MOTOR BOATING

*Built for
extended coast-wise cruising*

ELCO Cruisers are suitable for use in all climates and in all waters. And they are thoroughly seaworthy. Many of them . . . even the smaller models . . . have made the entire coast-wise trip from Maine to southern Florida. These graceful Cruisers are real "homes afloat," being fitted with all the comforts and conveniences to be found ashore. Write for Catalog MG showing the latest standardized models. Sizes range from a trim 26-footer to a superb 62-foot Motor Yacht.

Start of 3 mile Free-For-All for outboards, at Manhasset Bay, August 22, 1926. *Flying Fish*, winner in foreground.

Flying Fish winner of Free-For-All outboard event at Gold Cup Races. Powered with a Big Twin. Time 18:68 m. p. h.

Baby Buzz V-1 winner of Baby Buzz class at Gold Cup Races. Also winner of 75 mile Outboard Marathon held August 15th.

Johnson Big Twin, 0 h. p. Weight, 85 pounds

Price \$195

Write for catalogue describing this motor and the *Johnson Light Single* and *Light Twin*, the lightest weight outboard motors made.

Again Johnson Wins at Gold Cup Regatta

AGAIN the speed, stamina and dependability of the Johnson Motor is proven in three outboard classics.

At the Gold Cup Regatta—*Flying Fish*, powered with a Big Twin won the Free-For-All outboard event at 18:68 m. p. h. In the one design class race, for Baby Buzz boats, *Baby Buzz V-1* won at a speed of 17:16 m. p. h.

Such achievements are remarkable—especially with the rough water existent during the Gold Cup events.

Another distinctive performance of the Big Twin was the winning of the First Annual Outboard Marathon Championship by *Baby Buzz V-1* at New York,

Aug. 15th. A speed average of 16 m. p. h. was made over the 75-mile course.

Just as consistent—just as outstanding—is the everyday performance of Johnson Motors, in the hands of thousands of satisfied owners.

Now!

Type IS-5

A New IMPROVED Impulse Starter

THIS new easy starting device was not hurriedly designed and rushed into production. More than two years ago the first sample was fashioned. Months of testing and experimentation followed. At one point after another it was strengthened and improved.

And laboratory bench tests were not considered sufficient. Hundreds of IS-5's were put into the field—in the most severe service to which an impulse starter could be subjected—and performance records carefully checked.

So, the IS-5 is not an untried device. Its superiority has been proven, and it is now offered for sale to all users of magnetos.

OUT of the heap of reverse gears built for boatmen—yachtsmen—fishermen—rises the Paragon. There it sits at the peak of the pile . . . solely because we build it to be bigger than its job.

We think of the fisherman whose living comes from his boat and say—"that man needs a reverse gear that is tough, strong and sturdy; he puts it to heavy use—give him a big margin of safety."

We think of the boatmen and yachtsmen with only a few precious week-end hours of

play and say—"two days a week out of the office shouldn't be spent over dirty, stubborn machinery—give them a gear that won't need petty repairs."

Whenever we say that, as we have been saying for 18 years, we must give that reverse gear a little better quality in the materials—a little better workmanship in the making. We can't cramp—we can't skimp.

But the policy is worth the practice. Every Paragon can do every job called upon it . . . and every boatman knows it.

PARAGON REVERSE GEARS

The Enclosed Type Paragon Reverse Gear

Keep your mind free for boating and forget such annoyances as filling up reverse gear grease cups and continually squirting in oil when you'd rather keep the trousers clean.

The Enclosed Type Paragon lets you do it. It is entirely housed in to prevent flying grease and for holding a long time supply of lubricant.

Incidentally it's an "Extra Quality" gear—built from the best materials and can be had in aluminum.

For motors without extended bases.

The Yoke Type Paragon Reverse Gear

It was this type of Paragon Reverse Gear that had run 16 years when it was last heard from—and still going strong. It was this type that served on Lake George for 15 years before it needed a single repair. It was this type that helped haul cargo up the Magdalena River down in South America for 12 hard years without requiring attention.

For long reverse gear life, look for it on the engines of leading manufacturers and ask for it when you need a replacement.

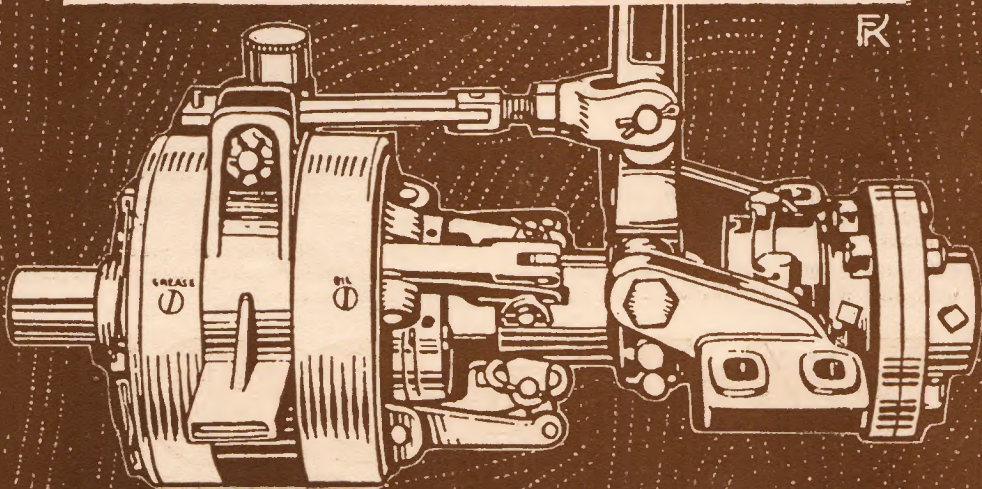

If you are interested, we have circulars giving more information. Write for them.

Tougher, *more* Enduring

This varnish made with hard fossil gums—used by leading boats in every class

FOR generations they have selected Edward Smith varnish—owners, masters, and the leading marine architects in the country.

They have chosen it because they have found that it combines the water and heat resistance of a fine spar varnish with unique durability.

The reason for this durability is easy to understand. For Edward Smith's Spar Varnishes are made with hard fossil gums—so hard that a temperature of 650 degrees must be used to melt them so that they will combine with oil.

This accounts for the fact, too, that these varnishes are peculiarly free from the deep hair-line cracks so characteristic of modern varnishes made with rosin or estergum.

Edward Smith's Deck and Bottom Paints, Non-fouling paints, Marine Enamels, etc.,

are all made with the same painstaking regard for lasting quality. They are made with a care not possible under ordinary quick commercial methods.

No matter what paint or varnish job you have, it will pay you to use or specify these products. Our booklet on marine paints may be helpful in selecting the particular paint or varnish for your need. A postcard will bring it to you. Address—Edward Smith & Co., Long Island City, N. Y.

*Sea Sleds run dry
in either smooth or
rough water.*

Safe, Comfortable, and Completely Equipped,
—with all the Speed You Need!

SEA SLEDS navigate with equal facility and comfort either deep water or shallow, weed-choked waterways. Their patented construction throws the bow wave beneath the centre of the hull, which prevents stern squatting and raises the entire craft a few inches. This exclusive feature of Sea Sleds enables them to operate at full speed in shallow waters where boats of other design must literally "poke along."

Owners of Sea Sleds are able to enjoy the quick and comfortable touring of waterways not

hitherto navigable without vexatious delays.

Sea Sleds can be delivered immediately.

Model 23 is medium-priced and of moderate passenger-carrying capacity, embodying all the distinctive features of the larger and more expensive Model 28.

Model 28 is the De Luxe Sea Sled with greater passenger capacity and speed than its smaller brother. Illustrated data and specifications will be cheerfully sent and demonstrations arranged upon request.

New York

The October issue of MoToR BoatinG, coming as it does at the close of the busiest and most enthusiastic racing summer, might almost be termed a Racing number. There have been so many regattas of national importance that it has been a problem to crowd them all into the issue, and still leave space for other good things. November MoToR BoatinG will also contain reports of races. There are still several big regattas on the program, and prominent among these are the President's Cup Regatta at Washington, D. C., and the regatta of the Maryland Yacht Club at Baltimore. Both of these regattas will be fully reported in the next issue.

Bird's Eye View
of Superfour

The Greatest Power in the smallest space

15-30 H. P. — 20-40 H. P. — 50 H. P.

Who would have believed it possible! In a compact space measuring $17\frac{1}{8} \times 47\frac{7}{16}$ inches, only 5 times larger than this bird's eye outline of Superfour — is a motor weighing only 425 lbs., complete with reverse gear and electric starting, lighting and ignition system (less battery) — and capable of the performance of many motors twice and three times the weight and far greater in price.

What is now accomplished in the new Superfour, is lifting the name Universal, always famous, to a new level of distinction.

Superfour's startling new results in compactness, light weight, great power and great speed are unquestionably revolutionizing all previous conceptions of performance in its class.

Choose from Three Models

- Model GLS — 15-30 HP. Medium speed type, complete as described above. Weight 425 lbs. Price \$545
- Model GLH — 20-40 HP. High speed type, same equipment as GLS. Weight 425 lbs. Price \$595
- Model GLR — 50 HP. Special racing motor for 151 class. Weight 300 lbs. Price \$625, (only \$12.50 per horse power).

Models GLS and GLH can be furnished with Silent Herringbone Gear Reduction Drive for powering cruisers and heavy boats. All prices F. O. B. Oshkosh, Wis. Write for Literature.

BIG BROTHER TO FLEXIFOUR

GAR WOOD

Still Speed King

The Veteran Commodore After Several Years Retirement Comes Back with Three New Hydroplanes and Establishes New World's Records—French Challenger for Harmsworth Trophy Proves a Failure

AMERICA has again demonstrated her supremacy in speed on the water. Again Commodore Gar Wood has proven that he is still speed king of the world and in a class by himself, his boats finishing, one two and three in the recent races at Detroit for the British International Trophy, commonly referred to as the Harmsworth Trophy. The French challenger, owned by Henri Esders of Paris and driven by T. A. Clark was not able to furnish real competition for the Wood boats and withdrew at the end of the first 5 mile lap of the first 30 nautical mile heat. She did not start in the second heat which was shortened to 10 miles.

Briefly told, the above is the complete story of this year's race for the famous International Trophy which has not been raced for since 1921 when the English challenger Maple Leaf VII came over to try her speed against Commodore Wood's older boat, Miss America I and Miss America II with no better luck than the French challenger had this year. The results of the two last attempts by the Europeans to take the championship from America and Commodore Wood have conclusive-

ly proven that much development work will be necessary on the other side of the Atlantic before there can be much hope for success.

In every respect, including hull design and construction, engines and their installations, seaworthy qualities and workmanship, the American boats were far superior to the foreign boat. In fact the latter was so far behind in every way that it is hard to notice any improvement in foreign boats since the days when the older Maple Leafs and Pioneer used to race on Long Island Sound 12 or 15 years ago and show their sterns to the American craft. One wonders at the judgment of the French in going to the great expense and time required in shipping such a boat to America when they must have known the speeds of our boats were many miles in excess of that which the French challenger showed.

The Detroit Yacht Club, under whose auspices the races for Harmsworth Trophy were held, as it was this club which won the trophy in 1920 at Cowes, England, proved wonderful hosts to the French representative and his party. From the time that the France-Excelsior and

The crews of the three Miss America. Left to right: Phil and Louis Wood, driver and mechanic of Miss America III, Orlin Johnson and Gar Wood, mechanic and driver of Miss America V and Joseph Kinney and George Wood, mechanic and driver of Miss America IV

her builder and driver, T. A. Clark together with Mrs. Clark and his two mechanics arrived in New York on the S. S. France of the French line, nothing was left undone to make their visit to this country enjoyable. The party was met at the pier upon its arrival by a group of members of the R. C. R. C. under the leadership of Ira Hand and from the moment they stepped ashore until they reached Detroit, the New Yorkers kept them busy every minute. Every detail in connection with the transfer and re-shipment of the racing boat by rail to Detroit was arranged by Howard W. Lyon without expense or trouble to the visitors. When the party arrived at Detroit, they were met at the station by a delegation of officials and members of the Detroit Yacht Club, headed by Commodores Stafford and Schantz and arranged by "Eddie" Edenburn. They were escorted through the streets of Detroit by a special escort of police and taken to the Mayor of Detroit who officially welcomed them and gave them the keys to his city. From this moment until after the races, the Detroit Yacht Club and R. C. R. C. arranged every kind of entertainment for them as well as made provision for their race boat's needs. Everything was in such contrast to the reception which the Americans and Canadians received in England earlier this summer when they went abroad to race for the

Miss America IV, with George Wood at the wheel

Photographs by M. Rosenfeld

France-Excelsior, the French challenger owned by Henri Esders of Paris and driven by T. A. Clarke

Duke of York Trophy on the Thames that it must have impressed the visitors most favorably.

The American team consisted of three new boats, Miss America III, Miss America IV, and Miss America V, built by Commodore Wood especially to defend the Harmsworth trophy. Three finer boats in every respect have never floated. The three boats were practically identical in every respect. They were about 30 feet in length by 8½ feet beam and each was powered with 2-12 cylinder super-powered Liberty

motors placed well aft in the hull. The shape of the underbody was slightly different, yet in all other ways the hulls and power plans were identical. Hyde wheels were used, Miss America III using one 20 x 40, Miss America IV, 21 x 38 and Miss America V, 21 x 37. Delco starting and ignition was used in all the boats.

France-Excelsior was somewhat longer than the American boats and very different in underwater design. Her power plant consisted of 2-16 cylinder motors, placed forward over the forward step, the after plane not being flat or slightly V like the American boats but convex in form. The bow of the French boat closely resembled that of a displacement boat and (Continued on page 144)

The FIRST East

A fair sample of the difficulties of navigating the schooner Nanuk through the ice around Herschel Island.
Heavy ice floes frequently must be blown up with explosives

of Barrow

By Tom White

*A Realistic Story of the Perils
and Dangers Met by Hardy
Navigators of the North in Their
Annual Trading Voyages*

IT'S something of a race, especially in point of distance, from the ports of the West Coast, up the Pacific, through the Bering Sea, around the jagged, barren coastline of Alaska, into the Arctic Ocean and as far east as the mouth of the Mackenzie. But notwithstanding that thousands of miles to be covered a large part of which is negotiated with no small amount of hardship and very real danger, the furs are there, and to the trading skipper who brings his vessel first into the tiny, remote ports of the Far North go the bulk of the choicest fox furs to be found in the Northland. With the coming of spring and the break-up of ice in the Polar seas, the able little 280-ton Diesel-powered schooner Nanuk year after year has headed out over the course, her commander, Captain Pederson, firmly resolved to be the first east of Barrow. And Nanuk has won this long-winded race enough times to have claimed for her own a suitably engraved loving-

The furnace on the forward deck where whale blubber is tried out

cup. But no such trophy is offered the winner of this marine super-classic; however, he has the pick of the furs, for this race, be it known, is entirely a commercial affair, just as much so as the expeditions of our forefathers when they set out each spring to barter guns, clothing and trinkets with the Indians for their pelts of mink, otter and beaver.

Technically, to the skipper who takes his vessel around the tip of Point Barrow on to the roof of the world and is the first to enter that region which yields the richest cargoes of furs, goes the title that season of being The First East of Barrow. What these men don't know of the tricks of navigation in the ice-choked waters of the polar regions whose shores bear grim testimony of the danger of working through the ice, is scarcely worth knowing. First of all they must know their ship, and as they are familiar with the streets of their home town they must know the treacherous

Esquimo belles come aboard with their men folk to select provisions

the streets of their home town they must know the treacherous

Arctic currents, some of which flow at the rate of five or six knots. In addition to all this they must have the uncanny ability of picking a course through densely packed seas of ice, estimating now and then the probable under-water size and the shape of an ugly looking berg from the jagged dimensions above water.

Working through the ice is a pretty tough job both for men and boat. But as for Nanuk,

A surprised walrus who was pushed off the ice floe and came up in front of the whale boat

she is quite capable in almost any sort of a pinch. She proved this beyond any doubt in 1924. Barrow, as the sailors call Point Barrow for short, had been passed and her course laid for Herschel Island. Three or four miles astern of her—the race had been close that year—were the schooners Arctic and Lady Kindersly bound for the same port, which is a sizeable settlement of natives and missionaries. The three vessels were finding it pretty hard going, due to the Arctic ice—the clear, blue kind, quite as dangerous as a rock, especially when grounded in shoal water. Fearful odds were against them, but they plugged along heroically, each vessel trying her level best to find a way out or through the grinding mass.

The battle was but half over when Nanuk found she was making her way alone. The other two had to give up the struggle. The ice was too much for them.

(Continued on page 74)

The First Outboard Marathon

Small Speedsters Furnish a Fine Day's Racing in Covering a Seventy-Five Mile Course on the Hudson River

V. Withstandley, the winner in the Free-for-All Class, who covered the 75 miles in 4:46:05 or 15.7 m.p.h.

SOME time ago a casual conversation among several people interested in outboard motor racing, resulted in some discussion as to the possibilities of running a race for boats of this kind on the Hudson River, from Albany to New York. Strange to say the subject was taken up more seriously, and finally it was agreed that the 135 miles from Albany to New York were entirely too much. Discussion modified the length to 75 miles, with a proposal to run from Poughkeepsie to New York,

and this was finally modified so as to have a race start and finish in New York City. Members of the Colonial Yacht Club took an active interest in this event, and it was through the cooperation of this club, that it became possible. As finally arranged it was agreed to start the race from New York and run up the Hudson River to a point near Bear Mountain, and return again to New York, a distance of 75 miles. Plans were made to carry out the necessary details, and

GREENWICH FOLLY

*Famous Trophy Remains in The East Despite
—Gold Cup Regatta One of The*

By F. W.

Summary of Results
on page 122

THE twenty-fourth race for the famous American Power Boat Association Gold Cup, was run in Manhasset Bay on August 21 and 22, over a three mile course, and in three heats of 30 miles each. The scoring for the trophy was done on the point system, and resulted in a win for George H. Townsend's fast runabout, Greenwich Folly, which ran up a total score of 978 points. The next nearest competitor was Shadowvite, owned by Carl G. Fisher, and driven by Victor Kliersath, whose point score totaled 944. This briefly is the story of the race. Many incidents and events

combined to make this Regatta one of the most brilliant and successful ever conducted for this famous trophy. Beginning back in 1904, the Columbia Yacht Club of New York presented this trophy for competition and the first winner was the motor boat Standard, which covered a 32 nautical mile course, at a speed of 23.6 statute miles per hour. In each succeeding year, the name of a new winner was engraved on the medallions around the base of the trophy, until the speeds had steadily climbed to 70 m.p.h., which was achieved by G. A. Wood, with his hydroplane Miss America, in the eighteenth race at

Baby Watercar, a challenger from Detroit, entered by the Dodge Bros. Dealers Association, and driven by W. D. Morton

Most Successful Ever Conducted*

HORENBURGER

Detroit in 1920. Between 1921 and 1922, the Deed of Gift for the trophy was modified, so as to make the competition open to a displacement type runabout, with engines not to exceed 625 cubic inches, and ever since then the races have been with boats of this type. The earliest record for these boats was 40.6 m.p.h., established by Packard Christcraft, and again the speeds have been mounting slowly and steadily, until this year with engines of 625 cubic inches, a high speed record for one

lap was established at the rate of 53.58 m.p.h., which can be credited to Imp, owned and driven by Richard F. Hoyt, while the best time for a 30 mile lap must be credited to Baby Bootlegger, driven by Colonel J. G. Vincent, and owned by Caleb S. Bragg. This time was 50.53 m.p.h., and is 10 m.p.h. better than the winner's time four years ago.

Photographs by M. Rosenfeld

Imp, Richard F. Hoyt's Gold Cup racer, powered with a Wright marine engine established a record of 53.58 m.p.h. in the first heat

Impshi, another Dodge Bros. Dealers Association craft, which tried to take the Gold Cup

Miss Columbia hot on the heels of Shadowvite, rounding a turn on the course

Together with the competition for the Gold Cup, other events had been provided on the program, to keep the immense spectator fleet thoroughly thrilled. There were a series of heats for the very popular little Biscayne Baby boats, which it will be remembered are 20 foot runabouts, all powered with 100-hp. Scripps engines, and all exactly alike. These boats competed in two heats on each of the two days of racing, and since their speeds were all close to 40 m.p.h., the competition between them was keen and exciting.

The racing on Sunday was enlivened by the races for the Dodge trophy, which was handled in four heats of 12 miles each, in which several of the Gold Cup boats also tried to win. The winner is determined by the boat which wins the first four heats, and since four heats were taken in succession by Rowdy, the fine boat built by the Purdy Boat Works for Carl G. Fisher, and driven by Victor Kliesrath, there was never any question as to who the winner was. In addition the second day's racing completed the four heats in the Biscayne Baby class, and took care of two outboard motor events. In the Biscayne Baby class, seven boats competed in the four heats, and three of these were won by T. Pratt, driving boat number 27. The third heat was won by R. Gamble, in boat number 25, so that the total point score for Mr. Pratt was 1,456, with second place going to J. Rutherford, boat number 26, with a total score of 1,398. The winner's best time for a single lap was 40.67 m.p.h., while

the best time for any one boat was 40.10 m.p.h., also credited to the same boat.

The outboard races provided a Free-for-All class which were to race three miles, and a Baby Buzz class, which were to race nine miles. There were seven starters in the Free-for-All class, and amid a great roaring of these little engines, V. Withstandley was successful in driving his boat Flying Fish to victory at a speed of 18.64 m.p.h. In the Baby Buzz class, there were thirteen starters, and V. Withstandley again proved the winner in this class, with a speed for the course of 17.18 m.p.h.

The Gold Cup Regatta this year was conducted under the auspices of the Columbia, and Montauk Yacht Clubs. These two clubs handled all of the many details of the racing, and provided the finances to make the contests successful. Entertainment of the visiting yachtsmen was taken care of by the several clubs in Manhasset Bay, notably the Manhasset Bay, Port Washington, and Knickerbocker Yacht Clubs. The cruiser races, which took place earlier in the week, also resulted in a large delegation of cruiser racing followers, assembling in Manhasset Bay, and the Colonial Yacht Club of New York, despite the fact that it has no yacht club house in Manhasset Bay, had engaged quarters and established headquarters where the cruiser owners gathered and discussed their own little problems.

During the three heats of the Gold Cup race, the interest and enthusiasm of the

BROOK II

*Commuting by Motor Yacht One of
The Most Pleasant Ways of
Going To Your Daily Tasks*

The fast express commuter Brook II was recently put into service by Percy R. Pyne, and makes the daily run between Glen Cove and New York in quick time. Brook II is the successor to the earlier Brook, and is universally admired

She was built from designs by Tams & King at Julius Petersen's yard at Nyack and is 58 feet in length. She is powered with two six-cylinder Sterling Dolphin engines of 235 h. p. each, which drive her 27 miles without effort

Comfortable quarters are provided for the owner and crew, while the construction is high class throughout. Ample fuel capacity is provided to give a large cruising radius. She carries a Delco set, and Frigidaire ice machine

Up and Down GLEN CANYON *of the Colorado*

The Elements Take a Hand in Obstructing the Passage of the Canyon — Cloud Bursts and Cyclones Liven the Day for the Crews of the Outboard Driven Boats on Their Difficult Journey

By Lewis R. Freeman

Author of "In the Tracks of the Trades," "Down the Yellowstone,"
"By Waterways to Gotham," etc., etc.

Part III

THE condition of our outboard motors at the end of their first day's work in the abrasive torrent of the Colorado was fairly encouraging. The pump of my Elto had become a total loss, of course, but this had been expected and provided against. In surviving something like seven hours of continuous running, indeed, the hard-worked little plunger had lasted twice as long as experienced old Tom had given it. Even so, however, it had functioned only from a third to a tenth of the time similar pumps had served me on

the Missouri the previous summer, and The Big Muddy is locally rated as the most destructive stream in the country on the engines of craft navigating its heavily silted waters.

It would seem to be clearly established that, for the quantity of scouring media carried in suspension, the Colorado knows no near rival in any part of the world. There are many rivers that are just as opaque to the eye in seasons of high water, such as the Yangtse and the Hoang-ho of China. There are many, also, like the

Mississippi, La Plata and the Nile, which have built out more extensive deltas from the earth carried seaward by their currents. But the soft loess which builds up the bottom of the Hoang-ho until it breaks its dikes in floods that have won for it the name of China's Sorrow is as soft as flour compared to the abrasive grits which the Colorado has scoured from the gneisses, quartzes, porphyries and sandstones of the desert mountains through which it has worn the most profound of the world's great gorges. So are the silts which have built up the rich loams of the Nile and Mississippi deltas.

Only the Indus and the Brahmaputra run through series of gorges comparable to those of the Colorado, but the geological formations through which these great Himalayan streams have ground their way are not of a character to yield to the scouring action that has turned the Colorado into a water-mill which grinds as slowly but as surely as the proverbial Mills of the Gods. I have boated on the Indus at several points between Leh, in Ladakh or Little Tibet, and its mouth, though never with a motor. In appearance, at least, its comparatively clear water threatened little of the abrasive destructiveness of that of the great river of our Southwest.

The astonishing way in which the river had literally gobbled up the pump of my Elto could not but arouse apprehension as to what it would do to the rest of the motors. The plunger cylinder proved to be scoured so thin that it could be crushed between the thumb and finger when it was removed, and on one side it had actually worn through. The gears, of course, were the parts for which we had the most fear, and on this point Tom's experience of the previous year was not very reassuring. He had had fairly steady service out of the same three Evinrudes we were now using, but frequent replacements had been needed even though the work had been with lighter loads than those we were now trying to carry, and against a less powerful current.

The foot of Glen Canyon with the Vermilion Cliffs and head of Marble Canyon in distance

Before starting out on

Organ Rock, near the San Juan

the present trip these three veteran outboards had been completely overhauled in the Los Angeles shops of the Southern California Edison Company, from which they had been borrowed. A full set of new parts for each motor had also been provided, including a number of gears, but the box containing these was among the several things which had gone astray on its way to Flagstaff in the confusion of the railway strike pre-

vailing at the time of our departure.

That these three old Evinrudes, with one season of annihilative work on the Colorado already to their credit, could stand a hundred and fifty miles of a grind which would get harder and harder every day as the fall of the river increased the swiftness of the current and the roughness of the rapids, seemed almost too much to hope. In the words of old Tom, there was nothing to do but trust in the Lord and keep the gears greased.

With the Gordian Knot of pump difficulties cut by rigging a can-and-dipper arrangement for cooling the cylinders of my Elto, and with plenty of spare parts in reserve, my own worries were rather on the score of a disabling if not disintegrative collision with the bottom or sides of the gorge of Glen Canyon.

We ran in good luck all morning of our second day, and must have put over six miles of winding canyon behind us before tying up for lunch in the deep pool of clear water at Wa-weap. Standing squarely across the mouth of the creek and forcing it sharply to the right in finding a channel to the river, is Sentinel Rock, one of the most distinctive and striking landmarks to be found anywhere on the Colorado. It consists of a slender pillar of red sandstone, scarcely thicker at its base than at its pinnacle, two hundred feet above. It had once stood as the apex of the main cliff, and has probably been reduced to its present graceful proportions as a consequence of continual encroachments upon its base by both the stream and the main river. So precarious appears the position of this sliver of obelisk athwart the course of the sometimes torrential Wa-

weap, that one wonders how it can possibly survive the next spring flood, or even the run-off of the next cloudburst on the plateau above. Doubtless Powell thought the same

thing; yet the photograph taken on his second expedition of fifty years ago shows a profile of the lone sentinel apparently quite identical to that in my view of four summers ago. It was Powell, by the way, who gave this striking monument its singularly

Lute watching for duck from the bow of his boat

Sentinel Rock at mouth of Wa-weap, Glen Canyon

appropriate name. He also applied the name of Sentinel to the creek whose mouth it guards, but somehow the picturesque Indian designation seems to have refused to be dislodged.

We were speculating upon the possible effects a cloudburst-wave rushing down Wa-weap would have on Sentinel Rock when, by a somewhat remarkable coincidence, a rumble of sudden thunder and the flare of hidden lightnings signalled the advance of an unseen storm of considerable force. Tumbling over one another like scuffling bear cubs, the black, water-swollen thunder-heads came rolling up the gorge, blotting out the light of the sun-bright ribbon of the rim-framed sky.

Muttering something about the mouth of a creek being the last place a guy wanted to be with a cloudburst busting, Tom began casting an anxious eye about for a place of refuge. There was a big cave half a mile up-stream, he said, that was safe against anything short of the Crack 'o Doom, but it would hardly do to risk the boats on the open river till the storm was past. A tepee-like niche where a broad slab of sandstone leaned against the base of Sentinel Rock appeared the best solution of the difficulty, and Tom ordered a rendezvous there after the boats had been removed to a place of greater safety.

Bill Jones, as direct of action as of mind, started to wade directly across, leading his boat by the painter. Down to his eyes at the first step in the soft silt deposited by the We-weap where it was dammed back by the flood of the Colorado, he swam the rest of the way, but even then had a hard flounder before getting anything solid underfoot. The rest of us, profiting by his example, pulled out into the. (Continued on page 168)

DETROIT'S Tenth ANNUAL REGATTA

A Series of Races for Many Classes of Boats—Rowdy Wins the 150-Mile Sweepstakes and Lady Helen II Takes the Junior Gold Cup Event in Record Time

(See Summary of Results Pages 142-148-158)

Five Boats Hold Lead in 150-Mile Sweepstakes

| Laps | Miles | Leading Boat |
|-------|--------|----------------|
| 1-9 | 1-27 | Cigarette IV |
| 10-12 | 30-36 | Miss Syndicate |
| 13-17 | 39-51 | Cigarette IV |
| 18-31 | 54-93 | Miss Syndicate |
| 32-50 | 96-150 | Rowdy |

DETROIT'S 10th Annual Motor Boat Regatta was held under the auspices of the Detroit Yacht Club on September 4-7th. As usual, under the leadership of W. D. Edenburn, from the viewpoint of the number of events, entries, general yachting interest and the number of spectators viewing the contest, the Regatta was the most successful one of the year held anywhere.

The principal events of the Detroit Regatta, aside from

The crew of Rowdy: Bob Purdy, Vic Kliesrath and Capt. Woolson

Racing for the Junior Gold Cup with Lady Helen II in the lead

Miss Syndicate, driven by Horace E. Dodge, a leader in the 150 mile Sweepstakes

the International Contest for the British International Trophy (described elsewhere in this issue), were the 150 Mile Sweepstakes and the contest for the Junior Gold Cup. In addition to these two events, which require spe-

cially built hulls and to greater or less extent special built power plants, there were other events planned to meet the requirements of existing boats and to interest motor boatmen at large. For a number of years, it has been the practice of the Regatta Committee of the Detroit Yacht Club to so formulate their program of events so that a yachtman who has not a special built hull and power plant, would enter his craft and become enthused over national Regattas. This year's program, showed a continuation of this policy and the number of entries which were received for the events such as Chris-Craft race,

Start of the Kermath race, open to cruisers powered with Kermath motors

Horace, a big, husky Dodge boat, powered with a Wright Typhoon engine

Sallan Trophy event for cruisers, Kermath Trophy race, the Matthew's Trophy event and the various classes for boats powered with outboard motors, shows that interest in racing in this country is not confined exclusively to the mile a minute craft.

In the Junior Gold Cup

SPITFIRES Make History

*Hydroplanes Built by Richardson Boat Company
Establish New Marks in Elgin Trophy Competition*

SIGNIFICANT evidence of the increasing interest in motor boating was given throughout the annual regatta of the Buffalo Launch Club in the brilliant performance of the Spitfires owned and driven by James

Rand, Jr., a member of the Buffalo Launch Club. On the first day of the regatta the thousands of spectators lining the banks of the swift-flowing Niagara were thrilled by the daring and determined manner in which

James H. Rand, Jr., drove his Spitfire VI to a decisive victory in the five mile race for the 151 hydroplane class. Although he is the president of Rand, Kardex Bureau and a director of the Marine Trust Company, Mr. Rand did not hesitate to drive his own craft, nor was he the least bit discomfited when Spitfire VI turned over after crossing the finish line and gave him a thorough drenching

The engine room of Bo Peep II contains two of the new six cylinder, 100 h.p. Kermath engines, with a two to one reduction gear which turn 33 inch diameter Columbian propellers. A Delco generating set supplies electric power. Goodrich Cutless stern bearings are fitted

The deck house combines an attractive day cabin, in which is the steersman's station, with an entrance from the after end to the cabins below. Crew's quarters are in the forward part of the ship and ample room for several men

The galley is most modern and up to date. It contains Protane gas cooking range, and water heater, with a Kelvinette refrigerating machine to keep supplies fresh. A complete set of Fire Foam extinguishers is carried

Bo PEEP II

A Fast House Boat Cruiser Built by the Defoe Boat and Motor Works, from Hacker & Fermann Designs

Bo Peep II was built for I. M. Kirlin of Detroit, and is 55 feet by 13 feet in size. The hull is substantially built, and makes a fine seaworthy craft

CHARLOTTE, A Fast One

*Express Cruising Craft of Substantial Construction
Built for Detroit Banker by Defoe Boat and Motor Works*

The deck house provides a fine shelter for the helmsman

Vasanta's two 300 h.p. Fiat engines drive her at a lively clip

A companionway in the deckhouse leads to the quarters below

THERE is an increasing tendency on the part of fast yacht owners to provide their new craft with every possible comfort and aid to good living. The new express cruiser Charlotte recently completed by the Defoe Boat & Motor Works for J. J. Barlum of Detroit is a typical example of the high class craft which are now being built. The firm Hacker & Fermann designed the boat, and she was built in the Bay City plant of the Defoe works. Her principal dimensions are 65 feet in length, and 12½ feet beam. Her motive power consists of two, 300 h.p. Fiat marine engines, which were supplied by the Detroit Aero Marine Engine Company. The construction throughout has been heavy and substantial. The frames and chine are of oak, with

Douglas Fir fore and aft members. The planking is 1¾ inches thick below the water line, and is copper riveted throughout. The main engines turn a pair of 24 inch diameter and 22 inch pitch Hyde propellers, which gives the boat an excellent turn of speed. The galley is a most interesting place also, and home comforts have been abundantly provided. There are a Protane three burner gas stove, as well as a hot water heater, supplied with the same compact fuel. A Kohler electric generating set of 1500 watts capacity is also installed, to provide an abundance of electric power for lights, table use, and wherever necessary otherwise. A great proportion of the hardware, deck fittings, and marine accessories used on the boat, were supplied by the G. B. Carpenter Company, and the Hubbard H. Erickson company, both of Chicago.

Smart Boats on Lakes

Defoe Boat & Motor Works Complete a Large Number of Fine Craft in Their Big Plant at Bay City, Michigan

Frances A-VII, one of the 55 foot cruising house boats, built by the Defoe Boat and Motor Works, this summer. This one was built for Commodore Alex. McLeod of Detroit, and is powered with two 60 h.p. Sterling Sea Gull engines

One of the thirteen 100 foot Coast Guard Cutters built by the Defoe Boat and Motor Works in quick time, last winter. These boats are powered with two 150 h.p. Winton Diesel engines. The hulls are heavily built of steel

Lassie, another 55 foot cruising house boat built from the same Hacker-Fermann design as Frances A-VII. This boat is powered with two 125 h.p. model MR Speedway engines, which drive 26 inch Hyde propellers. She carries Protane gas for fuel in galley

Nomabin is a 44 foot Vee bottom fast cruiser, also designed by Hacker-Fermann, and built for M. Whaling of Detroit. She is powered with a six cylinder Hall-Scott engine. A novelty is the auto type window lifts, fitted to all windows

The Most Modern Plant

OFTEN there is a general impression among yachtsmen and to some extent among naval architects and yacht builders in the East and to a considerable extent over the entire country, that there are no yacht building facilities or first-class yacht yard in the middle west having facilities which compare favorably with those of the best yards on the Atlantic and Pacific Coasts, with a first-class organization and the necessary capital and financial backing, but such is not the case. At the plant of the Defoe Boat & Motor Works

Interior of the Defoe Boat & Motor Works plant, showing a number of boats nearing completion

Thirteen of the 100 foot Coast Guard patrol boats built in quick time at the Defoe plant

at Bay City, Michigan will be found facilities and a plant equalling those to be found anywhere in this country and surpassed by none.

The Defoe Boat & Motor Works for the past several years have employed and kept busy a crew of from three hundred to five hundred men. This plant has all of the up-to-date equipment in both their steel and wood working departments that are to be found in any yacht yard anywhere. In the

An interior view of the finishing plant showing

Just before the launching of the steel Diesel yacht *Sylvia* in June

many new boats in various stages of completion

The DIESEL YACHT *Sylvia*

A Fine Example of Steel Yacht Construction Built By the Defoe Boat & Motor Works from a Design by John H. Wells, Inc.

The interior appointments of Sylvia are the finest that first class yacht construction makes possible. The deck houses and exterior joiner work are of teak, while the interiors have been finished in black walnut. The interior decoration has been carried out with a richness and cozy cheerfulness by Miss Sparks, Inc.

Sylvia is a steel Diesel yacht of 133 feet in length, designed by John H. Wells, Inc., for Logan G. Thomson, and built by the Defoe Boat & Motor Works, Bay City, Michigan

All staterooms are below decks, there being one with bath forward of the engine room and four in the stern. The general arrangement of the boat provides a dining room, pantry and galley in the forward deck house, while the space in the after deck house is devoted to a living room. Sylvia is driven by two Bessemer Diesel engines of 300 h.p. each

Yachtsmen have watched with interest the construction of the new 188 foot Diesel yacht Arcadia, recently completed by the Newport News Shipbuilding and Dry Dock Company from designs by Cox & Stevens. This boat is owned by Galen L. Stone of Boston, and he has stipulated a fast boat of 16 knots speed for his requirements. She is powered with two 800 h.p. Winton Diesel engines

More New Diesel Yachts

*Activity in the Construction of New Yachts Is Pronounced
With Big Yards and Designers Working at Full Speed*

A new Diesel yacht which is now under construction has been designed with the more graceful clipper bow, and overhanging stern. She will be 196 feet in length, with Diesel power to drive her at 14 knots. She has been arranged with a continuous upper deck, and two large deck houses. Remarkable accommodations for the owner have been provided, and when the boat is commissioned she will be one of the finest of the new type of craft

The Diesel yacht Robador, also designed by Cox & Stevens, and built by the Newport News Shipbuilding & Dry Dock Company, for Commodore Robert Law, is now in commission. She is a staunch and heavily constructed ship, with excellent accommodations for owner and guests. She is driven by two 450 h.p. Winton Diesel engines, and can maintain a speed of better than 15 knots. On her initial trip heavy seas gave her a thorough test

racers in New York waters, in which these several boats had taken part, and first class data as to their speed under various conditions was at hand. It happens that one or two boats whose handicap was based on the result of a short run over a measured course exceeded their trial times somewhat, and as a result succeeded in winning the race. The boats were started on their handicap times, which made it necessary for the committee to be on the job early in order to start the first boat at 9:25. This was rather difficult, due to the excellent entertainment provided on the evening before, and which prevented both the contestants and the visitors from retiring betimes.

The first boat to cross the finish line, Idler III, powered with the new six cylinder Stearns engine

A new boat in cruiser racing circles proved to be (Continued on page 114)

Rene, Jr. II, a fast Elco Cruisette which was successful in winning the time prize

IDLER III Wins Ocean Race

Fifteen Cruisers Enter Long Distance Race of the Sheepshead Bay Yacht Club and Race Under Ideal Conditions

CRUISER racing on the broad waters of the Atlantic still furnishes sport to many yachtsmen. The Sheepshead Bay Yacht Club conducted its second annual ocean race on September 13, over a course of 47 nautical miles, which took a large fleet of cruisers down along the Long Island coast to Jones' Inlet and back to Scotland Light Ship, with a short leg to the finish line in the Rockaway Inlet. The weather conditions were ideal for this contest, with a bright day and just enough breeze and roll to the sea to make the contest exciting. The handicapping for this race was based on previous performances of the several contestants, and in the main was quite accurate and satisfactory. A history has been kept of each of the long distance

The Committee poses on board the cruiser Rescue, during a few idle moments

The New WINTON 800 H. P. Diesel

*Larger Size Diesel Engine Developed
and Produced in Response to Demand
for More Powerful Units*

THE modern tendency in yachts of large size is all Diesel power equipment. As engines of 200 and 300 horse power were ample for smaller boats in the earlier stages of Diesel engine development, the demand for larger and more powerful units has kept pace with the increase in the size of vessels for which these engines are adapted. The Winton Engine Company, for years have been building Diesel engines in sizes up to 600 h.p. Foreseeing the demand for more power, their engineers have been working on larger engines, for some time. The new 800 h.p. Diesel engine, is the result of these efforts, and al-

Forward end of machine showing its compact and close arrangement

Starboard side of the new 800 h.p. Winton Diesel Engine

Detail of the thrust bearings at the after end of engine

ready two large yachts have been supplied with these machines. The yachts Arcadia and Savarona have the distinction of being the first to be powered with these new machines. The design of these engines follows the most advanced lines, and the builders have incorporated in these new models many important refinements and improvements, not previously seen in engines of this size. The instructions of the management were that the engine was not to be placed on the market until it was proven beyond a doubt that it was the best Diesel engine ever produced in America. The resulting engine shows some striking departures, and is especially clean and symmetrical, and unusually compact.

The machine is of the six cylinder type, operating on the four cycle principle. Its bore is 16½ inches, while the stroke is 22 inches, and it develops its 800 h.p. at 300 revolutions. The crankshaft is a 10½ inch diameter forging, machined all over and drilled for lubrication. The connecting (Continued on page 180)

The application of the combined rudder strut invention of W. H. Fauber to the hydroplane Disturber III.

The Combined Rudder-Strut

AN invention was introduced in the United States in 1910 at the International Harmsworth Trophy Race held at Larchmont. It was the rudder-equipment of Pioneer, the Duke of Westminster's 40 ft. hydroplane, which I also designed.

This Rudder-Strut invention was first tested out in France in 1909 and afterward made the equipment of Pioneer and various Fauber Hydroplanes built in 1910 by my Licensee, Saunders, at Cowes, Isle of Wight.

The photographs of the 40 foot Disturber III shows my designs of this invention as worked out for twin-rudders. When this photograph was taken it appears that a cross-bar, having a hole in each end and fitting over the pins projecting from the top of the rudder-blades for the purpose of holding the rudders parallel, was left off. It will be noted that the rear end of the propeller-shaft and bearing extended about 2 inches back of the vertical pivots under the center of the rudder-post, thereby preventing cramping the bearing on the shaft, as is the case if the end of the propeller-shaft is stopped short of the rudder-post center. Either construction can be worked out satisfactorily for racing boats. In fitting the propeller-shaft bearing to the rudder, the forward end of the bearings should have about $\frac{1}{2}$ inch movement up and down so that any springing of the propeller-shaft will not cause it to bind in the bearing or break the

Advantages of the Combination Rudder and Propeller Shaft Strut as Used in High Speed Boats

By W. H. FAUBER

Inventor of the Hydroplane

A reproduction from the British patent papers of the combination rudder strut patented in 1910

connection with rudder. My practice was to have the lower pivot hole in the under-side of the bearing slotted fore and aft, thereby permitting the front end of the bearing to have plenty of up-and down movement so that any spring of the shaft will not cramp the bearing. The vertical pivot device must also be designed so that it will not fall apart. Since placing the bearing behind the propeller has the effect of lengthening the shaft between bearings, it is advisable to use a short, vertical strut propeller shaft bearing forward or make the shaft a trifle heavier.

One of the disadvantages and dangers of using either vertical or Vee-struts in front of the propeller is that if at high speed the boat is accidentally heeled over by a wave or other cause, the side surfaces of the strut act as a hydroplane member with a tendency to climb on top of the water and capsize the boat.

A diary-memorandum, July 2nd, 1908, reminds me that my attention was first brought to this matter by an accident in which my assistant and I were catapulted head-first into the Seine River so quickly and with such force that a tool-box 20 inches square was also thrown out of the boat, which ran about 200 ft. on its side until the 4-cylinders on the port side of the V-type motor were choked with water. The boat rolled back on its bottom, right side up. This accident was caused by too much vertical surface of an experi-

CAPER, A CAPE COD Cat

*Design and Specifications for the Construction
of a Popular Type Cat Boat of 22 Feet Length*

Designed Especially for MoToR BoatinG

By CHARLES D. MOWER

CAT boats are returning to favor in many localities where a shallow draft boat is required and in this issue of MoToR BoatinG a design is given for a typical Cape Cat twenty two feet over all with twenty four inches draft and fitted with auxiliary power which will without doubt interest many readers.

The cat rig makes a boat that is easy to handle and the large cockpit makes a very comfortable boat for day sailing while the small cabin gives shelter in bad weather or a sudden rain squall and provides accommodations for short cruises. Boats of this type have been used for many years around Cape Cod for fishing winter and summer and have proven good sea boats and able to take care of themselves in almost any weather.

A boat of this size can be built by an amateur builder of some experience but unless the amateur fully realizes the amount of work necessary to complete the boat it is advisable to turn the job over to a regular boat builder who has the shop and machinery equipment necessary for building a boat of this size and type and the published plans are such as are regularly furnished to the professional builder. As building costs vary considerably in different localities it is recommended that estimates be obtained from several builders before placing the order. It will not be necessary to send the plans to the various builders as every up-to-date builder in the country receives MoToR BoatinG regularly and can make up his estimate from his own copy of the magazine and quote a definite figure on the completed boat.

Readers who plan to construct this little craft can secure a set of blue print copies of the drawings to a

scale of 1 inch to the foot at moderate cost. Address the Editor of MoToR BoatinG, 119 West 40th Street, New York, N. Y., if you are interested in these drawings.

MoToR BoatinG has published a number of books of small boat designs and building instructions which amateur builders will find useful. A circular describing these will be sent on request.

General Dimensions: Length over all, 22 feet; Breadth, extreme, 10 feet; Draft, extreme, 2 feet.

Materials and Workmanship: In carrying out these specifications, it is understood that only the best materials shall be used and the best workmen employed.

All woods shall be sound, well seasoned and of a kind and quality suitable for the use intended. Any defective material or workmanship shall be rejected at whatever stage of the work it may be discovered and shall be made good by the Builder, at his expense, to the complete satisfaction of the Owner.

Keel: To be a white oak plank, 2 1/4 inches thick and 13 inches wide amidship. To be tapered fore and aft and made 2 1/2 inches wider than the offsets given for rabbet line to form back rabbet for planking. Outer keel to be white oak, sided 10 1/2 inches amidship and tapered as per offsets for rabbet line. To be moulded as shown on plans and fitted to plank keel. Deadwood aft to be white oak, moulded as shown on plans and tapered same as keel.

Stem: To be an oak or hackmatack knee, shaped as shown on plans and sided 3 1/2 inches. To be scarfed to keel and fastened to keel with 1/2 inch galvanized screw

SMALL MOTOR BOATS

Their Care, Construction and Equipment

A Monthly Prize Contest Conducted by Motor Boatmen

Questions Submitted for the December Prize Contest

1. What should be done to the engine during the winter months to put it into such shape that next season will be free of mechanical troubles?

(Submitted by V. L. S., Wilmington, Dela.)

2. Explain how you care for the dishes, cooking utensils and stores on the cruiser.

(Submitted by W. B. M., Newburgh, N. Y.)

Mooring Boats in Crowded Quarters

How the Clubs Can Accommodate the Most Boats in Limited Space

With Greatest Convenience for All

Answers to the Following Question Published in the August Issue

"Devise a practical scheme for mooring boats in a limited space so that they are accessible and not apt to damage each other by contact when moved by wind or tide."

Mooring Boats in Close Quarters

(The Prize-Winning Answer)

BOATS moored offshore can hardly be regarded as accessible, except by way of a rowboat. This, together with the fact that the space allotted for mooring is limited, would seem to imply that the boats are to be tied up to a pier or landing float.

First, then, to utilize the available space to the best advantage, the boats should lay square, that is, head-on to the pier. A few feet astern of the boats, a row of piles or stout stakes are driven, one for each boat. A triangular shaped float constructed of light lumber strongly bolted and strapped is dropped over the top of the pile, and the stern line made fast to it.

The float should not be built of oak. While oak, of course, is much stronger than the lighter woods recommended, it has very little buoyancy, being almost as heavy as water. With the necessary iron fittings added and thoroughly water-logged, it would make a better sinker than a float.

If the bow lines are to be made fast to a landing float, it will be enough to tie up to a cleat, as the float itself rises and falls with the tide.

If moored to a pier, however, some other scheme will be necessary. As good a method as any perhaps, is to attach logs or spars to the foot of the pier-piling, by

means of sliders. The sliders are not difficult to make, being simply lengths of one inch round iron rod threaded at each end for about three inches more than the diameter of the log, and then bent to a U shape. A nut and washer is run on each end about as far as they will go, forming a shoulder.

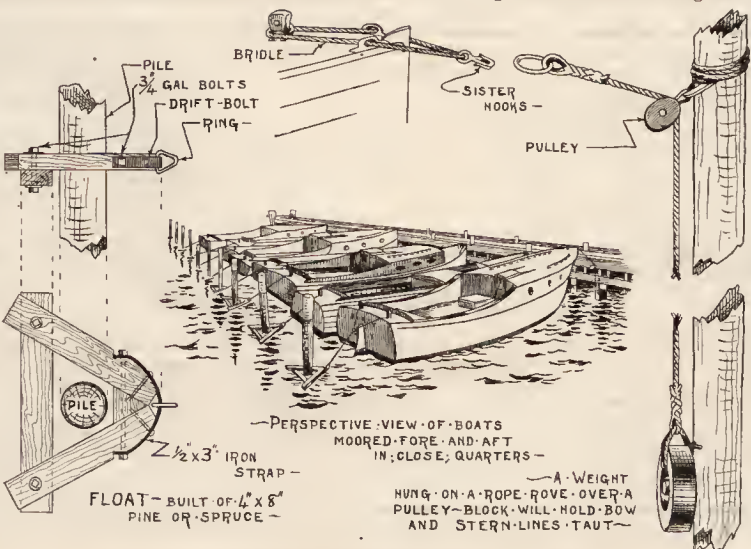

Bore two, one inch holes through the log at each end. The holes should be parallel and register with the prongs of the U-bolt, which is then driven through the holes and pulled up tight by two more nuts and washers. Allow plenty of clearance around the pile.

It may not be out of place to mention, that iron fittings in contact with salt water, will last much longer if galvanized. Fasten rope or chain straps on the log at suitable intervals to allow a couple of feet spacing between the boats, and the rig is complete, providing moorings for a number of boats.

As the log as well as the triangle floats at the stern, rise and fall with the tide, the mooring lines can be snubbed up close, thus taking care of any leeway or side pull of wind or water.

Floating logs across the outlying stakes at the stern of the boats, would not be practical, as the spaces between the stakes will have to be left clear to permit the boats to leave and return to their moorings.

The other method shown in the sketches, consist of a weight on a

A. N. arranges bow and stern mooring to a wharf

— A FLOATING LOG ATTACHED TO PIER-PILINGS BY U-BOLTS WILL RISE AND FALL WITH THE TIDE —

A. N.'s detail of floating log at pier for securing boats

rope rove over a pulley. The weight acts as a spring and compensates automatically for any movement of the water. In this case the stern lines are attached to a triangle float, the same way as in the first method.

Still another way to moor individual boats, is to use two floats, one at the stern as before, and the other built around one of the piles supporting the pier.

In the event of the space available being too narrow to permit the boats to lay at an angle of 90 degrees to the pier, they can be arranged obliquely in the same manner.

A. N., Brooklyn, N. Y.

Mooring to Suit Conditions

WHEN a number of boats are moored in a limited space, the extent of exposure of the place to the wind and the sea will determine how close together the boats may be moored with safety. Generally these places are fairly well protected. In a badly exposed place it is impractical to moor boats close together. Each boat must be anchored with a heavy anchor, and with plenty of scope in the cable to relieve the pull on the anchor and to permit the boat to swing with the wind and sea.

Figure 1 shows an extremely simple arrangement such as would be useful in a creek with a bridge. The one end of the boat is secured to a pile with a rope. The other end of the boat is made fast with a rope passing through a pulley block which is

A. G. W. shows an arrangement of mooring and stakes which should work well

Rules for the Prize Contest

READERS are urged to consider the above questions for the December issue, and send answers to them to the Editor, MoToR BoatnG, 119 West 40th Street, New York, N. Y. Answers should be (a) in our hands on or before October 25, (b) about 500 words long, (c) written on one side of the paper only, (d) accompanied by the sender's names and addresses.

The names will be withheld and initials used.

QUESTIONS for the next contest must reach us on or before October 15. The editor reserves the right to make such changes and corrections in the accepted answers as he may deem necessary.

The prizes are: For each of the best answers to the question above, any article or articles sold by an advertiser advertising in the current issue of MoToR BoatnG of which the advertised price

secured to the bridge. On the other end of the rope is a large weight of about 100 pounds to provide a pull to keep the rope taut at all times, and hold the boat in position, regardless of the height of the tide. A hundred pound piece of cast iron submerged will provide a pull on the rope of about 85 pounds. In the rope between the boat and the pulley, where the rope has reached the maximum of travel through the pulley, a cross piece of hard wood should be tied into the rope with a clove hitch, Fig. 4. This will prevent the rope from running through the pulley when it is let go from the boat.

Fig. 2 shows a method of mooring boats in shallow water with a good mud bottom. Light locust poles are driven into the mud where required, and a triangular float (Fig. 5) is used to take the ropes. This method is especially recommended where the boats lay on or close to the mud at low water, when a boat might lay on a mooring anchor, stone or casting, and be damaged if such were used.

Fig. 3 shows a deep water anchorage. Here the boats are moored, bow and stern, with anchors or heavy weights with chains extending to mooring buoys. The anchors or weights should be fairly heavy, and the chains short to prevent too much movement of the boats at low water. It will require some skill, good judgment and perhaps some re-adjustment to get the moorings in their places. When a boat leaves the moorings a line should be made fast to both mooring ropes to hold the buoys in the same position, occupied by them when the boat is moored. See X, Fig. 3. This will make it easy to moor the boat again, and will prevent the buoys from coming in contact with and fouling the other boats.

As there is always danger of one boat rubbing against

does not exceed \$25, or a credit of \$25 on any article which sells for more than that amount. There are two prizes—one for each question—but a contestant need send in an answer to only one if he does not care to answer both.

For answers we print that do not win a prize we pay space rates.

For each of the questions selected for use in the following month's contest, any article or articles sold by an advertiser advertising in this issue of MoToR BoatnG of which the advertised price does not exceed \$5, or a credit of \$5 on any article which sells for more than that amount.

All details connected with the ordering of the prizes selected by the winners must be handled by us. The winners should be particular to specify from which advertisers they desire to have their prizes ordered.

another, it would be well to have some good rope or cork canvas filled fenders hung on the side where they would do the most good.

A swivel should be provided somewhere in the mooring to prevent kinks from getting into the chain due to twisting of the rope.

Figures 6 and 7 show several types of mooring anchors, and buoys. A barrel or box filled with concrete, composed of one part of Portland cement, two parts clean sand, and four parts of broken stone, into which should be cast a bent piece of steel bar forming an eye, will make a good mooring anchor.

A. G. W., College Point, N. Y.

Bow and Stern Moorings

In narrow channels and river ways the bow to stern method of mooring finds favor. Since such conditions are usually accompanied with shallow water, it is necessary to use short cable and extra heavy anchors. Moored in such manner, there will be

Some details of mooring arrangement by A. G. W.

little movement on the part of the anchored fleet despite winds from any quarter.

On lakes and non-tidal rivers, where the rise and fall is small, with little or no change in the height of the water for days at a time, the method illustrated in Fig. 2 uses a minimum space. This method is used in many places wherein there is plenty of room in the anchorage location, since it makes the boat readily accessible without the use of a tender and eliminates the work of maintaining, putting down and taking up moorings.

A stretcher fastened to two piles allows the installation of rings or cleats to which the stern lines are attached. The piles must be sufficiently high above water to allow the unobstructed passage of the boats under the stretcher. Auxiliaries with rigid masts must be moored in the outside berths.

The arrangement illustrated in Fig. 2 can be modified as in Fig. 3 to conform to tidal waters where the rise and the

Protecting the Boat During Winter

Many Tasks Which Can Be Done Before Closing the Boat Will Help to Speed Up the Going Over in the Spring

Answers to the Following Question Published in the August Issue

"What suggestions can you make to protect the boat during the winter lay-up, and what should be done in the fall to make the fitting out tasks easier in the spring?"

Saving Work in the Spring

(The Prize Winning Answer)

YACHTSMEN in northern waters will soon be faced with the necessity of hauling out their boats to protect them from the ice and cold of the approaching

winter. We frequently find that once the boat is hauled out and safely blocked up on shore, that the yachtsman becomes interested in other subjects, and allows his boat to suffer through the winter in neglect. The careful man, however, with method and forethought guards against the severity of the winter, and also eases the labor on the part of his crew when the time comes to replace the boat in the water. Many little tasks

should be done in the fall, before the boat is finally abandoned to the winter.

In the first place it is necessary to see that the ground on which the boat is to rest is substantial, and not subject to upheaval when the frost leaves the ground in the

spring. All blocking and supports which maintain the boat in a proper position should be substantial and durable timbers. Do not use flimsy or picked up odds and ends for this purpose, since they may fail in their task, and permit the boat to sag or otherwise subject it to a deformation, which may injure it.

The first task which confronts the boat owner as the boat leaves the water is a thorough scrubbing down of the bottom. At this time, the slime and growths can be

FIG. 1

FIG. 4

J. E. M. shows several convenient arrangements of moorings

easily removed, and since there is an abundance of water handy, the hull can be easily washed thoroughly clean. The inside of the bilge should also be cleaned about this time, so that all accumulation of oil and dirt are cleaned out. A coat of copper bottom paint can be applied to the bottom soon after the boat is placed in the yard, so that it will prevent undue drying out of the wood, and unnecessary opening up of the seams. All bright work should be cleaned down and given a coat of varnish before the covers are finally secured, in order to protect the wood during the winter. If this is neglected, in all probability it will be necessary to scrape down the entire bright work, and refinish it completely. On the other hand, a coat of varnish now, will preserve the wood, and do away with the necessity for a scraping in the spring. Since the scraping down of a large area of bright work is one of the most tedious tasks imaginable, a coat of varnish applied in the fall is really a genuine labor saver.

The inside of the cabin can also come in for a share of attention at this time, which will result in a saving of time in the spring. While it is true that it may be necessary to repaint the floors, brighten up the varnish work, and re-enamel the whites, these tasks can all be done in the fall, before the weather gets too cold to stop work. Any tasks of this kind which are completed will not require doing in the spring, when time is naturally more pressing.

Coming now to the engine and mechanical equipment, it is naturally well to remove the storage batteries and similar easily portable accessories to a safe warmer place. The engine should be run slowly, with all watercocks open, so that there will be no trace of moisture left in the water jackets. Should a small compartment hold some water, and freeze the natural consequence would be a crack in the jacket, with costly repairs. Water tanks similarly should be drained, and waterpipes cleared of all water. While there is no particular necessity for draining the fuel tanks, except as a means of reducing the fire risk, it will generally be required in all of the bigger boat yards. All small fittings and accessories which can be easily removed, should be taken down and safely stowed away. In this way, they will be on hand in the spring when wanted. All plumbing, particularly the toilet fixtures, should be freed of water and the pump washers well oiled, so that they will not dry out.

The engine should also be thoroughly cleaned and well oiled at this time. While it is true that the grinding of valves should be deferred until the spring, they can be cleaned and prepared for this task in order to permit the work to be done as quickly as possible later. Due to the temperature changes, over the winter, a certain amount of sweating takes place on the cold metal, which results in rusting, and corrosion. This must be guarded against by oil, and in this way the parts are protected against

damage. If the engine is in need of any major repairs, it will be found that the shops can do better work at their leisure during the winter, than would be possible in the rush of the spring. Stern bearings, which are in need of new babbitt, can be refinished now, and should the shaft show signs of wearing, it can be replaced before a new one is needed. An engine should not be covered over tightly with canvas or other covering. This will result in sweating as mentioned, and will do more harm than an engine which is allowed to remain uncovered. The uncovered engine at least will be exposed to the air, and remain dry at all times.

The method of supporting the canvas cover on a boat should also be given some thought. If at all possible, arrange the canvas on a ridge pole, so that it will be supported entirely clear of the boat, and in such a way that it will not have any flat spots to catch snow and rain. Also instead of securing it tightly to the hull, it is a much better practice to provide some form of spacing material, so that it will stand off a few

rubbing strip, and permit air to circulate more freely throughout the boat. While a canvas is watertight, it is also air tight, and there are some warm days during the winter in which the sun would create a high percentage of humidity under the canvas, which would cause sweating and considerable damage. Allowing the air to circulate, by providing means of ventilation, overcomes this objection, and the boat will remain drier as a result.

Before the boat is finally left to its fate, it will be to take

an inventory of the work to be done in the spring, so that all necessary new parts can be secured and the paint and other materials required will be on hand when needed. There are many times during the winter when the owner will pass the ship chandler, and could easily secure his fitting out materials at such a time. If all of these tasks are deferred until the spring, it means that it will be necessary to carry a large volume of material to the boat at one time, in order that the work can progress properly. A little time and thought given to these subjects at this time will more than repay the efforts expended and simplify the task on hand in the spring.

T. B. K., Bronx, N. Y.

Protecting the Boat

BEFORE the boat leaves the water there are many things that can be done to further the spring overhauling. Lockers can be cleaned, gas tank drained, cylinder heads removed and the cylinders packed with oil soaked waste.

Any check valves or shutoff valves that can be disassembled without an inflow of water, should be taken apart, greased and loosely put in position. Galley, bilge and toilet pumps should like-

Notes of Interest to Both Owner and Manufacturer

Tell Time by Stars

THERE has recently been developed a new and simple means of determining time without the use of clocks or watches. The device is called Startime and is the invention of Frederick C. Meacham of Garden City, N. Y. The instrument consists of a thin aluminum dial three inches in diameter, on the face of which there are two circular sets of divisions. One of these, which is around the outside edge, represents the twenty-four hours of the day and each hour is divided into quarters, each division representing fifteen minutes of time. Just inside of this set of divisions is a second set which represents the twelve months of the year and each month is divided into intervals of five days. There is a hole in the center of the dial around which may be revolved two aluminum arms, one of which is set on the date and the other, when properly adjusted, will give the time of night.

The operation of the device is based upon the apparent rotation of the Big Dipper around the North Star, the time required for one complete revolution being twenty-three hours and fifty-six minutes.

To use the device, the observer first sets the date arm on the date of the observation. The dial is then held up before the eyes, which are both kept open, with the date arm pointing straight downward and the dial in such a position that the North Star is visible through the hole in the center. The time arm is then moved slowly around until the two end stars of the Big Dipper which point almost directly to the North Star, come into line with the straight edge of this arm. After having made sure

A novel star time indicator by which time can be determined closely with the pole star group

that the date arm is pointing straight downward and that the two Pointer Stars are properly lined up with the edge of the time arm, the observer has only to look at the line on the time arm to find out what time it is. With reasonable care in making the observations, a maximum error of five minutes may be expected.

The extra heavy crankshaft construction in the Gray marine engines

The instrument can also be used for a rough determination of Latitude and Longitude and will give, with close accuracy, the culmination and elongation of the North Star. It is extremely useful to surveyors, navigators, campers, woodsmen, hunters, boy scouts and particularly to those who are away

from a source of accurate time for any extended period as they would have available in Startime, an unfailing means of determining the time.

The instrument with its leatherette carrying case and booklet of instructions is about three and one-half inches, one-eighth of an inch thick and weighs less than one ounce, so that it can be carried in the pocket without difficulty.

On Hoisting Boats

There are many localities in which boats can be run directly into a boat house and where it is often desirable to take a finely finished boat out of the water in between the periods of its service. Special equipment has been developed by Herbert Morris, Inc., to make this task an easy one. Special twin lift, triple gear boat hoist simplify an operation of this kind to such an extent, that boats up to five tons in

weight can be quite readily handled by one man. When a boat is run into the boat house, it can be raised out of the water sufficiently in practically the same time that it takes to tie it up. A boat kept in this way will always be safe and secure and at the same time will be more thoroughly protected against marine growths than in any other way. The bottom of boats do not accumulate sea growth while the boat is in motion, it is only in

the idle periods that these get a chance to get started, and a boat which is out of the water entirely will have a thoroughly clean bottom at all times. The gearing of these hoists is so arranged that the load is sustained by a brake.

Little Huskie

The new Palmer engine announced in July MoToR Boat-inG as Little Pal, a small four cylinder engine, is to be called Little Huskie instead. The description of this engine appeared in July MoToR Boat-inG and since the only change which has been made is in the name, the earliest description is still good.

The Mobile-Boat as it appears when riding on the high-ways as a motor car

A Novel Vehicle

An innovation in self propelling vehicles is a craft or car, called by the inventors a Mobile-Boat. This machine consists of a metallic hull mounted on a chassis in such a way that the same engine can be connected either to the wheels when used on the road or to the twin propellers when used as a boat. It can be truly called an amphibious automobile. It has the advantage of being driven to the shores of a river or lake where it can enter the water directly; or by the removal of the wheels, the hull alone can be used for all boating purposes. A winch arrangement permits it to haul itself out of the water again at a later time, and when the wheels and axles are replaced it again becomes an automobile.

The craft has a length of 16-feet with a speed of about 10 miles in the water. It is driven by a well known small engine which can be engaged to drive two propellers. Sheet steel is used in the construction which is riveted and then galvanized. The Powell-Mobile Boat Works in Chicago, builders of this novel craft anticipate a considerable need for this type of conveyance as many sections of the country are inaccessible except to a vehicle of this special type.

A New Diesel Hand Book

A new hand book completely describing and illustrating American types of Diesel engines, has just been prepared by David Louis Jones, and published by The Norman W. Henley Publishing Company of New York. Mr. Jones is chief machinist in the U. S. Navy, and instructor in the Diesel Engine Department of the Submarine Schools. The book which he has prepared is a complete, thorough and up-to-date treatise. It explains in simple terms the underlying principles of thermodynamics and the principals of operation of all types of engine. The constructional features of the engines and such parts as the fuel pumps, fuel injection valves,

starting and reversing systems, air compressors, governors, etc., are all treated in detail.

It explains the operation, repair and maintenance of the Diesel engine, their troubles and adjustments, indicator cards and engine testing, fuel and lubricating oils, etc.

Today, the modern Diesel engine is being used extensively on shore and for the powering of ships. Engines of as large as 16,000 brake horse power are now being built. In the last five years the number of motorships has been almost tripled and the world's motorship construction has grown to about 60 per cent of the steamship construction. Diesel engined locomotives are now being operated at one-third the cost of steam locomotives. This is the only American book containing an illustrated chapter on the application of the Diesel engine to railway service.

The importance of the Diesel engine cannot be overestimated and the progressive engineer will find it his duty to extend his knowledge into the Diesel Engine Field.

This book should be in the hands of every Power Station and Marine Operating Engineer as well as every Student of Mechanical Engineering, as it contains data that is invaluable.

Its contents have been very carefully selected for the benefit of those seeking real information, and is particularly adapted for the steam engineer who is preparing to operate Diesel engines, as it contains complete information regarding the construction and operation of the Diesel engine.

The same Mobile-Boat in the water ready to act as a full fledged motor boat

Duplex Oil Helps

Gray engines and Duplex Marine Engine Oil made a splendid combination during the races at Indian Lake early in August. In particular the Gray Imperial Six made a most impressive showing in the Dart Runabout.

Captain C. S. Lawson, owner of the boat in which the Gray engine made such a splendid showing, put his boat into the race right from his regular passenger service. This boat has been making an average of 100 miles per day all summer, and Captain Lawson states that both engine and oil performance have been faultless throughout the season. It is of particular interest to know that in all races the Gray Imperial Six was running at 2260 r.p.m. and at no time was any motor adjustment necessary.

Doesn't the Good Ship "write your own"

Deserve a Decent
Set of China *and*
Crystal?

YOU own a yacht because you love the sea. And because you like to have your friends enjoy it.

That means hospitality and hospitality implies dinner. And dinner almost inexorably implies a service of Ovington china.

Why not start in and get a good one while you are about the business? Why not decide to give the good ship a china service of which she may well be proud?

For as little as \$100 it can be done and done well at Ovington's. For \$100 you may have a service for six emblazoned with your flags. And crystal to match is not expensive. We are glad to submit designs and estimates for any member of a recognized yacht club.

Johnson Motors in Turkey

Johnson Light Twin Outboard Motors were recently chosen by the Turkish Government to be used as equipment for their submarines, according to advice received from the New York Johnson Motor Company, Inc., who obtained the order only after a comparison was made between all makes of Outboard Motors.

Bruce N. Davis of the Kelley-Duluth Company, trying out the Elto Super-Twin on a recent visit to the Elto factory.

B. N. Davis Visits Elto Factory

Bruce N. Davis, who has charge of the Automotive and Outdoor Equipment Departments of the Kelley-Duluth Company, of Duluth, Minnesota, spent several days at the factory of the Elto Outboard Motor Company, in Milwaukee.

The Kelley-Duluth Company has built up a really tremendous volume of business on all outdoor equipment and particularly on boats and Elto Motors. Although this company has enjoyed five times their last year's volume of Elto business in 1926, still Mr. Davis says, "We have barely scratched the surface."

Florida Dealer Is Elto Guest

H. S. Talton, of Talton's Sport Shop, DeLand, Florida, has just completed an extensive business trip during which he visited the Elto Outboard Motor Company at Milwaukee.

Mr. Talton has developed his Elto sales volume to the point where it is one of the most important parts of his business.

While visiting the Elto factory Mr. Talton made some trial runs with the Super Elto on a Meraco Racer.

H. S. Talton, during an extensive business trip, visited the Elto plant, and made some trials with an Elto Twin on a Meraco racer

The Northeaster Magnetic Horn

A magnetic electric horn developed particularly for the use of motor boats is now being marketed by the North East Electric Company of Rochester, under the trade names of Commodore and Admiral. These horns are De Luxe types of the Standard and the Special, with a more enduring finish intended particularly for motor boat use. They are available in either polished brass or nickel to suit the trim of the boat. These horns are constructed on the same principles, as the original Standard Northeaster, but are larger and fitted with a flare at the end of the horn. The tone adjustment is simple.

Explorer Purchases Cape Cod Boats

John Borden of Chicago, who has already gained considerable fame from his interesting explorations will take with him on his next trip to the Arctic regions in October two of the famous Cape Cod Seaworthy boats which he recently purchased from the Boston office of the Cape Cod Shipbuilding Corporation. Mr. Borden who required staunch seaworthy boats yet light in draft scoured the country for the same, and finally was advised by his Chicago yacht broker to go to Massachusetts for the boats he required, quite a tribute to the boat builders of the Bay State. He immediately rushed to Boston where he inspected among others the complete line of Cape Cod boats on exhibition in Boston, and as a result decided on two of their most seaworthy craft. The first is the 20 foot dory launch equipped with 12-15 h.p. Universal Flexi-Four four cylinder four cycle motor with electric starter. This boat is a combination of round and flat bottom'd type. It has smooth planked sides, and interior is finished like a launch with her full lockered seats, and sheathing from the seats to the coaming. The engine is located aft with roomy house over the same. Cockpit carries ten people comfortably. This will be equipped with four air tanks, folding spray hood, and full set of

The Walter H. Moreton Corporation of Boston, were recently confronted with the task of moving a 38 foot Matthews cruiser out of their show rooms. Our illustration shows it leaving the building

cushions. The boat will be equipped with heavy hoisting rings fore and aft for slinging her onto the davits of the large schooner, and the equipment will include a full set of extras as there will be no motor boat supply houses in the frozen North. The second boat purchased by Mr. Borden is one of the 17 foot Cape Cod Club sailing dories. This is a cedar planked boat, closely fastened, and designed for fast individual sailing. This has liberal beam, works well under full rig, and sails well in a blow reefed down. She is equipped with large leg'o'mutton sail and jib, will be perfectly safe in very rough seas, and yet has only 9 inches draft. Both boats will be shipped to Oakland, California. Mr. Borden will spend several weeks at Oakland getting all his boats and equipment completed, and around the middle of October sails for the Gulf of Mexico from which point he will later sail for the Arctic regions.

Interesting booklets covering Cape Cod boats will be mailed MoToR Boating readers on application to the Cape Cod Shipbuilding Corporation, 18 Tremont St., Boston, Mass.

A Market in Colombia

A recent bulletin issued by the Department of Commerce mentions that trade opportunities exist in the South American state of Colombia for marine motors of from 150 to 200 h.p. complete with accessories, as well as steel material for motor boat construction. Manufacturers who are interested in these items, can secure further information on trade opportunity numbers 22176, by addressing the Bureau of Foreign and Domestic Commerce at Washington, or one of the district offices in principal big cities.

(Continued on page 72)

When the ducks fly

WHEN you are ready at the edge of the ice-rimmed lake, when dawn is coming fast and every minute counts in getting to the distant shooting blind—then you'll be thankful for the motor that starts with an easy quarter turn! No ropes—no spinning of the flywheel! Nothing but an easy quarter turn!

That's all—just a simple quarter turn. No matter what the weather, your Super Elto will respond instantly and unhesitatingly. Even in the icy coldness of a November dawn, that unflinching spark—big, fat, fiery hot—answers the flywheel's turn. Even after an all-night pelting rain

your Super Elto's ignition system will be on the job.

And when you put your motor away for the winter—when hunting is over and cold weather sends you indoors—you can store away your Super Elto with the comforting knowledge that its big, oversize bearings and sturdy construction hold for you many more seasons of use and enjoyment. For Ole Evinrude, the pioneer outboard designer, builds the Super Elto to last you season after season.

Don't start your hunting this fall with a worn-out motor! If you're due for a new motor next spring, *get it now!* Send today for the Super Elto catalog!

The Elto Catalog Gives You Full Details on All These Features

Instant, easy starting on the quarter-turn flip of the flywheel.

Abundant power—4 full h. p.—generous power for heavy boats—flashing speed on light hulls.

Steer and control motor from any part of boat—freeing you to move at will from stern seat. No vibrating tiller handle.

Full rudder steering—positive, safe control in all conditions of wind and water.

Propello-Pump—without a moving part—eliminates parts of greatest wear and trouble.

Light—weighs slightly over 50 lbs. Compact—rudder folds for easy carrying. Silent, odorless underwater exhaust.

Send for the catalog!

An Acceptable Small Boat Design Which Should Prove to Be a Useful Little Craft for Pleasure and Service of Many Kinds

IN many localities there is a need for a small open boat, powered with a small engine, which will be useful for all of the many purposes for which a boat is called on. There are people and merchandise to be carried from place to place, as well as errands to be done here and there. The little design reproduced here has been prepared particularly to supply the need for a boat of this kind, and has been made 18 feet in length.

John G. Alden, the designer, has incorporated somewhat of the general lines of the sail boat, giving it a broad well balanced beam. The keel or skeg, which is included in the design, may be eliminated, but it furnishes a

factor of safety in shallow or rocky waters, and with it the boat may be readily beached without damage to the rudder or wheel. Since the draft is only about 18 inches, it may be safely used in shallow waters.

A boat of this type, powered with the two cylinder 8-10 h. p. Kermath engine, which the designer calls for, is an economical one to build and operate. With the power plant recommended it has a speed of 7 to 8 miles.

The Kermath Manufacturing Company, Detroit, Mich., has arranged to supply a complete set of plans for this boat, for those who wish to order a motor suitable for it.

 NAVAL ARCHITECTS—YACHT BROKERS
 11 BROADWAY, NEW YORK

 Cable Address
 "Rigging"

FOR SALE or CHARTER—No. 4029— Power cruiser, semi-houseboat type. A thoroughly modern, comfortable cruiser suitable for either Northern or Southern cruising. Capable of making sea trips with safety, yet shallow enough to navigate the Florida waters. Built 1924, and present condition as good as new. Accommodations include five large staterooms, each connecting with bathroom; large dining room, and separate living room on deck. Independent refrigerating plant. Two Winton engines, 280 H.P. each, give cruising speed of better than 12 miles per hour. Edison electric plant. Everything in perfect condition. This is a most unusual opportunity, and to any of our clients who are interested in securing a boat of this sort we would advise immediate action, as she should not remain on the market very long with the present demand for yachts of her type. Further particulars from Burgess, Rigg & Morgan, Ltd., 11 Broadway, New York City.

FOR SALE—No. 3292—Unusual offering twin-screw Elco 56-footer, built 1922, but has been kept at all times like a new boat. Has three staterooms and fine large deckhouse. Equipment all first-class and in good condition. In commission in New York, and can be inspected by application to this office. Burgess, Rigg & Morgan, Ltd., 11 Broadway, New York City.

FOR SALE OR CHARTER—No. 4039—Splendid houseboat cruiser. Dimensions 57'6" x 56' x 15' 8" x 3'6" draft. Two double and one single staterooms. Has bath and three toilets. Every modern convenience. Standard motor. Further particulars from Burgess, Rigg & Morgan, Ltd., 11 Broadway, New York City.

FOR SALE—No. 2091—Express cruiser, has two 300 H.P. Sterling motors, giving speed of better than 35 knots. Designed by Hand and built by Robert Jacob, of City Island, in 1917. Owner very anxious to sell, and will accept very low price for quick cash deal. Dimensions, 60' x 10'6" x 3'6". Excellent double stateroom, two toilets. Further particulars from Burgess, Rigg & Morgan, Ltd., 11 Broadway, New York City.

FOR SALE—No. 3314—Well-known power cruiser. Dimensions 44' x 11' x 3'6" draft. Practically new. Hall-Scott motor. Completely equipped with best of everything. Sleeps six including owner's stateroom. Exceptionally strong construction throughout. Winner of several of this year's Cruiser Championships. Complete information from Burgess, Rigg & Morgan, Ltd., 11 Broadway, New York City.

Practical Advice At Your Service

I will be glad to give you the advantage of my experience upon any Yachting and Boating matters that may concern you.

Whether you are thinking of a boat for the first time—
maybe for use next Season,

Whether you desire a larger boat—perhaps for use this
Winter in the South,

Whether you wish to dispose of your present boat,

My services are offered to you—and there is no obligation on
your part.

Twenty-five years' experience in building and selling Motor Boats
and Yachts has given me a vast knowledge of how to secure the
things essential to your complete satisfaction.

Also 12' tender with Elto outboard motor. All in A-1 condition. Write for complete description and price. W. C. Wimsatt, 9th and Eye Streets S. W., Washington, D. C.

Probably the most complete, seaworthy and commodious bridge deck cruiser for her size on the market. Best of reasons for selling. Designed by Wm. J. Deed, Jr.; built by F. F. Pendleton, Wiscasset, Maine. 64 ft. overall, 12 ft. 10 in. beam, 3 ft. 6 in. draught, speed 10 miles; power 50 H.P. 6-cylinder Standard, new Spring, 1924; fuel capacity 350 gals., water capacity 225 gals.; Homelite Electric system, tender. All interior and exterior finish finest mahogany; sleeping accommodations for eight comfortably; two for crew. In commission, ready and able to go anywhere. Price very reasonable.

MYER ROSENBUH, 1003 American Building, Baltimore, Md.

STATE OF NEW YORK DEPARTMENT OF PUBLIC WORKS BUREAU OF CANALS ALBANY

September 17, 1926.
NOTICE TO CONTRACTORS:
 Sealed proposals will be received by the undersigned at his office in the State Public Works Building, 353 Broadway, Albany, N. Y., until one o'clock P. M., Eastern standard time, of Tuesday, October 5, 1926, at which place and hour they will be publicly opened and read:

For the construction and delivery at Eric Canal Lock No. 3, Waterford, N. Y., of six twenty-six-foot buoy tender boats, pursuant to the provisions of Chapter 628 of the Laws of 1926.

Plans may be seen and blank forms for proposal, specifications, contracts and bonds may be obtained at the office of the Bureau of Canals, Albany, N. Y.

Every proposal for said work must be accompanied by a money deposit for five per cent. of the amount of the proposal. The amount of bond for faithful performance on execution of the contract will be fifty per centum of the proposal.

Each proposal must be addressed to the Bureau of Canals, State Department of Public Works, Albany, N. Y., and must be endorsed on the envelope, "For construction of six buoy tender boats."

The right is reserved to reject any or all bids.
 THOMAS F. FARRELL,
 Commissioner of Canals and Waterways.

FOR SALE—7-year-old yacht, perfectly sound, 82 ft. long, 13 1/2 ft. beam, 5 ft. draft. 250 horsepower gasoline engine, speed 16 miles; double frame, double planking, steel watertight bulkheads. Lawley built. Cost \$115,000. Will sell to prompt buyer for \$18,000. Box 198, MoToR Boating.

Reason Enough—

THE only reason MoToR Boating carries a larger volume of advertising per issue (more than double any other boating magazine) is because it has a greater number and higher class of readers. Advertisers say MoToR Boating produces more inquiries, and at a lower cost per inquiry, than any other boating paper, and also including many publications of general circulation. Any product that is salable to yachtsmen can be profitably advertised in MoToR Boating.

Write today for rates and advertising data

MoToR Boating 119 West 40th Street New York City

Can You Sell Boats?

ONE of the country's leading boat builders, with unsurpassed facilities and a long record for building master-made craft, desires a competent representative in every center of marine activity. It is not essential that this representative should devote his entire time to the work, but it is essential that he should have a knowledge and interest in motor boating and be in position to approach prospective boat owners at the right time and in the right way. Such a party can effect an arrangement that will be highly remunerative. If you feel that you can sell boats in your community, write us fully about yourself. Your letter will be held in strictest confidence and you will find this concern the type of company which you can represent with integrity and profit. For complete details, address Boat Builder, Box 195, care of MoToR Boating.

Sales Manager Wanted

by one of the oldest and most prominent marine engine manufacturers producing a line of ten models ranging from 5 H.P. to 100 H.P. Marine Engine Markets Abroad

Motor boating is a very popular sport in the vicinity of Ottawa during the summer and autumn months and a large number of small power boats are in use. The Ottawa River, the Rideau Canal and the numerous lakes in the vicinity afford facilities for motor boating which is surpassed by few localities. A report from the Consulate General at Ottawa showed 63 motor boats valued at \$38,356 imported into Canada from the United States during the fiscal year ending March 31, 1926. This does not represent more than a fraction of the boats sold, however, as there are more than 20 manufacturers of motor boats in the Dominion.

A report from Mexico City states that that city does not offer any possibilities as a market for motor boats and engines. However, Xachimilco, a suburb of the city, at a few miles distance may hold some future promise. Inhabited principally by truck and flower gardeners it has an extensive network of narrow shallow waterways, between the banks of which vegetation thrives due to the richness of the soil and the ease of irrigation. The natural beauties of the place and the navigability of the canals make this a very popular place for picnics and excursions from Mexico City.

The canals are crowded with small craft of all descriptions from one-man dugouts to large flat-bottom barges with a capacity of as many as 15 persons.

Winton Office in Miami

A sales office for the Winton Engine Company, has been opened in the Ostend Building, Miami, with A. C. Houser as general manager. "For some years" says George W. Codrington, Vice President of the Winton Engine Company, "we have felt the need of establishing a sales and service headquarters in the south, in order to expedite the transaction of our rapidly growing business in that part of the country. Mr. Houser has for several years been associated with our New York office, and is thoroughly familiar with yachts and marine engines. He will be a valuable aid in his new connection to users and prospective users of our product." Mr. Houser extends an invitation to ship owners, designers, builders, and operators, to avail themselves of his facilities when in Florida waters.

Rajah Name Is Changed

Announcement is made that a meeting of the stock holders of the Rajah Auto Supply Company voted to change the corporate name to, The Rajah Company, incorporated under the laws of New Jersey. This change, which became effective September 1, does not involve any change in the ownership, management or officers.

Enterprise Distributors

In a little paragraph mentioning distributors for the Enterprise Oil Company in September MoToR Boating, the notice was made to read, that the

Cleveland distributor, W. F. Meier was also the distributor for other adjacent sections. This was not quite correct, as the Put-in-Bay Dock Company are distributors for Put-in-Bay. Julius Stuetzer operating as Union Boat & Supply Company at the foot of Holcomb Street, is the distributor in Detroit, while the Richardson Boat Company is acting as distributor in Tonawanda, N. Y.

Kermath Six in Production

The 6 cylinder Kermath 150 H.P. dual valve in head motor is now in sufficient production after eight months of effort that immediate deliveries may be had. Specifications will be furnished on application to the Kermath Manufacturing Company; Detroit.

New Coast Pilot

The U. S. Coast and Geodetic Survey has completed a new edition of the United States Coast Pilot, Atlantic Coast, Cape Cod to Sandy Hook. This volume which replaces an earlier edition published in 1918, is up to date in its information which supplements that found on the charts for this important section of the coast. The information is compiled from a wide variety of sources, and includes much special data secured as a result of special examinations by the Department of the region covered in this volume. The book is divided into three parts, first, general information of value to the navigator, next, detailed descriptions and sailing directions for the coast, harbors, and inside passages, and finally, an appendix containing anchorage regulations, notes on the use of charts, rules of the road, and much other valuable information. This new volume as the other volumes of the Coast Pilot, are all priced to be sold at seventy-five cents, which is merely sufficient to cover the cost of the paper and printing. The Government does not attempt to secure any revenue from the sale of books and publications of this kind, as their distribution is considered a service to the maritime world.

City Island's New Yard

The Minneford Yacht Yard has been opened for the benefit of the yachting fraternity, and is located on the east side of City Island, directly between Nevins' and Jacob's. Many yachtsmen are accustomed to laying up their boats in these yards, but due to the increased demand for space, the new yard will be able to handle many of the boats which cannot find accommodation at the older plants. Yachtsmen are invited to inspect the facilities, and store their boats there for the winter. All sorts of repair facilities are available.

The First East of Barrow

(Continued from page 18)

They had been squeezed. Then came the dangerous work of transferring their crews with their personal belongings to the Nanuk. The Arctic and Lady Kindersly had been loaded with supplies for the natives at Herschel and members of the Northwest Mounted Police on the mainland, but with the abandonment of these vessels and the loss of their cargoes, it fell to Captain Pederson to dig a little deeper into his stores in order that no one should go hungry. It is just this sort of thing—the totally unexpected—against which these resourceful navigators of northern seas have to contend, or be prepared for, at any rate.

To be a competent seaman and one capable of handling his ship under conditions often requiring snap judgment and good judgment at one and the same time—all this would seem to be enough; but it isn't. The preliminaries out of the way, the really big job is ahead; that of getting furs. That's what they go up for and that's what they bring back, providing nothing interferes short of foundering or sudden death.

As a class, the native Eskimos are reasonable fellows to deal with, but, even as you or I, if we have been doing business with one man year after year, we have found him to be eminently fair, and our relationship has developed into a mutual friendship, we will continue doing business with him. And so it is with the natives. They like to deal with Captain Pederson, for he has met them, cruise after cruise, befriended them, and what is infinitely more important, gained their confidence. Incidentally, he can talk with them in their own language, when necessary.

Relations between the native trapping fraternity and the traders, however, have not always been leavened with justice. Many stories of shady dealings in the early days still go the rounds, 'way up there on top of the world. One of them runs like this:

Old Jim Tabuk needed a rifle in his business, and he needed it badly. So with the arrival of one of the early traders that summer, he lugged his pelts down to the shore, stowed them carefully and paddled out to see what sort of a deal could be made. Besides the firearm and enough ammunition for the coming winter, Jim figured he should be able to dicker for some new traps, fishing gear and grub, too—what with all those skins. So he clambered aboard, grinned in friendly fashion at the skipper, brought up his winter's catch and went down below into the cabin. The first thing he saw was a bright and shiny rifle. His eyes glistened; he must have that rifle. And here was an array of traps to delight the heart of any true son of the Far North. And over there were the fishing lines and a couple of boxes of assorted hooks. On the other side of the dingy, ill-lighted, foul-smelling little room the shelves were loaded with groceries; and in the far corner were big red tins of smoking tobacco, flanked with long black plugs of chewing. Then came the appraisal of the furs, when Jim was gruffly told they would do. At that he began to make known his wants, pointing first to the rifle. Down it came, and was set up against the cabin bulkhead. Jim's heart gave an anxious thump at sight of the weapon, now so nearly his very own; his trigger finger even itched. . . . Well, the long and the short of it was that old Jim got his rifle all right, and some ammunition, too, but that was about all, for the deep-sea Shylock had made the Eskimo stack up one beautiful fur on top of another until the pile reached the muzzle of the firearm.

As a class, these natives of the North are industrious fellows, even-tempered, good-natured and generally easy to get along with. Those who trap for a living are busy most of the time; indeed, those whose trap-lines extend for thirty or forty miles have about all they can attend to. Trapping is far more profitable east of Barrow than it is west of that point. It is commonly known that the native whose lines are set along the stretch lying to the westward will call it a fair season's work if he secures from twenty to twenty-five hides, while his brother who hunts the white fox far to the eastward calls it a poor season when he fails to gather fewer than fifty. Not so very long ago a young native brought Captain Pederson two hundred and sixty-five pelts. Just how the acquisition of sudden wealth resulting from such a prosperous season affected this young Davy Crockett of the North is neither here nor there, but it is said his record still stands in the community.

A number of walrus are shot each year and their hides, together with their long ivory tusks, are brought aboard Nanuk. The King Islanders are particularly skilled at carving ivory. Beautiful specimens of their work are brought down, some of which are on display in American and Euro-

(Continued on page 76)

How Do You Prefer to Save?

Even in first cost, where saving begins and ends in the minds of many, White Cap offers more for the money. Large production, concentrated on three motors, with Wisconsin's highly-developed shop methods, makes possible a really sensational price range.

White Cap's "More Power per Cubic Inch" (a proved fact, not a pencil-and-paper theory), brings more economies in fuel and oil.

Finally, Wisconsin's precision standards guarantee to every White Cap owner many seasons of uninterrupted, trouble-free motor boating—instead of motor tinkering.

No matter what type of saving means most to you, White Cap offers it in generous measure. And with it, remember, a dashing, sparkling performance that will make your boat the talk of the fleet.

MORE POWER

New price, 75c

(90c in Canada)

Delivering the spark in high powered speed-boat engines is about the most exacting task that a spark plug can be asked to perform, as it means a continuous run with wide open throttle and full load.

That AC Spark Plugs are best suited for this work is evidenced by the fact that they have been the choice of the winners of the Gold Cup and Sweepstake Regatta for many years.

Likewise, foremost automotive engineers specify AC Spark Plugs as standard equipment for the very good reason that they perform best.

There is a type and size of AC Spark Plug for every engine, and they are available through AC dealers everywhere.

pean museums. The walrus is found in large numbers between St. Lawrence and Diomed Islands during the spring and summer months. He's a curious creature, but in one respect particularly he resembles the human species—he loves company, and lots of it. There is nothing he would rather do than herd with anywhere from ten or twenty up to hundreds of his fellows and enjoy a pleasant siesta on the sunny side of an ice cake. When surprised, the bulls throw slips and flounders off into the water, the cows carrying their young on their backs.

In addition to her hundred or so of other activities, Nanuk also functions as a whaler, and she carries a most complete outfit, ranging all the way from whale-guns and harpoons down to the brick furnace on her forward deck for trying out the blubber. Nearly every year Captain Pederson and his men have been taking three, four and sometimes five bow-heads, which are brought alongside, their blubber cut up, tried out, and the oil brought back to the States, where it finds a ready market. And still there are those who croak that whaling is no more!

The skipper of Nanuk often trades in Polar bear skins; it was just last year that one of his men brought down a bouncing big fellow. Fishing is always good; salmon, cod, halibut and white fish thriving in the icy waters of the Alaskan coast, and as for the fresh water streams, it is said that they are continually visited by the shades of Isaac Walton, the trout being plentiful enough to delight the heart of this famous old angler, even in the spirit.

At her many ports of call, especially among the more remote, far-flung reaches of the inhospitable north coast of Alaska, they regard Nanuk as the true harbinger of spring. The men hardly have the anchor down before the natives begin to swarm aboard. It must be borne in mind that with these fellows there just isn't any such thing as stepping out to the neighboring grocery for a tin of coffee, a half dozen eggs or a pound of sugar. Their shopping has to be attended to at one visit, some of them traveling great distances from the interior. So when they restock their larder, say in July, 1926, it must last through until July, 1927, and if their supplies run low along about Washington's Birthday—well, they just run low, that's all, and have to be stretched to the limit.

But on the shelves of Nanuk's floating store there is an abundance of everything, from coffee to calico and from licorice chews to lamp chimneys. Speaking of lamp chimneys, though, her captain caused a mild stir among some of the natives last year when he took up his first lot of the new variety—Nanuk had put in at one of her many ports of call and a rushing business was going on down in the trading-room. The skipper had withdrawn, but he soon re-appeared and in each hand he carelessly held a lamp chimney. He even tossed one up and caught it, in playful fashion. As it settled into his hand the eyes of the Eskimos popped and blinked. "Suppose he dropped it!" grunted Ahlowuk to Penatuk.

"Oh, Charley," called the captain. "You'd better have one of these. They're pretty good." The words were hardly out of his mouth before the frail looking chimney came hurtling the length of the room, end over end. Charley Hook made a desperate lunge for it, but fumbled. Two or three others grabbed in a vain effort to save it. But despite their combined efforts, the chimney fell to the deck!

Then a funny thing happened. Instead of its laying there before them, shattered to a thousand bits, it bounced! The unbreakable lamp chimney had arrived. So now, when the dusk of the seemingly endless winters night settles down over the bleak regions of the far Northland, should Charley Hook's fat little youngster become unruly and upset the oil lamp, his mother placidly recovers the chimney and sets it in place again. But in years gone by this would have amounted to nothing short of a tragedy, for the family simply would have to get along somehow with the aid of the smoky, open flame.

Nanuk and her officers and men are equally well known and liked down the coasts of the Far North. The chief reason for the vessel's popularity is because she can be depended upon to make every one of her regular ports of call. Not one of them is too small nor too isolated to be visited. In her passages up the Pacific and through the Bering Sea she spreads her canvas, in order to save as much of her precious fuel as possible, but when negotiating the ice-fields and touching at the various trading stations, her big Diesel engine is put to work.

There is an engine-room telegraph not only from the

“Matthews”

STANDARDIZED CRUISERS

AN IDEAL HOME — *for a Winter of healthful pleasures in the SOUTH*

MATTHEWS “38”s have met with overwhelming favor all through the South. Northerners, too, who habitually spend their winters where it is “June in January” have forcefully shown their preference of Matthews “38”s through orders in large numbers.

There is no denying the comforts in them because the commodious cabins with large galley and complete toilet and wash room facilities provide everything that could be desired in a home on water.

An inherent seaworthiness in Matthews “38”s completes to a rare nicety the combination of features required of boats for use in Southern waters. It is the normal thing for Matthews “38” owners in Florida to run to the Bahamas or Cuba. Ladies in particular appreciate the exceptional seaworthiness of the boats on such runs.

You can have all these pleasures and adventures this winter and profit in health through the experience. You can get a reasonably prompt delivery to any point.

Write for our descriptive literature or call on our nearest Sales and Service distributor.

Announcing

A new line of small cruisers

Complete Specifications well illustrated with outline drawings will be sent upon request.

The *Two-Cabin Cruiser*, shown above, can be built for as little as \$6,000 (depending upon the type of engine used). Length over all, 40 feet; beam, 10 feet 2 inches; draft, 3 feet 4½ inches; designed by Ralph E. Winslow, the world-famous Naval Architect.

There are other seaworthy types—the *Houseboat* and *Deep Sea Cruiser*—built for the utmost in comfort, speed and serviceability at a moderate price.

Should your requirements vary from any of these craft—small or large—we would be glad to figure on your own specifications or cooperate with your architect. In any event, it will be well worth your while to send for full particulars.

It casts less to build good boats in Maine.

"Where Boat Building Is a Family Tradition"

The First East of Barrow

(Continued from page 76)

after deck, but from the mast-head as well. The mast-head telegraph is indispensable when working through the ice, and at such times the captain often spends hours at a stretch in the crow's-nest. First, it's a jingle-bell for full speed, then two bells will ring down for a stop; then a clear patch of water will appear as the telegraph clangs for half speed while Nanuk makes her way across and into the ice on the other side; then two bells once more as she cautiously feels her way along. And so it goes—ticklish navigation every foot of the way.

On her homeward-bound passage last year Nanuk had to literally work her way for a part of the distance. It was in the vicinity of Herschel Island where westerly gales had blown the icepack on to the coast, making further headway next to impossible, some of the ice being aground in seventy feet of water. Captain Pederson freely admitted that the ice was the heaviest he had ever seen. However, after waiting for a few days in the hope that the wind would make a favorable opening, Nanuk fell to and commenced to fight. And she fought, desperately; it may be realized just how desperately she fought and bucked and showed, part of the time with her keel dragging bottom, when it is told of her that it required five days of twenty hours each to round Herschel. And in three of these days just two miles of headway was made! The engineer says that during that trying time he received so many bells from full ahead to full astern that he must have averaged one a minute; and every one was answered, promptly.

Of course, such grueling work as this made a sizeable dent in the fuel supply; so much so, in fact, that in the final run of 2,100 miles from Juneau to San Francisco, which required 3,600 gallons, it looked, at times, like a race with the bottom of the tank. But this 3,600 gallons could hardly be called legitimate fuel oil, the regular Diesel fuel having to necessarily be diluted by a wierd mixture of lubricating fluids, aviation gasoline, whale oil, coal oil, and even grease from the galley! But with all this abuse the screw kept right on turning.

The sort of work in which Nanuk is engaged subjects her power to the severest kind of tests, but her installation is a sturdy one. The chief advantage of Diesel power lies, of course, in the fact that about four times the cruising radius is made available by means of this power over steam, considered from the standpoint of bunkering space. In the case of Nanuk, for example, it can readily be seen that every cubic foot of space has to be put to the best possible use.

This vessel is powered with a six-cylinder Atlas-Imperial Diesel engine capable of developing 300 brake horsepower. The fuel consumption amounts to approximately 15 gallons of 24° Diesel fuel oil per hour, while the lubricating oil consumed will average one-sixth of a gallon.

Nanuk is a three-master, schooner rigged. Her length of 130 feet, with a beam of 31½ feet and 9½ feet depth, permit of easy handling in a limited berth and shoal water, which is very essential in her work. She was built at Fairhaven, California, in 1892, and when selected for work in the Far North her hull, to a point well up above the water-line, was sheathed with iron-bark, which affords the best known protection against bad ice. And if anyone is really curious to know what iron-bark is like and just how tough it is, let him consult with any good, experienced shipwright.

Some New Books

A recent publication which should prove of interest to the yachtsmen is the extremely interesting book, *Fight of The Firecrest*, by Alain Gerbault. This book furnishes an absolutely authentic and truthful record of the hazardous trip which the author made during his cruise from Gibraltar to New York in a 39 foot boat. The voyage required 101 days for the crossings, and the adventures and hardships which befell the lone navigator and his boat render their survival of the trip a marvel. Every difficulty of fate and the elements combined to delay his progress, and make his voyage perilous. Calms left him motionless for days, and at the mercy of the sun. Torrential rains and waves drenched him to the skin, and flooded the boat. His provisions spoiled forcing him to continue on short rations. In spite of all these misfortunes, the voyage was safely completed at Fort Totten, Long Island, without having touched any port. The book has been published by D. Appleton and Company, New York.

The New World's yachting center

- - - a chosen gathering place for sportsmen

No other section of America surpasses the Jacksonville river-country in beauty, or in its opportunities for pleasure. In this one district there are literally hundreds of square miles of lakes, with innumerable waterways, varying in size from diminutive streams to the mighty, 285-miles-long St. Johns River—five miles wide when it passes Jacksonville!

Great, calm waterways, glittering beneath the sun, invite you to water-sports—draw you irresistibly into the healthful outdoors, to week after week of cruising in speed-boat, yacht or houseboat.

Yachtsmen from every state are seeking Jacksonville in steadily increasing numbers. Sportsmen are realizing the range of Jacksonville's opportunities for winter and autumn pastimes. Five magnificent 18-hole golf courses, tennis, horse-

back riding, motoring over perfect roads, nationally-known yacht races—these are only a few of Jacksonville's attractions for sports-lovers. Fresh and salt water fishing is at its best.

Those who come to Jacksonville year after year are invariably struck by its sure, solid growth in industry and prosperity. They know that Jacksonville's opportunities for profitable investment are safe—because Jacksonville's steady expansion has been going on for decades. Jacksonville's industries were never in a more flourishing condition than now. Foreign trade has increased more than 500 per cent, during the last five years. Jacksonville has more than 400 manufacturing plants, with payrolls totaling \$20,000,000. Five great trunk line railroads converge here, making Jacksonville the logical gateway to Florida and the growing Southeast. In-

creasing bank and savings deposits illustrate the growing prosperity of Jacksonville's people.

And this commercial and industrial growth is constantly going forward—constantly multiplying opportunities. Come to Jacksonville and investigate its business possibilities for yourself. Come here for your vacation. Enjoy Jacksonville's pastimes, its beautiful homes, its delightful winter climate. Live in one of its imposing hotels or apartments. For further information concerning Jacksonville and its opportunities, inquiries should be addressed to Believers in Jacksonville, P. O. Box 318, Jacksonville, Florida.

Bow and Stern Moorings

(Continued from page 46)

fall is excessive. Instead of a stretcher common to all boats at each side of the pier, there is a pile driven directly astern of each boat. On this pile is rigged a pulley and a weight of sufficient mass to hold the boat away from its neighbors. Bumpers should be used on both sides of the boats to insure further protection.

A weighted ladder, with hooks to fit over the string piece, will allow those who tie up the boat a means to reach the top of the wharf without much effort. Other passengers will, of course, be landed at the float.

Stops on the mooring lines will hold the lines at convenient length while the boat is being used.

The stake method (Fig. 4) requires nothing but a stake of sufficient diameter to hold the boat. A short painter fitted to a loose ring that engages the stake completes the outfit. J. E. M., Norwich, Conn.

Protecting the Boat

(Continued from page 47)

wise be taken apart and given a protective coating of grease, for the inroads of rust, particularly on those parts of the equipment that comes in contact with water, cause much of the unnecessary work in the spring time overhauling.

It is best to haul out a boat on a cradle, or skids, and block it up with the cradle as a base. It is well to have the cradle a little wider than the boat. Blocking up a boat on its cradle will offset to a great extent some of the unsatisfactory conditions that exist in some layup places. In these places the ground may be even and solid enough before the winter sets in, but March very often finds frost upheavals and gulleys made by torrential rains that spell ruin to blocking and shores that have nothing but shifting ground as a base.

Where a cradle is not used, all blocking and shoring should be securely fastened into a unit in order to ward against slipping. As a matter of fact this is good practice even where a cradle is used.

In blocking up the boat, see that the greater part of the weight of the boat is borne at points in the extreme bow and in the stern—to prevent hogging. The time honored wedge will serve to adjust the blocking and shores to a nicety.

As the boat leaves the water, it will be an easy matter to clean the under body with a broom eliminating thus one of the dirtiest jobs of the spring overhauling—getting the underbody ready for its coat of paint.

A coat of copper paint applied to the underbody of a boat immediately after it is hauled out is doubly beneficial. It retains the moisture in the planking, does away with the necessity of much caulking and puttying in the spring and leaves the underbody in excellent condition for the reception of the spring coat of paint.

Regardless of the watertight conditions of the cover, a one inch hole should be bored in the lowermost part of the bilge near the keel, if one is not already there, to insure the escape of any water that might make its way into the boat.

A canvas cover makes a popular and easily put up covering. A wooden framework should be made that will last through several seasons. A strong back, or center piece, should be made in two pieces with a strap hinge at the joint. This will make the center piece continuous and allow the slope that will make the cover a good water shed.

The cross members and verticals supports, as well as the cross members should be fastened to the center piece with angle irons. The amidship cross member should be bolted to uprights the bottom ends of which should be fastened to the cradle, or to a strap piece joining the bottom of the uprights.

Elsewhere the frame will be held rigid by the cover, provided its edges are securely lashed with body ropes or the lower edges of the cover attached to the hull with laths. While not necessary, chicken wire stretched over the frame work makes for a smoother cover and one that will prevent sagging of the canvas in northern latitudes where the snow fall is heavy. The canvas itself should be 12-oz. A portion of an old sail or two or three tarpaulins such as can be bought in many ship chandlers will meet this requirement. Make provisions for easy access to the hull during the layup, either by incorporating a laced opening in the cover, or by overlapping the tarpaulins in such a manner that it will be an easy matter to roll one back a little in order to get into the boat.

J. E. M., Norwich, Conn

1926 IMPROVED "INTERNATIONAL 32"

with Glass Windshield

After you have seen and had a ride in this new model you'll know definitely that you simply can't buy more boat for the same money anywhere. The price \$4,700 makes it possible for you now to own a boat possessing the most advanced improvements without paying an exorbitant price.

Pictures can give you only a general idea of this wonderful new International model. Quantity production, efficient manufacturing methods and the last word in modern equipment, have made it possible to produce a boat consistent with International ideals of quality at a lower price than often asked for inferior boats. The International 32 is equipped with a 6 c./l. Continental Van Blerck Motor.

Immediate delivery from stock. We invite you to ride in the New International—confident that you will acclaim it the best buy you have ever known.

"Little Star" Wins With

NOT only did Willard M. Waugh's 151-class hydroplane Little Star bring the Rudder Trophy back to the United States, when she captured it at Ottawa on August 17th, but this sensational speed boat broke its own previous world's record of 40.82 miles per hour by setting up a new mark for its class of 42.11 miles per hour.

Like the world's premier automobile racing drivers, Mr. Waugh uses Oilzum Motor Oil in Little Star's power plant. Since the beginning of automobile racing Oilzum has been the leading choice of lubricant. The more recent champion drivers, Tommy Milton, Jimmy Murphy, Eddie Hearne, Peter De Paolo, and Frank Lockhart, winner of the 1926 Indianapolis Speedway 500-mile classic, use Oilzum in their racing cars exclusively because it stands up the longest and lubricates the best.

The ability of Oilzum to bring home the bacon in motor speed contests on land and sea is the most convincing proof of its high and consistent lubricating qualities. Let us tell you about Oilzum and why it is America's Finest Oil. There is a grade of Oilzum for every make of marine engine—and it lubricates the best by every test.

Extra tubing per foot..... .25

The Moto Meter Company, Inc.

12 Wilbur Avenue Long Island City, N. Y.
The Moto Meter Co. of Canada, Ltd., Hamilton, Ont.

on August 15, the day of the race, it was found that there were 16 outboard motor boat drivers, who thought they could handle the voyage of 75 miles. These boats were started on their long run from the Colonial Yacht Club anchorage, and covered the course in remarkably good time. The weather conditions while fair overhead, were not so easy on the little boats, as the wind and tide combined to make a nasty chop on the river, which proved difficult for the little boats to negotiate at speed. This also served to slow down the running time in the race, because of the difficulties of handling and re-fueling while underway.

Provision had been made for boats to compete in four classes, the smallest Class A was for engines up to 14 inches displacement. Class B, was for engines from 14 to 20 inches, and Class C for engines from 20 to 30 inches. The Free-For-All class was free from all restrictions as to the number in the crew. On the morning of the race, the boats entered in Class A failed to appear. Class B brought forth only two competitors, while Class C, and the Free-for-All were represented for four boats each. The power plants on the larger boats were all the big twin Johnson engine, while the engines in Class B, were a Lockwood-Ash twin, and an Elto twin. All the boats in the larger class were of the Baby Buzz type, and performed well under the heavy sea conditions which prevailed on the river. In Class B there were two Meraco canoes competing, and one of these outclassed the other in type, so that the winner had no serious task before him.

Through the generosity of the Johnson Motor Company, the Evinrude Motor Company, members of the Colonial Yacht Club, E. J. Willis & Co., and Von Lengerke and Detmold, prizes were provided, so that the winners in each class were awarded handsome prizes and a time prize was also presented to V. Withstandley for the best elapsed time over the course. The results of the races are as follows:

Captain Praises Radio Compass

The use of the radio compass as an adjunct to other modern devices used by mariners in piloting the course of their vessels during adverse as well as fair weather is causing considerable comment in maritime circles. Reports of the experience of a number of steamship captains furnish conclusive evidence that the radio direction finder is fast becoming recognized by practical mariners as one of the most valuable instruments of marine navigation. In a letter to the Vacuum Oil Company in New York, which accompanied the log of a recent trip on the Pacific Coast, K. I. Marcussen, Master of the S. S. Gargoyle stated in part:

"I wish to add that coming up the California Coast in dense fog, I found this apparatus to be of inestimable value. As soundings are impractical on this steep coast, with great depths a short distance off the beach, I had this to fall back on, and by taking a number of bearings off Point Sur, at about 10 minute intervals, I could tell, not only that we were well clear, but also by applying my speed, could tell the distance off, and the minute I had that Point abeam. "This apparatus, in conjunction with the gyro so bearings can be read off true, is by far the greatest aid to navigation in fog. No uncertain guessing about it, and when you know you are right you can go ahead and delays on account of fog are practically eliminated."

At the offices of the Radio Corporation of America, in New York, T. M. Stevens, Marine Superintendent said the Vacuum Oil Company had equipped twelve of their largest vessels with the radio compass.

MONARCH ELECTRIC PUMP

Silent Economical and Efficient

This pump is used for flushing decks, pumping bilge or furnishing circulating water for heating systems or free running water to all parts of the boat. It's portable and can be used at home, in camp or factory. Free supply of water at all times assured.

Monarch Valve & Carburetor Co.

RAJAH SPARK PLUGS

RAJAH Plugs have been favorites with boat owners for more than twenty years because no other plug can stand up under the full load of a marine engine with reliability equal to Rajah. The heavy fuel charges quickly short-circuit a poorly designed spark plug, resulting in waste of fuel and loss of power.

For unprotected engines and outboard motors use the Rajah Waterproof Type Spark Plug—the only successful waterproof plug ever designed. For cruisers and protected engines, there is nothing better than the Standard Rajah Spark Plugs.

Rajah plugs are made in all types and threads to fit every make of engine. If your dealer does not carry in stock the Particular type you want, order direct from us.

Rajah Spark Plugs are used by famous boat and automobile racing drivers.

WHY gamble the pleasures of a southern cruise with the performance uncertainties of the old engine in your boat? Start the cruise right with a BRENNAN and you are assured a most enjoyable and carefree voyage.

Point for point the BRENNAN will prove its superiority in engineering features, in materials and in workmanship. Then, too, the BRENNAN gives you a full 100% reverse speed, a vital need in an emergency and an advantage in traffic congested harbors.

There is a BRENNAN for every type of boat, from 18 to 75 feet in length.

Replace your motor NOW with a BRENNAN

FREEDOM
at Biscayne Bay
during the winter
season

The Nth Degree in Comfort—the distinguishing feature of Mathis-built Houseboats is well exemplified by this deckhouse on the 104-ft. Cruiser-Houseboat "FREEDOM" recently built by us for Mr. A. J. Fay, of Lowell, Mass.

Dr. H. B. Baruch's latest 92-ft. Mathis Houseboat **RIPOSO** at Bar Harbor

In Florida This Coming Season

the 104-ft. **FREEDOM** and the new-type 93-ft. Mathis Houseboats

with their new 1927 perfections will be the sensation of the season, just as Mathis-built houseboats have been in every season back to 1911.

Equally at home on the ocean, the lakes, the bays, sounds and inland streams, they provide a luxury and comfort un-

excelled by the finest hotels, combined with an ability to go anywhere unrivaled by the largest yachts.

The choice of men who know—the boats that bring their owners back to us again and again with new commissions —because right designing is combined in the Mathis Yard with enduring, economical construction.

CROSS BALL BEARING REDUCTION GEAR

THIS balanced, vibrationless and super-efficient all enclosed reverse gear has a special appeal to boat builders and owners. Compact and short in length for the H.P. to be transmitted, it can be installed in boats where a minimum of space is available—particularly in this true where the design calls for a forward cockpit. Oil-tight aluminum housing—ball-bearing job throughout—a velvety clutch—gears running in oil—total absence of propeller drag—85% of motor speed in reverse—built as accurately as a watch and as husky as a bulldog—jig built with interchangeable parts—easily accessible.

Yacht Finishing Plant in Right
Foreground.

Defoe-Built in 1926

SYLVIA, 133'x21'-6"x8' Steel Diesel Yacht for Logan G. Thomson, Hamilton, Ohio. Design by John H. Wells, Inc., New York. Power Plant, 2 Bessemer Diesels developing 300-H.P. each at 450 r.p.m.

ROSEWILL, 83'x15'x3'-9" Round Bilge Express Cruiser for W. C. Rands, Detroit. Design by Hacker & Fermann. Power Plant, 2 500-H.P. Packards.

CHARLOTTE, 65'x12'-6" V-bottom Express Cruiser for J. J. Barlum, Detroit. Design by Hacker & Fermann. Power Plant, 2 300-H.P. Marine-Aero Fiats.

LASSIE, 55'x13'x3'-8" Heavy-weather Cruiser for T. B. Van Dorn, Cleveland. Design by Hacker & Fermann. Power Plant, 2 125-H.P. Speedways.

BO-PEEP II, 55'x13'x3'-8" Heavy-weather Cruiser for I. M. Kirlin, Detroit. Design by Hacker & Fermann. Power Plant, 2 100-H.P. Kermaths with reduction gears.

FRANCES A-VII, 55'x13'x3'-8" Heavy-weather Cruiser for Com. Alex I. McLeod, Detroit and Algonac. Design by Hacker & Fermann. Power Plant, 2 60-H.P. Sterling Seagulls.

NOMABIN, 44'x10'-6"x2'-6" V-bottom Express Day Cruiser for Montgomery Whaling, Detroit. Design by Hacker & Fermann. Power Plant, 1 200-H.P. Hall-Scott.

NO-NAME. 55'x13'x3'-8" Cruiser for Hacker & Fermann, designed by themselves.

Also, constructed separately from the yachts, THIRTEEN 100-ft. STEEL PATROL BOATS, Winton Diesel Powered, for the U. S. Coast Guard. (While these boats do not classify as Yachts, the exacting nature of Government Inspection entitles them to mention in the same paragraph as among the best in their own class.)

DEFOE BOAT & MOTOR WORKS

Builders of the Finest in Steel and Wood Yachts

ROSEWILL, an 83 ft. Round Bilge Cruiser of very Special Design and Construction. Lower Left—Dining Salon, Lower Right—Aft Stateroom.

ROSEWILL is a boat of many novel features, among them the roomy forward cockpit with its windshield. She is framed of woods selected for their light weight and great strength and double-planked with cedar and mahogany.

Finished in mahogany throughout. Besides accommodations for the Captain and crew of four, she has two full staterooms, one full bathroom, a commodious dining room forward, and a large roomy deckhouse.

FRANCES A-VII, above, with her Black Hull and Mahogany Upper Work, is both striking and Handsome in Appearance.

NOMABIN, at Right, is a credit to Hacker's peculiar skill in V-bottom Design, Clipping off her 20 Miles per Hour.

BO-PEEP II, is Unique in her Power Plant. Each Kermath Swings a 33 x 34 inch Propeller through Reduction Gear, Reducing Slippage and any Squatting Tendency to a Minimum.

The list includes:—

Sylvia, 133' steel diesel yacht owned by
Logan G. Thompson, Cincinnati
Rosewill, 83' express cruiser owned by W. C. Rands, Detroit
Lassie, 55' deck cruiser owned by T. B. Van Dorn, Cleveland
Charlotte, 65' express cruiser owned by J. J. Barlum, Detroit
Frances A VII, 55' houseboat cruiser owned by
Com. Alex. I. McLeod, Detroit
Nomabin, 44' express day cruiser owned by
Montgomery Whaling, Detroit
Bo-Peep II, 55' houseboat cruiser owned by I. M. Kirilin, Detroit

The "Sylvia" was designed by John H. Wells,
Inc., Naval Architects, New York, and all the
others by Hacker & Formann, Inc., of Detroit.

Goodrich "Cutless" (rubber surface) Bearings are lubricated entirely by water, and the inner shell of Olivite rubber is so tough that it will far outlast any other bearing surface known which means fewer bearing replacements and a lowering in dry dock expenses.

At the same time the added cushion for the shaft reduces vibration materially while shaft scoring is practically eliminated.

THE B. F. GOODRICH RUBBER COMPANY
Established 1870 Akron, Ohio

DEFOE BOAT & MOTOR WORKS

Builders of the Finest in Steel and Wood Yachts

Commoore Alex McLeod's new Defoe built and Hacker Fermann designed cruiser equipped with two Sterling Sea Gulf motors (one of the H and F Standardized Fifty-fives).

The H & F Standardized Cruiser

THIS cruiser is the last word in standardized design, giving unexampled comfort and seaworthiness. Length, 55 ft. Beam, 13 ft. Draft, 3 ft. 6 in. Filled with unique features.

Duplicate navigating instruments in the deck house and on the navigating bridge provide the important feature of dual control. Provision for twin screw installation is made, choice of motors being optional. With gear reduction motors, 15 miles per hour is guaranteed, while 13 miles is obtained by direct drive.

The enclosed 16-foot deck house provides an ideal lounging room and dining salon. Two double state-rooms aft, an emergency double berth in the deck house, provide comfortable sleeping accommodations for 10 people. A carefully planned, well ventilated galley extends the width of the cruiser. Crew's quarters are contentedly furnished in the same elegant manner as guest's quarters.

The price, fully equipped and ready to step in and cruise away, is surprisingly low because of standardized quantity production savings in building.

Above — Galley — extending full width of boat with excellent ventilation.

Above — Forward cabin crew's quarters — so equipped and furnished as to assure crew contentment. At left — Interior view of deck house showing navigating controls (duplicate controls also located on bridge.)

Designing and Brokerage

Our designing department will furnish designs with complete specifications and will supervise construction of any type craft ranging from high speed racing runabouts to the largest Diesel type yacht. Our brokerage department has a complete file of available boats of various types and we offer a complete brokerage service to both buyer and seller, especially in boats located on or desired for the Great Lakes district.

HACKER & FERMAN, Incorporated

6300 East Jefferson

Detroit, Michigan

Nomabin—a 44 ft. day cruiser designed by Hacker & Fermann and built by Defoe—equipped with one 6 cyl. 200 h.p. Hall Scott Marine motor giving speed of 20 miles per hour.

The Most Modern Plant

(Continued from page 37)

etc., which are moved around wherever wanted according to the requirements of the particular job. Both stationary and portable sanders are to be found so that very little sanding is done by hand. All drilling, boring and other laborious and time killing kinds of work are handled by the most up-to-date machinery.

The Defoe plant has its own drafting room for detail work in caring for designs of their own but the plans of the general naval architects can be worked out and completed with the same swiftness, accuracy and quality of finish, as is the case of work from their own plans.

The plant facilities of the Defoe Boat & Motor Works, include two steam boilers for the steam hammers, wood bending and plant heating. The Compressor Plant contains two compressors and the air is piped to all buildings and to the entire length of the ways. Standard 110 volt current is wired throughout the plant and yard for lights and small tools. There is also high voltage 3-phase current for the heavier motors in the compressor room, mill and elsewhere.

The plant of the Defoe Boat & Motor Works is located in Bay City directly opposite the side of the Old Wheeler Shipyards which built some of the largest and best boats on the Great Lakes and many of the older men who were formerly employed in the Old Wheeler Shipyards are now and have for sometime been located at the Defoe plant.

The water frontage is approximately 1800 feet with sufficient depth to take care of boats of the greatest draft. The plant acreage is in the neighborhood of sixteen acres.

Of the interesting commercial boats which the Defoe Boat & Motor Works have completed recently, the thirteen 100 foot steel Coast Guard boats should be included. These craft, which are powered with 150 horse power Winton Diesels, are now all in commission on the Atlantic Seaboard and according to reports of the Coast Guard officers and crews which man these boats, they are a success in every way. They are well built and real seagoing little ships, built for government business under command of government officers and built according to government specifications and inspection.

Yacht work is the principal feature of the Defoe plant and within the last few months a great number of motor yachts of various sizes and types have been completed at Bay City and have gone into commission. Most of these have been from the boards of the country's best naval architects and designers, including several designed by Hacker and Ferman of Detroit and John H. Wells of New York City. Several of these boats are illustrated elsewhere in this issue and are described in detail below:

Lassie, a 55 x 13 foot heavy weather cruiser, was designed by Hacker & Ferman for T. B. Van Dorn, of Cleveland. Her power plant consists of 2-125 h.p. Speedways, which drive her 13½ m.p.h.

She is heavily framed in oak and mahogany planked. Decks are double, with outer layer of teak. Deckhouse and all exterior trim are in mahogany; cabin interiors in mahogany and ivory enamel over Haskelite panels.

Interior decoration scheme is in blue and gold with upholstery of gold-backed blue mohair.

In galley is a Frigidaire refrigerating plant and a large white enamel Protane gas range with top oven, constituting a galley equipment the equal of that in most boats of much larger size.

(Continued on page 112)

The Rosewill's Engines Are Synchronized With ELGIN Chronometric Tachometers

THE eighty-three foot express cruiser Rosewill, designed by Hacker & Ferman and built by the Defoe Boat & Motor Works, synchronizes its two 600 H. P. Packard engines with Elgin Chronometric Tachometers enclosed in the new Elgin Unit Control Board for twin-engined craft.

The Elgin Unit Control for twin-engines has two Elgin Chronometric Tachometers, two Ammeters and two Oil Pressure Gauges, all under one glass, indirectly illuminated.

For single engine runabouts and cruisers use this Elgin Unit Control containing an Elgin Chronometric Tachometer, Ammeter and Oil Pressure Gauge. All under one glass, indirectly illuminated. Other models include Motor Temperature Gauge and Air Gauge for Gasoline line.

A-E-CO Equipped Rosewill

THIS fine eighty-three-foot yacht just completed by the Defoe Boat and Motor Works for Mr. W. C. Rands, of Detroit, is equipped with an A-E-CO windlass which makes the tasks of weighing anchor and handling warping lines easy and certain. Furthermore, the beauty in line and finish of the A-E-CO windlass gives Rosewill the final touch in smartness.

For more than sixty years, America's finest yachts have been equipped with A-E-CO Auxiliaries—steerers, windlasses, boat hoists and other boat machinery of our design. Their absolute reliability, rugged strength, high efficiency, space-saving compactness and trim appearance are characteristic features that win the enthusiastic approval of the most critical naval architects and boat builders.

A-E-CO Electric Windlass, Gypsy Type for rope or cable, handles anchor, sail, small boats or warping lines—compact, powerful, economical. Occupies very little space above or below deck—easy to install—easy to operate. You just step on the button and the windlass does the rest. Takes very little power. A handsome machine with polished bronze head and mahogany base. Also furnished in wildcat type for chain. The most popular windlass on the market. Installed on hundreds of yachts and powerboats.

On the Sylvania IV Bessemer Diesels

ONE after another, Bessemer Diesel Engines are being selected to power the finest modern yachts.

The Sylvania IV, designed by J. H. Wells, Inc., built by The Defoe Boat & Motor Works, is powered with two direct reversible Bessemer Diesels, selected because of their unusual quietness, vibrationless operation and sturdy dependability.

Bessemer Diesels are really fine marine power plants that are ideal for every type of marine service—yachts, fishing vessels, tow boats, and as auxiliary equipment on larger ships. They have been proved by performance—that's why ships like the Sylvania IV are Bessemer powered.

When Mr. W. C. Rands, of Detroit, ordered the Rosewill, he wanted a bilge pump on it that could be depended upon.

When Hacker & Fermann designed the Rosewill for Mr. Rands, they specified an AMF Rotary Bilge Pump as being dependable, and noiseless in operation.

When the Defoe Boat & Motor Works built the Rosewill, they installed the AMF Rotary Bilge Pump as being dependable, noiseless in operation, and positive in action.

And all three parties are satisfied that the requirements of a perfect bilge pump have been met. What about *your* bilge pump?

Defoe Uses ERICO ACCESSORIES

Cabin Control Electric Searchlight

Remote Control Electric Searchlight

Cruiser Type Chain Steerer

THE Defoe Boat & Motor Works, builders of the fine yachts shown in this insert and featured in the editorial pages of this issue, use ERICO Accessories on their boats.

Defoe yachts being of high standard in design, workmanship and materials are naturally fitted with only the finest Accessories.

There is a decisive superiority in the quality and workmanship of ERICO Accessories. A difference that has led the foremost boat builders to use ERICO Accessories in preference to others.

Thank You, Mr. Kirlin

Kermath Manufacturing Company,
Detroit, Michigan.
Gentlemen:

Let me tell you how much I appreciate the Kermath twin 100 H.P. installation with a reduction gear in my 55-footer built by Defoe. The smoothness of power and the unusual lack of vibration have already convinced me after a trip of 600 miles that my choice could not be bettered.

My engine room is not cluttered up with a lot of cast iron and there is plenty of room to make adjustments without stealing space from the comfortable quarters that the design of my boat has provided.

I. M. KIRLIN.

Kermath motors are built in 13 rugged sizes. There is a dependable Kermath model for your boat.

Brass Skylight Shelf Binnacles

5", 6" and 7" compasses with oil and electric lights. Sighting lines for quick bearings.

The Leading Naval Architects and Boat Builders Use These Binnacles on Their Boats

THE 133-ft. Sylvia, one of the finest and most expensive yachts built and launched this year, is equipped with our nautical instruments.

It is the natural thing for naval architects and yacht builders to specify and use Kelvin and Wilfrid O. White instruments on all fine boats because experience has taught them that no other navigational instruments give greater satisfaction or longer service.

The Pedestal Binnacle shown on the right is a substantial, good looking and practical instrument, requiring little space. It is arranged for compensation and has sighting lines for quick bearings. A hurricane-proof oil light that will stay lit is standard with the binnacle.

Binnacle Pedestal

Made in 5" and 6" sizes.

All Defoe Boats Have HASKELITE Bulkheads, Sidewalls and Ceilings

HASKELITE, the waterproof plywood, combines structural strength and unsurpassed beauty of finish. For bulkheads, paneling, or any interior work, the surface ply can be mahogany, walnut, oak or any desired wood, while the strength and other advantages of the material make possible important savings in space, weight, first cost, time of delivery, etc.

HASKELITE is made with a blood albumen glue, producing a bond that can be boiled in water and is practically unbreakable. Originally developed for airplane construction, it has found applications in many industries, including some of the largest trans-Atlantic liners afloat. Over 90% of the major contracts for plywood joiner construction placed since the introduction of HASKELITE have been for this material.

Full information regarding applications of HASKELITE and PLYMETL, its steel-faced companion, to marine construction of all kinds will be sent on request.

Stearns Leadership

STEARNS Extra Reserve Marine Engines, fours and sixes, embrace all of the fine points of modern marine power plant engineering to such a degree that they are acknowledged leaders of their class in performance, value, quality, workmanship, economy and endurance. And then there is the Stearns plus power—one of the things so seldom needed, but so vital in an emergency. It is because of these advantages that among sportsmen who really live on the water you will find the Stearns is the leading choice of power plant.

Go to the nearest Stearns dealer and see this remarkable power plant or write us today for catalogue giving complete details.

The Stearns Six

A power plant embodying refinements and improvements in every detail of its construction. Skinner Oil Rectifier, three spark plugs to each cylinder, two independent ignition systems and high pressure lubrication are only a few of the major improvements the Stearns gives you.

No Caulking or Seam Filling
 For Ten Years or More If You Use

KUHLS' ELASTIC SEAM COMPOSITION

KUHLS' Elastic Seam Composition is the most satisfactory and durable filler you can use for deck seams and Kuhls' Elastic Glazing Composition for top, sides and bottom seams. One filling lasts for years. It sets semi-hard, but never gets brittle, adhering tightly to the sides of the seams, and retains all its original elasticity through many years of hard service.

Its elasticity gives with the twisting and bending of the hull, compensating for the swelling and shrinking of the planking. Used by the U. S. Government and the best boat builders everywhere.

Five colors—White, Gray, Yellow, Black and Mahogany
 Carried in stock by marine supply dealers, ship
 chandlers and hardware dealers everywhere.

The Most Modern Plant

(Continued from page 96)

Fuel tanks are copper of 600 gal. capacity. An Oberdorfer electric pump takes the gas direct from the main fuel tanks to a gravity tank which feeds the engines. Current is furnished by a Delco generator. There is one Erico electric pump for bilge and another for fire and wash-deck use.

Cabins are heated by means of Protane gas room heaters. Bo-Peep II was designed by Hacker & Fermann for I. M. Kirlin, of Detroit. She is also a heavy weather cruiser 55 x 13 feet. Her power plant consists of 2-100 h.p. Kermaths working through 2 to 1 reduction gears.

Decks are double with outer layer mahogany. Deckhouse and exterior finish is in mahogany. Interior is in mahogany and old ivory.

She has, like Lassie and Frances A-VII, one stateroom and toilet forward. Just forward of the enclosed bridge is a roomy galley equipped with a Kelvinet refrigerator, made by the Kelvinator Company and a Protane range with bottom oven and railed top. Aft of the bridge deckhouse are two staterooms with ample wardrobe space, and one full bathroom between the two, opposite the companionway. The deckhouse has an overall length of 15 feet, with a clear floor space inside 9 feet long. A wide upholstered seat crosses the aft end, and furniture is wicker.

Also like Frances A-VII and Lassie, Bo-Peep has two control stations, one in the deckhouse and one on the outside bridge. Each is complete with motor controls and instrument panels as well as steering column and binnacle, and either may be cut out when it is desired to use the other.

Interior decorations in cabins are in taupe—both carpets and upholstery. Mattresses are extra thick Nachman inner spring type. Furniture and furnishings include many special conveniences, such as a hinged desk in owner's stateroom.

Horn is a Bosch with a special resistance switch to give two distinct tones.

Fuel tanks are of 460 gallons capacity, and Auto-pulse feed takes fuel direct from them to the motors.

An interesting feature of the boat is her reduction gear installation. Each motor swings a 33 x 34 inch Columbian Rocket propeller. The slippage is very low and the boat shows almost no tendency to squat even at her maximum speed of 14 miles.

Frances A-VII is of the same size and general arrangement as the two boats described, but was equipped, with 2 Sterling Seagull motors. Her exhaust was piped out through transom instead of underwater as in the other two boats. The most distinctive thing about her is her black hull with the mahogany upperwork above it, which gives her a snappy and handsome appearance.

All of these boats, as well as Charlotte, were delivered to their destinations under their own power, whence speed data is obtained from time made on charted courses. In thus making the deliveries under power, moreover, the builders gave each boat a thoroughgoing test in all particulars, as each delivery meant a maiden voyage of 220 to 340 miles.

Sylvia is a 133 by 21½ by 8 foot steel Diesel yacht designed by John H. Wells, Inc., of New York, for Logan G. Thomson, of Hamilton, Ohio, and built in 1926 by Defoe Boat & Motor Works.

Hull construction is of steel with customary bilge tanks for oil and water. Tank capacity gives her a cruising range of 3000 miles.

Power plant consists of two Bessemer Diesels developing 300 h.p. at 450 r.p.m. Her cruising speed is 13 miles per hour at 280 turns of the motors; maximum speed 15 miles per hour.

Electric current is furnished by 2-110v, 12½ k.w. Universal generators with a 100-cell A-6 Edison battery. Engine room auxiliaries are most complete, including a separate electric pump for wash-deck and routine work in addition to the regular fire and bilge pumps. Fresh and salt water-pressure systems are of Kewanee manufacture, and sewage tank disposal system is a Rumsey automatic.

Equipment is such as to give a maximum of comfort both to the owner and his crew in living accommodations and easy handling of the boat itself. It includes such things as an American Engineering electric, worm-gear windlass; double vertical gypsy boat hoist on boat deck, with all driving mechanism and resistance in engine casing out of the weather; Webb-Perfection coal and oil galley range; quad Strombos horn; 21-foot Universal powered owner's launch; Mott plumbing of highest grade with a full flushing system draining to sump tank; 3 Serval ice machines, one in pantry

(Continued on page 116)

A Wright Marine Engine Made the Fastest Lap

A new record for the fastest lap ever made in the Gold Cup Race was established on August 21, 1926, at Manhasset Bay over a three-mile closed course by Mr. R. F. Hoyt in his racing runabout "Imp", designed and built by

Mr. R. F. Hoyt's racing runabout, "Imp", designed and built by the Purdy Boat Co., Port Washington, N. Y., Mr. Hoyt driving.

the Purdy Boat Company, Port Washington, N. Y., and powered with a Wright Marine Engine.

The "Imp" attained a speed of 53.58 miles per hour in the fourth lap of the first heat.

The "Shadow Vite", owned by Mr. Carl G. Fisher, and designed and built by the Purdy Co., and also powered with a Wright Marine Engine won the second and third heats in remarkable time.

Thus do Wright Marine Engines again assert their supremacy in the marine field.

Airships BABY BUZZ

**Winner of First, Second and Third Places in Gold Cup Regatta Baby Buzz Class.
Winner of First, Second, Third, Fourth and Fifth Places in Outboard Free-for-All at Broad Channel Y. C. Regatta.**

Won New York State Championship at Jamaica Bay.

Captured Time Prize by Several Hours in Bear Mountain Marathon.

THE Airships Baby Buzz is the aristocrat of all outboard motor boats. It is not only a champion racing craft but is also a safe, seaworthy, sound and sensible boat for general use and fishing.

This handsome boat is built by skilled aircraft artisans, the most expert of woodworkers. Solid mahogany planking, selected straight grain spruce keel and ribs; brass screwed throughout. Finished in the best spar varnish and highly polished.

AIRRAFT
"The Boat in the Bag"

A safe and seaworthy portable boat for hunting and fishing. Use as swimming raft, seaplane, and boat tender, etc. Any light weight standard make of outboard motor can be attached. Carried by Capt. Rene Fonck, Lt. Com. Byrd and all long distance over-water flyers.

Length 7'. Beam 3' 18"
Fits in bag 18" x 12" x 5".

AIRSHIPS INCORPORATED

HAMMONDSPORT, N.Y.

Idler III Wins Ocean Race

(Continued from page 40)

the winner of this race. Idler III, owned by Otto von Au, a big seaworthy cruiser powered with a six cylinder Stearn engine covered with the course in 5:13:18, or at the rate of 12.8 m.p.h. The second boat to finish was the cruiser Redcyl owned by J. R. Huntley, which covered the course in 6:23:30, which with the ample handicap gave her the second place. The time prize for the fastest run over the course was awarded to Rene, Jr. II, a new Elco Cruisette, purchased by L. M. Simmons only a day or two before the race, and which established a speed of 13 miles an hour for the course.

Having started on the basis of the handicaps, all boats were computed to finish the race at four o'clock in the afternoon. Of the ten boats which started and finished, six reached the finish line within a very few minutes of the computed time. The widest divergence from the estimated time was in the case of the two boats finishing first and second, who both took eighteen minutes less than the committee had computed. The closest approach to the committee's estimate was in the case of Commander Downey's

Paducah, which did the course in three and one half minutes less than computed. The others varied between, and as a general thing all went a few minutes faster than they had gone on previous occasions.

A suggestion was made on behalf of the Tamaqua Yacht Club, which also runs an ocean race over the same course, that the Sheepshead Bay Club combine with the Tamaqua Yacht Club in running a joint race in the next season, which should be the biggest contest of its kind ever held on local waters. There are promises of an abundance of prizes for a contest of this nature, and a double system of handicapping was suggested, so that a race under both the past performance rule, and under the American Power Boat Association measurement rule could be arranged. This suggestion was very favorably received on the part of members of the several clubs, and also some of the contestants in the race. It seems likely that another year will see one big race over this course.

(Continued on page 116)

The Most Modern Plant

(Continued from page 112)

refrigerator, one in galley refrigerator and one in a large meat box just abaft of the galley with deck outlet; Capital heating system with pump, circulation; sashless type windows with Kearfott crank-operated regulators.

The finish of *Sylvia* is the finest that first class yacht building practice makes possible. Main deck and all exterior joinery is of teak including deck houses, rails, etc. Interior of deck houses including dining room, pantry and living room is finished in American black walnut, and owner's and guests' cabins are finished in antique walnut and French gray.

While the Crew's Quarters is a portion of a yacht that is generally given only passing attention, in *Sylvia* they deserve something more. In this section of the boat there are 3 staterooms, 3 toilets, mess-room and forecabin, all finished in brown mahogany.

Rosewill was designed by Hacker & Fermann for W. C. Rands, of Detroit. She is 83 by 15 feet round bilge express cruiser, but of seagoing adaptations. In the one trial that the builders have given her they put her into a heavy sea at all angles, and she performed beautifully.

Rosewill is a boat of many special features: Her large forward cockpit with its really artistic windshield; her windshield protected bridge; the third, hinged windshield sheltering the aft deck; her sashless Ternsteadt lift windows in deckhouse; her very ample quarters for a boat of the express cruiser type, including two full staterooms and one full bathroom aft, and roomy dining saloon forward besides galley, forward toilet, captains stateroom and a very long and spacious deckhouse.

Her toilets are U. G. Lee electric flushing. Her bath tub and considerable amount of her plumbing of duralumin for lightness, all special made. Screens of non-corroding Monel metal. Monel metal propeller shafts. Electric brass-head windlass, AECO. In short a very special job in all particulars, and one calculated to attract attention around the club on that account.

The power tender is Defoe built—solid mahogany with Hallet 10-12 h.p. motor. Rosewill will be completely illustrated and described in *MoToR BoatinG* in the near future.

Nomabin, a 44 by 10 foot 6 inch V-bottom express day cruiser, was built from Hacker & Fermann design for Montgomery Whaling, of Detroit. Below the chine she is double planked with cedar over moulded frames. Sides are single planked with cedar—seam batten construction.

Arrangement consists of a stateroom forward, galley and toilet on opposite sides of ship just aft of this, then a fully enclosed bridge over motor compartment, with hatches over motors and a roomy aft cockpit the floor of which is level with the bridge.

Deckhouse and all exterior trim is in mahogany. Deckhouse windows are of sashless type with Ternsteadt crank lifts. Galley has a Protane gas range concealed when not in use under a hinged-top table. Sink is of white metal and the whole top of recessed galley dresser is white metal lined. Toilet has Mott bowl and lavatory.

Power plant is a Hall-Scott LM6-cylinder of 200 h.p. which drives her 20 miles per hour. Generator is a Delco automatic without batteries. Boat is equipped with a Delco water pressure system, Frigidaire refrigerator, Erico bilge pump, and Auto-pulse gasoline feed direct from fuel tanks to motor.

She is a very complete little outfit, and as pretty as she is complete—a fair tribute to John Hacker's skill and experience in V-bottom design, reposing, as she does, one of his latest efforts.

Idler III Wins Ocean Race

(Continued from page 114)

Another suggestion which is likely to find favor in a race of this kind is to use a slightly different method of determining the winner. In this contest the boats were started on their handicap times, and the first boat to finish was declared the winner. Based on the present experience, it would be better to determine the winner as the boat which varied the least from its handicap time. Since all times were computed on the basis of the best previous known speed of the boat, it would require a full speed run, and any attempt to manipulate the boat's speed would be easily discovered and would automatically throw the boat out of the running. Had this race been run on a basis of this kind, Paducah would have proven to be the winner, with a variation of only three and one half minutes from the estimated time.

Available for Fall Delivery

Sixty-Eight Foot

Twin Screw Express Cruiser and Standard Thirty-Eight Footer

*"Lawley
Built"*

The Lawley Twin-Screw Cruiser: 68 ft. over all, 12 ft. 6 in. beam, 3 ft. 8½ in. draft. Speed, 23 miles per hour. Delivered ready for service with following equipment: Two 6-cyl. 225 H.P. Sterling engines, Unimote 2 k.w. generating set, anchors, chain, lines, fenders, government equipment, dinghy, 12-ft. launch, oars, davits, blocks, harpoon pulpit, covers, awnings, etc.

THESE two superb boats, the Lawley Sixty-eight Foot Twin Screw Express Cruiser and the Standard Thirty-eight Footer embody in construction, finish and appointments the final word in boats of their class. They have exclusiveness and individuality that makes ownership a source of unending pride. Sixty years' experience in custom built yachts are in back of these boats and an enviable reputation that is famed far and wide in the boating world. You will appreciate the mechanical excellence, admire the smart and modern lines and praise the brilliant performance of these boats. Your order placed now will insure delivery this fall in time for the southern season.

Lawley Standard Thirty-eight Foot Cruiser

In this ideal small cruiser speed, comfort and pleasing appearance are combined with LAWLEY workmanship. It is an able, seaworthy and roomy boat, having four real berths, toilet, galley, engine room and commodious cockpit all in 38 feet. Six-cylinder Model E-6 Scripps Motor, 100 H.P. Suitable for Florida, coastwise cruising or the Great Lakes. Dimensions: 38 feet over all, 10 feet 4 inches beam, 2 feet 9 inches draft.

Two New Matthews Craft

Many requests for special types of boats are met by boat builders, and these cannot always be taken care of by existing types of standardized boats. The Matthews Company, Port Clinton, Ohio, are arranging to produce two new types of boat around their standardized 38 foot hull. One of these will be a 38 foot Sport Fisherman, a boat particularly for off-shore fishing. It is designed for those who do not desire the limit of accommodations in the cabin, but prefer more room in the cockpit and equipment adapted for their purposes. The Sport Fisherman has a reduced forward cabin and contains only two comfortable berths, locker space and toilet. From this cabin aft is a very large cockpit being 17 feet 8 inches in length. The floor of this cockpit has been raised to a higher level above the water line than that contained in the Standard Matthews 38, and the motor is entirely installed under the cockpit floor which has, however, a large box hatch which opens up and entirely exposed the motor so that it is very easy to get at any part of same for repairs or adjustments. The standard equipment will be the six cylinder Kernath, and at the standard price, the boat will be completely equipped similar to the Standard 38 cruisers, and will contain a large ice chest in the cockpit, two swivel fishing chairs at the aft end, as well as other details especially intended for a fishing boat. The boat in general will be finished the same as the Standard 38, so that this particular model will provide at a very reasonable price an unusually high grade, substantial and seaworthy craft which can be used under practically any conditions of weather for off shore fishing. In addition to the lighter weight of this particular model, and other details, the boat is especially well adapted for the installation of high powered motors where speed is wanted and as it is practical to install a motor of very large size in this model, it is probable the Sport Fisherman will be used in a great many cases equipped with considerable power.

The other model is the Matthews 38 Day Cruiser, which also uses the same hull and actually contains exactly the same aft cabin including the same arrangement, equipment, etc., as the aft cabin of the Matthews 38 Double cabin cruiser, but in place of having the regular forward cabin, similar to the Double Cabin boat, this has been eliminated and the bridge cockpit carried the full distance forward. The permanent top, contains a mahogany windshield both forward and aft. This boat provides an ideal type for the use of customers who do not care for additional accommodations over the Standard Single Cabin Cruiser, so far as berths, etc., are concerned, but want a cruiser especially adapted for entertaining a large number of friends on one day trips.

This boat should also be very popular as a real estate and hotel accessory for use in Florida, as there is considerable demand for suitable boats to be used in taking out hotel guests in the southern territory.

The Sport Fisherman contains the regular Matthews 38 emergency sail rig, and also that the mahogany windshield and top does not run the entire length of the cockpit in order to give added convenience for fishing. The day cruiser does not come equipped with the sail rig, but instead is provided with a suitable signal mast.

400 Per Cent Increase

The Lockwood Ash Motor Company of Jackson, Michigan reports a 400% increase over 1925 in the sale of Twin outboard motors. About a year ago F. T. Irgins was added to the organization as Chief Engineer. He was able, through careful redesign of the Lockwood Ash Twin to increase the power about 30% without materially increasing the weight and to add several features to the motor, greatly increasing its performance in several different ways. As a result the 1926 Model Twin motor increased the World's record for Class B outboard motors from 12.55 miles per hour, held previously by the Lockwood Ash motor to 19.904 miles per hour as officially recorded in the mile time trials at the Mississippi Valley Power Boat Association Regatta at Louisville, Kentucky on July Fourth.

The added performance of the motor combined with a vigorous and well directed sales campaign resulted in the 400% increase in sales as above mentioned.

The Lockwood Ash Motor Company is now preparing through the addition of manufacturing space and equipment to further increase production for the 1927 season and definite sales activity and production on the 1927 model will be well under way within the next thirty days.

Gar Wood with Miss America V

Sets a New World's Record

HAVING established his right to the Harmsworth Trophy for the third consecutive time, Gar Wood, driving Miss America V in the second heat of the British International Trophy race, drove the second lap at 72.702 m.p.h.—a *World's record for speed in competition.*

On the preceding day, Miss Indianapolis, a three year old BABY GAR, driven by F. L. Sanford, owner, in his first race, won second in the 150-mile Sweepstake race, averaging 47.102 m.p.h. in a rough sea.

The start of the Free-for-all class at the Gold Cup Regatta, Manhasset Bay, August 22nd. Arrowhead-Meraco Racer is second in the lead.

spectator fleet was at its highest pitch. As the boats succeeded in gaining a few feet of distance, they were greeted with a loud whistling and cheering. The various favorites were loudly cheered at the end of each heat, and the appreciation of the public for good driving and sportsmanship was marked. The first heat of the Gold Cup race brought out thirteen starters. These all kept closely together for the first few laps, until the strain of driving wide open began to tell on some of them. During the fifth lap, both Hotsy Totsy, owned by Caleb S. Bragg, and Baby Water Car, owned by the Dodge Brothers Dealers' Association, were forced out of the running. During the seventh lap, Baby Shadow, driven by G. W. Vaughan, also was compelled to drop out. The remainder continued in the race until the end, with the first heat going to Baby Bootlegger, driven by Colonel Vincent. Imp was second, with Palm Beach Days third. Five of the boats had not finished the tenth lap, when the heat was over, and were flagged from the course. Sara de Sota never got beyond the first turn on the first lap as she threw her crew out and damaged herself beyond immediate repair.

The second heat showed the loss of two boats, since Hotsy Totsy and Baby Shadow failed to start. In this heat also, mishaps befell Baby Bootlegger and Baby Water Car, during the seventh lap, as they both retired during this one. The others managed to finish the ten laps or keep going, until the end of the heat, when they were flagged from the course, with the result that Shadowvite, owned by Carl G. Fisher, proved to be the winner of this heat. The score now stood with one heat each credited to Baby Bootlegger and Shadowvite, although on the point system of scoring, Palm Beach Days, with a total point score of 648, seemed to be the leader. The start of the third heat brought out ten of the boats, but this was quickly reduced to eight, as Baby Bootlegger withdrew in the first lap, and Detroit Water Car turned over shortly after. During the eighth lap, Nuisance, owned and driven by Mrs. Delphine Dodge Cromwell, was forced to retire, leaving only seven boats in the running. The winner of this heat proved to be Shadowvite, and the strange result appears, that on the point system Greenwich Folly, owned and driven by George H. Townsend, by virtue of consistent running, and having finished fifth in the first heat, second in the second heat, and second in the third heat, had piled up a total score of 978 points, which makes her the winner of the race. The second boat with 944 points was Shadowvite, and the third one Palm Beach Days, with 904. The consistent running of Greenwich Folly, while she was not the fastest boat in the race, enabled her to finish each heat without difficulty and successfully pile up enough points to take the trophy.

Only four boats came out in the first heat of the shorter race for the Dodge Memorial Trophy. These were, the Gold Cup boats, Miss Columbia and Impshi, and the two new jobs built for this race, Rascal and Rowdy, owned by Caleb S. Bragg and Carl Fisher. These boats were exactly alike, and performed about equally well. Both were built at the Purdy plant, and powered with similar Packard engines. The first heat of this race found these four boats battling in pairs, with Rascal leading in the first lap, closely followed by Rowdy. The second lap finds the positions changed with Rowdy in the lead, hard pressed by Rascal. They hold their relative positions through the remaining two laps, and finish with Rowdy first, and Rascal second. Her time for the twelve miles was 15:12, an average of 47.41 m.p.h., and her best lap was at the rate of 48.70 m.p.h.

The second heat again found four boats, but this time Miss Columbia was absent, and Baby Water Car was running. It was almost a repetition of the first heat since Rascal and Rowdy both ran away from the others. During the second lap, Baby Water Car turned over, spilled her crew, and requiring the services of the Coast Guard to rescue both the men and the boat. Impshi was noticeably slower than the other two, who fought it out between themselves, with the result that Rowdy again proved to be the winner, with a total time 15:37, an average speed of 46.09 m.p.h.

The third heat found five boats taking part, with Nuisance trying her chances against the others. Miss Columbia started off well, and gave Rascal a tussle for the first few laps, and was nosed out for second place by a mere matter of seconds. First place in this heat again went to Rowdy, with a total time of 15:12, or a speed of 47.38 m.p.h. Nuisance completed one lap and withdrew during the second. Second place went to Rascal, with Miss Columbia third, and Impshi a poor fourth.

Now Is the Time to Order Your FAY & BOWEN RUNABOUT For the Southern Season

Fay & Bowen twenty-four-foot, single cockpit runabout; powered with the Fay & Bowen model LC-41 marine engine, 27 H.P. Speed, 17 miles per hour. Solid mahogany construction, natural finish.

TO assure yourself the convenience and pleasure of having one of these fine Fay & Bowen runabouts at your command during the coming southern season, we suggest that you place your order now.

All models of Fay & Bowen runabouts are kept in stock for immediate delivery. If your requirement is for a family boat, a gentleman's runabout or a small runabout for lake or river service there is a Fay & Bowen craft to meet it. These are quality boats, built of the highest grade of materials, and by skilled craftsmen. Fay & Bowen runabouts

have the class and style that make you feel at home with the finest boats afloat.

Five models: Twenty-two, twenty-four and twenty-seven and thirty foot single cockpit types and a thirty-footer with a double cockpit. Each is handsomely finished, luxuriously upholstered and salt water equipped.

Fay & Bowen boats are powered with Fay & Bowen engines. There is no division of responsibility between boat builder and engine manufacturer. Our warranty covers both hull and power plant.

The Fay & Bowen double cockpit runabout, a thirty-footer, powered with the Fay & Bowen model LNS-43 marine engine, 60 H.P., gives a speed of 21 miles per hour. Passenger capacity for 12 persons. All mahogany finished hull.

Greenwich Folly Wins Gold Cup

(Continued from page 120)

The fourth heat was virtually a repetition of the third, with the same boats taking part. Nuisance again dropped out during the second lap, while Rowdy and Rascal battled strenuously for first place. This was taken by Rowdy in a matter of 14:52, a speed of 48.40 m.p.h. Rascal was close behind her, and Miss Columbia was again third, Rowdy having won all four of the heats, was the winner of the Trophy.

The races for the Biscayne Baybies were held on both of the days of the Regatta, and two heats were run on each day. Seven of these little boats all powered with Scripps engines took part, and furnished excellent sport by their close running. A peculiar thing about these is that while they are all alike, some of them are faster than others, and generally one of them will stand out above the rest. In this case it happened to be Number 27, driven by T. Pratt, and this boat was successful in winning first place in three of four heats. This piled up an enormous point score, totalling 1456 points, which gave this boat first place in the race. The second boat Number 26, driven by J. Rutherford was third in the first heat, second in the second and third heats, and third in the fourth heat with a point score of 1398. The third boat, Number 25, driven by R. Gamble, was second in the first heat, third in the second heat, first in the third, and fifth in the fourth. His point score was 1378, giving him third place.

The Cruiser Races

During the Gold Cup Regatta there were a number of most interesting cruiser races held by different clubs cooperating with the Gold Cup Committee. The most strenuous of these was the event from Philadelphia to New York, under the auspices of the Tri State Yacht Club. This race was for the famous James Craig Trophy, and was open to cruisers, express cruisers, and auxiliaries. It started from the Tri State Yacht Club at Essington on Monday and Tuesday, August 16 and 17, finishing at the Columbia Yacht Club, New York on the 18th. The boats started according to their own choice, with the handicaps deducted at the end of the race. There were six boats in the cruiser class, with two express cruisers racing in a separate class. A third contest for the Fred J. Poth Trophy took place at the same time, with all boats racing in the same class.

The reports of the crews at the finish of the long grind of 200 nautical miles, were of storms and fogs and heavy seas encountered on the ocean on the way to New York. The weather was so bad at times, that the boats had to slow down to insure their safety. In fact one boat having been wet down thoroughly, experienced trouble with the ignition system, and put into a harbor for shelter, and experienced a very close escape from the effects of a twister which shattered itself on the break water only a short distance from where this boat lay. Other boats reported similar experiences and the crews deserve great credit for their seamanship and perseverance in driving through the 200 miles under the severe conditions existing.

In the cruiser class, Rene, Jr., owned by L. M. Simmons of the New York Athletic Club, was successful in winning first place on corrected time, and was awarded the James Craig trophy for one year. Her elapsed time was 21:28:15, and deducting her small allowance gives her a corrected time of 21:12:15. The other boats finished much later, with the exception of Katherine R, which found the going too strenuous, and put in at Atlantic City, without finishing the race.

In the express cruiser class there were only two contestants Baby Boozer and Clarella. Both of these boats started early on Tuesday morning after the storm had subsided somewhat, and did not experience such difficult conditions. They finished in twelve hours, running time, and were allowed one hour for refueling at Atlantic City, where they stopped for this purpose. Clarella, owned by J. H. Van Seiver, proved to be the winner on her corrected time of 11:04:50.

Considering all boats racing in one class, Rene, Jr., also proved to be the winner of the Poth Trophy, with Ballantras, owned by R. C. Roebeling of Washington, second. Her corrected time on this basis was 9:59:15, with Ballantras about thirty-four minutes behind her. A summary of the race results will be found on page 122.

On arriving at the Columbia Yacht Club, the crews were entertained at a dinner in their honor, by the club. The donor of the original Craig Trophy, James Craig, entertained them with some of his early experiences in the long race to Bermuda in the early days of motor boat racing. The Trophy originally was awarded for this race, and more recently the conditions were modified so that it is now raced for over a shorter course.

Another famous trophy which was in competition during
 (Continued on page 130)

MARCO

The Ideal One-Man Control

CRUISER

THE MARCO is a thirty-three foot cruiser having many exceptional features that are equally attractive to the man who delights in extended trips and the man who just wants a substantial boat for fishing or family day outings.*

Aboard this beautiful boat the living accommodations are on par with the comforts of home—four seven-foot berths, a fully equipped galley with built-in ice box, two-burner stove, dish racks and sink, besides plenty of cupboard space. A built-in buffet, separate lavatory and full head room are among the features of the Marco. The cockpit is over 12 feet long and is furnished with awping and side curtains.

In construction you will not want a boat that is more rugged than the Marco, nor one with more beautiful lines. The Marco is unusually seaworthy and with its standard six-cylinder Kermath marine engine you have a cruising speed of 15 miles per hour.

SCHILLO

Below shows the forward cockpit open ready for two passengers.

Lines as Graceful as a Sea Gull

A Social Thorough-Bred

Proudly you play host with your wonderful Schillo 8-220. Aristocratic beauty and comfortable roominess, concealing staunch seaworthiness, make your Schillo Sportabout outstandingly popular at every social occasion.

Six can sit uncrowded in the body. For including two more, lift the cover of the forward cockpit and slide it back (an absolutely new power boat feature). There are the needed seats—roomy and beautifully upholstered in highest grade Spanish leather, like the main cockpit seats.

The pilot's vision is never interfered with by the forward cockpit guests. They sit low. Even when bucking a mean sea at night he can easily follow the course, which is clearly lighted by a powerful search-light fitted into the clamshell form at the bow (and controlled from the driver's seat).

Only through a personal test can one realize the advanced design, beauty and luxury combined with amazing economy of upkeep, as found in this Schillo 8-220 Sportabout. You are invited to see and ride in it at your convenience. Should you prefer a smaller but equally distinguished craft the Schillo 8-90 Sportabout will give you every desired feature.

The Gear for Heavy Service McKinnon Reverse Gear

WINNING satisfaction and holding it. That's what the McKinnon Reverse Gear is doing every day. Although designed for use with powerful engines and heavy boats, the McKinnon is rapidly gaining favor as the reverse gear for light cruisers and runabouts, because it is practically trouble-free and stands up under abuse that would ordinarily injure or put any other make of gear out of commission.

Study the sectional view of the McKinnon Reverse Gear shown above. Note the three big bevel gears, their large teeth and the broad contact surface of every tooth. Compare this strength with the multiplicity of small parts in other reverse gears and you will know why the McKinnon is the preferred gear for heavy service. Each part is sturdily constructed of the best materials and seldom if ever are repairs or adjustments necessary.

The McKinnon Reverse Gear has been tested in laboratories having the most improved scientific testing apparatus and is proving its superiorities every day in actual service on all types of motor boats. You will find it without question the most efficient gear you can buy.

Write today for further particulars and prices, giving details of your engine, including R. P. M. and H. P.

WORLD'S RECORDS

to win the Junior Gold
Cup and 151-type hydro-
plane races at the

DETROIT REGATTA

Above—The gold-plated Lady Helen II. Against blue water this golden streak flashed ahead of her white wake for 63 miles, smashing the world's record by more than 9 miles per hour, retaining for her owner, Aaron DeRoy, the Junior Gold Cup. Side panel—Spitfire V which established a new world's record for 151 type hydroplanes.

LADY HELEN II—Hackerbuilt and Miller powered—established a new record for the Junior Gold Cup class at the Detroit Regatta of 39.69 miles per hour. Lady Helen I—Hackerbuilt (1924) and Scripps powered—was a close second at 39.58 miles per hour. Two stock Tampa Baybies—Hackerbuilt and Scripps powered—ran fourth and fifth in this race with speeds exceeding previous records for boats built to Duff-Greening specifications.

In the 151 class events all entries were Hacker-designed Pelican models. Spitfire V, in winning, set a new world's record of 41.96 miles per hour. Hacker Pelican type hydroplanes have been continually shattering records since February, raising the speed mile by mile at each regatta to this new record.

The important thing in all this for you is that the same designing and building experience which was responsible for these new records is also wrapped up in the unmatched excellence of the following stock Hacker runabouts:

The HACKER DOLPHIN—a runabout of refinement seating 10—\$3900 to \$4625. The BABY DOLPHIN—fastest stock runabout of its price, seating six—\$2595 to \$3095. The TAMAPA BAYBY—a racing thoroughbred—\$3500. PELICAN model 151-type hydroplane—ready for motor—\$850.

The Southern Season

Orders for fall and winter delivery for the southern season may be made now with the assurance of prompt fulfillment on date specified. Descriptive literature and complete specifications upon request.

"We hit a wash from a private pilot."

Seven Start, Seven Finish; Chrysler's 'Baby' Winner

By HARRY LEDUC.

MANHASSETT BAY, L. I., Aug. 21. —Though Walter Chrysler's Gold Cup boat, Miss Frolic, failed, the Detroit manufacturer was not without a winner. His Scripps-powered 18-footer won the 12-mile race for Biscayne Babies by covering two of Manhassetts three miles laps at the rate of 40 miles an hour and averaging 39.61 miles per hour for the race.

The boats were fast, smart, seaworthy craft. All were piloted by millionaires and each boat was identical in hull construction and in power, all the motors being the Scripps 100 horse power type.

Because the boats looked alike, numbers on them were necessary. Commander Robert Bable, of the United States Navy, finished second, averaging 39.38 miles per hour. John Rutherford, Long Island millionaire sportsman, was third, his

Biscayne Baby averaging 38.37 miles per hour. Nelson Doubleday, the publisher, finished fourth, average 38.35 miles per hour; John Inglis, New York Central Railroad executive, was fifth, average 37.23 miles per hour; L. Gordon Hammersley, whose \$60,000 all metal Dodge Memorial boat, Cigarette, was temporarily lost to racing Friday due to a motor accident, brought his Biscayne Baby over the line in sixth position, averaging 35.23 miles per hour; and C. Truntz, another of the summer colony sportsmen, was seventh, his boat averaging 31.74 miles per hour.

Seven boats started and seven boats finished.

A second Biscayne Baby race was held between the second and third Gold Cup heats and Chrysler's boat won again, this time averaging 40.06 miles an hour. Six boats started and all finished, the slowest making better than 35 miles an hour.

The two most consistent one design racing boats ever produced. Above, the sensational Biscayne Babies built by the Purdy Boat Company. Below, the perfect score Tampa Babies, developed by the Hacker Boat Company, all SCRIPPS powered, with a perfect score.

SCRIPPS consistency is more than an advertising slogan. It is an actual accomplishment, recognized by yachtsmen for more than twenty years. A ready start and a strong finish always, whether in a mile dash or a long ocean cruise. Models for almost every class of marine service, 10 to 150 H.P.

SCRIPPS MOTOR COMPANY

5819 Lincoln Ave.

Detroit, Mich.

THE winning of races is only a partial manifestation of SCRIPPS power and reliability and the lesser agency in its widespread use and popularity. The year in, year out, satisfaction in everyday service is the great factor that has built up its tremendous following.

Typical among the thousands of enthusiastic comments is the following from Mr. J. L. Williamson of the J. O. Ross Engineering Corp., Chicago:

"The F-4 Scripps Motor installed in my Schooner 'Kittiwake' is giving the best of satisfaction. In fact, we have had no trouble with the motor since it came from Burger's plant with the boat.

Your statement that an all day run for this motor, under the proposed conditions, would be nothing but play for it, has been proved. We have started this motor at ten in the morning and not shut it off until six or seven at night, and it purrs along with absolutely no fuss or trouble.

"Both the gas and oil consumption on this motor are exceptionally low. In fact, we use so little gas and oil that I have not kept track of it."

Choose any engine from the SCRIPPS line and you will enjoy service in the real sense of the word.

Greenwich Folly Wins Gold Cup

(Continued from page 124)

the Gold Cup week, was the C. C. Hunt Trophy, held for some years by the Colonial Yacht Club of New York. This Trophy originally stipulated a race to Cornfield Light and return, but due to the great length of this course, competition had stopped, and the committee arranged to hold a race for it at the same time as the race to Stratford Shoal and return for the cruiser Championship of North America. This race, together with the one for the Hunt Trophy were conducted at the same time, and over the same course, with the single difference that the Handicap Cruiser Championship of North America was handicapped under the American Power Boat Association rules for 1926, while the race for the Hunt Trophy was handicapped on the basis of previous known performances of the boats. Unfortunately the weather man again upset the plans somewhat, and furnished a stiff easterly gale, which interfered with the time and speed of the boats. Eight boats were competing for the Cruiser Championship, and ten for the Hunt Trophy. Since the allowance in the two contests were different, the boats all started at the same time, and the allowances were deducted at the finish. The results were that Brickton IV, the fast cruiser or commodore A. L. Bobrick of the Colonial Yacht Club, was success-

ful in winning the Cruiser Championship. Her elapsed time was 6:13:12, while her corrected time was 4:25:57. Second place was taken by Kemah, with a corrected time of 5:16:48.

In the race for the Hunt Trophy, Kemah proved to be the winner, with a corrected time of 5:49:42, with Sea Dream, owned by G. D. Larner, a close second, with a corrected time of 5:54:06. Brickton IV was third, with a corrected time of 6:00:12. The first three boats accordingly finished within eleven minutes, which is very close considering the weather conditions at the time. It is quite probable that if the weather had been milder, the finish of all the boats would have been much closer. This method of handicapping is finding favor with cruiser owners, who are not always satisfied with the time allowances given them on the basis of the A. P. B. A. rules. It requires the compilation of much data on the part of the committee and careful work in computing the speeds of the boats. It is possible to predict the time of finish of any boat in a contest, within a few minutes, and barring mishaps or unforeseen delays, the boats are able to run at their known speeds, without difficulty. A summary of the results for both the Cruiser Championship and the Hunt Trophy races will be found below.

in the Niagara Waters.

One senses something of the eternal lure of motor boating when such a business leader as Mr. Rand makes it his favorite sport. After effecting the consolidation of the Rand, Kardex, Library Bureau, Safe-Cabinet and Globe-Wernicke companies, a gigantic association of the leading makers of office equipment. Mr. Rand takes his recreation by piloting his Spitfires to new world's records.

In capturing the five mile event, a new mark of 42.42 miles per hour was set up, breaking the best previous record of 40.8 which was established by Little Star at the Louisville regatta. Little Star was a competitor in this race, but she could not meet the pace of the new contender.

Following the race, Spitfire V was driven over the twenty mile course and created new world's records for five, ten, fifteen and twenty miles. Then this marvel craft set out, in a series of one mile heats, to establish an unofficial straight-away record of 45 miles per hour.

The remarkable performances of the Spitfires began when James H. Rand, Jr., set up a new mark with Spitfire IV at the Tampa races last February, and the interest Mr. Rand is taking in these hydroplanes is another instance of the increasing recognition of motor boating as the king of sports, by men who are accomplishing big things in the realm of business affairs.

Mr. Rand handles his racing affairs in the same go-getter spirit which he puts into business. That he is not to be deterred by mishaps was proved when he won the first race of the regatta with Spitfire IV, only to capsizé traveling at high speed on the turn after crossing the finish line. That he is not superstitious or afraid of any hoodoo, was shown when he came back the next day, Friday the thirteenth, with Spitfire V and broke all the records in sight.

When Spitfire IV threw Mr. Rand into the water of the Niagara on the first day of the regatta, his first thought after being pulled aboard a coast guard cutter by Captain Daly, was how he was going to win the events of the morrow. He had as much confidence as ever in his Fronty Marine engine but he was determined to transfer the motor to another hull.

As it is Mr. Rand's habit to be always prepared for emergencies, he had a beautiful new Spitfire in readiness at the nearby boat works of the Richardson Boat Company in North Tonawanda. Mr. Rand rushed Spitfire IV to the Richardson plant and with Stanley Reed of the Fronty Motor Sales Company, worked all night to install the engine in Spitfire V.

As dawn was breaking the task was done and a new Spitfire was ready to glean through the water. The boat is a distinctive mahogany creation, formed with the craftsmanship that has brought fame to Richardson boats for many years. Mr. Rand was again at the starting line that afternoon, with his son, Marcel Rand, at his side, and Spitfire V stepped out to an even faster pace than the boat which won for him the day before.

If anything had happened to this boat, Mr. Rand possessed still another craft, Spitfire VI, in readiness to continue the Rand determination to clean up the regatta. In fact, this boat showed that it rightfully belongs to the Spitfire line by holding a 41.89 pace for 15 miles during one of the last races of the regatta.

The friends of Mr. Rand never fail to tell how he came to possess his first boat. When he asked his father for the money for a boat at the age of sixteen, his father suggested that he go to work and earn the money to buy it. Nothing daunted, he shoved lumber into a planer for ten hours a day at a meager wage but when he had the money to buy the boat, he didn't buy it. By that time he had arrived at the conclusion that he could build the boat himself and he sailed his hand built craft up and down the Niagara for several years.

The competition in the baby hydroplane class is waxing keener as the year comes to a close. At the present time Mr. Rand and Spitfire V have the best claim for the coveted Elgin Trophy, which is to come into the possession of the baby hydroplane which makes the best mile record in competition during the year.

Mr. Rand is not content to rest upon his laurels but will have the Spitfires in action at both the Norfolk and Washington regattas. He has a clear vision of the magnificent Elgin Trophy adorning the trophy room of the Buffalo Launch Club and he has three Spitfires ready to meet all challengers until the trophy actually comes into his hands. And that is the spirit which makes motor boating the great

(Continued on page 136)

DUPLEX MARINE ENGINE OIL

Duplex was used in practically every winning boat in northern and southern waters, 1925-1926.

Duplex is used exclusively by Gar Wood, and he urges its use in all Baby Gars and in all boats using Gar Wood engines.

Duplex will do for you what it has done for Wood, Com. H. B. Greening and other world-famous experts.

Write today for the story of Duplex Marine Engine Oil.

“Winners *all* equipped with Tobin Bronze”

THIS statement has been made following so many important races that the uninitiated might think that Tobin Bronze contributed to the winners' speed.

While this is not the case, the fact remains that builders who know how to make a good boat, appreciate the importance of giving her staying qualities and lasting seaworthiness.

Practically every prominent builder in the United States uses Tobin Bronze for shafting and underwater parts. This is because it is unrivalled in its combination of strength, high yield point and resistance to corrosion.

It will pay you to be sure that Tobin Bronze, manufactured exclusively by The American Brass Company, is used in your boat. The name Tobin Bronze is rolled in the metal.

MoToR BoatinG's Ideal Series

Books of Plans of Cruisers, Runabouts, Auxiliaries, and Dinghies
THE BEST HOW TO BUILD SERIES EVER PUBLISHED
 See Complete List of Plans of All Boats in Ideal Series on Pages 6 and 7

Volume I

Designs of Ideal Motor Boats and How to Design a Motor Boat

This volume describes in detail how to design a motor boat. It also contains complete plans of 30 Cruisers, Runabouts and Auxiliaries. The plans include lines, table of offsets, interior plans, profiles, construction details, etc. There is no book published at the present time which describes in everyday language the details of designing a boat according to your own tastes. The plans of Ideal Cruisers, Runabouts and Auxiliaries are complete in every particular. They include the best of the plans published in MoToR BoatinG during the past several years. The plans include boats of from 20 feet in length up to 40 feet. The drawings are all to scale and large size.

Foreign Postage, 50 cents extra.

\$2.00

Volume II

How to Build Sixteen Ideal Motor Boats

This book gives complete information for building the following boats:

10-foot mark boat, 12-foot outboard motor boat, 12-foot speed boat, 12-foot bangabout, 13-foot sea skiff, 16-foot sharpie, 18-foot runabout, 20-foot monoplane, 20-foot hydro-runabout, 20-foot knockabout, 20-foot tunnel stern, 22-foot V-bottom runabout, 25-foot V-bottom cruiser, 25-foot round-bottom cruiser, 28-foot cruiser (Consort II).

Every article is fully illustrated with working drawings and no information or instructions are missing which would be of assistance to the novice to build his own boat.

All of the Ideal Books are printed in large type on extra fine paper. They have been edited by Charles F. Chapman, Editor of MoToR BoatinG.

Foreign Postage, 50 cents extra.

\$2.00

Ideal Series, Volume III

Twelve Complete V-Bottom Designs

By WILLIAM H. HAND, JR.

Plans Prepared Expressly for MoToR BoatinG

This new book is the most valuable ever published for the amateur builder or anyone desiring to have a V-bottom boat built by his own builder. The plans contain outboard profile, lines, inboard, construction and interior arrangement plans, sectional views and complete table of offsets. Accompanying each design is a description of the boat and a full set of specifications taking up step by step each feature of the boat's construction, how it should be built and the proper material to use.

Plans and specifications of the following boats are included: Edith, a 15-foot runabout; Jane, an 18-foot runabout; Katherine, a 30-foot cruiser; Dorothy, a 25-foot runabout; Zenith, a 25-foot cruiser; Cyclone, a 36-foot auxiliary; Eclipse, a 40-foot express cruiser; Magnet, a 25-foot cruiser; Tornado, a 45-foot auxiliary schooner; Broncho, a 28-foot cruising runabout; Shark, a 21-foot utility runabout; Claire, a 36-foot express cruiser.

Price of Twelve Complete V-Bottom Designs..... **\$2.00**

Foreign Postage, 50 cents extra.

Volume IV Ideal Series

Twenty Easy-to-Build Motor Boats

By WILLIAM J. DEED AND OTHERS

America's Foremost Small-Boat Designers

A New Book of Small-Boat Plans and How to Build Them

These plans have been prepared especially for MoToR BoatinG and are complete in every particular. They are in detail enough to permit building from direct, either by the amateur or professional builder. No part of the boat's design or construction has been omitted or slighted.

Read the contents: Chum, a 16-foot Motor and Sail Craft; a 9-foot Easy-to-Build Dinghy; Nomad, a 34-foot Cruiser; a 9-foot Sharpie; Porpoise, a 20-foot Auxiliary Cat Boat; Kingfisher, a 14-foot Fishing Skiff; Sbrimp, a 25-foot Hampton Boat; Flattie, a 16-foot Utility Boat; Dolphin, a 34-foot Tunnel Stern Cruiser; a 9-foot Dory; an 8-foot V-Bottom Tender; Penguin, a 25-foot Auxiliary Sloop; Sea Gull, a 41-foot Auxiliary Schooner; Whale, a 20-foot Cruiser that's a Real Cruiser; Tarpon, a 20-foot Raised Deck Cruiser; Alligator, a 20-foot Tunnel Stern Cruiser, a boat that will run in water little deeper than a heavy dew, and Mud Turtle, a 36-foot Stern Wheel Motor Boat. Rookie, a 20-foot Auxiliary Sloop; Nautilus, a 40-foot Tunnel Stern House Boat; Victory II, the Cruising Champion; Complete Bills of Material for Building.

Book is printed in large type, on fine paper, and handsomely bound in cloth.

Price of Twenty Easy-to-Build Motor Boats..... **\$2.00**

Foreign Postage, 50 cents extra.

Volume VII Ideal Series

BUILD A BOAT

Plans and Blue Prints of Twenty-five Practical Runabouts, Cruisers, Hydroplanes, Auxiliaries and Dinghies

By JOHN L. HACKER, N. A.; CHARLES D. MOWER, N. A., and others

America's foremost designers of small and practical motor craft

MoToR BoatinG's Build a Boat Series

MANY of the plans are accompanied by large detail blue prints, 12"x22", giving measurements and dimensions, all accurately drawn and reproduced exactly to scale. The descriptions of the boats as well as the drawings are complete in every particular with full specifications and directions for building.

All of the boats are simple in design and construction and can readily be built by any amateur who is handy with tools. And still they are real motor boats, designed by the country's most successful small boat architects, combining attractive lines with seaworthiness, speed, safety and sturdiness.

For those desiring to have a professional builder construct their boat for them this book of plans may be used in place of employing a naval architect, thus saving several hundred dollars in fees. Every one of these boats was designed especially for MoToR BoatinG on specifications drawn up by our editors to meet the distinct requirements of different classes of motor boat owners. They represent the best and most up-to-date types of boats in use today.

A summary of the boats, complete plans of which appear in this book, is as follows:

A 12-foot dinghy for outboard motor.

Buster—12-foot sailing dinghy—auxiliary outboard motor.

Smarty—14-foot utility boat—auxiliary outboard motor.

Marybell—14-foot runabout—4 horsepower, speed 8 miles.

Lorrain—16-foot runabout—25 horsepower, speed 30 miles.

Miss Mississippi—17-foot hydroplane—25 horsepower, speed 32 miles.

Anita—17-foot runabout—4 horsepower, speed 8 miles.

Flapper—18-foot runabout—4 cylinder, 20 horsepower, speed 14 miles.

Imp—18-foot runabout, 12 horsepower, speed 11 miles.

Frances—18-foot runabout—auxiliary outboard motor.

Giddy—20-foot runabout—20 horsepower, speed 15 miles.

Grace—20-foot Cape Cod cat—auxiliary outboard motor.

Priscilla—21-foot 6 inch monoplane—125 horsepower, speed 45 miles.

Miss Victory—22-foot hydroplane—Up to 300 horsepower, speed 60 miles.

Suzette—22-foot runabout, 4 cylinder, speed 23 miles.

Fleetfoot—22-foot runabout—20 horsepower, speed 15 miles.

Chiquita—23 1/2-foot knockabout—50 horsepower, speed 20 miles.

Dolores—24-foot knockabout—8 horsepower, speed 7 miles.

White Cap—25-foot runabout—6 cylinder, speed 23 miles.

Ponset—25-foot cruiser—10 horsepower speed 8 miles.

Miss A. P. B. A.—26-foot runabout—125 horsepower, speed 40 miles.

Irene—28-foot speedabout—4 cylinder, speed 22 miles.

Margie—31-foot cruiser—20 to 50 horsepower, speed 10 to 15 miles.

Ruth—33-foot fishing cruiser—35 horsepower, speed 12 miles.

Florence—37-foot cruiser—100 horsepower, 4 cylinder, speed 15 miles.

Price of this new book of plans (including blue prints) Build A Boat..... **\$3.00**

Price of all five books of Ideal Series (Vols. 1-5) if ordered together **\$8.00**

Foreign Postage, \$1.00 extra.

THE CRUISE OF THE HIPPOCAMPUS

by Alfred F. Loomis

A DELIGHTFUL salty sea-yarn. There is humor dancing and bubbling round this story of a 4-months cruise from New York to Balboa (Isthmus of Panama) as brightly as the sparkling waters danced about the 28-foot yawl on its fair-weather days.

The HIPPOCAMPUS, with but three lusty souls for crew, enjoyed numerous flirtations with disaster, poked her blunt nose into extraordinary scrapes—and came through whole. Long before the saucy little yawl makes Balboa you will like the staunch little vessel and all aboard her.

352 pages, 47 illustrations.
With MoToR BoatinG—2 Yrs. for \$6.00.
\$3.00 less than single-copy price of MoToR BoatinG alone.

THE DINGHY BOOK

by William Atkins

INCLUDES 10 complete easy-to-follow designs for small boats from a seven-footer up, including sailing skiffs. You can build a boat from any of these plans without further professional help.

With MoToR BoatinG—1 Yr. for \$3.50.

| Mary Irene | Meyers | 24:15 | 22:04 | D.N.S. |

1st—Wilgold II, 1,161 points.
2d—Miss Crystal, 761 points.
3d—Mary Irene, 648 points.
Average speed made by winner, Wilgold II—29:17 m.p.h.

50 Mile Sweepstakes

Sunday, August 15, 1926

Start, 4:15 o'clock

| Position | Boat | Owner | Elapsed Time |
|----------|-----------------|--------------------|--------------|
| 1 | Curtiss Wilgold | R. Williams | 59:04 |
| 2 | Miss Palm Beach | W. J. Connors, Jr. | 59:21 |
| 3 | Lady Cleveland | J. H. McDowell | 61:47 |
| 4 | Miss Okeechobee | W. J. Connors | D.N.F. |

Average speed made by winner, Curtiss Wilgold was 50:79 m.p.h.

Fastest time was made in second lap by Miss Okeechobee and the tenth lap by Curtiss-Wilgold, both boats making five miles in 5 minutes, 46 seconds—average speed 52:02 m.p.h.

151 Class—5 Miles per Heat

Mississippi Valley Rules

Buffalo Launch Club—August 12, 13, 1926

| Boat | Owner | 1st Heat | 2d Heat | 3d Heat |
|----------------|-------------|----------|---------|---------|
| Spitfire IV | J. H. Rand | 7:44 | D.N.S. | D.N.S. |
| Spitfire V | J. H. Rand | 9:10 | 7:14 | 7:27 |
| Baby Peerless | Ed. Grimm | 8:28 | 7:42 | 7:44 |
| Lady Baltimore | A. R. Gross | 9:30 | 9:45 | 10:00 |
| Little Star | Waugh Bros. | D.N.F. | 9:37 | 8:04 |
| C. L. Cummings | | D.N.S. | D.N.F. | D.N.S. |

Summary:

1st—Spitfire V, 450 points.
2nd—Baby Peerless, 300 points.
3d—Spitfire IV, 200 points.
4th—Little Star, 100 points.
5th—Lady Baltimore, 75 points.
Spitfire V made 41.47 m.p.h. average in second heat, August 13. New world record for 151 class in competition.
Later the same day Spitfire V ran against time for 20 miles, 4 laps, 5 miles each in 29 minutes, 10 seconds, an average of 41.4 m.p.h.
On August 14, Spitfire V made an effort to beat her time of the day before which she did by a good margin, running 20 miles, 4 laps, 5 miles each in 28 minutes, 33 seconds, making one lap in 7 minutes, 4 seconds, an average of 42.43 m.p.h.

Knight Sleeve Valve Marine Engines

CLEVELAND, OHIO

Gasoline Turbine Type Power Plant

Model "D" Marine Turbine Motor. Speed range 300 R. P. M. to 5000 R. P. M. Weight of Motor 125 lbs.

THE Turbine Type Marine Motor has all of the characteristics of the turbine engine principle, but does not use blades. In principle and design it differs distinctly from any type of gasoline engine heretofore constructed. Its weight is less than one-half that of the reciprocating motor of the same power. In actual operation the Turbine Type Marine Motor has proven to be more economical both in fuel and oil consumption than any reciprocating engine of equal power.

There are only about twenty essential parts used in the construction of this motor. No crankshaft, no poppet valves or reciprocating parts are used, consequently there are no reversal strains, impact shocks or alternating stresses to cause either wear or vibration.

Snow & Petrelli to Make Universals

Old Mah Joe has taken over the manufacturing and sales rights for the Hartmann Marine Universal Joints, together with their good will in the marine trade, and hereafter they will be an exclusive Joe's product.

The Snow & Petrelli Manufacturing Company have acted as distributors of these joints for the past two years, and have found them so superior and satisfactory in all respects that the sale for them can be greatly increased through sales effort in connection with their reverse gears and clutches.

The high quality of material and workmanship which has put these joints at the top will be fully maintained, and the good will which has been enjoyed by the Hartmann Company will be fostered and increased.

RASCAL: 2nd Dodge Trophy, 1925

BABY BOOTLEGGER: Winner Gold Cup, 1925

PACKARD CHRIS-CRAFT II: Winner Sweepstakes, 1925

GREENWICH FOLLY: Winner Gold Cup, 1925

AUTOPULSE

BRICKTON IV: Winner Bear Mt. Handicap, 1926

ROWDY: Winner Dodge Trophy and 150-Mile Sweepstake, 1926

All Autopulse Equipped

The performance of the Autopulse Patented Magnetic Fuel Pump in power-boat racing classics for the last three years has made it possible for the wonderful records established by Baby Bootlegger, Packard Chris-craft II, Lady Helen I and II, Greenwich Folly, Rowdy, Spitfire IV and many others.

The AUTOPULSE can be depended upon always to keep a constant flow of gasoline from tank to carburetor, no matter to what tests or speeds it is subjected.

And for this reason it is preferred as standard equipment by 95% of the country's leading engine manufacturers, boat builders and boat owners.

No matter how thoroughly standardized a boat may be, it is still a hand made article. To build fine boats on a production basis, men are more essential than machinery. It is an art that demands the skill and experience of expert craftsmen.

The Horace E. Dodge Works have gathered a group of the finest artisans whose skill is attested by the appearance, performance and service of Dodge Watercars.

You are invited to drive a Watercar and to critically examine it from stem to stern.

Order your Watercar now for Florida delivery.

A few slightly used demonstrators in excellent condition may be had at substantial reductions.

Gar Wood Still Speed King

(Continued from page 13)

when she was running at speed, the water left the hull, much in the same way as a displacement hull. The American boats in running, ran perfectly flat without any jump while the French craft ran at quite an angle and loped considerably. The French helmsman steered from amidship and used a tug boat steering wheel from a standing position.

The races were originally scheduled to begin on Saturday, September fourth but due to the fact that the French boat did not reach Detroit until that day, the first race was postponed until Monday, the sixth, and again postponed due to rough water until Tuesday. They were to consist of two or three thirty nautical mile heats around a 5 mile course. The French boat had a short trial on Saturday and another on Monday. To those who saw her run, it was apparent that she was not to be a dangerous contender. Her driver, who had the chance to see the Miss Americas in practice spins on the river, probably came to the same conclusion as he refused to become enthusiastic over his chances and even showed an inclination not to wish to race. He claimed that he had not had a chance to properly try out his boat in France before shipment and believed that the hull had been strained in the trip from France which had injured her sea-going qualities. In addition to this, the motors in France-Excelsior start by air and all the air bottles that had been brought from home had been used up in starting the motors in the trial runs in Detroit. But more bottles were supplied by the race officials but even then the motors of France-Excelsior did not respond properly.

Shortly before the time scheduled for the first race to start, the driver of France-Excelsior sent word to the Race Committee, that due to lack of air bottles he would be unable to start the first heat on scheduled time. So with the consent of Commodore Wood an hour's postponement was allowed. But when this interval had expired no French boat had put in an appearance. Commodore Wood again declined to start his boats without competition. So an additional postponement was allowed. After waiting several hours the French challenger was towed to the starting line and an effort made to start the race for the Championship of the World. Commodore Wood's boats were all running perfectly but again when the signal was about to be given to start, the motors of the French craft again refused to start so the race was again called off temporarily. Finally after the challenger had been towed up and down the course by one of the speedy runabouts of which there are many on the Detroit River, her motors started with a mighty roar but soon once again went dead. The towing process was repeated with better success and this time the Committee signalled for a start in 5 minutes.

When the starting gun was fired the three Miss Americas were off in a flash but the French boat was going up the river in the opposite direction. By the time her helmsman was able to swing France-Excelsior around and get her to the line the Wood boats were far out of sight down the river. France-Excelsior made a gallant attempt to catch the leaders which were fairly flying around the 5 nautical mile course but the effort was in vain. Before she could be seen coming up the back stretch of the first lap, the three Wood boats had completed their first round and were close astern of the Frenchman on their second lap by the time France-Excelsior had completed his first.

One lap was enough for the driver of the foreign boat for he pulled his boat up to the Committee stand and withdrew, acknowledging defeat and the superiority of the American boats. His speed for the one lap which he finished was only 41.537 miles per hour.

The three Miss Americas continued the course, keeping almost abreast, making a fine race for the many thousands of spectators which were on shore around the race course. Miss America V with Commodore Gar Wood at the wheel finished the course, slightly in the lead, in 33 minutes 54.81 seconds which is at the rate of 61.118 miles per hour. Miss America IV's time was 33:55:64 and Miss America III, 34:07:31.

The second heat was shortened to 10 nautical miles and only the three American boats started. Miss America V again won completing the course at a speed of 67.067 miles per hour. One 5 nautical mile lap was made at a speed of 72.702 miles per hour, a new world's record in competition.

Miss America V was driven by her owner Gar Wood with Orlin Johnson as his aid. George Wood was at the helm of Miss America IV with Joe Kinney as mechanic and Phil Wood drove Miss America III and his brother Louis acted as mechanic.

A complete summary of the Harmsworth results, as well as the other Detroit races will be found on pages 142, 148 and 158.

DOMAN
"BULL DOG"

4-5 H.P. MARINE ENGINE

The Best Small 4-Cycle Engine in the World

1 Cyl. 3 3/4x4 1/4
Model "K" Bull Dog
4-5 H.P.

REASONS WHY

- 1—It is a Four Cycle Engine.
- 2—It has Overhead Valves.
- 3—Both Intake and Exhaust Valves are mechanically operated.
- 4—It has removable Cylinder Head.
- 5—Ball Thrust Bearings prevent undue wear from thrust of propeller.
- 6—Bearings are bronze backed, die cast, removable and interchangeable.
- 7—One piece Drop Forged Cam Shaft hardened and ground.
- 8—Cut semi-steel Gears.
- 9—Compact, Light, and will throttle down to low speed.
- 10—Guaranteed 5 years.

“Hey, Tender”

Ready response to instant demands have given Palmer Engines their high reputation, and earned the respect not only of floatmen, but of owners and sailors of the entire fleet.

To that well-known line of engines a new member has been added. It is already filling in a most satisfactory manner a long-felt need for a truly dependable, light weight, high powered motor to fit in the limited space available in sail-boats, dories, tenders or runabouts.

The Little Huskie is a compact, high speed, substantially built, four cylinder, four cycle engine, made of the same materials and built with the same painstaking care that have characterized Palmer engines for over 30 years.

Detroit's Tenth Annual Regatta

(Continued from page 29)

A horn made especially for motorboats and fine cars

The Original Bosch horn—the Robert Bosch horn—was made especially for motorboats and fine cars. Owners of fine cars want a distinctive horn. Motorboat owners want a distinctive horn, too, but in addition the horn must be built to huffet the peculiar conditions of marine service.

Even in "thick" weather, the Original Bosch horn penetrates distance,—not with a rasping honk but with a musical note that clears the way. Even in salt air, usually damaging to horn service, the Orig-

inal Bosch horn sounds its warning signal with positive dependability.

No wonder the Sea Sled Corp. has standardized on the original Robert Bosch horn for all their boats. No wonder they write that "at last we have found a real horn for marine service."

If you have ever had on your boat any other Original Bosch products, such as the magneto and the spark plug, you will know the kind of stamina you can expect from the Original Bosch horn. Robert Bosch Magneto Co., Inc., 115A West 64th St., New York.

The name Robert Bosch and this trademark are on all Original Bosch products—your guarantee of Original Bosch quality as known the world over since 1867.

The Original Bosch

ROBERT BOSCH MAGNETO COMPANY, INC.

No connection whatsoever with the American Bosch Magneto Corporation

event, which consisted of three 21 mile heats on the first day of the Regatta, there were six starters all of which finished the last heat. This is an event open to displacement craft of more than 21 feet in length and powered with marine engines of not over 335 cubic inches piston displacement. Two new boats were built especially for this race, Lady Helen II built by the Hacker Boat Company of Detroit for Aaron de Roy, and Baby Frolic built by Jacob of City Island for W. P. Chrysler. The former was powered with an 8 cylinder Miller engine and Baby Frolic was powered with one 6 cylinder Chrysler engine. In addition to these two boats, Mr. deRoy entered his Lady Helen I which won the trophy two years ago and is powered with a 6 cylinder Scripp's engine.

Carl G. Fisher also entered his Gold Cup boat Baby Shadow which was re-powered with a 6 cylinder Chrysler motor to make it come within the requirements for the Junior Gold Cup race. Two of the Tampa Baybies, known as Tampa Baby I and Tampa Baby II also competed. Tampa Baby I is owned by Jas. Barclay, Jr., and the other boat by Carroll Hall. Lady Helen II showed her superiority over the rest of the field by taking the event in three straight heats, at average speeds of 39.70, 39.59 and 39.77 miles per hour respectively. Lady Helen II driven by Dick Locke of Detroit led over practically the entire distance and did not seem at all pressed at any time to hold the lead. Lady Helen's fastest three mile lap was at the rate of 43.42 miles per hour.

Lady Helen I also owned by Aaron de Roy and driven by S. D. McCreedy, made a close race with the newer Lady Helen during most of the distance but did not have quite the speed to take the lead from her at any time. This boat is powered with the same 6 cylinder type F. Scripp's motor which drove the boat to victory in 1924.

Baby Frolic, W. P. Chrysler's entry, built especially for the race and with Caleb S. Bragg at the wheel, did not show the necessary speed to make her a dangerous contender. The best she could do around the 21 mile course was 37.66 miles per hour with the fastest lap at 38.29 miles an hour. The same is true of Baby Shadow driven by Victor Klierath, who finished a little ahead of Baby Frolic in each of the events, making 38.25 miles an hour in the last 21 mile heat with a fast lap of 39.31 miles per hour.

The two Tampa Baybies trailed along behind the rest of the field and while they ran very consistently lap by lap, yet did not have sufficient speed to even make an interesting race. In the best 21 mile heat of these boats, they were capable of about 35 miles an hour.

The cruiser enthusiasts showed their usual keen interest in the race for the Sallan Trophy, which consists of three heats of 25 nautical miles each with the boats handicapped on a past performance basis. The competitors were allowed to exceed their handicap time by 5% but if they exceeded it by more than this amount they were disqualified, not only for the particular heat but refused further competition. Several boat's hopes and chances were spoiled by these disqualifications. Twenty-six boats started in the first heat for the Sallan Trophy. All the cruisers were of a very wholesome type and showed considerable improvement in cruiser design and construction on the Great Lakes during the past year. Nearly all of the boats showed speeds of 10 miles an hour or more which considering their type and size, is a very good performance.

In the first heat for the Sallan Trophy, the Liggett cruiser built and owned by A. C. Liggett was the winner. This boat was followed closely by Escapade owned by H. R. Esling and Del-Mar-Lu owned by Chas. H. Koerber. The winning boat showed a speed of 11.035 miles per hour. In the second heat, the first three boats to finish were disqualified due to the fact that they exceeded their time allowance, so this allowed Caroline E. owned by Dr. Connelly to finish first, with Edith C owned by Howard E. Blood, second. The Liggett cruiser which finished in first place in the first heat, was third and at the end of the second heat was leading as far as total points scored were concerned.

The third heat for the Sallan Trophy showed keen competition among most of the starters. The boats were started on their handicap time, so that theoretically, they would all finish together. Practically the results worked out almost as well and the finishing line was hardly long enough to permit the various boats to get across the line side by side, so close were they bunched. In this heat Edith C was the winner followed closely by Ebco owned by Harry A. Ebetts. However, in total number of points, the best place

(Continued on page 152)

Enjoy A Prize Winning Biscayne Baby Immediate Delivery From Stock

YOU can now own one of these fast eighteen-foot runabouts, combining thrilling speed, moderate cost and real utility for all runabout service. They are constructed by the original designers and builders of the first Biscayne Babies which made their debut at the 1925 Miami Beach Regatta. These boats were such a success and attracted so much attention at all of the more important speed boat meets, including the Gold Cup Regattas of 1925 and 1926, that additional races for this class are being planned for coming Regattas in the South.

Powered with Scripps Junior Gold Cup motors, Biscayne Babies give a speed of 40 miles or better. They are staunchly constructed of the finest of materials, mahogany planked and salt water equipped. Your Biscayne Baby is ready and can be shipped immediately via rail or boat to any point in the United States. Price, \$2,800 complete.

Rowdy, winner of the 1926 Dodge Trophy Race at the Manhasset Bay and the 1926 International Sweepstakes at Detroit. Designed and built by Purdy for Mr. Carl G. Fisher.

Accessibility of Power Plant

THE experienced yachtsman knows the importance of having plenty of working room around the power plant. Just as the accommodations of the Gray Thirty-six Foot Cruiser are unusually spacious and complete, the power plant, an E-6 Scripps, is installed in a large compartment under the bridge, making it easy for even a big man to work on the engine with more ease than the motor of most automobiles allows. The entire engine is accessible by simply lifting the hatches.

Gray Boats

WHEREVER the Gray Thirty-six Foot Cruiser goes it is admired for its smartness, seaworthiness and comfort. This handsome boat embodies all of the fine points of approved boat construction together with an interior arrangement that is unusually pleasing and exceptionally complete in appointments. There are two cabins, a separate galley fully furnished and a neatly fitted toilet room. Sleeping accommodations are provided for five people. The cockpit is extra large and can be enclosed like a deckhouse as shown below. The power plant, a Scripps E-6, six-cylinder, 65-100 H.P. gives a cruising speed of 15 miles per hour.

Detroit's Tenth Annual Regatta

(Continued from page 146)

which Edith C could win was second, while Ebco was no better than fifteenth. When the total score was computed, it was found that Escapade was leading with 67 points.

For the race for 151 cubic inch hydroplanes which consisted of two heats of 9 miles each, three of the little puddle jumpers showed up. Spitfire V and Spitfire IV, the two speedsters owned by J. H. Rand, Jr. of Buffalo, N. Y. which boats have been setting new speed records in this class in most of the important Regattas held this year, had everything their own way. Spitfire V, the new Hacker designed hull, built by Richardson of North Tonawanda, New York, which set a new world's record of 42.43 miles an hour for 5 miles in this class at Buffalo two weeks previous to the Detroit races, again won, covering the 9 mile course at speeds of 41.98 and 41.91 miles per hour respectively. While this record did not equal the world's record made by this boat at Buffalo, yet it is a new world's record for 9 miles. Spitfire IV showed speeds of 36.02 and 35.62 miles per hour respectively.

Miss Westchester II, the other entrant did not finish in the first heat but showed an average speed of 32.22 miles an hour in the second heat.

In the race for Chris-crafts, which consisted of one heat of 24 miles around the three mile course, Sea Breeze, owned by S. E. Potter was the winner averaging 32.64 miles an hour for the entire distance. Eleven Chris-Crafts, all of the same size and type started in this race and as would be expected, all of them finished. Competition was close and keen throughout the race and the event was one of the most interesting and spectacular of the entire Regatta. It was quite evident that the spectators enjoy a race of this kind where the boats are well bunched during the entire distance.

Ten cruisers built by the Matthews Boat Co. of Port Clinton, Ohio started in the class arranged for boats built by the Matthews Co. This race consisted of one heat of 6 miles and was won by Bookie, owned by H. A. Buchbinder which covered the 6 mile course in 32:20, which is at the rate of 11.13 miles per hour. Edith C owned by H. E. Blood finished second and Bob-E-Lo owned by R. E. Linn was third.

Several races were held for outboards and in class A, the boat owned by O. E. Klann covered the 3 mile course in 18 minutes, 21 seconds or at the rate of 9.81 miles per hour, winning in his class. In Class B, the boat owned by H. W. Hart was the winner covering the course at a speed of 15.58 miles per hour. Class C was won by C. V. Covert, whose boat covered the 3 mile course in 8:50 or at the rate of 20.35 miles per hour. Ed Meyers took second place at a speed of 19.2 miles per hour. Thirteen Baby Buzz boats started in this class and while the speed made is not a new world's record, yet it very closely approximates one. All the boats were very evenly matched and all of them showed speeds in excess of 15 miles an hour.

One of the most interesting events of the entire Detroit Regatta was the race for cruisers powered with Kermath motors. The motors in this class were built by the Kermath Motor Co. Twenty five cruisers went across the starting line and all of them completed the 6 mile course in record time. Del-Mar-Lu owned by C. H. Koerber, finished first showing a speed of 12.35 miles an hour. Sunshine owned by E. H. Scott was second and Wags II owned by Adolph Wagner was third.

The principal event of the Detroit Regatta was the 151 mile Sweepstakes scheduled for Labor Day. A number of new boats had been built for this race, among them being the new Cigarette IV owned by L. Gordon Hamersley of New York City, a 34 footer built of duralumin and powered with a 12 cylinder Curtiss motor. This boat was designed by F. K. Lord of New York and built by Brewster of Long Island City. It is stated that the total cost of this boat was approximately \$60,000. Mr. Hamersley, owner of Cigarette IV, had intended to race her in the Dodge Trophy race in August but an accident to the power plant the day before the Dodge Trophy race, did not give him a chance to start. Much had been heard about this new craft from many sources, so her ability from every angle was watched with the keenest interest.

Other new boats built especially for this race were Rowdy and Rascal, two boats of identical design produced by the Purdy Boat Co. of Port Washington, L. I. and powered with 12 cylinder Packard engines. These boats were approximately 34 feet in length and are owned by Carl G. Fisher and Caleb S. Bragg. In the trials for the Sweep-

Detroit's Tenth Annual Regatta

(Continued from page 152)

stakes race around a 6 mile course, Rowdy averaged 64.201 miles an hour and Rascal 63.814 miles an hour. Both of these are world's records for displacement boats. One of the three mile laps in the trials made by Rowdy was covered at a speed of 64.32 miles per hour. Cigarette IV in her 6 mile trials made a speed of 60.261 miles an hour.

Other boats in the Sweepstakes race included Horace, a new craft built by the Horace E. Dodge Boat Works and designed by George F. Crouch. This boat was powered with a Wright-Typhoon motor and in her 6 mile trials showed a speed of 48.579 miles per hour.

Baby Gar VI was entered by Gar Wood. This is the same craft which won the Fisher-Allison trophy race at Miami Beach last March. Baby Gar VI in her trials showed a speed of 55.33 miles per hour. Miss Indianapolis, a Baby Gar and also another of the Fisher-Allison boats, was also entered and showed trial speeds of 52.274 miles an hour.

Horace E. Dodge entered Miss Syndicate, now powered with a 12 cylinder Packard engine and in her trials, showed a speed of 57.8 miles an hour. Mr. Dodge also entered Water Car Detroit, one of his Gold Cup boats, which in her trials showed a speed of 46.15 miles per hour. Mrs. Delphine Dodge Cromwell entered her Gold Cup racer, Nuisance, which averaged 46.754 miles per hour in her qualifying trials.

Conditions on the Detroit river on Labor Day were anything but favorable for high speed racing, especially a 150 mile grind. To make a 150 mile race at all enjoyable for the crews, water and wind conditions should be perfect. To go this distance at high speeds in the type of boats which were entered for this year's race, can hardly be called a pleasure jaunt even with everything favorable for comfort. But with wind and high seas to buck the contest becomes one of the greatest hardships of any sport. One who has never ridden in a mile a minute boat even with the slightest chop showing on the water can hardly appreciate the punishment which the crews must endure.

Labor Day in Detroit dawned stormy. During the morning the wind increased and at noon there was half a gale blowing. To make matters worse, the direction of the wind was directly against the current in the Detroit river. This resulted in a very sloppy sea, which had no definite direction but seemed to be both head and across the paths of the boats no matter how hard they tried to avoid them or how adept the drivers were.

The start of the Sweepstakes was scheduled for 12.30 p.m. An hour before this time it hardly seemed that any of the boats would be able to live in the sea which was running, not to mention the probability of finishing the 150 miles at any kind of speed. However, the Race Committee ordered no postponement so preparations went on for the race. It was very evident that the contest was to be a test of hull and power plant, the likes of which had never before been seen.

Rowdy having made the fastest speed in her qualification trials had the pole position. Alongside of Rowdy in the front row were Rascal, Cigarette IV and Miss Syndicate. In the second row came Baby Gar VI, Miss Indianapolis, Horace and Water Car Detroit. The third row was held by Nuisance alone, with her owner Delphine Dodge Cromwell at the wheel.

The boats went round one lap in the above position before the actual start, being paced by Eddie Edenburn and Dick Locke in the latter's fast runabout. When they reached the starting line and the gun boomed for the start, Rowdy, Rascal, Cigarette IV and Miss Syndicate were directly side by side. However, before the first turning buoy was reached only a few hundred yards away, Cigarette IV went into the lead in a fountain of spray and foam. Miss Syndicate with Horace E. Dodge at the wheel was less than a length astern but Vic Kliensrath and Caleb Bragg in their boats Rowdy and Rascal had evidently decided to take it more easily and let the leaders kill themselves off. With the finish line 150 miles away, this was a very safe and sane policy considering the very bad water conditions. Although those two boats had more speed than any of the others, with conditions normal, yet they elected to run at a speed some 10 miles below their maximum. As later developments showed, their policy was the correct one.

With Cigarette IV in the lead but being pushed every inch of the way by Miss Syndicate the race was on in earnest. Baby Gar VI was running in third place followed some distance astern by Rowdy, Horace, Miss Indianapolis and Rascal in the order named. Nuisance withdrew after the

THE NIAGARA "SPECIAL" 4 cylinder, 4 cycle, 12-15 H.P.

When you have just come in from a trip, and your boat has lived up to the boasts you made—pulling you through tight corners, never wavering for a minute—that's what builds confidence in your NIAGARA.

For flexibility and smooth running this high grade NIAGARA 4 cylinder complete power plant has no peer.

The most compact, reliable, and sturdy engine of its size on the market. This 4-cylinder engine costs no more than most 2 cylinder engines of its size.

Write for specifications Authorized agencies; write for details.

THE NIAGARA "GEM" gives a surprising performance and a service that lasts. You will find it the best you can buy in its size. You'll be enthusiastic about this NIAGARA "GEM" because of its power and even running. Unfaltering, you will find it ready to go and almost without vibration.

Here is an engine that offers the most value in genuine marine engine service today. It will surprise you with its ability and power. Its hot spot manifold guarantees you the most miles per gallon you ever realized. Its measured perfection and finish is consistent with reputation of its builders, for quality and durability. Compare the specifications, its sturdy counterbalanced crankshaft, extra large bearings and heavy flywheel.

Detroit's Tenth Annual Regatta

(Continued from page 154)

paced lap and Water Car Detroit at the end of the first lap. Cigarette IV's first lap was made at a speed of 58.26 miles per hour and Syndicate's at 56.94, a very remarkable performance. Both boats appeared to be running at full throttle and their handling was marvelous. They were making good weather of the seas and showed that both craft are the two best sea boats which have ever been produced. Neither showed any tendency to upset and made the turns wide open.

At the end of the 5th lap, Horace had gone up into third place but soon dropped back to fourth again until the 12th lap when she withdrew due to failure of the fuel supply. Miss Syndicate took the lead away from Cigarette IV at the end of the 10th lap and held it for 3 laps when she was again passed by Cigarette.

All went well until the 50th mile when Miss Syndicate again passed Cigarette and held the lead up to the 93rd mile mark. Here Miss Syndicate had fuel trouble and dropped back to third place being passed by both Cigarette and Miss Indianapolis which boat had worked up from sixth to second. Baby Gar VI dropped out on the 24th lap due to a broken valve and Cigarette's gasoline tank began to leak after 30 laps so she withdrew.

On the 32nd lap with Miss Syndicate dead on the course
(Continued on page 158)

The Combined Rudder-Strut

(Continued from page 42)

mental filling piece over the propeller shaft. However, it led to the study and experiments with the strut problem and the invention of the Combination Rudder Strut, which was patented in 1910, as a cut from my British Patent shows.

Other advantages of this invention are that, there being no struts to interfere with the action of the Rudder, the boat turns freer, heels inboard on the turns and logically, and in my opinion, is the safest and most practical equipment for high-speed boats.

There are other advantages. Fixed struts in front of a propeller on light, high-speed racing-boats, are likely to cavitate the water momentarily as the strut is driven sidewise in turning under the action of the rudder.

Obviously if the propeller-blades on the top side are cutting through air-pockets caused by struts and the blades on the lower half are, at the same instant, working on solid water the side pull of the lower blades will be so much greater than the side pull of the upper blades in the opposite direction that the stern of the boat will be swung sidewise. But there are other factors which co-operate so quickly that no one can ever explain how it happened. Take the usual conditions: the propeller is turning clockwise as you face forward; you are making a turn to port under power of the motor; the rudder is set forcing the stern to starboard. If, at this moment, there is serious cavitation affecting the propeller-blades in the upper half of their revolution, several forces are instantly combined to capsize the boat. The side pull of the propeller, the torque of the propeller, the angle of the rudder, and, as the boat heels under such conditions, the action of the propeller to climb on top of the water, all combine to capsize the boat. Once the propeller-blades on the top side and the rudder are out of the water, things happen fast and it is all done inside of one second of time. The same thing may happen through a boat striking a swell or a wave which momentarily breaks the water under the stern or in any way which seriously affects the proper action of the propeller-blades.

In the matter of rudder-equipment, I believe that high-speed boats are made safer by having the rudder-blade extend below the propeller-shaft with surface enough to get a bite on the water when there happens to be any cavitation about the upper blades.

Another safeguard against such accidents, which I believe Racing-rules should require, is that all boats should be equipped with an accelerator which automatically shuts the power down to, say a speed of ten miles; such accelerators may be controlled by the foot, leg or hand but, in any case, must close automatically. The throttle should only be used to regulate the maximum speed where that is desirable.

Usually the first indication that a racing-boat is becoming pranking is the sensation of the boat taking charge, and the pilot is likely to be so busy with both hands on the wheel that he is a fraction of a second too slow in using a hand throttle which does not close automatically. Whereas a foot-accelerator will be released instinctively. Again, if the crew should be thrown out, the boat will not run wild, as has happened.

It Cuts Fog

Black night—fog rolling in, blotting out harbor lights, muffling ordinary warning signals, making headway risky business. These are the times when the weird, fog penetrating scream of a Federal is appreciated.

Federal Sirens are even more valuable in clear weather. No skipper will drive his craft across the bows of an approaching power boat, clearing its way with the mighty Federal.

In addition, think of the fun and pride in having your boat so distinctively equipped. The coupon brings you a Federal on approval. Install it and watch the harbor watch you.

Summary of Results

Detroit Regatta

September 4, 5, and 6, 1926

(Continued from page 156)

but her crew working hard to get her running again, Vic Kliesrath, the veteran gray haired driver, put Rowdy into first place and she was never headed again until she crossed the finish line as the winner.

Miss Syndicate finally got going and held third place until within 2 laps of the finish when the old trouble reappeared and she withdrew. Miss Indianapolis held 2nd place from the 33rd lap until the finish. Rowdy was 4th from the 31st

to the 48th lap but when Miss Syndicate withdrew she went into 3rd position where she finished.

Rowdy's speed for the 150 miles was 48.25 miles per hour, which was very good considering the bad conditions. It was Vic Kliesrath's good judgment in driving which gave Rowdy first prize.

A complete summary of the Sweepstakes race by laps and other Detroit races will be found on page 142, 148 and 158.

"Wooden Boats No Longer Interest Me"

We gather from Mr. Sturdevant's letter that wooden boats *did* interest him once. Probably he knows all about scraping and calking, replacing rotted planks, the swelling, shrinking, drying and checking that wooden boats are subject to.

And like thousands of other Mullins owners he prefers being master of his boat than slave to it.

Since we can't tell you all about Mullins Steel Boats within the confines of this page—may we ask that you send the coupon for the whole story?

MULLINS BODY CORPORATION

On the **NEW PEERLESS**

**Yep, the New Peerless
And Joes Gear Do Their
Trick Together**

Mr. Grimm was fussy but chose the No. 133 Joes gear after many a test for his new 4 and 6 cylinder Peerless, because it had the double disc drive and didn't drive through locked gear teeth.

All o' which means a lot, for when a builder adopts a gear he makes it a part o' his engine, an' he's got to father the whole job. Well,

38 LEADING ENGINE BUILDERS

seem to be proud to father Joes Gear, because they've made it standard equipment. Old Man Joe says, when figgerin' on buyin' an engine, insist on Joes Gear. You can gen'ly get it, no matter what the make of motor is. You ought to have a copy o' Bulletin 25-A, tellin' about Joes Gears. Better write for it today.

Again Packard Makes Clean Sweep in Annual Power Boat Races

Packard-powered craft win 150 Mile Sweepstakes—Gold Cup Race—Dodge Memorial Trophy Race.

The Gold Cup Race was won by George H. Townsend's Greenwich Folly, powered with a 6-cylinder Packard Gold Cup Engine.

In the first heat Caleb Bragg's Baby Bootlegger, winner of last year's Gold Cup Race, again demonstrated the consistent performance of the Packard Gold Cup Engine by setting a new world's record for Gold Cup Boats of 50.53 miles per hour.

Both the Sweepstakes and the Dodge Memorial were won by Carl G. Fisher's Rowdy—equipped with a 12-cylinder Packard Sweepstakes Engine—an installation which has developed 67 miles per hour.

Third place in the Gold Cup Race was also taken by a Packard-powered boat—Harry Greening's old

Rainbow III, rechristened Palm Beach Days. Winner of the 1923 Gold Cup, Palm Beach Days has been used for three years as a pleasure craft, and was given no special preparation before this year's race.

Caleb Bragg's Rascal, sister ship to Rowdy, took third place in the Sweepstakes—one of the only two boats, besides the winner, to finish.

Last year's triumphant performance record was repeated—not one Packard-powered boat was forced out of any of the three races by engine trouble.

Year by year Packard Marine Engines win new laurels such as these, and repeatedly establish their reliability and endurance under all conditions—for racing, work boats and pleasure craft. Complete details of any model will gladly be furnished upon request.

PACKARD MOTOR CAR COMPANY
DETROIT MICHIGAN

MODEL IM-1242—12 cylinder Sweepstakes Type. Designed originally for the Sweepstakes Race and winner of both the 1926 and 1925 Sweepstakes. Develops 800 H. P. at 2300 R. P. M. Weight 1140 lbs. Speed up to 67 miles per hour. Price, complete with equipment, \$12,000.00.

Caper, a Cape Cod Cat

(Continued from page 43)

bolts set up with nut and washer. Stem to be rabbeted to take ends of planking. Outside face of stem to be finished fair with outside of planking and to be fitted with a galvanized iron stem band with eye in head for stay.

Stern Transom: White oak, 1 1/4 inches thick and shaped as per plans. To be thoroughly edged bolted with 1/2 inch galvanized iron rods. Stern transom to be fastened to end of keel with a hackmatack knee as shown on plans.

Centerboard Trunk: Lower bed logs to be of oak, 2 1/2 inches thick and moulded 8 inches deep amidships. To be fitted to inside of plank keel, set in white lead and thoroughly bolted to keel. Head ledges to be oak, sided 2 inches and moulded 3 inches. Trunk siding to be yellow pine, 1 3/4 inch thick; thoroughly edge bolted and riveted to headledges. Mahogany cap on top of trunk.

Centerboard: To be of yellow pine, 1 1/4 inch thick and shaped as per plans. To be thoroughly edge bolted with 1/2 inch galvanized iron rod. To be weighted with lead sufficient to overcome flotation. Board to be hung on a 3/4 inch galvanized iron bolt through bed logs. Hoisting pennant to be led over sheave in after head ledge to cleat on after end of trunk.

Frames: White oak, stem bent to shape, 1 1/4 by 1 1/4 inches, spaced 8 inches center to center. Heels of frames to be fitted into mortises in plank keel.

Oak floor frames to be fitted at every pair of frames, extending across top of keel and moulded as shown on plans. To be riveted or bolted to frames and bolted to keel.

Clamps: Yellow pine 1 1/8 by 5 inches, tapered at ends, in one piece each side, fastened to frames at proper height to take under side of deck beams.

Shelf to be yellow pine, 1 1/2 by 2 inches, fastened with rivets through clamp and heads of frames.

Bilge Stringer: Yellow pine, 1 1/2 by 3 inches, tapered at ends, riveted to frames. Two each side as shown on plans.

Planking: To be selected white cedar 7/8 inch thick when finished. To be worked in long lengths and narrow strakes with butts well shifted. Planks at turn of bilge to be hollowed on inside to fit curve of frames. All butts to be made on oak block between frames and through riveted. Planking to be fastened with galvanized boat nails clinched on inside of frames; heads to be countersunk and plugged with cedar bungs set in white lead. Seams to be caulked with cotton, payed with white lead paint and filled flush with white lead putty. Planking to be planned and sandpapered smooth and fair before painting.

Deck Beams: White oak, sawn to crown of 5 inches in 10 feet to be moulded 2 inches and sided 1 1/8 inches. Heavy beam at mast partner, forward end of cabin trunk and at aft end of cockpit to be 2 by 2 inches. Fore and aft carlins to be 2 by 2 inches, oak. Hackmatack knees to be fitted as shown on deck plan.

Deck: White pine in narrow planks, 1 1/4 inch thick and 1 1/2 inch wide, laid parallel to side of boat; blind fastened to deck beams with galvanized nails and edge nailed between beams. Ends to be nibbed into a mahogany center plank forward. Planksheers to be mahogany, 1 1/8 by 3 inches, sprung to side of boat and fastened with brass screws countersunk and bunged. Deck to be caulked with a thread of cotton, seams payed and filled with white lead putty.

Mahogany water batten, 1 1/2 by 1 1/4 inches fitted on outer edge of planksheer.

Cabin Trunk: Sides to be clear white oak, 1 inch thick, steam bent to shape. Height to be as shown on lines of hull. Coaming to be edge bolted through carlin with nut and washer on under side of carlin. Cabin beams oak, sawn to shape of crown, 1 by 1 3/8 inches, spaced 10 inches center to center. Cabin top to be 3/4 inch tongue and groove white pine sheathing covered with No. 10 canvas in one piece laid in thick white lead paint, thoroughly stretched and fastened with copper tacks. Mahogany half round moulding to cover edge of canvas.

Companionway slide and doors at aft end to be mahogany. Four oval lights of plate glass to be set in sides of cabin trunk.

Cockpit: Cockpit floor beams to be oak, 1 1/4 by 2 1/2 inches. Floor to be white pine in narrow planks laid straight fore and aft. Hatch for motor to be fitted in floor as shown on plans, or as required to suit motor installed.

Cockpit coaming to be 3/4 inch clear white oak, steam bent to shape. Inside cockpit staving to be 1/2 inch tongue and groove mahogany staving set in a rabbeted sill and made

(Continued on page 166)

Dual Ignition

Simple push-plug. No clips or terminals. Switch from battery to magneto without misfiring.

Sure Starting

One snappy pull on the rope starter and the motor starts sure as your car.

Electric Lighting

Brilliant 6-volt light on tiller handle illuminates motor and boat.

Sure Starting—Electric Lighting

FOR the first time modern motor car conveniences have been adapted to outboard motor construction. Now in the New 1926 Champion Evinrude Sport Twin you have quick starting. Standard dry cell battery current is transformed into secondary current of 13,000 volts. One quick, snappy pull on the rope starter—the New 1926 Champion Evinrude Sport Twin starts as sure as your car.

Electrically lighted, with brilliant 6-volt bulb with thumb switch same as your car. Illuminates motor and boat. Magneto supplies current when motor is running, battery when motor is stopped. Now—new pleasure, new convenience, and new safety for night cruising.

In addition to these innovations there are ten more refinements that provide Evinruding conveniences and comforts, comparable to the equipment of your car. These include self-steering—Extra Power—30% Hotter Spark—Improved Tilt-up—Tiller and Rope Steering—Shear-off Pin Compartment—Improved Cooling—Leather Tiller Handle—New Locking Device—New Carburetor.

Have the nearest Evinrude dealer demonstrate this new motor. You will be amazed at its efficiency, conveniences and performance.

Every Motor Boatman and Sailor Needs This Book

The Yachtsman's Annual Guide

The Only Yachting Hand Book of Useful Boating Information

No Boat or Nautical Library Complete Without it
 Published by Yachtsmen for Yachtsmen

Founded 1877

Over 500 Pages

Published January and July of Each Year

Profusely Illustrated

Valuable Alike for Novice or Expert

**The Reference Book Which Combines the Important Data to Be Found in
 All Government Publications of Interest to Motor Boatmen
 and Yachtsmen Into One Volume**

PARTIAL LIST OF CONTENTS

- *Sixty complete motor boatmen's charts covering the entire Atlantic Coast, Great Lakes, important harbors and rivers
- *Tide Tables showing time of high and low waters, range of tides, etc., at more than 1,000 different locations
- *List of important lights on Atlantic Coast, their characteristics, fog signals, etc.
- *Current tables showing time of slack water, strength of current, time of current changes, etc., at all important points
- *Latitude and longitude tables, giving the locations of over 1,000 points, aids to navigation, etc.
- *List of ports where numbers of motor boats are assigned
- *New York—Florida, motor boat inside route
 A complete description of the course for motor boats to follow, where to get supplies, anchor, etc.
- *Where to Cruise—
 A chapter giving numerous suggestions and hints on cruising, description of the best cruising waters in the East and on the Great Lakes
- *Yachting signal code
- *List of all yacht clubs
- *List of marine engines manufactured
- *Trent Canal
- *Notes about Government Coast and Geodetic Charts
- *Where to buy Government charts
- *Cruising to Florida in twenty days
- *Racing Summary
- *How to form a yacht club
- *Duties of yacht club officers and members
 Tables of times of high and low tides
- *Tables showing time of sunrise and sunset
- *Details of motor boat routes, New York to Albany, Albany to Buffalo, Albany to Thousand Islands, Albany to the St. Lawrence River and Montreal, New York to Philadelphia, Buffalo to Detroit, Miami, Fla., to New Orleans, etc., etc.
- *Motor Boatmen's Charts of Lake Ontario, Lake Erie, Lake Huron, Lake Michigan, etc.
- *Numbering Law—How to obtain numbers for your boat
 Index to principal harbors which are described
 Tide commutation table
 Anchorage rules—Port of Boston
 Port of New York—Anchorage rules
 Rates of Pilotage—New York
 Distances—Boston to New York
 Lights—New York to Boston
 Distance and Bearings—New York to Maine
 Complete sailing directions (79 pages), entire Atlantic Coast, Maine to Gulf of Mexico. Detailed information on coastwise navigation, as well as complete instructions for getting into all harbors, bays, sounds, rivers, etc. Compass directions, distances, descriptions and locations of shoals, rocks and other dangers to Navigation. The waters described in detail include Atlantic Coast, Coast of Maine and all Harbor and rivers. New Hampshire, Portsmouth Harbor, Massachusetts and all of its principal harbors; Massachusetts Bay, North, South and West shores Cape Cod Canal, Cape Cod to New York, Buzzards and Narragansett Bays and Long Island Sound, including motor boat and yacht harbors, anchorages and tributary rivers. East River to New York City, South Shore of Long Island, New York Bay and Harbor, Coast of New Jersey, Hudson River, Chesapeake Bay, Delaware River and Bay, Hampton Roads and all tributary waters, Potomac River, Inside Route—New York to Florida.
- Water Routes, New York to Chicago and Duluth, including New York State Canals, sailing directories on the Great Lakes

MOTOR BOATING, 119 West 40th St., New York, N. Y.

BANFIELD

Model

**\$4,500⁰⁰ Complete With
100 H.P. Kermath Motor**

THE Banfield Sail Fish Model has been designed for the growing number of sportsmen who prefer a Fishing Boat and Cruiser adaptable for Southern waters and capable of going to sea safely, comfortably and quickly. Designed, constructed and finished in true Banfield fashion and equipped with the Kermath 100, this boat represents the best value yet offered in a genuine Sea Skiff. It will unquestionably be the most popular boat in Southern waters this coming winter.

The Banfield Sail Fish Model is a 30-Footer with 8 ft. 6 in. beam and draws only 30" of water. The cabin has 5 ft. 8 in. headroom and is arranged to sleep two (or four) people comfortably. The toilet is forward; galley with sink, ice box, dish racks and large locker spaces is nicely arranged. A sliding hatch forward ventilates the cabin and facilitates handling anchor. The boat is equipped with standard Banfield type mahogany and plate-glass windshield. Motor is installed in cockpit entirely out of cabin; cockpit is spacious and has removable aft seat for fishing. Interior finished in white and mahogany. "Tieabouts" standardized polished brass and bronze hardware used throughout. The boat is substantial in every detail and has been worked out to give the best possible service in Southern waters. Only a limited number of this model will be available this fall. Why not make up your mind now to own one of these boats and avail yourself of many enjoyable trips this winter?

Two of the Best Boats Ever Built By Dunphy

These boats are designed and constructed with all the skill, care and precision of master craftsmanship. They're two of the best boats ever built by Dunphy.

The Dunphy Sand Dob

18-foot shallow craft tunnel stern, with room for nine passengers. Runs in 11 inches of water. Beaches anywhere, lands anywhere, goes anywhere, the propeller is protected. Eases into coves, streams, and inlets where others cannot enter.

Equipped with 4-cylinder, 15 H.P. Universal Motor, with electric starter. Makes 15 miles an hour. Hull is cedar planked, brass and copper fastened, mahogany finished.

\$1,275.00 F.O.B. Eau Claire

The Dunphy 26 Foot Runabout

Roomy cockpit forward with two leather upholstered seats. Rear cockpit has one leather upholstered seat and two wicker chairs. Comfortable capacity for five in each cockpit.

Equipped with powerful 6-cylinder, 100 H.P. Marine Motor, with electric starter. Makes better than 30 miles an hour, and on special order equipped to do 45 miles guaranteed. Steering wheels and all controls operated from forward seat. Hull is double planked mahogany, brass and copper fastened.

\$3,325.00 F.O.B. Eau Claire

Send us your specifications—we are equipped to design and build any boat to your entire satisfaction. Write for illustrated catalog on launches, outboard motor boats, canoes and row boats.

DUNPHY

Caper, a Cape Cod Cat

(Continued from page 162)

watertight. Staving to extend to a top of outside coaming and to be fitted with an oval mahogany cap.

Cockpit seats to be mahogany supported by turned mahogany stanchions.

Two lead pipe scuppers to be fitted at forward end of cockpit with screw deck plates in cockpit floor led in flush.

Rudder: Rudder blade to be made of white oak, 2 inches thick, shaped as per plans and thoroughly edge bolted with ½ inch galvanized iron rods; to be tapered to ¼ inch thickness at after edge.

Steering gear to be an Edson quadrant steerer, square stern type for outside rudder, No. 1 size, with 24 inch wheel. Tiller on top of rudder blade, to which steerer is fastened, is to be reinforced with a ½ inch thick plate of galvanized iron, same width as thickness of rudder.

Oak tiller may be used if desired in place of steering gear and wheel.

Rudder to be hung to stern transom with galvanized iron fittings and to have a lower heel bearing at bottom of keel.

Cabin: Cabin floor to be of ¾ inch pine, laid with hatches to give access to entire bottom of boat.

Cabin to be arranged with transom seats, lockers, shelves, etc., as required by Owner.

Finishing: Outside of hull to be finished perfectly smooth, given a priming coat of lead paint and at least three coats of white paint on topsides. Bottom to have two coats of anti-fouling marine bottom paint of color and make directed by Owner. Decks and sides of cabin trunk to be scraped smooth and given at least three coats of best spar varnish. Top of cabin trunk to be given two coats of buff color deck paint. All mahogany joiner work to be varnished three coats of best spar varnish.

Interior of hull to be painted two coats of lead paint of color directed.

Spars and Rigging: All spars to be solid spruce as per sizes given on sail plan. To be finished smooth and given three coats of best spar varnish.

Mast to have one stay to stem head of ¾ inch diameter galvanized wire rope fitted with eye splice over masthead and set up with a ½ inch galvanized turnbuckle at stem head. Peak halyard blocks on masthead to be hung on eye bolts through mast. Throat halyard block hung on a wire rope pennant fitted with eyesplice around masthead and supported by an oak shoulder cleat on forward side of mast. Gooseneck for main boom to be a galvanized iron stock hardware fitting with band around mast.

Gaff to have curved oak gaff jaws and wire rope bridle for peak halyard.

Boom to have galvanized gooseneck and a galvanized sling band for main sheet block.

Halyard and mainsheet blocks to be 4 inch size wood shell blocks fitted with shackles; peak halyard block to have a bridle attachment fitting.

Running rigging to be 15 thread manila yacht rope.

Mainsail to be made of 7 ounce yacht duck, fitted with three reefs spaced as shown on sail plan.

Auxiliary Motor: Motor to be furnished by Owner and installed by Builder.

Shaft to be carried out through deadwood, with outboard stuffing box on aft side of deadwood. Gasoline tank to be a cylindrical galvanized tank placed in cockpit under cockpit seat; to have a shut off valve at tank. Details of installation to be as directed by Owner.

Equipment: To include one 35 pound anchor; 100 feet of ¾ inch diameter anchor cable; life preservers; fire extinguisher; fog horn; running lights; 2 copies of Pilot Rules; whistle; brass bilge pump; boat hook.

Ballast: About one thousand pounds of lead ballast, in small pigs, to be placed in bottom of boat under forward end of cockpit and carefully stowed to prevent shifting. Iron sash weights may be used in place of lead if desired and should be thoroughly coated with red lead before being placed in boat.

Delivery: The boat is to be delivered afloat, at the yard of the Builder, completely finished and ready to sail, on or before the.....day of....., 1927.

Cutless Bearings On New Yachts

In the description of a number of new yachts, which were published in August MoTOR Boating, several items of their equipment were mentioned, but the fact that these boats are all equipped with Goodrich Rubber Cutless stern bearings was not stated. The boats Edamena, Lura M II, Scamper, Argo, and Patricia, are all supplied with this installation, which adds greatly to the comfort of the boat.

W-S-M Wins!

RENE JR., powered with a W-S-M 60 H.P. marine engine and owned by Mr. L. M. Simmons of the New York Athletic Club, is the victor of two of the most important cruiser races held this year. In the annual Tamaqua Ocean Race, a forty mile contest in open sea, Rene Jr. took first honors against a formidable fleet of entries, and a few weeks later this boat won the James Craig Trophy in the race from Philadelphia to New York over a grueling course.

Sea Dream II, an Elco 34-foot Cruisette owned by Mr. G. L. Lerner and powered with a W-S-M engine, took second place in the Tamaqua Ocean Race.

The consistency of W-S-M power and stamina is demonstrated every day in boats of all types in all kinds of service, — pleasure, commercial and fishing. Write today for the latest W-S-M catalog.

Up and Down Glen Canyon

(Continued from page 26)

main stream and worked up along the eddy to the base of Sentinel Rock. Mooring the boats as securely as possible, we clambered up to the protection of the leaning slab. Turning to peer at the storm, we discovered to our not inconsiderable relief that it had left the gorge at the bend below and was breaking with savage force upon the crest of the plateau.

Just which mound or pinnacle of the heights above had rasped the bottom off those murky clouds and released their accumulated floods we could never be certain. A roaring and grinding that was not from wind or thunder told that a cataclysm was taking place somewhere up there, but all we saw of water was a half dozen tremulous jets that played from the rim for a few minutes, to cease as suddenly as they had begun. Doubtless they represented not more than the spray of the outer splash of the main dump. At both Glen and the Grand Canyon drainage is away from the rims. The flood from this particular cloudburst must have found its circuitous way back to the Colorado by the side canyon draining whichever of the tributary watersheds that the deluge invaded. We were not anxious to linger to find out if any of it was coming down Wa-weap. But the end of our experiences with cloudbursts was not yet.

With another bank of storm clouds blowing up from the south, Tom decided to run along to the big cave above and camp within reach of shelter. One sharp squall broke while we were working up the river. The two leading boats came in for something of a drenching, but Andy and I, by running under a long overhang of cliff, came through almost dry-backed. Busy as I was steering between the Scylla of the rain and the Charybdis of the cliff, I still could not quite miss the Aladdin's Cave effect lent to the innermost depths of the overhang by clustering knuckles of water-polished garnets.

I also hailed in passing a number of bright little lizards, temporarily driven by the rain from their favorite outdoor sport of catching flies on the sun-warmed cliff at the water-line. With the lowest sheltering crack a thousand feet or more above, one could judge of their love of the game by the length of that desperate upward and downward crawl. I have known golfers to grumble over having to climb a long flight of club-house steps. I became more and more intrigued by these game little sportsmen as the days went by. When changes transpired that left me with more time on my hands, I began keeping a pair of them as pets, coursing them for imitation flies (dried currants) on a smooth section of flour-sack.

With the half dozen ducks that had fallen to Lute's gun in the course of the morning, and plenty of time for cooking with frills, supper that night was a very different affair from that of the previous evening on the wind-scoured bar. The storms passed over early, leaving the air fresh and cool, and so in no need of equalization from above through the medium of the twilight dervish dance of warring winds. The great arching cave, running back fifty feet or more into the cliff, was dry as a bone, but its pavement of bat guano had a musty smell and a verminous look. The Ramsaurs and I plumped for risking the rain by sleeping on the beach; Tom, Andy and Bill Jones shouldered their beds and toiled up through the brush to the cave.

Although the mouth of the cave was a couple of hundred feet from where we were turned in by the river, the smooth up-curving arch of it made so perfect a sounding board that even the heavy breathing of the would-be sleepers was audible to us as they set up their cots and spread their beds. For a while they conducted a lively expulsive campaign against bats and rats, employing both bed-bundle straps and word of mouth. We caught the swish of the straps and the short, chesty grunts that followed the blows upon the empty air. After a while they settled down a bit, and Tom told what he said was a funny story about a tramp who, seeing a trunk in front of a second-hand store tagged "This. Size for Ten Dollars," promptly remarked, "So do I!" After a somewhat charged interval of vocal silence punctuated by the swish of straps and the whirr of wings, the raconteur said he would tell them another story that would make it easier for them to get the admittedly elusive point of the first. This had to do with the lady owner of a vicious terrier who, on being asked "How's your dog?" replied, "I have." Still no answering guffaws. Even Tom's meticulously diagramed mental graph of each story only drew from Andy the snorting comment that they reminded him of the gasoline we had brought from Flagstaff.

"I suppose you mean because they're hard to start at this altitude," Tom suggested gropingly.

NEITHER FOG NOR RAIN

Tarnish Crodon-plated Fittings

DESPITE constant exposure to the elements, the marine hardware and fittings on your boat will never have to be polished if they are CRODON-plated. For CRODON never tarnishes or corrodes.

CRODON is a chromium electro-plate with a high mirror-like lustre. It never chips or peels and indefinitely resists atmospheric corrosion, service wear, steam, high temperature, the majority of acids and all alkalis. CRODON prevents the formation of verdigris.

Even in salt spray, fog, or rain it never becomes stained. An occasional wiping with a cloth will remove grease or other foreign matter and maintain the original beauty of the finish.

The sparkling beauty of

CRODON adds considerably to the trim appearance of any boat. Since no metal polishes need ever be used, the painted surfaces in contact with metal fittings never become stained.

If you wish your boat to be permanently "dressed" without the expense or annoyance of metal polishing, see that all brightwork is CRODON-plated.

The E. J. Willis Company of 85 Chambers Street, New York, our sales representative for CRODON-plating marine hardware in New York City and vicinity, will be glad to estimate the probable cost of plating the metal equipment of any boat. Inquiries from other cities should be addressed directly to the Chromium Corporation of America, 26 Broadway, New York City.

Specify CRODON for:

- Ships' Bells, Binnacles, Binnacle Stands, Reverse Levers, Cleats, Engine Room Telegraphs, Chocks, Capstans, Windlass, Steering Wheels, Port Lights, Electric Fans, Search Lights and Reflectors, Plumbing Fixtures, Door Hardware, Hinges, Exposed Pipes and Rails.

Up and Down Glen Canyon

(Continued from page 168)

"No," answered his son; "only because they're so far fetched."

The long-delayed gust of laughter swooped down from the cave following that sally, but I could not detect Tom's chesty bass contributing to its volume. More likely he was the inspiration of the thud that had the sodden sound of a wet shoe striking a soft surface. A number of things seemed to be flying through the air after that, but sleep supervened before I could make out whether or not they were borne on whirling wings.

And the boom of an axe on a hollow log was the morning of the next day.

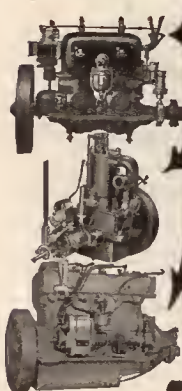

The general average of our navigation was improving steadily with experience. Collisions with rocks and groundings on bars were less frequent than at first, and delayed us less when they did occur. We were also acquiring the technique of working up through the eddies more effectively, making most of slack water and picking the best courses through the swift. This, and the lightening loads, about offset the slow but steady, quickening of the current that we knew was to be expected all the way to Hall's Crossing, our destination. Starting delays were still frequent and annoying, but in spite of these—and barring a breakdown of the engines or the smashing of some of the boats—there seemed a good prospect of averaging the ten miles a day that would take us to our up-stream goal with a good margin of time to spare.

My little Elto, after the addition of the water-can gravity cooling system, ran like a top. Where towing round was practicable, I spared it at the hardest ruffles, and it showed its appreciation by responding with an unguessed reserve of power when there was no alternative but to drive through. The steady replenishment of the water-can by dipping from the river added another duty to the five or six I was already trying to perform with two hands. But dexterity improved with practice, and I soon developed a sort of touch system of steering, sounding, lading and jiggering with the motor which, operating with less and less ocular supervision, left my eyes comparatively free to size up the river and pick the best courses.

Wherever it was practicable, Bill Jones and I found our navigational difficulties considerably simplified by following closely in the wake of Tom or Andy. Both father and son displayed good judgment in picking channels, being helped not a little by the division of duties made possible through the presence of an extra man in their boats. That extra man, pulling at the oars, made it possible for them to go up through many a riffle where we lone navigators had to shoot across to the bar and wade; but there was no tendency to run away from us on that account. On the contrary, indeed, both of the better manned boats were constantly on the watch to lend a hand, and neither ever allowed more than a bend or two to intervene between itself and the rear-most of the laggards. Bill's troubles were a good deal worse than mine on the score of falling behind. The perfect starting and consistent running of my little motor rather more than made up for the fact that it had somewhat less power than the other three. Plugging steadily along, it is probable that, first and last, I was waited for a good deal less than I waited.

It was during the third day that the tips of occasional soaring spires and pinnacles began to show rims that had hitherto formed our only skylines. It was not that the canyon walls were becoming lower, but only that we were penetrating to a region where they were backed by a second line of cliffs similar to those which tower above the inner gorge of the Grand Canyon. The difference between the two great canyons is largely one of dimension, and of that one could not come to a complete realization unless the lesser gorge were to be picked up bodily and deposited in the former. Without a scale of comparison one is hardly conscious of any great disparity even in size. Glen Canyon, to be sure, never gave me anything quite on a par with that staggered, all-gone-inside sensation that even a Chicago pork-packer must feel at a first glimpse of the Grand Canyon from El Tovar, but that would have been largely due to the fact that I never had a chance to view it from so favorable a vantage. Neither in the course of our up- or down-river voyage was there time to climb any of the loftier outer cliffs and headlands. The highest of the rims to which we did ascend were not much over a thousand feet above the river, where at El Tovar one is at a height of a mile or more above the bottom of the inner gorge. Confining the comparison to the worm's eye views to which the boatman is limited, I can recall no pictures of the Grand Canyon opening up from the river at

Up and Down Glen Canyon

(Continued from page 172)

the foot of the Bright Angel or Hermit trails, or at the mouth of Diamond Creek, they surpass in my mind scenes unfolded to us many times daily along the middle reaches of Glen Canyon.

An advancing phalanx of thunder-clouds that came rolling up from the southwest while we were at lunch on the third day of the voyage proved to be the curtain of one of the most stupendous natural dramas I have ever had the fortune to witness. Except in the one case in ten thousand that this one proved to be, people seeing cloudbursts have always been either too near to, or too far from, the center of action to be able to gain any connected impression of how the thing really works. Usually, as in our case the previous day, they are at so distant, or so unfavorably located, a vantage point that they see no more than a great big, black lightning-riven rain cloud. Indeed, the impression of a big, angry rain cloud is about all one can get unless he is in the very heart of the deluge. In that case, in the unlikely event he survives, his recollections are not likely to prove much more voluminous than those of a man who has been sand-bagged in the dark. Even on the edge of a cloudburst, where the water is falling only in broken sheets rather than in solid masses (and this experience I have touched somewhat intimately), there is not much more to be seen than in a shower-bath. Really to see how the wheels of a cloudburst go round, the observer must have a comparatively safe point of observation and a completely unobstructed range of vision. Also, he must be far enough away to grasp the ensemble of action, but still not so far that he misses the details. Such a combination might well refuse to click into realization in the whole lifetime of even a dweller in cloudburst lands. And yet there was Jupiter Pluvius, advancing arm-in-arm with Thor of the Thunders at the head of their billowing cloudland retinue, bringing it to a bedragged bunch of voyagers almost on a silver platter.

For one did not need to be overly weather-wise, nor unduly sapient in the ways of Thor with a black cloud full of water, to know that the oncoming storm was just as certain to miss the bend where we waited as it was to hit a great jagged pink and terracotta butte that towered three or four thousand feet in the air a half mile up the opposite side of the river. To make assurance doubly sure on the score of our own safety, the heavy overhang of the cliff in whose shadow we lounged offered secure retreat in the unlikely event of the storm's flying off on a tangent when it collided with the obstructing butte. We had the best seats in the house for the show of a lifetime. The curtain was up and there was nothing to do but munch raisins and wait for the climax.

The drama developed without hitch. Not a cue was missed. Even the sun, obscured at first by a maverick flight of frosty cirrus, turned on a golden sheaf of spotlights for the climactic scene. With the sun shining, the ghostly greens and olives that had banked the gorge to the rime during the storm of the day before were confined to the wavering column above the jagged cloud-shadow racing across the opposite plateau.

"That sagging-bellied cloud," I began largely in an attempt to be impressive, "reminds me of a bombed Zeppelin I once saw trying to drag its punctured gas-bag home across the North Sea. I was in a destroyer out from Harwich—"

"Zeppelin, your hat!" snorted Tom, in flagrant disregard of the fact that my one piece of head-gear had gone into the river an hour previously; "nothing so soft as a gas-bag 'bout that devil. He's carrying a million tons of water stowed under his belt. Looks to me more like a raging black bull!"

Andy, pointing out politely that bulls didn't wear belts, and, moreover, couldn't stow a million tons of water under them if they did, suggested a dirigible reservoir as the proper object of comparison. Lute, more romantically inclined, feigned to see the flash of bayonets in the forked lightning, and pictured charging soldiers. Bill Jones, always a shade less elegant than the rest of us, saw a big fat mother-pig rushing to the morning trough, and encouraged her with explosive grunts of "Suey! Suey! Suey!"

Technically, beyond doubt, Andy's dirigible reservoir was the best descriptive term; yet it still seems to me the simile of the punctured gas-bag conveys to the imagination the most graphic picture of the look of things at the climax. Nothing could have been more suggestive of a wounded balloon than the way that sinister low-sagging cloud bumped along the top of the plateau. Dusky streamers of rain, trailing far astern like drag-ropes, told that the blows from the smooth round knobs of sand-stone had set the inner envelope leaking without holing it. One sensed an al-

(Continued on page 176)

George H. Townsend's "Greenwich Folly," powered with a Delco-Remy Equipped Packard engine, set a new record for the Gold Cup Races at Port Washington, L. I., on August 21.

"Rowdy," owned by Carl G. Fisher, Packard-engined and carrying Delco-Remy electrical equipment, won the International Sweepstakes at Detroit, September 6.

Thus, two more marine classics have been added to that long list of victories in which this dependable electrical equipment has played a big part.

And therefore men of experience in the marine power boat field, will be all the more interested in the following announcement:

Hereafter, the entire engineering talents and manufacturing facilities of the great "Delco" and "Remy" concerns will be combined. This will give positive assurance to the motor boat industry of a still greater measure of performance and service in marine starting, lighting and ignition.

most rubbery toughness in the bounding water-bag, and felt that it was equal to withstanding those soft bludgeony bumps indefinitely. It was going to take something jagged-edged or sharp-pointed really to rip a proper gash in a fabric of that character. That rough-necked, red-headed Titan of a butte was just the sort of thing for it; and exactly in the right place, too. With that obstruction out of the way there is no doubt that the cloud would have survived to stagger on a mile or two farther, and so burst quite out of sight of the bend from which we watched.

The blue-black shadow of the racing cloud clapped down over the high-flung pinnacle of the butte like the death-cap over the head of a mediaeval executioner; and what followed maintained the simile. It was doubtless the sudden crash of thunder and spatter of lightning that created the illusion of a solid impact when the flying ball of nimbus impaled itself upon the jagged fang of rock. Ripped from end to end, the great water-bag spewed forth its imprisoned flood and dissolved in streaming rags and tatters of thinning vapor. It was not simply a terrific rain that was released; the earthward flying mass of water was as solid and as ponderable as the flood from an open head-gate.

The supreme wonder of the spectacle came with the crashing of the waters upon the rocky base of the butte, a thousand feet or more below. Only fluttering gleams—as evanescent as the lightning but less brilliant—revealed the cataclysmic discharge while it was still in the air; but where it dashed upon the rock it was as though hundred of yards of the plateau along the lower slopes of the butte had been changed at the wave of a wand to the boiling pool at the foot of a heaven-high cataract. One instant we were looking at a gypsum-streaked slope of gay red rock; the next at a seething, snow-white welter of water that rebounded high into the air and dissolved in sun-shot spray. Spreading fingers of drainage fanned out to left and right, and three or four of them ran to feed sudden, short-lived falls from the rim to the river, such as we had seen the day before. The duration of the flood of solid water could not have been more than a minute or two, though tumbling cascades from the higher levels, half veiled in a rising cloud of rainbowed mist, continued to run for much longer.

The earth-shaking crash of the descending floods was in itself a thing to make a man gasp and hold his breath. It came to our ears in a great savage wave of sound perhaps two or three seconds after our eyes told us that masses of solid water were being precipitated upon the butte. While it lasted the roll of the thunder shrunk to the rat-a-tat of a boy's snare-drum and the native rock upon which we sat shivered as in the grip of an earthquake. The sound—in its raucousness, its rawness—was more that of an imminent avalanche of great volume than a waterfall! At Niagara, Kaiteur, Yguazu, even at the Victoria Falls of the Zambesi, one is conscious that the resonant roar he hears is that of water falling upon water. Here one knew that his eardrum was being torn by the aerial vibrations resulting from solid water rending solid rock.

I was aware from time to time of an awe-gaping jaw being gathered up as a preliminary to outward expression of inward sensation. One of them was my own. But whatever of pearls were broadcast were doomed to waste their sheen upon the desert air. I think the loss was not great. Men usually curse fervently when greatly stirred, either to awe or to anger; or else perpetrate cheap witticisms to hide their real feelings. They are always ashamed of these jokes if they remember them later, or at least they should be. Take mine, which had to do with the storm-cloud committing *hari-kari* on the pinnacle of the butte. Tom shook his head blankly when I tried that on him at the climacteric moment, for of course he couldn't hear it. At supper, a few days later, I tried it again, unfortunately, perhaps, just after I had been dissertating in somewhat high-brow vein on the movements of cirri and nimbi and cumuli. Tom mouthed *hari-kari* rather disgustedly once or twice, then shook his head impatiently. "Them storm clouds all look alike to me," he growled; "but it ain't as if I was one of them that didn't know enough to go in when it rains." As I had been taking advantage of a shower that afternoon to scour a little Colorado silt out of my hide, that closing remark was not without its point. But Tom and I never did think much of each other's jokes.

So considerable a meteorological disturbance as that which we had just witnessed could hardly take place without leaving a few stray odds and ends of high and low pressure

LOBEE CIRCULATING & BILGE PUMP

You can't get a better or more reliable pump than the Lobe because there isn't a better one made. It has been the World's Standard of Pump Quality for 25 years. No other pump has proven so popular in the marine trade. Simple, compact, noiseless and positive. These pumps will outwear the engines to which they are attached.

Gear and Rotary Pumps from $\frac{3}{8}$ " to $1\frac{1}{4}$ " suction and discharge. Different designs for various types of drive and mounting made to order.

tumbling about in its immediate wake. Reckoning that these were just as likely to take a form calculated to help as to hinder up-stream navigation, Tom ordered the floilla to get under way. Bill Jones and I, pushing off in advance of the other two boats, ran out to midstream just in time to connect with a fine spanking little southerly squall that might well have been hurrying up river to see what had become of the pieces of the parent cloudburst. Tom and Andy missed the very substantial lift that timely series of gusts gave us, but received the full benefit of a side-winding squall that came boring down over the rim of the bend we had just left. Perhaps benefit is hardly the word to use, for that vicious little twister, catching both of their boats side-on before they could be headed to meet it, drove them straight over against the sheer cliff of the right side of the river. Jammed together and clamped up against the sandstone wall like a couple of half-dislodged limpets, the last glimpse I had before a sheet of blown water cut off the view revealed considerable activity with both fly-wheels and baling cans.

Bill and I only got a splash from the tail of that little trouble-maker, but a real worry developed when it became apparent that our first up-stream squall had met and was waging unequal battle with a down-stream squall of considerably greater might. Locked in a death-grapple, they were fighting it out to a finish all over the channel of a narrow neck of canyon immediately ahead. With sheer or overhanging walls on either side, and so no place to land, there was nothing to do but keep on going and make the best of it.

With the whirlwind (for that was the form the Borean ruction took) seeming inclined to move down the left side of the river, the obvious course to take to avoid it was close in against the cliff to the right. It looked like fairly good going there, and such it would have been had not an air-pocket at that particular point—doubtless created by the rough-and-tumble going on across the river—demanded instant replenishment from above. As a matter of fact, air was probably moving into that Swiss-Cheese vacuum from several directions. The installment from the plateau I remember particularly because it brought with it an infernally persistent cataract of blow-sand, fine, sharp blinding particles that gravitated to the eyes like iron to the magnet.

It is only to be expected that the finer intricacies of navigational finesse should be considerably blunted under conditions like those. Of course Bill rammed me, and of course I rammed Bill, and of course both of us rammed and re-rammed the cliff. Strangely enough, none of these little tentative ramblings seemed to do very much harm to anything or anybody. But where the fur and feathers really began to fly was when we caromed off the cliff and went over and rammed that baby cyclone. The only thing comparable in my experience to that sudden twisting jolt of impact was toddling into the side of a spinning merry-go-round when I was four. The one nice thing in connection with the sequel was having the sand washed from my eyes by the flying spray, but that—with the air stiff with blown water—didn't widen greatly my range of vision.

There was a rather confusing play of warring forces around the base of that spitting column of whirling air. The wind action appeared to be exerted centrifugally—throwing outward; that of the sympathetically whirling water acted centripetally—drawing inward. Trying to go both ways at once the boats, naturally, did some little spinning themselves, and not always on even keels. I am inclined to think that the explosive action of the air was the stronger force—that my boat would have been thrown quite clear after the first impact if only there had been an open course for it. But every time it started to shoot away from the vortex Bill's boat would drive out of the spray and jam right across its bows. Bill said later that my boat kept blocking the escape of his in a precisely similar manner. So, impartially cussing the air, water, sand, each other and the universe generally, Bill and I, fighting-cock-like, banged in and out in erratic circles for all of a long half minute. At the rate we were taking water, probably another half minute would have swamped the both. Before that happened, however, the twister—more out of boredom than pity, doubtless—spun off down-stream in search of a quarry less cringing and more worthy of its strength. It was roaring and sharpening its teeth on a sand-stone ledge at the next bend the last we saw of it, possibly in preparation for gulping down the other boats, Bill suggested.

It was a rather remarkable fact that not all of the water

A Light That's Built for Boats!

When you're coming alongside a strange dock after dark, or trying to pick up an elusive mooring, let JACK-O-LITE help you!

JACK-O-LITE is a real electric light, without batteries. Makes its own electricity. Just turn the crank; a sturdy, spring-driven magneto type generator does the rest. Gives 3 minutes' strong light from ten seconds' winding, and can be kept burning indefinitely. Never weakens from use or when not in use like battery lights.

JACK-O-LITE'S a born sailor, too. Water, oil or dirt won't short-circuit it. Drop it overboard—fish it out—wind it up—it's good as ever!

Try JACK-O-LITE on your boat. Shipped prepaid on receipt of price—\$15.00. Your money back if you don't like it.

Patented and guaranteed.

"HARDI BIAOU," 80' x 18' x 10' heavy offshore schooner, designed by John G. Alden for Dr. Henry D. Lloyd and ably powered with a Big Chief Special 75-90 H.P. Red Wing THOROBRED.

The famous Mathews "38" cruiser which performs most creditably with the Little Chief BB-SIX 50-75 H.P. THOROBRED.

Red Wing Thorobred Motors

For All Types Of Boats

No matter what type of boat you have, cruiser, runabout, auxiliary or commercial craft, there is a Red Wing THOROBRED to power it to perfection and give you that boating satisfaction you have longed for. Thousands have found Red Wings to be mighty fine investments as they are equally efficient even after years of service. Let us know what your requirements are. We will gladly make suggestions based on actual performance with Red Wing motors, and send full details. Your inquiry will be appreciated.

and sand with which they had been deluged sufficed to stop either motor. Popping somewhat erratically, but still with a goodly amount of kick behind them, they pushed us up to a landing on a hard bar where the right-hand cliff edged back a few yards from the river. Here, bailing, cleaning up and snugging down, we waited for the other boats to come up from what Bill facetiously called The Valley of the Shadow of Bluffs.

It was a quarter of an hour before Tom and Andy were in sight with their respective commands. Considerably banged about by the first squall, they had discreetly worked along to a sheltered water-level fissure in the overhanging cliff and let the rest of the whirls go by. They had had a lively time fending the banging boats off the rocky wall in air which Tom claimed was stiff as pan-cake batter with sand descending from the mesa overhead. The faces of all four men were as black with blown grime as a stoker's with coal-dust.

The air was still a bit nervous and jumpy as the reunited flotilla pushed on up the gorge, with occasional flurries of rain playing hide-and-seek with saffron bars of sunshine and purple blobs of shadow. These were no more than dwindling fragments of the shattered storm, however, and quite empty of real menace.

There was quiet, smooth water for a mile, and the four boats ran well bunched until a broadening river opened out to a long straight reach crossed with baffling shallows. The adventurous Bill Jones built up a substantial lead by taking a chance at precarious cross-cuts through obstructing bars, which made it rather the worse for him when one of them finally ended in a *cul de sac* a good hundred yards from the only practicable channel. Trying to reach deeper water as the crow flies rather than by working back through the sinuous passage by which he had come, Bill ended by getting into a maze from which there was, no apparent outlet at all. In an endeavor to reduce temporarily the draught of his boat, which had suddenly become too large for the river, the energetic chap started discharging cargo at this juncture.

Setting up a foundation of two cases of gasoline, he erected a six-foot-high pillar of blankets, duffle bags, grub boxes and cooking utensils, topped off with a sack of sugar. As he was about to push over the bar with the lightened boat, Bill looked back over his shoulder to discover that the settling of the gasoline-case foundation into the quicksands had converted his pillar of food into a recognizable imitation of the Leaning Tower of Pisa.

Quick intervention prevented it from becoming a falling tower, but only at the cost of allowing the abandoned boat to drift before the wind into a quickening current. Being only an irrigation-ditch sailor, Bill evidently reckoned that sticking to the grub was more important than sticking to the ship. At any rate, it was by a half-foundered grubpile that we found him—after mourning him as drowned through the long forty minutes that it took to intercept and tow back the empty boat that had come bobbing to meet us half a mile below.

(To be continued)

The New Winton Diesel

(Continued from page 41)

ing rods are Chrome Vanadium steel, tubular sections 6 inches in diameter. The crankcase parts are made of cast iron, and support nine main bearings, which are all accessible through large hand holes.

Cylinder liners are installed for each cylinder, and are machined and ground so they are of a uniform thickness, resulting in an even cooling of the cylinder walls, and pistons. The cylinder heads are detachable, without removing the manifolds, and each cylinder head carries six removable cages, two for the exhaust, two for the intake, one for injection, and one for air starting and the relief valve. The pistons are of Bu-Nite aluminum alloy, and fitted with six compression rings, and one oil scraper ring. The piston pin bearings are carried in the piston, and lubricated by pressure from the main oiling system.

The air compressor is directly connected to the engine at the forward end, and driven from the main crankshaft. The compressor is of the three stage progressive type, fitted with easily removable valves, and coolers between each stage. The injection valve is of a simple design, which opens inwardly. The oiling system is force feed throughout and is delivered at pressure to all main bearings, connecting rod bearings, wrist pins, and pistons. The weight of the engine is 110,000 pounds.

MOTOR BOATING PRACTICAL HAND-BOOKS

Every motor boatman has long felt the need for a really complete and comprehensive library devoted to his favorite pastime—motor boating. One of the obstacles to the accomplishment of this important work was the difficulty in finding any one writer who could cover the field in its entirety. In presenting the new series of practical hand-books, MoToR BoatinG believes that the problem has been solved at last. These books are edited by Charles F. Chapman, M. E., the editor of MoToR BoatinG, and they are the results of months of untiring effort on his part, together with the best of thousands of suggestions sent to him by motor boatmen themselves. The list of the contents given below will give you some idea of the vast amount of ground covered by these volumes.

Practical Motor Boats and Their Equipment

Volume 1.—The first volume tells you what the ideal boat for various kinds of service should be and what to look for in buying a boat. Many suggestions about decoration and hints on all kinds of equipment. All about steering gears, wireless outfits, electrical attachments, etc. Glance over the list of contents appended herewith: Hulls, Ballast and Seaworthiness; Round Bottom vs. Sharp Bilge; What Are the Advantages of Flare, Raised Deck vs. Trunk Cabin; Best Proportion of Beam to Length; Selecting a New Design; The Advantage of Bilge Keels; Open or Solid Deadwood? What Makes a Hull Seaworthy? The \$1,000 Cruiser; Buying a Second-Hand Boat; Types of Bows and Sterns; Exterior Arrangement of Cruisers; The Best Cabin Arrangement; Finishing Up the Cabin; Changes in Interior Arrangement; Interior Arrangement for Open Boat; Propeller-Rudder Arrangements; Best Position for the Rudder; Advantages of the Outboard Rudder; Different Steering Positions; Steering Equipments for Motor Boats; Steering Gear for the Cruiser; The Steering Gear for a Runabout; Steering the Boat from the Side; The Electrical Equipment; Making and Wiring a Switchboard; Electric Lighting on a Motor Boat; The Inexpensive Lighting Outfit; Wiring the Small Cruiser; The Storage Battery; The Dynamo Cut-Out; Wireless for a Small Cruiser; Tender for a Thirty-foot Cruiser; Building a Folding Dinghy; Installing the Boat Boom; What Is the Best Galley Arrangement; Ventilating the Galley; The Galley Stove and its Installation; Making a Fireless Cooker; a Portable Cook Box; Running Water for the Cruiser; How to Build a Portable Table; A Table for the Open Boat.

Practical Things Motor Boatmen Should Know

Volume 2.—Navigation is one of the important subjects covered in volume three of the series. Tells you how to steer, how to increase the factor of safety, and a host of other things relative to the proper running of your boat. The chart and compass are both fully explained in a clear and comprehensive manner. The list of contents will tell you more about it: Advice for the Beginner, Lessons Learned from Experience; Good Things to Know; Increasing the Factor of Safety; Which Way Should the Boat Steer? Why a Boat Steers Badly; Why Do Boats Squat? Figuring the Boat's Speed; Ballasting the Cruiser; Getting Off Bottom; To Ride Out a Storm in a Motor Boat; The Why and How of Storm Oil; Preventing Fire; Handling Ground Tackle; Government Charts; Stowing the Anchor on a Cruiser; Diminishing Deviation; Preventing Electrolysis; Stowing and Using Charts; How to Get a Motor Boat's Motor; How to Make a Sextant; A Compass; Tides and Tidal Waters; Taking Her Through the Canals; The Best All Round Dinghy; Towing the Tender; Handling the Dory in a Seaway; Getting the Tender Aboard; Planning for a Cruise; Equipping for a Cruise; Equipment for Offshore Cruising; Novel Events for Regatta Day; Handicapping; The Object of a Handicap Rule; Laying Off a Race Course; Measuring the Length of a Race Course; Preparing a Boat's Bottom for a Race; How to Build a Turning Buoy; Starting Boats in a Race; Stowing the Signal Flags; Fitting a Gun Mount; A Fish Box for Your Cruiser; A Cabin Wall Rack.

Practical Marine Motors

Volume 4.—All about the marine motor; what it should and should not be. Tells why the automobile engine is unsuccessful in marine work. The best location for your engine; the ideal engine bed, the fuel tank, exhaust and countless other suggestions that will enable you to get the best results from your power plant. List of contents: Purchasing a Marine Motor; How Many Cylinders? Power Per Cylinder; High Speed vs. Heavy Duty; Long Stroke vs. Short Stroke; Correct Motor Design; Changes in One's Power Plant; The Things That Cause Vibration; The Automobile Engine for a Boat; The Best Position for the Motor; The Ideal Engine Compartment; Placing the Engine in the Hull; Installing a Motor in a Canoe; Installing Power in a Yawl; Converting a "Banker" to a Cruiser; Engine Installation in a Hydroplane; Putting Power in the Rowboat; Limits of Shaft Inclination; Constructing the Engine Bed; Getting the Motor Aboard; Lining Up the Propeller Shaft; The Best Exhaust; Mufflers vs. Under-Water Exhausts; Installing an Under-Water Exhaust; Primary Batteries for Ignition; Keeping the Ignition System Dry; Installing a High-Tension Magnet; From Make and Break to Jump Spark; Installing the Gasoline Tanks; Taking Care of Extra Gasoline; Spark and Throttle Controls; Constructing a Rear Starter; Propeller for Engine and Hull; Installing a Universal Joint; Gearing Motor to Propeller Shaft; The Automobile Throttle; Harnessing the Main Engine; Rebabbiting a Worn Bearing; Should Fuel Line Be Inside or Outside?

Practical Motor Operation and Maintenance

Volume 5.—One of the most valuable books of the entire set. Your motor's ills and how to cure them. This volume tells you how to adjust your carburetor, how to fit piston rings, how to remedy poor compression and a number of other things that will enable you to doctor your own motor. List of contents: Locating the Motor's Troubles; The Overheated Motor; Starting in Cold Weather; Overhauling a Marine Motor; How to Save Fuel; The Fuel Situation; Using Low Grade Fuel; How to Run on Kerosene; Supplying the Fuel to the Carburetor; Adjusting the Carburetor; Cleaning the Fuel Tanks; Cleaning the Gasoline Line; Stopping Up the Leak in the Tank; A Home-Made Gasoline Gauge; Carrying an Extra Supply of Oil; Mixing the Fuel and Lubricant; Remedying Leaky Compressions; Killing the Carbon Jinx; Tool and Spare Parts to Carry; Removing and Replacing Piston Rings; Repairing a Leaky Cylinder; Grinding a Motor's Valves; Setting the Valves; Timing the Ignition System; Cleaning the Water Jacket; Making and Fitting a Gasket; Patching Up a Bearing; Straightening the Sprung Shaft; Truing a Bent Propeller; Removing the Flywheel; Separating Couplings and Pipe Fittings; Changing the Shaft Hole Location; Utilizing the Exhaust; Disposing of the Bilge Water; Heating a Small Cruiser's Cabin; Operating the Outboard Motor; The Clean and Quiet Boat; Charging a Storage Battery; When the Motor Stops Unexpectedly; Making a Unit Power Plant.

Practical Suggestions for Handling, Fitting Out and Caring for the Boat

Volume 6.—This volume is an especially valuable one. You will find in it points covering the care of your boat that you never dreamed of before. Whether you are a beginner or a finished expert this book will give you a better knowledge of the handling of your craft than you can imagine. List of contents: Putting the Boat in Commission; Fitting Out a Thirty-Footer; Suggestions for the Beginner; Refinishing Bright Work; Keeping the Wood Surface Bright; Putting the Boat Out of Commission; Laying Up an Unsheltered Boat; Hauling Out for the Winter; Covering the Boat for the Winter; Launching from a Wharf; Correcting Faults; Lengthening Out the Boat; Moorings and Buoys; Taking Steps to Safeguard the Anchor; What to Use in the Bilge; Preserving the Wood in Boats; Emergency Rigs for the Cruiser; Auxiliary Sails for the Cruiser; Providing an Emergency Rudder; Preparing for Southern Waters; Stopping the Troublesome Leak; Replacing a Broken Plank; Removing Broken Lag Screws; Raising the Boat's Stern; Clearing the Propeller; Protecting the Bow and Stern; Open Boat Sleeping Quarters; Ventilating the Cabin of Small Cruisers; Converting the Open Boat to a Cruiser; Making a Cover for the Open Boat; Preventing Electrolysis; Building a Club Float; A Floating Boatbouse; Constructing a Landing Stage; Building the Marine; Keeping the Thief Out; A Place for Your Shore Clothes; Sewing for Life Preservers; The Winter's Alterations; What Changes Shall I Make; The Satisfactory Bilge Pump; The Pressure Water System; Making a Pelorus; Your Storm Curtains; Life-Saving Equipment; The Absent Owner's Anchor Light; Mounting the Reverse Gear.

Price \$1.50 Per Volume, or \$6.25 Set of Five Volumes of Over 1,000 Pages

Foreign Postage \$1.00 extra, per set

The books measure 7 x 10 inches and are handsomely bound in cloth. Each volume is fully illustrated and printed in clear type on fine paper.

For safety's sake—dry batteries

EVEREADY COLUMBIA Dry Batteries

-they last longer

Popular uses
include—

- motor-boat ignition
- doorbells
- buzzers
- heat regulators
- tractor ignition
- gas engine ignition
- telephone and telegraph
- starting Fords
- ringing burglar alarms
- protecting bank vaults
- electric clocks
- calling Pullman porters
- firing blasts
- lighting tents and outbuildings
- running toys

Eveready Columbia Hot Shot Batteries contain 4, 5 or 6 cells in a neat, water-proof steel case. It is not a "Hot Shot" unless it is an Eveready Columbia.

1½ volts. Fahnestock spring clip binding posts on the Eveready Columbia Ignitor at no extra cost.

THERE'S a heap of comfort in knowing that your boat is seaworthy. Use dry battery ignition and you'll have another guarantee that you and yours will motor on the deep in safety—there and back without a miss. Batteries and battery systems are so reliable and fool-proof that the most inexperienced can run the boats equipped with them. They give instant, easy starting, and full-powered ignition at all speeds and under all weathers, to engines large and small. Eveready Columbia Dry Batteries are the choice of experts—use the Eveready Columbia Hot Shots. They are ready-connected, high-capacity batteries in water-proof steel cases, ideal for motor-boat ignition.

Coming

THE Twenty-Second Annual National Motor Boat Show is only a few months away. The place and dates are: Grand Central Palace, New York City, January 21st to 29th.

This Show will be the largest and most elaborate ever held. Do not fail to see it. The advance demand for exhibitor's space has compelled the directors for the first time to reserve three entire floors in the big building.

MoToR Boating's February issue will be the Annual Show Number, and, like the Show itself, it will surpass its own previous records in circulation and number of pages—both editorial and advertising.

Standard Oil Engines

"FULL DIESEL"

The preference shown for the Standard oil engine in yacht installation is due to the quiet running, absence of vibration, simplicity of design, reliability, absolute safety with low pressure air. The only direct reversing engine built in three, four and six cylinder sizes.

The New Jersey Fish and Game Commission Patrol Boat, H. J. Burlington, 70 feet over all, 16 feet Beam, 4 feet 9 inches Draft; powered with a 6-cylinder, direct reversing, 150 H. P. Standard Full Diesel Oil Engine.

Write us your requirements for either Gasoline or Oil Engines

Back of the STANDARD Gasoline and Oil Engines is the

178 WHITON STREET

JERSEY CITY, N. J., U. S. A.

Check These Fourteen Big Light Marine Reverse Gear Features:

- 1 Soundest principles of design.
- 2 Compact.
- 3 Alloy Steels heat treated.
- 4 No complicated adjustments.
- 5 Forced feed lubrication or splash system.
- 6 Ball bearing yoke.
- 7 Drum semi steel.
- 8 Instant reverse and positive.
- 9 Absolute neutral.
- 10 Perfect balance.
- 11 Smooth operation.
- 12 Precision workmanship.
- 13 Interchangeability.
- 14 Long life.

ALL of these fine points of desirability are exclusively a part of this great product. The Light Marine Reverse Gear brings character to your product. It has genuine sales appeal. It is a reflection of in-built quality. It is a visible indication of a well-built product. It helps to solve the selling problem, and this, when competition is the order of the day, is not to be scorned.

Mark of Quality

THE quiet and uniform flow of power from the Fay & Bowen Marine Engine is a revelation to every owner and gives a feeling of genuine satisfaction and pleasure that adds to the zest of motor boating.

Fay & Bowen Marine Engines are made in five sizes for all types of boats, and are the same as those used in the famous Fay & Bowen high grade runabouts.

They are the product of a quarter century experience in building power plants and boats of the better kind.

Heading South

ALITTLE faster than the best schedules of previous years; more quietly, more economically, the yachts are moving southward for the winter season.

The admiration of the smart acceleration and silent, swift action of the Sterling-powered cruisers recalls that even the industry credits Sterling with contributing most to the quiet, speedy comfort that has been attained.

With average use and reasonable attention, the current models are destined for 10 to 20 years of active duty.

Plan now for that southern cruise!

WHY not try something new this winter—spend your southern outing on board an Elco Cruiser?

With one of these cruisers—a real “home afloat”—you will be independent—free to go where and when you please. You can visit all the coast resorts from New York to Key West and take

interesting side trips on inland waterways. Elco Cruisers are thoroughly seaworthy and are suitable for use in all climates and in all waters.

Start planning now for a glorious season in southern waters. Write for Catalog MGB showing the latest models of standardized Elco Cruisers.
