenth annual meeting at Springfield, Oct. 21-23.

The opening session was called to order by the president, F. K. W. Drury, who in his address said that as the primary purpose of the organization of the association had been fulfilled in the establishment of the State Library Extension Commission, the association must exert itself along other needed lines and suggested four important steps to be taken in the immediate future: (1) To secure needed library legislation in Illinois; (2) To correlate library meetings so as to avoid duplication; (3) To endorse the work of the Library Extension Commission; (4) To work out still closer affiliation with the A. L. A.

The reports of the officers and committees were presented, including one on the revision of the constitution, and accepted.

At its general meetings there were speakers of prominence and these sessions were attended by many local people not directly connected with libraries, in this way spreading the knowledge of the usefulness of the library to the community.

The social service rendered by the library and its use in the social survey work were subjects touched upon by several of the speakers. Among them, Prof. Robert E. Hieronymus, community adviser, University of Illinois, spoke of "The community center"; Miss Florence R. Curtis of the University of Illinois Library School, of the "Library's part in the social survey"; Dr. Walter Dill Scott of Northwestern University of the "Psychology of the rising generation."

Of direct interest to the librarians present were the papers presented by Miss Nellie E. Parham of the Withers Public Library, Bloomington, giving a "White list of periodicals for a public library"; by Henry C. Re-

mann of the Lincoln Library at Springfield on "The libraries of Springfield"; and by Henry E. Legler of the Chicago Public Library on "Shall we urge county libraries on Illinois." Considerable discussion followed the last address, and a motion was passed commending the county library plan to the incoming legislature.

The legislative committee presented the following recommendations:

"1. An amendment increasing the tax rate so as to allow the levy of two mills generally and 1.2 mills for cities over 100,000.

"2. An amendment requiring the library board to certify the annual budget for the council.

"3. An amendment to the commission government act requiring a separate library board to be appointed by the commissioners similar to the library board under the regular library act.

"We recommend that these three amendments selected by your legislative committee out of many that might be endorsed, be referred to a new legislative committee to be appointed by the incoming president, and that they be pushed in the next legislature.

"In regard to the situation at Springfield, we also ask that the Association endorse the recommendation of the legislative committee as follows:

"We recommend, namely, that a library board be authorized to consist of seven members, five to be appointed by the governor for a term of five years, one to retire each year, together with two ex-officio members, the governor and the secretary of state; that this board receive no pay for its services; that it have charge of the various library interests of the state at Springfield, and also care for library interests throughout the state."

The round table for small libraries was conducted by Miss Anna May Price, secretary of the Library Extension Commission. "Children's books suggested for Christmas purchase" was discussed by Miss Eva Cloud of the Public Library, Kewanee, and a list presented. This list has been printed by the commission and is for distribution.

Miss Josie Houchens of the University of Illinois Library considered "Periodicals for a small library" and gave a list of 22 with their list price, the estimated discount, and cost of binding.

"Simplification of the accession book" was taken up by Miss Florence R. Curtis, who said that the only necessary items were author, title, publisher, and cost, and that the preferable style of book was the loose leaf one, which permitted the use of the typewriter.

Other subjects discussed were the "Defacement and mutilation of books," and "How many books should be issued on a reader's card."

The reference librarians' round table was conducted by Earl N. Manchester of the reader's department, University of Chicago Libraries.

The Trustees' Association held a special session and discussed thoroughly the legislation needed and the best way to get it. Their recommendation may be found in the report of the legislative committee. Officers of the Trustees' Association elected for the ensuing year are: president, J. L. O'Donnell, Joliet; secretary and treasurer, Miss Eugenia Allin, Decatur. The trustees' committee on legislation appointed were: John R. Jones, Carmi; John W. Downey, Joliet; Arthur R. Haley, Rockford; and Anna E. Felt, Galena.

At the general session on Thursday Miss Frances Simpson of the University of Illinois Library School gave a sincere and appreciative tribute to the late Katharine L. Sharp, whose whole professional service was given to the libraries of Illinois and who was ever active in the work of the I. L. A., in securing proper legislation, and in fact in anything that made for the betterment of library conditions. On Friday an exposition of the story hour was given by Mrs. Gudrun Thorne-Thomsen to a large and interested audience.

Springfield's seven libraries proved interesting to the visitors, and the local committee attended well to the comfort and entertainment of the members of the association. The diversions included an informal reception at the State Library, a personally conducted automobile tour of the city's parks and places of historic interest, and a social hour at the Lincoln Library, where tea was served under the supervision of Miss Ida F. Wright with the aid of the Camp Fire Girls.

All sessions were held in the State House, but all the libraries were open for inspection at all times and greetings were received from Mrs. Eva May Fowler on behalf of the State Library, Dr. A. R. Crook for the State Natural History Museum, Miss Anna May Price for the Extension Commission, Mrs. Jessie Palmer Weber for the State Historical Library, and Finley A. Bell for the State Legislative Reference Bureau.

The A. L. A. was represented by the secretary, George B. Utley, who made a short address on Thursday evening.

Election of officers resulted as follows: president, Miss Mary Eileen Ahern, Chicago; vice-president, Ida F. Wright, Springfield; secretary, Maud A. Parsons, Joliet; treasurer,

Mary J. Booth, Charleston; council (terms to expire 1917), Effie A. Lansden, Cairo, and Henry E. Legler, Chicago.

MAUD A. PARSONS, *Secretary*.

KANSAS LIBRARY ASSOCIATION

The Kansas Library Association held its fourteenth annual meeting in Topeka, Oct. 28-30. In point of attendance this was the best meeting ever held, seventy librarians and members of library boards registering. The meetings were held with the Kansas State Historical Society in the Memorial building, and much interest was manifested by the association in the arrangement of this handsome structure.

The first session was called to order Wednesday, Oct. 28, at 2:30 o'clock, by the president, James L. King. His address was brief and was in the nature of a history of the Kansas Library Association, whose first president he was. He told the story of the organization of the association and gave something of the struggle of the pioneer workers. He spoke of the *esprit de corps* which held them, and has continued to hold them, until to-day the fruits are shown in the increased membership and attendance of the K. L. A.

There were at the meeting, besides Mr. King, two librarians who had been present at the organization of the K. L. A.—Miss Carrie M. Watson, Kansas University, and Miss Mary L. Barlow, Fort Scott. At the close of Mr. King's address Miss Watson added some delightful personal reminiscences of the first meetings of the K. L. A., and antedated its organization by an earlier one in 1891, when the Kansas Library Association, consisting of four members, all officers, and the city of Topeka, entertained the American Library Association on its return from the San Francisco meeting of that year. Miss Francis, State Historical Library, added that a copy of the welcoming pamphlet addressed to the A. L. A. was upstairs in the Historical Library and could be produced momentarily to prove the birth and heartiness of the Kansas library spirit.

After the reports of the secretary and treasurer had been read and approved, a symposium of wishes followed in response to roll call. Each librarian was asked to express one paramount wish for his or her library. This brought out a bewildering list of "library wants." "Increased income" and "more shelving" were the popular desires, the wishes generally showing that practically every building erected five years ago had been outgrown. One librarian wanted "more light, artificial and mental"; another wisely wished

"to give satisfaction," whereat a ripple of mirth ran over the hearers who knew the impossibility of such a thing. Mr. King's wish was so generous that it should go on record as his own, "that all the wishes expressed today may come true."

At the end of the afternoon session the members were asked to go across to the rooms of the Traveling Library, where Mrs. Green, assisted by the wives of the justices of the Supreme Court, was serving afternoon tea.

Wednesday evening was devoted to a social gathering and "visiting bee." There was a short program consisting of music, a "story hour" and "Young Lochinvar," a throbbing tragedy. To the relief of the Topeka libraries this last received honorable mention in the "thank-you resolutions."

Thursday morning a visit was made to the state printing plant, where, through the courtesy of the state printer, a demonstration was given of printing, binding, and book-making. At ten o'clock the meeting convened in Memorial building and listened to a delightful talk from Mr. Purd B. Wright, a member of the Kansas Library Association by adoption. "Some broad methods of interesting the public" was his topic. The question of advertising and reaching every class of citizen was thoroughly discussed. One of Mr. Wright's suggestions was that the best way to reach a business man was through his end of business—interesting the banker through books on banking, and the insurance man through books on insurance. After Mr. Wright's address the report of the work of the publicity committee was made through its chairman and unanimously approved. The association then adjourned for a motor trip to interesting places about Topeka. A short visit was made to the Washburn College Library and later the automobiles returned the guests to a luncheon at the Mills tea-room, a courtesy of the Topeka Public Library.

The afternoon session was called to order at three o'clock, when Mr. C. E. Rush gave an address on "Practical affairs in a public library." His talk was along lines to interest the librarians keenly, and much valuable discussion succeeded it, Mr. Rush submitting to a fire of questions which would have perplexed a man less sure of his subject. At the close of the afternoon session a tour of Memorial building was made, disclosing all the dark secrets of a hurried "moving-in." Apples and candy were found in the reading room of the library, for the Kansas library spirit takes into serious account the library stomach.

Thursday evening Dr. Walter Burr of the rural service department, Kansas State Agri-

cultural College, talked to the librarians on "The new rural community." He told them how they might help in this movement and what a few of them had already done. His commendation of the work of the Traveling Libraries Commission was hearty and sincere. Miss Linna Bresette followed Dr. Burr with a talk on "The wage earning woman and the factory." Miss Bresette asked for co-operation from the public libraries in her work, and explained how much there was to do for these girls who paid \$5 for a hat because they did not know how to get a cheaper one, and wanted pretty shoes because they could have only one pair, and so bought satin pumps. Miss Bradford, of Topeka, closed the evening with a delightful reading from William Allen White's "Court of Boyville."

The Friday morning session was a divided one, the first half being the demonstration, in the State Library, on the use of the library by the pupils of the public school, Miss Dinsmoor using a class from the Topeka High School for the work. Afterwards coffee and cakes were served and the meeting adjourned to Memorial Hall, where Miss Grace M. Leaf, of the State Normal Library, Emporia, told how she organized the special library of the Wisconsin State Board of Control. This was followed by a business session, with the election of officers, reports of committees and selection of a meeting place for 1915.

The following were the officers elected for the ensuing year: President, Mrs. Belle Curry, Parsons; first vice-president, Mr. James L. King, Topeka; second vice-president, Miss Kathryn Cossitt, Wichita; third vice-president, Miss Mary C. Lee, Manhattan; secretary, Miss Adelaide Bolmar, Topeka; treasurer, Mr. I. R. Bundy, Leavenworth; member-at-large, Miss Hattie Osborne, Baldwin.

Wichita was selected as the next meeting place, and after the transaction of other business, including an arrangement to print a new handbook of Kansas libraries, the meeting adjourned.

CLARA FRANCIS, *Secretary.*

NEBRASKA LIBRARY ASSOCIATION

The twentieth annual meeting of the Nebraska Library Association was held in Geneva, Oct. 19-21. The first session was opened by the president, Mrs. Elizabeth O'Linn Smith, on Monday at 3.30 p. m. After the business meeting, reports from the librarians present were given, showing increased activities since last year.

At the evening session, a report of the A. L. A. meeting was given; also an illustrated talk by Miss Charlotte Templeton on

"Public libraries in Nebraska." In this address, Miss Templeton showed the growth of the library movement in Nebraska by telling when the libraries were organized and when the present buildings were erected.

"Extension of library privileges to the rural communities" was discussed Tuesday morning. Mrs. F. A. Long, of Madison, Nebraska, discussed the "County library," using Kern county, California, as a basis for her talk. Kern county has thirty-two branch libraries, deposit and delivery stations. She urged that as good work could be done in the counties of Nebraska, and hoped that the librarians would use their influence for county libraries.

Miss Edith Tobitt, of Omaha, told of the work done at Dundee, Florence, Benson, and Ralston. These suburban towns pay an annual tax to the city of Omaha, and, in return, have full privileges of the Omaha Public Library. Messengers carry books to the deposit stations every other day, thus giving good service, although daily trips will be made as soon as possible. Other towns of Nebraska may do the same work for nearby villages.

Under the Nebraska library law a township may establish a township library or it may contract with an adjoining town for the free use of the library, by paying a township tax levy. "The value of the township library" was presented by Rev. Thomas Griffiths, of Edgar. The efficiency of the township library would be greater, because the librarian could come in closer touch with all patrons and the rural schools. Co-operation with the county superintendent and the rural teachers was given as the key to the founding of more township libraries. All counties in Nebraska do not have township organization, and in such counties, county libraries must be formed. Most libraries allow the rural population privileges of the library upon payment of a yearly fee. The library commission supplies such demands as come to it, but efficient work can best be given when rural communities have organization of their own. During the discussion which followed Mr. H. E. Legler, of Chicago, told of the work done in the suburban towns of Chicago. Each librarian was urged to use her influence to bring about some form of extension of privileges.

At the afternoon session, the girls' orchestra of the State Industrial School gave a very interesting musical program, which was followed by an address by Mr. Malcolm G. Wyer of the University Library, on "Librarians' interest in book illustration." In addition to a collection of mounted illustrations, lantern slides were used. The special address of the meeting was given by Mr. Henry E. Legler

of the Chicago Public Library on "The library and the melting pot." In his address, he emphasized the influence of libraries in making American citizens of the immigrant population.

At the business meeting Wednesday morning Mr. M. G. Wyer was elected alternate to attend the A. L. A. meeting, 1915. The following officers were elected: Miss Nellie Williams, Geneva, president; Mr. Malcolm G. Wyer, Lincoln, first vice-president; Miss Clara Howard, Columbus, second vice-president; Miss Josephine Lammers, Lincoln, secretary-treasurer.

The rest of the morning was given to a valuable round table conducted by Miss Edith Tobitt.

JOSEPHINE LAMMERS, *Secretary.*

SOUTHERN WORCESTER LIBRARY CLUB

The Southern Worcester Library Club held its eighteenth meeting in Framingham. Owing to repairs in process at the library building, the session was held in the rooms of the Sketch and Camera Club.

Records of the May meeting were read and approved. At roll call, sixteen libraries were represented in the audience of twenty-six.

Mr. Stebbins, chairman of the Framingham trustees, cordially welcomed the club. Miss Franklin, chairman of the nominating committee, presented the following list of officers for the ensuing year, and they were elected: President, Mrs. E. M. Arnold, Ashland; first vice-president, Miss Ethelwyn Blake, Milford; second vice-president, Miss Blanche E. Partridge, Holliston; secretary, Miss Lucy W. Biscoe, Grafton. Miss Sornborger, in her report of the Stockbridge meeting, said it was one of the best she ever attended, as it had the larger character of a national meeting.

Mrs. Whittemore, of Hudson, spoke on "Some advantages of the small library." She said she was keenly alive to the disadvantages of the small library, but she knew there were distinct advantages also. The selection of books for a small library is a greater problem than for a large one, as resources are generally limited, yet a small library may have a larger percentage of excellence. This is one way the large library can help the small one, by advising the best book on a subject to buy, and by loaning from its larger collection. In a small library, the librarian can know her people and her books, whereas the larger library is often handicapped by wealth of material and size of patronage. A large library has many rules that must be enforced, while a small library has a distinct

advantage in fewer rules and those as elastic as possible. In speaking of publicity, she said the best advertisement for a library is a satisfied patron. She spoke of the great assistance a small library might receive from the Free Public Library Commission, which is always ready to give expert advice.

Miss Moore, of the English department of the Framingham Normal School, spoke of her work in reading. She based her remarks on papers which her girls had written about their choice of books. No one reported a liking for history and not many for poetry. Preferences were expressed for biography, travel, current topics in newspapers and magazines, and fiction. Of standard fiction, Dickens and Scott were preferred to Thackeray. Historical novels received high praise because of their power to enliven history. Of recent fiction mention was made of "The rosary," "T. Tembarom," "Girl of the Limberlost," "Secret garden," "Pollyanna," and the books of Marion Crawford and Joseph Lincoln. Children's books were favorites with many of the girls, in fact, the juniors are urged to read plenty of children's books. They are also urged to read one standard author thoroughly that they may know a certain style.

Mrs. E. M. Arnold, of Ashland, gave an interesting report of her European trip this summer. She gave vivid pen pictures of the principal places visited, then described how her party ran from the Germans.

A rising vote of thanks was given the speakers and the librarian and trustees of the Framingham Library.

NEW YORK LIBRARY CLUB

The second meeting of the year was held in the auditorium of the Merchants Association in the Woolworth building, Thursday, Nov. 12, at 2:45 p. m., President Jenkins in the chair and present also 310 members and guests. The minutes of the meeting of October 8 were approved, and nine new members elected.

President Jenkins then introduced the speaker of the afternoon, Dr. Frederick A. Cleveland, director of the Bureau of Municipal Research, who gave an interesting account of the beginning and development of the bureau. Though many committees, he said, had investigated and made reports on different portions of the administrative machinery no one knew how New York city was organized as a corporation, what it was doing, and what results it was getting. To get at these facts in a non-partisan way, in 1906 Dr. Cleveland drafted a prospectus for an agency to ascertain these facts. As an experiment R. Fulton Cutting gave \$1,000 a month to find

out what a citizen's agency equipped with a staff could do. The first investigation which was carried through proved the efficiency of the bureau, and it was later placed on a \$100,000 basis.

The method of the bureau is to get at the facts and then to lay them before the official involved, giving him an opportunity to correct conditions before publishing them. Frequently the official does not know the facts and could not make the changes without this information. The idea is that the bureau owes it to the officer to bring the facts to his attention first, so as to give him an opportunity to make needed changes and to give him intelligent citizen co-operation in improving conditions before giving the information to the newspapers for wide publicity.

Other communities have asked for the help of the bureau, Philadelphia being the first. The help was given and now Philadelphia has a bureau of its own which has been remarkably successful.

There are now twenty bureaus organized in the United States and Canada and recommendations have been made to about forty-three cities. Owing to the number of requests for trained workers from outside places the bureau now has a training school for public service.

ELEANOR H. FRICK, *Secretary.*

MISSOURI VALLEY LIBRARY CLUB

Fifty persons from Kansas City, Mo., Kansas City, Kan., and Independence, Mo., all of whom are connected in some manner with library work, met at the public library in Kansas City, Oct. 21, and took preliminary steps toward the formation of what is to be known as the Missouri Valley Library Club. Mrs. Rosa M. Hibbard, librarian of the Kansas City Medical Library Club, was named as chairman pro tem and Miss Irene Gentry of Kansas City (Mo.) Public Library, temporary secretary. Superintendent I. I. Cammack talked of the work of the public schools.

TORONTO LIBRARY INSTITUTE

The annual meeting of the City of Toronto Library Institute was held in the Public Reference Library on Friday afternoon and evening, Nov. 6. There were one hundred and twenty-five delegates present. The out-of-town guest on this occasion was Miss Mary Hall of the Girls' High School, Brooklyn, N. Y. She told of what was being done in the development of high school libraries and the possibilities of co-operation with public libraries. It was a splendid address and was discussed by Dr. James L. Hughes,

ex-superintendent of schools. Others who spoke were Mr. W. J. Sykes of the Ottawa Public Library on "What books are being read by boys and girls in high school," discussion being opened by Principal Gray of Oakwood School and Principal Gavin of Windsor. Professor Tracy of the University of Toronto and Mr. Crocker spoke on "Co-operation of the public library with the Sunday school libraries of the city." The president, Mr. George H. Locke, spoke on the social survey of Toronto which was in progress by the assistant librarians. The officers elected were: President, Professor A. E. Lang of Victoria College Library; vice-president, Principal Gray of Oakwood High School; secretary, Miss Eva Davis of the Public Library. The executive committee represents the libraries of Royal Canadian Institute, Normal School, Public School, Academy of Medicine, and Children's Department of Public Library, Sunday School Association.

Library Schools

NEW YORK STATE LIBRARY SCHOOL

The following names should be added to the list of seniors published in the November LIBRARY JOURNAL. The school enrollment is now 49: 22 seniors and 27 juniors.

Bayer, Edna Elizabeth, Rochester, N. Y., B.S., University of Rochester, 1913.
 Byrne, Paul R., Chittenango, N. Y., Ph.B., Notre Dame University, 1913; cataloger, Notre Dame University Library, 1907-13; summer assistant, Buffalo Public Library, July-Sept., 1914.

The advanced course in library buildings which was suspended on Mr. Eastman's resignation in 1912, has been resumed under the direction of Mr. William R. Watson.

Mr. and Mrs. Walter entertained the faculty and students on the afternoon of Election day, Nov. 3.

A series of trips to near-by points of interest has been planned by the students; the first, a visit to the United States Arsenal at Watervliet, was made Saturday, Nov. 7. A student club, "The Library Round Table," has also been organized, chiefly for the discussion of current topics of interest to librarians. The first meeting was held Tuesday, Nov. 10. Miss Helen M. Claffin (1914) is president of the club and Miss Emily L. Gilfillan (1915) is secretary.

Junior class officers for the present school year are: president, Ralf P. Emerson; vice-president, Helen M. Laws; secretary-treasurer, Adelaide H. Grenside.

F. K. WALTER.

PRATT INSTITUTE SCHOOL OF LIBRARY SCIENCE

The annual reception given to the incoming class by the Graduates' Association was held on Thursday evening, Nov. 5, in the north class-room. There were more than 80 present, representing all of the classes from 1891 to 1915 with the exception of the classes of 1893, 1899, 1910, and 1912. Several of the graduates came from some distance, Madison, Englewood, Jersey City, Yonkers, and New Haven sending representatives. No formal entertainment was attempted but a display of the class photographs from 1896 down created no little interest and amusement.

Prof. A. S. Root, librarian of Oberlin College, Oberlin, Ohio, spoke to the students Nov. 10, on the library as a co-operative and inspirational factor in community life.

Mr. George B. Utley, secretary of the American Library Association, addressed the class Nov. 12, on the history and work of the Association.

The class of 1915 effected an organization Oct. 16, electing as president Miss Mildred Maynard of Williamsport, Pa., and as secretary Miss Myra W. Buell of St. Paul, Minn.

ALUMNI NOTES

Miss Caroline L. Jones, 1913, who has been assistant in the library of the Young Women's Christian Association of Brooklyn, has been made head of the Hazelwood branch of the Pittsburgh Public Library.

Miss Ella B. Cook, 1914, who went to the Trenton Public Library as head of a branch, has been made reference librarian at the main library.

Miss Madalene F. Dow, 1914, who substituted at Columbia during the summer, has become a cataloger in the library of Columbia University.

JOSEPHINE ADAMS RATHBONE,
Vice-Director.

LIBRARY SCHOOL OF NEW YORK PUBLIC LIBRARY

Senior lectures since the first fortnight's report have been as follows:

School and college library course:

Mary E. Hall, on "Training in books in high schools"; "The high school situation"; "Administration of the high school library"; (evening lectures, one given at the Girl's High School, Brooklyn.)

Freeman F. Burr, on the "Literature of biology, and of chemistry."

Advance reference and cataloging course:

Freeman F. Burr, on the "Literature of biology, and of chemistry."

Catherine S. Tracey, "History of printing," (first two lectures of course).

Administration course:

Frederick W. Jenkins, on "Education and treatment of defectives, delinquents and incorrigibles," and on "Public health."

Annie C. Moore, on "Selection of books for children" (first two lectures of course).

Children's librarians course

Frederick W. Jenkins, on "Education and treatment of defectives, delinquents and incorrigibles."

Annie C. Moore, on "Selection of books for children."

Practice in selection of editions has been given the two latter classes, and tests have been given on Mr. Jenkins' lectures.

The juniors have had lectures from visiting lecturers as follows:

October 21, Dr. N. Krishna, "Modern education in India, and the modern literature of India."

October 30, Frederick W. Jenkins, "The library as a civic factor."

November 4, in the morning, Claude G. Leland, on "The public school system of New York City"; in the afternoon, a recital by Nicholas Vachel Lindsay, of some of his poems, including "The Congo," "The eagle that is forgotten," and "General William Booth enters into Heaven."

Dr. and Mme. Krishna met the school at an informal reception after his lecture, and Mr. and Mrs. Jenkins were guests of the school at a Halloween party given by the Alumni Association to the entering class the evening of October 30.

The Alumni Association has inaugurated an "at home" evening, in room 73 of the school quarters, the 12th of each month during the school-year. The first meeting took the form of a reception to the recently married alumni, their wives and husbands.

At five o'clock, three days a week, the women of the junior class are having a sewing and knitting-bee under Miss Sutliff's direction, for the benefit of European refugees and non-combatants.

The Thanksgiving recess will begin at one o'clock November 25, sessions being resumed the following Monday.

MARY W. PLUMMER, *Principal*.

SIMMONS COLLEGE LIBRARY SCHOOL

In November the two outside lecturers were Prof. Root and Miss Sawyer. The latter spoke of the work for the blind in the Perkins Institution. The former, in "Some impressions of European libraries," made them far more real to those privileged to listen. Prof. Root spent November 5-6 examining the school on behalf of the A. L. A. committee on library training.

Visits were made during November to the Boston Book Company, the Perkins Institution for the Blind, and, in Worcester, to the libraries of Clark University, the Antiquarian Society, and the Worcester Public Library.

The "Better books of the year" exhibit has been an attraction to draw students and instructors to Paine's frequently.

POSITIONS

Martha Bailey, 1914, was appointed in June in the Library of the Bureau of Education, Washington.

Edith Brown, 1914, is an assistant in the Howard University Library, Washington, D. C.

Alice Day, C II, 1913-14, became an assistant in the Smith College Library, November 1.

Elva Greef, 1913-14, is substituting for the librarian of the Public Library, Manchester, Ia.

Mildred Page, 1914, is in the Utica (N. Y.) Public Library.

Marian Small, 1914, was with the Massachusetts Library Commission during September in reorganization work at Braintree, and in October was appointed in the reference catalog division of the New York Public Library.

Katharine Warren, 1914, is assisting in reorganization work on the West Springfield Public Library catalog.

Esther S. Chapin, 1913, has been appointed in the New York Public Library.

Elsie Wells, 1910, has been appointed to a position in the Somerville Public Library, which recently gave a civil service examination for assistants.

JUNE RICHARDSON DONNELLY.

CARNEGIE LIBRARY OF PITTSBURGH—TRAINING SCHOOL FOR CHILDREN'S LIBRARIANS

The following courses are scheduled for the autumn term:

Junior: Reference work, Miss Stewart; classification, Miss Mann; book selection, Miss Elva Smith, Miss Power, and Miss Whiteman; seminar for periodical review, Miss McGirr; story-telling, Mrs. Thorne-Thomsen and Miss Whiteman; library handwriting and printing, Miss Groft.

Senior: Book selection, Miss Elva Smith; cataloging, Miss Elva Smith.

A schedule of 15 hours of practice work each week in the various divisions of the children's department is required of the junior class. Two periods of three hours each during the term are taken from this schedule for practice work in the reference department.

The senior class is scheduled for 15 periods of three hours each for practice work in the catalog department. The junior class has matriculated at the University of Pittsburgh for a course in "Games and plays."

On October 28 the Training School was fortunate in having as its guests Mr. and Mrs. Andrew Carnegie, who both addressed the school.

The junior class has organized and elected the following officers: Margaret Jean Clay, president; Harriet W. Leaf, vice-president; Lenore Townsend, secretary and treasurer.

SARAH C. N. BOGLE, *Director*.

WESTERN RESERVE LIBRARY SCHOOL

NEWS NOTES

The reception given for the class of 1915 by the faculty of the Library School on the evening of Nov. 2, brought together a large number of the graduates residing in Cleveland and a few from nearby cities. The class has organized by the election of officers, appointment of committees, etc. The new practice of the class of the previous year sending a messenger with greetings and suggestions regarding organization, was much appreciated. Miss Coveney of the class of 1914 brought the greetings. The officers for 1915 are: president, Mildred McAfee; vice-president, Louise Bailey; secretary-treasurer, Helen Lewis.

Professor Emma Perkins of the College for Women gave a lecture on "Personal reminiscences of Alice Freeman Palmer."

Mrs. Julia S. Harron, the library editor of the Cleveland Public Library, had charge of the book evaluation course during October, during the absence of the Director, who was in attendance at the meetings of the Keystone State Library Association and of the Iowa Library Association.

The lecture by Mr. George B. Utley, secretary of the A. L. A., Nov. 4, was greatly enjoyed by the students, the early history of the Association and its present activities being presented in a most interesting manner.

ALUMNI NOTES

Alice G. Gaylord, 1906, who was formerly children's librarian in the Public Library of Duluth, is now in charge of stations and extension work of that library.

Ethel M. Knapp, 1907, cataloger in the University of Indiana Library, has been appointed reference librarian in the Public Library of Davenport, Iowa.

Cards have been received announcing the marriage of Mabel Hines, 1909, to Mr. Norman Houser, of Cleveland.

Ellen G. Stocker, 1909, assistant librarian of

the P. M. Musser Public Library of Muscatine, Iowa, has been elected librarian.

Cornelia Plaister, 1913, has resigned her position as librarian of the Clarinda (Iowa) Public Library to become the supervisor of branches of Sioux City Public Library.

ALICE S. TYLER, *Director*.

CARNEGIE LIBRARY OF ATLANTA—LIBRARY SCHOOL

The tenth annual session of the Library School, Carnegie Library of Atlanta, opened Sept. 82 with the following enrollment of students:

Harvie Banks, Trenton, Ky.
Mrs. H. B. Chamberlin, Atlanta, Ga.
Myrtle Flagg, Louisiana, Mo.
Jennie Quinn Gresham, Prattville, Ala.
Nell Hendrick, Jackson, Ga.
Alma Jamison, Villa Rica, Ga.
Annie Mayson, Atlanta, Ga.
Louise Roberts, Birmingham, Ala.
Nellie Row, Greensboro, N. C.
Julia Schilling, Marietta, Ga.
Pauline Shelley, Albany, Ga.
Mary Yates, Greensboro, N. C.

Five of the students have had previous experience in library work.

During October, Mrs. Percival Sneed, director of the School, was appointed librarian of the Carnegie Library of Atlanta. Mrs. Sneed will continue to be the active head of the school.

ALUMNI NOTES

Miss Mary Louise Browne, 1909, was married Aug. 6 to Edward Erwin of Morganton, N. C. Mr. and Mrs. Erwin will make their home at the University of Mississippi, where Mr. Erwin is associate professor of English.

Two of the graduates of the Library School planned to attend the meeting of the British Library Association at Oxford from Aug. 31 to Sept. 4. Miss Louie Smith, 1910, went early in June to Paris, where she expected to study art until the last of August, at which time she was to return to England for the Oxford meeting. At the declaration of war Miss Smith was forced to leave Paris, going immediately to England, where she spent several weeks. After a short visit to Scotland she returned to America early in October. Miss Smith gave the students in the Library School an interesting description of the Bodleian Library and also of the methods of the Chelsea Public Library, which she used while in London.

Miss Jessica Hopkins, 1906, librarian of the Public Library, Paducah, Ky., who had also planned to attend the Oxford meeting and had been granted a six weeks' leave of absence by her trustees for the journey, was fortunate enough to learn of the postponement of the meeting in time to cancel her sailing.

Miss Anna Laura Robinson, who was graduated in June from the Library School and served during the summer as cataloger in the Savannah (Ga.) Public Library, was married Oct. 2 to Russell Malcolm Dodson. Mr. and Mrs. Dodson will live in Atlanta.

The Graduates Association, which belongs to the Georgia State Federation of Women's Clubs, sent Miss Margaret Jemison, 1914, librarian of the Valdosta Public Library, as a delegate to the meeting held at Albany, Ga., Oct. 27-29. Miss Catharine Walker, 1913, president of the Graduates Association, was not able to attend the meeting and Miss Helen Brewer, 1913, librarian of the Cordele Public Library, was sent to the meeting as the president's appointee. The reading of the report of the Association was entrusted to Miss Jemison.

DELIA FOREACRE SNEED, *Director.*

SYRACUSE UNIVERSITY LIBRARY SCHOOL ALUMNI NOTES

May Angell, Anna Hurlbut, Anna Middlekauf, Margaret Sanborn, and Ida B. Swart, all of the class of 1914, are assistants in the Brooklyn Public Library.

Mildred Wood, 1914, takes the place of Edith E. Haith, resigned, as librarian of the State College of Forestry at Syracuse.

Agnes Mackin, 1914, is an assistant in the Public Library at Ames, Iowa.

E. E. SPERRY, *Director.*

PORTLAND, OREGON, TRAINING CLASS

The Library Association of Portland opened its yearly training class Nov. 2, with 10 members enrolled. The library has had a training class for several years, conducted by the heads of departments, but this year a training teacher, Miss Ethel R. Sawyer, has been engaged. Miss Sawyer is a graduate of Pratt Institute Library School and goes to Portland from the Seattle Public Library. This course has been extended to eight months, including two weeks preliminary practice, and it is probable that in the future courses will begin the first of October and continue for nine months.

The course of study includes the technical subjects of cataloging, classification, shelving, etc.; general problems of administration; use of reference books; public documents; book ordering and trade bibliography; book selection; work with children; current events; municipal reference work; work of the technical department; library extension; loan work; care of books; business forms and methods; periodicals; survey of literature; appraisal of fiction. Other subjects may be added to the course later.

ST. LOUIS PUBLIC LIBRARY TRAINING CLASS

A training class of seventeen members, who had taken the year's course under Mrs. Harriet P. Sawyer, chief of the instruction department, was graduated on June 12, including one member of the class of 1912 and one of the class of 1913 who had been appointed to the staff before the completion of their course. Dr. George R. Dodson gave an address on "Librarianship as a profession," which was followed by an informal reception held in the class room.

In addition to regular lectures by members of the library staff, the following were given during the spring term: "Bibliography of American history," Dr. Roland G. Usher, of Washington University; "Bibliography of sociology," Dr. George B. Mangold, director of the School of Social Economy; "Moral education," Dr. John Withers, principal of Teachers' College; "Playground work," Hon. Dwight F. Davis, park commissioner; "The library and civic activity," Mr. Roger N. Baldwin, secretary of the Civic League; "Completing periodical sets," Mr. Frederick W. Faxon, Boston Book Co.; "Story telling," Miss Anna Tyler of the New York Public Library; "The work of the State Library Commission," Miss Elizabeth B. Wales, secretary of the Missouri Library Commission.

The present class of fifteen members, selected from the sixty-four applicants taking the entrance examinations, began the year's training on September 28, after two weeks of preliminary practice work in the branch libraries.

RIVERSIDE LIBRARY WINTER SCHOOL

The eight-week course now offered in the Riverside Library's winter school begins Jan. 18 and is planned for those who have some library experience. A certificate will be given for the courses completed.

The list of subjects will include: business methods (10 lecture periods); book selection (6 lecture periods); reference and book description (24 lecture periods and laboratory); classification (18 lecture periods and laboratory); cataloging (18 lecture periods and laboratory); documents (12 lecture periods and laboratory); young people and schools and library organization (6 lecture periods); library handicraft, to be given with binding and repair; story-telling, to be given with young people and schools; periodicals and serials (6 lecture periods); binding and repair (36 hours in the bindery); library law and county service (12 lecture periods).

The teachers already engaged for these courses, besides Joseph F. Daniels, the librarian

of the Riverside Public Library and the head of the school, are Alice M. Butterfield, Lillian L. Dickson, Helen Evans, W. Elmo Reavis, Lutie E. Stearns, and Sabra W. Vought. Several others will be announced later.

In answer to the question why the course has been lengthened from six weeks to eight, Mr. Daniels says in his circular of announcement, "There is no doubt that the usual summer school in library subjects omits too much and that some of the subjects offered are not given enough time. Several items in short courses, such, for example as binding, library law, documents, young people and schools, organizing, and business management are not well done or are not attempted at all. Cataloging, classification, reference and book selection are of first importance in any plan of library science and they require the full six weeks with but little to spare for the other subjects: if that remainder of time on the schedule be combined with the two additional weeks, we shall have a normal, balanced schedule requiring six days each week and about six hours each day for eight weeks.

"An eight-week program allows the student to pick and choose and in the time schedule which we present, a student who wishes to take only law and binding may do so in two weeks; reference, documents, periodicals, business management and book selection may be taken in four weeks; cataloging and classification have six solid weeks (alternate days), with only one other subject for a part of the time and a reasonable diversion of time for the whole program.

"Another feature emphasized at Riverside is the mechanical and business side of library service: how to do things in a library should receive more attention. Our students do not 'visit' the bindery, they use it twelve half days in the short course and as much more as they like. The same is true of school library work; we have two high school libraries and ten grammar school libraries in the city of Riverside under contract service. There are nearly forty other branches and stations in the county.

"Library law and the study of public documents are both neglected subjects and in California, with the most thorough-going library legislation ever enacted, the law is certainly important. For those taking county free library examinations it is imperative that they have the subject well presented."

None knows solitude who spends
Life with books when books are friends.

—J. WILLIAMS.

Reviews

BROWN, JAMES DUFF. Subject classification, with tables, indexes, etc., for the subdivision of subjects. Second edition, revised. London; Grafton & Co., 1914. 406 p. 8°.

In the LIBRARY JOURNAL for December, 1906, the writer reviewed at some length the first edition of the late Mr. Brown's "Subject classification." There seems but little to add to the judgment then set forth. The second edition differs but slightly from the first. Minor changes and corrections have been made, and the classification of all things pertaining to libraries (by Mr. L. S. Jast) has been omitted. This has reduced the book by some seventeen pages.

Mr. Brown's classification offers but three distinctive features: *first*, it groups the various arts and applied sciences with those portions of pure science from which the author believes them to be derived, *e. g.*, Music follows acoustics, and precedes Astronomy, and Architecture comes between Civil Engineering and Railways; *second*, certain "categorical" tables takes the place of extensive subdivision under most topics; *third*, the index is very comprehensive and useful, containing over 17,000 entries. The notation is complicated and in a large library would be very clumsy.

With the merits of Mr. Brown's general scheme we have little to do. It is hard to imagine an American library adopting it, or American librarians agreeing to his main thesis in the grouping of classes. There appears (as in most classifications) an over-elaboration of certain parts (particularly in the natural sciences), and a too summary treatment of others, especially the historical sciences. The scheme of fixed "categorical tables" is an excellent contribution to classification theory, but the tables as printed stand in sore need both of compression and of revision. The index is the best part of the book. It makes the scheme workable, and insures a practical uniformity of treatment which is invaluable to a library using the system.

The preface tells us that over a score of libraries have adopted the Subject Classification. It would be interesting to know their character and size. The smaller public libraries would doubtless find certain merits in these schedules. It seems hardly likely, however, that libraries designed for research would discover much profit in them. The fate of a classification scheme must rest ultimately on its adaptability to diverse and

changing conditions. Classification is not an end in itself, and no scheme has any sure prospect of permanence. We do well in passing judgment on classifications to be of the school of Gamaliel. Wm. W. BISHOP.

KAISER, JOHN B. Law, legislative, and municipal reference libraries. The Boston Book Co. 476 p. \$4.00 sp. n. No discount to libraries. Delivery free.

Mr. Kaiser's book is presented as "an introductory manual and bibliographical guide to the materials and methods of three types of related special libraries." Its 476 pages are crammed with facts—it is not a treatise of opinion. It gives but little space to any general consideration of these types of libraries, although perhaps giving all that its plan would require. This is even true of the treatment of the origin and development of the newer forms of libraries, their present success and tendencies, and their future possibilities. The author's judgment in this is probably correct, for this phase of the field has already been covered in much detail and the bibliographic references in the appendix make this matter available. The big element in the book is that part relating to "materials." In fact 187 of the 343 pages of text are given to this one subject (in three parts). Here is where the most valuable and really constructive work has been done. This work had hitherto been left for each one interested to do for himself. Nowhere else in published form had there been massed the facts outlining the part of the great "world of print" which must be used most intensively in work of this character. The copious footnotes guide in expanding the knowledge of each particular type of information source. And there are in addition other sections of the text which should be classed here as, for instance, the six pages devoted to "legal works in a general library," the references on the specific subject "Minimum wage" found in the section on reference work in chapter 2, and the valuable lists of publications compiled in the appendix.

A number of tests seem to prove beyond question that this work has been most thoroughly and accurately done. In this connection it is significant of the author's methods that much more space is given to the present development and agencies in municipal reference work than in the state legislative field. For the former material is not elsewhere available, though the latter has been written upon by others whose articles are referred to in the appendix and in footnotes.

With the discussion of materials so evidently the greatest and most useful single ele-

ment in the book, it is obvious that the consideration of methods must occupy a lesser place. The main topic under this subject of methods is "Handling of materials" and to this 54 pages are given, likewise of course in three parts. In chapter 2 there are 23 pages devoted to "Preparing for a legislative session," including reference work and bill drafting and legislative procedure. In chapter 3 there are two pages in the section on "Handling of materials" given up to some general hints on drafting ordinances. The author does not pretend to give any detailed study of the technique of drafting, as beyond the scope of his plan which is intended to emphasize the "library side" of the topics treated. (See p. 209-210.) He recognizes that this subject "demands separate treatment as a special field of endeavor" and refers his readers to extended citations of authorities on bill drafting and statutory construction, as listed in the appendix.

The title of the book uses the term "libraries," but at times the institutions doing legislative and municipal reference work seem to be referred to rather indiscriminately as bureaus, libraries, or departments. Compare, for instance, the table of contents for the appendix on page 345. But this is true of all writing on the subject, and apparently when speaking of an individual institution the author has endeavored to refer to it by the word officially used, although not always successful in this endeavor. For instance, the New York library is referred to as a "bureau" on page 191 and as a "section" of the State Library (its official name) on page 225. Similarly the Wisconsin library is referred to as "library" on page 173, along with others as a "bureau" on page 232, and as a "department" on page 330. This diversity of name is worth noting as in itself implying the very complexity of function of these institutions—not by any means devoting themselves to strictly library work alone—and as lending point to the contentions of Mr. Lapp and others as to the use of these terms.

It would have been helpful if the running heads on the pages gave notice as to which of the three main divisions of the subject, at least, was being considered. It would also greatly aid the reader if the topical outlines, at least in main divisions, referred to the inclusive pages within which the subject is treated. The index, excellent as it is, does not make up for this lack and the table of contents is quite inadequate from this point of view.

A table of the contents of the appendix is given on page 345. It is divided into three

main sections corresponding to the sections of the text. Each division of these sections is numbered in the table. It might be wished that there were a page reference which would eliminate the necessity for recourse to the index. Unfortunately also the actual matter in the appendix is not always numbered in divisions to correspond to the table. For instance, the divisions referred to as 3 and 5 of section II, and 2 and 3 of section III, are not numbered at all, and division 4 of each of these two sections is wrongly marked as 5 in each case, when found in the appendix.

A slight misprint in the main table of contents indicates that the index begins on page 445, instead of 435 as is the case.

Here and there are minor inconsistencies in terminology or in tabulating. For instance, in the topical outline of chapter 1, there is a heading "Kinds of material: general." For chapter 2 this becomes "The materials," and for chapter 3 the article is dropped and we have a section on "Materials." Of course, all refer to the same division of subject matter. Other instances have been referred to. But when one contemplates the really remarkable amount of material collected and organized, these minor flaws disappear in admiration of the energy and application evident in the search for this matter in many and diverse sources.

The section on law libraries covers 65 pages, that on legislative reference libraries 168 pages, and that on municipal reference libraries 110 pages. The appendix occupies 89 pages, and the index with its explanatory note 33 pages. This of course does not imply any quantitative expression of the treatment of the three types of libraries, since much that is said about one in detail is incorporated into the consideration of another by reference.

That part of the book referring to law libraries is probably more useful to law students and to other users of the library not practicing lawyers than it is to the law librarian himself, although the latter will find some useful information collected here. Its sections on legislative and municipal reference work, however, will form the most enduring part of the book and here it brings together a large amount of hitherto scattered data as to what these libraries do to aid in the solution of the "problem of intelligent legislation" and how they do it. It refers to the earliest specialized reference work in the New York State Library and the later combination of reference and drafting work originated in Wisconsin and adopted successfully in a number of other states. In addition, Indiana, Pennsylvania and Rhode Island are especially referred to as il-

lustrations of types of present development in the states and Baltimore (the first) and Kansas City among the cities.

The appendix contains reading lists or bibliographies on law library work, legislative reference libraries and municipal reference libraries, compilations of laws and ordinances relating to legislative and municipal reference libraries, laws relating to other official state bill drafting agencies, lists of publications of legislative reference and municipal reference libraries and of municipal research bureaus, a bibliography of bill drafting, and suggested class problems. The tabular statement of legislative reference work, by the way, is quite worthy of its own place in the appendix material, instead of being included in a "list of publications."

Other selected matter worth noting and not already spoken of would include the following:

- Legal bibliography (p. 37)
- Comparative constitution sources (p. 81)
- Bibliographic aids (p. 162)
- Comparative legislation sources (p. 147)
- The list of municipal reference libraries and research bureaus (p. 251)
- Comparative ordinance collections (p. 276)
- Bibliographic aids for municipal documents (p. 281)
- Bibliographies of municipal affairs (p. 309)

The book is expanded and revised from lectures delivered by the author at the University of Illinois Library School. Presumably its organization follows the plan of development of the three topics as outlined there and quite naturally the emphasis in text is given to that part which has not been adequately written upon by others. The abundant footnotes and the bibliographic lists and other matter collected in the appendix refer to the writings of others more for additional information than for supporting authority. The index is excellent.

The book should be of much value to library workers in the field of public affairs and to students of library activities in this field. It contains data of use to those advocating the development of libraries of this type. Its strength is in the selecting and bringing together from widespread and diverse sources of definite information as to the most useful "material" for these libraries. Its treatment of "methods" is thorough as it relates to what is actually being done, but does not raise the questions which might be asked as to whether some of these methods, largely adapted from the public library field, should not be radically changed. In its self-imposed limitation to a

discussion of the "library side" of this work it perhaps too briefly refers to those elements of trained research and direct assistance which are of the very essence of the functions of these institutions. The reader should not fail to remember that these libraries are not merely collections of specialized materials, carefully selected and efficiently used as reference sources, but beyond that as the chief justification for their existence they are essential factors in the development of a statute law which shall be the expression of an advancing democracy.

C. B. L.

CHIPMAN, CHARLES PHILLIPS. Books and libraries, their makers and use; an outline course for the use of students. Waterville, Me.: Colby Alumnus Press. 140 p. D. \$1.

This little book is based on talks given by the author to the students of Colby College. It is divided into three parts of which the first, The making of books, is not only the longest but of the most general interest. In brief but readable chapters it traces the history of the alphabet, the Assyrian records, papyrus and parchment manuscripts, the origin and development of printing to the modern book, including sketches of ancient, medieval and modern libraries.

The second part, The use of books, treats of such technical matters as the catalog, classification, reference books, note-taking, etc. According to the preface these chapters "have purposely been made very brief, since they serve simply as a starting-point for the student's study at first hand of the arrangement and use of the library." The third section, The student's library, contains some helpful hints on the reading habit and the choice of books. The volume should prove suggestive to librarians whose duties include the giving of talks on the topics covered.

M. L. S.

Librarians

BALDWIN, Rachel, Pratt 1908, has accepted a position in the Newark Public Library.

BRISCOE, Mrs. Ruth, has been appointed librarian of the medical department of the University of Maryland.

BUCHER, Mrs. Paul, B.L.S., N. Y. State Library School, 1910, has resigned her position as first assistant in the order section of the New York State Library, to accept a position in the reference department of The California University Library, Berkeley.

BURNHAM, Adele, N. Y. State Library School, 1912-13, has resigned her position as assistant in the Superior (Wis.) Public Library to become connected with the University of Michigan Library, Ann Arbor.

CLATWORTHY, Linda M., who was in charge of the Dayton (O.) Public Library at the time of the flood, and who has been taking a year's rest since that time, has been secured by the Dallas (Tex.) Public Library as reference assistant for the winter.

DIXON, Vera M., Pratt 1912, librarian of the Engineering Schools at Columbia, has accepted the position of head of the new technical department of the Multnomah County Library, Portland, Oregon.

DUREN, Fanny, who had been librarian in charge of the Waterloo (Iowa) Public Library for eight years, resigned Nov. 15, to take charge of one of the branches of the Minneapolis Public Library.

GROFF, Edward L., who was for eight years assistant librarian in the Pennsylvania Senate Library, died from cancer in a Philadelphia hospital Nov. 10.

HAFFKIN-HAMBURGER, Mme., who sailed from San Francisco Sept. 26 on her way home to Russia, writes that she has changed her route and is going through Korea instead of via Vladivostok. While in Japan she visited four libraries in Tokyo, two in Kyoto, and the libraries of Osaka and Kobe. She found Japan delightful and her libraries very interesting, though not to be compared with those of Europe or America. Japan now has 670 libraries scattered through the islands.

HASSE, Adelaide R., who had charge of the A. L. A. exhibit in Leipzig during the last three months of its existence, landed in New York Nov. 11.

HAZELTINE, Alice I., who succeeds Miss Effie L. Power as supervisor of children's work in the St. Louis Public Library Dec. 1, graduated from Syracuse University with the Ph.B. degree in 1901 and studied in the New York State Library School at Albany in 1901-02. She was chief children's librarian in the Carnegie Library of Pittsburgh, taking a special course at the same time in the Training School for Children's Librarians, in 1906-09, librarian of the Hazelwood branch until 1911 and the first assistant in the children's department until 1913, when she became supervisor of branches in the Buffalo Public Library. Miss Power, who has held the St. Louis position since 1911, has resigned to take charge of the work with schools in the Carnegie Library of Pittsburgh.

KUDALKAR, J. S., the editor of the *Library Miscellany* and the successor of Mr. W. A. Borden as director of state libraries in Baroda, India, arrived in Bombay Sept. 4, after a year spent in visiting the libraries of Europe and America and in studying their methods.

LAWRENCE, Hannah M., vice-librarian of the Washington County Free Library, has tendered her resignation, to take effect Dec. 1. She has accepted a position as supervisor of branches in the Public Library of Buffalo, N. Y.

LEDYARD, Winifred E., for the last year librarian of the Palmer School branch, of the Grand Rapids Public Library, has resigned. She expects to spend some time in California. Miss Ledyard went to Grand Rapids in September, 1910, a graduate of the Library School at Syracuse University.

LOWRY, Elizabeth, N. Y. State Library School, 1912-13, has been appointed instructor of classification and cataloging in the California State Library School, Sacramento.

MOORE, Caroline, who has been librarian of the Westbrook (Ct.) Free Public Library since 1896, has resigned.

PARKER, Mary C., Pratt 1898, who has been librarian of the Hudson and Manhattan Railroad Company of New York for two years, now has charge of the new Federal Reserve Bank Library. The position includes charge of the files as well as of the library, and promises to include a certain amount of statistical work.

SAWYER, R. Alger, Jr., B.L.S., N. Y. State Library School, 1914, has joined the staff of the New York Public Library.

SNEED, Mrs. Percival, has been appointed librarian of the Carnegie Library of Atlanta to succeed Miss Katharine Wootten. Mrs. Sneed has been principal of the Library School, Carnegie Library of Atlanta, for several years. In assuming the librarianship she will retain the active direction of the school and serve in the double capacity of director and librarian.

TAGGART, Anne V., has been appointed superintendent of branch libraries in Grand Rapids. Miss Taggart took the examination for the apprentice class work in Grand Rapids in 1908. After this she spent a year at the Pratt Institute Library School, at Brooklyn, N. Y., from which she graduated. In 1910-11 she was librarian of the Public Library at Lock Haven, Pa., and in January, 1912, she returned to Grand Rapids. During the absence of the head of the catalog department she was act-

ing head of that department for a year, and last winter was librarian of the West Side branch.

TAYLOR, W. Agutter, for over thirty years librarian for the Law Society of Winnipeg, Manitoba, died suddenly Oct. 23.

THOMPSON, Laura E., superintendent of branch libraries in Grand Rapids, has resigned her position on account of ill health. Miss Thompson took the examination for apprentices in the Grand Rapids Library in the fall of 1904. In June of the following year she was appointed to a position in the regular classified service. On the opening of Bissell House branch in 1905, the first of the branch libraries, she was one of the assistants detailed to take charge of this branch. Since that time her work has been chiefly with the branch libraries, and she has worked at nearly all of them for longer or shorter periods. She has seen this work develop from nothing to a recorded use in all departments of over 400,000 a year. Since April 1, 1912, she has been superintendent of the branch libraries.

TURNER, Isabel McC., who has been a cataloger for the Free Library Commission at Harrisburg, Pa., has accepted an appointment as librarian of the Allentown (Pa.) Free Public Library. Miss Turner graduated from the Drexel Library school in 1908, and has taught in the summer school conducted each year by the Library Commission at State College.

VOUGHT, Sabra W., B.L.S., N. Y. State Library School, 1901, is assisting temporarily in the Utica (N. Y.) Public Library. In February she will go to California to teach in the winter course of the Riverside Public Library Service School.

WOOTTEN, Katharine, who has been librarian of the Carnegie Library of Atlanta for the past three years, has resigned, her resignation taking effect Nov. 14. Miss Wootten's withdrawal from the library is due to the refusal of the city council to grant her the increase in salary of \$25 a month, which had been repeatedly recommended by the library board. The present salary of the librarian was fixed nine years ago—three years after the library was opened. At that time there was one library, and no branches, fourteen employes, 13,000 members, an appropriation of \$12,000, and a circulation of 106,000 volumes. To-day there are four libraries, ten deposits of books in schools, clubs, etc., thirty-one employes, over 54,000 members from Atlanta's citizenship, and in 1913 a circulation of more than 330,000 volumes, with a maintenance appropriation of \$31,000.

THE LIBRARY WORLD

New England

NEW HAMPSHIRE

Bow. The Baker Free Library, the gift to the town of the late Hon. Henry M. Baker, was dedicated Oct. 29. The library is of brick, with limestone trimmings, and is one story in height. In it are a main reception and reading room, 50 by 20, an office for the librarian, and a stack room with steel shelving for 8000 volumes. Now on the shelves are some 6000 books, the private library of Mr. Baker. This library is to be cataloged by D. Waldo White, and during the progress of the work he will be in charge as librarian.

Manchester. The Public Library opened its third deposit station, at Goff's Falls school-house, early in November.

Manchester City L. F. Mabel Winchell, lbn. (60th annual rpt.—yr. ending, Dec. 31, 1913.) Accessions 3126; total 71,771. Circulation 129,933. New registration 1251; total 9278. Receipts \$40,907.03; expenditures \$40,028.56.

Sugar Hill. The Charles Francis Richardson Memorial Library, a gift to the town from Mrs. Richardson, was dedicated Nov. 7.

MASSACHUSETTS

Boston. The trustees of the Public Library have received a check for \$35,000, in part payment of a bequest made some time ago by Francis Skinner. The total bequest will amount to about \$53,000, and is given entirely without restriction.

Cambridge. The original manuscript of "America" ("My country, 'tis of thee"), written by the Rev. Samuel Francis Smith, D.D., has been presented to the Harvard College Library by his children. Dr. Smith was a member of the Harvard class of 1829. His son, the Rev. Dr. Daniel A. W. Smith, president of the Karen Theological Seminary, at Insein, Burma, who tendered the gift, was graduated from Harvard in 1859.

Northampton. The Forbes Library has four victrolas which it lends to the public schools of the city. They are used to provide music for the folk dancing taught in the schools, as well as in connection with the classes in music.

Oxford F. P. L. Clara A. Fuller, lbn. (Annual rpt.—yr. ending Feb. 1, 1914.) Circulation 14,225. Receipts \$1300.46; expendi-

tures \$1301.87, including \$341.88 for salaries, \$114.22 for books and \$166.97 for binding and periodicals.

Somerville. In the September JOURNAL the circulation figures for the Public Library are given as 407,617. This, it seems, represents only the circulation from the four library buildings, and does not include a circulation of 148,317 from over 250 deposit stations, which, if added to the other figures would give a grand total of 555,934.

Springfield City L. Hiller C. Wellman, lbn. (57th annual rpt.—yr. ending Apr. 30, 1914.) Accessions 17,479; total 186,778. Circulation 655,903. Receipts \$73,872.40; expenditures \$73,720.19, including \$26,221.87 for salaries, \$2,730.22 for binding, \$9,634.11 for books, and \$1,101.37 for periodicals.

This year marks the completion of the Memorial Square branch and the establishment of 29 new deposit stations. The total number of distributing agencies of the library has been increased from 334 last year to 363 at present, including 11 fire engine houses and 322 school-rooms. As a result of the great emphasis placed on work with foreigners, the foreign circulation increased more than any other class, or 27 per cent., and it now constitutes one-tenth of the adult books circulated, excluding fiction. The library received as a gift the famous George Walter Vincent Smith art collections, which heretofore were deposited in the Art Museum.

Waltham. Ground has been broken for the Francis Buttrick Memorial Library, which is to be erected on the Old Central House site on Main street. The new library will be 122 by 114 feet. There will be room for 28,500 volumes on open shelves, while space for 96,000 more will be provided in the metal stacks.

Woburn P. L. George Hill Evans, lbn. (35th annual rpt.—yr. ending Dec. 31, 1913.) Accessions 1019; total 51,882. Circulation 65,047. New registration 1841; total 3296. Receipts \$5814.27; expenditures \$5804.87.

Worcester. The Free Library has recently opened an industrial room, in which about 1500 books on the useful arts have been gathered. Only medicine, agriculture, and domestic science have been omitted from lack of shelf room. The room was partitioned off from the southeast end of the newspaper reading room.

RHODE ISLAND

Centredale. The Library reopened Nov. 10 after being closed for six months. The Union Library Association will continue to look after the library affairs. Clarence Brown, who has worked in the Providence and Olneyville libraries, has been appointed librarian. Frank C. Angell, who has been librarian for the past 40 years will assist, but will take no active part in the management.

CONNECTICUT

Bethel F. P. L. (Rpt.—1913.) Accessions 518; total 3334. Registration 1315. Circulation 14,339. Receipts \$1467.07; expenditures \$621.56.

The outstanding event of the year was the gift to the town of Bethel of the L. Clark Seelye homestead and adjoining property for library purposes. With the gift of the property, Dr. Seelye, who is the president emeritus of Smith College, presented to the library directors \$1000 to be expended in remodelling the building and improving the grounds. Extensive alterations are now under way, and it is hoped that in the near future the library will be moved to its new and comfortable quarters.

Bristol P. L. Charles L. Wooding, lbn. (Rpt.—yr. ending Jl. 31, 1914.) Accessions 3280; total 26,796. Circulation 95,985. • New registration 230; total 3997. Receipts \$9,408.04; expenditures \$9,403.98.

New Haven F. P. L. Willis K. Stetson, lbn. (Annual rpt.—1913.) Accessions 10,589; total 111,000. Circulation 400,479. Receipts \$41,721.30; expenditures \$38,696.30, including \$22,130.64 for salaries, \$2,371.43 for binding, \$8,051.19 for books and \$355.45 for periodicals.

The offer by the Carnegie Corporation of \$60,000 for the erection of three branch library buildings has been accepted.

Norwich. Otis L. Imogene A. Cash, lbn. (Rpt.—yr. ending Aug. 31, 1914.) Accessions 2074; total 39,523. Circulation 116,854. New registration 1237; total 26,604. Receipts 08,879.57; expenditures \$7702.92, including \$3,634.51 for salaries, \$243.75 for binding, \$1763.79 for books, and \$177.91 for periodicals.

Southport. The library board at the Pequot Library have made arrangements whereby entertainments and theatricals may be held in the building.

Stratford. The sum of \$5000 was bequeathed to the Public Library by the late Stiles Judson.

Middle Atlantic

NEW YORK

Belfast. The corner-stone for the new library was laid on Oct. 22.

Brooklyn. When the library which is now being built in Red Hook section is completed, Brooklyn will have twenty Carnegie buildings, the number originally intended for the borough. So well has the Carnegie building committee managed the \$1,600,000 given for the purpose that they will have enough money left for two more buildings.

New Rochelle. As a result of effort on the part of the Parents' and Teachers' Association, the first branch of the New Rochelle Public Library has been opened in Stephenson school. It is in a corner room on the second story, in charge of an assistant from the main Library, and is to be open two afternoons every week. In the branch there are 350 books for adults and 100 new books for children and a few magazines.

New York City. The private library of the Hudson family of Stratford, Ct., has become a part of the library of Columbia University. The Hudson library includes among other rare works, hundreds of books, letters, and papers belonging to the famous Dr. Samuel Johnson, first president of King's College (Columbia University), who in his lifetime lived in Stratford and from whom the Hudson family is descended.

New York City. The Municipal Reference branch of the New York Public Library started, Oct. 28, the publication of a leaflet called *Municipal Reference Library Notes*, intended for circulation among officials and employes of the city. It is intended in future issues to publish lists of references to material in the library on important local problems, as well as lists of the latest publications received. Each volume will be indexed, so that a complete file will furnish a guide to the resources of the branch.

Northport. Ground is being broken for the foundation of the Carnegie Library on Main street. The sum of \$10,000 was granted the village for the library.

Perry. The Perry Public Library, made possible by the generosity of Andrew Carnegie, was formally opened to the public on Oct. 13.

Portville. Two extensive additions are being built to the library. They will provide 800 square feet of additional space.

Sayville. Sayville now has a reading room on the second floor of the Brush building, open to the residents of Sayville, West Sayville, and Bayport.

Warren. Funds for the erection of a Memorial Library to cost \$100,000, have been offered by J. P. Jefferson and Edward Wetmore of this city.

NEW JERSEY

Hawthorne. At a meeting of the Public Library Committee Oct. 26, it was decided to arrange for the rental of a house next door to the new postoffice as a public library.

Newark P. L. John Cotton Dana, lbn. (25th annual rpt.—1913.) Accessions 17,277; total 205,217. Circulation 1,098,398. New registration 18,849; total 55,766. Receipts \$132,964.15; expenditures \$132,463.48, including salaries \$54,809.91, books \$15,304.62, binding \$5621.45, periodicals \$1829.16.

The salaries of assistants have been increased and the hours per week have been reduced to forty-two. Work with schools has included the giving of many special lessons to visiting classes, instruction of normal school pupils, and the preparation and distribution of 439 libraries to teachers. The report also gives an account of the regular work of the library for the past twelve years, comparing it with similar work of other libraries in cities of the same size. It also describes with some detail the scope of the various additional activities whose successful maintenance have made the Newark Public Library unique among libraries.

Newark. The Newark Museum Association is assembling an exhibition of the clay industries of New Jersey, to open for six weeks in February. Manufacturers of brick, hollow tile, drain pipe, sanitary and electrical wares, as well as the makers of architectural terra cotta, fine and common china, tiles, and decorative pottery have signified their interest in the exhibit, and their willingness to help to make it a success. The co-operation of the women's clubs of the state has been secured to assist in bringing together an historical section of the exhibition, to include pottery and porcelain made in New Jersey before 1876. It is believed that other cities in the state will want to borrow and display the exhibit before it is dispersed.

Newark. A petition bearing 1200 signatures and protesting against the abandonment of deposit stations and the giving up of the traveling libraries of the Free Public Library, was presented to Mayor Haussling Oct. 26. The li-

brary was forced to this action by the decrease in the library appropriations. These appropriations are mandatory and are fixed at one-third of a mill for each dollar of the city tax ratables of the previous year. Since the state courts decided in 1913 that the \$30,000,000 deferred dividend funds of the Prudential Insurance Company were not taxable, \$10,000 was at once cut off from the expected appropriation for library purposes. As a result much work had to be left undone, and it was decided that plans must be cut down for the coming year.

Perth Amboy. The Carnegie Corporation has authorized a grant of \$30,000 to provide an extension to the Public Library.

Trenton. The library has transferred its books from the old stack on Academy street to the new one in the Cadwalader extension. The new stack holds from 75,000 to 80,000 volumes. When the Cadwalader extension is completed there will be an additional open shelf room, making the total capacity of the library about 100,000 volumes.

Washington. The Public Library is now in its new location in the Jeffrey building with Mrs. Susan Beavers as librarian.

PENNSYLVANIA

Bradford. An annex, costing \$14,100, has just been completed on the Carnegie Public Library. It connects with the main library building on the northwest side, is of brick, two stories in height, and 24 x 50 feet in dimensions. The new part is of fireproof construction as far up as the attic. The additional shelving provided will make the capacity of the library about 44,000 volumes.

Wilkes-Barre. Osterhout F. L. Myra Poland, lbn. (25th annual rpt.—yr. 1913). Accessions 2784; total 45,157. Circulation 140,308. Total registration 16,081.

MARYLAND

Goucher. The new library at Goucher College was opened for the use of the students Oct. 12 in Alfheim Hall. The college has not yet secured its regular library building.

Baltimore. The Enoch Pratt Free Library has published the second edition of its "Facts for the public." It includes a short account of the history of the library and its work, with statements of the work of the reference department, work with schools and the work with the blind. A directory of the central library and the branches is also given.

The South

VIRGINIA

Hampton. The Hampton Institute offers traveling libraries, consisting of nineteen books each, to any teacher or superintendent in Virginia for a school year (Oct. 1 to June 1), for the nominal fee of fifty cents and the payment of transportation charges. The library includes books on agriculture, gardening, cooking, furniture making, trees, flowers, birds, hygiene, sewing, and the Boy Scout movement, besides bound volumes of the *Hampton Leaflets*.

NORTH CAROLINA

Charlotte. An addition, costing \$15,000, is being made to the Carnegie library building.

GEORGIA

Atlanta. The Carnegie Corporation has offered \$25,000 towards a library for negroes in Atlanta.

Fitzgerald. Work has begun late in October on the new Carnegie Library, and it is expected to have the building completed in about three months.

FLORIDA

Jacksonville. A branch of the Public Library, to be open three days a week, was opened in East Jacksonville, Nov. 5.

Tampa. Work has been started on the Carnegie Library, which will probably be finished in the spring or early summer. The library is to be built of reinforced concrete, with a tile roof. It will cost approximately \$50,000.

KENTUCKY

Louisville. It is announced that further effort to secure \$50,000 from the Carnegie Corporation for another branch library here, will be postponed until after the war.

TENNESSEE

Greeneville. A Carnegie library is now being constructed here. It is claimed that the building will be ready to occupy by the first of next year.

Nashville. The branch library in South Nashville was opened the last of October, with Mrs. Nannie Eagan in charge.

Central West

MICHIGAN

Detroit. Work has been going on actively the past month clearing the site for the new central building of the Public Library.

Detroit P. L. Adam Strohm, lbn. (49th annual rpt.—fiscal yr. 1913-14.) Accessions 42,994; total 325,487. Circulation 1,321,552. New registration 34,466; total 81,969. Receipts \$766,263.35. Expenditures \$456,043.38, including \$85,327.17 for salaries, \$8,882.14 for binding, and \$36,499.37 for books.

In February, 1914, Mr. Clarence M. Burton deeded his valuable private library of material on Detroit and Michigan, together with the property in which it is housed, to the Library Commission. Three new Carnegie branches, the Henry M. Utley, Edwin F. Conely and Magnus Butzel, were completed and opened to the public during the year. There are now eleven branches in operation—all but two in permanent buildings of their own. The reference department of the main library was reorganized and all books which were not strictly for research and study were transferred to the circulation department. The children's department of the main library has been modified and now contains no books for children under fourteen. The training class was made up of 20 apprentices—the largest number ever enrolled. The age limit regulating admission to the class has been advanced to 20 years, resulting in an increased mental maturity of apprentices. Realizing the value of professional training, the library commission allows any member of the staff leave of absence to attend a training school of good standing, and will grant advanced standing in the service to such members on their return. A staff lecture course, comprising eight lectures by librarians and library workers of note, was conducted during the year.

Grand Rapids. The series of free public lectures under the auspices of the Public Library, given in the library building and at various school branches, was opened Nov. 13. About 90 lectures are included in the series.

Hancock. The library in the Central High School building has been opened to the public. Mrs. Elsie Martin has been put in charge, the first trained librarian the library has ever had. The library will be open in the morning to students in the public schools, and in the afternoon and evening to the general public.

OHIO

Cincinnati. The library fines of Cincinnati amount to between \$6000 and \$7000 yearly. The library officials estimate that the library is able to buy about 10,000 books each year out of the fine fund.

Zanesfield. New Year's day is announced for the formal opening of the new Public Li-

brary given the village by Dr. Earl S. Sloan of Boston, Mass. Miss Emmeline Grubbs will be in charge of the library.

INDIANA

The women's clubs of Indiana are working hard for the State Memorial Library and Museum which has been proposed as a permanent monument to mark Indiana's hundredth birthday in 1916. The State Library in its present crowded condition is unsatisfactory, and a new library building such as is proposed for the centennial, would put Indiana in line with such states as New York, Wisconsin, Missouri, Virginia, and Kansas.

Aurora. The dedication of the Aurora Library bequeathed to the city of Aurora by the late Georgiana Sutton was held Tuesday, October 13.

Boonville. Funds have been furnished by Andrew Carnegie for a library at Boonville. The building will cost about \$12,500.

Richmond. The circulation of music rolls at the Morrison-Reeves Library now averages 900 a month. In the last year 122 rolls were added to the collection, making a total of nearly 1800.

Sullivan. The private library of the late Dr. James R. Minkle of this city has been presented to the Carlisle and Haddon Township Public Library by his sister.

Veedersburg. The Woman's Civic League, in establishing a public library, gave a book shower, at which more than five hundred books were contributed.

ILLINOIS

Chicago. The Chicago Public Library opened two new collections on Nov. 2. The music room opened with a collection of standard and classical music for home circulation, and the foreign room with some 20,000 volumes of works in the various European languages arranged on open shelves for home circulation.

Chicago. Mayor Harrison is receiving, at frequent intervals, large bundles of German daily newspapers which are forwarded by the mayor of Berlin with the request that they be made accessible to the general public. These papers have therefore been placed on file in the reading room of the Public Library. The library is also receiving numerous pamphlets, broadsides, and other publications from officials and organizations in the several countries now at war, embodying statements and argu-

ments regarding their respective contentions and their views of the issues involved, an interesting indication of the importance placed by the nations upon the current of American public opinion.

Delavan. The Ayers Public Library has moved into its new building on North Locust street.

Galesburg F. P. L. Anna F. Hoover, lbn. (40th annual rpt.—yr. ending May 31, 1914.) Accessions 1796; total 44,670. Circulation, 159,722. New registration 1512; total 6361. Receipts \$9049.37; expenditures \$7742.69, including \$3323.99 for salaries, \$266.33 for binding, \$1372.57 for books and \$408.85 for periodicals.

Rockford P. L. Jane P. Hubbell, lbn. (42d annual rpt.—yr. ending May 31, 1914.) Accessions 3478; total 60,643. Circulation 177,753. New registration 4081; total 11,138. Receipts \$20,721.21; expenditures \$20,657.75, including \$9,103.25 for salaries, \$797.50 for binding, \$3,437.48 for books, and \$580.12 for periodicals.

Springfield. Two branches of the Lincoln library have been opened, one at Harvard Park school and the other at Enos school. Both have been equipped with books for children and adults.

The North West

WISCONSIN

The Wisconsin Free Library Commission, by making use of the new parcel post privileges, has opened the large libraries of the state to all the citizens of Wisconsin. The libraries from which are drawn the books for circulation by parcel post are those of the Wisconsin Free Library Commission, 45,000 volumes; the State Historical Library, 183,000 volumes; the University Library, 210,000 volumes; the Wisconsin Academy of Sciences, Arts and Letters, 5,000 volumes, making a total of 443,000 volumes, exclusive of pamphlets. The plan of distribution will be practically the same as that adopted by the city libraries, except that books will be sent by mail. Those who get books in this way must have the endorsement of some one of prominent position in his community, but will have no other expense except the postage.

Black River Falls. The contract for the new Carnegie Library has been let. The building will cost \$15,000.

Madison F. L. Mary A. Smith, lbn. (39th annual rpt.—yr. ending Je. 30, 1914.) Accessions 4061; total 32,790. Circulation 165,307.

New registration 2686; total 17,557. Receipts \$21,314.37; expenditures \$15,352.07, including \$6,396.72 for salaries, \$655.50 for binding, \$2,064.43 for books, and \$506.12 for periodicals.

MINNESOTA

Chatfield. Work has been commenced here on the Carnegie library.

Minneapolis. The Lyndale branch of the public library, formerly located upstairs at 612 West Lake street, has been moved into the new building of the Calhoun Commercial club. The new location is much more roomy, and is on the ground floor.

Thief River Falls. The new Carnegie library building is expected to be ready for occupancy by Dec. 1.

IOWA

One hundred and fifty dolls are ready to travel through Iowa. The collection has been prepared by the state Library Commission and is to be loaned through the traveling library for exhibition purposes to the libraries of Iowa. Foreign, character, home-made, and curious dolls are included in the collection, which has been designed to be interesting and instructive to adults as well as children.

Davenport. The library trustees plan to open stations in the Washington and Grant schools. Both of these schools receive grade libraries which are circulated to the children by the teachers, but no provision is made for those out of school or the parents in these districts. If stations are opened they will be for the members of the community above school age.

MONTANA

Butte. The juvenile branch of the Public Library in the courthouse, which had been closed since the arrival of the military on Sept. 1, reopened Nov. 4. At the same time the juvenile library in the library building was closed permanently.

NEBRASKA

Broken Bow. Plans are being made for a new Carnegie library building to be erected here.

Lincoln City L. Lulu Horne, lbn. (Rpt.—yr. ending May 31, 1914.) Accessions 3,177; total 36,693. Circulation 199,091. New registration 2884; total 11,335. Receipts \$11,740.04; expenditures \$12,429.24, including \$5,936.50 for salaries, \$515.58 for binding, \$3,649.62 for books, and \$412.21 for periodicals.

Omaha. Public library stations established in seven Omaha public schools this fall have been so successful that stations in the future will be placed in any school in the city upon application of the principals.

The South West

MISSOURI

With 1912, the Missouri Library Commission completed its fifth year of actual work. During that time twelve new libraries were organized in the state, five of which have separate buildings. The issue of traveling libraries increased from less than fifty in 1907 to 280 in 1912. Twenty-four active stations were on the list in 1907; in December, 1912, active stations to the number of 163 had traveling libraries in circulation. In 1912, eleven of the twenty-five largest cities of Missouri (over 5000 population) had no public library. There were, besides these, 84 other cities of over 2000 population without library facilities. The year 1913 showed an awakening impulse toward better public libraries in the state. Mexico completed a new building and five other cities accepted offers of Carnegie buildings: Aurora, \$9000; Bolivar, \$8000; Excelsior Springs, \$10,000; Fayette, \$10,000; Webb City, \$25,000. The traveling libraries sent out 46 more groups and 1566 more volumes from the office than in 1912, circulating 13,391 volumes from 326 different stations. The commission detailed one assistant to take charge of the legislative reference collection, and besides the regular work of this department, a cumulative bill index was printed weekly, each number showing a complete record. In the last number a list of bills passed in each house was added. The commission also had charge of the distribution of printed bills to all public libraries in the state willing to pay the expense.

Liberty. William Jewell College L. Ward H. Edwards, lbn. (Annual rpt.—yr. ending May 29, 1914.) Accessions 1396; total 25,825. Circulation 6777, double that of last year.

A small binder has been installed. This makes possible the saving of from one-third to one-half on binding. With an experienced binder as the head of this department, the rest of the work is carried on by students, who are paid 15 and 17½ cents an hour for their work.

Sedalia P. L. Frances Fordice, lbn. (19th annual rpt.—yr. 1914.) Accessions 754; total 16,376. Circulation 62,728. New registration 1312; total 6881. Receipts \$5344.90; expenditures \$6742.43, including \$2690.00 for salaries, \$443.10 for binding, \$597.03 for books, and \$245.20 for periodicals.

KANSAS

Emporia. Eight students took the full course in library science at the Emporia State Normal School last year, and eight are taking the work this year. The courses are offered by Miss Gertrude Buck, professor of library science, who is a graduate of the University of Illinois Library School. The library work offered at Emporia is designed especially for the instruction of teachers in the use and care of school libraries, but many public librarians of Kansas have taken training in this way at the Emporia School.

Eureka. The Boy Scouts helped the Public Library move from its old quarters to the new Carnegie building, which was formally opened on September 25.

Hutchinson. The high school has more than 3000 volumes in its library. The books are classified and cataloged, and beginning this year, the librarian, Miss Mabel Parks, is relieved of teaching duties.

Osborne. The Osborne Library was established and maintained for twenty years by Osborne ladies. In 1913 a public tax was voted and a \$6000 Carnegie building opened. Of Osborne's 1500 citizens, 560 have library cards in use, and last year 10,580 books were issued, fiction making 72 per cent. of the total, juvenile books 22 per cent., and non-fiction 6 per cent. The library has 2400 volumes, and Miss Allis Babcock is librarian.

Russell. The Sunday school library of the Methodist church, after lying dormant and unused for fifteen years, has been placed in the city library, to be loaned out as other books are, on condition that title remains in the Sunday school and the books are to be kept together with a label of ownership.

Topeka. At the annual meeting of the Kansas Historical Society, Oct. 21, the event of the afternoon session was the unveiling of a tablet to the memory of Miss Zu Adams, librarian of the Historical Society for many years. The tablet was placed in the reading-room of the library by the Topeka Chapter, Daughters of the American Revolution, of which Miss Adams had been a charter member. The reading-room also contains a portrait of Miss Adams, placed there by the society in recognition of her services as its first librarian.

Wichita. The Public Library and the Friends' University Library have arranged for the interloan of books which are in one institution and not in the other.

OKLAHOMA

Oklahoma City. As a part of the extension work of the University of Oklahoma, a class in library science will be held at the City Public Library by Miss Edith Phelps this winter for a course of about four months. The classes will be open to all who desire to attend them, and only a nominal fee will be charged. They will be held every Tuesday and Thursday, and will cover instruction in the methods of conducting a library as designated by the rules of the American Library Association. University credits will be given for satisfactory completion of the course.

TEXAS

Fort Worth Carnegie P. L. Mrs. Charles Scheuber, lbn. (Annual rpt.—yr. ending Mr. 1, 1914.) Accessions 4860; total 28,304. Circulation 76,175. New registration 3967; total 16,064. Receipts \$12,544.57; expenditures \$12,445.03, including \$4515.04 for salaries, \$1552.88 for binding, \$1404.14 for books and \$588.85 for periodicals.

Gainesville. The new \$15,000 Carnegie library building of Gainesville was opened Oct. 10.

Palestine. Palestine's new \$20,000 library building was formally dedicated Oct. 21. The dedicatory address was delivered by Dr. S. P. Brooks, president of Baylor University. The building was tendered the city by President A. G. Greenwood, of the library building board. The building is built of brick, and is located in a commanding position in the central part of the city.

LOUISIANA

Baton Rouge. The United Daughters of the Confederacy, which maintains the only public library in the city, has appointed a committee to confer with the mayor and council on the possibility of securing a Carnegie Library for the city. It is estimated that \$20,000 would provide a satisfactory building.

Pacific Coast

WASHINGTON

Seattle. A movement has been organized by the Woman's Century Club to purchase for the Public Library by public subscription the collection of engravings and etchings owned by Albert de Chivalat and recently exhibited here. In the collection are 352 engravings and etchings, covering every period of the development of the art from 1498 to date. Mr. de Chivalat

places an approximate value of \$5000 on his collection, but he has agreed to dispose of it to the Public Library for \$1500.

Spokane P. L. George W. Fuller, lbn. (19th annual rpt.—1913.) Accessions 7933; total 61,878. Circulation 366,906. New registration 10,578; total 28,436. Receipts \$44,514.32; expenditures \$43,172.33, including \$22,199.95 for salaries, \$1520.75 for binding, \$8815.01 for books, and \$1280.75 for periodicals.

Besides the usual record of work of the different departments, the report includes a short historical sketch of the library and a table of comparative statistics from twelve libraries similar to Spokane in size. The table gives population, book circulation, accessions, number of employes, appropriations, and per capita cost of circulation.

Tacoma. Asking that Whitworth College be either compelled to turn over the 1120 books missing from the Mason Library and several articles of furniture belonging to the library, including a piano, chairs and other articles, or pay a judgment of \$2500 in lieu of the missing property, the city of Tacoma has started a suit in the superior court against the college. The city asks also that the deed given the college for the building and the library be canceled, as the school has failed to live up to the agreement to keep it open as a public library.

CALIFORNIA

Alameda F. L. Marcella H. Krauth, lbn. (35th annual rpt.—yr. ending Je. 30, 1914.) Accessions 3188; total 43,350. Circulation 123,723. New registration 1020; total 11,697. Receipts \$16,345.70; expenditures \$12,235.49, including \$4767.78 for salaries, \$249.18 for binding, \$4129.44 for books and \$519.14 for periodicals.

Alhambra. The new city library building will probably be occupied about the first of the year.

Coalinga. The new Carnegie Library was opened Oct. 29.

Los Angeles. The Southwest Museum has moved into its new building, and its Munk Library of Arizoniana, containing over 7000 books, pamphlets, and manuscripts, is now open to the public as a free reference library every afternoon in the year. A catalog of the collection, compiled by Hector Alliot, the curator of the museum, has just been published in a limited edition, under the title, "Bibliography of Arizona."

Los Angeles P. L. Everett R. Perry, lbn. (26th annual rpt.—yr. ending July, 1914.) Accessions 20,442; total 227,894. Circulation 1,559,359. New registration 36,685; total 85,369. Receipts \$172,316.00; expenditures \$172,251.57, including \$84,041.21 for salaries, \$9,058.05 for binding, \$19,328.45 for books, and \$3903.37 for periodicals.

The most important step taken during the year was the removal of the main library to its new quarters in the Metropolitan Building (described in the November issue of the JOURNAL). Two new departments were organized June 1: the industrial department, which includes all reference and circulating titles pertaining to the sciences and the useful arts, with the exception of the books classified in domestic economy; and the sociology department, including foreign, federal, state, and city documents and all municipal reference and sociological books. The past year has shown much additional use of the library, which is probably due to the publicity work in charge of the assistant librarian. The registration for the past year shows a 20 per cent. increase. There was also a large increase in the circulation, especially foreign circulation. The appreciation of books in their own language has been shown by the Russian population of the city, who contributed \$25 for the purchase of books. They are the only readers of foreign literature who have contributed to the library. The work of the children's department for the past year has shown progress in many directions. With fewer books than in the previous year, the main children's room shows an increase in juvenile circulation of 2166. The circulation of the playground libraries has likewise grown. The total circulation here for the past year was 64,768, and this in spite of the fact that the playground libraries have not been able to increase the number of open hours, so often requested by the public. The deposit station work has steadily increased, the total number of stations last year being 43, and this year 61. During the year every step not absolutely essential in the cataloging processes has been eliminated; revision being reduced to a minimum and analytics almost entirely omitted, with the result that the books reach the shelves quickly. With the renewal of books by telephone allowed in the last half year, 1500 people availed themselves of this convenience. The pay duplicate collection which was tried for the first time this year in the branch libraries has had sufficient success to justify its continuance. The Library School curriculum has been extended and an extra month added to the school year, giving eight months of instruction instead of seven. It is

hoped in time to establish a Library School in connection with the Los Angeles Public Library. A tuition fee of \$25.00 is required of those who enter the training class from out of the city, and who do not intend to take a position in the Los Angeles Public Library. A minimum salary of \$50.00 a month is paid after appointment to a regular position. Fifteen young women were given certificates in the class of 1913-14.

Pasadena P. L. Nellie M. Russ, lbn. (Rpt.—yr. ending June 30, 1914.) Net accessions 4200; total 44,025. Circulation 280,418. New registration 3171; total 12,776. Receipts \$27,000; expenditures \$26,979.52, including salaries \$13,990.22, books, magazines and music \$6,492.05, pictures and maps \$100.90, subscriptions to periodicals \$874.92, binding \$840.75.

Sacramento. The state library in the Capitol closed Oct. 6 for an indefinite period, pending the completion of extensive and needed repairs and alterations. One of the principal improvements will be the installation of a large passenger elevator, connecting all four floors of the library, which take up in actual floor space one-fourth of the state house. Additional book racks and cases will also be installed.

San Francisco. Although the construction of the new Public Library building cannot be undertaken until the unsold bonds are disposed of, it has been decided that the excavation shall be done immediately and the foundations for the edifice laid.

San Francisco P. L. Robert Rea, lbn. (Rpt.—yr. ending Je. 30, 1914.) Accessions 21,861; total 144,360. Circulation 934,002. New registration 22,604; total 44,376. Receipts \$136,682.24; expenditures \$96,513.14, including \$48,293.75 for salaries, \$8101.82 for binding, \$23,694.74 for books, and \$1880.93 for periodicals.

Nearly 35 per cent. of the total expenditures was spent in the purchase of books, periodicals and binding, the increased expenditure going far to build up the sections of fine arts, periodicals, and technology. All records have been entirely restored, the branches now have an improved system of cataloging, making them uniform with the library, and both membership and circulation of the library have increased 10 per cent. over the record for the library at the time of its practical destruction in the great fire.

Vacaville. The Carnegie Corporation has allowed the city \$12,500 for the building of a library.

IDAHO

Harrison. Due to the efforts of the members of the Fortnightly Club, Harrison, a mountain saw-mill town of 1000 people, now has a public library of 533 volumes and a membership of one hundred and seventy. The members of the Fortnightly Club take turns serving as librarian.

UTAH

Salt Lake City. The new branch of the Free Public Library at Sugar was formally opened Nov. 1. The branch will be known as the Sprague Library, so named in honor of Miss Joanna Sprague, librarian of the Packard Public Library. Circulation of books began Nov. 2. Mrs. Robert Forrester will have direct charge of the Sprague branch, which has at present about 2300 books.

Canada

MANITOBA

Winnipeg L. J. P. Robertson, lbn. (Annual rpt.—yr. ending Nov. 30, 1913.) Accessions 1508; total 45,000. The appropriations for salaries was \$4060, and for other purposes \$4600. Expenditures for binding were \$952, for books \$1814.45, and for periodicals \$914.71.

ONTARIO

Collingwood. The board of trustees of the Public Library has decided to extend the privileges of the library free to the people of the townships contiguous to Collingwood, and these people are invited to use market day to take home to their farms literature for recreation and for instruction. The library has a Carnegie building, well planned and well administered, which also houses the Huron Institute, a historical collection of the early days of the Georgian Bay district.

Foreign

GREAT BRITAIN

Warrington, P. L. Charles Madeley, lbn. (Rpt.—yr. ending Je. 30, 1914.) Accessions 2147; totals 58,318. Circulation 91,030. Total registration 4956.

BELGIUM

Louvain. A dispatch from Bordeaux to the *New York Sun*, Nov. 8, stated that Henri Bergson, presiding at a meeting of the Academy of Moral and Political Science in that city, had announced the gift of the private library of Arthur Raffalovitch to the library

of the University of Louvain. M. Raffalovitch, who is a Russian privy councillor and attaché of the Russian embassy in Paris and a correspondent of the academy, has been collecting his library for thirty years. M. Bergson added that a committee is being formed to reconstitute the library's funds. It is said that the Germans removed the most precious manuscripts before burning the library, so it is hoped that the treasures eventually will be restored to Louvain.

Louvain. The September issue of *The Library World* contained a short article (p. 67-69) by Frank Hamal on "The libraries of Louvain," inspired by the suggestion made by certain English scholars that an expedition be sent to Louvain to search for early printed books and manuscripts which may still be buried, unharmed, beneath the ruins of the libraries. Louvain had three main libraries, all possessing a considerable number of volumes. The most important was the University Library, with its 230,000 printed books, of which between three and four hundred were incunabula, about 350 manuscripts and more than 500 newspapers. The second large library was that belonging to the College of the Jesuits, which included 120,000 volumes (250 incunabula). Besides these two institutions, the town library contained over 15,000 volumes and pamphlets, and there were also some interesting archives at Parc Abbey, some little distance from the town. No printed catalog of the University Library existed in recent years, but a manuscript catalog was to be found at the library. A short sketch of the early history of the University Library, from the agitation which led to its establishment in 1627 down to the early part of the last century, is given in the articles, with a brief description of some few of the priceless manuscripts for which search might be made.

INDIA

A meeting of the librarians of the traveling libraries of the Social Service League was

held in Girgaum last February. It was reported that in the preceding quarter the number of libraries had increased from 85 to 98, and the number of books from 5000 to 6127. During the quarter 900 books were received as gifts. While the record of work accomplished is satisfactory to the league, the members fear that when the novelty has worn off, interest will wane. To stimulate a taste for reading among the masses it is suggested that readings from interesting books be given on Sundays and holidays. The establishment of additional library centers was considered, and also the sending of libraries to remote rural regions. A change in transportation arrangements was made, and henceforth the librarians of the stations must secure the money for transportation charges from their readers instead of from the league funds.

Baroda. The report of the minister of education on public instruction in the state of Baroda for 1912-13 gives the following statistics for the work of the libraries in the state: "Thanks are due to the four District Panchayats, the members of which fully appreciated the practical good the libraries do the people, and contributed the magnificent sum of Rs. 24,500 for district libraries, Baroda giving Rs. 12,000, Kadi Rs. 5000, Navsari Rs. 5000 and Amreli Rs. 2500. The total expenditure incurred on account of the Central Library Department amounted to Rs. 102,000, the principal items being salaries Rs. 23,606, contingencies Rs. 5412, books Rs. 17,081, periodicals Rs. 1497, deadstock Rs. 9018, aid to town and village libraries Rs. 37,107, traveling libraries Rs. 2270, visual instruction branch, Rs. 5285, scholarships Rs. 724. It will be apparent from the above that the state spent a large sum, considering it its duty not merely to teach the people to read in childhood at school but even through adult life. The Library Department has proved very useful and its success is due to Mr. Borden and the library staff who assisted him to make the Library Department a success."

THE LIBRARIAN'S MOTHER GOOSE

XII. CHARGING DESK

*One, two,—nothing to do.
Three, four,—open the door.
Five, six,—a book she picks.
Seven, eight,—stamp it straight.
Nine, ten,—come again.*

—Renée B. Stern.

LIBRARY WORK

Notes of developments in all branches of library activity, particularly as shown in current library literature

Scope, Usefulness, Founding

Library in Relation to Schools

INSTRUCTION IN THE USE OF THE LIBRARY

During last year talks were given by the New Haven Public Library to 800 children in groups of varying sizes on various requested subjects concerning the library and its books. Some of these talks were given in school assembly halls at special exercises, some were given in classrooms and others at the library. During May and June talks on the subject, "The value of the library after school days are over," were given in several schools to those pupils of the eighth grade who were obliged to go to work, and also talks to those who intended to attend high school, on the use which they might make of the library. One hundred pupils from the junior class of the Normal School received instruction in the use of the card catalog and the value of the library to the teacher. Talks were given to each division of the class on the teacher's opportunity to use the best in literature in the classroom. Aside from these classes, 85 pupils from the freshman class of the high school and from the eighth grades of two other schools received instruction in the use of the catalog and the resources of the library.

Library Extension Work

INDUSTRIAL EXHIBIT

The George Smith Public Library at Junction City, Kan., has in its reading room a table of industrial exhibits which are being used extensively by the school children. There is a wheat and flour exhibit, presented by the Hogan Milling Company, and designed by Mr. A. D. Nothstein; also a cotton exhibit from the Coates Company, silk from Belding, all the Standard Oil products, Lowney's chocolate, asbestos, needles, and an International Harvester exhibit.

BETTER BABIES EXHIBIT

At a Better Babies Exhibit, held at Ozone Park, Long Island, in July, the Queens Borough Public Library was prominently represented. Several telling bulletins were hung, a bookcase was set up filled with books on the care of babies and mothers, and on general hygiene. Twelve lists of books on baby care, children's physical culture, education, ethics

for children, eugenics, games and story telling, home hygiene, eyes, ears, nose and teeth; infant diseases, insects as disease carriers, milk, and young mothers, were available for distribution, and application forms for joining the library were given to all interested persons.

A large proportion of the mothers present knew little or nothing of what the library was doing for the children, so a "scrapbook of the children's work"—lettered and pasted for the exhibit by Miss Doherty, of Flushing, under the direction of the chief of the department—was more or less a revelation. It contains many photographs illustrating the work, with brief descriptive texts for those which require explanation. The contents of the large folio scrapbook is as follows:

1. Location of branches and stations, with dates of opening and diagram.
2. Some Carnegie branches.
3. Some rented quarters.
4. Every-day glimpses of the children in branch libraries.
5. Story telling in the library: (a) regular, (b) special.
6. May day—wild flower day and "doll story hours."
7. Clubs and reading circles.
8. Art exhibits.
9. Regular exhibits.
10. Work with schools.
11. Typical library stations.
12. Library story hours in playgrounds.

The branch librarians from two nearby libraries were in attendance, one or the other being constantly at the exhibit. They made the acquaintance of many persons living in the neighborhood, and interested them in the library. More than two hundred babies were enrolled, and the mother of every baby received such of the lists as aroused her interest.

A short list was printed on postals and one of them was mailed to every mother. These were very successful in winning a response, such as a visit to the library or enrollment as a library member.

After the close of the Better Babies Exhibit, the head nurse asked for the bulletins, which were given her and carried down to the milk station, a permanent institution, together with some lists for distribution therefrom.

The lists of births are received from the board of health, and one of the postals is mailed to each mother.

Founding, Developing, and Maintaining Interest

ADVERTISING SLIDES

In Council Bluffs, Iowa, slides like the following have been shown in moving-picture theatres to advertise the public library:

If you want a Good
Book go to the
Public Library.
Open 9 A. M. to 9 P. M.
You will be welcome.

Do You know that
It is the Business
Of the Public Library
To lend Books and
Answer Questions?
Free—Yes—Free.

If You Wish to Read
The New Magazines
Go to the
Public Library.

If You Wish to Know
The Meaning of a Word
The Spelling of a Word
The Pronunciation of a Word
Telephone to the
Public Library.

ADVERTISING BOOKMARKS

The Greensboro (N. C.) Public Library has issued some attractive bookmarks. They are printed on light weight card board, and at the top of each is a small half-tone of some object in the library museum. For instance, one picture shows two dolls. One, an old-time dandy, with grizzled hair, is seated in his wooden armchair, his banjo in his lap, while beside him stands a little boy. Beneath is the text to explain the picture:

Uncle Jack, of Bruce's Cross Roads, Guilford County, was a real hero of Revolutionary War times, beloved and trusted by all his master's family, and this little boy was the oldest child of that family, Charles Bruce, Jr.

When the British soldiers came near their plantation, faithful Uncle Jack took his mistress and all the children seven miles north to Hogan's Creek for safety. He risked his own life to come back alone that night for news, and next morning he was able to tell his mistress that her home had not been burned by the enemy.

GREENSBORO PUBLIC
LIBRARY

CARNEGIE BUILDING

EXHIBITS AT STATE FAIRS

Much interest was evinced in an exhibit at the Kentucky State Fair, Sept. 14-19, which was prepared by the Kentucky Library Commission. This exhibit consisted of model school libraries from the \$10.00 and \$15.00 lists prepared for the rural schools of the state, with samples of the regular agricultural and school libraries sent out by the commission, and a library map of the state. The commission's secretary was on hand to explain the work and to distribute printed material on the various activities of the commission. Results already show the usefulness of the exhibit.

The Little Rock (Ark.) Public Library offered an exhibit of much value to farmers during the Pulaski county fair the first week in November. Books dealing with agricultural subjects were on display, and attachés of the library were on hand to explain the method of lending the books to the public.

LIBRARY POST CARDS

In the *Dial* of Oct. 16 comment is made on the postcards issued by the British Museum to call attention to its resources, including its library. Says the *Dial*, "Necessarily it is but a few of that library's three and one-half million volumes that can thus be advertised, but these chosen few are well worth the trouble and expense involved. For example, the famous Gutenberg Bible is pictured for a penny to many an interested person who will be glad to take the hint and get sight of the volume itself; a page from an early Caxton is reproduced in facsimile; the Greek fragment known as 'The sayings of Jesus' is similarly photo-engraved, and Nelson's last letter to Lady Hamilton, and the earliest map of New York, known as 'The Duke's Plan,' showing the topography of the town in 1661; also the title-page to the Shakespeare First Folio, and the first known map of the British Isles, from Ptolemy's 'Cosmographia.' The Oxford University Press, expert in this species of art printing, manufactures some, if not all, of these picture cards, which are described as collotypes of an excellent quality. Numerous other objects of interest besides books and manuscripts are made to contribute to the variety and beauty and instructiveness of this set of post cards." The last report of the British Museum records the fact that about 155,000 of these postcards were sold during the year.

PUBLICITY

The Los Angeles Public Library has used the following methods whereby wide publicity

has been secured with little expenditure. They are described in the last annual report as follows:

"First, the use of newspaper lists and news notes concerning new books and the work of the library. Second, slides shown by thirty-six motion-picture theaters in the center of the city and also in the vicinity of the branches, explaining the library service and giving location, these slides run free by theater managers. Third, book exhibits in store windows in various parts of the city. Some of these were prepared by the branch librarians in their neighborhoods. Eighteen were shown in the business section. During the first week of September, a series of eight exhibits were shown in the large stores on Broadway. Through the co-operation of the merchants, these were very attractively made, and drew the attention of thousands of people to the library's books. Ten thousand circulars, briefly explaining the library's use, were distributed from these eight stores. These exhibits have been a most successful venture. Fourth, short talks by library representatives at shop noon hours, and at labor union meetings. These have also been highly successful in attracting men to read books, whether on their own occupations or good fiction and works of general information. At many of these meetings, library cards were issued and books given out to new patrons."

CO-OPERATION FROM PUBLIC SCHOOLS

The school board of Des Moines, Iowa, supplied the shelving and the library board the books, and as a result of the united efforts of these two public institutions, a valuable collection of books on vocational guidance, books on business, trade catalogs, house organs, etc., has been placed in the rotunda of the Public Library. There are several hundred books on vocational training. Two thousand five hundred trade catalogs from all over the country and covering all lines of business are a feature of the collection.

CO-OPERATION WITH CLUBS

The week of Nov. 9-14 was a busy one for the library of Binghamton, N. Y. The New York State Federation of Women's Clubs held its annual meeting in the city, and the Farm Improvement Association of Broome County its annual display and meeting.

Several months before the local chairman of arrangements for the state federation meeting requested Librarian William F. Seward to make an exhibit at the library during federation week. The official federation pro-

gram contained the following notice: "The librarian of the Public Library invites all visiting club women to view a special exhibit of pink lustre and Bavarian ware, and Sheraton and other choice colonial furniture in the art gallery of the library each afternoon and evening." Material for the exhibition was loaned by local collectors and owners. It opened with an attendance of more than 200. The newspapers carried notices of the exhibit along with federation news, and also gave it good special notices.

On Wednesday of that week, Mrs. Henry Altman, a visiting delegate from Buffalo, gave a talk at the library on "Our schools as social centers," under the auspices of the Civic Club.

Friday was the busiest day. The Farm Improvement Association held an all-day session, also making an exhibit of prize apples and potatoes. In the afternoon a feature of the meeting was a public lecture on "Cooperation in buying and selling for farmers," by C. C. Mitchell. Logically following this was the lecture in the evening by Mrs. Julian Heath on "Market systems and the housewife," under the auspices of the Civic Club.

Library Support. Funds

LIBRARY TAXES

How an increased library rate might affect library administration. Wilfrid Robertshaw. *Lib. World*, S., 1914. p. 81-87.

An increased library rate would mean almost of necessity increased efficiency in library administration. The writer proves this statement by taking for example a typical stagnant library; increases the rate 50 per cent, and shows just what an increased library rate would mean not only for the financial aspect of the library's work, but also for increasing the efficiency of administration. He discusses in turn and in detail the increases that would be possible for salaries and staff, for book purchases, for improved equipment and care of buildings, and for additional printing and stationery.

The increased staff would make it possible to keep the catalog adequate and up to date, and there would be a better opportunity for assistants to get experience in the various departments. More money for books would enable many a library to provide reading for the blind in its community, now too often neglected altogether. Library story-telling might receive more attention, and educational societies and organizations be formed. A reference library for business men could be formed and an information bureau established. The final

improvement suggested would be the drawing up of a definite code of rules for the guidance of the staff and the preservation of uniformity in the work.

RAISING FUNDS

The Ideal Club in Waukesha, Wis., has compiled a cookbook called "The ideal way to a man's heart," to be sold for the benefit of the children's room of the Public Library.

Government and Service

Staff

CO-OPERATIVE LUNCHEONS

The employes of the Public Library in Washington, D. C., have organized a co-operative luncheon club that solves satisfactorily the high cost of eating. Miss Ruth H. Todd, a member of the staff, manages the club, and there are about 60 members, or two-thirds of the library staff. Six luncheons to each person are served, one on each working day of the week, in two shifts, one at noon and another to the night force after 6 o'clock. The cost is 35 cents per week for each person.

These lunches are served in a neat, home-like dining room. This is part of the library equipment. It seats about thirty at a time. The kitchen is equipped with a gas stove, sink with running water, refrigerator, and a well-filled china closet. Gas for cooking is supplied by the library and one charwoman is assigned to wash the dishes.

The services of the cook are paid for, \$5 a week, out of the weekly assessment of 35 cents each, on which the club has thus far been conducted.

Miss Todd gives the following account of the organization and management of the club:

"By far the most difficult problem which presented itself was the selection of the week's menu with an eye both to economy and efficiency—that is, having the food selected in such combinations as to be a well balanced meal. We serve no tea, coffee or milk; such drinks are, however, provided by individuals who desire them. We do, however in addition to the listed menu, serve bread and butter.

"A committee from the library went to the commission merchants on Louisiana avenue to get prices on staple articles, such as potatoes, butter, olive oil, etc. We found by patronizing these people and buying in wholesale quantities that we could cut corners considerably. For instance, we buy butter in ten-pound lots, thereby saving from 3 to 4 cents on the retail price; so with potatoes. Perishable things, such as lettuce, celery and fresh tomatoes, we purchase as needed at the Center market.

"Friday of each week the menu for the following week is prepared, an inventory of supplies is taken and food for the entire week is estimated on and purchased as far as possible so as to relieve the purchaser of the daily care of kitchen affairs. One menu is posted in the kitchen for the guidance of the cook; another is posted where it may be consulted by all members of the staff, so that at any time if the bill of fare is not personally pleasing any member may supplement as he sees fit.

"The following menus, covering two weeks, show exactly of what the luncheons consist:

"October 19-24—Monday: Baked macaroni with tomatoes, stewed apples, bread and butter (with every luncheon). Tuesday: Irish stew, prunes. Wednesday: Creamed potatoes, baked stuffed tomatoes. Thursday: Hash brown potatoes, lettuce and tomato salad. Friday: Creamed tuna fish, baked potatoes. Saturday: Baked rice and tomatoes, apples sliced and stewed.

"October 26-31—Monday: Baked salmon, creamed potatoes. Tuesday: Baked beans, stewed apples. Wednesday: Macaroni and tomatoes, stewed peaches. Thursday: Tomato bisque, rice and tomatoes. Friday: Corn pudding, stewed peaches. Saturday: Beef loaf and tomato sauce, baked apples.

"In no one article of food have we secured better prices in buying wholesale than on meat. We buy directly from a slaughter house and the meat is the best of its kind. Needless to say we cannot have meat every day, but, thanks to such articles of food as beans, rice and potatoes, we do not need it every day. Our aim is to serve these simple articles of food in such quantities as to be sufficient, so that no extra food need be brought by anybody.

"We buy the bread in large loaves, at 8 cents, a saving of 2 cents on the retail price.

"This plan is essentially co-operative. Every member has a chance to voice his opinions and preferences. All suggestions are gladly received and, if at all feasible, are put into operation.

"Each member is required to pay cash in advance. On Friday of each week each member places an envelope inscribed with his name and containing 35 cents in a box provided for the purpose. Should any one omit to make payment it is regarded as a sign that he does not care to participate for the following week."

Administration

Treatment of Special Material

LANTERN SLIDES

The indexing of lantern slides; some brief notes. A. W. Champkins. *Lib. World*, S., 1914. p. 79-81.

In this article the writer recommends the use of regular cabinets for the storage of lantern slides, and gives the following brief notes descriptive of methods used in libraries for their preparation and arrangement.

1. While it is impossible for all libraries to make their own lantern slides, there are usually some parts of the work assistants can do. Where there are portions of a slide which it is not desirable to show on a screen, the library assistant can easily perform the operation of concealing these parts, termed "masking." This consists of sticking specially prepared gummed paper on to the plate.

2. Every slide should be "spotted," that is, the top should be marked in some way, in order that the picture may be projected on the screen in the correct position.

3. The title of the slide should be placed below the picture, the class mark on the left-hand side—for each slide should be classified as if it were a book—and a folio number on the right-hand side.

4. The slide should be bound in strips of white binding, and the class marks carried on to the binding at the upper left-hand corner, white side of mask facing reader.

The index should be made on cards and may be arranged in any definite order, either under the place name, or classified according to subject.

Specimen forms are given of both the slide and the index card.

INDEXING LOCAL NEWSPAPERS

The librarian as local historian. *The Librarian*, J1., 1914. p. 419-422.

It is conceded that every public library should collect material for the history of its locality. The greatest mine of information is in the local paper, and properly indexed, it would form a history of the district for the future. In considering this, two points must be borne in mind: (1) how the work can be done best; and (2) who should bear the cost.

A cumulative index on cards is considered the best form, with alphabetical arrangement. The most satisfactory way of handling the task would be the formation of a small special department of the town's work, and every locality should have a special grant from the local council to carry on the work. A national index also might be compiled by the British Museum, in compiling which all local papers should be included.

It is estimated that the average total cost of the index would be from three to four shillings weekly for each local paper.

MAPS, STORAGE OF

The library of the American Society of Civil Engineers in New York City uses the following method of filing the two thousand or more topographic atlas sheets published by the United States Geological Survey. The maps are arranged by states, mounted on heavy manila paper and tied together, ten sheets to a section, in the order in which they are received. By folding the manila paper for a depth of three-quarters of an inch at the back of each sheet and reinforcing it in three places by pieces of muslin, a hinge is provided where holes are punched and the sheets are tied with soft untwisted cable cord.

In section number one, for each state, is the key map on which every sheet in that state is indexed by putting its section number in the upper left corner of the quadrangle representing that sheet on the key map.

The unique part of this system of filing, however, is the map case, the invention of Dr. Charles Warren Hunt, secretary of the society. It stands two sections high, four feet two and a half inches from the floor, with vertical divisions allowing the maps to stand upright, and with openings on both sides of the case dovetailed into each other. Fifty maps or five sections are allowed to each space. Because the spaces are made to fit the maps as mounted, they are $3\frac{1}{2}$ inches wide at the front and $1\frac{3}{4}$ inches wide at the back, so that the thin edge of each section is held firmly in the narrow portion, and the space saved on this part forms the wide portion on the other side of the case.

The advantages are: (1) Economy of space. A case $28 \times 25 \times 20\frac{1}{2}$ inches will hold four hundred and fifty maps. (2) Accessibility. The maps stand upright, arranged by states alphabetically with the name of the state marked plainly over each section. (3) Preservation. No crumpling of the maps by catching in the edge of drawers.

Accession

PUBLIC DOCUMENTS

Public documents in a small library. Ione Armstrong. *Iowa Lib. Quar.*, J1.-S., 1914. p. 103-106.

Public documents for a non-depository library should be chosen with a view to the needs of that special library. Some of the single documents which are recommended to even the smallest libraries are: "Dictionary of altitudes," published by the U. S. Geological Survey; "Handbook of American Indians," published by the Bureau of American Ethnology; the "Special report on the diseases of cattle and cattle feeding," and "Special report

on the diseases of the horse," both published by the Bureau of Animal Industry; "Abraham Lincoln, James A. Garfield, William McKinley," a collection of memorial addresses delivered in Congress and published by Congress; also the "Statistics of public, society, and school libraries having 5,000 volumes and over in 1908."

The best and quickest way to secure documents is through your congressman or senator. When unnecessary bound volumes have accumulated in the library they should be returned to the superintendent of documents. This can be done free by sending to the local post office or to the superintendent of documents for mail sacks and mailing franks.

Public documents should be classified, cataloged, and arranged on the shelves like any other books, putting the smaller ones in pamphlet boxes, and the more important ones in pamphlet binders.

"U. S. government documents in small libraries," by J. I. Wyer, Jr., published by the A. L. A. Publishing Board, is perhaps the best aid in selecting documents for the small library. The A. L. A. Catalog, 1904, and the *Booklist* also have helpful annotated lists of public documents.

LOAN BOOK COLLECTIONS

The Danielson (Ct.) Public Library has reserved a shelf for books lent to the library by private individuals. These books will be loaned in the same manner as are other volumes. In many homes there are books that have been read by the family and may not be soon, if ever, read again. The owners do not care to give them away, but are willing the public library should have the use of them for a limited time.

Classification

DECIMAL CLASSIFICATION (DEWEY'S)

Some thoughts on Dewey. J. E. Walker. *Lib. World*, J1, 1914. p. 23-26.

The Dewey classification, as practically the first in the field, has now an international recognition of its symbols. Nevertheless, the writer criticizes the class Religion, in which there is no place for a general work on Christianity. The Literature classes are also criticized and some changes suggested. Throughout the scheme many subjects are insufficiently divided for English purposes, and expansion of certain sections is necessary before it can be satisfactorily applied.

Loan Department

PARCEL POST BOOK DELIVERY

The Queens Borough Public Library has put into effect in three of its branches a system of parcel post delivery. The idea was

derived from the *Bulletin* of the Washington Public Library, under the librarianship of Mr. George F. Bowerman, and his methods adopted *in toto*. The borrowers make a deposit of \$1.00 and all postage paid by the library and fines due are punched off on his card. Members return books at their own expense, sending a list of preferred books with their card for punching in a separate envelope by letter postage. The library retains a duplicate of the member's card so that the account is always the same. The member can have the unexpended balance returned at any time on request.

WITHDRAWN BOOKS

At the Rockford (Ill.) Public Library, whenever books are withdrawn and not replaced, the cards are removed from the catalog and the author cards are filed in the catalog room with the reason why the book is not replaced stamped or written on the card. This list was begun soon after the library moved into its present building, and has grown to considerable proportions now. It does not contain the titles of books discarded when the library was reclassified, but they may be found in the old printed catalog, which thus in a way supplements the card list. The list is often consulted when questions arise about books which have formerly been in the library, and it has settled many a controversy.

General Libraries

For Special Classes

NEGROES, WORK WITH

Good reading for negroes. I. The Louisville Free Library. George T. Settle. *Southern Workman*, O., 1914. p. 536-540.

A description of the work and resources of the Eastern and Western colored branches of the Louisville Free Public Library. The Western branch was the first of its kind in existence.

Good reading for negroes. II. A Memphis library. Cecelia K. Yerby. *Southern Workman*, O., 1914. p. 541-543.

A sketch of the colored school department of the Cossitt Library, established in September, 1913. The plan of work has been to visit the schools and find what class of literature each pupil is interested in. If he has no preference, an effort is made to select for him a book or magazine that will both interest and benefit him and tend to create an interest in other books. Weekly story hours have been held in one branch, with occasional use of the stereopticon. A branch has been opened in

rooms of the Howe Collegiate Institute, an institution owned and controlled by the negro Baptists of Tennessee.

For Special Classes—Children

STORY-HOUR

Suggestions for the beginning of a story-hour in the small library. *Grace Shellenberger. Iowa Lib. Quar.,* JI.-S., 1914. p. 100-102.

If the story-hour is a new adventure, one of the first requisites is a good announcing. A bulletin in a conspicuous place will catch the eyes of most of the children who frequent the library, but an announcement by the teachers in the schools will interest more. Still better results will follow if the librarian makes the announcement herself in each room. The place for holding the story must be such as to contribute to a cozy intimate atmosphere. When it is necessary to use the assembly room, use only a part of it, one corner, perhaps. Some very successful story-hours have been conducted with children sitting on the floor. The time, which is an individual problem, when once decided, should be an established rule. The story need not be an hour in length. A half hour is long enough as a regular thing. The preparation of the story requires a good deal of time. If the librarian is so busy that she cannot do it wisely, it is often possible to find someone who will gladly share the work. It is not fair to the children to let some person who has no knowledge of what the children like and need in the matter of stories, take this opportunity to secure the practice she desires. The purpose of the story-hour is not only to give the child keen delight, but to arouse interest in books which have heretofore been sealed to him.

ENCOURAGING GOOD READING

The librarian at Pottsville, Pa., has published a list of books on different countries, in the shape of a folded bookmark, for children. The list is entitled "Travels via the rocking-chair," and every continent is included. A roll of honor is being kept, and on it is placed the name of every child that reads one book on each country listed. If all the books (45 titles) are read, a star is put against the child's name on the honor roll.

School Libraries

SELF-GOVERNMENT IN A HIGH SCHOOL LIBRARY

In a letter to the *LIBRARY JOURNAL* Miss Lucile F. Fargo, librarian of the North Central High School in Spokane, Wash., describes the system of student government in operation there. She says:

"The plan of student self-government which is in operation in the North Central High School Library is very simple. A 'library board' composed of eleven students elected from the three upper classes for a term of one year is the backbone of the system. The board elects a president, a secretary, and a reporter for the school paper from its own number, and makes all rules governing conduct in the library. It appoints two monitors, a girl and a boy, for each period of the school day. It is the duty of these monitors to keep order and to check attendance, and it is their privilege to suspend from the library any student who infringes upon the rules of the board. A student thus suspended is required to appear before the board at its next regular meeting together with the monitor who suspended him. Each states his case, after which both are sent from the room and the board passes judgment and inflicts such penalties as it sees fit. The secretary of the board keeps a card record of all cases and sends out all necessary notices to session-room teachers. Members of the board take charge of the library during the noon hour in the absence of the librarian, and also maintain order before and after school.

"The policy of the principal of the school and of the librarian and teachers concerning action taken by the board is distinctly 'Hands off.' Unwise rulings have been extremely rare.

"The arguments for such a plan are the ones usually advanced in favor of student government elsewhere—the value of student responsibility, training in the ways of good citizenship, the development of a spirit of co-operation and helpfulness. But student government in the library has further advantages. It leaves the librarian free to do real library work—to visit classes and to hold them; to give herself wholly to the student who needs her. In the North Central High School a small room adjoining the library is used as a stack-room. With the knowledge that the order in the library will not be affected by her absence, the librarian is able to make of this stack-room a consulting room where debaters, teachers, or pupils in need of special help may be met and talked with freely.

"The business of a school librarian takes her into every part of the school—even to the janitor's quarters. Her helpfulness depends very largely on her freedom. Any plan which provides such freedom is useful. Student government has gone a long way towards doing this in the North Central High School. It is a success."

Reading and Aids

Courses of Reading

READING CIRCLES

The organization and conduct of reading circles; adult and junior. William J. Harris. *Lib. World*, S., 1914. p. 69-73.

The success of a circle depends very considerably upon its leader. The leader selected should be well read and broad-minded, and have infinite tact and courtesy. The choice of the subject is of great importance; subjects of little depth or authors of small reputation are to be avoided.

The method of conducting the adult reading circle of the Bromley Public Library is described and specimen programs given. A short biographical essay always opens the meeting, followed by selected readings from the author chosen, and the evening closes with a 10-minute critical essay and a general discussion. Junior circles are also conducted. Five scholars each from six schools are selected by the head teachers, scholars who would most benefit by the training in reading which the circle affords. The children meet once a week. The procedure differs somewhat from that of the adult circle in that the leader generally does all the reading. The attendances average 28 out of a possible 30 members.

Aids to Readers

BOOK SELECTION HELPS FOR READERS

Various suggestive lists of books, some of them compiled in the New Haven Public Library, and some taken from the bulletins of other libraries, were placed in a scrap-book belonging to the library last spring. This book is kept in the open shelf room and has proved useful both to the public and the library attendants. Another plan to aid the general reader in the choice of books was carried out during the fall by pasting a descriptive and critical annotation in the front of each book in the permanent collection of "Some of the best novels." Annotations were also placed in the current additions of new books in all classes, so far as the material for such annotation was obtainable from the *Book Review Digest*. The reference department has done the work connected with the annotation of new books.

Character of Reading in Libraries

FICTION.

The place of fiction to-day in libraries. W. C. Berwick Sayers. *Lib. Assn. Record*, Jc., 1914. p. 273-280.

(1) The novel in intrinsic importance occupies as high a place as any form of unimaginative literature, and its proper representation in libraries is a just public requirement; (2) a decline in the reading of fiction is possibly a reflection of a decline in other valuable social qualities, and is not necessarily to be applauded; (3) a constant sifting process is necessary in which the law of demand shall be allowed to operate naturally, so that all novels for which public demand is sufficient to encourage publishers to issue them has ceased, shall disappear; (4) in selection, the new shall not be superseded by the old simply to maintain the completeness of catalogs; (5) a new terminology for non-fiction and a classification of fiction itself are desirable.

Bibliographical Notes

Mr. William Beer, librarian of the Howard Memorial Library of New Orleans, has had reprinted from the *Pennsylvania Magazine of History and Biography* a list of material for Louisiana genealogy which he had compiled, and which he will be glad to distribute to genealogists, on request.

"Good stories for great holidays" is the title of a new book by Miss Frances Olcott, which the Houghton Mifflin Company are bringing out this autumn. The book contains 120 stories, gathered from various sources, suitable to be read or told to children in celebration of seventeen of our most important holidays.

Mr. John Cotton Dana has recently had published by the Elm Tree Press of Woodstock, Vt., a little book called "American art: how it can be made to flourish." Only 200 copies were printed, and the type distributed. Mr. Dana calls it No. 1 of the Hill of Corn series, and plans to print other small books in similar style, at \$1 each.

The Wisconsin Free Library Commission has been sending out to librarians in the state a mimeographed list of children's books suitable for Christmas purchase, supplementary to the list printed in the *Wisconsin Library Bulletin* in October, 1913. Both lists were prepared by Miss Marion Humble, instructor in children's literature in the Library School of the University of Wisconsin, and include both inexpensive and finely illustrated editions.

A new edition of Gilbert O. Ward's "Practical use of books and libraries" has been brought out by the Boston Book Co. The chapter on Reference books has been con-

siderably enlarged and that on Magazines has also been revised to bring it down to date. Many minor changes have been made and a list of abbreviations commonly found in books or in library catalogs has been added, increasing the usefulness of the book to one inexperienced in the use of library tools.

The free public library of Jersey City recently published three pamphlets describing the government of the city, county, and state in which the library is located. The publications have been prepared primarily for the use of the schools and are brief and elementary, but more advanced students will find them useful. Although dealing only with local conditions, they have considerable interest owing to the fact that one of the pamphlets describes the operation of commission government in the largest city in which it has been introduced, and the other explains the government of a typical New Jersey county. The titles of these latest monographs published by the library are "Brief outline of the government of New Jersey," "Brief outline of the government of Hudson county," and "Brief outline of the government of Jersey City."

The *Library Miscellany* for February-May, just come to hand, devotes a large part of its English section to affairs bibliothecal in America. There is a long descriptive article on the Library of Congress, with exterior and interior views; a biographical sketch of Andrew Carnegie, with portrait, and a summary statement of the various funds he has established; a description of the unusual collection of Biblical manuscripts contained in the Library of the Jewish Theological Seminary, in New York city, and also of the library itself; short articles on the instruction given in American schools and colleges on the use of libraries, on the traveling libraries of the New York Public Library, and on the training of American school children in the art of reading. There is in addition a "Survey of Marathi literature," concerning which very little has been written in English; a report of the first Andra Desa library conference; a description of the Mackenzie collection of Oriental manuscripts in Madras; and an account of the unveiling of an equestrian statue to the Maharaja Gaekwar of Baroda, the patron of libraries in India.

"The literature of the war," which was first printed in the *Bulletin of the New York Public Library* for August, was reprinted with additions, in November. It is a running comment on about a hundred and forty of the books, old and new, which have a direct bearing on the present struggle in Europe.

a special purpose. We are trying to ascertain the average practice of libraries in shelving typical forms of literature, books dealing with combinations of subjects, books serving diversified purposes, books revealing definite influences, or disclosing tangible factors, in such a way that the result represents a logical and purposeful organization. In order to do this, we librarians have made a study of the various schemes proposed for the philosophical organization of human thought and effort, and our study has been applied to the arrangement of libraries in a number of ways. Dr. Dewey, Mr. Cutter, Dr. Hartwig, Mr. Martel, and several others, have each proposed definite schemes for a fixed localization of books. But an arrangement of subjects in logical order is one thing, its application is another. No system of classification devised and in actual use gives more than an indication of what *may* be done in the placing of books in a library. The committee now at work attempts to define what actually is done, and presumably should be done, by way of actual practice.

I quite agree with the reviewer that it is highly necessary to correlate the three classification systems now more or less generally used (the Decimal, the Expansive, and the L. C.). But all of them are still in a state of real or projected development and amplification. It is much more necessary for us to record what is done in adjusting the classification scheme, whatever it be, to the books as we meet them in our work, day by day. For classification certainly means more than locating books according to their obvious topics and intended use. It means a mastery of subjects and their forms in literature, a general knowledge of their relations, an intelligent view of the whole field of literature, and a capability of effecting a historical continuity in the application of the library's practice to these ever-changing conditions. Thus human anatomy in the past was oftentimes termed anthropology (not in the sense of ethnology), and efficiency and scientific management were known under other names previous to their present development. Should material on the smoke problem be shelved with municipal government, public hygiene, or sanitary engineering? Should books on the building and sailing of ships be shelved prevailingly with one or the other topic? Should the documents from adjutants general and treasurers of state be placed with state documents or respectively with military science and public finance? Should military science or should history prevail for description of battles? Should doctors' dissertations be shelved col-

Communications

THE PROPOSED CODE FOR CLASSIFIERS

Editor *Library Journal*:

The A. L. A. Committee on Code for Classifiers has sent out to some fifty librarians and classifiers mimeographed copies of the data collected by its chairman, for the purpose of eliciting comment and criticism.

The undersigned, as an active classifier and a member of the Committee, submits the following comments on the review which was printed in the LIBRARY JOURNAL for November:

It seems to me necessary, and quite in keeping with the purpose of the A. L. A., to attempt an organization of the general practice governing our work, irrespective of the system used and of the demands of libraries serving

lectively or individually? Should periodical publications on special subjects issued by universities be treated as periodicals or as university publications? Should commercial geography be considered prevailing commerce, or geography? Should Christian science be shelved in philosophy, religion, or medicine? Should biographies of medical men be shelved in general medicine or with the possible specialties (e.g., surgery, ophthalmology)? Is military aeronautics to be shelved with military science or with aeronautics? What geographic subdivision should collect material designated as oriental?

In the John Crerar Library, we find it useful to hold meetings known as council meetings, its members being the chiefs of staff and its leader and moderator the librarian, which body debates and decides all important problems of procedure of the kind exemplified above; the decisions are recorded and kept on file. Decisions of this kind are absolutely necessary. It is necessary to decide what is best, on general principles, to do with the subject of general biology including, as it does, the principles of animal and vegetable forms and expressions of life, in some cases human physiology in addition. It seems best, for general purposes, to let zoology prevail for animal and vegetable physiology, and to let human physiology prevail for books containing human and animal and vegetable physiology.

A library certainly must define its practice in regard to combinations of subjects. Thus, the D. C. allows for the classification of diseases of eye, of ear, of nose, of throat. What is to be done, however, with combinations of two or more of these subjects? This procedure, based upon experience in the purpose for which the books in question are used, must be recorded, and can be, and should be, recorded, irrespective of the system of classification. If this is done, and done well, the result will tend to eliminate from the practice the will or preference of individual classifiers.

It is true that sometimes the decision means a choice between two or more equally logical, or practical, possibilities, and that one decision may be as good as the other. But the decision, whatever it be, should be recorded so as to be readily applied when a repetition occurs.

Classification implies adjustment for a purpose. While we are not concerned with teaching to the public the philosophic principles of book arrangement, we certainly owe to the public to be consistent in what we do. I know of some two hundred publications on the influence of Danish upon the English form of speech; if these were dribbled into a library,

we must be certain of our procedure,—whether to shelve with Danish or with English philology. I can conceive of a library coming into possession of about four hundred publications on the movements of irritability in the Mimosa. As a classifier, I must know whether the practice of the library is to shelve such matter in vegetable physiology or in systematic botany. And since my successor in office may face such questions by hundreds, it is necessary to formulate what is actual practice.

I quite agree that it is imperative to express in the catalog, rather than on the shelves, the library's resources on a given subject. I reserve the opinion, however, that definite forms, or relations, or combinations, should receive a treatment that is recorded for the librarian's information. I believe that unless this is done, Pilot charts are apt to land one day in the map collection, another day in navigation, and if mounted and bound in book form, perhaps the third day along with local travel and description. Examples might be multiplied. I hope the ones quoted will help to show that the committee's work deserves support and, if continued on the lines indicated by Mr. Merrill, must lead to increased efficiency of service.

Very respectfully,

J. CHRISTIAN BAY,

*Medical reference librarian and
supervising classifier.*

The John Crerar Library, Chicago.

WHAT IS TO BE THE REPRESENTATIVE LARGE LIBRARY OF THE FUTURE?

Editor Library Journal:

In the beginning of his valuable article on the "Future development of college and university libraries," published in the November number of the LIBRARY JOURNAL, Prof. A. S. Root states that it is necessary "to establish a 'base line' from which we can measure the possibilities of the future." From the 1876 and 1908 reports of the Bureau of Education Prof. Root gathers statistics of the increase in the number of scholarly libraries from which he draws the conclusion that "This remarkable development makes it evident that in the future this type of library (devoted to the interests of scholarly study) is to be the representative large library." The facts cited by Prof. Root as supporting this contention are these: of the 18 libraries in the United States that had more than 50,000 volumes in 1876, two only were college

libraries. In 1908 there were 54 college and university libraries that exceeded 50,000 volumes, and if, says Prof. Root, to these are added the libraries of professional schools and societies the total aggregates 84, or about 40 per cent of the 210 libraries having over 50,000 in 1908. Again adding to these the large reference libraries would bring the number of libraries devoted to scholarly research up to about 50 per cent. of the total number of large libraries in the country. That is, indeed, a remarkable development, but will the facts support Prof. Root's contention that the library devoted to scholarly research is to be the dominant type of large library in the future. Let us examine the situation a little more carefully.

There were, it is true, only two college libraries included among the 18 large libraries in 1876, or about 11 per cent. of the whole number, and that number has increased to 54 out of 210, or an increase of nearly one-fourth or nearly 25 per cent., making a net increase over 1876 of 14 per cent.; but, on the other hand, there were only three public libraries among the 18 large libraries in 1876, or 16 2-3 per cent. of the whole, which number had increased to 69 in 1908, or nearly 33 per cent. of the whole,—a net gain of 17 per cent. as against a net gain of 14 per cent. of college libraries. But Prof. Root adds the libraries of professional schools and societies and the large reference libraries to the number of college libraries in 1908, thereby bringing the total increase of this class of libraries up to 50 per cent. Adding this class of libraries to the two college libraries which form the basis of comparison in 1876, we find there were six libraries in this class of scholarly libraries in 1876, or a percentage of 33 per cent of the large libraries of that period. The net gain of this class of library from 1876 to 1908 is therefore 17 per cent. and not 50 per cent., or exactly the same as the net gain of the percentage of public libraries to the whole number of large libraries from 1876 to 1908. It would seem, therefore, that honors are even as between the development of the large scholarly library and the large public library. State and federal libraries and subscription libraries, which might from some points of view very properly be classified with public libraries, have been omitted from consideration. The growth of all groups has been phenomenal, and that the figures presented afford no basis for a prediction as to future predominance in nowise detracts from the value of Prof. Root's exposition of the future needs and problems of college and reference libraries, but in the interest of the history of

library development, it has seemed worth while to set forth these facts.

JOSEPHINE ADAMS RATHBONE.

THE GERMAN BOOKTRADE AND THE AMERICAN BOOKBUYER

Editor of *The Library Journal*:

Dear Sir:—I am told that in the *New York Herald* an English bookdealer offers his services as European agent, "as it is possible that, owing to the present war, many libraries of public bodies who hitherto have been supplied by German agencies, have found their supplies cut off." I herewith beg to state that there is no interruption whatever of the relations between the German booktrade and the American bookbuyers, although, of course, an occasional short delay cannot be avoided. The regular mail service between both countries is kept up through the medium of neutral ports and all orders received can be filled as usual. Books and periodicals are sent either by mail or by parcel-post or by freight at the choice of the American customers.

As I think it to be important for most American libraries to know this fact, I would be obliged to you for bringing it to the knowledge of your readers.

Very truly yours,

OTTO HARRASSOWITZ

Leipzig, Oct. 21, 1914.

LOST AND STOLEN BOOKS

Editor *The Library Journal*:

I wonder if you or any of your readers could give me an idea of what may be considered a reasonable proportion of wastage in the way of lost and stolen books in a well organized open access library. This is a point which is of great importance to every library and the ideas of fellow librarians on the matter would, I think, be of interest to the profession.

Yours faithfully,

NEWTON M. DUTT,

State librarian, and reader to His
Highness the Maharaja Gaekwad.

Central Library Dept., Baroda,

Oct. 9, 1914.
