BOLGIANO'S FAIR GREEN LAWN GRASS

With Creeping Bent

The need of a top grade lawn seed using bent grass in the mixture has been proven by the popular acceptance of this mixture among our customers.

We are glad, therefore, that our efforts, in combination with the best grass experts, to produce a truly fine mixture has met with such favor. The grasses in Fair Green Mixture were selected on the basis of years of experimentation on lawn and golf course work here in Washington. For a base there is still nothing superior to Kentucky Blue Grass, which remains evergreen all winter. Then there's a grass that resists the dry summer weather; one to grow quickly giving an even sod in a short time; the old favorite white clover that most people want in abundance, and finally bent grass to give that dense undergrowth and velvety appearance so wanted by all. 1 lb. 50 cts.; 5 lbs. \$2.25; 25 lbs. \$11.00.

FOR PUTTING GREENS

Lb. 40 cts.; 5 lbs. \$1.75; 25 lbs. \$7.75.

BOLGIANO'S "CAPITOL PARK" LAWN GRASS SEED

It is composed of the very finest varieties of grasses, thoroughly re-cleaned, 99 per cent free of weed seeds. Contains a well-balanced blend of various American and foreign fine-bladed and deeply-rooted grasses which has proved to produce the best results under the varied conditions as to soil and climate met with in America. It will give a green, smooth, velvety sod with a thick bottom and free from such varieties of common grasses as produce clumps and knots on the lawn which so frequently spoil the desired smooth and deep effect. Lb. 35 cts.; 5 lbs. \$1.50; 25 lbs. \$6.50.

1938

CHARLES W. BOLGIANO

It is with sorrow we enter this, our Golden Anniversary year, for on September 19, 1938, Mr. Charles Bolgiano passed on to the Great Beyond. We pause here to pay respect to the man who was our guiding hand for fifteen years. A man, true and kind, who became our president upon the death of his father, Mr. Frank W. Bolgiano, on November 30, 1923. No greater tribute could be paid to this man than the words that he himself wrote of the death of his father in 1923.

"To those of us who are left behind, he leaves an enviable legacy. His energy and pluck will be ever a spur to greater action in moments of fatigue. His spirit of fair play throughout his business dealing has set a standard which has become our greatest ambition to maintain. His kindly thought of others kept him ever in mind of his customers' point of view, so that those who dealt with him became his closest friends.

"We who were his associates intend to carry on this work he left behind, and in seeking an ideal to follow we can find none nobler than the ambitions which led him on. Our highest ambition will be to follow his undying leadership; to continue to uphold his standards of trade that had made his influence one of eternal good and which were expressed in his simple motto, 'Show thyself a Man.'"

We give no warranty, expressed or implied, as to description (including kind, variety and name) quality or productiveness, or any other matter of any seeds, plants or bulbs we send out, and will not be in any way responsible for the crop. There are many reasons why seeds do not always turn out as desired such as sowing too deep or too shallow, in too wet weather, cold weather, or too dry soil, or too wet soil, insects which do not only destroy the seeds, but often the young plants, about the time they appear at the surface of the ground. For these causes we cannot guarantee seeds or the crop.

Bolgiano's "Seeds that Succeed" for 1939

"Best in Garden" Varieties

We respectfully call to your attention those varieties marked "Best in Garden." These do not in every case represent our latest introductions, but they do represent those varieties that stand out conspicuously in any garden as the "Best in the Garden." You are playing safe by planting liberally of these varieties.

We Pay Postage on All Vegetable Seed Ordered by the Pkt., Ozs., 1/4 Lbs. and Lbs. Excepting Peas, Beans and Corn. On These We Pay the Postage Only on Pkts., Pts. and Qts. Larger Quantities Carrying Charges Extra.

ASPARAGUS

One ounce to 50 feet of drill
About 4 pounds to the acre

CULTURE. Sow the seed thinly in rows 1 foot apart in April or May (4 to 5 pounds to the acre) and keep down all weeds. To secure strong, healthy plants, thin the seedlings to 3 or 4 inches in the rows, saving only the strongest. The one-year-old plants should be set out in the spring in rich, sandy loam, dug 18 inches deep, into which has been worked a plenty of well-rotted manure. If a stiff clay soil is all that can be had, add a plenty of sand and sifted coal ashes to loosen it up, and also see that it is well underdrained. In planting for private use, set out in beds 5 feet wide, 3 rows in a bed, the outer being each 1 foot from the edge, and allow 18 inches between rows. Set the plants from 4 to 6 inches below the surface. If set out in autumn, top-dress with 6 inches of manure.

167. Mary Washington. This variety which has been selected by the United States Department of Agriculture has proven to be nearly rust free. The shoots are thick and heavy. They are long and straight with closely folded tips. The color is rich dark green tinted deeper at the tips. It is a very heavy yielder of exceptionally fine flavor. Pkt. 10 cts.; oz. 15 cts.; 1/4 lb. 30 cts.; lb. 90 cts., postpaid.

Mary Washington Asparagus

ASPARAGUS ROOTS

Plant either in spring or fall. By mail, 20 cts. per 100 extra.

WASHINGTON. 2-year-old roots. 12 for 50 cts.; 100 for \$1.40; 1,000 for \$8.50.

ARTICHOKE

One ounce will produce about 500 plants

CULTURE. Sow seeds in January in the greenhouse or in hotbeds in March. Transplant when large enough in rows 3 feet apart, 2 feet in the row. Cultivate when growing, freely, and protect the plants in winter by taking them in a cellar or in a cold frame, or they may be left outdoors protected by straw in a climate that is not too severe. Artichokes properly cared for last for several years.

248. Green Globe. Pkt. 10 cts.; oz. 40 cts.

BEANS

(Green Podded Bush)

One quart will plant 100 feet of drill; 1 to 2 bushels to the acre.

551. Tendergreen Beans

(Ready to pick in about 48 days)
("Best in Garden" Variety)

A most prolific producer of round, meaty, tender pods, 6 1/2 to 7 inches in length and absolutely stringless. Color a very attractive beautiful deep green. The quality and flavor of the pods are unexcelled. Produces a strong upright bush vine about 1 1/2 to 2 feet in height and matures in about seven weeks after sowing the seed. Splendid for canning because they retain their color and delicious flavor just as if freshly picked from the vines. You will be delighted with this bean if you give it a trial. Pkt. 10 cts.; pt. 30 cts.; qt. 50 cts., postpaid; pk. \$1.80; bu. \$6.50.

Tendergreen Beans

CULTURE. About the first of May, if the ground is perfectly warm, select a warm, dry sheltered spot; dig and manure slightly; make drills 2 inches deep and 18 inches to 2 feet apart; drop the beans 3 inches apart in the drills and cover not more than 2 inches deep. Hoe well in dry weather to keep down the weeds. Sow every 2 weeks for a succession. For mailing, see Parcel Post Rates, page 4.

Seed beans weight by Parcel Post, including packing: Pt., 2 lbs.; Qt. 3 lbs.; 4 Qts., 9 lbs.; Pk. 17 lbs.

525. Bolgiano's Stringless Green Pod. (Ready to pick in about 47 days.) A superior strain for home or market use, absolutely stringless, producing heavy crops of long, meaty pods. Pkt. 10 cts.; pt. 30 cts.; qt. 55 cts., postpaid; pk. \$2.10; bu. \$7.75.

BEANS—Green Podded Bush

No matter how small or how large your garden, you certainly want to devote some space to beans. There is hardly any crop that will repay you more for your time and efforts. They are very healthy and nutritious. Beans are vigorous growers and abundant producers. Plants of the greenpod bush varieties range from 15 to 20 inches tall. The beans are most delicious if they are picked before they reach full size and the plants will continue to bear much longer. The early varieties will mature in from 45 to 65 days.

548. Stringless Black Valentine. ("Best in Garden" Variety.) (Ready to pick in 45 days.) Retains all the good qualities of Black Valentines and adds stringlessness. Early. Plant is very hardy, upstanding, dark green and very prolific. Pods $6\frac{1}{2}$ to 7 inches long, oval round, nearly straight, meaty stringless, fine quality and delicate flavor. Good for home, market gardeners and shippers. Pkt. 10 cts.; pt. 30 cts.; qt. 50 cts., postpaid; pk. \$1.80; bu. \$6.50.

green color. The pods are straighter than Stringless Green Pod and are matured a few days later. The plants are vigorous, being large and spreading. Pkt. 10 cts.; pt. 30 cts.; qt. 50 cts., postpaid; pk. \$1.80; bu. \$6.50.

545. Stringless Green Pod. (Matures in about 47 days.) A very early and prolific variety having long, round, fleshy, medium green pods. It has a long bearing season, making it very desirable for the small garden. It is larger than Red Valentine and retains its crispness and tenderness longer. Pkt. 10 cts.; pt. 30 cts.; qt. 50 cts., postpaid; pk. \$1.80; bu. \$6.50.

Early Bountiful Beans

550. Red Valentine. (Matures in about 47 days.) The pods are of good quality and medium in color and size. Its ability to produce a crop under adverse conditions together with earliness makes it one of the market grower's favorites, as well as ideal for the home garden. Pkt. 10 cts.; pt. 30 cts.; qt. 50 cts., postpaid; pk. \$1.80; bu. \$6.50.

547. Giant Stringless. (Matures in about 50 days.) Used more universally than perhaps any other bean, being very popular among home gardeners, market growers, and canners. Exceedingly handsome and productive, with very long, nearly round pods of medium

546. Early Bountiful. (Matures in 45 days.) One of the very best beans grown both for home and market, also valuable for early shipping. Plants are large, thrifty and prolific. They produce very early and if picked when young will continue to bear for a long time. Pods clear rich green, $6\frac{1}{2}$ to 7 inches long, over $\frac{1}{2}$ inch wide, flat $\frac{3}{8}$ inch thick; fleshy, strictly stringless, brittle and tender. Seeds are straw yellow. Pkt. 10 cts.; pt. 30 cts.; qt. 50 cts., postpaid; pk. \$1.80; bu. \$6.50.

549. Full Measure. (Matures in 48 days.) A fine quality bean that has gained popularity as a market variety and is also satisfactory for home planting. It is early, an abundant producer and bears for a long season. Entirely stringless. Pods are similar in size and shape to Giant Stringless. Pkt. 10 cts.; pt. 30 cts.; qt. 55 cts., postpaid; pk. \$1.90; bu. \$7.00.

538. Tennessee Green Pod. (Matures in about 45 days.) This early intermediate snap bean is very popular in some sections of the south and where known in other parts of the country is considered of exceptional merit. It is the longest podded dwarf sort. The plants are large, somewhat spreading and prolific. The foliage is dark green, with leaves large and crumpled. The pods are very long, often six to seven inches, flat, irregular in shape, bright but rather dark green and of exceptionally fine flavor. The green shell pods are much depressed between seeds. Seed of medium size, oval, flat, yellowish brown in color. Pkt. 10 cts.; pt. 30 cts.; qt. 55 cts., postpaid; pk. \$1.90; bu. \$7.00.

539. Dwarf Horticultural. (Matures in about 54 days.) Very productive pods of medium length with splashes of red. Always stringless and desirable for cooking when young. The green shelled beans are of the finest quality and are matured early. Pkt. 10 cts.; pt. 30 cts.; qt. 55 cts., postpaid; pk. \$1.90; bu. \$7.00.

528. French Horticultural. (65 days.) An excellent shell bean. Pods 7 to 8 inches long; broad, marked with vivid carmine. Very attractive appearance. Pkt. 10 cts.; pt. 30 cts.; qt. 55 cts., postpaid; pk. \$2.35; bu. \$8.75.

536. Boston Pea, or White Navy. (Matures in 90 days.) The most popular of all the so-called baking beans. Easily grown and very productive. Pkt. 10 cts.; pt. 30 cts.; qt. 55 cts., postpaid; pk. \$2.00.

Bolgiano's Stringless Greenpods

WAX BEANS

Seed Beans weight by parcel post, including packing:

Bolgiano's Best Yet
Wax Beans

541. Bolgiano's Best Yet Wax.

("Best in Garden" Variety.)

(Ready to pick in about 45 days.)

Among the finest of late introductions. It is erect and bushy in habit of growth, bearing heavily rich lemon yellow, flat pods which are brittle and absolutely stringless. Its resistance to disease assures wonderful yielding qualities that recommend them highly to the home grower, trucker, and canner. You will fall quite in love with their tenderness and delicious flavor and, after growing them once, they will be assured of a permanent place in your garden. Pkt. 10 cts.; pt. 30 cts.; qt. 55 cts., postpaid; pk. \$2.15; bu. \$8.00.

540. Sure Crop Stringless Wax. (Matures in about 50 days.) A very fine flavored tender bean. The pods are fleshy, nearly round, and excellent quality, but being somewhat later are used more by market and home growers. Pkt. 10 cts.; pt. 30 cts.; qt. 55 cts., postpaid; pk. \$2.00; bu. \$7.50.

542. Pencil Pod Wax. (Matures in about 50 days.) A medium early stringless sort, which is used by market growers and home gardeners. The very fine, long, bright yellow pods are produced through a long season, on plants that are fairly hardy and quite productive. Pkt. 10 cts.; pt. 30 cts.; qt. 55 cts., postpaid; pk. \$2.00; bu. \$7.50.

Climbing, or Pole Beans

553. Kentucky Wonder, Old Homestead. (Matures in about 65 days.) This variety is one of the earliest and most desirable of all the green podded running types. It is enormously productive; the pods, hanging in great clusters from base to top of pole, are of a silvery, green color and entirely stringless, growing rough and spongy as the beans ripen. They cook deliciously tender at all times and are very popular among home and market gardeners. Pkt. 10 cts.; pt. 30 cts.; qt. 50 cts., postpaid; pk. \$1.80; bu. \$6.50.

Kentucky Wonder Beans

527. Lazy Wife. (Matures in about 72 days.) One of the best for snaps of the later green podded pole beans. The numerous pods, borne in large clusters, are 5 to 7 inches long, broad, thick, fleshy, and entirely stringless. When young they have a rich buttery flavor, which is retained until they are nearly ripe. The dry beans are excellent for winter use. Seed, white. Pkt. 10 cts.; pt. 30 cts.; qt. 50 cts., postpaid; pk. \$1.80; bu. \$6.50.

543. Cherry Pole, Horticultural, or Cutshort. (Matures in about 75 days.) Vines moderately large, light colored leaves; pods short, pale green, but becomingly streaked with bright red; beans large, oval, splashed and spotted with wine-red, and of the highest quality either green or dry. Many people like them better than Limas. Adapted for cool locations and short seasons. Pkt. 10 cts.; pt. 30 cts.; qt. 50 cts., postpaid; pk. \$1.80; bu. \$6.50.

529. Burger's Stringless Green Pod. (Matures in about 65 days.) White-seeded Kentucky Wonder. The pods average 6 to 8 inches in length, are uniformly straight, of a rich, dark green, and so meaty as to be really saddle-backed. The pods are as entirely stringless as the popular Stringless Green Pod Bush Bean; they are equally tender and of similar sweet, mild flavor. The dry beans are pure white. Pkt. 10 cts.; pt. 30 cts.; qt. 55 cts., postpaid; pk. \$2.15; bu. \$8.00.

530. Golden Cluster Wax. (Matures in about 70 days.) Extra strong in growth and very productive. The pods are of large size, 7 to 8 inches long by 3/4 inch wide. Although flat, the pods of a rich golden yellow, are stringless and of excellent flavor. The dry seeds are thick and pure white. Pkt. 10 cts.; pt. 30 cts.; qt. 55 cts., postpaid; pk. \$2.15; bu. \$8.00.

213. Scarlet Runner. (Matures in 75 days.) In northern locations, where the summers are cool and short, this takes the place of the Large Lima Beans. Plants are strong, quick growth, bearing large sprays of bright scarlet, pea-like flowers. When fully ripened, the dry beans are of bright scarlet, heavily blotched with purple. CULTURE. Our beet seed is grown from selected transplanted roots and have given truckers and market gardeners, who appreciate a high standard of perfection, the utmost satisfaction. The soil best suited for beet culture is that which is rather light and well enriched. Sow in drills 1 foot apart and 1 inch deep, as early as the ground can be worked. When the plants are large enough, thin out to stand 6 inches apart in rows; continue sowing for a succession as late as the middle of August. Keep well cultivated.

The early varieties mature in 40 to 50 days; the midseason and late varieties require 70 to 100 days. Beets can readily be kept for winter use by packing them in slightly moist earth and storing in a cool cellar.

67. Bolgiano's Extra Early Superb. (Illustrated in color on front cover.) (40 days.) ("Best in Garden" Variety.) The flesh is a rich, dark blood-red, tender, crisp, and deliciously sweet, besides having a very small top; is an ideal variety for bunching. Will produce a good crop inside of six weeks from sowing. Is excellent as a forcing sort or as a main crop. Pkt. 10 cts.; oz. 15 cts.; ¼ lb. 25 cts.; lb. 90 cts.; 2-lb lots, 80 cts. lb.; 5-lb lots, 70 cts. lb.; 10-lb. lots, 65 cts. lb., postpaid.

Frost Proof Cabbage Plants**WILL DOUBLE YOUR PROFITS****Ready for Immediate Delivery****Mature Heads Two to Three Weeks Earlier Than Your Home-Grown Plants**

Our plants are grown in the South where there is found a soil and climatic conditions just suited for growing tough, hardy cabbage plants during the Winter and early Spring. Here the plants develop slowly but steadily until they are ready for shipment at 8 to 10 weeks of age, having developed at this time purple buds and reddish brown outer leaves. They are then very tough and hardy, and can be shipped north for long distances where they may be planted in the open ground a month to six weeks sooner than the more delicate hot-bed or cold-frame plants.

FROST-PROOF CABBAGE PLANTS will stand a temperature of 20 degrees above zero, the land freezing, or being covered with ice, sleet or snow, without injury.

Although the roots grow from the time they are planted, the tops of the plants do not start until regular Spring weather opens up, at which time the established root growth takes up the fertilizer in the soil and the plants grow very fast, maturing headed cabbage two to three weeks sooner than you can mature them from hot-bed or cold-frame plants. You know what the difference in profit will be if your crop is matured and marketed before the general crop from home plants is matured, but—

To get the advantage of these Frost-Proof Cabbage Plants, they must be planted a month or six weeks earlier than you would plant home-grown plants.

Our cabbage plants are grown from the best Long Island grown seed, and are shipped direct from our growing station by Parcel Post or Express. We can fill orders from December 1 to May 1.

The plants when received will be somewhat wilted and have a hard stunted appearance, which will be disappointing to persons who have never used these plants before. Regardless of this, they will produce the crop results. We guarantee good order delivery on Parcel Post shipments.

Prices Include Postage on Pkts., Ozs., $\frac{1}{4}$ Lbs. and Lbs.

One ounce of seed produces about 2,500 plants.

Four ounces will grow enough plants to set an acre.

CULTURE. For very early use sow in January or February in hotbeds put out when the plants are strong enough into other hotbeds, or sow in cold frames in March; transplant, when danger from killing frost is past, to open ground in rows 2 feet apart and 18 inches in the row. For a succession sow in the open ground the last of March or early in April. The autumn and winter varieties sow in April or early in May, in shallow drills, 3 or 4 inches apart; transplant early in July in rows $2\frac{1}{2}$ feet apart and 2 feet in the row. Cabbage succeeds best in fresh, rich soil, well manured and deeply dug or plowed.

Extra Early Varieties

122. Big Winner Wakefield. (65 days.) No other cabbage of which we have knowledge has aroused such enthusiasm among cabbage growers as has our "Big Winner." It has the same general characteristics of other Wakefield Cabbages, the head being conical with a rounded or blunt point. It is, however, far superior to other strains of Wakefield Cabbage, being much larger in size and better quality, and at the same time is fully as early. It has few outer leaves, permitting close planting. Pkt. 10 cts.; oz. 25 cts.; $\frac{1}{4}$ lb. 75 cts.; lb. \$2.50; 2-lb. lots, \$2.40 lb.; 5-lb. lots, \$2.25 lb.; 10-lb. lots, \$2.10 lb., postpaid.

105. Large Charleston Wakefield. (75 days.) True Long Island grown. 299. Golden Acre. (60 days.) This early, round-headed cabbage closely resembles Copenhagen Market in type. It is eight to ten days earlier than Copenhagen Market but is smaller and can be planted closer. Because of its earliness and fine quality it commands a higher price than any round-headed cabbage. Early Varieties

117. Bolgiano's New Early Cabbage. (70 days.) ("Best in Garden" Variety.) Has gained its present pre-eminence among vegetables through merit alone. We would not wish you to think it the earliest cabbage offered, for in season it follows the Wakefields. It is in production and quality, however, that we find it excelling other market varieties. The immense hearts develop with remarkable rapidity and are noticeable for the very small growth of outer spreading leaves, making it possible to grow more New Earlys to the acre than other more spreading sorts. Pkt. 10 cts.; oz. 20 cts.; $\frac{1}{4}$ lb. 65 cts.; lb. \$2.00; 2-lb. lots, \$1.90 lb.; 5-lb. lots, \$1.80 lb.; 10-lb. lots, \$1.75 lb., postpaid.

333. Copenhagen Market. (75 days.) The heads average about 10 pounds each in weight, are very solid and of fine quality. It matures as early as Charleston Wakefield, and will give a heavier yield per acre than that well-known variety. The plant is short-stemmed, the leaves always tightly folded. Pkt. 10 cts.; oz. 20 cts.; $\frac{1}{4}$ lb. 60 cts.; lb. \$2.00; 2-lb. lots, \$1.80 lb.; 5-lb. lots, \$1.60 lb., postpaid.

129. Allhead Early. (80 days.) It is the earliest of the large heading cabbages. The deep flat heads are remarkably solid and the most uniform in color, form and size. It is really an all-the-year-round Cabbage, being equally good for winter if seed is sown about August. Pkt. 10 cts.; oz. 20 cts.; $\frac{1}{4}$ lb. 60 cts.; lb. \$2.00; 2-lb. lots, \$1.85 lb.; 5-lb. lots, \$1.75 lb.; 10-lb. lots, \$1.60 lb., postpaid.

Pkt. 10 cts.; oz. 20 cts.; $\frac{1}{4}$ lb. 50 cts.; lb. \$1.75; 2-lb. lots, \$1.65 lb.; 5-lb. lots, \$1.55 lb.; 10-lb. lots, \$1.50 lb., postpaid.

The Twentieth Century Cauliflower

CULTURE. Sow the seed in a hotbed in January or February, and when the plants are large enough transplant three inches apart in boxes or in other hotbeds until time to plant out. If hardened off they are seldom injured by planting out as early as the ground can be properly prepared. 2½ feet apart each way. Keep them well hoed and bring the earth gradually up to their stems, watering freely in dry weather and especially when they begin to head. Cauliflower succeeds best when planted in frames at the close of winter and brought to maturity before the summer heat sets in. The late varieties mature in the autumn and are sown and managed similar to winter cabbage.

252. The Twentieth Century. (90 days.) Where other cauliflower fails, gardeners should try this strain. The heads are all large, and every plant will make a head when the conditions are right. The heads are compact and white, weighing more than any other sort. The outside leaves are smaller than other varieties; for this reason it can be planted closer, thereby getting a greater number of heads to the acre. Pkt. 10 cts.; ¼ oz. 40 cts.; ½ oz. 75 cts.; oz. \$1.25; ¼ lb. \$4.50, postpaid.

243. Danish Giant or New Dry Weather Cauliflower. (95 days.) A splendid variety, actually drought-resistant which will produce fine heads when some other varieties are a complete failure due to lack of moisture. Will produce splendid crops in very dry locations. Pkt. 10 cts.; ¼ oz. 40 cts.; ½ oz. 75 cts.; oz. \$1.25; ¼ lb. \$4.50, postpaid.

289. Autumn Giant. (100 days.) It is very late in maturing and while the heads are not as tightly formed as are some of the earlier varieties, Autumn Giant's large, white heads will remain long fit for use. Pkt. 10 cts.; ½ oz. 25 cts.; oz. 40 cts.; 2 ozs. 70 cts.; ¼ lb. \$1.25; lb. \$4.50, postpaid.

334. Extra Early Dwarf Erfurt. (90 days.) A remarkably sure heading early Cauliflower. It is of dwarf habit with short outside leaves similar in most respects to Early Snowball, and nearly as early. The heads when ready for market are medium to large size. The curd is white, exceptionally deep and of finest quality. It will give excellent results either in the home garden or for market use. Pkt. 10 cts.; ¼ oz. 40 cts.; ½ oz. 60 cts.; oz. \$1.15; ¼ lb. \$4.25, postpaid.

273. Early Snowball Cauliflower. ("Best in Garden" Variety.) (90 days.) The seed is from our selected imported stock, grown for us by the best grower in Europe. This Cauliflower, the most widely known of them all, may be planted early in the spring or late in the fall. It is of dwarf, compact growth and produces pure-white solid heads of large size and excellent quality. The long pointed leaves protect the curd from the sun. Its earliness and large size make it most desirable.

Pkt. 10 cts.; ¼ oz. 45 cts.; ½ oz. 65 cts.; oz. \$1.25; ¼ lb. \$4.50, postpaid.

COLLARDS

The collard is an old-time favorite, adapted to all parts of the South, and as a producer of "greens" for boiling in Winter and Spring it has no equal. It will pay you to have a collard patch just to give your cows an occasional taste of "green stuff." Sow any time up to September 1st.

211. Southern or Georgia. (80 days.) This variety is the old-time favorite. Stands all sorts of adverse conditions without injury. It is very hardy, standing winters as far north as Atlanta. In many places where the soil is too poor to grow cabbage, the collard grows easily and makes a good substitute for cabbage. Pkt. 5 cts.; oz. 10 cts.; ¼ lb. 20 cts.; lb. 50 cts.; 2-lb. lots, 45 cts. lb.; 5-lb. lots, 40 cts. lb., postpaid.

CORN SALAD

One ounce will sow about 18 square feet and six pounds will sow an acre.

112. Broad Leaved (Large Seeded). (50 days.) Delicious salad used during the winter and spring months as a substitute for lettuce, and is also cooked and used like Spinach. Sow in spring in drills 1 foot apart. It will mature in six weeks. For early spring use sow in September and winter over like Spinach. CRESS **CULTURE.** Sow thickly in shallow drills every 2 or 3 weeks. It should be cut often, and it will continue to grow. It is useful not only for salad, but for the breakfast table and for garnishing. True Water Cress should be sown in damp soil; or if a stream of water can be utilized they will be much finer. They will also thrive well in damp hotbeds. Rightly managed, their culture is very profitable. To obtain early salad, it is a good plan to sow with Water Cress seed a strip 4 inches wide on the outer margin of a hotbed, inside the frame, where it is always cool.

270. True Water. (55 days.) It thrives when its roots and stems are submerged in water. It is one of the most delicious of small salads. Pkt. 10 cts.; oz. 30 cts.; ¼ lb. 85 cts.; lb. \$3.00; 2-lb. lots, \$2.80 lb.; 5-lb. lots, \$2.75 lb., postpaid.

CELERY

Prices Include Postage on Pkts., Ozs., ¼ Lbs. and Lbs.

One Ounce Will Produce About 3000 Plants, and Sow About 200 Feet of Row

CULTURE. Sow the last of March or early in April in an open border, in rich, mellow ground, in shallow drills, watering freely in dry weather. Cut the tops off once or twice before planting out to make them stocky. When the plants are 5 or 6 inches high transplant the dwarf varieties 5 feet and taller sorts 4 feet between rows; plant 6 inches apart in the row. Cultivate well, and when large enough blanch by earthing up. The first operation is that of "handling" generally done the beginning of September. After the soil has been drawn up with a hoe, it is drawn closer around each plant by hand to keep the leaves firm in an upright position and prevent spreading. When the plants have become "set" in an upright position and the celery is wanted for early use, they should be "banked."

94. Golden Self-Blanching. Bolgiano's Special Strain. (110 days.) Very early. Largely grown by market gardeners as well as home gardeners. The beautiful appearance of the plant, with its close habit, compact growth and straight, vigorous stalks, is faithfully shown in the illustration. The ribs are perfectly solid, crisp, brittle and of delicious flavor. It is self-blanching to a very remarkable degree, for without banking up or any covering whatever, even the outer ribs become a handsome, fresh, yellowish white color. The heart is large and solid and of a beautiful, rich, golden yellow color. Pkt. 10 cts.; oz. 25 cts.; ¼ lb. 90 cts.; lb. \$3.25; 2-lb. lots, \$3.00 lb., postpaid.

192. Golden Plume or Wonderful. ("Best in Garden" Variety.) (110 days.) A large early celery of superior quality and appearance. Large, heavy stalks with a full solid heart of golden yellow. Easy to blanch, a good keeper and always of the crisp, brittle and nutty quality so much desired. Very resistant to blight and rot. Free from strings and hollow stalks. Ready for the table in about 110 days. We consider this the finest celery yet introduced. Pkt. 10 cts.; oz. 35 cts.; ¼ lb. \$1.15; lb. \$4.00, postpaid.

CELERIAC (Turnip Rooted Celery)

This is constantly becoming more popular with gardeners owing to the fact that it is so much easier to grow than blanching celery. The large thick roots are very valuable boiled or used in soups, stews, and other dishes. Celeriac grows best in moderately moist well drained soils. They do well in almost any good garden soil and grow to perfection in cool seasons.

Start the seed in boxes indoors and when the seedlings are large enough to handle, transplant into the garden to stand about 8 to 10 inches apart each way. Use when the roots are moderately large size. They do not require blanching.

272. Large Smooth Prague. (120 days.) A new and quite distinct sort, the roots being very smooth, large, round. Of a very distinctive flavor, roots may be boiled or used in flavoring other dishes. Pkt. 10 cts.; oz. 20 cts.; ¼ lb. 60 cts.; lb. \$2.00; 2-lb. lots, \$1.80 lb., postpaid.

New A & C
Cucumber

CULTURE. For early cucumbers sow first of April in a hotbed upon pieces of sod (the grass side down), so that they can be readily transplanted to the open ground in rich soil when

danger of frost is over or protect by hand glasses.

For early use, if the weather has become settled and warm, plant in hills about four feet apart each way; thin out to four of the strongest plants to each hill after all

danger from insects is over; they succeed best in warm, moist, rich, loamy soil; continue planting at intervals for a succession. The cucumbers should be gathered when large enough for use, whether required or not; if left to ripen it destroys the productiveness. For pickles, plant from June until the middle of July.

109. A & C (60 days.) A new introduction, similar to Longfellow but somewhat shorter. Vines healthy, robust and resistant to disease, producing cucumbers about 10 inches long. They are uniform, very dark green and well rounded at ends. Highly desirable for shipping and market gardens. Pkt. 10 cts.; oz. 15 cts.; $\frac{1}{4}$ lb. 40 cts.; lb. \$1.25; 2-lb. lots, \$1.15 lb.; 5-lb. lots, \$1.10 lb.; 10-lb. lots, \$1.00 lb., postpaid.

42. The New Straight-8 Cucumber. An America Gold Medal Award for 1935. ("Best in Garden" Variety.) (60 days.) (Illustrated in color on front cover.) Straight-8 produces symmetrical fruits, almost cylindrical, and well rounded at both ends. When it is ready for use, it is regularly eight inches in length and about one and one-half to two inches in diameter. The color is rich, deep green, without objectionable striping. Pkt. 10 cts.; oz. 15 cts.; $\frac{1}{4}$ lb. 35 cts.; lb. \$1.25, postpaid.

131. Bolgiano's Early Fortune. (55 days.) An excellent early cucumber for table, market or shipping purposes. In color, Early Fortune is a rich, attractive, deep green, which it retains during a much longer period of growth than most varieties. Its form is so regular and the size of all the fruits so nearly the same that growers marvel at the purity and trueness of the stock. The flavor is delicately refreshing, entirely free from bitterness, exceedingly crisp and brittle, making it an ideal slicing cucumber. Pkt. 5 cts.; oz. 15 cts.; $\frac{1}{4}$ lb. 30 cts.; lb. 90 cts.; 2-lb. lots, 80 cts. lb.; 5-lb. lots, 70 cts. lb.; 10-lb. lots, 65 cts. lb., postpaid.

169. Bolgiano's Prosperity. (55 days.) Intense, rich, deep green color. The flesh sparkling white. An extra early white spine cucumber. Most refreshing and delightful flavor. An enormous yielder of very uniform attractive cukes which makes it a very good market variety. Pkt. 10 cts.; oz. 15 cts.; $\frac{1}{4}$ lb. 35 cts.; lb. \$1.15; 2-lb. lots, \$1.10 lb., postpaid.

93. Stays Green or Black Diamond. (60 days.) The cucumber that stays green. An extra early of the White Spine type. Holds its dark green color as long as any variety we know of. EGG PLANT

1 Ounce Egg Plant Seed Will Produce About 500 Plants

CULTURE. Egg Plant seed should be sown very early in hotbed; plants being very tender, must be protected from frost but exposed as far as practicable to light and air to harden them. Egg Plant seed will not germinate freely without a strong uniform heat; if they get the least chilled they seldom recover; therefore, repeated sowing is sometimes necessary.

Bolgiano's
Black Beauty
Egg Plant

205. Black Beauty Egg Plant. ("Best in Garden" Variety.) (110 days.) The earliest and the best of all large-fruited Egg Plants. It is valuable alike to the private planter and the extensive grower for the market. Black Beauty produces fruits fully as large and ready for use ten days to two weeks earlier than the New York Improved Purple. The grand, large fruits are thick, and of attractive form. The skin is a rich lustrous purplish-black—the satin gloss and rich coloring adding greatly to its beauty. The intensely brilliant coloring is uniform over the whole fruit and does not fade or change to a lighter color. Pkt. 10 cts.; oz. 30 cts.; ¼ lb. 90 cts.; lb. \$3.00; 2-lb. lots, \$2.75 lb.; 5-lb. lots, \$2.50 lb., postpaid.

339. Florida High Bush. (120 days.) Has proved of the greatest value to the Southern truckers and shippers. It is remarkable for its vigorous growth and productiveness; very hardy and will stand more cold weather than the New York Improved. The hot sun does not blight the blossoms. It grows from 3 to 4 feet high, erect and sturdy, free from thorns. Fruit is large, oblong in shape and purple; keeps its freshness and condition much longer than any other variety. Pkt. 10 cts.; oz. 30 cts.; ¼ lb. 90 cts.; lb. \$3.00; 2-lb. lots, \$2.75 lb.; 5-lb. lots, \$2.50 lb., postpaid.

ENDIVE

One Ounce Will Sow 150 Feet of Row

Endive is one of the best salads for Fall and Winter use. Sow for an early supply about the middle of April. As it is used mostly in the Fall months, the main sowings are made in June and July. Plant one foot apart each way. When the plant has attained its full size, gather up the leaves and tie them by their tips in a conical form. This excludes the light and air from the inner leaves until blanched.

Broad Leaf Batavian Endive

198. Batavian or Full Heart. (55 days.) Leaves a pale green; requires very little blanching. More productive than green curled. Forms large heads of broad, thick leaves. Pkt. 10 cts.; oz. 15 cts.; ¼ lb. 35 cts.; lb. 90 cts.; 2-lb. lots, 80 cts. lb.; 5-lb. lots, 70 cts. lb.; 10-lb. lots, 65 cts. lb., postpaid.

43. Green Curled. (50 days.) Self-blanching. The best in cultivation. Much more beautiful and ornamental than the old sort. Pkt. 10 cts.; oz. 15 cts.; ¼ lb. 35 cts.; lb. 90 cts.; 2-lb. lots, 80 cts. lb.; 5-lb. lots, 70 cts. lb.; 10-lb. lots, 65 cts. lb., postpaid.

285. White Curled. (50 days.) As the color of the leaves is a light golden-yellow, little or no blanching is required. Very easily grown, and plants may be gathered for use at any time. Pkt. 10 cts.; oz. 15 cts.; ¼ lb. 35 cts.; lb. 90 cts.; 2-lb. lots, 80 cts. lb.; 5-lb. lots, 70 cts. lb.; 10-lb. lots, 65 cts. lb., postpaid.

When the plants are 6 to 8 inches high transplant in a deep, rich soil in rows 12 ins. apart and 6 ins. in the rows, as deep as possible, so that the neck may be covered and blanched; draw the earth to them as they grow. The seed may also be sown in August or September, and the young plants transplanted in the spring.

LETTUCE—Early Varieties

One Ounce Will Sow 200 Feet of Drill
4 to 5 Lbs. to Sow One Acre in Drills

CULTURE. Lettuce belongs in every garden, whether large or small. It is easy to grow, and grows to perfection in a rich, moist, cool soil. Sow the seed in hotbeds in February or March, transplant into a sheltering border with a southern exposure. For successive crops sowing may be made in the open ground as early as the spring opens and continuing until July. From 40 to 60 days are required to bring the crop to maturity. Always thin out well, or the plants will not be strong. When wanted as a cut salad, sow seed thickly in rows or broadcast.

58. Big Boston (Special Stock). (58 days.) Big, compact, tender and crisp, creamy-white heads. Whether grown in the open ground for summer and fall use, or in frames for spring, it invariably gives both grower and user the utmost satisfaction, producing during all seasons, under ordinary favorable conditions, splendid, large, buttery-yellow heads, packed with thoroughly blanched leaves, crisp, tender and sweet. Although "Big Boston" is one of the best large-heading midsummer lettuces, it is also particularly adapted for late fall culture. Pkt. 5 cts.; oz. 15 cts.; ¼ lb. 35 cts.; lb. 90 cts.; 2-lb. lots, 85 cts. lb.; 5-lb. lots, 75 cts. lb.; 10-lb. lots, 65 cts. lb., postpaid.

Pale green color shading to creamy white at the center of the head which is formed of closely wrapped, crisp leaves. Succeeds at all seasons. Pkt. 10 cts.; oz. 15 cts.; ¼ lb. 40 cts.; lb. \$1.35; 2-lb. lots, \$1.25 lb.; 5-lb. lots, \$1.15 lb., postpaid.

Bolgiano's Special Stock Big Boston

Bolgiano's May King Lettuce

98. Early May King. (55 days.) Plants are of quick growth, practically all head and extremely handsome. From early spring plantings in the open ground they grow quickly to a diameter of 6 to 7 inches, with the broad, light-green outer leaves folding closely about the round solid head; in cool weather the edges of these outer leaves are lightly tinged with brown. The inner leaves (practically the entire head) are blanched into a rich golden yellow and have a specially fine, rich buttery flavor. The round solid heads are so firmly folded that they can be shipped to distant market and arrive in good condition. We recommend repeated plantings of this fine early variety in the spring, and again during August and September for fall use. Pkt. 10 cts.; oz. 15 cts.; ¼ lb. 35 cts.; lb. \$1.00; 2-lb. lots, 90 cts. lb.; 5-lb. lots, 85 cts. lb., postpaid.

MUSKMELON, or CANTALOUPE

One Ounce Will Plant 50 Hills;
2 or 3 Pounds in Hill per Acre.

CULTURE. Melons thrive best in a rich, light soil. Plant early in May, when the ground has become warm and dry, in hills six feet apart each way for muskmelons, eight feet for watermelons. Previous to sowing the seed, mix a few shovelfuls of well-rotted manure in each hill, and plant in each 12 to 15 seeds; after all danger of the bugs is over, thin out to three plants per hill.

Long John Cantaloupe

When about one foot long, pinch off the tips to make them branch as it strengthens the growth of the vines and makes the fruit mature earlier. Give plenty of water and feed liquid manure occasionally. A few hills for early use may be had by sowing on pieces of sod in a hotbed, and when warm enough transplant to open ground.

WATERMELON

Four to Five Pounds to an Acre; One
Ounce for Thirty Hills.

CULTURE. Prepare hills 8 or 10 feet apart each way by working in thoroughly rotted manure, or poultry droppings—rich ground gives the plants a good start before insects attack them. When the ground is warm plant 6 or 8 seeds to the hills, covering an inch deep and, when well up, thin out, leaving three strong plants to each hill. Do not grow near pumpkins and gourds.

Stone Mountain Watermelon

CULTURE. For sets sow the seed early as possible in the spring, very thickly in drills. As soon as the tops die off in summer remove them to a dry, airy place, and early in the following spring replant by placing the sets in shallow drills, 12 inches apart, and about 4 inches apart in the drills. The onions obtained by that process are of a large size early in the season. May also be grown to full size during the first season by sowing thinly in drills 1 foot apart and about ¼ inch deep in March or early in April, in strong land, well manured, and thinning them out to 3 to 4 inches apart in drills. They delight in a strong, rich, deep, loamy soil, and succeed well if grown successive years on the same ground. By sowing onion seed in frames in February and March and transplanting in April onions of immense size can be obtained. For this purpose Prize-Taker succeeds best.

PEAS 1 Quart Will Plant 100 Feet of Drill.

Weight by Parcel Post, Including Packing, 4 Qts., 9 Lbs.; Pk., 17 Lbs.—Parcel Post Table, Page 2.

CULTURE. Peas mature earliest in light, rich soil. For general crop use a rich, deep loam or inclining to clay is best. When grown in garden sow in double rows 6 to 8 inches apart; the rows 2 to 4 feet apart. Commence sowing the extra early varieties as early as the ground can be worked in February or March; transplant for a succession every two weeks until June, then discontinue until the middle of August, when a good crop may be secured by sowing extra early and early sorts for fall use. They should be kept clean and earthed up twice during the growth. The wrinkled varieties are not as hardy as the small, round sort and if planted early should have a dry soil or they are liable to rot in the ground. They are, however, the sweetest and best flavored varieties. The dwarf varieties are best suited for small gardens.

Sweet Potato Roots

CULTURE. Don't wait for a rain or a 'season' to set out sweet potato plants. Harrow your ground well before laying it off, then throw up the ridges higher than you want them, and if the soil is very dry, allow 2 or 3 days for the moisture to rise; then knock off the top of the ridge just ahead of planting; make a mud batter with water and clay loam, or, better, with the addition of fresh cow dung, about as thick as cream; dip the plants, in hands of about 20, into this, so that a large quantity of the mud clings to them.

RADISH

Eight to Twelve
Lbs. to the Acre.

Prices Include Postage on Pkts., Ozs., $\frac{1}{4}$ Lbs. and Lbs.

CULTURE

Radishes thrive best in light, rich, mellow soil, and to bring out their mild qualities they must make quick and tender growth. Sow for very early use in hotbeds during the winter and early spring, or later on in sheltered borders in well-manured, deeply-dug and finely-raked soil. If not well stimulated into a rapid growth they become fibrous and tough. Sow in drills 10 inches apart and thin to 2 inches in the rows. Sow at intervals of 2 or 3 weeks until September for a succession. Sow winter varieties in July and August. Like the turnips, they make the best growth in the autumn, and must be taken out before severe frost and stored away in a cool cellar in sand or in a pit where they will keep tender and crisp all the winter. Before using, put in cold water, which adds to their freshness.

TOBACCO

CULTURE. One ounce of tobacco produces at least 10,000 plants if sown properly. It is advisable to sow as early as possible, the usual custom being to make a large fire over the place intended for the seed-bed, in order to destroy weed seeds. The ground is put in the finest possible condition, the seed sown broadcast on the surface and pressed down firmly with a plank or the back of a spade, after which the bed must be protected by cottons or covering. When seedlings get 5 or 6 inches high, they are transplanted in rows 4 feet apart, with 3 feet between the plants. Cultivate thoroughly.

TOMATO

6 to 8 Ozs. to an Acre;
1 Oz. to 1,500 Plants.

CULTURE. The seed may be started in hotbed in March, or sufficient plants for family use can be grown in pots or boxes indoors with very little trouble. Be particular to give plants the benefit of fresh air and sun whenever judicious, for the purpose of hardening them, and cover with mats when necessary to prevent them from frosting. The two extremes of heat and cold are equally injurious. It is customary with the best gardeners to remove the plants from hotbeds to the cold frames, allowing a distance of several inches between the plants. In May select and prepare the soil and set the plants 3 feet each way. Hoe and draw earth to the stems. When the plants crowd, the fruit will be small. Have the soil very rich. For general crop sow from the middle of April or during May, in the open air, selecting good soil in a location much exposed to the sun and sheltered by a hill or woods on the north.

77. The "President" Tomato. (95 days.) Beautiful bright red color; mild, delicious flavor. Produces very few seeds; ripens earlier than many varieties planted for early use; a marvelous yielder. The Bolgiano Tomato is two weeks earlier than Earliana. First fruit just as perfect as the prime fruit of the season. The heavy potato leaf foliage protects the fruit from sun scalds and blisters. The large stem set clusters make it a profitable tomato for the grower. Pkt. 10 cts.; oz. 30 cts.; ¼ lb. \$1.00; lb. \$3.50; 2-lb. lots, \$3.25 lb.; 5-lb. lots, \$3.00 lb., postpaid.

TOMATO

Red Tomatoes—Continued

344. Rutgers Tomato. An outstanding variety. Fruits are medium to large, globe shaped, slightly flattened at the stem end. Flesh very firm and red. This variety ripens from the inside, or gets its color on the inside before it fully ripens up on the outside. This makes it especially desirable for canning and for juice. The vines are vigorous, quite leafy and more resistant than some other sorts to blight and other tomato diseases. Pkt. 10 cts.; oz. 30 cts.; $\frac{1}{4}$ lb. 90 cts.; lb. \$3.00, postpaid.

138. Earliana Improved. (95 days.) This is Bolgiano's special strain, developed to retain the earliness for which this tomato is famous and to produce heavier crops of more even, smoother fruit than the old type. It can always be depended on to produce a crop at the season when crops pay best. Pkt. 10 cts.; oz. 25 cts.; $\frac{1}{4}$ lb. 80 cts.; lb. \$2.75; 2-lb. lots, \$2.50 lb.; 5-lb. lots, \$2.25 lb., postpaid.

**FLOWER
SEEDS**

**Superior
Quality**

STARTING SEED INDOORS. A month before you expect to set the started plants outdoors fill a flat wooden box one inch deep with coal ashes or small stones and cover that with an inch of finely sifted rich soil. Sow the seed thinly, cover about one-eighth of an inch and press firmly. Cover with a pane of glass and two thicknesses of newspaper to prevent too rapid evaporation. Keep in a temperature between 60° and 70° and water regularly and carefully. When the seeds have germinated remove the glass. When large enough to handle, transplant one inch apart in a similarly prepared box where they may be kept until time to set outdoors. (We supply small seed flats at 15 cts. each.)

STARTING SEED OUTDOORS. A fine seed bed is necessary and the seed should not be planted deeper than four times their size.

Bolgiano's "Capitol Brand" Grass and Forage Seeds

Kentucky Blue Grass (*Poa pratensis*). This grass is not only the best for lawn purposes, but makes the sweetest and most nutritious pasture for all kinds of stock. It is very hardy and is uninjured by cold or dry weather, hot sun or trampling of hoofs. The roots are so thick and stout that they form a tough sod. Blue Grass requires about two years to get well started and for that reason it is often sown in mixture with other grasses. It will do well on almost any land, but does best on well drained clay land. Sow in the Fall or Spring at the rate of two or three bushels per acre.

Bermuda Grass Especially adapted for golf fairways and summer greens in the south where other grasses will not grow. Withstands drought and scorching Summer Sun better than any other variety. Has exceptionally long heavy root system. Covers bare spaces by long overground runners. Dies down completely in winter. Sow it at the rate of 5 to 6 pounds to acre.

Poa Trivialis (Rough Stalked Meadow Grass). Recommended for shady places. It is a fine leaved, even turf-forming grass, and used mostly for fine lawns, although it is valuable as a bottom grass in pasture mixtures.

Red Top or Herds Grass (*Agrostis vulgaris*). It is a good, permanent grass, standing our climate well, and makes a good pasture when grazed close. Is valuable for low, wet meadows, producing a large return in good hay. When sown alone, use about 12 pounds of the fancy seed per acre. Sow in Spring or Fall.

Orchard Grass (*Dactylis glomerata*). Desirable on account of its quick growth and valuable aftermath. It is ready for grazing in spring two weeks sooner than most grasses, and when fed off is again ready for grazing in a week, and will continue green when other grasses are withered by dry weather. It does better if sown with clover, and as it ripens at the same time, the mixed hay is of the best quality. If sown alone, about 28 pounds are required per acre; if sown with clover, half that quantity. Perennial and will last for years.

Dwarf Essex Rape It is an annual, bearing a close resemblance in leaf and stalk to Kale, but both leaves and stalks are more numerous in the Rape plant, and of a taller habit of growth. It is a pasture plant which may be eaten off by any kind of live stock. But is pre-eminently fitted to furnish pasture for sheep, cattle and swine. Under favorable conditions Rape is ready for pasturing sheep or cattle within six weeks from the time of sowing.

Tennessee Cultivated Golden Millet This variety is extensively used as it is more nutritious in value for feeding. It is sown at the same time and at the same rate per acre as the common Millet. Growers once using the Tennessee Cultivated Millet will never plant any other kind. Grows more vigorous; gives a much larger yield of hay.

Burt or 90-Day Oats The earliest, most prolific and surest cropping of Spring Oats; far superior to an ordinary Spring or rust-proof Oats for Spring seeding.

Virginia Gray Winter or Turf Oats When sown early, before the middle of March, these Oats will far outyield the ordinary Spring Oats, making a larger crop and heavier grain.

Timothy (*Phleum pratense*). The most valuable of all grasses for hay. Sow early in the Spring or Fall, at the rate of 12 pounds per acre. With Clover, 10 pounds Timothy and 6 pounds Clover. A splendid mixture is 8 pounds Timothy, 6 pounds Clover (either Mammoth Clover or Alsike Clover preferred, as they mature at the same time as Timothy), 6 pounds Fancy Red Top, 1/2 bushel Meadow Fescue. Together these will produce most excellent hay, also nutritious and abundant pasture in good loamy clay or low ground soils.

A Field of Alfalfa Grown from Bolgiano's "Capitol Brand" Alfalfa Seed

Alfalfa (*Medicago sativa*). Considered the most valuable of clovers and is capable of resisting droughts. It should be sown alone in thoroughly prepared soil either in the Spring or Fall at the rate of 20 to 25 pounds to the acre. Height, 1 to 3 feet.

Mammoth, or Sapling (*Trifolium pratense perenne*). Is similar to Red Clover in appearance of seeds and habits of growth, the difference being larger growth and later maturing. It is often used for hog pastures. As a soil improver to plow under it is considered superior on account of its extra growth. It is a good variety for thin soils or to seed with Timothy, Meadow Fescue, Herd's Grass or Red Top, as it matures about the same time as these grasses. Sow 10 to 12 lbs. to the acre when sown alone. When sown with Timothy use 6 lbs. Sapling Clover and 8 lbs. Timothy to the acre.

Crimson or Scarlet (*Trifolium incarnatum*). The Great Nitrogen Gatherer. The best crop for hay, soiling and green manuring; Fall, Winter and Spring pasturing. Crimson Clover furnishes an abundance of nutritive forage at seasons when pastures are dead. Improves poor land, restores to fertility those that have been worn down by excessive cropping. May be planted in the Spring, Summer or Fall. Splendid for reseeding Red Clover that has been Winter killed. Sow 15 pounds to the acre.

Alsike, or Hybrid (*Trifolium hybridum*). Alsike Clover grows thicker and is finer in growth than Red Clover, making better hay and grazing. It is also the hardiest of clovers, resisting extremes of heat and drought as well as severe cold weather. When sown with other grasses, it forms a quick undergrowth and greatly increases the yield. Sow 8 pounds to the acre.

Sudan Grass One of the best hay forage crops, easily cured and is very similar to Timothy in food value. Sow in late Spring at the rate of 20 to 25 pounds to the acre. Should be cut before frost. Can be sown with Soja Beans, 20 pounds Sudan Grass and one bushel Soja Beans to the acre.

Creeping Bent Grass Similar to red top and considered as good, if not better, than that variety. Distinctive on account of its compact, rooting stems which hold in the soil in a tenacious way. Of rapid growth, and spreading habit, forming a strong, durable turf. Fine for lawns and putting greens because of its fine texture. If sowing alone use 50 pounds to the acre.

Sheep Fescue Lands that are worthless for growing other fine grazing grasses can be made of value by growing sheep fescue, for it will grow on thin, dry, sandy and rocky soils where few grasses will live, and will stand any amount of drought. Does not grow so tall and does not have to be turned so often. Used in the rough on golf courses (14 lbs. to the bushel).

Red or Creeping Fescue A creeping rooted variety forming a close and durable turf and particularly suited for dry, sandy soil. Resists drought and thrives on very poor soils, gravelly banks and exposed hillsides. Valuable for shady lawns and for golf courses. Sow 30 pounds to the acre if used alone.

Bolgiano's Permanent Pasture Mixtures

These mixtures are composed of only the best germinating seeds and are sure to give satisfaction.

For Uplands. A special mixture of the best grasses and clovers for establishing a permanent pasture.

For Lowlands. A mixture of grasses and clovers adapted for moist or slightly sour lowlands.

White Clover (*Trifolium repens*). Some White Clover is usually included in Lawn Grass Mixtures. It makes an excellent turf that stands constant trampling. It is of dwarf habit, spreads rapidly and is very hardy. It is valuable in permanent pastures, being sweet and nutritious. Sow in Spring. In mixtures, 1 or 2 pounds; if alone, 8 or 10 pounds to the acre.

White Sweet Clover (*Melilotus alba*). Valuable sort for soiling, ensilage and bees. Grows from 3 to 5 feet high; sown in rich soil, may be cut three times; lasts for years if cut before flowering. Ten pounds to the acre.

Medium Red, or June (*Trifolium pratense*). This is regarded the most popular of clovers for hay crops. It makes two crops each year and is usually sown with Orchard Grass and Timothy. Sow in Spring or Fall, and if no other grasses are used, at the rate of 8 to 12 pounds per acre. Use best quality seed only (Bolgiano's Re-cleaned).

Korean Lespedeza This popular new type of Clover is coming into large demand. "Korean Lespedeza" makes the best and prettiest of hay, equal to Alfalfa in analysis and feed value. Grows 20-24 in. tall and very thick on good land, producing 2 to 3 tons of hay per acre each year and reseeds itself if cut properly, even with closest grazing. It grows readily in acid soil. It requires no land preparation for sowing; does not cause slobber nor bloat when pastured. Korean makes the best and cheapest midsummer pasture from June through September, is drought resistant and is cut for hay in August when least likely to be lost from wet weather. It may be put in the barn 36 hours after cutting. It permits use of land for small grain crops, increases soil fertility and costs less to get and keep a stand than other important legumes. Sow on small grain from March 1st to April 15th, 12½ pounds per acre.

Hairy Vetch (*Vicia villosa*). It is very hardy, is valuable as a Winter cover crop to prevent leaching, and for forage and fertilizing purposes. Sow 50 to 60 pounds to the acre.

Perennial Rye Grass (*Lolium perenne*). A very valuable variety for permanent pasture. Succeeds well on almost any soil, but is particularly adapted to moderately moist or irrigated lands. Sow 30 to 40 pounds per acre in spring.

Italian Rye Grass Yields three or four cuttings a year of most nutritious hay; a very valuable grass, particularly adapted for rich, loamy soils or low grounds; does better in damp situations than other grasses. Recommended principally for fall seeding. Sow 30 to 35 pounds to the acre.

For more than a score of years "Prosperity Corn" has been under the most watchful breeding and selection.

Reid's Yellow Dent This is a splendid Yellow Dent variety with 18 to 24 rows of kernels on an ear. WHITE CORN

Boone County White (Pedigreed Stock) A pure white corn on a white cob. Very deep grain, not overly wide. Rows generally 20, sometimes 22 to 24. A perfect shape. That is the striking thing about it—big, long ears, beautiful shape, perfect butts and tips, and deep grains. We believe this to be the best all-around White Corn in existence. It is a heavy yielder; has small cob and produces good-sized fodder, free from barren stalks. Matures in 110 days.

"Hickory King" White Corn So large are the grains and so small the cob that on an ear broken in half a single grain will almost cover the cob section. Of a strong growth, the stalks take a firm hold in the

Bolgiano's "Capitol Brand" Cow Peas and Soja Beans

The Soil Improvers—Make Poor Land Rich—A Splendid Hay Crop

Whippoorwill Cow Peas An early variety; grows upright, vigorous, and the crop is easy to harvest. We sell more of this variety than any other, and consider it the best for general purposes.

Black Cow Peas Seed medium sized and black. Vines trailing. Seed matures early.

Clay Peas Seeds medium sized and cream colored. Vines grow tall and erect. Seed matures medium late.

Black Eye Vines erect. Seeds medium sized and white; matures medium late.

Groit A fine early maturing Cow Pea somewhat resembling New Era in appearance and size of seed, but makes a larger growth. Very highly recommended as an early maturing, large yielding variety.

Mixed Cow Peas. We strongly recommend sowing Mixed Cow Peas as a soil improving crop. The upright growing varieties holding up the vining varieties, they will make a much better growth and give more satisfactory results.

Canada Field Peas Here is a crop which is not only profitable, but will return to the land the much needed nitrogen. Peas are second only to Clover in their soil enriching properties and can be grown under almost any condition of soil or climate. There is always a ready market for Peas, or they can be profitably ground and fed to the stock. The vines make rich, nutritious hay.

Mammoth Yellow Soja The largest growing and most popular Soja Bean for forage purposes, although a little later in maturing than other varieties.

Tar-Heel or Mammoth Black Soja Slightly earlier than Mammoth yellow and produces about same amount of forage.

Wilson Black Soja Very small seed, matures in about ninety days, can be grown in the Northern States where an early variety is desired.

Virginia Soja Beans About twenty days earlier than the Mammoth Yellow. The vines make a fine growth, are filled with pods, stand about 3 feet high, are easy to cut and easy to cure.

Japanese Buckwheat It has the advantage of remaining for some time in bloom and produces seed earlier. It resists drought and blight very well. Sow 1 bushel per acre.

Is a valuable medicine and system regulator for all fowls and birds. A few drops daily in the drinking water helps to ward off disease and puts hens in fine condition for heavy egg laying. Especially beneficial during moulting season.

It acts through the blood as a tonic and conditioner. Aids digestion, improves the appetite, clears the system of food poisons, builds strength and vitality.

Keep your fowls and birds healthy and they will grow faster and lay more eggs. A great aid in starting baby chicks.

A Triple Combination Worm Medicine containing Kamala (for Tape Worms), Nicotine Sulphate (for Round Worms), and Pyrethrum (for Pin Worms)—all in an INSOLUBLE Capsule.

FIVE TIMES AS EFFECTIVE AS WORM REMEDIES GIVEN IN FOOD OR DRINK

Why? It is INSOLUBLE and therefore carries through to the gizzard. In the gizzard it is ground up, pouring the correct dose in full strength directly into the intestines upon the worms. No starving birds to force eating of bad tasting food. Gets all three kinds of worms.

The most efficient worm remedy yet devised. Quickly and easily given. Used and recommended by many Agricultural Colleges, Experiment Stations, County Agents and leading poultry raisers.

DON'T GO BROKE FEEDING WORMS!

No matter how good the feed, wormy hens can't lay. Young birds are stunted. Proper development is impossible. That's because worms absorb the nourishment instead of the birds.

One "Split-Action" N-K Capsule does the work of two ordinary worm treatments. Releases two different drugs—nicotine and Kamala . . . into the intestines separately and hours apart. One "N-K" treats large tape, large round and pin worms at one small cost.

Carbola is a white paint in powder form combined with a disinfectant many times stronger than pure carbolic acid. It is non-poisonous and non-caustic. It helps prevent the start and spread of contagious diseases that affect man, beast and fowl. It dries a clear snow white. It saves labor, time and money. It paints and disinfects at one operation in the same time and with the same labor required to paint or disinfect only.

Carbola is recommended for use instead of whitewash in every place where whitewash ordinarily is used, and it is recommended for use instead of whitewash and disinfectants in stables, kennels, poultry houses, rabbit hutches, barns, creameries, hog pens, dairy buildings.

It is recommended for use as a disinfectant wherever one is needed and where the added light that comes from a whitened wall—which walls increase the light from 25 per cent to 50 per cent—is an advantage. 5 lbs., 60 cts.; 10 lbs. 98 cts.; 25 lbs., \$1.90; 50 lbs., \$3.50.

NOBBE-MILTNER PROCESS NITRAGIN

THE ORIGINAL LEGUME INOCULATOR
 Guaranteed Fresh Each Year—Leads in High Germ Count

For profitable results. Agricultural Colleges advise inoculation for all legume seed, because it pays well in producing larger quality yields. Fresh, high count NITRAGIN, containing billions of efficient nitrogen-gathering germs, builds up the soil.

All Legume Germs are PERISHABLE. To Protect You, NITRAGIN Cans are Stamped With Expiration Date. Insist on NITRAGIN.

Mixing Nitragin with Seed

Legume germs die rapidly when dried. NITRAGIN, containing between 30%—40% moisture, will readily stick to the seed without adding water, and give inoculation. However, for best results, the preferred practice, recommended by The Nitragin Company and Agricultural Authorities is to use water when mixing legume culture with seed.

27" Imperial 20" Royal

Cooper Mowers are popular for sturdy construction, light weight and perfect balance. Models are short coupled and easy to operate. The steel frame is anchored to a solid aluminum deck—an exclusive Cooper feature—providing strength and minimum weight without deflection and distortion, giving solidity, smoothness and long life.

A normal position behind the mower governs operation by means of handy levers providing finger tip control through independent clutches to reel and roller. Equipped throughout with ball and roller bearings, and alemite lubrication. Differential drive roller permits easy turning without marring the turf.

The Royal and Imperial models meet every lawn mowing requirement and will maintain a vigorous and healthy growth of grass, keep it evenly trimmed and rolled at less cost than any other power mower.

Following up for close trimming is unnecessary because the Cooper cuts as close to trees, shrubs, walks, flower beds, fences, etc., as the ordinary hand mower.

Automatic dump grass catcher, sulky and triplex equipment to provide extra mowing capacity are optional equipment, easily and quickly attached.

Cooper Riding Sulky

Saves time, cuts labor costs and provides relief to operator in hot weather. One man on a 27" mower and sulky can cut from 6 to 8 acres per day.
